(2) If the licensee fails to provide alternate financial assurance as specified in the department's regulations within 90 days after receipt by the licensee and department of a notice of cancellation of the parent company guarantee from the guarantor, the guarantor will provide such alternative financial assurance in the name of the licensee.

(3) The parent company guarantee and financial test provisions must remain in effect until the department has terminated the license.

(4) If a trust is established for decommissioning costs, the trustee and trust must be acceptable to the department; an acceptable trustee includes an appropriate state or federal government agency or an entity which has the authority to act as a trustee and whose trust operations are regulated and examined by a federal or state agency.

[20.3.3.334 NMAC - Rp, 20.3.3.334 NMAC, 04/30/2009]

20.3.3.335 CRITERIA RELATING TO USE OF FINANCIAL TESTS AND SELF-GUARANTEES FOR PROVIDING REASONABLE ASSURANCE OF FUNDS FOR DECOMMISSIONING:

A. Introduction. An applicant or licensee may provide reasonable assurance of the availability of funds for decommissioning based on furnishing its own guarantee that funds will be available for decommissioning costs and on a demonstration that the company passes the financial test of Subsection B of this section. The terms of the self-guarantee are in Subsection C of this section. This section establishes criteria for passing the financial test for the self guarantee and establishes the terms for a self-guarantee.

B. Financial Test.

(1) To pass the financial test, a company must meet all of the following criteria:

(a) tangible net worth at least 10 times the total current decommissioning cost estimate for the total of all facilities or parts thereof (or the current amount required if certification is used) for all decommissioning activities for which the company is responsible as self-guaranteeing licensee and as parent-guarantor;

(b) assets located in the United States amounting to at least 90 percent of total assets or at least 10 times the total current decommissioning cost estimate for the total of all facilities of parts thereof (or the current amount required if certification is used) for all decommissioning activities for which the company is responsible as self-guaranteeing licensee and as parent-guarantor; and

(c) a current rating for its most recent bond issuance of AAA, AA or A as issued by Standard and Poors, or Aaa, Aa or A as issued by Moodys.

(2) To pass the financial test, a company must meet all of the following additional requirements:

(a) the company must have at least one class of equity securities registered under the Securities Exchange Act;

(b) the company's independent certified public accountant must have compared the data used by the company in the financial test which is derived from the independently audited, year-end financial statements for the latest fiscal year, with the amounts in such financial statement; in connection with that procedure, the licensee shall inform the department within 90 days of any matters coming to the attention of the auditor that cause the auditor to believe that the data specified in the financial test shall be adjusted and that the company no longer passes the test; and

(c) after the initial financial test, the company must repeat passage of the test within 90 days after the close of each succeeding fiscal year.

(3) If the licensee no longer meets the requirements of Paragraph (1) of Subsection B of this section, the licensee must send immediate notice to the

department of its intent to establish alternate financial assurance as specified in the department's regulations within 120 days of such notice.

C. Company Self-Guarantee. The terms of a self-guarantee which an applicant or licensee furnishes must provide the following.

(1) The guarantee will remain in force unless the licensee sends notice of cancellation by certified mail to the department; cancellation may not occur, however, during the 120 days beginning on the date of receipt of the notice of cancellation by the department, as evidenced by the return receipt.

(2) The licensee shall provide alternative financial assurance as specified in 20.3.3.311 NMAC within 90 days following receipt by the department of a notice of cancellation of the guarantee.

(3) The guarantee and financial test provisions must remain in effect until the department has terminated the license or until another financial assurance method acceptable to the department has been put in effect by the licensee.

(4) The licensee will promptly forward to the department and the licensee's independent auditor all reports covering the latest fiscal year filed by the licensee with the securities and exchange commission pursuant to the requirements of Section 13 of the Securities and Exchange Act.

(5) If, at any time, the licensee's most recent bond issuance ceases to be rated in any category of "A" or above by either Standard and Poors or Moodys, the licensee will provide notice in writing of such fact to the department within 20 days after publication of the change by the rating service. If the licensee's most recent bond issuance ceases to be rated in any category of "A" or above by both Standard and Poors and Moodys, the licensee no longer meets the requirements of Paragraph (1) of Subsection B of this section.

(6) The applicant or licensee must provide to the department a written guarantee (a written commitment by a corporate officer) which states that the licensee will fund and carry out the required decommissioning activities or, upon issuance of an order by the department, the licensee will set up and fund a trust in the amount of the current cost estimates for decommissioning.

[20.3.3.335 NMAC - Rp, 20.3.3.335 NMAC, 04/30/2009]

20.3.3.336 CRITERIA RELATING TO USE OF FINANCIAL TESTS AND SELF-GUARANTEES FOR PROVIDING REASONABLE ASSURANCE OF FUNDS FOR DECOMMISSIONING BY COMMERCIAL COMPANIES THAT HAVE NO OUTSTANDING RATED BONDS:

A. Introduction. An applicant or licensee may provide reasonable assurance of the availability of funds for decommissioning based on furnishing its own guarantee that funds will be available for decommissioning costs and on a demonstration that the company passes the financial test of Subsection B of this section. The terms of the self-guarantee are in Subsection C of this section. This section establishes criteria for passing the financial test for the self guarantee and establishes the terms for a self-guarantee.

B. Financial Test.

(1) To pass the financial test, a company must meet the following criteria:

(a) tangible net worth greater than \$10 million, or at least 10 times the total current decommissioning cost estimate (or the current amount required if certification is used), whichever is greater, for all decommissioning activities for which the company is responsible as self-guaranteeing licensee and as parent-guarantor;

(b) assets located in the United States amounting to at least 90 percent of total assets or at least 10 times the total current decommissioning cost estimate (or the current amount required if certification is used) for all decommissioning activities for which the company is responsible as self-guaranteeing licensee and as parent-guarantor; and

(c) a ratio of cash flow divided by total liabilities greater than 0.12 and a ratio of total liabilities divided by net worth less than 1.5.

(2) In addition, to pass the financial test, a company must meet all of the following requirements:

(a) the company's independent certified public accountant must have compared the data used by the company in the financial test which is derived from the independently audited, year-end financial statements for the latest fiscal year, with the amounts in such financial statement; in connection with that procedure, the licensee shall inform the department within 90 days of any matters coming to the attention of the auditor that cause the auditor to believe that the data specified in the financial test shall be adjusted and that the company no longer passes the test;

(b) after the initial financial test, the company must repeat passage of the test within 90 days after the close of each succeeding fiscal year; and

(c) if the licensee no longer meets the requirements of Paragraph (1) of Subsection B of this section, the licensee must send immediate notice to the department of its intent to establish alternate financial assurance as specified in 20.3.3.311 NMAC; the notice must be sent by certified mail, return receipt requested, within 90 days after the end of the fiscal year for which the year end financial data show

that the licensee no longer meets the financial test requirements; the licensee must provide alternative financial assurance within 120 days after the end of such fiscal year.

C. Company Self-Guarantee. The terms of a self-guarantee which an applicant or licensee furnishes must provide the following.

(1) The guarantee will remain in force unless the licensee sends notice of cancellation by certified mail to the department; cancellation may not occur until alternative financial assurance mechanism is in place.

(2) The licensee shall provide alternative financial assurance as specified in 20.3.3.311 NMAC within 90 days following receipt by the department of a notice of cancellation of the guarantee.

(3) The guarantee and financial test provisions must remain in effect until the department has terminated the license or until another financial assurance method acceptable to the department has been put in effect by the licensee.

(4) The applicant or licensee must provide to the department a written guarantee (a written commitment by a corporate officer) which states that the licensee will fund and carry out the required decommissioning activities or, upon issuance of an order by the department, the licensee will set up and fund a trust in the amount of the current cost estimates for decommissioning.

[20.3.3.336 NMAC - N, 04/30/2009]

20.3.3.337 CRITERIA RELATING TO USE OF FINANCIAL TESTS AND SELF-GUARANTEES FOR PROVIDING REASONABLE ASSURANCE OF FUNDS FOR DECOMMISSIONING BY NONPROFIT COLLEGES, UNIVERSITIES AND HOSPITALS:

A. Introduction. An applicant or licensee may provide reasonable assurance of the availability of funds for decommissioning based on furnishing its own guarantee that funds will be available for decommissioning costs and on a demonstration that the applicant or licensee passes the financial test of Subsection B of this section. The terms of the self-guarantee are in Subsection C of this section. This section establishes criteria for passing the financial test for the self-guarantee and establishes the terms for a self-guarantee.

B. Financial Test.

(1) For colleges and universities, to pass the financial test a college or university must meet either the criteria in Subparagraph (a) or the criteria in Subparagraph (b) of this paragraph.

(a) For applicants or licensees that issue bonds, a current rating for its most recent uninsured, uncollateralized and unencumbered bond issuance of AAA, AA or A as issued by Standard and Poors or Aaa, Aa or A as issued by Moodys.

(b) For applicants or licensees that do not issue bonds, unrestricted endowment consisting of assets located in the United States of at least \$50 million, or at least 30 times the total current decommissioning cost estimate (or the current amount required if certification is used), whichever is greater, for all decommissioning activities for which the college or university is responsible as a self-guaranteeing licensee.

(2) For hospitals, to pass the financial test a hospital must meet either the criteria in Subparagraph (a) or the criteria in Subparagraph (b) of this paragraph.

(a) For applicants or licensees that issue bonds, a current rating for its most recent uninsured, uncollateralized, and unencumbered bond issuance of AAA, AA or A as issued by Standard and Poors or Aaa, Aa or A as issued by Moodys.

(b) For applicants or licensees that do not issue bonds, all the following tests must be met:

(i) total revenues less total expenditures divided by total revenues must be equal to or greater than 0.04;

(ii) long term debt divided by net fixed assets must be less than or equal to 0.67;

(iii) current assets and depreciation fund divided by current liabilities must be greater than or equal to 2.55; and

(iv) operating revenues must be at least 100 times the total current decommissioning cost estimate (or the current amount required if certification is used) for all decommissioning activities for which the hospital is responsible as a self-guaranteeing license.

(3) In addition, to pass the financial test, a licensee must meet all the following requirements:

(a) the licensee's independent certified public accountant must have compared the data used by the licensee in the financial test, which is required to be derived from the independently audited year end financial statements, based on United States generally accepted accounting practices, for the latest fiscal year, with the amounts in such financial statement; in connection with that procedure, the licensee shall inform the department within 90 days of any matters coming to the attention of the auditor that cause the auditor to believe that the data specified in the financial test shall be adjusted and that the licensee no longer passes the test;

(b) after the initial financial test, the licensee must repeat passage of the test within 90 days after the close of each succeeding fiscal year; and

(c) if the licensee no longer meets the requirements of Subsection B of this section, the licensee must send notice to the department of its intent to establish alternative financial assurance as specified in 20.3.3.311 NMAC; the notice must be sent by certified mail, return receipt requested, within 90 days after the end of the fiscal year for which the year end financial data show that the licensee no longer meets the financial test requirements; the licensee must provide alternate financial assurance within 120 days after the end of such fiscal year.

C. Self-Guarantee. The terms of a self-guarantee which an applicant or licensee furnishes must provide the following.

(1) The guarantee shall remain in force unless the licensee sends notice of cancellation by certified mail and return receipt requested, to the department. Cancellation may not occur unless an alternative financial assurance mechanism is in place.

(2) The licensee shall provide alternative financial assurance as specified in the 20.3.3.311 NMAC within 90 days following receipt by the department of a notice of cancellation of the guarantee.

(3) The guarantee and financial test provisions must remain in effect until the department has terminated the license or until another financial assurance method acceptable to the department has been put in effect by the licensee.

(4) The applicant or licensee must provide to the department a written guarantee (a written commitment by a corporate officer or officer of the institution) which states that the licensee will fund and carry out the required decommissioning activities or, upon issuance of an order by the department, the licensee will set up and fund a trust in the amount of the current cost estimates for decommissioning.

(5) If, at any time, the licensee's most recent bond issuance ceases to be rated in any category of "A" or above by either Standard and Poors or Moodys, the licensee shall provide notice in writing of such fact to the department within 20 days after publication of the change by the rating service.

³ based on alpha disintegration rate of U-238, U-234 and U-235.

B. Note. Where a combination of isotopes in known amounts is involved, the limit for the combination shall be derived as follows: determine, for each isotope in the combination, the ratio between the quantity present in the combination and the limit otherwise established for the specific isotope when not in combination. The sum of such ratios for all the isotopes in the combination may not exceed "1" (i.e. "unity").

[20.3.3.338 NMAC - Rp, 20.3.4.465 NMAC, 04/30/2009]

PART 4: STANDARDS FOR PROTECTION AGAINST RADIATION

20.3.4.1 ISSUING AGENCY:

Environmental Improvement Board.

[20.3.4.1 NMAC - Rp, 20.3.4.1 NMAC, 04/30/2009]

20.3.4.2 SCOPE:

Except as specifically provided in other parts of this chapter, this part applies to persons licensed or registered by the department to receive, possess, use, transfer or dispose of sources of radiation. The limits in this part do not apply to doses due to background radiation, to exposure of patients to radiation for the purpose of medical diagnosis or therapy, to exposure from individuals administered radioactive material and released under Subsection I of 20.3.7.703 NMAC or to exposure from voluntary participation in medical research programs.

[20.3.4.2 NMAC - Rp, 20.3.4.1 NMAC, 04/30/2009]

20.3.4.3 STATUTORY AUTHORITY:

Sections 74-1-9, 74-3-5 and 74-3-9 NMSA 1978.

[20.3.4.3 NMAC - Rp, 20.3.4.3 NMAC, 04/30/2009]

20.3.4.4 DURATION:

Permanent.

[20.3.4.4 NMAC - Rp, 20.3.4.4 NMAC, 04/30/2009]

20.3.4.5 EFFECTIVE DATE:

April 30, 2009, unless a later date is cited at the end of a section.

[20.3.4.5 NMAC - Rp, 20.3.4.5 NMAC, 04/30/2009]

20.3.4.6 OBJECTIVE:

A. The requirements of this part establish standards for protection against ionizing radiation resulting from activities conducted pursuant to licenses or registrations issued by the department.

B. The requirements of this part are designed to control the receipt, possession, use, transfer and disposal of sources of radiation by any licensee or registrant so the total dose to an individual, other than background radiation, does not exceed the standards for protection against radiation prescribed in this part. However, nothing in this part shall be construed as limiting actions that may be necessary to protect public health and safety.

[20.3.4.6 NMAC - Rp, 20.3.4.6 NMAC, 04/30/2009]

20.3.4.7 DEFINITIONS:

A. "**Absorbed dose**" means the energy imparted by ionizing radiation per unit mass of irradiated material. The units of absorbed dose are the gray (Gy) and the rad.

B. "**Activity**" means the rate of disintegration or transformation or decay of radioactive material. The units of activity are the becquerel (Bq) and the curie (Ci).

C. "**Adult**" means an individual 18 or more years of age.

D. "**Airborne radioactive material**" means any radioactive material dispersed in the air in the form of dusts, fumes, particulates, mists, vapors or gases.

E. "**Airborne radioactivity area**" means a room, enclosure or area in which airborne radioactive materials exist in concentrations:

(1) in excess of the derived air concentrations (DAC) specified in table I of 20.3.4.461 NMAC; or

(2) to such a degree that an individual in the area without respiratory protective equipment could exceed, during the hours an individual is present in a week, an intake of 0.6 percent of the annual limit on intake (ALI) or 12 DAC-hours.

F. "**Air-purifying respirator**" means a respirator with an air-purifying filter, cartridge or canister that removes specific air contaminants by passing ambient air through the air-purifying element.

G. "**ALARA**" (acronym for "as low as is reasonably achievable") means making every reasonable effort to maintain exposures to radiation as far below the dose limits in these regulations as is practical, consistent with the purpose for which the licensed or registered activity is undertaken, taking into account the state of technology, the economics of improvements in relation to state of technology, the economics of improvements in relation to benefits to the public health and safety and other societal and socioeconomic considerations, and in relation to utilization of nuclear energy and licensed or registered sources of radiation in the public interest.

H. "**ALI**" (annual limit on intake) means the derived limit for the amount of radioactive material taken into the body of an adult worker by inhalation or ingestion in a year. ALI is the smaller value of intake of a given radionuclide in a year by the reference man that would result in a committed effective dose equivalent of 5 rems (0.05 sievert) or a committed dose equivalent of 50 rems (0.5 sievert) to any individual organ or tissue. ALI values for intake by ingestion and by inhalation of selected radionuclides are given in columns 1 and 2 of table I of 20.3.4.461 NMAC.

I. "**APF**" (assigned protection factor) means the expected workplace level of respiratory protection that would be provided by a properly functioning respirator or a

class of respirators to properly fitted and trained users. Operationally, the inhaled concentration can be estimated by dividing the ambient airborne concentration by the APF.

J. "Atmosphere-supplying respirator" means a respirator that supplies the respirator user with breathing air from a source independent of the ambient atmosphere, and includes supplied-air respirators (SARs) and self-contained breathing apparatus (SCBA) units.

K. "Background radiation" means radiation from cosmic sources; naturally occurring radioactive material as it occurs in nature, including radon (except as a decay product of source or special nuclear material); and global fallout as it exists in the environment from the testing of nuclear explosive devices or from past nuclear accidents such as Chernobyl that contribute to background radiation and are not under the control of the licensee. *Background radiation* does not include radiation from radioactive material regulated by the department or NRC.

L. "Bioassay" (radiobioassay) means the determination of kinds, quantities or concentrations, and, in some cases, the locations of radioactive material in the human body, whether by direct measurement (in vivo counting) or by analysis and evaluation of materials excreted or removed from the human body.

M. "Class" (lung class or inhalation class) means a classification scheme for inhaled material according to its rate of clearance from the pulmonary region of the lung. Materials are classified as D, W or Y, which applies to a range of clearance half-times: for class D (days) of less than 10 days, for class W (weeks) from 10 to 100 days, and for class Y (years) of greater than 100 days.

N. "Collective dose" means the sum of the individual doses received in a given period of time by a specified population from exposure to a specified source of radiation.

O. "Committed dose equivalent" ($H_{T,50}$) means the dose equivalent to organs or tissues of reference (T) that will be received from an intake of radioactive material by an individual during the 50-year period following the intake.

P. "Committed effective dose equivalent" ($H_{E,50}$) is the sum of the products of the weighting factors applicable to each of the body organs or tissues that are irradiated and the committed dose equivalent to each of these organs or tissues ($H_{E,50} = \{\text{sum over T}\}w_T H_{T,50}$).

Q. "Constraint" (dose constraint) means a value above which specified licensee actions are required.

R. "Controlled area" means an area, outside of a restricted area but inside the site boundary, access to which can be limited by the licensee for any reason.

S. "Critical Group" means the group of individuals reasonably expected to receive the greatest exposure to residual radioactivity for any applicable set of circumstances.

T. "DAC" means the derived air concentration.

U. "DAC-hour" means the derived air concentration - hour.

V. "Declared pregnant woman" means a woman who has voluntarily informed the licensee, in writing, of her pregnancy and the estimated date of conception. The declaration remains in effect until the declared pregnant woman withdraws the declaration in writing or is no longer pregnant.

W. "Deep dose equivalent" (H_d), which applies to external whole body exposure, means the dose equivalent at a tissue depth of 1 centimeter (1000 mg/cm^2).

X. "Demand respirator" means an atmosphere-supplying respirator that admits breathing air to the facepiece only when a negative pressure is created inside the facepiece by inhalation.

Y. "Derived air concentration" (DAC) means the concentration of a given radionuclide in air which, if breathed by reference man for a working year of 2,000 hours under conditions of light work, results in an intake of one ALI. For purposes of these regulations, the condition of light work is an inhalation rate of 1.2 cubic meters of air per hour for 2,000 hours in a year. DAC values are given in column 3 of table I of 20.3.4.461 NMAC.

Z. "Derived air concentration-hour" (DAC-hour) means the product of the concentration of radioactive material in air, expressed as a fraction or multiple of the derived air concentration for each radionuclide, and the time of exposure to that radionuclide, in hours. A licensee or registrant may take 2,000 DAC-hours to represent one ALI, equivalent to a committed effective dose equivalent of 5 rems (0.05 sievert).

AA. "Disposable respirator" means a respirator for which maintenance is not intended and that is designed to be discarded after excessive breathing resistance, sorbent exhaustion, physical damage or end-of-service-life renders it unsuitable for use. Examples of this type of respirator are a disposable half-mask respirator or a disposable escape-only self-contained breathing apparatus (SCBA).

AB. "Distinguishable from background" means that the detectable concentration of a radionuclide is statistically different from the background concentration of that radionuclide in the vicinity of the site or, in the case of structures, in similar materials using adequate measurement technology, survey and statistical techniques.

AC. "Dose" (radiation dose) is a generic term that means absorbed dose, dose equivalent, effective dose equivalent, committed dose equivalent, committed effective dose equivalent, total organ dose equivalent or total effective dose equivalent.

AD. "Dose equivalent" (H_T) means the product of the absorbed dose in tissue, quality factor and all other necessary modifying factors at the location of interest. The units of dose equivalent are the sievert (Sv) and rem.

AE. "Dose limits" (limits) means the permissible upper bounds of radiation doses established in accordance with these regulations.

AF. "Dosimetry processor" means an individual or an organization that processes and evaluates individual monitoring devices in order to determine the radiation dose delivered to the monitoring devices.

AG. "Effective dose equivalent" (H_E) means the sum of the products of the dose equivalent to each organ or tissue (H_T), and the weighting factor (w_T) applicable to each of the body organs or tissues (T) that are irradiated ($H_E = \{\text{sum over } T\}w_T H_T$).

AH. "Embryo/fetus" means the developing human organism from conception until the time of birth.

AI. "Entrance or access point" means any opening through which an individual could gain access to radiation areas or to radioactive materials. This includes entry or exit portals of sufficient size to permit human entry, irrespective of their intended use.

AJ. "Exposure" means being exposed to ionizing radiation or to radioactive material. Exposure also means the quotient of dQ divided by dm where "dQ" is the absolute value of the total charge of the ions of one sign produced in air when all the electrons (negatrons and positrons) liberated by photons in a volume element of air having mass "dm" are completely stopped by air. The special unit of exposure is the roentgen (R). The SI unit of exposure is the coulomb per kilogram (C/kg) (see 20.3.4.8 NMAC).

AK. "Exposure rate" means the exposure per unit of time, such as roentgen per minute and milliroentgen per hour.

AL. "External dose" means that portion of the dose equivalent received from any source of radiation outside the body.

AM. "Extremity" means hand, elbow, arm below the elbow, foot, knee and leg below the knee.

AN. "Eye dose equivalent" means the external dose equivalent to the lens of the eye at a tissue depth of 0.3 centimeter (300 mg/cm²).

AO. "Filtering facepiece" (dust mask) means a negative pressure particulate respirator with a filter as an integral part of the facepiece or with the entire facepiece composed of the filtering medium, not equipped with elastomeric sealing surfaces and adjustable straps.

AP. "Fit factor" means a quantitative estimate of the fit of a particular respirator to a specific individual and typically estimates the ratio of the concentration of a substance in ambient air to its concentration inside the respirator when worn.

AQ. "Fit test" means the use of a protocol to qualitatively or quantitatively evaluate the fit of a respirator on an individual.

AR. "Generally applicable environmental radiation standards" means standards issued by the EPA under the authority of the Atomic Energy Act that impose limits on radiation exposures or levels, and concentrations or quantities of radioactive material in the general environment outside the boundaries of locations under the control of persons possessing or using radioactive material.

AS. "Gray" (Gy) means the SI unit of absorbed dose. One gray is equal to an absorbed dose of 1 joule per kilogram (1 gray=100 rads).

AT. "Helmet" means a rigid respiratory inlet covering that also provides head protection against impact and penetration.

AU. "High radiation area" means an area, accessible to individuals, in which radiation levels from radiation sources external to the body could result in an individual receiving a dose equivalent in excess of 0.1 rem (1 millisievert) in 1 hour at 30 centimeters from the radiation source or 30 centimeters from any surface that the radiation penetrates.

AV. "Hood" means a respiratory inlet covering that completely covers the head and neck and may also cover portions of the shoulders and torso.

AW. "Individual monitoring" means the assessment of:

(1) dose equivalent by the use of individual monitoring devices designed to be worn by an individual; or

(2) committed effective dose equivalent by bioassay or by determination of the time-weighted air concentrations to which an individual has been exposed, that is, DAC-hours; or

(3) dose equivalent by the use of survey data.

AX. "Individual monitoring devices" (individual monitoring equipment) means devices designed to be worn by a single individual for the assessment of dose

equivalent, such as film badges, thermoluminescence dosimeters (TLDs), pocket ionization chambers and personal ("lapel") air sampling devices.

AY. "Inhalation class" (see "class").

AZ. "Internal dose" means that portion of the dose equivalent received from radioactive material taken into the body.

BA. "Lens dose equivalent" (LDE) applies to the external exposure of the lens of the eye and is taken as the dose equivalent at a tissue depth of 0.3 centimeter (300 mg/cm²).

BB. "Limits" (see "dose limits").

BC. "Loose-fitting facepiece" means a respiratory inlet covering that is designed to form a partial seal with the face.

BD. "Lung class" (see "class").

BE. "Member of the public" means any individual except when that individual is receiving an occupational dose.

BF. "Minor" means an individual less than 18 years of age.

BG. "Monitoring" (radiation monitoring, radiation protection monitoring) means the measurement of radiation, radioactive material concentrations, surface area activities or quantities or radioactive material and the use of the results of these measurements to evaluate potential exposures and doses.

BH. "Negative pressure respirator" (tight fitting) means a respirator in which the air pressure inside the facepiece is negative during inhalation with respect to the ambient air pressure outside the respirator.

BI. "Nationally tracked source" is a sealed source containing a quantity equal to or greater than category 1 or category 2 levels of any radioactive material listed in 20.3.4.467 NMAC. In this context a sealed source is defined as radioactive material that is sealed in a capsule or closely bonded, in a solid form and which is not exempt from regulatory control. It does not mean material encapsulated solely for disposal, or nuclear material contained in any fuel assembly, subassembly, fuel rod or fuel pellet. Category 1 nationally tracked sources are those containing radioactive material at a quantity equal to or greater than the category 1 threshold. Category 2 nationally tracked sources are those containing radioactive material at a quantity equal to or greater than the category 2 threshold but less than the category 1 threshold.

BJ. "Nonstochastic effect" (deterministic effect) means a health effect, the severity of which varies with the dose and for which a threshold is believed to exist. Radiation-induced cataract formation is an example of a nonstochastic effect.

BK. "Occupational dose" means the dose received by an individual in the course of employment in which the individual's assigned duties involve exposure to radiation or to radioactive material from licensed and unlicensed sources of radiation, whether in the possession of the licensee, registrant or other person. Occupational dose does not include dose received from background radiation; from any medical administration the individual has received; from exposure to individuals administered radioactive materials and released under Subsection I of 20.3.7.703 NMAC; from voluntary participation in medical research programs; or as a member of the public.

BL. "Personnel monitoring equipment" (see "individual monitoring devices").

BM. "Planned special exposure" means an infrequent exposure to radiation, separate from and in addition to the annual occupational dose limits.

BN. "Positive pressure respirator" means a respirator in which the pressure inside the respiratory inlet covering exceeds the ambient air pressure outside the respirator.

BO. "Powered air-purifying respirator" (PAPR) means an air-purifying respirator that uses a blower to force the ambient air through air-purifying elements to the inlet covering.

BP. "Pressure demand respirator" means a positive pressure atmosphere-supplying respirator that admits breathing air to the facepiece when the positive pressure is reduced inside the facepiece by inhalation.

BQ. "Public dose" means the dose received by a member of the public from exposure to radiation or radioactive material released by a licensee or registrant, or to any other sources of radiation under the control of a licensee or registrant. Public dose does not include: occupational dose; dose received from background radiation; dose received from any medical administration the individual has received; dose received from exposure to individuals administered radioactive material and released under Subsection I of 20.3.7.703 NMAC; or dose received from voluntary participation in medical research programs.

BR. "Pyrophoric material" means any liquid that ignites spontaneously in dry or moist air at or below 130 degrees fahrenheit (54.4 degrees celsius) or any solid material, other than one classed as an explosive, which under normal conditions is liable to cause fires through friction, retained heat from manufacturing or processing, or which can be ignited readily and, when ignited, burns so vigorously and persistently as

to create a serious transportation, handling or disposal hazard. Included are spontaneously combustible and water-reactive materials.

BS. "Qualitative fit test" (QLFT) means a pass or fail fit test to assess the adequacy of respirator fit that relies on the individual's response to the test agent.

BT. "Quality factor" (Q) means the modifying factor, listed in table 8.1 of Subsection C of 20.3.4.8 NMAC and table 8.2 of Subsection D of 20.3.4.8 NMAC, that is used to derive dose equivalent from absorbed dose.

BU. "Quantitative fit test" (QNFT) means an assessment of the adequacy of respirator fit by numerically measuring the amount of leakage into the respirator.

BV. "Quarter" means a period of time equal to one-fourth of the year observed by the licensee, approximately 13 consecutive weeks, providing that the beginning of the first quarter in a year coincides with the starting date of the year and that no day is omitted or duplicated in consecutive quarters.

BW. "Radiation area" means any area, accessible to individuals in which radiation levels could result in an individual receiving a dose equivalent in excess of 0.005 rem (0.05 millisievert) in 1 hour at 30 centimeters from the source of radiation or from any surface that the radiation penetrates.

BX. "Radiation dose" (see "dose").

BY. "Radiobioassay" (see "bioassay").

BZ. "Reference man" means a hypothetical aggregation of human physical and physiological characteristics determined by international consensus. These characteristics may be used by researchers and public health employees to standardize results of experiments and to relate biological insult to a common base. A description of reference man is contained in the international commission on radiological protection report (ICRP), publication 23, *report of the task group on reference man*.

CA. "Residual radioactivity" means radioactivity in structures, materials, soils, groundwater and other media at a site resulting from activities under the licensee's control. This includes radioactivity from all licensed and unlicensed sources used by the licensee, but excludes background radiation. It also includes radioactive materials remaining at the site as a result of routine or accidental releases of radioactive material at the site and previous burials at the site, even if those burials were made in accordance with the provisions of this part.

CB. "Respiratory protective equipment" means an apparatus, such as a respirator, used to reduce an individual's intake of airborne radioactive materials.

CC. "Restricted area" means an area, access to which is limited by the licensee or registrant for purposes of protection of individuals against undue risks from exposure to sources of radiation. Restricted area does not include areas used as residential quarters, but separate rooms in a residential building may be set apart as a restricted area.

CD. "Sanitary sewerage" means a system of public sewers for carrying off waste water and refuse, but excluding sewage treatment facilities, septic tanks and leach fields owned or operated by the licensee or registrant.

CE. "Self-contained breathing apparatus" (SCBA) means an atmosphere-supplying respirator for which the breathing air source is designed to be carried by the user.

CF. "Shallow-dose equivalent" (H_s), which applies to the external exposure of the skin of the whole body or the skin of an extremity, is taken as the dose equivalent at a tissue depth of 0.007 centimeter (7 mg/cm^2).

CG. "SI" means the international system of units.

CH. "Site boundary" means that line beyond which the land or property is not owned, leased or otherwise controlled by the licensee or registrant.

CI. "Stochastic effect" (probabilistic effect) means a health effect that occurs randomly and for which the probability of the effect occurring, rather than its severity, is assumed to be a linear function of dose without threshold. Hereditary effects and cancer incidence are examples of stochastic effects.

CJ. "Supplied-air respirator" (SAR) or airline respirator means an atmosphere-supplying respirator for which the source of breathing air is not designed to be carried by the user.

CK. "TEDE" (total effective dose equivalent) means the sum of the effective dose equivalent for external exposures and the committed effective dose equivalent for internal exposures.

CL. "Tight-fitting facepiece" means a respiratory inlet covering that forms a complete seal with the face.

CM. "TODE" (total organ dose equivalent) means the sum of the deep dose equivalent and the committed dose equivalent to the organ receiving the highest dose as described in Paragraph (6) of Subsection A of 20.3.4.446 NMAC.

CN. "Unrestricted area" means an area, access to which is neither limited nor controlled by the licensee or registrant.

CO. "User seal check" (fit check) means an action conducted by the respirator user to determine if the respirator is properly seated to the face. Examples include negative pressure check, positive pressure check, irritant smoke check or isoamyl acetate check.

CP. "Very high radiation area" means an area, accessible to individuals, in which radiation levels from radiation sources external to the body could result in an individual receiving an absorbed dose in excess of 500 rads (5 grays) in 1 hour at 1 meter from a radiation source or 1 meter from any surface that the radiation penetrates.

CQ. "Waste disposal site operators" means persons licensed to dispose of radioactive waste.

CR. "Waste handling licensees" means persons licensed to receive and store radioactive wastes prior to disposal or persons licensed to dispose of radioactive waste.

CS. "Week" means 7 consecutive days starting on Sunday.

CT. "Weighting factor" (w_T) for an organ or tissue (T) means the proportion of the risk of stochastic effects resulting from irradiation of that organ or tissue to the total risk of stochastic effects when the whole body is irradiated uniformly. For calculating the effective dose equivalent, the values of w_T are:

ORGAN DOSE WEIGHTING FACTORS	
Organ or Tissue	w_T
Gonads	0.25
Breast	0.15
Red bone marrow	0.12
Lung	0.12
Thyroid	0.03
Bone surfaces	0.03
Remainder	0.30 ¹
Whole Body	1.00 ²

table 7.1 notes:

¹ 0.30 results from 0.06 for each of 5 "remainder" organs, excluding the skin and the lens of the eye, that receive the highest doses.

² for the purpose of weighting the external whole body dose, for adding it to the internal dose, a single weighting factor, $w_T = 1.0$, has been specified. The use of other weighting factors for external exposure will be approved on a case-by-case basis until such time as specific guidance is issued.

CU. "Whole body" means, for purpose of external exposure, head, trunk including male gonads, arms above the elbow or legs above the knee.

CV. "Worker" means an individual engaged in work under a license or registration issued by the department and controlled by a licensee or registrant, but does not include the licensee or registrant.

CW. "Working level" (WL) means any combination of short-lived radon daughters in 1 liter of air that will result in the ultimate emission of $1.3E+5$ megaelectronvolts of potential alpha particle energy. The short-lived radon daughters are for radon-222: polonium-218, lead-214, bismuth-214 and polonium-214; and for radon-220: polonium-216, lead-212, bismuth-212 and polonium-212.

CX. "Working level month" (WLM) means exposure to 1 working level for 170 hours (2,000 working hours per year divided by 12 months per year is approximately equal to 170 hours per month).

CY. "Year" means the period of time beginning in January used to determine compliance with the provisions of these regulations. The licensee or registrant may change the starting date of the year used to determine compliance by the licensee or registrant provided that the change is made at the beginning of the year and that no day is omitted or duplicated in consecutive years.

[20.3.4.7 NMAC - Rp, 20.3.4.7 NMAC, 04/30/2009; A, 06/30/2011]

20.3.4.8 UNITS OF EXPOSURE AND DOSE:

A. As used in these regulations, the unit of exposure is the coulomb per kilogram (C/kg) of air. One roentgen is equal to $2.58E-4$ coulomb per kilogram of air.

B. As used in these regulations, the units of dose are:

(1) gray (Gy) is the SI unit of absorbed dose; one gray is equal to an absorbed dose of 1 joule per kilogram (1 gray = 100 rads);

(2) rad is the special unit of absorbed dose; one rad is equal to an absorbed dose of 100 erg per gram or 0.01 joule per kilogram (1 rad = 0.01 gray);

(3) rem is the special unit of any of the quantities expressed as dose equivalent; the dose equivalent in rem is equal to the absorbed dose in rad multiplied by the quality factor (1 rem = 0.01 sievert); and

(4) sievert is the SI unit of any of the quantities expressed as dose equivalent; the dose equivalent in sievert is equal to the absorbed dose in gray multiplied by the quality factor (1 sievert = 100 rems).

C. As used in these regulations, the quality factors for converting absorbed dose to dose equivalent are shown in table 8.1.

TABLE 8.1		
QUALITY FACTORS AND ABSORBED DOSE EQUIVALENCIES		
Type of Radiation	Quality Factor (Q)	Absorbed Dose Equal to A Unit Dose Equivalent ¹
X, gamma, or beta radiation and high-speed electrons	1	1
Alpha particles, multiple-charged particles, fission fragments and heavy particles of unknown charge	20	0.05
Neutrons of unknown energy	10	0.1
High-energy protons	10	0.1

Table 8.1 note: ¹absorbed dose in gray equal to 1 sievert or the absorbed dose in rad equal to 1 rem.

D. If it is more convenient to measure the neutron fluence rate than to determine the neutron dose equivalent rate in sievert per hour or rem per hour, as provided in Subsection C of this section, 0.01 sievert (1 rem) of neutron radiation of unknown energies may, for purposes of these regulations, be assumed to result from a total fluence of 25 million neutrons per square centimeter incident upon the body. If sufficient information exists to estimate the approximate energy distribution of the neutrons, the licensee or registrant may use the fluence rate per unit dose equivalent or the appropriate Q value from table 8.2 to convert a measured tissue dose in gray or rad to dose equivalent in sievert or rem (Note: The values in table 8.2 are presented in the "E" notation. In this notation a value of 5E-1 represents a value of 5×10^{-1} or 0.5. A value of 4E+2 represents 4×10^2 or 400.)

TABLE 8.2			
MEAN QUALITY FACTORS, Q, AND FLUENCE PER UNIT DOSE EQUIVALENT FOR MONOENERGETIC NEUTRONS			
Neutron Energy (megaelectronvolt)	Quality Factor¹ (Q)	Fluence per Unit Dose Equivalent² (neutrons centimeter⁻² rem⁻¹)	Fluence per Unit Dose Equivalent (neutrons centimeter⁻² sievert⁻¹)
(thermal) 2.5E-8	2	980E+6	980E+8
1E-7	2	980E+6	980E+8
1E-6	2	810E+6	810E+8
1E-5	2	810E+6	810E+8
1E-4	2	840E+6	840E+8
1E-3	2	980E+6	980E+8
1E-2	2.5	1010E+6	1010E+8
1E-1	7.5	170E+6	170E+8
5E-1	11	39E+6	39E+8
1	11	27E+6	27E+8
2.5	9	29E+6	29E+8
5	8	23E+6	23E+8
7	7	24E+6	24E+8
10	6.5	24E+6	24E+8
14	7.5	17E+6	17E+8
20	8	16E+6	16E+8
40	7	14E+6	14E+8
60	5.5	16E+6	16E+8
1E+2	4	20E+6	20E+8
2E+2	3.5	19E+6	19E+8
3E+2	3.5	16E+6	16E+8
4E+2	3.5	14E+6	14E+8

Table 8.2 notes:

¹ value of quality factor (Q) at the point where the dose equivalent is maximum in a 30-centimeter diameter cylinder tissue-equivalent phantom;

² monoenergetic neutrons incident normally on a 30-centimeter diameter cylinder tissue-equivalent phantom.

[20.3.4.8 NMAC - Rp, 20.3.1.117 NMAC, 04/30/2009]

20.3.4.9 UNITS OF ACTIVITY:

For purposes of these regulations, activity is expressed in the SI unit of becquerel (Bq) or in the special unit of curie (Ci), or their multiples, or disintegrations or transformations per unit of time.

A. One becquerel (Bq) = 1 disintegration or transformation per second (dps or tps).

B. One curie (Ci) = 3.7×10^{10} disintegration or transformation per second (dps or tps) = 3.7×10^{10} becquerel (Bq) = 2.22×10^{12} disintegration or transformation per minute (dpm or tpm).

[20.3.4.9 NMAC - Rp, 20.3.1.7 NMAC 04/30/2009]

20.3.4.10-20.3.4.402 [RESERVED]

20.3.4.403 IMPLEMENTATION:

A. Any existing license or registration condition or technical specification that is more restrictive than a requirement in this part remains in force until there is a technical specification change, license amendment or renewal, or registration amendment or renewal.

B. If a license or registration condition or technical specification exempted a licensee or registrant from a requirement in the standards for protection against radiation in effect prior to May 3, 1995 (see 20.3.4 NMAC codified as of May 3, 1995), it continues to exempt the licensee or registrant from the corresponding provision of this part.

C. If a license or registration condition cites provisions of this part in effect prior to the effective date of the regulations in this part, which do not correspond to any current provisions of this part, then the license or registration condition remains in force until there is a technical specification change, an amendment or renewal of the license or registration that modifies or removes that condition.

[20.3.4.403 NMAC - Rp, 20.3.4.403 NMAC, 04/30/2009]

20.3.4.404 RADIATION PROTECTION PROGRAMS:

A. Each licensee or registrant shall develop, document and implement a radiation protection program commensurate with the scope and extent of licensed or registered activities and sufficient to ensure compliance with the provisions of this part (see 20.3.4.441 NMAC for recordkeeping requirements related to these programs.)

B. The licensee or registrant shall use, to the extent practical, procedures and engineering controls based upon sound radiation protection principles to achieve occupational doses and doses to members of the public that are ALARA.

C. The licensee or registrant shall, at intervals not to exceed 12 months, review the radiation protection program content and implementation with all employees before beginning their job duties and annually thereafter.

D. To implement the ALARA requirements of Subsection B of this section, and notwithstanding the requirements in 20.3.4.413 NMAC, a constraint on air emissions of radioactive material to the environment, excluding Radon-222 and its daughters, shall be established by licensees such that the individual member of the public likely to receive the highest dose will not be expected to receive a total effective dose equivalent in excess of 10 millirems (0.1 millisievert) per year from these emissions. If a licensee subject to this requirement exceeds this dose constraint, the licensee shall report the exceedance as provided in 20.3.4.453 NMAC and promptly take appropriate corrective action to ensure against recurrence.

[20.3.4.404 NMAC - Rp, 20.3.4.404 NMAC, 4/30/2009, A, 5/1/2024]

20.3.4.405 OCCUPATIONAL DOSE LIMITS FOR ADULTS:

A. Annual limits. The licensee or registrant shall control the occupational dose to individual adults, except for planned special exposures pursuant to 20.3.4.410 NMAC, to the following dose limits:

(1) an annual limit, which is the more limiting of:

(a) the total effective dose equivalent being equal to 5 rems (0.05 sievert); or

(b) the sum of the deep dose equivalent and the committed dose equivalent to any individual organ or tissue other than the lens of the eye being equal to 50 rems (0.5 sievert); and

(2) the annual limits to the lens of the eye, to the skin of the whole body, and to the skin of extremities which are:

(a) a lens dose equivalent of 15 rems (0.15 sievert); and

(b) a shallow dose equivalent of 50 rems (0.5 sievert) to the skin of the whole body or to the skin of any extremity.

B. Doses received in excess of the annual limits, including doses received during accidents, emergencies and planned special exposures, shall be subtracted from the limits for planned special exposures that the individual may receive during the current year and during the individual's lifetime (see Subsection E of 20.3.4.410 NMAC).

C. Determining, assessing and assigning dose equivalent.

(1) When the external exposure is determined by measurement with an external personal monitoring device, the deep dose equivalent must be used in place of the effective dose equivalent, unless the effective dose equivalent is determined by a dosimetry method approved by the department. The assigned shallow-dose equivalent must be the dose averaged over the contiguous 10 square centimeters of skin receiving the highest exposure. The deep-dose equivalent, lens dose equivalent and shallow-dose equivalent may be assessed from surveys or other radiation measurements for the purpose of demonstrating compliance with the occupational dose limits, if the individual monitoring device was not in the region of highest potential exposure, or the results of individual monitoring are unavailable.

(2) **Working with fluoroscopic equipment.** When a protective apron is worn while working with medical fluoroscopic equipment and monitoring is conducted as specified in Paragraph (5) of Subsection A of 20.3.4.417 NMAC, the effective dose equivalent for external radiation shall be determined as follows:

(a) when only one individual monitoring device is used and it is located at the neck outside the protective apron, the reported deep dose equivalent shall be the effective dose equivalent for external radiation; or

(b) when only one individual monitoring device is used and it is located at the neck outside the protective apron, and the reported dose exceeds 25 percent of the limit specified in Subsection A of this section, the reported deep dose equivalent value multiplied by 0.3 shall be the effective dose equivalent for external radiation; or

(c) when individual monitoring devices are worn, both under the protective apron at the waist and outside the protective apron at the neck, the effective dose equivalent for external radiation shall be assigned the value of the sum of the deep dose equivalent reported for the individual monitoring device located at the waist under the protective apron multiplied by 1.5 and the deep dose equivalent reported for the individual monitoring device located at the neck outside the protective apron multiplied by 0.04.

D. DAC and ALI. Derived air concentration (DAC) and annual limit on intake (ALI) values are specified in table I of 20.3.4.461 NMAC, and may be used to determine the individual's dose and to demonstrate compliance with the occupational dose limits.

E. Uranium limits. Notwithstanding the annual dose limits, the licensee shall limit the soluble uranium intake by an individual to 10 milligrams in a week in consideration of chemical toxicity (see table note 3 of 20.3.4.461 NMAC.)

F. Prior dose. The licensee or registrant shall reduce the dose that an individual may be allowed to receive in the current year by the amount of occupational dose

received while employed by any other person during the current year (see 20.3.4.409 NMAC).

[20.3.4.405 NMAC - Rp, 20.3.4.405 NMAC, 04/30/2009; A, 06/30/2011]

20.3.4.406 COMPLIANCE WITH REQUIREMENTS FOR SUMMATION OF EXTERNAL AND INTERNAL DOSES:

A. If the licensee or registrant is required to monitor pursuant to both Subsections A and B of 20.3.4.417 NMAC, the licensee or registrant shall demonstrate compliance with the dose limits by summing external and internal doses. If the licensee or registrant is required to monitor only pursuant to either Subsection A or Subsection B of 20.3.4.417 NMAC, then summation is not required to demonstrate compliance with the dose limits. The licensee or registrant may demonstrate compliance with the requirements for summation of external and internal doses pursuant to Subsections B, C and D of this section. The dose equivalents for the lens of the eye, the skin and the extremities are not included in the summation, but are subject to separate limits.

B. Intake by Inhalation. If the only intake of radionuclides is by inhalation, the total effective dose equivalent limit is not exceeded if the sum of the deep dose equivalent divided by the total effective dose equivalent limit, and one of the following, does not exceed unity:

- (1) the sum of the fractions of the inhalation ALI for each radionuclide; or
- (2) the total number of derived air concentration-hours (DAC-hours) for all radionuclides divided by 2,000; or
- (3) the sum of the calculated committed effective dose equivalents to all significantly irradiated organs or tissues (T) calculated from bioassay data using appropriate biological models and expressed as a fraction of the annual limit; for purposes of this requirement, an organ or tissue is deemed to be significantly irradiated if, for that organ or tissue, the product of the weighting factors, w_T , and the committed dose equivalent, $H_{T,50}$, per unit intake is greater than 10 percent of the maximum weighted value of $H_{T,50}$, that is, $w_T H_{T,50}$, per unit intake for any organ or tissue.

C. Intake by Oral Ingestion. If the occupationally exposed individual receives an intake of radionuclides by oral ingestion greater than 10 percent of the applicable oral ALI, the licensee or registrant shall account for this intake and include it in demonstrating compliance with the limits.

D. Intake through Wounds or Absorption through Skin. The licensee or registrant shall evaluate and, to the extent practical, account for intakes through wounds or skin absorption. The intake through intact skin has been included in the calculation of DAC for hydrogen-3 and does not need to be evaluated or accounted for pursuant to Subsection D of 20.3.4.406 NMAC.

[20.3.4.406 NMAC - Rp, 20.3.4.406 NMAC, 04/30/2009]

20.3.4.407 DETERMINATION OF EXTERNAL DOSE FROM AIRBORNE RADIOACTIVE MATERIAL:

A. Licensees or registrants shall, when determining the dose from airborne radioactive material, include the contribution to the deep dose equivalent, lens dose equivalent and shallow dose equivalent from external exposure to the radioactive cloud (see 20.3.4.461 NMAC, table notes 1 and 2).

B. Airborne radioactivity measurements and DAC values shall not be used as the primary means to assess the deep dose equivalent when the airborne radioactive material includes radionuclides other than noble gases or if the cloud of airborne radioactive material is not relatively uniform. The determination of the deep dose equivalent to an individual shall be based upon measurements using instruments or individual monitoring devices.

[20.3.4.407 NMAC - Rp, 20.3.4.407 NMAC, 04/30/2009]

20.3.4.408 DETERMINATION OF INTERNAL EXPOSURE:

A. For purposes of assessing dose used to determine compliance with occupational dose equivalent limits, the licensee or registrant shall, when required pursuant to 20.3.4.417 NMAC, take suitable and timely measurements of:

- (1) concentrations of radioactive materials in air in work areas; or
- (2) quantities of radionuclides in the body; or
- (3) quantities of radionuclides excreted from the body; or
- (4) combinations of these measurements.

B. Unless respiratory protective equipment is used, as provided in 20.3.4.423 NMAC, or the assessment of intake is based on bioassays, the licensee or registrant shall assume that an individual inhales radioactive material at the airborne concentration in which the individual is present.

C. When specific information on the physical and biochemical properties of the radionuclides taken into the body or the behavior of the material in an individual is known, the licensee or registrant may:

- (1) use that information to calculate the committed effective dose equivalent, and, if used, the licensee or registrant shall document that information in the individual's record;

(2) upon prior approval of the department, adjust the DAC or ALI values to reflect the actual physical and chemical characteristics of airborne radioactive material, for example, aerosol size distribution or density; and

(3) separately assess the contribution of fractional intakes of class D, W or Y compounds of a given radionuclide to the committed effective dose equivalent (see 20.3.4.461 NMAC).

D. If the licensee or registrant chooses to assess intakes of class Y material using the measurements given in Paragraphs (2) or (3) of Subsection A of this section, the licensee or registrant may delay the recording and reporting of the assessments for periods up to 7 months, unless otherwise required by 20.3.4.452 NMAC or 20.3.4.453 NMAC. This delay permits the licensee or registrant to make additional measurements basic to the assessments.

E. If the identity and concentration of each radionuclide in a mixture are known, the fraction of the DAC applicable to the mixture for use in calculating DAC-hours shall be either:

(1) the sum of the ratios of the concentration to the appropriate DAC value, that is, D, W or Y, from 20.3.4.461 NMAC for each radionuclide in the mixture; or

(2) the ratio of the total concentration for all radionuclides in the mixture to the most restrictive DAC value for any radionuclide in the mixture.

F. If the identity of each radionuclide in a mixture is known, but the concentration of one or more of the radionuclides in the mixture is not known, the DAC for the mixture shall be the most restrictive DAC of any radionuclide in the mixture.

G. When a mixture of radionuclides in air exists, a licensee or registrant may disregard certain radionuclides in the mixture if:

(1) the licensee or registrant uses the total activity of the mixture in demonstrating compliance with the dose limits in 20.3.4.405 NMAC and in complying with the monitoring requirements in Subsection B of 20.3.4.417 NMAC; and

(2) the concentration of any radionuclide disregarded is less than 10 percent of its DAC; and

(3) the sum of these percentages for all of the radionuclides disregarded in the mixture does not exceed 30 percent.

H. When determining the committed effective dose equivalent, the following information may be considered:

(1) in order to calculate the committed effective dose equivalent, the licensee or registrant may assume that the inhalation of one ALI, or an exposure of 2,000 DAC-hours, results in a committed effective dose equivalent of 5 rems (0.05 sievert) for radionuclides that have their ALIs or DACs based on the committed effective dose equivalent;

(2) for an ALI and the associated DAC determined by the nonstochastic organ dose limit of 50 rems (0.5 sievert), the intake of radionuclides that would result in a committed effective dose equivalent of 5 rems (0.05 sievert), that is, the stochastic ALI, is listed in parentheses in table I of 20.3.4.461 NMAC; the licensee or registrant may, as a simplifying assumption, use the stochastic ALI to determine committed effective dose equivalent; however, if the licensee or registrant uses the stochastic ALI, the licensee or registrant shall also demonstrate that the limit in Paragraph (2) of Subsection A of 20.3.4.405 NMAC is met.

[20.3.4.408 NMAC - Rp, 20.3.4.408 NMAC, 04/30/2009]

20.3.4.409 DETERMINATION OF PRIOR OCCUPATIONAL DOSE:

A. For each individual who may enter the licensee's or registrant's restricted area and is likely to receive, in a year, an occupational dose requiring monitoring pursuant to 20.3.4.417 NMAC, the licensee or registrant shall determine the occupational radiation dose received during the current year.

B. Prior to permitting an individual to participate in a planned special exposure, the licensee or registrant shall determine:

(1) the internal and external doses from all previous planned special exposures; and

(2) all doses in excess of the limits, including doses received during accidents and emergencies, received during the lifetime of the individual.

C. In complying with the requirements of Subsections A or B of this section, a licensee or registrant may:

(1) accept, as a record of the occupational dose that the individual received during the current year, a written signed statement from the individual, or from the individual's most recent employer for work involving radiation exposure, that discloses the nature and the amount of any occupational dose that the individual received during the current year; and

(2) accept, as the record of lifetime cumulative radiation dose, a form *cumulative occupational dose history* or equivalent, signed by the individual and countersigned by an appropriate official of the most recent employer for work involving

radiation exposure, or the individual's current employer, if the individual is not employed by the licensee or registrant; and

(3) obtain reports of the individual's dose equivalent from the most recent employer for work involving radiation exposure, or the individual's current employer, if the individual is not employed by the licensee or registrant, by telephone, telegram, facsimile or letter; the licensee or registrant shall request a written verification of the dose data if the authenticity of the transmitted report cannot be established.

D. Recording exposure history.

(1) The licensee or registrant shall record the exposure history of each individual, as required by Subsections A and B of this section, on department form *cumulative occupational dose history*, or other clear and legible record, including all the information required by that form. The form or record shall show each period in which the individual received occupational exposure to radiation or radioactive material and shall be signed by the individual who received the exposure. For each period for which the licensee or registrant obtains reports, the licensee or registrant shall use the dose shown in the report in preparing department form *cumulative occupational dose history* or equivalent. For any period in which the licensee or registrant does not obtain a report, the licensee or registrant shall place a notation on department form *cumulative occupational dose history* or equivalent indicating the periods of time for which data are not available.

(2) Licensees or registrants are not required to partition historical dose between external dose equivalent(s) and internal committed dose equivalent(s). Further, occupational exposure histories obtained and recorded on department form *cumulative occupational dose history* or equivalent before the effective date of these regulations, might not have included effective dose equivalent, but may be used in the absence of specific information on the intake of radionuclides by the individual.

E. If the licensee or registrant is unable to obtain a complete record of an individual's current and previously accumulated occupational dose, the licensee or registrant shall assume:

(1) in establishing administrative controls pursuant to Subsection F of 20.3.4.405 NMAC for the current year, that the allowable dose limit for the individual is reduced by 1.25 rems (12.5 millisieverts) for each quarter for which records were unavailable and the individual was engaged in activities that could have resulted in occupational radiation exposure; and

(2) that the individual is not available for planned special exposures.

F. The licensee or registrant shall retain the records on department form *cumulative occupational dose history* or equivalent until the department terminates each pertinent license or registration requiring this record. The licensee or registrant shall retain

records used in preparing department form *cumulative occupational dose history* or equivalent for 3 years after the record is made.

[20.3.4.409 NMAC - Rp, 20.3.4.409 NMAC, 04/30/2009; A, 06/30/2011]

20.3.4.410 PLANNED SPECIAL EXPOSURES:

A licensee or registrant may authorize an adult worker to receive doses in addition to and accounted for separately from the doses received under the limits specified in 20.3.4.405 NMAC provided that each of the following conditions is satisfied:

A. the licensee or registrant authorizes a planned special exposure only in an exceptional situation when alternatives that might avoid the dose estimated to result from the planned special exposure are unavailable or impractical;

B. the licensee or registrant, and employer if the employer is not the licensee or registrant, specifically authorizes the planned special exposure, in writing, before the exposure occurs;

C. before a planned special exposure, the licensee or registrant ensures that each individual involved is:

(1) informed of the purpose of the planned operation;

(2) informed of the estimated doses and associated potential risks and specific radiation levels or other conditions that might be involved in performing the task; and

(3) instructed in the measures to be taken to keep the dose ALARA considering other risks that may be present;

D. prior to permitting an individual to participate in a planned special exposure, the licensee or registrant ascertains prior doses as required by Subsection B of 20.3.4.409 NMAC during the lifetime of the individual for each individual involved;

E. subject to Subsection B of 20.3.4.405 NMAC, the licensee or registrant shall not authorize a planned special exposure that would cause an individual to receive a dose from all planned special exposures and all doses in excess of the limits to exceed:

(1) the numerical values of any of the dose limits in Subsection A of 20.3.4.405 NMAC in any year; and

(2) five times the annual dose limits in Subsection A of 20.3.4.405 NMAC during the individual's lifetime;

F. the licensee or registrant maintains records of the conduct of a planned special exposure in accordance with 20.3.4.445 NMAC and submits a written report in accordance with 20.3.4.454 NMAC;

G. the licensee or registrant records the best estimate of the dose resulting from the planned special exposure in the individual's record and informs the individual, in writing, of the dose within 30 days from the date of the planned special exposure; the dose from planned special exposures shall not be considered in controlling future occupational dose of the individual pursuant to Subsection A of 20.3.4.405 NMAC but shall be included in evaluations required by Subsections D and E of this section.

[20.3.4.410 NMAC - Rp, 20.3.4.410 NMAC, 04/30/2009]

20.3.4.411 OCCUPATIONAL DOSE LIMITS FOR MINORS:

The annual occupational dose limits for minors are 10 percent of the annual occupational dose limits specified for adult workers in 20.3.4.405 NMAC.

[20.3.4.411 NMAC - Rp, 20.3.4.411 NMAC, 04/30/2009]

20.3.4.412 DOSE EQUIVALENT TO AN EMBRYO/FETUS:

A. The licensee or registrant shall ensure that the dose equivalent to the embryo/fetus during the entire pregnancy, due to the occupational exposure of a declared pregnant woman, does not exceed 0.5 rem (5 millisieverts) (see 20.3.4.446 NMAC for recordkeeping requirements).

B. The licensee or registrant shall make efforts to avoid substantial variation above a uniform monthly exposure rate to a declared pregnant woman so as to satisfy the limit in Subsection A of this section.

C. The dose equivalent to the embryo/fetus is the sum of:

(1) the dose equivalent to the embryo/fetus resulting from radionuclides in the embryo/fetus and radionuclides in the declared pregnant woman; and

(2) the deep dose equivalent that is most representative of the dose to the embryo/fetus from external radiation, that is, in the mother's lower torso region:

(a) if multiple measurements have not been made, assignment of the highest deep dose equivalent for the declared pregnant woman shall be the dose to the embryo/fetus, in accordance with Subsection C of 20.3.4.405 NMAC; or

(b) if multiple measurements have been made, assignment of the deep dose equivalent for the declared pregnant woman from the individual monitoring device which is most representative of the dose to the embryo/fetus shall be the dose to the

embryo/fetus; assignment of the highest deep dose equivalent for the declared pregnant woman to the embryo/fetus is not required unless that dose is also the most representative deep dose equivalent for the region of the embryo/fetus.

D. If the dose equivalent to the embryo/fetus is found to have exceeded 0.5 rem (5 millisieverts), or is within 0.05 rem (0.5 millisievert) of this dose, by the time the woman declares the pregnancy to the licensee or registrant, the licensee or registrant shall be deemed to be in compliance with Subsection A of this section if the additional dose equivalent to the embryo/fetus does not exceed 0.05 rem (0.5 millisievert) during the remainder of the pregnancy.

[20.3.4.412 NMAC - Rp, 20.3.4.412 NMAC, 04/30/2009]

20.3.4.413 DOSE LIMITS FOR INDIVIDUAL MEMBERS OF THE PUBLIC:

A. Each licensee or registrant shall conduct operations so that:

(1) the total effective dose equivalent to individual members of the public from the licensed or registered operation does not exceed 0.1 rem (1 millisievert) in a year, exclusive of the dose contributions from background radiation, from any medical administration the individual has received, from exposure to individuals administered radioactive material and released under Subsection I of 20.3.7.703 NMAC, from voluntary participation in medical research programs, and from the licensee's disposal of radioactive material into sanitary sewerage in accordance with 20.3.4.435 NMAC; and

(2) the dose in any unrestricted area from external sources, exclusive of dose contributions from patients administered radioactive material and released under Subsection I of 20.3.7.703 NMAC, does not exceed 0.002 rem (0.02 millisievert) in any one hour.

B. If the licensee or registrant permits members of the public to have access to controlled areas, the limits for members of the public continue to apply to those individuals.

C. A licensee, registrant, or an applicant for a license or registration may apply for prior department authorization to operate up to an annual dose limit for an individual member of the public of 0.5 rem (5 millisieverts). This application shall include the following information:

(1) demonstration of the need for and the expected duration of operations in excess of the limit in Subsection A of this section;

(2) the licensee's or registrant's program to assess and control dose within the 0.5 rem (5 millisieverts) annual limit;

(3) the procedures to be followed to maintain the dose ALARA.

D. In addition to the requirements of this part, a licensee or registrant subject to the provisions of the EPA's generally applicable environmental radiation standards in 40 CFR 190 shall comply with those standards.

E. The department may impose additional restrictions on radiation levels in unrestricted areas and on the total quantity of radionuclides that a licensee or registrant may release in effluents in order to restrict the collective dose.

F. Notwithstanding Paragraph (1) of Subsection A of this section, a licensee may permit visitors to an individual who cannot be released, under Subsection I of 20.3.7.703 NMAC, to receive a radiation dose greater than 0.1 rem (1 millisievert) if:

(1) the radiation dose received does not exceed 0.5 rem (5 millisieverts); and

(2) the authorized user, as defined in 20.3.7 NMAC, has determined before the visit that it is appropriate.

[20.3.4.413 NMAC - Rp, 20.3.4.413 NMAC, 04/30/2009]

20.3.4.414 COMPLIANCE WITH DOSE LIMITS FOR INDIVIDUAL MEMBERS OF THE PUBLIC:

A. The licensee or registrant shall make or cause to be made surveys of radiation levels in unrestricted and controlled areas and radioactive materials in effluents released to unrestricted and controlled areas to demonstrate compliance with the dose limits in 20.3.4.413 NMAC for individual members of the public.

B. A licensee or registrant shall show compliance with the annual dose limit in 20.3.4.413 NMAC by:

(1) demonstrating by measurement or calculation that the total effective dose equivalent to the individual likely to receive the highest dose from the licensed or registered operation does not exceed the annual dose limit; or

(2) demonstrating that:

(a) the annual average concentrations of radioactive material released in gaseous and liquid effluents at the boundary of the unrestricted area do not exceed the values specified in table II of 20.3.4.461 NMAC; and

(b) if an individual were continuously present in an unrestricted area, the dose from external sources would not exceed 0.002 rem (0.02 millisievert) in an hour and 0.05 rem (0.5 millisievert) in a year.

C. Upon approval from the department, the licensee or registrant may adjust the effluent concentration values in table II of 20.3.4.461 NMAC for members of the public, to take into account the actual physical and chemical characteristics of the effluents, such as, aerosol size distribution, solubility, density, radioactive decay equilibrium and chemical form.

[20.3.4.414 NMAC - Rp, 20.3.4.414 NMAC, 04/30/2009]

20.3.4.415 TESTING FOR LEAKAGE OR CONTAMINATION OF SEALED SOURCES:

A. The licensee in possession of any sealed source shall assure that:

(1) each sealed source, except as specified in Subsection B of this section, is tested for leakage or contamination and the test results are received before the sealed source is put into use unless the licensee has a certificate from the transferor indicating that the sealed source was tested within the frequencies specified in Paragraphs (2) and (3) of this subsection, before transfer to the licensee;

(2) each sealed source that is not designed to emit alpha particles is tested for leakage or contamination at intervals not to exceed 6 months, or at alternative intervals specified by the source manufacturer and as approved by the department, NRC or an agreement state;

(3) each sealed source that is designed to emit alpha particles is tested for leakage or contamination at intervals not to exceed 3 months, or at alternative intervals specified by the source manufacturer and as approved by the department, NRC or an agreement state;

(4) for each sealed source that is required to be tested for leakage or contamination, at any other time there is reason to suspect that the sealed source might have been damaged or might be leaking, the licensee shall assure that the sealed source is tested for leakage or contamination before further use;

(5) tests for leakage for all sealed sources, except brachytherapy sources manufactured to contain radium, shall be capable of detecting the presence of 0.005 microcuries (185 becquerels) of radioactive material on a test sample; test samples shall be taken from the sealed source or from the surfaces of the container in which the sealed source is stored or mounted on which one might expect contamination to accumulate; for a sealed source contained in a device, test samples are obtained when the source is in the "off" position;

(6) the test for leakage for brachytherapy sources manufactured to contain radium shall be capable of detecting an absolute leakage rate of 0.001 microcuries (37 becquerels) of radon-222 in a 24 hour period when the collection efficiency for radon-

222 and its daughters has been determined with respect to collection method, volume and time; and

(7) tests for contamination from radium daughters shall be taken on the interior surface of brachytherapy source storage containers and shall be capable of detecting the presence of 0.005 microcuries (185 becquerels) of a radium daughter which has a half-life greater than 4 days.

B. A licensee need not perform tests for leakage or contamination on the following sealed sources:

(1) sealed sources containing only radioactive material with a half-life of less than 30 days;

(2) sealed sources containing only radioactive material as a gas;

(3) sealed sources containing 100 microcuries (3.7 megabecquerels) or less of beta or photon-emitting material or 10 microcuries (370 kilobecquerels) or less of alpha-emitting material;

(4) sealed sources containing only hydrogen-3;

(5) seeds of iridium-192 encased in nylon ribbon; and

(6) sealed sources, except teletherapy and brachytherapy sources, which are not being used and identified as in storage; however, the licensee shall test each such sealed source for leakage or contamination and receive the test results before any use or transfer of the source unless it has been tested for leakage or contamination within such frequency as specified in Paragraphs (2) and (3) of Subsection A of this section before the date of use or transfer.

C. Tests for leakage or contamination from sealed sources shall be performed by persons specifically authorized by the department.

D. Test results shall be kept in units of becquerel or microcurie and maintained for inspection by the department. Records of test results for sealed sources shall be made pursuant to 20.3.4.443 NMAC.

E. The following shall be considered evidence that a sealed source is leaking:

(1) the presence of 0.005 microcuries (185 becquerels) or more of removable contamination on any test sample;

(2) leakage of 0.001 microcuries (37 becquerels) of radon-222 per 24 hours for brachytherapy sources manufactured to contain radium; and

(3) the presence of removable contamination resulting from the decay of 0.005 microcuries (185 becquerels) or more of radium.

F. The licensee shall immediately withdraw a leaking sealed source from use and shall take action to prevent the spread of contamination. The leaking sealed source shall be repaired or disposed of in accordance with this part.

G. Reports of test results for leaking or contaminated sealed sources shall be made pursuant to 20.3.4.458 NMAC.

[20.3.4.415 NMAC - Rp, 20.3.4.415 NMAC, 04/30/2009]

20.3.4.416 GENERAL REQUIREMENTS FOR SURVEY AND MONITORING:

A. Each licensee or registrant shall make, or cause to be made, surveys of areas, including the subsurface, that:

(1) may be necessary to demonstrate compliance with this part; and

(2) are necessary under the circumstances to evaluate:

(a) the magnitude and extent of radiation levels;

(b) concentrations or quantities of radioactive material and residual radioactivity;

(c) the potential radiological hazards of the radiation levels and residual radioactivity detected; and

(d) notwithstanding 10 CFR 20 or equivalent state regulations of this part, records from surveys describing the location and amount of subsurface residual radioactivity identified at the site must be kept with records important for decommissioning, and such records must be retained in accordance with the applicable regulations in 10 CFR parts 30, 40, 50, 70, or 72.30 or equivalent state regulations.

B. The licensee or registrant shall ensure that instruments and equipment used for quantitative radiation measurements (e.g. dose rate and effluent monitoring) are calibrated at intervals not to exceed 12 months, except when a more frequent interval is specified in another applicable part of this chapter or in a license condition.

C. All personnel dosimeters (except for direct and indirect reading pocket ionization chambers and those dosimeters used to measure the dose to the extremity) that require processing to determine the radiation dose and that are used by licensees and registrants to comply with 20.3.4.405 NMAC, with other applicable provisions of this chapter or with conditions specified in a license or registration shall be processed and evaluated by a dosimetry processor:

(1) holding current personnel dosimetry accreditation from the national voluntary laboratory accreditation program (NVLAP) of the national institute of standards and technology (NIST); and

(2) approved in this accreditation process for the type of radiation or radiations included in the national voluntary laboratory accreditation program (NVLAP) program that most closely approximates the type of radiation or radiations for which the individual wearing the dosimeter is monitored.

D. The licensee or registrant shall ensure that adequate precautions are taken to prevent a deceptive exposure of an individual monitoring device.

[20.3.4.416 NMAC - Rp, 20.3.4.416 NMAC, 04/30/2009; A, 06/13/2017]

20.3.4.417 CONDITIONS REQUIRING INDIVIDUAL MONITORING OF EXTERNAL AND INTERNAL OCCUPATIONAL DOSE:

Each licensee or registrant shall monitor exposures from sources of radiation at levels sufficient to demonstrate compliance with the occupational dose limits of this part. As a minimum the following requirements shall be met.

A. Each licensee or registrant shall monitor occupational exposure to radiation from licensed and unlicensed radiation sources under the control of the licensee or registrant and shall supply and require the use of individual monitoring devices by:

(1) adults likely to receive, in 1 year from sources external to the body, a dose in excess of 10 percent of the limits in Subsection A of 20.3.4.405 NMAC;

(2) minors likely to receive, in 1 year, from radiation sources external to the body, a deep dose equivalent in excess of 0.1 rem (1 millisievert), a lens dose equivalent in excess of 0.15 rem (1.5 millisieverts), or a shallow dose equivalent to the skin or to the extremities in excess of 0.5 rem (5 millisieverts);

(3) declared pregnant women likely to receive during the entire pregnancy, from radiation sources external to the body, a deep dose equivalent in excess of 0.1 rem (1 millisievert) (note: all of the occupational doses in Subsection A of 20.3.4.405 NMAC continue to be applicable to the declared pregnant worker as long as the embryo/fetus dose limit is not exceeded);

(4) individuals entering a high or very high radiation area; and

(5) individuals working with medical fluoroscopic equipment:

(a) an individual monitoring device used for the dose to an embryo/fetus of a declared pregnant woman, pursuant to Subsection A of 20.3.4.412 NMAC, shall be located under the protective apron at the waist;

(b) an individual monitoring device used for eye dose equivalent shall be located at the neck, or an unshielded location closer to the eye, outside the protective apron; and

(c) when only one individual monitoring device is used to determine the effective dose equivalent for external radiation pursuant to Paragraph (2) of Subsection C of 20.3.4.405 NMAC, it shall be located at the neck outside the protective apron; when a second individual monitoring device is used, for the same purpose, it shall be located under the protective apron at the waist; the second individual monitoring device is required for a declared pregnant woman.

B. Each licensee or registrant shall monitor (see 20.3.4.408 NMAC) the occupational intake of radioactive material by and assess the committed effective dose equivalent to:

(1) adults likely to receive, in 1 year, an intake in excess of 10 percent of the applicable ALI(s) in columns 1 and 2 of table I of 20.3.4.461 NMAC;

(2) minors likely to receive, in 1 year, a committed effective dose equivalent in excess of 0.1 rem (1 millisievert); and

(3) declared pregnant women likely to receive, during the entire pregnancy, a committed effective dose equivalent in excess of 0.1 rem (1 millisievert).

C. Each licensee or registrant shall ensure that individuals who are required to monitor occupational doses in accordance with Subsection A of this section wear individual monitoring devices as follows:

(1) an individual monitoring device used for monitoring the dose to the whole body shall be worn at the unshielded location of the whole body likely to receive the highest exposure; when a protective apron is worn, the location of the individual monitoring device is typically at the neck (collar); or

(2) an individual monitoring device used for monitoring the dose to an embryo/fetus of a declared pregnant woman, pursuant to Subsection A of 20.3.4.412 NMAC, shall be located at the waist under any protective apron being worn by the woman; or

(3) an individual monitoring device used for monitoring the eye dose equivalent, to demonstrate compliance with Subparagraph (a) of Paragraph (2) of Subsection A of 20.3.4.405 NMAC, shall be located at the neck (collar), outside any protective apron being worn by the monitored individual, or at an unshielded location closer to the eye; or

(4) an individual monitoring device used for monitoring the dose to the extremities, to demonstrate compliance with Subparagraph (b) of Paragraph (2) of

Subsection A of 20.3.4.405 NMAC, shall be worn on the extremity likely to receive the highest exposure; each individual monitoring device shall be oriented to measure the highest dose to the extremity being monitored.

[20.3.4.417 NMAC - Rp, 20.3.4.417 NMAC, 04/30/2009]

20.3.4.418 CONTROL OF ACCESS TO HIGH RADIATION AREAS:

A. The licensee or registrant shall ensure that each entrance or access point to a high radiation area has one or more of the following features:

(1) a control device that, upon entry into the area, causes the level of radiation to be reduced below that level at which an individual might receive a deep dose equivalent of 0.1 rem (1 millisievert) in 1 hour at 30 centimeters from the source of radiation or from any surface that the radiation penetrates; or

(2) a control device that energizes a conspicuous visible or audible alarm signal so that the individual entering the high radiation area and the supervisor of the activity are made aware of the entry; or

(3) entryways that are locked, except during periods when access to the areas is required, with positive control over each individual entry.

B. In place of the controls required by Subsection A of this section for a high radiation area, the licensee or registrant may substitute continuous direct or electronic surveillance that is capable of preventing unauthorized entry.

C. The licensee or registrant may apply to the department for approval of alternative methods for controlling access to high radiation areas.

D. The licensee or registrant shall establish the controls required by Subsections A and C of this section in a way that does not prevent individuals from leaving a high radiation area.

E. The licensee or registrant is not required to control each entrance or access point to a room or other area that is a high radiation area solely because of the presence of radioactive materials prepared for transport, and packaged and labeled in accordance with the regulations of the DOT provided that:

(1) the packages do not remain in the area longer than 3 days; and

(2) the dose rate at 1 meter from the external surface of any package does not exceed 0.01 rem (0.1 millisievert) per hour.

F. The licensee or registrant is not required to control entrance or access to rooms or other areas in hospitals solely because of the presence of patients containing

radioactive material, provided that there are personnel in attendance who are taking the necessary precautions to prevent the exposure of individuals to radiation or radioactive material in excess of the established limits in this part and to operate within the ALARA provisions of the licensee's or registrant's radiation protection program.

[20.3.4.418 NMAC - Rp, 20.3.4.418 NMAC, 04/30/2009]

20.3.4.419 CONTROL OF ACCESS TO VERY HIGH RADIATION AREAS:

In addition to the requirements in 20.3.4.418 NMAC, the licensee or registrant shall institute measures to ensure that an individual is not able to gain unauthorized or inadvertent access to areas in which radiation levels could be encountered at 500 rads (5 grays) or more in 1 hour at 1 meter from a source of radiation or any surface through which the radiation penetrates.

[20.3.4.419 NMAC - Rp, 20.3.4.419 NMAC, 04/30/2009]

20.3.4.420 CONTROL OF ACCESS TO VERY HIGH RADIATION AREAS - IRRADIATORS:

In addition to the requirements in 20.3.4.419 NMAC, the licensee shall comply with the requirements specified in 20.3.15 NMAC for access control.

[20.3.4.420 NMAC - Rp, 20.3.4.420 NMAC, 04/30/2009]

20.3.4.421 USE OF PROCESS OR OTHER ENGINEERING CONTROLS:

The licensee or registrant shall use, to the extent practicable, process or other engineering controls, such as, containment, decontamination or ventilation, to control the concentrations of radioactive material in air.

[20.3.4.421 NMAC - Rp, 20.3.4.421 NMAC, 04/30/2009]

20.3.4.422 USE OF OTHER CONTROLS:

A. When it is not practical to apply process or other engineering controls to control the concentrations of radioactive material in the air to values below those that define an airborne radioactivity area, the licensee or registrant shall, consistent with maintaining the total effective dose equivalent ALARA, increase monitoring and limit intakes by one or more of the following means:

- (1) control of access;
- (2) limitation of exposure times;
- (3) use of respiratory protection equipment; or

- (4) other controls.

B. If the licensee or registrant performs an ALARA analysis to determine whether or not respirators should be used, the licensee or registrant may consider safety factors other than radiological factors. The licensee or registrant should also consider the impact of respirator use on workers' industrial health and safety.

[20.3.4.422 NMAC - Rp, 20.3.4.422 NMAC, 04/30/2009]

20.3.4.423 USE OF INDIVIDUAL RESPIRATORY PROTECTION EQUIPMENT:

The requirements of this section apply to licensees and registrants who assign or permit the use of respiratory protection equipment to limit the intake of radioactive material.

A. The licensee or registrant shall use only respiratory protection equipment that is tested and certified by the national institute for occupational safety and health (NIOSH) except as otherwise noted in this part.

B. If the licensee or registrant wishes to use equipment that has not been tested or certified by national institute for occupational safety and health (NIOSH), or for which there is no schedule for testing or certification, the licensee or registrant shall submit an application to the department for authorized use of this equipment except as provided in this part. The application shall include evidence that the material and performance characteristics of the equipment are capable of providing the proposed degree of protection under anticipated conditions of use. This shall be demonstrated either by testing made by the licensee or registrant, or on the basis of reliable test information.

C. The licensee or registrant shall implement and maintain a respiratory protection program that includes:

- (1) air sampling sufficient to identify the potential hazard, permit proper equipment selection and estimate doses;
- (2) surveys and bioassays, as necessary, to evaluate actual intakes;
- (3) testing of respirators for operability (user seal check for face sealing devices and functional check for others) immediately prior to each use;
- (4) written procedures regarding:
 - (a) monitoring, including air sampling and bioassays;
 - (b) supervision and training of respirator users;
 - (c) fit testing;

- (d) respirator selection;
 - (e) breathing air quality;
 - (f) inventory and control;
 - (g) storage, issuance, maintenance, repair, testing and quality assurance of respiratory protection equipment;
 - (h) recordkeeping; and
 - (i) relief from respirator use and limitations on periods of respirator use;
- (5) determination by a physician that the individual user is medically fit to use respiratory protection equipment; before:
- (a) the initial fitting of a face sealing respirator;
 - (b) before the first field use of non-face sealing respirators; and
 - (c) either every 12 months thereafter, or periodically at a frequency determined by a physician;
- (6) fit testing, with fit factor greater than or equal to 10 times the APF for negative pressure devices, and a fit factor that is greater than or equal to 500 for any positive pressure, continuous flow, and pressure-demand devices, before the first field use of tight fitting, face-sealing respirators and periodically thereafter at a frequency not to exceed 1 year; fit testing shall be performed with the facepiece operating in the negative pressure mode.

D. The licensee or registrant shall advise each respirator user that the user may leave the area at any time for relief from respirator use in the event of equipment malfunction, physical or psychological distress, procedural or communication failure, significant deterioration of operating conditions or any other conditions that might require such relief.

E. The licensee or registrant shall also consider limitations appropriate to the type and mode of use. When selecting respiratory devices the licensee or registrant shall provide for vision correction, adequate communication, low temperature work environments and the concurrent use of other safety or radiological protection equipment. The licensee or registrant shall use equipment in such a way as not to interfere with the proper operation of the respirator.

F. Standby rescue persons are required whenever one-piece atmosphere-supplying suits, or any combination of supplied air respiratory protection device and personnel protective equipment are used from which an unaided individual would have difficulty

extricating himself or herself. The standby persons shall be equipped with respiratory protection devices or other apparatus appropriate for the potential hazards. The standby rescue persons shall observe or otherwise maintain continuous communication with the workers (visual, voice, signal line, telephone, radio or other suitable means), and be immediately available to assist them in case of a failure of the air supply or for any other reason that requires relief from distress. A sufficient number of standby rescue persons shall be immediately available to assist all users of this type of equipment and to provide effective emergency rescue if needed.

G. Atmosphere-supplying respirators shall be supplied with respirable air of grade D quality or better as defined by the compressed gas association in publication G-7.1, *commodity specification for air*, 1997, and included in the regulations of the occupational safety and health administration at 29 CFR 1910.134(i)(1)(ii)(A) through (E). Grade D quality air criteria include:

- (1) oxygen content (v/v) of 19.5-23.5 percent;
- (2) hydrocarbon (condensed) content of 5 milligrams per cubic meter of air or less;
- (3) carbon monoxide content of 10 parts per million (ppm) or less;
- (4) carbon dioxide content of 1,000 parts per million (ppm) or less; and
- (5) lack of noticeable odor.

H. The licensee or registrant shall ensure that no objects, materials or substances, such as facial hair, or any conditions that interfere with the face-facepiece seal or valve function, and that are under the control of the respirator wearer, are present between the skin of the wearer's face and the sealing surface of a tight-fitting respirator facepiece.

I. In estimating the dose to individuals from intake of airborne radioactive materials, the concentration of radioactive material in the air that is inhaled when respirators are worn is initially assumed to be the ambient concentration in air without respiratory protection, divided by the assigned protection factor. If the dose is later found to be greater than the estimated dose, the corrected value shall be used. If the dose is later found to be less than the estimated dose, the corrected value may be used.

J. Application for Use of Higher Assigned Protection Factors. The licensee or registrant shall obtain authorization from the department before using assigned protection factors in excess of those specified in 20.3.4.460 NMAC. The department may authorize a licensee or registrant to use higher assigned protection factors on receipt of an application that:

(1) describes the situation for which a need exists for higher protection factors; and

(2) demonstrates that the respiratory protection equipment provides these higher protection factors under the proposed conditions of use.

[20.3.4.423 NMAC - Rp, 20.3.4.423 NMAC, 04/30/2009]

20.3.4.424 FURTHER RESTRICTIONS ON THE USE OF RESPIRATORY PROTECTION EQUIPMENT:

The department may impose restrictions in addition to those in sections 20.3.4.422 NMAC, 20.3.4.423 NMAC and 20.3.4.460 NMAC, in order to:

A. ensure that the respiratory protection program of the licensee or registrant is adequate to limit doses to individuals from intakes of airborne radioactive materials consistent with maintaining total effective dose equivalent ALARA; and

B. limit the extent to which a licensee or registrant may use respiratory protection equipment instead of process or other engineering controls.

[20.3.4.424 NMAC - Rp, 20.3.4.424 NMAC, 04/30/2009]

20.3.4.425 SECURITY AND CONTROL OF LICENSED OR REGISTERED SOURCES OF RADIATION:

A. The licensee shall secure from unauthorized removal or access licensed materials that are stored in controlled or unrestricted areas. The licensee possessing category 1 and category 2 quantities of radioactive materials shall comply with 10 CFR 37. The licensee shall comply with 10 CFR 37 except as follows:

(1) any reference to the commission or NRC shall be deemed a reference to the department;

(2) 10 CFR 37.5 definitions of agreement state, byproduct material, commission and person shall not be applicable;

(3) 10 CFR 37.7, 10 CFR 37.9, 10 CFR 37.11(a) and (b), 10 CFR 37.13, 10 CFR 37.27(c), 10 CFR 37.71, 10 CFR 37.105, and 10 CFR 37.107 shall not be applicable; and

(4) for any reporting or notification requirements that the licensee must follow in 10 CFR 37.45, 10 CFR 37.57, 10 CFR 37.77(a) through (d), and 10 CFR 37.81, the licensee shall use the following address when applicable: New Mexico environment department/RCB, P.O. Box 5469, Santa Fe, NM 87502-5469 address information.

B. The licensee shall control and maintain constant surveillance, and use devices or administrative procedures to prevent unauthorized access to licensed radioactive material that is in a controlled or unrestricted area and that is not in storage.

C. The registrant shall secure registered radiation machines from unauthorized removal.

D. The registrant shall use devices or administrative procedures to prevent unauthorized use of registered radiation machines.

[20.3.4.425 NMAC - Rp, 20.3.4.425 NMAC, 4/30/2009; A, 8/10/2021]

20.3.4.426 RADIOLOGICAL CRITERIA FOR LICENSE TERMINATION:

A. General provisions and scope.

(1) The criteria in this part apply to the decommissioning of any facility licensed under this chapter as well as other facilities subject to the department's jurisdiction under the Act. For low-level waste disposal facilities licensed under 20.3.13 NMAC, the criteria apply only to ancillary surface facilities that support radioactive waste disposal activities.

(2) The criteria in this section do not apply to sites which:

(a) have been decommissioned prior to the effective date of the rule; or,

(b) have previously submitted and received department approval on a license termination plan or decommissioning plan that is compatible with applicable department criteria.

(3) After a site has been decommissioned and the license terminated in accordance with the criteria in this section, the department will require additional cleanup only if, based on new information, it determines that the criteria of this section were not met and residual radioactivity remaining at the site could result in significant threat to public health and safety.

(4) When calculating TEDE to the average member of the critical group the licensee shall determine the peak annual TEDE dose expected within the first 1000 years after decommissioning.

B. Radiological criteria for unrestricted use. A site will be considered acceptable for unrestricted use if the residual radioactivity that is distinguishable from background radiation results in a TEDE to an average member of the critical group that does not exceed 25 millirems (0.25 millisievert) per year, including that from groundwater sources of drinking water, and the residual radioactivity has been reduced to levels that are ALARA. Determination of the levels which are ALARA must take into account

consideration of any detriments, such as deaths from transportation accidents, expected to potentially result from decontamination and waste disposal.

C. Criteria for License Termination under Restricted Conditions. A site will be considered acceptable for license termination under restricted conditions if:

(1) the licensee can demonstrate that further reductions in residual radioactivity necessary to comply with the provisions of Subsection B of this section would result in net public or environmental harm or were not being made because the residual levels associated with restricted conditions are ALARA; determination of the levels which are ALARA must take into account consideration of any detriments, such as traffic accidents, expected to potentially result from decontamination and waste disposal;

(2) the licensee has made provisions for legally enforceable institutional controls that provide reasonable assurance that the TEDE from residual radioactivity distinguishable from background to the average member of the critical group will not exceed 25 millirems (0.25 millisievert) per year;

(3) the licensee has provided sufficient financial assurance to enable an independent third party, including a governmental custodian of a site, to assume and carry out responsibilities for any necessary control and maintenance of the site; acceptable financial assurance mechanisms are:

(a) funds placed into a trust segregated from the licensee's assets and outside the licensee's administrative control, and in which the adequacy of the trust funds is to be assessed based on an assumed annual one percent real rate of return on investment;

(b) surety method, insurance, or other guarantee method as described in Paragraph (2) of Subsection F of 20.3.3.311 NMAC;

(c) a statement of intent in the case of federal, state, or local government licensees, as described in Paragraph (4) of Subsection F of 20.3.3.311 NMAC; or

(d) when a governmental entity is assuming custody and ownership of a site, an arrangement that is deemed acceptable by such governmental entity;

(4) the licensee has submitted a decommissioning plan or license termination plan to the department indicating the licensee's intent to decommission in accordance with Subsection E of 20.3.3.318 NMAC, and specifying that the licensee intends to decommission by restricting use of the site; the licensee shall document in the license termination plan or decommissioning plan how the advice of individuals and institutions in the community who may be affected by the decommissioning has been sought and incorporated, as appropriate, following analysis of that advice:

(a) licensees proposing to decommission by restricting use of the site shall seek advice from such affected parties regarding the following matters concerning the proposed decommissioning:

(i) whether provisions for institutional controls proposed by the licensee: **1)** will provide reasonable assurance that the TEDE from residual radioactivity distinguishable from background to the average member of the critical group will not exceed 25 millirems (0.25 millisievert) TEDE per year; **2)** will be enforceable; and **3)** will not impose undue burdens on the local community or other affected parties;

(ii) whether the licensee has provided sufficient financial assurance to enable an independent third party, including a governmental custodian of a site, to assume and carry out responsibilities for any necessary control and maintenance of the site;

(b) in seeking advice on the issues identified in Subparagraph (a) of this paragraph, the licensee shall provide for:

(i) participation by representatives of a broad cross section of community interests who may be affected by the decommissioning;

(ii) an opportunity for a comprehensive, collective discussion on the issues by the participants represented; and

(iii) a publicly available summary of the results of all such discussions, including a description of the individual viewpoints of the participants on the issues and the extent of agreement and disagreement among the participants on the issues; and

(5) residual radioactivity at the site has been reduced so that if the institutional controls were no longer in effect, there is reasonable assurance that the TEDE from residual radioactivity distinguishable from background to the average member of the critical group is ALARA and would not exceed either:

(a) 100 millirems (1 millisievert) per year; or

(b) 500 millirems (5 millisieverts) per year provided the licensee:

(i) demonstrates that further reductions in residual radioactivity necessary to comply with the 100 millirems per year (1 millisievert per year) value of Subparagraph (a) of this paragraph are not technically achievable, would be prohibitively expensive, or would result in net public or environmental harm;

(ii) makes provisions for durable institutional controls; and

(iii) provides sufficient financial assurance to enable a responsible government entity or independent third party, including a governmental custodian of a

site, both to carry out periodic rechecks of the site no less frequently than every five years to assure that the institutional controls remain in place as necessary to meet the criteria of Paragraph (2) of this subsection and to assume and carry out responsibilities for any necessary control and maintenance of those controls; acceptable financial assurance mechanisms are those in Paragraph (3) of this subsection.

D. Alternate Criteria for License Termination.

(1) The department may terminate a license using alternate criteria greater than the dose criterion of Subsection B of this section, Paragraph (2) of Subsection C of this section, and Item (i) of Subparagraph (a) of Paragraph (4) of Subsection C of this section, if the licensee:

(a) provides assurance that public health and safety would continue to be protected, and that it is unlikely that the dose from all man-made sources combined, other than medical, would be more than the 100 millirems per year (1 millisievert per year) limit of 20.3.4.413 NMAC, by submitting an analysis of possible sources of exposure;

(b) has employed to the extent practical restrictions on site use according to the provisions of Subsection C of this section in minimizing exposures at the site;

(c) reduces doses to ALARA levels, taking into consideration any detriments such as traffic accidents expected to potentially result from decontamination and waste disposal; and

(d) has submitted a decommissioning plan or license termination plan to the department indicating the licensee's intent to decommission in accordance with Subsection E of 20.3.3.318 NMAC, and specifying that the licensee proposes to decommission by use of alternate criteria; the licensee shall document in the decommissioning plan or license termination plan how the advice of individuals and institutions in the community who may be affected by the decommissioning has been sought and addressed, as appropriate, following analysis of that advice; in seeking such advice, the licensee shall provide for:

(i) participation by representatives of a broad cross section of community interests who may be affected by the decommissioning;

(ii) an opportunity for a comprehensive, collective discussion on the issues by the participants represented; and

(iii) a publicly available summary of the results of all such discussions, including a description of the individual viewpoints of the participants on the issues and the extent of agreement and disagreement among the participants on the issues.

(e) Has provided sufficient financial assurance in the form of a trust fund to enable

an independent third party, including a governmental custodian of a site, to assume and carry out responsibilities for any necessary control and maintenance of the site.

(2) The use of alternate criteria to terminate a license requires the approval of the department after consideration of the department staff's recommendations that will address any comments provided by state and federal agencies and any public comments submitted pursuant to Subsection E of this section.

E. Public Notification and Public Participation. Upon the receipt of a license termination plan or decommissioning plan from the licensee, or a proposal by the licensee for release of a site pursuant to Subsection C or D of this section, or whenever the department deems such notice to be in the public interest, the department shall:

(1) notify and solicit comments from:

(a) local governments in the vicinity of the site and any Indian nation or other indigenous people that have treaty or statutory rights that could be affected by the decommissioning; and

(b) the EPA for cases where the licensee proposes to release a site pursuant to Subsection D of this section; and

(2) publish a notice in the state register and in a forum, such as local newspapers, letters to state or local organizations, or other appropriate forum, that is readily accessible to individuals in the vicinity of the site, and solicit comments from the public and affected parties; further, that the public notice may be published in any language when appropriate.

F. Minimization of contamination. Licensee shall, to the extent practical, conduct operations to minimize the introduction of residual radioactivity into the site, including the subsurface, in accordance with the existing radiation protection requirements in 20.3.4.404 NMAC and the radiological criteria for license termination in 20.3.4.426 NMAC.

[20.3.4.426 NMAC - Rp, 20.3.4.426 NMAC, 04/30/2009; A, 06/13/2017]

20.3.4.427 CAUTION SIGNS:

A. Standard Radiation Symbol. Unless otherwise authorized by the department, the symbol prescribed by this section shall use the colors magenta, purple or black on yellow background. The symbol prescribed is the three-bladed design as follows:

(1) cross-hatched area is to be magenta, purple or black; and

(2) the background is to be yellow.

B. Exception to Color Requirements for Standard Radiation Symbol.

Notwithstanding the requirements of Subsection A of this section, licensees or registrants are authorized to label sources, source holders or device components containing sources of radiation that are subjected to high temperatures, with conspicuously etched or stamped radiation caution symbols and without a color requirement.

C. Additional Information on Signs and Labels. In addition to the contents of signs and labels prescribed in this part, the licensee or registrant shall provide, on or near the required signs and labels, additional information, as appropriate, to make individuals aware of potential radiation exposures and to minimize the exposures.

[20.3.4.427 NMAC - Rp, 20.3.4.427 NMAC, 04/30/2009]

20.3.4.428 POSTING REQUIREMENTS:

A. Posting of Radiation Areas. The licensee or registrant shall post each radiation area with a conspicuous sign or signs bearing the radiation symbol and the words "Caution, Radiation Area."

B. Posting of High Radiation Areas. The licensee or registrant shall post each high radiation area with a conspicuous sign or signs bearing the radiation symbol and the words "Caution, High Radiation Area" or "Danger, High Radiation Area."

C. Posting of Very High Radiation Areas. The licensee or registrant shall post each very high radiation area with a conspicuous sign or signs bearing the radiation symbol and words "Grave Danger, Very High Radiation Area."

D. Posting of Airborne Radioactivity Areas. The licensee or registrant shall post each airborne radioactivity area with a conspicuous sign or signs bearing the radiation symbol and the words "Caution, Airborne Radioactivity Area" or "Danger, Airborne Radioactivity Area."

E. Posting of Areas or Rooms in Which Licensed or Registered Material is Used or Stored. The licensee or registrant shall post each area or room in which there is used or stored an amount of licensed or registered material exceeding 10 times the quantity of such material specified in 20.3.4.462 NMAC with a conspicuous sign or signs bearing the radiation symbol and the words "Caution, Radioactive Material" or "Danger, Radioactive Material."

[20.3.4.428 NMAC - Rp, 20.3.4.428 NMAC, 04/30/2009]

20.3.4.429 EXCEPTIONS TO POSTING REQUIREMENTS:

A. A licensee or registrant is not required to post caution signs in areas or rooms containing sources of radiation for periods of less than 8 hours, if each of the following conditions is met:

(1) the sources of radiation are constantly attended during these periods by an individual who takes the precautions necessary to prevent the exposure of individuals to sources of radiation in excess of the limits established in this part; and

(2) the area or room is subject to the licensee's or registrant's control.

B. Rooms or other areas in hospitals that are occupied by patients are not required to be posted with caution signs pursuant to 20.3.4.428 NMAC provided that the patient could be released from licensee control pursuant to Subsection I of 20.3.7.703 NMAC.

C. A room or area is not required to be posted with a caution sign because of the presence of a sealed source provided the radiation level at 30 centimeters from the surface of the sealed source container or housing does not exceed 0.005 rem (0.05 millisievert) per hour.

D. A room or area is not required to be posted with a caution sign because of the presence of radiation machines provided the radiation level at 30 centimeters from the radiation machine housing does not exceed 0.005 rem (0.05 millisievert) per hour.

E. Rooms in hospitals or clinics that are used for teletherapy are exempt from the requirement to post caution signs under 20.3.4.428 NMAC if:

(1) access to the room is controlled pursuant to Subsection E of 20.3.7.711 NMAC; and

(2) personnel in attendance take necessary precautions to prevent the inadvertent exposure of workers, other patients and members of the public to radiation in excess of the limits established in this part.

[20.3.4.429 NMAC - Rp, 20.3.4.429 NMAC, 04/30/2009]

20.3.4.430 LABELING CONTAINERS AND RADIATION MACHINES:

A. The licensee or registrant shall ensure that each container of licensed or registered material bears a durable, clearly visible label bearing the radiation symbol and the words "Caution, Radioactive Material" or "Danger, Radioactive Material." The label shall also provide information, such as the radionuclides present, an estimate of the quantity of radioactivity, the date for which the activity is estimated, radiation levels, kinds of materials and mass enrichment, to permit individuals handling or using the containers, or working in the vicinity of the containers, to take precautions to avoid or minimize exposures.

B. Each licensee or registrant shall, prior to removal or disposal of empty uncontaminated containers to unrestricted areas, remove or deface the radioactive material label or otherwise clearly indicate that the container no longer contains radioactive materials.

C. Each registrant shall ensure that each radiation machine is labeled in a conspicuous manner which cautions individuals that radiation is produced when it is energized.

[20.3.4.430 NMAC - Rp, 20.3.4.430 NMAC, 04/30/2009]

20.3.4.431 EXEMPTIONS TO LABELING REQUIREMENTS:

A licensee is not required to label:

A. containers holding licensed material in quantities less than the quantities listed in 20.3.4.462 NMAC;

B. containers holding licensed material in concentrations less than those specified in table III of 20.3.4.461 NMAC;

C. containers attended by an individual who takes the precautions necessary to prevent the exposure of individuals in excess of the limits established by this part;

D. containers when they are in transport and packaged and labeled in accordance with the regulations of the DOT (labeling of packages containing radioactive materials is required by the DOT if the amount and type of radioactive material exceeds the limits for an excepted quantity or article as defined and limited by DOT regulations 49 CFR 173.403 (m) and (w) and 173.421-424);

E. containers that are accessible only to individuals authorized to handle or use them, or to work in the vicinity of the containers, if the contents are identified to these individuals by a readily available written record; examples of containers of this type are containers in locations such as water-filled canals, storage vaults or hot cells; the record shall be retained as long as the containers are in use for the purpose indicated on the record; or

F. installed manufacturing or process equipment, such as piping and tanks.

[20.3.4.431 NMAC - Rp, 20.3.4.431 NMAC, 04/30/2009]

20.3.4.432 PROCEDURES FOR RECEIVING AND OPENING PACKAGES:

A. Each licensee who expects to receive a package containing quantities of radioactive material in excess of a type A quantity, as defined in Subsection A of

20.3.3.306 NMAC, incorporating 10 CFR 71.4 and Appendix A of 10 CFR 71, shall make arrangements to receive:

- (1) the package when the carrier offers it for delivery; or
- (2) the notification of the arrival of the package at the carrier's terminal and to take possession of the package expeditiously.

B. Each licensee shall:

- (1) monitor the external surfaces of a labeled (with a radioactive white I, yellow II or yellow III label as specified in DOT regulations 49 CFR 172.403 and 172.436-440) package for radioactive contamination unless the package contains only radioactive material in the form of gas or in special form as defined in 10 CFR 71.4;
- (2) monitor the external surfaces of a labeled package for radiation levels unless the package contains quantities of radioactive material that are less than or equal to the type A quantity, as defined in Subsection A of 20.3.3.306 NMAC, incorporating 10 CFR 71.4 and Appendix A to 10 CFR 71; and
- (3) monitor all packages known to contain radioactive material for radioactive contamination and radiation levels if there is evidence of degradation of package integrity, such as packages that are crushed, wet or damaged.

C. The licensee shall perform the monitoring required by Subsection B of this section as soon as practicable after receipt of the package, but not later than 3 hours after the package is received at the licensee's facility if it is received during the licensee's normal working hours. If a package is received after working hours, the package shall be monitored no later than three hours from the beginning of the next working day.

D. The licensee shall immediately notify the final delivery carrier and, by telephone and written communication which can include e-mail, telegram, mailgram or facsimile, the department when:

- (1) removable radioactive surface contamination exceeds the limits of 20.3.3.306 NMAC, incorporating 10 CFR 71.87(i); or
- (2) external radiation levels exceed the limits of 20.3.3.306 NMAC, incorporating 10 CFR 71.47.

E. Each licensee shall:

- (1) establish, maintain and retain written procedures for safely opening packages in which radioactive material is received; and

(2) ensure that the procedures are followed and that due consideration is given to special instructions for the type of package being opened.

F. Licensees transferring special form sources in vehicles owned or operated by the licensee to and from a work site are exempt from the contamination monitoring requirements of Subsection B of this section, but are not exempt from the survey requirement in Subsection B of this section for measuring radiation levels that ensures that the source is still properly lodged in its shield.

[20.3.4.432 NMAC - Rp, 20.3.4.432 NMAC, 04/30/2009]

20.3.4.433 WASTE DISPOSAL - GENERAL REQUIREMENTS:

A. A licensee shall dispose of licensed material only:

(1) by transfer to an authorized recipient as provided in 20.3.4.438 NMAC or 20.3.3 NMAC, or to the DOE;

(2) by decay in storage;

(3) by release in effluents within the limits in 20.3.4.413 NMAC; or

(4) as authorized pursuant to 20.3.4.434 NMAC, 20.3.4.435 NMAC, 20.3.4.436 NMAC or 20.3.4.437 NMAC and in accordance with 20.3.4.439 NMAC.

B. A person shall be specifically licensed to receive waste containing licensed material from other persons for:

(1) treatment prior to disposal;

(2) treatment or disposal by incineration;

(3) decay in storage;

(4) disposal at a land disposal facility licensed pursuant to 20.3.13 NMAC;

(5) storage until transferred to a storage or disposal facility authorized to receive the waste; or

(6) disposal at a geologic repository under 10 CFR 60 or 10 CFR 63, specifically licensed by NRC.

[20.3.4.433 NMAC - Rp, 20.3.4.433 NMAC, 04/30/2009]

20.3.4.434 METHOD FOR OBTAINING APPROVAL OF PROPOSED DISPOSAL PROCEDURES:

A licensee or applicant for a license may apply to the department for approval of proposed procedures, not otherwise authorized in these regulations, to dispose of licensed material generated in the licensee's activities. Each application shall include:

A. a description of the waste containing licensed material to be disposed of, including the physical and chemical properties important to risk evaluation, and the proposed manner and conditions of waste disposal;

B. an analysis and evaluation of pertinent information on the nature of the environment;

C. the nature and location of other potentially affected licensed and unlicensed facilities; and

D. analyses and procedures to ensure that doses are maintained ALARA and within the dose limits in this part.

[20.3.4.434 NMAC - Rp, 20.3.4.434 NMAC, 04/30/2009]

20.3.4.435 DISPOSAL BY RELEASE INTO SANITARY SEWAGE:

A. A licensee may discharge licensed material into sanitary sewerage if each of the following conditions is satisfied:

(1) the material is readily soluble, or is readily dispersible biological material, in water;

(2) the quantity of licensed or other radioactive material that the licensee releases into the sewer in 1 month divided by the average monthly volume of water released into the sewer by the licensee does not exceed the concentration listed in table III of 20.3.4.461 NMAC;

(3) if more than one radionuclide is released, the following conditions must also be satisfied:

(a) the licensee shall determine the fraction of the limit in table III of 20.3.4.461 NMAC represented by discharges into sanitary sewerage by dividing the actual monthly average concentration of each radionuclide released by the licensee or registrant into the sewer by the concentration of that radionuclide listed in table III of 20.3.4.461 NMAC; and

(b) the sum of the fractions for each radionuclide required by Subparagraph (a) of Paragraph (3) of this subsection does not exceed unity; and

(4) the total quantity of licensed or other radioactive material that the licensee releases into the sanitary sewerage in a year does not exceed 5 curies (185

gigabecquerels) of hydrogen-3, 1 curie (37 gigabecquerels) of carbon-14, and 1 curie (37 gigabecquerels) of all other radioactive materials combined.

B. Excreta from individuals undergoing medical diagnosis or therapy with radioactive material are not subject to the limitations contained in Subsection A of this section.

[20.3.4.435 NMAC - Rp, 20.3.4.435 NMAC, 04/30/2009]

20.3.4.436 TREATMENT OR DISPOSAL BY INCINERATION:

A licensee may treat or dispose of licensed material by incineration only in the form and concentration specified in 20.3.4.437 NMAC or as specifically approved by the department pursuant to 20.3.4.434 NMAC.

[20.3.4.436 NMAC - Rp, 20.3.4.436 NMAC, 04/30/2009]

20.3.4.437 DISPOSAL OF SPECIFIC WASTES:

A. A licensee may dispose of the following licensed material as if it were not radioactive:

(1) 0.05 microcurie (1.85 kilobecquerels), or less, of hydrogen-3 or carbon-14 per gram of medium used for liquid scintillation counting; and

(2) 0.05 microcurie (1.85 kilobecquerels), or less, of hydrogen-3 or carbon-14 per gram of animal tissue, averaged over the weight of the entire animal.

B. A licensee shall not dispose of tissue pursuant to Paragraph (2) of Subsection A of this section in a manner that would permit its use either as food for humans or as animal feed.

C. Disposal of Certain Byproduct Material.

(1) Licensed material as defined in Paragraphs (3), (4) and (5) of the definition of *byproduct material* set forth in 20.3.1.7 NMAC may be disposed of in accordance with 20.3.13 NMAC even though it is not defined as low-level radioactive waste. Therefore, any licensed radioactive material being disposed of at a facility, or transferred for ultimate disposal at a facility licensed under 20.3.13 NMAC, must meet the requirements of 20.3.4.438 NMAC.

(2) A licensee may dispose of byproduct material as defined in Paragraphs (3), (4) and (5) of the definition of *byproduct material* set forth in 20.3.1.7 NMAC, at a disposal facility authorize to dispose of such material in accordance with any federal or state solid or hazardous waste law, including the Solid Waste Disposal Act, as authorized under the Energy Policy Act.

D. The licensee shall maintain records of disposal in accordance with 20.3.4.448 NMAC.

[20.3.4.437 NMAC - Rp, 20.3.4.437 NMAC, 04/30/2009]

20.3.4.438 TRANSFER FOR DISPOSAL AND MANIFESTS:

A. The requirements of this section and 20.3.4.466 NMAC are designed to:

(1) control transfers of low-level radioactive waste by any waste generator, waste collector or waste processor licensee, as defined in 20.3.4.466 NMAC (appendix G), who ships low-level waste either directly or indirectly through a waste collector, waste broker or waste processor, to a licensed low-level waste land disposal facility (as defined in 20.3.13 NMAC);

(2) establish a manifest tracking system; and

(3) supplement existing requirements concerning transfers and record keeping for those wastes.

B. Each shipment of radioactive waste intended for disposal at a licensed land disposal facility must be accompanied by a shipment manifest, which contains all the information on the NRC's *uniform low-level radioactive waste manifest* (see 20.3.4.466 NMAC).

C. Any licensee shipping radioactive waste intended for ultimate disposal at a licensed land disposal facility must document the information required on NRC's *uniform low-level radioactive waste manifest* and transfer this recorded manifest information to the intended consignee in accordance with 20.3.4.466 NMAC.

D. Each shipment manifest must include a certification by the waste generator as specified in Subsection B of 20.3.4.466 NMAC.

E. Each person involved in the transfer for disposal and disposal of waste, including the waste generator, waste collector, waste processor and disposal facility operator, shall comply with the requirements specified in Subsection C of 20.3.4.466 NMAC.

F. Any licensee shipping byproduct material as defined in Paragraphs (3), (4) and (5) of the definition of *byproduct material* set forth in 20.3.4.7 NMAC intended for ultimate disposal at a land disposal facility licensed under 20.3.13 NMAC must document the information required on the NRC's *uniform low-level radioactive waste manifest* and transfer this recorded manifest information to the intended consignee in accordance with 20.3.4.466 NMAC.

[20.3.4.438 NMAC - Rp, 20.3.4.438 NMAC, 04/30/2009]

20.3.4.439 COMPLIANCE WITH ENVIRONMENTAL AND HEALTH PROTECTION REGULATIONS:

Nothing in sections 20.3.4.433 NMAC, 20.3.4.434 NMAC, 20.3.4.435 NMAC, 20.3.4.436 NMAC, 20.3.4.437 NMAC or 20.3.4.438 NMAC relieves the licensee from complying with other applicable federal, state and local regulations governing any other toxic or hazardous properties of materials that may be disposed of under these sections.

[20.3.4.439 NMAC - Rp, 20.3.4.439 NMAC, 04/30/2009]

20.3.4.440 RECORDS - GENERAL PROVISIONS:

A. Each licensee or registrant shall use the units: curie, rad, rem, including multiples and subdivisions, and shall clearly indicate the units of all quantities on records required by this part.

B. In the records required by this part, the licensee or registrant may record quantities in SI units in parentheses following each of the units specified in Subsection A of this section. However, all quantities must be recorded as stated in Subsection A of this section.

C. Notwithstanding the requirements of Subsection A of this section, when recording information on shipment manifests, as required in Subsection B of 20.3.4.438 NMAC, information must be recorded in the international system of units (SI) or in SI and the units as specified in Subsection A of this section.

D. The licensee or registrant shall make a clear distinction among the quantities entered on the records required by this part (e.g., total effective dose equivalent, shallow-dose equivalent, lens dose equivalent, deep-dose equivalent, committed effective dose equivalent).

[20.3.4.440 NMAC - Rp, 20.3.4.440 NMAC, 04/30/2009; A, 06/30/2011]

20.3.4.441 RECORDS OF RADIATION PROTECTION PROGRAMS:

A. Each licensee or registrant shall maintain records of the radiation protection program, including:

- (1) the provisions of the program; and
- (2) audits and other reviews of program content and implementation.

B. The licensee or registrant shall retain the records required by Paragraph (1) of Subsection A of this section until the department terminates each pertinent license or registration requiring the record. The licensee or registrant shall retain the records

required by Paragraph (2) of Subsection A of this section for 3 years after the record is made.

[20.3.4.441 NMAC - Rp, 20.3.4.441 NMAC, 04/30/2009]

20.3.4.442 RECORDS OF SURVEYS:

A. Each licensee or registrant shall maintain records showing the results of surveys and calibrations required by 20.3.4.416 NMAC and Subsection B of 20.3.4.432 NMAC. The licensee or registrant shall retain these records for 3 years after the record is made.

B. The licensee or registrant shall retain each of the following records until the department terminates each pertinent license or registration requiring the record:

(1) records of the results of surveys to determine the dose from external sources of radiation and used, in the absence of or in combination with individual monitoring data, in the assessment of individual dose equivalents;

(2) records of the results of measurements and calculations used to determine individual intakes of radioactive material and used in the assessment of internal dose;

(3) records showing the results of air sampling, surveys and bioassays required pursuant to Subparagraphs (a) and (b) of Paragraph (3) of Subsection A of 20.3.4.423 NMAC;

(4) records of the results of measurements and calculations used to evaluate the release of radioactive effluents to the environment; and

(5) records from surveys describing the location and amount of subsurface residual radioactivity identified at the site must be kept with records important for decommissioning, and such records must be retained in accordance with 20.3.3 NMAC as applicable.

[20.3.4.442 NMAC - Rp, 20.3.4.442 NMAC, 04/30/2009; A, 06/13/2017]

20.3.4.443 RECORDS OF TESTS FOR LEAKAGE OR CONTAMINATION OF SEALED SOURCES:

Records of tests for leakage or contamination of sealed sources required by 20.3.4.415 NMAC shall be kept in units of microcurie or becquerel, and maintained for inspection by the department for 5 years after the records are made.

[20.3.4.443 NMAC - Rp, 20.3.4.443 NMAC, 04/30/2009]

20.3.4.444 RECORDS OF PRIOR OCCUPATIONAL DOSE:

A. The licensee or registrant shall retain the records of prior occupational dose and exposure history as specified in 20.3.4.409 NMAC on department form *cumulative occupational dose history* or equivalent until the department terminates each pertinent license or registration requiring this record. The licensee or registrant shall retain records used in preparing department form *cumulative occupational dose history* or equivalent for 3 years after the record is made.

B. Upon termination of the license or registration, the licensee or registrant shall permanently store records on department form *cumulative occupational dose history* or equivalent, or shall make provision with the department for transfer to the department.

[20.3.4.444 NMAC - Rp, 20.3.4.444 NMAC, 04/30/2009]

20.3.4.445 RECORDS OF PLANNED SPECIAL EXPOSURES:

A. For each use of the provisions of 20.3.4.410 NMAC for planned special exposures, the licensee or registrant shall maintain records that describe:

(1) the exceptional circumstances requiring the use of a planned special exposure;

(2) the name of the management official who authorized the planned special exposure and a copy of the signed authorization;

(3) what actions were necessary;

(4) why the actions were necessary;

(5) what precautions were taken to assure that doses were maintained ALARA;

(6) what individual and collective doses were expected to result; and

(7) the doses actually received in the planned special exposure.

B. The licensee or registrant shall retain the records until the department terminates each pertinent license or registration requiring these records.

C. Upon termination of the license or registration, the licensee or registrant shall permanently store records on department form *cumulative occupational dose history* or equivalent, or shall make provision with the department for transfer to the department.

[20.3.4.445 NMAC - Rp, 20.3.4.445 NMAC, 04/30/2009]

20.3.4.446 RECORDS OF INDIVIDUAL MONITORING RESULTS:

A. Record Keeping Requirement. Each licensee or registrant shall maintain records of doses received by all individuals for whom monitoring was required pursuant to 20.3.4.417 NMAC, and records of doses received during planned special exposures, accidents and emergency conditions. Assessments of dose equivalent and records made using units in effect before May 3, 1995 (see 20.3.4 NMAC codified as of May 3, 1995) need not be changed. These records shall include, when applicable:

(1) the deep dose equivalent to the whole body, lens dose equivalent, shallow dose equivalent to the skin and shallow dose equivalent to the extremities;

(2) the estimated intake of radionuclides (see 20.3.4.406 NMAC);

(3) the committed effective dose equivalent assigned to the intake of radionuclides;

(4) the specific information used to assess the committed effective dose equivalent pursuant to Subsections A and C of 20.3.4.408 NMAC, and when required by 20.3.4.417 NMAC;

(5) the total effective dose equivalent when required by 20.3.4.406 NMAC;
and

(6) the total of the deep dose equivalent and the committed dose to the organ receiving the highest total dose.

B. Record Keeping Frequency. The licensee or registrant shall make entries of the records specified in Subsection A of this section at intervals not to exceed 1 year.

C. Record Keeping Format. The licensee or registrant shall maintain the records specified in Subsection A of this section on department form *occupational dose record for a monitoring period*, in accordance with the instructions to the form, or in clear and legible records containing all the information required by the form.

D. The licensee or registrant shall maintain the records of dose to an embryo/fetus with the records of dose to the declared pregnant woman. The declaration of pregnancy, including the estimated date of conception, shall also be kept on file, but may be maintained separately from the dose records.

E. The licensee or registrant shall retain each required form or record until the department terminates each pertinent license or registration requiring the record.

F. Upon termination of the license or registration, the licensee or registrant shall permanently store records on department form *cumulative occupational dose history* or equivalent, or shall make provision with the department for transfer to the department.

G. Privacy Protection. The records required under this section should be protected from public disclosure because of their personal and private nature.

[20.3.4.446 NMAC - Rp, 20.3.4.446 NMAC, 04/30/2009]

20.3.4.447 RECORDS OF DOSE TO INDIVIDUAL MEMBERS OF THE PUBLIC:

A. Each licensee or registrant shall maintain records sufficient to demonstrate compliance with the dose limit for individual members of the public (see 20.3.4.413 NMAC).

B. The licensee or registrant shall retain the records required by Subsection A of this section until the department terminates each pertinent license or registration requiring the record.

[20.3.4.447 NMAC - Rp, 20.3.4.447 NMAC, 04/30/2009]

20.3.4.448 RECORDS OF WASTE DISPOSAL:

A. Each licensee shall maintain records of the disposal of licensed materials made pursuant to 20.3.4.434 NMAC, 20.3.4.435 NMAC, 20.3.4.436 NMAC, 20.3.4.437 NMAC and 20.3.3 NMAC.

B. Each registrant shall maintain records of the disposal of radiation machines.

C. The licensee or registrant shall retain the records required by Subsections A and B of this section until the department terminates each pertinent license or registration requiring the record.

[20.3.4.448 NMAC - Rp, 20.3.4.448 NMAC, 04/30/2009]

20.3.4.449 [RESERVED]

20.3.4.450 FORM OF RECORDS:

Each record required by this part shall be legible throughout the specified retention period. The record shall be the original or a reproduced copy or a microform, provided that the copy or microform is authenticated by authorized personnel and that the microform is capable of producing a clear copy throughout the required retention period or the record may also be stored in electronic media with the capability for producing legible, accurate and complete records during the required retention period. Records, such as letters, drawings and specifications, shall include all pertinent information, such as stamps, initials and signatures. The licensee or registrant shall maintain adequate safeguards against tampering with and loss of records.

[20.3.4.450 NMAC - Rp, 20.3.4.450 NMAC, 04/30/2009]

20.3.4.451 REPORTS OF STOLEN, LOST OR MISSING LICENSED OR REGISTERED SOURCES OF RADIATION:

A. Telephone Reports. Each licensee shall report to the department by telephone as follows:

(1) immediately after its occurrence becomes known to the licensee, stolen, lost or missing licensed radioactive material in an aggregate quantity equal to or greater than 1,000 times the quantity specified in 20.3.4.462 NMAC under such circumstances that it appears to the licensee that an exposure could result to individuals in unrestricted areas; or

(2) within 30 days after its occurrence becomes known to the licensee, lost, stolen or missing licensed radioactive material in an aggregate quantity greater than 10 times the quantity 20.3.4.462 NMAC that is still missing;

(3) each registrant shall report immediately after its occurrence becomes known to the registrant, a stolen, lost or missing radiation machine.

B. Written Reports. Each licensee or registrant required to make a report pursuant to Subsection A of this section shall, within 30 days after making the telephone report, make a written report to the department setting forth the following information:

(1) a description of the licensed or registered source of radiation involved, including, for radioactive material, the kind, quantity, and chemical and physical form; and, for radiation machines, the manufacturer, model and serial number, type and maximum energy of radiation emitted;

(2) a description of the circumstances under which the loss or theft occurred;

(3) a statement of disposition, or probable disposition, of the licensed or registered source of radiation involved;

(4) exposures of individuals to radiation, circumstances under which the exposures occurred, and the possible total effective dose equivalent to persons in unrestricted areas;

(5) actions that have been taken, or will be taken, to recover the source of radiation; and

(6) procedures or measures that have been, or will be, adopted to ensure against a recurrence of the loss or theft of licensed or registered sources of radiation.

C. Subsequent to filing the written report, the licensee or registrant shall also report additional substantive information on the loss or theft within 30 days after the licensee or registrant learns of such information.

D. The licensee or registrant shall prepare any report filed with the department pursuant to this section so that names of individuals who may have received exposure to radiation are stated in a separate and detachable portion of the report.

[20.3.4.451 NMAC - Rp, 20.3.4.451 NMAC, 04/30/2009]

20.3.4.452 NOTIFICATION OF INCIDENTS:

A. Immediate Notification. Notwithstanding other requirements for notification, each licensee or registrant shall immediately report each event involving a source of radiation possessed by the licensee or registrant that may have caused or threatens to cause any of the following conditions:

(1) an individual to receive:

(a) a total effective dose equivalent of 25 rems (0.25 sievert) or more; or

(b) a lens dose equivalent of 75 rems (0.75 sievert) or more; or

(c) a shallow dose equivalent to the skin or extremities or a total organ dose equivalent of 250 rads (2.5 grays) or more; or

(2) the release of radioactive material, inside or outside of a restricted area, so that, had an individual been present for 24 hours, the individual could have received an intake five times the occupational ALI; this provision does not apply to locations where personnel are not normally stationed during routine operations, such as hot-cells or process enclosures.

B. Twenty-Four Hour Notification. Each licensee or registrant shall, within 24 hours of discovery of the event, report to the department each event involving loss of control of a licensed or registered source of radiation possessed by the licensee or registrant that may have caused, or threatens to cause, any of the following conditions:

(1) an individual to receive, in a period of 24 hours:

(a) a total effective dose equivalent exceeding 5 rems (0.05 sievert); or

(b) a lens dose equivalent exceeding 15 rems (0.15 sievert); or

(c) a shallow dose equivalent to the skin or extremities or a total organ dose equivalent exceeding 50 rems (0.5 sievert); or

(2) the release of radioactive material, inside or outside of a restricted area, so that, had an individual been present for 24 hours, the individual could have received an intake in excess of one occupational ALI; this provision does not apply to locations

where personnel are not normally stationed during routine operations, such as hot-cells or process enclosures.

C. The licensee or registrant shall prepare each report filed with the department pursuant to this section so that names of individuals who have received exposure to sources of radiation are stated in a separate and detachable portion of the report.

D. Licensees and registrants shall make the reports required by Subsections A and B of this section to the department by telephone, and shall confirm the initial contact by e-mail, telegram, mailgram or facsimile to the department.

E. The provisions of this section do not apply to doses that result from planned special exposures, provided such doses are within the limits for planned special exposures and are reported pursuant to 20.3.4.454 NMAC.

[20.3.4.452 NMAC - Rp, 20.3.4.452 NMAC, 04/30/2009]

20.3.4.453 REPORTS OF EXPOSURES, RADIATION LEVELS AND CONCENTRATIONS OF RADIOACTIVE MATERIAL EXCEEDING THE CONSTRAINTS OR LIMITS:

A. Reportable Events. In addition to the notification required by 20.3.4.452 NMAC, each licensee or registrant shall submit a written report within 30 days after learning of any of the following occurrences:

- (1) incidents for which notification is required by 20.3.4.452 NMAC; or
- (2) doses in excess of any of the following:
 - (a) the occupational dose limits for adults in 20.3.4.452 NMAC;
 - (b) the occupational dose limits for a minor in 20.3.4.411 NMAC;
 - (c) the limits for an embryo/fetus of a declared pregnant woman in 20.3.4.412 NMAC;
 - (d) the limits for an individual member of the public in 20.3.4.413 NMAC;
 - (e) the limit in the license or registration; or
 - (f) the ALARA constraints for air emissions established under Subsection D of 20.3.4.404 NMAC; or
- (3) levels of radiation or concentrations of radioactive material in:

(a) a restricted area in excess of applicable limits in the license or registration;
or

(b) an unrestricted area in excess of 10 times the applicable limit set forth in this part (20.3.4 NMAC) or in the license or registration, whether or not involving exposure of any individual in excess of the limits in 20.3.4.413 NMAC; or

(4) for licensees subject to the provisions of EPA generally applicable environmental radiation standards in 40 CFR 190, levels of radiation or releases of radioactive material in excess of those standards, or of license conditions related to those standards.

B. Content of Report.

(1) Each report required by Subsection A of this section shall describe the extent of exposure of individuals to radiation and radioactive material, including, as appropriate:

(a) estimates of each individual's dose;

(b) the levels of radiation and concentrations of radioactive material involved;

(c) the cause of the elevated exposures, dose rates or concentrations; and

(d) corrective steps taken or planned to ensure against a recurrence, including the schedule for achieving conformance with applicable limits, ALARA constraints, generally applicable environmental standards and associated license or registration conditions.

(2) Each report filed pursuant to Subsection A of this section shall include for each occupationally overexposed individual: the name, social security account number and date of birth. With respect to the limit for the embryo/fetus set forth in 20.3.4.412 NMAC, the identifiers should be those of the declared pregnant woman. The report shall be prepared so that this information is stated in a separate and detachable part of the report.

C. All licensees or registrants who make reports pursuant to Subsection A of this section shall submit the report in writing to the department.

[20.3.4.453 NMAC - Rp, 20.3.4.453 NMAC, 04/30/2009]

20.3.4.454 REPORTS OF PLANNED SPECIAL EXPOSURES:

The licensee or registrant shall submit a written report to the department within 30 days following any planned special exposure conducted in accordance with 20.3.4.410 NMAC, informing the department that a planned special exposure was conducted and

indicating the date the planned special exposure occurred and the information required by 20.3.4.445 NMAC.

[20.3.4.454 NMAC - Rp, 20.3.4.454 NMAC, 04/30/2009]

20.3.4.455 REPORTS OF TRANSACTIONS INVOLVING NATIONALLY TRACKED SOURCES:

The regulations of the U. S. Nuclear Regulatory Commission set forth in 10 CFR 20.2207 are hereby incorporated by reference.

[20.3.4.455 NMAC - N, 4/30/2009, A, 5/1/2024]

20.3.4.456 REPORTS OF INDIVIDUAL MONITORING:

A. This section applies to each person licensed or registered by the department to:

(1) possess or use sources of radiation for purposes of industrial radiography pursuant to 20.3.3 NMAC and 20.3.5 NMAC; or

(2) receive radioactive waste from other persons for disposal pursuant to 20.3.13 NMAC; or

(3) possess or use at any time, for processing or manufacturing for distribution pursuant to 20.3.3 NMAC or 20.3.7 NMAC, radioactive material in quantities exceeding any one of the following quantities:

TABLE 456.1		
Radionuclide	Activity ¹	Gigabecquerels
	Curies	
Cesium-137	1	37
Cobalt-60	1	37
Gold-198	100	3,700
Iodine-131	1	37
Iridium-192	10	370
Krypton-85	1,000	37,000
Promethium-147	10	370
Technetium-99m	1,000	37,000

Table 456.1 note: ¹the department may require as a license condition, or by rule, regulation or order pursuant to 20.3.1.111 NMAC, reports from licensees who are licensed to use radionuclides not on this list, in quantities sufficient to cause comparable radiation levels.

B. Each licensee or registrant in a category listed in Subsection A of this section shall submit an annual report of the results of individual monitoring carried out by the licensee or registrant for each individual for whom monitoring was required by 20.3.4.417 NMAC during that year. The licensee or registrant may include additional data for individuals for whom monitoring was provided but not required. The licensee or registrant shall use department form *occupational dose record for a monitoring period* or equivalent, or electronic media containing all the information required by department form *occupational dose record for a monitoring period*.

C. The licensee or registrant shall file the report required by Subsection B of this section, covering the preceding year, on or before April 30 of each year. The licensee or registrant shall submit the report to the department.

[20.3.4.456 NMAC - Rp, 20.3.4.456 NMAC, 04/30/2009]

20.3.4.457 NOTIFICATIONS AND REPORTS TO INDIVIDUALS OF EXCEEDING DOSE LIMITS:

A. Requirements for notification and reports to individuals of exposure to radiation or radioactive material are specified in 20.3.10.1003 NMAC.

B. When a licensee or registrant is required pursuant to the provisions of 20.3.4.453 NMAC or 20.3.4.454 NMAC to report to the department any exposure of an identified occupationally exposed individual, or an identified member of the public, to radiation or radioactive material, the licensee or registrant shall also provide a copy of the report submitted to the department to the individual. This report must be transmitted at a time not later than the transmittal to the department, and shall comply with the provisions of 20.3.10.1003 NMAC.

[20.3.4.457 NMAC - Rp, 20.3.4.457 NMAC, 04/30/2009; A, 06/30/2011]

20.3.4.458 REPORTS OF LEAKING OR CONTAMINATED SEALED SOURCES:

The licensee shall file a report within 5 days with the department if the test for leakage or contamination required pursuant to 20.3.4.415 NMAC indicates a sealed source is leaking or contaminated. The report shall include the equipment involved, the test results and the corrective action taken.

[20.3.4.458 NMAC - Rp, 20.3.4.458 NMAC, 04/30/2009]

20.3.4.459 VACATING PREMISES:

Each specific licensee shall, no less than 30 days before vacating or relinquishing possession or control of premises which may have been contaminated with radioactive material as a result of his activities, notify the department in writing of intent to vacate.

When deemed necessary by the department, the licensee shall decontaminate the premises in such a manner as the department may specify.

[20.3.4.459 NMAC - Rp, 20.3.4.459 NMAC, 04/30/2009]

20.3.4.460 APPENDIX A - PROTECTION FACTORS FOR RESPIRATORS:

The assigned protection factors specified in this section apply only in a respiratory protection program that meets the requirements of this part. They are applicable only to airborne radiological hazards and may not be appropriate to circumstances when chemical or other respiratory hazards exist instead of, or in addition to, radioactive hazards. Selection and use of respirators for such circumstances shall also comply with department of labor regulations. Radioactive contaminants for which the concentration values in column 3 of table I of 20.3.4.461 NMAC are based on internal dose due to inhalation may, in addition, present external exposure hazards at higher concentrations. Under these circumstances, limitations on occupancy may have to be governed by external dose limits.

A. Air Purifying Respirators.

Configuration (air purifying respirators only)	Operating Mode	Assigned Protection Factors
Filtering facepiece disposable. (Refer to Paragraph (4) of this subsection.)	Negative Pressure	(Refer to Paragraph (4) of this subsection.)
Facepiece, half (Refer to paragraph (5) of this subsection.)	Negative Pressure	10
Facepiece, full	Negative Pressure	100
Facepiece, half	Power air-purifying respirators	50
Facepiece, full	Power air-purifying respirators	1000
Helmet/hood	Power air-purifying respirators	1000

Configuration (air purifying respirators only)	Operating Mode	Assigned Protection Factors
Facepiece, loose-fitting	Power air-purifying respirators	25

(1) The assigned protection factors apply for protection against particulate only.

(2) Air purifying respirators with APF <100 shall be equipped with particulate filters that are at least 95 percent efficient. Air purifying respirators with APF = 100 shall be equipped with particulate filters that are at least 99 percent efficient. Air purifying respirators with APFs >100 shall be equipped with particulate filters that are at least 99.97 percent efficient.

(3) The licensee may apply to the department for the use of an APF greater than 1 for sorbent cartridges as protection against airborne radioactive gases and vapors (e.g., radioiodine).

(4) **Special requirements and indications for filtering facepiece disposable respirators.** Licensees may permit individuals to use this type of respirator who have not been medically screened or fit tested on the device provided that no credit is taken for their use in estimating intake or dose. It is also recognized that it is difficult to perform an effective positive or negative pressure pre-use user seal check on this type of device. All other respiratory protection program requirements listed in 20.3.4.423 NMAC apply. An assigned protection factor has not been assigned for these devices. However, an APF equal to 10 may be used if the licensee can demonstrate a fit factor of at least 100 by use of a validated or evaluated, qualitative or quantitative fit test.

(5) **Special requirements and indications for half facepiece, negative pressure respirators.** The requirements in this paragraph apply to the under-chin configuration only. No distinction is made in this section between elastomeric half-masks with replaceable cartridges and those designed with the filter medium as an integral part of the facepiece (e.g., disposable or reusable disposable). Both types are acceptable so long as the seal area of the latter contains some substantial type of seal-enhancing material such as rubber or plastic, the two or more suspension straps are adjustable, the filter medium is at least 95 percent efficient and all other requirements of this part are met.

B. Air-Line Respirators (Atmosphere Supplying).

Configuration (air-line respirators only)	Operating Mode	Assigned Protection Factors
Facepiece, half	Demand	10
Facepiece, half	Continuous Flow	50
Facepiece, half	Pressure Demand	50
Facepiece, full	Demand	100
Facepiece, full	Continuous Flow	1000
Facepiece, full	Pressure Demand	1000
Helmet/hood	Continuous	1000
Facepiece, loose-fitting	Continuous	25
Suit	Continuous	(Refer to Paragraph (3) of this subsection.)

(1) The assigned protection factors apply for protection against particulate, gases and vapors.

(2) The assigned protection factors for gases and vapors are not applicable to radioactive contaminants that present an absorption or submersion hazard. For tritium oxide vapor, approximately one-third of the intake occurs by absorption through the skin so that an overall protection factor of 3 is appropriate when atmosphere-supplying respirators are used to protect against tritium oxide. Exposure to radioactive noble gases is not considered a significant respiratory hazard, and protective actions for these contaminants should be based on external (submersion) dose considerations.

(3) **Special requirements and indications for suits.** No national institute for occupational safety and health (NIOSH) approval schedule is currently available for atmosphere supplying suits. This equipment may be used in an acceptable respiratory protection program as long as all the other minimum program requirements, with the exception of fit testing, are met (see 20.3.4.423 NMAC).

C. Self-Contained Breathing Apparatus "SCBA" (Atmosphere Supplying).

Configuration	Operating Mode	Assigned Protection Factors
----------------------	-----------------------	--

(SCBA respirators only)		
Facepiece, full	Demand	100 (Refer to Paragraph (3) of this subsection.)
Facepiece, full	Pressure Demand	10,000 (Refer to Paragraph (4) of this subsection.)
Facepiece, full	Demand-Recirculating	100 (Refer to Paragraph (3) of this subsection.)
Facepiece, full	Positive Pressure Recirculating	10,000 (Refer to Paragraph (4) of this subsection.)

(1) The assigned protection factors apply for protection against particulate, gases and vapors.

(2) The assigned protection factors for gases and vapors are not applicable to radioactive contaminants that present an absorption or submersion hazard. For tritium oxide vapor, approximately one-third of the intake occurs by absorption through the skin so that an overall protection factor of 3 is appropriate when atmosphere-supplying respirators are used to protect against tritium oxide. Exposure to radioactive noble gases is not considered a significant respiratory hazard, and protective actions for these contaminants should be based on external (submersion) dose considerations.

(3) **Special requirements and indications for demand and demand-recirculating self-contained breathing apparatus (SCBA).** The licensee should implement institutional controls to assure that these devices are not used in areas immediately dangerous to life or health (IDLH).

(4) **Special requirements and indications for pressure demand and positive pressure recirculating self-contained breathing apparatus (SCBA).** This type of respirator may be used as an emergency device in unknown concentrations for protection against inhalation hazards. External radiation hazards and other limitations to permitted exposure such as skin absorption shall be taken into account in these circumstances. This device may not be used by any individual who experiences perceptible outward leakage of breathing gas while wearing the device.

D. Combination Respirators.

Configuration (combination respirators only)	Operating Mode and Assigned Protection Factors
---	---

Any combination of air-purifying and atmosphere-supplying respirators	Assigned protection factor for type and mode of operation as listed above.
---	--

[20.3.4.460 NMAC - Rp, 20.3.4.460 NMAC, 04/30/2009]

20.3.4.461 APPENDIX B - ANNUAL LIMITS ON INTAKE (ALI) AND DERIVED AIR CONCENTRATIONS (DAC) OF RADIONUCLIDES FOR OCCUPATIONAL EXPOSURE; EFFLUENT CONCENTRATIONS; CONCENTRATIONS FOR RELEASE TO SANITARY SEWERAGE:

A. Introduction. For each radionuclide, table I of this section indicates the chemical form which is to be used for selecting the appropriate ALI or DAC value. The ALIs and DACs for inhalation are given for an aerosol with an activity median aerodynamic diameter (AMAD) of 1 micrometer, and for three classes (D,W and Y) of radioactive material, which refer to their retention (approximately days, weeks or years) in the pulmonary region of the lung. This classification applies to a range of clearance half-times for D if less than 10 days, for W from 10 to 100 days and for Y greater than 100 days. The class (D,W or Y) given in the column headed "Class" applies only to the inhalation ALIs and DACs given in columns 2 and 3 of table I of this section. Table II of this section provides concentration limits for airborne and liquid effluents released to the general environment. Table III of this section provides concentration limits for discharges to sanitary sewerage.

B. Note. The values in tables I, II and III of this section are presented in the E-notation. In this notation a value of 6E-02 represents a value of 6×10^{-2} or 0.06, 6E+2 represents 6×10^2 or 600, and 6E+0 represents 6×10^0 or 6.

C. Table I "Occupational Values".

(1) Note that the columns in table I of this section titled "Oral Ingestion ALI," "Inhalation ALI" and "DAC," are applicable to occupational exposure to radioactive material.

(2) The ALI's in this section are the annual intakes of given radionuclide by "reference man" which would result in either a committed effective dose equivalent of 5 rems (0.05 sievert) (stochastic ALI), or a committed dose equivalent of 50 rems (0.5 sievert) to an organ or tissue (non-stochastic ALI). The stochastic ALIs were derived to result in a risk, due to irradiation of organs and tissues, comparable to the risk associated with deep dose equivalent to the whole body of 5 rems (0.05 sievert). The derivation includes multiplying the committed dose equivalent to an organ or tissue by a weighting factor, w_T . This weighting factor is the proportion of the risk of stochastic effects resulting from irradiation of the organ or tissue, T, to the total risk of stochastic effects when the whole body is irradiated uniformly. The values of w_T are listed under the definition of weighting factor in 20.3.4.7 NMAC. The non-stochastic ALI's were

derived to avoid non-stochastic effects, such as prompt damage to tissue or reduction in organ function.

(3) A value of $w_T = 0.06$ is applicable to each of the five organs or tissues in the "remainder" category receiving the highest dose equivalents, and the dose equivalents of all other remaining tissues may be disregarded. The following portions of the gastro-intestinal (GI) tract - stomach, small intestine, upper large intestine and lower large intestine - are to be treated as four separate organs.

(4) Note that the dose equivalents for an extremity, skin and lens of the eye are not considered in computing the committed effective dose equivalent, but are subject to limits that must be met separately.

(5) When an ALI is defined by the stochastic dose limit, this value alone is given. When an ALI is determined by the non-stochastic dose limit to an organ, the organ or tissue to which the limit applies is shown, and the ALI for the stochastic limit is shown in parentheses. Abbreviated organ or tissue designations are used:

(a) LLI wall = lower large intestine wall;

(b) St wall = stomach wall;

(c) Blad wall = bladder wall; and

(d) Bone surf = bone surface.

(6) The use of the ALI's listed first, the more limiting of the stochastic and non-stochastic ALI's, will ensure that non-stochastic effects are avoided and that the risk of stochastic effects is limited to an acceptably low value. If, in a particular situation involving a radionuclide for which the non-stochastic ALI is limiting, use of that non-stochastic ALI is considered unduly conservative, the licensee may use the stochastic ALI to determine the committed effective dose equivalent. However, the licensee shall also ensure that the 50 rems (0.5 sievert) dose equivalent limit for any organ or tissue is not exceeded by the sum of the external deep dose equivalent plus the internal committed dose equivalent to that organ, not the effective dose. For the case where there is no external dose contribution, this would be demonstrated if the sum of the fractions of the non-stochastic ALI's (ALI_{ns}) that contribute to the committed dose equivalent to the organ receiving the highest dose does not exceed unity, that is, the sum (intake in microcuries of each radionuclide/ ALI_{ns}) is less than or equal to 1.0. If there is an external deep dose equivalent contribution of H_d , then this sum must be less than $1 - (H_d/50)$, instead of less than or equal to 1.0. Note that the dose equivalents for an extremity, skin and lens of the eye are not considered in computing the committed effective dose equivalent, but are subject to limits that must be met separately.

(7) The derived air concentration (DAC) values are derived limits intended to control chronic occupational exposures. The relationship between the DAC and the ALI

is given by: $DAC = ALI \text{ (in microcuries)} / (2000 \text{ hours per working year} \times 60 \text{ minutes/hour} \times 20000 \text{ milliliter per minute}) = (ALI / 2.4 \times 10^9 \text{ ml}) \text{ microcuries/milliliter}$, where 20000 milliliter is the volume of air breathed per minute at work by reference man under working conditions of light work.

(8) The DAC values relate to one of two modes of exposure: either external submersion or the internal committed dose equivalents resulting from inhalation of radioactive materials. DACs based upon submersion are for immersion in a semi-infinite cloud of uniform concentration and apply to each radionuclide separately.

(9) The ALI and DAC values include contributions to exposure by the single radionuclide named and any in-growth of daughter radionuclides produced in the body by decay of the parent. However, intakes that include both the parent and daughter radionuclides should be treated by the general method appropriate for mixtures.

(10) The values of ALI and DAC do not apply directly when the individual both ingests and inhales a radionuclide, when the individual is exposed to a mixture of radionuclides by either inhalation or ingestion or both, or when the individual is exposed to both internal and external irradiation (see 20.3.4.406 NMAC). When an individual is exposed to radioactive materials which fall under several of the translocation classifications of the same radionuclide, such as class D, class W or class Y, the exposure may be evaluated as if it were a mixture of different radionuclides.

(11) It should be noted that the classification of a compound as class D, W or Y is based on the chemical form of the compound and does not take into account the radiological half-life of different radionuclides. For this reason, values are given for class D, W and Y compounds, even for very short-lived radionuclides.

D. Table II "Effluent Concentrations".

(1) The columns in table II of this section titled "effluents," "air" and "water" are applicable to the assessment and control of dose to the public, particularly in the implementation of the provisions of 20.3.4.414 NMAC. The concentration values given in columns 1 and 2 of table II are equivalent to the radionuclide concentrations which, if inhaled or ingested continuously over the course of a year, would produce a total effective dose equivalent of 0.05 rem (0.5 millisievert).

(2) Consideration of non-stochastic limits has not been included in deriving the air and water effluent concentration limits because non-stochastic effects are presumed not to occur at or below the dose levels established for individual members of the public. For radionuclides, where the non-stochastic limit was governing in deriving the occupational DAC, the stochastic ALI was used in deriving the corresponding airborne effluent limit in table II of this subsection. For this reason, the DAC and airborne effluent limits are not always proportional as was the case in appendix A of part D of the eighth edition of volume I of the *suggested state regulations for control of radiation*.

(3) The air concentration values listed in column 1 of table II of this subsection were derived by one of two methods. For those radionuclides for which the stochastic limit is governing, the occupational stochastic inhalation ALI was divided by 2.4×10^9 milliliter, relating the inhalation ALI to the DAC, as explained above, and then divided by a factor of 300. The factor of 300 includes the following components: a factor of 50 to relate the 5 rems (0.05 sievert) annual occupational dose limit to the 0.1 rem (1 millisievert) limit for members of the public, a factor of 3 to adjust for the difference in exposure time and the inhalation rate for a worker and that for members of the public; and a factor of 2 to adjust the occupational values, derived for adults, so that they are applicable to other age groups.

(4) For those radionuclides for which submersion, that is external dose, is limiting, the occupational DAC in column 3 of table I was divided by 219. The factor of 219 is composed of a factor of 50, as described above, and a factor of 4.38 relating occupational exposure for 2,000 hours per year to full-time exposure (8,760 hours per year). Note that an additional factor of 2 for age considerations is not warranted in the submersion case.

(5) The water concentrations were derived by taking the most restrictive occupational stochastic oral ingestion ALI and dividing by 7.3×10^7 . The factor of 7.3×10^7 milliliter includes the following components: the factors of 50 and 2 described above and a factor of 7.3×10^5 milliliter which is the annual water intake of reference man.

(6) Note 2 of Subsection F of this section provides groupings of radionuclides which are applicable to unknown mixtures of radionuclides. These groupings, including occupational inhalation ALIs and DACs, air and water effluent concentrations and releases to sewer, require demonstrating that the most limiting radionuclides in successive classes are absent. The limit for the unknown mixture is defined when the presence of one of the listed radionuclides cannot be definitely excluded as being present either from knowledge of the radionuclide composition of the source or from actual measurements.

E. Table III "Releases to Sewers". The monthly average concentrations for release to sanitary sewerage are applicable to the provisions in 20.3.4.435 NMAC. The concentration values were derived by taking the most restrictive occupational stochastic oral ingestion ALI and dividing by 7.3×10^6 milliliter. The factor of 7.3×10^6 milliliter is composed of a factor of 7.3×10^5 milliliter, the annual water intake by reference man, and a factor of 10, such that the concentrations, if the sewage released by the licensee were the only source of water ingested by reference man during a year, would result in a committed effective dose equivalent of 0.05 rem (5 millisieverts).

<p>- Any single radionuclide not listed above with decay mode other than alpha emission or spontaneous fission and with radioactive half-life less than 2 hours; Submersion¹</p>	-	2E+2	1E-7	1E-9	-	-
<p>- Any single radionuclide not listed above with decay mode other than alpha emission or spontaneous fission and with radioactive half-life greater than 2 hours.</p>	-	2E-1	1E-10	1E-12	1E-8	1E-7
<p>- Any single radionuclide not listed above that decays by alpha emission or spontaneous fission, or any mixture for which either the identity or the concentration of any radionuclide in the mixture is not known.</p>	-	4E-4	2E-13	1E-15	2E-9	2E-8

Tables I, II and III notes:

¹ "submersion" means that values given are for submersion in a hemispherical semi-infinite cloud of airborne material;

² these radionuclides have radiological half-lives of less than 2 hours. The total effective dose equivalent received during operations with these radionuclides might include a significant contribution from external exposure. The DAC values for all radionuclides, other than those designated class "Submersion," are based upon the committed effective dose equivalent due to the intake of the radionuclide into the body and do not include potentially significant contributions to dose equivalent from external exposures. The licensee may substitute 1E-7 microcurie per milliliter ($\mu\text{Ci/ml}$) for the listed DAC to account for the submersion dose prospectively, but should use individual monitoring devices or other radiation measuring instruments that measure external exposure to demonstrate compliance with the limits (see 20.3.4.407 NMAC);

³ for soluble mixtures of U-238, U-234 and U-235 in air, chemical toxicity may be the limiting factor (see Subsection E of 20.3.4.405 NMAC). If the percent of weight (enrichment) of U-235 is not greater than 5, the concentration value for a 40-hour workweek is 0.2 milligrams uranium per cubic meter of air average. For any enrichment, the product of the average concentration and time of exposure during a 40-hour workweek shall not exceed 8E-3 (SA) microcurie-hours per milliliter ($\mu\text{Ci-hr/ml}$), where SA is the specific activity of the uranium inhaled. The specific activity for natural uranium is 6.77E-7 curies per gram uranium. The specific activity for other mixtures of U-238, U-235 and U-234, if not known, shall be:

$SA = 3.6\text{E-}7$ curies/gram U for depleted uranium; and

$SA = (0.4 + 0.38 (\text{enrichment}) + 0.0034 (\text{enrichment})^2)\text{E-}6$ for enrichment > 0.72,

where enrichment is the percentage by weight of U-235, expressed as percent.

F. Notes.

(1) If the identity of each radionuclide in a mixture is known but the concentration of one or more of the radionuclides in the mixture is not known, the DAC for the mixture shall be the most restrictive DAC of any radionuclide in the mixture.

(2) If the identity of each radionuclide in the mixture is not known, but it is known that certain radionuclides specified in this section are not present in the mixture, the inhalation ALI, DAC and effluent and sewage concentrations for the mixture are the lowest values specified in this section for any radionuclide that is not known to be absent from the mixture; or

Radionuclide	Table I Occupational Values			Table II Effluent Concentrations		Table III Releases to Sewers
	Col. 1	Col. 2	Col. 3	Col. 1	Col. 2	
	Oral Ingestion	Inhalation		Air	Water	Monthly Average Concentration ($\mu\text{Ci/ml}$)
ALI (μCi)		ALI (μCi)	DAC ($\mu\text{Ci/ml}$)			
If, in addition it is known that Fe-60, Sr-90, Cd-113m, Cd-113, In-115, I-129, Cs-134, Sm-145, Sm-147, Gd-148, Gd-152, Hg-194 (organic), Bi-210m, Ra-223, Ra-224, Ra-225, Ac-225, Th-228, Th-230, U-233, U-234, U-235, U-236, U-238, U-Nat, Cm-242, Cf-248, Es-254, Fm-257, and Md-258 are not present.	-	-	-	-	1E-6	1E-5

(3) If a mixture of radionuclides consists of uranium and its daughters in ore dust (10 micrometers AMAD particle distribution assumed) prior to chemical separation of the uranium from the ore, the following values may be used for the DAC of the mixture: 6E-11 microcurie of gross alpha activity from uranium-238, uranium-234, thorium-230 and radium-226 per milliliter of air; 3E-11 microcurie of natural uranium per milliliter of air; or 45 micrograms of natural uranium per cubic meter of air.

(4) If the identity and concentration of each radionuclide in a mixture are known, the limiting values should be derived as follows: determine, for each radionuclide in the mixture, the ratio between the concentration present in the mixture and the concentration otherwise established in this section for the specific radionuclide when not in a mixture. The sum of such ratios for all of the radionuclides in the mixture may not exceed "1" (i.e., "unity"). Example: If radionuclides "A," "B" and "C" are present in concentrations C_A , C_B and C_C , and if the applicable DACs are DAC_A , DAC_B and DAC_C , respectively, then the concentrations shall be limited so that the following relationship exists:

$$\frac{C_A}{DAC_A} + \frac{C_B}{DAC_B} + \frac{C_C}{DAC_C} < 1$$

(5) To convert microcuries to kilobecquerels, multiply the microcurie value by 37.

Any radionuclide other than alpha-emitting radionuclides not listed	0.01

TABLE 462.1	
Radionuclide	Quantity (microcuries ²)
above, or mixtures of beta emitters of unknown composition	

Table 462.1 notes:

¹ the quantities listed above were derived by taking 1/10th of the most restrictive ALI listed in columns 1 and 2 of table I of 20.3.4.461 NMAC, rounding to the nearest factor of 10, and constraining the values listed between 0.001 and 1,000 microcuries (37 becquerels and 37 megabecquerels). Values of 100 microcuries (3.7 megabecquerels) have been assigned for radionuclides having a radioactive half-life in excess of E+9 years, except rhenium, 1,000 microcuries (37 megabecquerels) to take into account their low specific activity;

² to convert microcuries to kilobecquerels, multiply the microcurie value by 37.

B. Note. For purposes of Subsection E of 20.3.4.428 NMAC, Subsection A of 20.3.4.431 NMAC and Subsection A of 20.3.4.451 NMAC where there is involved a combination of radionuclides in known amounts, the limit for the combination shall be derived as follows: determine, for each radionuclide in the combination, the ratio between the quantity present in the combination and the limit otherwise established for the specific radionuclide when not in combination. The sum of such ratios for all radionuclides in the combination may not exceed "1", that is, unity.

[20.3.4.462 NMAC - Rp, 20.3.4.462 NMAC, 4/30/2009; A, 8/10/2021]

20.3.4.465 [RESERVED]

20.3.4.466 APPENDIX G - REQUIREMENTS FOR TRANSFERS OF LOW-LEVEL RADIOACTIVE WASTE INTENDED FOR DISPOSAL AT LICENSED LAND DISPOSAL FACILITIES AND MANIFESTS:

LLW means low-level radioactive waste as defined in the Low-Level Radioactive Waste Policy Act.

A. Manifest.

(1) A waste generator, collector or processor who transports, or offers for transportation LLW intended for ultimate disposal at a licensed low-level radioactive

waste land disposal facility must prepare a manifest [NRC OMB Control Numbers 3150-0164, -0165 and -0166] reflecting information requested on applicable NRC forms 540 (*uniform low-level radioactive waste manifest* (shipping paper) and 541 (*uniform low-level radioactive waste manifest* (container and waste description)) and, if necessary, on an applicable NRC form 542 (*uniform low-level radioactive waste manifest* (manifest index and regional compact tabulation)). NRC forms 540 and 540A must be completed and must physically accompany the pertinent low-level waste shipment. Upon agreement between shipper and consignee, NRC forms 541, 541A, 542 and 542A may be completed, transmitted and stored in electronic media with the capability for producing legible, accurate and complete records on the respective forms. Licensees are not required by NRC to comply with the manifesting requirements of this part when they ship the following:

(a) LLW for processing and expect its return (i.e., for storage under their license) prior to disposal at a licensed land disposal facility;

(b) LLW that is being returned to the licensee who is the "waste generator" or "generator", as defined in this part; or

(c) radioactively contaminated material to a "waste processor" that becomes the processor's "residual waste" unless regulated by other applicable federal or state regulations;

(d) these exclusions from manifesting requirements do not, however, exempt the licensee from complying with applicable DOT requirements for shipments referencing 49 CFR, including the preparation of shipping papers.

(2) For guidance in completing these forms, refer to the instructions that accompany the forms. Copies of manifests required by this section may be legible carbon copies, photocopies or computer printouts that reproduce the data in the format of the uniform manifest.

(3) NRC forms 540, 540A, 541, 541A, 542 and 542A, and the accompanying instructions, in hard copy, may be obtained by writing or calling the Office of the Chief information Officer, United States nuclear regulatory commission, Washington, DC 20555-0001, telephone (301) 415-5877, or by visiting the NRC's web site at <http://www.nrc.gov> and selecting forms from the index found on the home page.

(4) This section includes information requirements of the DOT, as codified in 49 CFR Part 172. Additional 49 CFR requirements may be applicable. Information on hazardous, medical or other waste, required to meet EPA regulations, as codified in 40 CFR Parts 259, 261 or elsewhere, is not addressed in this section, and must be provided on the required EPA forms. However, any required EPA forms must accompany the *uniform low-level radioactive waste manifest* required by this chapter.

(5) As used in this section, the following definitions apply:

(a) **"chelating agent"** has the same meaning as that given in 20.3.13.7 NMAC;

(b) **"chemical description"** means a description of the principal chemical characteristics of a low-level radioactive waste;

(c) **"computer-readable medium"** means that the department's computer can transfer the information from the medium into its memory;

(d) **"consignee"** means the designated receiver of the shipment of low-level radioactive waste;

(e) **"decontamination facility"** means a facility operating under a department, NRC or agreement state license whose principal purpose is decontamination of equipment or materials to accomplish recycle, reuse or other waste management objectives, and, for purposes of this part, is not considered to be a consignee for LLW shipments;

(f) **"disposal container"** means a container principally used to confine low-level radioactive waste during disposal operations at a land disposal facility (also see "high integrity container"); note that for some shipments, the disposal container may be the transport package;

(g) **"EPA identification number"** means the number received by a transporter following application to the administrator of EPA as required by 40 CFR Part 263;

(h) **"generator"** means a licensee operating under a department, NRC or agreement state license who (1) is a waste generator as defined in this part, or (2) is the licensee to whom waste can be attributed within the context of the Low-Level Radioactive Waste Policy Amendments Act (e.g., waste generated as a result of decontamination or recycle activities);

(i) **"high integrity container"** (HIC) means a container commonly designed to meet the structural stability requirements of 20.3.13.1325 NMAC, and to meet DOT requirements for a type A package;

(j) **"land disposal facility"** has the same meaning as that given in 20.3.13.7 NMAC;

(k) **"NRC forms 540, 540A, 541, 541A, 542 and 542A"** are official NRC forms referenced in this section; licensees need not use originals of these NRC forms as long as any substitute forms are equivalent to the original documentation in respect to content, clarity, size and location of information; upon agreement between the shipper and consignee, NRC forms 541 (and 541A) and NRC forms 542 (and 542A) may be completed, transmitted and stored in electronic media; the electronic media

must have the capability for producing legible, accurate and complete records in the format of the uniform manifest;

(l) "**package**" means the assembly of components necessary to ensure compliance with the packaging requirements of DOT regulations, together with its radioactive contents, as presented for transport;

(m) "**physical description**" means the items called for on NRC form 541 to describe a LLW;

(n) "**residual waste**" means LLW resulting from processing or decontamination activities that cannot be easily separated into distinct batches attributable to specific waste generators; this waste is attributable to the processor or decontamination facility, provided that other federal laws or regulations, such as those of Resource Conservation and Recovery Act (RCRA), are not applicable;

(o) "**shipper**" means the licensed entity (i.e., the waste generator, waste collector or waste processor) who offers low-level radioactive waste for transportation, typically consigning this type of waste to a licensed waste collector, waste processor or land disposal facility operator;

(p) "**shipping paper**" means NRC form 540 and, if required, NRC form 540A which includes the information required by DOT in 49 CFR part 172;

(q) "**source material**" has the same meaning as that given in 20.3.3.7 NMAC;

(r) "**special nuclear material**" has the same meaning as that given in 20.3.3.7 NMAC;

(s) "**uniform low-level radioactive waste manifest**" or "**uniform manifest**" means the combination of NRC forms 540, 541 and, if necessary, 542, and their respective continuation sheets as needed, or equivalent;

(t) "**waste collector**," including "waste broker," means an entity, operating under a department, NRC or agreement state license, whose principal purpose is to collect and consolidate waste generated by others, and to transfer this waste, without processing or repackaging the collected waste, to another licensed waste collector, licensed waste processor or licensed land disposal facility;

(u) "**waste description**" means the physical, chemical and radiological description of a low-level radioactive waste as called for on NRC form 541;

(v) "**waste generator**" means an entity, operating under a department, NRC or agreement state license, who (1) possesses any material or component that contains radioactivity or is radioactively contaminated for which the licensee foresees no further

use, and (2) transfers this material or component to a licensed land disposal facility or to a licensed waste collector or processor for handling or treatment prior to disposal; a licensee performing processing or decontamination services may be a "waste generator" if the transfer of low-level radioactive waste from its facility is defined as "residual waste";

(w) "waste processor" means an entity, operating under a department, NRC or agreement state license, whose principal purpose is to process, repackage or otherwise treat low-level radioactive material or waste generated by others prior to eventual transfer of waste to a licensed low-level radioactive waste land disposal facility; and

(x) "waste type" means a waste within a disposal container having a unique physical description (i.e., a specific waste descriptor code or description; or a waste sorbed on or solidified in a specifically defined media).

(6) Information requirements.

(a) General information. The shipper of the radioactive waste shall provide the following information on the uniform manifest:

(i) the name, facility address and telephone number of the licensee shipping the waste;

(ii) an explicit declaration indicating whether the shipper is acting as a waste generator, collector, processor or a combination of these identifiers for purposes of the manifested shipment; and

(iii) the name, address and telephone number, or the name and EPA identification number for the carrier transporting the waste.

(b) Shipment information. The shipper of the radioactive waste shall provide the following information regarding the waste shipment on the uniform manifest:

(i) the date of the waste shipment;

(ii) the total number of packages or disposal containers;

(iii) the total disposal volume and disposal weight in the shipment;

(iv) the total radionuclide activity in the shipment;

(v) the activity of each of the radionuclides H-3, C-14, Tc-99 and I-129 contained in the shipment; and

(vi) the total masses of U-233, U-235 and plutonium in special nuclear material, and the total mass of uranium and thorium in source material.

(c) Disposal container and waste information. The shipper of the radioactive waste shall provide the following information on the uniform manifest regarding the waste and each disposal container of waste in the shipment:

(i) an alphabetic or numeric identification that uniquely identifies each disposal container in the shipment;

(ii) a physical description of the disposal container, including the manufacturer and model of any high integrity container;

(iii) the volume displaced by the disposal container;

(iv) the gross weight of the disposal container, including the waste;

(v) for waste consigned to a disposal facility, the maximum radiation level at the surface of each disposal container;

(vi) a physical and chemical description of the waste;

(vii) the total weight percentage of chelating agent for any waste containing more than 0.1% chelating agent by weight, plus the identity of the principal chelating agent;

(viii) the approximate volume of waste within a container;

(ix) the sorbing or solidification media, if any, and the identity of the solidification media vendor and brand name;

(x) the identities and activities of individual radionuclides contained in each container, the masses of U-233, U-235 and plutonium in special nuclear material, and the masses of uranium and thorium in source material, including fissile category classification; for discrete waste types (i.e., activated materials, contaminated equipment, mechanical filters, sealed source/devices and wastes in solidification/stabilization media), the identities and activities of individual radionuclides associated with or contained on these waste types within a disposal container shall be reported;

(xi) the total radioactivity within each container;

(xii) for wastes consigned to a disposal facility, the classification of the waste pursuant to 20.3.13.1324 NMAC; waste not meeting the structural stability requirements of Subsection B of 20.3.13.1325 NMAC; and

(xiii) any other information required on a manifest or shipping paper by the DOT, the NRC or other regulatory agencies.

(d) Uncontainerized waste information. The shipper of the radioactive waste shall provide the following information on the uniform manifest regarding a waste shipment delivered without a disposal container:

- (i) the approximate volume and weight of the waste;
- (ii) a physical and chemical description of the waste;
- (iii) the total weight percentage of chelating agent if the chelating agent exceeds 0.1% by weight, plus the identity of the principal chelating agent;
- (iv) for waste consigned to a disposal facility, the classification of the waste pursuant to 20.3.13.1324 NMAC; waste not meeting the structural stability requirements of Subsection B of 20.3.13.1325 NMAC must be identified;
- (v) the identities and activities of individual radionuclides contained in the waste, the masses of U-233, U-235 and plutonium in special nuclear material, and the masses of uranium and thorium in source material; and
- (vi) for wastes consigned to a disposal facility, the maximum radiation levels at the surface of the waste.

(e) Multi-generator disposal container information. This section applies to disposal containers enclosing mixtures of waste originating from different generators. (Note: The origin of the LLW resulting from a processor's activities may be attributable to one or more "generators," including "waste generators," as defined in this section). It also applies to mixtures of wastes shipped in an uncontainerized form, for which portions of the mixture within the shipment originate from different generators.

- (i) For homogeneous mixtures of waste, such as incinerator ash, provide the waste description applicable to the mixture and the volume of the waste attributed to each generator.
- (ii) For heterogeneous mixtures of waste, such as the combined products from a large compactor, identify each generator contributing waste to the disposal container, and, for discrete waste types (i.e., activated materials, contaminated equipment, mechanical filters, sealed source/devices and wastes in solidification/stabilization media), the identities and activities of individual radionuclides contained on these waste types within the disposal container. For each generator, provide the following: (1) the volume of waste within the disposal container; (2) a physical and chemical description of the waste, including the solidification agent, if any; (3) the total weight percentage of chelating agents for any disposal container containing more than 0.1% chelating agent by weight, plus the identity of the principal chelating

agent; (4) the sorbing or solidification media, if any, and the identity of the solidification media vendor and brand name if the media is claimed to meet stability requirements in Subsection B of 20.3.13.1325 NMAC; and (5) radionuclide identities and activities contained in the waste, the masses of U-233, U-235 and plutonium in special nuclear material, and the masses of uranium and thorium in source material if contained in the waste.

B. Certification. An authorized representative of the waste generator, processor or collector shall certify by signing and dating the shipment manifest that the transported materials are properly classified, described, packaged, marked and labeled, and are in proper condition for transportation according to the applicable regulations of the department, the DOT and the NRC. A collector in signing the certification is certifying that nothing has been done to the collected waste which would invalidate the waste generator's certification.

C. Control and Tracking.

(1) Any licensee who transfers radioactive waste to a land disposal facility or a licensed waste collector shall comply with the requirements in Subparagraphs (a) through (i) of this paragraph. Any licensee who transfers waste to a licensed waste processor for waste treatment or repackaging shall comply with the requirements of Subparagraphs (d) through (i) of this paragraph. A licensee shall:

(a) prepare all wastes so that the waste is classified according to 20.3.13.1324 NMAC, and meets the waste characteristics requirements in 20.3.13.1325 NMAC;

(b) label each disposal container (or transport package if potential radiation hazards preclude labeling of the individual disposal container) of waste to identify whether it is class A waste, class B waste, class C waste or greater than class C waste, in accordance with 20.3.13.1324 NMAC;

(c) conduct a quality assurance program to assure compliance with 20.3.13.1324 NMAC and 20.3.13.1325 NMAC (the program must include management evaluation of audits);

(d) prepare the NRC *uniform low-level radioactive waste manifest* as required by Subsection A of this section;

(e) forward a copy or electronically transfer the *uniform low-level radioactive waste manifest* to the intended consignee so that either (1) receipt of the manifest precedes the LLW shipment or (2) the manifest is delivered to the consignee with the waste at the time the waste is transferred to the consignee. Using both delivery methods (1) and (2) is also acceptable;

(f) include NRC form 540 (and NRC form 540A, if required) with the shipment regardless of the option chosen in Subparagraph (e) of this paragraph;

(g) receive acknowledgment of the receipt of the shipment in the form of a signed copy of NRC form 540;

(h) retain a copy of or electronically store the *uniform low-level radioactive waste manifest* and documentation of acknowledgment of receipt as the record of transfer of licensed material as required by 20.3.3 NMAC; and

(i) for any shipments or any part of a shipment for which acknowledgment of receipt has not been received within the times set forth in this section, conduct an investigation in accordance with Paragraph (5) of this subsection.

(2) Any waste collector licensee who handles only prepackaged waste shall:

(a) acknowledge receipt of the waste from the shipper within one week of receipt by returning a signed copy of NRC form 540;

(b) prepare a new manifest to reflect consolidated shipments that meet the requirements of this section; the waste collector shall ensure that, for each container of waste in the shipment, the manifest identifies the generator of that container of waste;

(c) forward a copy or electronically transfer the *uniform low-level radioactive waste manifest* to the intended consignee so that either (1) receipt of the manifest precedes the LLW shipment or (2) the manifest is delivered to the consignee with the waste at the time the waste is transferred to the consignee; using both delivery methods (1) and (2) is also acceptable;

(d) include NRC form 540 (and NRC form 540A, if required) with the shipment regardless of the option chosen in Subparagraph (c) of this paragraph;

(e) receive acknowledgment of the receipt of the shipment in the form of a signed copy of NRC form 540;

(f) retain a copy of or electronically store the *uniform low-level radioactive waste manifest* and documentation of acknowledgment of receipt as the record of transfer of licensed material as required by 20.3.3 NMAC;

(g) for any shipments or any part of a shipment for which acknowledgment of receipt has not been received within the times set forth in this section, conduct an investigation in accordance with Paragraph (5) of this subsection; and

(h) notify the shipper and the department when any shipment, or part of a shipment, has not arrived within 60 days after receipt of an advance manifest, unless notified by the shipper that the shipment has been cancelled.

(3) Any licensed waste processor who treats or repackages waste shall:

(a) acknowledge receipt of the waste from the shipper within one week of receipt by returning a signed copy of NRC form 540;

(b) prepare a new manifest that meets the requirements of this section; preparation of the new manifest reflects that the processor is responsible for meeting these requirements; for each container of waste in the shipment, the manifest shall identify the waste generators, the preprocessed waste volume and the other information as required in Subparagraph (e) of Paragraph (6) of Subsection A of this section;

(c) prepare all wastes so that the waste is classified according to 20.3.13.1324 NMAC, and meets the waste characteristics requirements in 20.3.13.1325 NMAC;

(d) label each package of waste to identify whether it is class A waste, class B waste or class C waste, in accordance with 20.3.13.1324 NMAC and 20.3.13.1326 NMAC;

(e) conduct a quality assurance program to assure compliance with 20.3.13.1324 NMAC and 20.3.13.325 NMAC (the program shall include management evaluation of audits);

(f) forward a copy or electronically transfer the *uniform low-level radioactive waste manifest* to the intended consignee so that either (1) receipt of the manifest precedes the LLW shipment or (2) the manifest is delivered to the consignee with the waste at the time the waste is transferred to the consignee; using both delivery methods (1) and (2) is also acceptable;

(g) include NRC form 540 (and NRC form 540A, if required) with the shipment regardless of the option chosen in paragraph Subparagraph (f) of this paragraph;

(h) receive acknowledgment of the receipt of the shipment in the form of a signed copy of NRC form 540;

(i) retain a copy of or electronically store the *uniform low-level radioactive waste manifest* and documentation of acknowledgment of receipt as the record of transfer of licensed material as required by 20.3.3 NMAC;

(j) for any shipment or any part of a shipment for which acknowledgment of receipt has not been received within the times set forth in this section, conduct an investigation in accordance with Paragraph (5) of this subsection; and

(k) notify the shipper and the department when any shipment, or part of a shipment, has not arrived within 60 days after receipt of an advance manifest, unless notified by the shipper that the shipment has been canceled.

(4) The land disposal facility operator shall:

(a) acknowledge receipt of the waste within one week of receipt by returning, as a minimum, a signed copy of NRC form 540 to the shipper; the shipper to be notified is the licensee who last possessed the waste and transferred the waste to the operator; if any discrepancy exists between materials listed on the *uniform low-level radioactive waste manifest* and materials received, copies or electronic transfer of the affected forms must be returned indicating the discrepancy;

(b) maintain copies of all completed manifests and electronically store the information required by 20.3.13.1334 NMAC until the department terminates the license; and

(c) notify the shipper and the department when any shipment, or part of a shipment, has not arrived within 60 days after receipt of an advance manifest, unless notified by the shipper that the shipment has been canceled.

(5) Any shipment or part of a shipment for which acknowledgment is not received within the times set forth in this section must:

(a) be investigated by the shipper if the shipper has not received notification or receipt within 20 days after transfer; and

(b) be traced and reported; the investigation shall include tracing the shipment and filing a report with the department; each licensee who conducts a trace investigation shall file a written report with the department within 2 weeks of completion of the investigation.

[20.3.4.467 NMAC - N, 04/30/2009]

PART 5: RADIATION SAFETY REQUIREMENTS FOR INDUSTRIAL RADIOGRAPHIC OPERATIONS

20.3.5.1 ISSUING AGENCY:

Environmental Improvement Board.

[20.3.5.1 NMAC - N, 5/19/02]

20.3.5.2 SCOPE:

The regulations in this part apply to all licensees or registrants who use sources of radiation for industrial radiography. Except for those regulations of this Part clearly applicable only to sealed radioactive sources, both radiation machine and sealed radioactive sources are covered by this part. The requirements of this part are in addition to, and not in substitution for, other applicable requirements of 20.3 NMAC.

[20.3.5.2 NMAC - Rp, 20 NMAC 3.1.5.501, 5/19/02]

20.3.5.3 STATUTORY AUTHORITY:

Sections 74-1-8, 74-1-9, 74-3-5, and 74-3-9 NMSA 1978.

[20.3.5.3 NMAC - N, 5/19/02]

20.3.5.4 DURATION:

Permanent.

[20.3.5.4 NMAC - N, 5/19/02]

20.3.5.5 EFFECTIVE DATE:

May 19, 2002, unless a later date is cited at the end of a section.

[20.3.5.5 NMAC - N, 5/19/02]

20.3.5.6 OBJECTIVE:

To establish radiation safety requirements for both radiation machines and sealed radioactive sources used for industrial radiography.

[20.3.5.6 NMAC - Rp, 20 NMAC 3.1.5.500, 5/19/02]

20.3.5.7 DEFINITIONS:

As used in this Part, the following apply:

A. "ALARA" (acronym for "as low as is reasonably achievable") means making every reasonable effort to maintain exposures to radiation as far below the dose limits specified in Part 4 of 20.3 NMAC as is practical consistent with the purpose for which the licensed activity is undertaken, taking into account the state of technology, the economics of improvements in relation to state of technology, the economics of improvements in relation to benefits to the public health and safety, and other societal and socioeconomic considerations, and in relation to utilization of radiation and licensed materials in the public interest;

B. "Annual refresher safety training" means a review conducted or provided by the licensee or registrant for its employees on radiation safety aspects of industrial radiography. The review may include, as appropriate, the results of internal inspections, new procedures or equipment, new or revised regulations, accidents or errors that have been observed, and should also provide opportunities for employees to ask safety questions;

C. "Associated equipment" means equipment that is used in conjunction with a radiographic exposure device to make radiographic exposures that drives, guides, or comes in contact with the source, (e.g., guide tube, control tube, control (drive) cable, removable source stop, "J" tube and collimator when it is used as an exposure head;

D. "Becquerel" (Bq) means one disintegration per second;

E. "Cabinet radiography" means industrial radiography conducted in an enclosure or cabinet shielded so that radiation levels at every location on the exterior meet the limitations specified in 20.3.4.406 NMAC;

F. "Cabinet x-ray system" means an x-ray system with the x-ray tube installed in an enclosure (hereinafter termed "Cabinet") which, independently of existing architectural structures except the floor on which it may be placed, is intended to contain at least that portion of a material thing irradiated, provide radiation attenuation, and exclude personnel from its interior during generation of x-radiation. Included are all x-ray systems designed primarily for the inspection of carry-on baggage at airline, railroad, and bus terminals, and in similar facilities. An x-ray tube used within a shielded part of a building, or x-ray equipment that may temporarily or occasionally incorporate portable shielding is not considered a cabinet x-ray system;

G. "Certified cabinet x-ray system" means an x-ray system which has been certified in accordance with 21 CFR 1010.2 as being manufactured and assembled pursuant to the provisions of 21 CFR 1020.40;

H. "Certifying Entity" means an independent certifying organization meeting the requirements in 20.3.5.12 NMAC or an Agreement State meeting the requirements in 20.3.5.12 NMAC;

I. "Collimator" means a radiation shield that is placed on the end of the guide tube or directly onto a radiographic exposure device to restrict the size of the radiation beam when the sealed source is cranked into position to make a radiographic exposure;

J. "Control (drive) cable" means the cable that is connected to the source assembly and used to drive the source to and from the exposure location;

K. "Control drive mechanism" means a device that enables the source assembly to be moved to and from the exposure device;

L. "Control tube" means a protective sheath for guiding the control cable. The control tube connects the control drive mechanism to the radiographic exposure device;

M. "Exposure head" means a device that locates the gamma radiography sealed source in the selected working position. (an exposure head is also known as a source stop);

N. "Field station" means a facility where licensed material or registered machines may be stored or used, and from which equipment is dispatched;

O. "Gray" means the SI unit of absorbed dose; one gray is equal to an absorbed dose of 1 Joule/kilogram. It is also equal to 100 rads;

P. "Guide tube" (Projection sheath) means a flexible or rigid tube (i.e., "J" tube) for guiding the source assembly and the attached control cable from the exposure device to the exposure head; the guide tube may also include the connections necessary for attachment to the exposure device and to the exposure head;

Q. "Hands-on experience" means experience in all of those areas considered to be directly involved in the radiography process;

R. "Independent certifying organization" means an independent organization that meets all of the criteria of 20.3.5.12 NMAC;

S. "Industrial radiography" means the examination of the macroscopic structure of materials by nondestructive methods using sources of ionizing radiation to produce radiographic images;

T. "Lixiscope" means a portable light-intensified imaging device using a sealed source;

U. "Permanent radiographic installation" means an enclosed shielded room, cell, or vault, not located at a temporary jobsite, in which radiography is performed;

V. "Personal supervision" means guidance and instruction to a radiographer trainee by a radiographer instructor who is present at the site, in visual contact with the trainee while the trainee is using sources of radiation, and in such proximity that immediate assistance can be given if required;

W. "Practical examination" means a documented demonstration through practical application of the safety rules and principles in industrial radiography including use of all appropriate equipment and procedures;

X. "Radiation safety officer" (RSO) for industrial radiography means an individual with the responsibility for the overall radiation safety program on behalf of the licensee or registrant and who meets the requirements as specified in Subsection C of 20.3.5.11 NMAC;

Y. "Radiographer" means any individual who performs, or in attendance personally supervises, industrial radiographic operations and who is responsible to the licensee or registrant for assuring compliance with the requirements of these regulations and all license and/or certificate of registration conditions; this individual must meet the training requirements as specified in Subsection B of 20.3.5.11 NMAC;

Z. "Radiographer certification" means written approval received from a certifying entity stating that an individual has satisfactorily met certain established radiation safety, testing, and experience criteria;

AA. "Radiographer instructor" means any radiographer who provides on-the-job training to radiographer trainees in accordance with Subsection D of 20.3.5.11 NMAC;

AB. "Radiographer trainee" means any individual who, under the personal supervision of a radiographer instructor, uses sources of radiation, related handling tools, or radiation survey instruments during the course of his instruction;

AC. "Radiographer's assistant" means any individual who under the direct supervision of a radiographer, uses radiographic exposure devices, sealed sources or related handling tools, or radiation survey instruments in industrial radiography;

AD. "Radiographic exposure device" means any instrument containing a sealed source fastened or contained therein, in which the sealed source or shielding thereof may be moved, or otherwise changed, from a shielded to unshielded position for purposes of making a radiographic exposure;

AE. "Radiographic operations" means all activities performed with a radiographic device, or with a radiation machine; these include however are not limited to activities associated with the use of the device or machine, or transport (except when being transported by a common or contract transport), including surveys to confirm the adequacy of boundaries, setting up equipment and any activity inside restricted area boundaries;

AF. "Radiographic personnel" means any radiographer, radiographer's assistant, radiographer instructor, or radiographer trainee;

AG. "Residential location" means any area where structures in which people lodge or live are located, and the grounds on which structures are located including, but not limited to, houses, apartments, condominiums, and garages;

AH. "S-tube" means a tube through which the radioactive source travels when inside a radiographic exposure device;

AI. "Sealed source" means any byproduct material that is encased in a capsule designed to prevent leakage or escape of the byproduct material;

AJ. "Shielded position" means the location within the radiographic exposure device or source changer where the sealed source is secured and restricted from movement;

AK. "Shielded-room radiography" means industrial radiography conducted in an enclosed room, the interior of which is not occupied during radiographic operations, which is shielded so that radiation levels at every location on the exterior meet the limitations specified in 20.3.4.406 NMAC;

AL. "sievert" (Sv) means the SI unit of any of the quantities expressed as dose equivalent. The dose equivalent in sieverts is equal to the absorbed dose in grays multiplied by the quality factor (1 Sv = 100 rems);

AM. "Source assembly" means an assembly that consists of the sealed source and a connector that attaches the source to the control cable; the source assembly may also include a stop ball used to secure the source in the shielded position;

AN. "Source changer" means a device designed and used for replacement of sealed sources in radiographic exposure devices, including those source changers also used for transporting and storage of sealed sources;

AO. "Storage area" means any location, facility, or vehicle which is used to store, to transport, or to secure a radiographic exposure device, a storage container, or a sealed source when it is not in use and which is locked or has a physical barrier to prevent accidental exposure, tampering with, or unauthorized removal of the device, container, or source;

AP. "Storage container" means a shielded device in which sealed sources are secured and stored;

AQ. "Temporary job site" means any location where industrial radiography is performed and where licensed material or X-ray machines may be stored other than the location(s) listed in a specific license or certificate of registration; and

AR. "Transport container" means a package that is designed to provide radiation safety and security when sealed sources are transported and which meets all applicable requirements of the U.S. department of transportation;

AS. "Underwater radiography" means industrial radiography performed when the radiographic exposure device and/or related equipment are beneath the surface of the water.

[20.3.5.7 NMAC - Rp, 20 NMAC 3.1.5.502, 5/19/02]

20.3.5.8 EXEMPTIONS:

A. Except for the requirements of Subsections B and C of 20.3.5.25 NMAC, certified x-ray systems designed to exclude individuals from the interior of the cabinet are exempt from the requirements of this part.

B. Industrial uses of lixiscopes are exempt from the requirements of this part.

[20.3.5.8 NMAC - Rp, 20 NMAC 3.1.5.503, 5/19/02]

20.3.5.9 PROHIBITIONS:

Industrial radiography performed with a sealed source that is not fastened to or contained in a radiographic exposure device, known as fish pole radiography, is prohibited unless specifically authorized in a license issued by the department.

[20.3.5.9 NMAC - Rp, 20 NMAC 3.1.5.526, 5/19/02]

20.3.5.10 SPECIFIC LICENSE FOR INDUSTRIAL RADIOGRAPHY:

An application for a specific license for the use of licensed material in industrial radiography will be approved if the applicant meets the following requirements:

A. The applicant satisfies the general requirements specified in Part 3 of 20.3 NMAC for byproduct material, as appropriate, and any special requirements contained in this part.

B. An application for a specific license of category 1 and category 2 quantities of radioactive material shall comply with 10 CFR 37. The licensee shall comply with 10 CFR 37 except as follows:

(1) any reference to the commission or NRC shall be deemed a reference to the department;

(2) 10 CFR 37.5 definitions of agreement state, byproduct material, commission and person shall not be applicable;

(3) 10 CFR 37.7, 10 CFR 37.9, 10 CFR 37.11(a) and (b), 10 CFR 37.13, 10 CFR 37.71, 10 CFR 37.105, and 10 CFR 37.107 shall not be applicable; and

(4) for any reporting or notification requirements that the licensee must follow in 10 CFR 37.45, 10 CFR 37.57, 10 CFR 37.77(a) through (d), and 10 CFR 37.81 the licensee shall use the following address when applicable: New Mexico Environment Department/RCB, P.O. Box 5469, Santa Fe, NM 87502-5469 address information.

C. The applicant submits an adequate program for training radiographers and radiographers' assistants that meets the requirements of Paragraph (1) of Subsection A of 20.3.5.11 NMAC. License applicants need not describe the initial training and examination program for radiographers in the subjects outlined in Paragraph (1) of Subsection A of 20.3.5.11 NMAC.

D. The applicant submits procedures for verifying and documenting the certification status of radiographers and for ensuring that the certification of individuals acting as radiographers remains valid.

E. The applicant submits written operating and emergency procedures as described in 20.3.5.29 NMAC.

F. The applicant submits a description of a program for inspections of the job performance of each radiographer and radiographers' assistant. The intervals for these performance inspections are not to exceed six months as described in Subsection B of 20.3.5.13 NMAC.

G. The applicant submits a description of the applicant's overall organizational structure as it applies to the radiation safety responsibilities in industrial radiography, including specified delegation of authority and responsibility.

H. The applicant identifies and lists the qualifications of the individual(s) designated as the RSO and potential designees responsible for ensuring that the licensee's radiation safety program is implemented in accordance with approved procedures. Refer to Subsection C of 20.3.5.11 NMAC for RSO qualification requirements.

I. If an applicant intends to perform leak testing of sealed sources or exposure devices containing depleted uranium (DU) shielding, the applicant must describe the procedures for performing and the qualifications of the person(s) authorized to do the leak testing. If the applicant intends to analyze its own wipe samples, the application must include a description of the procedures to be followed. The description must include the:

- (1) instruments to be used;
- (2) methods of performing the analysis; and
- (3) pertinent experience of the person who will analyze the wipe samples.

J. If the applicant intends to perform "in-house" calibrations of survey instruments the applicant must describe methods to be used and the relevant experience of the person(s) who will perform the calibrations. All calibrations must be performed according to the procedures described and at the intervals prescribed in 20.3.5.16 NMAC.

K. The applicant identifies and describes the location(s) of all field stations and permanent radiographic installations.

L. The applicant identifies the location(s) where all records required by this part and other parts of 20.3 NMAC will be maintained. If a license is issued to the applicant, the licensee shall maintain copies of records required by this Part and other applicable Parts of 20.3 NMAC at the specified location(s).

[20.3.5.10 NMAC - N, 5/19/02; A, 02/14/2023]

20.3.5.11 TRAINING AND QUALIFICATION REQUIREMENTS:

A. Radiographer's assistant. Licensees and registrants may not permit any individual to act as a radiographer's assistant until the requirements of this subsection have been completed. Until completion of these requirements the individual is considered to be a radiographer trainee. Licensees and registrants will have 120 days from the effective date of these regulations to comply with these requirements:

(1) Training shall be provided regarding the fundamentals of radiation safety including:

(a) Characteristics of gamma and X-ray radiation;

(b) Units of radiation dose and quantity of radioactivity;

(c) Hazards of exposure to radiation during radiographic operations, including case histories of accidents in radiography;

(d) Levels of radiation experienced during radiographic operations; and

(e) Methods of controlling radiation dose (time, distance, and shielding).

(f) Proper techniques for use and operation, and limitations of, the specific radiation survey instruments and personnel monitoring equipment used by the licensee or registrant.

(2) The individual has been provided copies of and instruction in the requirements contained in this part, applicable sections of Parts 3, 4, and 10 of 20.3 NMAC, 10 CFR 71 of federal regulations, and conditions of the radioactive materials license or registration under which the radiographer will perform industrial radiography, and the licensee's or registrant's operating and emergency procedures;

(3) The individual has developed competence to use, under the personal supervision of the radiographer or radiographer instructor, the radiographic exposure devices, sealed sources, radiation machines, associated equipment, and radiation survey instruments that the assistant will use; and

(4) The individual has demonstrated understanding of the instructions provided under Paragraph (2) of Subsection A of 20.3.5.11 NMAC by successfully completing a written test on the subjects covered and has demonstrated competence in the use of hardware described in Paragraph (3) of Subsection A of 20.3.5.11 NMAC by successful completion of a practical examination on the use of such hardware.

B. Radiographer. Licensees may not permit any individual to act as a radiographer until the individual has completed the requirements of this subsection. With the exception of Paragraph (3) of Section B of 20.3.5.11 NMAC, licensees and registrants will have 120 days from the effective date of these regulations to comply with these requirements:

- (1) The requirements of Subsection A of 20.3.5.11 NMAC; and,
- (2) Two months minimum on-the-job training in addition to paragraph (1) of Subsection B of 20.3.5.11 NMAC; and,
- (3) Certification through a radiographer certification program by a certifying entity in accordance with the criteria specified in 20.3.5.12 NMAC. Licensees or registrants will have one calendar year from the effective date of these regulations to comply with this requirement. Records of radiographer certification maintained in accordance with Subsection F of 20.3.5.11 NMAC provide appropriate affirmation of meeting this certification requirement; and,
- (4) Has demonstrated understanding of the license or registration and the operating and emergency procedures by successful completion of a written or oral examination covering this material; and,
- (5) Has received adequate training and has demonstrated understanding in the use of the licensee's or registrant's radiation survey instruments and associated equipment by successful completion of a practical examination covering the following material:
 - (a) Use, operation, calibration, and limitations of radiation survey instruments; and
 - (b) Survey techniques; and
 - (c) Use of personnel monitoring equipment; and
- (6) Has received adequate training and has demonstrated understanding in the use of the licensee's or registrant's radiographic exposure devices, sources, radiation machines, and associated equipment by successful completion of a practical examination covering the following material:
 - (a) Operation and control of radiographic exposure equipment, radiation machines, remote handling equipment, and storage containers, including pictures or models of source assemblies (pigtailed); and
 - (b) Storage, control, and disposal of licensed material; and
 - (c) Inspection and maintenance of equipment.

C. Radiation safety officer (RSO). The licensee may not permit any individual to act as an RSO until the requirements of this subsection have been satisfied. Licensees and registrants will have one year from the effective date of these regulations to comply with these requirements:

(1) The minimum qualifications, training, and experience for RSOs are as follows:

(a) Completion of the training and qualification requirements of Subsection B of 20.3.5.11 NMAC; and

(b) 2000 hours of hands-on experience as a qualified radiographer in industrial radiographic operations; and

(c) Formal training in the establishment and maintenance of a radiation protection program.

(2) The department will consider alternatives to these requirements when the RSO has appropriate training and/or experience in the field of ionizing radiation, and in addition, has adequate formal training with respect to the establishment and maintenance of a radiation safety protection program.

D. Radiographer instructor. No individual shall act as a radiographer instructor unless such individual:

(1) Has met the requirements of Subsection B of 20.3.5.11 NMAC; and

(2) Has 2000 hours of hands-on experience as a qualified radiographer in industrial radiographic operations; and

(3) Has been named as a radiographer instructor on the license or a registration certificate issued by the Department.

E. Annual refresher training. The licensee or registrant shall provide annual refresher training in radiation safety for each radiographer and radiographer's assistant at intervals not to exceed 12 months.

F. Records of training and certification. Each licensee or registrant shall maintain the following records (of training and certification) for 3 years after the record is made:

(1) Records of training of each radiographer and each radiographer's assistant. The record must include radiographer certification documents and verification of certification status, copies of written tests, dates of oral and practical examinations, and names of individuals conducting and receiving the oral and practical examinations; and

(2) Records of annual refresher safety training for each radiographer and each radiographer's assistant. The records must list the topics discussed during the refresher safety training, the dates the annual refresher safety training was conducted, and names of the instructors and attendees. For inspections of job performance

required by Subsection B of 20.3.5.13 NMAC, the records must also include a list showing the items checked and any non-compliances observed by the RSO.

[20.3.5.11 NMAC - Rp, 20 NMAC 3.1.5.515, 5/19/02]

20.3.5.12 REQUIREMENTS FOR AN INDEPENDENT CERTIFYING ORGANIZATION:

A. An independent certifying organization shall:

- (1) be an organization such as a society or association, whose members participate in, or have an interest in, the fields of industrial radiography; and
- (2) make its membership available to the general public nationwide that is not restricted because of race, color, religion, sex, age, national origin or disability; and
- (3) have a certification program open to nonmembers, as well as members; and
- (4) be an incorporated, nationally recognized organization, that is involved in setting national standards of practice within its fields of expertise; and
- (5) have an adequate staff, a viable system for financing its operations, and a policy-and decision-making review board; and
- (6) have a set of written organizational by-laws and policies that provide adequate assurance of lack of conflict of interest and a system for monitoring and enforcing those by-laws and policies; and
- (7) have a committee, whose members can carry out their responsibilities impartially, to review and approve the certification guidelines and procedures, and to advise the organization's staff in implementing the certification program; and
- (8) have a committee, whose members can carry out their responsibilities impartially, to review complaints against certified individuals and to determine appropriate sanctions; and
- (9) have written procedures describing all aspects of its certification program, maintain records of the current status of each individual's certification and the administration of its certification program; and
- (10) have procedures to ensure that certified individuals are provided due process with respect to the administration of its certification program, including the process of becoming certified and any sanctions imposed against certified individuals; and

(11) have procedures for proctoring examinations, including qualifications for proctors. These procedures must ensure that the individuals proctoring each examination are not employed by the same company or corporation (or a wholly-owned subsidiary of such company or corporation) as any of the examinees; and

(12) exchange information about certified individuals with other independent certifying organizations, the Department, the U.S. nuclear regulatory commission, and/or Agreement States and allow periodic review of its certification program and related records; and

(13) provide a description to the department of its procedures for choosing examination sites and for providing an appropriate examination environment.

B. Requirements for certification programs. All certification programs must:

(1) require applicants for certification to: a) receive training in the topics set forth in Subsection D of 20.3.5.12 NMAC or equivalent Agreement State regulations; and b) satisfactorily complete a written examination covering these topics; and

(2) require applicants for certification to provide documentation that demonstrates that the applicant has:

(a) received training in the topics set forth in Subsection D of 20.3.5.12 NMAC or equivalent Agreement State regulations;

(b) satisfactorily completed a minimum period of on-the-job training; and

(c) has received verification by an Agreement State or a NRC licensee that the applicant has demonstrated the capability of independently working as a radiographer; and

(3) include procedures to ensure that all examination questions are protected from disclosure; and

(4) include procedures for denying an application, revoking, suspending, and reinstating a certificate; and

(5) provide a certification period of not less than 3 years nor more than 5 years; and

(6) include procedures for renewing certifications and, if the procedures allow renewals without examination, require evidence of recent full-time employment and annual refresher training.

(7) Provide a timely response to inquiries, by telephone or letter, from members of the public, about an individual's certification status.

C. Requirements for written examinations. All examinations must be:

- (1) designed to test an individual's knowledge and understanding of the topics listed in Subsection D of 20.3.5.12 NMAC or equivalent Agreement State requirements; and
- (2) written in a multiple-choice format; and
- (3) have test items drawn from a question bank containing psychometrically valid questions based on the material in Subsection D of 20.3.5.12 NMAC.

D. Required Training Topics. All certification programs shall include training in the following topics:

- (1) fundamentals of radiation safety including:
 - (a) characteristics of gamma radiation; and
 - (b) units of radiation dose and quantity of radioactivity; and
 - (c) hazards of exposure to radiation; and
 - (d) levels of radiation from licensed material; and
 - (e) methods of controlling radiation dose (time, distance, and shielding); and
- (2) radiation detection instruments including:
 - (a) use, operation, calibration, and limitations of radiation survey instruments; and
 - (b) survey techniques; and
 - (c) use of personnel monitoring equipment; and
- (3) equipment to be used including:
 - (a) operation and control of radiographic exposure equipment, remote handling equipment, and storage containers, including pictures or models of source assemblies (pigtailed); and
 - (b) storage, control, and disposal of licensed material; and
 - (c) inspection and maintenance of equipment; and
- (4) the requirements of pertinent State and Federal regulations; and

- (5) case histories of accidents in radiography.

[20.3.5.12 NMAC - N, 5/19/02]

20.3.5.13 REQUIREMENTS OF THE RADIATION SAFETY OFFICER (RSO):

A. The specific duties and authorities of the RSO include, but are not limited to:

- (1) Ensuring that radiation safety activities are being performed in accordance with approved procedures and regulatory requirements in the daily operation of the licensee's or registrant's program; and

- (2) Establish, document, and oversee all operating, emergency, and ALARA procedures required by Part 4 of 20.3 NMAC. The procedures shall be revised by the RSO whenever necessary to ensure procedural accuracy. The procedures shall be reviewed regularly by the RSO at intervals not to exceed one calendar year to ensure that they conform to Part 4, other pertinent regulations, and to the conditions of the license or registration; and

- (3) Overseeing and approving all phases of the training program for radiographic personnel, ensuring that appropriate and effective radiation protection practices are taught; and

- (4) Ensuring that required radiation surveys and leak tests are performed and documented in accordance with the regulations, including any corrective measures when levels of radiation exceed established limits; and

- (5) Ensuring that personnel monitoring devices are calibrated and used properly by occupationally-exposed personnel, that records are kept of the monitoring results, and that timely notifications are made as required by 20.3.4.453 NMAC; and

- (6) Ensuring that operations are conducted safely and to assume control for instituting corrective actions including stopping of operations when necessary.

B. Inspections of Job Performance. Except as provided in paragraph (4) of Subsection B of 20.3.5.13 NMAC, the RSO or designee shall conduct an inspection program of the job performance of each radiographer and radiographer's assistant to ensure that the Department's regulations, license or registration requirements, and the applicant's operating and emergency procedures are followed. The inspection program must:

- (1) Include observation of the performance of each radiographer and radiographer's assistant during an actual industrial radiographic operation, at intervals not to exceed 6 months; and

(2) Provide that, if a radiographer or a radiographer's assistant has not participated in an industrial radiographic operation for more than 6 months since the last inspection, the radiographer must demonstrate knowledge of the training requirements of paragraph (5) of Subsection B of 20.3.5.11 NMAC and the radiographer's assistant must re-demonstrate knowledge of the training requirements of paragraph (3) of Subsection A of 20.3.5.11 NMAC by a practical examination before these individuals can next participate in a radiographic operation.

(3) The Department may consider alternatives requested in writing in those situations where the individual serves as both radiographer and RSO.

(4) Records of semi-annual inspections of job performance for each radiographer and each radiographer's assistant shall include a list showing the items checked and any non-compliances observed by the RSO.

[20.3.5.13 NMAC - N, 5/19/02]

20.3.5.14 SUPERVISION OF RADIOGRAPHER'S ASSISTANTS:

Whenever a radiographer's assistant uses radiographic exposure devices, associated equipment, sealed sources, radiation machines, or conducts radiation surveys required by Subsection B of 20.3.5.17 NMAC to determine that the sealed source has returned to the shielded position after an exposure, the assistant shall be under the personal supervision of a radiographer. The personal supervision must include:

A. The radiographer's physical presence at the site where the sealed sources or radiation machines are being used;

B. The availability of the radiographer to give immediate assistance if required; and

C. The radiographer's direct observation of the assistant's performance of the operations referred to in this section.

[20.3.5.14 NMAC - Rp, 20 NMAC 3.1.5.518, 5/19/02]

20.3.5.15 PERSONNEL MONITORING:

A. The licensee or registrant may not permit any individual to act as a radiographer or a radiographer's assistant unless, at all times during radiographic operations, each individual wears, on the trunk of the body, a direct reading dosimeter, an operating alarm ratemeter, and a personnel dosimeter. At permanent radiography installations where other appropriate alarming or warning devices are in routine use, the wearing of an alarming ratemeter is not required.

(1) Pocket dosimeters must have a range from zero to two millisieverts (200 millirems) and must be recharged at the start of each shift. Electronic personal dosimeters may only be used in place of ion-chamber pocket dosimeters.

(2) Each personnel dosimeter must be assigned to and worn by only one individual.

(3) Film badges must be replaced for personnel at least monthly and all other personnel dosimeters that require replacement must be replaced at least quarterly. All personnel dosimeters that must be evaluated must be evaluated at least quarterly or promptly after replacement, whichever is more frequent.

B. Direct reading dosimeters such as pocket dosimeters or electronic personal dosimeters must be read and the exposures recorded at the beginning and end of each shift. Records shall be maintained in accordance with Paragraph (2) of Subsection H of 20.3.5.15 NMAC.

C. Pocket dosimeters, or electronic personal dosimeters, must be checked at periods not to exceed 12 months for correct response to radiation. Acceptable dosimeters must read within plus or minus twenty percent of the true radiation exposure. Records shall be maintained in accordance with Paragraph (1) of Subsection H of 20.3.5.15 NMAC.

D. If an individual's pocket chamber is found to be off-scale, or if his or her electronic personal dosimeter reads greater than two millisieverts (200 millirems), and the possibility of radiation exposure cannot be ruled out as the cause, the individual's personnel dosimeter must be sent for processing within 24 hours. In addition, the individual may not resume work associated with licensed material use until a determination of the individual's radiation dose has been made. This determination must be made by the RSO or the RSO's designee. The results of this determination shall be documented. The documents shall be maintained in accordance with Subsection H of 20.3.5.15 NMAC.

E. If a personnel dosimeter that is required by Subsection A of 20.3.5.15 NMAC is lost or damaged, the worker shall cease work immediately until a replacement dosimeter is provided and the exposure is calculated for the time period from issuance to loss or damage of the dosimeter. The results of the calculated exposure and the time period for which the dosimeter was lost or damaged shall be documented. The documents shall be maintained in accordance with Paragraph (4) of Subsection H of 20.3.5.15 NMAC.

F. Dosimetry results shall be maintained in accordance with Paragraph (3) of Subsection H of 20.3.5.15 NMAC.

G. Each alarm ratemeter must --

(1) Be checked to ensure that the alarm functions properly (sounds) before using at the start of each shift;

(2) Be set to give an alarm signal at a preset dose rate of five mSv/hr (500 mrem/hr); with an accuracy of plus or minus twenty percent of the true radiation dose rate;

(3) Require special means to change the preset alarm function; and

(4) Be calibrated at periods not to exceed 12 months for correct response to radiation. The licensee or registrant shall maintain records of alarm ratemeter calibrations in accordance with Paragraph (2) of Subsection H of 20.3.5.15 NMAC.

H. Personnel Monitoring Records. Each licensee and registrant shall maintain the following exposure records pursuant to 20.3.5.15 NMAC:

(1) Direct reading dosimeter readings and yearly operability checks required by Subsections B and C of 20.3.5.15 NMAC for three years after the record is made.

(2) Records of alarm ratemeter calibrations for three years after the record is made.

(3) Reports received for personnel dosimetry shall be maintained until the Department terminates the license or registration.

(4) Records of estimates of exposures as a result of: off-scale personal direct reading dosimeters, or lost or damaged personnel dosimeters, until the department terminates the license or registration.

[20.3.5.15 NMAC - Rp, 20 NMAC 3.1.5.517, 5/19/2002; A, 5/1/2024]

20.3.5.16 RADIATION SURVEY INSTRUMENTS:

A. Licensees and registrants shall keep sufficient calibrated and operable radiation survey instruments at each location to make the radiation surveys required by this Part and by 20.3.4.416 NMAC. Instrumentation required by this section must be capable of measuring a range from 0.02 millisieverts (2 millirems) per hour through 0.01 sievert (1 rem) per hour.

B. Each radiation survey instrument shall be calibrated:

(1) At energies appropriate for use and at intervals not to exceed 6 months and after each instrument servicing (except battery changes);

(2) Such that accuracy within plus or minus 20 percent can be demonstrated;
and

(3) At 2 points located approximately 1/3 and 2/3 of full-scale on each scale for linear scale instruments; at mid-range of each decade, and at 2 points of at least 1 decade for logarithmic scale instruments; and at appropriate points for digital instruments.

C. Records of these calibrations shall be maintained for 3 years after the calibration date for inspection by the Department.

D. Each radiation survey instrument shall be checked with a radiation source at the beginning of each day of use and at the beginning of each work shift to ensure it is operating properly.

[20.3.5.16 NMAC - Rp, 20 NMAC 3.1.5.509, 5/19/02]

20.3.5.17 RADIATION SURVEYS AND SURVEY RECORDS:

A. No radiographic operation shall be conducted unless calibrated and operable radiation survey instrumentation, as described in 20.3.5.16 NMAC is available and used at each site where radiographic exposures are made.

B. Survey Requirements for Devices Containing Radioactive Materials.

(1) Using a survey instrument meeting the requirements of Subsection A of 20.3.5.17 NMAC, conduct a survey of the radiographic exposure device and the guide tube after each exposure when approaching the device or the guide tube. The survey must determine that the sealed source has returned to its shielded position before exchanging films, repositioning the exposure head, or dismantling equipment.

(2) Conduct a survey of the radiographic exposure device with a calibrated radiation survey instrument any time the source is exchanged and whenever a radiographic exposure device is placed in a storage area (as defined in Subsection AO of 20.3.5.7 NMAC), to ensure that the sealed source is in its shielded position.

C. Survey Requirements for Radiation Machines. A physical radiation survey shall be made after each radiographic exposure using radiation machines to determine that the machine is "off".

D. Records shall be kept of the surveys required by Subsection B of 20.3.5.17 NMAC. Such records shall be maintained for inspection by the Department for 3 years after completion of the survey. If the survey was used to determine an individual's exposure, however, the records of the survey shall be maintained until the Department authorizes their disposition.

[20.3.5.17 NMAC - Rp, 20 NMAC 3.1.5.521, 5/19/02]

20.3.5.18 SPECIFIC REQUIREMENTS FOR RADIOGRAPHIC OPERATIONS:

A. Licensees and registrants shall supply the following items at each job site:

- (1) At least one operable, calibrated survey instrument;
- (2) A current whole body NVLAP certified dosimeter for each individual;
- (3) An operable, calibrated pocket dosimeter with a range of 0 to 200 milliroentgens (2 milligrays) for each worker; and
- (4) The appropriate barrier ropes and signs.

B. Industrial radiographic operations shall not be performed if any of the items in Subsection A of 20.3.5.18 NMAC are not available at the job site or are inoperable.

C. No individual other than a qualified radiographer, radiographer's assistant, radiographer instructor, or radiographer trainee (under the personal supervision of a radiographer instructor) shall manipulate controls or operate equipment used in industrial radiographer operations.

D. No individual shall act as radiographer instructor unless such individual possesses the qualifications required for radiographer instructors as listed in Subsection D of 20.3.5.11 NMAC.

E. During an inspection by the Department, the Department inspector may terminate an operation if any of the items in Subsection A of 20.3.5.18 NMAC are not available and operable or if the required number of radiographic personnel is not present. Operations shall not be resumed until such conditions are met.

F. All radiographic operations conducted at locations of use authorized on the license or registration must be conducted in a permanent radiographic installation, unless specifically authorized by the Department.

G. Whenever radiography is performed at a location other than a permanent radiographic installation, the radiographer must be accompanied by at least one other qualified radiographer or a radiographer's assistant who has at a minimum met the requirements specified within Subsections B or A of 20.3.5.11 NMAC as appropriate. The additional qualified individual shall observe the operations and be capable of providing immediate assistance to prevent unauthorized entry. Radiography may not be performed if only one qualified individual is present. Licensees will have one calendar year from the effective date of these regulations to meet the requirements for having two qualified individuals present at locations other than a permanent radiographic installation.

H. During each radiographic operation the radiographer, or the other individual present as required by Subsection G of 20.3.5.18 NMAC, shall maintain continuous

direct visual surveillance of the operation to protect against unauthorized entry into a high radiation area, as defined in Part 1 of 20.3 NMAC, except:

(1) Where the high radiation area is equipped with a control device or alarm system as described in Part 4 of 20.3 NMAC; or

(2) Where the high radiation area is locked to protect against unauthorized or accidental entry.

I. All areas in which industrial radiography is being performed must be conspicuously posted as required by Part 4 of 20.3 NMAC. Exceptions to posting requirements listed in Part 4 do not apply to industrial radiographic operations.

J. Utilization Logs. Each licensee or registrant shall maintain current logs which shall be kept available for inspection by the Department for 3 years from the date of the recorded event, showing for each source of radiation the following information:

(1) A description, including the make, model, and serial number of the radiographic exposure device or transport or storage container in which the sealed source is located;

(2) The identity and signature of the radiographer to whom assigned;

(3) Locations where used and dates of use; and

(4) The date(s) each source of radiation is removed from storage and returned to storage.

K. Locking of Sources of Radiation.

(1) Each radiographic exposure device must have a lock or outer locked container designed to prevent unauthorized or accidental removal of the sealed source from its shielded position. The exposure device and/or its container must be kept locked (and if a keyed-lock, with the key removed at all times) when not under the direct surveillance of a radiographer or a radiographer's assistant except at permanent radiographic installations as stated in Subsection G of 20.3.5.18 NMAC. In addition, during radiographic operations the sealed source assembly must be secured in the shielded position each time the source is returned to that position.

(2) Each sealed source storage container and source changer must have a lock or outer locked container designed to prevent unauthorized or accidental removal of the sealed source from its shielded position. Storage containers and source changers must be kept locked (and if a keyed-lock, with the key removed at all times) when containing sealed sources except when under the direct surveillance of a radiographer or a radiographer's assistant.

L. A licensee may conduct underwater radiography only if procedures have been approved by the Department.

[20.3.5.18 NMAC - Rp, 20 NMAC 3.1.5.523, 5/19/02]

20.3.5.19 PERMANENT RADIOGRAPHIC INSTALLATIONS:

A. Each entrance that is used for personnel access to the high radiation area in a permanent radiographic installation must have either:

(1) An entrance control of the type described in Part 4 of 20.3 NMAC that reduces the radiation level upon entry into the area, or

(2) Both conspicuous visible and audible warning signals to warn of the presence of radiation. The visible signal must be actuated by radiation whenever the source is exposed. The audible signal must be actuated when an attempt is made to enter the installation while the source is exposed.

B. The alarm system must be tested for proper operation with a radiation source each day before the installation is used for radiographic operations. The test must include a check of both the visible and audible signals. Entrance control devices that reduce the radiation level upon entry (designated in Subsection A of 20.3.5.19 NMAC) must be tested monthly. If an entrance control device or an alarm is operating improperly, it must be immediately labeled as defective and repaired within 7 calendar days. The facility may continue to be used during this 7-day period, provided the licensee implements the continuous surveillance requirements of Subsection H of 20.3.5.18 NMAC and uses an alarming ratemeter.

C. Test records for entrance controls and audible and visual alarms must be maintained for 3 years after they are made.

[20.3.5.19 NMAC - Rp, 20 NMAC 3.1.5.514, 5/19/02]

20.3.5.20 LABELING, STORAGE, AND TRANSPORTATION:

A. The licensee may not use a source changer or a container to store licensed material unless the source changer or the storage container has securely attached to it a durable, legible, and clearly visible label bearing the standard trefoil radiation caution symbol conventional colors, i.e., magenta, purple or black on a yellow background, having a minimum diameter of 25 mm, and the wording:

CAUTION (or "DANGER")

RADIOACTIVE MATERIAL

NOTIFY CIVIL AUTHORITIES (or "NAME OF COMPANY")

B. The licensee may not transport licensed radioactive material unless the material is packaged, and the package is labeled, marked, and accompanied with appropriate shipping papers in accordance with regulations set out in 10 CFR part 71.

C. Locked radiographic exposure devices, storage containers, and radiation machines shall be physically secured to prevent tampering or removal by unauthorized personnel. The licensee shall store licensed material in a manner which will minimize danger from explosion or fire.

D. The licensee shall lock and physically secure the transport package containing licensed material or radiation machine(s) in the transporting vehicle to prevent accidental loss, tampering, or unauthorized removal of the licensed material from the vehicle.

[20.3.5.20 NMAC - N, 5/19/02]

20.3.5.21 PERFORMANCE REQUIREMENTS FOR RADIOGRAPHY EQUIPMENT.

Equipment used in industrial radiographic operations must meet the following minimum criteria:

A. Each radiographic exposure device and all associated equipment must meet the requirements specified in American national standard N432-1980 "Radiological Safety for the Design and Construction of Apparatus for Gamma Radiography," (published as NBS handbook 136, issued January 1981). This publication has been approved for incorporation by reference by the director of the federal register in accordance with 5 U.S.C. 552(a). This publication may be purchased from the Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402 and from the American National Standards Institute, Inc., 25 West 43rd Street, New York, New York 10036, Telephone (212) 642-4900.

B. In addition to the requirements specified in Subsection A of 20.3.5.21 NMAC, the following requirements apply to radiographic exposure devices and associated equipment;

(1) Each radiographic exposure device utilizing radioactive material must have attached to it by the user, a durable, legible, clearly visible label bearing the:

(a) chemical symbol and mass number of the radionuclide in the device;

(b) activity and the date on which this activity was last measured;

(c) model number and serial number of the sealed source;

(d) manufacturer of the sealed sources; and

(e) licensee's name, address, and telephone number.

(2) Radiographic exposure devices intended for use as type B transport containers must meet the applicable requirements of 10 CFR part 71; and

(3) Modification of any exposure devices and associated equipment is prohibited, unless the design of any replacement component, including source holder, source assembly, controls or guide tubes would not compromise the design safety features of the system.

C. In addition to the requirements specified in Subsections A and B of 20.3.5.21 NMAC, the following requirements apply to radiographic exposure devices and associated equipment that allow the source to be moved out of the device for routine operation.

(1) The coupling between the source assembly and the control cable must be designed in such a manner that the source assembly will not become disconnected if cranked outside the guide tube. The coupling must be such that it cannot be unintentionally disconnected under normal and reasonably foreseeable abnormal conditions.

(2) The device must automatically secure the source assembly when it is cranked back into the fully shielded position within the device. This securing system may only be released by means of a deliberate operation on the exposure device.

(3) The outlet fittings, lock box, and drive cable fittings on each radiographic exposure device must be equipped with safety plugs or covers which must be installed during storage and transportation to protect the source assembly from water, mud, sand or other foreign matter.

(4) Each sealed source or source assembly must have attached to it or engraved in it, a durable, legible, visible label with the words "DANGER-- RADIOACTIVE." The label must not interfere with the safe operation of the exposure device or associated equipment.

(5) The guide tube must be able to withstand a crushing test that closely approximates the crushing forces that are likely to be encountered during use, and be able to withstand a kinking resistance test that closely approximates the kinking forces that are likely to be encountered during use.

(6) Guide tubes must be used when moving the source out of the device.

(7) An exposure head or similar device designed to prevent the source assembly from passing out of the end of the guide tube must be attached to the outermost end of the guide tube during radiographic operations.

(8) The guide tube exposure head connection must be able to withstand the tensile test for control units specified in ANSI N432-1980.

(9) Source changers must provide a system for assuring that the source will not be accidentally withdrawn from the changer when connecting or disconnecting the drive cable to or from a source assembly.

D. All radiographic exposure devices and associated equipment in use must comply with the requirements of this section.

E. Notwithstanding Subsection A of 20.3.5.21 NMAC, equipment used in industrial radiographic operations need not comply with §8.9.2(c) of the endurance test in American national standards institute N432-1980, if the prototype equipment has been tested using a torque value representative of the torque that an individual using the radiography equipment can realistically exert on the lever or crankshaft of the drive mechanism.

[20.3.5.21 NMAC - Rp, 20 NMAC 3.1.5.506, 5/19/02; A, 06/13/2017]

20.3.5.22 LIMITS ON EXTERNAL RADIATION LEVELS FROM STORAGE CONTAINERS AND SOURCE CHANGERS:

The maximum exposure rate limits for storage containers and source changers are 2 millisieverts (200 millirem) per hour at any exterior surface, and 0.1 millisieverts (10 millirem) per hour at 1 meter from any exterior surface with the sealed source in the shielded position.

[20.3.5.22 NMAC - Rp, 20 NMAC 3.1.5.504, 5/19/02]

20.3.5.23 INSPECTION AND MAINTENANCE:

A. The licensee or registrant shall perform visual and operability checks on survey meters, radiation machines, radiographic exposure devices, transport and storage containers, associated equipment and source changers before use on each day the equipment is to be used to ensure that the equipment is in good working condition, that the sources are adequately shielded, and that required labeling is present. Survey instrument operability must be performed using check sources or other appropriate means. If equipment problems are found, the equipment must be removed from service until repaired.

B. Each licensee or registrant shall perform, and have written procedures for, inspection and routine maintenance of radiation machines, radiographic exposure devices, source changers, associated equipment, transport and storage containers, and survey instruments at intervals not to exceed 3 months or before the first use thereafter to ensure the proper functioning of components important to safety. Replacement

components shall meet design specifications. If equipment problems are found, the equipment must be removed from service until repaired.

C. The inspection and maintenance program must include procedures to assure that Type B packages are shipped and maintained in accordance with the certificate of compliance or other approval.

D. If any inspection conducted pursuant to Subsections A, B, or C of 20.3.5.23 NMAC reveals damage to components critical to radiation safety, the device shall be removed from service and labeled as defective until repairs have been made.

E. Records of equipment problems and of any maintenance performed pursuant to the requirements of this section shall be made in accordance with the following:

(1) Each licensee or registrant shall maintain records of equipment problems found in daily checks and quarterly inspections of radiation machines, radiographic exposure devices, transport and storage containers, associated equipment, source changers, and survey instruments; and retain each record for 3 years after it is made.

(2) The record must include the date of check or inspection, name of inspector, equipment involved, any problems found, and what repair and/or maintenance, if any, was done.

[20.3.5.23 NMAC - Rp, 20 NMAC 3.1.5.513, 5/19/02]

20.3.5.24 LEAK TESTING, REPAIR, TAGGING, OPENING, MODIFICATION, AND REPLACEMENT OF SEALED SOURCES:

A. The replacement of any sealed source fastened to or contained in a radiographic exposure device and leak testing, repair, tagging, opening, or any other modification of any sealed source shall be performed only by persons specifically authorized to do so by the Department.

B. Each sealed source shall be tested for leakage at intervals not to exceed six months. In the absence of a certificate from a transferor indicating that a test has been made within the six-month period prior to the transfer, the sealed source shall not be put into use until tested.

C. The leak test shall be capable of detecting the presence of 185 becquerels (0.005 microcuries) of removable contamination on the sealed source. An acceptable leak test for sealed sources in the possession of a radiography licensee would be to test at the nearest accessible point to the sealed source storage position, or other appropriate measuring point, by a procedure to be approved pursuant to Part 3 of 20.3 NMAC. Records of leak test results shall be kept in units of becquerels or microcuries and maintained for inspection by the Department for 3 years.

D. Any test conducted pursuant to Subsections B and C of 20.3.5.24 NMAC that reveals the presence of 185 becquerels (0.005 microcuries) or more of removable radioactive material shall be considered evidence that the sealed source is leaking. The licensee shall immediately withdraw the equipment involved from use and shall cause it to be decontaminated and repaired or to be disposed of in accordance with 20.3 NMAC. Within 5 days after obtaining results of the test, the licensee shall file a report with the Department describing the equipment involved, the test results, and the corrective action taken.

E. A sealed source which is not fastened to or contained in a radiographic exposure device shall have permanently attached to it a square durable tag at least 2.5 cm on each side bearing the prescribed radiation caution symbol in conventional colors, magenta or purple on a yellow background, and at least the instructions: "Danger - Radioactive Material - Do Not Handle - Notify Civil Authorities if Found."

F. Each exposure device using depleted uranium (DU) shielding and an "S" tube configuration must be tested for DU contamination at intervals not to exceed 12 months. The analysis must be capable of detecting the presence of 185 Bq (0.005 microcuries) of radioactive material on the test sample and must be performed by a person specifically authorized by the Department to perform the analysis. Should such testing reveal the presence of 185 Bq (0.005 microcuries) or more of removable DU contamination, the exposure device must be removed from use until an evaluation of the wear on the S-tube has been made. Should the evaluation reveal that the S-tube is worn through, the device may not be used again. DU shielded devices do not have to be tested for DU contamination while in storage and not in use. Before using or transferring such a device however, the device must be tested for DU contamination if the interval of storage exceeded 12 months. Records of DU leak tests results shall be kept in units of microcuries (becquerels) and maintained for inspection by the department for 3 years.

[20.3.5.24 NMAC - Rp, 20 NMAC 3.1.5.510, 5/19/02]

20.3.5.25 SPECIAL REQUIREMENTS AND EXEMPTIONS FOR CABINET RADIOGRAPHY:

A. Systems for cabinet radiography designed to allow admittance of individuals shall:

(1) Comply with all applicable requirements of this Part, and Sections 405 to 412 of 20.3.4 NMAC. If such a system is a certified cabinet x-ray system, it shall comply with all applicable requirements of this Part and 21 CFR 1020.40; and

(2) Be evaluated at intervals not to exceed 1 year to assure compliance with the applicable requirements as specified in paragraph (1) of Subsection A of 20.3.5.25 NMAC. Records of these evaluations shall be maintained for inspection by the Department for a period of 3 years after the evaluation.

B. Certified cabinet x-ray systems designed to exclude individuals from the interior of the cabinet are exempt from the requirements of this Part except that:

(1) Operating personnel must be provided with a NVLAP certified dosimeter, and reports of the results shall be maintained for inspection by the Department;

(2) No registrant shall permit any individual to operate a cabinet x-ray system until such individual has received a copy of and instruction in the operating procedures for the unit and has demonstrated competence in its use. Records which demonstrate compliance with this section shall be maintained for inspection by the Department until disposition is authorized by the Department;

(3) Tests for proper operation of high radiation area control devices or alarm systems, where applicable, shall be conducted, recorded, and maintained in accordance with Subsection B of 20.3.5.19 NMAC; and

(4) The registrant shall perform an evaluation at intervals not to exceed 1 year, to determine conformance with Sections 405 to 412 of 20.3.4 NMAC. If such a system is a certified cabinet x-ray system, it shall be evaluated at intervals not to exceed 1 year to determine conformance with 21 CFR 1020.40. Records of these evaluations shall be maintained for inspection by the Department for a period of 3 years after the evaluation.

C. Certified cabinet x-ray systems shall be maintained in compliance with 21 CFR 1020.49 unless prior approval has been granted by the Department pursuant to Subsection A of 20.3.1.107 NMAC.

[20.3.5.25 NMAC - Rp, 20 NMAC 3.1.5.524, 5/19/02]

20.3.5.26 SPECIAL REQUIREMENTS FOR RADIOGRAPHY EMPLOYING RADIATION MACHINES:

A. Shielded room radiography. Shielded room radiography (as defined in Subsection AK of 20.3.5.7 NMAC) using radiation machines shall be exempt from other requirements of this Part; however:

(1) no registrant shall permit any individual to operate a radiation machine for shielded room radiography until such individual has received a copy of, and instruction in, and demonstrated an understanding of operating procedures of the unit, and has demonstrated competence in its use;

(2) each registrant shall supply appropriate personnel monitoring equipment to, and shall require the use of such equipment by, every individual who operates, makes "set-ups", or performs maintenance on a radiation machine for shielded room radiography; and

(3) a physical radiation survey shall be conducted to determine that the radiation machine is "off" prior to each entry into the shielded room. Such surveys shall be made with a radiation measuring instrument which is capable of measuring radiation of the energies and at the exposure rates to be encountered, which is in good working order, and which has been properly calibrated within the preceding three months or following the last instrument servicing, whichever is later.

B. Other radiography using radiation machines. Other radiography using machines shall be exempt from 20.3.5.17 NMAC, 20.3.5.21 NMAC, 20.3.5.22 NMAC, and 20.3.5.24 NMAC; however:

(1) A physical radiation survey shall be conducted to determine that the radiation machine is "off" prior to each entry into the radiographic exposure area. Such surveys shall be made with a radiation measuring instrument capable of measuring radiation of the energies and at the exposure rates to be encountered, which is in good working order, and which has been properly calibrated within the preceding three months or following the last instrument servicing, whichever is later. Survey results and records of boundary locations shall be maintained and kept available for inspection; and

(2) Mobile or portable radiation machines shall be physically secured to prevent removal by unauthorized personnel.

[20.3.5.26 NMAC - Rp, 20 NMAC 3.1.5.525, 5/19/02]

20.3.5.27 REPORTING REQUIREMENTS:

A. In addition to the reporting requirements specified in Part 3 and under other sections of 20.3 NMAC, each licensee or registrant (as appropriate) shall provide a written report to the department within 30 days of the occurrence of any of the following incidents involving radiographic equipment:

(1) Unintentional disconnection of the source assembly from the control cable;

(2) Inability to retract the source assembly to its fully shielded position and secure it in this position; and/or

(3) Failure of any component (critical to safe operation of the device) to properly perform its intended function.

B. The licensee or registrant shall include the following information in each report submitted under Subsection A of 20.3.5.27 NMAC:

(1) A description of the equipment problem;

(2) Cause of each incident, if known;

- (3) Manufacturer and model number of equipment involved in the incident;
- (4) Place, time and date of the incident;
- (5) Actions taken to establish normal operations;
- (6) Corrective actions taken or planned to prevent recurrence; and
- (7) Qualifications of personnel involved in the incident.

C. Any licensee or registrant conducting radiographic operations, or storing radioactive material or radiation machine(s), at any location not listed on the license for a period in excess of 180 days in a calendar year, shall notify the Department in writing prior to exceeding the 180 days.

[20.3.5.27 NMAC - Rp, 20 NMAC 3.1.5.507, 5/19/02]

20.3.5.28 INVENTORY ACCOUNTING REQUIREMENTS:

A. Receipt and Transfer of Sealed Sources.

(1) Each licensee shall maintain records showing the receipts and transfers of sealed sources, radiation machines, and devices using DU for shielding and retain each record for 3 years after it is made.

(2) These records must include the date, the name of the individual making the record, radionuclide, number of becquerels (curies) or mass (for DU), and manufacturer, model, and serial number of each sealed source, radiation machine, and/or device, as appropriate.

B. Quarterly Inventories.

(1) Quarterly physical inventories shall be conducted by licensees and registrants to account for all sealed sources, radiography exposure devices, radiation machines, and devices containing depleted uranium received or in their possession. Inventory records shall be maintained for 3 years from the date of the inventory for inspection by the Department.

(2) Each record must include the date of the inventory, name of the individual conducting the inventory, quantities of radiation machines, radionuclide, number of becquerels (curies) or mass (for DU) in each device, location of sealed source and/or devices, and manufacturer, model, and serial number of each sealed source, radiation machines, and/or device, as appropriate.

[20.3.5.28 NMAC - Rp, 20 NMAC 3.1.5.511, 5/19/02]

20.3.5.29 OPERATING AND EMERGENCY PROCEDURES:

A. Operating and emergency procedures must include, as a minimum, instructions in the following:

- (1) Appropriate handling and use of licensed sealed sources and radiographic exposure devices so that no person is likely to be exposed to radiation doses in excess of the limits established in Part 4 of 20.3 NMAC;
- (2) Methods and occasions for conducting radiation surveys;
- (3) Methods for controlling access to radiographic areas;
- (4) Methods and occasions for locking and securing radiographic exposure devices, transport and storage containers and sealed sources;
- (5) Personnel monitoring and the use of personnel monitoring equipment;
- (6) Transporting sealed sources to field locations, including packing of radiographic exposure devices and storage containers in the vehicles, placarding of vehicles when needed, and control of the sealed sources during transportation (refer to 49 CFR parts 171-173);
- (7) The inspection, maintenance, and operability checks of radiographic exposure devices, survey instruments, transport containers, and storage containers;
- (8) Steps that must be taken immediately by radiography personnel in the event a pocket dosimeter is found to be off-scale or an alarm ratemeter alarms unexpectedly;
- (9) The procedure for notifying proper persons in the event of an accident;
- (10) Minimizing exposure of persons in the event of an accident;
- (11) Source recovery procedure if licensee will perform source recovery;
- (12) Maintenance of records.

B. Each licensee or registrant shall maintain a copy of current operating and emergency procedures until the Department terminates the license or registration. Superseded material must be retained for 3 years after the change is made.

[20.3.5.29 NMAC - Rp, 20 NMAC 3.1.5.516, 5/19/02]

20.3.5.30 DOCUMENTS AND RECORDS REQUIRED AT TEMPORARY JOB SITES:

Each licensee or registrant shall also maintain copies of the following documents and records sufficient to demonstrate compliance at each applicable field station and each temporary jobsite:

- A. Appropriate license or certificate of registration or equivalent document;
- B. Operating and emergency procedures;
- C. A copy of Parts 4, 5, and 10 of 20.3 NMAC;
- D. Survey records required pursuant to 20.3.5.17 NMAC and area survey records required pursuant to Part 4 of 20.3 NMAC for the period of operation at the site;
- E. Daily pocket dosimeter records for the period of operation at the site;
- F. The latest instrument calibration and leak test records for specific devices and sealed sources in use at the site. Acceptable records include tags or labels which are affixed to the device or survey meter;
- G. Utilization records for each radiographic exposure device dispatched from that location as required by Subsection J of 20.3.5.18 NMAC;
- H. Records of equipment problems identified in daily checks of equipment as required by Subsection A of 20.3.5.23 NMAC;
- I. Records of alarm system and entrance control checks required by Subsection B of 20.3.5.19 NMAC, if applicable;
- J. Evidence of the latest calibrations of alarm ratemeters and operability checks of pocket dosimeters and/or electronic personal dosimeters as required by Subsection H of 20.3.5.15 NMAC; and,
- K. The shipping papers for the transportation of radioactive materials required by 10 CFR 71.5.
- L. When operating under reciprocity pursuant to Part 3 of 20.3 NMAC, a copy of the Agreement State license authorizing the use of licensed materials.

[20.3.5.30 NMAC - Rp, 20 NMAC 3.1.5.522, 5/19/02]

PART 6: X-RAYS IN HEALING ARTS

20.3.6.1 ISSUING AGENCY:

Environmental Improvement Board.

[Recompiled 11/27/01]

20.3.6.2 SCOPE:

This Subpart [Part] establishes requirements, for which a registrant is responsible, for use of x-ray equipment by or under the supervision of an individual authorized by and licensed in accordance with state statutes to engage in the healing arts or veterinary medicine. The provisions of this Subpart [Part] are in addition to, and not in substitution for, other applicable provisions of these regulations.

[5-3-95; 20.3.6.2 NMAC - Rn, NMAC 3.1.6.600, Recompiled xx/xx/xx]

20.3.6.3 STATUTORY AUTHORITY:

[RESERVED]

20.3.6.4 DURATION:

[RESERVED]

20.3.6.5 EFFECTIVE DATE:

[RESERVED]

20.3.6.6 OBJECTIVE:

[RESERVED]

20.3.6.7 DEFINITIONS:

As used in this Subpart [Part]:

A. "Accessible surface" means the external surface of the enclosure or housing provided by the manufacturer.

B. "Added filter" means the filter added to the inherent filtration.

C. "Aluminum equivalent" means the thickness of aluminum (type 1100 alloy) affording the same attenuation, under specified conditions as the material in question. (The nominal chemical composition of type 1100 aluminum alloy is 99.00 percent minimum aluminum, 0.12 percent copper.)

D. "Attenuation block" means a block or stack 3.8 cm thick of type 1100 aluminum alloy or other material having equivalent attenuation.

E. "Automatic exposure control" means a device which automatically controls one or more technique factors in order to obtain at a preselected location(s) a required quantity of radiation (see also "Phototimer").

F. "Barrier" (see "Protective barrier").

G. "Beam axis" means a line from the source through the center of the x-ray field.

H. "Beam-limiting device" means a device which provides a means to restrict the dimensions of the x-ray field.

I. "Changeable filter" means any filter, exclusive of inherent filtration, which can be removed from the useful beam through any electronic, mechanical or physical process.

J. "Coefficient of variation (SA)" means the ratio of the standard deviation to the mean value of a population of observations. It is estimated using the following equation:

where:

\bar{x} = mean value of observations in sample

x_i = i th observation in sample

N = number of observations in sample

K. "Collimator" means a device or mechanism by which the x-ray beam is restricted in size.

L. "Contact therapy system" means that the x-ray tube port is put in contact with, or within 5 centimeters of, the surface being treated.

M. "Control panel" means that part of the x-ray control upon which are mounted the switches, knobs, pushbuttons, and other hardware necessary for manually setting the technique factors.

N. "Cooling curve" means the graphical relationship between heat units stored and cooling time.

O. "Dead man switch" means a switch so constructed that a circuit closing contact can be maintained only by continuous pressure on the switch by the operator.

P. "Density (D)" (as used in conjunction with image receptors) means the logarithm to the base 10 of the ratio of the incident to the transmitted luminous flux, where I is luminous flux.

$D = \text{LOG SUB } 10 \left[\frac{I_{\text{Incident}}}{I_{\text{Transmitted}}} \right]$

Q. "Diagnostic source assembly" means the tube housing assembly with a beam-limiting device attached.

R. "Diagnostic x-ray system" means an x-ray system designed for irradiation of any part of the human body for the purpose of diagnosis or visualization.

S. "Direct scattered radiation" means that scattered radiation which has been deviated in direction only by materials irradiated by the useful beam (see also "Scattered radiation").

T. "Entrance exposure rate" means the roentgens per unit time at the point where the center of the useful beam enters the patient.

U. "Equipment" (see "X-ray equipment").

V. "Exposure" means the quotient of dQ by dm where dQ is the absolute value of the total charge of the ions of one sign produced in air when all the electrons (negatrons and positrons) liberated by photons in a volume element of air having mass dm are completely stopped in air. (The special unit of exposure is the roentgen, $1R = 2.58 \times 10^{-4} C/Kg$)

W. "Field emission equipment" means equipment which uses an x-ray tube in which electron emission from the cathode is due solely to the action of an electric field.

X. "Filter" means material placed in the useful beam to absorb preferentially the less penetrating components.

Y. "Fluoroscopic imaging assembly" means a component which comprises a reception system in which x-ray photons produce a fluoroscopic image. It includes equipment housings, electrical interlocks if any, the primary protective barrier, and structural material providing linkage between the image receptor and the diagnostic source assembly.

Z. "General purpose radiographic x-ray system" means any radiographic x-ray system which, by design, is not limited to radiographic examination of specific anatomical regions.

AA. "Gonad shield" means a protective barrier for the testes or ovaries.

AB. "Half-value layer (HVL)" means the thickness of specified material which attenuates the beam of radiation to an extent such that the exposure rate is reduced to one-half of its original value. In this definition the contribution of all scattered radiation, other than any which might be present initially in the beam concerned, is deemed to be excluded.

AC. "Image intensifier" means a device which produces an image of greater contrast than would be produced without the device present.

AD. "Image receptor" means any device, such as a fluorescent screen or radiographic film, which transforms incident x-ray photons either into a visible image or into another form which can be made into a visible image by further transformations.

AE. "Inherent filtration" means filtration permanently in the useful beam; it includes the window of the x-ray tube and any permanent tube or source enclosure.

AF. "Interlock" means a device for precluding access to a radiation area by automatically terminating exposure upon entry by personnel.

AG. "Kilovolts peak (kVp)" (see "Peak tube potential").

AH. "kWs" means kilowatt second which is equal to the product of peak kilovolts, amperes, and seconds or 103 kVmA sec.

AI. "Lead equivalent" means the thickness of material in question affording the same attenuation, under specified conditions, as the lead in question.

AJ. "Leakage radiation" means radiation emanating from the diagnostic or therapeutic source assembly except for:

- (1) the useful beam; and
- (2) radiation produced when the exposure switch or timer is not activated.

AK. "Leakage technique factors" means the technique factors associated with the tube housing assembly which are used in measuring leakage radiation. They are defined as follows:

- (1) For capacitor energy storage equipment, the maximum rated number of exposures in an hour for operation at the maximum rated peak tube potential with the quantity of charge per exposure being 10 millicoulombs (mAs) or the minimum obtainable from the unit, whichever is larger.

- (2) For field emission equipment rated for pulsed operation, the maximum rated number of x-ray pulses in an hour for operation at the maximum rated peak tube potential.

- (3) For all other equipment, the maximum rated continuous tube current for the maximum rated peak tube potential.

AL. "Light field" means that area of the intersection of the light beam from the beam-limiting device and one of the set of planes parallel to and including the plane of

the image receptor, whose perimeter is the locus of points at which the illumination is one-fourth of the maximum in the intersection.

AM. "Line pair" means an object in which parallel wires or strips are placed so that the space between each wire or strip is equal to the width of the wire or strip. A line pair is one space and a strip or wire.

AN. "Linear Accelerator" means a device for accelerating particles employing alternate electrodes and gaps arranged in a straight line, so proportioned that when their potentials are varied in the proper amplitude and frequency, particles passing through them receive successive increments of energy.

AO. "Line-voltage regulation" means the difference between the no-load and the load potentials expressed as a percent of the load line potential, that is: Percent line-voltage regulation = $100 (V_n - V_1) / V_1$ where:

(1) V_n = No-load line potential and

(2) V_1 = Load line potential

AP. "Maximum line current" means the root mean square current in the supply line of an x-ray machine operating at its maximum rating.

AQ. "Mobile equipment" (see "X-ray equipment").

AR. "Peak tube potential" means the maximum value of the potential difference across the x-ray tube during an exposure.

AS. "Personal monitoring" means the estimation of dose to a person.

AT. "Phototimer" means a method for controlling radiation exposures to image receptors by the amount of radiation which reaches a radiation monitoring device(s). The radiation monitoring device(s) is part of an electronic circuit which controls the duration of time the tube is activated (see also "Automatic exposure control").

AU. "Portable equipment" (see "X-ray equipment").

AV. "Position indicating device (PID)" means a device on dental x-ray equipment used to indicate the beam position and to establish a definite source-surface (skin) distance. It may or may not incorporate or serve as a beam-limiting device.

AW. "Primary protective barrier" (see "Protective barrier").

AX. "Protective apron" means an apron made of radiation absorbing materials, used to reduce radiation exposure.

AY. "Protective barrier" means a barrier of radiation absorbing material(s) used to reduce radiation exposure. The types of protective barriers are as follows:

(1) "Primary protective barrier" means the material, excluding filters, placed in the useful beam, for protection purposes, to reduce the radiation exposure; and

(2) "Secondary protective barrier" means a barrier sufficient to attenuate the stray radiation to the required degree.

AZ. "Protective glove" means a glove made of radiation absorbing materials used to reduce radiation exposure.

BA. "Qualified expert" (see 106.CC [Subsection CC. Of Section 7 of 20.3.1.7 NMAC]).

BB. "Radiograph" means an image receptor on which the image is created directly or indirectly by an x-ray pattern and results in a permanent record.

BC. "Radiographic imaging system" means any system whereby a permanent or semi-permanent image is recorded on an image receptor by the action of ionizing radiation.

BD. "Recording" means producing a permanent form of an image resulting from x-ray photons (e.g., film, video tape).

BE. "Registrant", as used in this Subpart [Part], means any person who owns or possesses and administratively controls an x-ray system which is used to deliberately expose humans or animals to the useful beam of the system and is required by the provisions in Subpart 1 and 2 [Part 1 and 2] of these regulations to register with this Department.

BF. "Repair person (Service person)" means an individual who maintains an x-ray system; not limited to a manufacturer, assembler or user.

BG. "Response time" means the time required for an instrument system to reach 90 percent of its final reading when the radiation-sensitive volume of the instrument system is exposed to a step change in radiation flux from zero sufficient to provide a steady state midscale reading.

BH. "Scattered radiation" means radiation that, during passage through matter, has been deviated in direction (see also "Direct scattered radiation").

BI. "Secondary protective barrier (see "Protective barrier").

BJ. "SID" (see "Source-image receptor distance").

BK. "Source" means the focal spot of the x-ray tube.

BL. "Source-image receptor distance (SID)" means the distance from the source to the center of the input surface of the image receptor.

BM. "Spot film" means a radiograph which is made during a fluoroscopic examination to permanently record conditions which exist during that fluoroscopic procedure.

BN. "Stationary equipment " (see "X-ray equipment").

BO. "Stray radiation" means the sum of leakage and scattered radiation.

BP. "Technique factors" means the conditions of operation. They are specified as follows:

(1) For capacitor energy storage equipment, peak tube potential in kVp and quantity of charge in mAs;

(2) For field emission equipment rated for pulsed operation, peak tube potential in kVp and number of x-ray pulses; and

(3) For all other equipment, peak tube potential in kVp and either tube current in mA and exposure time in seconds, or the product of tube current and exposure time in mAs.

BQ. "Therapeutic-type protective tube housing" means the tube housing with tube installed and it includes high voltage or filament transformers and other appropriate elements when they are contained within that housing.

BR. "Tube" means an x-ray tube, unless otherwise specified.

BS. "Tube housing assembly" means the tube housing with tube installed. It includes high-voltage or filament transformers and other appropriate elements when they are contained within the tube housing.

BT. "Tube rating chart" means the set of curves which specify the rated limits of operation of the tube in terms of the technique factors.

BU. "Useful beam" means the radiation which passes through the tube housing port and the aperture of the beam-limiting device when the exposure switch or timer is activated.

BV. "Variable-aperture beam-limiting device" means a beam-limiting device which has capacity for stepless adjustment of the x-ray field size at a given SID.

BW. "Visible area" means that portion of the input surface of the image receptor over which incident x-ray photons produce a visible image.

BX. "X-ray control" means a device which controls input power to the x-ray high-voltage generator of the x-ray tube. It includes equipment which controls the technique factors of an x-ray exposure.

BY. "X-ray equipment" means an x-ray system, subsystem or component thereof. Types of x-ray equipment are as follows:

- (1) Mobile means x-ray equipment mounted on a permanent base with wheels or casters for moving while completely assembled;
- (2) Portable means x-ray equipment designed to be hand-carried;
- (3) Stationary means x-ray equipment which is installed in a fixed location;
and
- (4) Transportable means x-ray equipment installed in a vehicle or trailer.

BZ. "X-ray field" means that area of the intersection of the useful beam and any one of the set of planes parallel to and including the plane of the image receptor, whose perimeter is the locus of points at which the exposure rate is one-fourth of the maximum in the intersection.

CA. "X-ray high-voltage generator" means a device which transforms electrical energy from the potential supplied by the x-ray control to the tube operating potential. The device may also include means for transforming alternating current to direct current, filament transformers for the x-ray tube(s), high-voltage switches, electrical protective devices, and other appropriate elements.

CB. "X-ray system" means an assemblage of components for the controlled production of x-rays. It includes minimally an x-ray high-voltage generator, an x-ray control, a tube housing assembly, a beam-limiting device, and the necessary supporting structures.

CC. "X-ray subsystem" means any combination of two or more components of an x-ray system for which there are requirements specified in this Subpart [Part].

CD. "X-ray tube" means any electron tube which is designed for the conversion of electrical energy into x-ray energy.

[5-3-95; 20.3.6.7 NMAC – Rn, 20 NMAC 3.1.6.601, Recompiled xx/xx/xx]

20.3.6.602 GENERAL REQUIREMENTS:

A. Administrative Controls:

(1) Registrant: The registrant shall be responsible for directing the operation of the x-ray machines which he has registered with the Department. He or his agent shall assure that the following provisions are met in the operation of the x-ray machine(s).

(a) An x-ray machine which does not meet the provision of these regulations shall not be operated for diagnostic or therapeutic purposes, if so directed by the Department.

(b) Individuals who will be operating the x-ray equipment shall be adequately instructed in the safe operating procedures and be competent in the safe use of the equipment.

(c) In the vicinity of each x-ray system's control panel a chart shall be provided which specifies for all examinations which are performed by that system a listing of information, including but not limited to the following, for each projection within that examination:

- (i) patient's anatomical size versus technique factors to be utilized;
- (ii) type of and size of the film or film-screen combination to be used;
- (iii) type of grid to be used if any, and focal distance;
- (iv) source to image receptor distance to be used; and
- (v) type and location of placement of gonad shielding to be used.

(d) Written safety procedures and rules shall be provided to each individual operating x-ray equipment under his control, including any restrictions of the operating technique required for the safe operation of the particular x-ray system. The operator shall be able to demonstrate familiarity with these rules.

(e) Except for patients who cannot be moved out of the room, only the staff and ancillary personnel required for the medical procedure or training shall be in the room during the radiographic exposure. Other than the patient being examined:

- (i) all individuals shall be positioned such that no part of the body including the extremities not protected by 0.5 mm lead equivalent, will be struck by the useful beam;
- (ii) staff and ancillary personnel shall be protected from the direct scatter radiation by protective aprons or whole body protective barriers of not less than 0.25 mm lead equivalent;

(iii) patients who cannot be removed from the room shall be protected from the direct and scatter radiation by whole body protective barriers of 0.25 mm lead equivalent or shall be so positioned that the nearest portion of the body is at least 2 meters from both the tube head and the nearest edge of the image receptor;

(iv) when a portion of the body of any staff or ancillary personnel is potentially subjected to stray radiation which could result in that individual receiving one quarter of the maximum permissible dose as defined in Subpart 4 [Part 4] additional protective devices may be required by the Department;

(f) Gonad shielding of not less than 0.25 mm lead equivalent shall be used for patients who have not passed the reproductive age during radiographic procedures in which the gonads are in the direct (useful) beam, except for cases in which this would interfere with the diagnostic procedures;

(g) Patients shall not be exposed to the useful beam except for healing arts purposes, each exposure of which has been authorized by a licensed practitioner of the healing arts. This provision specifically prohibits deliberate exposure for the following purposes:

(i) exposure of an individual for training, demonstration or other purpose unless there are also healing arts requirements and proper prescription has been provided; and

(ii) exposure of an individual for the purpose of healing arts screening without prior written approval of the Department. (Screening means an exposure of a person without a prior examination by a licensed practitioner).

(h) When a patient or film must be provided with auxiliary support during a radiation exposure:

(i) mechanical holding devices shall be used when the technique permits. The safety rules, required by 602 [Section 602 of 20.3.6.602 NMAC]. shall list individual projections where holding devices cannot be utilized;

(ii) written safety procedures, as required by 602.A.1.d [Subparagraph (d), Paragraph (1), Subsection A., Section 602 of 20.3.6.602 NMAC], shall indicate the requirements for selecting a holder and the procedure the holder shall follow;

(iii) the human holder shall be protected as required by 602.A.1.e [Subparagraph (e), Paragraph (1), Subsection A., Section 602 of 20.3.6.602 NMAC];

(iv) no person shall be used routinely to hold film or patients;

(v) such holding shall be permitted only in very unusual and rare situations; and

(vi) all x-ray room doors shall be closed before an exposure is made;

(i) Procedures and auxiliary equipment designed to minimize patient and personnel exposure commensurate with the needed diagnostic information shall be utilized. This is interpreted to include but is not limited to:

(i) the speed of film or screen and film combinations shall be the fastest speed consistent with the diagnostic objective of the examinations;

(ii) the radiation exposure to the patient shall be the minimum exposure required to produce images of good diagnostic quality; and

(iii) portable or mobile equipment shall be used only for examinations where it is impractical to transfer the patient(s) to a stationary installation;

(j) Personnel monitoring. All persons who are associated with the operation of an x-ray system are subject to the occupational exposure limits and the requirements for the determination of the doses which are stated in 405 and 412 [Section 405 and 412 of 20.3.4.405 and 412 NMAC]. In addition, the following requirements are made:

(i) when protective clothing or devices are worn on portions of the body and a monitoring device(s) is required, at least one such device shall be utilized as follows: 1) when an apron is worn, the monitoring device shall be worn at collar level outside of the apron; and 2) the dose to the whole body based on the maximum dose attributed to any one critical organ (which are the gonads, the blood forming organs, head and trunk, or lens of the eye) shall be recorded in the reports required by 452 [Section 452 of 20.3.4.452 NMAC]. If more than one device is used, each dose shall be identified with the area of the body where the device was worn;

(ii) exposure of a personnel monitoring device to deceptively indicate a dose delivered to an individual is prohibited.

(2) Information and Maintenance Record and Associated Information: The registrant shall maintain at least the following information for each x-ray machine:

(a) Maximum rating of technique factors;

(b) Model numbers of all certifiable components;

(c) Aluminum equivalent filtration of the useful beam; including any routine variation;

(d) Tube rating charts and cooling curves;

(e) Record of surveys, calibrations, maintenance, modifications (from the original schematics and drawings) performed on the x-ray machine after the effective date of these regulations, along with the names of persons who performed the service;

(f) A scale drawing of the room in which a stationary x-ray system is located. The drawing shall denote the type of materials and their thickness (or lead equivalence) provided by each barrier of the room (walls, ceilings, floors, doors, windows). The drawing shall also denote the type of occupancy of adjacent areas to include above and below the x-ray room of concern (e.g., hallways, office, parking lots, and toilets). Estimates of the frequency of such occupancy shall also be noted on the drawing; and

(g) A copy of all correspondence with this Department regarding that x-ray machine.

(3) X-ray Log. Each facility shall maintain an x-ray log containing the examinations and the dates those examinations were performed. The log shall indicate when techniques for procedures vary from those specified in the technique chart required in 602.A.1.c [Subparagraph (c), Paragraph (1), Subsection A. , Section 602 of 20.3.6.602 NMAC].

B. Plan Review:

(1) Prior to construction, the floor plans and equipment arrangement of all installations (new or modifications of existing installations) utilizing x-rays for diagnostic or therapeutic purposes shall be submitted to the Department for review and approval. The required information is denoted in Subpart 6, 610 and 611 [Part 6, Sections 610 and 611 of 20.3.6.610 and 611].

(2) The Department may require the applicant to utilize the services of a qualified expert to determine the shielding requirement prior to the plan review and approval.

(3) The approval of such plans shall not preclude the requirement of additional modifications should a subsequent analysis of operating conditions indicate the possibility of an individual receiving a dose in excess of the limits prescribed in 405 to 412 [Sections 405 to 412 of 20.3.4.405 to 412 NMAC].

(4) For all medical facilities in hospitals or clinics, interlocks shall be required on all doors leading into diagnostic x-ray rooms when the doors cannot be seen by the operator at the control station.

C. Chemicals, film processing and darkroom will be complied with in accordance with Subpart 6, 612 [Part 6, Section 612 of 20.3.6.612 NMAC].

20.3.6.603 GENERAL REQUIREMENTS FOR ALL DIAGNOSTIC X-RAY SYSTEMS:

In addition to other requirements of this Subpart, all diagnostic x-ray systems shall meet the following requirements:

A. Warning Label: The control panel containing the main power switch shall bear the warning statement, legible and accessible to view: "WARNING: This X-ray Unit May Be Dangerous To Patient and Operator Unless Safe Exposure Factors and Operating Instructions Are Observed";

B. Battery Charge Indicator: On battery-powered generators, visual means shall be provided on the control panel to indicate whether the battery is in a state of charge adequate for proper operation;

C. Leakage Radiation from the Diagnostic Source Assembly: The leakage radiation from the diagnostic source assembly measured at a distance of 1 m in any direction from the source shall not exceed 100 mR (1 mSv) in 1 hour when the x-ray tube is operated at its leakage technique factor. Compliance shall be determined by measurements averaged over an area of 100 sq cm (39.37 inches) with no linear dimension greater than 20 cm (7.87 inches); and

D. Radiation from Components other than the Diagnostic Source Assembly: The radiation emitted by a component other than the diagnostic source assembly shall not exceed 2 mR (2 mSv) in 1 hour at 5 cm from any accessible surface of the component when it is operated in an assembled x-ray system under any conditions for which it was designed. Compliance shall be determined by measurements averaged over an area of 100 sq cm (39.37 inches) with no linear dimension greater than 20 cm (7.87 inches).

E. Beam Quality:

(1) Half-value layer:

(a) The half-value layer (HVL) of the useful beam for a given x-ray tube potential shall not be less than the values shown in Table 603.1 [Table 1 , Section 603 of 20.3.6.603 NMAC]. If it is necessary to determine such half-value layer at an x-ray tube potential which is not listed in Table 603.1 [Table I, Section 603 of 20.3.6.603 NMAC], linear interpolation or extrapolation may be made.

TABLE I

Design operating range	Measured potential	Half-value layer
(Kilovolts peak)	(Kilovolts peak)	aluminum) (Millimeters of)

Below 50	30	0.3	
	40	0.4	
	49	0.5	
50 to 70	50		1.2
	60	1.3	
	70	1.5	
Above 70	71	2.1	
	80	2.3	
	90	2.5	
	100	2.7	
	110	3.0	
	120	3.2	
	130	3.5	
	140	3.8	
	150	4.1	

(b) The above HVL criteria will be considered to have been met if it can be demonstrated that the aluminum equivalent of the total filtration in the primary beam is not less than that shown in Table 603.2 [Table II of Section 603, 20.3.6.603 NMAC].

TABLE II

FILTRATION REQUIRED vs. OPERATING VOLTAGE

Total Filtration	(inherent plus added)
Operating Voltage	(millimeters aluminum (kVp)equivalent)
Below 50	0.5 mm

50 - 70	1.5 mm
Above 70	2.5 mm

(c) Beryllium window tubes shall have a minimum of 0.5 mm aluminum equivalent filtration permanently mounted in the useful beam.

(d) For capacitor energy storage equipment, compliance shall be determined with the maximum quantity of charge per exposure.

(e) The required minimal aluminum equivalent filtration shall include the filtration contributed by all materials which are always present between the focal spot of the tube and the patient (e.g., a tabletop when the tube is mounted "under the table" and inherent filtration of the tube).

(2) Filtration control: For x-ray systems manufactured after August 1, 1974, which have variable kVp and variable filtration for the useful beam, a device shall link the kVp selector with the filter(s) and will prevent an exposure unless the minimum required amount of filtration (see Table 603.1 or Table 603.2 above [Table I or II, Section 603 of 20.3.6.603 NMAC]) is in the useful beam for the given kVp which has been selected.

F. Multiple Tubes: Where two or more radiographic tubes are controlled by one exposure switch, the tube or tubes which have been selected shall be clearly indicated prior to initiation of the exposure. This indication shall be both on the x-ray control and at or near the tube housing assembly which has been selected.

G. Mechanical Support of Tube Head: The tube housing assembly supports shall be adjusted such that the tube housing assembly will remain stable during an exposure unless the tube housing movement is a designed function of the x-ray system.

H. Technique Indicators:

(1) The technique factors to be used during an exposure shall be indicated before the exposure begins, except when automatic exposure controls are used, in which case the technique factors which are set prior to the exposure shall be indicated.

(2) On equipment having fixed technique factors, the requirement, 603.H.1 [Paragraph (1), Subsection H., Section 603 of 20.3.6.603 NMAC], may be met by permanent markings. Indication of technique factors shall be visible from the operator's position except in the case of spot films by the fluoroscopist.

[5-3-95; 20.3.6.603 NMAC – Rn, 20 NMAC 3.1.6.603, Recompiled xx/xx/xx]

20.3.6.604 FLUOROSCOPIC X-RAY SYSTEMS:

All fluoroscopic x-ray systems shall meet the following requirements.

A. Limitation of Useful Beam:

(1) The fluoroscopic tube shall not produce x-rays unless the primary protective barrier is in position to intercept the entire useful beam at all times.

(2) The entire cross-section of the useful beam shall be intercepted by the primary protective barrier of the fluoroscopic image assembly at any SID.

(3) Limitation to the Imaging Surface.

(a) Non-Image-Intensified Fluoroscopy and Spot Filming: The x-ray field produced by non-image-intensified fluoroscopic equipment shall not extend beyond the entire visible area of the image receptor. This requirement applies to field size during both fluoroscopic procedures and spot-filming procedures.

(b) Image-Intensified Fluoroscopy and Spot Filming.

(i) During fluoroscopic or spot-filming procedures, neither the length nor the width of the x-ray field in the plane of the image receptor shall exceed the visible area of the image receptor by more than 3 percent of the SID. The sum of the excess length and the excess width shall be no greater than 4 percent of the SID.

(ii) Compliance shall be determined with the beam axis perpendicular to the image receptor. For rectangular x-ray fields used with circular image reception, the error in alignment shall be determined along the length and width dimensions of the x-ray field which pass through the center of the visible area of the image receptor.

B. Activation of the Fluoroscopic Tube: X-ray production in the fluoroscopic mode shall be controlled by a device which requires continuous pressure by the fluoroscopist for the entire time of any exposure. When recording serial fluoroscopic images, the fluoroscopist shall be able to terminate the x-ray exposure(s) at any time, but means may be provided to permit completion of any single exposure of the series in process.

C. Entrance Exposure Rate Allowable Limits:

(1) The exposure rate measured at the point where the center of the useful beam enters the patient shall not exceed 10 R per minute, (2.58 mC/kg) except during recording of fluoroscopic images or when provided with optional high-level control.

(2) When provided with optional high-level control, the equipment shall not be operable at any combination of tube potential and current which will result in an exposure rate in excess of 5 Rem (1.29 mC/kg) per minute at the point where the center of the useful beam enters the patient unless the high-level control is activated. A

continuous signal audible to the fluoroscopist shall indicate that the high-level control is being employed.

(3) Measuring Compliance of Entrance Exposure Rate Limits: Compliance with 604.C [Subsection C., Section 604 of 20.3.6.604 NMAC] shall be determined by:

(a) removing movable grids and compression devices from the useful beam during the measurements;

(b) if the source is below the table, express exposure rate, 1 cm above the tabletop or cradle;

(c) express exposure rate, if the source is above the table, 30 cm above the tabletop with the end of the beam-limiting device or spacer positioned as closely as possible to the point of measurement; and

(d) in a C-arm type of fluoroscope, the exposure rate shall be measured, 30 cm (11.81 inches) from the input surface of the fluoroscopic imaging assembly.

(4) Periodic measurement of entrance exposure rate limits:

(a) periodic measurements of the exposure rate shall be made by a qualified expert. An adequate period for such measurements shall be annually or after any maintenance of the system which might affect the exposure rate.

(b) results of these measurements shall be posted where any fluoroscopist may have ready access to such results while using that fluoroscope and in the record required in 602.A.2.e [Subparagraph (e), Paragraph (2), Subsection A., Section 602 of 20.3.6.602 NMAC]. Results of the measurements shall include the maximum possible Rem/per minute, (1.29 mC/kg) as well as the physical factors used to determine all data; the name of the person performing the measurements; and the date the measurements were performed.

(c) Use of monitoring devices (e.g., commercially available film badges, thermoluminescent dosimeters, or low-energy dosimeters) may be used to perform the test, provided the measurements are made as noted in 604.C.4.d [Subparagraph (d), Paragraph (4), Subsection C. Section 604 of 20.3.6.604 NMAC].

(d) Conditions of measurement:

(i) the measurement shall be made under the conditions that satisfy the requirements of 604.C.3 [Paragraph (3), Subsection C., Section 604 of 20.3.6.604 NMAC];

(ii) the kVp shall be the peak Kv that the x-ray system is capable of producing;

(iii) the high-level control, if present, shall not be activated;

(iv) the x-ray systems that do not incorporate automatic exposure control (automatic brightness control, etc.) shall have sufficient material (e.g., lead or lead equivalence) placed in the useful beam to produce the maximum milliamperage of the x-ray system; and

(v) x-ray systems that incorporate automatic exposure control shall utilize the maximum milliamperage of the x-ray system. Materials (e.g. an attenuation block) may be placed in the useful beam to protect the imaging system.

D. Barrier Transmitted Radiation Rate Limits:

(1) The exposure rate due to transmission through the primary protective barrier with the attenuation block in the useful beam combined with radiation from the image intensifier, if provided, shall not exceed 2 mR (0.516 mC/kg) per hour at 10 cm (3.93 inches) from any surface of the fluoroscopic imaging assembly beyond the plane of the image receptor for each roentgen per minute of entrance exposure rate.

(2) Measuring compliance of barrier transmission:

(a) The exposure rate due to transmission through the primary protective barrier combined with radiation from the image intensifier shall be determined by measurements averaged over an area of 100 sq cm with no linear dimension greater than 20 cm (7.87 inches).

(b) If the source is below the tabletop, the measurement shall be made with the input surface of the fluoroscopic imaging assembly, positioned 30 cm (11.81 inches) above the tabletop.

(c) If the source is above the tabletop and the SID is variable, the measurement shall be made with the end of the beam-limiting device or spacer as close to the tabletop as it can be placed, provided that it shall not be closer than 30 cm (11.81 inches).

(d) Movable grids and compression devices shall be removed from the useful beam during the measurement.

(e) The attenuation block shall be positioned in the useful beam 10 cm (3.93 inches) from the point of measurement of entrance exposure rate and between this point and the input surface of the fluoroscopic imaging assembly.

E. Indication of Potential and Current: During fluoroscopy and cinefluorography, x-ray tube potential and current shall be continuously indicated.

F. Source-Skin Distance: The source to skin distance shall not be less than:

(1) 38 cm (14.96 inches) on stationary fluoroscopes installed after March 10, 1989;

(2) 35.5 cm (13.98 inches) on stationary fluoroscopes which are in operation prior to March 10, 1989;

(3) 30 cm (11.81 inches) on all mobile fluoroscopes; and

(4) 20 cm (7.87 inches) for image intensified fluoroscopes used for specific surgical application. The users operating manual must provide precautionary measures to be adhered to during the use of this device.

G. Fluoroscopic Timer:

(1) Means shall be provided to preset the cumulative on-time of the fluoroscopic tube. The maximum cumulative time of the timing device shall not exceed 5 minutes without resetting.

(2) A signal audible to the fluoroscopist shall indicate the completion of any preset cumulative on-time. Such signal shall continue to sound while x-rays are produced until the timing device is reset.

H. Mobile Fluoroscopes: In addition to the other requirements of 604 [Section 604 of 20.3.6.604 NMAC], mobile fluoroscopes shall provide intensified imaging.

I. Control of Scattered Radiation:

(1) Fluoroscopic table designs when combined with procedures utilized shall be such that no unprotected part of any staff or ancillary person's body shall be exposed to unattenuated scattered radiation which originates from under the table. The attenuation required shall be not less than 0.25 mm lead equivalent.

(2) Equipment configuration when combined with procedures shall be such that no portion of any staff or ancillary person's body, except the extremities, shall be exposed to the unattenuated scattered radiation emanating from above the tabletop unless that individual:

(a) is at least 120 cm (47.24 inches) from the center of the useful beam; or

(b) the radiation has passed through not less than 0.25 mm lead equivalent material (e.g., drapes, Bucky-slot cover, sliding or folding panel, or self supporting curtains) in addition to any lead equivalency provided by the protective apron referred to in 602 A.1.e.(2)[Item (ii), Subparagraph (e), Paragraph (1), Subsection A., Section 602 of 20.3.6.602 NMAC]; and

(c) Exceptions to 604.1.2 [Paragraph (2), Subsection I., Section 604 of 20.3.6.604 NMAC] may be made in some special procedures where a sterile field will not permit the use of the normal protective barriers. Where the use of the prefitted sterilized cover for the barriers is practical, the Department shall not permit such exception.

[5-3-95; 20.3.6.604 NMAC – Rn, 20 NMAC 3.1.6.604, Recompiled xx/xx/xx]

20.3.6.605 RADIOGRAPHIC SYSTEMS OTHER THAN FLUOROSCOPIC, DENTAL, INTRAORAL, OR VETERINARIAN OR COMPUTED TOMOGRAPHY X-RAY SYSTEMS:

A. Beam Limitation: The useful beam shall be limited to the area of clinical interest.

(1) General purpose stationary and mobile x-ray systems:

(a) Variable field limitation: There shall be provided a means for stepless adjustment of the size of the x-ray field. The minimum field size at a SID of 100 cm shall be equal to or less than 5 cm (1.96 inches) by 5 cm (1.96 inches).

(b) Visual Definition: Means shall be provided for visually defining the perimeter of the x-ray field. The total misalignment of the edges of the x-ray field along either the length or width of the visually defined field shall not exceed 2 percent of the distance from the source to the center of the visually defined field when the surface upon which it appears is perpendicular to the axis of the x-ray beam.

(2) Additional Requirements for Stationary General Purpose X-ray Systems: In addition to the requirements in 605.A.1 [Paragraph (1), Subsection A., Section 605 of 20.3.6.605 NMAC] above, all stationary x-ray systems shall:

(a) provide means to indicate when the axis of the x-ray beam is perpendicular to the plane of the image receptor, to align the center of the x-ray field with respect to the center of the image receptor to within 2 percent of the SID, and to indicate the SID to within 2 percent;

(b) be equipped with a beam-limiting device that numerically indicates the field size in the plane of the image receptor to which it is adjusted; and

(c) indicate field size dimensions and SID's in inches or cm, and shall be such that aperture adjustments result in x-ray field dimensions in the plane of the image receptor which correspond to those of the image receptor to within 2 percent of the SID when the beam axis is perpendicular to the plane of the image receptor.

(3) X-ray Systems Designed for One Image Receptor Size: Radiographic equipment designed for only one image receptor size at a fixed SID shall be provided with means to limit the field at the plane of the image receptor to dimensions no greater

than those of the image receptor, and to align the center of the x-ray field with the center of the image receptor to within 2 percent of the SID.

(4) Special purpose x-ray systems:

(a) Shall be provided with means to limit the x-ray field in the plane of the image receptor so that such field does not exceed each dimension of the image receptor by more than 2 percent of the SID when the axis of the x-ray beam is perpendicular to the plane of the image receptor.

(b) Shall be provided with means to align the center of the x-ray field with the center of the image receptor to within 2 percent of the SID.

(c) The above, 605.A.4.a and 605.A.4.b [Subparagraphs (a) and (b), Paragraph (4), Subsection A., Section 605 of 20.3.6.605 NMAC], may be met with a system that meets the requirements for a general purpose x-ray system as specified in 605.A.1 [Paragraph (1), Subsection A., Section 605 of 20.3.6.605 NMAC] above or, when alignment means are also provided, may be met with either:

(i) an assortment of removable, fixed-aperture, beam-limiting devices sufficient to meet the requirements for each combination of image receptor size and SID for which the unit is designed (each such device shall have clear and permanent markings to indicate the image receptor size and SID for which it is designed); or

(ii) a beam-limiting device having multiple fixed apertures sufficient to meet the requirements for each combination of image receptor size and SID for which the unit is designed. Permanent, clearly legible markings shall indicate the image receptor size and SID for which each aperture is designed and shall indicate which aperture is in position for use.

B. Radiation Exposure Control Devices:

(1) Timers: Means shall be provided to terminate the exposure at a preset time interval, preset product of current and time, a preset number of pulses, or a preset radiation exposure to the image receptor. In addition:

(a) termination of exposure shall cause automatic resetting of the timer to its initial setting or to zero; and

(b) it shall not be possible to make an exposure when the timer is set to a zero or off position if either position is provided.

(2) X-ray control (exposure switch):

(a) A control shall be incorporated into each x-ray system such that an exposure can be terminated at any time except for:

- (i) exposure of one-half second or less; or
- (ii) during serial radiography when means shall be provided to permit completion of any single exposure of the series in process.

(b) Each x-ray control shall:

- (i) for stationary x-ray systems be permanently mounted in a protected area so that the operator is required to remain in that protected area during the entire exposure; or

- (ii) mobile and portable x-ray systems which are: 1) used for greater than one week in one location (one room or suite) shall meet the requirements of 605.B.2.b.(1) [Item (i), Subparagraph (b), Paragraph (2), Subsection B., Section 605 of 20.3.6.605 NMAC] above; 2) used for more than 1 hour and less than 1 week at one location (one room, or suite) shall meet the requirement of 605.B.2.b.(2)(a) [Item (ii), Subparagraph (b), Paragraph (2), Subsection B., Section 605 of 20.3.6.605 NMAC] or be provided with 1.98 m (6.5 feet) high protective barrier which is placed at least 1.83 m (6 feet) from the tube housing assembly and at least 1.83 m (6 feet) from the patient; or 3) used to make an exposure(s) of only one patient at the use location shall meet the requirement of 605.B.2.b.(2)(a) [Item (ii), Subparagraph (b), Paragraph (2), Subsection B., Section 605 of 20.3.6.605 NMAC] or 605.B.2.b.(2)(b) [Item(ii), Subparagraph (b), Paragraph (2), Subsection B., Section 605 of 20.3.6.605 NMAC] or be provided with a method of control which will permit the operator to be at least 3.66 m (12 feet) from the tube head assembly during an exposure.

- (iii) the x-ray control shall provide visual indication observable at or from the operator's protected position whenever x-rays are produced. In addition, a signal audible to the operator shall indicate that the exposure has terminated.

(3) Automatic Exposure Controls (Phototimer): When an automatic exposure control is provided:

- (a) indication shall be made on the control panel when this mode of operation is selected;

- (b) when the x-ray tube potential is equal to or greater than 50 kVp, the minimum exposure time for field emission equipment rated for pulsed operation shall be equal to or less than a time interval equivalent to two pulses;

- (c) the minimum exposure time for all equipment other than specified in 605.B.3.b [Subparagraph (b), Paragraph (3), Subsection B., Section 605 of 20.3.6.605 NMAC] shall be equal to or less than 1/60 second or a time interval required to deliver 5 mAs, whichever is greater;

(d) Either the product of peak x-ray tube potential, current, and exposure time shall be limited to not more than 60 kW per exposure or the product of x-ray tube current and exposure time shall be limited to not more than 600 mAs per exposure except when the x-ray tube potential is less than 50 kVp in which case the product of x-ray tube current and exposure time shall be limited to not more than 2000 mAs per exposure; and

(e) A visible signal shall indicate when an exposure has been terminated at the limits described in 605.B.3.d [Subparagraph (d), Paragraph (3), Subsection B., Section 605 of 20.3.6.605 NMAC], and manual resetting shall be required before further automatically timed exposures can be made. [5-3-95]

(4) Reproducibility: With a timer setting of 0.5 seconds or less, the average exposure period (T) shall be greater than or equal to 5 times the maximum exposure period (Tmax) minus the minimum exposure period (Tmin) when 4 timer tests are performed: $T \geq 5(T_{max} - T_{min})$.

C. Source-to-Source or Receptor Distance Limitation: All radiographic systems shall be provided with a durable, securely fastened means to limit the source-to-skin distance to not less than 30 cm (11.81 inches). This can be met when the collimator or cone provides the required limits.

D. Exposure Reproducibility: The exposure produced shall be reproducible to within the following criteria: When all technique factors are held constant, the coefficient of variation shall not exceed 0.10. This shall be deemed to have been met if when four exposures at identical technique factors are made that the value of the average exposure (E) is greater than or equal to five times the maximum exposure (Emax), minus the minimum exposure (Emin). $E \geq 5(E_{max} - E_{min})$

E. Standby Radiation from Capacitor Energy Storage Equipment: Radiation emitted from the x-ray tube when the exposure switch or timer is not activated shall not exceed a rate of 2 mR (20 mSv) per hour at 5 cm (1.96 inches) from any accessible surface of the diagnostic source assembly, with the beam-limiting device fully open.

[5-3-95; 20.3.6.605 NMAC – Rn, 20 NMAC 3.1.6.605, Recompiled xx/xx/xx]

20.3.6.606 INTRAORAL DENTAL RADIOGRAPHIC SYSTEMS:

In addition to the provisions of 602 and 603 [Sections 602 and 603 of 20.3.6.602 and 603 NMAC], the requirements of this section apply to x-ray equipment and associated facilities used for dental radiography. Criteria for extraoral dental radiographic systems are covered in 605 [Section 605 of 20.3.6.605 NMAC].

A. Source-to-Skin Distance: X-ray systems designed for use with an intraoral image receptor shall be provided with means to limit source-to-skin distance to not less than:

- (1) 18 cm (7.09 inches) if operable above 50 kVp; or
- (2) 10 cm (3.93 inches) if not operable above 50 kVp.

B. Field Limitation:

(1) Radiographic systems designed for use with an intraoral image receptor shall be provided with means to limit the x-ray beam such that:

(a) if the minimum source-to-skin distance (SSD) is 18 cm (7.09 inches) or more, the x-ray field, at the minimum SSD, shall be containable in a circle having a diameter of no more than 7 cm (2.76 inches); and

(b) if the minimum SSD is less than 18 cm, (7.09 inches) the x-ray field, at the minimum SSD, shall be containable in a circle having a diameter of no more than 6 cm (2.36 inches).

C. Timers: Means shall be provided to terminate the exposure at a preset time interval, preset product of current and time, a preset number of pulses, or a preset radiation exposure to the image receptor. In addition:

(1) Termination of exposure shall cause automatic resetting of the timer to its initial setting or to zero;

(2) It shall not be possible to make an exposure when the timer is to a zero or off position if either position is provided;

(3) Reproducibility: With a timer setting of 0.5 seconds or less, the average exposure period (T) shall be greater than or equal to 5 times the maximum exposure period (Tmax) minus the minimum exposure period (Tmin) when 4 timer tests are performed: $T \geq 5(T_{max} - T_{min})$.

D. X-ray Control (use of dead-man timers):

(1) A control shall be incorporated into each x-ray system such that an exposure can be terminated at any time, except for exposures of one-half second or less;

(2) Each x-ray control shall be located in such a way as to meet the following criteria:

(a) for stationary x-ray systems, it shall be required that the control switch be permanently mounted in a protected area (e.g., corridor outside the room) so that the operator is required to remain in that protected area during the entire exposure;

(b) for mobile and portable x-ray systems which are:

(i) used for greater than 1 week in one location (one room or suite) shall meet the requirements of 606.D.2.a [Subparagraph (a), Paragraph (2), Subsection D., Section 606 of 20.3.6.606 NMAC];

(ii) used for more than 1 hour and less than 1 week at one location (one room, or suite) shall meet the requirements of 606.D.2.b.(1) [Item (i), Subparagraph (b), Paragraph (2), Subsection D., Section 606 of 20.3.6.606 NMAC]] or be provided with 1.98 m (6.5 feet) high protective barrier which is placed at least 1.83 m (6 feet) from the tube housing assembly and at least 1.83 m (6 feet) from the patient;

(iii) used to make an exposure(s) of only one patient at the use location shall meet the requirement of 606.D.2.b.(1) or 606.D.2.b.(2) [Items (i) or (ii), Subparagraph (b), Paragraph (2), Subsection D., Section 606 of 20.3.6.606 NMAC] or be provided with a method of control which will permit the operator to be at least 3.63 m (12 feet) from the tube head assembly during an exposure.

(3) The x-ray control shall provide visual indication observable at or from the operator's protected position whenever x-rays are produced. In addition, a signal audible to the operator shall indicate that the exposure has terminated; and

(4) From the operator's position, the patient must be capable of being viewed directly or via mirrors.

E. Exposure Reproducibility: The exposure produced shall be reproducible to within the following criteria: When all technique factors are held constant, the coefficient of variation shall not exceed 0.10. This shall be deemed to have been met if when four exposures at identical technique factors are made that the value of the average exposure (E) is greater than or equal to five times the maximum exposure (E_{max}) minus the minimum exposure (E_{min}). $E > 5(E_{max} - E_{min})$

F. Operating Controls:

(1) Patient and film holding devices shall be used when the techniques permit. The safety rules, required by 602.A.1.d [Subparagraph (d), Paragraph (1), Subsection A., Section 602 of 20.3.6.602 NMAC], shall list individual projections where holding devices cannot be utilized.

(2) Neither the tube housing nor the position indicating device shall be hand-held during an exposure.

(3) The x-ray system shall be arranged and operated in such a manner that the useful beam at the patient's skin does not exceed the dimensions specified in 606.B.1.a or 606.B.1.b [Subparagraphs (a) or (b), Paragraph (1), Subsection B., Section 606 of 20.3.6.606 NMAC].

(4) Dental fluoroscopy shall be prohibited.

20.3.6.607 THERAPEUTIC X-RAY INSTALLATIONS:

A. Equipment:

- (1) The protective tube housing shall be of therapeutic type.
- (2) Permanent diaphragms or cones for collimating the useful beam shall afford the same degree of protection as the tube housing. Adjustable or removable beam-defining diaphragms or cones shall transmit not more than five percent of the useful beam at the maximum kilovoltage and with maximum treatment filter.
- (3) Filters shall be secured in place to prevent them from dropping out during treatment. The filter slot shall be so constructed that the radiation escaping through it does not exceed 1 R (0.258 mC/kg) per hour at 1 m (3.28 feet), or, if the radiation from the slot is accessible to the patient, 30 R (7.74 mC/kg) per hour at 5 cm (1.96 inches) from the external opening. Each removable filter shall be marked with its thickness and material.
- (4) A filter indication system shall be used on all therapy machines using changeable filters. It shall be designed so as to permit easy recognition of any added filter in place. It shall indicate, from the control panel, the presence or absence of any filter.
- (5) The x-ray tube shall be so mounted that it cannot turn or slide with respect to the housing aperture.
- (6) Means shall be provided to immobilize the tube housing during stationary portal treatment.
- (7) A device (e.g., an automatic timer exposure meter or dose meter) shall be provided to terminate the exposure after a preset time interval or preset exposure of dose limit. Means shall be provided for the operator to terminate the exposure at any time.
- (8) Equipment utilizing shutters to control the useful beam shall have a shutter position indicator on the control panel.
- (9) The control panel shall include a device (usually an ammeter) which will give positive indication of the production of x-rays whenever the x-ray tube is energized.

B. Structural Shielding:

(1) All walls, floors, and ceilings that can be struck by the useful beam shall be provided with primary barriers to the height of the ceiling. Low-voltage superficial therapy units only require a height of 2.1 m (6.88 feet).

(2) All walls, floors, and ceilings that, because of restrictions in the orientation of the useful beam, cannot be struck by the useful beam shall be provided with secondary barriers to a minimum height of 2.1 m (6.88 feet).

(3) With equipment operating at voltages above 50 kVp, the required barriers shall be an integral part of the building.

(4) With equipment operating above 150 kVp, the control panel shall be within a protective booth equipped with an interlocked door, or located outside the treatment room.

(5) Interlocks shall be provided for x-ray therapy equipment capable of operating above 150 kVp so that, when any door of the treatment room is opened, either the machine will shut off automatically or the radiation level within the room will be reduced to an average of not more than 2 mR (20 mSv) per hour and a maximum of 10 mR (100 mSv) per hour at a distance of 1 m (3.28 feet) in any direction from the target. After such shutoff or reduction in output, it shall be possible to restore the machine to full operation only from the control panel.

(6) Windows, mirror systems, or closed-circuit television viewing screen shall be provided to permit continuous observation of the patient during irradiation and shall be so located that the operator may see the patient and the control panel from the same position.

(7) Provision shall be made for oral communication with the patient from the control room.

(8) Treatment rooms to which access is possible through more than one entrance shall be provided with flashing warning lights in a readily observable position near the outside of all access doors, which will indicate when the useful beam is "on".

C. Operating Procedure:

(1) All new facilities, and existing facilities not previously surveyed, shall have a protection survey made by, or under the direction of a qualified expert. This also shall be done after any change in the facility which might produce a radiation hazard. The expert shall report his findings in writing to the person in charge of the facility and a copy of this report shall be transmitted to the Department.

(2) The facility shall be operated in compliance with any limitations indicated by the protection survey.

(3) When a patient must be held in position for radiation therapy, mechanical supporting or restraining devices shall be used whenever feasible. If the patient must be held by an individual, that individual shall be adequately protected and shall be positioned so that no part of the body will be struck by the useful beam and that the body is as far as possible from the edge of the useful beam. The exposure of any individual used for this purpose shall be monitored.

(4) The output of each therapeutic x-ray machine shall be calibrated by, or under the direction of, a qualified expert. The calibration shall be repeated after any change in or replacement of components of the x-ray generating equipment which could cause a change in x-ray output. Check calibrations shall be made at least once a year thereafter. Records of calibration shall be maintained by the registrant.

[5-3-95; 20.3.6.607 NMAC – Rn, 20 NMAC 3.1.6.607, Recompiled xx/xx/xx]

20.3.6.608 SPECIAL REQUIREMENTS FOR X-RAY THERAPY EQUIPMENT OPERATED AT POTENTIALS OF 60 kVp AND BELOW:

A. Equipment: All provisions of 607.A [Subsection A., Section 607 of 20.3.6.607 NMAC] apply except that the leakage radiation 5 cm (1.96 inches) from the surface to the tube housing shall not exceed 0.1 R/hr.

B. Operating Procedures:

(1) Automatic timers shall be provided which will permit accurate presetting and termination of exposures as short as one second.

(2) In the therapeutic application of apparatus constructed with beryllium or other low-filtration windows, the registrant shall ensure that the unfiltered useful beam is blocked at all times except when actually being used.

(3) Machines having an output of more than 1,000 R (100 Bq) per minute at any accessible place shall not be left unattended without the power being shut off at the main disconnect switch in addition to the control panel switch.

(4) The tube-head shall not be hand-held during x-ray therapy.

[5-3-95; 20.3.6.608 NMAC – Rn, 20 NMAC 3.1.6.608, Recompiled xx/xx/xx]

20.3.6.609 VETERINARY MEDICINE RADIOGRAPHIC INSTALLATIONS:

A. Equipment:

(1) The protective tube housing shall be of diagnostic type.

(2) Diaphragms or cones shall be provided for collimating the useful beam to the area of clinical interest, and shall provide the same degree of protection as is required of the housing.

(3) The total filtration permanently in the useful beam shall not be less than 0.5 mm aluminum equivalent for machines operating up to 50 kVp, 1.5 mm aluminum for machines operating between 50-70 kVp, and 2.5 mm aluminum equivalent for machines operating above 70 kVp.

(4) A device shall be provided to terminate the exposure after a preset time or exposure.

(5) A dead-man type of exposure switch shall be provided, together with an electrical cord of sufficient length, so that the operator can stand out of the useful beam and at least 1.8 m from the animal during all x-ray exposures.

B. Structural Shielding: All wall, ceiling, and floor areas shall be equivalent to or provided with applicable protective barriers as required in 602.B.1 and 602.B.2 [Paragraphs (1) and (2), Subsection B., Section 602 of 20.3.6.602 NMAC].

C. Operating Procedures:

(1) The operator shall stand well away from the useful beam and the animal during radiographic exposures.

(2) No individual other than the operator shall be in the x-ray room while exposures are being made unless such individual's assistance is required.

(3) When an animal must be held in position during radiography, mechanical supporting or restraining devices should be used. If the animal must be held by an individual, that individual shall be protected with appropriate shielding devices, such as protective gloves and apron, and he shall so positioned that no part of his body will be struck by the useful beam. The exposure of any individual used for this purpose shall be monitored.

[5-3-95; 20.3.6.609 NMAC – Rn, 20 NMAC 3.1.6.609, Recompiled xx/xx/xx]

20.3.6.610 APPENDIX A. INFORMATION ON RADIATION SHIELDING REQUIRED FOR PLAN REVIEWS:

A. In order for the Department to provide evaluation, technical advice and official approval on shielding requirements for a radiation installation, the following information is needed:

(1) normal location of the radiation producing equipment's radiation port; port's travel and traverse limits; general direction(s) of the radiation beam; locations of

all windows; locations of the operator's booth; location of the equipment's control console; distance from x-ray tube to nearest primary barrier;

(2) structural composition and thickness of all walls, doors, partitions, floor(s), and ceiling(s) of room(s) concerned;

(3) height, floor-to-floor, of room(s) concerned;

(4) type of occupancy of all adjacent areas inclusive of space above and below the room(s) concerned; for exterior walls, distance to the closest existing occupied area(s);

(5) kVp (Kilovolt Peak Potential) and maximum mA (milliamperage) for each radiation machine; and

(6) type of examination(s) or treatment(s) performed with equipment (e.g., dental, orthodontal, chest, gastrointestinal, fluoroscopic, podiatry, fixed therapy, rotational therapy, etc.).

B. Information on anticipated workload used in shielding calculations must be provided. This must include for each radiation machine number of exposures/week and average duration of each exposure.

C. If services of a qualified radiation expert have been utilized, a copy of his report shall be submitted with plans. This report must show all basic assumptions (i.e., workload, occupancy and use factors, distance, etc.) used to determine the shielding requirements.

[5-3-95; 20.3.6.610 NMAC – Rn, 20 NMAC 3.1.6.610, Recompiled xx/xx/xx]

20.3.6.611 APPENDIX B. MINIMUM DESIGN REQUIREMENTS FOR AN X-RAY MACHINE OPERATOR'S BOOTH:

A. Space Requirements:

(1) The operator shall be allotted not less than 0.7 square m (7.5 square feet) of unobstructed floor space in the booth.

(2) The minimum space as indicated above may be any geometric configuration with no dimension of less than 61 cm (2 feet).

(3) The space shall be allotted excluding any encumbrance by the console, such as overhang or cables, or other similar encroachments.

(4) The booth shall be located or constructed such that unattenuated direct scatter radiation originating on the examination table or at the wall cassette not reach the operator's station in the booth.

(5) The booth walls shall be at least 2.1 m (7 feet) high and shall be permanently fixed to the floor or other structure as may be necessary.

(6) When a door or movable panel is used as an integral part of the booth structure, it must have a permissive device which will prevent an exposure when the door or panel is not closed (this type of booth structure is not recommended).

B. Switch Placement:

(1) The operator's switch for the radiographic machine shall be fixed within the booth.

(2) The switch shall be at least 1 m (40 inches) from any edge of the booth wall which is proximal to the examining table.

(3) The switch shall allow the operator to use the majority of the available viewing windows.

C. Viewing System Requirements:

(1) Each booth shall have a least one viewing device which will:

(a) be so placed that the operator can view the patient during any exposure;
and

(b) the device shall be so placed that he can have full view of any occupant of the room and should be so placed that he can view any entry into the room; and if any door, which allows access to the room, cannot be seen from the booth, then that door must have a permissive device controlling the exposure which will prevent the exposure if the door is not closed.

(2) When the viewing system is a window:

(a) it shall have a visible area of at least 930 square cm (1.5 square feet);

(b) the distance between the proximal edge of the window and the open edge of the booth shall not be less than 45.7 cm (18 inches); and

(c) the glass shall have the same lead equivalence as that required in the booths' wall in which it is to be mounted.

(3) When the viewing system is by mirrors, the mirror(s) shall be so located as to accomplish the general requirements as in above.

(4) When the viewing system is by electronic means (e.g., TV, etc.):

(a) the camera shall be so located as to accomplish the general requirements of 611.C.1 [Paragraph (1), Subsection C. Section 611 of 20.3.6.611 NMAC]. above; and

(b) there shall be an alternative viewing system as a back-up for electronic failure.

[5-3-95; 20.3.6.611 NMAC – Rn, 20 NMAC 3.1.6.611, Recompiled xx/xx/xx]

20.3.6.612 APPENDIX C. X-RAY FILM DEVELOPING:

Time Temperature Chart:

Thermometer Readings		Minimum Developing
(Degrees)		Times (Minutes)
C	F	2.0
27	80	2.0
	79	2.5
	78	2.5
	77	3.0
24	76	3.0
	75	3.0
	74	3.5
	73	3.5
22	72	4.0
	71	4.0
	70	4.5
	69	4.5

20	68	5.0
	67	5.5
	66	5.5
	65	6.0
18	64	6.5
	63	7.0
	62	8.0
	61	8.5
16	60	9.5

A. Processing of Film: All films shall be processed in such a fashion as to achieve adequate sensitometric performance. This criterion shall be adjudged to have been met if either of the following items can be met:

- (1) film manufacturers' published recommendations as regards time and temperature are followed; or
- (2) each film shall be developed in accord with the time temperature chart.

B. Manual Processing of Film:

(1) Where film is developed manually, a system shall be available which consists of at least one three-sectional tank made of mechanically rigid, corrosion-resistant material (each section of which shall be constructed so as to retain its solution separation from the other two) and has the overall temperature-controlling capability of maintaining each solution such that the temperature of each solution will always fall within the range of 16 C to 27 C (60 -80 F).

- (2) Devices shall be available which will:
 - (a) give the actual temperature of the developer; and
 - (b) give an audible or visible signal, after a preset time (in minutes of duration).

(3) Chemical-Film Processing Control:

(a) Chemicals shall be mixed in accord with the chemical manufacturer's recommendations.

(b) Developer replenisher shall be periodically added to the developer tank based on the area of the films which have been developed (e.g., 1 liter per 3100 in² of film or in accord with the recommendations of the chemical manufacturer). Solution may be removed from the tank to permit the addition of an adequate volume of replenisher.

(c) All processing chemicals shall be completely replaced at least every 3 months.

(d) At the time of the complete processing chemical change, a film shall be exposed to a density of approximately one, with one-half of the film being protected from the exposure. After full development, it will be maintained in the darkroom or vicinity and at the beginning of each work day at least one test film or film strip (exposed under techniques identical with those used for the original test film) shall be compared with the original test film to evaluate the adequacy of developing results and base fog level.

C. Automatic Processors and Other Closed Processing Systems:

(1) Preventive maintenance shall be performed on the unit, except for extended periods of nonuse, on a frequency basis which is not less than that schedule recommended by the manufacturer. In the event that no schedule is available from the manufacturer a maintenance schedule shall be established which will preserve good film quality.

(2) After a full cleansing of the processor, a film shall be exposed to a density of approximately one, with one-half of the film protected from exposure. It will be developed and then kept near the unit and daily at least one test film (exposed under techniques identical with those used for the original test film) shall be compared with the original test film to evaluate the adequacy of the unit's developing capability and base fog level.

D. Darkrooms:

(1) Darkrooms shall be constructed so that film being processed, handled, or stored will be exposed only to light which has passed through a safe-light filter.

(2) The radiance and spectral emission of the safelight (bulb and filter combination) shall be such that film shall not be "fogged" above the base level when exposed for 1 minute at a distance of about 120 cm from the lamp(s). Film manufacturer's recommendations for a safelight and its placement shall be adjudged to meet this criterion.

20.3.1.613-20.3.1.699 [RESERVED]

PART 7: MEDICAL USE OF RADIONUCLIDES

20.3.7.1 ISSUING AGENCY:

Environmental Improvement Board.

[20.3.7.1 NMAC - Rp, 20 NMAC 3.1.1.100, 04/30/2009]

20.3.7.2 SCOPE:

This part contains the requirements and provisions for the medical use of radioactive materials and for issuance of specific licenses authorizing the medical use of radioactive material. These requirements and provisions provide for the radiation safety of workers, the general public, patients and human research subjects. The requirements and provisions of this part are in addition to, and not in substitution for, other parts in this chapter. The requirements and provisions of 20.3.3 NMAC, 20.3.4 NMAC, 20.3.10 NMAC and 20.3.16 NMAC apply to applicants and licensees subject to this part unless specifically exempted. Other federal, state or local regulations may apply.

[20.3.7.2 NMAC - Rp, 20 NMAC 3.1.7.700, 04/30/2009]

20.3.7.3 STATUTORY AUTHORITY:

Sections 74-1-9, 74-3-5 and 74-3-9 NMSA 1978.

[20.3.7.3 NMAC - Rp, 20 NMAC 3.1.1.102, 04/30/2009]

20.3.7.4 DURATION:

Permanent.

[20.3.7.4 NMAC - Rp, 20 NMAC 3.1.1.103, 04/30/2009]

20.3.7.5 EFFECTIVE DATE:

April 30, 2009, unless a later date is cited at the end of a section.

[20.3.7.5 NMAC - Rp, 20 NMAC 3.1.1.104, 04/30/2009]

20.3.7.6 OBJECTIVE:

This part provides for the medical use and licensing of radioactive materials.

[20.3.7.6 NMAC - Rp, 20 NMAC 3.1.1.105, 04/30/2009]

20.3.7.7 DEFINITIONS:

A. "Address of use" means the building or buildings that are identified on the license and where radioactive material may be prepared, received, used or stored.

B. "Area of use" means a portion of an address of use that has been set aside for the purpose of preparing, receiving, using or storing radioactive material.

C. "Associate Radiation Safety Officer (ARSO)" means an individual who:

(1) Meets the requirements in 10 CFR § 35.50 and 10 CFR §35.59; and

(2) Is currently identified as an Associate Radiation Safety Officer for the types of use of byproduct material for which the individual has been assigned duties and tasks by the Radiation Safety Officer on:

(a) A specific medical use license issued by the Commission or an Agreement State; or

(b) A medical use permit issued by a Commission master material licensee.

D. "Authorized medical physicist" means an individual who:

(1) meets the requirements in Subsection B of 20.3.7.714 NMAC, incorporating 10 CFR 35.51(a), and Subsection E of 20.3.7.714 NMAC; or

(2) is identified as an authorized medical physicist or teletherapy physicist on:

(a) a specific medical use license issued by the department, NRC or agreement state;

(b) a medical use permit issued by a NRC master material licensee;

(c) a permit issued by the department, NRC or agreement state broad scope medical use licensee; or

(d) a permit issued by a NRC master material license broad scope medical use permittee.

E. "Authorized nuclear pharmacist" means a pharmacist who:

(1) meets the requirements in Subsection C of 20.3.7.714 NMAC, incorporating 10 CFR 35.55(a), and Subsection E of 20.3.7.714 NMAC; or

(2) is identified as an authorized nuclear pharmacist on:

(a) a specific license issued by the department, NRC or agreement state that authorizes medical use or the practice of nuclear pharmacy;

(b) a permit issued by a NRC master material licensee that authorizes medical use or the practice of nuclear pharmacy;

(c) a permit issued by a department, NRC or agreement state broad scope medical use licensee that authorizes medical use or the practice of nuclear pharmacy; or

(d) a permit issued by a NRC master material license broad scope medical use permittee that authorizes medical use or the practice of nuclear pharmacy; or

(3) is identified as an authorized nuclear pharmacist by a commercial nuclear pharmacy that has been authorized to identify authorized nuclear pharmacists; or

(4) is designated as an authorized nuclear pharmacist in accordance with Subparagraph (e) of Paragraph (2) of Subsection J of 20.3.3.315 NMAC.

F. "Authorized user" means a physician, dentist or podiatrist who:

(1) meets the requirements in Subsection E of 20.3.7.714 NMAC and any of the following subsections of 20.3.7.714 NMAC: Subsection F, incorporating 10 CFR 35.190(a); Subsection G, incorporating 10 CFR 35.290(a); Subsection H, incorporating 10 CFR 35.390(a); Subsection I, incorporating 10 CFR 35.392(a); Subsection J, incorporating 10 CFR 35.394(a); Subsection L, incorporating 10 CFR 35.490(a); Subsection N, incorporating 10 CFR 35.590(a); or Subsection O, incorporating 10 CFR 35.690(a); or

(2) is identified as an authorized user on:

(a) a department, NRC or agreement state license that authorizes the medical use of radioactive material;

(b) a permit issued by a NRC master material licensee that is authorized to permit the medical use of radioactive material;

(c) a permit issued by a department, NRC or agreement state specific licensee of broad scope that is authorized to permit the medical use of radioactive material; or

(d) a permit issued by a NRC master material license broad scope permittee that is authorized to permit the medical use of radioactive material.

G. "Brachytherapy" means a method of radiation therapy in which sources are used to deliver a radiation dose at a distance of up to a few centimeters by surface, intracavitary, intraluminal or interstitial application.

H. "Brachytherapy source" means a radioactive source or a manufacturer-assembled source train or a combination of these sources that is designed to deliver a therapeutic dose within a distance of a few centimeters.

I. "Client's address" means the area of use or a temporary job site for the purpose of providing mobile medical service in accordance with Subsection J of 20.3.7.703 NMAC.

J. "Dedicated check source" means a radioactive source that is used to assure the constant operation of a radiation detection or measurement device over several months or years.

K. "Dentist" means an individual licensed by a state or territory of the United States, the District of Columbia or the commonwealth of Puerto Rico to practice dentistry.

L. "High dose-rate remote afterloader", as used in this part, means a brachytherapy device that remotely delivers a dose rate in excess of 12 grays (1200 rads) per hour at the point or surface where the dose is prescribed.

M. "Low dose-rate remote afterloader", as used in this part, means a brachytherapy device that remotely delivers a dose rate of less than or equal to two grays (200 rads) per hour at the point or surface where the dose is prescribed.

N. "Management" means the chief executive officer or other individual having the authority to manage, direct or administer the licensee's activities or those persons' delegate or delegates.

O. "Manual brachytherapy", as used in this part, means a type of brachytherapy in which the brachytherapy sources (e.g., seeds, ribbons) are manually placed topically on or inserted either into the body cavities that are in close proximity to a treatment site or directly into the tissue volume.

P. "Medical event" means an event that meets the criteria in Paragraph (1) or (2) of Subsection A of 20.3.7.716 NMAC.

Q. "Medical institution" means an organization in which more than one medical discipline is practiced.

R. "Medical use" means the intentional internal or external administration of radioactive material or the radiation from radioactive material to patients or human research subjects under the supervision of an authorized user.

S. "Medium dose-rate remote afterloader", as used in this part, means a brachytherapy device that remotely delivers a dose rate of greater than two grays (200 rads) per hour, but less than or equal to 12 grays (1200 rads) per hour at the point or surface where the dose is prescribed.

T. "Mobile medical service" means the transportation of radioactive material to and its medical use at the client's address.

U. "NIST" means the national institute of standards and technology which is the standards-defining agency of the United States government, formerly the national bureau of standards. It is one of three agencies that fall under the technology administration (www.technology.gov), a branch of the United States commerce department that is devoted to advancing American economic growth through the use of technology.

V. "Ophthalmic physicist" means an individual who

(1) Meets the requirements in 10 CFR § 35.433(a)(2) and 10 CFR § 35.59;
and

(2) Is identified as an ophthalmic physicist on a:

(a) Specific medical use license issued by the Commission or an Agreement State;

(b) Permit issued by a Commission or Agreement State broad scope medical use licensee;

(c) Medical use permit issued by a Commission master material licensee; or

(d) Permit issued by a Commission master material licensee broad scope medical use permittee.

W. "Output" means the exposure rate, dose rate or a quantity related in a known manner to these rates from a brachytherapy source or a teletherapy, remote afterloader or gamma stereotactic radiosurgery unit for a specified set of exposure conditions.

X. "Patient intervention" means actions by the patient or human research subject, whether intentional or unintentional, such as dislodging or removing treatment devices or prematurely terminating the administration.

Y. "Pharmacist" means an individual licensed by a state or territory of the United States, the District of Columbia or the commonwealth of Puerto Rico to practice pharmacy.

Z. "Physician" means a medical doctor or doctor of osteopathy licensed by a state or territory of the United States, the District of Columbia or the commonwealth of Puerto Rico to prescribe drugs in the practice of medicine.

AA. "Podiatrist" means an individual licensed by a state or territory of the United States, the District of Columbia or the commonwealth of Puerto Rico to practice podiatry.

BB. "Positron emission tomography (PET) radionuclide production facility" is defined as a facility operating a cyclotron or accelerator for the purpose of producing PET radionuclides.

CC. "Preceptor" means an individual who provides, directs or verifies training and experience required for an individual to become an authorized user, an authorized medical physicist, an authorized nuclear pharmacist, radiation safety officer or a associate radiation officer.

DD. "Prescribed dosage" means the specified activity or range of activity of unsealed radioactive material as documented:

- (1) in a written directive; or
- (2) in accordance with the directions of the authorized user for procedures performed pursuant to 20.3.7.704 NMAC and 20.3.7.705 NMAC.

EE. "Prescribed dose" means:

- (1) for gamma stereotactic radiosurgery, the total dose as documented in the written directive;
- (2) for teletherapy, the total dose and dose per fraction as documented in the written directive;
- (3) for manual brachytherapy, either the total source strength and exposure time or the total dose, as documented in the written directive; or
- (4) for remote brachytherapy afterloaders, the total dose and dose per fraction as documented in the written directive.

FF. "Pulsed dose-rate remote afterloader", as used in this part, means a special type of remote afterloading brachytherapy device that uses a single source capable of delivering dose rates in the "high dose-rate" range, but:

- (1) is approximately one-tenth of the activity of typical high dose-rate remote afterloader sources; and

(2) is used to simulate the radiobiology of a low dose-rate treatment by inserting the source for a given fraction of each hour.

GG. "Radiation safety officer" means an individual who:

(1) meets the requirements in Subsection E of 20.3.7.714 NMAC and either Subsection A of 20.3.7.714 NMAC, incorporating 10 CFR 35.50(a), or Subsection A of 20.3.3.714 NMAC, incorporating 10 CFR 35.50(c)(1); or

(2) is identified as a radiation safety officer on:

(a) a specific medical use license issued by the department, NRC or agreement state; or

(b) a medical use permit issued by a NRC master material licensee.

HH. "Stereotactic radiosurgery" means the use of external radiation in conjunction with a stereotactic guidance device to very precisely deliver a therapeutic dose to a tissue volume.

II. "Structured educational program" means an educational program designed to impart particular knowledge and practical education through interrelated studies and supervised training.

JJ. "Teletherapy", as used in this part, means a method of radiation therapy in which collimated gamma rays are delivered at a distance from the patient or human research subject.

KK. "Temporary job site" means a location where mobile medical services are conducted other than those location(s) of use authorized on the license.

LL. "Therapeutic dosage" means a dosage of unsealed radioactive material that is intended to deliver a radiation dose to a patient or human research subject for palliative or curative treatment.

MM. "Therapeutic dose" means a radiation dose delivered from a source containing radioactive material to a patient or human research subject for palliative or curative treatment.

NN. "Treatment site" means the anatomical description of the tissue intended to receive a radiation dose, as described in a written directive.

OO. "Type of use" means use of radioactive material under the following sections: 20.3.7.704 NMAC, 20.3.7.705 NMAC, 20.3.7.708 NMAC, 20.3.7.710 NMAC, 20.3.7.711 NMAC, 20.3.7.712 NMAC and 20.3.7.713 NMAC.

PP. "Unit dosage" means a dosage prepared for medical use for administration as a single dosage to a patient or human research subject without any further manipulation of the dosage after it is initially prepared.

QQ. "Written directive" means an authorized user's written order for the administration of radioactive material or radiation from radioactive material to a specific patient or human research object, as specified in Subsection G of 20.3.7.702 NMAC.

[20.3.7.7 NMAC - Rp, 20 NMAC 3.1.7.701, 04/30/2009; A, 02/14/2023]

20.3.7.8-20.3.7.699 [RESERVED]

20.3.7.700 GENERAL REGULATORY REQUIREMENTS:

A. Provisions for research involving human subjects.

(1) A licensee may conduct research involving human research subjects only if it uses the radioactive materials specified on its license for the uses authorized on the license.

(2) If the research is conducted, funded, supported or regulated by a federal agency that has implemented the *federal policy for the protection of human subjects* (45 CFR Part 46), the licensee shall, before conducting research:

(a) obtain review and approval of the research from an "institutional review board," as defined and described in the *federal policy for the protection of human subjects*; and

(b) obtain "informed consent," as defined and described in the *federal policy for the protection of human subjects*, from the human research subject.

(3) If the research will not be conducted, funded, supported or regulated by a federal agency that has implemented the *federal policy for the protection of human subjects*, the licensee shall, before conducting research, apply for and receive a specific amendment to its medical use license issued by the department. The amendment request must include a written commitment that the licensee will, before conducting research:

(a) obtain review and approval of the research from an "institutional review board," as defined and described in the *federal policy for the protection of human subjects*; and

(b) obtain "informed consent," as defined and described in the *federal policy for the protection of human subjects*, from the human research subject.

(4) Nothing in this subsection relieves licensees from complying with the other requirements in this part.

B. FDA, federal and state requirements. Nothing in this part relieves the licensee from complying with applicable FDA, other federal and state requirements governing radioactive drugs or devices.

C. Implementation.

(1) When a requirement in this part differs from the requirement in an existing license condition, the requirement in this part shall govern.

(2) A licensee shall continue to comply with any license condition that requires it to implement procedures required by Subsections D, J, K and L of 20.3.7.711 NMAC until there is a license amendment or renewal that modifies the license condition.

D. License required.

(1) A person may manufacture, produce, acquire, receive, possess, prepare, use or transfer radioactive material for medical use only in accordance with a specific license issued by the department or as allowed in Paragraph (2) of this subsection.

(2) A specific license is not needed for an individual who:

(a) receives, possesses, uses or transfers radioactive material in accordance with the requirements in this chapter under the supervision of an authorized user as provided in Subsection F of 20.3.7.702 NMAC unless prohibited by license condition; or

(b) prepares unsealed radioactive material for medical use in accordance with the requirements in this chapter under the supervision of an authorized nuclear pharmacist or authorized user as provided in Subsection F of 20.3.7.702 NMAC unless prohibited by license condition.

E. Application for license, amendment or renewal.

(1) An application must be signed by the applicant or licensee, or a person duly authorized to act for or on their behalf.

(2) An application for a license for medical use of radioactive material as described in 20.3.7.704 NMAC, 20.3.7.705 NMAC, 20.3.7.708 NMAC, 20.3.7.710 NMAC, 20.3.7.711 NMAC, 20.3.7.712 NMAC and 20.3.7.713 NMAC must be made by:

(a) filing in duplicate of a department form, *application for radioactive material license*, completed according to the instructions in the form; and

(b) submitting written procedures required by Subsections D, J, K and L of 20.3.7.711 NMAC, as applicable.

(3) An application for a specific license of category 1 and category 2 quantities of radioactive material shall comply with 10 CFR 37. The licensee shall comply with 10 CFR 37 except as follows:

(a) any reference to the commission or NRC shall be deemed a reference to the department;

(b) 10 CFR 37.5 Definitions of: agreement state, byproduct material, commission and person shall not be applicable,

(c) 10 CFR 37.7, 10 CFR 37.9, 10 CFR 37.11(a) and (b), 10 CFR 37.13, 10 CFR 37.71, 10 CFR 37.105, and 10 CFR 37.107 shall not be applicable;

(d) for any reporting or notification requirements that the licensee must follow in 10 CFR 37.45, 10 CFR 37.57, 10 CFR 37.77(a) through (d), and 10 CFR 37.81, the licensee shall use the following address when applicable: New Mexico environment department/RCB, P.O. Box 5469, Santa Fe, NM 87502-5469 address information.

(4) A request for a license amendment or renewal must be made by:

(a) filing in duplicate of a department form, *application for radioactive material license*, as described in Paragraph (2) of this subsection; and

(b) submitting procedures required by Subsections D, J, K and L of 20.3.7.711 NMAC, as applicable.

(5) In addition to the requirements in Paragraphs (2) and (3) of this subsection, an application for a license or amendment for medical use of radioactive material described in 20.3.7.713 NMAC must also include information regarding any radiation safety aspects of the medical use of the material that are not addressed in sections 20.3.7.702 NMAC and 20.3.7.703 NMAC. The applicant shall also provide specific information on:

(a) radiation safety precautions and instructions;

(b) methodology for measurement of dosages or doses to be administered to patients or human research subjects; and

(c) calibration, maintenance and repair of instruments and equipment necessary for radiation safety.

(6) The applicant or licensee shall also provide any other additional information requested by the department in its review of the application, license renewal

or amendment, within 30 days of the request or other time as may be specified in the request.

(7) An applicant that satisfies the requirements specified in Subsection B of 20.3.3.314 NMAC may apply for a type "A" specific license of broad scope.

F. License amendments. A licensee shall apply for and must receive a license amendment:

(1) before it receives, prepares or uses radioactive material for a type of use that is permitted under 20.3.7 NMAC but that is not authorized on the licensee's current license issued under this part;

(2) before it permits anyone to work as an authorized user, authorized nuclear pharmacist or authorized medical physicist under the license, except:

(a) for an authorized user, an individual who meets the definition of an *authorized user* as defined in 20.3.7.7 NMAC;

(b) for an authorized nuclear pharmacist, an individual who meets the definition of an *authorized nuclear pharmacist* as defined in 20.3.7.7 NMAC;

(c) for an authorized medical physicist, an individual who meets the definition of an *authorized medical physicist* as defined in 20.3.7.7 NMAC; or

(d) a physician, podiatrist or dentist who used only accelerator-produced radioactive materials, discrete sources of radium-226, or both, for medical uses or a nuclear pharmacist who used only accelerator-produced radioactive materials in the practice of nuclear pharmacy at a government agency or federally recognized Indian tribe before November 30, 2007 or at all other locations of use in non-licensing state (as defined in 20.3.1.7 NMAC) before August 8, 2009, or an earlier date as noticed by the NRC, and for only those materials and uses performed before these dates;

(3) before it changes radiation safety officers, except as provided in Paragraph (4) of Subsection A of 20.3.7.702 NMAC;

(4) before it receives radioactive material in excess of the amount or in a different form, or receives a different radioactive material than is authorized on the license;

(5) before it adds to or changes the areas of use identified in the application or on the license, including areas used in accordance with either 20.3.7.704 NMAC or 20.3.7.705 NMAC if the change includes the addition or relocation of either an area where PET radionuclides are produced or a PET radioactive drug delivery line from the PET radionuclide/PET radioactive drug production area; other areas of use where

radioactive material is used only in accordance with either 20.3.7.704 NMAC or 20.3.7.705 NMAC are exempt;

(6) before it changes the address(es) of use identified in the application or on the license; and

(7) before it revises procedures required by Subsections D, J, K and L of 20.3.7.711 NMAC, as applicable, where such revision reduces radiation safety.

G. Notifications.

(1) For each individual, no later than 30 days after the date that the licensee permits the individual to work as an authorized user, an authorized nuclear pharmacist or an authorized medical physicist under Paragraph (2) of Subsection F of this section:

(a) the licensee shall verify the training and experience and provide the department with a copy the documentation demonstrating the training and experience as listed in the definitions of authorized user, authorized nuclear pharmacist or authorized medical physicist in 20.3.7.7 NMAC; or

(b) the licensee shall verify the training and experience and provide the department of a copy of the documentation demonstrating that only accelerator-produced radioactive materials, discrete sources, or both, were used for medical use or in the practice of nuclear pharmacy at a government agency or federally recognized Indian tribe before November 30, 2007 or at all other locations of use in non-licensing states (as defined in 20.3.1.7 NMAC) before August 8, 2009, or an earlier date as noticed by the NRC.

(2) A licensee shall notify the department by letter no later than 30 days after:

(a) an authorized user, an authorized nuclear pharmacist, radiation safety officer or an authorized medical physicist permanently discontinues performance of duties under the license or has a name change;

(b) the licensee permits an authorized user or an individual qualified to be a radiation safety officer, under Subsection A of 20.3.7.714 NMAC, incorporating 10 CFR 35.50 and Subsection E of 20.3.7.714 NMAC, to function as a temporary radiation safety officer and to perform the functions of a radiation safety officer in accordance with Paragraph (4) of Subsection A of 20.3.7.702 NMAC.

(c) the licensee's mailing address changes;

(d) the licensee's name changes, but the name change does not constitute a transfer of control of the license as described in Subsection B of 20.3.3.317 NMAC; or

(e) the licensee has added to or changed the areas of use identified in the application or on the license where radioactive material is used in accordance with either 20.3.7.704 NMAC or 20.3.7.705 NMAC if the change does not include addition or relocation of either an area where PET radionuclides are produced or a PET radioactive drug delivery line from the PET radionuclide or PET radioactive drug production area.

(3) A licensee shall notify the department by letter no later than 30 days after a calibration, transmission or reference source under Subsection E of 20.3.7.703 NMAC is acquired. The notification shall contain a description of the source, manufacturer name, model and serial number of the source, and the license number of the manufacturer of the specific license issued by the department, NRC or an agreement state under Subsection K of 20.3.3.315 NMAC or equivalent NRC or agreement state requirements.

(4) The licensee shall send the documents required in this subsection to the appropriate address identified in 20.3.1.116 NMAC.

H. Exemptions regarding type A specific licenses of broad scope. A licensee possessing a type "A" specific license of broad scope for medical use, issued under 20.3.3.314 NMAC, is exempt from:

(1) the provisions of Paragraph 4 of Subsection E of 20.3.7.700 NMAC regarding the need to file an amendment to the license for medical use of radioactive materials, for use described in 20.3.7.713 NMAC;

(2) the provisions of Paragraph (2) of Subsection F of 20.3.7.700 NMAC;

(3) the provisions of Paragraph (5) of Subsection F of 20.3.7.700 NMAC regarding additions to or changes in the areas of use at the addresses specified in the application or on the license;

(4) the provisions of Paragraph (1) of Subsection G of 20.3.7.700 NMAC;

(5) the provisions of Subparagraph (a) of Paragraph (2) of Subsection G of 20.3.7.700 NMAC for an authorized user, an authorized nuclear pharmacist or an authorized medical physicist;

(6) the provisions of Subparagraph (e) of Paragraph (2) of Subsection G of 20.3.7.700 NMAC regarding additions to or changes in the areas of use identified in the application or on the license where radioactive material is used in accordance with either 20.3.7.704 NMAC or 20.3.7.705 NMAC;

(7) the provisions in Paragraph (3) of Subsection G of 20.3.7.700 NMAC; and

(8) the provisions of Paragraph (1) of Subsection I of 20.3.7.702 NMAC.

[20.3.7.700 NMAC - Rp, 20 NMAC 3.1.7.700, 04/30/2009; A, 06/13/2017; A, 02/14/2023]

20.3.7.701 [RESERVED]

20.3.7.702 GENERAL ADMINISTRATIVE REQUIREMENTS:

A. Radiation safety officer.

(1) A licensee or licensee's management shall appoint a radiation safety officer, who agrees, in writing, to be responsible for implementing a radiation protection program. The licensee, through the radiation safety officer, shall ensure that radiation safety activities are being performed in accordance with licensee-approved procedures and regulatory requirements. A licensee's management may appoint, in writing, one or more Associate Radiation Safety Officers to support the Radiation Safety Officer. The Radiation Safety Officer, with written agreement of the licensee's management, must assign the specific duties and tasks to each Associate Radiation Safety Officer. These duties and tasks are restricted to the types of use for which the Associate Radiation Safety Officer is listed on a license. The Radiation Safety Officer may delegate duties and tasks to the Associate Radiation Safety Officer but shall not delegate the authority or responsibilities for implementing the radiation protection program.

(2) A licensee shall establish the authority, duties and responsibilities of the radiation safety officer in writing.

(3) A licensee shall provide the radiation safety officer sufficient authority, organizational freedom, time, resources and management prerogative to:

- (a) identify radiation safety problems;
- (b) initiate, recommend or provide corrective actions;
- (c) prevent or order the cessation of unsafe operations; and
- (d) verify implementation of corrective actions.

(4) For up to 60 days each year, a licensee may permit an authorized user or an individual qualified to be a radiation safety officer, under Subsections A and E of 20.3.7.714 NMAC, to function as a temporary radiation safety officer and to perform the functions of a radiation safety officer, as provided in Paragraph (3) of this subsection, if the licensee takes the actions required in Paragraphs (1), (2), (3) and (5) of this subsection and notifies the department in accordance with Paragraph (2) of Subsection G of 20.3.7.700 NMAC.

(5) A licensee may simultaneously appoint more than one temporary radiation safety officer in accordance with Paragraph (4) of this subsection, if needed to ensure

that the licensee has a temporary radiation safety officer that satisfies the requirements to be a radiation safety officer for each of the different types of uses of radioactive material permitted by the license.

B. Authority and responsibilities for the radiation protection program. In addition to the radiation protection program requirements of 20.3.4.404 NMAC, a licensee or licensee's management shall approve in writing:

- (1) requests for a license application, renewal or amendment before submittal to the department;
- (2) any individual before allowing that individual to work as an authorized user, authorized nuclear pharmacist or authorized medical physicist; and
- (3) radiation protection program changes that do not require a license amendment and are permitted under Subsection E of this section.

C. Record keeping. A licensee shall retain a record of actions taken under Subsections A and B of this section in accordance with Subsection A of 20.3.7.715 NMAC.

D. Radiation safety committee. Licensees that are authorized for two or more different types of use of radioactive material under 20.3.7.708, 20.3.7.710 and 20.3.7.711 NMAC or two or more types of units under 20.3.7.711 NMAC shall establish a radiation safety committee to oversee all uses of radioactive material permitted by the license. The radiation safety committee shall meet the following administrative requirements.

(1) The radiation safety committee must include an authorized user of each type of use permitted by the license, the radiation safety officer, a representative of the nursing service and a representative of management who is neither an authorized user, nor a radiation safety officer. The radiation safety committee may include other members who the licensee considers appropriate.

(2) The radiation safety committee shall meet at least once each calendar quarter. To establish a quorum and to conduct business, one-half of the committee's membership shall be present, including the radiation safety officer and the management's representative.

(3) The licensee shall maintain minutes of each radiation safety committee meeting, promptly provide each member with a copy of the meeting minutes and retain one copy for the duration of the license.

(4) To oversee the use of licensed material, the radiation safety committee shall:

(a) review and verify the training and experience documentation (such as the board certification, preceptor statement(s), or any additional required training) and approve or disapprove any individual who is to be listed on a license as an authorized user, an authorized nuclear pharmacist, a radiation safety officer or an authorized medical physicist before submitting a license application or request for amendment or renewal;

(b) review and verify the training and experience documentation (such as the board certification, preceptor statement(s), the license or the permit identifying an individual as an authorized user, authorized nuclear pharmacist, authorized medical physicist or a radiation safety officer) and approve or disapprove any individual prior to allowing that individual to work as an authorized user, authorized nuclear pharmacist, a radiation safety officer or an authorized medical physicist;

(c) review, on the basis of safety, and approve or disapprove each proposed method of use of radioactive material;

(d) review, on the basis of safety, and approve or disapprove with the advice and consent of the radiation safety officer and the management representative, licensee's procedures and radiation protection program changes prior to submittal to the department for licensing action;

(e) review quarterly records of the radiation protection program indicating non-ALARA occurrences and all incidents and medical events involving radioactive material with respect to cause and subsequent actions taken; and

(f) review, annually, with the assistance of the radiation safety officer, the radiation protection program.

E. Radiation protection program changes.

(1) A licensee may revise its radiation protection program without department approval if:

(a) the revision does not require a license amendment under Subsection F of 20.3.7.700 NMAC;

(b) the revision is in compliance with the requirements in 20.3 NMAC and the license;

(c) the revision has been reviewed and approved by the radiation safety officer and licensee's management; and

(d) the affected individuals are instructed on the revised program before the changes are implemented.

(2) A licensee shall retain a record of each change in accordance with Subsection B of 20.3.7.715 NMAC.

F. Supervision.

(1) A licensee that permits the receipt, possession, use or transfer of radioactive material by an individual under the supervision of an authorized user, as allowed by Subparagraph (a) of Paragraph (2) of Subsection D of 20.3.7.700 NMAC, shall:

(a) in addition to the requirements in 20.3.10.1002 NMAC, instruct the supervised individual in the licensee's written radiation protection program and quality assurance procedures, written directive procedures, requirements of this chapter and license conditions with respect to the use of radioactive material;

(b) require the supervised individual to follow the instructions of the supervising authorized user for medical uses of radioactive material, written radiation protection program and quality assurance procedures established by the licensee, written directive procedures, the requirements in 20.3 NMAC and license conditions with respect to the medical use of radioactive material;

(c) require the supervising authorized user to periodically review the supervised individual's use of radioactive material and the records kept to reflect this use; and

(d) document the performance of the supervised individual with respect to the medical use of radioactive material.

(2) A licensee that permits the preparation of radioactive material for medical use by an individual under the supervision of an authorized nuclear pharmacist or physician who is an authorized user, as allowed by Subparagraph (b) of Paragraph (2) of Subsection D of 20.3.7.700 NMAC shall:

(a) in addition to the requirements in 20.3.10.1002 NMAC, instruct the supervised individual in the preparation of radioactive material for medical use, as appropriate to that individual's involvement with radioactive material;

(b) require the supervised individual to follow the instructions of the supervising authorized user or authorized nuclear pharmacist regarding the preparation of radioactive material for medical use, the licensee's written radiation protection program and quality assurance procedures, the requirements of 20.3 NMAC and license conditions;

(c) require the supervising authorized nuclear pharmacist or authorized user to periodically review the work of the supervised individual as it pertains to radiation

safety and quality assurance in preparing radioactive material for medical use and the records kept to reflect that work; and

(d) document the performance of the supervised individual with respect to the medical use of radioactive material.

(3) A licensee who permits supervised activities under Paragraphs (1) and (2) of this subsection is responsible for the acts and omissions of the supervised individual.

G. Written directive. Each applicant or licensee under this part, as applicable, shall establish and maintain written directive procedures to provide high confidence that byproduct material or radiation from radioactive material will be administered as directed by the authorized user. The written directive procedures must include written policies and procedures that meet the following specific requirements.

(1) A written directive must be prepared, dated and signed by an authorized user before the administration of I-131 sodium iodide of quantities greater than 30 microcuries (1.11 megabecquerels), any therapeutic dosage of unsealed radioactive material or any therapeutic dose of radiation from radioactive material. If, because of the emergent nature of the patient's condition, a delay in order to provide a written directive would jeopardize the patient's health, an oral directive is acceptable. The information contained in the oral directive must be documented as soon as possible in writing in the patient's record. A written directive documenting the oral directive must be prepared, dated and signed by the authorized user within 48 hours of the oral directive.

(2) A written revision to an existing written directive may be made if the revision is dated and signed by an authorized user before the administration of the dosage of unsealed byproduct material, the brachytherapy dose, the gamma stereotactic radiosurgery dose, the teletherapy dose or the next fractional dose. If, because of the patient's condition, a delay in order to provide a written revision to an existing written directive would jeopardize the patient's health, an oral revision to an existing written directive is acceptable, provided that the oral revision is documented as soon as possible in writing in the patient's record. A revised written directive documenting the oral revision must be prepared, dated and signed by the authorized user within 48 hours of the oral revision.

(3) The written directive must contain the patient's or human research subject's name and the following information:

(a) for any administration of quantities greater than 30 microcuries (1.11 megabecquerels) of I-131 sodium iodide: the dosage;

(b) for an administration of a therapeutic dosage of unsealed radioactive material other than I-131 sodium iodide: the radioactive drug, dosage and route of administration;

(c) for gamma stereotactic radiosurgery: the total dose, treatment site and values for the target coordinate settings per treatment for each anatomically distinct treatment site;

(d) for teletherapy: the total dose, dose per fraction, number of fractions and treatment site;

(e) for high dose-rate remote afterloading brachytherapy: the radionuclide, treatment site, dose per fraction, number of fractions and total dose; or

(f) For permanent implant brachytherapy:

(i) Before implantation: The treatment site, the radionuclide, and the total source strength; and

(ii) After implantation but before the patient leaves the post-treatment recovery area: The treatment site, the number of sources implanted, the total source strength implanted, and the date; or

(g) for all other brachytherapy, including low, medium and pulsed dose rate remote afterloaders: before implantation: the treatment site, radionuclide and dose; and after implantation but before completion of the procedure: the radionuclide, treatment site, number of sources, total source strength and exposure time (or the total dose); and date.

(4) A written revision to an existing written directive may be made if the revision is dated and signed by an authorized user before the administration of the dosage of unsealed byproduct material, the brachytherapy dose, the gamma stereotactic radiosurgery dose, the teletherapy dose, or the next fractional dose. If, because of the patient's condition, a delay in order to provide a written revision to an existing written directive would jeopardize the patient's health, an oral revision to an existing written directive is acceptable. The oral revision must be documented as soon as possible in the patient's record. A revised written directive must be signed by the authorized user within 48 hours of the oral revision.

(5) The licensee shall retain a copy of the written directive in accordance with Subsection C of 20.3.7.715 NMAC.

H. Procedures for administrations requiring a written directive.

(1) For any administration requiring a written directive, the licensee shall develop, implement and maintain written procedures to provide high confidence that:

(a) the patient's or human research subject's identity is verified by more than one method as the individual named in the written directive before each administration; and

(b) each administration is in accordance with the written directive.

(2) At a minimum, the procedures required by Paragraph (1) of this subsection must address the following items that are applicable to the licensee's use of radioactive material:

(a) verifying the identity of the patient or human research subject;

(b) verifying that the administration is in accordance with the treatment plan, if applicable, and the written directive;

(c) checking both manual and computer-generated dose calculations; and

(d) verifying that any computer-generated dose calculations are correctly transferred into the consoles of therapeutic medical units authorized by 20.3.7.711 NMAC or 20.3.7.713 NMAC.

(e) Determining if a medical event, as defined in 20.3.7.716 NMAC and 10 CFR 35.3045, has occurred; and

(f) Determining, for permanent implant brachytherapy, within 60 calendar days from the date the implant was performed, the total source strength administered outside of the treatment site compared to the total source strength documented in the post-implantation portion of the written directive, unless a written justification of patient unavailability is documented.

(3) A licensee shall retain a copy of the procedures required under Paragraph (1) of this subsection in accordance with Subsection D of 20.3.7.715 NMAC.

I. Suppliers of sealed sources or devices for medical use. For medical use, a licensee may only use:

(1) sealed sources or devices manufactured, labeled, packaged and distributed in accordance with a license issued under Subsection K of 20.3.3.315 NMAC or equivalent requirements of NRC or an agreement state;

(2) sealed sources or devices non-commercially transferred from a 20.3.7 NMAC licensee, a NRC or agreement state licensee; or

(3) teletherapy sources manufactured and distributed in accordance with a license issued under 20.3.3 NMAC or the equivalent requirements of NRC or an agreement state.

[20.3.7.702 NMAC - Rp, 20 NMAC 3.1.7.702, 04/30/2009; A 02/14/2023]

20.3.7.703 GENERAL TECHNICAL REQUIREMENTS:

A. Possession, use and calibration of instruments used to measure the activity of unsealed radioactive material. Other than unit dosages of beta-emitting unsealed radioactive material obtained from the manufacturer or preparer, licensed pursuant to Subsection J of 20.3.3.315 NMAC, a medical use licensee authorized to administer radiopharmaceuticals shall possess a dose calibrator, and use it to measure the activity of unsealed radioactive material prior to the administration to each patient or human research subject for diagnostic applications. For therapeutic applications, a medical use licensee authorized to administer radiopharmaceuticals shall possess a dose calibrator, and use it to measure the activity of unsealed radioactive material prior to and after the administration to each patient or human research subject.

(1) A licensee shall:

(a) check each dose calibrator for constancy with a dedicated check source at the beginning of each day of use; to satisfy the requirements of this section, the check shall be done on a frequently used setting with a sealed source of not less than 10 microcuries (370 kilobecquerels) of radium-226 or 50 microcuries (1.85 megabecquerels) of any other photon-emitting radionuclide;

(b) test each dose calibrator for accuracy upon installation and at intervals not to exceed 12 months thereafter by assaying at least two sealed sources containing different radionuclides, the activity of which the manufacturer has determined within five percent of the stated activity, with minimum activity of 10 microcuries (370 kilobecquerels) for radium-226 and 50 microcuries (1.85 megabecquerels) for any other photon-emitting radionuclide, and at least one of which has a principal photon energy between 100 kiloelectron volts and 500 kiloelectron volts;

(c) test each dose calibrator for linearity upon installation and at intervals not to exceed three months thereafter over the range of use between 30 microcuries (1.11 megabecquerels), and the highest dosage that will be administered to a patient or human research subject; and

(d) test each dose calibrator for geometry dependence upon installation over the range of volumes and volume configurations for which it will be used; the licensee shall keep a record of this test for the duration of the use of the dose calibrator.

(2) A licensee shall mathematically correct dosage readings for any geometry or linearity error that exceeds ten percent if the dosage is greater than 10 microcuries (370 kilobecquerels), and shall repair or replace the dose calibrator if the accuracy or constancy error exceeds ten percent.

(3) A licensee shall also perform checks and tests required under this subsection, following adjustment or repair of the dose calibrator.

(4) **Beta-emitting radionuclides.** A licensee shall develop quality control procedures and use appropriate instrumentation to measure the radioactivity for beta-

emitting radiopharmaceuticals. A licensee may use checks, tests or calibration techniques other than those described in this section for instruments measuring the dosages of beta-emitting unsealed radioactive material if checks, tests or calibration techniques are in accordance with nationally recognized standards or the equipment manufacturer's instructions and have been approved by the department.

(5) A licensee shall retain a record of each instrument check, test and calibration required by this subsection in accordance with Subsection E of 20.3.7.715 NMAC.

B. Determination of dosages of unsealed radioactive material for medical use.

(1) A licensee shall determine and record the activity of each dosage before medical use for diagnostic applications and before and after medical use for therapeutic applications.

(2) This determination must be made by:

(a) direct measurement of radioactivity pursuant to Subsection A of this section;

(b) combination of direct measurement of radioactivity pursuant to Subsection A of this section and mathematical calculations;

(c) combination of volumetric measurements and mathematical calculations, based on the measurement made by:

(i) a manufacturer or preparer licensed under Subsection J of 20.3.3.315 NMAC or equivalent requirement of NRC or agreement state; or

(ii) a PET radioactive drug producer licensed under Subsection J of 20.3.3.307 NMAC or equivalent NRC or agreement state requirements; or

(d) decay correction, for unit dosages of beta-emitting unsealed radioactive material, based on the activity or activity concentration determined by:

(i) a manufacturer or preparer licensed under Subsection J of 20.3.3.315 NMAC or equivalent NRC or agreement state requirement;

(ii) a department, NRC or agreement state licensee for use in research in accordance with a radioactive drug research committee-approved protocol or an investigational new drug (IND) protocol accepted by FDA; or

(iii) a PET radioactive drug producer licensed under Subsection J of 20.3.3.307 NMAC or equivalent NRC or agreement state requirements.

(3) Unless otherwise directed by the authorized user, a licensee may not use a dosage if the dosage does not fall within the prescribed dosage range or if the dosage differs from the prescribed dosage by more than twenty percent.

(4) A licensee shall retain a record of the dosage determination required by this subsection in accordance with Subsection G of 20.3.7.715 NMAC.

C. Calibration and check of radiation survey instruments.

(1) A licensee shall calibrate the radiation survey instruments used to show compliance with this part and 20.3.4 NMAC before first use, annually and following a repair that affects the calibration.

(2) A licensee shall:

(a) calibrate all scales with readings up to 1000 millirems (10 millisieverts) per hour with a radiation source;

(b) calibrate two separate readings on each scale or decade that will be used to show compliance; and

(c) conspicuously note on the instrument the date of calibration.

(3) A licensee shall consider a point as calibrated if the indicated exposure rate differs from the calculated exposure rate by no more than twenty percent.

(4) A licensee shall check each radiation survey instrument for proper operation with a dedicated check source at the beginning of each day of use.

(5) A licensee shall retain a record of each radiation survey instrument calibration in accordance with Subsection F of 20.3.7.715 NMAC.

D. Quality control for other equipment. Each licensee shall establish written quality control procedures (checks, tests, calibrations, efficiency measurements, etc.) for equipment used to obtain quantitative radiation measurements for radionuclide studies, described in this part, or radiation safety surveys, necessary to demonstrate compliance with this part and 20.3.4 NMAC. At a minimum, quality control procedures and their frequencies shall be those recommended by the equipment manufacturer.

E. Authorization for calibration, transmission and reference sources. Any person authorized by Subsection D of 20.3.7.700 NMAC for medical use of radioactive material may receive, possess and use any of the following radioactive material for check, calibration, transmission and reference use:

(1) sealed sources, not exceeding 30 millicuries (1.11 gigabecquerels) each, manufactured and distributed by a person specifically licensed under Subsection K of 20.3.3.315 NMAC or equivalent NRC or an agreement state requirements;

(2) sealed sources, not exceeding 30 millicuries (1.11 gigabecquerels) each, redistributed by a licensee authorized to redistribute the sealed sources manufactured and distributed by a person licensed under Subsection K of 20.3.3.315 NMAC, providing the redistributed sealed sources are in the original packaging and shielding and are accompanied by the manufacturer's approved instructions;

(3) any radioactive material with a half-life no longer than 120 days in individual amounts not to exceed 15 millicuries (0.56 gigabecquerel);

(4) any radioactive material with a half-life longer than 120 days in individual amounts not to exceed 200 microcuries (7.4 megabecquerels) or 1000 times the quantities in 20.3.3.338 NMAC; and

(5) technetium-99m in amounts as needed but not to exceed 100 millicuries.

F. Requirements for possession of sealed sources and brachytherapy sources.

(1) A licensee in possession of any sealed source or brachytherapy source shall follow the radiation safety and handling instructions supplied by the manufacturer and shall maintain the instructions for the duration of source use in a legible form convenient for users.

(2) A licensee in possession of a sealed source shall:

(a) test the source for leakage before its first use unless the licensee has a certificate from the supplier indicating that the source was tested within 6 months before transfer to the licensee; and

(b) test the source for leakage at intervals not to exceed six months or at other intervals approved by the department, NRC or an agreement state.

(3) To satisfy the leak test requirements of this subsection, the licensee shall measure the sample so that the leak test can detect the presence of 0.005 microcurie (185 becquerels) of radioactive material in the sample.

(4) A licensee shall retain leak test records in accordance with Paragraph (1) of Subsection H of 20.3.7.715 NMAC.

(5) If the leak test reveals the presence of 0.005 microcurie (185 becquerels) or more of removable contamination, the licensee shall:

(a) immediately withdraw the sealed source from use and store, cause it to be repaired or disposed of in accordance with the requirements in 20.3.3 NMAC and 20.3.4 NMAC; and

(b) file a report within five days of the leak test result in accordance with Subsection C of 20.3.7.716 NMAC.

(6) A licensee need not perform a leak test on the following sources:

(a) sources containing only radioactive material with a half-life of less than 30 days;

(b) sources containing only radioactive material as a gas;

(c) sources containing 100 microcuries (3.7 megabecquerels) or less of beta or gamma-emitting material or 10 microcuries (0.37 megabecquerel) or less of alpha-emitting material;

(d) seeds of iridium-192 encased in nylon ribbon; and

(e) sources stored and not being used; however, the licensee shall test each such source for leakage before any use or transfer unless it has been leak tested within six months, or other frequency approved by the department, NRC or an agreement state, before the date of use or transfer.

(7) A licensee in possession of sealed sources or brachytherapy sources, except for gamma stereotactic radiosurgery sources, shall conduct a semi-annual physical inventory of all such sources in its possession. The licensee shall retain each inventory record in accordance with Paragraph (2) of Subsection H of 20.3.7.715 NMAC.

G. Labeling of vials and syringes. Each syringe and vial that contains unsealed radioactive material must be labeled to identify the radioactive drug. Each syringe shield and vial shield must also be labeled unless the label on the syringe or vial is visible when shielded.

H. Surveys for contamination and ambient radiation exposure rate.

(1) In addition to the surveys required by 20.3.4 NMAC:

(a) a licensee shall survey with a radiation detection survey instrument at the end of each day of use all areas where radiopharmaceuticals are routinely prepared or administered; and

(b) a licensee shall survey for removable contamination at the end of each day of use all areas where radiopharmaceuticals requiring written directive are routinely prepared for use or administered.

(2) A licensee does not need to perform the surveys required by Paragraph (1) of this subsection in areas where patients or human research subjects are confined when they cannot be released under Subsection I of 20.3.7.703 NMAC.

(3) A licensee shall retain a record of each survey in accordance with Subsection I of 20.3.7.715 NMAC.

I. Release of individuals containing radiopharmaceuticals or permanent implants.

(1) A licensee may authorize the release from its control of any individual who has been administered unsealed radioactive material or implants containing radioactive material if the total effective dose equivalent to any other individual from exposure to the released individual is not likely to exceed 0.5 rem (five millisieverts) (the current revision of the NRC guidance NUREG-1556, volume 9, "*consolidated guidance about materials licenses: program-specific guidance about medical licenses*", describes methods for calculating doses to other individuals and contains tables of activities not likely to cause doses exceeding 0.5 rem (five millisieverts)).

(2) A licensee shall provide the released individual or the individual's parent or guardian, with instructions, including written instructions, on actions recommended to maintain doses to other individuals as low as is reasonably achievable if the total effective dose equivalent to any other individual is likely to exceed 0.1 rem (one millisievert). If the total effective dose equivalent to a nursing infant or child could exceed 0.1 rem (one millisievert), assuming there was no interruption of breast-feeding, the instructions must also include:

(a) guidance on the interruption or discontinuation of breast-feeding; and

(b) information on the potential consequences, if any, of failure to follow the guidance.

(3) A licensee shall maintain a record of the basis for authorizing the release of an individual, in accordance with Paragraph (1) of Subsection J of 20.3.7.715 NMAC.

(4) The licensee shall maintain a record of instructions provided to a breast-feeding female in accordance with Paragraph (2) of Subsection J of 20.3.7.715 NMAC.

J. Provision of mobile medical service.

(1) A licensee providing mobile medical service shall:

(a) obtain a letter signed by the management of each client for which services are rendered that permits the use of radioactive material at the client's address and clearly delineates the authority and responsibility of the licensee and the client;

(b) check instruments used to measure the activity of unsealed radioactive material for proper function before medical use at each client's address or on each day of use, whichever is more frequent; at a minimum, the check for proper function required by this paragraph must include a constancy check;

(c) check radiation survey instruments for proper operation with a dedicated check source before use at each client's address or on each day of use, whichever is more frequent; and

(d) before leaving a client's address, survey all areas of use to ensure compliance with the requirements in 20.3.4 NMAC and 20.3.7 NMAC.

(2) A mobile medical service may not have radioactive material delivered from the manufacturer or the distributor to the client unless the client has a license allowing possession of the radioactive material. Radioactive material delivered to the client must be received and handled in conformance with the client's license.

(3) A licensee providing mobile medical services shall retain the letter required in Subparagraph (a) of Paragraph (1) of this subsection and the record of each survey required in Subparagraph (d) of Paragraph (1) of this subsection in accordance with Paragraphs (1) and (2) of Subsection K of 20.3.7.715 NMAC, respectively.

K. Storage of volatiles and gases.

(1) A license shall store volatile radiopharmaceuticals and radioactive gases in the shipper's radiation shield and container.

(2) A license shall store and use a multi-dosage container in a properly functioning fume hood.

L. Decay-in-storage.

(1) A licensee may hold radioactive material with a physical half-life of less than or equal to 120 days for decay-in-storage before disposal without regard of its radioactivity if the licensee:

(a) holds radioactive material for decay a minimum of 10 half-lives;

(b) monitors radioactive material at the surface before disposal and determines that its radioactivity cannot be distinguished from the background radiation level with an appropriate radiation detection survey instrument set on its most sensitive scale and with no interposed shielding;

(c) removes or obliterates all radiation labels, except for radiation labels on materials that are within containers and that will be managed as biomedical waste after they have been released from the licensee; and

(d) separates and monitors each generator column individually with all radiation shielding removed to ensure that its content have decayed to background radiation level before disposal.

(2) A licensee shall retain a record of each disposal permitted under Paragraph (1) of this subsection in accordance with Subsection L of 20.3.7.715 NMAC.

[20.3.7.703 NMAC - Rp, 20 NMAC 3.1.7.703, 04/30/2009; A, 06/13/2017]

20.3.7.704 USE OF UNSEALED RADIOACTIVE MATERIAL FOR UPTAKE, DILUTION AND EXCRETION STUDIES FOR WHICH A WRITTEN DIRECTIVE IS NOT REQUIRED:

Except for quantities that require a written directive under Paragraph (3) of Subsection G of Section 20.3.7.702 NMAC, a licensee may use any unsealed radioactive material prepared for medical use for uptake, dilution or excretion studies that is:

A. obtained from:

(1) a manufacturer or preparer licensed under Subsection J of 20.3.3.315 NMAC, or equivalent NRC or agreement state requirements; or

(2) a PET radioactive drug producer licensed under Subsection J of 20.3.3.307 NMAC or equivalent NRC or agreement state requirements; or

B. excluding production of PET radionuclides, prepared by:

(1) an authorized nuclear pharmacist;

(2) a physician who is an authorized user and who meets the requirements specified in either Subsection G of 20.3.7.714 NMAC, incorporating 10 CFR 35.290, or Subsection H of 20.3.7.714 NMAC, incorporating 10 CFR 35.390, and Subsection G of 20.3.7.714 NMAC, incorporating 10 CFR 35.290(c)(1)(ii)(G); or

(3) an individual under the supervision, as specified in Subsection F of 20.3.7.702 NMAC, of the authorized nuclear pharmacist in Paragraph (1) of this subsection or the physician who is an authorized user in Paragraph (2) of this subsection; or

C. obtained from and prepared by a department, NRC or agreement state licensee for use in research in accordance with a radioactive drug research committee-approved protocol or an investigational new drug protocol accepted by FDA; or

D. prepared by the licensee for use in research in accordance with a radioactive drug research committee-approved application or an investigational new drug protocol accepted by FDA.

[20.3.7.704 NMAC - Rp, 20 NMAC 3.1.7.704, 04/30/2009]

20.3.7.705 USE OF UNSEALED RADIOACTIVE MATERIAL FOR IMAGING AND LOCALIZATION STUDIES FOR WHICH A WRITTEN DIRECTIVE IS NOT REQUIRED:

Except for quantities that require a written directive under Paragraph (3) of Subsection G of 20.3.7.702 NMAC, a licensee may use any unsealed radioactive material prepared for medical for imaging and localization studies use that is:

A. obtained from:

(1) a manufacturer or preparer licensed pursuant to Subsection J of 20.3.3.315 NMAC or equivalent NRC or agreement state requirements; or

(2) a PET radioactive drug producer licensed under Subsection J of 20.3.3.307 NMAC or equivalent NRC or agreement state requirements; or

B. excluding production of PET radionuclides, prepared by:

(1) an authorized nuclear pharmacist;

(2) a physician who is an authorized user and who meets the requirements specified in either Subsection G of 20.3.7.714 NMAC, incorporating 10 CFR 35.290, or Subsection H of 20.3.7.714 NMAC, incorporating 10 CFR 35.390, and Subsection G of 20.3.7.714 NMAC, incorporating 10 CFR 35.290(c)(1)(ii)(G); or

(3) an individual under the supervision, as specified in Subsection F of 20.3.7.702 NMAC, of the authorized nuclear pharmacist in Paragraph (1) of this subsection or the physician who is an authorized user in Paragraph (2) of this subsection; or

C. obtained from and prepared by a department, NRC or agreement state licensee for use in research in accordance with a radioactive drug research committee-approved protocol or an investigational new drug protocol accepted by FDA; or

D. prepared by the licensee for use in research in accordance with a radioactive drug research committee-approved application or an investigational new drug protocol accepted by FDA.

[20.3.7.705 NMAC - Rp, 20 NMAC 3.1.7.705, 04/30/2009]

20.3.7.706 PERMISSIBLE MOLYBDENUM-99, STRONTIUM-82 AND STRONTIUM-85 CONCENTRATIONS:

A. Maximum concentrations. A licensee may not administer to humans a radiopharmaceutical containing:

(1) more than 0.15 microcurie of molybdenum-99 per each millicurie of technetium-99m (0.15 kilobecquerel of molybdenum-99 per each megabecquerel of technetium-99m); or

(2) more than 0.02 microcurie of strontium-82 per millicurie of rubidium-82 chloride injection (0.02 kilobecquerel of strontium-82 per megabecquerel of rubidium-82 chloride); or more than 0.2 microcurie of strontium-85 per millicurie of rubidium-82 chloride injection (0.2 kilobecquerel of strontium-85 per megabecquerel of rubidium-82).

B. Measurement.

(1) A licensee preparing technetium-99m radiopharmaceutical from molybdenum-99/technetium-99m generators shall measure the molybdenum-99 concentration in each eluate from a generator to demonstrate compliance with Subsection A of this section.

(2) A licensee that uses a strontium-82/rubidium-82 generator for preparing a rubidium-82 radiopharmaceutical shall, before the first patient use of the day, measure the concentration of radionuclides strontium-82 and strontium-85 to demonstrate compliance with Subsection A of this section.

C. Record keeping. If a licensee is required to measure the molybdenum-99 concentration or strontium-85 and strontium-85 concentrations, the licensee shall retain a record of each measurement in accordance with Subsection M of 20.3.7.715 NMAC.

D. Reporting. The licensee shall report any measurement that exceeds the limits in Subsection A of this section at the time of generator elution, in accordance with subsection D of 20.3.7.716 NMAC and 10 CFR § 35.3204.

[20.3.7.706 NMAC - Rp, 20 NMAC 3.1.7.706, 04/30/2009, A, 02/14/2023]

20.3.7.707 CONTROL OF AEROSOLS AND GASES:

A. System Requirements.

(1) A licensee who administers radioactive aerosols or gases shall do so with a system that shall keep airborne concentrations of the radioactive material, including releases to the environment, within the limits prescribed by 20.3.4 NMAC.

(2) The delivery or control system for the radioactive aerosols or gases shall either be directly vented to the atmosphere through an air exhaust or shall provide collection and decay or disposal of the aerosol or gas in a shielded container. Other federal, state or local regulatory requirements shall be met.

(3) The licensee shall perform check of the operation of reusable gas collection systems monthly or at other frequency approved by the department.

B. Room Requirements.

(1) A licensee shall only administer radioactive gases in rooms that are at negative pressure compared to surrounding rooms.

(2) The licensee shall perform measurements of ventilation rate at least semiannually or other frequency approved by the department for those areas of use required to operate under a negative pressure.

C. Clearance Time.

(1) Before receiving, using or storing a radioactive gas, the licensee shall calculate the amount of time needed after a release to reduce the concentration in the area of use to the limits in 20.3.4.461 NMAC. The calculation shall be based on the highest activity of gas handled in a single container and the measured available air exhaust rate.

(2) A licensee shall post the time calculated in Paragraph (1) of this subsection in the area of use and require that, in case of a gas spill, individuals evacuate the room until the posted time has elapsed or the concentration in the area of use is reduced below the limits in 20.3.4.461 NMAC.

D. Record keeping. A copy of the calculations required in Paragraph (1) of Subsection C of this section shall be retained in accordance with Subsection N of 20.3.7.715 NMAC.

[20.3.7.707 NMAC - Rp, 20 NMAC 3.1.7.707, 04/30/2009]

20.3.7.708 USE OF UNSEALED RADIOACTIVE MATERIAL FOR WHICH A WRITTEN DIRECTIVE IS REQUIRED:

A licensee may use any unsealed byproduct material identified in 10 CFR 35.390(b)(1)(ii)(G) prepared for medical use and for which a written directive is required that is:

A. Obtained from a manufacturer or preparer licensed under Subsection J of 20.3.3.315 NMAC or equivalent agreement state or NRC requirements; or

B. Prepared by:

- (1) an authorized nuclear pharmacist;
- (2) a physician who is an authorized user and who meets the requirements specified in either Subsection G of 20.3.7.714 NMAC, incorporating 10 CFR 35.290, or Subsection H of 20.3.7.714 NMAC, incorporating 10 CFR 35.390; or
- (3) an individual under the supervision, as specified in Subsection F of 20.3.7.702 NMAC, of the authorized nuclear pharmacist in Paragraph (1) of this subsection or the physician who is an authorized user in Paragraph (2) of this subsection; or

C. Obtained from and prepared by a department, NRC or agreement state licensee for use in research in accordance with a radioactive drug research committee-approved protocol or an investigational new drug protocol accepted by FDA; or

D. Prepared by the licensee for use in research in accordance with a radioactive drug research committee-approved application or an investigational new protocol accepted by FDA.

[20.3.7.708 NMAC - Rp, 20 NMAC 3.1.7.708, 04/30/2009, A, 02/14/2023]

20.3.7.709 SAFETY INSTRUCTIONS AND PRECAUTIONS FOR USE OF UNSEALED RADIOACTIVE MATERIAL FOR WHICH A WRITTEN DIRECTIVE IS REQUIRED:

In addition to the requirements in 20.3.10.1002 NMAC, the licensee shall provide the following.

A. Safety Instructions. A licensee shall provide radiation safety instructions initially and at least annually, to personnel caring for patients or human research subjects who cannot be released under Subsection I of 20.3.7.703 NMAC. To satisfy this requirement, the instruction must be commensurate with the duties of the personnel and include:

- (1) patient or human research subject control;
- (2) visitor control, including:
 - (a) routine visitation to hospitalized individuals in accordance with Paragraph (1) of Subsection A of 20.3.4.413 NMAC; and
 - (b) visitation authorized in accordance with Subsection F of 20.3.4.413 NMAC;

- (3) contamination control;
- (4) waste control; and
- (5) notification of the radiation safety officer, or their designee, and an authorized user if the patient or the human research subject has a medical emergency or dies.

B. Record Keeping. A licensee shall retain a record of individuals receiving safety instructions, as specified in Subsection A of this section, in accordance with Subsection O of 20.3.7.715 NMAC.

C. Safety Precautions. For each patient or human research subject who cannot be released under Subsection I of 20.3.7.703 NMAC, a licensee shall:

- (1) quarter the patient or the human research subject either in:
 - (a) a private room with a private sanitary facility; or
 - (b) a room, with a private sanitary facility, with another individual who also has received therapy with unsealed radioactive material and who also cannot be released under Subsection I of 20.3.7.703 NMAC;
- (2) visibly post the patient's or human research subject's room with a "Radioactive Materials" sign;
- (3) note on the door or in the patient's or human research subject's chart where and how long visitors may stay in the patient's or human research subject's room;
- (4) either monitor material and items removed from the patient's or the human research subject's room to determine that their radioactivity cannot be distinguished from the natural background radiation level with a radiation detection survey instrument set on its most sensitive scale and with no interposed shielding, or handle the material and items as radioactive waste; and
- (5) a licensee shall notify the radiation safety officer, or their designee, and an authorized user, as soon as possible if the patient or human research subject has a medical emergency or dies.

[20.3.7.709 NMAC - Rp, 20 NMAC 3.1.7.708, 04/30/2009]

20.3.7.710 MANUAL BRACHYTHERAPY:

A. Use of sources for manual brachytherapy. The regulations of the NRC set forth in 10 CFR 35.400 are hereby incorporated by reference:

B. Surveys after source implant and removal.

(1) Immediately after implanting sources in a patient or a human research subject, the licensee shall make a survey to locate and account for all sources that have not been implanted.

(2) Immediately after removing the last temporary implant source from a patient or a human research subject, the licensee shall make a survey of the patient or the human research subject with a radiation detection survey instrument to confirm that all sources have been removed.

(3) A licensee shall retain a record of the surveys required by Paragraphs (1) and (2) of this subsection in accordance with Subsection P of 20.3.7.715 NMAC.

C. Brachytherapy sources accountability.

(1) A licensee shall maintain accountability at all times for all brachytherapy sources in storage or use.

(2) As soon as possible after removing sources from a patient or a human research subject, a licensee shall return brachytherapy sources to a secure storage area.

(3) A licensee shall maintain a record of the brachytherapy source accountability in accordance with Subsection Q of 20.3.7.715 NMAC.

D. Safety instructions. In addition to the requirements in 20.3.10.1002 NMAC:

(1) the licensee shall provide radiation safety instructions, initially and at least annually, to personnel caring for patients or the human research subjects who are receiving brachytherapy and cannot be released under Subsection I of 20.3.7.703 NMAC; to satisfy this requirement, the instructions must be commensurate with the duties of the personnel and include:

(a) the size and appearance of the brachytherapy sources;

(b) safe handling of the brachytherapy sources and shielding instructions;

(c) a patient or human research subject control;

(d) visitor control, including both routine visitation of hospitalized individuals in accordance with Paragraph (1) of Subsection A of 20.3.4.413 NMAC, and visitation authorized in accordance with Subsection F of 20.3.4.413 NMAC; and

(e) notification of the radiation safety officer, or their designee, and an authorized user if the patient or human research subject has a medical emergency or dies;

(2) a licensee shall retain a record of individuals receiving safety instructions in accordance with Subsection O of 20.3.7.715 NMAC.

E. Safety precautions.

(1) For each patient or human research subject receiving brachytherapy and cannot be released under Subsection I of 20.3.7.703 NMAC a licensee shall:

(a) not quarter the patient or the human research subject in the same room with an individual who is not receiving brachytherapy;

(b) visibly post the patient's or human research subject's door with a "Radioactive Materials" sign; and

(c) note on the door or in the patient's or human research subject's chart where and how long visitors may stay in the patient's or human research subject's room.

(2) A licensee shall have applicable emergency response equipment available near each treatment room to respond to a source:

(a) dislodged from the patient; and

(b) lodged within the patient following removal of the source applicators.

(3) A licensee shall notify the radiation safety officer, or their designee, and an authorized user as soon as possible if the patient or human research subject has a medical emergency or dies.

F. Calibration measurements of brachytherapy sources.

(1) Before the first medical use of a brachytherapy source, a licensee shall have:

(a) determined the source output or activity using a dosimetry system that meets the requirements of Paragraph (1) of Subsection F of 20.3.7.711 NMAC;

(b) determined source positioning accuracy within applicators; and

(c) used published protocols currently accepted by nationally recognized bodies to meet the requirements of Subparagraphs (a) and (b) of this paragraph.

(2) Instead of a licensee making its own measurements as required in Paragraph (1) of this subsection, the licensee may use measurements provided by the source manufacturer or by a calibration laboratory accredited by the American association of physicists in medicine that are made in accordance with Paragraph (1) of this subsection.

(3) A licensee shall mathematically correct the outputs or activities determined in Paragraph (1) of this subsection for physical decay at intervals consistent with one percent physical decay.

(4) A licensee shall retain a record of each calibration in accordance with Subsection R of 20.3.7.715 NMAC.

G. Decay of strontium-90 sources for ophthalmic treatments. The regulations of the NRC set forth in 10 CFR 35.433 are hereby incorporated by reference.

H. Therapy-related computer systems. The licensee shall perform acceptance testing on the treatment planning system of therapy-related computer systems in accordance with published protocols accepted by nationally recognized bodies. At a minimum, the acceptance testing must include, as applicable, verification of:

(1) the source-specific input parameters required by the dose calculation algorithm;

(2) the accuracy of dose, dwell time and treatment time calculations at representative points;

(3) the accuracy of isodose plots and graphic displays; and

(4) the accuracy of the software used to determine sealed source positions from radiographic images.

[20.3.7.710 NMAC - Rp, 20 NMAC 3.1.7.709, 04/30/2009; A, 02/14/2023]

20.3.7.711 PHOTON EMITTING REMOTE AFTERLOADER UNITS, TELETHERAPY UNITS AND GAMMA STEREOTACTIC RADIOSURGERY UNITS:

A. Use of a sealed source in a remote afterloader unit, teletherapy unit or gamma stereotactic radiosurgery unit. A licensee shall use sealed sources in photon emitting remote afterloader units, teletherapy units or gamma stereotactic radiosurgery units for therapeutic medical uses:

(1) as approved in the sealed source and device registry; or

(2) in research in accordance with an active investigational device exemption application accepted by the FDA provided the requirements of Paragraph (1) of Subsection I of 20.3.7.702 NMAC are met.

B. Surveys of patients and human research subjects treated with a remote afterloader unit.

(1) Before releasing a patient or a human research subject from licensee control, a licensee shall survey the patient or the human research subject and the remote afterloader unit with a portable radiation detection survey instrument to confirm that the source(s) has been removed from the patient or human research subject and returned to the safe shielded position.

(2) A licensee shall retain a record of these surveys in accordance with Subsection P of 20.3.7.715 NMAC.

C. Installation, maintenance, adjustment and repair.

(1) Only a person specifically licensed by the department, NRC or an agreement state shall install, maintain, adjust or repair a remote afterloader unit, teletherapy unit or gamma stereotactic radiosurgery unit that involves work on the source(s) shielding, the source(s) driving unit, or other electronic or mechanical component that could expose the source(s), reduce the shielding around the source(s) or compromise the radiation safety of the unit or the source(s).

(2) Except for low dose-rate remote afterloader units, only a person specifically licensed by the department, NRC or an agreement state shall install, replace, relocate or remove a sealed source or source contained in other remote afterloader units, teletherapy units or gamma stereotactic radiosurgery units.

(3) For a low dose-rate remote afterloader unit, only a person specifically licensed by the department, NRC, an agreement state or an authorized medical physicist shall install, replace, relocate or remove a sealed source(s) contained in the unit.

(4) A licensee shall retain a record of the installation, maintenance, adjustment and repair of remote afterloader units, teletherapy units and gamma stereotactic radiosurgery units in accordance with Subsection T of 20.3.7.715 NMAC.

D. Safety procedures and instructions for remote afterloader units, teletherapy units and gamma stereotactic radiosurgery units.

(1) A licensee shall:

(a) secure the unit, the console, the console keys and the treatment room when not in use or unattended;

(b) permit only individuals approved by the authorized user, radiation safety officer or authorized medical physicist to be present in the treatment room during treatment with the source(s);

(c) prevent dual operation of more than one radiation producing device in a treatment room if applicable; and

(d) develop, implement and maintain written procedures for responding to an abnormal situation when the operator is unable to place the source(s) in the shielded position or remove the patient or human research subject from the radiation field with controls from outside the treatment room. These procedures must include:

(i) instructions for responding to equipment failures and the names of the individuals responsible for implementing corrective actions;

(ii) the process for restricting access to and posting of the treatment area to minimize the risk of inadvertent exposure; and

(iii) the names and telephone numbers of the authorized users, the authorized medical physicist and the radiation safety officer to be contacted if the unit or console operates abnormally.

(2) A copy of the procedures required by Subparagraph (d) of Paragraph (1) of this subsection must be physically located at the unit console.

(3) A licensee shall post instructions at the unit console to inform the operator of:

(a) the location of the procedures required by Subparagraph (d) of Paragraph (1) of this subsection; and

(b) the names and telephone numbers of the authorized users, the authorized medical physicist and the radiation safety officer to be contacted if the unit or console operates abnormally.

(4) Prior to the first use for patient treatment of a new unit or an existing unit with a manufacturer upgrade that affects the operation and safety of the unit, a licensee shall ensure that vendor operational and safety training is provided to all individuals who will operate the unit. The vendor operational and safety training must be provided by the device manufacturer or by an individual certified by the device manufacturer to provide the operational and safety training.

(5) A licensee shall provide operational and safety instruction, initially and at least annually, to all individuals who operate the unit at the facility, as appropriate to the individual's assigned duties, in:

(a) the procedures identified in Subparagraph (d) of Paragraph (1) of this subsection; and

(b) the operating procedures for the unit.

(6) A licensee shall ensure that operators, authorized medical physicists and authorized users participate in drills of the emergency procedures, initially and at least annually.

(7) A licensee shall retain a record of individuals receiving instruction required by Paragraph (5) of this subsection, in accordance with Subsection O of 20.3.7.715 NMAC.

(8) A licensee shall retain a copy of the procedures required by Subparagraph (d) of Paragraph (1) and Subparagraph (b) of Paragraph (4) of this subsection in accordance with Subsection U of 20.3.7.715 NMAC.

E. Safety precautions for remote afterloader units, teletherapy units and gamma stereotactic radiosurgery units.

(1) A licensee shall control access to the treatment room by a door at each entrance.

(2) A licensee shall equip each entrance to the treatment room with an electrical interlock system that will:

(a) prevent the operator from initiating the treatment cycle unless each treatment room entrance door is closed;

(b) cause the source(s) to be shielded when an entrance door is opened; and

(c) prevent the source(s) from being exposed following an interlock interruption until all treatment room entrance doors are closed and the source(s) on-off control is reset at the console.

(3) A licensee shall require any individual entering the treatment room to assure, through the use of appropriate radiation monitors, that radiation levels have returned to ambient levels.

(4) Except for low-dose remote afterloader units, a licensee shall construct or equip each treatment room with viewing and intercom systems to permit continuous observation of the patient or the human research subject from the treatment console during irradiation.

(5) For licensed activities where sources are placed within the patient's or human research subject's body, a licensee shall only conduct treatments which allow for expeditious removal of a decoupled or jammed source.

(6) In addition to the requirements specified in Paragraphs (1) through (5) of this subsection, a licensee shall:

(a) for medium dose-rate and pulsed dose-rate remote afterloader units, require:

(i) an authorized medical physicist and either an authorized user or a physician, under the supervision of an authorized user, who has been trained in the operation and emergency response for the unit to be physically present during the initiation of all patient treatments involving the unit; and

(ii) an authorized medical physicist and either an authorized user or an individual, under the supervision of an authorized user, who has been trained to remove the source applicator(s) in the event of an emergency involving the unit, to be immediately available during continuation of all patient treatments involving the unit;

(b) for high dose-rate remote afterloader units, require:

(i) an authorized user and an authorized medical physicist to be physically present during the initiation of all patient treatments involving the unit; and

(ii) an authorized medical physicist and either an authorized user or a physician, under the supervision of an authorized user, who has been trained in the operation and emergency response for the unit, to be physically present during continuation of all patient treatments involving the unit;

(c) for gamma stereotactic radiosurgery units, require an authorized user and an authorized medical physicist to be physically present throughout all patient treatments involving the unit;

(d) notify the radiation safety officer, or their designee and an authorized user as soon as possible if the patient or human research subject has a medical emergency or dies.

(7) A licensee shall have applicable emergency response equipment available near each treatment room to respond to a source which:

(a) remains in the unshielded position; or

(b) is lodged within the patient following completion of the treatment.

F. Dosimetry equipment.

(1) Except for low dose-rate remote afterloader sources where the source output or activity is determined by the manufacturer, a licensee shall have a calibrated dosimetry system available for use. To satisfy this requirement, one of the following two conditions must be met.

(a) The system must have been calibrated using a system or source traceable to the NIST and published protocols accepted by nationally recognized bodies, or by a calibration laboratory accredited by the American association of physicists in medicine. The calibration must have been performed within the previous 2 years and after any servicing that may have affected system calibration.

(b) The system must have been calibrated within the previous 4 years. Eighteen to 30 months after that calibration, the system must have been inter-compared with another dosimetry system that was calibrated within the past 24 months by NIST or by a calibration laboratory accredited by the American association of physicists in medicine. The results of the inter-comparison must indicate that the calibration factor of the licensee's system had not changed by more than two percent. The licensee may not use the inter-comparison result to change the calibration factor. When inter-comparing dosimetry systems to be used for calibrating sealed sources for therapeutic units, the licensee shall use a comparable unit with beam attenuators or collimators, as applicable, and sources of the same radionuclide as the source used at the licensee's facility.

(2) The licensee shall have a dosimetry system available for use for spot-check output measurements, if applicable. To satisfy this requirement, the system may be compared with a system that has been calibrated in accordance with Paragraph (1) of this subsection. This comparison must have been performed within the previous year and after each servicing that may have affected system calibration. The spot-check system may be the same system used to meet the requirement in Paragraph (1) of this subsection.

(3) The licensee shall retain a record of each calibration, inter-comparison and comparison in accordance with Subsection V of 20.3.7.715 NMAC.

G. Full calibration measurements on teletherapy units.

(1) A licensee authorized to use a teletherapy unit for medical use shall perform full calibration measurements on each teletherapy unit:

(a) before the first medical use of the unit;

(b) before medical use under the following conditions:

(i) whenever spot-check measurements indicate that the output differs by more than five percent from the output obtained at the last full calibration corrected mathematically for radioactive decay;

(ii) following replacement of the source or following reinstallation of the teletherapy unit in a new location;

(iii) following any repair of the teletherapy unit that includes removal of the source or major repair of the components associated with the source exposure assembly; and

(c) at intervals not exceeding one year.

(2) To satisfy the requirement of Paragraph (1) of this subsection, full calibration measurements must include determination of:

(a) the output within plus or minus three percent for the range of field sizes and for the distance or range of distances used for medical use;

(b) the coincidence of the radiation field and the field indicated by the light beam localizing device;

(c) the uniformity of the radiation field and its dependence on the orientation of the useful beam;

(d) timer accuracy and linearity over the range of use;

(e) on-off error; and

(f) the accuracy of all distance measuring and localization devices in medical use.

(3) A licensee shall use the dosimetry system described in Paragraph (1) of Subsection F of 20.3.7.711 NMAC to measure the output for one set of exposure conditions. The remaining radiation measurements required in Subparagraph (a) of Paragraph (2) of this subsection may be made using a dosimetry system that indicates relative dose rates.

(4) A licensee shall make full calibration measurements required by Paragraph (1) of this subsection in accordance with published protocols accepted by nationally recognized bodies.

(5) A licensee shall mathematically correct the outputs determined in Subparagraph (a) of Paragraph (2) of this subsection for physical decay for intervals not exceeding 1 month for cobalt-60, 6 months for cesium-137, or at intervals consistent with one percent decay for all other nuclides.

(6) Full calibration measurements required by Paragraph (1) of this subsection and physical decay corrections required by Paragraph (5) of this subsection must be performed by the authorized medical physicist.

(7) A licensee shall retain a record of each calibration in accordance with Subsection W of 20.3.7.715 NMAC.

H. Full calibration measurements on remote afterloader units.

(1) A licensee authorized to use a remote afterloader unit for medical use shall perform full calibration measurements on each unit:

(a) before the first medical use of the unit;

(b) before medical use under the following conditions:

(i) following replacement of the source or following reinstallation of the unit in a new location; and

(ii) following any repair of the unit that includes removal of the source or major repair of the components associated with the source exposure assembly;

(c) at intervals not exceeding one quarter for high dose-rate, medium dose-rate, and pulsed dose-rate remote afterloader units with sources whose half-life exceeds 75 days; and

(d) at intervals not exceeding one year for low dose-rate remote afterloader units.

(2) To satisfy the requirement of Paragraph (1) of this subsection, full calibration measurements must include, as applicable, determination of:

(a) the output within plus or minus five percent;

(b) source positioning accuracy to within plus or minus 1 millimeter;

(c) source retraction with backup battery upon power failure;

(d) length of the source transfer tubes;

(e) timer accuracy and linearity over the typical range of use;

(f) length of the applicators; and

(g) function of the source transfer tubes, applicators and transfer tube-applicator interfaces.

(3) A licensee shall use the dosimetry system described in Paragraph (1) of Subsection F of 20.3.7.711 NMAC to measure the output.

(4) A licensee shall make full calibration measurements required by Paragraph (1) of this subsection in accordance with published protocols accepted by nationally recognized bodies.

(5) In addition to the requirements for full calibrations for low dose-rate remote afterloader units in Paragraph (2) of this subsection, a licensee shall perform an autoradiograph of the source(s) to verify inventory and source(s) arrangement at intervals not exceeding one quarter.

(6) For low dose-rate remote afterloader units, a licensee may use measurements provided by the source manufacturer that are made in accordance with Paragraphs (1) through (5) of this subsection.

(7) A licensee shall mathematically correct the outputs determined in Subparagraph (a) of Paragraph (2) of this subsection for physical decay at intervals consistent with one percent physical decay.

(8) Full calibration measurements required by Paragraph (1) of this subsection and physical decay corrections required by Paragraph (7) of this subsection must be performed by the authorized medical physicist.

(9) A licensee shall retain a record of each calibration in accordance with Subsection W of 20.3.7.715 NMAC.

I. Full calibration measurements on gamma stereotactic radiosurgery units.

(1) A licensee authorized to use a gamma stereotactic radiosurgery unit for medical use shall perform full calibration measurements on each unit:

(a) before the first medical use of the unit;

(b) before medical use under the following conditions:

(i) whenever spot-check measurements indicate that the output differs by more than five percent from the output obtained at the last full calibration corrected mathematically for radioactive decay;

(ii) following replacement of the sources or following reinstallation of the gamma stereotactic radiosurgery unit in a new location; and

(iii) following any repair of the gamma stereotactic radiosurgery unit that includes removal of the sources or major repair of the components associated with the source assembly; and

(c) at intervals not exceeding one year, with the exception that relative helmet factors need only be determined before the first medical use of a helmet and following any damage to a helmet.

(2) To satisfy the requirement of Paragraph (1) of this subsection, full calibration measurements must include determination of:

- (a) the output within plus or minus three percent;
- (b) relative helmet factors;
- (c) isocenter coincidence;
- (d) timer accuracy and linearity over the range of use;
- (e) on-off error;
- (f) trunnion centricity;
- (g) treatment table retraction mechanism, using backup battery power or hydraulic backups with the unit off;
- (h) helmet microswitches;
- (i) emergency timing circuits; and
- (j) stereotactic frames and localizing devices (trunnions).

(3) A licensee shall use the dosimetry system described in Paragraph (1) of Subsection F of 20.3.7.711 NMAC to measure the output for one set of exposure conditions. The remaining radiation measurements required in Subparagraph (a) of Paragraph (2) of this subsection of this subsection may be made using a dosimetry system that indicates relative dose rates.

(4) A licensee shall make full calibration measurements required by Paragraph (1) of this subsection in accordance with published protocols accepted by nationally recognized bodies.

(5) A licensee shall mathematically correct the outputs determined in Subparagraph (a) of Paragraph (2) of this subsection at intervals not exceeding 1 month for cobalt-60 and at intervals consistent with one percent physical decay for all other radionuclides.

(6) Full calibration measurements required by Paragraph (1) of this subsection and physical decay corrections required by Paragraph (5) of this subsection must be performed by the authorized medical physicist.

(7) A licensee shall retain a record of each calibration in accordance with Subsection W of 20.3.7.715 NMAC.

J. Periodic spot-checks for teletherapy units.

(1) A licensee authorized to use teletherapy units for medical use shall perform output spot-checks on each teletherapy unit once in each calendar month that include determination of:

(a) timer accuracy and timer linearity over the range of use;

(b) on-off error;

(c) the coincidence of the radiation field and the field indicated by the light beam localizing device;

(d) the accuracy of all distance measuring and localization devices used for medical use;

(e) the output for one typical set of operating conditions measured with the dosimetry system described in Paragraph (2) of Subsection F of 20.3.7.711 NMAC; and

(f) the difference between the measurement made in Subparagraph (e) of this paragraph and the anticipated output, expressed as a percentage of the anticipated output (i.e., the value obtained at last full calibration corrected mathematically for physical decay).

(2) A licensee shall perform measurements required by Paragraph (1) of this subsection in accordance with written procedures established by the authorized medical physicist. That individual need not actually perform the spot-check measurements.

(3) A licensee shall have the authorized medical physicist review the results of each spot-check within 15 days. The authorized medical physicist shall notify the licensee as soon as possible in writing of the results of each spot-check.

(4) A licensee authorized to use a teletherapy unit for medical use shall perform safety spot-checks of each teletherapy facility once in each calendar month and after each source installation to assure proper operation of:

(a) electrical interlocks at each teletherapy room entrance;

(b) electrical or mechanical stops installed for the purpose of limiting use of the primary beam of radiation (restriction of source housing angulation or elevation, carriage or stand travel and operation of the beam on-off mechanism);

(c) source exposure indicator lights on the teletherapy unit, on the control console, and in the facility;

(d) viewing and intercom systems;

(e) treatment room doors from inside and outside the treatment room; and

(f) electrically assisted treatment room doors with the teletherapy unit electrical power turned off.

(5) If the results of the checks required in Paragraph (4) of this subsection indicate the malfunction of any system, a licensee shall lock the control console in the off position and not use the unit except as may be necessary to repair, replace or check the malfunctioning system.

(6) A licensee shall retain a record of each spot-check required by Paragraphs (1) and (4) of this subsection, and a copy of the procedures required by Paragraph (2), in accordance with Subsection X of 20.3.7.715 NMAC.

K. Periodic spot-checks for remote afterloader units.

(1) A licensee authorized to use a remote afterloader unit for medical use shall perform spot-checks of each remote afterloader facility and on each unit:

(a) before the first use of a high dose-rate, medium dose-rate or pulsed dose-rate remote afterloader unit on a given day;

(b) before each patient treatment with a low dose-rate remote afterloader unit;
and

(c) after each source installation.

(2) A licensee shall perform the measurements required by Paragraph (1) of this subsection in accordance with written procedures established by the authorized medical physicist. That individual need not actually perform the spot check measurements.

(3) A licensee shall have the authorized medical physicist review the results of each spot-check within 15 days. The authorized medical physicist shall notify the licensee as soon as possible in writing of the results of each spot-check.

(4) To satisfy the requirements of Paragraph (1) of this subsection, spot-checks must, at a minimum, assure proper operation of:

(a) electrical interlocks at each remote afterloader unit room entrance;

(b) source exposure indicator lights on the remote afterloader unit, on the control console, and in the facility;

(c) viewing and intercom systems in each high dose-rate, medium dose-rate and pulsed dose-rate remote afterloader facility;

(d) emergency response equipment;

(e) radiation monitors used to indicate the source position;

(f) timer accuracy;

(g) clock (date and time) in the unit's computer; and

(h) decayed source(s) activity in the unit's computer.

(5) If the results of the checks required in Paragraph (4) of this subsection indicate the malfunction of any system, a licensee shall lock the control console in the off position and not use the unit except as may be necessary to repair, replace or check the malfunctioning system.

(6) A licensee shall retain a record of each check required by Paragraph (4) of this subsection and a copy of the procedures required by Paragraph (2) of this subsection in accordance with Subsection Y of 20.3.7.715 NMAC.

L. Periodic spot-checks for gamma stereotactic radiosurgery units.

(1) A licensee authorized to use a gamma stereotactic radiosurgery unit for medical use shall perform spot-checks of each gamma stereotactic radiosurgery facility and on each unit:

(a) monthly;

(b) before the first use of the unit on a given day; and

(c) after each source installation.

(2) A licensee shall:

(a) perform the measurements required by Paragraph (1) of this subsection in accordance with written procedures established by the authorized medical physicist; that individual need not actually perform the spot check measurements;

(b) have the authorized medical physicist review the results of each spot-check within 15 days; the authorized medical physicist shall notify the licensee as soon as possible in writing of the results of each spot-check.

(3) To satisfy the requirements of Subparagraph (a) of Paragraph (1) of this subsection, spot-checks must, at a minimum:

(a) assure proper operation of:

(i) treatment table retraction mechanism, using backup battery power or hydraulic backups with the unit off;

(ii) helmet microswitches;

(iii) emergency timing circuits; and

(iv) stereotactic frames and localizing devices (trunnions); and

(b) determine:

(i) the output for one typical set of operating conditions measured with the dosimetry system described in Paragraph (2) of Subsection F of 20.3.7.711 NMAC;

(ii) the difference between the measurement made above (Item (i) of Subparagraph (b) of Paragraph (3) of Subsection L of 20.3.7.711 NMAC) and the anticipated output, expressed as a percentage of the anticipated output (i.e., the value obtained at last full calibration corrected mathematically for physical decay);

(iii) source output against computer calculation;

(iv) timer accuracy and linearity over the range of use;

(v) on-off error; and

(vi) trunnion centricity.

(4) To satisfy the requirements of Subparagraphs (b) and (c) of Paragraphs (1) of this subsection, spot-checks must assure proper operation of:

(a) electrical interlocks at each gamma stereotactic radiosurgery room entrance;

(b) source exposure indicator lights on the gamma stereotactic radiosurgery unit, on the control console, and in the facility;

(c) viewing and intercom systems;

(d) timer termination;

(e) radiation monitors used to indicate room exposures; and

(f) emergency off buttons.

(5) A licensee shall arrange for the repair of any system identified in Paragraph (3) of this subsection that is not operating properly as soon as possible.

(6) If the results of the checks required in Paragraph (4) of this subsection indicate the malfunction of any system, a licensee shall lock the control console in the off position and not use the unit except as may be necessary to repair, replace or check the malfunctioning system.

(7) A licensee shall retain a record of each check required by Paragraphs (3) and (4) and a copy of the procedures required by Paragraph (2) of this subsection in accordance with Subsection Z of 20.3.7.715 NMAC.

M. Additional technical requirements for mobile remote afterloader units.

(1) A licensee providing mobile remote afterloader service shall:

(a) check survey instruments before medical use at each address of use or on each day of use, whichever is more frequent; and

(b) account for all sources before departure from a client's address of use.

(2) In addition to the periodic spot-checks required by Subsection K of 20.3.7.711 NMAC, a licensee authorized to use mobile afterloaders for medical use shall perform checks on each remote afterloader unit before use at each address of use. At a minimum, checks must be made to verify the operation of:

(a) electrical interlocks on treatment area access points;

(b) source exposure indicator lights on the remote afterloader unit, on the control console, and in the facility;

(c) viewing and intercom systems;

(d) applicators, source transfer tubes and transfer tube-applicator interfaces;

(e) radiation monitors used to indicate room exposures;

(f) source positioning (accuracy); and

(g) radiation monitors used to indicate whether the source has returned to a safe shielded position.

(3) In addition to the requirements for checks in Paragraph (2) of this subsection, a licensee shall ensure overall proper operation of the remote afterloader unit by conducting a simulated cycle of treatment before use at each address of use.

(4) If the results of the checks required in Paragraph (2) of this subsection indicate the malfunction of any system, a licensee shall lock the control console in the off position and not use the unit except as may be necessary to repair, replace or check the malfunctioning system.

(5) A licensee shall retain a record of each check required by Paragraph (2) of this subsection in accordance with Subsection AA of 20.3.7.715 NMAC.

N. Radiation surveys.

(1) In addition to the survey requirements in Subsection H of 20.3.7.703 NMAC and 20.3.4.416 NMAC, a person subject to this section shall make surveys to ensure that the maximum radiation levels and average radiation levels from the surface of the main source safe with the source(s) in the shielded position do not exceed the levels stated in the sealed source and device registry.

(2) The licensee shall make the survey required by Paragraph (1) of this subsection at installation of a new source and following repairs to the source(s) shielding, the source(s) driving unit or other electronic or mechanical component that could expose the source, reduce the shielding around the source(s) or compromise the radiation safety of the unit or the source(s).

(3) A licensee shall retain a record of the radiation surveys required by Paragraph (1) of this subsection in accordance with Subsection BB of 20.3.7.715 NMAC.

O. Five-year inspection for teletherapy and gamma stereotactic radiosurgery units.

(1) A licensee shall have each teletherapy unit and gamma stereotactic radiosurgery unit fully inspected and serviced during source replacement to assure proper functioning of the source exposure mechanism and other safety components. The interval between each full inspection servicing shall not exceed 5 years for each teletherapy unit and shall not exceed 7 years for each gamma stereotactic radiosurgery unit.

(2) This inspection and servicing may only be performed by persons specifically licensed to do so by the department, NRC or an agreement state.

(3) A licensee shall keep a record of the inspection and servicing in accordance with Subsection CC of 20.3.7.715 NMAC.

P. Therapy-related computer systems. The licensee shall perform acceptance testing on the treatment planning system of therapy-related computer systems in accordance with published protocols accepted by nationally recognized bodies. At a minimum, the acceptance testing must include, as applicable, verification of:

- (1) the source-specific input parameters required by the dose calculation algorithm;
- (2) the accuracy of dose, dwell time and treatment time calculations at representative points;
- (3) the accuracy of isodose plots and graphic displays;
- (4) the accuracy of the software used to determine sealed source positions from radiographic images; and
- (5) the accuracy of electronic transfer of the treatment delivery parameters to the treatment delivery unit from the treatment planning system.

[20.3.7.711 NMAC - Rp, 20 NMAC 3.1.7.710, 04/30/2009; A, 02/14/2023]

20.3.7.712 SEALED SOURCES FOR DIAGNOSIS:

A. Use of sealed sources for diagnosis. A licensee shall use only sealed sources for diagnostic medical uses if the sealed sources are approved in the Sealed Source and Device Registry for diagnostic medicine. The sealed sources may be used for diagnostic medical uses that are not explicitly listed in the Sealed Source and Device Registry but must be used in accordance with the radiation safety conditions and limitations described in the Sealed Source and Device Registry.

B. A licensee must only use medical devices containing sealed sources for diagnostic medical uses if both the sealed sources and medical devices are approved in the Sealed Source and Device Registry for diagnostic medical uses. The diagnostic medical devices may be used for diagnostic medical uses that are not explicitly listed in the Sealed Source and Device Registry but must be used in accordance with the radiation safety conditions and limitations described in the Sealed Source and Device Registry.

C. Sealed sources and devices for diagnostic medical uses may be used in research in accordance with an active Investigational Device Exemption (IDE) application accepted by the U.S. Food and Drug Administration provided the requirements of 10 CFR § 35.49(a) are met.

D. Survey instrument. A licensee authorized to use radioactive material as a sealed source for diagnostic purposes shall have available for use a portable radiation survey meter capable of detecting dose rates ranging from 0.1 millirem (1 millisievert)

per hour to 1000 millirems (10 millisieverts) per hour. The instrument shall be operable and calibrated in accordance with section Subsection C of 20.3.7.703 NMAC.

[20.3.7.712 NMAC - Rp, 20 NMAC 3.1.7.711, 04/30/2009; A, 02/14/2023]

20.3.7.713 OTHER MEDICAL USES OF RADIOACTIVE MATERIAL OR RADIATION FROM RADIOACTIVE MATERIAL:

A licensee may use radioactive material or a radiation source approved for medical use which is not specifically addressed in 20.3.7.704 NMAC through 20.3.7.712 NMAC of this part if:

A. the applicant or licensee has submitted the information required by Paragraph (2) through (4) of Subsection E of 20.3.7.700 NMAC; and

B. the applicant or licensee has received written approval from the department in a license or license amendment and uses the material in accordance with the requirements and specific conditions the department considers necessary for the medical use of the material.

[20.3.7.713 NMAC - N, 04/30/2009]

20.3.7.714 TRAINING REQUIREMENTS:

A. Radiation safety officer and Associate Radiation Safety Officer. The regulations of the NRC set forth in 10 CFR 35.50 are hereby incorporated by reference.

B. Training for an authorized medical physicist. The regulations of the NRC set forth in 10 CFR 35.51 are hereby incorporated by reference.

C. Training for an authorized nuclear pharmacist. The regulations of the NRC set forth in 10 CFR 35.55 are hereby incorporated by reference.

D. Training for experienced radiation safety officer, teletherapy or medical physicist, authorized medical physicist, authorized user, nuclear pharmacist and authorized nuclear pharmacist. The regulations of the NRC set forth in 10 CFR 35.57 are hereby incorporated by reference.

E. Recency of training. The training and experience specified in Subsections A, B, C, F, G, H, I, J, K, L, M, N and O of this section must have been obtained within the 7 years preceding the date of application or the individual must have had related continuing education and experience since the required training and experience was completed.

F. Training for uptake, dilution, and excretion studies. (For use of unsealed radioactive material under 20.3.7.704 NMAC) The regulations of the NRC set forth in 10 CFR 35.190 are hereby incorporated by reference.

G. Training for imaging and localization studies. (For use of unsealed radioactive material under 20.3.7.705 NMAC) The regulations of the NRC set forth in 10 CFR 35.290 are hereby incorporated by reference.

H. Training for use of unsealed radioactive material for which a written directive is required. (For use of unsealed radioactive material under 20.3.7.708 NMAC) The regulations of the NRC set forth in 10 CFR 35.390 are hereby incorporated by reference.

I. Training for the oral administration of sodium iodide i-131 requiring a written directive in quantities less than or equal to 33 millicuries (1.22 gigabecquerels). The regulations of the NRC set forth in 10 CFR 35.392 are hereby incorporated by reference.

J. Training for the oral administration of sodium iodide i-131 requiring a written directive in quantities greater than 33 millicuries (1.22 gigabecquerels). The regulations of the NRC set forth in 10 CFR 35.394 are hereby incorporated by reference.

K. Training for the parenteral administration of unsealed byproduct material requiring a written directive. The regulations of the NRC set forth in 10 CFR 35.396 are hereby incorporated by reference.

L. Training for use of manual brachytherapy sources. (For use of radioactive material under 20.3.7.710 NMAC) The regulations of the NRC set forth in 10 CFR 35.490 are hereby incorporated by reference.

M. Training for ophthalmic use of strontium-90. (For use of radioactive material under 20.3.7.710 NMAC) The regulations of the NRC set forth in 10 CFR 35.491 are hereby incorporated by reference.

N. Training for use of sealed sources for diagnosis: (For use of radioactive material under 20.3.7.712 NMAC) The regulations of the NRC set forth in 10 CFR 35.590 are hereby incorporated by reference.

O. Training for use of remote afterloader units, teletherapy units and gamma stereotactic radiosurgery units (For use of radioactive material under 20.3.7.711 NMAC). The regulations of the NRC set forth in 10 CFR 35.690 are hereby incorporated by reference.

P. Modifications. The following modifications are made to the incorporated federal regulations in this section.

- (1) "Commission" means the department or NRC.
- (2) "Act" means the Radiation Protection Act, Sections 74-3-1 through 74-3-16 NMSA 1978.
- (3) "Byproduct material" means radioactive material as defined in this chapter.
- (4) "10 CFR 35.100" means 20.3.7.704 NMAC.
- (5) "10 CFR 35.200" means 20.3.7.705 NMAC.
- (6) "10 CFR 35.300" means 20.3.7.708 NMAC.
- (7) "10 CFR 35.400" means 20.3.7.710 NMAC.
- (8) "10 CFR 35.500" means 20.3.7.712 NMAC.
- (9) "10 CFR 35.600" means 20.3.7.711 NMAC.
- (10) "At all other locations of use" in Subsection D of this section, incorporating 10 CFR 35.57 means at all other locations of use in non-licensing state, as defined in 20.3.1.7 NMAC.

[20.3.7.714 NMAC - Rp, 20 NMAC 3.1.7.712; A, 02/14/2023]

20.3.7.715 RECORDS:

A. Records of Authority and Responsibilities for Radiation Protection Programs.

(1) A licensee shall retain a record of actions taken by the licensee's management in accordance with Subsection C of 20.3.7.702 NMAC for 5 years. The record must include a summary of the actions taken and a signature of licensee management.

(2) The licensee shall retain a copy of both authority, duties and responsibilities of the radiation safety officer as required by Paragraph (2) of Subsection A of 20.3.7.702 NMAC, and a signed copy of each radiation safety officer's agreement to be responsible for implementing the radiation safety program, as required by Paragraph (1) of Subsection A of 20.3.7.702 NMAC, for the duration of the license. The records must include the signature of the radiation safety officer and licensee management.

B. Records of Radiation Protection Program Changes. A licensee shall retain a record of each radiation protection program change made in accordance with Subsection E of 20.3.7.702 NMAC for 5 years. The record must include a copy of the

old and new procedures, the effective date of the change and the signature of the licensee management that reviewed and approved the change.

C. Records of Written Directives. A licensee shall retain a copy of each written directive as required by Subsection G of 20.3.7.702 NMAC for 3 years.

D. Records for Procedures for Administrations Requiring a Written Directive. A licensee shall retain a copy of the procedures required by Subsection H of 20.3.7.702 NMAC for the duration of the license.

E. Records of Calibrations, Test or Checks of Instruments Used to Measure the Activity of Unsealed Radioactive Material. A licensee shall maintain a record of instrument checks, tests and calibrations required by Subsection A of 20.3.7.703 NMAC for 3 years. The records must include the model and serial number of the instrument, the date of the check, test or calibration, the activity and serial number of the calibration source(s) used for the check, test or calibration, whichever applicable, the results of the check, test or calibration and the name of the individual who performed the check, test or calibration.

F. Records of Radiation Survey Instrument Calibrations. A licensee shall maintain a record of radiation survey instrument calibrations required by Subsection C of 20.3.7.703 NMAC for 3 years. The record must include the model and serial number of the instrument, the date of the calibration, the results of the calibration and the name of the individual who performed the calibration.

G. Records of Dosages of Unsealed Radioactive Material for Medical Use.

(1) A licensee shall maintain a record of dosage determinations required by Subsection B of 20.3.7.703 NMAC for 3 years.

(2) The record must contain:

(a) the radiopharmaceutical;

(b) the patient's or human research subject's name or identification number if one has been assigned;

(c) the prescribed dosage, the determined dosage or a notation that the total activity is less than 30 microcuries (1.1 megabecquerels);

(d) the date and time of the dosage determination; and

(e) the name of the individual who determined the dosage.

H. Records of Leaks Tests and Inventory of Sealed Sources and Brachytherapy Sources.

(1) A licensee shall retain records of leak tests required by Paragraph (2) of Subsection F of 20.3.7.703 NMAC for 3 years. The records must include the model number, and serial number if one has been assigned, of each source tested; the identity of each source by radionuclide and its estimated activity; the results of the test; the date of the test and the name of the individual who performed the test.

(2) A licensee shall retain records of the semi-annual physical inventory of sealed sources and brachytherapy sources required by Paragraph (7) of Subsection F of 20.3.7.703 NMAC for 3 years. The inventory records must contain the model number of each source, and serial number if one has been assigned, the identity of each source by radionuclide and its nominal activity, the location of each source and the name of the individual who performed the inventory.

I. Records of Surveys. A licensee shall retain a record of each survey required by Subsection H of 20.3.7.703 NMAC for 3 years. The record must include the date of the survey, the results of the survey, the instrument used to make the survey and the name of the individual who performed the survey.

J. Records of the Release of Individuals Containing Unsealed Radioactive Material or Implants Containing Radioactive Material.

(1) A licensee shall retain a record of the basis for authorizing the release of an individual in accordance with Subsection I of 20.3.7.703 NMAC, if the total effective dose equivalent is calculated by:

- (a) using the retained activity rather than the activity administered;
- (b) using an occupancy factor less than 0.25 at 1 meter;
- (c) using the biological or effective half-life; or
- (d) considering the shielding by tissue.

(2) A licensee shall retain a record that the instructions required by Paragraph (2) of Subsection I of 20.3.7.703 NMAC were provided to a breast-feeding female if the radiation dose to the infant or child from continued breastfeeding could result in a total effective dose equivalent exceeding 0.5 rem (5 millisieverts).

(3) The records required by Paragraphs (1) and (2) of this section must be retained for 3 years after the date of release of the individual.

K. Records of Mobile Medical Services.

(1) A licensee shall retain a copy of each letter that permits the use of radioactive material at a client's address, as required by Subparagraph (a) of Paragraph (1) of Subsection J of 20.3.7.703 NMAC. Each letter must clearly delineate the authority

and responsibility of the licensee and the client and must be retained for 3 years after the last provision of service.

(2) A licensee shall retain the record of each survey required by Subparagraph (d) of Paragraph (1) of Subsection J of 20.3.7.703 NMAC for 3 years. The record must include the date of the survey, the results of the survey, the instrument used to make the survey and the name of the individual who performed the survey.

L. Records of Decay-In-Storage. A licensee shall maintain records of the disposal of licensed materials, as required by Subsection L of 20.3.7.703 NMAC, for 3 years. The record must include the date of the disposal, the survey instrument used, the background radiation level, the radiation level measured at the surface of each waste container and the name of the individual who performed the survey.

M. Records of Molybdenum-99, Strontium-82 and Strontium-85 Concentrations. A licensee shall maintain a record of the molybdenum-99, strontium-82 and strontium-85 concentration tests required by 20.3.7.706 NMAC for 3 years. The record must include:

(1) for each measured elution of technetium-99m, the ratio of the measures expressed as microcuries of molybdenum-99 per each millicurie of technetium-99m (or kilobecquerel of molybdenum-99 per each megabecquerel of technetium-99m), the time and date of the measurement and the name of the individual who made the measurement; or

(2) for each measured elution of rubidium-82, the ratio of the measures expressed as microcuries of strontium-82 per millicurie of rubidium-82 (or kilobecquerel of strontium-82 per megabecquerel of rubidium), microcurie of strontium-85 per millicurie of rubidium-82 (or kilobecquerel of strontium-85 per megabecquerel of rubidium), the time and date of the measurement and the name of the individual who made the measurement.

N. Records of Gas Controls. A licensee shall maintain the records specified in Subsection D of 20.3.7.707 NMAC for 3 years.

O. Records of Safety Instructions. A licensee shall maintain a record of safety instructions required by Subsection A of 20.3.7.709 NMAC, Subsection D of 20.3.7.710 NMAC and Subsection D of 20.3.7.711 NMAC for 3 years. The record must include a list of the topics covered, the date of the instruction, the name(s) of the attendee(s) and the name(s) of the individual(s) who provided the instruction.

P. Records of Surveys after Source Implant and Removal. A licensee shall maintain a record of the surveys required by Subsection B of 20.3.7.710 NMAC and Subsection B of 20.3.7.711 NMAC for 3 years. Each record must include the date and results of the survey, the survey instrument used and the name of the individual who made the survey.

Q. Records of Brachytherapy Source Accountability.

(1) A licensee shall maintain a record of brachytherapy source accountability required by Subsection B of 20.3.7.710 NMAC for 3 years.

(2) For temporary implants, the record must include:

(a) the number and activity of sources removed from storage, the time and date they were removed from storage, the name of the individual who removed them from storage and the location of use; and

(b) the number and activity of sources returned to storage, the time and date they were returned to storage and the name of the individual who returned them to storage.

(3) For permanent implants, the record must include:

(a) the number and activity of sources removed from storage, the date they were removed from storage and the name of the individual who removed them from storage;

(b) the number and activity of sources not implanted, the date they were returned to storage and the name of the individual who returned them to storage; and

(c) the number and activity of sources permanently implanted in the patient or human research subject.

R. Records of Calibration Measurements of Brachytherapy Sources.

(1) A licensee shall maintain a record of the calibrations of brachytherapy sources required by Subsection F of 20.3.7.710 NMAC for 3 years after the last use of the source.

(2) The record must include:

(a) the date of the calibration;

(b) the manufacturer's name, model number and serial number for the source and the instruments used to calibrate the source;

(c) the source output or activity;

(d) the source positioning accuracy within the applicators; and

(e) the name of the individual, the source manufacturer or the calibration laboratory that performed the calibration.

S. Records of Decay of Strontium- 90 Sources for Ophthalmic Treatments.

(1) A licensee shall maintain a record of the activity of a strontium-90 source required by Subsection G of 20.3.7.710 NMAC for the life of the source.

(2) The record must include:

(a) the date and initial activity of the source as determined under Subsection F of 20.3.7.710 NMAC; and

(b) for each decay calculation, the date and the source activity as determined under Subsection G of 20.3.7.710 NMAC.

T. Records of Installation, Maintenance, Adjustment and Repair of Remote Afterloader Units, Teletherapy Units and Gamma Stereotactic Radiosurgery Units.

A licensee shall retain a record of the installation, maintenance, adjustment and repair of remote afterloader units, teletherapy units and gamma stereotactic radiosurgery units as required by Subsection C of 20.3.7.711 NMAC for 3 years. For each installation, maintenance, adjustment and repair, the record must include the date, description of the service and name(s) of the individual(s) who performed the work.

U. Records of Safety Procedures. A licensee shall retain a copy of the procedures required by Subparagraph (d) of Paragraph (1) of Subsection D of 20.3.7.711 NMAC and Subparagraph (b) of Paragraph (4) of Subsection D of 20.3.7.711 NMAC until the licensee no longer possesses the remote afterloader, teletherapy unit or gamma stereotactic radiosurgery unit.

V. Records of Dosimetry Equipment Used with Remote Afterloader Units, Teletherapy Units and Gamma Stereotactic Radiosurgery Units.

(1) A licensee shall retain a record of the calibration, inter-comparison and comparisons of its dosimetry equipment done in accordance with Subsection F of 20.3.7.711 NMAC for the duration of the license.

(2) For each calibration, inter-comparison or comparison, the record must include:

(a) the date;

(b) the manufacturer's name, model numbers and serial numbers of the instruments that were calibrated, inter-compared or compared as required by Paragraphs (1) and (2) of Subsection F of 20.3.7.711 NMAC;

(c) the correction factor that was determined from the calibration or comparison or the apparent correction factor that was determined from an inter-comparison; and

(d) the names of the individuals who performed the calibration, inter-comparison or comparison.

W. Records of Teletherapy, Remote Afterloader and Gamma Stereotactic Radiosurgery Full Calibrations.

(1) A licensee shall maintain a record of the teletherapy unit, remote afterloader unit and gamma stereotactic radiosurgery unit full calibrations required by Subsection G of 20.3.7.711 NMAC, Subsection H of 20.3.7.711 NMAC and Subsection I of 20.3.7.711 NMAC for 3 years, respectively.

(2) The record must include:

(a) the date of the calibration;

(b) the manufacturer's name, model number and serial number of the teletherapy, remote afterloader and gamma stereotactic radiosurgery unit(s), the source(s) and the instruments used to calibrate the unit(s);

(c) the results and an assessment of the full calibrations;

(d) the results of the autoradiograph required for low dose-rate remote afterloader units; and

(e) the signature of the authorized medical physicist who performed the full calibration.

X. Records of Periodic Spot Checks for Teletherapy Units.

(1) A licensee shall retain a record of each periodic spot-check for teletherapy units required by Subsection J of 20.3.7.711 NMAC for 3 years.

(2) The record must include:

(a) the date of the spot-check;

(b) the manufacturer's name, model number and serial number of the teletherapy unit, source and instrument used to measure the output of the teletherapy unit;

(c) an assessment of timer linearity and constancy;

(d) the calculated on-off error;

(e) a determination of the coincidence of the radiation field and the field indicated by the light beam localizing device;

(f) the determined accuracy of each distance measuring and localization device;

(g) the difference between the anticipated output and the measured output;

(h) notations indicating the operability of each entrance door electrical interlock, each electrical or mechanical stop, each source exposure indicator light and the viewing and intercom system and doors; and

(i) the name of the individual who performed the periodic spot-check and the signature of the authorized medical physicist who reviewed the record of the spot-check.

(3) A licensee shall retain a copy of the procedures required by Paragraph (2) of Subsection J of 20.3.7.711 NMAC until the licensee no longer possesses the teletherapy unit.

Y. Records of Periodic Spot-checks for Remote Afterloader Units.

(1) A licensee shall retain a record of each spot-check for remote afterloader units required by Subsection K of 20.3.7.711 NMAC for 3 years.

(2) The record must include, as applicable:

(a) the date of the spot-check;

(b) the manufacturer's name, model number and serial number for the remote afterloader unit and source;

(c) an assessment of timer accuracy;

(d) notations indicating the operability of each entrance door electrical interlock, radiation monitors, source exposure indicator lights, viewing and intercom systems and clock and decayed source activity in the unit's computer; and

(e) the name of the individual who performed the periodic spot-check and the signature of the authorized medical physicist who reviewed the record of the spot-check.

(3) A licensee shall retain a copy of the procedures required by Paragraph (2) of Subsection K of 20.3.7.711 NMAC until the licensee no longer possesses the remote afterloader unit.

Z. Records of Periodic Spot-checks for Gamma Stereotactic Radiosurgery Units.

(1) A licensee shall retain a record of each spot-check for gamma stereotactic radiosurgery units required by Subsection L of 20.3.7.711 NMAC for 3 years.

(2) The record must include:

(a) the date of the spot-check;

(b) the manufacturer's name, model number and serial number for the gamma stereotactic radiosurgery unit and the instrument used to measure the output of the unit;

(c) an assessment of timer linearity and accuracy;

(d) the calculated on-off error;

(e) a determination of trunnion centricity;

(f) the difference between the anticipated output and the measured output;

(g) an assessment of source output against computer calculations;

(h) notations indicating the operability of radiation monitors, helmet microswitches, emergency timing circuits, emergency off buttons, electrical interlocks, source exposure indicator lights, viewing and intercom systems, timer termination, treatment table retraction mechanism and stereotactic frames and localizing devices (trunnions); and

(i) the name of the individual who performed the periodic spot-check and the signature of the authorized medical physicist who reviewed the record of the spot-check.

(3) A licensee shall retain a copy of the procedures required by Paragraph (2) of Subsection L of 20.3.7.711 NMAC until the licensee no longer possesses the gamma stereotactic radiosurgery unit.

AA. Records of Additional Technical Requirements for Mobile Remote Afterloader Units.

(1) A licensee shall retain a record of each check for mobile remote afterloader units required by Subsection M of 20.3.7.711 NMAC for 3 years.

(2) The record must include:

(a) the date of the check;

(b) the manufacturer's name, model number and serial number of the remote afterloader unit;

(c) notations accounting for all sources before the licensee departs from a facility;

(d) notations indicating the operability of each entrance door electrical interlock, radiation monitors, source exposure indicator lights, viewing and intercom system, applicators, source transfer tubes and transfer tube applicator interfaces and source positioning accuracy; and

(e) the signature of the individual who performed the check.

BB. Records of Surveys of Therapeutic Treatment Units.

(1) A licensee shall maintain a record of radiation surveys of treatment units made in accordance with Subsection N of 20.3.7.711 NMAC for the duration of use of the unit.

(2) The record must include:

(a) the date of the measurements;

(b) the manufacturer's name, model number and serial number of the treatment unit, source and instrument used to measure radiation levels;

(c) each dose rate measured around the source while the unit is in the off position and the average of all measurements; and

(d) the signature of the individual who performed the test.

CC. Records of 5-Year Inspection for Teletherapy and Gamma Stereotactic Radiosurgery Units.

(1) A licensee shall maintain a record of the 5-year inspections for teletherapy and gamma stereotactic radiosurgery units required by Subsection O of 20.3.7.711 NMAC for the duration of use of the unit.

(2) The record must contain:

(a) the inspector's radioactive materials license number;

(b) the date of inspection;

(c) the manufacturer's name, model number and serial number of both the treatment unit and source;

- (d) a list of components inspected and serviced and the type of service; and
- (e) the signature of the inspector.

[20.3.7.715 NMAC - N, 04/30/2009]

20.3.7.716 REPORTS:

A. Report and notification of a medical event.

(1) A licensee shall report any event, except for an event that results from patient intervention, in which the administration of byproduct material or radiation from byproduct material, except permanent implant brachytherapy, results in:

(a) a dose that differs from the prescribed dose or dose that would have resulted from the prescribed dosage by more than 5 rems (50 millisieverts) effective dose equivalent, 50 rems (0.5 sievert) to an organ or tissue or 50 rems (0.5 sievert) shallow dose equivalent to the skin; and:

(i) the total dose delivered differs from the prescribed dose by twenty percent or more;

(ii) the total dosage delivered differs from the prescribed dosage by twenty percent or more or falls outside the prescribed dosage range; or

(iii) the fractionated dose delivered differs from the prescribed dose, for a single fraction, by fifty percent or more;

(b) a dose that exceeds 5 rems (50 millisieverts) effective dose equivalent, 50 rems (0.5 sievert) to an organ or tissue, or 50 rems (0.5 sievert) shallow dose equivalent to the skin from any of the following:

(i) an administration of a wrong radioactive drug containing byproduct material;

(ii) an administration of a radioactive drug containing radioactive material by the wrong route of administration;

(iii) an administration of a dose or dosage to the wrong individual or human research subject;

(iv) an administration of a dose or dosage delivered by the wrong mode of treatment; or

(v) a leaking sealed source; and

(c) a dose to the skin or an organ or tissue other than the treatment site that exceeds by 50 rems (0.5 sievert) to an organ or tissue and fifty percent or more of the dose expected from the administration defined in the written directive (excluding, for permanent implants, seeds that were implanted in the correct site but migrated outside the treatment site).

(d) For permanent implant brachytherapy, the administration of byproduct material or radiation from byproduct material (excluding sources that were implanted in the correct site but migrated outside the treatment site) that results in—

(i) The total source strength administered differing by 20 percent or more from the total source strength documented in the post-implantation portion of the written directive;

(ii) The total source strength administered outside of the treatment site exceeding 20 percent of the total source strength documented in the post-implantation portion of the written directive; or

(iii) An administration that includes any of the following: the wrong radionuclide; the wrong individual or human research subject; sealed source(s) implanted directly into a location discontinuous from the treatment site, as documented in the post-implantation portion of the written directive; or a leaking sealed source resulting in a dose that exceeds 0.5 Sv (50 rem) to an organ or tissue.

(2) A licensee shall report any event resulting from intervention of a patient or human research subject in which the administration of radioactive material or radiation from radioactive material results or will result in unintended permanent functional damage to an organ or a physiological system, as determined by a physician.

(3) The licensee shall notify by telephone the department no later than the next calendar day after discovery of the medical event.

(4) The licensee shall submit a written report to the department within 15 days after discovery of the medical event.

(a) The written report must include:

(i) the licensee's name;

(ii) the name of the prescribing physician;

(iii) a brief description of the event;

(iv) why the event occurred;

(v) the effect, if any, on the individual(s) who received the administration;

(vi) what actions, if any, have been taken or are planned to prevent recurrence; and

(vii) certification that the licensee notified the individual (or the individual's responsible relative or guardian), and if not, why not.

(b) The report may not contain the individual's name or any other information that could lead to identification of the individual.

(5) The licensee shall provide notification of the event to the referring physician and also notify the individual who is the subject of the medical event no later than 24 hours after its discovery, unless the referring physician personally informs the licensee either that he or she will inform the individual or that, based on medical judgment, telling the individual would be harmful. The licensee is not required to notify the individual without first consulting the referring physician. If the referring physician or the affected individual cannot be reached within 24 hours, the licensee shall notify the individual as soon as possible thereafter. The licensee may not delay any appropriate medical care for the individual, including any necessary remedial care as a result of the medical event, because of any delay in notification. To meet the requirements of this paragraph, the notification of the individual who is the subject of the medical event may be made instead to that individual's responsible relative or guardian. If a verbal notification is made, the licensee shall inform the individual or appropriate responsible relative or guardian that a written description of the event can be obtained from the licensee upon request. The licensee shall provide such a written description if requested.

(6) Aside from the notification requirement, nothing in this section affects any rights or duties of licensees and physicians in relation to each other, to individuals affected by the medical event or to that individual's responsible relatives or guardians.

(7) A licensee shall:

(a) annotate a copy of the report provided to the department with the:

(i) name of the individual who is the subject of the event; and

(ii) social security number or other identification number, if one has been assigned, of the individual who is the subject of the event; and

(b) provide a copy of the annotated report to the referring physician, if other than the licensee, no later than 15 days after the discovery of the event.

B. Report and notification of a dose to an embryo, fetus or a nursing child.

(1) A licensee shall report any dose to an embryo or fetus that is greater than 5 rems (50 millisieverts) dose equivalent that is a result of an administration of radioactive material or radiation from radioactive material to a pregnant individual unless the dose to the embryo or fetus was specifically approved, in advance, by the authorized user.

(2) A licensee shall report any dose to a nursing child that is a result of an administration of radioactive material to a breast-feeding individual that:

(a) is greater than 5 rems (50 millisieverts) total effective dose equivalent; or

(b) has resulted in unintended permanent functional damage to an organ or a physiological system of the child, as determined by a physician.

(3) The licensee shall notify by telephone the department no later than the next calendar day after discovery of a dose to the embryo, fetus or nursing child that requires a report in Paragraphs (1) or (2) in this subsection.

(4) The licensee shall submit a written report to the department within 15 days after discovery of a dose to the embryo, fetus or nursing child that requires a report in Paragraphs (1) or (2) in this subsection.

(a) The written report must include:

(i) the licensee's name;

(ii) the name of the prescribing physician;

(iii) a brief description of the event;

(iv) why the event occurred;

(v) the effect, if any, on the embryo, fetus or the nursing child;

(vi) what actions, if any, have been taken or are planned to prevent recurrence; and

(vii) certification that the licensee notified the pregnant individual or mother (or the mother's or child's responsible relative or guardian), and if not, why not.

(b) The report must not contain the individual's or child's name or any other information that could lead to identification of the individual or child.

(5) The licensee shall provide notification of the event to the referring physician and also notify the pregnant individual or mother, both hereafter referred to as the mother, no later than 24 hours after discovery of an event that would require

reporting under Paragraph (1) or (2) of this subsection, unless the referring physician personally informs the licensee either that he or she will inform the mother or that, based on medical judgment, telling the mother would be harmful. The licensee is not required to notify the mother without first consulting with the referring physician. If the referring physician or mother cannot be reached within 24 hours, the licensee shall make the appropriate notifications as soon as possible thereafter. The licensee may not delay any appropriate medical care for the embryo, fetus or for the nursing child, including any necessary remedial care as a result of the event, because of any delay in notification. To meet the requirements of this paragraph, the notification may be made to the mother's or child's responsible relative or guardian instead of the mother. If a verbal notification is made, the licensee shall inform the mother, or the mother's or child's responsible relative or guardian that a written description of the event can be obtained from the licensee upon request. The licensee shall provide such a written description if requested.

(6) A licensee shall:

(a) annotate a copy of the report provided to the NRC with the:

(i) name of the pregnant individual or the nursing child who is the subject of the event; and

(ii) social security number or other identification number, if one has been assigned, of the pregnant individual or the nursing child who is the subject of the event; and

(b) provide a copy of the annotated report to the referring physician, if other than the licensee, no later than 15 days after the discovery of the event.

C. Report of a leaking source. A licensee shall file a report within five days if a leak test required by Subsection F of 20.3.7.703 NMAC reveals the presence of 0.005 microcurie (185 becquerels) or more of removable contamination. The report must be filed with the department and it must include the model number and serial number, if assigned, of the leaking source, the radionuclide and its estimated activity, the results of the test, the date of the test and the action taken.

D. Report and notification for an eluate exceeding permissible molybdenum-99, strontium-82, and strontium-85 concentrations:

(1) The licensee shall notify by telephone the department and NRC Operations Center and the distributor of the generator within 7 calendar days after discovery that an eluate exceeded the permissible concentration listed in 10 CFR § 35.204(a) at the time of generator elution. The telephone report to the department and NRC must include the manufacturer, model number, and serial number (or lot number) of the generator; the results of the measurement; the date of the measurement; whether

dosages were administered to patients or human research subjects, when the distributor was notified, and the action taken.

(2) By an appropriate method listed in 10 CFR § 30.6(a) of this chapter, the licensee shall submit a written report to the department and appropriate NRC Regional Office listed in 10 CFR § 30.6 of this chapter within 30 calendar days after discovery of an eluate exceeding the permissible concentration at the time of generator elution. The written report must include the action taken by the licensee; the patient dose assessment; the methodology used to make this dose assessment if the eluate was administered to patients or human research subjects; and the probable cause and an assessment of failure in the licensee's equipment, procedures or training that contributed to the excessive readings if an error occurred in the licensee's breakthrough determination; and the information in the telephone report as required by Paragraph (1) of this section.

[20.3.7.716 NMAC - N, 04/30/2009; A, 02/14/2023]

PART 8: RADIATION SAFETY REQUIREMENTS FOR ANALYTICAL X-RAY EQUIPMENT

20.3.8.1 ISSUING AGENCY:

Environmental Improvement Board.

[Recompiled 11/27/01]

20.3.8.2 SCOPE:

This Subpart [20.3.8 NMAC] provides special requirements for analytical x-ray equipment. The requirements of this Subpart [20.3.8 NMAC] are in addition to, and not in substitution for, applicable requirements in other Subparts [Parts] of these regulations.

[5-3-95; 20.3.8.2 NMAC--Rn, 20 NMAC 3.1.8.800, Recompiled 11/27/01]

20.3.8.3 STATUTORY AUTHORITY:

[RESERVED]

20.3.8.4 DURATION:

[RESERVED]

20.3.8.5 EFFECTIVE DATE

[RESERVED]

20.3.8.6 OBJECTIVE:

[RESERVED]

20.3.8.7 DEFINITIONS:

A. "Analytical x-ray equipment" means equipment used for x-ray diffraction or fluorescence analysis.

B. "Analytical x-ray system" means a group of local and remote components utilizing x-rays to determine the elemental composition or to examine the microstructure of materials. Local components include those that are struck by x-rays such as radiation source housing, port and shutter assemblies, collimator, sample holders, cameras, goniometers, detectors and shielding. Remote components include power supplies, transformers, amplifiers, readout devices, and control panels.

C. "Fail-safe characteristics" mean a design feature which causes beam port shutters to close, or otherwise prevents emergence of the primary beam, upon the failure of a safety or warning device.

D. "Local components" mean part of an analytical x-ray system and include areas that are struck by x-rays such as radiation source housings, port and shutter assemblies, collimator, sample holders, cameras, goniometers, detectors and shielding but do not include power supplies, transformers, amplifiers, readout devices, and control panels.

E. "Normal operating procedures" mean step-by-step instructions necessary to accomplish the analysis. These procedures shall include sample insertion and manipulation, equipment alignment, routine maintenance by the registrant, and data-recording procedures which are related to radiation safety.

F. "Open-beam configuration" means analytical x-ray system in which an individual could accidentally place part of his body in the primary beam path during normal operation.

G. "Primary beam" means ionizing radiation which passes through an aperture of the source housing by a direct path from the x-ray tube or a radioactive source located in the radiation source housing.

[5-3-95; 20.3.8.7 NMAC--Rn, 20 NMAC 3.1.8.801, Recompiled 11/27/01]

20.3.8.8-20.3.8.801 [RESERVED]

20.3.8.802 EQUIPMENT REQUIREMENTS:

A. Safety Device: A device which prevents the entry of any portion of an individual's body into the primary x-ray beam or which causes the beam to be shut off upon entry into its path shall be provided on all open-beam configurations. An applicant may apply to the Department for an exemption from the requirements of a safety device. Such application shall include:

- (1) A description of the various safety devices that have been evaluated;
- (2) The reason each of these devices cannot be used; and
- (3) A description of the alternative methods that will be employed to minimize the possibility of an accidental exposure, including procedures to assure that operators and others in the area will be informed of the absence of safety devices.

B. Warning Devices: Warning devices shall be labeled so that their purpose is identified. On equipment installed after March 10, 1989, these warning devices shall have fail-safe characteristics. Open-beam configurations shall be provided with a readily discernible indication of:

- (1) X-ray tube status (ON-OFF) located near the radiation source housing, if the primary beam is controlled in this manner; and/or
- (2) Shutter status (OPEN-CLOSED) located near each port on the radiation source housing, if the primary beam is controlled in this manner.

C. Ports: Unused ports on radiation source housings shall be secured in the closed position in a manner which will prevent casual opening.

D. Labeling: All analytical x-ray equipment shall be labeled with a readily discernible sign or signs bearing the radiation symbol and the words:

- (1) "CAUTION--HIGH INTENSITY X-RAY BEAM", or words having a similar intent on the x-ray source housing; and
- (2) "CAUTION--RADIATION: THIS EQUIPMENT PRODUCES RADIATION WHEN ENERGIZED" or words having a similar intent, near any switch that energizes an x-ray tube if the radiation source is an x-ray tube; or
- (3) "CAUTION--RADIOACTIVE MATERIAL", or words having a similar intent, on the source housing if the radiation source is a radionuclide.

E. Shutters: On open-beam configurations installed after March 10, 1989, each port on the radiation source housing shall be equipped with a shutter that cannot be opened unless a collimator or coupling has been connected to the port.

F. Warning Lights: A fail-safe, visible warning light labeled with the words "X-RAY ON", or words having a similar intent, shall be located:

(1) near any switch that energizes an x-ray tube and shall be illuminated only when the tube is energized; or

(2) in the case of a radioactive source, near any switch that opens a housing shutter, and shall be illuminated only when the shutter is open.

G. Radiation Source Housing: Each x-ray tube housing shall be so constructed that with all shutters closed the leakage radiation measured at a distance of 5 cm from its surface is not capable of producing a dose in excess of 2.5 mrem (25 μ Sv) in one hour at any specified tube rating. (If radioactive sources are used, corresponding dose limits shall not exceed 2.5 mrem (25 μ Sv) per hour.)

H. Generator Cabinet: Each x-ray generator shall be supplied with a protective cabinet which limits leakage radiation measured at a distance of 5 cm from its surface such that it is not capable of producing a dose in excess of 0.25 mrem (2.5 μ Sv) in one hour.

[5-3-95; 20.3.8.802 NMAC--Rn, 20 NMAC 3.1.8.802, Recompiled 11/27/01]

20.3.8.803 AREA REQUIREMENTS:

A. Radiation Levels: The local components of an analytical x-ray system shall be located and arranged and shall include sufficient shielding or access control such that no radiation levels exist in any area surrounding the local component group which could result in a dose to an individual present therein in excess of the dose limits given in Section 405 [20.3.4.405 NMAC] to Section 412 [20.3.4.412 NMAC]. For systems utilizing x-ray tubes, these levels shall be met at any specified tube rating.

B. Surveys: Radiation surveys, as required by Section 405 [20.3.4.405 NMAC] and Section 416 [20.3.4.416 NMAC] of these regulations, of all analytical x-ray systems sufficient to show compliance with Section 802.A [Subsection A of 20.3.8.802 NMAC] shall be performed:

(1) upon installation of the equipment and at intervals not to exceed 12 months thereafter;

(2) following any change in the initial arrangement, number, or type of local components in the system;

(3) following any maintenance requiring the disassembly or removal of a local component in the system;

(4) during the performance of maintenance and alignment procedures if the procedures require the presence of a primary x-ray beam when any local component in the system is disassembled or removed; and

(5) any time a visual inspection of the local components in the system reveals an abnormal condition; and

(6) whenever personnel monitoring devices show a significant increase over the previous monitoring period or the readings are approaching the radiation dose limits in Subpart 4 [20.3.4 NMAC].

C. Posting: Each area or room containing analytical x-ray equipment shall be conspicuously posted with a sign or signs bearing the radiation symbol and the words "CAUTION-- X-RAY EQUIPMENT." or words having a similar intent.

[5-3-95; 20.3.8.803 NMAC--Rn, 20 NMAC 3.1.8.803, Recompiled]

20.3.8.804 OPERATING REQUIREMENTS:

A. Procedures: Normal operating procedures shall be written and available to all analytical x-ray equipment workers. No person shall be permitted to operate analytical x-ray equipment in any manner other than that specified in the procedures unless such person has obtained written approval of the radiation safety officer.

B. Bypassing: No person shall bypass a safety device unless such person has obtained the approval of the radiation safety officer. When a safety device or interlock has been bypassed, a readily discernible sign bearing the words "SAFETY DEVICE NOT WORKING," or words having a similar intent, shall be placed on the radiation source housing.

[5-3-95; 20.3.8.804 NMAC--Rn, 20 NMAC 3.1.8.804, Recompiled 11/27/01]

20.3.8.805 PERSONNEL REQUIREMENTS:

A. Instructions: No person shall be permitted to operate or maintain analytical x-ray equipment unless such person has received instruction in and demonstrated competence as to:

(1) identification of radiation hazards associated with the use of the equipment;

(2) significance of the various radiation warning and safety devices incorporated into the equipment, or the reasons they have not been installed on certain pieces of equipment and the extra precautions required in such cases;

(3) proper operating procedures for the equipment;

- (4) recognition of symptoms of an acute localized exposure; and
- (5) proper procedures for reporting an actual or suspected exposure.

B. Personnel Monitoring: Finger or wrist dosimeter devices shall be provided to and shall be used by:

- (1) analytical x-ray equipment workers using systems having an open-beam configuration and not equipped with a safety device; and
- (2) personnel maintaining analytical x-ray equipment if the maintenance procedures require the presence of a primary x-ray beam when any local component in the analytical x-ray system is disassembled or removed.

C. Reported dose values shall not be used for the purpose of determining compliance with Section 405 [20.3.4.405 NMAC] to Section 412 [20.3.4.412 NMAC] unless evaluated by a qualified expert.

[5-3-95; 20.3.8.808 NMAC--Rn, 20 NMAC 3.1.8.805, Recompiled 11/27/01]

20.3.8.809-20.3.8.899 [RESERVED]

PART 9: RADIATION SAFETY REQUIREMENTS FOR PARTICLE ACCELERATORS

20.3.9.1 ISSUING AGENCY:

Environmental Improvement Board.

[Recompiled 11/27/01]

20.3.9.2 SCOPE:

A. This Subpart [20.3.9 NMAC] establishes procedures for the registration and the use of particle accelerators.

B. In addition to the requirements of Subpart 9 [20.3.9 NMAC], all registrants are subject to the requirements of Subparts 1, 2, 4, and 10 of these regulations. Registrants engaged in industrial radiographic operations are subject to the requirements of Subpart 5 [20.3.5 NMAC] and registrants engaged in the healing arts are subject to the requirements of Subparts 6 and 7 [20.3.6 and 20.3.7 NMAC] of these regulations. Registrants engaged in the production of radioactive material are subject to the requirements of Subpart 3 [20.3.3 NMAC].

[5-3-95;20.3.9.2 NMAC--Rn, 20 NMAC 3.1.9.900, Recompiled 11/27/01]

20.3.9.3 STATUTORY AUTHORITY:

[RESERVED]

20.3.9.4 DURATION:

[RESERVED]

20.3.9.5 EFFECTIVE DATE:

[RESERVED]

20.3.9.6 OBJECTIVE:

[RESERVED]

20.3.9.7 DEFINITIONS:

[RESERVED]

20.3.9.8-20.3.9.900 [RESERVED]

20.3.9.901 REGISTRATION REQUIREMENTS:

No person shall receive, possess, use, transfer, own or acquire a particle accelerator except as authorized in a registration issued pursuant to these regulations or as otherwise provided for in these regulations. The general procedures for registration of particle accelerator facilities are included in Subpart 2 [20.3.2 NMAC].

[5-3-95; 20.3.9.901 NMAC--Rn, 20 NMAC 3.1.9.901, Recompiled 11/27/01]

20.3.9.902 GENERAL REQUIREMENTS FOR THE ISSUANCE OF A REGISTRATION FOR PARTICLE ACCELERATORS:

In addition to the requirements of Subpart 2 [20.3.2 NMAC], a registration application for use of a particle accelerator will be approved only if the Department determines that:

A. the applicant is qualified by reason of training and experience to use the accelerator in question for the purpose requested in accordance with Subparts 4, 9, and 10 [20.3.4 NMAC, 20.3.9 NMAC and 20.3.10 NMAC] of these regulations in such a manner as to minimize danger to public health and safety or property;

B. the applicant's proposed or existing equipment, facilities, and operating and emergency procedures are adequate to protect health and minimize danger to public health and safety or property;

C. the issuance of the registration will not be inimical to the health and safety of the public, and the applicant satisfies any applicable special requirements in Section 903 [20.3.9.903 NMAC] of these regulations;

D. the applicant has appointed a radiation safety officer;

E. the applicant and the applicant's staff have substantial experience in the use of particle accelerators for the intended uses;

F. the applicant has established a radiation safety committee to approve, in advance, proposals for uses of particle accelerators, whenever deemed necessary by the Department; and

G. the applicant has an adequate training program for particle accelerator operators.

[5-3-95; 20.3.9.902 NMAC--Rn, 20 NMAC 3.1.9.902, Recompiled 11/27/01]

20.3.9.903 HUMAN USE OF PARTICLE ACCELERATORS:

In addition to the requirements set forth in Subpart 2 [20.3.2 NMAC], a registration for use of a particle accelerator in the healing arts will be issued only if:

A. Whenever deemed necessary by the Department, the applicant has appointed a medical committee of at least three members to evaluate all proposals for research, diagnostic, and therapeutic use of a particle accelerator. Membership of the committee should include physicians expert in internal medicine, hematology, therapeutic radiology, and a person experienced in depth dose calculations and protection against radiation;

B. The individuals designated on the application as the users have substantial training and experience in deep therapy techniques or in the use of particle accelerators to treat humans; and]

C. The individual designated on the application as the user must be a physician.

[5-3-95; 20.3.9.903 NMAC--Rn, 20 NMAC 3.1.9.903, Recompiled 11/27/01]

20.3.9.904 GENERAL PROVISIONS:

A. These regulations establish radiation safety requirements for the use of particle accelerators. The provisions of Section 904 [20.3.9.904 NMAC] through Section 911 [20.3.9.911 NMAC] are in addition to, and not in substitution for, other applicable provisions of these regulations.

B. The registrant shall be responsible for assuring that all requirements of Subpart 9 [20.3.9 NMAC] are met.

[5-3-95; 20.3.9.904 NMAC-- Rn, 20 NMAC 3.1.9.904, Recompiled 11/27/01]

20.3.9.905 LIMITATIONS:

A. No registrant shall permit any person to act as a particle accelerator operator until such person:

(1) has been instructed in radiation safety and shall have demonstrated an understanding thereof;

(2) has received copies of and instruction in Subpart 9 [20.3.9 NMAC] and the applicable requirements of Subparts 4 [20.3.4 NMAC] and 10 [20.3.10 NMAC], pertinent registration conditions and the registrant's operating and emergency procedures, and shall have demonstrated understanding thereof; and

(3) has demonstrated competence to use the particle accelerator, related equipment, and survey instruments which will be employed in his assignment.

B. Either the radiation safety committee or the radiation safety officer shall have the authority to terminate the operations at a particle accelerator facility if such action is deemed necessary to protect health and minimize danger to public health and safety or property.

[5-3-95; 20.3.9.905 NMAC-- Rn, 20 NMAC 3.1.9.905, Recompiled 11/27/01]

20.3.9.906 SHIELDING AND SAFETY DESIGN REQUIREMENTS:

A. A qualified expert, specifically accepted by the Department, shall be consulted in the design of a particle accelerator installation and called upon to perform a radiation survey when the accelerator is first capable of producing radiation and when the accelerator operates at design levels.

B. Each particle accelerator installation shall be provided with such primary and secondary barriers as are necessary to assure compliance with Section 405 to Section 412 [20.3.4.405 NMAC to 20.3.4.412 NMAC]. [5-3-95; 20.3.9.906 NMAC--Rn, 20 NMAC 3.1.9.906, Recompiled 11/27/01]

20.3.9.907 PARTICLE ACCELERATOR CONTROLS AND INTERLOCK SYSTEMS:

A. Instrumentation, readouts and controls on the particle accelerator control console shall be clearly identified and easily discernible.

B. All entrances into a target room or other high radiation area shall be provided with interlocks that shut down the machine under conditions of barrier penetration.

C. Except where the main control console and the only entrance are adjacent, when an interlock system has been tripped, it shall be possible to resume operation of the accelerator by manually resetting controls at the position where the interlock has been tripped, and lastly at the main control console.

D. Each safety interlock shall be on a circuit which shall allow its operation independently of all other safety interlocks.

E. All safety interlocks shall be fail-safe, i.e., designed so that any defect or component failure in the interlock system prevents operation of the accelerator.

F. A scram button or other emergency power cutoff switch shall be located and easily identifiable in all high radiation areas. Such cutoff switch shall include a manual reset so that the accelerator cannot be restarted from the accelerator control console without resetting the cutoff switch.

[5-3-95, 20.3.9.907 NMAC--Rn, 20 NMAC 3.1.9.907, Recompiled 11/27/01]

20.3.9.908 WARNING DEVICES:

A. All locations designated as high radiation areas, and entrances to such locations, shall be equipped with easily observable flashing or rotation warning lights that operate when, and only when, radiation is being produced.

B. Except in facilities designed for human exposure, each high radiation area shall have an audible warning device which shall be activated for 15 seconds prior to the possible creation of such high radiation area. Such warning device shall be clearly discernible in all high radiation areas and all radiation areas.

C. Barriers, temporary or otherwise, and pathways leading to high radiation areas shall be identified in accordance with Section 427 [20.3.4.427 NMAC].

[5-3-95, 20.3.9.908 NMAC--Rn, 20 NMAC 3.1.9.908, Recompiled 11/27/01]

20.3.9.909 OPERATING PROCEDURES:

A. Particle accelerators, when not in operation, shall be secured to prevent unauthorized use.

B. Only a switch on the accelerator control console shall be routinely used to turn the accelerator beam on and off. The safety interlock system shall not be used to turn off the accelerator beam except in an emergency.

C. All safety and warning devices, including interlocks, shall be checked for proper operability at intervals not to exceed three months. Results of such tests shall be maintained for inspection at the accelerator facility.

D. Electrical circuit diagrams of the accelerator, and the associated interlock systems, shall be kept current and maintained for inspection by the Department and available to the operator at each accelerator facility.

E. If, for any reason, it is necessary to intentionally bypass a safety interlock or interlocks, such action shall be:

- (1) Authorized by the radiation safety committee and radiation safety officer;
- (2) Recorded in a permanent log and a notice posted at the accelerator control console; and
- (3) Terminated as soon as possible.

F. A copy of the current operating and the emergency procedures shall be maintained at the accelerator control panel.

[5-3-95; 20.3.9.909 NMAC-- Rn, 20 NMAC 3.1.9.909, Recompiled 11/27/01]

20.3.9.910 RADIATION MONITORING REQUIREMENTS:

A. There shall be available at each particle accelerator facility, appropriate portable monitoring equipment which is operable and has been calibrated for the appropriate radiations being produced at the facility. Such equipment shall be tested for proper operation daily, when in use, and calibrated at intervals not to exceed one year, and after each servicing and repair.

B. A radiation protection survey shall be performed and documented by a qualified expert specifically approved by the Department when changes have been made in shielding, operation, equipment, or occupancy of adjacent areas.

C. Radiation levels in all high radiation areas shall be continuously monitored. The monitoring devices shall be electrically independent of the accelerator control and interlock systems and capable of providing a remote and local readout with visual and audible alarms at both the control panel and at entrance to high radiation areas, and other appropriate locations, so that people entering or present become aware of the existence of the hazard.

D. All area monitors shall be calibrated at intervals not to exceed one year and after each servicing and repair.

E. Whenever applicable, periodic surveys shall be made to determine the degree of contamination in target and other pertinent areas.

F. All area surveys shall be made in accordance with the written procedures established by a qualified expert, or the radiation safety officer of the particle accelerator facility.

G. Records of all radiation protection surveys, calibration results, instrumentation tests, and smear results shall be kept and on file at each accelerator facility.

[5-3-95; 20.3.9.910 NMAC--Rn, 20 NMAC 3.1.9.910, Recompiled 11/27/01]

20.3.9.911 VENTILATION SYSTEMS:

A. Adequate ventilation shall be provided in areas where airborne radioactivity may be produced.

B. A registrant, as required by Section 433 [20.3.4.433 NMAC], shall not vent, release or otherwise discharge airborne radioactive material to a restricted area which exceed the limits specified in Subpart 4, 461 [20.3.4.461 NMAC], Table II, except as authorized pursuant to Section 434 [20.3.4.434 NMAC]. For purposes of this paragraph, concentrations may be averaged over a period not greater than one year. Every reasonable effort should be made to maintain releases of radioactive material to unrestricted areas as far below these limits as is reasonably achievable.

[5-3-95; 20.3.9.911 NMAC--Rn, 20 NMAC 3.1.9.911, Recompiled 11/27/01]

20.3.9.912-999 [RESERVED]

PART 10: NOTICES, INSTRUCTIONS AND REPORTS TO WORKERS: INSPECTIONS

20.3.10.1 ISSUING AGENCY:

Environmental Improvement Board.

[20.3.10.1 NMAC - Rp, 20 NMAC 3.1.1.100, 6/30/2011]

20.3.10.2 SCOPE:

This part establishes requirements for notices, instructions and reports by licensees, registrants and regulated entities to individuals engaged in department-licensed and regulated activities. This includes options available to such individuals in connection with department inspections of licensees or registrants, in order to ascertain compliance with the provisions of the act, rules, orders and licenses issued thereunder. The provisions in this part apply to all persons who receive, possess, use or transfer sources of radiation licensed by or registered with the department pursuant to 20.3.10 NMAC.

[20.3.10.2 NMAC - Rp, 20 NMAC 3.1.10.1000, 6/30/2011]

20.3.10.3 STATUTORY AUTHORITY:

Sections 74-1-9, 74-3-5 and 74-3-9 NMSA 1978.

[20.3.10.3 NMAC - Rp, 20 NMAC 3.1.1.102, 6/30/2011]

20.3.10.4 DURATION:

Permanent.

[20.3.10.4 NMAC - Rp, 20 NMAC 3.1.1.103, 6/30/2011]

20.3.10.5 EFFECTIVE DATE:

June 30, 2011, unless a later date is cited at the end of a section.

[20.3.10.5 NMAC - Rp, 20 NMAC 3.1.1.104, 6/30/2011]

20.3.10.6 OBJECTIVE:

A. To ensure the proper instruction of workers in regards to radiological working conditions, and to ensure that adequate notice and reporting is provided to workers regarding radiological working conditions.

B. To provide for the safe possession and use of radioactive materials and radiation machines in keeping with the ALARA principle.

C. To ensure that worker rights are protected during department inspection of regulated entities.

[20.3.10.6 NMAC - Rp, 20 NMAC 3.1.1.105, 6/30/2011]

20.3.10.7 DEFINITIONS:

A. "Regulated activities" means any activity carried on which is under the jurisdiction of the department under the act.

B. "Regulated entities" means any individual, person, organization or corporation that is subject to the regulatory jurisdiction of the department, including but not limited to an applicant for or a holder of a standard design approval or a standard design certification.

C. "Worker" means any individual engaged in activities licensed or regulated by the department and controlled by a licensee or regulated entity, but does not include the licensee or regulated entity.

[20.3.10.7 NMAC- N, 6/30/2011]

20.3.10.8-20.3.10.1000 [RESERVED]

20.3.10.1001 POSTING OF NOTICES TO WORKERS:

A. Each licensee or registrant shall post current copies of the following documents:

- (1) the regulations in this part and in 20.3.4 NMAC;
- (2) the license, certificate of registration, license conditions or documents incorporated into a license by reference and amendments thereto;
- (3) the operating procedures applicable to activities under the license or registration; and
- (4) any notice of violation involving radiological working conditions, proposed imposition of civil penalty or order issued pursuant to 20.1.5 NMAC, and any response from the licensee or registrant.

B. If posting of a document specified in Subsection A of this section is not practicable, the licensee or registrant may post a notice which describes the document and states where it may be examined.

C. Each licensee or registrant, or each applicant for a specific license, shall promptly post the latest version of department form *notice to employees*.

D. Documents, notices or forms posted pursuant to this section shall appear in a sufficient number of places to permit individuals engaged in department-licensed or regulated activities to observe them on the way to or from any particular licensed or regulated activity location to which the document applies, shall be conspicuous, and shall be replaced if defaced or altered.

E. Documents posted pursuant to Paragraph (4) of Subsection A of this section shall be posted within 2 working days after receipt of the documents from the department; the licensee's or registrant's response, if any, shall be posted within 2 working days after dispatch by the licensee or registrant. Such documents shall remain posted for a minimum of 5 working days or until action correcting the violation has been completed, whichever is later.

[20.3.10.1001 NMAC - Rp, 20 NMAC 3.1.10.1001, 6/30/2011]

20.3.10.1002 INSTRUCTIONS TO WORKERS:

A. All individuals who in the course of employment are likely to receive in a year an occupational dose in excess of 100 millirems (1 millisievert) shall be:

(1) kept informed of the storage, transfer, or use of radiation or radioactive material or both;

(2) instructed in the health protection problems associated with exposure to radiation or radioactive material or both, in precautions or procedures to minimize exposure, and in the purposes and functions of protective devices employed;

(3) instructed in, and required to observe, to the extent within the worker's control, the applicable provisions of department rules and licenses for the protection of personnel from exposure to radiation or radioactive material or both;

(4) instructed of their responsibility to report promptly to the licensee or registrant any condition which may lead to or cause a violation of the act, department rules and licenses; or unnecessary exposure to radiation or radioactive material or both;

(5) instructed in the appropriate response to warnings made in the event of any unusual occurrence or malfunction that may involve exposure to radiation or radioactive material or both; and

(6) advised as to the radiation exposure reports which workers may request pursuant to 20.3.10.1003 NMAC.

B. In determining those individuals subject to the requirements of Subsection A of this section, licensees must take into consideration assigned activities during normal and abnormal situations involving exposure to radiation or radioactive material or both, which can reasonably be expected to occur during the life of a licensed facility. The extent of these instructions must be commensurate with potential radiological health protection problems present in the work place.

[20.3.10.1002 NMAC - Rp, 20 NMAC 3.1.10.1002, 6/30/2011]

20.3.10.1003 NOTIFICATIONS AND REPORTS TO INDIVIDUALS:

A. Radiation exposure data for an individual and the results of any measurements, analyses and calculations of radioactive material deposited or retained in the body of an individual shall be reported to the individual as specified in this section. The information reported shall include data and results obtained pursuant to department rules, orders or license conditions, as shown in records maintained by the licensee or registrant pursuant to department rules. Each notification and report shall:

(1) be in writing;

(2) include appropriate identifying data such as the name of the licensee or registrant, the name of the individual and the individual's identification number, preferably social security number;

(3) include the individual's exposure information; and

(4) contain the following statement: "This report is furnished to you under the provisions of 20.3.10 NMAC. You should preserve this report for further reference."

B. Each licensee or registrant shall make dose information available to workers as shown in records maintained by the licensee under the provisions of 20.3.4.446 NMAC. The licensee or registrant shall provide an annual report to each individual monitored under 20.3.4.417 NMAC of the dose received in that monitoring year if:

(1) the individual's occupational dose exceeds 1 millisievert (100 millirems) TEDE or 1 millisievert (100 millirems) to any individual organ or tissue; or

(2) the individual requests his or her annual dose report.

C. At the request of a worker formerly engaged in department-licensed or regulated activities controlled by the licensee or registrant, each licensee or registrant shall furnish to the worker a written report of the worker's exposure to radiation or radioactive material or both as shown in records maintained by the licensee pursuant to 20.3.4.446 NMAC for each year the worker was required to be monitored under the provisions of 20.3.4.417 NMAC. The report must be furnished within 30 days from the time the request is made, or within 30 days after the exposure of the individual has been determined by the licensee or registrant, whichever is later. This report must cover the period of time that the worker's activities involved exposure to radiation from sources of radiation licensed or regulated by the department and must include the dates and locations of licensed or department-regulated activities in which the worker participated during this period.

D. When a licensee or registrant is required pursuant to 20.3.4.452 NMAC, 20.3.4.453 NMAC or 20.3.4.454 NMAC to report to the department any exposure of an individual to radiation or radioactive material or both; the licensee or the registrant shall also provide the individual a written report on his or her exposure data included in the report to the department. The report must be transmitted no later than the transmittal to the department.

E. At the request of a worker who is terminating employment with the licensee or registrant that involved exposure to radiation or radioactive materials or both, during the current calendar quarter or the current year, each licensee or registrant shall provide at termination to each such worker, or to the worker's designee, a written report regarding the radiation dose received by that worker from operations of the licensee or registrant during the current year or fraction thereof. If the most recent individual monitoring results are not available at that time, a written estimate of the dose shall be provided together with a clear indication that this is an estimate.

[20.3.10.1003 NMAC - Rp, 20 NMAC 3.1.10.1003, 6/30/2011]

20.3.10.1004 PRESENCE OF REPRESENTATIVES OF LICENSEE OR REGISTRANT AND WORKERS DURING INSPECTION:

A. Each licensee, applicant for a license or registrant shall afford to the department at all reasonable times opportunity to inspect materials, machines, activities, facilities, premises and records pursuant to this chapter.

B. During an inspection, department inspectors may consult privately with workers as specified in 20.3.10.1005 NMAC. The licensee, registrant or their representative may accompany department inspectors during other phases of an inspection.

C. If, at the time of inspection, an individual has been authorized by the workers to represent them during department inspections, the licensee or registrant shall notify the inspectors of such authorization and shall give the workers' representative an opportunity to accompany the inspectors during the inspection of physical working conditions.

D. Each worker's representative shall be routinely engaged in work under control of the licensee or registrant and shall have received instructions as specified in 20.3.10.1002 NMAC.

E. Different representatives of licensees or registrants, and workers may accompany the inspectors during different phases of an inspection if there is no resulting interference with the conduct of the inspection. However, only one worker's representative at a time may accompany the inspectors.

F. With the approval of the licensee or registrant, and the workers' representative, and individual who is not routinely engaged in work under control of the licensee or registrant, for example, a consultant to the licensee or registrant, or to the workers' representative, shall be afforded the opportunity to accompany department inspectors during the inspection of physical working conditions.

G. Notwithstanding the other provisions of this section, department inspectors are authorized to refuse to permit accompaniment by any individual who deliberately interferes with a fair and orderly inspection. With regard to any area containing information classified by an agency of the United States government in the interest of national security, an individual who accompanies an inspector may have access to such information only if authorized to do so. With regards to any area containing proprietary information, the workers' representative for that area shall be an individual previously authorized by the licensee or registrant to enter the area.

[20.3.10.1004 NMAC - Rp, 20 NMAC 3.1.10.1004, 6/30/2011]

20.3.10.1005 CONSULTATION WITH WORKERS DURING INSPECTIONS:

A. Department inspectors may consult privately with workers concerning matters of occupational radiation protection and other matters related to applicable provisions of the department rules and licenses to the extent the inspectors deem necessary for the conduct of an effective and thorough inspection.

B. During the course of an inspection, any worker may bring privately to the attention of the inspectors, either orally or in writing, any past or present condition which the worker has reason to believe may have contributed to or caused any violation of the act, the rules in this chapter or license condition, or any unnecessary exposure of an individual to sources of radiation under the licensee's or registrant's control. Any such notice in writing shall comply with the requirements of 20.3.10.1006 NMAC.

C. The provision of Subsection B of this section shall not be interpreted as authorization to disregard instructions pursuant to 20.3.10.1002 NMAC.

[20.3.10.1005 NMAC - Rp, 20 NMAC 3.1.10.1005, 6/30/2011]

20.3.10.1006 REQUESTS BY WORKERS FOR INSPECTION:

A. Any worker or representative of workers who believes that a violation of the act, the rules in this chapter, or license conditions exists or has occurred in work under a licensee or registration with regard to radiological working conditions in which the worker is engaged, may request an inspection by giving notice of the alleged violation to the department. Any such notice shall be in writing, shall set forth the specific grounds for the notice, and shall be signed by the worker or a representative of the workers. A copy shall be provided to the licensee or registrant by the department no later than at the time of inspection except that, upon the request of the worker giving such notice, such worker's name and the name of individuals referred to therein shall not appear in such copy or on any record published, released or made available by the department, except for good cause shown.

B. If, upon receipt of such notice, the department determines that the complaint meets the requirements set forth in Subsection A of this section, and that there are reasonable grounds to believe that the alleged violation exists or has occurred, the department shall cause an inspection to be made as soon as practicable to determine if such alleged violation exists or has occurred. Inspections pursuant to this section need not be limited to matters referred to in the complaint.

C. No licensee, registrant, contractor or subcontractor of a licensee or registrant shall discharge or in any manner discriminate against any worker because such worker has filed any complaint or instituted or caused to be instituted any proceedings under the provisions of this chapter or has testified or is about to testify in any such proceeding or because of the exercise by such worker on behalf of such worker or others of any option afforded by this part.

[20.3.10.1006 NMAC - Rp, 20 NMAC 3.1.10.1006, 6/30/2011]

20.3.10.1007 INSPECTIONS NOT WARRANTED: INFORMAL REVIEW:

A. If the department determines with respect to a complaint under 20.3.10.1006 NMAC, that an inspection is not warranted because there are no reasonable grounds to believe that a violation exists or has occurred, the department shall notify the complainant in writing of such determination. The complainant may obtain review of such determination by submitting a written statement of position with the secretary who will provide the licensee or registrant with a copy of such statement by certified mail, excluding, at the request of the complainant, the name of the complainant. The licensee or registrant may submit an opposing written statement of position with the secretary who will provide the complainant with a copy of such statement by certified mail. Upon the request of the complainant, the secretary may hold an informal conference in which the complainant and the licensee or registrant may orally present their views. An informal conference may also be held at the request of the licensee or registrant, but disclosure of the identity of the complainant will be made only following receipt of written authorization from the complainant. After considering all written or oral views presented, the secretary shall affirm, modify or reverse the determination of the department and furnish the complainant and the licensee or registrant a written notification of the decision and the reason therefore.

B. If the department determines that an inspection is not warranted because the requirements of Subsection A of 20.3.10.1006 NMAC have not been met, the complainant shall be notified in writing of such determination. Such determination shall be without prejudice to the filing of a new complaint meeting the requirements of Subsection A of 20.3.10.1006 NMAC.

[20.3.10.1007 NMAC - Rp, 20 NMAC 3.1.10.1007, 6/30/2011]

20.3.10.1008-20.3.10.1099 [RESERVED]

PART 11: CABINET X-RAY SYSTEMS

20.3.11.1 ISSUING AGENCY:

[RESERVED]

20.3.11.2 SCOPE:

This Subpart [20.3.11 NMAC] establishes requirements for use of cabinet x-ray systems, including x-ray systems used for inspection of carry-on baggage at airline terminals and similar facilities. The provisions of this Subpart [20.3.11 NMAC] are not applicable to systems which are designed exclusively for microscopic examination of material, e.g., x-ray diffraction, spectroscopic, and electron microscope equipment, or to systems for intentional exposure of humans to x-rays.

[5-3-95; 20.3.11.2 NMAC--Rn, 20 NMAC 3.1.11.1100, Recompiled 11/27/01]

20.3.11.3 STATUTORY AUTHORITY:

[RESERVED]

20.3.11.4 DURATION:

[RESERVED]

20.3.11.5 EFFECTIVE DATE:

[RESERVED]

20.3.11.6 OBJECTIVE:

[RESERVED]

20.3.11.7 DEFINITIONS:

A. "Access panel" means any barrier or panel which is designed to be removed or opened for maintenance or service purposes, requires tools to open, and permits access to the interior of the cabinets.

B. "Aperture" means any opening in the outside surface of the cabinet, other than a port, which remains open during generation of x-radiation.

C. "Cabinet x-ray system" means an x-ray system with the x-ray tube installed in an enclosure (hereinafter termed "Cabinet") which, independently of existing architectural structures except the floor on which it may be placed, is intended to contain at least that portion of a material thing irradiated, provide radiation attenuation, and exclude personnel from its interior during generation of x-radiation. Included are all x-ray systems designed primarily for the inspection of carry-on baggage at airline, railroad, and bus terminals, and in similar facilities. An x-ray tube used within a shielded part of a building, or x-ray equipment that may temporarily or occasionally incorporate portable shielding is not considered a cabinet x-ray system.

D. "Door" means any barrier which is designed to be removable or opened for routine operation purposes, does not generally require tools to open, and permits access to the interior of the cabinet. For the purposes of Section 1103.D.1 [Paragraph (1), Subsection D of 20.3.11.1103 NMAC], inflexible hardware rigidly affixed to the door shall be considered part of the door.

E. "Exposure" means the quotient of dQ divided by dm where dQ is the absolute value of the total charge of the ions of one sign produced in air when all the electrons (negatrons and positrons) liberated by photons in a volume element of air having mass dm are completely stopped in air.

F. "External surface" means the outside surface of the cabinet x-ray system, including the high-voltage generator, doors, access panels, latches, control knobs, and other permanently mounted hardware and including the plane across any aperture or port.

G. "Floor" means the underside external surface of the cabinet.

H. "Ground Fault" means an accidental electrical grounding of an electrical conductor.

I. "Port" means any opening in the outside surface of the cabinet which is designed to remain open, during generation of x-rays, for the purpose of conveying material to be irradiated into and out of the cabinet, or for partial insertion of an object whose dimensions do not permit complete insertion into the cabinet.

J. "Primary beam" means the x-radiation emitted directly from the target and passing through the window of the x-ray tube.

K. "Safety interlock" means a device which is intended to prevent the generation of x-radiation when access by any part of the human body to the interior of the cabinet x-ray system through a door or access panel is possible.

L. "X-ray system" means an assemblage of components for the controlled generation of x-rays.

M. "X-ray tube" means any electron tube which is designed for the conversion of electrical energy into x-ray energy.

[5-3-95; 20.3.11.7 NMAC--Rn, 20 NMAC 3.1.11.1101, Recompiled 11/27/01]

20.3.11.8-20.3.11.1101 [RESERVED]

20.3.11.1102 GENERAL SAFETY PROVISION:

A. Use.

(1) The registrant shall assure that all x-ray equipment under his control is operated only by individuals adequately instructed in safe operating procedures and competent in safe use of the equipment.

(2) The registrant shall provide safety rules to each individual operating x-ray equipment under his control, including any restrictions of the operating technique required for the safe operation of the particular x-ray apparatus, and require that the operator demonstrate familiarity with these regulations.

(3) The registrant shall provide personnel monitoring in accordance with Section 417 [20.3.4.417 NMAC] of these regulations.

(4) The registrant shall report to the Department, in writing, a list of those individuals whose exposure equals or exceeds 1.250 rem per quarter, and reasons for the exposure.

B. Prohibited Use: No registrant shall operate or permit the operation of x-ray equipment unless the equipment and installation meet the applicable requirements of these regulations.

[5-3-95; 20.3.11.1102 NMAC--Rn, 20 NMAC 3.1.11.1102, Recompiled 11/27/01]

20.3.11.1103 REQUIREMENTS:

A. Emission Limit.:

(1) Radiation emitted from the cabinet x-ray system shall not exceed an exposure of 0.5 mrem (5 μ Sv) per hour at any point 5 cm outside the external surface.

(2) Compliance with the exposure limit in Section 1103.A.1 [Paragraph (1), Subsection A of 20.3.11.1103 NMAC], shall be determined by measurements averaged over a cross-sectional area of ten square centimeters with no linear dimension greater than 5 centimeters, with the cabinet x-ray system operated at those combinations of x-ray tube potential, current, beam orientation, and conditions of scatter radiation which produce the maximum x-ray exposure at the external surface, and with the door and access panel fully closed as well as fixed at any other position which will allow the generation of x-radiation.

B. Floors: A cabinet x-ray system shall have a permanent floor. Any support surface to which a cabinet x-ray system is permanently affixed may be deemed the floor of the system.

C. Ports and Apertures: The insertion of any part of the human body through any port or aperture into the primary beam shall not be possible.

D. Safety Interlocks:

(1) Each door of a cabinet x-ray system shall have a minimum of two safety interlocks. One, but not both, of the required interlocks shall be such that door opening results in physical disconnection of the energy supply circuit to the high-voltage generator and such disconnection shall not be dependent upon any moving part other than the door.

(2) Each access panel shall have at least one safety interlock.

(3) Following interruption of x-ray generation by the functioning of any safety interlock, use of a control provided in accordance with Section 1103.F.2 [Paragraph (2), Subsection F of 20.3.11.1103 NMAC], shall be necessary for resumption of x-ray generation.

(4) Failure of any single component of the cabinet x-ray system shall not cause failure of more than one required safety interlock.

E. Ground Fault: A ground fault shall not result in the generation of x-rays.

F. Controls and Indicators for all Cabinet X-ray Systems: For all systems to which this section is applicable there shall be provided:

(1) A key-actuated control to ensure that x-ray generation is not possible with the key removed;

(2) A control or controls to initiate and terminate the generation of x-rays other than by functioning of safety interlock or the main power control;

(3) Two independent means which indicate when and only when x-rays are being generated, unless the x-ray generation period is less than one-half second, in which case the indicators shall be activated for one-half second, and which are discernible from any point at which initiation of x-ray generation is possible. Failure of a single component of the cabinet x-ray system shall not cause failure of both indicators to perform their intended function. One, but not both, of the indicators, required by this Section [Subsection] may be a milliammeter labeled to indicate x-ray tube current. All other indicators shall be legibly labeled "X-RAY ON "; and

(4) Additional means other than milliammeters which indicate when and only when x-rays are being generated, unless the x-ray generation period is less than one-half second, as needed to ensure that at least one indicator is visible from each door, access panel, and port, and is legibly labeled "X-RAY ON".

G. Additional Requirements for Cabinet X-ray Systems Designed to Admit Humans: For cabinet x-ray systems designed to admit humans there shall also be provided:

(1) A control within the cabinet for preventing and terminating x-ray generation, which cannot be reset, overridden or by-passed from the outside of the cabinet;

(2) No means by which x-ray generation can be initiated from within the cabinet;

(3) Audible and visible warning signals within the cabinet which are actuated for at least 10 seconds immediately prior to the first initiation of x-ray generation after closing any door designed to admit humans. Failure of any single component of the

cabinet x-ray system shall not cause failure of both the audible and visible warning signals;

(4) A visible warning signal within the cabinet which remains actuated when and only when x-rays are being generated, unless the x-ray generation period is less than one-half second, in which case the indicators shall be activated for one-half second;

(5) Signs indicating the meaning of the warning signals provided by Section 1103.G.3 [Paragraph (3), Subsection G of Section 20.3.11.1103 NMAC], and Subpart 4 [20.3.4 NMAC], and containing instructions for the use of the control provided by Section 1103.G.1 [Paragraph (1), Subsection G of 20.3.11.1103 NMAC]. These signs shall be legible, accessible to view, and illuminated when the main power control is in the "on" position; and

(6) A physical radiation survey shall be conducted to determine that the radiation machine is "off" prior to each entry into the shielded room. Such surveys shall be made with a radiation measuring instrument which is capable of measuring radiation of the energies and at the exposure rates to be encountered, which is in good working order, and which has been properly calibrated within the preceding three months or following the last instrument servicing, whichever is later.

H. Warning Labels:

(1) There shall be permanently affixed or inscribed on the cabinet x-ray system at the location of any controls that can be used to initiate x-ray generation, a clearly legible and visible label bearing the statement: CAUTION: X-RAYS PRODUCED WHEN ENERGIZED;

(2) There shall be permanently affixed or inscribed on the cabinet x-ray system adjacent to each port a clearly legible and visible label bearing the statement: CAUTION, X-RAY HAZARD: DO NOT INSERT ANY PART OF THE BODY WHEN SYSTEM IS ENERGIZED -- X-RAY HAZARD.

I. Instructions.

(1) Manufacturers of cabinet x-ray systems shall provide for purchasers, and to others upon request, at a cost not to exceed the cost of preparation and distribution, manuals and instructions that shall include at least the following technical and safety information: Potential, current, and duty cycle ratings of the x-ray generation equipment; adequate instructions concerning any radiological safety procedures and precautions which may be necessary because of unique features of the system; and a schedule of maintenance necessary to keep the system in compliance with this Subpart [Part].

(2) Manufacturers of cabinet x-ray systems which are intended to be assembled or installed by the purchaser shall provide instructions for assembly,

installation, adjustment and testing of the cabinet x-ray system adequate to assure that the system is in compliance with applicable provisions of this part when assembled, installed, adjusted and tested as directed.

J. Additional Requirements for X-ray Baggage Inspection Systems: X-ray systems designed primarily for the inspection of carry-on baggage at airline, railroad, and bus terminals, and at similar facilities, shall be provided with the following means to ensure operator presence at the control area in a position which permits surveillance of the ports and doors during generation of x-radiation:

(1) During an exposure or preset succession of exposures of one-half second or greater duration, the means provided shall enable the operator to terminate the exposure or preset succession of exposures at any time, and

(2) During an exposure or preset succession of exposures of less than one-half second duration, the means provided may allow completion of the exposure in progress but shall enable the operator to prevent additional exposures.

[20.3.12.5 NMAC - Rp, 20.3.12.5 NMAC, 6/30/2011]

20.3.12.6 OBJECTIVE:

A. This part prescribes requirements for the issuance of a license authorizing the use of licensed materials including sealed sources, radioactive tracers, radioactive markers and uranium sinker bars in well logging in a single well. This part also prescribes radiation safety requirements for persons using licensed materials in these operations. The provisions and requirements of this part are in addition to, and not in substitution for, other requirements of this chapter. In particular, the provisions of 20.3.1 NMAC, 20.3.3 NMAC, 20.3.4 NMAC and 20.3.10 NMAC apply to applicants and licensees subject to this part.

B. The requirements set out in this part do not apply to the issuance of a license authorizing the use of licensed material in tracer studies involving multiple wells, such as field flooding studies, or to the use of sealed sources auxiliary to well logging but not lowered into wells.

[20.3.12.6 NMAC- Rp, 20.3.12.6 NMAC, 6/30/2011]

20.3.12.7 DEFINITIONS:

As used in this part, the following definitions apply.

A. "Energy compensation source" (ECS) means a small sealed source, with an activity not exceeding 100 microcuries (3.7 megabecquerels), used within a logging tool, or other tool components, to provide a reference standard to maintain the tool's calibration when in use.

B. "Field station" means a facility where radioactive sources may be stored or used and from which equipment is dispatched to temporary job sites.

C. "Fresh water aquifer" means a geologic formation that is capable of yielding fresh water to a well or spring.

D. "Injection tool" means a device used for controlled subsurface injection of radioactive tracer material.

E. "Irretrievable well logging source" means any sealed source containing licensed material that is pulled off or not connected to the wireline that suspends the source in the well and for which all reasonable effort at recovery has been expended.

F. "Licensed material" means byproduct, source, or special nuclear material received, processed, used or transferred under a license issued by the department under this chapter.

G. "Logging assistant" means any individual who, under the personal supervision of a logging supervisor, handles sealed sources or tracers that are not in logging tools or shipping containers or who performs surveys required by 20.3.12.14 NMAC.

H. "Logging supervisor" means the individual who uses licensed material or provides personal supervision in the use of licensed material at a temporary jobsite and who is responsible to the licensee for assuring compliance with the requirements of the department's regulations and the conditions of the license.

I. "Logging tool" means a device used subsurface to perform well logging.

J. "Personal supervision" means guidance and instruction by a logging supervisor, who is physically present at a temporary job site, who is in personal contact with logging assistants and who can give immediate assistance.

K. "Radioactive marker" means licensed material used for depth determination or direction orientation. For the purposes of this part, this term includes radioactive collar markers and radioactive iron nails.

L. "Safety review" means a periodic review provided by the licensee for its employees on radiation safety aspects of well logging. The review may include, as appropriate, the results of internal inspections, new procedures or equipment, accidents or errors that have been observed and opportunities for employees to ask safety questions.

M. "Sealed source" means any licensed material that is encased in a capsule designed to prevent leakage or escape of the licensed material.

N. "Source holder" means a housing or assembly into which a sealed source is placed for the purpose of facilitating the handling and use of the source in well logging operations.

O. "Subsurface tracer study" means the release of unsealed licensed material or a substance labeled with licensed material in a single well for the purpose of tracing the movement or position of the material or substance in the well or adjacent formation.

P. "Surface casing for protecting fresh water aquifers" means a pipe or tube used as a lining in a well to isolate fresh water aquifers from the well.

Q. "Temporary job site" means a location where licensed materials are present for the purpose of performing well logging or subsurface tracer studies.

R. "Tritium neutron generator target source" means a tritium source used within a neutron generator tube to produce neutrons for use in well logging applications.

S. "Uranium sinker bar" means a weight containing depleted uranium used to pull a logging tool toward the bottom of a well.

T. "Well" means a drilled hole, in which well logging may be performed. As used in this part, "well" includes drilled holes for the purpose of oil, gas, mineral, groundwater or geological exploration.

U. "Well logging" means all operations involving the lowering and raising of measuring devices or tools which may contain licensed material or are used to detect licensed materials in wells for the purpose of obtaining information about the well or adjacent formations which may be used in oil, gas, mineral, groundwater or geological exploration.

[20.3.12.7 NMAC - Rp, 20.3.12.7 NMAC, 6/30/2011]

20.3.12.8 APPLICATION FOR A SPECIAL LICENSE:

A person, as defined in 20.3.1.7 NMAC, shall file an application in duplicate for a specific license authorizing the use of licensed material in well logging on a department prescribed form pursuant to 20.3.3.307 NMAC. The application must be sent to the department for review and approval.

[20.3.12.8 NMAC - N, 6/30/2011]

20.3.12.9 SPECIFIC LICENSES FOR WELL LOGGING:

The department will approve an application for a specific license for the use of licensed material in well logging if the applicant meets the following requirements.

A. The applicant shall satisfy the general requirements specified in 10 CFR 30.33 for byproduct material, 10 CFR 40.32 for source material and in 10 CFR 70.23 for special nuclear material and in 20.3.3.308 NMAC and any special requirements contained in this part.

B. An application for a specific license of category 1 and category 2 quantities of radioactive material shall comply with 10 CFR 37. The licensee shall comply with 10 CFR 37 except as follows:

(1) any reference to the commission or NRC shall be deemed a reference to the department;

(2) 10 CFR 37.5 definitions of agreement state, byproduct material, commission and person shall not be applicable;

(3) 10 CFR 37.7, 10 CFR 37.9, 37.11(a) and (b), 10 CFR 37.13, 10 CFR 37.71, 10 CFR 37.105, and 10 CFR 37.107 shall not be applicable;

(4) for any reporting or notification requirements that the licensee must follow in 10 CFR 37.45, 10 CFR 37.57, 10 CFR 37.77(a) through (d), and 10 CFR 37.81, the licensee shall use the following address when applicable: New Mexico Environment Department/RCB, P.O. Box 5469, Santa Fe, NM 87502-5469 address information.

C. The applicant shall develop a program for training logging supervisors and logging assistants and submit to the department a description of this program which specifies the:

(1) initial training;

(2) on-the-job training;

(3) annual safety reviews provided by the licensee;

(4) means the applicant will use to demonstrate the logging supervisor's knowledge and understanding of and ability to comply with the department's regulations and licensing requirements and the applicant's operating and emergency procedures; and

(5) means the applicant will use to demonstrate the logging assistant's knowledge and understanding of and ability to comply with the applicant's operating and emergency procedures.

D. The applicant shall submit to the department written operating and emergency procedures as described in 20.3.12.12 NMAC or an outline or summary of the procedures that includes the important radiation safety aspects of the procedures.

E. The applicant shall establish and submit to the department its program for annual inspections of the job performance of each logging supervisor to ensure that the department's regulations, license requirements and the applicant's operating and emergency procedures are followed. Inspection records must be retained for three years after each internal inspection.

F. The applicant shall submit a description of its overall organizational structure as it applies to the radiation safety responsibilities in well logging, including specified delegations of authority and responsibility.

G. If an applicant wants to perform leak testing of sealed sources, the applicant shall identify the manufacturers and the model numbers of the leak test kits to be used. If the

applicant wants to analyze its own wipe samples, the applicant shall establish procedures to be followed and submit a description of these procedures to the department. The description must include the:

- (1) instruments to be used;
- (2) methods of performing the analysis; and
- (3) pertinent experience of the person who will analyze the wipe samples.

[20.3.12.9 NMAC- N, 6/30/2011; A, 06/13/2017; A, 02/14/2023]

20.3.12.10 RETRIEVAL OR ABANDONMENT OF SEALED SOURCES:

A. Agreement with well owner or operator.

(1) A licensee may perform well logging with a sealed source only after the licensee has a written agreement with the employing well owner or operator. This written agreement shall identify who will meet the requirements of Subsections B and C of this section and who will meet the following requirements:

(a) the radiation monitoring requirements of Subsection A of 20.3.12.15 NMAC shall be performed; and

(b) if the environment, any equipment or personnel are contaminated with licensed material, they shall be decontaminated before release from the site or release for unrestricted use.

(2) Recordkeeping. The licensee shall retain a copy of the written agreement for 3 years after the completion of the well logging operation.

(3) A written agreement between the licensee and the well owner or operator is not required if the licensee and the well owner or operator are part of the same corporate structure or otherwise similarly affiliated. However, the licensee shall still otherwise meet the requirements of Subsections B and C of this section.

B. Retrieval of lodged sealed sources.

(1) If a sealed source becomes lodged in the well, a reasonable effort shall be made to recover it.

(2) A person may not attempt to recover a sealed source in a manner which, in the licensee's opinion, could result in its rupture.

C. Irretrievable sealed sources. If the sealed source is classified as irretrievable after reasonable efforts at recovery have been expended, the licensee shall implement the requirements of this subsection within 30 days.

(1) Each irretrievable well logging source shall be immobilized and sealed in place with a cement plug.

(2) The licensee shall implement means to prevent inadvertent intrusion on the source, unless the source is not accessible to any subsequent drilling operations.

(3) The licensee shall install a permanent identification plaque, constructed of long lasting material such as stainless steel, brass, bronze or monel, shall be mounted at the surface of the well, unless the mounting of the plaque is not practical. The size of the plaque shall be at least 17 centimeters (7 inches) square and 3 millimeters (1/8 inch) thick. The plaque shall contain:

(a) the word "caution";

(b) the radiation symbol (the color requirement in Subsection A of 20.3.4.427 NMAC need not be met);

(c) the date the source was abandoned;

(d) the name of the well owner or well operator, as appropriate;

(e) the well name and well identification number(s) or other designation;

(f) an identification of the sealed source(s) by radionuclide and quantity;

(g) the depth of the source and depth to the top of the plug; and

(h) an appropriate warning, such as, "do not re-enter this well."

D. A licensee may apply, pursuant to Subsection A of 20.3.1.107 NMAC, for department approval, on a case-by-case basis, of proposed procedures to abandon an irretrievable well logging source in a manner not otherwise authorized in this subsection.

[20.3.12.10 NMAC - Rp, 20.3.12.1203 NMAC, 6/30/2011]

20.3.12.11 TRAINING:

A. Logging supervisor. The licensee may not permit an individual to act as a logging supervisor until that person has met all of the following requirements:

(1) the person has completed training in the subjects outlined in Subsection E of this section;

(2) the person has received copies of, and instruction in:

(a) the department rules contained in the applicable sections of 20.3.4 NMAC, 20.3.10 NMAC and 20.3.12 NMAC;

(b) the department license under which the logging supervisor will perform well logging; and

(c) the licensee's operating and emergency procedures required by 20.3.12.12 NMAC;

(3) the person has completed on-the-job training and demonstrated competence in the use of licensed materials, remote handling tools and radiation survey instruments by a field evaluation; and

(4) the person has demonstrated understanding of the requirements in Paragraphs (1) and (2) of this subsection by successfully completing a written test.

B. Logging assistant. The licensee may not permit an individual to act as a logging assistant until that person has met the following requirements:

(1) the person has received instruction in applicable sections of 20.3.4 NMAC, 20.3.10 NMAC and 20.3.12 NMAC;

(2) the person has received copies of, and instruction in, the licensee's operating and emergency procedures required by 20.3.12.12 NMAC;

(3) the person has demonstrated understanding of the materials listed in Paragraphs (1) and (2) of this subsection by successfully completing a written or oral test; and

(4) the person has received instruction in the use of licensed materials, remote handling tools and radiation survey instruments, as appropriate for the logging assistant's intended job responsibilities.

C. The licensee shall provide safety reviews for logging supervisors and logging assistants at least once during each calendar year.

D. Recordkeeping. The licensee shall maintain a record on each logging supervisor's and logging assistant's training and annual safety review. The training records must include copies of written tests and dates of oral tests. The training records must be retained until 3 years following the termination of employment. Records of annual safety reviews must list the topics discussed and be retained for 3 years.

E. The licensee shall include the following subjects in the training required in Paragraph (1) of Subsection A of this section.

- (1) Fundamentals of radiation safety including:
 - (a) characteristics of radiation;
 - (b) units of radiation dose and quantity of radioactivity;
 - (c) hazards of exposure to radiation;
 - (d) levels of radiation from licensed material;
 - (e) methods of controlling radiation dose (time, distance, and shielding); and
 - (f) radiation safety practices, including prevention of contamination, and methods of decontamination.
- (2) Radiation detection instruments including:
 - (a) use, operation, calibration and limitations of radiation survey instruments;
 - (b) survey techniques; and
 - (c) use of personnel monitoring equipment.
- (3) Equipment to be used including:
 - (a) operation of equipment, including source handling equipment and remote handling tools;
 - (b) storage, control and disposal of licensed material; and
 - (c) maintenance of equipment.
- (4) The requirements of pertinent department regulations.
- (5) Case histories of accidents in well logging.

[20.3.12.11 NMAC - Rp, 20.3.12.1214 and 20.3.12.1225 NMAC, 6/30/2011]

20.3.12.12 OPERATING AND EMERGENCY PROCEDURES:

Each licensee shall develop and follow written operating and emergency procedures that cover the following topics:

- A.** the handling and use of licensed materials including the use of sealed sources in wells without surface casing for protecting fresh water aquifers, if appropriate;

- B.** the use of remote handling tools for handling sealed sources and radioactive tracer material except low-activity calibration sources;
- C.** methods and occasions for conducting radiation surveys, including surveys for detecting contamination, as required by Subsections C through E of 20.3.12.14 NMAC;
- D.** minimizing personnel exposure including exposures from inhalation and ingestion of licensed tracer materials;
- E.** methods and occasions for locking and securing stored licensed materials;
- F.** personnel monitoring and the use of personnel monitoring equipment;
- G.** transportation of licensed materials to field stations or temporary jobsites, packaging of licensed materials for transport in vehicles, placarding of vehicles when needed, and physically securing licensed materials in transport vehicles during transportation to prevent accidental loss, tampering or unauthorized removal;
- H.** picking up, receiving and opening packages containing licensed materials, in accordance with 20.3.4.432 NMAC;
- I.** for the use of tracers, decontamination of the environment, equipment, and personnel;
- J.** maintenance of records generated by logging personnel at temporary jobsites;
- K.** the inspection and maintenance of sealed sources, source holders, logging tools, injection tools, source handling tools, storage containers, transport containers and uranium sinker bars as required by 20.3.12.22 NMAC;
- L.** actions to be taken if a sealed source is lodged in a well;
- M.** notifying proper persons in the event of an accident; and
- N.** actions to be taken if a sealed source is ruptured including actions to prevent the spread of contamination and minimize inhalation and ingestion of licensed materials and actions to obtain suitable radiation survey instruments as required by Subsection B of 20.3.12.17 NMAC.

[20.3.12.12 NMAC - Rp, 20.3.12.1215 and 20.3.12.1218 NMAC, 6/30/2011]

20.3.12.13 PERSONNEL MONITORING:

- A.** The licensee may not permit an individual to act as a logging supervisor or logging assistant unless that person wears, at all times during the handling of licensed radioactive materials, a personnel dosimeter. Each personnel dosimeter shall be

assigned to and worn by only one individual. Film badges shall be replaced at least monthly and other personnel dosimeters evaluated at least quarterly.

B. The licensee shall provide bioassay services to individuals using licensed radioactive materials in subsurface tracer studies if required by the license.

C. Recordkeeping. The licensee shall retain records of personnel dosimeters required by Subsection A of this section and bioassay results for inspection until the department authorizes disposition of the records.

[20.3.12.13 NMAC - Rp, 20.3.12.1216 NMAC, 6/30/2011; A, 5/1/2024]

20.3.12.14 RADIATION SURVEYS:

A. The licensee shall make radiation surveys, including but not limited to the surveys required under Subsections B through E of this section, of each area where licensed materials are used and stored.

B. Before transporting licensed materials, the licensee shall make a radiation survey of the position occupied by each individual in the vehicle and of the exterior of each vehicle used to transport the licensed materials.

C. If the sealed source assembly is removed from the logging tool before departure from the temporary jobsite, the licensee shall confirm that the logging tool is free of contamination by energizing the logging tool detector or by using a survey meter.

D. If the licensee has reason to believe that, as a result of any operation involving a sealed source, the encapsulation of the sealed source could be damaged by the operation, the licensee shall conduct a radiation survey, including a contamination survey, during and after the operation.

E. The licensee shall make a radiation survey at the temporary jobsite before and after each subsurface tracer study to confirm the absence of contamination.

F. Recordkeeping. The results of surveys required under Subsections A through E of this section must be recorded and must include the date of the survey, the name of the individual making the survey, the identification of the survey instrument used, and the location of the survey. The licensee shall retain records of surveys for inspection by the department for 3 years after they are made.

[20.3.12.14 NMAC - Rp, 20.3.12.1221 NMAC, 6/30/2011]

20.3.12.15 RADIOACTIVE CONTAMINATION CONTROL:

A. If the licensee detects evidence that a sealed source has ruptured or licensed materials have caused contamination, the licensee shall initiate immediately the emergency procedures required by 20.3.12.12 NMAC.

B. If contamination results from the use of licensed material in well logging, the licensee shall decontaminate all work areas, equipment and unrestricted areas.

C. During efforts to recover a sealed source lodged in the well, the licensee shall continuously monitor, with an appropriate radiation detection instrument or a logging tool with a radiation detector, the circulating fluids from the well, if any, to check for contamination resulting from damage to the sealed source.

[20.3.12.15 NMAC - N, 6/30/2011]

20.3.12.16 LABELS, SECURITY AND TRANSPORT PRECAUTIONS:

A. Labels.

(1) The licensee may not use a source, source holder or logging tool that contains licensed material unless the smallest component that is transported as a separate piece of equipment with the licensed material inside bears a durable, legible and clearly visible marking or label. The marking or label must contain the radiation symbol specified in 20.3.4.427 NMAC, without the conventional color requirements, and the wording "Danger (or Caution) radioactive material."

(2) The licensee may not use a container to store licensed material unless the container has securely attached to it a durable, legible and clearly visible label. The label must contain the radiation symbol specified in 20.3.4.427 NMAC and the wording "Danger (or Caution), radioactive material, notify civil authorities (or name of company)."

(3) The licensee may not transport licensed material unless the material is packaged, labeled, marked and accompanied with appropriate shipping papers in accordance with regulations set out in 20.3.3.306 NMAC, incorporating 10 CFR Part 71.

B. Security precautions during storage and transportation.

(1) The licensee shall store each source containing licensed material in a storage container or transportation package. The container or package must be locked and physically secured to prevent tampering or removal of licensed material from storage by unauthorized personnel. The licensee shall store licensed material in a manner which will minimize danger from explosion or fire.

(2) The licensee shall lock and physically secure the transport package containing licensed material in the transporting vehicle to prevent accidental loss, tampering or unauthorized removal of the licensed material from the vehicle.

[20.3.12.16 NMAC - Rp, 20.3.12.1205, 20.3.12.1206, and 20.3.12.1212 NMAC, 6/30/2011]

20.3.12.17 RADIATION SURVEY INSTRUMENTS:

A. The licensee shall keep a calibrated and operable radiation survey instrument capable of detecting beta and gamma radiation at each field station and temporary jobsite to make the radiation surveys required by this part and by 20.3.4 NMAC. To satisfy this requirement, the radiation survey instrument must be capable of measuring 0.001 millisievert (0.1 millirem) per hour through at least 0.5 millisievert (50 millirems) per hour.

B. The licensee shall have available additional calibrated and operable radiation detection instruments sensitive enough to detect the low radiation and contamination levels that could be encountered if a sealed source ruptured. The licensee may own the instruments or may have a procedure to obtain them quickly from a second party.

C. The licensee shall have each radiation survey instrument required under this section calibrated:

- (1) at intervals not to exceed 6 months and after each instrument servicing;
- (2) for linear scale instruments, at two points located approximately 1/3 and 2/3 of full-scale on each scale; for logarithmic scale instruments, at mid-range of each decade, and at two points of at least one decade; and for digital instruments, at appropriate points; and
- (3) so that an accuracy within plus or minus 20 percent of the calibration standard can be demonstrated on each scale.

D. Recordkeeping. The licensee shall retain calibration records for a period of 3 years after the date of calibration for inspection by the department.

[20.3.12.17 NMAC - Rp, 20.3.12.1207 NMAC, 6/30/2011]

20.3.12.18 LEAK TESTING OF SEALED SOURCES:

A. Testing and recordkeeping requirements. Each licensee who uses a sealed source of radioactive material shall have the source tested for leakage periodically. Records of leak tests results shall be kept in units of microcuries and maintained for inspection by the department for 3 years after the leak test is performed.

B. Method of testing. The wipe of a sealed source shall be performed using a leak test kit or method approved by the department, NRC or an agreement state. The wipe sample shall be taken from the nearest accessible point to the sealed source where contamination might accumulate. The wipe sample shall be analyzed for radioactive

contamination. The analysis shall be capable of detecting the presence of 0.005 microcurie (185 becquerels) of radioactive material on the test sample and shall be performed by a person approved by the department, NRC or an agreement state to perform the analysis.

C. Test frequency.

(1) Each sealed source (except an energy compensation source (ECS)) shall be tested at intervals not to exceed 6 months. In the absence of a certificate from a transferor that a test has been made within the 6 months before the transfer, the sealed source may not be used until tested.

(2) Each energy compensation source (ECS) that is not exempt from testing in accordance with Subsection E of this section shall be tested at intervals not to exceed 3 years. In the absence of a certificate from a transferor that a test has been made within the 3 years before the transfer, the energy compensation source (ECS) may not be used until tested.

D. Removal of leaking source from service.

(1) If the test conducted pursuant to Subsections A and B of this section reveals the presence of 0.005 microcurie (185 becquerels) or more of removable radioactive material, the licensee shall remove the sealed source from service immediately and have it decontaminated, repaired or disposed of by a department, NRC or an agreement state licensee that is authorized to perform these functions. The licensee shall check the equipment associated with the leaking source for radioactive contamination and, if contaminated, have it decontaminated or disposed of by a department, NRC or an agreement state licensee that is authorized to perform these functions.

(2) The licensee shall submit a report to the department within 5 days of receiving the test result. The report must describe the equipment involved in the leak, the test results, any contamination which resulted from the leaking source and the corrective actions taken up to the time the report was made.

E. Exemptions. The following sealed sources are exempt from the periodic leak test requirements set out in Subsections A through D of this section:

- (1) hydrogen-3 (tritium) sources;
- (2) sources containing licensed material with a half-life of 30 days or less;
- (3) sealed sources containing licensed material in gaseous form;
- (4) sources of beta- or gamma-emitting radioactive material with an activity of 100 microcuries (3.7 megabecquerels) or less; and

(5) sources of alpha- or neutron-emitting radioactive material with an activity of 10 microcuries (0.370 megabecquerel) or less.

[20.3.12.18 NMAC - Rp, 20.3.12.1208 NMAC, 6/30/2011]

20.3.12.19 PHYSICAL INVENTORY:

Each licensee shall conduct a semi-annual physical inventory to account for all licensed material received and possessed under the license. The licensee shall retain records of the inventory for 3 years from the date of the inventory for inspection by the department. The inventory must indicate the quantity and kind of licensed material, the location of the licensed material, the date of the inventory and the name of the individual conducting the inventory. Physical inventory records may be combined with leak test records.

[20.3.12.19 NMAC - Rp, 20.3.12.1209 NMAC, 6/30/2011]

20.3.12.20 RECORDS OF MATERIAL USE:

A. Each licensee shall maintain records for each use of licensed material showing:

(1) the make, model number and serial number or a description of each sealed source used;

(2) in the case of unsealed licensed material used for subsurface tracer studies, the radionuclide and quantity of activity used in a particular well and the disposition of any unused tracer materials;

(3) the identity of the logging supervisor who is responsible for the licensed material and the identity of logging assistants present; and

(4) the location and date of use of the licensed material.

B. Recordkeeping. The licensee shall make the records required by Subsection A of this section available for inspection by the department. The licensee shall retain the records for 3 years from the date of the recorded event.

[20.3.12.20 NMAC - Rp, 20.3.12.1210 NMAC, 6/30/2011]

20.3.12.21 DESIGN AND PERFORMANCE CRITERIA FOR SEALED SOURCES:

A. A licensee may use a sealed source for use in well logging applications if:

(1) the sealed source is doubly encapsulated;

(2) the sealed source contains licensed material whose chemical and physical forms are as insoluble and nondispersible as practical; and

(3) meets the requirements of Subsections B, C and D of this section.

B. For a sealed source manufactured on or before July 14, 1989, a licensee may use the sealed source, for use in well logging applications if it meets the requirements of USASI N5.10-1968, classification of sealed radioactive sources, or the requirements in Subsections C and D of this section.

C. For a sealed source manufactured after July 14, 1989, a licensee may use the sealed source, for use in well logging applications if it meets the oil well logging requirements of ANSI/HPS N43.6-1997, sealed radioactive sources - classification.

D. For a sealed source manufactured after July 14, 1989, a licensee may use the sealed source, for use in well logging applications, if the sealed source's prototype has been tested and found to maintain its integrity after each of the tests in Paragraphs (1) through (5) of this subsection.

(1) Temperature. The test source shall be held at -40 degrees celsius for 20 minutes, 600 degrees celsius for 1 hour, and then be subject to a thermal shock test with a temperature drop from 600 degrees celsius to 20 degrees celsius within 15 seconds.

(2) Impact test. A 5-kilogram steel hammer, 2.5 centimeters in diameter, shall be dropped from a height of 1 meter onto the test source.

(3) Vibration test. The test source shall be subject to a vibration from 25 hertz to 500 hertz at 5 g (g meaning the acceleration due to gravity) amplitude for 30 minutes.

(4) Puncture test. A 1 gram hammer and pin, 0.3 centimeter pin diameter, shall be dropped from a height of 1 meter onto the test source.

(5) Pressure test. The test source shall be subject to an external pressure of 1.695×10^7 pascals (24,600 pounds per square inch absolute).

E. The requirements in Subsections A, B, C and D of this section do not apply to sealed sources that contain licensed material in gaseous form.

F. The requirements in Subsections A, B, C and D of this section do not apply to energy compensation sources (ECS). ECSs shall be registered with the sealed source and device registry (see definition in 20.3.1.7 NMAC) upon an approval by the NRC under 10 CFR 32.210 or an agreement state equivalent regulations.

[20.3.12.21 NMAC - Rp, 20.3.12.1211 NMAC, 6/30/2011]

20.3.12.22 INSPECTION, MAINTENANCE AND OPENING OF A SOURCE OR SOURCE HOLDER:

A. Each licensee shall visually check source holders, logging tools and source handling tools, for defects before each use to ensure that the equipment is in good working condition and that required labeling is present. If defects are found, the equipment must be removed from service until repaired, and a record must be made listing: the date of check, name of inspector, equipment involved, defects found and repairs made. These records must be retained for 3 years after the defect is found.

B. Each licensee shall have a program for semiannual visual inspection and routine maintenance of source holders, logging tools, injection tools, source handling tools, storage containers, transport containers and uranium sinker bars to ensure that the required labeling is legible and that no physical damage is visible. If defects are found, the equipment must be removed from service until repaired, and a record must be made listing: date, equipment involved, inspection and maintenance operations performed, any defects found and any actions taken to correct the defects. These records must be retained for 3 years after the defect is found.

C. Removal of a sealed source from a source holder or logging tool, and maintenance on sealed sources or holders in which sealed sources are contained may not be performed by the licensee unless a written operating procedure is developed and has been approved either by the department, NRC or an agreement state.

D. If a sealed source is stuck in the source holder, the licensee may not perform any operation, such as drilling, cutting or chiseling, on the source holder unless the licensee is specifically approved by the department, NRC or an agreement state to perform this operation.

E. The opening, repair or modification of any sealed source must be performed by persons specifically approved to do so by the department, NRC or an agreement state.

[20.3.12.22 NMAC - Rp, 20.3.12.1213 NMAC, 6/30/2011]

20.3.12.23 SUBSURFACE TRACER STUDIES:

A. The licensee shall require all personnel handling radioactive tracer material to use protective gloves and, if required by the license, other protective clothing and equipment. The licensee shall take precautions to avoid ingestion or inhalation of radioactive tracer material and to avoid contamination of field stations and temporary jobsites.

B. A licensee shall not knowingly inject licensed material into fresh water aquifers unless specifically authorized to do so by the department.

[20.3.12.23 NMAC - Rp, 20.3.12.1219 NMAC, 6/30/2011]

20.3.12.24 RADIOACTIVE MARKERS:

The licensee may use radioactive markers in wells only if the individual markers contain quantities of licensed material not exceeding the exempt quantities specified in 20.3.3.330 NMAC. The use of markers is subject only to the requirements of physical inventory in 20.3.12.19 NMAC.

[20.3.12.24 NMAC - N, 6/30/2011]

20.3.12.25 URANIUM SINKER BARS:

The licensee may use a uranium sinker bar in well logging applications only if it is legibly impressed with the words "Caution - radioactive - depleted uranium" and "Notify civil authorities (or name of company) if found."

[20.3.12.25 NMAC - Rp, 20.3.12.1200 NMAC, 6/30/2011]

20.3.12.26 USE OF A SEALED SOURCE IN A WELL WITHOUT A SURFACE CASING:

The licensee may use a sealed source in a well without a surface casing for protecting fresh water aquifers only if the licensee follows a procedure for reducing the probability of the source becoming lodged in the well. The procedure must be approved by the department pursuant to Subsection C of 20.3.12.9 NMAC, the NRC or an agreement state.

[20.3.12.26 NMAC - N, 6/30/2011]

20.3.12.27 ENERGY COMPENSATION SOURCE:

A. The licensee may use an energy compensation source (ECS) which is contained within a logging tool or other tool components, only if the ECS contains quantities of licensed material not exceeding 100 microcuries (3.7 megabecquerels).

B. For well logging applications with a surface casing for protecting fresh water aquifers, use of the ECS is only subject to the requirements of 20.3.12.18 NMAC, 20.3.12.19 NMAC and 20.3.12.20 NMAC.

C. For well logging applications without a surface casing for protecting fresh water aquifers, use of the ECS is only subject to the requirements of 20.3.12.10 NMAC, 20.3.12.18 NMAC, 20.3.12.19 NMAC, 20.3.12.20 NMAC, 20.3.12.26 NMAC and 20.3.12.32 NMAC.

[20.3.12.27 NMAC - Rp, 20.3.12.1201 NMAC, 6/30/2011]

20.3.12.28 TRITIUM NEUTRON GENERATOR TARGET SOURCE:

A. Use of a tritium neutron generator target source, containing quantities not exceeding 30 curies (1,110 megabecquerels) and in a well with a surface casing to protect fresh water aquifers, is subject to the requirements of this part except 20.3.12.10 NMAC, 20.3.12.21 NMAC and 20.3.12.32 NMAC.

B. Use of a tritium neutron generator target source, containing quantities exceeding 30 curies (1,110 megabecquerels) or in a well without a surface casing to protect fresh water aquifers, is subject to the requirements of this part except 20.3.12.21 NMAC.

[20.3.12.28 NMAC - Rp, 20.3.12.1202 NMAC, 6/30/2011]

20.3.12.29 SECURITY DURING USE OF LICENSED MATERIAL:

A. A logging supervisor must be physically present at a temporary jobsite whenever licensed materials are being handled or are not stored and locked in a vehicle or storage place. The logging supervisor may leave the jobsite in order to obtain assistance if a source becomes lodged in a well.

B. During well logging, except when radiation sources are below ground or in shipping or storage containers, the logging supervisor or other individual designated by the logging supervisor shall maintain direct surveillance of the operation to prevent unauthorized entry into a restricted area, as defined in 20.3.4.7 NMAC.

[20.3.12.29 NMAC - Rp, 20.3.12.1217 NMAC, 6/30/2011]

20.3.12.30 DOCUMENTS AND RECORDS REQUIRED AT FIELD STATIONS:

Each licensee shall maintain the following documents and records at the field station:

- A.** a copy of 20.3.4 NMAC, 20.3.10 NMAC and 20.3.12 NMAC;
- B.** the license authorizing the use of licensed material;
- C.** operating and emergency procedures required by 20.3.12.12 NMAC;
- D.** the record of radiation survey instrument calibrations required by 20.3.12.17 NMAC;
- E.** the record of leak test results required by 20.3.12.18 NMAC;
- F.** physical inventory records required by 20.3.12.19 NMAC;
- G.** utilization records required by 20.3.12.20 NMAC;
- H.** records of inspection and maintenance required by 20.3.12.22 NMAC;

- I. training records required by 20.3.12.11 NMAC; and
- J. survey records required by 20.3.12.14 NMAC.

[20.3.12.30 NMAC - Rp, 20.3.12.1222 NMAC, 6/30/2011]

20.3.12.31 DOCUMENTS AND RECORDS REQUIRED AT TEMPORARY JOBSITES:

Each licensee conducting operations at a temporary jobsite shall maintain the following documents and records at the temporary jobsite until the well logging operation is completed:

- A. operating and emergency procedures required by 20.3.12.12 NMAC;
- B. evidence of latest calibration of the radiation survey instruments in use at the site required by 20.3.12.17 NMAC;
- C. latest survey records required by 20.3.12.14 NMAC;
- D. the shipping papers for the transportation of radioactive materials required by 20.3.3.306 NMAC, incorporating 10 CFR 71.5; and
- E. when operating under reciprocity pursuant to 20.3.3.324 NMAC, a copy of the NRC or agreement state license authorizing use of licensed materials.

[20.3.12.31 NMAC - Rp, 20.3.12.1223 NMAC, 6/30/2011]

20.3.12.32 NOTIFICATION OF INCIDENTS AND LOST SOURCES; ABANDONMENT PROCEDURES FOR IRRETRIEVABLE SOURCES:

- A. The licensee shall immediately notify the department by telephone and subsequently, within 30 days, by confirmation in writing, if the licensee knows or has reason to believe that a sealed source has been ruptured. The written confirmation must designate the well or other location, describe the magnitude and extent of the escape of licensed materials, assess the consequences of the rupture, and explain efforts planned or being taken to mitigate these consequences.
- B. The licensee shall notify the department of the theft or loss of radioactive materials, radiation overexposures, excessive levels and concentrations of radiation and certain other accidents as required by 20.3.4.451 NMAC, 20.3.4.452 NMAC, 20.3.4.453 NMAC and 20.3.3.325 NMAC.
- C. If a sealed source becomes lodged in a well, and when it becomes apparent that efforts to recover the sealed source will not be successful, the licensee shall:

(1) notify the department by telephone of the circumstances that resulted in the inability to retrieve the source; and

(a) obtain department approval to implement abandonment procedures; or

(b) that the licensee implemented abandonment before department approval because the licensee believed there was an immediate threat to public health and safety; and

(2) advise the well owner or operator, as appropriate, of the abandonment procedures under Subsection A or D of 20.3.12.10 NMAC; and

(3) either ensure that abandonment procedures are implemented within 30 days after the sealed source has been classified as irretrievable or request an extension of time if unable to complete the abandonment procedures.

D. The licensee shall, within 30 days after a sealed source has been classified as irretrievable, make a report in writing to the department. The licensee shall send a copy of the report to each appropriate local, state or federal agency that issued permits or otherwise approved of the drilling operation. The report must contain the following information:

(1) date of occurrence;

(2) a description of the irretrievable well logging source involved including the radionuclide and its quantity, chemical and physical form;

(3) surface location and identification of the well;

(4) results of efforts to immobilize and seal the source in place;

(5) a brief description of the attempted recovery effort;

(6) depth of the source;

(7) depth of the top of the cement plug;

(8) depth of the well;

(9) the immediate threat to public health and safety justification for implementing abandonment if prior department approval was not obtained in accordance with Subparagraph (b) of Paragraph (1) of Subsection C of this section;

(10) any other information, such as a warning statement, contained on the permanent identification plaque; and

(11) local, state and federal agencies receiving copy of this report.

[20.3.12.32 NMAC - Rp, 20.3.12.1224 NMAC, 6/30/2011]

PART 13: LICENSING REQUIREMENTS FOR LAND DISPOSAL OF RADIOACTIVE WASTE

20.3.13.1 ISSUING AGENCY:

Environmental Improvement Board.

[5-3-95; 20.3.13.1 NMAC - Rn, 20 NMAC 3.1.1.100, 04/15/2004]

20.3.13.2 SCOPE:

A. The regulations in this part (20.3.13 NMAC) establish procedures, criteria, and terms and conditions upon which the department issues licenses for the land disposal of wastes received from other persons. The requirements of this part (20.3.13 NMAC) are in addition to, and not in substitution for, other applicable requirements of these regulations.

B. The regulations in this part (20.3.13 NMAC) do not apply to disposal of byproduct material as defined in definition (2) of "byproduct material", in Paragraph (2) of Subsection F of 20.3.1.7 NMAC in quantities greater than 10,000 kilograms containing more than 5 millicuries (18.5 megabecquerels) of radium-226, or disposal of waste as provided in 20.3.4 NMAC.

C. This part (20.3.13 NMAC) establishes procedural requirements and performance objectives applicable to any method of land disposal. It establishes specific technical requirements for near-surface disposal of radioactive waste which involves disposal in the uppermost portion of the earth.

[5-3-95; 20.3.13.2 NMAC - Rn, 20 NMAC 3.1.13.1300, 04/15/2004; A, 04/30/2009]

20.3.13.3 STATUTORY AUTHORITY:

Sections 74-1-9, 74-3-5, and 74-3-9 NMSA 1978.

[5-3-95; 20.3.13.3 NMAC - Rn, 20 NMAC 3.1.1.102, 04/15/2004]

20.3.13.4 DURATION:

Permanent.

[5-3-95; 20.3.13.4 NMAC - Rn, 20 NMAC 3.1.1.103, 04/15/2004]

20.3.13.5 EFFECTIVE DATE:

May 3, 1995, unless a later date is cited at the end of a section.

[5-3-95, 8-2-95, A, 7-30-99; 20.3.1.5 NMAC - Rn, 20 NMAC 3.1.1.104, 04/15/2004]

20.3.13.6 OBJECTIVE:

The regulations in this part (20.3.13 NMAC) establish procedures, criteria, and terms and conditions upon which the department issues licenses for the land disposal of wastes. [Refer to the purpose and scope promulgated by the board as specified in 20.3.13.2 NMAC.]

[5-3-95; 20.3.13.6 NMAC - Rn, 20 NMAC 3.1.13.1300.A, 04/15/2004]

20.3.13.7 DEFINITIONS:

As used in this part (20.3.13 NMAC), the following definitions apply.

A. "Active maintenance" means any significant activity needed during the period of institutional control to maintain a reasonable assurance that the performance objectives in 20.3.13.1307 NMAC and 20.3.13.1308 NMAC are met. Such active maintenance includes ongoing activities, such as the pumping and treatment of water from a disposal unit, or one-time measures, such as replacement of a disposal unit cover. Active maintenance does not include custodial activities, such as repair of fencing, repair or replacement of monitoring equipment, revegetation, minor additions to soil cover, minor repair of disposal unit covers and general disposal site upkeep, such as mowing grass.

B. "Buffer zone" means a portion of the disposal site that is controlled by the licensee, and that lies under the disposal units and between the disposal units and the boundary of the site.

C. "Chelating agent" means amine polycarboxylic acids, hydroxy-carboxylic acids, gluconic acid and polycarboxylic acids.

D. "Commencement of construction" means any clearing of land, excavation or other substantial action that would adversely affect the environment of a land disposal facility. The term does not mean disposal site exploration, necessary roads for disposal site exploration, borings to determine foundation conditions, or other preconstruction monitoring or testing to establish background information related to the suitability of the disposal site or the protection of environmental values.

E. "Custodial agency" means an agency of the government designated to act on behalf of the government owner of the disposal site.

F. "Disposal" means the isolation of wastes from the biosphere inhabited by man and his food chains by emplacement in a land disposal facility.

G. "Disposal site" means that portion of a land disposal facility which is used for disposal of waste. It consists of disposal units and a buffer zone.

H. "Disposal unit" means a discrete portion of the disposal site into which waste is placed for disposal. For near-surface disposal, the unit is usually a trench.

I. "Engineered barrier" means a man-made structure or device that is intended to improve the land disposal facility's ability to meet the performance objective in this part (20.3.13 NMAC).

J. "Explosive material" means any chemical compound, mixture or device which produces a substantial instantaneous release of gas and heat spontaneously, or by contact with sparks or flame.

K. "Hazardous waste" means those wastes designated as hazardous by U.S. environmental protection agency regulations in 40 CFR, Part 261.

L. "Hydrogeologic unit" means any soil or rock unit or zone which, by virtue of its porosity or permeability, or lack thereof, has a distinct influence on the storage or movement of ground water.

M. "Inadvertent intruder" means a person who might occupy the disposal site after closure and engage in normal activities, such as agriculture, dwelling construction or other pursuits in which an individual might be unknowingly exposed to radiation from the waste.

N. "Intruder barrier" means a sufficient depth of cover over the waste that inhibits contact with waste, and helps to ensure that radiation exposures to an inadvertent intruder will meet the performance objectives set forth in this part (20.3.13 NMAC), or engineered structures that provide equivalent protection to the inadvertent intruder.

O. "Land disposal facility" means the land, buildings and equipment which is intended to be used for the disposal of wastes into the subsurface of the land.

P. "Monitoring" means observing and making measurements to provide data to evaluate the performance and characteristics of the disposal site.

Q. "Near-surface disposal facility" means a land disposal facility in which waste is disposed of within approximately the upper 30 meters of the earth's surface.

R. "Pyrophoric liquid" means any liquid that ignites spontaneously in dry or moist air at or below 130 degrees F (54.4 degrees C). A pyrophoric solid is any solid material, other than one classed as an explosive, which under normal conditions is liable to

cause fires through friction, retained heat from manufacturing or processing, or which can be ignited readily, and when ignited, burns so vigorously and persistently as to create a serious transportation, handling or disposal hazard. Included in this definition are spontaneously combustible and water-reactive materials.

S. "Site closure and stabilization" means those actions that are taken upon completion of operations that prepare the disposal site for custodial care and that assure that the disposal site will remain stable and will not need ongoing active maintenance.

T. "Stability" means structural stability.

U. "Surveillance" means monitoring and observation of the disposal site for purposes of visual detection of need for maintenance, custodial care, evidence of intrusion and compliance with other license and regulatory requirements.

[5-3-95; 20.3.13.7 NMAC - Rn, 20 NMAC 3.1.13.1301 & A, 04/15/2004; A, 04/30/2009]

20.3.13.8-20.3.13.1301 [RESERVED]

20.3.13.1302 LICENSE REQUIRED:

A. No person may receive, possess, and dispose of waste received from other persons at a land disposal facility, unless authorized by a license issued by the department pursuant to this part (20.3.13 NMAC), and 20.3.3 NMAC.

B. Each person shall file an application with the department pursuant to 20.3.3.307 NMAC and obtain a license as provided in this part (20.3.13 NMAC) before commencement of construction of a land disposal facility. Failure to comply with this requirement may be grounds for denial of a license.

[5-3-95; 20.3.13.1302 NMAC - Rn, 20 NMAC 3.1.13.1302, 04/15/2004]

20.3.13.1303 CONTENT OF APPLICATION:

In addition to the requirements set forth in 20.3.3.308 NMAC, an application to receive from others, possess and dispose of wastes shall consist of general information, specific technical information, institutional information, and financial information as set forth in 20.3.13.1304 NMAC through 20.3.13.1308 NMAC.

[5-3-95; 20.3.13.1303 NMAC - Rn, 20 NMAC 3.1.13.1303, 04/15/2004]

20.3.13.1304 GENERAL INFORMATION:

The general information shall include each of the following.

A. Identity of the applicant including:

- (1)** the full name, address, telephone number and description of the business or occupation of the applicant;
- (2)** if the applicant is a partnership, the name and address of each partner, and the principal location where the partnership does business;
- (3)** if the applicant is a corporation or an unincorporated association, the state where it is incorporated or organized and the principal location where it does business, and the names and addresses of its directors and principal officers; and
- (4)** if the applicant is acting as an agent or representative of another person in filing the application, all information required under Subsection A of 20.3.13.1304 NMAC must be supplied with respect to the other person.

B. Qualifications of the applicant including:

- (1)** the organizational structure of the applicant, both off-site and on-site, including a description of lines of authority and assignments of responsibilities, whether in the form of administrative directives, contract provisions, or otherwise;
- (2)** the technical qualifications, including training and experience of the applicant and members of the applicant's staff to engage in the proposed activities; minimum training and experience requirements for personnel filling key positions described in Paragraph (1) of Subsection B of 20.3.13.1304 NMAC, must be provided;
- (3)** a description of the applicant's personnel training program; and
- (4)** the plan to maintain an adequate complement of trained personnel to carry out waste receipt, handling, and disposal operations in a safe manner.

C. A description of:

- (1)** the location of the proposed disposal site;
- (2)** the general character of the proposed activities;
- (3)** the types and quantities of waste to be received, possessed and disposed of;
- (4)** plans for use of the land disposal facility for purposes other than disposal of wastes; and
- (5)** the proposed facilities and equipment.

D. Proposed schedules for construction, receipt of waste, and first emplacement of waste at the proposed land disposal facility.

[5-3-95; 20.3.13.1304 NMAC - Rn, 20 NMAC 3.1.13.1304, 04/15/2004]

20.3.13.1305 SPECIFIC TECHNICAL INFORMATION:

The specific technical information shall include the following information needed for demonstration that the performance objectives and the applicable technical requirements of this part (20.3.13 NMAC) will be met:

A. a description of the natural and demographic disposal site characteristics as determined by disposal site selection and characterization activities; the description shall include geologic, geochemical, geotechnical, hydrologic, ecologic, archaeologic, meteorologic, climatologic, and biotic features of the disposal site and vicinity;

B. a description of the design features of the land disposal facility and the disposal units: for near-surface disposal, the description shall include those design features related to infiltration of water; integrity of covers for disposal units; structural stability of backfill, wastes, and covers; contact of wastes with standing water; disposal site drainage; disposal site closure and stabilization; elimination to the extent practicable of long-term disposal site maintenance; inadvertent intrusion; occupational exposures; disposal site monitoring; and adequacy of the size of the buffer zone for monitoring and potential mitigative measures;

C. a description of the principal design criteria and their relationship to the performance objectives;

D. a description of the design basis, natural events or phenomena and their relationship to the principal design criteria;

E. a description of codes and standards which the applicant has applied to the design and which will apply to construction of the land disposal facilities;

F. a description of the construction and operation of the land disposal facility; the description shall include, as a minimum, the methods of construction of disposal units, waste employment, the procedures for and areas of waste segregation, types of intruder barriers, on-site traffic and drainage systems, survey control program, methods and areas of waste storage, and methods to control surface water and ground water access to the wastes; the description shall also include a description of the methods to be employed in the handling and disposal of wastes containing chelating agents or other non-radiological substances that might affect meeting the performance objectives of this part (20.3.13 NMAC);

G. a description of the disposal site closure plan, including those design features which are intended to facilitate disposal site closure and to eliminate the need for ongoing active maintenance;

H. an identification of the known natural resources at the disposal site, whose exploitation could result in inadvertent intrusion into the wastes after removal of active institutional control;

I. a description of the kind, amount, classification and specifications of the radioactive material proposed to be received, possessed and disposed of at the land disposal facility;

J. a description of the quality assurance program for the determination of natural disposal site characteristics and for quality assurance during the design, construction, operation and closure of the land disposal facility; and the receipt, handling and emplacement of waste; audits and managerial controls must be included;

K. a description of the radiation safety program for control and monitoring of radioactive effluents to ensure compliance with the performance objective in 20.3.13.1317 NMAC and occupational radiation exposure to ensure compliance with the requirements of 20.3.4 NMAC, and to control contamination of personnel, vehicles, equipment, buildings and the disposal site; both routine operations and accidents shall be addressed; the program description must include procedures, instrumentation, facilities and equipment;

L. a description of the environmental monitoring program to provide data to evaluate potential health and environmental impacts, and the plan for taking corrective measures if migration of radionuclides is indicated;

M. a description of the administrative procedures that the applicant will apply to control activities at the land disposal facility; and

N. a description of the facility electronic record keeping system as required in 20.3.13.1334 NMAC.

[5-3-95, 7-30-99; 20.3.13.1305 NMAC - Rn, 20 NMAC 3.1.13.1305, 04/15/2004]

20.3.13.1306 TECHNICAL ANALYSES:

The specific technical information shall also include the following analyses needed to demonstrate that the performance objectives of this part (20.3.13 NMAC) will be met:

A. pathways analyzed in demonstrating protection of the general population from releases of radioactivity shall include air, soil, ground water, surface water, plant uptake and exhumation by burrowing animals; the analysis shall clearly identify and differentiate between the roles performed by the natural disposal site characteristics and

design features in isolating and segregating the wastes; the analysis shall clearly demonstrate that there is reasonable assurance that the exposure to humans from the release of radioactivity will not exceed the limits set forth in 20.3.13.1317 NMAC;

B. analysis of the protection of individuals from inadvertent intrusion shall include demonstration that there is reasonable assurance the waste classification and segregation requirements will be met and that adequate barriers to inadvertent intrusion will be provided;

C. analyses of the protection of individuals during operations shall include assessments of expected exposures due to routine operations and likely accidents during handling, storage and disposal of waste; the analysis shall provide reasonable assurance that exposures will be controlled to meet the requirements of 20.3.4 NMAC; and

D. analyses of the long-term stability of the disposal site and the need for ongoing active maintenance after site closure shall be based upon analyses of active natural processes, such as erosion, mass wasting, slope failure, settlement of wastes and backfill, infiltration through covers over disposal areas and adjacent soils, and surface drainage of the disposal site; the analyses shall provide reasonable assurance that there will not be a need for ongoing active maintenance of the disposal site following closure.

[5-3-95; 20.3.13.1306 NMAC - Rn, 20 NMAC 3.1.13.1306, 04/15/2004]

20.3.13.1307 INSTITUTIONAL INFORMATION:

The institutional information submitted by the applicant shall include:

A. a certification by the federal or state agency which owns the disposal site that the federal or state agency is prepared to accept transfer of the license when the provisions of 20.3.13.1304 NMAC are met, and will assume responsibility for institutional control after site closure and post closure observation and maintenance; and

B. where the proposed disposal site is on land not owned by the federal or a state government, the applicant shall submit evidence that arrangements have been made for assumption of ownership in fee by a federal or a state agency before the department issues a license.

[5-3-95; 20.3.13.1307 NMAC - Rn, 20 NMAC 3.1.13.1307, 04/15/2004]

20.3.13.1308 FINANCIAL INFORMATION:

The financial information shall be sufficient to demonstrate that the financial qualifications of the applicant are adequate to carry out the activities for which the license is sought and meet other financial assurance requirements of 20.3.3 NMAC.

[5-3-95; 20.3.13.1308 NMAC - Rn, 20 NMAC 3.1.13.1308, 04/15/2004]

20.3.13.1309 REQUIREMENTS FOR ISSUANCE OF A LICENSE:

A license for the receipt, possession, and disposal of waste containing or contaminated with radioactive material will be issued by the department upon finding that:

A. the issuance of the license will not constitute an unreasonable risk to the health and safety of the public;

B. the applicant is qualified, by reason of training and experience, to carry out the disposal operations requested in a manner that protects and minimizes danger to life or property;

C. the applicant's proposed disposal site, disposal design, land disposal facility operations, including equipment, facilities and procedures, disposal site closure and post-closure institutional control, are adequate to protect the public health and safety in that they provide reasonable assurance that the general population will be protected from releases of radioactivity, as specified in the performance objective in 20.3.13.1317 NMAC;

D. the applicant's proposed disposal site, disposal site design, land disposal facility operations, including equipment, facilities and procedures, disposal site closure and post-closure institutional control, are adequate to protect the public health and safety in that they will provide reasonable assurance that individual inadvertent intruders are protected in accordance with the performance objective in 20.3.13.1318 NMAC;

E. the applicant's proposed land disposal facility operations, including equipment, facilities and procedures, are adequate to protect the public health and safety in that they will provide reasonable assurance that the standards for radiation protection set out in 20.3.4 NMAC will be met;

F. the applicant's proposed disposal site, disposal site design, land disposal facility operations, disposal site closure and post-closure institutional control are adequate to protect the public health and safety in that they will provide reasonable assurance that long-term stability of the disposed waste and the disposal site will be achieved, and will eliminate to the extent practicable the need for ongoing active maintenance of the disposal site following closure;

G. the applicant's demonstration provides reasonable assurance that the applicable technical requirements of this part (20.3.13 NMAC) will be met;

H. the applicant's proposal for institutional control provides reasonable assurance that such control will be provided for the length of time found necessary to ensure the findings in Subsections C through F of 20.3.13.1309 NMAC, and that the institutional control meets the requirements of 20.3.13.1330 NMAC; and

I. the financial or surety arrangements meet the requirements of this part (20.3.13 NMAC) and 20.3.3 NMAC.

[5-3-95; 20.3.13.1309 NMAC - Rn, 20 NMAC 3.1.13.1309, 04/15/2004]

20.3.13.1310 CONDITIONS OF LICENSES:

A. A license issued under this part (20.3.13 NMAC), or any right there under, may be transferred, assigned or in any manner disposed of, either voluntarily or involuntarily, directly or indirectly, through transfer of control of the license to any person, only if the department finds, after securing full information, that the transfer is in accordance with the provisions of the act and gives its consent, in writing, in the form of a license amendment.

B. The licensee shall submit written statements under oath upon request of the department at any time before termination of the license, to enable the department to determine whether the license should be modified, suspended or revoked.

C. The license will be terminated only on the full implementation of the final closure plan as approved by the department, including post-closure observation and maintenance.

D. The licensee shall be subject to the provisions of the act now or hereafter in effect, and to all rules, regulations, and orders of the board or department. The terms and conditions of the license are subject to amendment, revision or modification by reason of amendments to, or by reason of rules, regulations and orders issued in accordance with the terms of the act.

E. Each person licensed by the department pursuant to the regulations in this part (20.3.13 NMAC) shall confine possession and use of materials to the locations and purpose authorized in the license.

F. The licensee shall not dispose of waste until the department has inspected the land disposal facility and has found it to be in conformance with the description, design and construction in the application for a license.

G. The department may incorporate in any license at the time of issuance, or thereafter, by appropriate rule, regulation or order, additional requirements and conditions with respect to the licensee's receipt, possession, and disposal of waste as it deems appropriate or necessary in order to:

(1) protect health or to minimize danger to life or property; and

(2) require reports and the keeping of records, and to provide for inspections of activities under the license that may be necessary or appropriate to effectuate the purposes of the act and regulations there under.

H. The authority to dispose of wastes expires on the date stated in the license. Any expiration date on a license applies only to the above ground activities and to the authority to dispose of waste. Failure to renew the license shall not relieve the licensee of responsibility for implementing site closure, post-closure observation and transfer of the license to the site owner.

I. Each licensee shall notify the department in writing immediately following the filing of a voluntary or involuntary petition for bankruptcy under any Chapter of Title 11 (bankruptcy) of the United States Code by or against:

(1) the licensee;

(2) an entity (as that term is defined in 11 U.S.C. 101(14)) controlling the licensee or listing the license or licensee as property of the estate; or

(3) an affiliate (as that term is defined in 11 U.S.C. 101(2)) of the licensee.

J. The notification specified in 20.3.13.1310 NMAC shall indicate the bankruptcy court in which the petition for bankruptcy was filed and the date of the filing of the petition.

[5-3-95; 20.3.13.1310 NMAC - Rn, 20 NMAC 3.1.13.1310, 04/15/2004]

20.3.13.1311 APPLICATION FOR RENEWAL OR CLOSURE:

A. An application for renewal or an application for closure under 20.3.13.1302 NMAC must be filed at least 90 days prior to license expiration.

B. Applications for renewal of a license must be filed in accordance with sections 20.3.13.1304 NMAC through 20.3.13.1308 NMAC. Applications for closure must be filed in accordance with 20.3.13.1312 NMAC. Information contained in previous applications, statements, or reports filed with the department under the license may be incorporated by reference if the references are clear and specific.

C. In any case in which a licensee has filed an application in proper form for renewal of a license, the license does not expire until the department has taken final action on the application for renewal.

D. In determining whether a license will be renewed, the department will apply the criteria set forth in 20.3.13.1309 NMAC.

[5-3-95; 20.3.13.1311 NMAC - Rn, 20 NMAC 3.1.13.1311, 04/15/2004]

20.3.13.1312 CONTENTS OF APPLICATION FOR SITE CLOSURE AND STABILIZATION:

A. Prior to final closure of the disposal site, or as otherwise directed by the department, the applicant shall submit an application to amend the license for closure. This closure application shall include a final revision and specific details of the disposal site closure plan included as subpart of the license application submitted under Subsection G of 20.3.13.1305 NMAC that includes each of the following:

(1) any additional geologic, hydrologic or other data pertinent to the long-term containment of emplaced wastes obtained during the operational period;

(2) the results of tests, experiments or any other analyses relating to backfill of excavated areas, closure and sealing, waste migration and interaction with emplacement media, or any other tests, experiments or analysis pertinent to the long-term containment of emplaced waste within the disposal site;

(3) any proposed revision of plans for:

(a) decontamination and/or dismantlement of surface facilities;

(b) backfilling of excavated areas; or

(c) stabilization of the disposal site for post-closure care; and

(4) any significant new information regarding the environmental impact of closure activities and long-term performance of the disposal site.

B. Upon review and consideration of an application to amend the license for closure submitted in accordance with Subsection A of 20.3.13.1312 NMAC, the department shall issue an amendment authorizing closure if there is reasonable assurance that the long-term performance objectives of this part (20.3.13 NMAC) will be met.

[5-3-95; 20.3.13.1312 NMAC - Rn, 20 NMAC 3.1.13.1312, 04/15/2004]

20.3.13.1313 POST-CLOSURE OBSERVATION AND MAINTENANCE.

The licensee shall observe, monitor and carry out necessary maintenance and repairs at the disposal site until the site closure is complete and the license is transferred by the department in accordance with 20.3.13.1314 NMAC. Responsibility for the disposal site must be maintained by the licensee for 5 years. A shorter or longer time period for post-closure observation and maintenance may be established by the department and approved as part of the site closure plan, based on site-specific conditions.

[5-3-95; 20.3.13.1313 NMAC - Rn, 20 NMAC 3.1.13.1313, 04/15/2004]

20.3.13.1314 TRANSFER OF LICENSE:

Following closure and the period of post-closure observation and maintenance, the licensee may apply for an amendment to transfer the license to the disposal site owner. The license shall be transferred when the department finds:

A. that the closure of the disposal site has been made in conformance with the licensee's disposal site closure plan, as amended and approved as part of the license;

B. that reasonable assurance has been provided by the licensee that the performance objectives of this part (20.3.13 NMAC) are met;

C. that any funds and necessary records for care will be transferred to the disposal site owner;

D. that the post-closure monitoring program is operational for implementation by the disposal site owner; and

E. that the federal or state agency which will assume responsibility for institutional control of the disposal site is prepared to assume responsibility and ensure that the institutional requirements found necessary under Subsection H of 20.3.13.1309 NMAC will be met.

[5-3-95; 20.3.13.1314 NMAC - Rn, 20 NMAC 3.1.13.1314, 04/15/2004]

20.3.13.1315 TERMINATION OF LICENSE:

A. Following any period of institutional control needed to meet the requirements found necessary under 20.3.13.1309 NMAC, the licensee may apply for an amendment to terminate the license.

B. This application will be reviewed in accordance with the provisions of 20.3.3.307 NMAC.

C. A license shall be terminated only when the department finds:

(1) that the institutional control requirements found necessary under Subsection H of 20.3.13.1309 NMAC have been met;

(2) that any additional requirements resulting from new information developed during the institutional control period have been met; and

(3) that permanent monuments or markers warning against intrusion have been installed.

[5-3-95; 20.3.13.1315 NMAC - Rn, 20 NMAC 3.1.13.1315, 04/15/2004]

20.3.13.1316 GENERAL REQUIREMENTS:

Land disposal facilities shall be sited, designed, operated, closed and controlled after closure so that reasonable assurance exists that exposure to individuals are within the requirements established in the performance objectives in sections 20.3.13.1317 NMAC through 20.3.13.1320 NMAC.

[5-3-95; 20.3.13.1316 NMAC - Rn, 20 NMAC 3.1.13.1316, 04/15/2004]

20.3.13.1317 PROTECTION OF THE GENERAL POPULATION FROM RELEASE OF RADIOACTIVITY:

Concentrations of radioactive material, which may be released to the general environment in ground water, surface water, air, soil, plants or animals, shall not result in an annual dose exceeding an equivalent of 25 millirems (250 microsieverts) to the whole body, 75 millirems (750 microsieverts) to the thyroid and 25 millirems (250 microsieverts) to any other organ of any member of the public. Reasonable effort should be made to maintain releases of radioactivity in effluents to the general environment as low as reasonably achievable.

[5-3-95; 20.3.13.1317 NMAC - Rn, 20 NMAC 3.1.13.1317, 04/15/2004]

20.3.13.1318 PROTECTION OF INDIVIDUALS FROM INADVERTENT INTRUSION:

Design, operation and closure of the land disposal facility shall ensure protection of any individual inadvertently intruding into the disposal site and occupying the site or contacting the waste at any time after active institutional controls over the disposal sites are removed.

[5-3-95; 20.3.13.1318 NMAC - Rn, 20 NMAC 3.1.13.1318, 04/15/2004]

20.3.13.1319 PROTECTION OF INDIVIDUALS DURING OPERATIONS:

Operations at the land disposal facility shall be conducted in compliance with the standards for radiation protection set out in Part 4 (20.3.4) NMAC, except for releases of radioactivity in effluents from the land disposal facility, which shall be governed by 20.3.13.1317 NMAC. Every reasonable effort should be made to maintain radiation exposures as low as is reasonably achievable.

[5-3-95; 20.3.13.1319 NMAC - Rn, 20 NMAC 3.1.13.1319, 04/15/2004]

20.3.13.1320 STABILITY OF THE DISPOSAL SITE AFTER CLOSURE:

The disposal facility shall be sited, designed, used, operated and closed to achieve long-term stability of the disposal site and to eliminate, to the extent practicable, the need for ongoing active maintenance of the disposal site following closure so that only surveillance, monitoring or minor custodial care are required.

[5-3-95; 20.3.13.1320 NMAC - Rn, 20 NMAC 3.1.13.1320, 04/15/2004]

20.3.13.1321 DISPOSAL SITE SUITABILITY REQUIREMENTS FOR LAND DISPOSAL:

Disposal site suitability for near-surface disposal: The primary emphasis in disposal site suitability is given to isolation of wastes, and to disposal site features that ensure that the long-term performance objectives are met.

A. The disposal site shall be capable of being characterized, modeled, analyzed and monitored.

B. Within the region where the facility is to be located, a disposal site should be selected so that projected population growth and future developments are not likely to affect the ability of the disposal facility to meet the performance objectives of this part (20.3.13 NMAC).

C. Areas having known natural resources which, if exploited, would result in failure to meet the performance objectives of this part (20.3.13 NMAC) shall be avoided.

D. The disposal site shall be generally well-drained and free of areas of flooding or frequent ponding. Waste disposal shall not take place in a 100-year flood plain, coastal high-hazard area or wetland, as defined in Executive Order 11988, "floodplain management guidelines".

E. Upstream drainage areas shall be minimized to decrease the amount of runoff which could erode or inundate waste disposal units.

F. The disposal site shall provide sufficient depth to the water table such that ground water intrusion, perennial or otherwise, into the waste will not occur. The department will consider an exception to this requirement to allow disposal below the water table if it can be conclusively shown that disposal site characteristics will result in molecular diffusion being the predominant means of radionuclide movement and the rate of movement will result in the performance objectives being met. In no case will waste disposal be permitted in the zone of fluctuation of the water table.

G. The hydrogeologic unit used for disposal shall not discharge ground water to the surface within the disposal site.

H. Areas shall be avoided where tectonic processes, such as faulting, folding, seismic activity or vulcanism, may occur with such frequency and extent to significantly affect the ability of the disposal site to meet the performance objectives of this part (20.3.13 NMAC), or preclude any defensible modeling and prediction of long-term impacts.

I. Areas shall be avoided where surface geologic processes, such as mass wasting, erosion, slumping, landsliding or weathering, occur with such frequency and extent to significantly affect the ability of the disposal site to meet the performance objectives of this part (20.3.13 NMAC), or may preclude defensible modeling and prediction of long-term impacts.

J. The disposal site must be located where nearby facilities or activities could adversely impact the ability of the site to meet the performance objectives of this part (20.3.13 NMAC) or significantly mask the environmental monitoring program.

[5-3-95; 20.3.13.1321 NMAC - Rn, 20 NMAC 3.1.13.1321, 04/15/2004]

20.3.13.1322 DISPOSAL SITE DESIGN FOR LAND DISPOSAL:

Disposal site design for near-surface disposal.

A. Site design features shall be directed toward long-term isolation and avoidance of the need for continuing active maintenance after site closure.

B. The disposal site design and operation shall be compatible with the disposal site closure and stabilization plan, and lead to disposal site closure that provides reasonable assurance that the performance objectives will be met.

C. The disposal site shall be designed to complement and improve, where appropriate, the ability of the disposal site's natural characteristics to assure that the performance objectives will be met.

D. Covers shall be designed to minimize to the extent practicable water infiltration, to direct percolating or surface water away from the disposed waste, and to resist degradation by surface geologic processes and biotic activity.

E. Surface features shall direct surface water drainage away from disposal units at velocities and gradients which will not result in erosion that will require ongoing active maintenance in the future.

F. The disposal site shall be designed to minimize to the extent practicable the contact of water with waste during storage, the contact of standing waste with water during disposal, and the contact of percolating or standing water with wastes after disposal.

[5-3-95; 20.3.13.1322 NMAC - Rn, 20 NMAC 3.1.13.1322, 04/15/2004]

20.3.13.1323 LAND DISPOSAL FACILITY OPERATION AND DISPOSAL SITE CLOSURE:

Near-surface disposal facility operation and disposal site closure.

A. Wastes designated as class A, pursuant to 20.3.13.1324 NMAC, shall be segregated from other wastes by placing them in disposal units that are sufficiently separated from disposal units for the other waste classes so that any interaction between class A wastes and other wastes will not result in the failure to meet the performance objectives of this part (20.3.13 NMAC). This segregation is not necessary for class A wastes if they meet the stability requirements in Subsection B of 20.3.13.1325 NMAC.

B. Wastes designated as class C pursuant to 20.3.13.1324 NMAC shall be disposed of so that the top of the waste is a minimum of 5 meters below the top surface of the cover, or must be disposed of with intruder barriers that are designed to protect against an inadvertent intrusion for at least 500 years.

C. Except as provided in Subsection L of 20.3.13.1323 NMAC, only waste classified as class A, B or C shall be acceptable for near-surface disposal. All waste shall be disposed of in accordance with requirements of Subsections D through L of 20.3.13.1323 NMAC.

D. Wastes shall be emplaced in a manner that maintains the package integrity during emplacement, minimizes the void spaces between packages, and permits the void spaces to be filled.

E. Void spaces between waste packages shall be filled with earth or other material to reduce future subsidence within the fill.

F. Waste shall be placed and covered in a manner that limits the radiation dose rate at the surface of the cover to levels that at a minimum will permit the licensee to comply with all provisions of sections 20.3.4.413 NMAC and 20.3.4.414 NMAC at the time the license is transferred pursuant to 20.3.13.1314 NMAC.

G. The boundaries and locations of each disposal unit shall be accurately located and mapped by means of a land survey. Near-surface disposal units shall be marked in such a way that the boundaries of each unit can be easily defined. Three permanent survey marker control points, referenced to United States geological survey (USGS) or national geodetic survey (NGS) survey control stations, shall be established on the site to facilitate surveys. The USGS or NGS control stations shall provide horizontal and vertical controls as checked against USGS or NGS record files.

H. A buffer zone of land shall be maintained between any buried waste and the disposal site boundary and beneath the disposed waste. The buffer zone shall be of adequate dimensions to carry out environmental monitoring activities specified in Subsection D of 20.3.13.1328 NMAC and take mitigative measures if needed.

I. Closure and stabilization measures as set forth in the approved site closure plan shall be carried out as each disposal unit is filled and covered.

J. Active waste disposal operations shall not have an adverse effect on completed closures and stabilization measures.

K. Only wastes containing or contaminated with radioactive material shall be disposed of at the disposal site.

L. Proposals for disposal of waste that is not generally acceptable for near-surface disposal because the waste form and disposal methods must be different, and in general, be more stringent than those specified for class C waste, must be submitted to the department for approval.

[5-3-95; 20.3.13.1323 NMAC - Rn, 20 NMAC 3.1.13.1323, 04/15/2004; A, 04/30/2009]

20.3.13.1324 WASTE CLASSIFICATION:

Classification of waste for near surface disposal.

A. Considerations. Determination of the classification of radioactive waste involves two considerations. First, consideration must be given to the concentration of long-lived radionuclides (and their shorter-lived precursors) whose potential hazard will persist long after such precautions as institutional controls, improved waste form, and deeper disposal have ceased to be effective. These precautions delay the time when long-lived radionuclides could cause exposures. In addition, the magnitude of the potential dose is limited by the concentration and availability of the radionuclide at the time of exposure. Second, consideration must be given to the concentration of shorter-lived radionuclides for which requirements in institutional controls, waste form and disposal methods are effective. Additional consideration must be given to ensure that such waste is not regulated by RCRA.

B. Classes of waste.

(1) Class A waste is waste that is usually segregated from other waste classes at the disposal site. The physical form and characteristics of class A waste must meet the minimum requirements set forth in Subsection A of 20.3.13.1325 NMAC. If class A waste also meets the stability requirements set forth in Subsection B of 20.3.13.1325 NMAC, it is not necessary to segregate the waste for disposal.

(2) Class B waste is waste that must meet more rigorous requirements of waste form to ensure stability after disposal. The physical form and characteristics of class B waste must meet both the minimum and stability requirements set forth in 20.3.13.1325 NMAC.

(3) Class C waste is waste that not only must meet more rigorous requirements on waste form to ensure stability but also requires additional measures at the disposal facility to protect against inadvertent intrusion. The physical form and

characteristics of class C waste must meet both the minimum and stability requirements set forth in 20.3.13.1325 NMAC.

C. Classification determined by long-lived radionuclides. If radioactive waste contains only radionuclides listed in table 1324.1, classification shall be determined as follows:

(1) if the concentration does not exceed 0.1 times the value in table 1324.1, the waste is class A;

(2) if the concentration exceeds 0.1 times the value in table 1324.1 but does not exceed the value in table 1324.1, the waste is class C;

(3) if the concentration exceeds the value in table 1324.1, the waste is not generally acceptable for near-surface disposal; and

(4) for wastes containing mixtures of radionuclides listed in table 1324.1, the total concentration shall be determined by the sum of fractions rule described in Subsection G of 20.3.13.1324 NMAC.

TABLE 1324.1 Radionuclide	
Concentration	Curies per Cubic Meter(M ³)
C-14	8
C-14 in activated metal	80
N-59 in activated metal	220
Nb-94 in activated metal	0.2
Tc-99	3
I-129	0.08

Alpha emitting transuranic nuclides with half life greater than 5 years	¹ 100
Pu-241	¹ 3,500
Cm-242	¹ 20,000
Ra-226	100
<p>NOTE: To convert the Ci/M³ to gigabecquerel (G bq) per cubic meter, multiply the Ci/M³ by 37.</p> <p>¹Units are nanocuries per gram.</p>	

D. Classification determined by short-lived radionuclides. If radioactive waste does not contain any of the radionuclides listed in table 1324.1, classification shall be determined based on the concentration shown in table 1324.2. However, as specified in Subsection F of 20.3.13.1324 NMAC, if radioactive waste does not contain any nuclides listed in either table 1324.1 or table 1324.2, it is class A.

(1) If the concentration does not exceed the value in table 1324.2, column 1, the waste is class A.

(2) If the concentration exceeds the value in table 1324.2, column 1, but does not exceed the value in column 2, the waste is class B.

(3) If the concentration exceeds the value in table 1324.2, column 2, but does not exceed the value in column 3, the waste is class C.

(4) If the concentration exceeds the value in table 1324.2, column 3, the waste is not generally acceptable for near-surface disposal.

(5) For wastes containing mixtures of the nuclides listed in table 1324.2, the total concentration shall be determined by the sum of fractions rule described in Subsection G of 20.3.13.1324 NMAC.

TABLE 1324.2

Radionuclide	Concentration, Curies Per Cubic Meter		
	Col. 1	Col. 2	Col. 3
Total of all nuclides with less than 5 year Half-life	700	(¹)	(¹)
H-3	40	(¹)	(¹)
Co-60	700	(¹)	(¹)
Ni-63	3.5	70	700
Ni-63 in activated metal	35	700	7000
Sr-90	0.04	150	7000
Cs-137	1	44	4600
NOTE: To convert the Ci/M ³ to gigabecquerel (GBq) per cubic meter, multiple the C/M ³ by 37.			

E. Classification determined by both long and short-lived radionuclides. If radioactive waste contains a mixture of radionuclides, some of which are listed in table 1324.1, and some of which are listed in table 1324.2, classification shall be determined as follows.

(1) If the concentration of a nuclide listed in table 1324.1 does not exceed 0.1 times the value listed in table 1324.1, the class shall be that determined by the concentration of nuclides in table 1324.2.

(2) If the concentration of a nuclide listed in table 1324.1 exceeds 0.1 times the value listed in table 1324.1 but does not exceed the value in table 1324.1, the waste shall be class C, provided the concentration of nuclides listed in table 1324.2 does not exceed the value shown in column 3 of table 1324.2.

F. Classification of wastes with radionuclides, other than those listed in tables 1324.1 and 1324.2. If radioactive waste does not contain any nuclides listed in either table 1324.1 or table 1324.2, it is class A.

G. The sum of the fractions rule for mixtures of radionuclides. For determining classification for waste that contains a mixture of radionuclides, it is necessary to determine the sum of fractions by dividing each nuclide's concentration by the appropriate limit and adding the resulting values. The appropriate limits must all be taken from the same column of the same table. The sum of the fractions for the column must be less than 1.0 if the waste class is to be determined by that column. Example: A waste contains Sr-90 in a concentration of 50 Ci/m³ and Cs-137 in a concentration of 22 Ci/m³. Since the concentrations both exceed the values in column 1 of table 1324.2, they must be compared to column 2 values. For Sr-90 fraction $50/150=0.33$; for Cs-137 fraction, $22/44=0.5$; the sum of the fractions = 0.83. Since the sum is less than 1.0, the waste is class B.

H. Determination of concentrations in wastes. The concentration of a radionuclide may be determined by indirect methods, such as use of scaling factors which relate the inferred concentration of one radionuclide to another that is measured, or radionuclide material accountability, if there is reasonable assurance that the indirect methods can be correlated with actual measurements. The concentration of a radionuclide may be averaged over the volume of the waste, or weight of the waste if the units are expressed as nanocuries per gram.

[5-3-95; 20.3.13.1324 NMAC - Rn, 20 NMAC 3.1.13.1324, 04/15/2004]

20.3.13.1325 WASTE CHARACTERISTICS:

A. The following are minimum requirements for all classes of waste and are intended to facilitate handling at the disposal site and provide protection of health and safety of personnel at the disposal site.

(1) Waste must not be packaged for disposal in cardboard or fiberboard boxes.

(2) Liquid waste must be solidified or packaged in sufficient absorbent material to absorb twice the volume of the liquid.

(3) Solid waste containing liquid shall contain as little free standing and non-corrosive liquid as is reasonably achievable, but in no case shall the liquid exceed 1 percent of the volume.

(4) Waste must not be readily capable of detonation, or of explosive decomposition or reaction at normal pressures and temperatures, or of explosive reaction with water.

(5) Waste must not contain, or be capable of generating, quantities of toxic gases, vapors or fumes harmful to persons transporting, handling or disposing of the waste. This does not apply to radioactive gaseous waste packaged in accordance with Paragraph (7) of Subsection A of 20.3.13.1325 NMAC.

(6) Waste must not be pyrophoric: Pyrophoric materials contained in waste shall be treated, prepared and packaged to be nonflammable.

(7) Waste in a gaseous form must be packaged at a pressure that does not exceed 1.5 atmosphere at 20 degrees C. Total activity must not exceed 100 curies per container.

(8) Waste containing hazardous, biological, pathogenic, or infectious material must be treated to reduce to the maximum extent practicable the potential hazard from the non-radiological materials.

(9) All RCRA regulations must be met.

B. The requirements in this section are intended to provide stability of the waste. Stability is intended to ensure that the waste does not structurally degrade and affect overall stability of the site through slumping, collapse or other failure of the disposal unit, and thereby lead to water infiltration. Stability is also a factor in limiting exposure to an inadvertent intruder, since it provides a recognizable and non-dispersible waste.

(1) Waste must have structural stability: A structurally stable waste form will generally maintain its physical dimensions and its form under the expected disposal conditions, such as weight of overburden and compaction equipment, the presence of moisture, and microbial activity and internal factors, such as radiation effects and chemical changes. Structural stability can be provided by the waste form itself, processing the waste to a stable form, or placing the waste in a disposal container or structure that provides stability after disposal.

(2) Notwithstanding the provisions in Paragraphs (2) and (3) of Subsection A of 20.3.13.1325 NMAC, liquid wastes, or wastes containing liquid, must be converted into a form that contain as little free standing and non-corrosive liquid as is reasonably achievable, but in no case shall the liquid exceed 1 percent of the volume of the waste when the waste is in a disposal container designed to ensure stability, or 0.5 percent of the volume of the waste for waste processed to a stable form.

(3) Void spaces within the waste and between the waste and its package must be reduced to the extent practicable.

[5-3-95; 20.3.13.1325 NMAC - Rn, 20 NMAC 3.1.13.1325, 04/15/2004]

20.3.13.1326 LABELING:

Each package of waste must be clearly labeled to identify whether it is class A waste, class B waste, or class C waste, in accordance with 20.3.13.1324 NMAC.

[5-3-95; 20.3.13.1326 NMAC - Rn, 20 NMAC 3.1.13.1326, 04/15/2004]

20.3.13.1327 ALTERNATIVE REQUIREMENTS FOR WASTE CLASSIFICATION AND CHARACTERISTICS:

The department may, upon request or on its own initiative, authorize other provisions for the classification and characteristics of waste on a specific basis, if, after evaluation of the specific characteristics of the waste, disposal site and method of disposal, it finds reasonable assurance of compliance with the performance objectives in sections 20.3.13.1316 NMAC through 20.3.13.1320 NMAC.

[5-3-95; 20.3.13.1327 NMAC - Rn, 20 NMAC 3.1.13.1327, 04/15/2004]

20.3.13.1328 ENVIRONMENTAL MONITORING:

A. At the time a license application is submitted, the applicant shall have conducted a preoperational monitoring program to provide basic environmental data on the disposal site characteristics. The applicant shall obtain information about the ecology, meteorology, climate, hydrology, geology, geochemistry and seismology of the disposal site. For those characteristics that are subject to seasonal variation, data must cover at least a twelve-month period.

B. During the land disposal facility site construction and operation, the licensee shall maintain an environmental monitoring program. Measurements and observations must be made and recorded to provide data to evaluate the potential health and environmental impacts during both the construction and the operation of the facility, and to enable the evaluation of long-term effects and the need for mitigative measures. The monitoring system must be capable of providing early warning of releases of radioactive materials from the disposal site before they leave the site boundary.

C. After the disposal site is closed, the licensee responsible for post-operational surveillance of the disposal site shall maintain a monitoring system based on the operation history, and the closure and stabilization of the disposal site. The monitoring system must be capable of providing early warning of releases of radioactive materials from the disposal site before they leave the site boundary.

D. The licensee shall have plans for taking corrective measures if the environmental monitoring program detects migration of radioactive materials which would indicate that the performance objectives may not be met.

[5-3-95; 20.3.13.1328 NMAC - Rn, 20 NMAC 3.1.13.1328, 04/15/2004]

20.3.13.1329 ALTERNATIVE REQUIREMENTS FOR DESIGN AND OPERATIONS:

The department may, upon request or on its own initiative, authorize provisions other than those set forth in sections 20.3.13.1322 NMAC through 20.3.13.1328 NMAC for the segregation and disposal of waste, and for the design and operation of a land disposal facility on a specific basis, if it finds reasonable assurance of compliance with the performance objectives of this part (20.3.13 NMAC).

[5-3-95; 20.3.13.1329 NMAC - Rn, 20 NMAC 3.1.13.1329, 04/15/2004]

20.3.13.1330 INSTITUTIONAL REQUIREMENTS:

A. Land ownership. Disposal of waste received from other persons may be permitted only on land owned in fee by the federal or a state government.

B. Institutional control. The land owner or custodial agency shall conduct an institutional control program to physically control access to the disposal site following transfer of control of the disposal site from the disposal site operator. The institutional control program shall also include, but not be limited to, conducting an environmental monitoring program at the disposal site, periodic surveillance, minor custodial care and other requirements as determined by the department, and shall include administration of funds to cover the costs for these activities. The period of controls will be determined by the department, but controls may not be relied upon for more than 100 years following transfer of control of the disposal site to the owner.

[5-3-95; 20.3.13.1330 NMAC - Rn, 20 NMAC 3.1.13.1330, 04/15/2004]

20.3.13.1331 APPLICANT QUALIFICATIONS AND ASSURANCES:

Each applicant shall show that it either possesses the necessary funds or has reasonable assurance of obtaining the necessary funds, or by a combination of the two, to cover the estimated costs of conducting all licensed activities over the planned operating life of the project, including costs of construction and disposal.

[5-3-95; 20.3.13.1331 NMAC - Rn, 20 NMAC 3.1.13.1331, 04/15/2004]

20.3.13.1332 FUNDING FOR DISPOSAL SITE CLOSURE AND STABILIZATION:

A. The applicant shall provide assurance prior to the commencement of operations that sufficient funds will be available to carry out disposal site closure and stabilization, including:

- (1) decontamination of dismantlement of land disposal facility structures; and

(2) closure and stabilization of the disposal site so that, following transfer of the disposal site to the site owner, the need for ongoing active maintenance is eliminated to the extent practicable and only minor custodial care, surveillance and monitoring are required; these assurances shall be based on department-approved cost estimates reflecting the department-approved plan for disposal site closure and stabilization; the applicant's cost estimates must take into account total costs that would be incurred if an independent contractor were hired to perform the closure and stabilization work;

B. in order to avoid unnecessary duplication and expense, the department will accept financial sureties that have been consolidated with ear-marked financial or surety arrangements established to meet requirements of federal or other state agencies for such decontamination, closure, and stabilization; the department will accept these arrangements only if they are considered adequate to satisfy the requirements of 20.3.13.1333 NMAC, and that the portion of the surety which covers the closure of the disposal site is clearly identified and committed for use in accomplishing these activities;

C. the licensee's financial or surety arrangement shall be submitted annually for review by the department to assure that sufficient funds will be available for completion of the closure plan;

D. the amount of the licensee's financial or surety arrangement shall change in accordance with changes in the predicted costs of closure and stabilization; factors affecting closure and stabilization cost estimates include inflation, increases in the amount of disturbed land, changes in engineering plans, closure and stabilization that has already been accomplished, and any other conditions affecting costs; the financial or surety arrangement shall be sufficient at all times to cover the costs of closure and stabilization of the disposal units that are expected to be used before the next license renewal;

E. the financial or surety arrangement shall be written for a specified period of time and shall be automatically renewed unless the person who issues the surety notifies the department, the beneficiary (the site owner) and the principal (the licensee), not less than 90 days prior to the renewal date, of its intention not to renew; in such situations, the licensee must submit a replacement surety within 30 days after notification of cancellation; if the licensee fails to provide a replacement surety acceptable to the department, the beneficiary may collect on the original surety;

F. proof of forfeiture shall not be necessary to collect the surety so that, in the event that the licensee could not provide an acceptable replacement surety within the required time, the surety shall be automatically collected prior to its expiration; the conditions described above shall be clearly stated on any surety instrument;

G. financial or surety arrangements generally acceptable to the department include surety bonds, cash deposits, certificates of deposit, deposits of government securities,

escrow accounts, irrevocable letters or lines of credit, trust funds and combinations of the above, or such other types of arrangements as may be approved by the department; self-insurance, or any arrangement which essentially constitutes self-insurance, will not satisfy the surety requirements for private sector applicants; and

H. the licensee's financial or surety arrangement shall remain in effect until the closure and stabilization program has been completed and approved by the department and the license has been transferred to the site owner.

[5-3-95; 20.3.13.1332 NMAC - Rn, 20 NMAC 3.1.13.1332, 04/15/2004]

20.3.13.1333 FINANCIAL ASSURANCE FOR INSTITUTIONAL CONTROLS:

A. Prior to the issuance of the license, the applicant shall provide for department approval a binding arrangement between the applicant and the disposal site owner that ensures that sufficient funds will be available to cover the costs of monitoring and any required maintenance during the institutional control period. The binding arrangement shall be reviewed annually by the department to ensure that changes in inflation, technology and disposal facility operations are reflected in the arrangements.

B. Subsequent changes to the binding arrangements specified in Subsection A of 20.3.13.1334 NMAC relevant to institutional control shall be submitted to the department for prior approval.

[5-3-95; 20.3.13.1333 NMAC - Rn, 20 NMAC 3.1.13.1333, 04/15/2004]

20.3.13.1334 MAINTENANCE OF RECORDS, REPORTS AND TRANSFERS:

A. Each licensee shall maintain any records and make any reports in connection with the licensed activities as may be required by the conditions of the license or by the rules, regulations and orders of the department.

B. Records which are required by these regulations or by license conditions shall be maintained for a period specified by the appropriate regulations or by license condition. If a retention period is not otherwise specified, these records must be maintained and transferred to the officials specified in Subsection D of 20.3.13.1334 NMAC as a condition of license termination, unless the department otherwise authorizes their disposition.

C. Records which shall be maintained pursuant to this part (20.3.13 NMAC) may be the original or a reproduced copy or microfilm if this reproduced copy or microfilm is capable of producing a copy that is clear and legible at the end of the required retention period. The record may also be stored in electronic media with the capability for producing legible, accurate and complete records during the required retention period. Records, such as letters, drawings and specifications, must include all pertinent

information such as stamps, initials and signatures. The licensee shall maintain adequate safeguards against tampering with and loss of records.

D. If there is a conflict between the department's regulations in this part (20.3.13 NMAC), license condition, or other written department approval or authorization pertaining to the retention period for the same type of record, the longest retention period specified takes precedence.

E. Notwithstanding Subsections A through D of 20.3.13.1334 NMAC, the licensee shall record the location and the quantity of radioactive wastes contained in the disposal site and transfer these records upon license termination to the chief executive of the nearest municipality, the chief executive of the county in which the facility is located, the county zoning board or land development and planning agency, the state governor and other state, local, and federal governmental agencies as designated by the department at the time of license termination.

F. Following receipt and acceptance of a shipment of radioactive waste, the licensee shall record the date that the shipment is received at the disposal facility, the date of disposal of the waste, a traceable shipment manifest number, a description of any engineered barrier or structural overpack provided for disposal of the waste, the location of disposal at the disposal site, the containment integrity of the waste disposal containers as received, any discrepancies between materials listed on the manifest and those received, the volume of any pallets, bracing, or other shipping or onsite generated materials that are contaminated, and are disposed of as contaminated or suspect materials, and any evidence of leaking or damaged disposal containers or radiation or contamination levels in excess of limits specified in U.S. department of transportation and department regulations. The licensee shall briefly describe any repackaging operations of any of the disposal containers included in the shipment, plus any other information required by the department as a license condition. The licensee shall retain these records until the department transfers or terminates the license that authorizes the activities described in this section.

G. Each licensee authorized to dispose of radioactive waste received from other persons shall file a copy of its financial report or a certified financial statement annually with the department in order to update the information base for determining financial qualifications.

H. Each licensee authorized to dispose of waste materials received from other persons, pursuant to this part (20.3.13 NMAC), shall submit annual reports to the department. Reports shall be submitted by the end of the first calendar quarter of each year for the preceding year.

(1) The reports shall include:

(a) specification of the quantity of each of the principal radionuclides released to unrestricted areas in liquid and in airborne effluents during the preceding year;

- (b) the results of the environmental monitoring program;
- (c) a summary of licensee disposal unit survey and maintenance activities;
- (d) a summary, by waste class, of activities and quantities of radionuclides disposed of;
- (e) any instances in which observed site characteristics were significantly different from those described in the application for a license; and
- (f) any other information the department may require.

(2) If the quantities of radioactive materials released during the reporting period, monitoring results, or maintenance performed are significantly different from those expected in the materials previously reviewed as part of the licensing action, the report must specifically address those differences.

I. Any transfer of radioactive materials by the licensee is subject to the requirements in 20.3.3.323 NMAC of these regulations.

J. In addition to the other requirements of this section, the licensee shall store, or have stored manifest and other information pertaining to receipt and disposal of radioactive waste in an electronic record keeping system.

(1) The manifest information that must be electronically stored is:

(a) that required in 20.3.4.466 NMAC of these regulations, with the exception of shipper and carrier telephone numbers, and shipper and consignee certifications; and

(b) that information required in Subsection F of 20.3.13.1334 NMAC.

(2) As specified in facility license conditions, the licensee shall report the stored information, or subsets of this information, on a computer-readable medium.

[5-3-95, N, 7-30-99; 20.3.13.1334 NMAC - Rn, 20 NMAC 3.1.13.1334, 04/15/2004]

20.3.13.1335 TESTS ON LAND DISPOSAL FACILITIES:

Each licensee shall perform, or permit the department to perform, any tests the department deems appropriate or necessary for the administration of the regulations in this part (20.3.13 NMAC), including, but not limited to, tests of:

A. wastes;

B. facilities used for the receipt, storage, treatment, handling or disposal of wastes;

C. radiation detection and monitoring instruments; or

D. other equipment and devices used in connection with the receipt, possession, handling, treatment, storage or disposal of waste.

[5-3-95, N, 7-30-99; 20.3.13.1335 NMAC - Rn, 20 NMAC 3.1.13.1335, 04/15/2004]

20.3.13.1336 DEPARTMENT INSPECTIONS OF LAND DISPOSAL FACILITIES:

A. Each licensee shall afford to the department at all reasonable times, opportunity to inspect waste not yet disposed of and the premises, equipment, operations and facilities in which wastes are received, possessed, handled, treated, stored or disposed.

B. Each licensee shall make available to the department for inspection, upon reasonable notice, records kept by the licensee pursuant to these regulations. Authorized representatives of the department may copy and take away copies of, for the department's use, any record required to be kept pursuant to these regulations.

[5-3-95; 20.3.13.1336 NMAC - Rn, 20 NMAC 3.1.3.1336, 04/15/2004]

PART 14: NATURALLY OCCURRING RADIOACTIVE MATERIALS (NORM) IN THE OIL AND GAS INDUSTRY

20.3.14.1 ISSUING AGENCY:

Environmental Improvement Board.

[Recompiled 11/27/01]

20.3.14.2 SCOPE:

A. The regulations of this Subpart [Part] and other applicable subparts of these regulations apply to any person who engages in the extraction, transfer, transport, storage or disposal of NORM, or in the enhancement of NORM, in the oil and gas industry by altering the chemical properties, physical state or concentration of the NORM or its potential exposure pathways to humans.

B. The regulations of this Subpart [Part] and other applicable subparts of these regulations also apply to sludges and scale deposits in tubulars and equipment and to scale deposits from cleaning added to the environment. The regulations of this Subpart [Part] and other applicable subparts of these regulations also apply to NORM deposits in soil, water and the environment unless otherwise regulated.

C. The regulations of this Subpart and other applicable subparts of these regulations also address Regulated NORM management, transfer, storage, and

disposal with regard to facilities involved in storage and/or cleaning of tubulars and equipment.

[8-2-95; 20.3.14.2 NMAC – Rn, 20 NMAC 3.1.14.1401, Recompiled 11/27/01]

20.3.14.3 STATUTORY AUTHORITY:

[RESERVED]

20.3.14.4 DURATION:

[RESERVED]

20.3.14.5 EFFECTIVE DATE:

[RESERVED]

20.3.14.6 OBJECTIVE — PURPOSE:

This Subpart [Part] establishes radiation protection standards for the possession, use, transfer, transport, storage and disposal of naturally occurring radioactive materials (NORM) associated with the oil and gas industry, and which are not subject to regulation under the Atomic Energy Act of 1954, as amended. Nothing in these regulations relieves a licensee from abiding by the regulations of the New Mexico Water Quality Control Commission, other applicable state and federal laws and regulations including those of the New Mexico Oil Conservation Commission, or the terms and conditions of the Rocky Mountain Low Level Radioactive Waste Compact.

[8-2-95; 20.3.14.6 NMAC – Rn, 20 NMAC 3.1.14.1400, Recompiled 11/27/01]

20.3.14.7 DEFINITIONS:

A. "Accessible point" means any external location on a piece of equipment, or place on a facility where NORM or Regulated NORM may be present. This includes any internal location which can be reached through an opening, by removal of a plate, lid or hatch or which is made accessible as a result of structural modification;

B. "Centralized facility" means a facility that is operated by one person or more than one person under an operating agreement for the purpose of disposing of Regulated NORM generated exclusively by that person or persons. This definition does not include plugged and abandoned wells and-or Underground Injection Control (UIC) wells used for disposal of Regulated NORM as provided in 1407.D.3 and 4,[Paragraph (3) and (4), Subsection D., Section 1407 of 20.3.14.1407 NMAC].

C. "Commercial facility" means any facility that receives compensation to receive, store, treat and-or dispose of Regulated NORM pursuant to applicable Department and Division rules and regulations;

D. "Decontamination" means the removal of media containing Regulated NORM from equipment or facilities solely for the intended purpose of reducing levels of radiation to levels below Regulated NORM levels in order to release equipment, materials, or land for unrestricted use in accordance with these regulations;

E. "Department" means the New Mexico Environment Department or its designated representative(s);

F. "Division" means the New Mexico Oil Conservation Division or its designated representative(s);

G. "Equipment" means tubulars (i.e., pipe), wellheads, separators, tanks, condensers, or any other related apparatus that have been in contact with produced gas or fluids associated with the oil and gas industry;

H. "Facility" means any land or structures, including appurtenances, and improvements on land or water used in or related to the oil and gas industry;

I. "General environment" means the total terrestrial, atmospheric, and aquatic environments outside the boundary of a facility;

J. "Naturally occurring radioactive material (NORM)" means any nuclide which is radioactive in its natural physical state (i.e., not manmade) but does not include byproduct, source or special nuclear material;

K. "Oil and Gas Industry" means any person(s) engaged in exploring, producing, gathering, trading, servicing, supplying, refining, and transporting of crude hydrocarbons, or their by-products and waste, or facilities associated with such activities;

L. "Produced water" means those waters produced in conjunction with the production of crude oil and-or natural gas and commonly collected at field storage, processing or disposal facilities, including, but not limited to: lease tanks, commingled tank batteries, burn pits, LACT units, dehydrators and community or lease salt water disposal systems, and which may be collected at gas processing plants, pipeline drips and other processing or transportation facilities;

M. "Product" means something produced, made, manufactured, refined, or beneficiated;

N. "Regulated NORM" means NORM contained in any oil-field soils, equipment, sludges or any other materials related to oil-field operations or processes exceeding the radiation levels specified in 1403 [Section 1403 of 20.3.14.1403 NMAC];

O. "Storage" means the collection and containment of Regulated NORM for the purpose of and prior to disposal. Storage does not include the accumulation of Regulated NORM in operating vessels; and

P. "Treatment" means any commercial method, technique, or process, including neutralization, designed to change the physical, chemical form or composition of Regulated NORM. This definition does not refer to treatment as defined in the Resource Conservation Recovery Act (RCRA), nor does it refer to processing of Regulated NORM for disposal in plugged and abandoned wells.

[8-2-95; 20.3.14.7 NMAC – Rn, 20 NMAC 3.1.14.1402, Recompiled 11/27/01]

20.3.14.9-20.3.14.1402 [RESERVED]

20.3.14.1403 EXEMPTIONS:

A. For release for unrestricted use, persons who receive, possess, use, process, transfer, distribute, transport, store or dispose of NORM are exempt from the requirements of these regulations if: the NORM present is at concentrations of 30 picocuries per gram or less of radium 226, above background, or 150 picocuries per gram or less of any other NORM radionuclide, above background, in soil, in 15 cm layers, averaged over 100 square meters. Samples should be taken if gamma radiation readings (mR/hr) are equal to or exceed twice background readings when surveyed at a distance of 1 cm from the surface of the soil, in accordance with Department guidelines.

B. The possession and use of natural gas and natural gas products and crude oil and crude oil products as fuels are exempt from the requirements of this Subpart [Part].

C. NORM not otherwise exempted and equipment from oil, gas, and water production containing NORM are exempt from the requirements of this Subpart if the maximum radiation exposure reading at any accessible point does not exceed 50 microroentgens per hour (mR/hr) (0.5 mSv/hr), including background radiation levels. Sludges and scales contained in oil, gas and water production equipment are exempt from the requirements of this Subpart if the maximum radiation exposure reading within 1 cm of the surface of the sludge or scale does not exceed 50 microroentgens per hour (50 mR/hr) (0.5 mSv/hr), including background radiation levels. If the radiation readings exceed 50 mR/hr (0.5 mSv/hr), removable sludges and scales are exempt from the requirements of these regulations if the concentration of Radium 226, in a representative sample, does not exceed 30 picocuries per gram.

D. NORM not otherwise exempted and equipment from gas processing, fractionation, and dry gas distribution containing NORM are exempt from the

requirements of this Subpart [Part] if the removable surface NORM contamination does not exceed 1000 dpm/100 cm² and otherwise conforms with the requirements of 1403.A [Subsection A., Section 1403 of 20.3.14.1403 NMAC]. Removable scale from gas processing fractionating, and dry gas distribution is exempt from the requirements of this Subpart [Part] if the concentration of Lead 210, in a representative sample, does not exceed 150 picocuries per gram.

E. Produced water is exempt from the requirements of these regulations if it is reinjected into a Class I or Class II Underground Injection Control (UIC) well permitted by the Division and/or stored or disposed in a double, synthetically lined surface impoundment permitted by the Division.

[8-2-95; 20.3.14.1403 NMAC – Rn, 20 NMAC 3.1.14.1403, Recompiled 11/27/01]

20.3.14.1404 RADIATION SURVEY INSTRUMENTS:

A. Radiation survey instruments used to determine exemptions pursuant to 1403.C [Subsection C., Section 1403 of 20.3.14.1403 NMAC] shall be capable of measuring from 1 microrentgen per hour through at least 500 microrentgens per hour. Laboratory analytical instrumentation used in accordance with 1406 [Section 1406 of 20.3.14.1406 NMAC] must have a radiation detection system with an efficiency such that it is capable of measuring 1000 dpm/100 cm² on filter paper. The efficiency of portable survey instruments must be such that when cpm is equated to dpm, the 1000 dpm/100cm² limit is not exceeded.

B. Radiation survey instruments used to make surveys required by this Subpart shall be calibrated to an appropriate standard and operable according to Department guidelines for operability checks on a regular basis.

C. Each radiation survey instrument shall be calibrated:

- (1) by a qualified person or by the manufacturer provided the person or the manufacturer is certified by the Department;
- (2) at intervals not to exceed twelve (12) months and after each instrument servicing other than battery replacement; and
- (3) to demonstrate an accuracy within plus or minus 20 percent.

D. Records of required calibrations shall be maintained for Department inspection for five years after the calibration date.

[8-2-95; 20.3.14.1404 NMAC – Rn, 20 NMAC 3.1.14.1404, Recompiled 11/27/01]

20.3.14.1405 PROTECTION OF WORKERS DURING OPERATIONS:

A. All general and specific licensees shall conduct operations:

(1) in compliance with the standards for radiation protection set forth in Subparts 4 and 10 [Parts 4 and 10], except for releases of radioactivity in effluents, which shall be regulated under 1406 [Section 1406 of 20.3.14.1406 NMAC], and disposal, which shall be regulated under 1407 [Section 1407 of 20.3.14.1407 NMAC], and;

(2) pursuant to a Worker Protection Plan prepared according to applicable Department guidelines and maintained by the licensee and made available upon request of employees or representatives of the Department. The licensee shall post official notices to employees in areas where employees will have sufficient access to and notification of the Plan.

B. The Department will prepare and issue worker protection guidelines and notices to employees no later than six (6) months from the effective date of these regulations. The Worker Protection Plan prepared by the licensee pursuant to 1405.A.2 [Paragraph (2), Subsection A., Section 1405 of 20.3.14.1405 NMAC] shall be no less stringent than the Department's worker protection guidelines.

C. Licensees shall incorporate hazard identification and training into their hazard communication programs as required by the Occupational Safety and Health Administration (OSHA) or by the Board pursuant to the Occupational Health and Safety Act, and as required under Subpart [Part] 10 for personnel working on or around equipment and materials that contain Regulated NORM. Regulated NORM material that has been removed from equipment and containerized shall be labeled as per the requirement of 430 and 431 [Sections 430 and 431 of 20.3.4.430 and 431 NMAC] .

D. Licensees operating at more than one location may prepare a single Worker Protection Plan to cover all facilities and operations in New Mexico, provided that the Plan is readily accessible to all employees.

E. The total radiation dose in any one year to any General Licensee employee from Regulated NORM shall not exceed the standards for exposure to members of the public as set forth in Subpart [Part] 4. Employees engaged in an activity subject to a Specific License as required by 1411 [Section 1411 of 20.3.14.1411 NMAC], shall not exceed the limits for radiation workers as specified in Subpart [Part] 4. Any worker engaged in an activity subject to a Specific License and who is likely to receive in one year an accumulative dose in excess of 500 mrem (5 mSv) shall be monitored.

[8-2-95; 20.3.14.1405 NMAC – Rn, 20 NMAC 3.1.14.1405, Recompiled 11/27/01]

20.3.14.1406 PROTECTION OF THE GENERAL POPULATION FROM RELEASES OF RADIOACTIVITY:

A. All licensees shall conduct operations in compliance with the standards for radiation protection set forth in Subpart [Part] 4 and in such a manner that concentrations of radioactive materials which are released to the general environment do not result in an annual dose exceeding 100 mrem (1 mSv) in a year. The dose in any unrestricted area from external sources shall not exceed 2 mrem (20 mSv) in any one hour. If the licensee permits members of the public to have access to restricted areas the limits for members of the public continue to apply to those individuals.

B. All licensees shall assure that any equipment released for unrestricted use shall not exceed the exposure limits specified in 1403 [Section 1403 of 20.3.14.1403 NMAC].

C. The licensee shall provide the recipient of transferred equipment, the inside of which is not accessible through any opening, plate, lid or hatch, with a notice that required surveys have been performed, that equipment meets the standards of 1403.C or D [Subsections C. or D., Section 1403 of 20.3.14.1403 NMAC], and that further surveys may be necessary if the equipment is structurally modified following transfer. The licensee shall retain copies of all notices of transfer.

[8-2-95; 20.3.14.1406 NMAC – Rn, 20 NMAC 3.1.14.1406, Recompiled 11/27/01]

20.3.14.1407 DISPOSAL AND TRANSFER OF REGULATED NORM FOR DISPOSAL:

A. Disposal of Regulated NORM on or near the surface of the ground shall be done pursuant to a general license issued under 1410 [Section 1410 of 20.3.14.1410 NMAC] and Subpart [Part] 13 and pursuant to NMOCD Rule 711. A general licensee may blend or disc Regulated NORM contaminated soils in place provided that:

(1) the soils were contaminated at that site and prior to promulgation of this Subpart [Part]; and

(2) the limits established in 1403.A [Subsection A., Section 1403 of 20.3.14.1403 NMAC] are met.

B. Disposal of Regulated NORM in nonretrieved flowlines and pipelines, in plugged and abandoned wells or by deep-well injection shall be done pursuant to a general license issued under 1410 [Section 1410 of 20.3.14.1410 NMAC] and pursuant to applicable Division rules and regulations.

C. All licensees shall store, transfer and/or dispose of Regulated NORM in accordance with the Worker Protection Plan required under 1405 [Section 1405 of 20.3.14.1405 NMAC]. All requirements of this Worker Protection Plan shall be available for inspection by the Department.

D. Regulated NORM shall only be disposed by the methods enumerated below, except that the Department will consider and approve alternative methods of disposal if the applicant demonstrates that such alternative method(s) will protect the environment,

public health and fresh waters, and otherwise is consistent with this Subpart [Part], with other provisions of this Part and with applicable Division rules and regulations.

(1) Disposal in Non-retrieved Flowlines and Pipelines: Non-retrieved flowlines and pipelines which are buried are authorized by the Department to be left in place in accordance with Division rules and regulations.

(2) Disposal at Commercial and Centralized Facilities: Before a commercial or centralized facility may accept Regulated NORM for treatment and/or disposal, the operator of the facility shall obtain both a specific license issued by the Department pursuant to the requirements of this Subpart [Part] and a permit from the Division, and must be in compliance with Subpart [Part] 13.

(3) Disposal in Plugged and Abandoned Wells: The Department allows downhole disposal of NORM solids and NORM contaminated equipment in wells which are to be plugged and abandoned, provided such procedures are performed in a manner to protect the environment, public health, and fresh waters; are conducted in accordance with applicable Division rules and regulations; and occur below the lowermost underground source of drinking water. The allowable form shall be media-laden fluid with a minimum density of nine (9.0) pounds per gallon and with the allowable volume for disposal dependent on the plug location required for a specific well.

(4) Disposal by Injection: The Department allows the injection of Regulated NORM into Underground Injection Control (UIC) Class I nonhazardous and Class II wells pursuant to NMOCD rules and regulations. All UIC Class I nonhazardous and Class II injection wells shall be permitted by the Division.

(5) Other Disposal Methods: Each person subject to general or specific license requirements shall manage and dispose of Regulated NORM:

(a) in accordance with the applicable requirements of Subparts [Parts] 4 and 10;

(b) in accordance with the applicable requirements of the U.S. Environmental Protection Agency for disposal of such wastes;

(c) by transfer of the wastes for disposal to a land disposal facility licensed by the U.S. Nuclear Regulatory Commission, an Agreement State, or a Licensing State; or

(d) in accordance with alternate methods authorized in this Subpart [Part] or by the Department in writing upon application or upon the Department's initiative and in accordance with Division Regulations.

20.3.14.1408 RADIATION SURVEY REQUIREMENTS:

A. Persons subject to the general license established in 1410.A [Subsection A., Section 1410 of 20.3.14.1410 NMAC] shall conduct radiation surveys of equipment and facilities in their control or possession and maintain that information on file. Surveys would be conducted for all of the following events.

(1) Prior to working on facilities or equipment where potential release of regulated NORM could occur or where workers could be exposed to regulated NORM.

(2) Prior to any transfer of equipment to another operator, the general public, or a salvage firm.

(3) Prior to the movement or removal of equipment from any facility or facility reclamation.

(4) At facilities where pipe has been cleaned.

(5) At facilities where materials are known to have been spread, spilled or stockpiled.

B Surveys required by this Subpart shall be conducted using instruments that meet the requirements of 1404 [Section 1404 of 20.3.14.1404 NMAC].

C. Surveys required by this Subpart shall be performed pursuant to guidelines issued by the Department and by persons who possess the knowledge and/or training to perform such surveys pursuant to Department and Division Guidelines.

[8-2-95; 20.3.14.1408 NMAC – Rn, 20 NMAC 3.1.14.1408, Recompiled 11/27/01]

20.3.14.1409 REQUIREMENTS FOR STORAGE OF REGULATED NORM:

A. Storage of Regulated NORM, whether under a general or specific license, will be done in such a manner as to prevent, to the extent practicable, release of NORM to unrestricted areas, and otherwise to protect human health and the environment.

B. Storage of Regulated NORM will be done in such a manner as to comply with the limits set forth in 413 and 425 [Sections 413 and 425 of 20.3.4.413 and 435 NMAC], including those specified in 461 [Section 461 of 20.3.4.461 NMAC], Table II, of these regulations.

C. Regulated NORM will be stored at all times:]

(1) In accordance with the recommended practices of Section 6 of the American Petroleum Institute's Bulletin E2 (edition of April 1, 1992, or most recent edition), including practices specified for facility security, management of uncontained

NORM, containerization and labeling, signage and record keeping, except that the dose limits specified in Section 6 or Bulletin E2 shall not apply;

(2) NORM storage facilities must be designed to minimize or prevent release of Regulated NORM to the environment; and

(3) In accordance with applicable Department guidelines.

D. Licensing of Regulated NORM Storage Facilities:

(1) Effective August 2, 1995, storage of Regulated NORM for longer than one year must be under a specific license unless the Department grants an extension of a general license issued pursuant to 1410.A [Subsection A., Section 1410 of 20.3.14.1410 NMAC]. Such an extension must be requested by the licensee on an annual basis and may be granted by the Department on an annual basis, not to exceed 10 years of storage under a general license; and

(2) In granting an extension of a general license for storage of Regulated NORM, the Department must certify that the licensee is in compliance with 1409.A, B., and C [Subsections A., B., and C., Section 1409 of 20.3.14.1409 NMAC] and has a valid reason or reasons why the Regulated NORM under his or her ownership will not be disposed within the next year. Factors the Department should consider in determining whether the licensee has a valid reason or reasons for receiving an extension include, but are not limited to, the volume and radioactivity of the Regulated NORM, and/or the location of the storage facility and its proximity to populated areas or sensitive environments.

E. Storage of Regulated NORM under a specific license will be done in accordance with the requirements of this Subpart [Part], any other applicable requirements of these regulations and any other conditions as may be imposed by the Department to ensure compliance with these regulations.

[8-2-95; 20.3.14.1409 NMAC – Rn, 20 NMAC 3.1.14.1409, Recompiled 11/27/01]

20.3.14.1410 GENERAL LICENSE:

A. A general license is hereby issued to extract, receive, possess, own, use, process and transport Regulated NORM without regard to quantity. A general license is hereby issued to store Regulated NORM in accordance with the requirements of 1409 [Section 1409 of 20.3.14.1409 NMAC], for one year or less and to dispose of Regulated NORM in plugged and abandoned wells or Class II UIC wells pursuant to 1407.D.3 and 1407.D.4 [Paragraphs (3) and (4), Subsection D., Section 1407 of 20.3.14.1407 NMAC]. A general licensee may, as part of routine operations, perform maintenance work on equipment that contains Regulated NORM provided that work practices conform to the Worker Protection Plan and that employee exposures prescribed in 1405 [Section 1405 of 20.3.14.1405 NMAC] and Subpart [Part] 4 are not exceeded.

B. A general license does not authorize the manufacture or distribution of products containing Regulated NORM, does not allow the transfer for disposal of Regulated NORM between general licensees, and does not authorize the storage of Regulated NORM for compensation or other commercial purposes.

C. Facilities and equipment containing Regulated NORM shall not be released for unrestricted use.

D. No generally licensed facility, including plugged and abandoned wells used for NORM disposal, shall be transferred for unrestricted use where the concentration of radium-226 in soil averaged over 100 square meters exceeds 30 pCi/g above background in 15 cm layers.

E. Equipment containing Regulated NORM may be released for maintenance and/or overhaul provided the recipient is specifically licensed to perform such activity.

F. The transfer of Regulated NORM from one general licensee to another general licensee is authorized by the Department provided that the equipment and facilities containing Regulated NORM are to be used by the recipient for the same purpose or similar service.

G. Transfers of Regulated NORM do not relieve the transferring general licensee from the responsibilities of surveying pursuant to these requirements, informing the receiving general licensee of the results of such surveys, and maintaining records pursuant to these requirements.

H. Record keeping for NORM survey data is to be maintained for inspection by the Department.

I. The landowner shall be notified prior to on-site mixing of soil pursuant to 1407.A [Subsection A., Section 1407 of 20.3.14.1407 NMAC].

[8-2-95; 20.3.14.1410 NMAC – Rn, 20 NMAC 3.1.14.1410, Recompiled 11/27/01]

20.3.14.1411 SPECIFIC LICENSES:

A. Unless otherwise exempted under the provisions of 1403 [Section 1403 of 20.3.14.1403 NMAC], or licensed under the provisions of Subpart [Part] 3 of these regulations, the manufacturing and distribution of any material or product containing Regulated NORM shall be specifically licensed pursuant to the requirements of this Subpart [Part] or pursuant to equivalent regulations of another state.

B. The decontamination of equipment or facilities containing Regulated NORM shall be performed only by persons specifically licensed.

C. Persons conducting the following activities involving equipment or facilities containing Regulated NORM must be specifically licensed to:

(1) dispose of or treat the resulting Regulated NORM unless exempted under this Subpart [Part];

(2) transfer Regulated NORM for long-term storage, treatment and/or disposal; or

(3) after August 2, 1995, store Regulated NORM in accordance with the requirements of 1409 [Section 1409 of 20.3.14.1409 NMAC] for longer than one year.

[8-2-95; 20.3.14.1411 NMAC – Rn, 20 NMAC 3.1.14.1411, Recompiled 11/27/01]

20.3.14.1412 REQUIREMENTS FOR THE ISSUANCE OF SPECIFIC LICENSES:

The licensee shall comply with the provisions of 308 [Section 308 of 20.3.3.308 NMAC].

[8-2-95; 20.3.14.1412 NMAC – Rn, 20 NMAC 3.1.14.1412, Recompiled 11/27/01]

20.3.14.1413 FILING APPLICATION FOR SPECIFIC LICENSES:

A. The licensee shall comply with the provisions of 307.A through F [Subsections A. through F., Section 307 of 20.3.3.307 NMAC].

B. An applicant for a specific license shall comply with the Public Notification requirements in 310 [Section 310 of 20.3.3.310 NMAC].

[8-2-95; 20.3.14.1413 NMAC – Rn, 20 NMAC 3.1.14.1413, Recompiled 11/27/01]

20.3.14.1414 CONDITIONS FOR ISSUANCE OF SPECIFIC LICENSES:

A. The licensee shall comply with the provisions of 316 and 317.A. through C [Subsections A. through C., Section 317 and Section 316 of 20.3.3.316 and 317 NMAC].

B. An application for a Specific License to decontaminate equipment or land not otherwise exempted under the provisions of 1403 [Section 1403 of 20.3.14.1403 NMAC] will be approved if:

(1) the applicant satisfies the requirements specified in 1413 [Section 1413 of 20.3.14.1413 NMAC]; and

(2) the applicant has adequately addressed the following items:

(a) procedures and equipment for monitoring and protection of workers;

(b) an evaluation of the radiation levels and concentrations of contamination expected during normal operations;

(c) operating and emergency procedures, including procedures for waste reduction and quality assurance of items released for unrestricted use; and

(d) a method of managing the Regulated NORM removed from contaminated equipment and facilities.

C. Each person licensed by the Department pursuant to this Part shall have met the financial surety requirements of 311.E [Subsection E., Section 311 of 20.3.3.311 NMAC].

D. Each person licensed by the Department pursuant to this Part shall manage and dispose of wastes containing Regulated NORM in accordance with 1407 [Section 1407 of 20.3.14.1407 NMAC].

[8-2-95; 20.3.14.1414 NMAC – Rn, 20 NMAC 3.1.14.1414, Recompiled 11/27/01]

20.3.14.1415 MODIFICATION, EXPIRATION AND TERMINATION OF LICENSES:

The licensee shall comply with the provisions in 322 [Section 322 of 20.3.3.322 NMAC].

[8-2-95; 20.3.14.1415 NMAC – Rn, 20 NMAC 3.1.14.1415, Recompiled 11/27/01]

20.3.14.1416 RENEWAL OF LICENSES:

A. Applications for renewal of specific licenses shall be filed in accordance with 1413 [Section 1413 of 20.3.14.1413 NMAC].

B. In any case in which a licensee, not less than 30 days prior to expiration of an existing license, has filed an application in proper form for renewal or for a new license authorizing the same activities, such existing license shall not expire until final action by the Department.

[8-2-95; 20.3.14.1416 NMAC – Rn, 20 NMAC 3.1.14.1416, Recompiled 11/27/01]

20.3.14.1417 AMENDMENT OF LICENSES AT REQUEST OF SPECIFIC LICENSEE:

Applications for amendment of a specific license shall be filed in accordance with 320 [Section 320 of 20.3.3.320 NMAC], and shall specify the respects in which the licensee desires the license to be amended and the grounds for such amendment.

[8-2-95; 20.3.14.1417 NMAC – Rn, 20 NMAC 3.1.14.1417, Recompiled 11/27/01]

20.3.14.1418 ACRONYMS:

- A. Bq/kg Becquerels per kilogram
- B. cm centimeters
- C. dpm disintegrations per minute
- D. LACT Lease Automated Custody Transfer
- E. NORM Naturally Occurring Radioactive Material
- F. P&A Plugged and Abandoned
- G. pCi/g picocuries per gram
- H. UIC Underground Injection Control
- I. mR/hr microroentgens per hour
- J. rem roentgen equivalent man
- K. mR/hr milliroentgen per hour
- L. RCRA Resource Conservation Recovery Act
- M. cpm counts per minute
- N. mSv millisievert
- O. μ Sv microsievert
- P. mSv/hr microsievert per hour

[8-2-95; 20.3.14.1418 NMAC – Rn, 20 NMAC 3.1.14.1418, Recompiled 11/27/01]

20.3.14.1419 RECIPROCAL RECOGNITION OF LICENSES:

Recognition of Reciprocal Licenses shall be done in accordance with 324 [Section 324 of 20.3.3.324 NMAC].

[8-2-95; 20.3.14.1419 NMAC – Rn, 20 NMAC 3.1.14.1419, Recompiled 11/27/01]

20.3.14.1420-20.3.14.1499 [RESERVED]

PART 15: LICENSES AND RADIATION SAFETY REQUIREMENTS FOR IRRADIATORS

20.3.15.1 ISSUING AGENCY:

Environmental Improvement Board.

[5-3-95; 20.3.15.1 NMAC - Rn, 20 NMAC 3.1.1.100, 04/15/2004]

20.3.15.2 SCOPE:

A. The requirements of this part (20.3.15 NMAC) are in addition to other requirements in these regulations. In particular, the provisions of Parts 3, 4 and 10 (20.3.3 NMAC, 20.3.4 NMAC, and 20.3.10 NMAC) apply to applications and licenses subject to this part (20.3.15 NMAC). Nothing in this part (20.3.15 NMAC) relieves the licensee from complying with other applicable federal, state and local regulations governing the siting, zoning, land use and building code requirements for industrial facilities.

B. The regulations in this part (20.3.15 NMAC) apply to panoramic irradiators that have either dry or wet storage of the radioactive sealed sources and to under water irradiators in which both the source and the product being irradiated are under water. Irradiators whose dose rates exceed 5 grays (500 rads) per hour at 1 meter from the radioactive sealed sources in air or in water, as applicable for the irradiator type, are covered by this part (20.3.15 NMAC).

C. The regulations in this part (20.3.15 NMAC) do not apply to self-contained dry-source storage irradiators (those in which both the source and the area subject to irradiation are contained within a device and are not accessible by personnel), medical radiology or teletherapy, radiography (the irradiation of materials for nondestructive testing purposes), gauging, or open-field (agricultural) irradiations.

[05/03/95; 20.3.15.2 NMAC - Rn, 20 NMAC 3.1.15.1500, 04/15/2004]

20.3.15.3 STATUTORY AUTHORITY:

Sections 74-1-9, 74-3-5, and 74-3-9 NMSA 1978.

[5-3-95; 20.3.15.3 NMAC - Rn, 20 NMAC 3.1.1.102, 04/15/2004]

20.3.15.4 DURATION:

Permanent.

[5-3-95; 20.3.15.4 NMAC - Rn, 20 NMAC 3.1.1.103, 04/15/2004]

20.3.15.5 EFFECTIVE DATE:

May 3, 1995, unless a later date is cited at the end of a section.

[5-3-95, 8-2-95, A, 7-30-99; 20.3.3.5 NMAC - Rn, 20 NMAC 3.1.1.104, 04/15/2004]

20.3.15.6 OBJECTIVE:

This part (20.3.15 NMAC) contains requirements for the issuance of a license authorizing the use of sealed sources containing radioactive materials in irradiators used to irradiate objects or materials using gamma radiation. This part (20.3.15 NMAC) also contains radiation safety requirements for operating irradiators.

[05/03/95; 20.3.15.2 NMAC - Rn, 20 NMAC 3.1.15.1500.A, 04/15/2004]

[Refer to the purpose and scope promulgated by the board as specified in 20.3.15.2 NMAC.]

20.3.15.7 DEFINITIONS:

A. "Annually" means either: (1) at intervals not to exceed 1 year; or (2) once per year, at about the same time each year (plus or minus 1 month).

B. "Doubly encapsulated sealed source" means a sealed source in which the radioactive material is sealed within a capsule and that capsule is sealed within another capsule.

C. "Irradiator" means a facility that uses radioactive sealed sources for the irradiation of objects or materials and in which radiation dose rates exceeding 5 grays (500 rads) per hour exist at 1 meter from the sealed radioactive sources in air or water, as applicable for the irradiator type, but does not include irradiators in which both the sealed source and the area subject to irradiation are contained within a device and are not accessible to personnel.

D. "Irradiator operator" means an individual who has successfully completed the training and testing described in 20.3.15.1517 NMAC, and is authorized by the terms of the license to operate the irradiator without a supervisor present.

E. "Panoramic dry-source-storage irradiator" means an irradiator in which the irradiations occur in air in areas potentially accessible to personnel and in which the sources are stored in shields made of solid materials. The term includes beam-type dry-source-storage irradiators in which only a narrow beam of radiation is produced for performing irradiations.

F. "Panoramic irradiator" means an irradiator in which the irradiations are done in air in areas potentially accessible to personnel. The term includes beam-type irradiators.

G. "Panoramic wet-source-storage irradiator" means an irradiator in which the irradiations occur in air in areas potentially accessible to personnel and in which the sources are stored under water in a storage pool.

H. "Pool irradiator" means any irradiator at which the sources are stored or used in a pool of water, including panoramic wet-source-storage irradiators and under water irradiators.

I. "Product conveyor system" means a system for moving the product to be irradiated to, from and within the area where irradiation takes place.

J. "Radiation room" means a shielded room in which irradiations take place. Under water irradiators do not have radiation rooms.

K. "Radiation safety officer" means an individual with responsibility for the overall radiation safety program at the facility.

L. "Sealed source" means any byproduct material that is used as a source of radiation and is encased in a capsule designed to prevent leakage or escape of the byproduct material.

M. "Seismic area" means any area where the probability of a horizontal acceleration in rock of more than 0.3 times the acceleration of gravity in 250 years is greater than 10 percent, as designated by the U.S. geological survey.

N. "Underwater irradiator" means an irradiator in which the sources always remain shielded under water and humans do not have access to the sealed sources or the space subject to irradiation without entering the pool.

[05/03/95; 20.3.15.7 NMAC - Rn, 20 NMAC 3.1.15.1500, 04/15/2004]

20.3.15.8-20.3.15.1500 [RESERVED]

20.3.15.1501 APPLICATION FOR A SPECIFIC LICENSE:

A person, as defined in 20.3.1 NMAC of these regulations, may file an application for a specific license authorizing the use of sealed sources in an irradiator on forms provided by the department, in accordance with 20.3.3.307 NMAC.

[05/03/95; 20.3.15.1501 NMAC - Rn, 20 NMAC 3.1.15.1501, 04/15/2004]

20.3.15.1502 SPECIFIC LICENSES FOR IRRADIATORS:

The department will approve an application for a specific license for the use of licensed material in an irradiator if the applicant meets the requirements contained in this section.

A. The applicant shall satisfy the general requirements specified in 20.3.3 NMAC and the requirements contained in this part (20.3.15 NMAC).

B. An application for a specific license of category 1 and category 2 quantities of radioactive material shall comply with 10 CFR 37. The licensee shall comply with 10 CFR 37 except as follows:

(1) any reference to the commission or NRC shall be deemed a reference to the department;

(2) 10 CFR 37.5 definitions of agreement state, byproduct material, commission and person shall not be applicable;

(3) 10 CFR 37.7, 10 CFR 37.9, 10 CFR 37.11(a) and (b), 10 CFR 37.13, 10 CFR 37.71, 10 CFR 37.105, and 10 CFR 37.107 shall not be applicable;

(4) for any reporting or notification requirements that the licensee must follow in 10 CFR 37.45, 10 CFR 37.57, 10 CFR 37.77(a) through (d), 10 CFR 37.81, the licensee shall use, when applicable, New Mexico Environment Department/RCB, P.O. Box 5469, Santa Fe, NM 87502-5469 address information.

C. The application must describe the training provided to irradiator operators including:

(1) classroom training;

(2) on-the-job or simulator training;

(3) safety reviews;

(4) means employed by the applicant to test each operator's understanding of these regulations and licensing requirements, and the irradiator operating and emergency procedures; and

(5) minimum training and experience of personnel who may provide training.

D. The application must include an outline of the written operating and emergency procedures listed in 20.3.15.1518 NMAC that describes the radiation safety aspects of the procedures.

E. The application must describe the organizational structure for managing the irradiator, specifically the radiation safety responsibilities and authorities of the radiation safety officer, and those management personnel who have important radiation safety responsibilities or authorities. In particular, the application must specify who within the management structure has the authority to stop unsafe operations. The application must also describe the training and experience required for the position of radiation safety officer.

F. The application must include a description of the access control system required by 20.3.15.1507 NMAC, the radiation monitors required by 20.3.15.1510 NMAC, the method of detecting leaking sources required by 20.3.15.1521 NMAC including the sensitivity of the method, and a diagram of the facility that shows the locations of all required interlocks and radiation monitors.

G. If the applicant intends to perform leak testing of dry-source-storage sealed sources, the applicant shall establish procedures for leak testing and submit a description of these procedures to the department. The description must include the:

- (1) instruments to be used;
- (2) methods of performing the analysis; and
- (3) pertinent experience of the individual who analyzes the samples.

H. If licensee personnel are to load or unload sources, the applicant shall describe the qualifications and training of the personnel and the procedures to be used. If the applicant intends to contract for source loading or unloading at its facility, the loading or unloading must be done by an organization specifically authorized by the department to load or unload irradiator sources.

I. The applicant shall describe the inspection and maintenance checks, including the frequency of the checks required by 20.3.15.1522 NMAC.

[05/03/95; 20.3.15.1502 NMAC - Rn, 20 NMAC 3.1.15.1502, 04/15/2004; A, 06/13/2017; A, 02/14/2023]

20.3.15.1503 START OF CONSTRUCTION:

The applicant may not begin construction of a new irradiator prior to the submission to the department an application for a license for the irradiator. As used in this section, the term "construction" includes the construction of any portion of the permanent irradiator structure on the site, but does not include engineering and design work, purchase of a site, site surveys or soil testing, site preparation, site excavation, construction of warehouse or auxiliary structures, and other similar tasks. Any activities undertaken prior to the issuance of a license are entirely at the risk of the applicant and have no bearing on the issuance of a license.

[05/03/95; 20.3.15.1503 NMAC - Rn, 20 NMAC 3.1.15.1503, 04/15/2004]

20.3.15.1504 APPLICATIONS FOR EXEMPTIONS:

A. The department may, upon application of any interested person or upon its own initiative, grant any exemptions from the requirements in this part (20.3.15 NMAC) that it

determines are authorized by law and will not endanger life or property or the common defense and security, and are otherwise in the public interest.

B. Any application for a license or for amendment of a license authorizing use of teletherapy-type unit for irradiation of materials or objects may include proposed alternatives for the requirements of this part (20.3.15 NMAC). The department will approve the proposed alternatives if the applicant provides adequate rationale for the proposed alternatives and demonstrates that they are likely to provide an adequate level of safety for workers and the public.

[05/03/95; 20.3.15.1504 NMAC - Rn, 20 NMAC 3.1.15.1504, 04/15/2004]

20.3.15.1505 REQUEST FOR WRITTEN STATEMENTS:

A. After the filing of the original application, the department may request further information necessary to enable the department to determine whether the application should be granted or denied.

B. Each license is issued with the condition that the licensee will, at any time before expiration of the license, upon the department's request, submit written statements to enable the department to determine whether the license should be modified, suspended or revoked.

[05/03/95; 20.3.15.1505 NMAC - Rn, 20 NMAC 3.1.15.1505, 04/15/2004]

20.3.15.1506 PERFORMANCE CRITERIA FOR SEALED SOURCES:

A. Requirements. Sealed sources installed after July 1, 1993:

- (1) must be doubly encapsulated;
- (2) must use radioactive material that is as non-dispersible as practical and that is as insoluble as practical if the source is used in a wet-source-storage or wet-source-change irradiator;
- (3) must be encapsulated in a material resistant to general corrosion and to localized corrosion, such as 316L stainless steel or other material with equivalent resistance if the sources are for use in irradiator pools; and
- (4) in prototype testing of the sealed source, must have been leak tested and found leak-free after each of the tests described in Subsections B through G of 20.3.15.1506 NMAC.

B. Temperature. The test source must be held at -40 degrees C for 20 minutes, 600 degrees C for one hour, and then be subject to a thermal shock test with a temperature drop from 600 degrees C to 20 degrees C within 15 seconds.

C. Pressure. The test source must be twice subjected for at least five minutes to an external pressure (absolute) of 2 million newtons per square meter.

D. Impact. A 2-kilogram steel weight, 2.5 centimeters in diameter, must be dropped from a height of 1 meter onto the test source.

E. Vibration. The test source must be subjected 3 times for 10 minutes each to vibrations sweeping from 25 hertz to 500 hertz, with a peak amplitude of 5 times the acceleration of gravity. In addition, each test source must be vibrated for 30 minutes at each resonant frequency found.

F. Puncture. A 50-gram weight and pin, 0.3-centimeter pin diameter, must be dropped from a height of 1 meter onto the test source.

G. Bend. If the length of the source is more than 15 times larger than the minimum cross-sectional dimension, the test source must be subjected to a force of 2000 newtons at its center equidistant from two support cylinders, the distance between which is 10 times the minimum cross-sectional dimension of the source.

[05/03/95; 20.3.15.1506 NMAC - Rn, 20 NMAC 3.1.15.1506, 04/15/2004; A, 06/13/2017]

20.3.15.1507 ACCESS CONTROL:

A. Each entrance to a radiation room at a panoramic irradiator must have a door or other physical barrier to prevent inadvertent entry of personnel if the sources are not in the shielded position. Product conveyer systems may serve as barriers as long as they reliably and consistently function as a barrier. It must not be possible to move the sources out of their shielded position if the door or barrier is open. Opening the door or barrier while the sources are exposed must cause the sources to return promptly to their shielded position. The personnel entrance door or barrier must have a lock that is operated by the same key used to move the source. The doors and barriers must not prevent any individual in the radiation room from leaving.

B. In addition, each entrance to a radiation room at a panoramic irradiator must have an independent backup access control to detect personnel entry while the sources are exposed. Detection of entry while the sources are exposed must cause the sources to return to their fully shielded position, and must also activate a visible and audible alarm to make the individual entering the room aware of the hazard. The alarm must also alert at least one other individual who is on-site of the entry. That individual shall be trained on how to respond to the alarm and prepared to promptly render or summon assistance.

C. A radiation monitor must be provided to detect the presence of high radiation levels in the radiation room of a panoramic irradiator before personnel entry. The monitor must be integrated with personnel access door locks to prevent room access

when radiation levels are high. Attempted personnel entry while the monitor measures high radiation levels must activate the alarm described in Subsection B of 20.3.15.1507 NMAC. The monitor may be located in the entrance (normally referred to as the maze), but not in the direct radiation beam.

D. Before the sources move from their shielded position in a panoramic irradiator, the source control must automatically activate conspicuous visible and audible alarms to alert people in the radiation room that the sources will be moved from their shielded position. The alarms must give individuals enough time to leave the room before the sources leave the shielded position.

E. Each radiation room at a panoramic irradiator must have a clearly visible and readily accessible control that would allow an individual in the room to make the sources return to their fully shielded position.

F. Each radiation room of a panoramic irradiator must contain a control that prevents the sources from moving from the shielded position, unless the control has been activated and the door or barrier to the radiation room has been closed within a preset time after activation of the control.

G. Each entrance to the radiation room of a panoramic irradiator and each entrance to the area within the personnel access barrier of an underwater irradiator must be posted as required by 20.3.4.428 NMAC. Radiation postings for panoramic irradiators must comply with the posting requirements of 20.3.4.428 NMAC, except that signs may be removed, covered, or otherwise made inoperative when the sources are fully shielded.

H. If the radiation room of a panoramic irradiator has roof plugs or other movable shielding, it must not be possible to operate the irradiator unless the shielding is in its proper location. This requirement may be met by interlocks that prevent operation if shielding is not placed properly or by an operating procedure requiring inspection of shielding before operating.

I. Underwater irradiators must have a personnel access barrier around the pool which must be locked to prevent access when the irradiator is not attended. Only operators and facility management may have access to keys to the personnel access barrier. There must be an intrusion alarm to detect unauthorized entry when the personnel access barrier is locked. Activation of the intrusion alarm must alert an individual (not necessarily onsite) who is prepared to respond or summon assistance.

[05/03/95; 20.3.15.1507 NMAC - Rn, 20 NMAC 3.1.15.1507 & A, 04/15/2004]

20.3.15.1508 SHIELDING:

A. The radiation dose rate in areas that are normally occupied during operation of a panoramic irradiator may not exceed 0.02 millisievert (2 millirems) per hour at any

location 30 centimeters or more from the wall of the room when the sources are exposed. The dose rate must be averaged over an area not to exceed 100 square centimeters having no linear dimension greater than 20 cm. Areas where the radiation dose rate exceeds 0.02 millisievert (2 millirems) per hour must be locked, roped off or posted.

B. The radiation dose at 30 centimeters over the edge of the pool of a pool irradiator may not exceed 0.02 millisievert (2 millirems) per hour when the sources are in the fully shielded position.

C. The radiation dose rate at 1 meter from the shield of a dry-source-storage panoramic irradiator when the source is shielded may not exceed 0.02 millisievert (2 millirems) per hour and at 5 centimeters from the shield may not exceed 0.2 millisievert (20 millirems) per hour.

[05/03/95; 20.3.15.1508 NMAC - Rn, 20 NMAC 3.1.15.1508, 04/15/2004]

20.3.15.1509 FIRE PROTECTION:

A. The radiation room at a panoramic irradiator must have heat and smoke detectors. The detectors must activate an audible alarm. The alarm must be capable of alerting a person who is prepared to summon assistance promptly. The sources must automatically become fully shielded if a fire is detected.

B. The radiation room at a panoramic irradiator must be equipped with a fire extinguishing system capable of extinguishing a fire without the entry of personnel into the room. The system for the radiation room must have a shut-off valve to control flooding into unrestricted areas.

[05/03/95; 20.3.15.1509 NMAC - Rn, 20 NMAC 3.1.15.1509, 04/15/2004]

20.3.15.1510 RADIATION MONITORS:

A. Irradiators with automatic product conveyor systems must have a radiation monitor with an audible alarm located to detect loose radioactive sources that are carried toward the product exit. If the monitor detects a source, an alarm must sound and product conveyors must stop automatically. The alarm must be capable of alerting an individual in the facility who is prepared to summon assistance. Underwater irradiators in which the product moves within an enclosed stationary tube are exempt from the requirements of this subsection.

B. Underwater irradiators that are not in a shielded radiation room must have a radiation monitor over the pool to detect abnormal radiation levels. The monitor must have an audible alarm and a visible indicator at entrances to the personnel access barrier around the pool. The audible alarm may have a manual shut-off. The alarm must be capable of alerting an individual who is prepared to respond promptly.

[05/03/95; 20.3.15.1510 NMAC - Rn, 20 NMAC 3.1.15.1510, 04/15/2004]

20.3.15.1511 CONTROL OF SOURCE MOVEMENT:

A. The mechanism that moves the sources of a panoramic irradiator must require a key to actuate. Actuation of the mechanism must cause an audible signal to indicate that the sources are leaving the shielded position. Only one key may be in use at any time, and only operators or facility management may possess it. The key must be attached to a portable radiation survey meter by a chain or cable. The lock for source control must be designed so that the key may not be removed if the sources are in an unshielded position. The door to the radiation room must require the same key.

B. The console of a panoramic irradiator must have a source position indicator that indicates when the sources are in the fully shielded position, when they are in transit and when the sources are exposed.

C. The control console of a panoramic irradiator must have a control that promptly returns the sources to the shielded position.

D. Each control for a panoramic irradiator must be clearly marked as to its function.

[05/03/95; 20.3.15.1511 NMAC - Rn, 20 NMAC 3.1.15.1511, 04/15/2004]

20.3.15.1512 IRRADIATOR POOLS:

A. For licenses initially issued after July 1, 1993, irradiator pools must either:

(1) have a water-tight stainless steel liner or a liner metallurgically compatible with other components in the pool; or

(2) be constructed so that there is a low likelihood of substantial leakage and have a surface designed to facilitate decontamination; and

(3) in either case, the licensee shall have a method to safely store the sources during repairs of the pool.

B. For licenses initially issued after July 1, 1993, irradiator pools must have no outlets more than 0.5 meter below the normal low water level that could allow water to drain out of the pool. Pipes that have intakes more than 0.5 meter below the normal low water level and that could act as siphons must have siphon breakers to prevent the siphoning of pool water.

C. A means must be provided to replenish water losses from the pool.

D. A visible indicator must be provided in a clearly visible location to indicate if the pool water level is below the normal low water level or above the normal high water level.

E. Irradiator pools must be equipped with a purification system designed to be capable of maintaining the water during normal operation at a conductivity of 20 microsiemens per centimeter or less and with a clarity so that the sources can be seen clearly.

F. A physical barrier, such as a railing or cover, must be used around or over irradiator pools during normal operation to prevent personnel from accidentally falling into the pool. The barrier may be removed during maintenance, inspection and service operations.

G. If long-handled tools or poles are used in irradiator pools, the radiation dose rate on the handling areas of the tools may not exceed 0.02 millisievert (2 millirems) per hour.

[05/03/95; 20.3.15.1512 NMAC - Rn, 20 NMAC 3.1.15.1512, 04/15/2004]

20.3.15.1513 SOURCE RACK PROTECTION:

If the product to be irradiated moves on a product conveyor system, the source rack and the mechanism that moves the rack must be protected by a barrier or guides to prevent products and product carriers from hitting or touching the rack or mechanism.

[05/03/95; 20.3.15.1513 NMAC - Rn, 20 NMAC 3.1.15.1513. 04/15/2004]

20.3.15.1514 POWER FAILURES:

A. If electrical power at a panoramic irradiator is lost for longer than 10 seconds, the source must automatically return to the shielded position.

B. The lock on the door of the radiation room of a panoramic irradiator may not be deactivated by a power failure.

C. During a power failure, the area of any irradiator where sources are located may be entered only when using an operable and calibrated radiation survey meter.

[05/03/95; 20.3.15.1514 NMAC - Rn, 20 NMAC 3.1.15.1514, 04/15/2004]

20.3.15.1515 DESIGN REQUIREMENTS:

Irradiators whose construction begins after July 1, 1993, must meet the design requirements of this section.

A. Shielding. For panoramic irradiators, the licensee shall design shielding walls to meet generally accepted building code requirements for reinforced concrete, and design the walls, wall penetrations and entrance ways to meet the radiation shielding requirements of 20.3.15.1508 NMAC. If the irradiator will use more than 2×10^{17} becquerels (5 million curies) of activity, the licensee shall evaluate the effects of heating of the shielding walls by the irradiator sources.

B. Foundations. For panoramic irradiators, the licensee shall design the foundation, with consideration given to soil characteristics, to ensure it is adequate to support the weight of the facility shield walls.

C. Pool integrity. For pool irradiators, the licensee shall design the pool to assure that it is leak resistant, that is strong enough to bear the weight of the pool water and shipping casks, that a dropped cask would not fall on sealed sources, that all outlets or pipes meet the requirements of Subsection B of 20.3.15.1512 NMAC, and that metal components are metallurgically compatible with other components in the pool.

D. Water handling system. For pool irradiators, the licensee shall verify that the design of the water purification system is adequate to meet the requirements of Subsection E of 20.3.15.1512 NMAC. The system must be designed so that water leaking from the system does not drain to unrestricted areas without being monitored.

E. Radiation monitors. For all irradiators, the licensee shall evaluate the location and sensitivity of the monitor to detect sources carried by the product conveyor system as required by Subsection A of 20.3.15.1510 NMAC. The licensee shall verify that the product conveyor is designed to stop before a source on the product conveyor would cause a radiation overexposure to any person. For pool irradiators, if the licensee uses radiation monitors to detect contamination under Subsection B of 20.3.15.1521 NMAC, the licensee shall verify that the design of radiation monitoring systems to detect pool contamination includes sensitive detectors located close to where contamination is likely to concentrate.

F. Source rack. For pool irradiators, the licensee shall verify that there are no crevices on the source or between the source and source holder that would promote corrosion on a critical area of the source. For panoramic irradiators, the licensee shall determine that source rack drops due to loss of power will not damage the source rack and that source rack drops due to failure of cables (or alternate means of support) will not cause loss of integrity of sealed sources. For panoramic irradiators, the licensee shall review the design of the mechanism that moves the sources to assure that the likelihood of a stuck source is low and that, if the rack sticks, a means exists to free it with minimal risk to personnel.

G. Access control. For panoramic irradiators, the licensee shall verify from the design and logic diagram that the access control system will meet the requirements of 20.3.15.1507 NMAC.

H. Fire protection. For panoramic irradiators, the licensee shall verify that the number, location and spacing of the smoke and heat detectors are appropriate to detect fires, and that the detectors are protected from mechanical and radiation damage. The licensee shall verify that the design of the fire extinguishing system provides the necessary discharge patterns, densities and flow characteristics for complete coverage of the radiation room, and that the system is protected from mechanical and radiation damage.

I. Source return. For panoramic irradiators, the licensee shall verify that the source rack will automatically return to the fully shielded position if off-site power is lost for more than 10 seconds.

J. Seismic. For panoramic irradiators to be built in seismic areas, the licensee shall design the reinforced concrete radiation shields to retain their integrity in the event of an earthquake by designing to the seismic requirements of an appropriate source such as American concrete institute standard ACI 318-89, "Building Code Requirements for Reinforced Concrete," Chapter 21, "Special Provisions for Seismic Design," or local building codes, if current.

K. Wiring. For panoramic irradiators, the licensee shall verify that electrical wiring and electrical equipment in the radiation room are selected to minimize failures due to prolonged exposure to radiation.

[05/03/95; 20.3.15.1515 NMAC - Rn, 20 NMAC 3.1.15.1515, 04/15/2004; A, 06/13/2017]

20.3.15.1516 CONSTRUCTION MONITORING AND ACCEPTANCE TESTING:

The requirements of this section must be met for irradiators whose construction begins after July 1, 1993. The requirements must be met prior to loading sources.

A. Shielding. For panoramic irradiators, the licensee shall monitor the construction of the shielding to verify that its construction meets design specifications and generally accepted building code requirements for reinforced concrete.

B. Foundations. For panoramic irradiators, the licensee shall monitor the construction of the foundations to verify that their construction meets design specifications.

C. Pool integrity. For pool irradiators, the licensee shall verify that the pool meets design specifications and shall test the integrity of the pool. The licensee shall verify that outlets and pipes meet the requirements of Subsection B of 20.3.15.1512 NMAC.

D. Water handling system. For pool irradiators, the licensee shall verify that the water purification system, the conductivity meter and the water level indicators operate properly.

E. Radiation monitors. For all irradiators, the licensee shall verify the proper operation of the monitor to detect sources carried on the product conveyor system, and the related alarms and interlocks required by Subsection A of 20.3.15.1510 NMAC. For pool irradiators, the licensee shall verify the proper operation of the radiation monitors and the related alarm, if used, to meet Subsection B of 20.3.15.1521 NMAC. For underwater irradiators, the licensee shall verify the proper operation of the over-the-pool monitor, alarms and interlocks required by Subsection B of 20.3.15.1510 NMAC.

F. Source rack. For panoramic irradiators, the licensee shall test the movement of the source racks for proper operation prior to source loading; testing must include source rack lowering due to simulated loss of power. For all irradiators with product conveyor systems, the licensee shall observe and test the operation conveyor system to assure that the requirements in 20.3.15.1513 NMAC are met for protection of the source rack and the mechanism that moves the rack; testing must include tests of any limit switches and interlocks used to protect the source rack and mechanism that moves the rack from moving product carriers.

G. Access control. For panoramic irradiators, the licensee shall test the completed access control system to assure that it functions as designed, and that all alarms, controls and interlocks work properly.

H. Fire protection. For panoramic irradiators, the licensee shall test the ability of the heat and smoke detectors to detect a fire, to activate alarms and to cause the source rack to automatically become fully shielded. The licensee shall test the operability of the fire extinguishing system.

I. Source return. For panoramic irradiators, the licensee shall demonstrate that the source racks can be returned to their fully shielded positions without offsite power.

J. Computer systems. For panoramic irradiators that use a computer system to control the access control system, the licensee shall verify that the access control system will operate properly if offsite power is lost, and shall verify that the computer has security features that prevent an irradiator operator from commanding the computer to override the access control system when it is required to be operable.

K. Wiring. For panoramic irradiators, the licensee shall verify that the electrical wiring and electrical equipment that were installed meet the design specifications.

[05/03/95; 20.3.15.1516 NMAC - Rn, 20 NMAC 3.1.15.1516, 04/15/2004]

20.3.15.1517 TRAINING:

A. Before an individual is permitted to operate an irradiator without a supervisor present, the individual must be instructed in:

(1) the fundamentals of radiation protection applied to irradiators (including the differences between external radiation and radioactive contamination, units of radiation dose, dose limits, why large radiation doses must be avoided, how shielding and access controls as provided in these regulations prevent large doses, how an irradiator is designed to prevent contamination, the proper use of survey meters and personnel dosimeters, other radiation safety features of an irradiator, and the basic function of the irradiator);

(2) the requirements of 20.3.10 NMAC and 20.3.15 NMAC that are relevant to the irradiator;

(3) the operation of the irradiator;

(4) those operating and emergency procedures listed in 20.3.15.1518 NMAC that the individual is responsible for performing; and

(5) case histories of accidents or problems involving irradiators.

B. Before an individual is permitted to operate an irradiator without a supervisor present, the individual shall pass a written test on the instruction received, consisting primarily of questions based on the licensee's operating and emergency procedures that the individual is responsible for performing and other operations necessary to safely operate the irradiator without supervision.

C. Before an individual is permitted to operate an irradiator without a supervisor present, the individual must have received on-the-job training or simulator training in the use of the irradiator as described in the license application. The individual shall also demonstrate the ability to perform those portions of the operating and emergency procedures that he or she is to perform.

D. The licensee shall conduct safety reviews for irradiator operators at least annually. The licensee shall give each operator a brief written test on the information. Each safety review must include, to the extent appropriate, each of the following:

(1) changes in operating and emergency procedures since the last review, if any;

(2) changes in regulations and license conditions since the last review, if any;

(3) reports on recent accidents, mistakes or problems that have occurred at irradiators, if any;

(4) relevant results of inspections of operator safety performance;

(5) relevant results of the facility's inspection and maintenance checks; and

(6) a drill to practice an emergency or abnormal event procedure.

E. The licensee shall evaluate the safety performance of each irradiator operator at least annually to ensure that regulations, license conditions, and operating and emergency procedures are followed. The licensee shall discuss the results of the evaluation with the operator, and shall instruct the operator on how to correct any mistakes or deficiencies observed.

F. Individuals who will be permitted unescorted access to the radiation room of the irradiator or the area around the pool of an underwater irradiator, but who have not received the training required for operators and the radiation safety officer, shall be instructed and tested in any precautions they should take to avoid radiation exposure, any procedures or parts of procedures listed in 20.3.15.1518 NMAC that they are expected to perform or comply with, and their proper response to alarms required in this part (20.3.15 NMAC). Tests may be oral.

G. Individuals who must be prepared to respond to alarms required by Subsection B of 20.3.15.1507 NMAC, Subsection I of 20.3.15.1507 NMAC, Subsection A of 20.3.15.1509 NMAC, Subsections A and B of 20.3.15.1510 NMAC, and Subsection B of 20.3.15.1521 NMAC shall be trained and tested on how to respond. Each individual shall be retested at least once a year. Tests may be oral.

[05/03/95; 20.3.15.1517 NMAC - Rn, 20 NMAC 3.1.15.1517, 04/15/2004]

20.3.15.1518 OPERATING AND EMERGENCY PROCEDURES:

A. The licensee shall have and follow written operating procedures for:

- (1) operation of the irradiator, including entering and leaving the radiation room;
- (2) use of personnel dosimeters;
- (3) surveying the shielding of panoramic irradiators;
- (4) monitoring pool water for contamination while the water is in the pool and before release of pool water to unrestricted areas;
- (5) leak testing of sources;
- (6) inspection and maintenance checks required by 20.3.15.1522 NMAC;
- (7) loading, unloading and repositioning sources, if the operations will be performed by the licensee; and

(8) inspection of movable shielding required by Subsection H of 20.3.15.1507 NMAC; if applicable.

B. The licensee shall have and follow emergency or abnormal event procedures, appropriate for the irradiator type, for:

- (1)** sources stuck in the unshielded position;
- (2)** personnel overexposures;
- (3)** a radiation alarm from the product exit portal monitor or pool monitor;
- (4)** detection of leaking sources, pool contamination or alarm caused by contamination of pool water;
- (5)** a low or high water level indicator, an abnormal water loss or leakage from the source storage pool;
- (6)** a prolonged loss of electrical power;
- (7)** a fire alarm or explosion in the radiation room;
- (8)** an alarm indicating unauthorized entry into the radiation room, area around pool or another alarmed area;
- (9)** natural phenomena, including an earthquake, a tornado, flooding, or other phenomena as appropriate for the geographical location of the facility; and
- (10)** the jamming of automatic conveyor systems.

C. The licensee may revise operating and emergency procedures without department approval only if all of the following conditions are met:

- (1)** the revisions do not reduce the safety of the facility;
- (2)** the revisions are consistent with the outline or summary of procedures submitted with the license application;
- (3)** the revisions have been reviewed and approved by the radiation safety officer; and
- (4)** the users or operators are instructed and tested on the revised procedures before they are put into use.

[05/03/95; 20.3.15.1518 NMAC - Rn, 20 NMAC 3.1.15.1518, 04/15/2004; A, 06/13/2017]

20.3.15.1519 PERSONNEL MONITORING:

A. Irradiator operators shall wear a personnel dosimeter while operating a panoramic irradiator, or while in the area around the pool of an underwater irradiator. The personnel dosimeter processor must be capable of detecting high-energy photons in the normal and accident dose ranges (see Subsection C of 20.3.4.416 NMAC). Each personnel dosimeter must be assigned to and worn by only one individual. Film badges must be replaced at least monthly, and other personnel dosimeters that require replacement must be at least quarterly. All personnel dosimeters must be evaluated at least quarterly or promptly after replacement, whichever is more frequent.

B. Other individuals who enter the radiation room of a panoramic irradiator shall wear a dosimeter, which may be a pocket dosimeter. For groups of visitors, only two people who enter the radiation room are required to wear dosimeters. If pocket dosimeters are used to meet the requirements of this subsection, a check of their response to radiation must be done at least annually. Acceptable dosimeters must read within plus or minus thirty percent of the true radiation dose.

[5/3/1995; 20.3.15.1519 NMAC - Rn, 20 NMAC 3.1.15.1519, 4/15/2004; A, 8/31/2005; A, 5/1/2024]

20.3.15.1520 RADIATION SURVEYS:

A. A radiation survey of the area outside the shielding of the radiation room of a panoramic irradiator must be conducted with the sources in the exposed position before the facility starts to operate. A radiation survey of the area above the pool of pool irradiators must be conducted after the sources are loaded, but before the facility starts to operate. Additional radiation surveys of the shielding must be performed at intervals not to exceed 3 years and before resuming operation after addition of new sources or any modification to the radiation room shielding or structure that might increase dose rates.

B. If the radiation levels specified in 20.3.15.1508 NMAC are exceeded, the facility must be modified to comply with the requirements in 20.3.15.1508 NMAC.

C. Portable radiation survey meters must be calibrated at least annually to an accuracy of +20 percent for the gamma energy of the sources in use. The calibration must be done at two points on each scale, or for digital instruments at one point per decade over the range that will be used. Portable radiation survey meters must be of a type that does not saturate and read zero at high radiation dose rates.

D. Water from the irradiator pool, other potentially contaminated liquids and sediments from pool vacuuming must be monitored for radioactive contamination before release to unrestricted areas. Radioactive concentrations must not exceed those specified in 20.3.4 NMAC, column 2 of table II, or table III of 20.3.4.461 NMAC, "annual

limits on intake (ALIs) and derived air concentrations (DACs) of radionuclides for occupational exposure; effluent concentration; concentrations for release to sewerage".

E. Before releasing resins for unrestricted use, they must be monitored before release in an area with a background level less than 0.5 microsievert (0.05 millirem) per hour. The resins may be released only if the survey does not detect radiation levels above background radiation levels. The survey meter used must be capable of detecting radiation levels of 0.5 microsievert (.05 millirem) per hour.

[05/03/95; 20.3.15.1520 NMAC - Rn, 20 NMAC 3.1.15.1520, 04/15/2004]

20.3.15.1521 DETECTION OF LEAKING SOURCES:

A. Each dry-source-storage sealed source must be tested for leakage at intervals not to exceed 6 months using a leak test kit or method approved by the department. In the absence of a certificate from a transferor that a test has been made within the 6 months before the transfer, the sealed source may not be used until tested. The test must be capable of detecting the presence of 200 becquerels (0.005 microcurie) of radioactive material and must be performed by a person approved by the department to perform the test.

B. For pool irradiators, sources may not be put into the pool unless the licensee tests the sources for leaks or has a certificate from a transferor that a leak test has been done within the 6 months before the transfer. Water from the pool must be checked for contamination each day the irradiator operates. The check may be done either by using a radiation monitor on a pool water circulating system or by analysis of a sample of pool water. If a check for contamination is done by analysis of a sample of pool water, the results of the analysis must be available within 24 hours. If the licensee uses a radiation monitor on a pool water circulating system, the detection of above normal radiation levels must activate an alarm. The alarm set-point must be set as low as practical, but high enough to avoid false alarms. The licensee may reset the alarm set point to a higher level if necessary to operate the pool water purification system to clean up contamination in the pool if specifically provided for in written emergency procedures.

C. If a leaking source is detected, the licensee shall arrange to remove the leaking source from service and have it decontaminated, repaired or disposed of by a department licensee that is authorized to perform these functions. The licensee shall promptly check its personnel, equipment, facilities and irradiated product for radioactive contamination. No product may be shipped until the product has been checked and found free of contamination. If a product has been shipped that may have been inadvertently contaminated, the licensee shall arrange to locate and survey that product for contamination. If any personnel are found to be contaminated, decontamination must be performed promptly. If contaminated equipment, facilities or products are found, the licensee shall arrange to have them decontaminated or disposed of by a department licensee that is authorized to perform these functions. If a pool is contaminated, the licensee shall arrange to clean the pool until the contamination levels do not exceed the

appropriate concentration in column 2 of table II, 20.3.4.461 NMAC. (See 20.3.3.325 NMAC for reporting requirements.)

[05/03/95; 20.3.15.1521 NMAC - Rn, 20 NMAC 3.1.15.1521, 04/15/2004; A, 04/30/2009]

20.3.15.1522 INSPECTION AND MAINTENANCE:

A. The licensee shall perform inspection and maintenance checks that include, as a minimum, each of the following at the frequency specified in the license or license application:

- (1)** operability of each aspect of the access control system required by 20.3.15.1507 NMAC;
- (2)** functioning of the source position indicator required by Subsection B of 20.3.15.1511 NMAC;
- (3)** operability of the radiation monitor for radioactive contamination in pool water required by Subsection B of 20.3.15.1521 NMAC, using a radiation check source, if applicable;
- (4)** operability of the over-pool radiation monitor at underwater irradiator as required by Subsection B of 20.3.15.1510 NMAC;
- (5)** operability of the product exit monitor required by Subsection A of 20.3.15.1510 NMAC;
- (6)** operability of the emergency source return control required by Subsection C of 20.3.15.1511 NMAC;
- (7)** leak-tightness of systems through which pool water circulates (visual inspection);
- (8)** operability of the heat and smoke detectors and extinguisher system required by 20.3.15.1509 NMAC, but without turning extinguishers on;
- (9)** operability of the means of pool water replenishment required by Subsection C of 20.3.15.1512 NMAC;
- (10)** operability of the indicators of high and low pool water levels required by Subsection D of 20.3.15.1512 NMAC;
- (11)** operability of the intrusion alarm required by Subsection I of 20.3.15.1507 NMAC;

(12) functioning and wear of the system, mechanisms, and cables used to raise and lower sources;

(13) condition of the barrier to prevent products from hitting the sources or source mechanism as required by 20.3.15.1513 NMAC;

(14) amount of water added to the pool to determine if the pool is leaking;

(15) electrical wiring on required safety systems for radiation damage; and

(16) pool water conductivity measurements and analysis as required by Subsection B of 20.3.15.1523 NMAC.

B. Malfunctions and defects found during inspection and maintenance checks must be repaired without undue delay.

[05/03/95; 20.3.15.1522 NMAC - Rn, 20 NMAC 3.1.15.1522, 04/15/2004]

20.3.15.1523 POOL WATER PURITY:

A. Pool water purification system must be run sufficiently to maintain the conductivity of the pool water below 20 microsiemens per centimeter under normal circumstances. If pool water conductivity rises above 20 microsiemens per centimeter, the licensee shall take prompt actions to lower the pool water conductivity and shall take corrective actions to prevent future recurrences.

B. The licensee shall measure the pool water conductivity frequently enough, but no less than weekly, to assure that the conductivity remains below 20 microsiemens per centimeter. Conductivity meters must be calibrated at least annually.

[05/03/95; 20.3.15.1523 NMAC - Rn, 20 NMAC 3.1.15.1523, 04/15/2004]

20.3.15.1524 ATTENDANCE DURING OPERATION:

A. Both an irradiator operator, and at least one other individual who is trained on how to respond and prepared to promptly render or summon assistance if the access control alarm sounds, shall be present on-site:

(1) whenever the irradiator is operated using an automatic product conveyor system; and

(2) whenever the product is moved into or out of the radiation room when the irradiator is operated in a batch mode.

B. At a panoramic irradiator at which static irradiations (no movement of the product) are occurring, a person who has received the training on how to respond to alarms described in Subsection G of 20.3.15.1517 NMAC must be onsite.

C. At an underwater irradiator, an irradiator operator must be present at the facility whenever the product is moved into or out of the pool. Individuals who move the product into or out of the pool of an underwater irradiator need not be qualified as irradiator operators; however, they must have received the training described in Subsections F and G of 20.3.15.1517 NMAC. Static irradiations may be performed without a person present at the facility.

[05/03/95; 20.3.15.1524 NMAC - Rn, 20 NMAC 3.1.15.1524, 04/15/2004; A, 06/13/2017]

20.3.15.1525 ENTERING AND LEAVING THE RADIATION ROOM:

A. Upon first entering the radiation room of a panoramic irradiator after an irradiation, the irradiator operator shall use a survey meter to determine that the source has returned to its fully shielded position. The operator shall check the functioning of the survey meter with a radiation check source prior to entry.

B. Before exiting from and locking the door to the radiation room of a panoramic irradiator prior to a planned irradiation, the irradiator operator shall:

(1) visually inspect the entire radiation room to verify that no one else is in it; and

(2) activate a control in the radiation room that permits the sources to be moved from the shielded position, only if the door to the radiation room is locked within a preset time after setting the control.

C. During a power failure, the area around the pool of an underwater irradiator may not be entered without using an operable and calibrated radiation survey meter, unless the over-the-pool monitor required by Subsection B of 20.3.15.1510 NMAC is operating with backup power.

[05/03/95; 20.3.15.1525 NMAC - Rn, 20 NMAC 3.1.15.1525, 04/15/2004]

20.3.15.1526 IRRADIATION OF EXPLOSIVE OR FLAMMABLE MATERIALS:

A. Irradiation of explosive material is prohibited, unless the licensee has received prior written authorization from the department. Authorization will not be granted, unless the licensee can demonstrate that detonation of the explosive would not rupture the sealed sources, injure personnel, damage safety systems or cause radiation overexposures of personnel.

B. Irradiation of more than small quantities of flammable material (flash point below 140 degrees F) is prohibited in panoramic irradiators, unless the licensee has received prior written authorization from the department. Authorization will not be granted, unless the licensee can demonstrate that a fire in the radiation room could be controlled without damage to sealed sources or safety systems and without radiation overexposures of personnel.

[05/03/95; 20.3.15.1526 NMAC - Rn, 20 NMAC 3.1.15.1526, 04/15/2004]

20.3.15.1527 RECORDS AND RETENTION PERIODS:

The licensee shall maintain the following records at the irradiator for the periods specified.

A. A copy of the license, license conditions, documents incorporated into a license by reference, and amendments thereto until superseded by new documents or until the department terminates the license for documents not superseded.

B. Records of each individual's training, tests and safety reviews provided to meet the requirements of Subsections A, B, C, D, F and G of 20.3.15.1517 NMAC, until 3 years after the individual terminates work.

C. Records of the annual evaluations of the safety performance of irradiator operators required by Subsection E of 20.3.15.1517 NMAC for 3 years after the evaluation.

D. A copy of the current operating and emergency procedures required by 20.3.15.1518 NMAC, until superseded or the department terminates the license. Records of the radiation safety officer's review and approval of changes in procedures as required by Paragraph (3) of Subsection C of 20.3.15.1518 NMAC retained for 3 years from the date of the change.

E. Evaluations of personnel dosimeters required by 20.3.15.1519 NMAC until the department terminates the license.

F. Records of radiation surveys required by 20.3.15.1520 NMAC for 3 years from the date of the survey.

G. Records of radiation survey meter calibrations required by 20.3.15.1520 NMAC, and pool water conductivity meter calibrations required by Subsection B of 20.3.15.1523 NMAC until 3 years from the date of calibration.

H. Records of the results of leak tests required by Subsection A of 20.3.15.1521 NMAC, and the results of contamination checks required by Subsection B of 20.3.15.1521 NMAC for 3 years from the date of each test.

I. Records of the results of leak tests required by 20.3.15.1522 NMAC for 3 years.

J. Records of major malfunctions, significant defects, operating difficulties or irregularities, and major operating problems that involve required radiation safety equipment for 3 years after repairs are completed.

K. Records of the receipt, transfer and disposal of all licensed sealed sources as required by 20.3.1.108 NMAC.

L. Records on the design checks required by 20.3.15.1515 NMAC, and the construction control checks as required by 20.3.15.1516 NMAC until the license is terminated. The records must be signed and dated. The title or qualification of the person signing must be included.

M. Records related to decommissioning of the irradiator as required by 20.3.3.311 NMAC.

[05/03/95; 20.3.15.1527 NMAC - Rn, 20 NMAC 3.1.15.1527, 04/15/2004; A, 8/31/2005]

20.3.15.1528 REPORTS:

A. In addition to the reporting requirements in other parts these regulations (20.3 NMAC), the licensee shall report the following events, if not reported under other parts these regulations (20.3 NMAC):

- (1) source stuck in an unshielded position;
- (2) any fire or explosion in a radiation room;
- (3) damage to the source racks;
- (4) failure of the cable or drive mechanism used to move the source racks;
- (5) inoperability of the access control system;
- (6) detection of radiation source by the product exit monitor;
- (7) detection of radioactive contamination attributable to licensed radioactive material;
- (8) structural damage to the pool liner or walls;
- (9) abnormal water loss or leakage from the source storage pool; and
- (10) pool water conductivity exceeding 100 microsiemens per centimeter.

B. The report must include a telephone report within 24 hours as described in Paragraph (1) of Subsection C of 20.3.3.325 NMAC, and a written report within 30 days as described in Paragraph (2) of Subsection C of 20.3.3.325 NMAC.

[05/03/95; 20.3.15.1528 NMAC - Rn, 20 NMAC 3.1.15.1528, 04/15/2004; A, 04/30/2009]

PART 16: FEES FOR LICENSURE OF RADIOACTIVE MATERIALS

20.3.16.1 ISSUING AGENCY:

Environmental Improvement Board.

[20.3.16.1 NMAC - Rp, 20.3.16.1 NMAC 5/1/2024]

20.3.16.2 SCOPE:

A. This Part applies to those entities or activities which require licensure in accordance with Chapter 3, Title 20 NMAC.

B. The requirements of this Part are in addition to, and not in substitution for, other applicable requirements of the regulations in Chapter 3, Title 20 NMAC.

C. This Part does not apply to those activities that the U.S. Nuclear Regulatory Commission (NRC) reserved exclusively for federal regulation.

[20.3.16.2 NMAC - Rp, 20.3.16.2 NMAC 5/1/2024]

20.3.16.3 STATUTORY AUTHORITY:

Section 74-1-8.A(5) and Section 74-3-5.A(2) NMSA 1978.

[20.3.16.3 NMAC - Rp, 20.3.16.3 NMAC 5/1/2024]

20.3.16.4 DURATION:

Permanent.

[20.3.16.4 NMAC - Rp, 20.3.16.4 NMAC 5/1/2024]

20.3.16.5 EFFECTIVE DATE:

May 1, 2024.

[20.3.16.5 NMAC - Rp, 20.3.16.5 NMAC 5/1/2024]

20.3.16.6 OBJECTIVE:

To establish fees and costs associated with applying for and maintaining radioactive material licenses.

[20.3.16.6 NMAC - Rp, 20.3.16.6 NMAC 5/1/2024]

20.3.16.7 DEFINITIONS:

A. "Amendment" means a request made by a licensee to the department to approve a change to its license. Examples of amendments include, but are not limited to, changes to users, changes in materials, and transfers of licenses.

B. "Application" means an application for a new license, a renewal of a license or an amendment.

C. "Byproduct material" means any radioactive material (except special nuclear material) yielded in or made radioactive by exposure to the radiation incident to the process of producing or utilizing special nuclear material.

D. "Department" means the New Mexico environment department and its duly authorized representatives.

E. "Fee" means an amount to be charged by the department in accordance with the provisions in this Part.

F. "Fiscal year" or "FY" means a year that begins on July 1 of each calendar year and ends on June 30 of the following calendar year. Fiscal years are identified by the year in which they end (e.g., fiscal year 2025 begins on July 1, 2024 and ends on June 30, 2025).

G. "Generator" means a person who produces, uses, stores, transfers, or disposes of radioactive materials in any licensable quantity.

H. "Government agency" means any state or federal executive department, commission, independent establishment, corporation, wholly or partly owned by any state or the United States of America which is an instrumentality of the state or United States, or any board, bureau, division, service, office, officer, authority, administration, or other establishment in executive branches of government.

I. "License" or "Materials license" means a license, certificate, approval, registration, or other form of permission issued by the department under the various parts of these regulations.

J. "Nonprofit educational institution" means a public or nonprofit educational institution whose primary function is education, whose programs are accredited by a

nationally recognized accrediting agency or association, who is legally authorized to provide a program of organized instruction or study, who provides an educational program for which it awards academic degrees, and whose educational programs are available to the public.

K. "NORM" means any naturally occurring radioactive material subject to the licensing requirements of these regulations.

L. "NRC" means the U.S. Nuclear Regulatory Commission; an officer, employee, or authorized representative of the commission.

M. "Operating license" means having a license issued pursuant to Part 3, Title 20 NMAC.

N. "Person" means:

(1) any individual, corporation, partnership, firm, association, trust, estate, public or private institution, group, or Government agency other than the department; any state or any political subdivision of, or any political entity within, a state; any foreign government or nation or any political subdivision of any such foreign government or nation; or other entity; and

(2) any legal successor, representative, agent, or agency of the foregoing.

O. "Registration holder" as used in this part means any manufacturer or initial distributor of a sealed source or device containing a sealed source that holds a certificate of registration issued by the NRC, or a holder of a registration for a sealed source or device manufactured in accordance with the unique specifications of, and for use by, a single applicant.

P. "Source material" means:

(1) uranium or thorium, or any combination thereof, in any physical or chemical form; or

(2) ores which contain by weight one-twentieth of one percent or more of

(a) uranium,

(b) thorium, or

(c) any combination thereof.

(3) Source material does not include special nuclear material.

Q. "Special nuclear material" means:

(1) plutonium, uranium-233, uranium enriched in the isotope 233 or in the isotope 235, and any other material which the NRC, pursuant to the provisions of section 51 of the Atomic Energy Act of 1954, as amended, determines to be special nuclear material, but does not include source material; or

(2) any material artificially enriched by any of the special nuclear materials and excluding source material.

[20.3.16.7 NMAC - Rp, 20.3.16.7 NMAC 5/1/2024]

20.3.16.8 INTERPRETATIONS:

Except as specifically authorized by the department in writing, no interpretation of the regulations in this part by an officer or employee of the department, other than a written interpretation by the general counsel, will be recognized as binding on the department.

[20.3.16.8 NMAC - Rp, 20.3.16.8 NMAC 5/1/2024]

20.3.16.9 CONSUMER PRICE INDEX ADJUSTMENT:

Starting in fiscal year 2027, then in each subsequent calendar year, all fees in this Part shall be increased pursuant to the provisions in this Part if there is an increase in the unadjusted consumer price index (CPI) for all urban consumers, United States city average for all items, or its successor index, as published by the U.S. Bureau of Labor Statistics or its successor agency. The increase shall be measured by the percentage increase of the consumer price index as of October of the immediately preceding year over the level of the consumer price index as of October of the next previous year and shall be rounded up to the nearest dollar. A fee increase shall take effect on July 1 of the year in which the fee schedule is adjusted. In the event there is a decrease or absence of change in the CPI, fees shall remain the same until the next increase in CPI as described in this paragraph.

[20.3.16.9 NMAC – Rp, 20.3.16.9 NMAC 5/1/2024]

20.3.16.10 ANNUAL FEE SCHEDULE, LICENSE APPLICATION FEES, AMENDMENT APPLICATION FEES, AND ANNUAL FEES:

A. The department shall develop and publish a current fee schedule each year by May 1 to take effect by July 1 of the same year. The fee schedule will list current license application fees, amendment application fees, annual fees, and termination request fees.

B. Each Location of Use. All fees in this Part apply to each location of use listed on the license. The licensee shall pay the cumulative amount owed for each location of use for each license held by the licensee.

C. License Applications.

(1) An application fee shall be charged for new licenses, renewals of licenses, and applications to reinstate expired, terminated, or inactive licenses. Each application for which a fee is prescribed must be accompanied by a remittance of the full amount of the fee prior to department review.

(2) Fees are charged regardless of whether the application is approved, denied, or withdrawn.

(3) Applications for licenses covering more than one fee category of special nuclear material or source material or byproduct material must be accompanied by the prescribed application fee for each applicable fee category.

(4) Applications for new licenses that cover both byproduct material and special nuclear material in sealed sources for use in gauging devices will pay the appropriate application fee for the fee category specified in paragraph 1 of Subsection B of 20.3.16.12 NMAC and in Subsection D of 20.3.16.12 NMAC.

(5) After the department approves an application for a new license, the applicant shall pay the full amount of annual fees due, regardless of the month of issuance of license, prior to commencing operations under the new license.

D. Amendment Applications. A licensee seeking an amendment to a license shall submit an amendment application for an amendment to an existing license submitted to the department. Each amendment application will be charged a fee of twenty-five percent of the amount of the license application fee that would be charged for the license in the fiscal year of the amendment submission.

E. Annual Fees.

(1) Beginning July 1, 2024, annual fees will be charged prospectively. For existing licensees, annual fees will be due on July 1 of each year for use of the license for the next 12 months. For new licensees, the full amount of the annual fees will be due within 30 days of issuance of the license, regardless of the month of issuance, then the next due date for the annual fees will be July 1.

(2) If a single license authorizes more than one activity (e.g., human use and irradiator activities), then annual fees will be assessed for each fee category applicable to the license.

(3) If a person holds more than one license, certificate, registration, or approval, the annual fee(s) will be assessed for each license, certificate, registration, or approval held by that person.

(4) Separate annual fees will not be assessed for pacemaker licenses issued to medical institutions that also hold nuclear medicine licenses.

(5) Payment of the prescribed annual fee does not automatically renew the license for which the fee is paid. Renewal applications must be filed in accordance with the requirements of Part 3, Title 20 NMAC as applicable and must be approved by the department.

[20.3.16.10 NMAC - Rp, 20.3.16.10 NMAC 5/1/2024]

20.3.16.11 CATEGORIES OF MATERIALS LICENSES, APPLICATION FEES AND ANNUAL FEES:

A. The categories of materials licenses for which fees are due for each location of use are listed below in this section. For each category of materials license, the FY 25 and FY 26 application fee and FY 25 and FY 26 annual fee amounts are listed. Starting in FY 27, all license application fees and annual fees charged in FY 26 will be subject to the CPI adjustment described in this Part. Since the amendment application fees are calculated based on the license application fees, no additional CPI adjustment applies to amendment application fees.

B. Special nuclear material:

(1) Licenses for possession and use of special nuclear material of less than a critical mass, as defined in Code of Federal Regulations 10 CFR 70.4, in sealed sources contained in devices used in industrial measuring systems, including x-ray fluorescence analyzers:

(a) License application fee: \$1,300 for FY 25 and \$1,300 for FY 26; and

(b) Annual fee: \$1,200 for FY 25 and \$2,400 for FY 26.

(2) All other special nuclear material licenses, except licenses authorizing special nuclear material in the sealed or unsealed form in combination that would constitute a critical mass as defined in Code of Federal Regulations 10 CFR70.4.

(a) License application fee: \$2,700 for FY 25 and \$2,700 for FY 26; and

(b) Annual fee: \$2,850 for FY 25 and \$5,700 for FY 26.

C. Source material:

(1) Licenses for possession and use of source material in recovery operations such as ion exchange facilities.

(a) License application fee: \$87,000 for FY 25 and \$87,000 for FY 26; and

(b) Annual fee: \$87,000 for FY 25 and \$87,000 for FY 26.

(2) Licenses that authorize only the possession, use and/or installation of source material for shielding.

(a) License application fee: \$1,300 for FY 25 and \$1,300 for FY 26; and

(b) Annual fee: \$1,350 for FY 25 and \$2,700 for FY 26.

(3) Licenses to distribute items containing source material to persons exempt from the licensing requirements of 20.3.3 NMAC.

(a) License application fee: \$6,200 for FY 25 and \$6,200 for FY 26; and

(b) Annual fee: \$4,450 for FY 25 and \$8,900 for FY 26.

(4) Licenses to possess, distribute, transfer, store, and dispose of source material to persons specifically licensed under 20.3.3 NMAC.

(a) License application fee: \$2,000 for FY 25 and \$2,000 for FY 26; and

(b) Annual fee: \$2,550 for FY25 and \$5,100 for FY26.

(5) Licenses for possession and use of source material for processing or manufacturing products or materials containing source material for commercial distribution.

(a) License application fee: \$2,700 for FY 25 and \$2,700 for FY 26; and

(b) Annual fee: \$3,150 for FY 25 and \$6,300 for FY 26.

(6) All other source material licenses

(a) License application fee: \$2,700 for FY 25 and \$2,700 for FY 26; and

(b) Annual fee: \$4,250 for FY 25 and \$8,500 for FY 26.

D. Byproduct Material:

(1) Licenses of broad scope for possession and use of byproduct material issued for processing or manufacturing of items containing byproduct material for commercial distribution.

(a) License application fee: \$13,500 for FY 25 and \$13,500 for FY 26; and

(b) Annual fee: \$13,700 for FY 25 and \$27,400 for FY 26.

(2) Other licenses for possession and use of byproduct material issued for processing or manufacturing of items containing byproduct material for commercial distribution.

(a) License application fee: \$3,700 for FY 25 and \$3,700 for FY 26; and

(b) Annual fee: \$4,800 for FY 25 and \$9,600 for FY 26.

(3) Licenses authorizing the processing or manufacturing and distribution or redistribution of radiopharmaceuticals, generators, reagent kits and/or sources and devices containing byproduct material.

(a) License application fee: \$5,400 for FY 25 and \$5,400 for FY 26; and

(b) Annual fee: \$4,500 for FY 25 and \$9,000 for FY 26.

(4) Licenses for possession and use of byproduct material in sealed sources for irradiation of materials in which the source is not removed from its shield (self-shielded units).

(a) Licensing application fee: \$3,300 for FY 25 and \$3,300 for FY 26; and

(b) Annual fee: \$4,950 for FY 25 and \$9,900 for FY 26.

(5) Licenses for possession and use of less than or equal to 10,000 curies of byproduct material in sealed sources for irradiation of materials in which the source is exposed for irradiation purposes. This category also includes underwater irradiators for irradiation of materials in which the source is not exposed for irradiation purposes.

(a) License application fee: \$6,700 for FY 25 and \$6,700 for FY 26; and

(b) Annual fee: \$4,450 for FY 25 and \$8,900 for FY 26.

(6) Licenses for possession and use of greater than 10,000 curies of byproduct material in sealed sources for irradiation of materials in which the source is exposed for irradiation purposes. This category also includes underwater irradiators for irradiation of materials in which the source is not exposed for irradiation purposes.

(a) License application fee: \$64,300 for FY 25 and \$64,300 for FY 26; and

(b) Annual fee: \$36,050 for FY 25 and \$72,100 for FY 26.

(7) Licenses to distribute items containing byproduct material that require device review or quantities of byproduct material to persons exempt from the licensing requirements of these regulations, except for specific licenses authorizing redistribution

of items that have been authorized for distribution to persons exempt from the licensing requirements.

(a) License application fee: \$6,900 for FY 25 and \$6,900 for FY 26; and

(b) Annual fee: \$4,350 for FY 25 and \$8,700 for FY 26.

(8) Licenses to distribute items containing byproduct material or quantities of byproduct material that require sealed source and/or device review to specifically licensed persons, except specific licenses authorizing redistribution of items that have been authorized for distribution to generally licensed persons.

(a) License application fee: \$2,100 for FY 25 and \$2,100 for FY 26; and

(b) Annual fee: \$1,800 for FY 25 and \$3,600 for FY 26.

(9) License issued to distribute items containing byproduct material or quantities of byproduct material that do not require device evaluation to persons exempt from the licensing requirements, except for specific licenses authorizing redistribution of items that have been authorized for distribution to persons exempt from the licensing requirements.

(a) License application fee: \$15,300 for FY 25 and \$15,300 for FY 26; and

(b) Annual fee: \$8,700 for FY 25 and \$17,400 for FY 26.

(10) Licenses issued to distribute items containing byproduct material or quantities of byproduct material that do not require sealed source and/or device review to persons specifically licensed, except specific licenses authorizing redistribution of items that have been authorized for distribution to persons generally licensed.

(a) License application fee: \$1,200 for FY 25 and \$1,200 for FY 26; and

(b) Annual fee: \$1,350 for FY 25 and \$2,700 for FY 26.

(11) Licenses of broad scope for possession and use of byproduct material for research and development that do not authorize commercial distribution.

(a) License application fee: \$5,700 for FY 25 and \$5,700 for FY 26; and

(b) Annual fee: \$6,250 for FY 25 and \$12,500 for FY 26.

(12) Other licenses for possession and use of byproduct material for research and development that do not authorize commercial distribution.

(a) License application fee: \$8,600 for FY 25 and \$8,600 for FY 26; and

(b) Annual fee: \$6,700 for FY 25 and \$13,400 for FY 26

(13) Licenses that authorize services for other licensees:

(a) License application fee: \$9,200 for FY 25 and \$9,200 for FY 26; and

(b) Annual fee: \$7,600 for FY 25 and \$15,200 for FY 26.

(14) Licenses for the possession and use of byproduct material for industrial radiography operations; this category also includes the possession and use of source material for shielding when authorized on the same license:

(a) License application fee: \$9,200 for FY 25 and \$9,200 for FY 26; and

(b) Annual fee: \$14,550 for FY 25 and \$29,100 for FY 26.

(15) All other specific byproduct material licenses, including calibration and leak testing:

(a) License application fee: \$6,600 for FY 25 and \$6,600 for FY 26; and

(b) Annual fee: \$4,950 for FY 25 and \$9,900 for FY 26.

(16) Licenses for production of accelerator-produced radionuclides:

(a) License application fee: \$14,700 for FY 25 and \$14,700 for FY 26; and

(b) Annual fee: \$11,900 for FY 25 and \$23,800 for FY 26.

E. Waste disposal and processing:

(1) Class 1 Waste Licenses - Licenses specifically authorizing the receipt of waste byproduct material, source material, NORM, or special nuclear material from other persons specifically licensed for the purpose of contingency storage or commercial land disposal by the licensee; or licenses for receipt of waste from other persons for incineration or other treatment, packaging of resulting waste and residues, and transfer of packages to another person authorized to receive or dispose of waste material:

(a) License application fee: \$5,000 for FY 25 and \$10,000 for FY 26; and

(b) Annual fee: \$10,000 for FY 25 and \$20,000 for FY 26.

(2) Class 2 Waste Licenses - Licenses specifically authorizing the receipt of waste byproduct material, source material, NORM, or special nuclear material from other persons for the purpose of packaging or repackaging the material. The licensee

will dispose of the material by transfer to another person authorized to receive or dispose of the material:

(a) License application fee: \$0 for FY 25 and \$0 for FY 26; and

(b) Annual fee: \$7,480 for FY 25 and \$7,480 for FY 26.

(3) Class 3 Waste Licenses - Licenses specifically authorizing the receipt of prepackaged waste byproduct material, source material, NORM, or special nuclear material from other persons. The licensee will dispose of the material by transfer to another person authorized to receive or dispose of the material:

(a) License application fee: \$0 for FY 25 and \$0 for FY 26; and

(b) Annual fee: \$5,530 for FY 25 and \$5,530 for FY 26.

F. Well logging:

(1) Licenses for possession and use of byproduct material, source material, and/or special nuclear material for well logging, well surveys, and tracer studies other than field flooding tracer studies:

(a) License application fee: \$4,800 for FY 25 and \$4,800 for FY 26; and

(b) Annual fee: \$6,250 for FY 25 and \$12,500 for FY 26.

(2) Licenses for possession and use of byproduct material for field flooding tracer studies:

(a) License application fee: \$6,530 for FY 25 and \$6,530 for FY 26; and

(b) Annual fee: \$3,265 for FY 25 and \$6,530 for FY 26.

G. Nuclear laundries - Licenses for commercial collection and laundry of items contaminated with byproduct material, source material, or special nuclear material and storage and transfer of laundry from the license location:

(1) License application fee: \$22,900 for FY 25 and \$22,900 for FY 26; and

(2) Annual fee: \$14,050 for FY 25 and \$28,100 for FY 26.

H. Medical licenses:

(1) Licenses for human use of byproduct material, source material, or special nuclear material in sealed sources contained in gamma stereotactic radiosurgery units

teletherapy devices; this category also includes the possession and use of source material for shielding when authorized on the same license:

(a) License application fee: \$11,500 for FY 25 and \$11,500 for FY 26; and

(b) Annual fee: \$13,550 for FY 25 and \$27,100 for FY 26.

(2) Licenses of broad scope issued to medical institutions or two or more physicians authorizing research and development, including human use of byproduct material except licenses for byproduct material, source material, or special nuclear material in sealed sources contained in teletherapy devices:

(a) License application fee: \$9,000 for FY 25 and \$9,000 for FY 26; and

(b) Annual fee: \$18,500 for FY 25 and \$37,000 for FY 26.

(3) Other licenses for human use of byproduct material, source material, and/or special nuclear material except licenses for in-vitro analysis, and except licenses for byproduct material, source material, or special nuclear material in sealed sources contained in teletherapy devices; this category also includes the possession and use of source material for shielding when authorized on the same license:

(a) License application fee: \$10,900 for FY 25 and \$10,900 for FY 26; and

(b) Annual fee: \$8,400 for FY 25 and \$16,800 for FY 26.

I. Civil defense - Licenses for possession and use of byproduct material, source material, or special nuclear material for civil defense activities:

(1) License application fee: \$2,600 for FY 25 and \$2,600 for FY 26; and

(2) Annual fee: \$3,000 for FY 25 and \$6,000 for FY 26.

J. Reciprocal Recognition of Licenses under 20.3.3.24 NMAC:

(1) License application fee: \$2,700 for FY 25 and \$2,700 for FY 26; and

(2) Annual fee: \$0 for FY25 and \$0 for FY26.

K. New categories. For generators of any category and any licensable quantity of radioactive material not listed above:

(1) License application fee: \$10,000 for FY 25 and \$10,000 for FY 26; and

(2) Annual Fee: \$10,000 for FY 25 and \$10,000 for FY 26.

[20.3.16.11 NMAC - Rp, 20.3.16.11 NMAC 5/1/2024]

20.3.16.12 SMALL ENTITIES AND ANNUAL FEES:

A. A licensee may qualify as a small entity pursuant to the provisions of this section and receive a refund of a portion of annual fees paid following the submission of certification and documentation with the annual fee payment. The submission of certification and documentation of being a small entity after the due date of the annual fee payment will not allow the licensee to qualify as a small entity until the following year in which the next annual fee payment is due. To qualify as a small entity, an entity must provide appropriate documentation that it meets the size standards and gross income standards described in 20.3.16.12.

B. Small entity criteria.

(1) A small business that is a for-profit entity providing services or products and:

(a) earned average gross receipts of \$8 million or less over its last 3 completed fiscal years and is not engaged in manufacturing; or

(b) is a manufacturing concern with an average number of 500 or fewer employees based upon employment during each pay period for the preceding 12 calendar months; or

(2) A small governmental jurisdiction that is a government of a city, county, town, township, or village with a population (including educational institution populations) of 49,999 or fewer individuals; or

(3) A small educational institution that:

(a) has more than seventy percent of its operating budget funded by state or local governments; or

(b) has zero percent to fifty percent of its operating budget funded by state or local governmental funds and has 500 or fewer employees.

C. For a small entity that meets the small entity criteria listed above in Paragraph A of this section the following are the maximum annual fees, for each location of use and for each licensed category:

(1) Small businesses not engaged in manufacturing and small not-for-profit organizations (Average gross receipts for the last three completed years for all business locations):

(a) Gross annual receipts of \$485,000 to \$7 million, the annual fee is \$ 4,900 for each location.

(b) Gross annual receipts of less than less than \$485,000, the annual fee is \$1,000 for each location.

(2) Manufacturing entities that have an average of 500 or fewer employees working in all of licensee's locations:

(a) 35 to 500 employees, the annual fee is \$4,900 for each location.

(b) Less than 35 employees, the annual fee is \$1000 for each location.

(3) Small governmental jurisdictions.

(a) Population of 20,000 to 49,999, the annual fee is \$ 4,900 for each location.

(b) Population of less than 20,000, the annual fee is \$1000 for each location.

(4) Educational institutions that are not state or publicly supported with 500 employees or less.

(a) With 35 to 500 employees, the annual fee is \$4,900 for each location.

(b) With less than 35 employees, the annual fee is \$1000 for each location.

D. For the purposes of this section, the department shall use the small business administration definition of receipts in the Code of Federal Regulations, 13 CFR 121.104(a)(1)(2), or its successor regulation. A licensee who is a subsidiary of a large entity does not qualify as a small entity for the purposes of this section.

E. Whenever appropriate in the interest of administering statutes and regulations within its jurisdiction, it is the practice of the department to answer inquiries from small entities concerning information on and advice about compliance with the statutes and regulations that affect them.

F. A licensee who seeks to establish status as a small entity for the purpose of paying the annual fees required under this section must file a certification statement with the department. The licensee must file the required certification on department Form RPP526 for each license under which it is billed. The department will include a copy of Form RPP526 with each annual fee invoice sent to a licensee. A licensee who seeks to qualify as a small entity must submit the completed Form RPP526 with the reduced annual fee payment.

G. For purposes of this section, the licensee must submit a new certification with its annual fee payment each year.

H. Small entities are required to pay the appropriate small entity fee for each fee category applicable to their license(s).

I. If a person files a false certification with respect to qualifying as a small entity, the department may refuse to process any application submitted by or on behalf of the person with respect to any license issued to the person and may suspend or revoke any licenses held by the person. The filing of a false certification to qualifying as a small entity under this section may also result in punitive action pursuant to applicable New Mexico state statutes.

[20.3.16.12 NMAC - Rp, 20.3.16.12 NMAC 5/1/2024]

20.3.16.13 PRORATION:

A. The purpose of proration is to bring all licensees to an annual fee due date of July 1 of each year, beginning July 1, 2024. For licenses issued prior to July 1, 2024, the annual fees shall be prorated by multiplying the number of complete and partial months between the anniversary date of the license issuance and July 1, 2024 by the calculated monthly amount of the annual fees due. The resulting calculation of prorated annual fees will be rounded up to the nearest dollar and be due, along with the FY 25 annual fee, on July 1, 2024.

B. After July 1, 2024, there will be no proration, and:

(1) new licensees must pay the full amount of annual fees, regardless of the month of license issuance;

(2) existing licensees must pay the full amount of annual fees on July 1 of each year, regardless of the anniversary date of license issuance; and

(3) licensees who terminate their licenses will not receive a refund of annual fees paid.

[20.3.16.13 NMAC - Rp, 20.3.16.13 NMAC 5/1/2024]

20.3.16.14 PAYMENT, COLLECTION AND COSTS:

A. Payments of fees and costs shall be in the form of an online payment or a check or money order made payable to the Radiation Protection Fund at the address shown on the application, license, registration, or the invoice issued by the department or online payments service providers authorized by the department to collect payments.

B. In the event that fees and costs are not paid within 30 days of the applicable due date, all outstanding fee balances become due and payable, along with a ten percent penalty cost and the costs of collection, to be charged each month until all fees and costs are paid. The penalty and collection costs shall be calculated from the original due date of the outstanding fee balances.

C. Non-compliance with Chapter 3, Title 20 NMAC, the Radiation Protection Act or license requirements, regardless of whether the generator has a current license or generator activities have ceased, requires a generator to cease and desist generator activities and subjects the generator to administrative compliance costs for enforcement of Chapter 3, Title 20 NMAC, civil penalties of up to \$15,000 per day and other remedies available under law and Chapter 3, Title 20 NMAC.

[20.3.16.14 NMAC - Rp, 20.3.16.14 NMAC 5/1/2024]

20.3.16.15 LICENSE TERMINATIONS:

A. For each license termination, the licensee shall inform the department of the intention to terminate the license and shall follow the termination procedures in Chapter 3, Title 20 NMAC and any other requirements set by the department.

B. Upon the department's determination that all conditions for termination have been met, the department shall issue an invoice for a termination fee in an amount equal to the application fee that would be charged for the license in the fiscal year of the termination request. The department shall issue a license termination within 30 days of receipt of total payment of owed fees and costs.

C. Until the department issues the license termination, annual fees and all other outstanding fees and costs under this Part are the continued obligation of the licensee, regardless of whether the license has expired or the licensed activities have ceased.

[20.3.16.15 NMAC - Rp, 20.3.16.15 NMAC 5/1/2024]

20.3.16.16 ANNUAL REVIEW:

By October 1 of each year, the department shall perform a review of the fees and costs required by this part and shall provide a report of the review to the chair of the New Mexico radiation technical advisory council (RTAC).

PART 17-19: [RESERVED]

PART 20: MEDICAL IMAGING AND RADIATION THERAPY LICENSURE

20.3.20.1 ISSUING AGENCY:

Environmental Improvement Board.

[20.3.20.1 NMAC - Rp, 20.3.20.1 NMAC, 09/25/2018]

20.3.20.2 SCOPE:

All individuals engaged in the practice of medical imaging and radiation therapy.

[20.3.20.2 NMAC - Rp, 20.3.20.2 NMAC, 09/25/2018]

20.3.20.3 STATUTORY AUTHORITY:

Medical Imaging and Radiation Therapy Health and Safety Act, Sections 61-14E-1 to 61-14E-12 NMSA 1978, Section 74-1-8 NMSA 1978, and the Uniform Licensing Act, Sections 61-1-1 to 61-1-34 NMSA 1978.

[20.3.20.3 NMAC - Rp, 20.3.30.3 NMAC, 09/25/2018]

20.3.20.4 DURATION:

Permanent.

[20.3.20.4 NMAC - Rp, 20.3.20.4 NMAC, 09/25/2018]

20.3.20.5 EFFECTIVE DATE:

September 25, 2018, unless a later date is cited at the end of a section.

[20.3.20.5 NMAC - Rp, 20.3.20.5 NMAC, 09/25/2018]

20.3.20.6 OBJECTIVE:

To maximize the protection practicable for the citizens of New Mexico from ionizing and non-ionizing radiation in the practice of medical imaging and radiation therapy by establishing requirements for appropriate education and training of individuals operating medical equipment emitting ionizing and non-ionizing radiation, establishing standards of education and training for the individuals who perform medical imaging and radiation therapy procedures, and providing for the appropriate examination and licensure of those individuals.

[20.3.20.6 NMAC - Rp 20.3.20.6 NMAC, 09/25/2018]

20.3.20.7 DEFINITIONS:

As used in this part (20.3.20 NMAC).

A. "Act" means the Medical Imaging and Radiation Therapy Health and Safety Act, Sections 61-14E-1 to 61-14E-12 NMSA 1978.

B. "Advisory council" means the medical imaging and radiation therapy advisory council (MIRTAC).

C. "Applying ionizing radiation" means to use ionizing radiation for diagnostic or therapeutic purposes, including tasks having direct impact on the radiation burden of the patient, such as, but not limited to:

- (1) positioning the patient, image receptor, and beam;
- (2) selection of exposure factors or treatment parameters;
- (3) preparation, calibration, and injection of pharmaceuticals and radiopharmaceuticals in accordance with a licensee's scope of practice; and
- (4) actuating the production of radiation.

D. "Approved program" means a medical imaging or radiation therapy educational program that meets the requirements of 20.3.20.200 NMAC.

E. "Biennial licensure fee" means the licensure fee for an initial, renewal, and limited radiography license, excluding the temporary license, for a period up to 24 months, and is only applied once per continuing medical education biennium period regardless of the number of licenses granted to that registrant. This fee will be assessed each time a registrant submits an application packet to the department. Upon written request to the department, the registrant may reduce their NM biennium period to match their national continuing medical education biennium period.

F. "Board" means the environmental improvement board.

G. "Cardiac sonography" or "echocardiography" means an examination using ultrasound to generate an image of the heart or major blood vessels.

H. "Category A" means a continuing education activity approved for category A credit by an organization recognized by the American registry of radiologic technologists as a recognized continuing education evaluation mechanism.

I. "Certificate of licensure" means a document issued by the department that lists the type or types of license granted to an individual.

J. "Certificate of limited practice" or "limited practice of radiography license" means a limited license granted by the department to an individual other than a licensed practitioner or radiographer who performs restricted diagnostic radiography procedures under the direct supervision of a licensed practitioner or radiographer on designated anatomical sites or limited anatomical areas.

K. "Certified nurse practitioner" means a person licensed pursuant to Section 61-3-23.2 NMSA 1978.

L. "Chest and thorax" or "viscera of the thorax" means radiographic examinations of the ribs and lungs, including anteroposterior, posterior-anterior, lateral, and apical lordotic views, but does not include mammography.

M. "Clinical instruction" means hands-on educational experience in a health care setting such as a hospital, clinic, or physician's office, under the supervision requirements consistent with the standards of the program's accrediting agencies.

N. "Continuing education" (CE) or "continuing medical education" (CME) means a learning activity that is planned, organized, and administered to enhance the professional knowledge and skill of the licensee.

O. "Credential" or "certification" means the recognition awarded to an individual who meets the initial and ongoing requirements of a credentialing or certification organization.

P. "Credentialing organization" or "certification organization" means an organization accredited by the national commission for certifying agencies or the American national standards institute and recognized by the board that issues credentials through testing or evaluation and determines that an individual has met defined standards for training and competence in a medical imaging or radiation therapy modality and subspecialty.

Q. "Department" means the New Mexico environment department.

R. "Diagnostic medical sonographer" means a person, including a vascular technologist or echocardiographer, other than a licensed practitioner, who provides patient care services using ultrasound;

S. "Diagnostic medical sonography" or "sonogram" means the use of ultrasound and sonographic equipment to create medical images for interpretation by a licensed practitioner or other qualified health care practitioner that provide diagnostic information about a patient's medical condition and includes obstetrical ultrasound. Obstetrical ultrasound means an ultrasound exam performed for the purpose of fetal

biometry beyond the first trimester, fetal number, anatomic survey, or follow-up examination for a known or suspected anomaly or growth disturbance. It does not mean a procedure using ultrasound on a focused imaging target to assess specific and limited information about a patient's immediate medical condition or to provide real-time visual guidance for another procedure.

T. "Didactic instruction" means academic instruction.

U. "Duplicate certificate of licensure" means an additional original certificate of licensure issued by the department.

V. "Extremities" means the fingers, hand, wrist, radius/ulna, elbow, humerus, pectoral girdle (shoulder joint and clavicle), toes, foot, ankle, calcaneus, tibia/fibula, patella, knee, or distal femur, but does not include the skull, spine, hip, or pelvis.

W. "Facility" means a hospital, clinic, medical office, mobile lab, or other location where medical imaging or radiation therapy is provided.

X. "Focused imaging target" means a discrete anatomical target, to which ultrasound is applied to create an image for assessment of specific and limited information about a patient's immediate medical condition, or to provide visual guidance for another procedure. An ultrasound procedure on a focused imaging target does not supplant a diagnostic ultrasound examination.

Y. "General sonography" means an examination using ultrasound to create an image of the abdomen, chest, pelvis, pregnant uterus, small parts, or superficial structures.

Z. "Interventional" means to diagnose or treat patients using medical imaging devices. Interventional procedures may include, but are not limited to: radiation therapy, organ biopsy, angiography, angioplasty, and catheter delivered stents. Interventional does not mean needle or catheter placement for vascular access or delivery of medicine or anesthesia, or the use of non-ionizing energy for non-imaging therapeutic or treatment purposes.

AA. "Ionizing radiation" means gamma rays and x-rays, alpha and beta particles, high speed electrons, neutrons, protons, and other nuclear particles; but not ultrasound, sound, or radio waves, nor visible, infrared or ultraviolet light.

AB. "License" means a grant of authority issued by the department for an individual to perform medical imaging or radiation therapy procedures.

AC. "License term" means a length of licensure as indicated on the certificate of licensure issued by the department.

AD. "Licensed practitioner" means an individual licensed to practice medicine, dentistry, podiatry, chiropractic or osteopathy in this state.

AE. "Licensee" means an individual who has met and continues to meet all requirements of the act and this part.

AF. "Licensure" means the grant of authority by the department for an individual to perform medical imaging or radiation therapy procedures.

AG. "Limited practice radiography technologist" means an individual who has been granted a limited practice in radiography license by the department to perform restricted diagnostic radiography procedures under the direct supervision of a licensed practitioner or radiographer.

AH. "Lower leg" means the knee and ankle and portions of the leg between the knee and ankle.

AI. "Magnetic resonance imaging" means an examination using magnetic fields and radio frequency signals to generate an image.

AJ. "Magnetic resonance technologist" means an individual other than a licensed practitioner who performs magnetic resonance imaging procedures under the supervision of a licensed practitioner using magnetic fields and radio frequency signals.

AK. "Medical imaging" means the use of substances or equipment emitting ionizing or non-ionizing radiation on humans for diagnostic or interventional purposes.

AL. "Medical imaging professional" means an individual who has been granted a license by the department pursuant to the act in at least one medical imaging modality.

AM. "Modality" means the following medical imaging procedures or technologies:

- (1) computed tomography and all of its subspecialties;
- (2) diagnostic medical sonography and all of its subspecialties;
- (3) magnetic resonance imaging and all of its subspecialties;
- (4) nuclear medicine technology and all of its subspecialties;
- (5) radiation therapy and all of its subspecialties; and
- (6) radiography and all of its subspecialties.

AN. "Musculoskeletal sonography" or "musculoskeletal ultrasound" means an examination using ultrasound to generate an image of a superficial muscle, tendon, ligament, or joint.

AO. "Non-ionizing radiation" means the static and time-varying electric and magnetic fields and radio frequency, including microwave radiation and ultrasound.

AP. "Nuclear medicine technologist" means an individual, other than a licensed practitioner, who performs nuclear medicine procedures, venipuncture, and compounds, calibrates, dispenses, and administers pharmaceuticals, radiopharmaceuticals, and radionuclides under the supervision of a licensed practitioner.

AQ. "Personal identification" means an applicant's or licensee's full legal name, permanent and mailing address, social security number, date of birth, home phone number, cellular telephone number, work telephone number, electronic mail address, department registration number, and other related information.

AR. "Phlebology" means ultrasound examination of superficial veins in the lower extremities for the identification and treatment of venous disease.

AS. "Physician assistant" means a person licensed and operating within their scope of practice pursuant to Section 61-6-7 or 61-10A-4 NMSA 1978.

AT. "Place of employment" means a location with its own physical address or separated by building structure regardless of ownership, company, nonprofit organization, or business name.

AU. "Podiatric" means radiographic examination of the toes, foot, ankle, calcaneus, distal tibia/fibula, but does not include the knee joint.

AV. "Programmatic accreditation" means a specialized accreditation process that examines the medical imaging or radiation therapy program within an educational institution.

AW. "Radiation therapy" means the use of high-energy particles or waves to destroy or damage cells.

AX. "Radiation therapy technologist" or "radiation therapist" means an individual, other than a licensed practitioner, who utilizes ionizing radiation for the planning and delivery of therapeutic procedures to humans under the supervision of a licensed practitioner.

AY. "Radiographer" means an individual, other than a licensed practitioner, who applies radiation to humans for diagnostic purposes under the supervision of a licensed practitioner.

AZ. "Radiography" means the application of radiation to humans for diagnostic purposes, including adjustment or manipulation of x-ray systems and accessories, including image receptors, positioning of patients, processing of films and any other action that materially affects the radiation dose to patients.

BA. "Radiologic technologist" or "radiation therapy technologist" means a medical imaging or radiation therapy professional licensed by the department in one or more of the imaging modalities.

BB. "Radiologist" means a licensed practitioner certified by the American board of radiology, the British royal college of radiology, the American osteopathic board of radiology or the American chiropractic board of radiology.

BC. "Radiologist assistant" means an individual licensed as a radiographer who holds additional certification as a registered radiologist assistant by the American registry of radiologic technologists and who works under the supervision of a radiologist; provided that a radiologist assistant shall not interpret images, render diagnoses or prescribe medications or therapies.

BD. "Recognized continuing education evaluation mechanism (RCEEM)" means a recognition mechanism of the ARRT for evaluating the content, quality, and integrity of a continuing education activity.

BE. "Registration number" means a number that is generated by the department to be used as a unique identification number in place of that individual's social security number. This number will remain the same number throughout the individual's lifetime.

BF. "Remedial education" or "remedial training" means additional education or training required for an individual to re-qualify to take a state-administered examination for the limited practice of radiography.

BG. "Scope of practice" means nationally recognized practice standards as applicable to each medical imaging modality and subspecialty, unless this part is superseded by the act.

BH. "Small parts" means superficial structures or anatomy including, but not limited to: axilla, chest or abdominal wall, penis, scrotum or testicles, thyroid, parathyroid, and other non-vascular structures of the neck or extremities.

BI. "Sonographer" or "echocardiographer" or "vascular technologist" means an individual other than a licensed practitioner who applies ultrasound to humans for diagnostic and interventional purposes under the supervision of a licensed practitioner.

BJ. "Sonography" or "ultrasound" means the use of high frequency sound waves (above 20,000 cycles per second) with specialized equipment to direct the sound waves into an area of the human body to generate an image.

BK. "Sonography subspecialty" means an area of specialization recognized by the board, including:

- (1) abdominal sonography;
- (2) breast sonography;
- (3) cardiac sonography;
- (4) musculoskeletal sonography;
- (5) obstetric/gynecology sonography;
- (6) phlebology sonography; and
- (7) vascular sonography.

BL. "Student" means an individual enrolled in and attending a school or college of medicine, osteopathy, chiropractic, podiatry, dentistry, dental hygiene, an approved program in medical imaging or radiation therapy, or an approved limited radiography program.

BM. "Subspecialty" means an area of specialization approved by the board within a medical imaging or radiation therapy modality.

BN. "Supervision" means responsibility for and control of quality, radiation safety, and protection and technical aspects of the application of ionizing and non-ionizing radiation to human beings for diagnostic or therapeutic purposes.

(1) "direct supervision" means the medical imaging or radiation therapy procedure is provided under the direction and control of a person authorized to provide supervision and the person's physical presence must be present in the office suite or building and immediately available to furnish assistance and direction throughout the performance of the procedure. It does not mean that the supervisor must be present in the room when the procedure is performed.

(2) "indirect supervision" or "general supervision" means the medical imaging or radiation therapy procedure is provided under the direction and control of a person authorized to provide supervision, but the person's presence is not required during the performance of the procedure. The training of the non-physician personnel and the maintenance of the necessary equipment and supplies are the continuing responsibility of the person authorized to provide supervision.

(3) student supervision requirements must be consistent with the medical imaging and radiation therapy standards of the programmatic accreditation agencies.

BO. "Temporary license" means a grant of authority by the department for an individual to perform medical imaging or radiation therapy procedures pursuant to the term and requirements of section 20.3.20.321 NMAC.

BP. "Vascular sonography" means an examination using ultrasound to generate an image of the peripheral or neck blood vessels.

BQ. "Viscera of the thorax" means radiographic examination of the lungs and mediastinum.

[20.3.20.7 NMAC - Rp, 20.3.20.7 NMAC, 9/25/2018; A, 04/19/2022]

20.3.20.8 ABBREVIATIONS AND ACRONYMS:

A. "ANSI" stands for American national standards institute.

B. "ARDMS" stands for the American registry for diagnostic medical sonography.

C. "ARMRIT" stands for American registry of magnetic resonance imaging technologists.

D. "ARRT" stands for the American registry of radiologic technologists.

E. "BS" stands for breast sonography.

F. "CAAHEP" stands for the commission on accreditation of allied health education programs.

G. "CCI" stands for the cardiovascular credentialing international.

H. "CHEA" stands for the council of higher education accreditation.

I. "CNMT" stands for certified nuclear medicine technologist.

J. "CS" stands for cardiac sonography.

K. "CT" stands for computed tomography.

L. "DMS" stands for diagnostic medical sonography.

M. "FUS" stands for fusion imaging.

N. "JRCMDS" stands for the joint review committee on diagnostic medical sonography.

O. "JRCERT" stands for the joint review committee on education in radiologic technology.

P. "JRCNMT" stands for the joint review committee on educational program in nuclear medicine technology.

Q. "LXE" stands for limited practice radiography to the extremities.

R. "LXP" stands for limited practice radiography to the podiatric.

S. "LXT" stands for limited practice radiography to the viscera of the thorax.

T. "LXV" stands for limited practice radiography to the axial/appendicular skeleton.

U. "MR" stands for magnetic resonance.

V. "MRT" stands for magnetic resonance technologist.

W. "MSK" stands for diagnostic musculoskeletal technologist.

X. "NCCA" stands for national commission for certifying agencies.

Y. "NMT" stands for nuclear medicine technologist.

Z. "NMTCB" stands for the nuclear medicine technologist certification board.

AA. "N" stands for nuclear medicine technology.

AB. "PBS" stands for phlebology sonography.

AC. "PET" stands for positron emission tomography.

AD. "PVL" stands for provisional license.

AE. "RCCS" stands for registered congenital cardiac sonographer.

AF. "RCS" stands for registered cardiac sonographer.

AG. "RDMS" stands for registered diagnostic cardiac sonographer.

AH. "RDMS" stands for registered diagnostic medical sonographer.

AI. "RMRIT" stands for magnetic resonance imaging technologist.

- AJ.** "RMSK" stands for registered in musculoskeletal sonography.
- AK.** "RPhS" stands for registered phlebology sonographer.
- AL.** "R" stands for radiography.
- AM.** "RRT" stands for radiographic radiologic technologist.
- AN.** "RRA" stands for registered radiology assistant.
- AO.** "R.T." stands for registered technologist.
- AP.** "RTT" stands for radiation therapy technologist.
- AQ.** "RVS" stands for registered vascular specialist.
- AR.** "RVT" stands for registered vascular technologist.
- AS.** "S" stands for sonography.
- AT.** "TMP" stands for temporary.
- AU.** "T" stands for radiation therapy.
- AV.** "USDE" stands for United States department of education.
- AW.** "VS" stands for vascular sonography.

[20.3.20.8 NMAC - Rp, 20.3.20.8 NMAC, 09/25/2018]

20.3.20.9 ADMINISTRATION AND ENFORCEMENT:

The administration and enforcement of the act and this part (20.3.20 NMAC) is vested in the department.

[20.3.20.9 NMAC - N, 09/25/2018]

20.3.20.10-20.3.20.99 [RESERVED]

20.3.20.100 LICENSE REQUIRED:

A. Unlawful acts. It is unlawful for an individual, other than an individual licensed by the department, or who is exempt under the provisions of the act, to:

- (1) use ionizing or non-ionizing radiation for diagnostic, interventional, or therapeutic purposes on humans;

(2) use any title, abbreviation, letters, figures, signs, or other devices to indicate the individual is a medical imaging or radiation therapy professional; or

(3) engage in any of the medical imaging or radiation therapy modalities or subspecialties.

B. Statutory exceptions. Pursuant to the act, a medical imaging license is not required for:

(1) a licensed practitioner;

(2) a student under the supervision of a licensed practitioner or under the direct supervision of a licensed medical imaging or radiation therapy professional licensed in the modality and subspecialty in which the student is performing the procedure;

(3) a health care practitioner licensed or certified by an independent board as defined by the act that has been approved by the board as provided in Subsection C of this section; or

(4) a registered nurse or certified nurse-midwife performing ultrasound procedures; provided that the registered nurse or certified nurse-midwife has documented demonstration of competency within the registered nurse's scope of practice in compliance with board of nursing rules or certified nurse-midwife's scope of practice in compliance with department of health rules. A registered nurse or certified nurse-midwife shall not perform diagnostic ultrasound examinations or ionizing procedures, including radiography, radiation therapy, nuclear medicine or a non-ionizing magnetic resonance procedure, unless licensed by the department as medical imaging professional or radiation therapist professional. A registered nurse or a certified nurse-midwife may perform ultrasound procedures limited to a focused imaging target. A focused imaging target includes, but is not limited to:

(a) identification of an anatomical landmark or blood vessel;

(b) assessment of presence or absence of fluid in a body cavity;

(c) assessment of fetal presentation or heartbeat; or

(d) assessment of foreign body position or location.

C. An independent board or state regulatory body may submit an application for approval of their medical imaging certification and examination program to the MIRTAC for review.

(1) The MIRTAC shall consider whether the medical imaging and certification examination program adequately ensures the appropriate education, training, and

clinical experience while ensuring patient health and safety and shall make a written recommendation to the board.

(2) The board may approve or deny an application based on whether or not it finds adequate evidence that the certification and examination program ensures appropriate education, training, and clinical experience while ensuring health and patient safety.

(3) The independent board or state regulatory body shall reapply to the board for re-approval if substantive changes to the certification and examination program are made subsequent to the board's approval.

D. Temporary exemption. The department may temporarily exempt applicants from licensure requirements upon determining that:

(1) the experience or training of the applicant is such that no apparent danger to the public exists;

(2) the people in the area of the state to be served by the applicant would otherwise be denied adequate medical care because of the unavailability of a medical imaging or radiation therapy professional; and

(3) each application for temporary exemption shall be supported by:

(a) an application for temporary exemption;

(b) an application fee; and

(c) written evidence to support the applicant's compliance with Paragraph (1) and (2) of this subsection.

E. Temporary exemption term. A temporary exemption approved by the board shall be for a limited period of time, not to exceed one year. A temporary exemption may be renewed if the circumstances have not changed and if deemed warranted by the department.

F. Temporary exemption application denial. The board, with the advice of the MIRTAC, shall resolve appeals of a denial of an application for temporary exemption pursuant to 20.3.20.600 NMAC. When making a determination of existence of community hardship, the board will:

(1) consult health agencies;

(2) evaluate availability of alternative medical imaging or radiation therapy services and licensed medical imaging or radiation therapy professionals; and

(3) evaluate documentation from the applicant's employer or prospective employer to demonstrate that recruitment of qualified individuals, at competitive compensation, has been attempted and was unsuccessful. Such demonstration may take the form of:

(a) documented advertising in publications pertaining to medical imaging professionals;

(b) registration of the position with the New Mexico department of workforce solutions or similar state agency; or

(c) documentation of current and past contracting with medical imaging or radiation therapy job placement companies.

[20.3.20.100 NMAC - N, 09/25/2018]

20.3.20.101 SCOPE OF PRACTICE:

A. General provisions.

(1) A licensee's scope of practice is determined based upon the licensee's education, certification, and state and federal law.

(2) The following are the different scopes of practice for a licensee that will be recognized by the department:

(a) Radiography - the current version of the American society of radiologic technologists radiography practice standards;

(b) Radiation therapy - the current version of the American society of radiologic technologists radiation therapy practice standards;

(c) Nuclear medicine technology - the current version of the American society of radiologic technologists nuclear medicine practice standards or society of nuclear medicine and molecular imaging scope of practice for nuclear medicine technologist;

(d) Magnetic resonance technology - the current version of the American society of radiologic technologists magnetic resonance practice standards;

(e) Radiologist assistant - the current version of the American society of radiologic technologists radiologist assistant practice standards;

(f) Sonography - the current version of the American society of radiologic technologists sonography practice standards or the society of diagnostic medical sonography scope of practice and clinical standards for the diagnostic medical sonographer; [or]

(g) Limited practice of radiography license or certificate of limited practice - the current version of the American society of radiologic technologists limited x-ray machine operator practice standards; or

(h) Computed tomography-the current version of the American society of radiologic technologists computer tomography practice standards and the society of nuclear medicine and molecular imaging.

B. Radiologist assistant. A radiologist assistant shall practice under the indirect supervision of a radiologist and shall not interpret images, render diagnoses, or prescribe medications or therapies.

[20.3.20.101 NMAC - N, 9/25/2018; A, 04/19/2022]

20.3.20.102 - 20.3.20.199 [RESERVED]

20.3.20.200 APPROVED EDUCATIONAL PROGRAMS:

A. Approved program for a medical imaging or radiation therapy license: An approved program for medical imaging or radiation therapy includes:

(1) an educational program in a medical imaging or radiation therapy modality that is programmatically accredited by an accreditation agency recognized by the USDE or the CHEA and also recognized by the board pursuant to 20.3.20.220 NMAC; or

(2) an educational program in a medical imaging or radiation therapy modality that is in the process of preparing for programmatic accreditation by an accreditation agency recognized by the USDE or CHEA and also recognized by the board pursuant to 20.3.20.220 NMAC. This programmatic accreditation by an accreditation agency must be attained within five years of the effective date of this section or within five years of the establishment of a new educational program.

B. Approved program for a limited practice in radiography license: A limited radiography program shall be reviewed by the MIRTAC and approved by the board before enrolling students into the educational program. Prior to approval of the educational program, the MIRTAC will consider if the program includes the necessary didactic and clinical education to prepare students for the state examination for a limited practice in radiography license prior to submitting its recommendations to the board. Before enrolling students or offering courses, including clinical instruction, a limited radiography program shall submit an application to the department with supporting documentation to show compliance with this section and alignment with national educational accreditation standards. No fee is required for the application and, if all requirements are met, the department shall issue a letter to the educational program confirming compliance with this section.

[20.3.20.200 NMAC - N, 09/25/2018]

20.3.20.201-20.3.20.219 [RESERVED]

20.3.20.220 RECOGNIZED PROGRAMMATIC ACCREDITATION ORGANIZATIONS:

A. Programmatic accreditation. To be recognized by the board, an educational program accreditation agency must:

- (1) be recognized by the USDE or CHEA; and
- (2) provide programmatic accreditation for the medical imaging or radiation therapy modality offered by the educational program.

B. Recognized programmatic accreditation organizations. Medical imaging or radiation therapy programmatic accreditation agencies recognized by the board include:

- (1) CAAHEP;
- (2) JRCERT; and
- (3) JRCNMT.

[20.3.20.220 NMAC - N, 09/25/2018]

20.3.20.221-20.3.20.299 [RESERVED]

20.3.20.300 RECOGNIZED CREDENTIALING ORGANIZATIONS:

The board recognizes the following medical imaging and radiation therapy credentialing organizations in each modality defined by the act including:

- A.** computed tomography: ARRT.
- B.** diagnostic medical sonography:
 - (1) ARDMS;
 - (2) ARRT; or
 - (3) CCI.
- C.** magnetic resonance imaging:
 - (1) ARMRT; or
 - (2) ARRT.

D. nuclear medicine:

- (1) ARRT; or
- (2) NMTCB.

E. radiation therapy: ARRT.

F. radiography: ARRT.

[20.3.20.300 NMAC - N, 9/25/2018; A, 04/19/2022]

20.3.20.301 RECOGNIZED CREDENTIALS AND CERTIFICATIONS:

The board recognizes the following medical imaging and radiation therapy credentials and certifications for each type of license issued by the department:

A. fusion imaging- restricted to PET/CT medical imaging procedures only:

- (1) (CNMT)(NMTCB) and (CT)(NMTCB);
- (2) R.T. (ARRT)(N) and (ARRT)(CT);
- (3) R.T. (ARRT)(N) and (NMTCB)(CT); or
- (4) R.T. (ARRT)(R) and (NMTCB)(PET).

B. cardiac sonography:

- (1) (CCI)(RCS);
- (2) (CCI)(RCCS); or
- (3) (ARDMS)(RDMS).

C. computed tomography: R.T. (ARRT)(CT)

D. general sonography:

- (1) RDMS (ARDMS)(AB);
- (2) RDMS (ARDMS)(BR);
- (3) RDMS (ARDMS)(OB);
- (4) R.T. (ARRT)(S); or

(5) R.T. (ARRT)(BS).

E. limited radiography: none.

F. magnetic resonance imaging:

(1) (ARMRIT)(RMRIT); or

(2) R.T. (ARRT)(MR).

G. musculoskeletal sonography: (ARDMS)(RMSK).

H. nuclear medicine:

(1) certified nuclear medicine technologist (NMTCB); or

(2) nuclear medicine technology R.T. (ARRT)(N).

I. phlebology sonography: RPhS (CCI).

J. radiation therapy: R.T. (ARRT)(T).

K. radiography: R.T. (ARRT)(R).

L. radiology assistant: (ARRT)(RRA).

M. vascular sonography:

(1) R.T. (ARRT)(VS);

(2) RVS (CCI); or

(3) RVT(ARDMS).

[20.3.20.301 NMAC - N, 9/25/2018; A, 04/19/2022]

20.3.20.302-20.3.20.309 [RESERVED]

20.3.20.310 LIMITED PRACTICE OF RADIOGRAPHY LICENSE:

A. Limited practice in radiography. An individual seeking a license for the limited practice of radiography shall submit an application and applicable fee to the department, successfully complete an approved limited radiography program pursuant to Subsection B of 20.3.20.200 NMAC, and take and pass the state examination pursuant to Subsections D and E below. Individuals that are enrolled in an approved limited practice radiography program shall perform their required clinical radiography procedures under

the direct supervision of a licensed physician or licensed radiographer. A licensee with a limited practice of radiography license shall perform restricted diagnostic radiography under direct supervision of a licensed practitioner limited to the following specific procedures:

- (1) the viscera of the thorax;
- (2) extremities;
- (3) radiation to humans for diagnostic purposes in the practice of dentistry;
- (4) axial/appendicular skeleton; or
- (5) the foot, ankle, or lower leg.

B. Restrictions. A licensee with a limited practice of radiography license may not:

- (1) perform procedures outside the areas of specialization authorized by or under the individual's license; or
- (2) perform procedures outside their scope of practice including, but not limited to procedures involving the use of contrast media, fluoroscopic equipment, mammography, computed tomography, mobile or bedside radiography, diagnostic medical sonography, magnetic resonance imaging, nuclear medicine, or radiation therapy.

C. Emergency provision. A person having a valid limited practice of radiography license may perform diagnostic radiography procedures outside the normal scope of a limited practice of radiography license if the person is employed in an area having a federal designation as a medically underserved area and the person with the limited practice of radiography license is confronted with an emergency situation, where, by order of a licensed practitioner, a certified nurse practitioner or a registered physician assistant, the additional diagnostic radiography procedure is deemed medically necessary for the immediate safety or health of the patient.

D. Administration of state examinations. The department will not offer state examinations for medical imaging and radiation therapy professionals except for a limited practice of radiography licensee pursuant to Subsection E of this section. The department may administer and grade the limited practice of radiography examinations, though at its option, the department may contract for such preparation, administration, and grading services.

E. State examination for limited practice of radiography. An individual seeking a license for the limited practice of radiography must pass a state examination for limited practice of radiography. To apply for the state examination, the individual must:

(1) submit an examination application with supporting documentation to the department that the individual has:

(a) completed school through the 12th grade or has passed a high school equivalency examination; and

(b) successfully completed an approved limited radiography program in one or more of the body areas of specialization.

(2) submit the required examination fee to the department; and

(3) successfully complete a written or computerized examination administered by the department with a minimum score of seventy-five percent on both the core section and in each attempted body area section of the examination. At its option, the department may contract for such preparation, administration, and grading services for the limited practice of radiography examinations.

F. Failure of state examination for limited practice of radiography:

(1) If an applicant fails to achieve seventy-five percent on either the core section or a body area specialization section of the examination, it will be considered an examination failure and the applicant must retake the failed section or sections.

(2) The applicant must re-apply and pay the examination fee for each examination attempt.

(3) All sections of the examination taken on the same day are considered one examination attempt.

(4) An individual who attempts and fails the state-administered examination three times will be required to demonstrate to the department the successful completion of remedial education or training following the third attempt that is consistent with the ARRT standards before being eligible to retake the failed section or sections again.

[20.3.20.310 NMAC - N, 09/25/2018]

20.3.20.311-20.3.20.319 [RESERVED]

20.3.20.320 LICENSES:

A. Licensure Requirements. An applicant for a medical imaging or radiation therapy license shall submit the required application to the department; the applicable application fee located in 20.3.20.501 NMAC, and shall be currently certified and registered by a medical imaging or radiation therapy credentialing organization recognized by the board.

B. Registration number. The department shall assign a department registration number to each licensee regardless of the number of modalities and subspecialties licensed. The department registration number shall be listed on each certificate of licensure issued by the department.

C. Term for licenses issued prior to the 15th of the month. The license term for licenses issued prior to the 15th of the month will:

- (1) be for 24 months;
- (2) begin on the date the license is issued; and
- (3) end on the last day of the month the license was issued.

D. Term for licenses issued after the 15th of the month. The license term for licenses issued after the 15th of the month will:

- (1) be for 24 months;
- (2) begin on the date the license is issued; and
- (3) end on the last day of the month following the month the license was issued.

E. Request for coordination of license and credential expiration dates. At the written request of the licensee, the expiration date of their license or licenses may be reduced to match their current credentialing organization's expiration date. Such reduction in term shall not reduce the applicant or licensee's license fee.

F. Types of license. Upon demonstration of compliance with all applicable requirements of the act and this part, the department may grant one or more of the following types of licenses to be recognized by the department:

- (1) (DMS) which includes sonography subspecialties of RDMS (ARDMS)(AB)(BR)(OB) and R.T. (ARRT)(S)(BS);
- (2) (MSK);
- (3) (FUS);
- (4) (LXV);
- (5) (LXE);
- (6) (LXP);

- (7) (LXT);
- (8) (MRT);
- (9) (NMT);
- (10) (PBS);
- (11) (PVL);
- (12) (RTT);
- (13) (RRT);
- (14) (RRA);
- (15) (TMP);
- (16) (VS), which includes sonography subspecialties of (ARDMS)(RVT) and R.T. ARRT (VS);
- (17) (CS) which includes RDCS (ARDMS), RCS (CCI), and RCCS (CCI); and
- (18) (CT).

G. Certificate of licensure. Each certificate of licensure issued by the department shall identify all current licenses granted to the licensee.

[20.3.20.320 NMAC - N, 9/25/2018; A, 04/19/2022]

20.3.20.321 TEMPORARY LICENSES:

A. Temporary license. The purpose of a temporary license is to allow an individual who has completed an approved program pursuant to 20.3.20.200 NMAC to practice medical imaging or radiation therapy prior to sitting for their national examination with one of the medical imaging and radiation therapy credentialing organizations outlined in 20.3.20.300 NMAC. The department may grant a temporary license to practice medical imaging or radiation therapy to an individual who:

- (1) provides documentation to the department that the individual has completed an approved program pursuant to 20.3.20.200 NMAC;
- (2) submits an application for a temporary license to the department within one year of the individual's program completion date from an approved program;

(3) submits the applicable fees for a temporary license pursuant to Paragraph G of 20.3.20.501 NMAC to the department within one year of the program completion date from an approved program;

(4) provides the name and contact information of each employer where medical imaging or radiation therapy is performed by the individual; and

(5) meets all other applicable licensure requirements of the act and this part.

B. Notification. The individual will be required to notify the department of any changes to his or her employment by providing the department with the contact information for each new employer where medical imaging or radiation therapy is performed by the individual within thirty days after the change occurs.

C. Examination and notice.

(1) The department will recognize the credentialing organization's determination of what is considered a pass or fail for an individual's examination score.

(2) The individual shall notify the department of the date the individual plans to take the examination at least 30 days prior to the examination date.

(3) If the credentialing organization determines that an individual has failed his or her examination, the individual's active temporary license issued by the department will expire 90 days after the examination date. The individual will be required to notify the department of a failed examination within 30 days of receiving his or her examination results.

D. Temporary license term. A temporary license:

(1) expires on the last day of the 12th month from the date of issuance or upon the applicant's failure to pass the examination as outlined in Subsection B of this section; and

(2) may be granted only once and cannot be renewed or extended; however, a duplicate temporary certificate of licensure may be issued by the department for display at another place of employment upon submission of a duplicate certificate of licensure application and fee.

[20.3.20.321 NMAC - N, 09/25/2018]

20.3.20.322 PROVISIONAL LICENSES:

A. Provisional license. The department may grant a provisional license to practice medical imaging to an individual who:

- (1) submits an application to the department; and
- (2) follows training pathways established by one of the following recognized national certification organizations:

- (a) ARRT;
- (b) ARDMS;
- (c) ARMRT;
- (d) CCI; or
- (e) NMTCB.

B. License Term. A provisional license:

- (1) expires two years from the date of issuance;
- (2) may be renewed one time; and
- (3) the one-time renewal must occur before the license term expires in order to ensure the individual's provisional license remains active for that provisional license's second and last license term.

C. Term for licenses issued prior to the 15th of the month. The license term for licenses issued prior to the 15th of the month will:

- (1) be for 24 months;
- (2) begin on the date the license is issued; and
- (3) end on the last day of the month the license was issued.

D. Term for licenses issued after the 15th of the month. The license term for licenses issued after the 15th of the month will:

- (1) be for 24 months;
- (2) begin on the date the license is issued; and
- (3) end on the last day of the month following the month the license was issued.

E. Applicability to licensee enrolled in an approved program. This section does not apply to a licensee who is currently enrolled in an approved program leading to qualification for another modality and subspecialty license.

F. A provisional license to practice medical imaging or radiation therapy utilizing ionizing radiation will not be issued to individuals who are not already licensed by the department in one of the modalities that utilizes ionizing radiation.

[20.3.20.322 NMAC - N, 09/25/2018; A, 04/19/2022]

20.3.20.323 - 20.3.20.329 [RESERVED]

20.3.20.330 CONTINUING EDUCATION:

A. Continuing education.

(1) During the license term, a limited practice of radiography licensee must complete 24 hours or credits of category A or A+ continuing education approved by a RCEEM recognized by the ARRT. Documentation of completion of the required continuing education must be submitted to the department with each renewal application.

(2) During the license term, a medical imaging, a radiation therapy, or a radiologist assistant licensee, other than a limited practice of radiography licensee, must comply with all continuing education, continuing competency, and registration requirements of the credentialing organization for which they hold a credential or certification. The department may require a licensee to certify meeting the credentialing organization's requirements. Failure to meet the credentialing organization's requirements may be grounds for suspension or revocation of a license. This does not apply to individuals with an active temporary license or with an active provisional license that has been issued by the department.

(3) The department may require a licensee to submit documentation from the credentialing organization if online verification is not available at the time the licensee's renewal request is being reviewed.

B. Audit. The department may audit a licensee's continuing education and continuing compliance with requirements of the act and this part. A licensee must submit the audit information requested by the department within 30 days of receipt of the notification of audit. No application or fees are required when submitting information requested by the department for an audit.

[20.3.20.330 NMAC - Rp, 20.3.20.500 NMAC, 9/25/2018; A, 04/19/2022]

20.3.20.331-20.3.20.339 [RESERVED]

20.3.20.340 DUTIES OF LICENSEE:

A. Continuing to comply with requirements. A licensee must:

(1) continue to comply with all licensure requirements of the act and this part throughout the license term;

(2) maintain credential or certification and registration in their licensed imaging modality and subspecialty, if applicable, throughout the licensure period or notify the department in writing within 30 days that a credential or certification is no longer being maintained;

(3) notify the department in writing within 30 days of any pending or final actions by a credentialing organization, state agency, or federal agency against the licensee; and

(4) notify the department in writing within 30 days of lapse, probation, suspension, or revocation of any professional license.

B. Expired, suspended, or revoked license. An individual whose license has expired, or has been suspended or revoked by the department, shall not perform medical imaging or radiation therapy procedures.

C. Duty to cooperate with department. An applicant or licensee has a duty to cooperate with the department during an investigation or inspection authorized under the act, this part, or other state or federal law.

D. Reporting violations. A licensee has a duty to report a violation of the act, this part, or other state or federal law to the department or other appropriate agency.

E. Supervision of students or licensees.

(1) A limited practice of radiography licensee shall only provide supervision of a limited practice of radiography student or licensee.

(2) A medical imaging or radiation therapy licensee may provide supervision to a medical imaging or radiation therapy student or licensee in the same modality and specialization as the licensee. A radiographer may provide supervision to a limited practice of radiography student or licensee.

[20.3.20.340 NMAC - N, 09/25/2018]

20.3.20.341 CERTIFICATE OF LICENSURE:

A. Display of certificate of licensure. Original certificates of licensure shall be publicly displayed by the licensee at each place of employment.

B. Photocopying or reproduction prohibited. Photocopying or other reproduction of a certificate of licensure is prohibited.

C. Duplicate certificate of licensure or replacement of certificate of licensure. To obtain a duplicate certificate of licensure or replacement of certificate of licensure, the licensee must submit a duplicate certificate of licensure or replacement certificate of licensure application and required fee to the department.

D. Legal Name Change. To obtain a replacement certificate of licensure due to a legal name change, the licensee must submit documentation of the legal name change, a name change application, and required fee to the department.

[20.3.20.341 NMAC - N, 09/25/2018]

20.3.20.342-20.3.20.399 [RESERVED]

20.3.20.400 RENEWAL, REINSTATEMENT, AND REAPPLICATION:

A. License renewal and reinstatement. A licensee is solely responsible for ensuring they maintain a current license. Failure to receive notification by the department prior to the expiration date of the license is not an excuse for failure to file a timely renewal application.

(1) Prior to the expiration date listed on the licensee's current certificate of licensure, a licensee must submit the biennial licensure fee and completed renewal application, including any requested supporting documents to the department.

(2) The department will not process an incomplete renewal application.

(3) The department will process completed applications in the order received.

(4) The department shall not renew a license until it is satisfied the license renewal applicant meets all requirements of the act and this part.

(5) All required items must be received by the department prior to the expiration date on the licensee's current certificate of licensure or else the renewal application shall be considered incomplete. The licensee's failure to submit a complete license renewal application will result in a reinstatement fee. An earlier postmark date shall not excuse the reinstatement fee.

(a) If a reinstatement fee is assessed and all other requirements for renewal are met, the department will issue an invoice to the licensee that will accompany the renewed certificate of licensure.

(b) If an applicant or licensee fails to pay the reinstatement fee within 30 days of the invoice date, the department may take action to suspend the license until the department has received the reinstatement fee.

B. Reapplication. Reapplication is required if a license has been expired for more than one year. An applicant for reapplication must meet all of the requirements contained in 20.3.20.320 NMAC.

[20.3.20.400 NMAC - Rp, 20.3.20.501 NMAC, 09/25/2018]

20.3.20.401-20.3.20.499 [RESERVED]

20.3.20.500 DEPARTMENT FORMS, CONFIDENTIALITY, AND RELEASE OF PERSONAL IDENTIFICATION:

A. Department forms required.

(1) An individual seeking licensure or any other services listed in this part shall submit a completed application form and applicable fee to the department.

(2) The department shall create and make available all necessary application forms.

(3) The department's forms may request such personal identification as is required to perform the department's duties under the act and this part including, but not limited to: name, mailing address, telephone numbers, email address, certifications, licenses, date of birth, and social security number.

(4) No application shall be complete unless it is on the form prescribed by the department and includes, in legible format:

(a) all required personal identification;

(b) copies of all supporting documents specified on the form;

(c) full payment of required fees by a method specified on the form; and

(d) date and signature of the applicant.

B. Confidentiality of personal identification. Personal identification collected by the department shall not be disclosed except:

(1) in the performance of the department's duties under the act or this part;

(2) as provided in this part or as required by state or federal law; or

(3) in response to a valid subpoena or court order.

C. Release of licensee personal identification. Unless otherwise provided by law, the department shall only release a licensee's name, mailing address, department registration number, and verification of license and subspecialty. The department may release information related to an application denial or license revocation or suspension to a credentialing organization. In accordance with federal law, the department shall release any required information related to revocation or suspension of a licensee to the national practitioner data bank.

[20.3.20.500 NMAC - N, 09/25/2018]

20.3.20.501 FEES:

A. Application fee. In addition to any other fees, an application fee of \$10.00 must be submitted with each type of application available from the department, unless otherwise provided in this part.

B. Initial license fee. An initial license fee of \$100.00 must be submitted with each initial license application, regardless of the number of modality and subspecialty licenses requested on the same application.

C. Examination fee. An examination fee of \$150.00 must be submitted with each examination application as required in 20.3.20.310 NMAC.

D. Biennial licensure fee. A biennial fee of \$100.00 may be submitted to the department prior to the expiration date of the individual's current license issued by the department. The department will renew an individual's license upon submittal of the fee and the license will be valid for 24 months after the expiration date of their current license issued by the department.

E. License reinstatement fee. In addition to any other required fees, a license reinstatement fee of \$25.00 must be submitted with a license reinstatement application or if a licensee fails to submit a complete renewal application before the expiration of a license.

F. Duplicate certificate of licensure or replacement of certificate of licensure fee. A fee of \$5.00 will be required for each duplicate certificate of licensure or replacement of certificate of licensure requested in the application and a fee of \$5.00 for each additional duplicate certificate of license or replacement of certificate of licensure ordered from all other application forms that provide the option to request additional original duplicate certificates of licensure or replacement of certificate of licensure.

G. Temporary license fee. A temporary license fee of \$50.00 must be submitted with each temporary license application.

H. Provisional license fee. A provisional license fee of \$25.00 must be submitted with a provisional license application.

I. License verification fee. A license verification fee of \$10.00 for each verification must be submitted with each license verification form.

J. Legal name change fee. A legal name change fee of \$15.00 must be submitted with each legal name change application.

K. Refunds. Fees submitted to the department are non-refundable and non-transferrable. However, if the department determines that fees have been received in excess of the amount legally due, the department will refund the excess amount portion of the received fee upon receipt of a written request from the individual who paid the excess fee amount, or that individual's legal representative.

L. Nonsufficient funds fee. If the department is unable to process the fees submitted by the applicant, then the name of that licensee will be removed from the list of all New Mexico active radiologic technologists, which appears on the New Mexico environment department's radiation control bureau website, and the department will assess a \$25.00 nonsufficient fund fee. That licensee must submit payment to the department in the form of a cashiers' check or money order.

[20.3.20.501 NMAC - Rp, 20.3.20.600 NMAC, 09/25/2018]

20.3.20.502-20.3.20.599 [RESERVED]

20.3.20.600 DENIAL, REVOCATION, OR SUSPENSION OF LICENSE:

A. Denial of application. The department may not issue a license to an applicant who has failed to meet the requirements of the act or this part.

B. Suspension, revocation, application of uniform licensing act. The board, with advice from the advisory council, may deny, revoke, or suspend a license granted or applied for under the act and this part, pursuant to the procedures established in the Uniform Licensing Act Section 61-1-1 through 61-1-34 NMSA 1978, upon grounds that the medical imaging or radiation therapy licensee or applicant:

- (1) is guilty of fraud or deceit in procuring or attempting to procure any type of license or service from the department;
- (2) has been convicted of a felony subsequent to licensure;
- (3) is unfit or incompetent;
- (4) is habitually intemperate or is addicted to the use of habit-forming drugs;

- (5) is mentally incompetent;
- (6) has aided and abetted an individual who is not a licensee in engaging in the activities of a licensee;
- (7) has failed to maintain a credential or certification in the modality and subspecialty for which a license was granted;
- (8) has engaged in any practice beyond the licensee's scope of practice in violation of state or federal law or facility policy;
- (9) is guilty of unprofessional conduct or unethical conduct as defined in Subsection C of this section;
- (10) has interpreted a diagnostic imaging exam for a patient, a patient's family, or the public;
- (11) has willfully or repeatedly violated any provisions of the act or this part;
- (12) has failed to notify the department in writing within 30 days of any final disciplinary action by a licensing board or credentialing organization, including but not limited to sanction, probation, suspension, or revocation; or
- (13) is not in compliance with the terms of the New Mexico Parental Responsibility Act, Section 40-5A-1 to 40-5A-13 NMSA 1978; in taking action under this provision, the board shall follow the procedures in 20.1.7 NMAC named "Parental Responsibility Act Compliance."

C. Unprofessional or unethical conduct. With respect to the grounds for denial, revocation, or suspension under Section 61-14E-11 NMSA 1978, the terms "unprofessional conduct" or "unethical conduct" shall refer to, but shall not be limited to any licensee, applicant, medical imaging professional, or radiation therapist who:

- (1) is engaged in the practice of medical imaging or radiation therapy while in an intoxicated condition or under the influence of a narcotic or other drug that impairs consciousness, judgment, or behavior;
- (2) is engaged in unethical conduct while practicing medical imaging or radiation therapy;
- (3) has engaged in the willful falsification of records, or destruction or theft of property or records relating to the practice of medical imaging or radiation therapy;
- (4) fails to exercise due regard for the safety of life or health of the patient;

- (5) has unauthorized access to or disclosure of information relating to a patient's records;
- (6) discriminates against any individual because of race, religion, creed, color, national origin, sex, or sex while practicing medical imaging or radiation therapy;
- (7) has been convicted of a felony subsequent to licensure by the department;
- (8) impersonates a current or former licensee or engages in the activities of medical imaging or radiation therapy under an assumed name;
- (9) is applying ionizing or non-ionizing radiation to a human being without a specific prescription or direction of a licensed practitioner or other health care practitioner authorized to order a medical imaging or radiation therapy;
- (10) is incompetent or negligent in activities related to medical imaging, radiation therapy, or limited practice of radiography;
- (11) is continuing to practice without obtaining a license or renewal as required by the act or this part;
- (12) is using the prefix "Dr.", unless entitled to do so pursuant to a degree granted, the word "doctor", or any suffix or affix to indicate or imply that the individual is a licensed practitioner when not so licensed;
- (13) is providing false, misleading, or deceptive information on any application or supporting documents submitted to the department;
- (14) is failing to conform to nationally recognized practice standards as applicable to each modality or subspecialty;
- (15) fails to disclose in writing to the department any felony conviction or non-compliance with the New Mexico Parental Responsibility Act, Section 40-5A-1 to 40-5A-13 NMSA 1978, within 30 days of the conviction or judgment; or
- (16) fails to disclose in writing to the department any sanction, probation, suspension, or revocation by a state agency or credentialing organization within 30 days of such occurrence.

D. Opportunity for licensee or applicant to have a hearing. Any licensee or applicant whose license or license application is denied, revoked, or suspended under this part shall be afforded notice and an opportunity to be heard pursuant to the procedures established in the Uniform Licensing Act, Sections 61-1-1 to -34 NMSA 1978, the Medical Imaging and Radiation Therapy Health and Safety Act, Section 61-14E-11 NMSA 1978, and the adjudicatory procedures for the environmental improvement board in 20.1.2 NMAC.

E. Application of uniform licensing act. The department shall comply with the provisions of the Uniform Licensing Act, Section 61-1-1 to 61-1-34 NMSA 1978, and any rules or regulations promulgated thereunder.

[20.3.20.600 NMAC - Rp, 20.3.20.400 NMAC, 09/25/2018]

20.3.20.601-20.3.20.699 [RESERVED]

20.3.20.700 SEVERABILITY:

If any provision or application of this part is held invalid, the remainder, or its application to other situations or persons, shall not be affected.

[20.3.20.700 NMAC - Rp, 20.3.20.700 NMAC, 09/25/2018]

20.3.20.701 AMENDMENT AND SUPERSESION OF PRIOR REGULATIONS:

This part shall be construed as amending and superseding the regulations on the practice of medical imaging or radiation therapy, EIB/MRHSA 1, filed January 11, 1988, as amended. All references to the regulations on the practice of medical imaging or radiation therapy in any other rule shall be construed as a reference to this part.

[20.3.20.701 NMAC - Rp, 20.3.20.701 NMAC, 09/25/2018]

20.3.20.702 SAVING CLAUSE:

Supersession of the regulations on the practice of medical imaging or radiation therapy shall not affect any administrative or judicial enforcement action pending on the effective date of this part nor the validity of any license granted or certificate of licensure issued pursuant to the regulations on the practice of medical imaging or radiation therapy.

[20.3.20.702 NMAC - Rp, 20.3.20.702 NMAC, 09/25/2018]

20.3.20.703 CONSTRUCTION:

This part shall be liberally construed to effectuate the purpose of the act.

[20.3.20.703 NMAC - Rp, 20.3.20.703 NMAC, 09/25/2018]

20.3.20.704 COMPLIANCE WITH OTHER REGULATIONS:

Compliance with this part does not relieve an individual from the obligation to comply with other applicable state and federal regulations.

[20.3.20.704 NMAC - Rp, 20.3.20.704 NMAC, 09/25/2018]

CHAPTER 4: HAZARDOUS WASTE

PART 1: HAZARDOUS WASTE MANAGEMENT

20.4.1.1 ISSUING AGENCY:

Environmental Improvement Board.

[20.4.1.1 NMAC - Rp, 20 NMAC 4.1.1, 12/1/2018]

20.4.1.2 SCOPE:

All persons that generate, store, transport, or dispose of hazardous waste.

[20.4.1.2 NMAC - Rp, 20 NMAC 4.1.2, 12/1/2018]

20.4.1.3 STATUTORY AUTHORITY:

Sections 74-1-8 and 74-4-4, NMSA 1978 (as amended).

[20.4.1.3 NMAC - Rp, 20 NMAC 4.1.3, 12/1/2018]

20.4.1.4 DURATION:

Permanent

[20.4.1.4 NMAC - Rp, 20 NMAC 4.1.4, 12/1/2018]

20.4.1.5 EFFECTIVE DATE:

December 1, 2018 unless a later date is cited in the history note at the end of a section.

[20.4.1.5 NMAC - Rp, 20 NMAC 4.1.5, 12/1/2018]

20.4.1.6 OBJECTIVE:

The objective of Part 1 of Chapter 4 is to establish regulations for the management of hazardous waste, including standards for the identification and listing of hazardous waste, for generators and transporters of hazardous waste, for owners and operators of hazardous waste treatment, storage, and disposal facilities, for specific wastes and such facilities, for land disposal restrictions, and for issuing, suspending, revoking, or modifying permits.

[20.4.1.6 NMAC - Rp, 20 NMAC 4.1.6, 12/1/2018]

20.4.1.7 DEFINITIONS:

[RESERVED]

[20.4.1.7 NMAC - Rp, 20 NMAC 4.1.7, 12/1/2018]

20.4.1.8-20.4.1.99 [RESERVED]

[20.4.18 - 20.4.1.99 NMAC - Rp, 20 NMAC 4.1.8 - 4.1.99, 12/1/2018]

20.4.1.100 ADOPTION OF 40 CFR PART 260:

Except as otherwise provided, the regulations of the United States environmental protection agency ("EPA") set forth in 40 CFR Part 260, as it may be modified or amended, is hereby incorporated by reference.

[20.4.1.100 NMAC - Rp, 20 NMAC 4.1.100, 12/1/2018]

20.4.1.101 MODIFICATIONS, EXCEPTIONS AND OMISSIONS:

Except as otherwise provided, the following modifications, exceptions, and omissions are made to the incorporated federal regulations:

A. The following terms defined in 40 CFR Sections 260.10 and 270.2 have the meanings set forth herein, in lieu of the meanings set forth in 40 CFR Sections 260.10 and 270.2:

(1) "administrator" or "regional administrator" means the secretary of the New Mexico environment department or his/her designee;

(2) "act" or "RCRA" (Resource Conservation and Recovery Act, as amended) means the New Mexico Hazardous Waste Act, Sections 74-4-1 through 74-4-14, NMSA 1978 (as amended).

B. The following terms not defined in 40 CFR Sections 260.10 and 270.2 have the meanings set forth herein when the terms are used in this part:

(1) "appropriate act or regulation" means the New Mexico Hazardous Waste Act or 20.4.1 NMAC;

(2) "board" means the environmental improvement board;

(3) "CFR" means the Code of Federal Regulations;

(4) "department" means the New Mexico environment department;

(5) "environmental protection agency" or "EPA" shall be construed to mean the New Mexico environment department except when used in the phrases "EPA

hazardous waste number," EPA identification number," "EPA region," "EPA acknowledgment of consent," "EPA test methods," and in the definitions set forth in 40 CFR Sections 260.10 and 270.2;

(6) "Freedom of Information Act" or "FOIA" means Sections 14-2-1 through 14-2-12, 14-3A-1 through 14-3A-2, and 74-4-4.3D, NMSA 1978 (as amended);

(7) "hazardous substance incident" means any emergency incident involving a chemical or chemicals, including but not limited to transportation wrecks, accidental spills or leaks, fires or explosions, which incident creates the reasonable probability of injury to human health or property;

(8) "secretary" means the secretary of the New Mexico environment department or his/her designee; and

(9) "Subtitle C of RCRA" means the New Mexico Hazardous Waste Act, Sections 74-4-1 through 74-4-14, NMSA 1978 (as amended).

C. The following provisions of 40 CFR Part 260 are omitted from Section 20.4.1.100 NMAC:

- (1)** Section 260.1(b)(6);
- (2)** Section 260.20;
- (3)** Section 260.22;
- (4)** Section 260.30;
- (5)** Section 260.31;
- (6)** Section 260.32;
- (7)** Section 260.33; and
- (8)** Reference to 40 CFR Part 267.

D. Wherever there is any requirement in any of the federal regulations incorporated into this part to report an emergency situation, the requirement shall be construed to mean that the party required to report shall report the incident to the department via the New Mexico 24-hour emergency response number at (505) 827-9329 or such other number designated by the department.

[20.4.1.101 NMAC - Rp, 20 NMAC 4.1.101, 12/1/2018]

20.4.1.102-20.4.1.199 [RESERVED]

[20.4.1.102 - 20.4.1.199 NMAC - Rp, 20 NMAC 4.1.102 - 4.1.199, 12/1/2018]

20.4.1.200 ADOPTION OF 40 CFR PART 261:

Except as otherwise provided, the regulations of the EPA set forth in 40 CFR Part 261 as it may be modified or amended is hereby incorporated by reference.

[20.4.1.200 NMAC - Rp, 20 NMAC 4.1.200, 12/1/2018]

20.4.1.300 ADOPTION OF 40 CFR PART 262:

Except as otherwise provided, the regulations of the EPA set forth in 40 CFR Part 262 as it may be modified or amended is hereby incorporated by reference.

[20.4.1.300 NMAC - Rp, 20 NMAC 4.1.300, 12/1/2018]

20.4.1.301 MODIFICATIONS, EXCEPTIONS AND OMISSIONS:

Except as otherwise provided, the following modifications, exceptions and modifications are made to the incorporated federal regulations. The substitution of the following terms in Subparts E, F and H of 40 CFR Part 262 does not apply to Section 20.4.1.300 NMAC: "administrator" and "regional administrator" for the term "secretary" and "EPA" or "environmental protection agency" for the term "department."

[20.4.1.301 - Rp, 20 NMAC 4.1.301, 12/1/2018]

20.4.1.400 ADOPTION OF 40 CFR PART 263:

Except as otherwise provided, the regulations of the EPA set forth in 40 CFR Part 263 as it may be modified or amended is hereby incorporated by reference.

[20.4.1.400 NMAC - Rp, 20 NMAC 4.1.400, 12/1/2018]

20.4.1.401 MODIFICATIONS, EXCEPTIONS AND OMISSIONS:

Except as otherwise provided, the following modifications, exceptions and omissions are made to incorporate the federal regulations.

A. The following provision of 40 CFR Part 263 is omitted from Section 20.4.1.400 NMAC: Section 263.20(e).

B. A transfer facility, which stores manifested shipments of hazardous waste for more than 24 hours but 10 days or less shall notify the New Mexico Environment Department using form 8700-12, as it may be modified by EPA, and obtain an EPA identification number for each transfer facility located in New Mexico. New transfer facilities shall provide a notification 30 days prior to operating. Existing transfer facilities shall provide a notification no more than 90 days after the effective date of the regulations.

[20.4.1.401 NMAC - Rp, 20 NMAC 4.1.401, 12/1/2018]

20.4.1.402-20.4.1.499 [RESERVED]

[20.4.1.402 - 20.4.1.499 NMAC - Rp, 20 NMAC 4.1.402 - 4.1.499, 12/1/2018]

20.4.1.500 ADOPTION OF 40 CFR PART 264:

Except as otherwise provided, the regulations of the EPA set forth in 40 CFR Part 264 as it may be modified or amended is hereby incorporated by reference.

[20.4.1.500 NMAC - Rp, 20 NMAC 4.1.500, 12/1/2018]

20.4.1.501 MODIFICATIONS, EXCEPTIONS AND OMISSIONS:

Except as otherwise provided, the following modifications, exceptions and omissions are made to incorporate the federal regulations.

A. The following provisions of 40 CFR Part 264 are modified in 20.4.1.500 NMAC:

(1) the substitution of "secretary" for the term "regional administrator" in 20.4.1.101 NMAC does not apply to the required notice set forth in 40 CFR Section 264.12(a), as adopted in this section; the owner or operator of a facility that has arranged to receive hazardous waste from a foreign source must provide a copy of the notice required in 40 CFR Section 264.12(a) to the secretary at the time that notice is provided to the regional administrator;

(2) the owner or operator proposing a class 1 permit modification pursuant to 40 CFR 264.15(b)(5) shall submit the request to the director as required in 40 CFR Sections 264.15(b)(5)(i) and 270.42(a);

(3) the owner and operator shall submit the reports in 40 CFR Section 264.100(g) on a semi-annual basis to the secretary;

(4) "qualified professional engineer" as provided for in 40 CFR Sections 264.115, 264.120, 264.143(i), 264.145(i), 264.147(e), 264.191(a), 264.191(b)(5)(ii), 264.192(a), 264.192(b), 264.193(i)(2), 264.196(f), 264.280(b), 264.554(c)(2), 264.571(a-c), 264.573(a)(4)(ii), 264.573(g), 264.574(a) and 264.1101(c)(2) shall mean an independent New Mexico licensed professional engineer in accordance with the New Mexico Engineering and Surveying Practice Act, Sections 61-23-1 through 32, NMSA 1978 (as amended).

(5) the requirements of 40 CFR Section 264.73(b) shall be maintained in the operating record by the owner and operator at his facility until closure, except for 40 CFR Sections 264.73(b)(7) and 264.73(b)(9) which shall be kept in the operating record for no less than 3 years;

(6) the requirements of 40 CFR Section 264.347(d) shall be maintained in the operating record by the owner and operator at his facility until closure.

(7) the substitution of "department" for the term "EPA" does not apply to the second occurrence of the term "EPA" in 40 CFR Section 264.1082(c)(4)(ii).

B. The following provisions of 40 CFR Part 264 are omitted from Section 20.4.1.500 NMAC:

- (1) Section 264.1(f);
- (2) Section 264.149;
- (3) Section 264.150;
- (4) Section 264.301(1);
- (5) Section 264.1030(d);
- (6) Section 264.1050(g); and
- (7) Sections 264.1080(e), 264.1080(f), 264.1080(g).

[20.4.1.501 NMAC - Rp, 20 NMAC 4.1.501, 12/1/2018]

20.4.1.502-20.4.1.599 [RESERVED]

20.4.1.600 ADOPTION OF 40 CFR PART 265:

Except as otherwise provided, the regulations of the EPA set forth in 40 CFR Part 265 as it may be modified or amended is hereby incorporated by reference.

[20.4.1.600 NMAC - Rp, 20 NMAC 4.1.600, 12/1/2018]

20.4.1.601 MODIFICATIONS, EXCEPTIONS AND OMISSIONS:

Except as otherwise provided, the following modifications, exceptions and omissions are made to the incorporated federal regulations:

A. The following provisions of 40 CFR Part 265 are modified in 20.4.1.600 NMAC:

(1) the substitution of "secretary" for the term "regional administrator" in 20.4.1.101 NMAC does not apply to the required notice set forth in 40 CFR Section 265.12(a), as adopted in this section. The owner or operator of a facility that has arranged to receive hazardous waste from a foreign source must provide a copy of the notice required in 40 CFR Section 265.12(a) to the secretary at the time that notice is provided to the regional administrator;

(2) the owner and operator shall submit the reports in 40 CFR Section 264.100(g) on a semi-annual basis to the secretary;

(3) "qualified professional engineer" as provided for in 40 CFR Sections 265.115, 265.120, 265.143(h), 265.145(h), 265.147(e), 265.191(a), 265.191(b)(5)(ii), 265.192(a), 265.192(b), 265.193(i)(2), 264.196(f), 265.280(e), 265.441(a) through (c), 265.443(a)(4)(ii), 265.443(g), 265.444(a) and 264.1101(c)(2) shall mean an independent New Mexico licensed professional engineer in accordance with the New Mexico Engineering and Surveying Practice Act, Sections 61-23-1 through 32, NMSA 1978 (as amended);

(4) the requirements of 40 CFR 265.73(b) shall be maintained in the operating record by the owner and operator at his facility until closure;

(5) the requirements of 40 CFR Section 264.347(d) shall be maintained in the operating record by the owner and operator at his facility until closure.

(6) the substitution of "department" for the term "EPA" does not apply to the second occurrence of the term "EPA" in 40 CFR Section 265.1083(c)(4)(ii).

B. The following provisions of 40 CFR Part 265 are omitted from Section 20.4.1.600 NMAC:

(1) Section 265.1(c)(4);

(2) Section 265.149;

(3) Section 265.150;

(4) Section 265.1030(c);

(5) Section 265.1050(f); and

(6) Sections 265.1080(e), 265.1080(f), 265.1080(g).

20.4.1.801 MODIFICATIONS, EXCEPTIONS AND OMISSIONS:

Except as otherwise provided, the following modifications, exceptions and omissions are made to the incorporated federal regulations.

A. The substitution of "department" for the term "EPA" in 20.4.1.101 NMAC does not apply to 40 CFR Section 268.1(e)(3), as adopted in this section.

B. The following provisions of 40 CFR Part 268 are omitted from Section 20.4.1.800 NMAC:

- (1) Section 268.5;
- (2) Section 268.6;
- (3) Section 268.42(b); and
- (4) Section 268.44(a) through 264.44(g).

[20.4.1.801 NMAC - Rp, 20 NMAC 4.1.801, 12/1/2018]

20.4.1.802-20.4.1.899 [RESERVED]

20.4.1.900 ADOPTION OF 40 CFR PART 270:

Except as otherwise provided, the regulations of the EPA set forth in 40 CFR Part 270 as it may be modified or amended is hereby incorporated by reference.

[20.4.1.900 NMAC - Rp, 20 NMAC 4.1.900, 12/1/2018]

20.4.1.901 PERMITTING PROCEDURES:

A. Permit issuance or denial.

(1) Once an application is determined to be administratively and technically complete, the secretary shall prepare and issue either a draft permit or a notice of intent to deny.

(a) A draft permit shall contain all conditions, compliance schedules, monitoring requirements and technical standards for treatment, storage, and/or disposal provided for in 40 CFR Part 270.

(b) A notice of intent to deny shall state the secretary's reasons for the intended denial.

(2) Any draft permit or notice of intent to deny prepared by the department under Paragraph one of this subsection shall be accompanied by a fact sheet and shall be based on the administrative file. Copies of the fact sheet shall be sent to the applicant; to any state or federal agency, as applicable; and, upon request, to any other person.

(3) The secretary shall give public notice that a draft permit or a notice of intent to deny has been prepared, and shall allow 45 days for review and public comment, including requests for public hearing.

(4) If the secretary issues a draft permit, and a timely written notice of opposition to the draft permit and a request for a public hearing is received, the department, acting in conjunction with the applicant, will respond to the request in an attempt to resolve the issues giving rise to the opposition. If such issues are resolved to the satisfaction of the opponent, the opponent may withdraw the request for a public hearing.

(5) No ruling shall be made on permit issuance or denial without an opportunity for a public hearing, at which all interested persons shall be given a reasonable chance to submit significant data, views or arguments orally or in writing and to examine witnesses testifying at the public hearing. A public hearing shall be scheduled if:

(a) the secretary issues a notice of intent to deny, and a timely request for public hearing is received from the applicant;

(b) the secretary issues a draft permit, a timely request for public hearing is received from any person opposed to the granting of a permit, and such person does not subsequently withdraw the request pursuant to Paragraph four of this subsection; or

(c) the secretary determines, no later than five days following the end of the comment period specified in Paragraph four of this subsection, that a public hearing should be held notwithstanding the absence of a timely request for public hearing.

(6) The comment period specified in Paragraph three of this subsection shall automatically be extended to the close of any public hearing.

(7) The secretary shall give due consideration and the weight he/she deems appropriate to all comments received during a public comment period and to all relevant facts and circumstances presented at a public hearing.

(8) When ruling on permit issuance or denial, the secretary may disapprove in whole or in part, or make reasonable conditions to any permit, if it appears that the permit applied for will not meet the requirements of these regulations.

(9) At the time that any final permit decision is issued, the secretary shall issue a response to comments. This response shall:

(a) specify which provisions, if any, of the draft permit have been changed in the final permit decision, and the reasons for the change;

(b) briefly describe and respond to all comments on the draft permit or the permit application raised during the public comment period, or during any hearing, and

(c) be available to the public.

(10) A final permit decision shall become effective 30 days after notice of the decision has been served on the applicant, or such later time as the secretary may specify. This provision shall not be construed to extend the time for appeal of a permit decision as provided by the Hazardous Waste Act.

(11) The approval of a permit does not relieve any person from the responsibility of complying with applicable state or federal laws and regulations.

(12) The secretary shall notify the applicant by certified mail of any impending permit action and of any scheduled public hearing date.

B. Permit Modifications, Suspension and Revocation.

(1) The secretary may modify, suspend, or revoke a permit issued pursuant to Subsection A of this section for cause set forth in 40 CFR Part 270 and the act.

(2) The secretary may modify, suspend, revoke any permit upon his/her initiative, or if, after the department's investigation of the facts and circumstances, pursuant to the request of any interested person, such permit action is deemed warranted.

(3) Requests for permit modification, suspension, revocation shall be in writing and shall contain facts or reasons supporting the request.

(4) If the secretary decides that the request is not justified, the permittee will be notified in writing explaining the reason for denial. Denial of request of modification, revocation, and reissuance, or termination are not subject to public notice, comment, or hearings.

(5) If the secretary decides to modify or revoke and reissue a permit under 40 CFR section 270.41 or 40 CFR section 270.42(c), considered a major modification under the act, a draft permit shall be prepared incorporating the proposed changes. The secretary may request additional information and, in the case of a modified permit, may require the submission of an updated application. In the case of a revoked and reissued permit the secretary shall require the submission of a new application.

(6) Class 1 and 2 modifications under 40 CFR 270.42(a) and (b) shall be considered minor permit modifications under the act.

(7) In a permit modification under this section, only those conditions to be modified shall be reopened. All other aspects of the existing permit shall remain in effect for the duration of the unmodified permit. When a permit is revoked and reissued under this section, the entire permit is reopened just as if the permit had expired and were being reissued. During any revocation and reissuance proceeding the permittee shall comply with all conditions of the exiting permit until a new final permit is reissued.

(8) If the secretary decides to terminate a permit under 40 CFR section 270.43, a notice of intent to terminate shall be issued. The secretary shall follow the applicable procedures as required for a draft permit under Section 20.4.1.901 NMAC.

C. Public Notices.

(1) Pre-application public meeting and notice. Except as otherwise provided, the regulation of the EPA set forth in 40 CFR Section 124.31 through July 1, 2008 is hereby incorporated by reference.

(2) Public notice requirements at the application stage. Except as otherwise provided, the regulation of the EPA set forth in 40 CFR section 124.32 through July 1, 2008 is hereby incorporated by reference.

(3) Public notice of issuance of a draft permit or a notice of intent to deny, and of any public hearing scheduled, shall be given by publication of a notice in a newspaper of general circulation in the area affected, broadcasts over local radio stations and by mailing a copy of the notice to the permit applicant, those individuals on the department mailing list of persons interested in hazardous waste permit actions, and to any unit of local, state and federal government as may be applicable.

(4) All public notices issued shall contain the following minimum information:

(a) the subject, the time and place of any scheduled hearing and the manner in which interested persons may present their views;

(b) a brief description of the procedures by which requests for hearings may be made, unless already scheduled;

(c) the name and address of the office processing the permit action for which notice is being given;

(d) the name and address of the permittee or permit applicant, and, if different, of the facility or activity regulated by the permit;

(e) a brief description of the business conducted at the facility or activity described in the permit application or the draft permit;

(f) the name, address and telephone number of a person from whom interested persons may obtain further information;

(g) in addition, public notice of a scheduled public hearing shall also contain references to the dates of previous public notices relating to the permit;

(h) the notice shall state where interested persons may secure copies of any proposed draft permit or notice of intent to deny.

D. Fact Sheet.

(1) A fact sheet shall be prepared for every draft permit for a hazardous waste management facility or activity. The fact sheet shall briefly set forth the principal facts and the significant factual legal, methodological and policy questions considered in preparing the draft permit.

(2) The fact sheet shall include, when applicable:

(a) a brief description of the type of facility or activity which is the subject of the draft permit;

(b) the type and quantity of wastes which are proposed to be or are being treated, stored, disposed, injected, emitted, or discharged;

(c) a brief summary of the basis for the draft permit conditions including references to applicable statutory or regulatory provisions;

(d) reasons why any request for variance or alternative to require standards do or do not appear justified;

(e) a description of the procedures for reaching a final decision on the draft permit, including: the beginning and ending dates of the comment period, the address where comments will be received, procedures for requesting a hearing, the nature of that hearing, any other procedures by which the public may participate in the final decision, and the name and telephone number of a person to contact for additional information.

(3) The fact sheet shall be available at the time the public notice is published.

E. Information repository. Except as otherwise provided, the regulation of the EPA set forth in 40 CFR section 124.33 through July 1, 2008 is hereby incorporated by reference.

F. Hearings.

(1) Public notice of any public hearing shall be given at least 30 days prior to the scheduled date of the hearing and shall state the subject.

(2) Hearings shall be held in Santa Fe or within any area of the state substantially affected by the proceedings as specified by the secretary.

(3) The secretary may designate a hearing officer to take evidence at the hearing.

(4) All hearings shall be recorded by a certified court reporter. A transcript will be furnished to all persons for review at the department's main office. Costs of a copy of a transcript will be borne by those requesting such copies.

(5) In hearings, the rules of civil procedure and the technical rules of evidence shall not apply, but the hearings shall be conducted so that all relevant views, arguments, and testimony are amply and fairly received without undue repetition.

(a) Testimony for hearings on permit issuance or modification shall be presented in the following order: testimony by the applicant (such testimony is a prerequisite to the granting of the requested permit or modification), testimony by other persons (except the department) supporting issuance or modification of the permit, in any reasonable order, testimony by persons (except the department) opposed to issuance or modification of the permit, in any reasonable order, testimony by the department, and rebuttal testimony, as appropriate.

(b) Testimony for hearings on permit suspension or revocation shall be as follows: testimony by the department, testimony by other persons supporting suspension or revocation of the permit, in any reasonable order, testimony by the permittee, testimony by other persons opposed to suspension or revocation of the permit, in any reasonable order, and rebuttal testimony, as appropriate.

(c) In all hearings, cross examination of each witness shall be conducted by interested persons, in any reasonable order, immediately after that witness has testified.

(7) The burden of proof at hearings shall be as follows:

(a) for hearings on permit issuance or modifications, the burden of proof shall be on the applicant or permittee;

(b) for hearings on permit suspension or revocation, the burden of proof shall be on the department.

G. Secretary's decision.

(1) Any person heard or represented at the hearing shall be given written notice of the action of the secretary.

(2) The secretary shall notify the applicant or permittee of his/her decision and the reasons therefore by certified mail.

H. Appeals. Appeals of the secretary's decision shall be as provided by the Hazardous Waste Act.

(1) The filing of an appeal does not act as a stay of any action required by the secretary's decision.

(2) The record on appeal shall include the transcript of the hearing, all related correspondence, any responses to comments, and all other information relied upon by the secretary in deciding upon the permit action.

[20.4.1.901 NMAC - Rp, 20 NMAC 4.1.901, 12/1/2018]

20.4.1.902 MODIFICATIONS, EXCEPTIONS AND OMISSIONS:

Except as otherwise provided, the following modifications, exceptions and omissions are made to the incorporated federal regulations.

A. "Qualified professional engineer" as provided for in 40 CFR Sections 270.14(a), 270.16(a), and 270.26(c)(15) shall mean an independent New Mexico licensed professional engineer. A professional engineer shall abide by all requirements of the New Mexico Engineering and Surveying Practice Act, Sections 61-23-1 through 32, NMSA 1978 (as amended) and applicable regulations.

B. The substitution of the terms "EPA," "regional administrator" and "administrator" in 20.4.1.101 NMAC does not apply to 40 CFR Sections 270.5, 270.10(f)(2) & (3), 270.10 (g)(1)(i), 270.11 (a) (3), 270.32(c), 270.72(a)(5), and 270.72(b)(5), as adopted in this section.

C. The following provisions of 40 CFR Part 270 are omitted from 20.4.1.900 NMAC:

(1) statement in Section 270.1(b), "treatment, storage, and disposal facilities (TSDs) that are otherwise subject to permitting under RCRA and that meet the criteria in paragraph (b)(1), or paragraph (b)(2) of this section, may be eligible for a standardized permit under subpart J of this part.";

(2) Sections 270.1(b)(1) and 270.1(b)(2);

(3) "and standardized permit (subpart J of this part)" in the definition of "permit" in Section 270.2;

- (4) definition of "standardized permit" in Section 270.2;
- (5) Section 270.10(a)(6);
- (6) Section 270.10(h)(2);
- (7) portion of the first sentence stating, "or as a routine change with prior approval under 40 CFR 124.213" of Section 270.40(b);
- (8) Section 270.41 referencing 270.320 and 40 CFR part 124, subpart G;
- (9) Section 270.41(b)(3);
- (10) Section 270.51(e); and
- (11) Section 270, subpart J.

[20.4.1.902 NMAC - Rp, 20 NMAC 4.1.902, 12/1/2018]

20.4.1.903-20.4.1.999 [RESERVED]

[20.4.1.903 -20.4.1.999 NMAC - Rp, 20 NMAC 4.1.903 - 4.1.999, 12/1/2018]

20.4.1.1000 ADOPTION OF 40 CFR PART 273:

Except as otherwise provided, the regulations of the EPA set forth in 40 CFR Part 273 as it may be modified or amended is hereby incorporated by reference.

[20.4.1.1000 NMAC - Rp, 20 NMAC 4.1.1000, 12/1/2018]

20.4.1.1001 MODIFICATIONS, EXCEPTIONS AND OMISSIONS:

Except as otherwise provided, the following modifications, exceptions and omissions are made to the incorporated federal regulations.

A. The following terms have the meanings set forth herein.

(1) "Aerosol can" means a container in which gas under pressure is used to aerate and dispense any material through a valve in the form of a spray or foam.

(2) "Regional administrator" and "EPA" as used in 40 CFR sections 273.12 and 273.32 shall mean, as applicable to handlers of universal waste pesticides under this part, notification to the secretary of the New Mexico department of agriculture.

(3) "Universal waste" means, in addition to the hazardous wastes listed in 40 CFR Section 273.9, aerosol cans as described in this subsection.

B. Alternative universal waste labeling. As an alternative to the labeling requirements for universal waste in 40 CFR sections 273.14 and 273.34, universal waste handlers may use other words that accurately identify the universal waste material, for example, "spent bulbs" or "batteries for recycling." Note that the labeling must be either on the individual piece of universal waste, on the container in which the universal waste is stored, or on a pallet of banded or otherwise bound universal waste being readied for shipment.

C. Breaking and crushing universal waste lamps. In addition to the requirements for universal waste lamps contained in Subparts B and C of 40 CFR Part 273, the following requirements shall apply.

(1) A handler of universal waste may intentionally break or crush lamps generated on-site to reduce their volume to facilitate management or transport to destination facilities. However, breaking and crushing of lamps and subsequent management of the resulting waste must occur in a safe and controlled manner that minimizes the release of hazardous constituents to the workplace and the environment, and steps must be taken to minimize exposures of children, pregnant women, and other sensitive individuals to mercury releases from these activities. Universal waste destination facilities as defined in 40 CFR Section 273.9 may not intentionally break or crush lamps under this subsection.

(2) A handler of universal waste who intentionally breaks or crushes mercury-containing universal waste lamps under this subsection shall comply with the following provisions.

(a) Use a mechanical unit specifically designed for the process that results in the breaking or crushing operation to take place in a container or while the lamps are being added to the container, for example, a drum-top lamp crusher. The unit must also incorporate air pollution controls that capture both particulate and vapor phase mercury. At a minimum, these controls must include, or must be equivalent to, the protection provided by a high efficiency particulate air (HEPA) filter, activated charcoal, and a negative air flow (vacuum) through the unit. The unit must have documentation from the manufacturer that demonstrates that the unit is capable of achieving the occupational safety and health administration (OSHA) permissible exposure limit for mercury.

(b) Develop and implement a written procedure specifying how to safely break or crush universal waste lamps. This procedure must include: type of equipment to be used to break or crush the lamps, operation and maintenance of the unit in accordance with written procedures developed by the manufacturer of the equipment, safe work practices, decontamination and spill response practices, and proper waste management practices. The handler must document maintenance activities and keep records of maintenance. In addition, the unit operator(s) and assistant(s) must receive training applicable to their duties relating to breaking and crushing operations, waste handling, area and equipment decontamination, spill response, and emergency procedures; this training must be documented.

(c) Ensure that the area in which the lamps are broken or crushed is well ventilated and monitored to ensure compliance with applicable OSHA permissible exposure levels for mercury.

(d) Ensure that spills of the contents of the universal waste lamps that may occur during breaking or crushing operations are cleaned up in accordance with 40 CFR sections 273.13 or 273.33. A spill clean-up kit must be readily available to immediately clean up spills or leaks of the contents of the universal waste lamps which may occur during lamp breaking or crushing operations.

(e) Store the broken and crushed lamps and other solid waste generated as part of the breaking or crushing operation that are being reclaimed for mercury in closed, non-leaking containers that are in good condition. Transfer of the broken or crushed lamps to other containers is not permitted unless the area is well ventilated and monitored to ensure compliance with applicable OSHA permissible exposure levels for mercury.

(f) Label drums or containers used for storage of broken or crushed lamps and other solid waste generated as part of the breaking or crushing operation that are being reclaimed for mercury with the words "universal waste-lamps," "waste lamps," "used lamps," or other words that accurately identify the contents, for example, "crushed bulbs."

(g) Manage residues, filter media, or other solid waste generated as part of the breaking or crushing operation that are not being reclaimed and that exhibit any characteristics of a hazardous waste identified in Subpart C of 40 CFR Part 261 in accordance with all applicable requirements of this part.

(3) The owner or operator of a unit that breaks or crushes mercury-containing universal waste lamps must notify the department's hazardous waste bureau of its intent to operate the unit. The notification shall include the owner and operator name(s), address(es), and phone number(s); manufacturer's documentation describing the unit; documentation that demonstrates that the unit is capable of achieving the occupational safety and health administration (OSHA) permissible exposure limit for mercury; and a description of how and where the unit will be operated.

(a) For units in operation before the requirements in this subsection became effective, the owner or operator must submit such notification within 90 days of the effective date of this requirement.

(b) For units not in operation before the effective date of the requirements in this subsection, the owner or operator must submit such notification before operating the unit.

D. Universal waste aerosol cans. In addition to the requirements for universal waste contained in 40 CFR Part 273, the following requirements shall apply.

(1) Applicability. The requirements of this part apply to persons managing aerosol cans as described in Subsection A of this section, except persons managing the following aerosol cans.

(a) Aerosol cans that are not yet wastes under this part, including those that do not meet the criteria for waste generation in Subparagraph (c) of Paragraph (1) of this subsection.

(b) Aerosol cans that are not hazardous waste. An aerosol can must be managed as a hazardous waste if its contents exhibit one or more of the characteristics identified in Subpart C of 40 CFR Part 261 or if its contents are listed in Subpart D of 40 CFR Part 261.

(c) Generation of waste aerosol cans. An aerosol can becomes a waste on the date it is discarded or is no longer useable. For purposes of this part, an aerosol can is considered to be no longer useable when the can is as empty as proper work practices allow, the spray mechanism no longer operates as designed, the propellant is spent, or the product is no longer used. An unused aerosol can becomes a waste on the date the handler decides to discard it. This section does not apply to aerosol cans, including punctured aerosol cans, that are empty as defined in 40 CFR 261.7(b).

(2) Waste management. A handler of universal waste must manage universal waste aerosol cans in a way that prevents release of any universal waste or component of a universal waste to the environment as follows.

(a) A handler of universal waste must immediately contain any universal waste aerosol can that shows evidence of leakage, spillage, or damage that could cause leakage under reasonably foreseeable conditions in a separate individual container. The individual container must be closed, structurally sound, compatible with the contents of the universal waste aerosol can, and must lack evidence of leakage, spillage, or damage that could cause leakage under reasonably foreseeable conditions.

(b) A handler of universal waste may accumulate universal waste aerosol cans in an accumulation container provided it is clearly marked for such use. The accumulation container must be closed, structurally sound, compatible with the contents of the universal waste aerosol can, and must lack evidence of leakage, spillage, or damage that could cause leakage under reasonably foreseeable conditions. The universal waste aerosol cans must be sorted by type and compatibility of contents to ensure that incompatible materials are segregated and managed appropriately in separate accumulation containers.

(3) Puncturing universal waste aerosol cans. A handler of universal waste may puncture aerosol cans containing hazardous waste under this part to remove and collect the contents of the aerosol cans provided the handler complies with the following provisions.

(a) Ensure that the universal waste aerosol can is punctured in a manner designed to prevent the release of any universal waste or component of universal waste to the environment.

(b) Ensure that the puncturing operations are performed safely by developing and implementing a written procedure detailing how to safely puncture aerosol cans. This procedure must include the type of equipment to be used to puncture the aerosol cans, operation and maintenance of the unit, safe work practices, and proper waste management practices.

(c) Ensure that a spill clean-up kit is readily available to immediately clean up spills or leaks of the contents of the aerosol can which may occur during the can-puncturing operation.

(d) Immediately transfers the contents of the aerosol can, or puncturing device if applicable, to a container that meets the requirements of 40 CFR Section 262.34.

(e) Ensure that the area in which the aerosol cans are punctured is well ventilated.

(f) Ensure that employees are thoroughly familiar with the procedure for sorting and puncturing aerosol cans, and proper waste handling and emergency procedures, relevant to their responsibilities during normal facility operations and emergencies.

(g) Determine whether the contents of the aerosol can, residues, and other solid wastes generated from the aerosol can puncturing activities are a hazardous waste identified in this part.

(h) Manage the contents of the universal waste aerosol can, residues, and other solid waste generated from the aerosol can puncturing activities in accordance with all applicable hazardous waste management requirements if they exhibit one or more of the characteristics identified in Subpart C of 40 CFR Part 261 or if its contents are listed in Subpart D of 40 CFR Part 261. The handler is considered the generator of the contents of the universal waste aerosol can and other solid waste generated from the aerosol can puncturing activities. If the contents of the universal waste aerosol can, residues, or other solid waste are not hazardous, the handler may manage the waste in a way that is in compliance with applicable federal, state or local solid waste regulations.

(4) Labeling or marking. Each universal waste aerosol can, or each container in which universal waste aerosol cans are contained or accumulated, must be labeled or marked clearly with any one of the following phrases: "universal waste-aerosol can(s)", "waste aerosol can(s)," or other words that accurately identify the contents, for example, "spent aerosol can(s)."

[20.4.1.1001 NMAC - Rp, 20 NMAC 4.1.1001, 12/1/2018]

20.4.1.1002 ADOPTION OF 40 CFR PART 279:

Except as otherwise provided, the regulations of the United States environmental protection agency set forth in 40 CFR Part 279 as it may be modified or amended is hereby incorporated by reference.

[20.4.1.1002 NMAC - Rp, 20 NMAC 4.1.1002, 12/1/2018]

20.4.1.1003 MODIFICATIONS, EXCEPTIONS AND OMISSIONS:

Except as otherwise provided, the following modifications, exceptions and omissions are made to the incorporated federal regulations.

A. Alternative used oil labeling for generators. As an alternative to the labeling requirements for containers and aboveground tanks used to store used oil in 40 CFR Section 279.22, used oil generators may use other words that accurately identify the used oil, for example, "waste oil" or "oil for recycling."

B. Used oil storage.

(1) In addition to the requirements for used oil storage in 40 CFR Section 279.22, containers and aboveground tanks used to store used oil outdoors must be closed, except when it is necessary to add or remove used oil.

(2) With the exception of the response to releases requirements in 40 CFR 279.22(d), this section does not apply to used oil storage containers, used temporarily in the normal course of maintenance and service activities, where these containers are emptied at the end of each work day or shift.

[20.4.1.1003 NMAC – Rp, 20 NMAC 4.1.1003, 12/1/2018]

20.4.1.1004-20.4.1.1099 [RESERVED]

20.4.1.1100 COMPLIANCE WITH OTHER REGULATIONS:

Compliance with this Part does not relieve a person of the obligation to comply with all other applicable state and federal regulations. If the EPA should suspend any federal hazardous waste regulation having a direct counterpart to these regulations, the counterpart in these regulations shall be deemed suspended without any further action being taken.

[20.4.1.1100 NMAC - Rp, 20 NMAC 4.1.1100, 12/1/2018]

20.4.1.1101 CONSTRUCTION:

PART 2: HAZARDOUS WASTE PERMIT AND CORRECTIVE ACTION FEES

20.4.2.1 ISSUING AGENCY:

Environmental Improvement Board.

[12/31/1998; 20.4.2.1 NMAC - Rn, 20 NMAC 4.2.I.101, 8/18/2006]

20.4.2.2 SCOPE:

This part applies to all persons who own or operate a permitted facility at which the treatment, storage or disposal of hazardous waste is occurring or has occurred, all persons seeking or required to obtain a permit for the treatment, storage or disposal of hazardous waste or corrective action, all persons subject to an enforceable document under the New Mexico Hazardous Waste Act, and all persons engaging in or required to engage in closure, post closure care and corrective action under the New Mexico Hazardous Waste Act, Sections 74-4-1 through 74-4-14 NMSA 1978.

[12/31/1998; 20.4.2.2 NMAC - Rn, 20 NMAC 4.2.I.102, 8/18/2006; A, 3/5/2020]

20.4.2.3 STATUTORY AUTHORITY:

Sections 74-1-8, 74-4-4, 74-4-4.2 and 74-4-4.5 NMSA 1978.

[12/31/1998; 20.4.2.3 NMAC - Rn, 20 NMAC 4.2.I.103 & A, 8/18/2006]

20.4.2.4 DURATION:

Permanent.

[12/31/1998; 20.4.2.4 NMAC - Rn, 20 NMAC 4.2.I.104, 8/18/2006]

20.4.2.5 EFFECTIVE DATE:

December 31, 1998, unless a later date is cited at the end of a section.

[12/31/1998; 20.4.2.5 NMAC - Rn, 20 NMAC 4.2.I.105 & A, 8/18/2006]

20.4.2.6 OBJECTIVE:

The objective of this part is to provide a schedule of fees for facilities seeking permits, currently permitted, or undergoing corrective action for past or present hazardous waste management activities. Fees paid are for deposit in the hazardous waste fund to meet necessary expenses in the administration and operation of the state hazardous waste program.

[12/31/1998; 20.4.2.6 NMAC - Rn, 20 NMAC 4.2.I.106, 8/18/2006]

20.4.2.7 DEFINITIONS:

Unless otherwise defined in this part, the words and phrases used in this part have the same meanings as in 20.4.1 NMAC, Hazardous Waste Management regulations. As used in this part:

A. Terms beginning with the letter "A":

(1) **"Accelerated corrective action completion report" or "accelerated corrective measures completion report"** means a report on implementation of presumptive remedies at small and relatively simple units where groundwater contamination is not a component of the accelerated cleanup, where the remedy is considered to be the final remedy for the unit, and where the field work will be accomplished within 180 days of commencement;

(2) **"Accelerated corrective action work plan" or "accelerated corrective measures work plan"** means a work plan to implement presumptive remedies at small and relatively simple units where groundwater contamination is not a component of the accelerated cleanup, where the remedy is considered to be the final remedy for the unit, and where the field work will be accomplished within 180 days of commencement;

(3) **"Act"** means the New Mexico Hazardous Waste Act, Sections 74-4-1 through 74-4-14 NMSA 1978;

(4) **"Administrative authority"** means the secretary of the New Mexico environment department, or the secretary's designee, or, in the case of provisions for which the state is not authorized, the United States environmental protection agency (EPA);

(5) **"Administratively complete"** means a determination made by the secretary that an application contains all the general information required in 40 CFR 270.13, applicable specific information in sections 40 CFR 270.14 through 270.28 and is complete as defined by the regulations of 20.4.1.900 NMAC incorporating 40 CFR 270.10 (c) and (d);

(6) **"Area of concern" or "AOC"** means any area having a known or suspected release of hazardous waste or hazardous constituents that is not from a solid waste management unit and that the secretary has determined may pose a current or potential threat to human health or the environment, pursuant to 20.4.1.500 NMAC (incorporating 40 CFR 270.32 (b) (2)). An area of concern may include buildings, and structures at which releases of hazardous waste or constituents were not remediated, including one-time and accidental events;

B. Terms beginning with the letter "B":

(1) **"Background study report"** means a report documenting the results of a study to determine background concentrations of naturally occurring inorganic compounds;

(2) **"Background study work plan"** means a plan proposing the methods to evaluate naturally occurring concentrations of inorganic compounds in environmental media;

C. Terms beginning with the letter "C":

(1) **"Certification of completion"** means a report documenting completion of corrective action required at a unit, submitted to the NMED to demonstrate that corrective action requirements for the unit, have been satisfied;

(2) **"Closure certification document"** means all documentation certified by a New Mexico registered professional engineer in a certification of closure that is submitted by an owner or operator;

(3) **"Corrective action"** means any activity related to site assessment, investigation, remediation, characterization or monitoring including reporting and document submittals at SWMUs or AOCs, including activities related to off-site migration;

(4) **"Corrective action complete with controls"** means that NMED has determined that no additional remedial activity is required at a unit, but the unit requires continued performance of operation and maintenance, or monitoring actions for engineering controls, or institutional controls;

(5) **"Corrective action complete without controls"** means that NMED has determined that no additional remedial activity is required at a unit;

(6) **"Corrective measures evaluation" or "CME" or "corrective measures study report" or "CMS report"** means a report or study that evaluates remedial alternatives for the purpose of remedy selection and includes specifications to implement a proposed remedy;

(7) **"Corrective measures evaluation work plan"** or **"CME work plan"** or **"corrective measures study work plan"** or **"CMS work plan"** means a plan to identify, develop and evaluate potential corrective measures (remedy) alternatives;

(8) **"Corrective measures implementation work plan"** or **"CMI work plan"** means plans and specifications to implement the approved remedy at a facility;

(9) **"Corrective measures implementation report"** or **"CMI report"** means a report signifying completion of the remedy approved by NMED for termination of corrective action;

D. Terms beginning with the letter "D": [RESERVED]

E. Terms beginning with the letter "E":

(1) **"Emergency permit"** means an emergency permit as defined at 40 CFR 270.61;

(2) **"Enforceable document"** means an order, a plan, or other document issued by EPA or the state under an authority that meets the requirements of 40 CFR 271.16 (e);

F. Terms beginning with the letter "F":

(1) **"FFCO"** means federal facility compliance order;

(2) **"Frequent monitoring plan"** means a plan that describes proposed periodic monitoring activities for detection compliance or corrective action monitoring, monitoring of a remediation system, or other corrective measure monitoring for a single site or contiguous sites with shared boundaries;

(3) **"Frequent monitoring report"** or **"Frequent progress report"** means a report that describes periodic monitoring activities and results for detection, compliance or corrective action monitoring, monitoring of a remediation system, or other corrective measure monitoring or progress related to a corrective measure for a single site or contiguous sites with shared boundaries;

G. Terms beginning with the letter "G": [RESERVED]

H. Terms beginning with the letter "H":

(1) **"Hazardous waste management activity"** means the treatment, storage, or disposal of hazardous waste within a hazardous waste management unit at a facility subject to a hazardous waste permit or operated under interim status and subject to permit authorization, or any closure or post-closure care activity required at a hazardous waste management unit;

(2) **"HWMR"** means the New Mexico Hazardous Waste Management regulations, Title 20, Chapter 4, Part 1 of the New Mexico administrative code;

I. Terms beginning with the letter "I":

(1) **"Interim measures report"** means a report that describes the results of interim corrective measures conducted to abate, minimize, stabilize, mitigate, or eliminate a release or threat of release, implemented prior to implementation of a final remedy;

(2) **"Interim measures work plan"** means a work plan to implement proposed interim corrective measures conducted to abate, minimize, stabilize, mitigate, or eliminate a release or threat of release, implemented prior to implementation of a final remedy;

(3) **"Investigation report" or "RFI report" or "RCRA facility investigation report" or "phase report"** means a report that summarizes the results of investigation of the nature, rate, movement and extent of contamination at a unit or facility;

(4) **"Investigation work plan" or "RFI work plan" or "RCRA facility investigation work plan"** means a work plan that describes proposed investigation activities to evaluate the nature, rate, movement and extent of contamination at a unit or facility;

J. Terms beginning with the letter "J": [RESERVED]

K. Terms beginning with the letter "K": [RESERVED]

L. Terms beginning with the letter "L":

(1) **"Letter report" or "Supplemental report" or "Report addendum"** means a report summarizing the results of the implementation of a work plan of limited scope where the field work was completed in seven working days or less and that did not constitute the initial field investigation at a site.

(2) **"Letter work plan" or "Supplemental work plan" or "Work plan addendum"** means a work plan of limited scope that describes proposed corrective action activities where the field work can be completed in seven working days or less and does not constitute the initial field investigation of a site.

M. Terms beginning with the letter "M":

(1) **"Monitoring plan"** means a plan that describes proposed periodic monitoring activities for detection, compliance or corrective action monitoring, monitoring of a remediation system, or other corrective measure monitoring;

N. Terms beginning with the letter "N":

(1) **"Notice of land transfer"** means a notice that initiates NMED evaluation of the results of investigation activities conducted to evaluate the nature, rate, movement and extent of contamination and corrective measures at a property that is anticipated to be transferred to an owner other than the owner regulated by a permit or enforceable document;

(2) **"NMED"** means the New Mexico environment department;

(3) **"Notice of disapproval" or "Disapproval"** means NMED-issued correspondence requiring revision and resubmittal of a deficient document;

O. Terms beginning with the letter "O": "Operation and maintenance plan" means a plan that describes operation, maintenance and monitoring of a remediation system or other corrective measure or monitoring activity that requires continued monitoring or upkeep during implementation;

P. Terms beginning with the letter "P":

(1) **"Periodic monitoring report"** means a report that summarizes periodic detection, compliance or corrective action ground water monitoring, monitoring of a remediation system, or other corrective measure monitoring;

(2) **"Person"** means any individual, trust, firm, joint stock company, federal agency, corporation including a government corporation, partnership, association, state, municipality, commission, political subdivision of a state or any interstate body; and shall include each department, agency and instrumentality of the United States;

(3) **"Petition for corrective action complete review"** means a petition to change the status of a unit from "subject to corrective action" to a different status (e.g., corrective action complete or no further action required) based on the results of corrective action activities or other relevant information

(4) **"Pilot/aquifer test report"** means a report summarizing the results of pilot or aquifer tests conducted to evaluate hydrologic or other conditions for the purpose of site characterization or remedy selection;

(5) **"Pilot/aquifer test work plan"** means a work plan for conducting pilot or aquifer tests to evaluate hydrologic or other conditions for the purpose of site characterization or remedy selection;

Q. Terms beginning with the letter "Q": [RESERVED]

R. Terms beginning with the letter "R":

(1) **"RCRA facility assessment" or "RFA"** means the first stage in the corrective action process in which information is compiled on conditions at the site, including releases, potential releases, exposure pathways, solid waste management units, and areas of concern;

(2) **"Rejected document"** means a document deemed unreviewable due to deficiencies related to permit or other enforceable document requirements, disorganization, or a substantial amount of missing information, inaccuracies, or unrelated or redundant information;

(3) **"Release assessment" or "SWMU assessment report"** means an assessment of a solid waste management unit or area of concern performed after the RCRA facility assessment but before the initiation of any field investigation or full site characterization to obtain information for use in focusing subsequent investigations or eliminating certain units or areas from further consideration;

(4) **"Remedial action plan" or "RAP"** means a special form of a RCRA permit as defined in 20.4.1.900 NMAC, incorporating 40 CFR 270.80;

(5) **"Remedy completion report"** means a report summarizing the results of completion of the implementation of corrective measures;

(6) **"Revision" or "Document revision"** means a document that is revised and resubmitted by a facility in response to comments issued by the department in a Notice of Disapproval or Disapproval as distinct from revisions submitted in response to an Approval with Modification(s);

(7) **"Risk evaluation/risk assessment report"** means a report summarizing the results of a risk evaluation or assessment for the purpose of evaluating the human health and ecological risks of exposure to contaminants and determining appropriate cleanup levels at a site;

S. Terms beginning with the letter "S":

(1) **"Secretary"** means the secretary of the New Mexico environment department;

(2) **"Solid waste management unit" or "SWMU"** means any discernible unit at which solid wastes have been placed at any time, irrespective of whether the unit was intended for the management of solid or hazardous waste; such units include any area at a facility at which solid wastes have been routinely and systematically released;

(3) **"Submittal"** means all applications, permit modification requests, plans, reports, studies, and other documents listed in tables 2 through 7 in 20.4.2.205 NMAC through 20.4.2.210 NMAC;

(4) **"Status report"** means a report summarizing the progress of implementation of corrective actions or corrective measures;

T. Terms beginning with the letter "T": [RESERVED]

U. Terms beginning with the letter "U": "Unit" means "hazardous waste management unit" as defined in 20.4.1.101 NMAC, incorporating 40 CFR 260.10, or solid waste management unit, or area of concern;

V. Terms beginning with the letter "V": [RESERVED]

W. Terms beginning with the letter "W": [RESERVED]

(1) **"Well completion report"** means a report summarizing the activities related to the drilling and installation of wells.

(2) **"Well abandonment report" or "Well replacement report"** means a report summarizing the activities related to abandonment or replacement of a well;

(3) **"Well abandonment work plan" or "Well replacement work plan"** means a work plan that describes the proposed activities to abandon or replace a well.

[12/31/1998; 20.4.2.7 NMAC - Rn, 20 NMAC 4.2.I.107 & A, 8/18/2006; A, 3/5/2020]

20.4.2.8-20.4.2.107 [RESERVED]

20.4.2.108 GENERAL PROVISIONS:

Saving clause: Repeal and replacement of hazardous waste fees, New Mexico environmental improvement board, 20.4.2 NMAC, shall not affect any administrative or judicial enforcement action pending on the effective date of this part.

[12/31/1998; 20.4.2.108 NMAC - Rn, 20 NMAC 4.2.I.108, 8/18/2006]

20.4.2.109-20.4.199[RESERVED]

20.4.2.200 PERMIT APPLICATION, INTERIM STATUS, REMEDIAL ACTION PLAN, AND CORRECTIVE ACTION FEES:

[12/31/1998; 20.4.2.200 NMAC - Rn, 20 NMAC 4.2.II.200 & A, 8/18/2006]

20.4.2.201 TYPES OF FEES:

Every owner or operator engaged in hazardous waste management activities or engaged in corrective action shall pay to NMED fees in the amounts specified in Subsections A through L of 20.4.2.201 NMAC. However, if an owner or operator has

paid a fee for any type of permit application, or for the review of a submittal, prior to the effective date of these regulations, the owner or operator shall not be required to pay the fee provided for by these regulations. An owner or operator who has paid a fee provided for in table 2 or table 4 for permit applications or permit modification requests shall be required to pay the applicable fee again if the application or document is resubmitted by the owner or operator after being denied under Section 74-4-4.2 NMSA 1978 and 20.4.1.901 NMAC by NMED. The secretary may in his discretion, based on good cause shown, determine that the fee on resubmission should be reduced or waived.

A. Annual Fees: Every owner or operator engaged in hazardous waste management activities or engaged in corrective action shall pay to NMED an annual fee in an amount equal to the sum of the annual unit fees set forth in table 1 of 20.4.2.204 NMAC for each unit as identified in the facility permit, part A application, or enforceable document, or any combination thereof as applicable.

B. Submittal review process:

(1) For each submittal, the owner or operator shall pay the associated review fee as listed in the tables in 20.4.2.205 NMAC through 20.4.2.210 NMAC. NMED will conduct the review within the time specified in the tables in 20.4.2.205 NMAC through 20.4.2.210 NMAC. The secretary may grant an extension of time for good cause shown. NMED shall provide notice to the owner or operator of any requested time extension.

(2) NMED will invoice the owner or operator for the applicable review fee:

(a) Within 60 days of receipt of submittal, in the case of interim status fees, corrective action submittal fees, and other fees assessed under tables 3, 5, 6, and 7 of 20.4.2.206 NMAC and 20.4.2.208 NMAC through 20.4.2.210 NMAC.

(b) After an application is deemed administratively complete, in the case of application and permit modification fees under table 2 of 20.4.2.205 NMAC and table 4 of 20.4.2.207 NMAC. For class 2 permit modification requests the invoice shall be issued within 30 days of receipt and the procedures of 40 CFR 270.42, as incorporated by 20.4.1.900 NMAC, shall apply. Unless extended by the secretary, administrative completeness determination shall be made within 270 days of receipt of the submittal. If the application is incomplete, NMED shall provide the owner or operator with written notice that shall list those parts of the application that are missing and describe the specific information needed to process the permit application.

(3) The timeframe for NMED review begins after receipt of payment, except for class 2 permit modification requests, in which case the time frame for NMED's review begins upon receipt of the request.

(4) NMED will provide the owner or operator written notice of approval, approval with modifications, disapproval, denial, or rejection of the submittal. If the

submittal is disapproved, denied or rejected, NMED shall provide the owner or operator with written notice providing the reasons for such action.

(5) The review times specified in the tables in 20.4.2.205 NMAC through 20.4.2.210 NMAC shall be tolled during all periods in which NMED is awaiting a response by the owner or operator to a notice under Paragraph (1) of Subsection B of 20.4.2.201 NMAC and during all time periods in which further action cannot be taken due to public comment and hearing requirements, except for class 2 permit modification requests, in which case the time frame for NMED's review begins upon receipt of the request.

(6) If NMED fails to meet a notice date pursuant to 20.4.2.205 NMAC through 20.4.2.210 NMAC, including an administrative completeness notice date, the NMED shall, within 10 business days after the deadline, notify the secretary and the owner or operator that the deadline was not met. The written notice shall state the reasons that the deadline was not met and propose a new deadline by which the NMED will act. The owner or operator may submit a written response to the secretary regarding its proposed remedy within 10 business days of its receipt of the notification. The secretary, at his or her discretion, shall establish a new notice date and remedy within 30 days after the secretary receives notice that the deadline was not met.

(7) In the event of a conflict between review time and notice dates in these regulations and in an enforceable document, the time-periods and review process in the enforceable documents shall control.

C. Permit application, remedial action plan, and corrective action section fees: Every owner or operator seeking a permit for the treatment, storage or disposal of hazardous waste or for post closure care shall pay an application review and permit preparation fee set forth in table 2 of 20.4.2.205 NMAC. The fee for application review and permit preparation shall be in an amount equal to the sum of the fees for each unit included in the permit application. If a corrective action section is required, the owner or operator shall also pay the basic fee for corrective action preparation set forth in table 2 of 20.4.2.205 NMAC plus the additional unit fee for each corrective action unit in excess of one which is addressed by the corrective action section. NMED will perform the review of the application and prepare the draft permit within the time specified in table 2 of 20.4.2.205 NMAC after receipt of the fees.

D. Permit renewals: Every owner or operator seeking to renew a previously issued permit for the treatment, storage or disposal of hazardous waste or for post-closure care shall pay an application review and permit preparation fee, and if required, a corrective action section fee, in the amounts and in the manner set forth in table 2 in 20.4.2.205 NMAC.

E. Interim status closure plan review fees: Every owner or operator submitting an interim status closure plan for review and approval shall pay a fee set forth in table 3 of 20.4.2.206 NMAC. The fee shall be in an amount equal to the sum of the fees set forth

in table 3 of 20.4.2.206 NMAC for each unit included in the closure plan. An application to modify an approved interim status closure plan is subject to the following fees:

(1) Amendments of plans that are identified as equivalent to a class 1 or a class 2 permit modifications are subject to the corresponding fee in table 4 in 20.4.2.207 NMAC;

(2) Amendments of plans identified as equivalent to class 3 permit modifications are subject to the corresponding fee in table 3 in 20.4.2.206 NMAC.

F. Permit modification fees: Every owner or operator who requests a class 1, 2, or 3 modification to a permit, and every owner or operator whose permit is to be modified as a result of a five year land disposal review shall pay the applicable class modification fee for each modification as set forth in table 4 of 20.4.2.207 NMAC. If the permit modification request is to add a new unit to the permit the applicable fee in table 2 of 20.4.2.205 NMAC will apply.

G. Closure report review fees: Every owner or operator who submits a closure report for review shall pay a closure report review fee as set forth in table 3 of 20.4.2.206 NMAC.

H. Corrective action submittal review fees: Every owner or operator who submits a corrective action submittal for review shall pay a corrective action submittal review fee as set forth in table 5 of 20.4.2.208 NMAC. An additional unit fee shall be paid for each additional unit for submittals that address multiple units. Documents that contain attached documents or attached sections of other documents within the submittal will be assessed a separate document review fee for the attached document or document section corresponding to the document type listed in table 5 of 20.4.2.208 NMAC. Draft documents shall be considered initial submittals subject to the corrective action submittal review fees as set forth in table 5 of 20.4.2.208 NMAC. Rejected documents shall be subject to the corrective action submittal review fees as set forth in table 5 of 20.4.2.208 NMAC upon resubmittal.

I. Land disposal review fee: Every owner or operator subject to a review under 20.4.1.900 NMAC (incorporating 40 CFR 270.50 (d)) shall pay a review fee as set forth in table 6 of 20.4.2.209 NMAC. At the time of invoicing, NMED shall notify the owner or operator in writing of any additional information required to process the review.

J. Audit review fee: Every owner or operator subject to an audit review required under a facility permit or enforceable document shall pay an audit fee for each audit as set forth in table 6 of 20.4.2.209 NMAC.

K. FFCO fee: Every owner or operator subject to a review of amendments, annual reports, and revisions under an FFCO shall pay a fee as set forth in table 6 of 20.4.2.209 NMAC. In the event of a conflict between the review times specified in table 6 and the FFCO, the FFCO shall control.

L. Change during interim status fee: Every owner or operator who requests a change during interim status pursuant to 20.4.1.900 NMAC (incorporating 40 CFR 270.72) shall pay the following fees:

(1) Modifications that are identified as being equivalent to class 1 or class 2 permit modifications are subject to the corresponding fee in table 7 in 20.4.2.210 NMAC;

(2) Modifications identified as equivalent to class 3 permit modifications are subject to the corresponding fee in table 7 in 20.4.2.210 NMAC.

M. Emergency permit fee: Every facility that requests an emergency permit as required by 40 CFR 270.61 shall pay a fee as set forth in table 6 of 20.4.2.209 NMAC.

N. Adjustment for inflation: Beginning January 1 following the effective date of these fee regulations, the fees listed in 20.4.2.204 through 20.4.2.210 shall be adjusted annually to account for inflation. The amounts shall be adjusted by the percentage of the preceding calendar year's change in the consumer price index for All Urban Consumers (CPI-U), United States City Average for All Items, published by the United States Department of Labor. The amount of change in the fee shall be rounded to the nearest fifty dollars (\$50).

[12/31/1998; 20.4.2.201 NMAC - Rn, 20 NMAC 4.2.II.201 & A, 8/18/2006; A, 3/5/2020]

20.4.2.202 ANNUAL FEE REPORT:

On or before September 30 of every year, NMED shall review the amount of fees collected and the amount of money expended administering the hazardous waste management program for the prior state fiscal year and submit a report on its review to the board. The report shall include for each facility the amount of fees collected, the number and types of permitting actions taken, submittals reviewed, a summary of the time required to conduct each review or permitting action, and an analysis of the cost of regulatory oversight. The report shall include a summary of funds received and expenses required to administer the state hazardous waste program.

[12/31/1998; 20.4.2.202 NMAC - Rn, 20 NMAC 4.2.II.202 & A, 8/18/2006]

20.4.2.203 HEARING FEES:

A. An applicant for issuance, renewal, or modification of a permit, or remedy selection shall be required to pay the following hearing fees if the secretary determines that a public hearing shall be held on the application.

(1) **Hearing fee:** The applicant shall be invoiced a hearing fee of \$25,000 within 30 days of notification by the secretary that a hearing will be scheduled.

(2) Administrative record preparation fee: The applicant shall pay an administrative record preparation fee equal to the actual cost of copying the administrative record for the public hearing process.

(3) Facility fee: The applicant shall pay a facility fee equal to the actual cost of providing the public facility, including security and other ancillary costs, necessary to conduct the public hearing.

(4) Recording and Transcription service fee: The applicant shall pay a recording and transcription service fee equal to the actual cost of providing recording and transcription services for the public hearing and providing three copies of the hearing transcript to NMED.

(5) Translation service fee: If the secretary determines that translation services are required for the public hearing, the applicant shall pay a translation service fee equal to the actual cost of providing translation services necessary to conduct the public hearing.

(6) The applicant shall be invoiced for the total cost of the hearing within 90 days after the secretary's final decision under Subsection A of 20.4.2.203 NMAC. The hearing fee required under Paragraph (1) of Subsection A of 20.4.2.203 NMAC will be credited against the total cost of the hearing, or if the fee is more than the total cost of the hearing it shall be credited for future actions.

[12/31/1998; 20.4.2.203 NMAC - Rn, 20 NMAC 4.2.II.201.8 & 203 & A, 8/18/2006; A, 3/5/2020]

Well Abandonment Report/Well Replacement Report per well	\$2,000	N/A	90 days
Well Abandonment Work Plan/Well Replacement Work Plan per well	\$2,000	N/A	90 days

[20.4.2.208 NMAC - N, 8/18/2006; A, 3/5/2020]

20.4.2.209 TABLE 6 -LAND DISPOSAL, AUDIT REVIEW AND OTHER FEES:

Activity	Fee	Review Time
Land Disposal Permit Review	\$10,000	360 days
Audit Review	\$30,000	45 days
FFCO Administration	\$2,000	90 days
Emergency Permit	\$1,000	30 days

[20.4.2.209 NMAC - N, 8/18/2006; A, 3/5/2020]

20.4.2.210 TABLE 7- CHANGE DURING INTERIM STATUS FEES:

Submittal Type	Fee	Review Time
Change without prior approval	\$1,800	30 days
Change with prior approval (equivalent to Class 1 permit modification)	\$6,500	120 days
Change with prior approval (equivalent to Class 2 permit modification)	\$30,000	120 days
Change with prior approval (equivalent to Class 3 permit modification)	\$100,000	360 days

[20.4.2.210 NMAC - N, 8/18/2006; A, 3/5/2020]

20.4.2.211 FEE CALCULATION:

A. The annual fee shall be assessed for each unit identified in the facility permit, Part A application, and enforceable document on January 1 of the assessed year. The annual fee shall be waived for hazardous waste management units for which the owner or operator provides documentation to NMED that hazardous waste management activities did not occur at the unit during the previous calendar year. To be considered for the waiver the owner or operator shall submit the documentation to NMED on or before July 1 of each year.

B. The owner or operator of the facility is liable for payment of the undisputed part of the assessed fee on the date the annual fee is due. Payments will not be refunded because of a transfer of ownership or operations to a new owner or operator.

[20.4.2.211 NMAC - Rn, 20 NMAC 4.2.II.208 & A, 8/18/2006]

20.4.2.212-20.4.2.299 [RESERVED]

20.4.2.300 PAYMENT, DUE DATES, AND APPEALS:

[12/31/1998; 20.4.2.300 NMAC - Rn, 20 NMAC 4.2.III.300 & A, 8/18/2006]

20.4.2.301 MANNER OF PAYMENT AND DUE DATES:

A. Annual Fee Invoices: NMED shall invoice every owner or operator for the annual fee by October 1 of every year.

B. Review Fees: Any submittals listed in tables 2 through 7 of 20.4.2.205 NMAC through 20.4.2.210 NMAC submitted by an owner or operator for review shall be invoiced for the corresponding fee by NMED.

C. Due Date: Payment of any fee shall be due within 60 days of receipt of the invoice unless the owner or operator submits to NMED a written request seven days prior to the end of the 60 day period and receives written approval to extend the time for payment before the date payment is due. Failure to submit payment within the 60 days, or approved extension, may result in the document being denied, and further enforcement action.

D. All fees shall be paid to NMED by certified check or money order payable to the New Mexico-Environment Department or the Hazardous Waste Bureau, by electronic funds transfer (with prior notice to NMED), or by other methods deemed acceptable by NMED. Cash payments are not an acceptable method of payment. All payments must include the invoice number and be addressed to the New Mexico environment department - hazardous waste bureau.

[12/31/1998; 20.4.2.301 NMAC - Rn, 20 NMAC 4.2.III.301 & A, 8/18/2006; A, 3/5/2020]

20.4.2.302 APPEAL OF FEE ASSESSMENT:

A. Mandatory Settlement Conference:

Any owner or operator seeking to appeal an invoice for fees under this part must first notify the NMED in writing of the intent to appeal the invoice within 30 calendar days of receipt of the invoice. The notice shall set forth the specific matters in dispute, the basis for the dispute, and any matters considered necessary for NMED's consideration. The parties shall have 30 calendar days from NMED's receipt of notification to meet or confer with NMED to attempt to resolve the matters in the dispute. The secretary may extend deadlines under this section upon a determination that good cause exists. If an agreement is reached resolving the dispute, NMED may issue a revised invoice and the owner and operator shall comply with the terms of such agreement and revised invoice.

If an agreement is not reached, NMED shall issue a notification to all parties that an agreement has not been reached. Failure to notify NMED of an appeal in the required timeframe shall prohibit the owner and operator from appeal of the invoice.

B. Administrative appeal:

(1) An invoice for fees may be appealed by filing a written request for hearing with the hearing clerk designated by the secretary of environment within 30 days of the date of the notification that an agreement has not been reached. The written request shall be accompanied by a copy of the invoice being contested and shall set forth the grounds upon which the appellant disagrees with the assessment.

(2) Except as otherwise provided, the appeal shall be governed by 20.1.5 NMAC, Adjudicatory Procedures - Environment Department. The hearing officer shall schedule the hearing for no later than 90 days after service of the notice of docketing.

(3) NMED shall not seek collection of an appealed fee or take enforcement action on an appeal of the fee assessment until the secretary has issued a decision on the appeal. Late charges on the amount assessed shall continue to accrue and shall be payable if the assessment is upheld or upheld with modification. If the assessment is modified on appeal, late charges shall be calculated based on the assessment as modified.

(4) If an appeal is not timely filed pursuant to this subsection, the invoice shall constitute a final action of the secretary of environment.

[12/31/1998; 20.4.2.302 NMAC - Rn, 20 NMAC 4.2.III.302 & A, 8/18/2006; A, 3/5/2020]

20.4.2.303-20.4.2.399 [RESERVED]

20.4.2.400 LATE CHARGES AND ENFORCEMENT:

[12/31/1998; 20.4.2.400 NMAC - Rn, 20 NMAC 4.2.IV.400, 8/18/2006]

20.4.2.401 LATE CHARGES:

If any fee required by this part is not paid in full on the date due, which shall be either 60 days after receipt of the invoice or the end of an approved extension of the time for payment, the person owing the fee shall pay a billing charge of \$100, plus late charges in the amount of an additional one percent of all fees owed for every month or part of a month in which the fees remain unpaid beyond the due date. Billing and late charges shall be credited to the Hazardous Waste Fund and are independent of any penalties assessed under the act.

[12/31/1998; 20.4.2.401 NMAC - Rn, 20 NMAC 4.2.IV.401, 8/18/2006; A, 3/5/2020]

20.4.2.402 FAILURE TO PAY FEES:

A. Failure to pay any fee required by this part may result in enforcement proceedings under the act including but not limited to the revocation or suspension of any permit issued by NMED pursuant to the act to the person failing to pay the fees as required.

B. Fees are not refundable and do not guarantee that a permit will be issued or a submittal or action will be approved by the NMED.

[12/31/1998; 20.4.2.402 NMAC - Rn, 20 NMAC 4.2.IV.402 & A, 8/18/2006]

20.4.2.500 MISCELLANEOUS PROVISIONS:

[12/31/1998; 20.4.2.500 NMAC - Rn, 20 NMAC 4.2.V.500, 8/18/2006]

20.4.2.501 DEPOSIT IN THE HAZARDOUS WASTE FUND:

All fees collected pursuant to this part shall be transmitted to the state treasurer for credit to the hazardous waste fund and used for the sole purpose of meeting necessary expenses in the administration and operation of the hazardous waste program.

[12/31/1998; 20.4.2.501 NMAC - Rn, 20 NMAC 4.2.V.501, 8/18/2006]

20.4.2.502 COMPLIANCE WITH OTHER REGULATIONS:

Compliance with this part does not relieve a person of the obligation to comply with other applicable local, state and federal regulations.

[12/31/1998; 20.4.2.502 NMAC - Rn, 20 NMAC 4.2.V.502, 8/18/2006]

20.4.2.503 CONSTRUCTION:

This part shall be liberally construed to effectuate the purpose of the act.

[12/31/1998; 20.4.2.503 NMAC - Rn, 20 NMAC 4.2.V.503, 8/18/2006]

20.4.2.504 SEVERABILITY:

If any provision or application of this part is held invalid, the remainder, or its application to other situations or persons, shall not be affected.

[12/31/1998; 20.4.2.504 NMAC - Rn, 20 NMAC 4.2.V.504, 8/18/2006]

20.4.2.505-20.4.2.599 [RESERVED]

PART 3: HAZARDOUS WASTE FEES

20.4.3.1 ISSUING AGENCY:

Environmental Improvement Board.

[20.4.3.1 - Rp. 20.4.3.1 NMAC, 3/5/2020]

20.4.3.2 SCOPE:

This part applies to generators of hazardous waste, and to owners and operators of hazardous waste treatment, storage and disposal facilities which receive imported hazardous waste.

[20.4.3.2 - Rp. 20.4.3.2 NMAC, 3/5/2020]

20.4.3.3 STATUTORY AUTHORITY:

Subsection J of Section 74-4-4.2 NMSA 1978, directs the board to provide a schedule of business fees for businesses engaged in regulated hazardous waste activity and a schedule of generation fees for businesses generating hazardous waste.

[20.4.3.3 - Rp. 20.4.3.3 NMAC, 3/5/2020]

20.4.3.4 DURATION:

Permanent.

[20.4.3.4 - Rp. 20.4.3.4 NMAC, 3/5/2020]

20.4.3.5 EFFECTIVE DATE:

March 5, 2020, unless a different date is cited at the end of a section or paragraph

[20.4.3.5 - Rp. 20.4.3.5 NMAC, 3/5/2020]

20.4.3.6 OBJECTIVE:

The objective of this part is to provide a schedule of annual fees for hazardous waste generators and treatment, storage and disposal facilities which receive imported hazardous waste, as well as business fees for specific activities or events. The annual and business fees collected will be deposited in the hazardous waste fund to meet necessary expenses in the administration and operation of the state hazardous waste program.

[20.4.3.6 - Rp. 20.4.3.6 NMAC, 3/5/2020]

20.4.3.7 DEFINITIONS:

Unless otherwise defined in this part, the words and phrases used in this part have the same meanings as in 20.4.1 NMAC, Hazardous Waste Management. As used in this part:

A. "Act" means the New Mexico Hazardous Waste Act, Sections 74-4-1 to 74-4-14 NMSA 1978;

B. "Annual fee" means the hazardous waste fee in 20.4.3.200 NMAC through 20.4.3.203 NMAC;

C. "Annual imported waste compensating fee" means the fee on imported hazardous waste in 20.4.3.300 NMAC through 20.4.3.302 NMAC;

D. "Business fee" means the fee designated for specific activities or events in 20.4.3.400 NMAC through 20.4.3.402 NMAC;

E. "CFR" means the most recent Code of Federal Regulations adopted by reference at 20.4.1 NMAC;

F. "Compliance assistance visit for salvage yards" means a pre-arranged inspection at a salvage yard in order for the salvage yard to acquire a New Mexico Motor Vehicle Division Auto Recycler's license;

G. "Cleanup" means any activities associated with the removal or remediation of hazardous waste at a site, but does not include closure of a solid or hazardous waste management unit;

H. "Department" means the New Mexico environment department;

I. "Episodic generator" means a generator that has a planned or unplanned event that does not normally occur during generator operations, resulting in an increase in the generation of hazardous waste that exceeds the calendar month quantity limits for the generator's usual category;

J. "Emergency Environmental Protection Agency ("EPA") identification number" means a generator that meets the definition of a large quantity or small quantity generator due to an emergency and requires an EPA identification number to dispose of the hazardous waste;

K. "Generator" means a generator under 20.4.1 NMAC, Hazardous Waste Management, who is a large quantity generator, small quantity generator, or very small quantity generator of hazardous waste under this part;

L. "Hazardous waste" means all waste or material regulated as hazardous waste under 20.4.1 NMAC, Hazardous Waste Management;

M. "Imported hazardous waste" means hazardous waste that was generated outside of the state of New Mexico, including waste generated outside the United States, and that has been transported into the state for treatment, storage, or disposal;

N. "Large quantity generator" means a generator who generates more than 1,000 kilograms (or more than 2,204 pounds) of hazardous waste during any month in the calendar year; or a generator who generates more than 1 kilogram (or more than 2.2 pounds) of acutely toxic or "p-listed" hazardous waste in any month in the calendar year; or a generator that accumulates more than 6,000 kilograms (or more than 13,227 pounds) of hazardous waste on site in any month in the calendar year;

O. "Person" means any individual, trust, firm, joint stock company, federal agency, corporation, including a government corporation, partnership, association, state, municipality, commission, political subdivision of a state or any interstate body;

P. "Recycled" means "used or reused" or "reclaimed" as those terms are defined in 40 CFR, Part 261.1(c);

Q. "Secretary" means the secretary of environment;

R. "Site" means an "individual generation site" as defined in 40 CFR, Part 260.10;

S. "Small quantity generator" means a generator who generates more than 100 kilograms (or more than 220 pounds) but less than 1,000 kilograms (or less than 2,204 pounds) of hazardous waste during any month in the calendar year; or a generator that accumulates more than 1,000 kilograms (or more than 2,204 pounds) of hazardous waste on site in any month in the calendar year;

T. "Very small quantity generator" means a generator who generates less than 100 kilograms (or less than 220 pounds) in any month in the calendar year and never accumulates more than 1,000 kilograms (or more than 2,204 pounds) of hazardous waste on site in any month in the calendar year.

[20.4.3.7 - Rp. 20.4.3.7 NMAC, 3/5/2020]

20.4.3.8-20.4.3.107 [RESERVED]

20.4.3.108 SAVING CLAUSE:

Amendment of these fee regulations shall not affect any administrative or judicial enforcement action pending on the effective date of this part.

[20.4.3.108 - Rp. 20.4.3.108 NMAC, 3/5/2020]

20.4.3.109 [RESERVED]

[Repealed, 3/5/2020]

20.4.3.110 [RESERVED]

[Repealed, 3/5/2020]

20.4.3.111 ORPHAN WASTE:

Nothing in this part is intended to require the payment of annual hazardous waste fees on orphan hazardous waste or waste generated as a result of the cleanup of orphan hazardous waste. "Orphan hazardous waste" means hazardous waste for which a responsible party cannot be identified. The department may collect any fees otherwise owed from the person responsible for the creation of the orphan hazardous waste, if later identified.

[20.4.3.109 - Rp. 20.4.3.109 NMAC, 3/5/2020]

20.4.3.112-20.4.3.199 [RESERVED]

20.4.3.200 ANNUAL FEES:

Based on activities as defined in 20.4.3.7 NMAC, facilities shall pay fees to the department annually, in accordance with the provisions of this part.

[20.4.3.200 - Rp. 20.4.3.200 NMAC, 3/5/2020]

20.4.3.201 FEE SCHEDULE:

Annual fees are set forth below:

- A.** Very small quantity generator: \$100;
- B.** Small quantity generator: \$500;
- C.** Large quantity generators that generate 100,000 pounds or less of hazardous waste annually: \$5,000;
- D.** Large quantity generators that generate more than 100,000 pounds but less than 400,000 pounds of hazardous waste annually: \$10,000;
- E.** Large quantity generators that generate 400,000 pounds or more of hazardous waste: \$20,000.

[20.4.3.201 - Rp. 20.4.3.201 NMAC, 3/5/2020]

20.4.3.202 FEE CALCULATION:

A. Nothing herein is intended to affect the generator's obligations with respect to reporting or record keeping under other applicable laws and regulations.

B. The total annual fees due are the cumulative total of the fees for all sites engaged in activities as defined in 20.4.3.7 NMAC during the calendar year prior to the year in which the fee is to be paid, subject to the limits set forth in 20.4.3.109 NMAC;

C. Beginning January 1 following the effective date of these fee regulations, the fees listed in 20.4.3.401 NMAC shall be adjusted annually to account for inflation. The amounts shall be adjusted by the percentage of the preceding calendar year's change in the consumer price index for All Urban Consumers (CPI-U), United States City Average for All Items, published by the United States Department of Labor. The amount of change in the fee shall be rounded to the nearest one dollar (\$1.00).

[20.4.3.202 - Rp. 20.4.3.202 NMAC, 3/5/2020]

20.4.3.203 TRANSFER OF OWNERSHIP/OPERATIONS:

The transferor must report the waste generated during the calendar year in which the transfer takes place on a form obtained from the department. This report and payment shall be submitted to the department at the time of transfer.

[20.4.3.203 - Rp. 20.4.3.203 NMAC, 3/5/2020]

20.4.3.204-20.4.3.299 [RESERVED]

20.4.3.300 IMPORTED WASTE COMPENSATING FEES:

ANNUAL IMPORTED WASTE COMPENSATING FEES: For waste that is generated out-of-state, but treated, stored, or disposed of in New Mexico, an annual imported waste compensating fee shall be paid in lieu of the fee provided for in 20.4.3.200 NMAC through 20.4.3.203 NMAC. The owner or operator of the facility first receiving the imported hazardous waste shall pay to the department annually one cent (\$0.01) per pound of hazardous waste managed in New Mexico, in accordance with the provisions of this part.

[20.4.3.300 - Rp. 20.4.3.300 NMAC, 3/5/2020]

20.4.3.301 FEE SCHEDULE:

The annual fee and the exclusions applicable thereto shall apply to imported hazardous waste to the same extent as if the waste had been generated within the state. For purposes of determining the volume of waste and the fees due, all imported hazardous

waste received by a facility, during the calendar year prior to the year in which the fee is to be paid, shall be considered to have been received from a single source.

[20.4.3.301 - Rp. 20.4.3.301 NMAC, 3/5/2020]

20.4.3.302 TRANSFER OF OWNERSHIP/OPERATIONS:

A. If there is a transfer of ownership or operations, the owner or operator of the facility on the date an imported waste compensating fee is due under 20.4.3.500 NMAC is liable for payment of that fee in full.

B. The transferor must report the imported waste received during the calendar year in which the transfer takes place to the department, on a form obtained from the department. This report shall be submitted to the department at the time of transfer.

C. At the time of transfer, the transferor must also provide a copy of the above report to the person who will be liable for the fee based on the waste reported. In addition to the report, the transferor must provide to that person any manifests prepared on the waste reported, or copies thereof, and any other information used to prepare the report. Manifests and other information need not be sent to the department under this section, unless requested by the department.

[20.4.3.302 - Rp. 20.4.3.302 NMAC, 3/5/2020]

20.4.3.303-2.4.3.399 [RESERVED]

20.4.3.400 BUSINESS FEES:

Business fees shall be paid for each of the events outlined in 20.4.3.401 NMAC.

[20.4.3.400 - Rp. 20.4.3.400 NMAC, 3/5/2020]

20.4.3.401 FEE SCHEDULE:

Business fees are set forth in the schedules below and due at time of request.

A. Episodic generators, for each planned or unplanned event: \$500;

B. Generators or co-generators requesting temporary or emergency EPA identification number: \$100;

C. Salvage yards, for each compliance assistance visit requested: \$100;

D. Generators notifying of 40 CFR 262 Subpart K activities: \$100;

E. Generators notifying of 40 CFR 250.10 (hazardous secondary materials activities): \$100;

[20.4.3.401 - Rp. 20.4.3.401 NMAC, 3/5/2020]

20.4.3.402 FEE CALCULATION:

A. The business fee shall be paid in full if applicable during any part of the calendar year.

B. The business fees are due for all sites engaged in activities as defined in 20.4.3.7 NMAC during the calendar year prior to the year in which the fees are to be paid, subject to the limits set forth in 20.4.3.109 NMAC.

C. Beginning January 1 following the effective date of these fee regulations, the fees listed in 20.4.3.401 NMAC shall be adjusted annually to account for inflation. The amounts shall be adjusted by the percentage of the preceding calendar year's change in the consumer price index for All Urban Consumers (CPI-U), United States City Average for All Items, published by the United States Department of Labor. The amount of change in the fee shall be rounded to the nearest one dollar (\$1.00).

[20.4.3.402 - Rp. 20.4.3.402 NMAC, 3/5/2020]

20.4.3.403 - 20.4.3.499 [RESERVED]

20.4.3.500 DUE DATES:

The annual fees for which this part provides are due and payable on August 1 of each year.

[20.4.3.500 - Rp. 20.4.3.500 NMAC, 3/5/2020]

20.4.3.501 MANNER OF PAYMENT:

The person paying fees under this part shall complete a fee report form obtained from the department, and submit the report to the department, together with any documentation requested by the department. The report shall include a certification of the truthfulness of all of the matters and facts contained in the report, as provided in 20.4.3.502 NMAC. All fees shall be paid to NMED by certified check or money order payable to the New Mexico Environment Department or the Hazardous Waste Bureau, by electronic funds transfer (with prior notice to NMED), or by other methods deemed acceptable by NMED. Cash payments are not an acceptable method of payment. All payments must include the name, address, and contact information for the facility and must be addressed to the New Mexico Environment Department – Hazardous Waste Bureau.

[20.4.3.501 - Rp. 20.4.3.501 NMAC, 3/5/2020]

20.4.3.502 CERTIFICATE:

The certification required by 20.4.3.501 NMAC shall be made on oath or affirmation in accordance with Sections 14-13-1 and 14-13-2 NMSA 1978, by the chief executive officer or his designee in the case of a corporation, the managing partner in the case of a partnership, the proprietor in the case of a sole proprietorship, or the official with authority to execute the certification in the case of a government entity.

[20.4.3.502 - Rp. 20.4.3.502 NMAC, 3/5/2020]

20.4.3.503-20.4.3.599 [RESERVED]

20.4.3.600 LATE CHARGES; ENFORCEMENT:

LATE CHARGES: If any fee for which this part provides is not paid in full when due, the person owing the fee shall pay a billing charge of one hundred dollars (\$100), plus late charges in the amount of an additional one percent of all fees owed for every month or part of a month in which the fees remain unpaid beyond the due date. Billing and late charges shall be considered hazardous waste fees for deposit in the hazardous waste fund, pursuant to Section 74-4-4.5 NMSA 1978, and are independent of any penalties assessed under the act.

[20.4.3.600 - Rp. 20.4.3.600 NMAC, 3/5/2020]

20.4.3.601 VERIFICATION BY THE DEPARTMENT:

A. The department may at any time verify the accuracy of reports submitted and amounts paid pursuant to this part. It may use any relevant information for verification purposes, including, but not limited to, the biennial reports submitted pursuant to 20.4.1 NMAC, Hazardous Waste Management, or 40 CFR, Parts 262.41, 264.75 or 265.75, and any manifests prepared for waste shipments. Persons who are subject to this part shall make these and other records relating to the waste generated, manifested or managed available to the department upon request.

B. If the department determines that a fee report submitted pursuant to 20.4.3.501 NMAC does not accurately state the quantity of waste generated, the quantity of imported hazardous waste treated, stored or disposed of, or the fees owed, it shall notify the person submitting the report of the discrepancy and may recalculate the annual fee based on the department's determination.

C. Before assessing a recalculated fee, the department shall send notice of its determination and its intent to reassess the fee to the person who had submitted the report. That person shall have 30 days from the date of the notice to provide the department with any documentation to rebut the determination. Once the department

has reviewed any documentation submitted, it will send notice of fee assessment to the person owing a fee. Any amounts that the department determines were due, together with the billing and late charges on the amounts due and unpaid, shall be paid within 60 days of the date of the notice of fee assessment.

[20.4.3.601 - Rp. 20.4.3.601 NMAC, 3/5/2020]

20.4.3.602 ADMINISTRATIVE APPEAL:

A. A notice of fee assessment issued under Subsection C of 20.4.3.601 NMAC may be appealed by filing a written request for hearing with the hearing clerk designated by the secretary within thirty days of the date of the notice. The written request shall be accompanied by a copy of the fee assessment being contested and shall set forth the grounds upon which the appellant disagrees with the assessment.

B. Except as otherwise provided, notice of docketing and hearing officer assignment, motions, pre-hearing procedures and discovery, and hearing and post-hearing procedures shall be governed by 20.1.5 NMAC, Adjudicatory Procedures - Environment Department. The hearing officer shall schedule the hearing for no later than 90 days after service of the notice of docketing.

C. The department shall not seek collection of the fee or take enforcement action on the fee assessment until the secretary has issued a decision on the appeal. Late charges on the amount assessed shall continue to accrue and shall be payable if the assessment is upheld or upheld with modifications. If the assessment is modified on appeal, late charges shall be calculated based on the assessment as modified.

[20.4.3.602 - Rp. 20.4.3.602 NMAC, 3/5/2020]

20.4.3.603 FAILURE TO SUBMIT REPORTS OR PAY FEES:

A. Failure to complete or submit a report in the manner required by 20.4.3.501 NMAC, or to pay fees in full when due, may result in enforcement proceedings under the act. Enforcement actions may include, but are not limited to, the revocation or suspension of any permit issued by the department pursuant to the act to the person failing to complete or submit the fee report or pay the fees as required.

B. Any person who knowingly omits material information from or makes any false statement or representation in a fee report may be subject to criminal penalties under the act.

[20.4.3.603 - Rp. 20.4.3.603 NMAC, 3/5/2020]

20.4.3.604-20.4.3.699 [RESERVED]

20.4.3.700 RECORDS AND RECORD KEEPING:

RECORDKEEPING REQUIRED: All persons subject to this part are required to retain the documentation necessary to support their fee calculations, including all records used as a basis for the calculations.

[20.4.3.700 - Rp. 20.4.3.700 NMAC, 3/5/2020]

20.4.3.701 RETENTION RECORDS:

The records required by 20.4.3.700 NMAC, together with copies of any fee reports submitted under these regulations, shall be retained for three years from the date of payment of the fees to which the records and reports apply. The periods of record retention required by this section are automatically extended during the course of any unresolved enforcement action regarding the regulated activity.

[20.4.3.701 - Rp. 20.4.3.701 NMAC, 3/5/2020]

20.4.3.702-20.4.3.799 [RESERVED]

20.4.3.800 MISCELLANEOUS PROVISIONS:

DEPOSIT IN THE HAZARDOUS WASTE FUND: All fees collected pursuant to this part shall be transmitted to the state treasurer for credit to the hazardous waste fund, and used for the sole purpose of meeting necessary expenses in the administration and operation of the hazardous waste program.

[20.4.3.800 - Rp. 20.4.3.800 NMAC, 3/5/2020]

20.4.3.801 ANNUAL REPORT:

Within 90 days of the end of each state fiscal year, the department shall prepare and submit to the environmental improvement board a report describing the funds received pursuant to these regulations and the activities performed with the use of these funds. This report shall be made available to members of the public upon request. The department may charge a fee for copies to cover its costs in printing or duplicating the report.

[20.4.3.801 - Rp. 20.4.3.801 NMAC, 3/5/2020]

20.4.3.802 COMPLIANCE WITH OTHER REGULATIONS:

Compliance with this part does not relieve a person of the obligation to comply with other applicable state and federal regulations.

[20.4.3.802 - Rp. 20.4.3.802 NMAC, 3/5/2020]

20.4.3.803 CONSTRUCTION:

This part shall be liberally construed to effectuate the purpose of the act.

[20.4.3.803 - Rp. 20.4.3.803 NMAC, 3/5/2020]

20.4.3.804 SEVERABILITY:

If any provision or application of this part is held invalid, the remainder, or its application to other situations or persons, shall not be affected.

[20.4.3.804 - Rp. 20.4.3.804 NMAC, 3/5/2020]

20.4.3.805-20.4.3.899 [RESERVED]

PART 4: HAZARDOUS MATERIALS ACCIDENT RESPONSE TRAINING

20.4.4.1 ISSUING AGENCY:

Hazardous Materials Safety Board.

[10/15/96; 20.4.4.1 NMAC - Rn, 20 NMAC 4.4.I.100, Recompiled 11/27/01]

20.4.4.2 SCOPE:

This Part applies to personnel of state agencies who participate as trainers or responders in hazardous material accident responses governed by the Emergency Management Act, NMSA 1978 Sections 74-4B-1 et seq.

[10/15/96; 20.4.4.2 NMAC - Rn, 20 NMAC 4.4.I.101, Recompiled 11/27/01]

20.4.4.3 STATUTORY AUTHORITY:

This Part is adopted pursuant to the Emergency Management Act, NMSA 1978, Sections 74-4B-1 to 74-4B-14, specifically Section 74-4B-8(B).

[10/15/96; 20.4.4.3 NMAC - Rn, 20 NMAC 4.4.I.102, Recompiled 11/27/01]

20.4.4.4 DURATION:

Permanent.

[10/15/96; 20.4.4.4 NMAC - Rn, 20 NMAC 4.4.I.103, Recompiled 11/27/01]

20.4.4.5 EFFECTIVE DATE:

October 15, 1996. This Part amends and replaces the "Curriculum of Hazardous Material Accident Response Training and Certification Program", SP/HMER-2, filed February 5, 1991, as amended.

[10/15/96; 20.4.4.5 NMAC - Rn, 20 NMAC 4.4.I.104, Recompiled 11/27/01]

20.4.4.6 OBJECTIVE:

This Part is intended to enable state agencies to assure that their respective employees comply with OSHA regulations for training and response to a hazardous materials incident. Courses approved by the Board will meet or exceed the requirements established by 29 CFR 1910.120 as interpreted by the Board. Additionally, the following standards may be used as described in detail in "The Guidelines for Public Sector Hazardous Materials Training" (guidelines) published by the Federal Emergency Management Agency ("FEMA"). Copies of the FEMA guidelines are available from FEMA or from the New Mexico Department of Public Safety, Emergency Management - Planning and Coordination Bureau. The guidelines should be used during the review process when a more in-depth description of any given requirement is necessary.

[10/15/96; 20.4.4.6 NMAC - Rn, 20 NMAC.4.4.I.105, Recompiled 11/27/01]

20.4.4.7 DEFINITIONS:

[RESERVED]

20.4.4.8 EMPLOYER REQUIREMENTS:

It is the responsibility of employers whose employees are engaged in emergency response to comply with all requirements established under 29 CFR 1910.120. State employees who must respond as part of their duties to a hazardous materials incident must follow these guidelines where appropriate. The Board has developed these guidelines to assure that the State of New Mexico and its employees are in compliance. Local emergency responders (other than state employees) are strongly encouraged to attend these courses, but their respective employers must certify the responder's ability to meet the regulations. [10/15/96; 20.4.4.8 NMAC - Rn, 20 NMAC 4.4.I.106, Recompiled 11/27/01]

20.4.4.9 INSTRUCTOR REQUIREMENTS:

Instructors who teach any of the relevant subjects shall have good command of the subject matter of the course they are to teach. Additionally, they should have documented training and/or academic credentials and instructional experience necessary to demonstrate competent instruction.

[10/15/96; 20.4.4.9 NMAC - Rn, 20 NMAC.4.4.I.107, Recompiled 11/27/01]

20.4.4.10-20.4.4.199 [RESERVED]

20.4.4.200 COURSE REQUIREMENTS:

A. GENERAL REQUIREMENTS:

(1) All courses and the instructors of courses under this program will be sponsored by one or more of the following state agencies: Department of Public Safety Law Enforcement Academy, University of New Mexico Emergency Medical Services Academy, Firefighters Training Academy and others deemed appropriate by the Board. The sponsoring academy will screen both courses and trainers prior to submission to the Board. Additionally, the sponsoring Academy will ensure that this program is fully complied with.

(2) OSHA, 29 CFR 1910.120 defines the minimum number of hours at the operations, technician, specialist and incident commander levels. An effective hazardous materials response is based on the competency of the responders, not the number of their training hours. Hours listed for each of the categories is a suggested minimum and courses typically are longer to accommodate the curriculum or student needs.

(3) There are five different course levels. Individuals taking Board approved courses must meet the prerequisites listed before taking a higher level course.

B. LEVEL I - FIRST RESPONDER AWARENESS:

(1) Persons trained at this level are those likely to witness or discover a hazardous substance release and who have been trained to initiate an emergency response sequence by notifying the proper authorities of the release. Training must include instruction on the New Mexico Hazardous Materials Emergency Response Plan.

(2) Hours of attendance: Eight (8).

(3) Audience: Very broad; all who may first respond to hazardous materials incidents.

C. LEVEL II - FIRST RESPONDER OPERATIONS:

(1) Persons trained at this level are those whose duties include responding to the scene of emergencies that may involve hazardous materials. Training should contain appropriate subject matter which will allow individuals to respond safely to hazardous materials incidents as part of the initial response to the site for the purpose of protecting nearby persons, property, or the environment. Persons trained at this level will be able to respond in a defensive manner by taking appropriate actions.

(2) Hours of attendance: Twenty-four (24).

(3) Audience: Broad; all who may participate in initial operations at a hazardous materials incident.

(4) Prerequisite: Board approved Level I training.

D. LEVEL III - HAZARDOUS MATERIALS TECHNICIAN:

(1) This level of training is for personnel whose job duties require them to respond to releases or potential release of hazardous materials for the purpose of stopping the release.

(2) Hours of attendance: Eighty (80).

(3) Prerequisites: Board approved Level I and II training.

E. LEVEL IV - HAZARDOUS MATERIALS SPECIALISTS COURSES:

(1) This level of training is for individuals who respond to releases or potential releases to provide support to hazardous materials technicians. This training will contain appropriate subject matter which will allow the student to perform duties requiring a more direct or specific knowledge of the various substances or management techniques required during an emergency response.

(2) Hours of attendance: Varies depending on course content.

(3) Prerequisites: Board approved Levels I, II and III training.

F. LEVEL V - ON SCENE COMMANDER:

(1) This level of training is for persons whose job duties require them to assume control of the incident beyond the first responder awareness level. These courses must utilize the National Interagency Incident Management System Incident Command System to meet the executive order of the Governor of the State of New Mexico.

(2) Hours of attendance: Forty (40).

(3) Prerequisites: Board approved Levels I and II training.

[10/15/96; 20.4.4.200 NMAC - Rn, 20 NMAC 4.4.II.200-205, Recompiled 11/27/01]

PART 5: CLANDESTINE DRUG LABORATORY REMEDIATION

20.4.5.1 ISSUING AGENCY:

Environmental Improvement Board.

[20.4.5.1 NMAC - N, 1/01/2008]

20.4.5.2 SCOPE:

This part applies to all law enforcement agencies who discover a clandestine drug laboratory, all persons who own a clandestine drug laboratory property, and all persons engaging in remediation of a clandestine drug laboratory.

[20.4.5.2 NMAC - N, 1/01/2008]

20.4.5.3 STATUTORY AUTHORITY:

Section 74-4-4.B NMSA 1978 and Section 74-1-8.A(7) NMSA 1978 (as amended).

[20.4.5.3 NMAC - N, 1/01/2008]

20.4.5.4 DURATION:

Permanent.

[20.4.5.4 NMAC - N, 1/01/2008]

20.4.5.5 EFFECTIVE DATE:

January 1, 2008 unless a later date is cited at the end of a section.

[20.4.5.5 NMAC - N, 1/01/2008]

20.4.5.6 OBJECTIVE:

Contamination from the operation of clandestine drug laboratories is a serious health and environmental threat. Remediation of the residually contaminated portions of clandestine drug laboratory properties is essential to assure the health, safety and welfare of people and the environment. The objective of this part is to provide for the notice of such contamination to potential occupants of the residually contaminated portion of these properties and standards for the assessment and remediation of such properties.

[20.4.5.6 NMAC - N, 1/01/2008]

20.4.5.7 DEFINITIONS:

Unless otherwise defined in this part, the words and phrases used in this part have the same meanings as in Sections 74-4-1 through 74-4-14 NMSA 1978 (as amended), and 20.4.1 NMAC. As used in this part.

A. "Certified industrial hygienist" means a person certified in the comprehensive practice of industrial hygiene by the American board of industrial hygiene.

B. "Chemicals and equipment" means the bulk or containerized chemicals, illegal drugs and their precursors drugs, equipment and other items that are found in a clandestine drug laboratory that were used in the manufacture of any controlled substance.

C. "Clandestine drug laboratory" means property on which any controlled substance is being unlawfully manufactured or on which there is an attempt to unlawfully manufacture, or where a person is arrested for having on any property any chemicals or equipment used in manufacturing any controlled substance. In the case of a space rental mobile home or recreational vehicle park, clandestine drug laboratory means the mobile home or recreational vehicle in which any controlled substance is being manufactured or where a person is arrested for having in the mobile home or recreational vehicle any chemicals or equipment used in manufacturing any controlled substance. Clandestine drug laboratory shall include any place or area where chemicals or other waste materials used in clandestine drug laboratories have been located.

D. "Controlled substance" means any drug or substance or counterfeit substance listed in the Controlled Substances Act, 30-31-1 NMSA 1978, or regulations adopted thereunder.

E. "Department" means the New Mexico environment department or its successor agency under the Department of Environment Act, 9-7A-1 NMSA 1978.

F. "Law enforcement officer" means any employee of a police or public safety department administered by the state or any political subdivision of the state where the employee is responsible for the prevention and detection of crime and the enforcement of the penal, traffic or highway laws of this state as defined in Section 30-20A-2.D NMSA 1978, and specifically includes Albuquerque police department nuisance abatement inspectors.

G. "Owner" means any person, firm, corporation or other entity that owns, in whole or in part, the property subject to this part.

H. "Owner's agent" means person designated by the owner to act on behalf of the owner.

I. "Property" means real or personal property, which includes the following:

(1) the area within a structure and the area that surrounds a structure and that is within the land boundary or property lines of any property that can be used for residential purposes or is occupied by people for any length of time for any purpose, and

(2) a vehicle as defined in Section 66-1-4.19 NMSA 1978 (as amended).

J. "Remediation" means the cleanup, removal, or destruction of chemicals and equipment or residual contamination at a clandestine drug laboratory to conform with the remediation standards required by 20.4.5.16 NMAC and any action, including the destruction of property, necessary to investigate, prevent, minimize or mitigate potential damages or injury to human health, the environment, or property that may result from the chemicals or residual contamination.

K. "Remediation firm" means a person or firm that:

(1) performs remediation of residual contamination from the manufacture of any controlled substance or the storage of chemicals or equipment used in manufacturing any controlled substance, or

(2) conducts preliminary assessments or post-remediation assessments, including testing, for the presence of residual contamination from the manufacture of any controlled substance or the storage of chemicals or equipment used in manufacturing any controlled substance.

L. "Residual contamination" means any contaminants associated with manufacturing any controlled substance that are left at a property after the initial removal of chemicals and equipment.

M. "Residually contaminated portion of the property" means the structure or unit where chemicals and equipment were removed and the area of any adjacent structure, unit or land where evidence of residual contamination is observed by a law enforcement agency.

(1) Where chemicals and equipment are removed from a house, mobile home or vehicle, then the entire property, not just the room or rooms in which the chemicals and equipment are found, shall be deemed the residually contaminated portion of the property.

(2) Where chemicals and equipment are removed from a detached shed, garage or other structure and other property on the land are not affected, then the detached structure shall be deemed the residually contaminated portion of the property.

(3) Where chemicals and equipment are removed from a hotel or motel room, apartment unit, storage locker or other similar property with controlled-access units and the adjacent rooms or units are not affected, then the contaminated room or unit shall be deemed the residually contaminated portion of the property.

[20.4.5.7 NMAC - N, 1/01/2008]

20.4.5.8 COMPLIANCE WITH OTHER LAW:

Compliance with this part does not relieve a person from the obligation to comply with other applicable federal, state and local laws and regulations.

[20.4.5.8 NMAC - N, 1/01/2008]

20.4.5.9 DECLARATION OF HAZARDOUS SUBSTANCE INCIDENT AND PUBLIC NUISANCE:

Upon identification by a law enforcement agency of a clandestine drug laboratory where chemicals and equipment were removed or residual contamination was observed, the property is presumed to constitute a site of a hazardous substance incident and a public nuisance until such time as the remediation required by this part is completed.

[20.4.5.9 NMAC - N, 1/01/2008]

20.4.5.10 NOTICE OF CONTAMINATION:

A. Upon identification of a clandestine drug laboratory by a law enforcement agency where chemicals and equipment were removed or residual contamination was observed, the agency shall take the following actions.

(1) Post a notice of contamination in a conspicuous place at the clandestine drug laboratory.

(2) Deliver a copy of the notice of contamination to the owner of the property if the owner is on the site at the time of delivery, the on-site manager if the manager is on the site at the time of delivery or the on-site drop box if available. In the case of a tenant-owned unit in a space rental mobile home or recreational vehicle park, the agency shall deliver a copy of the notice of removal to the occupant of the unit if the occupant is on site at the time of delivery and to the on-site park landlord if the park landlord is on site at the time of delivery.

(3) Document proof of posting the notice of contamination, which proof of posting shall be considered notice to the owner if the owner of the clandestine drug laboratory cannot be identified.

(4) Deliver a copy of the notice of contamination to the department's hazardous waste bureau chief within seven days after identification of the clandestine drug laboratory. The law enforcement agency shall inform the department whether or not the agency was able to personally deliver the notice to the owner or on-site manager of the property.

B. Upon receiving a copy of the notice of contamination from a law enforcement agency, the department shall send a copy of the notice of contamination by certified mail, return receipt requested, to the owner at the owner's last known address contained in records of the county assessor where the clandestine drug laboratory is located if the

owner of the clandestine drug laboratory or, if the clandestine drug laboratory is a mobile home or recreational vehicle, the owner of a mobile home or recreational vehicle space-rental or space-purchase park where the clandestine drug laboratory may be located, is not personally provided a copy of the notice of contamination pursuant to Subsection A of this section. Proof of mailing shall be considered notice to the owner. The owner is presumed to have received the notice of contamination five days after the notice is mailed.

[20.4.5.10 NMAC - N, 1/01/2008]

20.4.5.11 CONTENTS OF NOTICE OF CONTAMINATION:

The notice of contamination required by 20.4.5.10 NMAC shall contain the following in both English and Spanish or other appropriate tribal language.

- A.** The word "warning" in large bold type at the top and bottom of the notice.
- B.** A statement that a clandestine drug laboratory was identified at the property.
- C.** The date of the identification.
- D.** The address or location of the property where the clandestine drug laboratory was identified. A description of the residually contaminated portion of the property, including a structure, room, apartment or unit number if not the entire or a vehicle registration or vehicle identification number if appropriate.
- E.** The name of the law enforcement agency that identified the clandestine drug laboratory and that agency's telephone number.
- F.** A statement that hazardous substances, toxic chemicals, or other residual contamination from operation of the clandestine drug laboratory may still be present.
- G.** A statement that a person other than the owner or the owner's agent may not enter, occupy, or use the clandestine drug laboratory property or otherwise knowingly and intentionally violate the provisions of the notice of contamination until remediation of the residually contaminated portion of the property has taken place in accordance with 20.4.5.16 NMAC and such remediation has been approved by the department.
- H.** A statement that a person may not knowingly and intentionally disturb the notice of contamination posted at the clandestine drug laboratory.
- I.** A statement that the owner of the property shall remediate the residually contaminated portion of the property in compliance with 20.4.5.16 NMAC.
- J.** A statement that until remediation is complete, the owner or the owner's agent shall not sell, lease, rent, loan, assign, exchange, or otherwise transfer the residually

contaminated portion of the property without providing notice of its existence as required by 20.4.5.13 NMAC.

K. A statement that failure of the owner to comply with the requirements of this part may result in a fine of up to \$10,000 per day pursuant to Section 74-4-12 NMSA 1978 , and is a petty misdemeanor pursuant to Section 74-1-10 NMSA 1978.

L. Contact information for the department.

[20.4.5.11 NMAC - N, 1/01/2008]

20.4.5.12 VACATING NOTICE OF CONTAMINATION:

A. The owner of a clandestine drug laboratory is responsible for providing proof to the department that the property has been remediated in compliance with 20.4.5.16 NMAC.

B. Within seven days of the department determining that a clandestine drug laboratory has been remediated in accordance with this part, or that no remediation is required, the department shall notify the owner of the clandestine drug laboratory that the notice of contamination can be removed from the property.

[20.4.5.12 NMAC - N, 1/01/2008]

20.4.5.13 USE AND TRANSFER OF CLANDESTINE DRUG LABORATORY:

A. An owner shall not sell, lease, rent, loan, assign, exchange or otherwise transfer the clandestine drug laboratory property unless the owner does the following:

(1) provides written notice to the purchaser, lessee, renter, borrower, assignee, exchange partner or other transferee, with a copy to the department's hazardous waste bureau, of the existence of the clandestine drug laboratory; and

(2) receives a written acknowledgment, and provides a copy to the department's hazardous waste bureau, that the notice was received by the purchaser, lessee, renter, borrower, assignee, exchange partner or other transferee.

B. A person other than the owner or the owner's agent may not enter, occupy, or use the clandestine drug laboratory or otherwise knowingly and intentionally violate the provisions of the notice of contamination until remediation of the residually contaminated portion of the property has taken place in accordance with 20.4.5.16 NMAC. Persons performing work for a law enforcement agency, the department, or a remediation firm are excepted from this prohibition.

[20.4.5.13 NMAC - N, 1/01/2008]

20.4.5.14 CLANDESTINE DRUG LABORATORY LIST:

A. The department shall maintain a list of clandestine drug laboratory sites on the department's web site based on information received from law enforcement agencies.

B. Within ten days of the department notifying the owner of its approval pursuant to Subsection B of 20.4.5.18 NMAC, the department shall indicate on its website whether the property has been remediated in accordance with this part.

[20.4.5.14 NMAC - N, 1/01/2008]

20.4.5.15 OWNER RESPONSIBILITIES FOR REMEDIATION:

A. The owner of the property shall retain a remediation firm to perform a preliminary assessment of the residually contaminated portion of the property to determine the extent of the contamination and the nature of the required remediation within seven days of the day of delivery of the notice of contamination to the owner. The preliminary assessment shall be completed within 21 days after delivery of the notice of contamination to the owner.

(1) If the preliminary assessment determines that remediation is not required, the owner shall send a copy of the assessment to the department's hazardous waste bureau chief within seven days of receipt of the results of the preliminary assessment, which shall be reviewed in accordance with 20.4.5.18 NMAC.

(2) The owner may choose to forego a preliminary assessment and conduct the remediation in accordance with Subsection B of this section.

B. The owner shall retain a remediation firm to conduct the remediation within 14 days of receipt of the results of the preliminary assessment when this preliminary assessment determines that remediation is required or, in event where a preliminary assessment was not performed pursuant to Paragraph (2) of Subsection A of this section, within 30 days of the day of delivery of the notice of contamination to the owner.

C. The owner shall complete remediation and the post remediation assessment in accordance with the requirements of this part within 90 days of the day of delivery of service of the notice of contamination to the owner or for such other period of time that is approved in writing by the department.

D. The owner shall retain a remediation firm to perform a post-remediation assessment of the residually contaminated portion of the property to determine that the requirements for remediation of residual contamination in this part have been met within seven days of receiving notice from the remediation firm that the residually contaminated portion of the property has been remediated.

E. After the department has approved the remediation and vacated the notice of contamination, the owner or owner's agent is not required to comply with 20.4.5.13 NMAC and may remove the notice of contamination and allow any person to enter, use, occupy, rent, or sell the property.

[20.4.5.15 NMAC - N, 1/01/2008]

20.4.5.16 REQUIREMENTS FOR REMEDIATION OF RESIDUAL CONTAMINATION:

The evaluation and cleanup of residual contamination found at clandestine drug laboratories after chemicals and equipment have been removed shall meet the following standards.

A. Remediation Firms.

(1) Any preliminary assessment, remediation, and post-remediation assessment of a clandestine drug laboratory for the purpose of complying with this part shall be performed by a remediation firm that meets the requirements of this subsection. The department recommends that the remediation firm performing the preliminary and post-remediation assessments be a different firm than the one that performs the remediation, to ensure independent evaluation of work required and thoroughness of the remediation.

(2) The remediation firm shall be under the direction of a certified industrial hygienist or be approved and currently registered to perform such work with a state, county, or municipal agency during the time the firm participates in the assessment or remediation of residual contamination. A firm's approval, certification, or registration with another state to perform assessments of residually contaminated properties will be accepted as meeting this requirement.

(3) The department may reject or require replacement of a remediation firm if one of the following findings is made:

- (a) criminal activity,
- (b) disregard for public health or the environment,
- (c) failure to comply with this section or local ordinances, or
- (d) noncompliance with health and safety, or environmental rules or standards.

B. Preliminary Assessment of the Property.

(1) The preliminary assessment shall include, but not be limited to, the following elements.

(a) A review of available information such as law enforcement reports and hazardous materials team reports that provide information regarding the manufacturing method, chemicals present, cooking areas, chemical storage areas, and observed areas of contamination or waste disposal.

(b) A physical inspection of the property, including but not limited to living areas, storage areas, plumbing, ventilation systems, septic systems, and outdoor areas, as necessary based on knowledge of the clandestine drug laboratory operation.

(c) Sampling and testing to determine the residual levels of contamination if the preliminary assessment results in a recommendation that no further remediation is required.

(2) A proposed work plan for remediating the residually contaminated portion of the property shall be prepared by the remediation firm that includes a description of the areas to be remediated and a description of the recommended cleanup methods.

(3) The remediation firm shall provide the owner with a written preliminary assessment report that includes the following elements.

(a) Identification of manufacturing methods, chemicals used, and actual and suspected areas of residual contamination or waste disposal based on law enforcement reports, visual observations, and knowledge of manufacturing method(s).

(b) The results of testing for residual contamination.

(c) A copy of the proposed work plan.

(4) In the event the remediation firm determines that remediation is not required, the firm shall provide the owner and the department's hazardous waste bureau with a written basis for the determination that includes the following statement signed by a certified industrial hygienist or principal in the remediation firm certifying the property meets the requirements in this section and that no remediation is required. **Remediation firm's certification:** "I hereby declare that I am a certified industrial hygienist or a principle in an approved remediation firm and that this report fully and accurately describes the preliminary assessment of the clandestine drug laboratory property named in the report. I certify that I have reviewed the results of the assessment, including the sampling and testing results, and find that the property meets the clearance levels in 20.4.5.17 NMAC for remediation of residual contamination and does not require further remediation."

C. Remediation of the Residually Contaminated Portion of the Property. Once chemicals and equipment removal is completed by the law enforcement agency or

hazardous materials team, the owner shall have a remediation firm remove and dispose of, or clean, the portions of the property with residual contamination. Both the interior and exterior residually contaminated portions of the property shall be decontaminated in accordance with this section. Cleanup activities must be repeated until testing indicates that contamination levels are below the clearance levels in 20.4.5.17 NMAC.

(1) Interior Decontamination. The decontamination of the interior of the residually contaminated portion of a property that will be occupied by people for any length of time for any purpose shall meet the clearance levels listed in 20.4.5.17 NMAC. At a minimum, the following steps shall be taken to decontaminate the interior of a clandestine drug laboratory property.

(a) Ventilate the property to remove or lower levels of residual volatile organic compounds in indoor air.

(b) Decontaminate or discard interior furnishings and household contents including, but not limited to, carpets, drapes, and furniture.

(c) Decontaminate structural features and surfaces paying particular attention to heavily contaminated areas such as those locations where the manufacturing occurred, or where chemicals were stored, mixed or disposed.

(d) Decontaminate interior surfaces of heating, ventilation and air conditioning systems and plumbing drain lines and traps that are impacted by residual contamination.

(e) Remove or seal interior surfaces where residual contamination can not be effectively removed by cleaning.

(2) Exterior Decontamination. Waste from clandestine drug laboratories are typically disposed of by dumping into indoor plumbing drains that empty either into a city sewer system or an onsite septic system or dumping on the ground into burn or burial pits. If evidence of exterior contamination is found at a clandestine drug laboratory property, the remediation firm shall respond as follows.

(a) Collect and analyze soil samples from areas where there is evidence that clandestine drug laboratory wastes have been directly disposed on the ground.

(b) Collect and analyze samples from septic tanks and drain fields if present.

(c) Collect and analyze samples from all wells within 100 feet of impacted septic systems, drain fields, and disposal areas for contaminants of concern.

(d) Contact the department's hazardous waste bureau for information on media-specific cleanup requirements.

(3) Vehicle Decontamination. For vehicles, including recreational vehicles, campers and trailers, the remediation firm shall follow the requirements listed in Paragraph (1) of Subsection C of 20.4.5.16 NMAC for interior decontamination. The cost of remediation may not make decontamination cost effective for many vehicles, in which case the entire vehicle shall be demolished.

(4) After the remediation is complete, the remediation firm shall notify the owner that the property is ready for post-remediation inspection.

D. Post-Remediation Assessment of the Property.

(1) The post-remediation assessment shall include, but not be limited to, a visual inspection, review of the scope of remediation work performed, and testing necessary to certify compliance with the requirements for remediation of residual contamination in this section.

(2) Samples must be collected from the property interior and submitted to a laboratory for analysis. If the results show that the clearance levels listed in 20.4.5.17 NMAC have not been achieved, further remediation shall be performed as necessary to achieve the clearance levels.

(3) When the remediation firm determines that the remediation of the residually contaminated portion of the property was completed pursuant to the requirements for remediation of residual contamination in this section, a final remediation report with a statement signed by a certified industrial hygienist or principal in the remediation firm certifying the remediation of the residually contaminated portion of the property was completed pursuant to the requirements for remediation of residual contamination shall be prepared. The remediation firm shall deliver the remediation report or send the report by certified mail to the owner and the department's hazardous waste bureau chief within 21 days of completion of the remediation pursuant to Subsection C of 20.4.5.16 NMAC. The remediation report certifying that remediation of the residually contaminated portion of the property shall not be in lieu of any certificate of occupancy or any building inspection, if required by a county or municipality.

(4) The remediation firm preparing the remediation report shall maintain that document and all supporting materials for three years.

E. Remediation Report. The remediation report shall include the following information and documentation.

(1) Information demonstrating the remediation firm's qualifications, the name and qualifications of the certified industrial hygienist or other principal of the remediation firm, and the names and training records of the onsite supervisor and workers that performed the remediation services on the residually contaminated portion of the real property.

(2) Complete identifying information of the real property such as street address, mailing address, owner of record, legal description, county tax or parcel identification number, or vehicle identification number if appropriate.

(3) A copy of the final remediation work plan.

(4) A summary of the remediation services completed on the residually contaminated portion of the real property, and any deviations from the approved work plan.

(5) Photographs documenting the remediation services and showing each of the sample locations, and a drawing or sketch of the residually contaminated areas that depict the sample locations.

(6) Diagram showing locations of all wells on the property and all wells on properties within 250 feet of any septic system, drain field, waste disposal areas on the subject property.

(7) A copy of the sampling and testing results and a copy of the chain-of-custody documents for all samples from the residually contaminated portion of the real property.

(8) A summary of the waste characterization work, any waste sampling and testing results, and transportation and disposal documents, including bills of lading or manifest, weight tickets and waste receipts for all materials removed from the property.

(9) The following statement signed by a certified industrial hygienist or principal in the remediation firm certifying that the residually contaminated portion of the property has been remediated in accordance with 20.4.5.16 NMAC. **Remediation firm's certification:** "I hereby declare that I am a certified industrial hygienist or a principle in an approved remediation firm and that this report fully and accurately describes the remediation of the clandestine drug laboratory property named in the report. I certify that I have reviewed the results of the remediation, including the post-remediation assessment results, and find that the remediation was completed pursuant to the requirements for remediation of residual contamination in 20.4.5.16 NMAC."

[20.4.5.16 NMAC - N, 1/01/2008; A, 1/01/2008]

20.4.5.17 CLEARANCE LEVELS FOR RESIDUAL CONTAMINATION:

At a minimum, the remediation firm shall conduct sampling and testing for all of the constituents listed below unless evidence indicates that such constituents were not used in the operation of the clandestine drug laboratory. All interior areas of the residually contaminated portion of a property that will be occupied by people for any length of time for any purpose and all furnishings and materials intended for reuse shall meet the following post-remediation clearance levels.

Constituent	Clearance Level
Unlawfully manufactured controlled substance or its precursor drugs	Surface area wipe <1.0 µg/ft ²
Volatile organic compounds (total)	Indoor air ≤ 1 part per million
Lead (total)	Surface area wipe ≤ 40 µg/ft ²
Mercury (vapor)	Indoor air < 0.3 µg/m ³
Corrosives	Surface pH of 6.0 to 8.0

[20.4.5.17 NMAC - N, 1/01/2008]

20.4.5.18 APPROVAL OF REMEDIATION:

A. Upon receipt of the remediation report, the department shall review the report to determine if the remediation of the residually contaminated portion of the property was completed pursuant to the requirements in this part within 30 days.

B. The department shall notify the owner or the owner's agent whether or not it approves the remediation report and agrees that the remediation is complete within seven days of completion of the department's review.

C. If the department does not approve the remediation report, it shall inform the owner or the owner's agent and state the reasons for disapproval. The owner shall take the appropriate corrective action within a time period allowed by the department.

[20.4.5.18 NMAC - N, 1/01/2008]

20.4.5.19 PREEMPTION OF CLANDESTINE DRUG LABORATORY REMEDIATION RULES:

A. Where a county or municipality has adopted an ordinance or other rule regarding the remediation of clandestine drug laboratories before the effective date of this part, the county or municipality may continue to apply and enforce such rules in lieu of the rules in this part.

B. Where a county or municipality has adopted an ordinance or other rules regarding the remediation of clandestine drug laboratories and remediation is performed under such ordinance or rule, the cognizant law enforcement agency shall still deliver notice of contamination to the department in accordance with Paragraph (4) of Subsection A of 20.4.5.10 NMAC.

[20.4.5.19 NMAC - N, 1/01/2008]

20.4.5.20 FAILURE TO COMPLY:

A. Failure to comply with the remediation standards required by this part may result in enforcement proceedings under Section 74-4-10 NMSA 1978, including but not limited to the following actions.

(1) Issuing a compliance order requiring compliance immediately or within a specified time period or assessing a civil penalty up to \$10,000 per day of noncompliance for each violation or both.

(2) Commencing a civil action in district court for appropriate relief, including a temporary or permanent injunction.

B. A person who fails to comply with the remediation standards required by this part is guilty of a petty misdemeanor under Section 74-1-10 NMSA 1978.

[20.4.5.20 NMAC - N, 1/01/2008]

20.4.5.21 SEVERABILITY:

If any provision or application of this part is held invalid, the remainder, or its application to other situations or persons, shall not be affected.

[20.4.5.21 NMAC - N, 1/01/2008]

CHAPTER 5: PETROLEUM STORAGE TANKS

PART 1: GENERAL PROVISIONS [REPEALED]

[This part was repealed on July 24, 2018.]

PART 2: REGISTRATION OF TANKS [REPEALED]

[This part was repealed on July 24, 2018.]

PART 3: ANNUAL FEE [REPEALED]

[This part was repealed on July 24, 2018.]

PART 4: NEW AND UPGRADED STORAGE TANK SYSTEMS: DESIGN, CONSTRUCTION AND INSTALLATION [REPEALED]

[This part was repealed on July 24, 2018.]

PART 5: GENERAL OPERATING REQUIREMENTS [REPEALED]

[This part was repealed on July 24, 2018.]

PART 6: RELEASE DETECTION [REPEALED]

[This part was repealed on July 24, 2018.]

PART 7: REPORTING AND INVESTIGATION OF SUSPECTED AND CONFIRMED RELEASES [REPEALED]

[This part was repealed on July 24, 2018.]

PART 8: OUT-OF-SERVICE SYSTEMS AND CLOSURE [REPEALED]

[This part was repealed on July 24, 2018.]

PART 9: FINANCIAL RESPONSIBILITY [REPEALED]

[This part was repealed on July 24, 2018.]

PART 10: ADMINISTRATIVE REVIEW [REPEALED]

[This part was repealed on July 24, 2018.]

PART 11: LENDER LIABILITY [REPEALED]

[This part was repealed on July 24, 2018.]

PART 12: CORRECTIVE ACTION FOR STORAGE TANK SYSTEMS CONTAINING PETROLEUM PRODUCTS [REPEALED]

[This part was repealed on July 24, 2018.]

PART 13: CORRECTIVE ACTION FOR UST SYSTEMS CONTAINING OTHER REGULATED SUBSTANCES [REPEALED]

[This part was repealed on July 24, 2018.]

PART 14: CERTIFICATION OF TANK INSTALLERS [REPEALED]

[This part was repealed on July 24, 2018.]

PART 15: CORRECTIVE ACTION FUND USE AND EXPENDITURES [REPEALED]

[This part was repealed on July 24, 2018.]

PART 16: QUALIFICATION OF PERSONS PERFORMING CORRECTIVE ACTION [REPEALED]

[This part was repealed on July 24, 2018.]

PART 17: CORRECTIVE ACTION FUND ADMINISTRATION [REPEALED]

[This part was repealed on July 24, 2018.]

PART 18: OPERATOR TRAINING [REPEALED]

[This part was repealed on July 24, 2018.]

PART 19: DELIVERY PROHIBITION [REPEALED]

[This part was repealed on July 24, 2018.]

PART 20-100: RESERVED

PART 101: GENERAL PROVISIONS

20.5.101.1 ISSUING AGENCY:

New Mexico Environmental Improvement Board.

[20.5.101.1 NMAC - N, 07/24/2018]

20.5.101.2 SCOPE:

A. This part applies to 20.5.101 through 20.5.125 NMAC.

B. Any UST system holding hazardous wastes that are listed or identified under Subtitle C of the federal Resource Conservation and Recovery Act, or a mixture of such hazardous waste and other hazardous regulated substances, is excluded from these regulations. This subsection does not apply to any UST system containing petroleum.

C. Previously deferred storage tank systems: Airport hydrant fuel distribution systems and UST systems with field-constructed tanks must meet all applicable requirements of 20.5 NMAC, including those in 20.5.114 NMAC, and storage tank systems that store fuel for use by emergency power generators must meet all applicable requirements of 20.5 NMAC, including those in 20.5.112 NMAC or 20.5.113 NMAC.

D. The following types of storage tank systems are excluded from the requirements of 20.5.102 through

20.5.125 NMAC:

(1) any wastewater treatment tank systems and any wastewater treatment tank system that is part of a wastewater treatment facility regulated under Section 402 or 307(b) of the federal Clean Water Act;

(2) equipment or machinery that contains regulated substances for operational purposes such as hydraulic lift tanks and electrical equipment tanks;

(3) any UST system with a capacity of 110 gallons or less or any AST system with a capacity of 1,320 gallons or less, or any AST system with a capacity of 55,000 gallons or more not associated with an airport hydrant fuel distribution system or a UST system with a field-constructed tank;

(4) any UST system that contains a de minimis concentration of regulated substances;

(5) any emergency spill or overflow containment UST system that is expeditiously emptied after use;

(6) any storage tank systems containing radioactive material that are regulated under the Atomic Energy Act of 1954;

(7) any storage tank system that is part of an emergency generator system at nuclear power generation facilities regulated by the nuclear regulatory commission under 10 CFR Part 50 Appendix A;

E. Partial Exclusions. 20.5.103 NMAC through 20.5.116 NMAC, 20.5.120 NMAC through 20.5.123 NMAC, and 20.5.125 NMAC do not apply to:

(1) wastewater treatment tanks that do not fall under Paragraph (1) of Subsection C of this section;

(2) ASTs with a capacity of 55,000 gallons or more associated with airport hydrant fuel distribution systems;

(3) ASTs with a capacity of 55,000 gallons or more associated with UST systems with field-constructed tanks;

F. Notwithstanding the foregoing exclusions, no person may install a storage tank system listed in Subsection D of this section for the purpose of storing regulated substances unless such storage tank system (whether of single- or double-walled construction):

(1) will prevent releases due to corrosion or structural failure for the operational life of the storage tank system; and

(2) is cathodically protected against corrosion, constructed of non-corrodible material, steel clad with a non-corrodible material, or designed in a manner to prevent the release or threatened release of any stored substance; and

(3) the material used in the construction or lining of the tank is compatible with the substance to be stored.

G. 20.5.106 NMAC, 20.5.107 NMAC, 20.5.108 NMAC, 20.5.115 NMAC, 20.5.117 NMAC, and 20.5.118 NMAC shall not apply to an existing AST or UST system which has never contained a regulated substance until the system is placed in service.

[20.5.101.2 NMAC - N, 07/24/2018]

20.5.101.3 STATUTORY AUTHORITY:

20.5.1 through 20.5.25 NMAC are promulgated pursuant to the provisions of the Hazardous Waste Act, Sections 74-4-1 through 74-4-14 NMSA 1978; the Ground Water Protection Act, Sections 74-6B-1 through 74-6B-14 NMSA 1978; and the general provisions of the Environmental Improvement Act, Sections 74-1-1 through 74-1-17 NMSA 1978.

[20.5.101.3 NMAC - N, 07/24/2018]

20.5.101.4 DURATION:

Permanent.

[20.5.101.4 NMAC - N, 07/24/2018]

20.5.101.5 EFFECTIVE DATE:

July 24, 2018, unless a later date is indicated in the bracketed history note at the end of a section.

[20.5.1.5 NMAC -N, 07/24/2018]

20.5.101.6 OBJECTIVE:

The purpose of this part is to provide definitions for use in 20.5.101 through 20.5.125 NMAC.

[20.5.101.6 NMAC - N, 07/24/2018]

20.5.101.7 DEFINITIONS:

A. Terms beginning with numerals or the letter "A."

(1) "Above ground release" means any release to the surface of the land or to surface water. This includes, but is not limited to, releases from the above ground portion of an underground storage tank system and releases associated with overfills and transfer operations during regulated substance deliveries to or dispensing from an UST system.

(2) "Above ground storage tank" or "AST" means a single tank or combination of manifolded tanks, including pipes connected thereto, that is 1,320 gallons or more, and less than 55,000 gallons, is permanently installed, and is used to contain petroleum, including crude oil or any fraction thereof that is liquid at standard conditions of temperature and pressure of 60 degrees fahrenheit and fourteen and seven-tenths pounds per square inch absolute, and the volume of which is more than ninety percent above the surface of the ground. Tanks in vaults and special enclosures are ASTs. A compartment tank with combined total capacity greater than 1,320 gallons and less than 55,000 gallons is an AST and for purposes of these regulations is considered to be one tank regardless of the number of compartments and the number of regulated substances contained. Above ground storage tank does not include (regardless of size) any:

(a) farm, ranch or residential tank used for storing motor fuel for noncommercial purposes;

(b) pipeline facility, including gathering lines regulated under the federal Natural Gas Pipeline Safety Act of 1968 or the federal Hazardous Liquid Pipeline Safety Act of 1979, or that is an intrastate pipeline facility regulated under state laws comparable to either act;

(c) surface impoundment, pit, pond or lagoon;

(d) storm water or wastewater collection system;

(e) flow-through process tank;

(f) liquid trap, tank or associated gathering lines or other storage methods or devices related to oil, gas or mining exploration, production, transportation, refining, processing or storage, or to oil field service industry operations;

(g) tank used for storing heating oil for consumptive use on the premises where stored;

(h) tanks, bulk terminals, or related pipelines and facilities owned or used by a refinery, natural gas processing plant or pipeline company in the regular course of their refining, processing or pipeline business; bulk plants are not included in the exemption;

(i) multiple tanks at a facility, that are individually less than 1,320 gallons, unless tanks that are siphoned together have a cumulative total capacity greater than 1,320 gallons;

(j) pipes connected to any tank exempted by Subparagraphs (a) through (i) of this paragraph.

(3) "Accidental release" means any sudden or non-sudden release neither expected nor intended by the tank owner or operator of petroleum or other regulated substance from a storage tank that results in a need for corrective action or compensation for bodily injury or property damage.

(4) "Airport hydrant fuel distribution system" (also called airport hydrant system) means an AST or UST system or a combination thereof which fuels aircraft and operates under high pressure with large diameter piping that typically terminates into one or more hydrants (fill stands). The airport hydrant system begins where fuel enters one or more regulated tanks from an external source such as a pipeline, barge, rail car, or other motor fuel carrier. AST systems with a capacity of 55,000 gallons or more associated with airport hydrant fuel distribution systems must comply with 20.5.101 NMAC, 20.5.102 NMAC, 20.5.117 NMAC, 20.5.118 NMAC, 20.5.119 NMAC, and 20.5.124 NMAC.

(5) "Ancillary equipment" means any device including, but not limited to, such devices as piping, fittings, flanges, valves, and pumps associated with a storage tank.

(6) "Applicable standards" means the most relevant target concentrations that legally apply to a site.

(7) "AST system" means an above ground storage tank and its associated ancillary equipment and containment system, if any.

B. Terms beginning with the letter "B."

(1) "Basin sump" means a liquid-tight collection container with no valves, joints or other penetrations.

(2) "Below ground release" means any release to the subsurface of the land or to groundwater. This includes, but is not limited to, releases from the below ground portions of a storage tank system and releases associated with overfills and transfer operations as the regulated substance is delivered to or dispensed from a storage tank.

(3) "Beneath the surface of the ground" means beneath the ground surface or otherwise covered with materials so that physical inspection is precluded.

(4) "Bodily injury" shall have the meaning given to this term by applicable state law; however, this term shall not include those liabilities which, consistent with standard insurance industry practices, are excluded from coverage in liability insurance policies for bodily injury.

(5) "Bulk plant" means a facility which is not a bulk terminal, and which is used for the temporary storage of petroleum products prior to delivery to gasoline stations, convenience stores, and commercial accounts, which is smaller than a bulk terminal and is not equipped with any processing equipment.

(6) "Bulk terminal" means a large facility for storing and handling petroleum products that receives and stores bulk deliveries of gasoline and other products from a pipeline, barges, or directly from a nearby refinery. Equipment at the terminal facility is usually capable of further processing the product, including but not limited to: injection of additives or conversion of gasoline vapors received from transports after making deliveries using stage one vapor recovery back to liquid form.

(7) "Bureau" means the New Mexico petroleum storage tank bureau.

C. Terms beginning with the letter "C."

(1) "Cathodic protection" means a technique to prevent corrosion of a metal surface by making that surface the cathode of an electrochemical cell through the application of either galvanic anodes or impressed current.

(2) "Certified installer" refers generally to both AST and UST certified installers.

(3) "Certified installer-AST" means an individual who has been certified by the department under 20.5.105 NMAC to install, replace, repair, and modify AST systems in this state.

(4) "Certified installer-UST" means an individual who has been certified by the department under 20.5.105 NMAC to install, replace, repair, and modify UST systems in this state.

(5) "Certified junior installer" refers generally to both AST and UST certified junior installers.

(6) "Certified junior installer-AST" means an individual who has been certified by the department under 20.5.105 NMAC to install, replace, repair, and modify spill prevention equipment and overfill prevention equipment on AST systems regulated under 20.5 NMAC.

(7) "Certified junior installer-UST" means an individual who has been certified by the department under 20.5.105 NMAC to install, replace, repair, and modify spill prevention equipment and overfill prevention equipment on UST systems regulated under 20.5 NMAC.

(8) "Certified operator" means a class A, B, or C operator trained and certified according to the requirements of 20.5.105 NMAC.

(9) "Change in service" means removing a regulated substance from a storage tank system and placing something in the system that is not a regulated substance.

(10) "Chief financial officer," in the case of local government owners and operators, means the individual with the overall authority and responsibility for the collection, disbursement, and use of funds by the local government.

(11) "Class A operator" means the individual who has primary responsibility to operate and maintain the storage tank system in accordance with 20.5 NMAC. The class A operator typically manages resources and personnel, such as establishing work assignments, to achieve and maintain compliance with regulatory requirements.

(12) "Class B operator" means the individual who has day-to-day responsibility for implementing the requirements of 20.5 NMAC. The class B operator typically implements in-field aspects of operation, maintenance, and associated recordkeeping for the storage tank system.

(13) "Class C operator" means the individual responsible for initially addressing emergencies presented by a spill or release from a storage tank system. The class C operator typically controls or monitors the dispensing or sale of regulated substances.

(14) "Class I liquid" means any flammable liquid having a flashpoint below 100.0 degrees fahrenheit (37.8 degrees celsius) and that meets one of the following sub classes:

(a) Class IA liquids include those having flashpoints below 73 degrees fahrenheit (22.8 degrees celsius) and boiling points below 100 degrees fahrenheit (37.8 degrees celsius);

(b) Class IB liquids include those having flashpoints below 73 degrees fahrenheit (22.8 degrees celsius) and boiling points at or above 100 degrees fahrenheit (37.8 degrees celsius); or

(c) Class IC liquids include those having flash points at or above 73 degrees fahrenheit (22.8 degrees celsius) but below 100 degrees fahrenheit (37.8 degrees celsius).

(15) "Class II Liquid" means a combustible liquid having flash points at or above 100 degrees fahrenheit (37.8 degrees celsius) and below 140 degrees fahrenheit (60 degrees), except any mixture having components with flashpoints of 200 degrees fahrenheit (93.3 degrees celsius) or higher, the volume of which make up ninety-nine percent or more of the total volume of the mixture.

(16) "Class III Liquid" means a combustible liquid having flashpoints at or above 140 degrees fahrenheit (60 degrees celsius) and that meets one of the following sub classes. Where the term "Class III liquid" is used, it shall mean only Class IIIA liquids.

(a) Class IIIA liquids include those having flash points at or above 140 degrees fahrenheit (60 degrees celsius) and below 200 degrees fahrenheit (93.3 degrees celsius) except any mixture having components with flashpoints of 200 degrees fahrenheit (93.3 degrees celsius), or higher, the total volume of which make up ninety-nine percent or more of the total volume of the mixture;

(b) Class IIIB liquids include those having flash points at or above 200 degrees fahrenheit (93.3 degrees celsius);

(c) any liquid that has a flash point at or above 200 degrees fahrenheit or 93 degrees celsius.

(17) "Community water system" means a public water system which serves at least 15 service connections used by year-round residents or regularly serves at least 25 year-round residents.

(18) "Compatible" means the ability of two or more substances to maintain their respective physical and chemical properties upon contact with one another for the design life of the storage tank system and under varied environmental conditions (i.e., at different temperatures).

(19) "Connected piping" means all above ground and underground piping including valves, elbows, joints, flanges, and flexible connectors attached to a tank system through which regulated substances flow. For the purpose of determining how much piping is connected to any individual storage tank system, the piping which joins the two storage tank systems should be allocated equally between them.

(20) "Consumptive use" with respect to heating oil means the oil is burned on the premises.

(21) "Contain" means the stopping of further migration of a regulated substance from a release into or through groundwater, surface water or soil.

(22) "Containment" means that contamination from a release has been contained and is not spreading, migrating, spilling, infiltrating or otherwise traveling into uncontaminated areas. Verification of containment requires the performance of physical measurements that provide positive proof that contamination is contained.

(23) "Containment sump" means a liquid-tight container that protects the environment by containing leaks and spills of regulated substances from piping, dispensers, pumps, and related components in the containment area. Containment sumps may be single walled or secondarily contained and located at the top of tank (tank top or submersible turbine pump sump), underneath the dispenser (under-dispenser containment sump), or at other points in the piping run (transition or intermediate sump). Containment sumps may have valves, joints or penetrations, such as piping penetrations.

(24) "Contaminant" means any regulated substance as defined in this section, any constituent of a regulated substance, or any combination of a regulated substance or constituent thereof with any other substance or matter.

(25) "Contaminant of concern" means any contaminant which is suspected of being released at the site based on site history for which:

(a) the New Mexico water quality control commission has adopted standards pursuant to the Water Quality Act, Sections 74-6-1 through 74-6-17 NMSA 1978;

(b) the New Mexico environmental improvement board has adopted standards, action levels, risk-based screening levels or site-specific target levels pursuant to the Hazardous Waste Act, the Ground Water Protection Act, or the Environmental Improvement Act; or

(c) the New Mexico environment department has established or approved site-specific target levels pursuant to the Hazardous Waste Act, the Ground Water Protection Act, or the Environmental Improvement Act.

(26) "Contaminant saturated soil" means soil exclusive of the water table and capillary fringe in which non-aqueous phase liquid is observable in the soil or, if sufficiently liquid, drains from the soil when the soil is suspended on filter paper or its equivalent.

(27) "Contaminated soil" means soil containing detectable quantities of contaminants of concern.

(28) "Contractor" means a person who has an agreement to perform corrective action on behalf of the state or owners or operators.

(29) "Controlling interest" means direct ownership or other legal control of at least fifty percent of the voting stock of another entity.

(30) "Corrective action" means an action taken to investigate, minimize, eliminate, or clean up a release to protect the public health, safety, and welfare or the environment.

(31) "Corrective action fund" or "fund" means the fund created pursuant to the Ground Water Protection Act, Section 74-6B-7 NMSA 1978, to pay or reimburse for corrective action performed pursuant to 20.5 NMAC and the Ground Water Protection Act.

(32) "Corrosion expert" means a person who, by reason of thorough knowledge of the physical sciences and the principles of engineering and mathematics acquired by a professional education and related practical experience, is qualified to engage in the practice of corrosion control on buried or submerged metal piping systems and metal tanks. Such a person must be accredited or certified as being qualified by the national association of corrosion engineers international (NACE). A corrosion expert shall only perform the specific activities required by these rules for which he is qualified, certified, registered or licensed; for example, a NACE licensed cathodic protection tester shall not design a cathodic protection system unless he is also a NACE licensed cathodic protection technologist, specialist or has another equivalent qualification, certification, registration or license.

(33) "Corrosion prevention plan" means a plan approved in writing by a corrosion expert for a UST or AST or associated piping, or secondary containment, which plan is designed to maintain the integrity of the tank or piping for its useful life.

(34) "Corrosion protection" means a technique to prevent corrosion of a metal surface by making that surface the cathode of an electrochemical cell through the application of either galvanic anodes or impressed current, or by isolating the metal surface from soil, water, or other elements that can cause corrosion, including but not limited to application of a paint or coating material approved for use as corrosion protection.

(35) "Critical junctures" means the steps of an installation, replacement, modification, repair or removal of a storage tank system or any part of a storage tank system, which are important to the prevention of releases and which are more specifically described in 20.5.106, 20.5.107, 20.5.109, 20.5.110 and 20.5.115 NMAC.

D. Terms beginning with the letter "D."

(1) "Deductible" means the first ten thousand dollars (\$10,000) of minimum site assessment costs, or any lesser amount determined in accordance with 20.5.123 NMAC.

(2) "Department" means the New Mexico environment department, also known as the New Mexico department of environment.

(3) "Dielectric material" means a material that does not conduct direct electrical current. Dielectric coatings are used to electrically isolate storage tank systems from the surrounding soils. Dielectric bushings are used to electrically isolate portions of storage tank systems, such as tank from piping.

(4) "Director" means the secretary of the New Mexico environment department also known as the secretary of the environment or as delegated to the director of the resource protection division of the department.

(5) "Direct responsible supervisory control" means responsibility for the direction, control, or supervision of investigation and remediation activities to assure that the work is performed in accordance with appropriate industry and regulatory quality standards.

(6) "Dispenser" means equipment located above ground that dispenses regulated substances from the storage tank system.

(7) "Dispenser system" means the dispenser and the equipment necessary to connect the dispenser to the storage tank system.

E. Terms beginning with the letter "E."

(1) "Effectively mitigating" means that the approach taken to corrective action has contained the release and is achieving reductions in contamination levels such that the standards described in 20.5.119 and 20.5.120 NMAC will be met in a manner protective of public health, safety and welfare and the environment, within the period of time specified in the plan for remediation by monitored natural attenuation or otherwise.

(2) "EIB" means the environmental improvement board.

(3) "EIB standards" means standards set forth in 20.5.119, 20.5.120 and 20.7.10 NMAC.

(4) "Electrical equipment" means equipment which contains dielectric fluid which is necessary for the operation of equipment such as transformers and buried electrical cable.

(5) "Emergency generator system" means any UST or AST system that stores any regulated substance for use by emergency power generators.

(6) "Emergency repair" means a repair required by immediate danger of a release, or by an immediate threat to public health, safety and welfare, or to the environment.

(7) "Environmental improvement board" (EIB) means the board created in the Environmental Improvement Act, Sections 74-1-1 through 74-1-17 NMSA 1978.

(8) "Environmental Improvement Act" means the Environmental Improvement Act, Sections 74-1-1 through 74-1-17 NMSA 1978.

(9) "Excavation zone" means the area containing the storage tank system and backfill material bounded by the ground surface, walls, and floor of the pit and trenches into which the UST system is placed at the time of installation.

(10) "Existing AST system" means an AST system which is used to contain an accumulation of regulated substances or for which installation commenced on or before June 14, 2002. Installation will be considered to have commenced if the owner or operator has obtained all federal, state and local approvals or permits necessary to begin physical construction at the site or installation of the tank system, and if either:

(a) a continuous on-site physical construction or installation program has begun, or

(b) the owner or operator has entered into contractual obligations, which cannot be canceled or modified without substantial loss, for physical construction at the site or installation of the tank system to be completed within a reasonable time.

(11) "Existing UST system" means a UST system which is used to contain an accumulation of regulated substances or for which installation has commenced on or before December 22, 1988. Installation will be considered to have commenced if the owner or operator has obtained all federal, state and local approvals or permits necessary to begin physical construction of the site or installation of the tank system, and if either:

(a) a continuous on-site physical construction or installation program has begun, or

(b) the owner or operator has entered into contractual obligations, which cannot be canceled or modified without substantial loss, for physical construction at the site or installation of the tank system to be completed within a reasonable time.

(12) "Exposed petroleum products" means petroleum that is present in the non-aqueous phase (i.e. not dissolved in water) on the surface of the ground, on surface water, or in any surface or subsurface structures such as utility corridors, basements and manholes.

(13) "Exposed hazardous substance" means a regulated substance other than petroleum that is present on the surface of the ground, on surface water, or in any surface or subsurface structures such as utility corridors, basements or manholes.

F. Terms beginning with the letter "F."

(1) "Facility" means a property location that contains storage tanks.

(2) "Facility ID number" is a department-issued facility identification number.

(3) "Farm tank" is a tank located on a tract of land devoted to the production of crops or raising animals, including fish, and associated residences and improvements. A farm tank must be located on the farm property. "Farm" includes fish hatcheries, range land and nurseries with growing operations.

(4) "Field-constructed tank" means a tank constructed in the field. For example, a tank constructed of concrete that is poured in the field, or a steel or fiberglass tank primarily fabricated in the field. AST systems with a capacity of 55,000 gallons or more associated with UST systems with field-constructed tanks must comply with 20.5.101 NMAC, 20.5.102 NMAC, 20.5.117 NMAC, 20.5.118 NMAC, 20.5.119 NMAC, and 20.5.124 NMAC.

(5) "Financial reporting year" means the latest consecutive twelve-month period for which any of the following reports used to support a financial test is prepared:

(a) a 10-K report submitted to the SEC;

(b) an annual report of tangible net worth submitted to Dun and Bradstreet; or

(c) annual reports submitted to the energy information administration or the rural utilities service; "financial reporting year" may thus comprise a fiscal or a calendar year period.

(6) "Flow restrictor" means an overfill prevention device that decreases the flow of a regulated substance into a UST during a delivery at a preset height by decreasing the flow of vapors out of the UST.

(7) "Flow-through process tank" is a tank that forms an integral part of a production process through which there is a steady, variable, recurring, or intermittent flow of materials during the operation of the process. Flow-through process tanks do not include tanks used for the storage of materials prior to their introduction into the production process or for the storage of finished products or by-products from the production process.

(8) "Free product" refers to a regulated substance that is present as a non-aqueous phase liquid (for example, liquid not dissolved in water).

(9) "Functionality test" means a test for automatic line leak detectors which determines whether they are operating correctly.

(10) "Fund" means the corrective action fund which was created pursuant to Section 74-6B-7 NMSA 1978, to pay or reimburse for corrective action required at leaking storage tank sites.

G. Terms beginning with the letter "G."

(1) "Gathering lines" means any pipeline, equipment, facility, or building used in the transportation of oil or gas during oil or gas production or gathering operations.

(2) "Ground Water Protection Act" means the Ground Water Protection Act, Sections 74-6B-1 through 74-6B-14 NMSA 1978.

H. Terms beginning with the letter "H."

(1) "Hazardous substance UST system" or "hazardous substance UST" means an underground storage tank system that contains an accumulation of hazardous substances defined in Section 101(14) of the federal Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) but not including any substance regulated as a hazardous waste under Subtitle C of the federal Resource Conservation and Recovery Act (RCRA). Hazardous substance UST includes a tank with a mixture of such substances and petroleum, but which is not a petroleum UST system.

(2) "Hazardous Waste Act" means the Hazardous Waste Act, Sections 74-4-1 through 74-4-14 NMSA 1978.

(3) "Heating oil" means petroleum that is No. 1; No. 2; No. 4--light; No. 4-heavy; No. 5-light; No. 5-heavy; and No. 6 technical grades of fuel oil; other residual fuel oils (including navy special fuel oil and bunker C); and other fuels when used as substitutes for one of these fuel oils. Heating oil is typically used in the operation of heating equipment, boilers, or furnaces.

(4) "Hybrid storage tank system" means a storage tank system where any combination of above ground and underground storage tank systems are connected in a manner where fuel enters one tank from the other tank under pressure or gravity flow but is not part of a siphon system.

(5) "Hydraulic lift tank" means a tank holding hydraulic fluid for a closed-loop mechanical system that uses compressed air or hydraulic fluid to operate lifts, elevators, and other similar devices.

I. Terms beginning with the letter "I".

(1) "Imminent threat to public health and the environment" means a condition that creates a substantial probability of harm, when the probability and potential extent of harm make it reasonably necessary to take immediate action to prevent, reduce, or mitigate the actual or potential damages to public health and the environment.

(2) "Incurred" means billed to the owner or operator.

(3) "Initiation of containment" means the point in time at which a system designed to achieve containment is put into continuous operation.

(4) "Install" or "installation" means the work involved in placing a storage tank system or any part thereof in, on or above the ground and preparing it to be placed in service.

(5) "Installation Date" means for existing storage tank systems, the date when a regulated substance was placed in the tank, or where the date is unknown, the approximate date the installation was completed. For a new installation, the date a regulated substance is first placed in each tank.

(6) "Installation of a new or replaced motor fuel dispenser system" means the installation of a new motor fuel dispenser and the equipment necessary to connect the dispenser to the storage tank system, but shall not mean the installation of a motor fuel dispenser installed separately from the equipment needed to connect the dispenser to the storage tank system. The equipment necessary to connect the motor fuel dispenser to the storage tank system may include check valves, shear valves, unburied risers or flexible connectors, or other transitional components that are beneath the dispenser and connect the dispenser to the underground piping.

(7) "Integrity test" means an evaluation process that has been independently tested and approved by a nationally recognized association or independent testing laboratory to determine, in the case of a UST, the suitability of the tank for continuous containment of a regulated substance, or, in the case of an AST, both the suitability of the tank for continuous containment of a regulated substance and the necessary hydraulic properties of the tank to contain the outward pressure of the regulated substance.

(8) "Internal inspection" means a formal inspection of an AST by an inspector authorized by the American petroleum institute or certified by the steel tank institute. The inspection shall determine whether the AST tank bottom or shell is severely corroded and leaking, and shall include an evaluation of the tank bottom and shell thickness to see whether they meet minimum thickness requirements. The inspector shall visually examine all tanks included in the inspection and, if applicable, check for tank bottom settlement.

(9) "Interstitial monitoring" is a leak detection method which surveys the space between a storage tank system's walls and the secondary containment system for a change in steady state conditions.

(10) "Inventory controls" are techniques used to identify a loss of product that are based on volumetric measurements in the tank and reconciliation of those measurements with product delivery and withdrawal records.

J. Terms beginning with the letter "J." **[RESERVED]**

K. Terms beginning with the letter "K." **[RESERVED]**

L. Terms beginning with the letter "L."

(1) "Landfarming" is the remediation of petroleum contaminated soils on or at ground surface using natural aeration and volatilization, disking and natural and enhanced bioremediation to reduce the concentrations of petroleum hydrocarbons to regulatory levels; requires a groundwater discharge permit.

(2) "Leak" means any spilling, emitting, discharging, escaping, or disposing of a regulated substance due to the failure of components of a storage tank system to contain a regulated substance as designed. A leak may or may not result in a release to the environment.

(3) "Legal defense cost" is any expense that an owner or operator or provider of financial assurance incurs in defending against claims or actions brought:

(a) by EPA or a state to require corrective action or to recover the costs of corrective action;

(b) by or on behalf of a third party for bodily injury or property damage caused by an accidental release; or

(c) by any person to enforce the terms of a financial assurance mechanism.

(4) "Liquid" means any material that has a fluidity greater than that of 300 penetration asphalt when tested in accordance with *ASTM D 5, "Test for Penetration for*

Bituminous Materials". When not otherwise identified, the term liquid shall mean both flammable and combustible liquids.

(5) "Liquid trap" means sumps, well cellars, and other traps used in association with oil and gas production, gathering, and extraction operations (including gas production plants), for the purpose of collecting oil, water, and other liquids. Such liquid traps may temporarily collect liquids for subsequent disposition or reinjection into a production or pipeline stream, or may collect and separate liquids from a gas stream.

(6) "Loading rack" means the area around and including loading arms, pumps, meters, shutoff valves, relief valves, and other equipment used to load and unload fuel cargo tanks, trucks, tank trucks, railroad cars, cars, other distribution containers or other transport vehicles, if the loading rack services or is attached to one or more storage tank(s) regulated in 20.5 NMAC.

(7) "Local government" shall have the meaning given this term by applicable state law. The term is generally intended to include counties, municipalities, school districts, and special districts, including flood control and conservancy districts.

(8) "Lower explosive limit" means the lowest percentage of a substance in an airspace that is explosive.

(9) "LST ranking system" means the leaking storage tank ranking system, the ranking or site prioritization system developed for and modified by the department using the analytical hierarchy process to rank sites where a release from a storage tank has occurred based upon public health, safety and welfare and environmental concerns.

M. Terms beginning with the letter "M."

(1) "Magnitude of contamination" means the maximum concentrations of contaminants of concern that resulted from a release.

(2) "Maintenance" means the normal operational upkeep to prevent a storage tank system from releasing product.

(3) "Minimum site assessment" or "MSA" means the sum total of all of the following activities:

(a) reporting, investigating and confirming a release pursuant to 20.5.118 NMAC; and

(b) determining the on-site extent, magnitude and impact of contamination by conducting investigations and reporting to the department pursuant to 20.5.119.1902 NMAC or 20.5.120.2002 NMAC (initial abatement), 20.5.119.1903 NMAC or 20.5.120.2003 NMAC (report on initial abatement), 20.5.119.1907 NMAC or

20.5.120.2007 NMAC (preliminary investigation), and 20.5.119.1909 NMAC or 20.5.120.2009 NMAC (report on the preliminary investigation).

(4) "Mining" means the process of obtaining useful minerals from the earth's crust or from previously disposed or abandoned mining wastes, including exploration, open-cut mining and surface operation, the disposal of refuse from underground and in situ mining, mineral transportation, concentrating, milling, evaporation, leaching and other processing. "Mining" does not mean the exploration and extraction of potash, sand, gravel, caliche, borrow dirt and quarry rock used as aggregate in construction, the exploration and extraction of natural petroleum in a liquid or gaseous state by means of wells or pipes, the development or extraction of coal, the extraction of geothermal resources, smelting, refining, cleaning, preparation, transportation or other off-site operations not conducted on permit areas or the extraction, processing or disposal of commodities, byproduct materials or wastes or other activities regulated by the federal nuclear regulatory commission.

(5) "Mobile AST" means an above ground storage tank that is not field-erected, and which is capable of changes in location.

(6) "Modification" means any change to any portion of a storage tank system that is not a repair. For purposes of 20.5.105 NMAC, the term does not include the process of relining a tank through the application of such materials as epoxy resins.

(7) "Monitored natural attenuation" means a methodology for remediation that relies upon a variety of naturally occurring chemical, physical and biological processes to achieve target concentrations in a manner that is equally as protective of public health, safety and welfare, and the environment as other methods, and that is accompanied by a program of monitoring to document the progress and results of the above-mentioned processes.

(8) "Monthly" means once per month, not to exceed 30 days.

(9) "Motor fuel" means a complex blend of hydrocarbons typically used in the operation of a motor engine, such as motor gasoline, aviation gasoline, No. 1 or No. 2 diesel fuel, or any blend containing one or more of these substances (for example: motor gasoline blended with alcohol).

(10) "Motor fuel dispenser system" or "dispenser system" means a motor fuel dispenser and the equipment necessary to connect the dispenser to a storage tank system. The equipment necessary to connect the motor fuel dispenser to the storage tank may include check valves, shear valves, unburied risers or flexible connectors, or other transitional components that are beneath the dispenser and connect the dispenser to the piping.

N. Terms beginning with the letter "N."

(1) "NAPL" means non-aqueous phase liquid as defined in this section.

(2) "New AST system" means an AST system for which installation has commenced after June 14, 2002. Installation will be considered to have commenced if the owner or operator has obtained all federal, state and local approvals or permits necessary to begin physical construction at the site or installation of the tank, and if either:

(a) a continuous on-site physical construction or installation program has begun, or

(b) the owner or operator has entered into contractual obligations which cannot be canceled or modified without substantial loss for physical construction at the site or installation of the tank system to be completed within a reasonable time.

(3) "New storage tank system" means a new AST system or a new UST system.

(4) "New UST tank system" means an UST system for which installation has commenced after December 22, 1988. Installation will be considered to have commenced if the owner or operator has obtained all federal, state and local approvals, or permits necessary to begin physical construction at the site or installation of the tank, and if either:

(a) a continuous on-site physical construction or installation program has begun, or

(b) the owner or operator has entered into contractual obligations which cannot be canceled or modified without substantial loss for physical construction at the site or installation of the tank system to be completed within a reasonable time.

(5) "Non-aqueous phase liquid" (NAPL) means an interstitial body of liquid oil, petroleum product or organic solvent or other organic substance, including an emulsion containing such material; in the case of liquid oil or a petroleum product, the term is synonymous with "phase separated hydrocarbon" and "free product."

(6) "Non-commercial purposes" with respect to motor fuel means not for resale.

(7) "Non-community water system" means a public water system that is not a community water

system.

(8) "Normal maintenance" means an activity involving work on a storage tank system that is not a repair, replacement, or installation, which may include but is not

limited to: painting, replacing fuses, or touchup. Any time an activity involves disconnecting or affecting the integrity of the piping, tank, spill or overfill systems, or work on line or tank leak detection systems, then the activity is not normal maintenance but is instead a repair.

O. Terms beginning with the letter "O."

(1) "Occurrence" means an accident, including continuous or repeated exposure to conditions, which results in a release from a storage tank. This definition is intended to assist in the understanding of 20.5.123 NMAC and is not intended either to limit the meaning of "occurrence" in a way that conflicts with standard insurance usage or to prevent the use of other standard insurance terms in place of "occurrence."

(2) "On the premises where stored" with respect to heating oil means storage tank systems located on the same property where the stored heating oil is used.

(3) "Operational life" is the period beginning from the time when the installation of the tank system is commenced until it is properly closed pursuant to 20.5.115 NMAC.

(4) "Operator" means any person in control of, or having responsibility for, the daily operation of a storage tank system.

(5) "Overfill release" is a release that occurs when a tank is filled beyond its capacity, resulting in a discharge of the regulated substance to the environment.

(6) "Owner" means, in the case of a storage tank in use on November 8, 1984 or brought into use after that date, any person who owns a storage tank used for storage, use, or dispensing of regulated substances; and in the case of a storage tank in use before November 8, 1984 but no longer in use after that date, any person who owned such tank immediately before the discontinuation of its use. For purposes of the registration requirements of 20.5.102

NMAC only, the term "owner" excludes any person who:

(a) had a UST taken out of operation on or before January 1, 1974;

(b) had a UST taken out of operation after January 1, 1974 and removed from the ground prior to November 8, 1984; or

(c) had an AST taken out of operation on or before July 1, 2001.

(7) "Owner ID number" means a department issued owner identification number.

P. Terms beginning with the letter "P."

(1) "Permanently installed AST" means an AST or mobile AST that is on site for more than 365 consecutive days and dispensing or storing a regulated substance for distribution at any time during that period.

(2) "Person" means any individual, trust, firm, joint stock company, federal agency, corporation including a government corporation, partnership, association, state, municipality, commission, political subdivision of a state, or any interstate body. "Person" also includes a consortium, a joint venture, a commercial entity, and the United States government.

(3) "Petroleum" means crude oil, crude oil fractions, and refined petroleum fractions, including gasoline, kerosene, heating oils, and diesel fuels.

(4) "Petroleum marketing facilities" include all facilities at which petroleum is produced or refined and all facilities from which petroleum is sold or transferred to other petroleum marketers or to the public.

(5) "Petroleum marketing firms" are all firms owning petroleum marketing facilities. Firms owning other types of facilities with storage tank systems as well as petroleum marketing facilities are considered to be petroleum marketing firms.

(6) "Petroleum tank system," "petroleum storage tank" or "petroleum UST" means a storage tank system that contains petroleum or a mixture of petroleum with de minimis quantities of other regulated substances. Such systems include those containing motor fuels, jet fuels, distillate fuel oils, residual fuel oils, lubricants, petroleum solvents, and used oils.

(7) "Pipe" or "piping" means the hollow cylinder or the tubular conduit constructed of non-earthen materials that routinely contains and conveys regulated substances within a storage tank system. Such piping includes any elbows, couplings, unions, valves, or other in-line fixtures that contain and convey regulated substances from the storage tank to the dispenser or other end-use equipment.

(8) "Pipeline facilities, including gathering lines," are new and existing pipe rights-of-way and any equipment, facilities, or buildings regulated under the federal Natural Gas Pipeline Safety Act of 1968, 49 U.S.C. App. 1671, et seq., or the federal Hazardous Liquid Pipeline Safety Act of 1979, 49 U.S.C. App. 2001, et seq., or which is an intrastate pipeline facility regulated under state laws comparable to either act.

(9) "Positive sampling, testing or monitoring results" refers to the results of sampling, testing or monitoring using a method described in 20.5.108 NMAC or 20.5.111 NMAC that indicate a release from a storage tank system has occurred.

(10) "Potable drinking water well" means any hole (dug, driven, drilled, or bored) that extends into the earth until it meets groundwater which may supply water for a community water system, a non-community public water system, or otherwise may

supply water for human consumption (consisting of drinking, bathing, cooking, or other similar uses). Such wells may provide water to entities such as a single-family residence, group of residences, businesses, schools, parks, campgrounds, and other permanent or seasonal communities.

(11) "Potentially explosive levels of petroleum hydrocarbon vapors" means vapors which register in excess of ten percent LEL (lower explosive limit) on a combustible gas indicator properly calibrated for pentane.

(12) "Potentially harmful petroleum hydrocarbon vapors" means vapors which register a reading of five whole units above ambient concentrations total aromatic hydrocarbons in any structure in the vicinity of the release site, on a photoionization detector, flame ionization detector or an equivalent device properly calibrated to detect hydrocarbon vapors at a minimum detection limit of at least one ppm.

(13) "Product" means a regulated substance.

(14) "Product deliverer" means any person who delivers or deposits product into a storage tank system. This term includes, but is not limited to, major oil companies, jobbers, petroleum transportation companies, brokers and other product delivery entities.

(15) "Professional engineer" is an individual licensed in New Mexico to engage in the practice of engineering under the New Mexico Engineering and Surveying Practices Act, Sections 61-23-1 through 61-23-32 NMSA 1978.

(16) "Project drawings" means schematic drawings of tanks, piping, and ancillary equipment, which need not be prepared, stamped or signed by a professional engineer.

(17) "Property damage" shall have the meaning given this term by applicable state law. This term shall not include those liabilities which, consistent with standard insurance industry practices, are excluded from coverage in liability insurance policies for property damage. However, such exclusions for property damage shall not include corrective action associated with releases from tanks which are covered by the policy.

(18) "Provider of financial assurance" means an entity that provides financial assurance to an owner or operator of a storage tank system through one of the mechanisms listed in 20.5.117.1705 through 20.5.117.1716 NMAC, including a guarantor, insurer, risk retention group, surety, issuer of a letter of credit, issuer of a state-required mechanism, or a state.

(19) "Public water system" means a system for the provision to the public of piped water for human consumption (consisting of drinking, bathing, cooking, or other similar uses) if such system has at least 15 service connections or regularly serves an average of at least 25 individuals daily at least 60 days out of the year. Such term

includes any collection, treatment, storage, and distribution facilities under the control of the operator of such system and used primarily in connection with such system; and any collection or pretreatment storage facilities not under such control which are used primarily in connection with such system. A public water system is either a "community water system" or a "non-community water system."

Q. Terms beginning with the letter "Q".

(1) "Qualified firm" means a person, as defined in this section, qualified by the department under 20.5.122 NMAC to undertake corrective action.

(2) "Qualified tester" means an individual who has the training, testing equipment manufacturer's certifications, and experience to test spill and overflow prevention equipment, containment sumps, interstitial and sump sensors, automatic line leak detectors, cathodic protection systems, and to conduct precision tank and line tightness testing on any above ground or underground storage tank systems. Also, the individual meets the requirements for testers in 20.5.105 NMAC and has submitted the information required in 20.5.105 NMAC to the department.

R. Terms beginning with the letter "R".

(1) "RBSL" means risk-based screening level as used in 20.5.119 NMAC.

(2) "Receptor" means a person, plant or animal community, structure, utility, surface water, designated wellhead or source water protection area or water supply well that is or may be adversely affected by a release.

(3) "Red tag" means a tamper-resistant tag on a storage tank system's fill pipes that clearly identifies a storage tank system as ineligible for product delivery, deposit or acceptance. The tag shall be easily visible and state that it is unlawful to deliver to, deposit into, or accept product into, the ineligible storage tank system.

(4) "Regulated substance" means:

(a) for USTs: any substance defined in Section 101(14) of the federal Comprehensive Environmental Response, Compensation and Liability Act, but not including any substance regulated as a hazardous waste under Subtitle C of the federal Resource Conservation and Recovery Act, as amended; and

(b) for ASTs and USTs: petroleum, including crude oil or any fraction thereof which is liquid at standard conditions of temperature and pressure of 60 degrees fahrenheit and fourteen and seven-tenths pounds per square inch absolute; asphalt is not a regulated substance; the term "regulated substance" includes but is not limited to petroleum and petroleum-based substances comprised of a complex blend of hydrocarbons derived from crude oil through processes of separation, conversion,

upgrading and finishing, such as motor fuels (including ethanol-based motor fuels), jet fuels, distillate fuel oils, residual fuel oils, lubricants, petroleum solvents, and used oils.

(5) "Release" means any spilling, leaking, emitting, discharging, escaping, leaching or disposing of a regulated substance from a storage tank system into groundwater, surface water or soil.

(6) "Release detection" means determining whether a release of a regulated substance has occurred from a storage tank system into the environment or a leak has occurred into the interstitial area between a storage tank system and a secondary barrier around it.

(7) "Remediation" is the process of reducing the concentration of contaminants in air, water or soil to a level that poses an acceptable risk to public health, safety and welfare and the environment.

(8) "Repair" means to restore to proper operating condition any defective or damaged part of a storage tank system. Repair does not include normal maintenance. For these purposes, normal maintenance shall include but is not limited to: painting, replacing fuses, or touchup. Any time an activity involves disconnecting or affecting the integrity of the piping, tank, spill or overfill systems, or work on line or tank leak detection systems, then the activity is not normal maintenance and is a repair.

(9) "Replace" or "replaced" means:

(a) for a storage tank or dispenser system, to remove an existing tank or dispenser system and install a new tank or dispenser; and

(b) for piping, to remove either 20 feet or more or fifty percent or more of piping, whichever is less, and install other piping, excluding flex connectors and other transitional components, connected to a single tank. For tanks with multiple piping runs, this definition applies independently to each piping run.

(10) "Residential tank" is a tank located on property used primarily for dwelling purposes.

(11) "Responsible party-lead site" means a site where the owner or operator takes corrective action and applies to the fund for payment of corrective action costs, as distinct from a site where the state takes corrective action.

(12) "Return to service" means to bring a storage tank into operation after the tank has been in temporary or permanent closure.

(13) "Risk-based screening level" (RBSL) means an action level or target level for a contaminant of concern determined using default criteria set by the department and

site-specific data for thickness of the contaminated zone and depth to groundwater in accordance with 20.5.119 NMAC.

(14) "Rural and remote area" means that a storage tank facility is located in an area that is more than 20 miles from another facility that sells fuel to the public and that is open year-round.

S. Terms beginning with the letter "S."

(1) "Secondary containment" or "secondarily contained" means:

(a) for USTs and ASTs: a release prevention and release detection system for a storage tank, its piping and associated ancillary equipment that is designed to prevent a release from migrating beyond the secondary containment system outer wall (in the case of a double-walled tank system) or excavation area (in the case of a liner or vault system) before the release can be detected. Such a system may include, but is not limited to, synthetic impervious liners. This term includes containment sumps when used for interstitial monitoring of piping.

(b) For USTs: a release prevention and release detection system for a tank or piping. This system has an inner and outer barrier with an interstitial space that is monitored for leaks.

(2) "Secretary" means the secretary of the New Mexico environment department also known as the secretary of the environment.

(3) "Septic tank" is a water-tight covered receptacle designed to receive or process, through liquid separation or biological digestion, the sewage discharged from a building sewer. The effluent from such receptacle is distributed for disposal through the soil and settled solids and scum from the tank are pumped out periodically and hauled to a treatment facility.

(4) "Siphon system" means two or more storage tanks where the tops of the tanks are installed at the same level, the fuel levels equalize by atmospheric pressure, and the piping connecting them is installed through penetrations on the tops of the tanks.

(5) "Site" means a place where there is or was at a previous time one or more storage tanks and may include areas contiguous to the actual location or previous location of the tanks.

(6) "Site conceptual exposure scenario" means a qualitative evaluation of exposure information for a site that identifies the relevant contaminant source, release mechanisms, media of concern, complete and incomplete exposure pathways, and receptors.

(7) "Site-specific target level" (SSTL) means an action level or target level for a contaminant of concern determined using more site-specific data as used in 20.5.119 NMAC.

(8) "Source water" means water that could be used for domestic purposes, including but not limited to ground water, natural springs, and surface water, even if such water is not currently being used for domestic purposes.

(9) "Special enclosure" means an above or below grade AST installation that surrounds an AST or ASTs, including but not limited to pits, cellars, and basements.

(10) "Spill" means:

(a) any spill or overflow of a regulated substance that exceeds its reportable quantity under 40 CFR 302 in accordance with CERCLA;

(b) any spill or overflow of petroleum that exceeds 25 gallons or causes a sheen on surface water or reaches groundwater; or

(c) any spill or overflow of petroleum of 25 gallons or less, the cleanup of which cannot be accomplished within 24 hours.

(11) "SSTL" means site-specific target level as used in 20.5.119 NMAC.

(12) "State-lead site" means a site where the department takes corrective action using the fund because the owners and operators are unknown, unable or unwilling to take corrective action as described in 20.5.121.2102 NMAC or because the department determines that a single entity is necessary to lead the corrective action.

(13) "Storage tank" means any above ground storage tank or underground storage tank.

(14) "Storage tank fee" means fees required by Section 74-4-4.4 NMSA 1978 and Section 74-6B-9 NMSA 1978.

(15) "Storage tank system" means a storage tank and its associated ancillary equipment and containment system, if any.

(16) "Storm water or wastewater collection system" means piping, pumps, conduits, and any other equipment necessary to collect and transport the flow of surface water run-off resulting from precipitation or domestic, commercial, or industrial wastewater to and from retention areas or any areas where treatment is designated to occur.

(17) "Substantial business relationship" means the extent of a business relationship necessary under applicable state law to make a guarantee contract issued

incident to that relationship valid and enforceable. A guarantee contract is issued "incident to that relationship" if it arises from and depends on existing economic transactions between the guarantor and the owner or operator.

(18) "Substantial governmental relationship" means the extent of a governmental relationship necessary under applicable state law to make an added guarantee contract issued incident to that relationship valid and enforceable. A guarantee contract is issued "incident to that relationship" if it arises from a clear commonality of interest in the event of a storage tank release such as coterminous boundaries, overlapping constituencies, common groundwater aquifer, or other relationship other than monetary compensation that provides a motivation for the guarantor to provide a guarantee.

(19) "Sump" means any pit or reservoir that meets the definition of tank (including troughs or trenches connected to it that serves to temporarily collect regulated substances.

(20) "Surface impoundment" is a natural topographic depression, man-made excavation, or diked area formed primarily of earthen materials (although it may be lined with man-made materials) that is designed to hold an accumulation of regulated substances and that is not an injection well.

T. Terms beginning with the letter "T".

(1) "Tangible net worth" means the tangible assets that remain after deducting liabilities; such assets do not include intangibles such as goodwill and rights to patents or royalties. For purposes of this definition, "assets" means all existing and all probable future economic benefits obtained or controlled by a particular entity as a result of past transactions.

(2) "Tank" is a stationary device designed to contain an accumulation of regulated substances which is constructed of non-earthen materials (e.g., concrete, steel, plastic) that provide structural support.

(3) "Tank chart" means a table that converts the number of inches of liquid in the tank into the number of gallons.

(4) "Target concentrations" means any concentration of a contaminant to which a medium is required to be remediated under any provision of 20.5 NMAC protective of human health, safety and welfare, and the environment. For purposes of 20.5.120 NMAC, target concentrations as they apply to soil contamination shall be based on standards prescribed by applicable law or, if there are no applicable standards, the standard set forth in 20.6.3.10 NMAC.

(5) "Temporary closure" is the state of a storage tank system that is not receiving deliveries, has no regulated substance being transmitted through its piping,

and whose owner or operator has notified the department that it is in temporary closure. Temporary closure shall not exceed 12 months unless the owner or operator receives an extension from the department and meets the requirements of 20.5.115 NMAC.

(6) "Termination" under Subsections A and B of 20.5.117.1757 NMAC means only those changes that could result in a gap in coverage as where the insured has not obtained substitute coverage or has obtained substitute coverage with a different retroactive date than the retroactive date of the original policy.

(7) "Tester" means an individual who has the training, testing equipment manufacturer's certifications, and experience to test spill and overfill prevention equipment, containment sumps, interstitial and sump sensors, automatic line leak detectors, cathodic protection systems, and to conduct precision tank and line tightness testing on any above ground or underground storage tank systems.

(8) "Third party" means an independent entity that is not affiliated with the owner and operator of a storage tank system.

(9) "Third party certified" means a process whereby release detection equipment or a method of release detection has been evaluated by an independent third-party testing laboratory which has published a report stating the equipment or method meets the claims made by the manufacturer.

(10) "Tightness testing" means a procedure for testing the ability of a storage tank system to prevent an inadvertent release of any stored substance into the environment (or, in the case of an UST system, intrusion of groundwater into a storage tank system).

(11) "Training program" means any program that meets the requirements of 20.5.104 NMAC and provides information to and evaluates the knowledge of a class A, class B, or class C operator through testing, practical demonstration, or another approach acceptable to the department regarding requirements for storage tank systems.

(12) "Trap door" means a device installed on the fill riser above the connection of remote fill line on a UST system that is designed to prevent a regulated substance from escaping the fill riser in the event of an overfill, and it allows for the manual gauging of the tank through this riser.

U. Terms beginning with the letter "U".

(1) "Under-dispenser containment" or "UDC" means containment underneath a dispenser system designed to prevent leaks from the dispenser and piping within or above the UDC from reaching soil or groundwater.

(2) "Underground area" means an underground room, such as a basement, cellar, shaft or vault, providing enough space for physical inspection of the exterior of the tank situated on or above the surface of the floor.

(3) "Underground release" means any below ground release.

(4) "Underground storage tank" or "UST" means a single tank or combination of tanks, including pipes connected thereto, that are used to contain an accumulation of regulated substances and the volume of which, including the volume of the underground pipes connected thereto, is ten percent or more beneath the surface of the ground. A compartment tank with combined total capacity greater than 110 gallons is a UST and for purposes of these regulations is considered to be one tank regardless of the number of compartments and the number of regulated substances contained. The term does not include any:

(a) farm, ranch or residential tank of 1,100 gallons or less capacity used for storing motor fuel for noncommercial purposes;

(b) septic tank;

(c) pipeline facility, including gathering lines which are regulated under the federal Natural Gas Pipeline Safety Act of 1968, 49 U.S.C. App. 1671, et seq., or the federal Hazardous Liquid Pipeline Safety Act of 1979, 49 U.S.C. App. 2001, et seq., or which is an intrastate pipeline facility regulated under state laws comparable to either act;

(d) surface impoundment, pit, pond or lagoon;

(e) storm water or wastewater collection system;

(f) flow-through process tank;

(g) liquid traps or associated gathering lines directly related to oil or gas production and gathering operations;

(h) storage tank situated in an underground area, such as a basement, cellar, mineworking, drift, shaft or tunnel, if the storage tank is situated upon or above the surface of the undesignated floor;

(i) tank used for storing heating oil for consumptive use on the premises where stored;

(j) tank exempted by rule of the EIB after finding that the type of tank is adequately regulated under another federal or state law; or

(k) pipes connected to any tank exempted by Subparagraphs (a) through (j) of this paragraph.

(5) "Un-manned facility" means a storage tank system without a sales office, store or other business establishment associated with it. Examples of un-manned facilities include, but are not limited to, a card-lock fueling station with no attendant and a tank serving an emergency generator at a utility transfer station.

(6) "Unsaturated zone" is the subsurface zone containing water under pressure less than that of the atmosphere, including water held by capillary forces within the soil and containing air or gases generally under atmospheric pressure. This zone is limited above by the ground surface and below by the upper surface of the zone of saturation (i.e., the water table).

(7) "Upgrade" means the addition, modification, or retrofit of some systems such as but not limited to cathodic protection, lining, or spill and overflow controls to improve the ability of an underground storage tank system to prevent the release of product.

(8) "USTR" means the version of the environmental improvement board's underground storage tank regulations in effect prior to adoption of the standard format in the New Mexico Administrative Code in 1995.

(9) "UST system" means an underground storage tank and its associated ancillary equipment and containment system, if any.

V. Terms beginning with the letter "V."

(1) "Vault" means a liquid-tight structure that completely surrounds a tank that is above, below or partially above or below the ground surface.

W. Terms beginning with the letter "W."

(1) "Wastewater treatment tank" means a tank that is designed to receive and treat an influent of wastewater through physical, chemical, or biological methods.

(2) "Workplan" means a written plan for corrective action, including, but not limited to, a scope of work, schedule for implementation, and description of qualifications of persons who will perform the work.

(3) "WQCC" means the New Mexico water quality control commission.

(4) "WQCC standards" means standards set forth in 20.6.4 NMAC, standards for interstate and intrastate streams, and 20.6.2 NMAC, ground and surface water protection.

X. Terms beginning with the letter "X." **[RESERVED]**

Y. Terms beginning with the letter "Y." **[RESERVED]**

Z. Terms beginning with the letter "Z." **[RESERVED]**

[20.5.101.7 NMAC - N, 07/24/2018]

20.5.101.8-20.5.101.99 [RESERVED]

20.5.101.100 SAVINGS CLAUSE:

This rule shall not affect any administrative or judicial enforcement action pending on the effective date of 20.5.101 through 20.5.125 NMAC.

[20.5.101.100 NMAC - N, 07/24/2018]

20.5.101.101 COMPLIANCE WITH OTHER REGULATIONS:

Compliance with 20.5 NMAC does not relieve a person of the obligation to comply with other applicable state and federal regulations.

[20.5.101.101 NMAC - N, 07/24/2018]

20.5.101.102 CONSTRUCTION:

The petroleum storage tank regulations, 20.5 NMAC, shall be liberally construed to effectuate the purposes of the Hazardous Waste Act and the Ground Water Protection Act.

[20.5.101.102 NMAC - N, 07/24/2018]

20.5.101.103 SEVERABILITY:

If any part, section or application of 20.5 NMAC is held invalid, the remainder, or its application to other situations or persons, shall not be affected.

[20.5.101.103 NMAC - N, 07/24/2018]

PART 102: REGISTRATION OF TANKS

20.5.102.1 ISSUING AGENCY:

New Mexico Environmental Improvement Board.

[20.5.102.1 NMAC - N, 07/24/2018]

20.5.102.2 SCOPE:

This part applies to any owner and operator of a storage tank as provided in 20.5.101 NMAC. This part also applies to owners and operators of AST systems with capacities of 55,000 gallons or more associated with airport hydrant fuel distribution systems and owners and operators of AST systems with capacities of 55,000 gallons or more associated with UST systems with field-constructed tanks as these terms are defined in 20.5.101 NMAC. If the owner and operator of a storage tank are separate persons, only one person is required to comply with the requirements of this part, including any notice, reporting and payment requirements; however, both parties are liable in the event of noncompliance.

[20.5.102.2 NMAC - N, 07/24/2018]

20.5.102.3 STATUTORY AUTHORITY:

This part is promulgated pursuant to the provisions of the Hazardous Waste Act, Sections 74-4-1 through 74-4-14 NMSA 1978; and the general provisions of the Environmental Improvement Act, Sections 74-1-1 through 74-1-17 NMSA 1978.

[20.5.102.3 NMAC - N, 07/24/2018]

20.5.102.4 DURATION:

Permanent.

[20.5.102.4 NMAC - N, 07/24/2018]

20.5.102.5 EFFECTIVE DATE:

July 24, 2018, unless a later date is indicated in the bracketed history note at the end of a section.

[20.5.102.5 NMAC - N, 07/24/2018]

20.5.102.6 OBJECTIVE:

The purpose of this part is to regulate storage tank systems in order to protect the public health, safety and welfare and the environment of the state.

[20.5.102.6 NMAC - N, 07/24/2018]

20.5.102.7 DEFINITIONS:

The definitions in 20.5.101 NMAC apply to this part.

[20.5.102.7 NMAC - N, 07/24/2018]

20.5.102.8 TO 20.5.102.199 [RESERVED]

20.5.102.200 EXISTING TANKS:

A. The owner of any underground storage tank, as those terms are defined in 20.5.101 NMAC, must have registered such tank or tanks with the petroleum storage tank bureau of the department within three months after April 14, 1988, the effective date of this part as first adopted, except that any owner who has filed the form of notice entitled "notification for underground storage tanks," prescribed by the United States environmental protection agency and described in 40 CFR 280 Appendix I (EPA form 7530-1), is not required to register a tank for which a notice has been filed, provided that the information as stated therein is still current.

B. The owner of any above ground storage tank, as those terms are defined in 20.5.101 NMAC, must have registered such tank or tanks with the petroleum storage tank bureau of the department no later than June 14, 2002.

C. The owner of any storage tank emergency generator system must have registered such tank with the petroleum storage tank bureau of the department no later than June 15, 2012.

D. Registration becomes effective upon receipt of the first year's annual fee described in 20.5.103 NMAC. Registration shall be renewed annually by payment of the annual fee until the permanent closure of the tank pursuant to 20.5.115 NMAC.

E. If owners and operators do not have a current and valid registration certificate because of the failure to pay tank fees in accordance with 20.5.102.207 NMAC, the storage tank system shall not be operated and owners and operators shall comply with the temporary closure requirements of 20.5.115 NMAC or shall immediately permanently close the storage tank system in accordance with 20.5.115.1502 NMAC.

[20.5.102.200 NMAC - N, 07/24/2018]

20.5.102.201 TRANSFER OF OWNERSHIP:

A. No purported transfer of any storage tank system shall be effective to create, alter or extinguish any right or responsibility of any person subject to this part, unless the following transfer requirements are met.

(1) Prior to any transfer of ownership, control or possession, whether by lease, conveyance or otherwise, of a property with a regulated storage tank system, the transferor shall notify the department and shall provide the name, address and phone number of the transferee, as well as the date and type of transfer (sale or lease, for example). The transferor shall also notify the transferee, prior to the transfer, of the

existence of the storage tank system, of the transferee's registration obligations under this part, and of these rules.

(2) Upon receipt of such notification, the transferee shall re-register the tank with the department within 30 days of transfer of ownership, and shall provide all information required for registration in 20.5.102.206 NMAC. The transferee also shall have the duty to inquire into all of the provisions and requirements of this part.

(3) A transferor shall pay the tank fees for storage tank systems on the transferred property for the fiscal year of the transfer. A transferee shall pay the tank fees for storage tank systems on the transferred property starting the first July 1 after the transfer.

B. Nothing in this section or in this part shall be construed to relieve any person of responsibility or liability for any act or omission which occurred while that person owned, controlled or was in possession of the storage tank system.

[20.5.102.201 NMAC - N, 07/24/2018]

20.5.102.202 NEW STORAGE TANK SYSTEMS:

The owner shall notify the department in writing at least 30 days before any new above ground or underground storage tank system is installed, and shall register any new tank or storage tank system with the department within 60 days of placing a regulated substance in the tank, unless the owner applies for an extension in writing and an extension is granted in writing by the department. Annual registration certificates required for operation will be issued in accordance with 20.5.102.207 NMAC.

[20.5.102.202 NMAC - N, 07/24/2018]

20.5.102.203 SUBSTANTIALLY MODIFIED STORAGE TANK SYSTEMS:

Except as provided in 20.5.102.205 NMAC below, when an existing storage tank system is substantially modified or replaced, the owner shall notify the department in writing of such modification or replacement, at least 30 days prior to the modification or replacement. Emergency repairs or replacements made pursuant to 20.5.102.205 NMAC are exempt from the notification requirements of this section.

[20.5.102.203 NMAC - N, 07/24/2018]

20.5.102.204 NOTIFICATION OF SPILL OR RELEASE:

Notice of any known or suspected release from a storage tank system, any spill or any other emergency situation shall be given to the department in accordance with 20.5.118 NMAC.

[20.5.102.204 NMAC - N, 07/24/2018]

20.5.102.205 EMERGENCY REPAIRS AND TANK REPLACEMENT:

The owner or operator may make immediate repairs or replacement of a storage tank system in the event an emergency situation presents a threat to the public health, provided the owner or operator gives notice to the department as set forth in 20.5.102.204 NMAC and complies with the requirements of 20.5.107 NMAC for UST systems and 20.5.110 NMAC for AST systems.

[20.5.102.205 NMAC - N, 07/24/2018]

20.5.102.206 REGISTRATION:

A. Required information. An owner or operator shall register all storage tanks unless EPA form 7530-1 entitled "notification for underground storage tanks" has been submitted to the department and all information contained thereon is still accurate. The registration shall contain at a minimum the following for each location with tanks:

- (1) facility name and address, including county, zip code and telephone number, and whether the tanks are located on Indian lands;
- (2) the department issued owner ID number and facility ID number for existing facilities;
- (3) whether the facility is currently listed as a leaking petroleum storage tank site;
- (4) storage tank system owner's name and address, including county, zip code and telephone number;
- (5) property owner's name and address, including county, zip code and telephone number;
- (6) storage tank system operator's name and address, including county, zip code and telephone number (if operator is different from owner);
- (7) facility contact person, job title and phone number;
- (8) type of facility: government (federal, state, county, municipality or other); individual; retail or non-retail (petroleum producer, petroleum refiner, school district, construction company, manufacturer);
- (9) whether a suspected or confirmed release as described in 20.5.118 NMAC has been reported at the facility to the bureau;

(10) type of tank (list all that apply): AST, UST, steel double-wall, steel with cathodic protection, horizontal, vertical, compartment, with secondary containment, convault, field erected, shop built, vaulted, fiberglass, fiberglass double wall;

(11) for each tank, (list all that apply): type of internal protection (cathodic protection, interior lining or other), type of external protection (asphalted, painted, epoxy coated, fiberglass reinforced plastic, cathodically protected or other), and type of corrosion protection (impressed current, sacrificial anode, internal lining or other);

(12) type of piping (list all that apply): bare or galvanized steel, coated steel, fiberglass reinforced plastic, pressurized, suction, cathodically protected or unknown;

(13) products stored (list all that apply): diesel, unleaded or leaded gasoline, alcohol-enriched gasoline, used oil, lubricating oil, heating oil, kerosene, aviation gas, jet fuel, hazardous substance, other or unknown;

(14) use of tank (list all that apply): bulk fuel storage, retail fuel sales, aviation, fleet fuel supply, emergency generator, on-site heating, other (please specify);

(15) method of release detection for each tank: visual inspection, tank tightness testing with inventory control, automatic tank gauging, vapor monitoring, groundwater monitoring, interstitial monitoring, statistical inventory reconciliation, secondary containment or other (please specify);

(16) method of release detection for piping: visual inspection, secondary containment, vapor monitoring, interstitial monitoring, automatic line leak detectors, line tightness testing or other (please specify);

(17) installation date of each tank;

(18) status of each tank (list all that apply): new installation, upgraded or modified, currently in service or out of service less than 12 months, change in service and for tanks out of use: estimated date last used, estimated quantity of substance remaining in tank in gallons, date tank filled with solid material (if applicable), and date tank removed (if applicable);

(19) certifications required in 20.5.106 NMAC, 20.5.107 NMAC, 20.5.109 NMAC, 20.5.110 NMAC, and 20.5.105 NMAC;

(20) whether any part of the storage tank system is within 1,000 feet of any water supply well;

(21) a description of the method and provider of financial responsibility meeting the requirements of 20.5.117 NMAC;

(22) a description of the spill and overfill prevention systems for each tank (product level sensor/alarm, automatic tank fill shut-off and type, spill catchment basin, less than 25 gallons at a time transferred to tank, none, or other); and

(23) the name of the class A or B operator, if available. If the name of the class A or B operator is not available at the time of registration, this information shall be provided within 60 days of placing the storage tank system in service.

B. Signature required. A registration submitted by a corporation shall be signed by a principal executive officer of at least the level of vice president or a duly authorized agent of the corporation with authority to represent the corporation in these matters. A registration submitted by a partnership or a sole proprietorship shall be signed by a general partner or proprietor. A registration submitted by a municipal, state or other public facility shall be signed by either a principal executive officer, ranking elected official or other duly authorized employee.

C. Registrations shall be sent or delivered to the petroleum storage tank bureau.

[20.5.102.206 NMAC - N, 07/24/2018]

[The department provides an optional form that may be used for registration. The form is available on the Petroleum Storage Tank Bureau's pages on the department website or by contacting the Petroleum Storage Tank Bureau at 505-476-4397 or 2905 Rodeo Park Drive East, Building 1, Santa Fe, New Mexico 87505.]

20.5.102.207 REGISTRATION CERTIFICATE:

A. No person shall operate a storage tank system without a current and valid registration certificate.

(1) The operator of any storage tank system shall display a current and valid registration certificate on the premises of the storage tank system at all times.

(2) Upon submittal to the department of a complete registration application or EPA form 7530-1 and payment of the annual fee, the department shall issue an initial registration certificate. An initial registration certificate shall expire on the next succeeding June 30, regardless of its date of issuance.

(3) After issuance of the initial registration certificate, except as provided in Paragraph (5) of this subsection, the department shall issue a renewed registration certificate upon payment of the annual fee on or before July 1 of each year. A renewed registration certificate shall expire on June 30 of each year.

(4) After receiving a registration form for a transfer as provided in Paragraph (2) of Subsection A of 20.5.102.201 NMAC, the department shall issue a registration

certificate within 30 days for the transferee if the annual fees for the current fiscal year have been paid as required in 20.5.102.201 NMAC.

(5) When fees, including late fees, for any of an owner's tanks are delinquent as of June 30 of any year, no registration certificate for any of that owner's tanks shall be renewed until:

(a) all past due annual fees and late fees for all of the owner's tanks have been paid; or

(b) the department and the owner or operator have agreed to a schedule for payment, provided any renewed certificate issued to an owner or operator who has agreed to such a schedule shall be valid only so long as the owner or operator continues to make payments in accordance with the payment schedule.

B. In the event any information provided on the registration form or EPA form 7530-1 changes or is no longer accurate, the owner or operator shall report the change within 30 days to the department.

[20.5.102.207 NMAC - N, 07/24/2018]

20.5.102.208 REQUIREMENT FOR A CORRECT MAILING ADDRESS:

All registration forms, inspection reports, correspondence, or other documents sent by owners or operators to the department shall include the correct mailing address of the owner or operator, and the owner and operator shall advise the department, in writing, within seven days of any change in mailing address.

[20.5.102.208 NMAC - N, 07/24/2018]

PART 103: ANNUAL FEE

20.5.103.1 ISSUING AGENCY:

New Mexico Environmental Improvement Board.

[20.5.103.1 NMAC - N, 07/24/2018]

20.5.103.2 SCOPE:

This part applies to any owner and operator of a storage tank as provided in 20.5.101 NMAC. If the owner and operator of a storage tank are separate persons, only one person is required to comply with the requirement of this part, including any notice, reporting and payment requirements; however, both parties are liable in the event of noncompliance.

[20.5.103.2 NMAC - N, 07/24/2018]

20.5.103.3 STATUTORY AUTHORITY:

This part is promulgated pursuant to the provisions of the Hazardous Waste Act, Sections 74-4-1 through 74-4-14 NMSA 1978; provisions of the Ground Water Protection Act, 74-6B-1 through 74-6B-14 NMSA 1978; and the general provisions of the Environmental Improvement Act, Sections 74-1-1 through 74-1-16 NMSA 1978.

[20.5.103.3 NMAC - N, 07/24/2018]

20.5.103.4 DURATION:

Permanent.

[20.5.103.4 NMAC - N, 07/24/2018]

20.5.103.5 EFFECTIVE DATE:

July 24, 2018, unless a later date is indicated in the bracketed history note at the end of a section.

[20.5.103.5 NMAC - N, 07/24/2018]

20.5.103.6 OBJECTIVE:

The purpose of this part is to regulate storage tank systems in order to protect the public health, safety and welfare and the environment of the state, and to interpret, implement and enforce the provisions of the Hazardous Waste Act relating to storage tank systems.

[20.5.103.6 NMAC - N, 07/24/2018]

20.5.103.7 DEFINITIONS:

The definitions in 20.5.101 NMAC apply to this part.

[20.5.103.7 NMAC - N, 07/24/2018]

20.5.103.8-20.5.103.299 [RESERVED]

20.5.103.300 PAYMENT OF FEE:

A. The owner or operator shall pay an annual per tank fee to the department on July 1 for each current fiscal year (July 1 through June 30) or portion of a year that a tank is in use. A storage tank shall be deemed "in use" until notice is received by the

department that the storage tank has been permanently closed in a manner acceptable to the department.

B. Schedule for payment.

(1) For USTs, the owner or operator shall pay the annual fee:

(a) for a UST in use on June 1, 1988, for calendar year 1988, the fee was due on June 1, 1988;

(b) for the period from January 1, 1989 through June 30, 1990, the fee was due on May 1, 1989;

(c) for each subsequent fiscal year (July 1 to June 30) on the July 1 that is the first day of each fiscal year;

(d) for a new UST, within 60 days after a regulated substance has been placed in the UST.

(2) For ASTs, the owner or operator shall pay the annual fee:

(a) for an AST in use on July 1, 2002, for fiscal year 2003, the fee was due on September 14, 2002; or within 30 days after the AST was placed in use for any AST installed after September 14, 2002;

(b) for each subsequent fiscal year (July 1 to June 30) on the July 1 that is the first day of each fiscal year;

(c) for a new AST, within 60 days after a regulated substance has been placed in the AST.

C. The department shall waive the annual tank fee for the current fiscal year for a storage tank system permanently closed in accordance with 20.5.115 NMAC on or before July 31.

D. When there is a transfer of ownership, control or possession, whether by lease, conveyance or otherwise, of a property with a registered storage tank system, the transferor shall pay the tank fees for storage tank systems on the transferred property for the fiscal year of the transfer. The transferee shall pay the tank fees for storage tank systems on the transferred property starting the first July 1 after any transfer. In addition, both parties shall comply with 20.5.102.201 NMAC.

[20.5.103.300 NMAC - N, 07/24/2018]

20.5.103.301 AMOUNT OF FEE:

A. The annual fee for all underground storage tanks shall be:

(1) \$28.00 per UST in calendar year 1988;

(2) \$75.00 per UST in calendar year 1989; and

(3) for subsequent years, \$100 per UST as established by Section 74-6B-9 NMSA 1978 and Section 74-4-4.4 NMSA 1978.

B. The annual fee for all above ground storage tanks shall be \$100 per AST as established by Section 74-6B-9 NMSA 1978 and Section 74-4-4.4 NMSA 1978, beginning July 1, 2002.

[20.5.103.301 NMAC - N, 07/24/2018]

20.5.103.302 TIMELINESS AND LATE FEES:

A. Due date. A tank owner and operator become liable for a fee as soon as the event generating the fee occurs, such as a due date. The fact that the owner has not registered a tank is not material to the owner's and operator's liability for payment of a fee.

B. Late fee. In the event the annual fee is not paid when due, the department shall impose a late fee of \$25.00 or twenty-five percent of the unpaid balance, whichever is greater, which shall accumulate on the entire unpaid balance until all annual fees and all accrued late fees are paid. The department may waive the late fees if payment is made within 15 days of the due date.

C. Determination of timeliness.

(1) Fees and late fees are timely if the postmark on the envelope made by the United States postal service bears the date on or before the date the payment is due. The date affixed on an envelope by a postage meter stamp will be considered the postmark date if it is not superseded by a postmark made by the United States postal service.

(2) Illegible postmark. If the postmark on the envelope is not legible and the department receives the contents by the second business day following the due date, the payment will be deemed timely. If the department receives the contents after the second business day following the due date, the owner or operator who is liable for the fees has the burden of proving the time when the postmark was made.

(3) If an envelope is improperly addressed and is returned to the sender by the post office, there has been no timely mailing within the meaning of these rules. The postmark date on the improperly addressed envelope will not be deemed the date of receipt by the department.

(4) If the payment is sent or delivered to the department by any means other than by mailing with the United States postal service, it must be received by the department on or before the payment due date. Received by the department means received at the department or bureau during the department's normal business hours.

D. Saturday, Sunday or holiday due date.

(1) If a payment due date falls on a Saturday, Sunday or a state of New Mexico or national holiday, the payment shall be considered timely if postmarked on the next succeeding day which is not a Saturday, Sunday or state or national holiday.

(2) Example: The due date for payment of annual fees is July 1. If July 1 is a Saturday, the due date for payment of annual fees is Monday July 3. In this example, the department will consider any payment postmarked on July 3 to be timely.

[20.5.103.302 NMAC - N, 07/24/2018]

20.5.103.303 DESIGNATION OF FEES:

All fees described in this part shall be deposited in the storage tank fund.

[20.5.103.303 NMAC - N, 07/24/2018]

PART 104: OPERATOR TRAINING

20.5.104.1 ISSUING AGENCY:

New Mexico Environmental Improvement Board.

[20.5.104.1 NMAC - N, 07/24/2018]

20.5.104.2 SCOPE:

This part applies to owners and operators of storage tanks as provided in 20.5.101 NMAC. If the owner and operator of a storage tank are separate persons, only one person is required to comply with the requirement of this part, including any notice, reporting, designation of certified operators, and payment requirements; however, both parties are liable in the event of noncompliance.

[20.5.104.2 NMAC - N, 07/24/2018]

20.5.104.3 STATUTORY AUTHORITY:

This part is promulgated pursuant to the provisions of the Hazardous Waste Act, Sections 74-4-1 through 74-4-14 NMSA 1978; the Ground Water Protection Act,

Sections 74-6B-1 through 74-6B-14 NMSA 1978; and the general provisions of the Environmental Improvement Act, Sections 74-1-1 through 74-1-17 NMSA 1978.

[20.5.104.3 NMAC - N, 07/24/2018]

20.5.104.4 DURATION:

Permanent.

[20.5.104.4 NMAC - N, 07/24/2018]

20.5.104.5 EFFECTIVE DATE:

July 24, 2018, unless a later date is indicated in the bracketed history note at the end of a section.

[20.5.104.5 NMAC - N, 07/24/2018]

20.5.104.6 OBJECTIVE:

The purpose of this part is to ensure that operators of regulated storage tanks are effectively trained to manage and prevent environmental and public health emergencies and other situations requiring on-site response, in order to protect public health, safety and welfare and the environment of the state.

[20.5.104.6 NMAC - N, 07/24/2018]

20.5.104.7 DEFINITIONS:

The definitions in 20.5.101 NMAC apply to this part. The terms operator and certified operator as used in this part are different terms, as defined in 20.5.101.7 NMAC.

[20.5.104.7 NMAC - N, 07/24/2018]

20.5.104.8-20.5.104.399 [RESERVED]

20.5.104.400 CLASSES OF OPERATORS:

There shall be three classes of operators identified as class A, class B, and class C.

A. Designation. Owners and operators shall identify and designate, for each storage tank system or group of storage tank systems at a facility, at least one named individual for each class of operator and provide the department the name(s) and certificate number(s) of the designated class A and B operator in writing within 30 days of a change in the designated operator.

(1) Owners and operators may designate different individuals for each class of operator, or one individual for more than one of the operator classes.

(2) Any individual designated for more than one operator class shall be trained and certified for each class of operator.

B. Training. All individuals designated as a class A, B or C operator shall, at a minimum, be trained and certified according to these regulations by the applicable deadlines in this part. Class A and B operators shall receive department approved training that applies to both AST systems and UST systems.

[20.5.104.400 NMAC - N, 07/24/2018]

20.5.104.401 CLASS A OPERATOR:

A class A operator has primary responsibility to operate and maintain the storage tank system. The class A operator's responsibilities include managing resources and personnel, such as establishing work assignments, to achieve and maintain compliance with regulatory requirements.

A. General requirements. The class A operator focuses on the broader aspects of the statutory and regulatory requirements and standards necessary to operate and maintain the storage tank system (20.5 NMAC). For example, the class A operator ensures that appropriate individuals:

- (1) properly operate and maintain the storage tank system;
- (2) maintain appropriate records;
- (3) are trained to operate and maintain the storage tank system and keep records;
- (4) properly respond to emergencies caused by releases or spills from storage tank systems at the facility; and
- (5) make financial responsibility documents available to the department as required.

B. Minimum training requirements. At a minimum, the class A operator shall be trained in:

- (1) a general knowledge of storage tank system requirements so he can make informed decisions regarding compliance and ensure appropriate individuals are fulfilling operation, maintenance, and recordkeeping requirements and standards of 20.5 NMAC regarding:

- (a) spill prevention;
 - (b) overfill protection;
 - (c) release detection;
 - (d) corrosion protection;
 - (e) emergency response; and
 - (f) product compatibility;
- (2) financial responsibility documentation requirements;
 - (3) notification requirements;
 - (4) release and suspected release reporting requirements;
 - (5) temporary and permanent closure requirements; and
 - (6) operator training requirements.

[20.5.104.401 NMAC - N, 07/24/2018]

20.5.104.402 CLASS B OPERATOR:

A class B operator implements applicable storage tank regulatory requirements and standards (20.5 NMAC) in the field. This individual implements the day-to-day aspects of operating, maintaining, and recordkeeping for storage tanks at one or more facilities.

A. General requirements. The class B operator monitors, maintains and ensures:

- (1) release detection method, recordkeeping and reporting requirements are met;
- (2) release prevention equipment, recordkeeping and reporting requirements are met;
- (3) all relevant equipment complies with performance standards; and
- (4) appropriate individuals are trained to properly respond to emergencies caused by releases or spills from storage tank systems at the facility.

B. Minimum training requirements. Compared with training for the class A operator, training for the class B operator shall provide a more in-depth understanding of

operation and maintenance aspects, but may cover a more narrow breadth of applicable regulatory requirements. At a minimum, class B operator training shall include:

- (1) components of storage tank systems;
- (2) materials of storage tank system components;
- (3) methods of release detection and release prevention applied to storage tank system components;
- (4) operation and maintenance requirements of 20.5 NMAC that apply to storage tank systems and include:
 - (a) spill prevention;
 - (b) overfill protection;
 - (c) release detection;
 - (d) corrosion protection;
 - (e) emergency response; and
 - (f) product compatibility;
- (5) reporting and recordkeeping requirements; and
- (6) class C operator training requirements.

[20.5.104.402 NMAC - N, 07/24/2018]

20.5.104.403 CLASS C OPERATOR:

A class C operator is an employee and is, generally, the first line of response to events indicating emergency conditions. This individual is responsible for responding to alarms or other indications of emergencies caused by spills or releases from storage tank systems. This individual notifies the class B or class A operator and appropriate emergency responders when necessary. Not all employees of a facility are necessarily class C operators.

A. General requirements. The class C operator:

- (1) controls or monitors the dispensing or sale of regulated substances; and
- (2) is responsible for initial response to alarms or releases.

B. Minimum training requirements. At a minimum, the class C operator shall be trained to take action in response to emergencies (such as situations posing an immediate danger or threat to the public or to the environment and that require immediate action) and alarms potentially caused by spills or releases from a storage tank system.

C. Training elements for class C.

(1) Trained class A or class B operators shall:

(a) provide training to class C operators on emergency response procedures and on contacts for alarms potentially caused by spills or releases;

(b) provide simple written instructions on these procedures and contacts; and

(c) post signage with these procedures and contacts in prominent areas of the storage tank facility that are easily visible to any person dispensing a regulated substance.

(2) For purposes of this subsection, emergency response procedures shall include but are not limited to:

(a) procedures for overfill protection during delivery of regulated substances;

(b) operation of the emergency shut off system and alarm response;

(c) release reporting; and

(d) any site-specific emergency procedures.

[20.5.104.403 NMAC - N, 07/24/2018]

20.5.104.404 TRAINING AND CERTIFICATION DEADLINES AND SCHEDULES:

A. Owners and operators of storage tank systems shall post at each facility owned a list of designated and certified class A and B operators and provide the department the name(s) and certificate number(s) of the designated class A and B operator(s) in writing within 30 days of a change in the designated operator.

B. When requested and at any inspection conducted by the department, owners and operators shall provide to the department a list of designated certified class A and B operators for each facility owned.

C. Owners shall maintain documentation identifying designated and certified class C operators, with proof of training, at each facility.

D. All designated certified class A, B and C operators shall be trained and possess a current certificate issued by a trainer approved pursuant to this part.

E. New operators shall be trained and certified within the following timeframes:

(1) Class A and class B operators shall be trained and certified within 60 days of assuming full operation and maintenance responsibilities of a storage tank system. Owners and operators in rural and remote areas of the state may apply in writing for a 60-day deferral of this requirement. To apply for this deferral, owners and operators must demonstrate to the department that they are located in a rural and remote area, as defined in 20.5.101.7 NMAC.

(2) Class C operators shall be trained before assuming responsibility for responding to emergencies and before dispensing a regulated substance.

F. Owners and operators shall provide the department the name(s) and certificate number(s) of the designated class A and B operator(s) within 30 days of when they assume full operation and maintenance responsibilities of a storage tank system.

[20.5.104.404 NMAC - N, 07/24/2018]

20.5.104.405 OPERATOR PRESENT:

Owners and operators shall ensure that every facility has either a class A, class B, or class C operator on-site whenever it is open for business and dispensing any regulated substance, except:

A. pursuant to Paragraph 1 of Subsection E of 20.5.104.404 NMAC;

B. at un-manned facilities, which shall conspicuously post signage required in Paragraph 1 of Subsection C of 20.5.104.403 NMAC, and shall either:

(1) be visited by a class A or B operator every week; or

(2) have a remote monitoring system that:

(a) meets the requirements for UST systems in 20.5.108 NMAC and for AST systems in 20.5.111 NMAC;

(b) will automatically shut off the delivery or transfer of regulated substances if a suspected release is detected; and

(c) is visited monthly by a class A or B operator;

C. at emergency generator systems, which shall comply with the requirements of Subsection B above, unless an owner or operator requests an alternate method and such request is approved by the department.

[20.5.104.405 NMAC - N, 07/24/2018]

20.5.104.406 RE-TRAINING AND RE-CERTIFICATION:

A. Class A and B operators shall be re-certified every five years, in the same manner as original training and certification required in this part. It is the responsibility of owners, operators and certified operators to track certification dates and expiration, and to ensure that a certified operator as required by this part is designated and on-site for every storage tank system by the deadlines in this part and as required in this part. Owners and operators shall provide the department with the certificate number and expiration date of their designated class A and B operators upon their certification.

B. In addition to the requirements of Subsection A, if the department finds that a storage tank system is out of compliance, the class A and class B operator shall be re-trained within 60 days unless they meet the requirements in Subsection C of this section. The class A and B operator may select training specific only to the area of non-compliance (if available) or attend a training program that includes all training elements required by this part. Owners and operators shall provide the department with verification of department approved re-training. At a minimum, a storage tank system is out of compliance for purposes of this section if the system is in violation of:

- (1) release detection requirements in 20.5 NMAC; or
- (2) release prevention requirements (spill, overfill, or corrosion prevention) requirements in 20.5 NMAC.

C. An owner may elect to certify class A and B operators annually for a storage tank system. Class A and B operators that are certified annually need not re-train as required in Subsection B of this section if the department finds the storage tank system is out of compliance. Owners and operators shall provide the department with the certificate number and expiration date of their designated class A and B operators upon their certification.**D.** No re-training or re-certification is required for class C operators. Class C operators must be trained and certified each time they are designated for a particular storage tank system.

E. Owners and operators of storage tank systems that have been placed in temporary closure in compliance with 20.5.115.1501 NMAC and have a designated trained class A or class B operator are exempt from re-training requirements unless one or both of the following conditions is present:

- (1) the storage tank contains greater than one inch of regulated substance; or

(2) the storage tank system has steel components that are in contact with soil, water or concrete.

[20.5.104.406 NMAC - N, 07/24/2018]

20.5.104.407 DEFERRAL OF RE-TRAINING:

A. An owner or operator that is a certified operator may apply in writing to the department for a one-time five-year deferral of re-training required in 20.5.104.406 NMAC if he can demonstrate the following:

(1) he owns no more than two facilities;

(2) no significant changes, modifications or upgrades to either of the facilities have been made during the five-year period immediately preceding the deferral application, including changes to spill prevention equipment, overfill protection equipment, leak detection equipment or corrosion protection equipment;

(3) the average monthly throughput at each facility is less than 20,000 gallons over the last 12 months; and

(4) the facility has not been out of compliance as defined in 20.5.104.406 NMAC during the five-year period immediately preceding the deferral application.

B. The department shall promptly evaluate applications for deferral of re-training, and shall respond in writing within 60 days of receipt whether the application is granted, denied, or whether more information is needed. The department shall not unreasonably withhold approval if the applicant meets all requirements of Subsection A of this section. It is the responsibility of owners and operators to timely apply for deferrals of re-training so that they may be processed and evaluated well before the expiration of operator certification.

C. The department shall place facilities where the owner or operator has received a deferral of re-training on a priority list for technical assistance and inspection.

D. Owners and operators that receive a deferral of re-training shall complete re-training as required in 20.5.104.406 NMAC within five years after the deferral is granted. In other words, if approved, these owners and operators shall re-certify class A and B operators after 10 years.

[20.5.104.407 NMAC - N, 07/24/2018]

[The department provides an optional form for application for deferral of re-training, available on the Petroleum Storage Tank Bureau's pages on the department website or by calling the department at 505-476-4397 or by writing to the Petroleum Storage Tank

Bureau at 2905 Rodeo Park Drive East, Building 1, Santa Fe, New Mexico 87505. Owners should submit applications for deferral to the bureau.]

20.5.104.408 APPROVAL OF TRAINERS AND TRAINING:

A. Training elements. Training materials must be updated within 90 days of the effective date of the regulations. The following topics shall be covered in approved training courses for class A and class B operators:

(1) general overview of department UST and AST program, to include emergency generator systems, airport hydrant systems, USTs with field-constructed tanks, hybrid storage tank systems, any other storage tank system regulated under 20.5 NMAC, and administrative requirements, including:

(a) registration forms and certificates, and process for filing and modifying them;

(b) notification process and general technical requirements for new installations, repairs, replacements and modifications;

(c) confirmed and suspected releases (including confirmation steps for suspected releases), monthly monitoring or release detection test failures, and other system failures that may indicate a release of regulated substance has or is occurring;

(d) annual tank fees and invoicing process;

(e) general requirements for maintaining and demonstrating financial responsibility;

(f) department process for inspections and technical assistance resources available, including written checklists required in 20.5.104.409 NMAC; and

(g) enforcement process for violations;

(2) general overview of other regulations pertaining to ASTs, USTs, and any other storage tank systems regulated under 20.5 NMAC, including but not limited to, fire codes, occupational health and safety, and any related industry practices pertaining to safety;

(3) spill prevention and overfill protection:

(a) rule requirements, including record keeping;

(b) equipment requirements;

(c) periodic inspection and testing requirements; and

(d) change in service;

(10) general requirements for tank installer and junior installer certification and tester requirements:

(a) rule requirements, including record keeping;

(b) when certified installers are required;

(c) qualification for testers; and

(d) how to find certified installers and verify certified status.

B. Training standards. In determining whether to approve any trainer or training, the department shall consider the following:

(1) whether the trainer is a third-party, in-house, educational institution or other;

(2) whether the trainer will offer training in multiple locations throughout the state, regionally or locally;

(3) how often the trainer will offer training;

(4) what fee (if any) the trainer will charge;

(5) whether the trainer will offer classes only to employee or in-house operators, to the general public, or to independent contract operators.

C. Training options may cover all or a portion of the required elements, and may include:

(1) live training sessions in a classroom setting or at a storage tank system;

(2) internet or computer training program; or

(3) any other equivalent training method approved by the department.

D. Application for approval of training class. Trainers shall apply to the department for approval of training classes. An application for approval of training class shall include at a minimum:

(1) name, address and contact information of the proposed trainer;

(2) detailed description of the proposed trainer's experience, education and qualifications to conduct training;

(3) agenda and materials to be used for the proposed class that shall include the elements required in this section;

(4) final tests or other proposed methods of evaluating attendee success;

(5) copies of proposed documentation to certify successful attendees as certified operators as required in 20.5.104.412 NMAC and to be used for the monthly and annual inspections required in 20.5.104.409 NMAC;

(6) the proposed fee schedule for the training class; and

(7) the proposed calendar for the proposed training classes that includes location and frequency.

E. Applications for approval of training classes shall only be accepted during the months of January and October.

F. The department shall evaluate applications for approval of training classes and provide a written approval, denial or request for additional information within the following timeframes:

(1) within 90 days of receipt of the original application;

(2) if the original application is denied and a second application is submitted, within 60 days of receipt of the second application; and

(3) if the second application is denied and a third application is submitted, within 60 days of receipt of the third application.

G. If the department has denied an application three times pursuant to Subsection F above, the applicant shall not re-submit an application for a period of one year from the date of receipt of the third denial.

H. The department may periodically audit or review any training class, and the trainer shall allow a maximum of two department employees to attend any training class on request without charge and without certification (except a reasonable charge for copying and materials). Upon an audit, the department may require the trainer to update or amend the training material.

I. The department may revoke approval of a training class if it determines that the trainer is not performing adequately or has misrepresented information about the content of the course material.

[20.5.104.408 NMAC - N, 07/24/2018]

[The department provides a form for application for approval of a training class, available on the petroleum storage tank bureau's pages on the department website or by calling the department at 505-476-4397 or by writing to the Petroleum Storage Tank Bureau at 2905 Rodeo Park Drive East, Building 1, Santa Fe, New Mexico 87505, Santa Fe, New Mexico. Owners shall submit applications for approval of the training to the bureau.]

20.5.104.409 RESPONSIBILITIES OF CERTIFIED OPERATORS:

A. A certified operator shall not represent himself or herself as certified unless the person has a current valid certificate from an approved trainer.

B. Monthly inspections. Each class A or class B operator shall perform a monthly inspection of each storage tank system for which he is designated, and shall record the results of each inspection on a checklist.

(1) At a minimum, monthly inspections shall be conducted and shall include an inspection of the following:

(a) release detection methods, including monitoring systems and all associated sensors, and whether they appropriately responded to all alarms and any conditions that might have indicated a release of regulated substance had occurred;

(b) integrity of spill prevention equipment (for cracks, holes, or bulges), and for the presence of regulated substance, water, or debris in the spill prevention equipment;

(c) dispenser and dispenser sumps for the presence of regulated substances, water, and debris;

(d) containment sumps, such as those which contain the submersible pump on the top of underground tanks, for the presence of regulated substances or any indication a release may have occurred; and

(e) overfill prevention equipment for proper operation and if maintenance is required.

(2) The certified operator(s) shall ensure that all inspections as outlined in the operations and maintenance plan, required in 20.5.107.701 NMAC for UST systems and 20.5.110.1001 NMAC for AST systems, are properly performed and conducted by qualified personnel.

(3) Certified operators may use checklists contained in the operations and maintenance plan, required in 20.5.107.701 NMAC for UST systems and 20.5.110.1001 NMAC for AST systems, to document monthly inspections only if the checklists meet the requirements of this section.

(4) The certified operator(s) shall provide the owner and operator with a copy of each inspection checklist, and alert the owner or operator of any condition discovered during the monthly inspection that may require follow-up actions.

(5) Owners and operators shall maintain a copy of inspection checklists and all attachments for the previous 12 months at all attended facilities or, if approved in writing by the department, off-site at a readily available location.

(6) Owners and operators shall provide monthly inspection reports and all attachments for the previous 12 months to the department on request.

C. The certified operator(s) shall be present or available during compliance inspections at the request of the department.

[20.5.104.409 NMAC - N, 07/24/2018]

[The department provides an optional checklist for compliance with this section. The checklist is available on the petroleum storage tank bureau's pages on the department website, or by contacting the Petroleum Storage Tank Bureau at 505-476-4397 or at 2905 Rodeo Park Drive East, Building 1, Santa Fe, New Mexico 87505.]

20.5.104.410 RECIPROCITY:

No reciprocity, training, or certification from any other state or territory shall qualify an operator to be certified pursuant to this part.

[20.5.104.410 NMAC - N, 07/24/2018]

20.5.104.411 ALTERNATE METHODS:

A. If owners and operators want to propose an alternate method of operator presence at facilities with either AST emergency generator systems or UST emergency generator systems, other than that specified by this part, owners and operators shall apply in writing to the department, shall provide supporting documentation, and shall not begin the proposed method unless and until the department approves the request in writing. At a minimum, the request for an alternate method shall contain the following:

- (1) date the form is completed;
- (2) facility name, facility ID number, address (with county), and telephone number;
- (3) owner name, owner ID number, address, and telephone number;
- (4) citation to regulation for which alternate method is requested;

(5) brief description of the proposed alternate method;

(6) justification of proposed alternate method, including citation to a standard or code supporting its use, if available; and

(7) demonstration of its equivalent protection of public health, safety, and welfare and the environment. The department shall not grant the request unless owners and operators demonstrate that the request will provide equivalent protection of public health, safety, and welfare and the environment.

[20.5.104.411 NMAC - N, 07/24/2018]

20.5.104.412 DOCUMENTATION AND RECORDKEEPING:

A. Approved trainers shall provide written verification of training completion for class A, B and C operators that shall include:

(1) the operator's name;

(2) the date and location where training was completed;

(3) the facility name, address and department facility ID number for each facility for which the operator is trained; and

(4) the name, address and phone number of the approved trainer that conducted the training.

B. Written verification of training shall include a certificate of training and wallet card.

C. Owners and operators shall maintain written verification of training for class A, B, and C operators at every storage tank system for all designated certified operators, and make the written verification available for review when requested by the department.

D. Approved trainers shall maintain records of successful completion of training, including examination results, for at least 10 years, and shall make the records available to the department on request.

[20.5.104.412 NMAC - N, 07/24/2018]

PART 105: CERTIFICATION OF TANK INSTALLERS AND JUNIOR INSTALLERS; REQUIREMENTS FOR TESTERS

20.5.105.1 ISSUING AGENCY:

New Mexico Environmental Improvement Board.

[20.5.105.1 NMAC - N, 07/24/2018]

20.5.105.2 SCOPE:

This part applies to persons installing, replacing, repairing, modifying, testing, or removing storage tank systems. The requirements for persons installing, replacing, repairing, or modifying airport hydrant systems, USTs with field-constructed tanks, and hybrid storage tank systems can be found in 20.5.114 NMAC.

[20.5.105.2 NMAC - N, 07/24/2018]

20.5.105.3 STATUTORY AUTHORITY:

This part is promulgated pursuant to the provisions of the

Hazardous Waste Act, Sections 74-4-1 through 74-4-14 NMSA 1978, and the general provisions of the

Environmental Improvement Act, Sections 74-1-1 through 74-1-17 NMSA 1978.

[20.5.105.3 NMAC - N, 07/24/2018]

20.5.105.4 DURATION:

Permanent.

[20.5.105.4 NMAC - N, 07/24/2018]

20.5.105.5 EFFECTIVE DATE:

July 24, 2018, unless a later date is indicated in the bracketed history note at the end of a section.

[20.5.105.5 NMAC - N, 07/24/2018]

20.5.105.6 OBJECTIVE:

The purpose of this part is to provide for the regulation of persons installing, replacing, repairing, modifying, testing, and removing storage tank systems that contain regulated substances in order to assure that storage tank systems are being installed, replaced, repaired, modified, tested, and removed in a manner which shall not encourage or facilitate leaking, and which shall protect the public health, safety and welfare and the environment of the state.

[20.5.105.6 NMAC - N, 07/24/2018]

20.5.105.7 DEFINITIONS:

The definitions in 20.5.101 NMAC apply to this part. Additionally, "entirely above ground piping" means all portions of the piping are completely above ground, are completely visible, and are not in contact with the ground or soil. This definition does not include piping for a system where any portion of the piping is within a transition sump or is below ground.

[20.5.105.7 NMAC - N, 07/24/2018]

20.5.105.8-20.5.105.499 [RESERVED]

20.5.105.500 GENERAL REQUIREMENTS FOR INSTALLER OF UST SYSTEMS:

A. Beginning September 16, 1989, no person may install, replace, repair or modify UST systems in this state unless the person is, or employs, an individual who has been certified by the department to perform that work on UST systems. This provision requires certification of the individual who exercises supervisory control over the installation, replacement, repair or modification work, whether as an officer or employee of the UST system owner or operator performing its own installation, replacement, repair or modification, or as an officer or employee of the person agreeing to perform the installation, replacement, repair or modification for the owner or operator.

Exceptions to this requirement for a certified installer include:

- (1) internal lining of a tank through the application of such materials as epoxy resins;
- (2) installation, replacement, repair or modification of cathodic protection systems;
- (3) any other installation, replacement, repair or modification specifically approved in writing by the department as an exception to the requirement for a certified installer;
- (4) an applicant for UST installer certification pursuant to Subsection C of 20.105.5.510 NMAC;
- (5) normal maintenance;
- (6) work on line or tank leak detection systems performed by technicians trained to work on line or tank leak detection systems by the manufacturer of the systems, or other equivalent training approved by the department; and
- (7) persons closing storage tank systems pursuant to 20.5.115 NMAC.

B. Beginning September 16, 1989, no person may install, replace, repair or modify an UST system in this state unless the person is or employs a certified installer who shall control and supervise a given installation, replacement, repair or modification and who shall be physically present on-site at the critical junctures in the installation, replacement, repair or modification.

C. An individual who has met the requirements for certified UST installer may perform the work of a UST certified junior installer.

D. The requirements of this part are not intended to prohibit the employment of apprentices or helpers so long as a certified installer exercises responsible supervisory control and is physically present on-site at the critical junctures in the installation, replacement, repair or modification.

E. The requirements of this part are in addition to and not in lieu of any other licensing and registration requirements imposed by law, including any applicable requirements of the Construction Industries Licensing Act, Sections 60-13-1 through 60-13-59 NMSA 1978.

F. The provisions of this part are not intended to relieve owners and operators of UST systems of their obligations and liabilities under applicable state and federal laws and regulations.

G. The department may deny an application or renewal and may suspend or revoke certification pursuant to the Parental Responsibility Act, Sections 40-5A-1 through 40-5A-13 NMSA 1978.

[20.5.105.500 NMAC - N, 07/24/2018]

20.5.105.501 GENERAL REQUIREMENTS FOR INSTALLER OF AST SYSTEMS:

A. Beginning August 15, 2004, no person may install, replace, repair or modify AST systems in this state unless the person is, or employs, an individual who has been certified by the department to perform that work on AST systems. This provision requires certification of the individual who exercises supervisory control over the installation, replacement, repair or modification work, whether as an officer or employee of the AST system owner or operator performing its own installation, replacement, repairs or modification, or as an officer or employee of the person agreeing to perform the installation, replacement, repair or modification for the owner or operator.

Exceptions to this requirement for a certified installer include:

- (1)** internal lining of a tank through the application of such materials as epoxy resins;
- (2)** coating or lining of secondary containment for AST systems;

- (3) installation, replacement, repair or modification of cathodic protection systems;
- (4) any other installation, replacement, repair or modification specifically approved in writing by the department as an exception to the requirement for a certified installer;
- (5) an applicant for AST installer certification pursuant to Subsection C of 20.5.105.510 NMAC;
- (6) normal maintenance;
- (7) work on line or tank leak detection systems performed by technicians trained to work on line or tank leak detection systems by the manufacturer of the systems, or other equivalent training approved by the department; and
- (8) persons closing storage tank systems pursuant to 20.5.115 NMAC.

B. Beginning August 15, 2004, no person may install, replace, repair or modify an AST system in this state unless the person is or employs a certified installer who shall control and supervise a given installation, replacement, repair or modification and who shall be physically present on-site at the critical junctures in the installation, replacement, repair or modification.

C. An individual who has met the requirements for certified AST installer may perform the work of an AST certified junior installer.

D. The requirements of this part are not intended to prohibit the employment of apprentices or helpers so long as a certified installer exercises responsible supervisory control and is physically present on-site at the critical junctures in the installation, replacement, repair or modification.

E. The requirements of this part are in addition to and not in lieu of any other licensing and registration requirements imposed by law, including any applicable requirements of the Construction Industries Licensing Act, Sections 60-13-1 through 60-13-59 NMSA 1978.

F. The provisions of this part are not intended to relieve owners and operators of AST systems of their obligations and liabilities under applicable state and federal laws and regulations.

G. The department may deny an application or renewal and may suspend or revoke certification pursuant to the Parental Responsibility Act, Sections 40-5A-1 through 40-5A-13 NMSA 1978.

[20.5.105.501 NMAC - N, 07/24/2018]

20.5.105.502 GENERAL REQUIREMENTS FOR JUNIOR INSTALLER OF AST SYSTEMS:

A. Beginning July 24, 2019, no person may install, replace, repair or modify spill and overfill prevention equipment on AST systems in this state unless the person is an individual who has been certified by the department to perform that work on AST systems. Exceptions to the requirement for an AST certified junior installer are listed in Paragraphs (1) through (8) of Subsection A of 20.5.105.501 NMAC.

B. An individual who is an AST junior installer shall be certified to perform installations, repairs, replacements, and modifications of spill and overfill prevention equipment.

C. Individuals who are AST junior installers shall be certified to repair and replace entirely above ground piping on ASTs if they are licensed by the New Mexico construction industries division in accordance with 14.6.6 NMAC as a journeyman pipe fitter (JPF), MM-4, or MM-98.

D. The requirements of this part are not intended to prohibit the employment of apprentices or helpers so long as an AST certified junior installer exercises responsible supervisory control and is physically present on-site during the replacement, repair or modification.

E. The requirements of this part are in addition to and not in lieu of any other licensing and registration requirements imposed by law, including any applicable requirements of the Construction Industries Licensing Act, Sections 60-13-1 through 60-13-59 NMSA 1978.

F. The provisions of this part are not intended to relieve owners and operators of AST systems of their obligations and liabilities under applicable state and federal laws and regulations.

G. The department may deny an application or renewal and may suspend or revoke certification pursuant to the Parental Responsibility Act, Sections 40-5A-1 through 40-5A-13 NMSA 1978.

[20.5.105.502 NMAC - N, 07/24/2018]

20.5.105.503 GENERAL REQUIREMENTS FOR JUNIOR INSTALLER OF UST SYSTEMS:

A. Beginning July 24, 2019, no person may install, replace, repair or modify spill and overfill prevention equipment on UST systems in this state unless the person is an individual who has been certified by the department to perform that work on UST systems. Exceptions to the requirement for a UST certified junior installer are listed in Paragraphs (1) through (7) of Subsection A of 20.5.105.500 NMAC.

B. An individual who is an UST junior installer shall be certified to perform installations, repairs, replacements, and modifications of spill and overfill prevention equipment. An UST junior installer shall not repair or replace piping that routinely contains a regulated substance.

C. A UST certified junior installer shall not install UST systems or piping.

D. The requirements of this part are not intended to prohibit the employment of apprentices or helpers so long as a UST certified junior installer exercises responsible supervisory control and is physically present on-site at the critical junctures in the installation, replacement, repair or modification of spill and overfill prevention equipment.

E. The requirements of this part are in addition to and not in lieu of any other licensing and registration requirements imposed by law, including any applicable requirements of the Construction Industries Licensing Act, Sections 60-13-1 through 60-13-59 NMSA 1978.

F. The provisions of this part are not intended to relieve owners and operators of UST systems of their obligations and liabilities under applicable state and federal laws and regulations.

G. The department may deny an application or renewal and may suspend or revoke certification pursuant to the Parental Responsibility Act, Sections 40-5A-1 through 40-5A-13 NMSA 1978.

[20.5.105.503 NMAC - N, 07/24/2018]

20.5.105.504 GENERAL REQUIREMENTS FOR PERSONS PERFORMING TESTS ON STORAGE TANK SYSTEMS AND EQUIPMENT:

A. Beginning on July 24, 2019, owners and operators shall demonstrate that persons who perform tests on storage tank systems regulated under 20.5 NMAC have the experience, training, and education to perform the following:

(1) periodic testing of spill prevention equipment and containment sumps as required in 20.5.107.704 NMAC, 20.5.107.706 NMAC, 20.5.110.1005 NMAC, and 20.5.110.1007 NMAC;

(2) periodic functionality testing and inspections of overfill prevention equipment as required in 20.5.107.704 NMAC and 20.5.110.1005 NMAC;

(3) functionality testing and inspections of automatic tank gauging systems as required in 20.5.108.805 NMAC and 20.5.111.1104 NMAC;

(4) precision tank tightness tests and line tightness tests;

(5) functionality testing of automatic line leak detectors, interstitial sensors, and sump sensors; and

(6) periodic testing of cathodic protection systems as required in 20.5.107.705 NMAC and 20.5.110.1006 NMAC.

B. Owners and operators shall ensure information on the tester's education, experience, and training is submitted to the department for each required test conducted on storage tank systems regulated under 20.5 NMAC. Testers may submit this information on the owner's and operator's behalf prior to conducting any testing on regulated storage tank systems and subsequently after changes to the information required in Paragraphs (1) through (5) of this subsection. The information to be submitted is as follows:

(1) any business name used by the tester, with the business address, telephone number, electronic mail address, and facsimile transmission number;

(2) name of the tester;

(3) tester's certification number from each testing equipment manufacturer and the expiration date for the certification;

(4) name of the manufacturer, association, or institute where they gained their certification or education.

(5) testers who use the testing procedures from petroleum equipment institute's *Recommended Practice, PEI RP 1200, "Recommended Practices for the Testing and Verification of Spill, Overfill, Leak Detection, and Secondary Containment Equipment at UST Facilities"* shall include the date they took and passed the test from the petroleum equipment institute.

(6) Number of years of experience in each of the testing protocols or procedures the tester will use.

C. Owners and operators shall ensure testers meet the following:

(1) perform only those tests and inspections for which they have training, experience, and certification from either the manufacturer of the testing equipment or the manufacturer of the equipment being tested or inspected.

(2) maintain certification with the equipment manufacturer for the tester and any testing apparatus they use, if they have a certification process or requirements. If the testing equipment manufacturer has periodic calibration and maintenance requirements the tester shall meet them.

D. A person shall not perform any test on storage tank systems for which they are also the owner and operator as defined in 20.5.101 NMAC or they are an employee of the owner or operator.

E. A tester who is trained and certified to functionality test automatic line leak detectors may replace line leak detectors that no longer meet the requirements in Subsection A of 20.5.108.810 NMAC or Subsection A of 20.5.111.1105 NMAC.

F. A person who has met the requirements for either AST or UST certified installer may perform non-precision integrity tests of the storage tank systems during the installation, modification, repair, or replacement without having to meet the requirements of a tester.

G. The requirements of this part are in addition to and not in lieu of any other licensing and registration requirements imposed by law, including any applicable requirements of the Construction Industries Licensing Act, Sections 60-13-1 through 60-13-59 NMSA 1978.

H. The provisions of this part are not intended to relieve owners and operators of storage tank systems of their obligations and liabilities under applicable state and federal laws and regulations.

[20.5.105.504 NMAC - N, 07/24/2018]

20.5.105.505 INDIVIDUAL CERTIFICATION FOR INSTALLER OF UST SYSTEMS:

A. An applicant for an individual's UST installer certification shall meet all of the following requirements in order to receive certification from the department.

(1) The applicant shall file an application with the department accompanied by a nonrefundable fee of \$50. At a minimum the application shall contain the following information:

- (a)** applicant's name, permanent residence address and telephone number;
- (b)** applicant's business address and any business name used by the applicant, with the business address, telephone number and facsimile transmission number;
- (c)** applicant's date of birth;
- (d)** applicant's social security number;
- (e)** construction industries division license number, type of license, name of license holder under which applicant is working and expiration of license;

(f) whether the construction industries division license in subparagraph (e) of Paragraph **(1)** of this subsection has ever been suspended or revoked; if so, an explanation of the circumstances of the suspension or revocation;

(g) the supervisor's name, business name, address and telephone number with whom the applicant apprenticed as a tank installer;

(h) a description of the number of years of experience the applicant has as a tank installer (specify USTs and ASTs);

(i) a description of the types and number of tanks the applicant has installed (specify USTs and ASTs) in the past four years;

(j) a description of the types and number of piping systems the applicant has installed, replaced, repaired or modified (specify USTs and ASTs) in the past four years; and

(k) whether applicant owes child support in New Mexico.

(2) The applicant shall be an individual and at least 18 years of age.

(3) The applicant need not, for purposes of this part, be a resident of the state.

(4) The applicant shall demonstrate that the applicant is in good standing with all licensing authorities by whom licensing is required given the nature and scope of the applicant's work, and that the applicant has not had a business or occupational license or certificate suspended or revoked in this or any other state, except as provided in Subsection B of this section.

(5) Applicants shall demonstrate in the application that they have met the experience requirements of 20.5.105.509 NMAC.

(6) The applicant shall pass the on-site examination for which 20.5.105.510 NMAC provides. The installation for an on-site examination shall include the on-site installation of a tank, dispenser system or meter, venting, ancillary equipment and initial testing.

(7) The applicant shall provide the department with evidence in the application that, within the prior three months, the applicant has passed:

(a) a New Mexico laws and rules UST test administered by the department pursuant to 20.5.105.514 NMAC; and

(b) a national technical UST installer's test administered by an approved certification educator and has been certified by that educator. For purposes of this section, the international code council is an approved certification educator.

(8) As an alternative to the tests required in Paragraph (7) of this subsection, applicants may propose alternate tests and approved certification to the department for consideration, including a tank installer certification program sponsored by another state or organization, but these courses shall not be approved for the requirements in Paragraph (7) of this subsection unless approved by the department in writing. Applicants seeking approval of alternate courses and alternate certification shall provide the department with all information about the course and the proposed educator to allow the department to determine whether to approve them, in the department's sole discretion. In determining whether to approve an alternate course and alternate certification, the department shall determine whether the alternate course and alternate certification provide an equivalent demonstration of knowledge of New Mexico petroleum storage tank regulations, 20.5 NMAC, and technical installation requirements.

(9) The applicant shall provide to the department a notarized affidavit from the applicant stating that all information submitted in the application is true and correct.

B. Notwithstanding the provisions of Paragraph (4) of Subsection A of this section, the department may grant certification to an applicant who has had a business or occupational license or certificate suspended or revoked where the suspension or revocation, by reason of its date, nature or other considerations, is not directly relevant to the applicant's competence to install, replace, repair, or modify UST systems.

[20.5.105.505 NMAC - N, 07/24/2018]

[The department provides an optional form that may be used to apply for certification. The form is available on the petroleum storage tank bureau's pages on the department website or by contacting the Petroleum Storage Tank Bureau at 505-476-4397 or 2905 Rodeo Park Drive East, Building 1, Santa Fe, New Mexico 87505. Applicants should submit application forms to the Petroleum Storage Tank Bureau, attention: Application for Certified Installer, 2905 Rodeo Park Drive East, Building 1, Santa Fe, New Mexico 87505.]

20.5.105.506 INDIVIDUAL CERTIFICATION FOR INSTALLER OF AST SYSTEMS:

A. An applicant for an individual's AST installer certification shall meet all of the following requirements in order to receive certification from the department.

(1) The applicant shall file an application with the department with the information required in Paragraph **(1)** of Subsection A of 20.5.105.505 NMAC, accompanied by a nonrefundable fee of \$50.00.

(2) The applicant shall be an individual and at least 18 years of age.

(3) The applicant need not, for purposes of this part, be a resident of the state.

(4) The applicant shall demonstrate that the applicant is in good standing with all licensing authorities by whom licensing is required, given the nature and scope of the applicant's work, and that the applicant has not had a business or occupational license or certificate suspended or revoked in this or any other state, except as provided in Subsection B of this section.

(5) Applicants shall demonstrate in the application that they have met the experience requirements of 20.5.105.509 NMAC.

(6) The applicant shall pass the on-site examination for which 20.5.105.510 NMAC provides. The installation for an on-site examination shall include the on-site installation of a tank and tank foundation, dispenser system or meter, venting, ancillary equipment and initial testing. Installation of a self-contained, concrete-encased or self-contained, skid-mounted AST system is not an AST system installation for purposes of this requirement.

(7) The applicant shall provide the department with evidence in the application that, within the prior three months, the applicant has passed:

(a) a New Mexico laws and rules AST test administered by the department pursuant to 20.5.105.514 NMAC; and

(b) a national technical AST installer's test administered by an approved certification educator and has been certified by that educator. For purposes of this section, the international code council is an approved certification educator.

(8) As an alternative to the tests required in Paragraph (7) of this subsection, applicants may propose alternate tests and approved certification to the department for consideration, including a tank installer certification program sponsored by another state or organization, but these courses shall not be approved for the requirements in Paragraph (7) of this subsection unless approved by the department in writing. Applicants seeking approval of alternate courses and alternate certification shall provide the department with all information about the course and the proposed educator to allow the department to determine whether to approve them, in the department's sole discretion. In determining whether to approve an alternate course and alternate certification, the department shall determine whether the alternate course and alternate certification provide an equivalent demonstration of knowledge of New Mexico petroleum storage tank regulations, 20.5 NMAC, and technical installation requirements.

(9) The applicant shall provide to the department a notarized affidavit from the applicant stating that all information submitted in the application is true and correct.

B. Notwithstanding the provisions of Paragraph (4) of Subsection A of this section, the department may grant certification to an applicant who has had a business or occupational license or certificate suspended or revoked where the suspension or revocation, by reason of its date, nature or other considerations, is not directly relevant to the applicant's competence to install, replace, repair or modify AST systems.

[20.5.105.506 NMAC - N, 07/24/2018]

[The department provides an optional form that may be used to apply for certification. The form is available on the petroleum storage tank bureau's pages on the department website or by contacting the petroleum storage tank bureau at 505-476-4397 or 2905 Rodeo Park Drive East, Building 1, Santa Fe, New Mexico 87505. Applicants should submit application forms to the Petroleum Storage Tank Bureau, attention: Application for Certified Installer, 2905 Rodeo Park Drive East, Building 1, Santa Fe, New Mexico 87505.]

20.5.105.507 INDIVIDUAL CERTIFICATION FOR JUNIOR INSTALLER OF AST SYSTEMS:

A. An applicant for an individual's AST junior installer certification shall meet all of the following requirements in order to receive certification from the department.

- (1)** The applicant shall file an application with the department with the information required in Paragraph (1) of Subsection A of 20.5.105.508 NMAC, accompanied by a nonrefundable fee of \$50.00.
- (2)** The applicant shall be an individual at least 18 years of age.
- (3)** The applicant need not, for purposes of this part, be a resident of the state.
- (4)** The applicant shall demonstrate that the applicant is in good standing with all licensing authorities by whom licensing is required, given the nature and scope of the applicant's work, and that the applicant has not had a business or occupational license or certificate suspended or revoked in this or any other state, except as provided in Subsection B of this section.
- (5)** Applicants shall demonstrate in the application that they have met the experience requirements of Subsection B of 20.5.105.509 NMAC.
- (6)** Applicants shall demonstrate certification by the manufacturer of the spill and overfill equipment they install, repair, replace, or modify.
- (7)** Applicants shall submit a copy of their journeyman pipe fitter (JPF), MM-4, or MM-98 license if they are applying to repair and replace entirely above ground piping in addition to activities listed in Subsection B of 20.5.105.502 NMAC.

(8) The applicant shall provide the department with evidence in the application that, within the prior three months, the applicant has passed:

(a) a New Mexico laws and rules AST test for junior installer certification administered by the department pursuant to 20.5.105.514 NMAC; and

(b) a national technical AST test administered by a certification educator approved by the department and has been certified by that educator.

(9) As an alternative to the tests required in Paragraph (8) of this subsection, applicants may propose alternate tests and approved certification to the department for consideration, including a tank installer certification program sponsored by another state or organization, but these courses shall not be approved for the requirements in Paragraph (8) of this subsection unless approved by the department in writing. Applicants seeking approval of alternate courses and alternate certification shall provide the department with all information about the course and the proposed educator to allow the department to determine whether to approve them, in the department's sole discretion. In determining whether to approve an alternate course and alternate certification, the department shall determine whether the alternate course and alternate certification provide an equivalent demonstration of knowledge of New Mexico petroleum storage tank regulations, 20.5 NMAC, and technical AST requirements.

(10) The applicant shall provide to the department a notarized affidavit from the applicant stating that all information submitted in the application is true and correct.

B. Notwithstanding the provisions of Paragraph (4) of Subsection A of this section, the department may grant certification to an applicant who has had a business or occupational license or certificate suspended or revoked where the suspension or revocation, by reason of its date, nature or other considerations, is not directly relevant to the applicant's competence to install, replace, repair or modify AST spill and overflow prevention equipment.

[20.5.105.507 NMAC - N, 07/24/2018]

20.5.105.508 INDIVIDUAL CERTIFICATION FOR JUNIOR INSTALLER OF UST SYSTEMS:

A. An applicant for an individual's UST junior installer certification shall meet all of the following requirements in order to receive certification from the department.

(1) The applicant shall file an application with the department accompanied by a nonrefundable fee of \$50.00. At a minimum the application shall contain the following information:

(a) applicant's name, permanent residence address and telephone number;

(b) applicant's business address and any business name used by the applicant, with telephone number and facsimile transmission number;

(c) applicant's date of birth;

(d) applicant's social security number;

(e) construction industries division license number, type of license, name of license holder under which applicant is working and expiration of license;

(f) whether the construction industries division license in Subparagraph (e) of Paragraph (1) of this subsection has ever been suspended or revoked; if so, an explanation of the circumstances of the suspension or revocation;

(g) the supervisor's name, business name, address and telephone number with whom the applicant worked as a junior installer;

(h) a description of the number of years of experience the applicant has installing, replacing, modifying, and repairing spill and overfill prevention equipment (specify USTs and ASTs);

(i) a description of the number of spill and overfill prevention equipment installations, repairs, replacements, or modifications the applicant has performed (specify USTs and ASTs) in the past four years; and

(j) whether applicant owes child support in New Mexico.

(2) The applicant shall be an individual and at least 18 years of age.

(3) The applicant need not, for purposes of this part, be a resident of the state.

(4) The applicant shall demonstrate that the applicant is in good standing with all licensing authorities by whom licensing is required, given the nature and scope of the applicant's work, and that the applicant has not had a business or occupational license or certificate suspended or revoked in this or any other state, except as provided in Subsection B of this section.

(5) Applicants shall demonstrate in the application that they have met the experience requirements of Subsection B of 20.5.105.509 NMAC.

(6) Applicants shall demonstrate certification by the manufacturer of the spill and overfill equipment they install, repair, replace, or modify.

(7) The applicant shall provide the department with evidence in the application that, within the prior three months, the applicant has passed:

(a) a New Mexico laws and rules UST test for junior installer certification administered by the department pursuant to 20.5.105.514 NMAC; and

(b) a national technical UST test administered by a certification educator approved by the department and has been certified by that educator.

(8) As an alternative to the tests required in Paragraph (7) of this subsection, applicants may propose alternate tests and approved certification to the department for consideration, including a tank installer certification program sponsored by another state or organization, but these courses shall not be approved for the requirements in Paragraph (7) of this subsection unless approved by the department in writing. Applicants seeking approval of alternate courses and alternate certification shall provide the department with all information about the course and the proposed educator to allow the department to determine whether to approve them, in the department's sole discretion. In determining whether to approve an alternate course and alternate certification, the department shall determine whether the alternate course and alternate certification provide an equivalent demonstration of knowledge of New Mexico petroleum storage tank regulations, 20.5 NMAC, and technical UST requirements.

(9) The applicant shall provide to the department a notarized affidavit from the applicant stating that all information submitted in the application is true and correct.

B. Notwithstanding the provisions of Paragraph (4) of Subsection A of this section, the department may grant certification to an applicant who has had a business or occupational license or certificate suspended or revoked where the suspension or revocation, by reason of its date, nature or other considerations, is not directly relevant to the applicant's competence to install, replace, repair, or modify UST spill and overfill prevention equipment.

[20.5.105.508 NMAC - N, 07/24/2018]

20.5.105.509 EXPERIENCE REQUIREMENTS:

A. Installer:

(1) To qualify for individual certification under 20.5.105.505 NMAC or 20.5.105.506 NMAC, an applicant shall demonstrate that the applicant has had two years of experience, within the three years immediately prior to making the application, of field experience in the installation, replacement, repair or modification of the type of storage tank systems for which the applicant is applying for certification or, with the approval of the department, closely related work. Additionally, the applicant shall demonstrate they have hands-on supervised experience in the installation of two petroleum storage tank systems of the tank type (AST or UST) they are applying for within the two years of experience. The applicant's demonstration shall include copies of inspection reports (or other similar documents) for the work performed, which shall include the name, phone number and email contact of the supervising inspector. For

purposes of this part, the applicant's field experience may be demonstrated in New Mexico or other states.

(2) An engineering degree or a license to practice engineering may substitute for six months of the experience required by Subsection A of this section.

B. Junior installer:

(1) To qualify for individual certification under 20.5.105.507 NMAC or 20.5.105.508 NMAC, an applicant shall demonstrate that the applicant has had one year, within the three years immediately prior to making the application, of field experience with storage tank spill and overflow equipment installations, replacements, modifications, or repairs.

(2) To qualify for individual certification under 20.5.105.507 NMAC as an AST junior installer who can repair or replace entirely above ground piping, applicants shall demonstrate that they meet the requirements in Subsection C of 20.5.105.502 NMAC in addition to the requirements in Paragraph (1) of this subsection.

(3) The applicant's demonstration shall include copies of inspection reports (or other similar documents) for the work performed which shall include the name, phone number and email contact of the supervising inspector. For purposes of this part, the applicant's field experience may be demonstrated in New Mexico or other states.

[20.5.105.509 NMAC - N, 07/24/2018]

20.5.105.510 ON-SITE EXAMINATION FOR INSTALLER:

A. To qualify for individual certification under 20.5.105.505 NMAC or 20.5.105.506 NMAC, an applicant shall pass an on-site examination consisting of a successful installation of the regulated and applicable (AST or UST) type of storage tank system in the presence of a designated employee of the department. The applicant shall complete each aspect of the installation successfully in order to pass the examination, including use of proper materials, proper assembly of materials and proper testing of the tank and piping at the appropriate times during the installation.

B. An applicant may request an on-site examination for UST or AST certification any time within 180 days of the date of submission of the application provided for in Paragraph (1) of Subsection A of 20.5.105.505 NMAC or Paragraph (1) of Subsection A of 20.5.105.506 NMAC and shall accompany the request with a nonrefundable \$300 fee. The applicant shall notify the department of the date and the site of the on-site examination 30 days prior to the examination. For good cause shown, the department may, in its sole discretion, grant an applicant one 180-day extension of the time period during which the applicant must take the on-site examination. The department shall not grant more than one extension. If the applicant does not schedule an on-site examination within these time periods, the applicant shall file a new application for

certification and comply with all the application requirements in 20.5.105.505 NMAC or 20.5.105.506 NMAC as applicable.

C. The applicant shall be responsible, subject to approval by department staff, for identifying a satisfactory site and date(s) for the on-site examination. The applicant is also responsible for ensuring that all necessary equipment and appropriate materials necessary for the installation are on site. Department staff shall fail any applicant who has three significant errors during the on-site examination. For purposes of this section, significant errors include, but are not limited to, use of materials or installation practices that violate these regulations, manufacturer's installation instructions, or other industry standards. As long as a department staff member responsible for assessing the on-site exam is present, the applicant may perform the activities involved in the exam even though the applicant is not a certified installer.

D. The installation shall be assessed by the department employee present at the examination who shall present findings to the department, with a recommendation as to whether or not the applicant passed the on-site examination. The department shall make the determination as to the success of the installation and notify the applicant by mail within 30 days of completion of the installation. If the applicant did not pass the examination, the department shall inform the applicant that the applicant may retake the examination upon payment of a nonrefundable \$300.00 fee and upon such conditions as the department may impose to ensure that the applicant is prepared to perform a more successful installation. If the applicant does not retake the examination within 180 days of being notified that the applicant did not pass the examination or if the applicant fails the on-site examination a second time, the applicant shall file a new application for certification with the department if the applicant desires to become a certified installer.

E. The department employee may stop an on-site examination if the employee determines that the installation being conducted constitutes a threat to public health, safety or welfare or the environment. If the examiner stops the installation, the examiner's findings shall be presented to the department with a "do not pass" recommendation. The department shall notify the applicant of its decision as provided in Subsection D of this section.

[20.5.105.510 NMAC - N, 07/24/2018]

20.5.105.511 DENIAL OF CERTIFICATION:

An applicant whose application for certification is denied shall be afforded an opportunity for a hearing before the secretary under 20.5.5.519 NMAC, in accordance with the Uniform Licensing Act, Sections 61-1-1 through 61-1-33 NMSA 1978, and the department's adjudicatory procedures in 20.1.5 NMAC.

[20.5.105.511 NMAC - N, 07/24/2018]

20.5.105.512 RENEWAL OF CERTIFICATION FOR INSTALLER:

A. A certification shall expire March 16 of the fourth calendar year after it was issued. Applications for renewal of certification issued under 20.5.105.505 NMAC and 20.5.105.506 NMAC shall be submitted no later than February 16 of the fourth year after the certification was granted to ensure renewal by March 16. Certification for installers who do not submit a timely renewal application shall be considered lapsed and invalid on March 16; the department shall not accept applications for renewal after February 16. Any installer whose certification has lapsed as provided in this subsection shall submit an application for new certification under 20.5.105.505 NMAC or 20.5.105.506 NMAC and comply with the requirements thereof.

B. At least 90 days before the expiration date of certification, the department shall mail a renewal application reminder to the installer, at the installer's address of record with the department. It is the duty and responsibility of the installer to timely submit the renewal application for certification pursuant to Subsection A whether or not an application reminder has been received from the department.

C. To qualify for renewal, a UST certified individual or installer shall:

(1) file an application with the department with the information required in Paragraphs (1), (4) and (9) of Subsection A of 20.5.105.505 NMAC, accompanied by a nonrefundable \$50.00 fee;

(2) demonstrate as required by 20.5.105.509 NMAC that the installer has completed at least two UST system installations, replacements, repairs or modifications during the four-year period preceding the renewal application; and

(3) demonstrate that the installer has passed a New Mexico laws and rules UST test administered by the department pursuant to 20.5.105.514 NMAC, within the prior three months.

D. To qualify for renewal, an AST certified installer shall:

(1) file an application with the department with the information required in Paragraphs (1), (4) and (9) of Subsection A of 20.5.105.506 NMAC, accompanied by a nonrefundable \$50.00 fee;

(2) demonstrate as required by 20.5.105.509 NMAC that the installer has completed at least two AST system installations, replacements, repairs or modifications during the four-year period preceding the renewal application; and

(3) demonstrate that the installer has passed a New Mexico laws and rules AST test administered by the department pursuant to 20.5.105.514 NMAC, within the prior three months.

E. An applicant for renewal shall be afforded opportunity for hearing before the secretary, as provided in 20.5.105.519 NMAC, in the event the department

contemplates withholding renewal for any cause other than failure to pay the required renewal fee.

F. For purposes of this section, "demonstrate" means provide copies of registration forms, inspection reports, installation checklists, written statements or other documents verifying the certified installer's on-site, physical, hands-on participation in critical junctures of a particular installation, replacement, repair or modification.

[20.5.105.512 NMAC - N, 07/24/2018]

[The department provides an optional form that may be used to apply for renewal of certification. The form is available on the petroleum storage tank bureau's pages on the department website or by contacting the Petroleum Storage Tank Bureau at 505-476-4397 or 2905 Rodeo Park Drive East, Building 1, Santa Fe, New Mexico 87505. Applicants should submit renewal forms to the Petroleum Storage Tank Bureau, attention: Application for Certified Installer, 2905 Rodeo Park Drive East, Building 1, Santa Fe, New Mexico 87505.]

20.5.105.513 RENEWAL OF CERTIFICATION FOR JUNIOR INSTALLER:

A. A certification for junior installer shall expire March 16 of the fourth calendar year after it was issued. Applications for renewal of certification issued under 20.5.105.507 NMAC and 20.5.105.508 NMAC shall be submitted no later than February 16 of the fourth year after the certification was granted to ensure renewal by March 16. Certification for junior installers who do not submit a timely renewal application shall be considered lapsed and invalid on March 16; the department shall not accept applications for renewal after February 16. Any junior installer whose certification has lapsed as provided in this subsection shall submit an application for new certification under 20.5.105.507 NMAC or 20.5.105.508 NMAC and comply with the requirements thereof.

B. At least 90 days before the expiration date of certification, the department shall mail a renewal application reminder to the junior installer, at the junior installer's address of record with the department. It is the duty and responsibility of the junior installer to timely submit the renewal application for certification pursuant to Subsection A whether or not an application reminder has been received from the department.

C. To qualify for renewal, a UST certified junior installer shall:

(1) file an application with the department with the information required in Paragraphs (1), (4) and (9) of Subsection A of 20.5.105.508 NMAC, accompanied by a nonrefundable \$50 fee;

(2) demonstrate as required by 20.5.105.509 NMAC that the junior installer has completed at least two spill and overfill prevention equipment installations,

replacements, repairs or modifications on UST systems during the four-year period preceding the renewal application; and

(3) demonstrate that the junior installer has passed a New Mexico laws and rules UST test for junior installer certification administered by the department pursuant to 20.5.105.514 NMAC, within the prior three months.

D. To qualify for renewal, AST certified junior installers shall:

(1) file an application with the department with the information required in Paragraphs (1), (4) and (10) of Subsection A of 20.5.105.507 NMAC, accompanied by a nonrefundable \$50.00 fee;

(2) demonstrate as required by 20.5.105.509 NMAC that the junior installer has completed at least two replacements, repairs or modifications of spill and overflow prevention equipment on AST systems during the four-year period preceding the renewal application;

(3) demonstrate that the junior installer has passed a New Mexico laws and rules AST test for junior installer certification administered by the department pursuant to 20.5.105.514 NMAC, within the prior three months; and

(4) if seeking to renew their certification to repair and replace entirely above ground piping, demonstrate that they have completed at least two repairs or replacements of above ground piping on AST systems during the four-year period preceding the renewal application or submit a current journeyman pipe fitter (JPF), MM-4, or MM-98 license from the New Mexico construction industries division in accordance with 14.6.6 NMAC.

E. An applicant for renewal shall be afforded opportunity for hearing before the secretary, as provided in 20.5.105.519 NMAC, in the event the department contemplates withholding renewal for any cause other than failure to pay the required renewal fee.

F. For purposes of this section, "demonstrate" means provide copies of registration forms, inspection reports, installation checklists, written statements or other documents verifying the certified junior installer's on-site, physical, hands-on participation in critical junctures of a particular installation, replacement, repair or modification of spill and overflow prevention equipment.

[20.5.105.513 NMAC - N, 07/24/2018]

20.5.105.514 NEW MEXICO LAWS AND RULES TEST:

A. The department shall create and administer written tests on the rules contained in 20.5 NMAC, petroleum storage tanks. Tests for AST and UST installer applicants and

AST and UST junior installer applicants may be different tests. The department shall offer tests at least monthly at a charge of \$45 per installer or junior installer applicant per test, paid to the storage tank fund.

B. Applicants may apply to take the New Mexico laws and rules test at any office of the bureau, at least 15 days before a test is given. The department shall post on its webpage dates, times and locations that tests will be offered. The department shall not administer any test until payment is received.

C. An applicant must pass a test by a grade of seventy percent or higher. The department will notify applicants in writing of a passing or failing grade no later than 15 working days after they took a test.

D. An applicant may re-take the New Mexico laws and rules test for each type of test once within 30 days of receipt of notice of a failing grade. If the applicant does not pass a test the second time, the applicant must reapply for certification complying with the requirements for initial certification in the applicable sections of this part.

[20.5.105.514 NMAC - N, 07/24/2018]

20.5.105.515 INSTALLER DUTIES AND OBLIGATIONS:

A. No person shall agree to perform installation, replacement, repair or modification services unless the person is or employs a certified installer competent to perform the particular installation, replacement, repair or modification involved.

B. A certified installer shall have adequate knowledge of appropriate materials, technical requirements and installation, replacement, repair or modification procedures for any storage tank system that the installer undertakes to install, replace, repair or modify. A certified installer shall not perform any installation, replacement, repair or modification, or affix an installer signature or certification number to any installation, replacement, repair or modification for which the installer lacks competence.

C. A certified installer shall:

(1) exercise responsible supervisory control over any installation, replacement, repair or modification undertaken;

(2) at a minimum, be physically present on-site at all critical junctures in the installation, replacement, repair or modification; and

(3) give notice as required by these regulations, 20.5 NMAC.

D. A certified installer shall not certify to an owner or operator of a storage tank system that an installation, replacement, repair or modification is complete unless the installation, replacement, repair, or modification complies with the New Mexico

Hazardous Waste Act, Sections 74-4-1 through 74-4-14 NMSA 1978, and the petroleum storage tank regulations promulgated pursuant to the act, 20.5 NMAC. The certified installer is responsible for the accuracy of any representations made to the owner or operator.

E. Certified installers have a duty to report to the department any and all suspected or confirmed releases, as those terms are used in 20.5.118 NMAC, detected at a site or the surrounding area by the installer or persons working under the installer's supervisory control, as required by 20.5.118 NMAC.

F. Certified installers shall not perform any installation, replacement, repair, modification or removal without providing notice as required by the provisions of 20.5 NMAC, except for emergency repairs as described in

20.5.107 NMAC and 20.5.110 NMAC, and defined in 20.5.101 NMAC. Certified installers shall not perform any activity described as a critical juncture in 20.5.105 NMAC, without providing the 24-hour notice required by that part, except for emergency repairs.

G. Certified installers shall comply with all of the provisions of the petroleum storage tank regulations, 20.5 NMAC.

[20.5.105.515 NMAC - N, 07/24/2018]

20.5.105.516 CERTIFIED JUNIOR INSTALLER DUTIES AND OBLIGATIONS:

A. No individual shall agree to perform an installation, replacement, repair or modification of spill and overfill prevention equipment unless the individual is a certified junior installer and is competent to perform the installation, replacement, repair or modification.

B. Junior installers shall acquire and maintain certification from the manufacturers of the spill and overfill prevention equipment they modify, install, replace, or repair, as applicable.

C. A junior installer of AST systems who is certified to repair or replace entirely above ground piping shall maintain all certifications and licenses as required by 20.5.105 NMAC.

D. A junior installer shall exercise responsible supervisory control when helpers are used.

E. A junior installer has a duty to report to the department any and all suspected or confirmed releases, as those terms are used in 20.5.118 NMAC, detected at a site or the surrounding area by the junior installer or persons working under the junior installer's supervisory control, as required by 20.5.118 NMAC.

F. A junior installer shall not perform any installation, replacement, repair, modification or removal of spill and overfill prevention equipment without providing notice as required by the provisions of 20.5 NMAC.

G. A junior installer shall comply with all of the provisions of the petroleum storage tank regulations, 20.5 NMAC.

[20.5.105.516 NMAC - N, 07/24/2018]

20.5.105.517 COMPLAINTS:

A. When the department receives a signed written complaint from any person which indicates an apparent violation of applicable law by an individual certified under this part, the department shall provide a copy of the complaint to the certified individual along with a letter from the department specifying the statute, regulation, order or license alleged to be violated. The letter shall include a reasonable description of the acts or practices alleged to be in violation of applicable law. The department shall provide a copy of the letter to the complainant.

B. The certified individual may, but need not, file a response to the complaint with the department. After reviewing the complaint together with any other matter in the certified individual's record, the department shall determine whether further action is to be taken.

[20.5.105.517 NMAC - N, 07/24/2018]

20.5.105.518 INVESTIGATIONS, ENFORCEMENT, PENALTIES:

A. The department may undertake such investigations and take such actions as it deems necessary to ensure compliance with the provisions of this part, including the issuance of compliance orders and the commencement of civil actions under the provisions of the Hazardous Waste Act, Sections 74-4-1 through 74-4-14 NMSA 1978. The department may also initiate proceedings to revoke certification of an individual certified under Subsection C of Section 74-4-4.4 NMSA 1978 and 20.5.114 NMAC. The department may revoke certification upon grounds that the certified individual:

(1) exercised fraud, misrepresentation or deception in obtaining the certification;

(2) exhibited gross incompetence in the installation, replacement, repair, modification or removal of a storage tank system; or

(3) was derelict in the performance of a duty as a certified installer or junior installer, as required in the applicable sections of this part (including repeated failure to provide notice of releases or of the installation, replacement, repair, modification or removal of storage tank systems as required in the applicable sections of this part).

B. Persons violating the provisions of this part may be subject to the imposition of penalties under the Hazardous Waste Act.

[20.5.105.518 NMAC - N, 07/24/2018]

20.5.105.519 DEPARTMENT ACTIONS AGAINST CERTIFIED INSTALLERS AND CERTIFIED JUNIOR INSTALLERS:

A. When the department contemplates denying an application for or revoking certification, it shall serve upon the applicant or certified individual a written notice of contemplated action as required by the Uniform Licensing Act, Sections 61-1-1 through 61-1-33 NMSA 1978.

B. Proceedings under this section shall be conducted in accordance with the provisions of the

Uniform Licensing Act, Sections 61-1-1 through 61-1-33 NMSA 1978 and in accordance with the department's adjudicatory procedures in 20.1.5 NMAC.

C. If the department revokes certification pursuant to this section, the certified individual may not apply for certification for a minimum of two years for the type of certification revoked. However, if the certified individual is certified for another type of certification in this part, the certified individual shall not be affected by the revocation of the certification for the other type of certification.

[20.5.105.519 NMAC - N, 07/24/2018]

20.5.105.520 AIRPORT HYDRANT FUEL DISTRIBUTION SYSTEMS, UST SYSTEMS WITH FIELD-CONSTRUCTED TANKS AND HYBRID STORAGE TANK SYSTEMS:

A. Certified installers shall only install, modify, repair, or replace airport hydrant fuel distribution systems, UST systems with field-constructed tanks, and hybrid storage tank systems if they also meet the requirements in 20.5.114.1400 NMAC.

B. Certified installers and junior installers shall only install, replace, modify, or repair spill and overfill prevention equipment associated with airport hydrant fuel distribution systems, UST systems with field-constructed tanks, and hybrid storage tank systems if they also meet the requirements in 20.5.114.1400 NMAC.

[20.5.105.520 NMAC - N, 07/24/2018]

PART 106: NEW AND UPGRADED UNDERGROUND STORAGE TANK SYSTEMS: DESIGN, CONSTRUCTION AND INSTALLATION

20.5.106.1 ISSUING AGENCY:

New Mexico Environmental Improvement Board.

[20.5.106.1 NMAC - N, 07/24/2018]

20.5.106.2 SCOPE:

This part applies to owners and operators of storage tanks as provided in 20.5.101 NMAC. If the owner and operator of a storage tank are separate persons, only one person is required to comply with the requirements of this part, including any notice and reporting requirements; however, both parties are liable in the event of noncompliance.

[20.5.106.2 NMAC - N, 07/24/2018]

20.5.106.3 STATUTORY AUTHORITY:

This part is promulgated pursuant to the provisions of the

Hazardous Waste Act, Sections 74-4-1 through 74-4-14 NMSA 1978, and the general provisions of the

Environmental Improvement Act, Sections 74-1-1 through 74-1-17 NMSA 1978.

[20.5.106.3 NMAC - N, 07/24/2018]

20.5.106.4 DURATION:

Permanent.

[20.5.106.4 NMAC - N, 07/24/2018]

20.5.106.5 EFFECTIVE DATE:

July 24, 2018, unless a later date is indicated in the bracketed history note at the end of a section.

[20.5.106.5 NMAC - N, 07/24/2018]

20.5.106.6 OBJECTIVE:

The purpose of 20.5.106 NMAC is to set forth the requirements for the design, construction, installation and upgrading of underground storage tank systems in a manner that will prevent releases and to protect the public health, safety and welfare and the environment of the state.

[20.5.106.6 NMAC - N, 07/24/2018]

20.5.106.7 DEFINITIONS:

The definitions in 20.5.101 NMAC apply to this part.

[20.5.106.7 NMAC - N, 07/24/2018]

20.5.106.8-20.5.106.599 [RESERVED]

20.5.106.600 GENERAL PERFORMANCE STANDARDS FOR UST SYSTEMS:

A. In order to prevent releases due to structural failure, corrosion or spills and overfills for as long as a UST system is used to store regulated substances, owners and operators of any UST system shall:

- (1) properly design, construct, and initially test each new UST system;
- (2) provide project drawings to the bureau 30 days prior to installation; and
- (3) ensure that any portion of a UST system that routinely contains regulated substances and is in contact with the ground, water, or other electrolyte shall be protected from corrosion, in accordance with the current edition of an industry standard or code of practice developed by a nationally recognized association or independent testing laboratory approved in advance by the department.

B. Owners and operators shall ensure that the entire UST system is compatible with any regulated substance conveyed, as required by 20.5.107.708 NMAC.

C. Tanks and piping installed or replaced after April 4, 2008 must be secondarily contained in accordance with 20.5.106.606 NMAC and use interstitial monitoring in accordance with 20.5.108.808 NMAC, 20.5.108.811 NMAC, and 20.5.108.813 NMAC, except for suction piping that meets the requirements of Subsection B of 20.5.108.813 NMAC.

D. Secondary containment must be able to contain regulated substances leaked from the primary containment until they are detected and removed and prevent the release of regulated substances to the environment at any time during the operational life of the UST.

[20.5.106.600 NMAC - N, 07/24/2018]

20.5.106.601 PERFORMANCE STANDARDS FOR FIBERGLASS-REINFORCED PLASTIC USTS:

If a UST is constructed of fiberglass-reinforced plastic, owners and operators shall comply with the requirements of the current edition of an industry standard or code of practice developed by a nationally recognized association or independent testing

laboratory approved in advance by the department. Owners and operators shall use one or more of the following to comply with the requirements of this section:

A. *Underwriters Laboratories Standard 1316, "Glass-Fiber-Reinforced Plastic Underground Storage Tanks for Petroleum Products, Alcohols, and Alcohol-Gasoline Mixtures";* or

B. *Underwriters' Laboratories of Canada Standard 615, "Standard for Fibre Reinforced Plastic Underground Tanks for Flammable and Combustible Liquids".*

[20.5.106.601 NMAC - N, 07/24/2018]

20.5.106.602 PERFORMANCE STANDARDS FOR STEEL USTS:

A. Owners and operators shall cathodically protect steel USTs by:

- (1)** coating the tank with a suitable dielectric material;
- (2)** ensuring that field-installed cathodic protection systems are designed by a corrosion expert;
- (3)** designing and installing impressed current or galvanic systems to allow ready determination of current operating status as required in Subsection C of 20.5.107.705 NMAC; and
- (4)** operating and maintaining cathodic protection systems in accordance with 20.5.107 NMAC.

B. If a UST is constructed of steel, owners and operators shall comply with the requirements of the current edition of an industry standard or code of practice developed by a nationally recognized association or independent testing laboratory approved in advance by the department. Owners and operators shall use one or more of the following to comply with the applicable requirements of this section:

- (1)** *Steel Tank Institute, "STI-P3 Specification and Manual for External Corrosion Protection of Underground Steel Storage Tanks";*
- (2)** *Underwriters Laboratories Standard 1746, "Standard for External Corrosion Protection Systems for Steel Underground Storage Tanks";*
- (3)** *Underwriters Laboratories of Canada Standard 603, "Standard for Steel Underground Tanks for Flammable and Combustible Liquids";*
- (4)** *Underwriters Laboratories of Canada Standard 603.1, "External Corrosion Protection Systems for Steel Underground Tanks for Flammable and Combustible Liquids";*

(5) *Underwriters' Laboratories of Canada S631, "Standard for Isolating Bushings for Steel Underground Tanks Protected with External Corrosion Protection Systems";*

(6) *NACE International Standard Practice SP0285, "External Corrosion Control of Underground Storage Tank Systems by Cathodic Protection";*

(7) *Steel Tank Institute Standard F841, "Standard for Dual Wall Underground Steel Storage Tanks";* or

(8) *Underwriters Laboratories Standard 58, "Standard for Steel Underground Tanks for Flammable and Combustible Liquids".*

[20.5.106.602 NMAC - N, 07/24/2018]

20.5.106.603 PERFORMANCE STANDARDS FOR USTS CONSTRUCTED OF STEEL AND CLAD OR JACKETED WITH A NON-CORRODIBLE MATERIAL:

If a UST is constructed of steel and clad or jacketed with a non-corrodible material, owners and operators shall meet the current edition of an industry standard or code of practice developed by a nationally recognized association or independent testing laboratory approved in advance by the department. Owners and operators shall use one or more of the following to comply with the requirements of this section:

A. *Underwriters Laboratories Standard 1746, "Standard for External Corrosion Protection Systems for Steel Underground Storage Tanks";*

B. *Steel Tank Institute ACT-100® Specification F894, "Specification for External Corrosion Protection of FRP Composite Steel Underground Storage Tanks";*

C. *Steel Tank Institute ACT-100-U® Specification F961, "Specification for External Corrosion Protection of Composite Steel Underground Storage Tanks";* or

D. *Steel Tank Institute Specification F922, "Specification for Permatank®".*

[20.5.106.603 NMAC - N, 07/24/2018]

20.5.106.604 PERFORMANCE STANDARDS FOR METAL USTS WITHOUT CORROSION PROTECTION:

If a UST is constructed of metal without additional corrosion protection measures, owners and operators shall only install the tank at a site that is approved in writing in advance of installation by a corrosion expert not to be corrosive enough to cause the UST to have a release due to corrosion during its operational life. Owners and operators shall maintain records that demonstrate compliance with this paragraph for the remaining life of the tank.

[20.5.106.604 NMAC - N, 07/24/2018]

20.5.106.605 INSTALLATION OF UST SYSTEMS:

A. Owners and operators shall properly install all USTs and piping:

(1) in accordance with the current edition of an industry standard or code of practice developed by a nationally recognized association or independent testing laboratory approved in advance by the department; and

(2) in accordance with the manufacturer's instructions.

B. Owners and operators shall use one or more of the following to comply with the requirements of this section:

(1) *American Petroleum Institute RP 1615, "Installation of Underground Hazardous Substances or Petroleum Storage Systems";*

(2) *Petroleum Equipment Institute Publication RP100, "Recommended Practices for Installation of Underground Liquid Storage Systems";* or

(3) *National Fire Protection Association Standard 30, "Flammable and Combustible Liquids Code" and Standard 30A, "Code for Motor Fuel Dispensing Facilities and Repair Garages".*

[20.5.106.605 NMAC - N, 07/24/2018]

20.5.106.606 SECONDARY CONTAINMENT FOR UST SYSTEMS:

A. Owners and operators shall install secondary containment as follows:

(1) for any new or replaced UST system;

(2) for any new or replaced dispenser system. A dispenser system is considered replaced when both the dispenser and the equipment needed to connect the dispenser to the underground storage tank system are installed at a UST facility. The equipment necessary to connect the dispenser to the underground storage tank system includes check valves, shear valves, unburied risers or flexible connectors, or other transitional components that are underneath the dispenser and connect the dispenser to the underground piping. Under-dispenser containment shall allow for access to the components in the containment system for visual inspections; and

(3) for any UST piping replaced after April 4, 2008.

B. Owners and operators shall design, provide project drawings for, and construct the entire new UST system with the secondary containment system in compliance with

the current edition of an industry standard or code of practice developed by a nationally recognized association or independent testing laboratory. The project drawings shall be approved in advance by the department. The secondary containment system shall:

- (1) include all tanks, piping, dispenser systems, and all containment sumps for any piping and ancillary equipment that routinely contains regulated substances;
- (2) include containment sumps, including under-dispenser containment, transition sumps, and containment sumps for submersible turbine pumps, that are liquid-tight on their sides, bottoms, and at any penetrations; and
- (3) be interstitially monitored in accordance with the requirements in 20.5.108 NMAC.

C. If owners and operators:

- (1) replace a UST, they shall install a double-walled tank with an inner and outer barrier and a release detection system that meets the requirements of 20.5.108 NMAC;
- (2) replace a dispenser system, they shall install, in accordance with manufacturer's recommendations, an under-dispenser containment system that shall be hydrostatically tested and approved by the department prior to use; types of under-dispenser containment systems include, but are not limited to, dispenser liners, containment sumps, dispenser pans and dispenser sump liners; or
- (3) replace piping, they shall install only double-walled piping with an inner and outer barrier and a release detection system that meets the requirements of 20.5.108 NMAC for the replaced piping.

D. Owners and operators shall use one or more of the following to comply with secondary containment requirements:

- (1) *Petroleum Equipment Institute Publication RP100, "Recommended Practices for Installation of Underground Liquid Storage Systems";*
- (2) *American Petroleum Institute RP 1615, "Installation of Underground Hazardous Substances or Petroleum Storage Systems";*
- (3) *National Fire Protection Association Standard 30, "Flammable and Combustible Liquids Code";* or
- (4) *National Fire Protection Association Standard 30A, "Code for Motor Fuel Dispensing Facilities and Repair Garages".*

E. The secondary containment requirements of this section shall not apply to:

(1) existing USTs in a manifolded system (as secondary containment is only required for a new or replaced UST in a manifolded system);

(2) repairs meant to restore a UST, piping or dispenser system to operating condition;

(3) piping runs that are not new or replaced for USTs with multiple piping runs;

(4) suction piping that meets the requirements of Subsection B of 20.5.108.813 NMAC; and

(5) non-pressurized piping that manifoldes two or more underground tanks together, such as a siphon piping system;

[20.5.106.606 NMAC - N, 07/24/2018]

20.5.106.607 PERFORMANCE STANDARDS FOR EXISTING UST SYSTEMS:

A. All existing UST systems (installed on or before December 22, 1988), by the effective date of these regulations, must have complied with one of the following requirements:

(1) new UST performance standards in 20.5.106 NMAC;

(2) upgrade requirements in Subsection B of 20.5.106.607 NMAC; or

(3) closure requirements in 20.5.115 NMAC.

B. UST upgrading requirements. Owners and operators must have upgraded existing steel USTs by the effective date of these regulations to meet one of the following requirements in accordance with the current edition of an industry standard or code of practice developed by a nationally recognized association or independent testing laboratory approved in advance by the department. Steel USTs that have not been upgraded by the effective date of these regulations shall be immediately permanently closed in accordance with 20.5.115 NMAC.

(1) Internal lining.

(a) USTs upgraded by internal lining must meet the following:

(i) the lining was installed in accordance with an industry standard or code of practice developed by a nationally recognized association or independent testing laboratory that was approved in advance by the department, and

(ii) within 10 years after installation of internal lining and every five years thereafter, the lined UST is required to be internally inspected in accordance with the current edition of an industry standard or code of practice developed by a nationally recognized association or independent testing laboratory, or manufacturer's recommendation, approved in advance by the department.

(b) One of the following shall be used to comply with internal lining upgrading requirements:

(i) *National Leak Prevention Association Standard 631, Chapter B, "Future Internal Inspection Requirements for Lined Tanks";*

(ii) *American Petroleum Institute Recommended Practice 1631, "Interior Lining and Periodic Inspection of Underground Storage Tanks";* or

(iii) *Ken Wilcox Associates Recommended Practice, "Recommended Practice for Inspecting Buried Lined Steel Tanks Using a Video Camera".*

(c) Owners and operators shall permanently close USTs in accordance with the requirements of 20.5.115 NMAC if the internal lining is not performing in accordance with the original design specifications and cannot be repaired in accordance with one of the following codes:

(i) *National Fire Protection Association Standard 30, "Flammable and Combustible Liquids Code";*

(ii) *American Petroleum Institute Recommended Practice RP 2200, "Repairing Hazardous Liquid Pipelines";*

(iii) *American Petroleum Institute Recommended Practice RP 1631, "Interior Lining and Periodic Inspection of Underground Storage Tanks";*

(iv) *National Fire Protection Association Standard 326, "Standard for the Safeguarding of Tanks and Containers for Entry, Cleaning, or Repair" or;*

(v) *National Leak Prevention Association Standard 631, Chapter A, "Entry, Cleaning, Interior Inspection, Repair, and Lining of Underground Storage Tanks".*

(2) Cathodic protection. USTs upgraded by cathodic protection shall meet the requirements of 20.5.106.602 NMAC and owners and operators must have ensured the integrity of the tank by:

(a) performing internal inspections and assessments to ensure that the tank was structurally sound and free of corrosion holes prior to installing the cathodic protection system; or

(b) if the tank had been installed for less than 10 years, by either having monitored monthly for releases in accordance with 20.5.108 NMAC or by having assessed for corrosion holes by conducting two tightness tests that met the requirements of 20.5.108 NMAC and that were approved in advance by the department. Owners and operators must have conducted the first tightness test prior to installing the cathodic protection system. Owners and operators must have conducted the second tightness test between three and six months following the first operation of the cathodic protection system.

(c) Owners and operators shall use one or more of the following to comply with cathodic protection upgrade requirements:

(i) *Steel Tank Institute Recommended Practice R972, "Recommended Practice for the Addition of Supplemental Anodes to STI-P3® USTs";*

(ii) *NACE International Standard Practice SP0285, "External Corrosion Control of Underground Storage Tank Systems by Cathodic Protection";* or

(iii) *American Petroleum Institute Publication RP 1632, "Cathodic Protection of Underground Petroleum Storage Tanks and Piping Systems".*

(3) Internal lining combined with cathodic protection. USTs upgraded by internal lining combined with cathodic protection must have met the following:

(a) the lining was installed in accordance with the current edition of an industry standard or code of practice developed by a nationally recognized association or independent testing laboratory, as follows:

(i) *National Leak Prevention Association Standard 631, Chapter B, "Future Internal Inspection Requirements for Lined Tanks";*

(ii) *American Petroleum Institute Recommended Practice 1631, "Interior Lining and Periodic Inspection of Underground Storage Tanks";*

(iii) *National Fire Protection Association Standard 326, "Standard for the Safeguarding of Tanks and Containers for Entry, Cleaning, or Repair",* or

(iv) *National Leak Prevention Association Standard 631, Chapter A, "Entry, Cleaning, Interior Inspection, Repair, and Lining of Underground Storage Tanks";* and

(b) the cathodic protection meets the requirements of 20.5.106.602 NMAC and has complied with one of the following:

(i) *Steel Tank Institute Recommended Practice R972, "Recommended Practice for the Addition of Supplemental Anodes to STI-P3®USTs";* or

(ii) *NACE International Standard Practice SP0285, "External Control of Underground Storage Tank Systems by Cathodic Protection";* or

(iii) *American Petroleum Institute Publication RP 1632, "Cathodic Protection of Underground Petroleum Storage Tanks and Piping Systems".*

C. Piping upgrade requirements. Owners and operators shall cathodically protect and upgrade metal piping in existing UST systems that routinely contain regulated substances and are in contact with an electrolyte, such as soil, to meet the requirements of 20.5.106.609 NMAC or 20.5.106.610 NMAC.

D. Spill and overflow prevention equipment. Owners and operators shall comply with the spill and overflow prevention requirements in 20.5.106.613 NMAC. Owners and operators of existing UST systems who installed oil/water separators to meet spill prevention requirements shall discontinue their use in meeting these requirements and shall install new spill prevention equipment that meets the requirements in Subsection F of 20.5.106.613 NMAC no later than three years after the effective date of these regulations.

E. Owners and operators of existing fiberglass reinforced plastic UST systems may install an internal lining in order to address compatibility issues in accordance with *Fiberglass Tank and Pipe Institute Recommended Practice T-95-1, "Remanufacturing of Fiberglass Reinforced Plastic (FRP) Underground Storage Tanks"*.

[20.5.106.607 NMAC - N, 07/24/2018]

20.5.106.608 GENERAL PERFORMANCE STANDARDS FOR PIPING:

A. Owners and operators shall properly design and construct new piping, provide project drawings, initially test piping, and ensure that any steel portion of piping that routinely contains regulated substances and is in contact with an electrolyte, such as soil or water, shall be protected from corrosion, in accordance with the current edition of an industry standard or code of practice developed by a nationally recognized association or independent testing laboratory approved in advance by the department. Owners and operators shall use one or more of the following to comply with the requirements of this section:

- (1) third party certification from a nationally recognized laboratory;
- (2) *American Society of Mechanical Engineering Standard B31.3, "Process Piping";*
- (3) *American Society of Testing and Materials A53, "Standard Specification for Pipe, Steel, Black and Hot-Dipped, Zinc-Coated, Welded and Seamless";*

(4) *American Society of Testing and Materials A106, "Standard Specification for Seamless Carbon Steel Pipe for High-Temperature Service";* or

(5) *American Society of Testing and Materials A135, "Standard Specification for Electric-Resistance-Welded Steel Pipe".*

B. Owners and operators shall ensure that piping is compatible with any regulated substance conveyed in accordance with 20.5.107.708 NMAC.

C. Owners and operators shall protect all piping from impact, settlement, vibration, expansion, corrosion, and damage by fire.

D. Owners and operators shall install a containment sump at any point where piping transitions from above the surface of the ground to below the ground surface.

E. If owners and operators install more than one type of piping at an underground storage tank system, then owners and operators shall comply with the requirements applicable to each type of piping for that run of piping.

[20.5.106.608 NMAC - N, 07/24/2018]

20.5.106.609 PERFORMANCE STANDARDS FOR PIPING CONSTRUCTED OF NON-CORRODIBLE MATERIAL:

A. If owners and operators construct or operate piping of fiberglass-reinforced plastic or flexible piping, the piping shall:

(1) be completely underground;

(2) be within secondary containment that includes a release detection system that meets the requirements of 20.5.108 NMAC;

(3) have a suitable cover approved by the piping manufacturer; or

(4) have equivalent protection approved by the piping manufacturer and approved by the department prior to installation.

B. Owners and operators shall ensure that the piping meets the requirements of the current edition of an industry standard or code of practice developed by a nationally recognized association or independent testing laboratory approved in advance by the department, and that the piping is approved by the manufacturer for the application for which it is to be used. Owners and operators shall use one or more of the following to comply with the requirements of this section:

(1) *Underwriters Laboratories Standard 971, "Standard for Nonmetallic Underground Piping for Flammable Liquids";* or

(2) *Underwriters Laboratories of Canada Standard S660, "Standard for Nonmetallic Underground Piping for Flammable and Combustible Liquids".*

[20.5.106.609 NMAC - N, 07/24/2018]

20.5.106.610 PERFORMANCE STANDARDS FOR STEEL PIPING FOR UST SYSTEMS:

A. If owners and operators construct or operate piping of steel for a UST system, owners and operators shall:

- (1) coat the piping with a suitable dielectric material;
 - (2) field-install a cathodic protection system designed by a corrosion expert;
- and
- (3) design any impressed current system to allow ready determination of current operating status as required in Subsection C of 20.5.107.705 NMAC.

B. Owners and operators shall ensure that the piping meets the requirements of the current edition of an industry standard or code of practice developed by a nationally recognized association or independent testing laboratory approved in advance by the department, and that the piping is approved by the manufacturer for the application for which it is to be used. Owners and operators shall use one or more of the following to comply with the requirements of this section:

- (1) *American Petroleum Institute Recommended Practice 1632, "Cathodic Protection of Underground Petroleum Storage Tanks and Piping Systems";*
- (2) *Underwriters Laboratories Subject 971A, "Outline of Investigation for Metallic Underground Fuel Pipe";*
- (3) *Steel Tank Institute Recommended Practice R892, "Recommended Practice for Corrosion Protection of Underground Piping Networks Associated with Liquid Storage and Dispensing Systems";*
- (4) *NACE International Standard Practice SP0169, "Control of External Corrosion on Underground or Submerged Metallic Piping Systems";* or
- (5) *NACE International Standard Practice SP0285, "External Corrosion Control of Underground Storage Tank Systems by Cathodic Protection".*

C. If owners and operators construct piping of steel for a UST system without additional corrosion protection measures, owners and operators shall only install the piping at a site that is approved, in writing, in advance of installation, by a corrosion expert, to not be corrosive enough to cause the piping to have a release due to

corrosion during its operational life. Owners and operators shall maintain records that demonstrate compliance with this requirement for the remaining life of the piping.

D. If owners and operators install or operate steel piping above ground that connects to an emergency generator or loading rack, they shall:

- (1) meet the requirements in Subsection D of 20.5.106.608 NMAC;
- (2) meet the requirements in Subsection A of 20.5.106.610 NMAC; and
- (3) meet the requirements in 20.5.109.915 NMAC for the above ground steel portion of the piping.

[20.5.106.610 NMAC - N, 07/24/2018]

20.5.106.611 UNDERGROUND STORAGE TANK SYSTEMS AT MARINAS:

A. Owners and operators of underground storage tank systems at marinas shall install an automatic break-away device to shut off flow of fuel from on-shore piping, which shall be located at the connection of the on-shore piping and the piping leading to the dock. Owners and operators shall install another automatic break-away device to shut off flow of fuel located at any connection between flexible piping and hard piping on the dispenser system and dock. The automatic break-away devices shall be easily accessible, and their location shall be clearly marked.

B. Owners and operators of underground storage tank systems at marinas shall electrically isolate dock piping where excessive stray electrical currents are encountered.

C. Owners and operators of underground storage tank systems at marinas shall protect piping from stress due to tidal action.

D. Owners and operators shall use *Petroleum Equipment Institute Publication RP1000, "Recommended Practices for the Installation of Marina Fueling Systems"*, or, if applicable, the current edition of an industry standard or code of practice developed by a nationally recognized association or independent testing laboratory approved in advance by the department.

[20.5.106.611 NMAC - N, 07/24/2018]

20.5.106.612 VENTING FOR UNDERGROUND STORAGE TANK SYSTEMS:

A. Owners and operators shall design and construct venting for all underground storage tank systems, following the current edition of an industry standard or code of practice developed by a nationally recognized association or independent testing laboratory approved in advance by the department.

B. Vent pipes that are provided for normal tank venting shall be located so that the discharge point is outside of buildings higher than the fill pipe opening. Vent pipes shall be installed not less than 15 feet from power ventilation air intake devices and not less than five feet from a building opening. Vent outlets and devices shall be designed and installed to minimize blockage.

C. Types of vent pipes.

(1) Vent pipes that are provided for normal tank venting shall extend at least 12 feet above ground level.

(2) If attached to a structure, vent pipes shall extend at least 5 feet above the highest projection of the canopy or roof.

(3) Vent pipes for normal tank venting shall be of appropriate size for the capacity and operating conditions of the tank.

D. Owners and operators shall use one or more of the following to comply with the requirements of this section:

(1) *Petroleum Equipment Institute Publication RP100, "Recommended Practices for Installation of Underground Liquid Storage Systems";*

(2) *National Fire Protection Association Standard 30, "Flammable and Combustible Liquids Code";*

(3) *National Fire Protection Association Standard 30A, "Code for Motor Fuel Dispensing Facilities and Repair Garages";*

(4) *Underwriters Laboratories Standard 142, "Standard for Steel Aboveground Tanks for Flammable and Combustible Liquids";* or

(5) *International Code Council, "International Fire Code".*

[20.5.106.612 NMAC - N, 07/24/2018]

20.5.106.613 SPILL AND OVERFILL PREVENTION:

A. Except as provided in subsection B of this section, to prevent spilling and overfilling associated with transfers of regulated substances to underground storage tank systems, owners and operators shall use the following spill and overfill prevention equipment:

(1) spill prevention equipment that will prevent release of regulated substances to the environment when the transfer hose is detached from the fill pipe; and

(2) overfill prevention equipment for USTs that will:

(a) automatically shut off flow into the tank when the tank is no more than ninety-five percent full; or

(b) alert the transfer operator when the tank is no more than ninety percent full by restricting the flow into the tank or triggering a high-level audible alarm.

B. Owners and operators are not required to use the spill and overfill prevention equipment specified in Subsection A of this section if approved in writing in advance by the department where:

(1) alternative equipment is used that is determined by the department to be no less protective of public health, safety and welfare and the environment than the equipment specified in Paragraphs (1) and (2) of Subsection A of this section; or

(2) the underground storage tank system is filled by transfers of no more than 25 gallons at one time;

C. Flow restrictors or ball float valves used in vent lines shall not be used as overfill prevention equipment for USTs when overfill prevention is installed or replaced after[the effective date of these rules.

D. Spill and overfill prevention equipment must be periodically tested or inspected in accordance with 20.5.107.704 NMAC.

E. Owners and operators of UST systems with remote fill piping shall install a trap door or equivalent device and shall meet the following:

(1) Flow restrictors or ball float valves shall not be installed or used on a UST system with a remote fill pipe.

(2) Owners and operators who install or modify remote fill piping shall install a containment sump where remote fill piping connects to the UST.

F. Overfill prevention and spill prevention equipment for new UST systems shall be either listed in accordance with an industry standard or code of practice developed by a nationally recognized association or independent testing laboratory for use with flammable and combustible liquids.

G. Owners and operators shall not install oil/water separators to meet spill prevention requirements for UST systems.

[20.5.106.613 NMAC - N, 07/24/2018]

20.5.106.614 LOADING RACKS:

A. Owners and operators who install loading racks shall design and construct them in accordance with the current edition of an industry standard or code of practice developed by a nationally recognized association or independent testing laboratory approved in advance by the department. Owners and operators shall use one or more of the following to comply with the requirements in this section:

(1) *American Petroleum Institute Standard 2610, "Design, Construction, Operation, Maintenance & Inspection of Terminal and Tank Facilities";*

(2) *National Fire Protection Association Standard 30, "Flammable and Combustible Liquids Code";*

(3) *International Code Council, "International Fire Code";* or

(4) *Petroleum Equipment Institute RP 800, "Recommended Practices for Installation of Bulk Storage Plants."*

B. Owners and operators of aviation fuel storage tank systems who install loading racks shall comply with *National Fire Protection Association Standard 407, "Standard for Aircraft Fuel Servicing"*.

C. Owners and operators shall install a containment system that is designed to contain all releases of regulated substances that occur during loading and unloading operations at the loading rack. For all loading racks, owners and operators shall install either:

(1) a drainage system, or secondary containment system meeting the requirements of 20.5.106 NMAC, with a catchment basin capable of containing the largest compartment of a tank car or tanker truck that is loaded or unloaded at the facility; or

(2) a drainage system that is connected to a treatment facility designed to receive releases of regulated substances that occur during loading and unloading operations.

D. Owners and operators shall ensure that loading racks are at least 25 feet from ASTs containing class I liquids (such as gasoline), buildings, and property lines. Owners and operators shall ensure that loading racks are at least 15 feet from ASTs containing class II or class III liquids.

[20.5.106.614 NMAC - N, 07/24/2018]

20.5.106.615 REQUIRED NOTIFICATION PRIOR TO INSTALLATION:

To ensure that an inspector has an opportunity to be present during the steps in procedures which are important to the prevention of releases, owners, operators, and

certified tank installers shall give the department notice of the dates on which critical junctures in the installation of an underground storage tank system are to take place. The inspector may require that critical junctures be performed from Monday through Friday during regular business hours.

A. For installations, the term "critical junctures" means:

- (1)** preparation of the excavation immediately prior to receiving backfill and a UST or piping for a UST;
- (2)** installation of any tank pad, vault, or secondary containment for a storage tank system;
- (3)** setting of a storage tank and piping, including placement of any anchoring devices, backfill to the level of the tank, and strapping, if any;
- (4)** placing a regulated substance in the tank;
- (5)** any time during the installation in which components of piping are connected;
- (6)** all pressure testing or integrity testing of an underground storage tank system, including associated piping, performed during the installation; and
- (7)** completion of backfill and filling of the excavation.

B. Owners, operators and certified tank installers shall give at least 30 days written notice before the installation of an underground storage tank system. At a minimum, the installation notice shall contain the following information:

- (1)** date the form is completed;
- (2)** facility name, facility ID number, address (with county), and telephone number;
- (3)** owner name, owner ID number, address, and telephone number;
- (4)** contractor name, address, and telephone number;
- (5)** tank details (number and size, type and materials, products to be stored);
- (6)** piping material and type of leak detection;
- (7)** type of spill and overfill prevention;

(8) type of corrosion protection (sacrificial, impressed current, or none with explanation why corrosion protection not required);

(9) method of leak detection (statistical inventory reconciliation, automatic tank gauges, visual, vapor monitoring, interstitial monitoring, inventory control with tightness testing);

(10) approximate date installation will take place; and

(11) the signature of the owner or owner's representative filling out the form.

C. Owners, operators and certified tank installers shall provide required project drawings with the 30 day written notice.

D. In addition to the written notice described in this section, owners, operators and certified tank installers shall give oral notice at least 24 hours in advance of the commencement of the procedure. In the oral notice, owners, operators and certified tank installers shall describe any changes to the 30-day written notice required in Subsection B of this section, such as different equipment or installation methods.

E. If owners, operators and certified tank installers are separate persons, only one person is required to comply with the notice requirements of this section; however, all parties are liable in the event of noncompliance.

[20.5.106.615 NMAC - N, 07/24/2018]

[The department provides an optional form that may be used for notification of installation. The form is available

on the petroleum storage tank bureau's pages on the department's website or by contacting the Petroleum Storage Tank Bureau at 505-476-4397 or 2905 Rodeo Park Drive East, Building 1, Santa Fe, New Mexico 87505.]

20.5.106.616 REQUIRED CERTIFICATIONS:

A. Certification of compliance. All owners and operators of new underground storage tank systems shall certify in the registration form required by 20.5.102 NMAC compliance with the following requirements:

(1) installation of tanks and piping in 20.5.106.605 NMAC for UST systems;

(2) cathodic protection of steel tanks and piping in 20.5.106.602 NMAC and 20.5.106.610 NMAC for UST systems, or 20.5.106.604 NMAC for UST systems;

(3) financial responsibility under 20.5.117 NMAC; and

- (4) release detection in 20.5.108 NMAC.

B. Installer certification. All owners and operators of new underground storage tank systems shall ensure that the installer certifies in the registration form required by 20.5.102 NMAC that the methods used to install the storage tanks and piping comply with the requirements in 20.5.106 NMAC.

C. Certification of installation. Owners and operators shall demonstrate compliance with the installation standards in 20.5.106 NMAC. Owners and operators shall provide a certification of installation on the UST registration form required by 20.5.102 NMAC, which asserts that all of the following methods of certification, testing, and inspection were used to demonstrate compliance with installation requirements of the UST system:

- (1) the installer has been certified by the tank and piping manufacturers;
 - (2) the installer has been certified or licensed as required in 20.5.105 NMAC;
- and
- (3) the installer has notified, submitted required documentation to, and the installation has been inspected by the department; and
 - (4) all work listed in the manufacturer's installation checklists has been completed.

[20.5.106.616 NMAC - N, 07/24/2018]

20.5.106.617 ALTERNATE METHODS:

A. If owners and operators want to install tanks, piping, underground storage tank systems, spill and overfill equipment, secondary containment, or any other requirement of this part with materials or methods that are not in accordance with the current edition of an industry standard or code of practice developed by a nationally recognized association or independent testing laboratory, owners and operators shall apply in writing to the department, shall provide supporting documentation, and shall not begin the installation unless and until the department approves the request in writing. At a minimum, the request for an alternate method shall contain the following:

- (1) date the form is completed;
- (2) facility name, facility ID number, address (with county) and telephone number;
- (3) owner name, owner ID number, address and telephone number;
- (4) citation to regulation for which alternate method or material (such as type of piping) is requested;

- (5) brief description of the proposed alternate method or material;
- (6) justification of proposed alternate method or material, including citation to a standard or code supporting its use, if available; and
- (7) demonstration of its equivalent protection of public health, safety and welfare and the environment.

B. The department shall not grant the request unless owners and operators demonstrate that the request will provide equivalent protection of public health, safety and welfare and the environment.

[20.5.106.617 NMAC - N, 07/24/2018]

[The department provides an optional form that may be used to request approval of an alternate method. The form is available on the petroleum storage tank bureau's pages on the department's website or by contacting the Petroleum Storage Tank Bureau at 505-476-4397 or 2905 Rodeo Park Drive East, Building 1, Santa Fe, New Mexico 87505.]

PART 107: GENERAL OPERATING REQUIREMENTS FOR UNDERGROUND STORAGE TANK SYSTEMS

New Mexico Register / Volume XXIX, Issue 14 / July 24, 2018

20.5.107.1 ISSUING AGENCY:

New Mexico Environmental Improvement Board.

[20.5.107.1 NMAC - N, 07/24/2018]

20.5.107.2 SCOPE:

This part applies to owners and operators of storage tanks as provided in 20.5.101 NMAC. If the owner and operator of a storage tank are separate persons, only one person is required to comply with the requirements of this part, including any notice and reporting requirements; however, both parties are liable in the event of noncompliance.

[20.5.107.2 NMAC - N, 07/24/2018]

20.5.107.3 STATUTORY AUTHORITY:

This part is promulgated pursuant to the provisions of the Hazardous Waste Act, Sections 74-4-1 through 74-4-14 NMSA 1978, and the general provisions of the Environmental Improvement Act, Sections 74-1-1 through 74-1-17 NMSA 1978.

[20.5.107.3 NMAC - N, 07/24/2018]

20.5.107.4 DURATION:

Permanent.

[20.5.107.4 NMAC - N, 07/24/2018]

20.5.107.5 EFFECTIVE DATE:

July 24, 2018, unless a later date is indicated in the bracketed history note at the end of a section.

[20.5.107.5 NMAC - N, 07/24/2018]

20.5.107.6 OBJECTIVE:

The purpose of 20.5.107 NMAC is to ensure that the operation and maintenance of storage tanks will prevent releases and to protect the public health, safety and welfare and the environment of the state.

[20.5.107.6 NMAC - N, 07/24/2018]

20.5.107.7 DEFINITIONS:

The definitions in 20.5.101 NMAC apply to this part.

[20.5.107.7 NMAC - N, 07/24/2018]

20.5.107.8-20.5.107.699 [RESERVED]

20.5.107.700 OPERATION AND MAINTENANCE OF UNDERGROUND STORAGE TANK SYSTEMS:

Owners and operators shall properly maintain all tanks, piping, secondary containment and other associated equipment required in 20.5.106 NMAC, and shall ensure that all tanks, piping, secondary containment and other associated equipment for all storage tank systems are fully operational at all times. Owners and operators shall notify the department in accordance with 20.5.118 NMAC if a visual inspection, other inspection or testing conducted in accordance with this part or 20.5.108 NMAC indicates that a release may have occurred.

A. Owners and operators shall mark fill port lids of USTs in accordance with the current edition of an industry standard or code of practice developed by a nationally recognized association or independent testing laboratory approved in advance by the department. The following shall be used to comply with this requirement: *American*

Petroleum Institute RP 1637, "Using the API Color-Symbol System to Mark Equipment and Vehicles for Product Identification at Gas Dispensing Facilities and Distribution Terminals". Owners and operators shall clearly label the contents of all storage tanks.

B. If any steel piping installed in a trench is used in a UST system, owners and operators shall visually inspect the trench monthly. Owners and operators shall draw off any liquid that has accumulated in the trench within one week of the accumulation, and shall remove any other debris that has accumulated inside the trench. Owners and operators shall properly treat and dispose of any accumulated liquid with a visible sheen and the disposal shall be in accordance with all federal, state, and local statutes, ordinances, and regulations. If a basin sump is located in the trench, owners and operators shall keep the basin sump free of accumulated liquid and debris. Owners and operators shall not install any valves in any basin sump in a piping trench.

[20.5.107.700 NMAC - N, 07/24/2018]

20.5.107.701 OPERATIONS AND MAINTENANCE PLAN:

Owners and operators of all storage tank systems shall adopt and implement a written operations and maintenance plan, which they shall keep at the facility for the life of the storage tank system. Owners and operators of unmanned storage tank systems may keep the operations and maintenance plan at an alternate location as long as it is made readily available to the department upon request. The operations and maintenance plan shall be as specific as possible for each facility and shall include the piping and ancillary equipment that routinely contains regulated substances, or controls the flow of regulated substances. Owners and operators may use, by reference, operational and maintenance guidance from the current edition of an industry standard or code of practice developed by a nationally recognized association or independent testing laboratory. Owners and operators who reference a current edition of an industry standard or code of practice shall maintain a copy of the code or standard they reference. Owners and operators shall not implement the plan until it has been approved by the department.

A. At a minimum, the operations and maintenance plan shall include the following:

(1) a detailed plan showing inspections, operations, testing and maintenance to be done on a daily, monthly, quarterly and annual basis; the plan shall include tank charts for each tank, a description of how owners and operators properly dispose of regulated substances spilled at the facility, and any water or soil removed from any part of the storage tank system where there is any indication it might be or have been contaminated with a regulated substance;

(2) a description of periodic operation and maintenance walk-through inspections in accordance with 20.5.107.707 NMAC; and

(3) responses to emergency situations; this information shall be readily accessible at the facility; responses to emergency situations shall include the following:

(a) the location of equipment to be shut down during an emergency and how to safely perform these tasks;

(b) actions to be taken in the event of a fire, flooding, a spill, or a release of regulated substances;

(c) a site diagram; and

(d) a list of whom to notify or call during or after an emergency situation.

B. Owners and operators shall use one or more of the following to comply with the requirements of this section:

(1) *Petroleum Equipment Institute Recommended Practice RP 900, "Recommended Practices for the Inspection and Maintenance of UST Systems",*

(2) *U.S. Environmental Protection Agency #510-R-05-001, "UST Systems: Inspecting and Maintaining Sumps and Spill Buckets"; or*

(3) *U.S. Environmental Protection Agency #510-R-05-002, "Operating and Maintaining Underground Storage Tank Systems: Practical Help and Checklists".*

C. Owners and operators may submit to the department for approval an alternate plan which contains all the information requested in this section.

D. Owners and operators of storage tank systems that have been placed in temporary closure in compliance with 20.5.115.1501 NMAC shall not be required to have an operations and maintenance plan, unless one or both of the following conditions is present:

(1) the storage tank contains greater than one inch of regulated substance; or

(2) the storage tank system has steel components that are in contact with an electrolyte, such as soil, water or concrete.

[20.5.107.701 NMAC - N, 07/24/2018]

20.5.107.702 OPERATION, REPAIR, AND MAINTENANCE OF SECONDARY CONTAINMENT FOR USTS:

A. Owners and operators of underground storage tank systems shall operate, maintain and repair secondary containment in accordance with the manufacturer's instructions or specifications, or with the current edition of an industry standard or code

of practice developed by a nationally recognized association or independent testing laboratory approved in advance by the department. Owners and operators shall use one or more of the following to comply with the requirements of this section:

(1) U.S. Environmental Protection Agency #510-R-05-001, "UST Systems: Inspecting and Maintaining Sumps and Spill Buckets"; or

(2) U.S. Environmental Protection Agency #510-R-05-002, "Operating and Maintaining Underground Storage Tank Systems: Practical Help and Checklists";

(3) *National Leak Prevention Association Publication RP823, "Standard for Preventative Maintenance, Repair, and In-situ Construction of Petroleum Sumps".*

B. Owners and operators shall draw off liquid that has accumulated in the secondary containment, including all sumps, within one week of any accumulation of liquid, and shall remove any other debris that has accumulated inside the secondary containment. Owners and operators shall properly treat and dispose of any accumulated liquid with a visible sheen.

C. Under-dispenser containment must allow for access to the components in the containment system for visual inspections in accordance with 20.5.107.707 NMAC.

D. Under-dispenser containment for UST systems installed after April 4, 2008 shall be maintained to meet requirements in 20.5.106.606 NMAC.

E. Owners and operators shall operate, maintain, and repair containment sumps on UST systems in order to prevent any leaks or spills from escaping the containment sumps.

[20.5.107.702 NMAC - N, 07/24/2018]

20.5.107.703 OPERATION, REPAIR, AND MAINTENANCE OF VENTING SYSTEMS:

Owners and operators shall operate, maintain and repair venting systems in accordance with the current edition of an industry standard or code of practice developed by a nationally recognized association or independent testing laboratory approved in advance by the department. At least monthly, owners and operators shall check emergency vents to ensure they are operational. The following shall be used to comply with this requirement: *National Fire Protection Association Standard 91, "Standard for Exhaust Systems for Air Conveying of Vapors, Gases, Mists, and Particulate Solids".*

[20.5.107.703 NMAC - N, 07/24/2018]

20.5.107.704 OPERATION AND MAINTENANCE OF SPILL AND OVERFILL PREVENTION:

Owners and operators shall ensure that releases due to spilling or overfilling do not occur.

A. Owners and operators shall ensure that the volume available in a tank is greater than the volume of product to be transferred to the tank before the transfer is made and that the transfer operation is monitored constantly to prevent overfilling and spilling. Owners and operators shall comply with the transfer procedures described in the current edition of an industry standard or code of practice developed by a nationally recognized association or independent testing laboratory approved in advance by the department. Owners and operators shall use one or more of the following to comply with the requirements of this section:

(1) *National Fire Protection Association Standard 30A, "Code for Motor Fuel Dispensing Facilities and Repair Garages";*

(2) *International Code Council, "International Fire Code";*

(3) *Petroleum Equipment Institute Publication RP600, "Recommended Practices for Overfill Prevention for Shop-Fabricated Aboveground Tanks";* or

(4) *American Petroleum Institute Standard 2350, "Overfill Protection for Storage Tanks in Petroleum Facilities".*

B. For additional guidance on Subsection A, see the following:

(1) *National Fire Protection Association Standard 385, "Standard for Tank Vehicles for Flammable and Combustible Liquids";*

(2) *American Petroleum Institute Recommended Practice 1007, "Loading and Unloading of MC 306/DOT 406 Cargo Tank Motor Vehicles";*

(3) *American Petroleum Institute Bulletin 1621, "Recommended Good Practices for Bulk Liquid-Loss Control in Service Stations";* or

(4) *National Fire Protection Association Standard 30, "Flammable and Combustible Liquids Code".*

C. Owners and operators of UST systems shall ensure that spill prevention equipment required in 20.5.106.613 NMAC is liquid tight, maintained, and fully operational at all times. In order to ensure the equipment meets these requirements, owners and operators shall, no later than three years after the effective date of these rules, meet the following requirements:

(1) Single walled spill prevention equipment shall be tested every three years either by a vacuum, pressure, or liquid test method that meets one of the following:

(a) the equipment manufacturer's developed and published testing requirements; or

(b) *Petroleum Equipment Institute RP 1200, "Recommended Practices for the Testing and Verification of Spill, Overfill, Leak Detection, and Secondary Containment Equipment at UST Facilities"*.

(2) Single walled spill prevention equipment installed in a containment sump shall be tested every three years or the containment sump shall be tested every three years. Testing shall either be by a vacuum, pressure, or liquid method that meets one of the following:

(a) the equipment manufacturer's developed and published testing requirements; or

(b) *Petroleum Equipment Institute RP 1200, "Recommended Practices for the Testing and Verification of Spill, Overfill, Leak Detection, and Secondary Containment Equipment at UST Facilities"*.

(3) Double walled spill prevention equipment that is periodically monitored every 30 days shall have records of the monitoring maintained in accordance with the requirements in 20.5.107.714 NMAC. If monthly monitoring is not being conducted or records of the monitoring cannot be produced, a test in accordance with Subsection C of this section shall be conducted within the next thirty days of discontinuing periodic monitoring of the equipment.

(4) Single walled containment sumps installed to meet spill prevention requirements shall be tested every three years. Testing shall be by a vacuum, pressure, or liquid method that meets one of the following:

(a) the equipment manufacturer's developed and published testing requirements; or

(b) *Petroleum Equipment Institute RP 1200, "Recommended Practices for the Testing and Verification of Spill, Overfill, Leak Detection, and Secondary Containment Equipment at UST Facilities"*.

(5) Double walled containment sumps that are installed to meet spill prevention requirements shall either be tested every three years or monitored as follows:

(a) Testing shall be by a vacuum, pressure, or liquid method that meets one of the following:

(i) the equipment manufacturers developed and published testing requirements; or

(ii) *Petroleum Equipment Institute RP 1200, "Recommended Practices for the Testing and Verification of Spill, Overfill, Leak Detection, and Secondary Containment Equipment at UST Facilities";*

(b) Monitoring shall be performed either continuously or monthly with a sensor or visual inspection as follows:

(i) continuous monitoring by liquid, pressure, or vacuum shall be done electronically and shall activate an alarm when liquid is detected in the interstice of the sump;

(ii) monthly monitoring with a sensor shall be conducted at least every 30 days and in accordance with either the manufacturer's instructions or the current edition of a national code or standard;

(iii) monthly monitoring by visual inspection may be used if a leak from the inner wall of the sump can be detected by a visual check of the interstice;

(6) Containment sumps installed prior to the effective date of these regulations shall be tested in accordance with Paragraph (2) of Subsection C of this section prior to the beginning of monthly monitoring, if applicable;

(7) Sensors used for monthly monitoring of spill prevention equipment or containment sumps associated with spill prevention equipment shall be functionality tested annually in accordance with the requirements in Subsection B of 20.5.108.808 NMAC;

(8) If evidence is found during the monthly monitoring that containment sumps or spill prevention equipment are no longer liquid tight, owners and operators shall have the equipment repaired or replaced in accordance with the requirements in 20.5.107.709 NMAC;

(9) A report shall be produced which includes the results of any vacuum, pressure, or liquid testing conducted on spill prevention equipment and the report shall be submitted to the department in accordance with the requirements in 20.5.107.715 NMAC and maintained in accordance with the requirements in 20.5.107.714 NMAC.

D. Spill prevention equipment that either fails when tested or is found to be damaged during periodic monitoring shall be repaired or replaced in accordance with 20.5.107.709 NMAC.

E. Owners and operators of UST systems shall ensure that overfill prevention equipment required in 20.5.106.613 NMAC is maintained and fully operational at all times. Owners and operators shall either use the methods and procedures for the inspection as listed in *Petroleum Equipment Institute RP 1200, "Recommended Practices for the Testing and Verification of Spill, Overfill, Leak Detection, and*

Secondary Containment Equipment at UST Facilities," or those developed and published by the equipment manufacturer. In order to ensure the equipment meets these requirements, owners and operators shall, no later than three years after the effective date of these regulations, and every three years thereafter, have the overfill prevention equipment inspected or tested and shall meet the following:

(1) The inspection shall verify the equipment meets the requirements in 20.5.106.613 NMAC, and if the equipment fails to meet these requirements, it shall be repaired or replaced. The repair or replacement shall be in accordance with 20.5.107.709 NMAC.

(2) Prior to the inspection of flow restrictors on vent lines on existing USTs, either a vacuum or pressure decay test shall be conducted in order to ensure all of the penetrations on top of the tank are vapor tight. If the tank fails the test it shall be repaired prior to placing the tank back into service.

(3) Flow restrictors on vent lines that are found to be inoperable during the inspection shall be replaced with different type of overfill prevention equipment. Flow restrictors shall not be installed or replaced with another flow restrictor on or after the effective date of these regulations.

(4) Drop tube style overfill prevention equipment shall be removed from the tank and inspected for operability.

(5) If more than one type of overfill prevention equipment is installed on a UST, owners and operators shall ensure that none of them will interfere with the proper operation of any of the others.

(6) A report on tests and inspections of overfill prevention equipment shall be produced which meets the requirements in Subsection D of 20.5.107.715 NMAC, and the report shall be maintained in accordance with the requirements in 20.5.107.714 NMAC. The report shall be submitted to the department in accordance with the requirements in Subsections B and C of 20.5.107.715 NMAC.

F. Owners and operators shall report, investigate, and clean up any spills and overfills in accordance with 20.5.118 NMAC.

G. Owners and operators of a storage tank system that meets the requirements for temporary closure where the tank is empty as defined in 20.5.115.1501 NMAC shall not be required to periodically test the spill and overfill prevention equipment.

H. Owners and operators of storage tank systems shall ensure that tests of all spill and overfill prevention equipment as required in this section are performed by a qualified tester. The requirements for testers can be found in 20.5.105 NMAC.

[20.5.107.704 NMAC - N, 07/24/2018]

20.5.107.705 OPERATION AND MAINTENANCE OF CORROSION PROTECTION:

Owners and operators of metal storage tank systems with any metal tank or piping with corrosion protection shall comply with the following requirements to ensure that releases due to corrosion are prevented until the storage tank system is permanently closed pursuant to 20.5.115 NMAC.

A. Owners and operators shall operate and maintain corrosion protection systems to continuously provide corrosion protection to all metal components of the storage tank system that routinely contain regulated substances and are in contact with an electrolyte, to include, but not limited to, soil or water. Owners and operators shall operate and maintain corrosion protection systems in accordance with the current edition of an industry standard or code of practice developed by a nationally recognized association or independent testing laboratory approved in advance by the department. Owners and operators shall use one or more of the following to comply with the requirements of this section:

- (1) *Steel Tank Institute, "STI-P3 Specification and Manual for External Corrosion Protection of Underground Steel Storage Tanks";*
- (2) *Underwriters Laboratories Standard 1746, "Standard for External Corrosion Protection Systems for Steel Underground Storage Tanks";*
- (3) *Underwriters' Laboratories of Canada CAN4-S603-14-ER1, "Standard for Steel Underground Tanks for Flammable and Combustible Liquids";*
- (4) *Underwriters' Laboratories of Canada CAN4-603.1, "Standard for External Corrosion Protection Systems for Underground Steel Tanks for Flammable and Combustible Liquids";*
- (5) *Underwriters' Laboratories of Canada CAN4-S631-M84, "Isolating Bushings for Steel Underground Tanks Protected with Coatings and Galvanic Systems";*
- (6) *NACE International Standard Practice SP 0285, "External Control of Underground Storage Tank Systems by Cathodic Protection";* or
- (7) *Underwriters Laboratories Standard 58, "Standard for Steel Underground Tanks for Flammable and Combustible Liquids."*

B. Owners and operators shall ensure that all storage tank systems equipped with cathodic protection are inspected for proper operation by a qualified corrosion expert in accordance with the following requirements:

- (1) Frequency: owners and operators shall test all cathodic protection systems as follows:

- (a) within six months of installation and at least every three years thereafter;
 - (b) within six months of a modification or repair; or
 - (c) another reasonable time frame approved in advance in writing by the department;
- (2) Inspection criteria: the criteria that are used to determine that cathodic protection is adequate as required by this section must be in accordance with the current edition of an industry standard or code of practice developed by a nationally recognized association or independent testing laboratory approved in advance by the department;
- (3) Owners and operators of storage tank systems shall provide the department a report on the cathodic protection system test that includes the following:
- (a) name of facility, facility address, and facility ID number;
 - (b) name of the technician who performed the test;
 - (c) certification of the technician in the type of test performed, including certification numbers, national association where the certification was obtained, and expiration date of the certification;
 - (d) description of cathodic protection system, for example impressed current, galvanic;
 - (e) description of storage tank system including tank ID number, product, capacity, tank type, piping, flex connectors;
 - (f) type of test conducted, such as: three-year test; test within six months of installation; test within six months after repair or modification; test within three months after failed test;
 - (g) whether all flex connectors or metal risers that routinely contain a regulated substance and are in contact with an electrolyte are protected from corrosion. If isolation boots, jackets, or other non-corrodible materials are used to protect this equipment from corrosion, it shall be determined if they are still providing protection from corrosion.
 - (h) tester's pass/fail evaluation and actions to be taken after evaluation;
 - (i) facility drawing of the storage tank system and cathodic protection system, indicating location of test points on the storage tank system, cathodic protection test stations, and reference electrode placement; and

(j) description of cathodic protection system repair or modification.

(4) Owners and operators of storage tank systems shall provide the department a report on impressed current systems that includes all requirements listed in Paragraph (3) of Subsection B of this section and:

(a) rectifier manufacturer, model, serial number, and what the rectifier is rated for in direct current output voltage and amperage;

(b) rectifier tap settings, direct current output voltage and amperage, and hour meter readings;

(c) description of structure tested, contact point of test lead, and reference electrode placement;

(d) structure to soil potential with current applied in millivolts;

(e) structure to soil potential with current interrupted, instant OFF in millivolts;

(f) 100 millivolts polarization shift, end voltage and voltage change;
and

(g) test results.

(5) Owners and operators of storage tank systems shall provide the department a report on galvanic systems that includes all requirements listed in Paragraph (3) of Subsection B of this section and:

(a) description of structure tested, contact point of test lead, and reference electrode placement;

(b) structure to soil potential measured locally in millivolts;

(c) structure to soil potential measured remotely in millivolts; and

(d) test results.

(6) Owners and operators shall use one or more of the following to comply with the requirements of this section:

(a) *National Fire Protection Association Standard 30, "Flammable and Combustible Liquids Code";*

(b) *National Fire Protection Association Standard 30A "Code for Motor Fuel Dispensing Facilities and Repair Garages";*

(c) American Petroleum Institute Publication RP 1615, "Installation of Underground Petroleum Storage Systems";

(d) American Petroleum Institute Publication RP 1632, "Cathodic Protection of Underground Petroleum Storage Tanks and Piping Systems";

(e) International Code Council, "International Fire Code";

(f) NACE International Test Method TM 0101, "Measurement Techniques Related to Criteria for Cathodic Protection of Underground Storage Tank Systems";

(g) NACE International Test Method TM0497, "Measurement Techniques Related to Criteria for Cathodic Protection on Underground or Submerged Metallic Piping Systems";

(h) Steel Tank Institute Recommended Practice R051, "Cathodic Protection Testing Procedures for STI-P3® USTs";

(i) NACE International Standard Practice SP 0285, "External Control of Underground Storage Tank Systems by Cathodic Protection"; or

(j) NACE International Standard Practice SP 0169, "Control of External Corrosion on Underground or Submerged Metallic Piping Systems".

C. Owners and operators shall inspect storage tank systems with impressed current cathodic protection systems every 60 days to ensure the equipment is running properly. Owners and operators shall record the date, time, readings and results of each inspection in a log kept at the facility, and indicate who performed each inspection.

D. Owners and operators shall monthly inspect any equipment or materials used to isolate metal components of UST systems and shall repair or replace equipment and materials used to meet corrosion protection requirements in this section.

E. For storage tank systems using cathodic protection, owners and operators shall maintain records of the operation of the cathodic protection in accordance with 20.5.107.714 NMAC to demonstrate compliance with the performance standards in this section. These records shall provide the following:

(1) the results of the last three inspections required in Subsection C of this section; and

(2) the results of testing from the last two inspections required in Subsection B of this section.

[20.5.107.705 NMAC - N, 07/24/2018]

[The department provides an optional form that may be used for the cathodic protection system test report required in Subsection B. The form is available on the Petroleum Storage Tank Bureau's pages on the department website, or by contacting the Petroleum Storage Tank Bureau at 505-476-4397 or 2905 Rodeo Park Drive East, Building 1, Santa Fe, New Mexico 87505.]

20.5.107.706 OPERATION AND MAINTENANCE OF CONTAINMENT SUMPS FOR UST SYSTEMS:

A. Owners and operators shall maintain all containment sumps (including but not limited to turbine sumps, under dispenser sumps, and transition sumps) and draw off liquid that has accumulated in the containment sumps within one week of the accumulation, and shall remove any other debris that has accumulated inside the containment sumps. Owners and operators shall properly treat and dispose of any accumulated liquid with a visible sheen and the disposal shall be in accordance with all federal, state, and local statutes, ordinances, and regulations.

B. Owners and operators shall maintain all containment sumps associated with interstitial monitoring of underground piping; the sumps shall be liquid tight and kept free of water.

C. Owners and operators of UST systems with single walled containment sumps associated with interstitial monitoring shall have the integrity of the sump tested no later than three years after the effective date of these regulations, and every three years thereafter, in accordance with the following:

(1) Hydrostatic or other test methods shall be conducted to ensure the containment sumps are liquid tight including at all penetrations in accordance with one of the following:

(a) the equipment manufacturers developed and published testing requirements;

(b) *Petroleum Equipment Institute RP 1200, "Recommended Practices for the Testing and Verification of Spill, Overfill, Leak Detection, and Secondary Containment Equipment at UST Facilities"*; or

(c) the current edition of an industry standard or code of practice developed by a nationally recognized association or independent testing laboratory approved in advance by the department;

(2) Hydrostatic test methods using a test apparatus developed specifically for testing containment sumps shall ensure the containment sumps are liquid tight including at all penetrations and comply with one of the following:

(a) protocols developed by the manufacturer of the test apparatus and the certification as listed on <http://www.nwglde.org>, the web site of the national work group on leak detection evaluation; or

(b) protocols developed and published by the manufacturer of the containment sump; or

(c) *Petroleum Equipment Institute RP 1200, "Recommended Practices for the Testing and Verification of Spill, Overfill, Leak Detection, and Secondary Containment Equipment at UST Facilities"*; or

(3) A low liquid level hydrostatic test method may be conducted if all of the following conditions are met:

(a) test method used shall be in accordance with the following:

(i) the liquid level meets the third-party certification for the sensor installed in the sump;

(ii) the duration of the test shall be a minimum of one hour unless a different test period is specified by the containment sump manufacturer or in Item (iii) below;

(iii) the current edition of an industry standard or code of practice developed by a nationally recognized association or independent testing laboratory approved in advance by the department;

(b) either a hydrostatic test shall be conducted every 12 years in accordance with Paragraph (1) and (2) of Subsection C or a site check shall be conducted every 12 years in accordance with in Subsection B of 20.5.118.1801 NMAC.

(c) a sump sensor that automatically shuts off equipment associated with the sump and meets the requirements for placement and testing of sensors used for interstitial monitoring in Paragraph 2 of Subsection B of 20.5.108.811 NMAC;

(4) A low liquid level test per Paragraph (3) of this subsection shall not be conducted if the following conditions exist:

(a) a liquid is discovered in the sump or evidence is found that a liquid has been at a level equal to or higher than the lowest penetration in the sump then testing has to be conducted in accordance with Paragraph (1) of this subsection;

(b) sensors in containment sumps are discovered to be located higher than the lowest part of the sump a test shall be conducted in accordance with Paragraph (1) of this subsection and owners and operators shall report and investigate a suspected release in accordance with the requirements in 20.5.118 NMAC; or

(c) a site check conducted in accordance with Paragraph (3) of this subsection indicates there has been a release from the containment sump.

D. Owners and operators of UST systems with double-walled containment sumps associated with interstitial monitoring shall have the integrity of the sumps tested no later than three years after the effective date of these regulations, and every three years thereafter, in accordance with one of the following:

(1) interstices under vacuum, pressure, or brine filled, are continuously monitored by use of interstitial sensors or visually inspected every 30 days, and the monitoring records are maintained in accordance with 20.5.107.714 NMAC. Owners and operators shall ensure that annual functionality testing or annual inspections of the monitoring equipment are conducted in accordance with 20.5.108.805 NMAC. Owners and operators who cannot demonstrate that the interstices of the containment sumps are continuously monitored or inspected every 30 days shall have the sumps tested in accordance with Subsection C above; or

(2) containment sumps with dry interstices that are not continuously monitored are integrity tested in accordance with Subsection C of this section.

E. All sensors and equipment used to monitor containment sumps shall be functionality tested annually in accordance with Subsection B of 20.5.108.805 NMAC.

F. A report shall be produced which includes the results of the testing, and the report shall be submitted in accordance with 20.5.107.715 NMAC and maintained in accordance with the requirements in 20.5.107.714 NMAC.

G. Owners and operators of storage tank systems shall ensure that tests of containment sumps as required in this section are performed by qualified testers. The requirements for testers can be found in 20.5.105 NMAC.

H. Owners and operators of storage tank systems shall dispose of water or other test media used in testing of components of petroleum storage tank systems, or any accumulated liquid with a visible sheen, and the disposal shall be in accordance with all federal, state, and local statutes, ordinances, and regulations. Owners and operators who temporarily store the test media or water on-site shall do so in accordance with all federal, state, and local statutes, ordinances, and regulations.

[20.5.107.706 NMAC - N, 07/24/2018]

20.5.107.707 PERIODIC OPERATION AND MAINTENANCE WALK-THROUGH INSPECTIONS:

A. Owners and operators shall conduct walk-through inspections that, at a minimum, check equipment as specified below:

(1) For spill and overfill prevention equipment, every 30 days (exception: spill prevention equipment at UST systems receiving deliveries at intervals greater than every 30 days may be checked prior to each delivery):

- (a)** visually check all spill and overfill prevention equipment for damage;
- (b)** remove liquid or debris;
- (c)** check for and remove obstructions in the fill pipe;
- (d)** check all fill and vapor caps to verify a tight seal; and
- (e)** for double walled spill prevention equipment with interstitial monitoring, check for a leak in the interstitial area; and
- (f)** check overfill prevention equipment for proper operation and determine whether maintenance is required.

(2) For release detection equipment, every 30 days:

- (a)** check to make sure the release detection equipment is operating with no alarms or other unusual operating conditions present; and
- (b)** ensure records of release detection testing are reviewed and current.

(3) For containment sumps, every 30 days:

- (a)** visually check the containment sump for damage, liquid in or leaks into the containment area, and releases to the environment;
- (b)** remove liquid and debris from containment sumps; and
- (c)** for double walled sumps with interstitial monitoring, check for liquid or a leak in the interstitial area.

(4) Annually: check hand held release detection equipment, such as, but not limited to, tank gauge sticks or groundwater bailers for operability and serviceability;

B. Owners and operators shall conduct these walk-through inspections in accordance with one of the following:

(1) *Petroleum Equipment Institute Recommended Practice RP 900, "Recommended Practices for the Inspection and Maintenance of UST Systems";*

(2) the current edition of a national code of practice or standard developed by a nationally recognized association or independent testing laboratory that checks equipment included in Subsection A of 20.5.107.707 NMAC; or

(3) a checklist developed by the department.

C. Owners and operators must maintain records of operation and maintenance walkthrough inspections in accordance with 20.5.107.714 NMAC. Records must include a list of each area checked, whether each area checked was acceptable or needed action taken, a description of actions taken to correct an issue, and delivery records if spill prevention equipment is checked less frequently than every 30 days due to infrequent deliveries.

[20.5.107.707 NMAC - N, 07/24/2018]

20.5.107.708 COMPATIBILITY:

Owners and operators shall use a storage tank system made of or lined with materials that are compatible with the substance stored in the storage tank system.

A. Owners and operators must notify the department at least 30 days prior to changing the substance in any of their tanks to a regulated substance containing greater than ten percent ethanol, greater than twenty percent biodiesel, or any other regulated substance identified by the department.

B. In addition, owners and operators with storage tank systems storing the regulated substances identified in Subsection A of this section must meet one of the following:

(1) demonstrate compatibility of the storage tank system, including the tank, piping, containment sumps, pumping equipment, release detection equipment, spill equipment, and overfill equipment. Owners and operators may demonstrate compatibility of the storage tank system by using one of the following options:

(a) certification or listing of storage tank system equipment or components by a nationally recognized, independent testing laboratory approved in advance by the department for use with the regulated substance stored; or

(b) equipment or component manufacturer approval. The manufacturer's approval must be in writing, indicate an affirmative statement of compatibility, specify the range of biofuel blends the equipment or component is compatible with, and be from the equipment or component manufacturer.

(2) for storage tank systems or system components that contain, but are not compatible with, one of the regulated substances listed in Subsection A of this section, or for those storage tank systems where compatibility cannot be determined, remove all

regulated substances from the storage tank system by the effective date of these regulations and comply with one of the following:

(a) replace the storage tank system or system components in accordance with the requirements for a new storage tank system in 20.5.106 NMAC; or

(b) prior to putting the tank back in service, repair the storage tank system in accordance 20.5.107.702 NMAC and comply with one of the following:

(i) install an internal lining in the tank in accordance with the requirements in Subsection E of 20.5.106.607 NMAC to address compatibility issues; or

(ii) comply with tank or equipment manufacturer's instructions;

(c) change the regulated substance stored to one that is compatible with the storage tank system; or

(d) permanently close the storage tank system within 12 months of the effective date of these regulations in accordance with the permanent closure requirements in 20.5.115 NMAC; or

(3) use another option determined by the department to be no less protective of human health and the environment than the options listed in this subsection.

C. Owners and operators must maintain records documenting compliance with this section for as long as the storage tank system is used to store the regulated substance.

D. Owners and operators shall use the current edition of an industry standard or code of practice developed by a nationally recognized association or independent testing laboratory approved in advance by the department to comply with the compatibility requirements of this section. *American Petroleum Institute Recommended Practice RP 1626, "Storing and Handling Ethanol and Gasoline-Ethanol Blends at Distribution Terminals and Service Stations"*, shall be used to comply with the requirements of this section as they pertain to storage of ethanol blends.

[20.5.107.708 NMAC - N, 07/24/2018]

20.5.107.709 REPAIRS, REPLACEMENTS AND MODIFICATIONS:

Owners and operators of a storage tank system shall ensure that repairs, replacements, and modifications will prevent releases due to structural failure or corrosion as long as the storage tank system is used to store regulated substances.

A. Determining whether repair, replacement or modification is necessary. Owners and operators shall determine whether a repair, replacement or modification to a

storage tank system is necessary in consultation with a department inspector, after providing notice required by this part.

(1) If owners and operators are repairing, replacing or modifying piping of any kind that is connected to a storage tank, the determination shall be made during an on-site inspection that provides the inspector the opportunity to view the piping while it is exposed.

(2) If, during an on-site inspection, the inspector determines that:

(a) any steel piping connected to a tank indicates corrosion; or

(b) any non-corrodible piping connected to a tank shows signs of deterioration or failure;

(3) Then the owner and operator shall replace all piping connected to that tank, and shall inspect all other piping at the same facility that is made of the same material to determine its condition prior to returning the facility to operation.

B. Owners and operators shall properly conduct repairs, replacements and modifications to storage tank systems in accordance with the current edition of an industry standard or code of practice developed by a nationally recognized association or independent testing laboratory approved in advance by the department, and in accordance with the manufacturer's instructions and recommended practices. Owners and operators shall use one or more of the following to comply with the requirements of this section:

(1) *National Fire Protection Association Standard 30, "Flammable and Combustible Liquids Code";*

(2) *American Petroleum Institute Recommended Practice RP 2200, "Repairing Hazardous Liquid Pipelines";*

C. Owners and operators shall tightness test a storage tank system that has been replaced, modified or repaired, prior to returning the system to service, in accordance with 20.5.108.804 NMAC and Subparagraph (a) of Paragraph (3) of Subsection A of 20.5.108.810 NMAC except as provided below:

(1) the repaired or modified tank is internally inspected in accordance with the current edition of an industry standard or code of practice approved in advance by the department; or

(2) owners and operators shall use an equivalent test method, which complies with the current edition of an industry standard or code of practice developed by a nationally recognized association or independent testing laboratory approved in advance in writing by the department.

D. The following codes of practice shall be used to comply with Subsection C of this section:

(1) *Steel Tank Institute Recommended Practice R012, "Recommended Practice for Interstitial Tightness Testing of Existing Underground Double Wall Steel Tanks";*

(2) *Fiberglass Tank and Pipe Institute Publication RP 2007-2, "Field Test Protocol for Testing the Annular Space of Installed Underground Fiberglass Double and Triple-Wall Tanks with Dry Annular Space";* or

(3) *Petroleum Equipment Institute Recommended Practice RP 1200, "Recommended Practices for the Testing and Verification of Spill, Overfill, Leak Detection and Secondary Containment Equipment of UST Facilities".*

E. Upon completion of a modification or repair of any cathodically protected storage tank system, owners and operators shall test the cathodic protection system in accordance with Subsections B and C of 20.5.107.705 NMAC to ensure that it is operating properly.

F. Owners and operators of a storage tank system shall maintain records of each repair, replacement and modification until the storage tank system is permanently closed pursuant to 20.5.115 NMAC.

G. Owners and operators shall meet all applicable installation requirements of 20.5.106 NMAC, including testing requirements, when repairing, replacing or modifying a storage tank system involves installing new components. If any tank or piping of a storage tank system is replaced, owners and operators shall follow all requirements for properly assessing the site for contamination in compliance with 20.5.115 NMAC prior to installing the new components.

H. Repairs to secondary containment areas of tanks and piping used for interstitial monitoring and to containment sumps used for interstitial monitoring of piping must have the secondary containment tested for tightness according to the manufacturer's instructions, a code of practice developed by a nationally recognized association or independent testing laboratory, or according to requirements established by the implementing agency within 30 days following the date of completion of the repair.

I. Within 30 days following any repair to spill or overfill prevention equipment, the repaired spill or overfill prevention equipment must be tested or inspected, as appropriate, in accordance with 20.5.107.704 NMAC to ensure it is operating properly.

[20.5.107.709 NMAC - N, 07/24/2018]

20.5.107.710 INSPECTIONS, MONITORING AND TESTING:

A. For the purpose of enforcing the provisions of these regulations, all owners and operators of storage tanks shall, upon the request of the secretary or authorized department representatives, furnish information relating to such tanks, including tank equipment and contents, conduct monitoring or testing, and permit any department representative at all reasonable times to have access to, and to copy all records relating to such tanks. Owners and operators shall comply with all applicable and appropriate Occupational Health and Safety Act requirements, Sections 50-9-1 through 50-9-25 NMSA 1978, so that storage tanks may be safely inspected. For the purpose of enforcing these regulations, department officers, employees, or representatives are authorized to:

- (1)** enter at reasonable times any establishment or place where a storage tank is located;
- (2)** inspect the storage tank system and obtain samples of its contents;
- (3)** conduct monitoring or testing of the tanks, associated equipment, contents, or surrounding soils, air, surface water, or groundwater; and
- (4)** retrieve all data from any electronic release detection equipment or device.

B. The department shall commence and complete each inspection with reasonable promptness. If the secretary or department representative obtains any samples, prior to leaving the premises he shall give to the owner, operator or agent in charge a receipt describing the sample obtained and, if requested, a portion of each sample equal in volume or weight to the portion retained. If any analysis is made of the samples, a copy of the results of the analysis shall be furnished promptly to the owner, operator or agent in charge.

C. Owners and operators shall permit the department or authorized department representative to be present at and inspect all storage tank system installations, replacements, repairs, substantial modifications, installations of leak detection systems and storage tank system closures.

D. Owners and operators shall not intentionally delete any history from any electronic release detection equipment or device.

[20.5.107.710 NMAC - N, 07/24/2018]

20.5.107.711 REQUIRED NOTIFICATION PRIOR TO REPLACEMENT, REPAIR AND MODIFICATION:

To ensure that an inspector has an opportunity to be present during the steps in procedures which are important to the prevention of releases, owners, operators, and certified tank installers shall give the department notice of the dates on which critical junctures in the replacement, repair, and modification of the storage tank system are to take place. Notice need not be provided for normal maintenance. The inspector may require that critical junctures be performed from Monday through Friday during regular business hours.

A. For replacements, modifications (including internal lining or changes to cathodic protection systems), and repairs, the term "critical junctures" means:

- (1) completion of the excavation of existing tanks or piping;
- (2) actual performance of the repair, lining or modification;
- (3) any time during the project in which components of piping are connected;
- (4) any time during the project in which a tank, its associated piping, spill prevention equipment, or secondary containment sumps are tested; and
- (5) any time during the project when overflow prevention equipment is inspected to ensure it meets the requirements in 20.5.106.613 NMAC.

B. Owners, operators and certified tank installers shall give at least 30 days written notice before the replacement, modification or repair of a storage tank system. It may not be feasible for owners, operators, and certified tank installers to provide advance notice of emergency repairs; however, owners, operators, and certified tank installers shall provide notice of emergency repairs as soon as possible after completing emergency repairs. At a minimum, the notice for replacements, modifications, and repairs shall contain the following information:

- (1) date the form is completed;

- (2) facility name, facility ID number, address (with county), and telephone number;
- (3) owner name, owner ID number, address, and telephone number;
- (4) contractor name, address, and telephone number;
- (5) description of type of replacement, modification or repair to be performed (such as spill containment, overspill prevention, release detection, piping or other);
- (6) expected date on which replacement, modification or repair will be performed; and
- (7) whether any part of the storage tank system is within 1,000 feet of a community water system or a potable drinking water well; and
- (8) signature of owner, operator or an authorized representative.

C. In addition to the written notices described in this section, owners, operators and certified tank installers shall give oral notice at least 24 hours in advance of the commencement of the procedure. In the oral notice, owners, operators and certified tank installers shall describe any changes to the 30-day written notice required in Subsection B of this section, such as different equipment or installation methods.

D. If owners, operators and certified tank installers are separate persons, only one person is required to comply with the notice requirements of this section; however, all parties are liable in the event of noncompliance.

[20.5.107.711 NMAC - N, 07/24/2018]

[The bureau provides an optional form that may be used for notification of replacement, repair and modification. The form is available on the petroleum storage tank bureau's pages on the department website, or by contacting the Petroleum Storage Tank Bureau at 505-476-4397 or 2905 Rodeo Park Drive East, Santa Fe, NM 87505.]

20.5.107.712 DEPARTMENT REVIEW AND APPROVAL OF PLANS, INSTALLATION, OPERATION, AND MAINTENANCE:

Owners and operators shall view any inspection, review or approval by the department as permission to proceed in accordance with all applicable rules, codes and standards. Review and approval by the department shall not relieve any owner, operator, or certified tank installer of his responsibility for compliance. If the department overlooks any deficiencies or violations in the course of plan review or inspection provided in 20.5 NMAC, the department may later require correction and compliance.

[20.5.107.712 NMAC - N, 07/24/2018]

20.5.107.713 ALTERNATE METHODS:

A. If owners and operators want to operate, maintain, replace, repair or modify any part of a storage tank system with materials or methods that are not in accordance with the current edition of an industry standard or code of practice developed by a nationally recognized association or independent testing laboratory, owners and operators shall apply in writing to the department, shall provide supporting documentation, and shall not begin to operate, maintain, replace, repair or modify the storage tank system, unless and until the department approves the request in writing. At a minimum, the request for an alternate method shall contain the following:

- (1) date the form is completed;
- (2) facility name, facility ID number, address (with county) and telephone number;
- (3) owner name, owner ID number, address and telephone number;
- (4) citation to regulation for which alternate method or material (such as type of piping) is requested;
- (5) brief description of the proposed alternate method or material;
- (6) justification of proposed alternate method or material, including citation to a standard or code supporting its use, if available; and
- (7) demonstration of its equivalent protection of public health, safety and welfare and the environment.

B. The department shall not grant the request unless owners and operators demonstrate that the request will provide equivalent protection of public health, safety and welfare and the environment.

[20.5.107.713 NMAC - N, 07/24/2018]

[The bureau provides an optional form that may be used to request approval of an alternate method. The form is available on the Petroleum Storage Tank Bureau's pages on the department website, or by contacting the Petroleum Storage Tank Bureau at 505-476-4397 or 2905 Rodeo Park Drive East, Building 1, Santa Fe, NM 87505.]

20.5.107.714 RECORD KEEPING:

A. Owners and operators shall maintain the following information for the life of the storage tank system:

- (1) a corrosion expert's analysis of site corrosion potential if corrosion protection equipment is not used, in accordance with 20.5.106.604 NMAC and 20.5.106.610 NMAC;
- (2) documentation of operation of corrosion protection equipment that demonstrates compliance with 20.5.107.705 NMAC;
- (3) documentation of storage tank system repairs, replacements and modifications that demonstrates compliance with 20.5 NMAC;
- (4) documentation of compliance with release detection requirements in accordance with 20.5.108 NMAC;
- (5) inspection logs required by 20.5.107 NMAC and 20.5.108 NMAC;
- (6) tank tightness, internal inspection and integrity test documents required by 20.5 NMAC;
- (7) any document approving any alternate method;
- (8) spill and overfill prevention equipment testing/inspection records;
- (9) containment sump testing records;
- (10) documentation of compatibility for UST systems;
- (11) documentation of compliance for spill and overfill prevention equipment and containment sumps used for interstitial monitoring of piping;
- (12) documentation of periodic walkthroughs;
- (13) documentation of operator training in accordance with 20.5.104 NMAC;
- (14) the operation and maintenance plan and related documentation as required by 20.5.107.701 NMAC; and
- (15) any other record or written approval required in 20.5 NMAC.

B. Availability and maintenance of records. Owners and operators shall keep the required records for the operational life of a tank, piping and storage tank system either:

- (1) at the storage tank site and immediately available for inspection by the department; or
- (2) at a readily available alternative site and the records shall be provided for inspection to the department upon request; if records are not available at a site during

inspection, owners and operators shall send to the inspector within 10 working days all records requested by the inspector.

C. Owners and operators shall maintain permanent closure records required under 20.5.115 NMAC. Owners and operators are also provided with the additional alternative of mailing closure records to the department if they cannot be kept at the site or an alternative site as indicated above.

D. If the owner and operator of a storage tank are separate persons, only one person is required to comply with the requirements of this section; however, both parties are liable in the event of noncompliance.

[20.5.107.714 NMAC - N, 07/24/2018]

20.5.107.715 REPORTING:

Owners and operators of a storage tank system shall cooperate fully with inspections, monitoring and testing conducted by the department, as well as requests for document submission, testing, and monitoring by the owner or operator pursuant to Section 9005 of Subtitle I of the federal Solid Waste Disposal Act, as amended.

A. Owners and operators shall provide the following information to the department:

(1) registration for all storage tank systems in accordance with 20.5.102 NMAC, which includes certification of installation for new UST systems in accordance with Subsection C of 20.5.106.616 NMAC;

(2) reports of all releases in accordance with 20.5.102 NMAC and the requirements in 20.5.118 NMAC for reporting suspected releases, spills and overfills and confirmed releases;

(3) corrective actions planned or taken as required by 20.5.119 NMAC and 20.5.120 NMAC;

(4) notification before storage tank system installation, replacement, repair or modification in accordance with 20.5.106 NMAC and 20.5.107 NMAC; notification when any person assumes ownership of a storage tank system in accordance with 20.5.102 NMAC and notification before permanent closure or change in service in accordance with 20.5.115 NMAC; it may not be feasible for owners and operators to provide advance notice of emergency repairs; however, owners and operators shall provide notice of emergency repairs as soon as possible after completing emergency repairs;

(5) notification prior to storage tank systems changing to certain regulated substances in accordance with Subsection A of 20.5.107.708 NMAC; and

(6) updated project drawings for any addition, replacement or modification of a storage tank system;

B. Owners and operators shall provide to the department all reports as required in 20.5.107 NMAC within 60 days of completion of the tests.

C. Owners and operators shall report any failed tests or inspections to the department within 24 hours of completion of the test or inspection in accordance with 20.5.118 NMAC.

D. Owners and operators shall ensure all reports required in 20.5.107 NMAC contain, at a minimum, the following:

- (1)** facility name and address;
- (2)** facility ID number;
- (3)** owner and operator name and address;
- (4)** owner ID number;
- (5)** date report was completed;
- (6)** date of the test;
- (7)** duration of the test;
- (8)** brand name and model number of equipment being tested or sufficient description to allow identification of the equipment;
- (9)** type of equipment being tested;
- (10)** type of test, including test procedures and methods;
- (11)** results of the test;
- (12)** name of the person who performed the inspection or test, and their qualifications as specified in 20.5.105 NMAC;
- (13)** name of the regulated substance stored in the tank associated with the equipment being tested; and
- (14)** for the inspections and testing of spill prevention equipment, overflow prevention equipment, and containment sumps include the information from the following forms, as applicable, from *Petroleum Equipment Institute Publication RP 1200*,

"Recommended Practices for the Testing and Verification of Spill, Overfill, Leak Detection and Secondary Containment Equipment at UST Facilities":

(a) spill bucket integrity testing, hydrostatic test method, single and double-walled vacuum method;

(b) containment sump integrity testing, hydrostatic testing method;

(c) UST overfill equipment inspection, automatic shutoff device and ball float valve; or

(d) automatic tank gauge operation inspection.

[20.5.107.715 NMAC - N, 07/24/2018]

PART 108: RELEASE DETECTION FOR UNDERGROUND STORAGE TANK SYSTEMS

20.5.108.1 ISSUING AGENCY:

New Mexico Environmental Improvement Board.

[20.5.108.1 NMAC - N, 07/24/2018]

20.5.108.2 SCOPE:

This part applies to owners and operators of underground storage tanks as provided in 20.5.101 NMAC. If the owner and operator of a storage tank are separate persons, only one person is required to comply with the requirements of this part, including any notice and reporting requirements; however, both parties are liable in the event of noncompliance.

[20.5.108.2 NMAC - N, 07/24/2018]

20.5.108.3 STATUTORY AUTHORITY:

This part is promulgated pursuant to the provisions of the Hazardous Waste Act, Sections 74-4-1 through 74-4-14 NMSA 1978; and the general provisions of the Environmental Improvement Act, Sections 74-1-1 through 74-1-17 NMSA 1978.

[20.5.108.3 NMAC - N, 07/24/2018]

20.5.108.4 DURATION:

Permanent.

[20.5.108.4 NMAC - N, 07/24/2018]

20.5.108.5 EFFECTIVE DATE:

July 24, 2018, unless a later date is indicated in the bracketed history note at the end of a section.

[20.5.108.5 NMAC - N, 07/24/2018]

20.5.108.6 OBJECTIVE:

The purpose of 20.5.108 NMAC is to ensure that releases from underground storage tanks are detected early to minimize potential harmful resulting effects, and to regulate underground storage tank systems in order to protect the public health, safety and welfare and the environment of the state.

[20.5.108.6 NMAC - N, 07/24/2018]

20.5.108.7 DEFINITIONS:

The definitions in 20.5.101 NMAC apply to this part.

[20.5.108.7 NMAC - N, 07/24/2018]

20.5.108.8-20.5.108.799 [RESERVED]

20.5.108.800 GENERAL RELEASE DETECTION REQUIREMENTS FOR UST SYSTEMS:

Owners and operators of all UST systems shall comply with the following:

A. Owners and operators of UST systems shall provide a method or combination of methods of release detection that:

(1) can detect a release from any portion of the tank, connected piping and ancillary equipment that routinely contains a regulated substance;

(2) is installed and calibrated in accordance with the manufacturer's instructions;

(3) is operated and maintained in accordance with one of the following, beginning on the effective date of these regulations:

(a) manufacturer's instructions;

(b) the current edition of an industry standard or code of practice developed by a nationally recognized association or independent testing laboratory approved in advance by the department; or

(c) requirements determined by the implementing agency to be no less protective of human health and the environment than Paragraph (1) and (2) of this subsection.

(4) has electronic and mechanical components that are tested to ensure proper operation;

(5) with the exceptions of inventory control in 20.5.108.802 NMAC and manual tank gauging in 20.5.108.803 NMAC, meets the performance requirements in 20.5.108 NMAC in accordance with a third party certified method as listed by the national work group on leak detection evaluations; and

(6) is capable of detecting the leak rate or quantity specified for that method in 20.5.108 NMAC with a probability of detection of 0.95 and a probability of false alarm of 0.05.

B. Owners and operators shall maintain written confirmations of performance claims and their method of determination. These statements shall be written by the equipment manufacturer or installer and shall confirm that the equipment meets the applicable requirements of 20.5.108 NMAC.

C. Prior to implementing a new method or combination of methods of release detection, owners and operators shall have the UST system components tested to ensure the new method is capable of detecting a release.

D. When a release detection method indicates a release may have occurred, owners and operators shall notify the department in accordance with 20.5.102.204 and 20.5.118 NMAC.

E. Owners and operators of underground storage tank systems installed prior to April 4, 2008 that meet the performance standards in 20.5.106 NMAC shall provide release detection for storage tank systems by monitoring monthly for releases using one of the methods listed in Sections 20.5.108.805 NMAC through 20.5.108.809 NMAC with the following exceptions:

(1) Monthly inventory control may be used in accordance with the requirements in 20.5.108 NMAC, in conjunction with tank tightness testing conducted in accordance with this part at least every five years until 10 years after the tank was installed.

(2) UST systems that do not meet the performance standards in 20.5.106 NMAC shall upgrade under 20.5.106 NMAC or permanently close under 20.5.115 NMAC.

(3) Manual tank gauging may be used if conducted in accordance with 20.5.108.803 NMAC.

(4) Underground pressurized piping that was installed prior to April 4, 2008 may use annual line tightness testing in conjunction with automatic line leak detectors in accordance with 20.5.108.810 NMAC, and

(5) Underground suction piping that was installed prior to April 4, 2008 may use line tightness testing every three years in accordance with 20.5.108.812 NMAC.

F. Owners and operators of UST systems installed or replaced after April 4, 2008 shall monitor the UST system monthly for releases using interstitial monitoring in accordance with 20.5.108.808 NMAC and either 20.5.108.811 or 20.5.108.813 NMAC.

G. Owners and operators shall ensure that any person who performs a test on their UST system in order to meet the requirements of 20.5.108 NMAC shall comply with the requirements in 20.5.105 NMAC.

H. Owners and operators shall ensure that equipment used to perform a test on their storage tank system is calibrated and maintained according to the manufacturer's requirements.

I. Owners and operators of UST systems shall maintain and provide to the department all reports required in 20.5.108 NMAC in accordance with 20.5.108.815 NMAC and 20.5.108.816 NMAC.

[20.5.108.800 NMAC - N, 07/24/2018]

20.5.108.801 REQUIREMENTS FOR HAZARDOUS SUBSTANCE UST SYSTEMS:

A. Owners and operators of hazardous substance UST systems installed before April 4, 2008 shall provide containment that meets the requirements in Subsection C of 20.5.108.801 NMAC, and these UST systems shall be monitored every 30 days using one or more of the UST methods allowed in 20.5.108 NMAC. Owners and operators may request to use an alternate method in accordance with the requirements of 20.5.108.814 NMAC and shall provide the department with information in writing on effective corrective action technologies, health risks, and chemical and physical properties of the stored substance along with the characteristics of the UST site.

B. Owners and operators of hazardous substance UST systems installed on or after April 4, 2008 shall provide containment that meets the requirements in Subsection C of 20.5.108.801 NMAC, and shall monitor these UST systems at least every 30 days using

interstitial monitoring in accordance with 20.5.108.808 NMAC and either 20.5.108.811 NMAC or 20.5.108.813 NMAC.

C. Release detection of hazardous substance UST systems shall meet the following requirements.

(1) Owners and operators shall design, construct and install secondary containment systems to:

(a) contain regulated substances that escape the primary containment until they are detected and removed;

(b) prevent the release of regulated substances to the environment at any time during the operational life of the UST system; and

(c) be checked for evidence of a release monthly; the provisions of 40 CFR 265.193, containment and detection of releases, may be used to comply with these requirements for storage tank systems installed on or before the effective date of these regulations.

(2) Double-walled tanks shall be designed, constructed, and installed to:

(a) contain a release from any portion of the inner tank within the outer wall; and

(b) detect the failure of the inner wall.

(3) External liners (including vaults) shall be designed, constructed and installed to:

(a) contain one hundred percent of the capacity of the largest tank within its boundary;

(b) prevent the interference of precipitation or groundwater intrusion with the ability to contain or detect a release of regulated substances; and

(c) surround the tank completely, thereby preventing lateral as well as vertical migration of regulated substances.

(4) Underground piping shall be equipped with secondary containment that satisfies the requirements of this section (for example: trench liners or double-walled pipe). In addition, underground piping that conveys regulated substances under pressure shall be equipped with an automatic line leak detector in accordance with Subsection A of 20.5.108.810 NMAC.

[20.5.108.801 NMAC - N, 07/24/2018]

20.5.108.802 INVENTORY CONTROL WITH TANK TIGHTNESS TESTING REQUIREMENTS FOR USTS:

Owners and operators of underground storage tanks installed on or before April 4, 2008 may use inventory control in conjunction with tank tightness testing every five years as release detection for 10 years after the storage tank system is installed. After the 10-year anniversary of the storage tank system installation, owners and operators shall use one of the methods in 20.5.108.805 NMAC through 20.5.108.809 NMAC. Inventory control with tank tightness testing shall meet the following requirements:

A. Inventory control or another test of equivalent performance shall be conducted monthly to detect a release of at least one percent of flow-through plus 130 gallons on a monthly basis.

B. Inventory volume measurements for regulated substance inputs, withdrawals, and the amount still remaining in the UST are recorded each operating day.

C. The equipment used is capable of measuring the level of regulated substance over the full range of the UST's height to the nearest one-eighth of an inch.

D. The regulated substance inputs are reconciled with delivery receipts by measurement of the UST inventory volume before and after delivery.

E. Deliveries are made through a drop tube that extends to within one foot of the UST bottom.

F. Regulated substance dispensing is metered and recorded within the state standards for meter calibration or an accuracy of six cubic inches for every five gallons of regulated substance withdrawn.

G. The measurement of any water level in the bottom of the UST is made to the nearest one-eighth of an inch at least once a month.

H. Practices described in the *American Petroleum Institute Publication RP 1621, "Bulk Liquid Stock*

Control at Retail Outlets" may be used, where applicable, as guidance in meeting the requirements of 20.5.108.802 NMAC.

I. Owners and operators shall meet all the requirements for tank tightness testing in 20.5.108.804 NMAC.

J. At least annually, owners and operators shall check the operability and serviceability of any measuring device or equipment used for inventory control in accordance with Subsection A of 20.5.108.800 NMAC.

K. Measurements and results of each monthly monitoring period shall be maintained in accordance with the recordkeeping requirements in 20.5.108.815 NMAC and shall be provided to the department upon request.

[20.5.108.802 NMAC - N, 07/24/2018]

20.5.108.803 MANUAL TANK GAUGING REQUIREMENTS FOR USTS:

A. Manual tank gauging:

(1) may be used as the sole method of release detection for regulated underground tanks of 550 gallons or less nominal capacity and tanks with a nominal capacity of 551 to 1,000 gallons that meet the tank diameter of 48 inches or 64 inches for the life of these tanks;

(2) may be used as a method of release detection for regulated underground tanks with a nominal capacity of 551 to 1,000 gallons, with a diameter other than either 48 inches or 64 inches, for 10 years after installation in conjunction with periodic tank tightness testing in accordance with 20.5.108.802 NMAC and 20.5.108.804 NMAC;

(3) may be used as a method of release detection for regulated underground tanks with a nominal capacity of 1,001 to 2,000 gallons with any diameter for 10 years after installation in conjunction with periodic tank tightness testing in accordance with 20.5.108.802 NMAC and 20.5.108.804 NMAC;

(4) shall not be used after the 10th year of the installation for tanks described in Paragraphs (2) and (3) of this subsection; after the 10th year, owners and operators shall change to a method described in 20.5.108.805 NMAC through 20.5.108.809 NMAC; and

(5) shall not be used to meet the requirements of this part for tanks of greater than 2,000 gallons nominal capacity.

B. Owners and operators of underground storage tanks who use manual tank gauging as release detection shall ensure the following:

(1) tank liquid level measurements are taken at the beginning and ending of a period of at least 36 hours during which no liquid is added to or removed from the tank;

(2) level measurements are based on an average of two consecutive stick readings at both the beginning and ending of the period;

(3) the equipment used is capable of measuring the level of product over the full range of the tank's height to the nearest one-eighth of an inch;

(4) a suspected release is reported in accordance with the requirements of 20.5.118 NMAC if the variation between beginning and ending measurements exceeds any of the weekly or monthly standards as follows:

(a) underground storage tank with a nominal capacity of 550 gallons or less, with a minimum test duration of 36 hours, where the weekly standard for one test exceeds 10 gallons, or the monthly standard for a four-test average exceeds five gallons;

(b) underground storage tank with a nominal capacity of 551 gallons through 1,000 gallons with a tank diameter of 64 inches and a minimum test duration of 44 hours, where the weekly standard for one test exceeds nine gallons or the monthly standard for a four-test average exceeds four gallons;

(c) underground storage tank with a nominal capacity of 551 gallons through 1,000 gallons with a tank diameter of 48 inches and a minimum test duration of 58 hours, where the weekly standard for one test exceeds 12 gallons or the monthly standard for a four-test average exceeds six gallons;

(d) underground storage tank with a nominal capacity of 551 gallons through 1,000 gallons, with a minimum test duration of 36 hours, where the weekly standard for one test exceeds 13 gallons or the monthly standard for a four-test average exceeds seven gallons;

(e) underground storage tank with a nominal capacity of 1,001 gallons through 2,000 gallons, with a minimum test duration of 36 hours, where the weekly standard for one test exceeds 26 gallons or the monthly standard for a four-test average exceeds 13 gallons.

C. At least annually, owners and operators shall check the operability and serviceability of any measuring device or equipment used for manual tank gauging in accordance with Subsection A of 20.5.108.800 NMAC.

D. Measurements and results of each monthly monitoring period shall be maintained in accordance with the recordkeeping requirements in 20.5.108.815 NMAC and shall be provided to the department upon request.

[20.5.108.803 NMAC - N, 07/24/2018]

20.5.108.804 TANK TIGHTNESS TESTING FOR USTS:

A. Tank tightness testing (or another test of equivalent performance) shall be capable of detecting a one-tenth gallon per hour leak rate from any portion of the tank that routinely contains product while accounting for the effects of thermal expansion or contraction of the product, vapor pockets, tank deformation, evaporation or

condensation, and the location of the water table. Owners and operators may not use tank tightness testing alone as a method of release detection.

B. Owners and operators shall ensure any person conducting this testing shall meet the tester requirements in 20.5.105 NMAC.

C. Owners and operators of UST systems shall maintain and provide the department with reports for all tank tightness testing conducted on their storage tank systems in accordance with 20.5.108.815 NMAC and 20.5.8.816 NMAC.

D. An automatic tank gauge system conducting a one-tenth gallon per hour leak test does not meet the requirements for tank tightness testing in this section.

[20.5.108.804 NMAC - N, 07/24/2018]

20.5.108.805 AUTOMATIC TANK GAUGING REQUIREMENTS FOR USTS:

A. Owners and operators of underground storage tanks may use automatic tank gauging as a method of release detection if the automatic tank gauging system:

(1) tests for the loss of product and can detect a two-tenths gallon per hour leak rate from any portion of the storage tank system that routinely contains regulated substances;

(2) meets inventory control or another test of equivalent performance requirements in accordance with 20.5.108.802 NMAC; and

(3) tests the storage tank system using one of the following modes:

(a) in-tank static testing conducted at least once every 30 days;

(b) continuous in-tank leak detection operating on an uninterrupted basis to determine the leak status of the tank at least once every 30 days; or

(c) continuous in-tank leak detection operating within a process that allows the system to gather incremental measurements to determine the leak status of the tank at least once every 30 days.

B. Owners and operators shall at least annually test the automatic tank gauging system for proper operation beginning three years after the effective date of these regulations. Inspections and testing shall be conducted by a person who is certified as a technician by the manufacturer of the automatic tank gauging system and meets the tester requirements in 20.5.105 NMAC. The annual tests shall, at a minimum and as applicable, include the following:

(1) automatic tank gauge and other controllers: test alarm; verify system programming and configuration; test battery backup;

(2) probes and sensors: inspect for residual buildup; ensure floats move freely; ensure shaft is not damaged; ensure cables are free of kinks and breaks; test alarm operability and communication with controller; and

(3) vacuum pumps and pressure gauges: ensure proper communication with sensors and controller.

C. Owners and operators shall use one of the following to comply with Paragraph B of this section:

1) Petroleum Equipment Institute Publication RP 1200, "Recommended Practices for the Testing and Verification of Spill, Overfill, Leak Detection and Secondary Containment Equipment at UST Facilities"; or

2) The manufacturer's testing or inspection instructions.

D. Owners and operators shall review the monitoring reports on a monthly basis and notify the department in accordance with 20.105.18 NMAC if there is a failed or inconclusive result.

E. Owners and operators shall maintain records for all inspections and testing required in this section in accordance with 20.5.108.815 NMAC. Owners and operators shall provide the department with a report of each annual test of the automatic tank gauge system in accordance with 20.5.108.816 NMAC.

F. A one tenth gallon per hour leak test conducted by an automatic tank gauge system does not meet the requirements for tank tightness testing in 20.5.108.804 NMAC.

[20.5.108.805 NMAC - N, 07/24/2018]

20.5.108.806 VAPOR MONITORING REQUIREMENTS FOR USTS:

Owners and operators of underground storage tanks may use vapor monitoring or testing as a method of release detection as long as the testing or monitoring for vapors within the soil gas of the excavation zone meets all of the following requirements:

A. The materials used as backfill are sufficiently porous (e.g., gravel, sand, crushed rock) to readily allow diffusion of vapors from releases into the excavation area.

B. The stored regulated substance, or a tracer compound placed in the UST system, is sufficiently volatile (e.g., gasoline) to result in a vapor level that is detectable

by the monitoring devices located in the excavation zone in the event of a release from the UST.

C. The measurement of vapors by the monitoring device is not rendered inoperative by groundwater, rainfall, soil moisture or other known interferences so that a release could go undetected for more than 30 days.

D. The level of background contamination in the excavation zone will not interfere with the method used to detect releases from the UST, and

E. The vapor monitors are designed and operated to detect any significant increase in concentration above background of the regulated substance stored in the UST system, a component or components of that substance, or a tracer compound placed in the UST system.

F. In the UST excavation zone, the site is assessed:

(1) to ensure compliance with the requirements in Subsections A through D of this section; and

(2) to establish the number and positioning of monitoring wells that will detect releases within the excavation zone from any portion of the tank that routinely contains a regulated substance.

G. Site assessments conducted after the effective date of these regulations are signed by a professional engineer or professional geologist, or equivalent licensed professional with experience in environmental engineering, hydrogeology, or other relevant technical discipline acceptable to the department and approved in advance by the department.

H. Monitoring wells are clearly marked and secured to avoid unauthorized access and tampering.

I. Hand-held electronic sampling equipment that is used for vapor monitoring is:

(1) annually checked to ensure that the equipment is functioning properly; and

(2) calibrated prior to each sampling event in accordance with the manufacturer's instructions.

J. All records of the site assessment and vapor monitoring system are maintained in accordance with 20.5.108.815 NMAC, and

K. Monthly reports of vapor monitoring and annual reports of functionality checks of electronic sampling equipment are maintained and provided to the department in accordance with 20.5.108.815 NMAC and 20.5.108.816 NMAC.

[20.5.108.806 NMAC - N, 07/24/2018]

20.5.108.807 GROUNDWATER MONITORING REQUIREMENTS FOR USTS:

Owners and operators of underground storage tanks may use groundwater monitoring as a method of release detection as long as the testing or monitoring for liquids on the groundwater meets all of the following requirements:

A. The regulated substance stored is immiscible in water and has a specific gravity of less than one.

B. Groundwater is never more than 20 feet from the ground surface and the hydraulic conductivity of the soil between the UST system and the monitoring wells or devices is not less than one one-hundredth centimeters per second (e.g., the soil should consist of gravels, coarse to medium sands, coarse silts or other permeable materials).

C. The slotted portion of the monitoring well casing shall be designed to prevent migration of natural soils or filter pack into the well and to allow entry of regulated substance on the water table into the well under both high and low groundwater conditions.

D. Monitoring wells shall be sealed from the ground surface to the top of the filter pack.

E. Monitoring wells or devices intercept the excavation zone or are as close to it as is technically feasible.

F. The continuous monitoring devices or manual methods used can detect the presence of at least one-eighth of an inch of non-aqueous phase liquid on top of the groundwater in the monitoring wells.

G. Within and immediately below the UST system excavation zone, the site is assessed to:

(1) ensure compliance with the requirements in Subsections A through E of this section; and

(2) establish the number and positioning of monitoring wells or devices that will detect releases from any portion of the tank that routinely contains product.

H. Site assessments conducted after the effective date of these regulations are signed by a qualified professional engineer or professional geologist, or equivalent licensed professional with experience in environmental engineering, hydrogeology, or other relevant technical discipline acceptable to the department and approved in advance by the department.

I. Monitoring wells are clearly marked and secured to avoid unauthorized access and tampering.

J. Owners and operators shall ensure that hand-held electronic and field equipment that is used for groundwater monitoring is:

- (1) annually checked to ensure that the equipment is functioning properly; and
- (2) calibrated prior to each sampling event in accordance with the manufacturer's instructions.

K. All records of the site assessment and groundwater monitoring system are maintained in accordance with 20.5.108.815 NMAC.

L. Monthly reports of groundwater monitoring and annual reports of functionality checks of electronic sampling equipment are maintained and provided to the department in accordance with 20.5.108.815 NMAC and 20.5.108.816 NMAC.

[20.5.108.807 NMAC - N, 07/24/2018]

20.5.108.808 INTERSTITIAL MONITORING REQUIREMENTS FOR USTS:

A. Owners and operators of underground storage tanks may use interstitial monitoring between the UST and a secondary barrier immediately around and underneath the tank, but only if the system is designed, constructed and installed to detect a leak from any portion of the storage tank system that routinely contains any regulated substance and also meets one of the following requirements:

(1) For double-walled UST systems, the sampling or testing method can detect a release through the inner wall in any portion of the tank that routinely contains a regulated substance, and the sampling or testing method complies with the requirements of the current edition of an industry code or standard approved in advance by the department; *Steel Tank Institute Standard F841, "Standard for Dual Wall Underground Storage Tanks"* may be used to meet this requirement.

(2) For UST systems with a secondary barrier within the excavation zone, the sampling or testing method used can detect a release between the UST system and the secondary barrier; the monitoring system shall meet all of the following requirements:

(a) The secondary barrier around or beneath the UST system consists of artificially constructed material that is sufficiently thick and impermeable (at least one X 10(-6)) centimeters per second for the regulated substance stored) to direct a release to the monitoring point and permit its detection.

(b) The barrier is compatible with the regulated substance stored so that a release from the UST system will not cause a deterioration of the barrier allowing a release to pass through undetected.

(c) For cathodically protected USTs, the secondary barrier shall be installed so that it does not interfere with the proper operation of the cathodic protection system.

(d) The groundwater, soil moisture, or rainfall will not render the testing or sampling method used inoperative so that a release could go undetected for more than thirty days.

(e) The site is assessed to ensure that the secondary barrier is always above the groundwater and not in a 25-year flood plain, unless the barrier and monitoring designs are for use under such conditions.

(f) Monitoring wells are clearly marked and secured to avoid unauthorized access and tampering, or

(3) For USTs with an internally fitted liner, an automated device can detect a release between the inner wall of the UST and the liner, and the liner is compatible with the regulated substance stored.

B. For all interstitially monitored USTs, owners and operators shall have all sensors tested by a qualified tester at least annually to ensure proper operation and functionality, including for alarm operability and communication with controller or monitoring equipment, and sensors shall be verified as set to the proper height, placement, and location in accordance with Subsection A of 20.5.108.800 NMAC and 20.5.107 NMAC. At a minimum, these tests shall follow either:

(1) liquid sensor functionality testing procedures described in *Petroleum Equipment Institute Publication RP 1200, "Recommended Practices for the Testing and Verification of Spill, Overfill, Leak Detection and Secondary Containment Equipment at UST Facilities"*; or

(2) the equipment manufacturer's published testing procedures.

C. Owners and operators shall ensure the requirements in 20.5.108.800 NMAC are met prior to implementing interstitial monitoring.

D. Owners and operators shall maintain and provide the department reports relating to the requirements of this section in accordance with 20.5.108.815 NMAC and 20.5.108.816 NMAC.

[20.5.108.808 NMAC - N, 07/24/2018]

20.5.108.809 STATISTICAL INVENTORY RECONCILIATION (SIR) FOR UST SYSTEMS:

A. Owners and operators of underground storage tanks may use release detection methods based on the application of statistical principles to inventory data similar to those described in 20.5.108.802 NMAC. Owners and operators who use SIR shall:

- (1)** comply with the requirements in Subsections B through G of 20.5.108.802 NMAC;
- (2)** use a third-party certified quantitative method;
- (3)** use a third-party vendor to analyze the data and include the name of the SIR provider and the name and version of the SIR method used for analysis;
- (4)** use a method that is capable of detecting a leak rate of two-tenths gallon per hour or a release of 150 gallons within 30 days;
- (5)** use a method with a threshold that does not exceed one-half the minimum detectable leak rate; and
- (6)** use a method that reports a quantitative result with a calculated leak rate.

B. Owners and operators shall ensure that the data is collected, analyzed, and reported within the same 30-day period in order to check for releases at least monthly.

C. Owners and operators shall:

- (1)** notify the department within 24 hours of discovery of an inconclusive or fail result;
- (2)** provide the department all data collected for the statistical analysis where the results are either inconclusive or fail and identify any further investigation necessary to determine whether there is a suspected release as part of the seven-day report required in 20.5.118 NMAC;
- (3)** perform an investigation within 14 days of receiving an inconclusive result, or another time frame approved in advance by the department to determine whether a suspected release should be investigated under 20.5.118 NMAC; and
- (4)** report a suspected release to the department within 24 hours in accordance with 20.5.118 NMAC if the investigation indicates a fail result.

D. Owners and operators shall inspect all mechanical equipment and test all electronic equipment annually to ensure proper operation and calibration.

E. Qualitative SIR methods are no longer accepted as meeting the requirements for monthly monitoring.

F. Owners and operators shall maintain results and records of monthly monitoring in accordance with 20.5.108.815 NMAC and 20.5.108.816 NMAC, and shall provide them to the department upon request.

[20.5.108.809 NMAC - N, 07/24/2018]

20.5.108.810 REQUIREMENTS FOR UST UNDERGROUND PRESSURIZED PIPING INSTALLED PRIOR TO APRIL 4, 2008:

Owners and operators of underground storage tank systems with piping installed prior to April 4, 2008, except those used for emergency power generation, shall provide release detection for underground pressurized piping that routinely contains regulated substances by following the current edition of an industry standard or code of practice developed by a nationally recognized association or independent testing laboratory approved in advance by the department.

A. Owners and operators of UST systems shall:

(1) use automatic line leak detectors (including mechanical or electronic detectors) that alert the operator to the presence of a leak by restricting or shutting off the flow of regulated substances through piping when a leak is detected at three gallons per hour at 10 pounds per square inch line pressure within one hour;

(2) perform an annual test of the operation of the leak detector which includes a simulated leak, is conducted in accordance with the manufacturer's testing protocol, and confirms the automatic line leak detector detects a leak at three gallons per hour at 10 pounds per square inch line pressure within one hour; and

(3) use a method, or combination of methods, for monitoring the piping for releases that complies with one of the following:

(a) A precision line tightness test is conducted every 12 months that is capable of detecting a leak of 0.1 gallons per hour at one and one-half times the operating pressure.

(b) The method is capable of detecting a two-tenths gallon per hour leak and is used every 30 days.

(c) One of the methods in 20.5.108.805 NMAC through 20.5.108.809 NMAC is used, if it is capable of detecting a release from any portion of the underground piping that routinely contains a regulated substance.

(d) Interstitial monitoring is used in accordance with all of the requirements in 20.5.108.808 NMAC and 20.5.108.811 NMAC.

B. Owners and operators who use statistical inventory reconciliation for monthly monitoring of underground pressurized piping shall conduct annual line tightness testing in accordance with Subparagraph (a) of Paragraph (3) of Subsection A of 20.5.108.810 NMAC.

C. Automatic line leak detectors and sensors required in this section that either fail a test or are found to be damaged shall be repaired or replaced and tested in accordance with 20.5.108.800 NMAC and Paragraph (1) of Subsection A of 20.5.108.810 NMAC. A line tightness test shall be conducted in accordance with Subsection A of this section after an automatic line leak detector has been replaced.

D. Equipment and methods used to monitor the piping shall be appropriate for the type and length of piping.

E. Owners and operators shall use one or more of the following to comply with the requirements of this section:

(1) *Petroleum Equipment Institute Publication RP100, "Recommended Practices for Installation of Underground Liquid Storage Systems";* or

(2) *American Petroleum Institute Publication RP 1615, "Installation of Underground Petroleum Storage Systems".*

F. Owners and operators shall maintain all records of release detection and testing in accordance with 20.5.108.815 NMAC and provide to the department reports for all leak detector testing, line tightness testing, and sensor testing in accordance with 20.5.108.816 NMAC.

[20.5.108.810 NMAC - N, 07/24/2018]

20.5.108.811 REQUIREMENTS FOR UST UNDERGROUND PRESSURIZED PIPING INSTALLED ON OR AFTER APRIL 4, 2008:

Owners and operators of underground storage tank systems with piping installed on or after April 4, 2008 shall use interstitial monitoring as release detection for underground pressurized piping that routinely contains regulated substances by following the current edition of an industry standard or code of practice developed by a nationally recognized association or independent testing laboratory approved in advance by the department.

A. Owners and operators of UST systems shall:

(1) use automatic line leak detectors (including mechanical or electronic detectors) that alert the operator to the presence of a leak by restricting or shutting off

the flow of regulated substances through piping when a leak is detected at three gallons per hour at 10 pounds per square inch line pressure within one hour; and

(2) perform an annual test of the operation of the leak detector which includes a simulated leak, is conducted in accordance with the manufacturer's testing protocol, and confirms the automatic line leak detector detects a leak at three gallons per hour at 10 pounds per square inch line pressure within one hour.

B. Owners and operators shall use interstitial monitoring that complies with all of the requirements in 20.5.108.808 NMAC and the following:

(1) Sensors shall be installed in all containment sumps associated with the piping, including under-dispenser containment, transition sumps, and submersible turbine pump containment sumps used to monitor the interstice.

(2) Sensors shall:

(a) monitor the interstice;

(b) monitor all containment sumps associated with the piping;

(c) sound an alarm and automatically shut off the submersible turbine pump when a regulated substance or water is detected;

(d) be positioned in the lowest point of the containment sump; and

(e) be tested annually in accordance with Subsection B of 20.5.108.805 NMAC.

(3) Containment sumps used for interstitial monitoring shall be tested every three years starting three years after the effective date of the regulations. The testing of the containment sumps shall comply with one of the following:

(a) the testing procedures as described in *Petroleum Equipment Institute Publication RP 1200, "Recommended Practices for the Testing and Verification of Spill, Overfill, Leak Detection and Secondary Containment Equipment at UST Facilities"*; or

(b) the equipment manufacturer's published testing procedures.

C. Automatic line leak detectors and sensors required in this section that either fail a test or are found to be damaged shall be repaired or replaced and tested in accordance with 20.5.108.800 NMAC and Paragraph (1) of Subsection A of 20.5.108.811 NMAC. A line tightness test shall be conducted in accordance with Subparagraph (a) of Paragraph (3) of Subsection A of 20.5.108.810 NMAC after an automatic line leak detector has been repaired or replaced.

D. Equipment and methods used to monitor the piping shall be appropriate for the type and length of piping.

E. Owners and operators shall use one or more of the following to comply with the requirements of this section:

(1) *Petroleum Equipment Institute Publication RP100, "Recommended Practices for Installation of Underground Liquid Storage Systems";*

(2) *American Petroleum Institute Publication RP 1615, "Installation of Underground Petroleum Storage Systems";* or

(3) *Petroleum Equipment Institute Publication RP 1200, "Recommended Practices for the Testing and Verification of Spill, Overfill, Leak Detection and Secondary Containment Equipment at UST Facilities".*

F. Owners and operators shall maintain all records of release detection and testing in accordance with 20.5.108.815 NMAC and provide to the department reports for all release detector testing, line tightness testing, containment sump testing, and sensor testing in accordance with 20.5.108.816 NMAC.

[20.5.108.811 NMAC - N, 07/24/2018]

20.5.108.812 REQUIREMENTS FOR UST UNDERGROUND SUCTION PIPING INSTALLED PRIOR TO APRIL 4, 2008:

A. Owners and operators of underground storage tank systems with piping installed prior to April 4, 2008 that conveys regulated substances under suction where the piping system does not meet the requirements in Subsection B of 20.5.108.812 NMAC shall use one of the following methods. These methods shall be designed to detect a release from any portion of underground piping.

(1) A line tightness test shall be conducted every three years and the tightness test shall be capable of detecting a one-tenth gallon per hour leak rate.

(2) Interstitial monitoring shall be used in accordance with all of the requirements in 20.5.108.808 NMAC and 20.5.108.813 NMAC.

(3) Statistical inventory reconciliation shall be used in accordance with 20.5.108.809 NMAC for monthly monitoring of underground suction piping in conjunction with line tightness testing in accordance with Paragraph (1) of Subsection A of this section.

(4) Vapor monitoring shall be used in accordance with 20.5.108.806 NMAC.

(5) Groundwater monitoring shall be used in accordance with 20.5.108.807 NMAC.

B. Release detection is not required for suction piping that is designed and constructed to meet all of the following standards:

- (1) The below-grade piping operates at less than atmospheric pressure.
- (2) The below-grade piping is sloped so that the contents of the pipe will drain back into the storage tank if the suction is released.
- (3) Only one check valve is included in each suction line.
- (4) The check valve is located directly below and as close as practical to the suction pump.
- (5) Compliance with Paragraphs (2) through (4) of Subsection B of this section is demonstrated.

C. Owners and operators shall use one or more of the following to comply with the requirements of this section:

- (1) *Petroleum Equipment Institute Publication RP100, "Recommended Practices for Installation of Underground Liquid Storage Systems";* or
- (2) *American Petroleum Institute Publication RP 1615, "Installation of Underground Petroleum Storage Systems".*

D. Owners and operators shall maintain all records of release detection and testing in accordance with 20.5.108.15 NMAC and provide to the department reports for all release detector testing, line tightness testing, and sensor testing in accordance with 20.5.108.816 NMAC.

[20.5.108.812 NMAC - N, 07/24/2018

20.5.108.813 REQUIREMENTS FOR UST UNDERGROUND SUCTION PIPING INSTALLED ON OR AFTER APRIL 4, 2008:

A. Owners and operators of underground storage tank systems with piping installed on or after April 4, 2008 where the piping conveys regulated substances under suction shall meet the requirements for interstitial monitoring in 20.5.108.808 NMAC and the following:

- (1) Sensors shall be installed in all containment sumps associated with the piping, including under-dispenser containment, transition sumps, and secondary containment sumps used to monitor the interstice.

(2) Sensors shall:

- (a)** monitor the interstice;
- (b)** monitor all containment sumps associated with the piping;
- (c)** sound an alarm and automatically shut off the pump when a regulated substance or water is detected;
- (d)** be positioned in the lowest point of the containment sump; and
- (e)** be tested annually in accordance with Subsection B of 20.5.108.805 NMAC.

(3) Containment sumps used for interstitial monitoring shall be tested every three years beginning three years after the effective date of the regulations. The testing of the containment sumps shall comply with one of the following:

- (a)** the testing procedures as described in *Petroleum Equipment Institute Publication RP 1200, "Recommended Practices for the Testing and Verification of Spill, Overfill, Leak Detection and Secondary Containment Equipment at UST Facilities"*; or
- (b)** the equipment manufacturer's published testing procedures.

B. Release detection is not required for suction piping that is designed and constructed to meet all of the following standards:

- (1)** The below-grade piping operates at less than atmospheric pressure.
- (2)** The below-grade piping is sloped so that the contents of the pipe will drain back into the storage tank if the suction is released.
- (3)** Only one check valve is included in each suction line.
- (4)** The check valve is located directly below and as close as practical to the suction pump.
- (5)** Compliance with Paragraphs (2) through (4) of Subsection B of this section is demonstrated.

C. Owners and operators shall use one or more of the following to comply with the requirements of this section:

- (1)** *Petroleum Equipment Institute Publication RP 100, "Recommended Practices for Installation of Underground Liquid Storage Systems"*;

(2) *American Petroleum Institute Publication RP 1615, "Installation of Underground Petroleum Storage Systems";* or

(3) *Petroleum Equipment Institute Publication RP 1200, "Recommended Practices for the Testing and Verification of Spill, Overfill, Leak Detection and Secondary Containment Equipment at UST Facilities".*

D. Owners and operators shall maintain all records of release detection and testing in accordance with 20.5.108.815 NMAC and provide to the department reports for all containment sump testing, line tightness testing, and sensor testing in accordance with 20.5.108.816 NMAC.

[20.5.108.813 NMAC - N, 07/24/2018]

20.5.108.814 ALTERNATE METHODS:

A. If owners and operators want to install materials or methods of release detection equipment for tanks or piping required in 20.5.108 NMAC that are not in accordance with the current edition of an industry standard or code of practice developed by a nationally recognized association or independent testing laboratory, owners and operators shall apply in writing to the department, shall provide supporting documentation, and shall not begin the installation unless and until the department approves the request in writing. At a minimum, the request for an alternate method shall contain the following:

- (1) date the form is completed;
- (2) facility name, facility ID number, address (with county) and telephone number;
- (3) owner name, owner ID number, address and telephone number;
- (4) citation to regulation for which alternate method or material (such as type of piping) is requested;
- (5) brief description of the proposed alternate method or material;
- (6) justification of proposed alternate method or material, including citation to a standard or code supporting its use, if available; and
- (7) demonstration of its equivalent protection of public health, safety and welfare and the environment.

B. Another type of release detection method, or combination of methods, may be used if approved pursuant to this section, and if it can detect a two-tenths gallon per

hour leak rate monthly or a release of 150 gallons within a month from a tank with a probability of detection of 0.95 and a probability of false alarm of 0.05.

C. The department may approve another method if owners and operators can demonstrate that the method can detect a release as effectively as any of the applicable methods allowed in 20.5.108 NMAC. In comparing methods, the department shall consider the size of release that the method can detect and the frequency and reliability with which it can be detected. If the method is approved, the owner and operator shall comply with any conditions imposed by the department on its use to ensure the protection of public health, safety and welfare and the environment. The department shall not grant the request unless owners and operators demonstrate that the request will provide protection of public health, safety and welfare and the environment equivalent to the protection provided by the methods in this part.

D. In addition to the requirements in Subsections B and C of this section, any request for an alternate method of release detection for hazardous substance UST systems shall also include information on effective corrective action technologies, health risks and chemical and physical properties of the stored substance, and the characteristics of the UST site.

[20.5.108.814 NMAC - N, 07/24/2018]

[The department provides an optional form that may be used to request approval of an alternate method. The form is available on the Petroleum Storage Tank Bureau's pages on the department's website or by contacting the Petroleum Storage Tank Bureau at 505-476-4397 or 2905 Rodeo Park Drive East, Building 1, Santa Fe, New Mexico 87505.]

20.5.108.815 RELEASE DETECTION RECORDKEEPING:

A. All storage tank system owners and operators shall maintain records in accordance with 20.5.107 NMAC demonstrating compliance with all applicable requirements of 20.5.108 NMAC. If the owner and operator of a storage tank are separate persons, only one person is required to maintain the records required by this section; however, both parties are liable in the event of noncompliance.

B. Records to be maintained shall include, but not be limited to:

(1) all written performance claims pertaining to any release detection system used, and the manner in which these claims have been justified or tested by the equipment manufacturer or installer;

(2) the results of any sampling, testing, or monitoring;

(3) written documentation of all calibration, maintenance, and repair of release detection equipment permanently located on-site and any schedules of calibration and maintenance required by the release detection equipment manufacturer;

(4) no later than three years after the effective date of these rule, records of site assessments required under 20.5.108.806 NMAC and 20.5.108.807 NMAC. Records of site assessments developed after the effective date of these rules must be signed by a professional engineer, professional geologist, or equivalent licensed professional with experience in environmental engineering, hydrogeology, or other relevant technical discipline acceptable to the department; and

(5) the results of annual operational tests of release detection equipment. At a minimum, the results must list each component tested, indicate whether each component tested meets criteria for the specified equipment or needs to have action taken, and describe any action taken to correct an issue.

[20.5.108.815 NMAC - N, 07/24/2018]

20.5.108.816 REPORTING:

A. Owners and operators shall provide to the department all reports as required in 20.5.108 NMAC within 60 days of completion of the tests.

B. Owners and operators shall report any test or inspection results that are anything other than a "pass" or "normal" result to the department within 24 hours of completion of the test or inspection in accordance with 20.5.118 NMAC.

C. Owners and operators shall ensure all reports required in 20.5.108 NMAC contain, at a minimum, the following:

- (1) facility name and address;
- (2) facility ID number;
- (3) owner and operator name and address;
- (4) owner ID number;
- (5) date report was completed;
- (6) date of the test;
- (7) duration of the test;

(8) brand name and model number of equipment being tested or sufficient description to allow identification of the equipment;

- (9)** type of equipment being tested;
- (10)** type of test, including test procedures and methods;
- (11)** results of the test;
- (12)** name of the person who performed the inspection or test, and their qualifications as specified in 20.5.105 NMAC;
- (13)** brand name and model number of the testing equipment used during the test and the date the testing equipment was last calibrated (only applies to tests performed in accordance with 20.5.108.800 NMAC, 20.5.108.804 NMAC, 20.5.108.806 NMAC, 20.5.108.807 NMAC, 20.5.108.808 NMAC, 20.5.108.810 NMAC through 20.5.108.813 NMAC);
- (14)** monitoring well number and instrument reading in parts per million (only applies to tests performed in accordance with 20.5.108.807 NMAC);
- (15)** monitoring well number, depth to groundwater and confirmation that free product was observed or not (only applies to tests performed in accordance with 20.5.108.807 NMAC);
- (16)** a completed copy of the automatic tank gauge operation inspection form in *Petroleum Equipment Institute Publication RP 1200, "Recommended Practices for the Testing and Verification of Spill, Overfill, Leak Detection and Secondary Containment Equipment at UST Facilities"* (only applies to tests performed in accordance with 20.5.108.805 NMAC);
- (17)** for testing of automatic line leak detectors:
 - (a)** serial number of the leak detector;
 - (b)** description of storage tank system;
 - (c)** detected leak rate in gallons per hour;
 - (d)** line pressure and functional element holding pressure in pounds per square inch;
 - (e)** type, diameter and length of piping;
 - (f)** test results, including the following:
 - (i)** whether flow is restricted by a mechanical line leak detector when a leak is detected;

(ii) whether the turbine shuts down when a leak is detected by an electronic line leak detector;

(18) for testing of sensors used for monitoring secondary containment and interstitial spaces:

(a) the information in the liquid sensor functionality testing form in the *Petroleum Equipment Institute Publication RP 1200, "Recommended Practices for the Testing and Verification of Spill, Overfill, Leak Detection and Secondary Containment Equipment at UST Facilities"*; and

(b) information on whether each individual sensor meets automatic shutdown requirements in 20.5.108.811 NMAC and 20.5.108.813 NMAC; and

(19) for line tightness testing:

(a) leak rate;

(b) testing pressure;

(c) bleed back;

(d) piping type;

(e) piping diameter; and

(f) length of piping.

D. Owners and operators may use forms and checklist developed by the department, when available, to meet the reporting requirements in 20.5.108 NMAC.

[20.5.108.816 NMAC - N, 07/24/2018]

[Provide reports as required in Subsection A of this section as directed at the department's website. The forms or checklists referred to in Subsection D of this section are available on the Petroleum Storage Tank Bureau's pages on the department's website or by contacting the Petroleum Storage Tank Bureau at 505-476-4397 or 2905 Rodeo Park Drive East, Building 1, Santa Fe, New Mexico 87505.]

PART 109: NEW AND UPGRADED ABOVE GROUND STORAGE TANK SYSTEMS: DESIGN, CONSTRUCTION AND INSTALLATION

20.5.109.1 ISSUING AGENCY:

New Mexico Environmental Improvement Board.

[20.5.109.1 NMAC - N, 07/24/2018]

20.5.109.2 SCOPE:

This part applies to owners and operators of above ground storage tanks as provided in 20.5.101 NMAC. If the owner and operator of an above ground storage tank are separate persons, only one person is required to comply with the requirements of this part, including any notice and reporting requirements; however, both parties are liable in the event of noncompliance.

[20.5.109.2 NMAC - N, 07/24/2018]

20.5.109.3 STATUTORY AUTHORITY:

This part is promulgated pursuant to the provisions of the Hazardous Waste Act, Sections 74-4-1 through 74-4-14 NMSA 1978, and the general provisions of the Environmental Improvement Act, Sections 74-1-1 through 74-1-17 NMSA 1978.

[20.5.109.3 NMAC - N, 07/24/2018]

20.5.109.4 DURATION:

Permanent.

[20.5.109.4 NMAC - N, 07/24/2018]

20.5.109.5 EFFECTIVE DATE:

July 24, 2018, unless a later date is indicated in the bracketed history note at the end of a section.

[20.5.109.5 NMAC - N, 07/24/2018]

20.5.109.6 OBJECTIVE:

The purpose of 20.5.109 NMAC is to set forth the requirements for the design, construction, installation and upgrading of above ground storage tank systems in a manner that will prevent releases and to protect the public health, safety and welfare and the environment of the state.

[20.5.109.6 NMAC - N, 07/24/2018]

20.5.109.7 DEFINITIONS:

The definitions in 20.5.101 NMAC apply to this part.

[20.5.109.7 NMAC - N, 07/24/2018]

20.5.109.8-20.5.109.899 [RESERVED]

20.5.109.900 INSTALLATION OF AST SYSTEMS:

A. Owners and operators shall properly install all ASTs and piping in accordance with the manufacturer's instructions and in accordance with the current edition of an industry standard or code of practice developed by a nationally recognized association or independent testing laboratory approved in advance by the department, or in accordance with 20.5.109.920 NMAC. Installations shall address the following:

(1) support, if required in the sole discretion of the department, by the use of saddles or longitudinal supports;

(2) a foundation that is of sufficient thickness and reinforcement to support the tank when the tank is filled to maximum capacity with a regulated substance and that is constructed of concrete with a minimum compression strength of 3,000 pounds per square inch at 28 days (or other comparable material approved by the department), and shall be used for:

(a) double-walled or double-bottomed above ground storage tanks;

(b) horizontal tanks with saddles, which shall be placed at a minimum on footings constructed of concrete or other comparable material approved in advance by the department;

(c) horizontal tanks with longitudinal supports, which shall be placed on a concrete slab that extends at least 12 inches beyond the perimeter of the tank and is constructed of concrete or other comparable material approved in advance by the department;

(d) vertical tanks, which shall be placed on a concrete slab that extends at least 12 inches beyond the perimeter of the tank and is constructed of concrete or other comparable material approved in advance by the department; and

(e) single-walled above ground storage tanks, which shall be installed inside secondary containment that meets the requirements of 20.5.109.904 NMAC;

(3) anchorage;

(4) fills, gauges and vents;

(5) environmental protection; and

(6) testing and inspection.

B. Tanks and underground piping installed or replaced after July 1, 2013 must be secondarily contained in accordance with 20.5.109.903 NMAC or 20.5.109.904 NMAC, except for any piping that meets the requirements for safe suction in 20.5.111.1108 NMAC.

C. Secondary containment must be able to contain regulated substances leaked from the primary containment until they are detected and removed and prevent the release of regulated substances to the environment at any time during the operational life of the AST.

D. Owners and operators shall provide an approval from the New Mexico state fire marshal's office to the department for any exceptions to the requirements of the international fire code, including any AST at a retail fueling facility that exceeds the size limit on ASTs;

E. In addition to other requirements of this section, if owners or operators want to place into service any shop-fabricated AST that has been permanently closed at any location, owners and operators shall:

(1) not use the AST until they have provided to the department:

(a) the age and type of tank;

(b) the tank manufacturer;

(c) a list of regulated and non-regulated substances previously stored in the tank and for what duration;

(d) a description of any unusual circumstances involving the AST; and

(e) any other information requested by the bureau based on the circumstances; and

(2) install the system in compliance with all requirements for new AST systems in this part.

F. Based on the information received in Subsection D of this section, the department may require owners and operators who want to relocate an AST that has been temporarily or permanently closed to have the tank recertified by a certified tank inspector, the tank manufacturer, or a professional engineer prior to use.

G. Owners and operators shall use the applicable national code or standard listed below to comply with the requirements for the installation of above ground storage tank systems in this part:

- (1) *American Petroleum Institute Standard 650, "Welded Tanks for Oil Storage";*
- (2) *American Petroleum Institute Standard 2610, "Design, Construction, Operation, Maintenance, and Inspection of Terminal & Tank Facilities";*
- (3) *National Fire Protection Association Standard 30, "Flammable and Combustible Liquids Code";*
- (4) *National Fire Protection Association Standard 30A, "Code for Motor Fuel Dispensing Facilities and Repair Garages";*
- (5) *Petroleum Equipment Institute Publication RP200, "Recommended Practices for Installation of Above Ground Storage Tank Systems for Motor Vehicle Fueling";*
- (6) *Petroleum Equipment Institute Publication RP700, "Recommended Practices for the Design and Maintenance of Fluid Distribution Systems at Vehicle Maintenance Facilities";*
- (7) *Petroleum Equipment Institute Publication RP800, "Recommended Practices for the Design and Installation of Bulk Storage Plants";*
- (8) *Petroleum Equipment Institute Publication RP1000, "Recommended Practices for the Installation of Marina Fueling Systems";*
- (9) *Petroleum Equipment Institute Publication RP1300, "Recommended Practices for the Design, Installation, Service, Repair, and Maintenance of Aviation Fueling Systems";*
- (10) *Petroleum Equipment Institute Publication RP1400, "Recommended Practices for the Design and Installation of Fueling Systems for Emergency Generators, Stationary Diesel Engines and Oil Burner Systems";*
- (11) *Steel Tank Institute RP R912, "Installation Instructions for Shop Fabricated Aboveground Storage Tanks for Flammable, Combustible Liquids";* or
- (12) *International Code Council, "International Fire Code".*

[20.5.109.900 NMAC - N, 07/24/2018]

20.5.109.901 REQUIRED NOTIFICATION PRIOR TO INSTALLATION:

To ensure that an inspector has an opportunity to be present during the steps in procedures which are important to the prevention of releases, owners, operators, and certified tank installers shall give the department notice of the dates on which critical

junctures in the installation of a storage tank system are to take place. The inspector may require that critical junctures be performed from Monday through Friday during regular business hours.

A. For installations, the term "critical junctures" means:

(1) installation of any tank pad, vault, or secondary containment for a storage tank system;

(2) setting of a storage tank and piping, including placement of any anchoring devices, backfill to the level of the tank, and strapping, if any;

(3) placing a regulated substance in the tank;

(4) any time during the installation in which components of piping are connected;

(5) preparation of any excavation immediately prior to receiving backfill for piping or containment sumps;

(6) all pressure testing or integrity testing of a storage tank system, including associated piping, spill prevention equipment, and containment sumps performed during the installation;

(7) completion of backfill and filling of any excavation;

(8) installation and testing of overfill prevention equipment and release detection equipment.

B. Owners, operators and certified tank installers shall give at least 30 days written notice before the installation of a storage tank system. At a minimum, the installation notice shall contain the following information:

(1) date the form is completed;

(2) facility name, facility ID number, address (with county), and telephone number;

(3) owner name, owner ID number, address, and telephone number;

(4) contractor name, address, and telephone number;

(5) tank details (number and size, type and materials, products to be stored);

(6) piping material and type of leak detection;

- (7) type of spill and overflow prevention;
- (8) type of corrosion protection (sacrificial, impressed current, or none with explanation why corrosion protection not required);
- (9) method of leak detection (automatic tank gauges, visual, interstitial monitoring);
- (10) approximate date installation will take place; and
- (11) the signature of the owner or owner's representative filling out the form.

C. Owners, operators and certified tank installers shall provide required project drawings with the 30-day written notice.

D. In addition to the written notice described in this section, owners, operators and certified tank installers shall give oral notice at least 24 hours in advance of the commencement of the procedure. In the oral notice, owners, operators and certified tank installers shall describe any changes to the 30-day written notice required in Subsection B of this section, such as different equipment or installation methods.

E. If owners, operators and certified tank installers are separate persons, only one person is required to comply with the notice requirements of this section; however, all parties are liable in the event of noncompliance.

[20.5.109.901 NMAC - N, 07/24/2018]

[The department provides an optional form that may be used for notification of installation. The form is available

on the Petroleum Storage Tank Bureau's pages on the department' website or by contacting the Petroleum Storage Tank Bureau at 505-476-4397 or 2905 Rodeo Park Drive East, Building 1, Santa Fe, New Mexico 87505.]

20.5.109.902 PERFORMANCE STANDARDS FOR AST SYSTEMS:

A. In order to prevent releases due to structural failure, corrosion or spills and overfills for as long as an AST system is used to store regulated substances, owners and operators of new AST systems shall properly design, construct and initially test each new AST system, provide project drawings in accordance with 20.5.109.901 NMAC, and ensure that any portion of an AST system that routinely contains regulated substances and is in contact with an electrolyte, such as soil, concrete or water shall be protected from corrosion, in accordance with the current edition of an industry standard or code of practice developed by a nationally recognized association or independent testing laboratory approved in advance by the department. Owners and operators shall ensure that the entire AST system is compatible with any regulated substance

conveyed. Owners and operators shall use the applicable national code or standard listed below to meet the requirements of this section:

(1) *National Fire Protection Association Standard 30, "Flammable and Combustible Liquids Code";*

(2) *National Fire Protection Association Standard 30A, "Code for Motor Fuel Dispensing Facilities and Repair Garages";*

(3) *National Fire Protection Association Standard 407, "Standard for Aircraft Fuel Servicing";* or

(4) *International Code Council, "International Fire Code".*

B. Owners and operators shall install and operate only ASTs made of steel that are constructed in accordance with one or more of the following, as applicable:

(1) *Underwriters Laboratories 142, "Steel Aboveground Tanks for Flammable and Combustible Liquids";*

(2) *Underwriters Laboratories 2085, "Standard for Protected Aboveground Tanks for Flammable and Combustible Liquids";*

(3) *Underwriters Laboratories 2245, "Standard for Below-Grade Vaults for Flammable Liquid Storage Tanks";*

(4) *American Petroleum Institute Standard 650, "Welded Tanks for Oil Storage";* or

(5) *International Code Council, "International Fire Code".*

C. Owners and operators shall protect newly installed ASTs from corrosion in accordance with one or more of the following:

(1) *American Petroleum Institute Publication RP 1632, "Cathodic Protection of Underground Petroleum Storage Tanks and Piping Systems";*

(2) *National Association of Corrosion Engineers International Standard RP0169, "Control of External Corrosion on Underground or Submerged Metallic Piping Systems";*

(3) *Steel Tank Institute R892, "Recommended Practice for Corrosion Protection of Underground Piping Networks Associated with Liquid Storage and Dispensing Systems";*

(4) *Steel Tank Institute R893, "Recommended Practice for External Corrosion Protection of Shop Fabricated Aboveground Storage Tank Floors";*

(5) *American Petroleum Institute Publication RP651, "Cathodic Protection of Aboveground Petroleum Storage Tanks".*

D. Above ground tanks located at an elevation so as to produce a gravity head on the dispenser system or piping shall be equipped with an anti-siphon or solenoid valve which meets the requirements of the current edition of an industry standard or code of practice developed by a nationally recognized association or independent testing laboratory approved in advance by the department. Owners and operators shall install and adjust the anti-siphon or solenoid valve so that fuel cannot flow by gravity or siphon from the tank to the dispenser system, loading rack, or other equipment, if the piping fails when the dispensing or transferring equipment is not in use. One of the following shall be used to meet the requirements of this Subsection:

(1) National Fire Protection Association Standard 30A, "Code for Motor Fuel Dispensing Facilities and Repair Garages"; or

(2) International Code Council, "International Fire Code".

[20.5.109.902 NMAC - N, 07/24/2018]

20.5.109.903 AST SECONDARY CONTAINMENT:

DOUBLE WALLED AST SYSTEMS: Owners and operators shall design, provide project drawings for, and install double walled above ground storage tank systems in accordance with the following:

A. Double-walled above ground storage tanks shall be installed in accordance with the applicable installation requirements in this part and shall use one or more of the following, as applicable, to comply with the requirements of this section:

(1) *Underwriters Laboratories 142, "Steel Aboveground Tanks for Flammable and Combustible Liquids";*

(2) *Underwriters Laboratories 2085, "Standard for Protected Aboveground Tanks for Flammable and Combustible Liquids"; or*

(3) *Underwriters Laboratories 2245, "Standard for Below-Grade Vaults for Flammable Liquid Storage Tanks".*

B. Above ground piping shall meet the requirements in 20.5.109.913 NMAC and 20.5.109.915 NMAC;

C. Underground piping shall be double-walled and meet the requirements for underground piping in this part. Owners and operators shall use one or more of the following, as applicable, to meet these requirements:

(1) *Underwriters Laboratories Standard 971, "Standard for Nonmetallic Underground Piping for Flammable Liquids";*

(2) *Underwriters Laboratories Standard 567, "Standard for Emergency Breakaway Fittings, Swivel Connectors and Pipe-Connection Fittings for Petroleum Products and LP-gas";*

(3) *Underwriters' Laboratories of Canada Guide ULC-107.7, "Glass-fibre Reinforced Plastic Pipe and Fittings for Flammable Liquids";*

(4) *ULC Standards CAN/ULC-S633:2017, "Standard for Flexible Connector Piping for Fuels".*

D. Containment sumps shall be installed in accordance with the requirements in this part.

E. Owners and operators shall base all secondary containment systems on the current edition of an industry standard or code of practice developed by a nationally recognized association or independent testing laboratory approved in advance by the department. One or more of the following shall be used, as applicable, to comply with these requirements:

(1) *Petroleum Equipment Institute Publication RP 200, "Recommended Practices for Installation of Above Ground Storage Systems for Motor Vehicle Fueling";*

(2) *Society of Protective Coatings SSPC-TU2/NACE6G197, "Design, Installation and Maintenance of Coating Systems for Concrete used in Secondary Containment";*

(3) *American Concrete Institute Publication ACI 350-06, "Code Requirements for Environmental Engineering Concrete Structures";*

(4) *American Petroleum Institute Standard 650, "Welded Tanks for Oil Storage";* or

(5) *Steel Tank Institute RP R912, "Installation Instructions for Shop Fabricated Aboveground Storage Tanks for Flammable, Combustible Liquids".*

[20.5.109.903 NMAC - N, 07/24/2018]

20.5.109.904 AST SECONDARY CONTAINMENT: SINGLE-WALLED TANKS AND PIPING:

Owners and operators shall construct a containment area under and around single-walled ASTs and piping, except for piping that meets the requirements of Paragraph (1) of Subsection A of 20.5.109.915 NMAC. Internal lining of ASTs shall not be used as a method of secondary containment.

A. General requirements:

(1) Owners and operators shall design and construct secondary containment to minimize damage to the surfaces of the tanks due to corrosion, accumulation of water, and stray electrical current.

(2) Owners and operators shall ensure that any regulated substance stored in an AST system is chemically compatible with the secondary containment material. If owners and operators store more than one type of regulated substance within a single containment area, owners and operators shall ensure that the substances are chemically compatible with each other and with the containment material.

(3) Owners and operators shall construct a containment area which has a capacity of at least one hundred ten percent of the size of the largest AST in the containment area plus the volume displaced by the other AST(s).

(4) Owners and operators shall not use clay for the construction of secondary containment.

(5) Owners and operators may use a vault which complies with the requirements of this section as secondary containment.

B. Concrete secondary containment. Owners and operators may use concrete for construction of the containment area except for masonry or cinder block which shall not be used.

(1) If owners and operators use concrete for construction of secondary containment installed on or after July 1, 2011, the concrete containment shall be designed and constructed in accordance with an industry standard or code of practice developed by a nationally recognized association or independent testing laboratory, which shall be approved in advance of construction by the department. New concrete secondary containment shall comply with Subparagraph (a), (b) or (c) below:

(a) be coated or internally lined with a material which, in conjunction with the concrete, has a demonstrated permeability rate to the regulated substance stored of 1×10^{-7} centimeters per second or less;

(b) be installed in accordance with a set of plans that have been stamped by a professional engineer demonstrating that the secondary containment system is able to contain a release of regulated substances for seven days and properly support the above ground storage tank systems within the secondary containment; or

(c) be installed in accordance with an alternate method for concrete secondary containment design and construction that is approved in advance by the department pursuant to 20.5.109.920 NMAC.

(2) One of the following shall be used to comply with the concrete secondary containment requirements:

(a) *American Concrete Institute 350-06, "Code Review for Environmental Engineering Concrete Structures";*

(b) *American Concrete Institute 350.2R-04, "Concrete Structures for Containment of Hazardous Materials";*

(c) *American Concrete Institute 224R-01, "Control of Cracking in Concrete Structures";*

(d) *National Association of Corrosion Engineers International RP0892-2007, "Coatings and Linings Over Concrete for Chemical Immersion and Containment Service";*

(e) *Society of Protective Coatings TU2/NACE6G197, "Design, Installation and Maintenance of Coating Systems for Concrete Used in Secondary Containment";*

(f) *National Association of Corrosion Engineers International Standard Number 6/SSPC-SP 13, "Surface Preparation of Concrete";*

(g) *National Association of Corrosion Engineers International RP0281, "Method for Conducting Coating (Paint) Panel Evaluation Testing in Atmospheric Exposures";* or

(h) *American Society for Testing and Materials D4258, "Standard Practice for Surface Cleaning Concrete for Coating".*

(3) Owners and operators of existing AST systems shall have the option of fulfilling the requirements of this subsection by submitting to the department a report stamped by a professional engineer demonstrating that the secondary containment system is able to contain a release of regulated substances for seven days and properly support the above ground storage tank systems within the secondary containment.

C. Liners as secondary containment.

(1) If owners and operators use geo-synthetic membrane for secondary containment, the geo-synthetic membranes or liners shall have a minimum thickness of 60 mils.

(2) Owners and operators shall install liners in accordance with the current edition of an industry standard or code of practice developed by a nationally recognized association or independent testing laboratory approved in advance by the department, or in accordance with the manufacturer's specifications. Owners and operators shall submit to the department a report on the installation of the geo-synthetic membrane which shall certify that the geo-synthetic membrane has been installed in accordance with the manufacturer's recommendations or an industry standard or code of practice developed by a nationally recognized association or independent testing laboratory. The report shall contain the date of the inspection and installation of the geo-synthetic membrane, the test methods used during the inspection, data collected during the inspection, and the standard or code of practice according to which the installation was conducted. An installer or inspector with appropriate certification or experience (which shall be documented in the report) shall prepare the report.

(3) Earthen dike fields shall be lined with a geo-synthetic membrane to qualify as secondary containment.

D. Steel as secondary containment. If owners and operators use steel for construction of the secondary containment area, and if the steel is routinely in contact with soil, water, concrete, or another electrolyte, owners and operators shall cathodically protect the containment area in accordance with the current edition of an industry standard or code of practice developed by a nationally recognized association or independent testing laboratory approved in advance by the department.

[20.5.109.904 NMAC - N, 07/24/2018]

20.5.109.905 USTS USED AS ASTS:

Effective July 1, 2013, the use of USTs as ASTs is prohibited.

[20.5.109.905 NMAC - N, 07/24/2018]

20.5.109.906 [RESERVED]

20.5.109.907 ADDITIONAL PERFORMANCE STANDARDS FOR FIELD-ERECTED ASTS:

A. If owners and operators install a field-erected tank, owners and operators shall comply with the current edition of an industry standard or code of practice developed by a nationally recognized association or independent testing laboratory approved in advance by the department.

B. Owners and operators shall use one or more of the following to comply with the requirements of this section:

(1) *American Petroleum Institute Standard 620, "Design and Construction of Large, Welded, Low Pressure Storage Tanks";*

(2) *American Petroleum Institute Standard 650, "Welded Tanks for Oil Storage";*

(3) *American Petroleum Institute Specification 12B, "Bolted Tanks for Storage of Production Liquids";*

(4) *American Petroleum Institute Specification 12D, "Field Welded Tanks for Storage of Production Liquids";* or

(5) *American Society of Mechanical Engineers B96.1, "Welded Aluminum-Alloy Storage Tanks".*

[20.5.109.907 NMAC - N, 07/24/2018]

20.5.109.908 PERFORMANCE STANDARDS FOR EXISTING AST SYSTEMS:

A. Owners and operators of existing single walled AST systems (installed on or before July 1, 2001), must have complied with the following requirements:

(1) New AST performance standards in 20.5.109 NMAC by July 1, 2011;

(2) Upgrade requirements in Subsections C, D, and E of 20.5.109.908 NMAC by the deferred date of July 1, 2013; or

(3) Closure requirements in 20.5.115 NMAC by July 1, 2011.

(4) Any good faith upgrades to an AST system secondary containment made in compliance with this part prior to December 3, 2010 shall be deemed in compliance with this section.

B. Owners and operators of existing AST systems that do not comply with the requirements of the International Fire Code shall provide approval from the state fire marshal's office to the department no later than three years after the effective date of these regulations.

C. Tank Upgrade Requirements. Owners and operators must have upgraded existing single walled ASTs by installing secondary containment or replaced them with double walled ASTs by July 1, 2013 in accordance with the current edition of an industry standard or code of practice developed by a nationally recognized association or independent testing laboratory approved in advance by the department. ASTs that have not been upgraded by the effective date of these regulations shall be permanently closed in accordance with 20.5.115 NMAC.

(1) Owners and operators of ASTs must have met secondary containment requirements either by the installation new concrete secondary containment in accordance with 20.5.109.904 NMAC or upgraded the existing concrete secondary containment to meet the general requirements in Subsection A of 20.5.109.904 NMAC along with one of the following:

(a) submit to the department a report stamped by a professional engineer for the existing concrete secondary containment that demonstrates the secondary containment system is able to contain a release of regulated substance for seven days and properly supports the AST systems within the secondary containment; or

(b) coat the interior of, or install an internal lining in, the existing concrete secondary containment in accordance with the manufacturer's instructions or in accordance with the current edition of an industry standard or code of practice developed by a nationally recognized association or independent testing laboratory approved in advance by the department;

(2) Owners and operators of ASTs must have upgraded the secondary containment by the installation of liners that meet the following:

(a) requirements for liners as secondary containment in Subsection C of 20.5.109.904 NMAC; and

(b) requirements for installation of AST systems in 20.5.109.900 NMAC; or

(3) Owners and operators of ASTs must have met the secondary containment requirements by the installation of steel secondary containment in accordance with the requirements in Subsection D of 20.5.9.904 NMAC.

D. Piping upgrade requirements. Owner and operators of ASTs must have met the requirements of 20.5.109.916 NMAC for secondary containment of piping.

E. Owners and operators must have used one or more of the following to comply with the existing secondary containment requirements:

(1) *American Concrete Institute 350-06, "Code Review for Environmental Engineering Concrete Structures";*

(2) *American Concrete Institute 350.2R-04, "Concrete Structures for Containment of Hazardous Materials";*

(3) *American Concrete Institute 224R-01, "Control of Cracking in Concrete Structures";*

(4) *National Association of Corrosion Engineers International RP0892-2007, "Coatings and Linings Over Concrete for Chemical Immersion and Containment Service";*

(5) *Society of Protective Coatings TU2/NACE6G197, "Design, Installation and Maintenance of Coating Systems for Concrete Used in Secondary Containment";*

(6) *National Association of Corrosion Engineers International Standard Number 6/SSPC-SP 13, "Surface Preparation of Concrete";*

(7) *National Association of Corrosion Engineers International RP0281, "Method for Conducting Coating (Paint) Panel Evaluation Testing in Atmospheric Exposures";* or

(8) *American Society for Testing and Materials D4258, "Standard Practice for Surface Cleaning Concrete for Coating".*

[20.5.109.908 NMAC - N, 07/24/2018]

20.5.109.909 ABOVE GROUND STORAGE TANKS AT MARINAS:

A. Owners and operators of AST systems at marinas shall install an automatic break-away device to shut off flow of fuel from on-shore piping, which shall be located at the connection of the on-shore piping and the piping leading to the dock. Owners and operators shall install another automatic break-away device to shut off flow of fuel located at any connection between flexible piping and hard piping on the dispenser system and dock. The automatic break-away devices shall be easily accessible, and their location shall be clearly marked.

B. Owners and operators of AST systems at marinas shall electrically isolate dock piping where excessive stray electrical currents are encountered.

C. Owners and operators of AST systems at marinas shall protect piping from stress due to tidal action.

D. Owners and operators of AST systems at marinas shall install spill catchment basins in addition to a system that will allow the level of regulated substance in the AST to be monitored during a delivery of fuel to the AST. Unless the AST system is equipped with an audible overfill alarm that will alert the transfer operator at ninety percent of capacity, and overfill protection which will shut off flow of product during a fuel delivery to the tank at ninety-five percent, owners and operators shall visually monitor the delivery of fuel.

E. Owners and operators shall use one or more of the following to comply with the requirements in this section:

(1) *Petroleum Equipment Institute Publication RP 1000, "Recommended Practices for the Installation of Marina Fueling Systems"; or*

(2) *National Fire Protection Association Standard 30A, "Code for Motor Fuel Dispensing Facilities and Repair Garages".*

[20.5.109.909 NMAC - N, 07/24/2018]

20.5.109.910 SPILL AND OVERFILL PREVENTION:

A. Except as provided in Subsection B of this section, to prevent spilling and overfilling associated with transfers of regulated substances to above ground storage tank systems, owners and operators shall use the following spill and overfill prevention equipment:

(1) spill prevention equipment that will prevent release of regulated substances to the environment when the transfer hose is detached from the fill pipe (for example, a spill bucket); and

(2) overfill prevention equipment for ASTs that will:

(a) automatically shut off flow into the tank when the tank is no more than ninety-five percent full; or

(b) alert the transfer operator when the tank is no more than ninety percent full by restricting the flow into the tank or triggering a high-level audible and visual alarm.

B. Owners and operators are not required to use the spill and overfill prevention equipment specified in Subsections A and G of this section if approved in writing in advance by the department where:

(1) alternative equipment is used that is determined by the department to be no less protective of public health, safety and welfare and the environment than the equipment specified in Paragraphs (1) or (2) of Subsection A of this section; or

(2) the above ground storage tank system is filled by transfers of no more than 25 gallons at one time;

C. Flow restrictors shall not be used in vent lines and shall not be used as overfill prevention equipment for ASTs.

D. Spill and overfill prevention equipment must be periodically tested or inspected in accordance with 20.5.110.1005 NMAC.

E. Owners and operators of AST systems that were previously exempt from spill and overfill requirements shall install no later than three years after the effective date of these regulations, spill and overfill prevention equipment required in Paragraphs (1) and (2) of Subsection A of this section for any AST system at retail and fleet refueling facilities where the fill port is located within a secondary containment system.

F. Overfill prevention and spill prevention equipment shall be either listed in accordance with an industry standard or code of practice developed by a nationally recognized association or independent testing laboratory for use with flammable and combustible liquids or approved prior to installation in accordance with Paragraph (1) of Subsection B of this section.

[20.5.109.910 NMAC - N, 07/24/2018]

20.5.109.911 VENTING FOR ABOVE GROUND STORAGE TANK SYSTEMS:

A. Owners and operators shall design and construct venting for all above ground storage tank systems, following the current edition of an industry standard or code of practice developed by a nationally recognized association or independent testing laboratory approved in advance by the department.

B. Normal atmospheric tank vents shall be located so that the discharge point is outside of buildings and higher than the fill pipe opening. Vent pipes shall be installed not less than 15 feet from power ventilation air intake devices and not less than five feet from a building opening. Vent outlets and devices shall be designed and installed to minimize blockage. Normal vent piping on AST systems installed after the effective date of these regulations shall not be used for any purpose other than venting the tank.

C. Types of vent pipes.

(1) Vent pipes that are provided for normal tank venting shall extend at least 12 feet above ground level.

(2) If attached to a structure, vent pipes shall extend at least five feet above the highest projection of the canopy or roof.

(3) Vent pipes for normal tank venting shall be of appropriate size for the capacity and operating conditions of the tank.

(4) Emergency vents shall be of appropriate size for the capacity of the AST and shall be installed on the primary tank and on the interstice of all double-walled tanks.

D. One of the following shall be used to comply with the requirements of this section:

(1) *Petroleum Equipment Institute Publication RP200 "Recommended Practices for Installation of Above Ground Storage Tank Systems for Motor Vehicle Fueling";*

(2) *National Fire Protection Association Standard 30, "Flammable and Combustible Liquids Code";*

(3) *Underwriters Laboratories 142, "Steel Aboveground Tanks for Flammable and Combustible Liquids";* or

(4) *International Code Council, "International Fire Code".*

[20.5.109.911 NMAC - N, 07/24/2018]

20.5.109.912 VAULTS:

A. Owners and operators shall provide project drawings for and install new AST systems which include vaults in accordance with the following requirements:

(1) A vault must completely enclose each tank, with no openings in the vault enclosure except those necessary for access to, inspection of, and filling, emptying, and venting of the tank. Each tank shall be enclosed in its own vault, although adjacent vaults may share a common wall. However, for good cause shown, the department, in its sole discretion, may grant a variance from the one-tank-one-vault requirement, for existing tanks only, if owners and operators demonstrate that the variance will provide equivalent protection of health, safety and welfare and the environment.

(2) Every vault shall be liquid tight or sealed with no backfill around the tank. If a vault is constructed of concrete, owners and operators shall ensure it meets the requirements of Subsection B of 20.5.109.904 NMAC.

(3) There shall be adequate space between the tank and the vault for inspection of the tanks and its appurtenances.

(4) Above-grade vaults shall be resistant to damage from the impact of a motor vehicle, or suitable collision barriers shall be installed.

(5) A vault shall include connections to permit venting of each vault to dilute, disperse, and remove any vapors prior to personnel entering the vault.

(6) A vault shall be equipped with a detection system capable of detecting liquids, including water, and capable of activating an audible alarm.

(7) A vault shall include a means for recovering liquid from the vault.

(a) If a pump is used to meet this requirement, it shall not be permanently installed in the vault.

(b) Electric-powered portable pumps shall meet the requirements of the current edition of an industry standard or code of practice developed by a nationally recognized association or independent testing laboratory approved in advance by the department.

(c) *National Fire Protection Association Standard 70, "National Electrical Code"* shall be used to comply with the requirements of this paragraph.

B. Vault construction. Owners and operators shall design and construct:

(1) the walls and floor of a vault of reinforced concrete at least six inches thick;

(2) the top of an above-grade vault of noncombustible material, and shall design and construct the top:

(a) to be weaker than the walls of the vault, to ensure that the thrust of any explosion occurring inside the vault is directed upward before significantly high pressure can develop within the vault; and

(b) to safely relieve or contain the force of any explosion occurring inside the vault.

(3) the top and floor of the vault and the tank foundation to withstand the anticipated loading, including loading from vehicular traffic, where applicable; and

(4) the walls and floor of any vault installed below grade in compliance with good engineering practice to withstand anticipated soil and hydrostatic loading.

C. All tanks, piping and other associated equipment in the interior of a vault shall meet the requirements of the current edition of an industry standard or code of practice developed by a nationally recognized association or independent testing laboratory approved in advance by the department. One of the following shall be used to comply with this requirement:

(1) *National Fire Protection Association Standard 70, "National Electrical Code"*; or

(2) *Underwriters Laboratories 2245, "Standard for Below-Grade Vaults for Flammable Liquid Storage Tanks"*.

D. Venting of vaults.

(1) Vent pipes that are provided for normal tank venting shall extend at least 12 feet above ground level.

(2) Emergency vents shall be vapor tight and may be permitted to discharge inside the vault.

(3) Owners and operators shall not use long-bolt manhole covers for this purpose.

(4) Owners and operators shall ensure that all vault vents meet the requirements of the current edition of an industry standard or code of practice developed by a nationally recognized association or independent testing laboratory approved in advance by the department. The following shall be used to comply with this requirement: *National Fire Protection Association Standard 91, "Standard for Exhaust Systems for Air Conveying of Vapors, Gases, Mists, and Noncombustible Particulate Solids"*.

E. Vault entry.

(1) A vault shall include a method of personnel entry.

(2) Owners and operators shall post a warning sign indicating procedures for safe entry at each entry point.

(3) Owners and operators shall secure each entry point against unauthorized entry and vandalism.

(4) Owners and operators shall provide each vault with a suitable means for admission of a fire suppression agent.

[20.5.109.912 NMAC - N, 07/24/2018]

20.5.109.913 GENERAL PERFORMANCE STANDARDS FOR PIPING:

A. Owners and operators shall properly design and construct new piping, provide project drawings, initially test piping, and ensure that any steel portion of piping that routinely contains regulated substances and is in contact with an electrolyte, such as soil or water, shall be protected from corrosion, in accordance with the current edition of an industry standard or code of practice developed by a nationally recognized association or independent testing laboratory approved in advance by the department. Owners and operators shall use one or more of the following to comply with the requirements of this section:

(1) third party certification from a nationally recognized laboratory;

(2) *American Society of Mechanical Engineering Standard B31.3, "Process Piping";*

(3) *American Society of Testing and Materials A53, "Standard Specification for Pipe, Steel, Black and Hot-Dipped, Zinc-Coated, Welded and Seamless";*

(4) *American Society of Testing and Materials A106, "Standard Specification for Seamless Carbon Steel Pipe for High-Temperature Service"; or*

(5) *American Society of Testing and Materials A135, "Standard Specification for Electric-Resistance-Welded Steel Pipe".*

B. Owners and operators shall ensure that piping is compatible with any regulated substance conveyed in accordance with 20.5.110.1009 NMAC.

C. Owners and operators shall protect all piping from impact, settlement, vibration, expansion, corrosion, and damage by fire.

D. Owners and operators shall install a containment sump at any point where piping transitions from above the surface of the ground to below the ground surface. Containment sumps shall be either listed in accordance with an industry standard or code of practice developed by a nationally recognized association or independent testing laboratory for use with flammable and combustible liquids or approved prior to installation by the Department in accordance with the alternate methods requirements in 20.5.109.920 NMAC.

E. If owners and operators install more than one type of piping at a storage tank system, then owners and operators shall comply with the requirements applicable to each type of piping for that run of piping.

[20.5.109.913 NMAC - N, 07/24/2018]

20.5.109.914 PERFORMANCE STANDARDS FOR PIPING CONSTRUCTED OF NON-CORRODIBLE MATERIAL:

A. If owners and operators construct or operate piping of fiberglass-reinforced plastic or flexible piping, the piping shall:

(1) be completely underground;

(2) be within secondary containment that includes a release detection system that meets the requirements of 20.5.111 NMAC;

(3) have a suitable cover approved by the piping manufacturer; or

(4) have equivalent protection approved by the piping manufacturer and approved by the department prior to installation.

B. If owners and operators install non-corrodible piping in an AST system, the piping shall be double-walled.

C. Owners and operators shall ensure that the piping meets the requirements of the current edition of an industry standard or code of practice developed by a nationally recognized association or independent testing laboratory approved in advance by the department, and that the piping is approved by the manufacturer for the application for which it is to be used. Owners and operators shall use one or more of the following to comply with this requirement:

(1) *Underwriters Laboratories Standard 971, "Standard for Nonmetallic Underground Piping for Flammable Liquids";* or

(2) *Underwriters Laboratories of Canada Standard S660, "Standard for Nonmetallic Underground Piping for Flammable and Combustible Liquids".*

[20.5.109.914 NMAC - N, 07/24/2018]

20.5.109.915 PERFORMANCE STANDARDS FOR STEEL PIPING FOR AST SYSTEMS:

If owners and operators construct or operate piping of steel for an AST system, owners and operators shall properly design and construct and provide project drawings for piping that routinely contains regulated substances in accordance with the current edition of an industry standard or code of practice developed by a nationally recognized association or independent testing laboratory approved in advance by the department. Owners and operators shall install all piping in accordance with the piping manufacturer's recommendations.

A. Steel piping for ASTs shall be coated with a suitable material approved by the piping manufacturer and shall be either:

(1) totally above the ground with all surfaces visible; or

(2) entirely contained in secondary containment that complies with the requirements of 20.5.109.916 NMAC.

B. Steel piping with an internal diameter greater than two inches shall be welded or flanged together.

C. Owners and operators shall use one or more of the following to comply with the requirements of this section:

(1) *American Society of Mechanical Engineering Standard B31.3, "Process Piping";*

(2) *American Society of Testing and Materials A53, "Standard Specification for Pipe, Steel, Black and Hot-Dipped, Zinc-Coated, Welded and Seamless"; or*

(3) *American Society of Testing and Materials A 135, "Standard Specification for Electric-Resistance-Welded Steel Pipe".*

[20.5.109.915 NMAC - N, 07/24/2018]

20.5.109.916 SECONDARY CONTAINMENT FOR AST PIPING:

To install new piping or replace existing piping in an AST system, owners and operators shall only use piping that is:

- A. double-walled in compliance with 20.5.109.903 NMAC;
- B. designed and constructed with secondary containment that meets the requirements of 20.5.109.904 NMAC; or
- C. steel piping that meets the requirements of 20.5.109.915 NMAC.

[20.5.109.916 NMAC - N, 07/24/2018]

20.5.109.917 SECONDARY CONTAINMENT FOR AST DISPENSERS:

Owners and operators shall install a containment sump underneath each dispenser system associated with an AST, unless the dispenser is located within secondary containment.

- A. Owners and operators shall hydrostatically test the sump upon installation, in accordance with manufacturer's recommendations.
- B. The following may be used to comply with this containment sump requirement: dispenser liners, under-dispenser containment, dispenser pans, and dispenser sump liners.
- C. Under-dispenser containment sumps shall be either listed in accordance with an industry standard or code of practice developed by a nationally recognized association or independent testing laboratory for use with flammable and combustible liquids or approved prior to installation by the department in accordance with the alternate methods requirements in 20.5.109.920 NMAC.

[20.5.109.917 NMAC - N, 07/24/2018]

20.5.109.918 LOADING RACKS:

A. Owners and operators shall design, construct and install loading racks following the current edition of an industry standard or code of practice developed by a nationally recognized association or independent testing laboratory approved in advance by the department. Owners and operators shall use one or more of the following to comply with the requirements of this section:

- (1) *American Petroleum Institute Standard 2610, "Design, Construction, Operation, Maintenance & Inspection of Terminal and Tank Facilities";*
- (2) *National Fire Protection Association Standard 30, "Flammable and Combustible Liquids Code";*
- (3) *International Code Council, "International Fire Code";* or
- (4) *Petroleum Equipment Institute RP 800, "Recommended Practices for Installation of Bulk Storage Plants".*

B. Owners and operators of aviation fuel storage tank systems who install loading racks shall comply with *National Fire Protection Association Standard 407, "Standard for Aircraft Fuel Servicing"*.

C. Owners and operators shall install a containment system that is designed to contain all releases of regulated substances that occur during loading and unloading operations at the loading rack. For all loading racks, owners and operators shall install either:

(1) a drainage system, or secondary containment system meeting the requirements of 20.5.109 NMAC, with a catchment basin capable of containing the largest compartment of a tank car or tanker truck that is loaded or unloaded at the facility; or

(2) a drainage system that is connected to a treatment facility designed to receive releases of regulated substances that occur during loading and unloading operations.

D. Owners and operators shall ensure that loading racks are at least 25 feet from ASTs containing class I liquids (such as gasoline), buildings, and property lines. Owners and operators shall ensure that loading racks are at least 15 feet from tanks containing class II or class III liquids.

[20.5.109.918 NMAC - N, 07/24/2018]

20.5.109.919 REQUIRED CERTIFICATIONS:

A. Certification of compliance. All owners and operators of new above ground storage tank systems shall certify in the registration form required by 20.5.102 NMAC compliance with the following requirements:

- (1) installation of tanks and piping in 20.5.109 NMAC;
- (2) installation of cathodic protection of steel tanks and piping in 20.5.109.902 NMAC and Subsection D of 20.5.109.904 NMAC;
- (3) financial responsibility under 20.5.117 NMAC; and
- (4) release detection in 20.5.111 NMAC.

B. Installer certification. All owners and operators of new above ground storage tank systems shall ensure that the installer certifies in the registration form required by 20.5.102 NMAC that the methods used to install the tanks and piping comply with the requirements in 20.5.109 NMAC.

C. Certification of installation. For installations after August 15, 2003, owners and operators shall demonstrate compliance with the installation standards in 20.5.109.900 NMAC. Owners and operators shall provide a certification of installation on the AST registration form required by 20.5.102 NMAC, which asserts that all of the following methods of certification, testing, and inspection were used to demonstrate compliance with installation requirements of the AST system:

- (1) the installer has been certified by the tank and piping manufacturers;
- (2) the installer has been certified or licensed as required in 20.5.105 NMAC;
- (3) the installer has notified, submitted required documentation to, and the installation has been inspected by the department; and
- (4) all work listed in the manufacturer's installation checklists has been completed.

[20.5.109.919 NMAC - N, 07/24/2018]

20.5.109.920 ALTERNATE METHODS:

A. If owners and operators want to install tanks, piping, storage tank systems, spill and overfill equipment, secondary containment, or any other requirement of this part with materials or methods that are not in accordance with the current edition of an industry standard or code of practice developed by a nationally recognized association or independent testing laboratory, owners and operators shall apply in writing to the department, shall provide supporting documentation, and shall not begin the installation

unless and until the department approves the request in writing. At a minimum, the request for an alternate method shall contain the following:

- (1) date the form is completed;
- (2) facility name, facility ID number, address (with county) and telephone number;
- (3) owner name, owner ID number, address and telephone number;
- (4) citation to regulation for which alternate method or material (such as type of piping) is requested;
- (5) brief description of the proposed alternate method or material;
- (6) justification of proposed alternate method or material, including citation to a standard or code supporting its use, if available; and
- (7) demonstration of its equivalent protection of public health, safety and welfare and the environment.

B. The department shall not grant the request unless owners and operators demonstrate that the request will provide equivalent protection of public health, safety and welfare and the environment.

[20.5.109.920 NMAC - N, 07/24/2018]

[The department provides an optional form that may be used to request approval of an alternate method. The form is

available on the Petroleum Storage Tank Bureau's pages on the department website or by contacting the Petroleum Storage Tank Bureau at 505-476-4397 or 2905 Rodeo Park Drive East, Building 1, Santa Fe, New Mexico 87505.]

PART 110: GENERAL OPERATING REQUIREMENTS FOR ABOVE GROUND STORAGE TANK SYSTEMS

20.5.110.1 ISSUING AGENCY:

New Mexico Environmental Improvement Board.

[20.5.110.1 NMAC - N, 07/24/2018]

20.5.110.2 SCOPE:

This part applies to owners and operators of above ground storage tanks as provided in 20.5.101 NMAC. If the owner and operator of a storage tank are separate persons, only one person is required to comply with the requirements of this part, including any notice and reporting requirements; however, both parties are liable in the event of noncompliance.

[20.5.110.2 NMAC - N, 07/24/2018]

20.5.110.3 STATUTORY AUTHORITY:

This part is promulgated pursuant to the provisions of the Hazardous Waste Act, Sections 74-4-1 through 74-4-14 NMSA 1978, and the general provisions of the Environmental Improvement Act, Sections 74-1-1 through 74-1-17 NMSA 1978.

[20.5.110.3 NMAC - N, 07/24/2018]

20.5.110.4 DURATION:

Permanent.

[20.5.110.4 NMAC - N, 07/24/2018]

20.5.110.5 EFFECTIVE DATE:

July 24, 2018 unless a later date is indicated in the bracketed history note at the end of a section.

[20.5.110.5 NMAC - N, 07/24/2018]

20.5.110.6 OBJECTIVE:

The purpose of 20.5.110 NMAC is to ensure that the operation and maintenance of above ground storage tanks will prevent releases and to protect the public health, safety and welfare and the environment of the state.

[20.5.110.6 NMAC - N, 07/24/2018]

20.5.110.7 DEFINITIONS:

The definitions in 20.5.101 NMAC apply to this part.

[20.5.110.7 NMAC - N, 07/24/2018]

20.5.110.8-20.5.110.999 [RESERVED]

20.5.110.1000 OPERATION AND MAINTENANCE OF ABOVE GROUND STORAGE TANK SYSTEMS:

Owners and operators shall properly maintain all tanks, piping, secondary containment and other associated equipment required in 20.5.109 NMAC, and shall ensure that all tanks, piping, secondary containment and other associated equipment for all storage tank systems are fully operational at all times. Owners and operators shall notify the department in accordance with 20.5.118 NMAC if a visual inspection, other inspection or testing conducted in accordance with 20.5.110 NMAC or 20.5.111 NMAC indicates that a release may have occurred.

A. Owners and operators shall visually inspect monthly an AST and all its components that are readily accessible to visual inspection.

B. Owners and operators shall maintain the exterior coating of an AST and ancillary equipment not in contact with soil in accordance with the current edition of an industry standard or code of practice developed by a nationally recognized association or independent testing laboratory approved in advance by the department. The following may be used to comply with this requirement:

(1) *Society of Protective Coatings SSPC-PA 1, "Shop, Field, and Maintenance Painting of Steel";*

(2) *Society of Protective Coatings, "The Inspection of Coatings and Linings: A Handbook of Basic Practice for Inspectors, Owners and Specifiers";*

(3) *Society of Protective Coatings SSPC-PA Guide 4, "Guide to Maintenance Repainting with Oil Base or Alkyd Painting Systems";* or

(4) *Society of Protective Coatings SSPC-PA Guide 5, "Guide to Maintenance Coating of Steel Structures in Atmospheric Service".*

C. Owners and operators shall mark fill port lids and label the tanks of ASTs as to the regulated substance stored in accordance with the current edition of an industry standard or code of practice developed by a nationally recognized association or independent testing laboratory approved in advance by the department. The following shall be used to comply with this requirement: *American Petroleum Institute RP 1637, "Using the API Color-Symbol System to Mark Equipment and Vehicles for Product Identification at Gasoline Dispensing Facilities and Distribution Terminals".*

D. If any steel piping installed in a trench is used in an AST system, owners and operators shall visually inspect the trench monthly. Owners and operators shall draw off any liquid that has accumulated in the trench within one week of the accumulation, and shall remove any other debris that has accumulated inside the trench. Owners and operators shall properly treat and dispose of any accumulated liquid with a visible sheen and the disposal shall be in accordance with all federal, state, and local statutes,

ordinances, and regulations. If a basin sump is located in the trench, owners and operators shall keep the basin sump free of accumulated liquid and debris. Owners and operators shall not install any valves in any basin sump in a piping trench.

E. Owners and operators shall check ASTs monthly for the presence of any accumulated liquids, other than the intended regulated substance. ASTs shall be checked at the lowest possible point inside the tank. Any accumulated liquid other than the intended regulated substance shall be removed to the extent technically possible. Owners and operators shall properly dispose of any liquid removed from an AST.

[20.5.110.1000 NMAC - N, 07/24/2018]

20.5.110.1001 OPERATIONS AND MAINTENANCE PLAN:

Owners and operators of all storage tank systems shall adopt and implement a written operations and maintenance plan, which they shall keep at the facility for the life of the storage tank system. Owners and operators of unmanned storage tank systems may keep the operations and maintenance plan at an alternate location as long as it is made readily available to the department upon request. The operations and maintenance plan shall be as specific as possible for each facility and shall include the piping and ancillary equipment that routinely contains regulated substances, or controls the flow of regulated substances. Owners and operators shall use, by reference, operational and maintenance guidance from the current edition of an industry standard or code of practice developed by a nationally recognized association or independent testing laboratory. Owners and operators who reference a current edition of an industry standard or code of practice shall maintain a copy of the code or standard they reference. Owners and operators shall not implement the plan until it has been approved by the department.

A. At a minimum, the operations and maintenance plan shall include the following:

(1) a detailed plan showing inspections, operations, testing and maintenance to be done on a daily, monthly, quarterly and annual basis; the plan shall include a description of how owners and operators properly dispose of regulated substances spilled at the facility, and any water or soil removed from any part of the storage tank system where there is any indication it might be or have been contaminated with a regulated substance;

(2) a description of periodic operation and maintenance walk-through inspections in accordance with 20.5.110.1008 NMAC; and

(3) responses to emergency situations; this information shall be readily accessible at the facility; responses to emergency situations shall include the following:

(a) the location of equipment to be shut down during an emergency and how to safely perform these tasks;

(b) actions to be taken in the event of a fire, flooding, a spill, or a release of regulated substances;

(c) a site diagram; and

(d) a list of whom to notify or call during or after an emergency situation.

B. Owners and operators shall use one or more of the following to comply with the requirements of this section:

(1) *American Petroleum Institute 570, "Piping Inspection Code: In-Service Inspection, Repair, and Alteration Piping Systems";*

(2) *American Petroleum Institute Standard 653, "Tank Inspection, Repair, Alteration, and Reconstruction";* or

(3) *Steel Tank Institute Standard SP001, "Standard for Inspection of In-Service Shop Fabricated Aboveground Tanks for Storage of Combustible and Flammable Liquids";* or

C. Owners and operators may submit to the department for approval an alternate plan which contains all the information requested in this section.

D. Owners and operators of storage tank systems that have been placed in temporary closure in compliance with 20.5.115.1501 NMAC shall not be required to have an operations and maintenance plan, unless one or both of the following conditions is present:

(1) the storage tank contains greater than one inch of regulated substance; or

(2) the storage tank system has steel components that are in contact with an electrolyte, such as soil, water or concrete.

[20.5.110.1001 NMAC - N, 07/24/2018]

20.5.110.1002 OPERATION, MAINTENANCE, REPAIR AND REPLACEMENT OF SECONDARY CONTAINMENT FOR ASTS:

A. Owners and operators shall operate, maintain and repair secondary containment in accordance with the current edition of an industry standard or code of practice developed by a nationally recognized association or independent testing laboratory approved in advance by the department.

B. Owners and operators shall not store inside the secondary containment any material which is chemically reactive with the regulated substance stored in the AST system, or with the AST itself. Owners and operators shall not store any material in the

secondary containment that reduces the capacity of the secondary containment below the requirements in 20.5.109.904 NMAC.

C. Owners and operators shall draw off any accumulation of liquid in the secondary containment, including all sumps, within one week of the accumulation, and shall remove any other debris that has accumulated inside the secondary containment. Owners and operators shall properly treat and dispose of any accumulated liquid with a visible sheen. If gravity drain valves are used to remove the accumulated liquid from the secondary containment, owners and operators shall keep all valves closed except during the process of draining the accumulated liquid.

D. In order to maintain the highest level of secondary containment in case of a discharge from, or an overflow of, an AST system, owners and operators shall keep the spill containment buckets, catchment basins, containment sumps, basin sumps, and piping trenches free of water, regulated substances and debris.

E. Owners and operators shall, in accordance with the current edition of an industry standard or code of practice developed by a nationally recognized association or independent testing laboratory approved in advance by the department:

(1) maintain, repair and replace any concrete secondary containment systems; and

(2) repair all significant cracks in the floors and walls of concrete secondary containment systems.

F. Owners and operators shall use one or more of the following to comply with the concrete secondary containment system repair requirements in Subsection E above:

(1) *Society of Protective Coating and National Association of Corrosion Experts SSPC-TU2/NACE 6G197, "Design, Installation and Maintenance of Coating Systems for Concrete used in Secondary Containment";*

(2) *American Concrete Institute 224R, "Control of Cracking in Concrete Structures";* or

(3) *American Concrete Institute "Concrete Repair Manual".*

G. Owners and operators shall maintain, repair and replace any geo-synthetic liner according to manufacturer's instructions, which owners and operators shall keep readily available at the facility for the life of the liner.

H. Owners and operators shall protect from corrosion any secondary containment constructed of steel, and shall cathodically protect any portion of the steel secondary containment that is in contact with an electrolyte, including soil or water. Owners and operators shall maintain the exterior of any steel secondary containment in accordance

with the current edition of an industry standard or code of practice developed by a nationally recognized association or independent testing laboratory approved in advance by the department. The following shall be used to comply with this requirement: *Society of Protective Coatings SSPC-PA-1, "Shop, Field, and Maintenance Painting of Steel"*.

I. Owners and operators of above ground storage tanks which are either double-walled or which have an interstitial space that is monitored as a method of release detection shall comply with the following applicable requirements:

(1) where design and release detection method allow the interstice of a double-walled above ground storage tank to be visually inspected without disturbance of the release detection system, owners and operators shall monthly visually inspect for the presence of water, regulated substances or debris;

(2) if testing conducted in accordance with 20.5.109, 20.5.110 or 20.5.111 NMAC indicates that the stored regulated substance is leaking into the interstice of the AST, then owners and operators shall have the tank repaired in accordance with the tank manufacturer's instructions or specifications, or with the current edition of an industry standard or code of practice developed by a nationally recognized association or independent testing laboratory. Also, owners and operators shall ensure the repair is conducted in accordance with the requirements in 20.5.110.1010 NMAC;

(3) owners and operators shall monitor all vertical ASTs with an interstitial space between the tank bottom and secondary containment for the presence of water or regulated substances; if gravity drain valves are used for monitoring and removal of water or regulated substances, owners and operators shall keep them closed except during the process of monitoring and draining;

(4) owners and operators shall keep all sumps associated with interstitial monitoring free of water;

(5) owners and operators shall annually inspect and test all sensors used to monitor interstitial spaces, in accordance with manufacturer's testing protocol, or in accordance with the current edition of an industry standard or code of practice developed by a nationally recognized association or independent testing laboratory approved in advance by the department; and

(6) owners and operators shall remove any liquid found in interstitial spaces, and dispose of it properly.

J. Owners and operators shall operate, maintain, and repair containment sumps on AST systems in order to prevent any leaks or spills in the containment area from entering the environment.

K. Under-dispenser containment must allow for visual inspection and access to the components in the containment system or be periodically monitored for liquid in the sump in accordance with 20.5.110.1008 NMAC.

L. Containment sumps shall be maintained to meet requirements in 20.5.110.1007 NMAC.

[20.5.110.1002 NMAC - N, 07/24/2018]

20.5.110.1003 OPERATION, REPAIR, AND MAINTENANCE OF VAULTS:

A. Owners and operators shall operate, maintain and repair the walls and floor of a vault in accordance with the current edition of an industry standard or code of practice developed by a nationally recognized association or independent testing laboratory approved in advance by the department. Owners and operators shall use one or more of the following to comply with the requirements of this section:

(1) *Society of Protective Coating and National Association of Corrosion Experts SSPC-TU2/NACE 6G197, "Design, Installation and Maintenance of Coating Systems for Concrete Used in Secondary Containment";*

(2) *American Concrete Institute 224R, "Control of Cracking in Concrete Structures";* or

(3) *American Concrete Institute, "Concrete Repair Manual".*

B. Owners and operators shall visually inspect the interior of any vault from the outside monthly, and annually shall enter and inspect the interior of the vault. Owners and operators shall draw off any liquid that has accumulated in a vault within one week of any accumulation of liquid if the liquid is in contact with the tank or piping (but need not draw off liquid only in contact with a tank's saddles, skid or other support), and shall remove any other debris that has accumulated inside the vault and which is in contact with the tank, piping or saddle, skid or other support. Owners and operators shall properly treat and dispose of any accumulated liquid with a visible sheen and the disposal shall be in accordance with all federal, state, and local statutes, ordinances, and regulations. If a sump is located in the vault, owners and operators shall keep the liquid trap free of water and debris. Owners and operators shall not install any valves in any sump in a vault.

C. Owners and operators shall not store inside a vault any material which is chemically reactive with the regulated substance stored in the AST system, or with the AST itself.

D. Owners and operators shall ensure that a vault is well vented before any fuel transfer begins, and shall keep open all vents during the transfer.

E. For vaults with roofs, owners and operators shall properly maintain and repair the roof of a vault in accordance with the current edition of an industry standard or code of practice developed by a nationally recognized association or independent testing laboratory approved in advance by the department.

[20.5.110.1003 NMAC - N, 07/24/2018]

20.5.110.1004 OPERATION, REPAIR, AND MAINTENANCE OF VENTING SYSTEMS:

Owners and operators shall operate, maintain and repair venting systems in accordance with the current edition of an industry standard or code of practice developed by a nationally recognized association or independent testing laboratory approved in advance by the department. At least monthly, owners and operators shall check emergency vents to ensure they are operational. The following shall be used to comply with this requirement: *National Fire Protection Association Standard 91, "Standard for Exhaust Systems for Air Conveying of Vapors, Gases, Mists, and Noncombustible Particulate Solids"*.

[20.5.110.1004 NMAC - N, 07/24/2018]

20.5.110.1005 OPERATION AND MAINTENANCE OF SPILL AND OVERFILL PREVENTION:

Owners and operators shall ensure that releases due to spilling or overfilling do not occur.

A. Owners and operators shall ensure that the volume available in a tank is greater than the volume of product to be transferred to the tank before the transfer is made and that the transfer operation is monitored constantly to prevent overfilling and spilling. Owners and operators shall comply with the transfer procedures described in the current edition of an industry standard or code of practice developed by a nationally recognized association or independent testing laboratory approved in advance by the department. Owners and operators shall use one or more of the following to comply with this requirement:

(1) *National Fire Protection Association Standard 30A, "Code for Motor Fuel Dispensing Facilities and Repair Garages";*

(2) *International Code Council, "International Fire Code";*

(3) *Petroleum Equipment Institute Publication RP600, "Recommended Practices for Overfill Prevention for Shop-Fabricated Above Ground Tanks";* or

(4) *American Petroleum Institute Standard 2350, "Overfill Protection for Storage Tanks in Petroleum Facilities"*.

B. For additional guidance on Subsection A, see the following:

(1) *National Fire Protection Association Standard 385, "Standard for Tank Vehicles for Flammable and Combustible Liquids";*

(2) *American Petroleum Institute Recommended Practice 1007, "Loading and Unloading of MC 306/DOT 406 Cargo Tank Motor Vehicles";*

(3) *American Petroleum Institute Publication 1621, "Bulk Liquid Stock Control at Retail Outlets";* or

(4) *National Fire Protection Association Standard 30, "Flammable and Combustible Liquids Codes".*

C. Owners and operators of AST systems shall ensure that spill prevention equipment required in 20.5.109.910 NMAC is liquid tight, maintained, and fully operational at all times. In order to ensure the equipment meets these requirements, owners and operators shall no later than three years after the effective date of these regulations meet the following requirements:

(1) Spill prevention equipment installed where the outer and inner walls along with bottom of the equipment are clearly visible shall be either monitored monthly or tested every three years. A liquid, pressure, or vacuum test method shall be used in accordance with one of the following:

(a) the equipment manufacturer's developed and published testing requirements;

(b) *Petroleum Equipment Institute RP 1200, "Recommended Practices for the Testing and Verification of Spill, Overfill, Leak Detection, and Secondary Containment Equipment at UST Facilities";* or

(c) the current edition of another industry standard or code of practice developed by a nationally recognized association or independent testing laboratory approved in advance by the department.

(2) Spill prevention equipment installed where the outer walls and the bottom are not visible shall be tested by a liquid, pressure, or vacuum test method every three years in accordance with one of the documents in Paragraph (1) of this subsection.

(3) Factory installed spill prevention equipment installed as an integral component of a double walled storage tank system shall either be tested every three years in accordance with Paragraph (1) of this subsection or, where a leak in the spill prevention equipment can be detected in the interstice of the tank, owners and operators shall monitor the interstice of the tank every 30 days.

(4) Spill prevention equipment that either fails when tested or is found to be damaged during monthly monitoring shall be repaired or replaced in accordance with 20.5.110.1010 NMAC.

(5) A report shall be produced which includes the results of any vacuum, pressure, or liquid testing conducted on spill prevention equipment and the report shall be submitted to the department in accordance with the requirements in 20.5.110.1016 NMAC and maintained in accordance with the requirements in 20.5.110.1015 NMAC.

(6) Records of the monthly monitoring and testing required in this subsection shall be maintained in accordance with 20.5.110.1015 NMAC.

D. Owners and operators of AST systems shall ensure that overfill prevention equipment required in 20.5.109.910 NMAC is maintained and fully operational at all times. In order to ensure the equipment meets these requirements, owners and operators shall, no later than three years after the effective date of these regulations, and every three years thereafter have the overfill prevention equipment inspected or tested and shall meet the following:

(1) The inspection shall verify the equipment meets the requirements in 20.5.109.910 NMAC, and if the equipment fails to meet these requirements, it shall be repaired, replaced, or re-installed. The repair, replacement, or re-installation shall be in accordance with the manufacturer's instructions or the current edition of an industry standard or code of practice developed by a nationally recognized association or independent testing laboratory approved in advance by the department;

(2) Drop tube style overfill prevention equipment shall be removed from the tank for the inspection;

(3) Owners and operators shall ensure the inspections or tests are performed in accordance with the methods and procedures listed in one of the following:

(a) *Petroleum Equipment Institute RP 1200, "Recommended Practices for the Testing and Verification of Spill, Overfill, Leak Detection, and Secondary Containment Equipment at UST Facilities"*, or

(b) testing requirements developed and published by the overfill prevention equipment manufacturer;

(4) If more than one type of overfill prevention equipment is installed on an AST, owners and operators shall ensure that none of them will interfere with the proper operation of any of the others; and

(5) A report shall be produced which includes the results of any inspections or testing conducted on overfill prevention equipment and the report shall be submitted to

the department in accordance with the requirements in 20.5.110.1016 NMAC and maintained in accordance with the requirements in 20.5.110.1015 NMAC.

E. Owners and operators shall report, investigate, and clean up any spills and overfills in accordance with 20.5.118 NMAC.

F. Owners and operators of a storage tank system that meets the requirements for temporary closure and the tank is empty as defined in 20.5.115.1501 NMAC shall not be required to periodically test the spill and overfill prevention equipment.

G. Owners and operators of storage tank systems shall ensure tests of all spill and overfill prevention equipment as required in this section are performed by a qualified tester. The requirements for testers can be found in 20.5.105 NMAC.

[20.5.110.1005 NMAC - N, 07/24/2018]

20.5.110.1006 OPERATION AND MAINTENANCE OF CORROSION PROTECTION:

Owners and operators of metal storage tank systems with any metal tank or piping with corrosion protection shall comply with the following requirements to ensure that releases due to corrosion are prevented until the storage tank system is permanently closed or undergoes a change in service pursuant to 20.5.115 NMAC.

A. Owners and operators shall operate and maintain corrosion protection systems to continuously provide corrosion protection to all metal components of the system that routinely contain regulated substances and are in contact with an electrolyte, to include soil or water. Owners and operators shall operate and maintain corrosion protection systems in accordance with the current edition of an industry standard or code of practice developed by a nationally recognized association or independent testing laboratory approved in advance by the department. Owners and operators shall use one or more of the following to comply with the requirements of this section:

(1) *American Petroleum Institute Publication 651, "Cathodic Protection of Aboveground Petroleum Storage Tanks";*

(2) *American Petroleum Institute Publication 652, "Linings of Aboveground Petroleum Storage Tank Bottoms";*

(3) *American Petroleum Institute Publication 1632, "Cathodic Protection of Underground Petroleum Storage Tanks and Piping Systems"*

(4) *National Association of Corrosion Engineers Publication RP0193, "External Cathodic Protection of On-Grade Carbon Steel Storage Tank Bottoms";*

(5) *National Association of Corrosion Engineers Publication SP0169, "Standard Practice for Control of External Corrosion on Underground or Submerged Metallic Piping Systems".*

B. Owners and operators shall ensure that all storage tank systems equipped with cathodic protection are inspected for proper operation by a qualified corrosion expert in accordance with the following requirements:

(1) Frequency: owners and operators shall test all cathodic protection systems as follows:

(a) within six months of installation and at least every three years thereafter;

(b) within six months of a modification or repair; or

(c) another reasonable time frame approved in advance in writing by the department;

(2) Inspection criteria: the criteria that are used to determine that cathodic protection is adequate as required by this section must be in accordance with the current edition of an industry standard or code of practice developed by a nationally recognized association or independent testing laboratory approved in advance by the department;

(3) Owners and operators of storage tank systems shall provide the department a report on the cathodic protection system test that includes the following:

(a) name of facility, facility address, and facility ID number issued by the department;

(b) name of the technician who performed the test;

(c) certification of the technician in the type of test performed, including certification numbers, national association where the certification was obtained, and expiration date of the certification;

(d) description of cathodic protection system, for example impressed current, galvanic;

(e) description of storage tank system including tank ID number, product, capacity, tank type, piping, flex connectors;

(f) type of test conducted, such as: routine three-year test; test within six months of installation; test within six months after repair or modification;

(g) whether all flex connectors or metal risers that routinely contain a regulated substance and are in contact with an electrolyte are protected from corrosion. If isolation boots, jackets, or other non-corrodible materials are used to protect this equipment from corrosion, it shall be determined if they are still providing protection from corrosion.

(h) tester's pass/fail evaluation and actions to be taken after evaluation;

(i) facility drawing of the storage tank system and cathodic protection system, indicating location of test points on the storage tank system, cathodic protection test stations, and reference electrode placement; and

(j) description of cathodic protection system repair or modification.

(4) Owners and operators of storage tank systems shall provide the department a report on impressed current systems that includes all requirements listed in 20.5.110.1016 NMAC; and

(a) rectifier manufacturer, model, serial number, rated direct current output voltage and amperage;

(b) rectifier tap settings, direct current output voltage and amperage, and hour meter reading;

(c) description of structure tested, contact point of test lead, and reference electrode placement;

(d) structure to soil potential with current applied in millivolts;

(e) structure to soil potential with current interrupted, instant OFF in millivolts;

(f) 100 millivolts polarization shift, end voltage and voltage change; and

(g) test results.

(5) Owners and operators of storage tank systems shall provide the department a report on galvanic systems that includes all requirements listed in 20.5.110.1016 NMAC; and

(a) description of structure tested, contact point of test lead, and reference electrode placement;

(b) structure to soil potential measured locally in millivolts;

(c) structure to soil potential measured remotely in millivolts; and

(d) test results.

(6) Owners and operators shall use one or more of the following to comply with the requirements of this section:

(a) *National Fire Protection Association Standard 30, "Flammable and Combustible Liquids Code";*

(b) *National Fire Protection Association Standard 30A "Code for Motor Fuel Dispensing Facilities and Repair Garages";*

(c) *American Petroleum Institute Publication RP 1615, "Installation of Underground Petroleum Storage Systems";*

(d) *American Petroleum Institute Publication RP 1632, "Cathodic Protection of Underground Petroleum Storage Tanks and Piping Systems";*

(e) *International Code Council, "International Fire Code";*

(f) *NACE International Test Method TM 0101, "Measurement Techniques Related to Criteria for Cathodic Protection of Underground Storage Tank Systems";*

(g) *NACE International Test Method TM0497, "Measurement Techniques Related to Criteria for Cathodic Protection on Underground or Submerged Metallic Piping Systems";*

(h) *Steel Tank Institute Recommended Practice R051, "Cathodic Protection Testing Procedures for STI-P3® USTs";*

(i) *NACE International Standard Practice SP 0285, "External Control of Underground Storage Tank Systems by Cathodic Protection";* or

(j) *NACE International Standard Practice SP 0169, "Control of External Corrosion on Underground or Submerged Metallic Piping Systems".*

C. Owners and operators shall inspect storage tank systems with impressed current cathodic protection systems every 60 days to ensure the equipment is running properly. Owners and operators shall record the date, time, readings and results of each inspection in a log kept at the facility, and indicate who performed each inspection.

D. Owners and operators shall monthly inspect any equipment or materials used to isolate metal components of AST systems and shall repair or replace equipment and materials used to meet corrosion protection requirements in this section.

E. For storage tank systems using cathodic protection, owners and operators shall maintain records of the operation of the cathodic protection in accordance with

20.5.110.1015 NMAC to demonstrate compliance with the performance standards in this section. These records shall provide the following:

(1) the results of the last three inspections required in Subsection C of this section; and

(2) the results of testing from the last two inspections required in Subsection B of this section.

[20.5.110.1006 NMAC - N, 07/24/2018]

[The department provides an optional form that may be used for the cathodic protection system test report required in Subsection B. The form is available on the petroleum storage tank bureau's pages on the department website, or by contacting the Petroleum Storage Tank Bureau at 505-476-4397 or 2905 Rodeo Park Drive East, Building 1, Santa Fe, New Mexico 87505.]

20.5.110.1007 OPERATION AND MAINTENANCE OF CONTAINMENT SUMPS FOR AST SYSTEMS:

A. Owners and operators shall maintain all containment sumps (including but not limited to under dispenser sumps and transition sumps) and draw off liquid that has accumulated in the containment sumps within one week of the accumulation, and shall remove any other debris that has accumulated inside the containment sumps. Owners and operators shall properly treat and dispose of any accumulated liquid with a visible sheen, and the disposal shall be in accordance with all federal, state, and local statutes, ordinances, and regulations. If gravity drain valves are used to remove accumulated liquid from the containment sumps, owners and operators shall keep all valves closed except during the process of draining the accumulated liquid.

B. In order to maintain the highest level of secondary containment in case of a discharge from, or an overflow of, an AST system, owners and operators shall keep the containment sumps and basin sumps free of water, regulated substances, and debris.

C. Owners and operators shall maintain all containment sumps associated with interstitial monitoring of underground piping; the sumps shall be liquid tight and kept free of water.

D. Owners and operators of AST systems with single walled containment sumps associated with interstitial monitoring shall have the integrity of the sumps tested no later than three years after the effective date of these regulations, and every three years thereafter, in accordance with the following:

(1) Hydrostatic or other test methods shall be conducted to ensure the containment sumps are liquid tight including at all penetrations in accordance with one of the following:

(a) the equipment manufacturer's developed and published testing requirements;

(b) *Petroleum Equipment Institute RP 1200, "Recommended Practices for the Testing and Verification of Spill, Overfill, Leak Detection, and Secondary Containment Equipment at UST Facilities"*; or

(c) the current edition of an industry standard or code of practice developed by a nationally recognized association or independent testing laboratory approved in advance by the department;

(2) Hydrostatic test methods using a test apparatus developed specifically for testing containment sumps shall ensure the containment sumps are liquid tight including at all penetrations and comply with one of the following:

(a) protocols developed by the manufacturer of the test apparatus and the certification as listed on the web site of the national work group on leak detection evaluation;

(b) protocols developed and published by the manufacturer of the containment sump;

(c) *Petroleum Equipment Institute RP 1200, "Recommended Practices for the Testing and Verification of Spill, Overfill, Leak Detection, and Secondary Containment Equipment at UST Facilities"*; or

(d) an alternate test method approved by the department in writing in advance in accordance with the requirements for Alternate Methods Requests in 20.5.110.1014 NMAC.

(3) A low liquid level hydrostatic test method may be conducted if all of the following conditions are met:

(a) test method used shall be in accordance with the following:

(i) the liquid level meets the third-party certification for the sensor installed in the sump;

(ii) the duration of the test shall be a minimum of one hour unless a different test period is specified by the containment sump manufacturer or in (iii) below;

(iii) the current edition of an industry standard or code of practice developed by a nationally recognized association or independent testing laboratory approved in advance by the department;

(b) either a hydrostatic test shall be conducted every 12 years in accordance with Paragraph (1) and (2) of Subsection D or a site check shall be conducted every 12 years in accordance with in Subsection B of 20.5.118.1801 NMAC.

(c) a sump sensor that automatically shuts off equipment associated with the sump and meets the requirements for placement and testing of sensors used for interstitial monitoring in Subparagraph (b) of Paragraph (3) of Subsection A of 20.5.111.1106 NMAC;

(4) A low liquid level test per Paragraph (3) of this subsection shall not be conducted if the following conditions exist:

(a) a liquid is discovered in the sump or evidence is found that a liquid has been at a level equal to or higher than the lowest penetration in the sump; then testing has to be conducted in accordance with Paragraph (1) of this subsection;

(b) sensors in containment sumps are discovered to be located higher than the lowest part of the sump; then a test shall be conducted in accordance with Paragraph (1) of this subsection and owners and operators shall report and investigate a suspected release in accordance with the requirements in 20.5.118 NMAC; or

(c) a site check conducted in accordance with Paragraph (3) of this subsection indicates there has been a release from the containment sump.

E. Owners and operators of AST systems with double-walled containment sumps associated with interstitial monitoring shall have the integrity of the sumps tested no later than three years from the effective date of these regulations, and every three years thereafter, in accordance with one of the following:

(1) interstices under vacuum, pressure, or brine filled, are continuously monitored by use of interstitial sensors or visually inspected every 30 days, and the monitoring records are maintained in accordance with 20.5.110.1015 NMAC. Owners and operators shall ensure that annual functionality testing or annual inspections of the monitoring equipment are conducted in accordance with 20.5.111.1104 NMAC. Owners and operators who cannot demonstrate that the interstices of the containment sumps are continuously monitored or inspected every 30 days shall have the sumps tested in accordance with Subsection D above; or

(2) containment sumps with dry interstices that are not continuously monitored are integrity tested in accordance with Subsection D of 20.5.110.1007 NMAC.

F. All sensors and equipment used to monitor containment sumps and their interstices shall be functionality tested annually in accordance with 20.5.111.1104 NMAC.

G. A report shall be produced which includes the results of the testing, and the report shall be submitted in accordance with 20.5.110.1016 NMAC and maintained in accordance with the requirements in 20.5.110.1015 NMAC.

H. Owners and operators of storage tank systems shall ensure that tests of containment sumps as required in this section are performed by qualified testers. The requirements for testers can be found in 20.5.105 NMAC.

I. Owners and operators of storage tank systems shall dispose of water or other test media used in testing of components of petroleum storage tank systems, or any accumulated liquid with a visible sheen, and the disposal shall be in accordance with all federal, state, and local statutes, ordinances, and regulations. Owners and operators who temporarily store the test media or water on-site shall do so in accordance with all federal, state, and local statutes, ordinances, and regulations.

[20.5.110.1007 NMAC - N, 07/24/2018]

20.5.110.1008 PERIODIC OPERATION AND MAINTENANCE WALK-THROUGH INSPECTIONS:

A. Owners and operators shall conduct walk-through inspections that, at a minimum, check equipment as specified below:

(1) For spill and overfill prevention equipment, every 30 days (exception: spill prevention equipment at AST systems receiving deliveries at intervals greater than every 30 days may be checked prior to each delivery):

(a) visually check all spill and overfill prevention equipment for damage;

(b) remove liquid or debris;

(c) check for and remove obstructions in the fill pipe;

(d) check the fill cap to make sure it is securely on the fill pipe; and

(e) for double walled spill prevention equipment with interstitial monitoring, check for liquid or a leak in the interstitial area; and

(f) check overfill prevention equipment for proper operation and determine whether maintenance is required.

(2) For release detection equipment, every 30 days:

(a) check to make sure the release detection equipment is operating with no alarms or other unusual operating conditions present; and

(b) ensure records of release detection testing are reviewed and current.

(3) For containment sumps, every 30 days:

(a) visually check the containment sump for damage, liquid in the containment area, and releases to the environment;

(b) remove liquid and debris in containment sumps; and

(c) for double walled sumps with interstitial monitoring, check for liquid or a leak in the interstitial area.

(4) Annually: check hand held release detection equipment, such as, but not limited to, tank gauge sticks for operability and serviceability;

B. Owners and operators shall conduct these walk-through inspections in accordance with one of the following:

(1) the current edition of a national code of practice or standard developed by a nationally recognized association or independent testing laboratory that checks equipment included in Subsection A of 20.5.110.1008 NMAC; or

(2) a checklist developed by the department.

C. If monthly visual checks of containment sumps are not being conducted or records of the checks cannot be produced, a test in accordance with Subsection D of 20.5.10.1007 NMAC shall be conducted within 30 days of failing to meet the requirement for monthly monitoring of the equipment.

D. Owners and operators must maintain records of operation and maintenance walkthrough inspections in accordance with 20.5.110.1015 NMAC. Records must include a list of each area checked, whether each area checked was acceptable or needed action taken, a description of actions taken to correct an issue, and delivery records if spill prevention equipment is checked less frequently than every 30 days due to infrequent deliveries.

[20.5.110.1008 NMAC - N, 07/24/2018]

20.5.110.1009 COMPATIBILITY:

Owners and operators shall use a storage tank system made of or lined with materials that are compatible with the substance stored in the storage tank system.

A. Owners and operators must notify the department at least 30 days prior to changing the substance in any of their tanks to a regulated substance containing

greater than ten percent ethanol, greater than twenty percent biodiesel, or any other regulated substance identified by the department.

B. In addition, owners and operators with storage tank systems storing these regulated substances must meet one of the following:

(1) demonstrate compatibility of the storage tank system (including the tank, piping, containment sumps, pumping equipment, release detection equipment, spill equipment, and overfill equipment). Owners and operators may demonstrate compatibility of the storage tank system by using one of the following options:

(a) certification or listing of storage tank system equipment or components by a nationally recognized, independent testing laboratory for use with the regulated substance stored; or

(b) equipment or component manufacturer approval. The manufacturer's approval must be in writing, include an affirmative statement of compatibility, specify the range of biofuel blends the equipment or component is compatible with, and be from the equipment or component manufacturer.

(2) for storage tank systems or system components that contain, but are not compatible with, one of the regulated substances listed in Subsection A of 20.5.110.1009 NMAC, or for those storage tank systems where compatibility cannot be determined, remove all regulated substances from the tank system by the effective date of these regulations, and comply with one of the following:

(a) replace the storage tank system or system components in accordance with the requirements for a new storage tank system in 20.5.109 NMAC;

(b) prior to putting the tank back in service, modify the storage tank system in accordance with 20.5.110.1010 NMAC and one of the following:

(i) install an internal lining in the tank, in accordance with the lining manufacturer's installation instructions, to address compatibility issues; or

(ii) comply with tank or equipment manufacturer's instructions;

(c) change the regulated substance stored to one that is compatible with the storage tank system; or

(d) permanently close the storage tank system within 12 months of the effective date of these regulations in accordance with the permanent closure requirements in 20.5.115.1502 NMAC; or

(3) use another option determined by the department to be no less protective of human health and the environment than the options listed in this section.

C. Owners and operators must maintain records documenting compliance with this section for as long as the storage tank system is used to store the regulated substance.

D. Owners and operators shall use the current edition of an industry standard or code of practice developed by a nationally recognized association or independent testing laboratory approved in advance by the department to comply with the compatibility requirements of this section. *American Petroleum Institute Recommended Practice RP 1626, "Storing and Handling Ethanol and Gasoline-Ethanol Blends at Distribution Terminals and Filling Stations"* shall be used to comply with the requirements of this section as they pertain to storage of ethanol blends.

[20.5.110.1009 NMAC - N, 07/24/2018]

20.5.110.1010 REPAIRS, REPLACEMENTS AND MODIFICATIONS:

Owners and operators of a storage tank system shall ensure that repairs, replacements, and modifications will prevent releases due to structural failure or corrosion as long as the storage tank system is used to store regulated substances. Owners and operators shall remove all regulated substances from a storage tank system when a release has been confirmed until it is repaired or replaced in accordance with the requirements of this section.

A. Determining whether repair, replacement or modification is necessary. Owners and operators shall determine whether a repair, replacement or modification to a storage tank system is necessary in consultation with a department inspector, after providing notice required by this part.

(1) If owners and operators are repairing, replacing or modifying piping of any kind that is connected to a storage tank, the determination shall be made during an on-site inspection that provides the inspector the opportunity to view the piping while it is exposed.

(2) If, during an on-site inspection, the inspector determines that:

(a) any steel piping connected to a tank indicates corrosion; or

(b) any non-corrodible piping connected to a tank shows signs of deterioration or failure,

(3) Then the owner and operator shall replace all piping connected to that tank, and shall inspect all other piping at the same facility that is made of the same material to determine its condition prior to returning the facility to operation.

B. Owners and operators shall properly conduct repairs, replacements and modifications to storage tank systems in accordance with the current edition of an industry standard or code of practice developed by a nationally recognized association

or independent testing laboratory approved in advance by the department, and in accordance with the manufacturer's instructions and recommended practices. Owners and operators shall use one or more of the following to comply with the requirements of this section:

- (1) *National Fire Protection Association Standard 30, "Flammable and Combustible Liquids Code";*
- (2) *American Petroleum Institute Recommended Practice RP 2200, "Repairing Crude Oil, Liquefied Petroleum Gas, and Product Pipelines";*
- (3) *National Fire Protection Association Standard 30A, "Code for Motor Fuel Dispensing Facilities and Repair Garages";*
- (4) *Petroleum Equipment Institute Publication RP200, "Recommended Practices for Installation of Above Ground Storage Systems for Motor Vehicle Fueling";*
- (5) *American Society for Testing and Materials ES40, "Emergency Standard Practice for Alternative Procedures for the Assessment of Buried Steel Tanks Prior to the Addition of Cathodic Protection";*
- (6) *American Petroleum Institute 570, "Piping Inspection Code: Inspection, Repair, Alteration and Rerating of In-Service Piping Systems";*
- (7) *American Petroleum Institute Standard 653, "Tank Inspection, Repair, Alteration, and Reconstruction";*
- (8) *American Society of Mechanical Engineering Standard B31.1, "Process Piping";*
- (9) *International Code Council, "International Fire Code";*
- (10) *National Leak Prevention Association Publication RP823, "Standard for Preventative Maintenance, Repair, and In-situ Construction of Petroleum Sumps";*
- (11) *Petroleum Equipment Institute Publication RP100 "Recommended Practices for the Installation of Underground Storage Tank Systems for Motor Vehicle Fueling";*
- (12) *Petroleum Equipment Institute Publication RP800 "Recommended Practices for Installation of Bulk Storage Plants";*
- (13) *Petroleum Equipment Institute Publication RP1000 "Recommended Practices for the Installation of Marina Fueling Systems";*

(14) *Petroleum Equipment Institute Publication RP1300 "Recommended Practices for the Design, Installation, Service, Repair, and Maintenance of Aviation Fueling Systems"; or*

(15) *Petroleum Equipment Institute Publication RP1400 "Recommended Practices for the Design and Installation of Fueling Systems for Emergency Generators, Stationary Diesel Engines and Oil Burner Systems".*

C. Owners and operators shall not internally line ASTs as a means of repair.

D. Owners and operators shall tightness test a storage tank system that has been replaced, modified or repaired, prior to returning the system to service, in accordance with 20.5.111.1101 NMAC and Subparagraph (a) of Paragraph (3) of Subsection A of 20.5.111.1105 NMAC except as provided below:

(1) the repaired or modified tank is internally inspected in accordance with the current edition of an industry standard or code of practice approved in advance by the department; or

(2) owners and operators shall use an equivalent test method, which complies with the current edition of an industry standard or code of practice developed by a nationally recognized association or independent testing laboratory approved in advance in writing by the department.

E. Upon completion of a modification or repair of any cathodically protected storage tank system, owners and operators shall test the cathodic protection system in accordance with 20.5.110.1006 NMAC to ensure that it is operating properly.

F. Owners and operators of a storage tank system shall maintain records of each repair, replacement and modification until the storage tank system is permanently closed pursuant to 20.5.115 NMAC.

G. Owners and operators shall repair an above ground storage tank if an internal inspection determines that a release is occurring or that the tank bottom or shell thickness is below minimum thickness requirements. Owners and operators shall keep the records of internal inspections for the life of the tank. Minimum thickness requirements shall be determined by one of the following:

(1) manufacturer's specifications;

(2) current edition of an industry standard or code of practice developed by a nationally recognized association or independent testing laboratory approved in advance by the department; or

(3) minimum thickness for the tank bottom shall never be less than one half of the original bottom plate thickness and minimum thickness for the tank shall never be less than one-tenth inch.

H. Owners and operators shall meet all applicable installation requirements of 20.5.109 NMAC, including testing requirements, when repairing, replacing or modifying a storage tank system involves installing new components. If any tank or piping of a tank system is replaced, owners and operators shall follow all requirements for properly assessing the site for contamination in compliance with 20.5.115 NMAC prior to installing the new components.

I. Repairs to secondary containment of tanks, piping and containment sumps must be tested for tightness according to the manufacturer's instructions, a code of practice developed by a nationally recognized association or independent testing laboratory, or according to requirements established by the implementing agency within 30 days following the date of completion of the repair.

J. Within 30 days following any repair to spill or overfill prevention equipment, the repaired spill or overfill prevention equipment must be tested or inspected, as appropriate, in accordance with 20.5.110.1005 NMAC to ensure it is operating properly.

[20.5.110.1010 NMAC - N, 07/24/2018]

20.5.110.1011 INSPECTIONS, MONITORING AND TESTING:

A. For the purpose of enforcing the provisions of these regulations, all owners and operators of storage tanks shall, upon the request of the secretary or authorized department representatives, furnish information relating to such tanks, including tank equipment and contents, conduct monitoring or testing, and permit any department representative at all reasonable times to have access to, and to copy all records relating to such tanks. Owners and operators shall comply with all applicable and appropriate Occupational Health and Safety Act requirements, Sections 50-9-1 through 50-9-25 NMSA 1978, so that storage tanks may be safely inspected. For the purpose of enforcing these regulations, department officers, employees, or representatives are authorized to:

(1) enter at reasonable times any establishment or place where a storage tank is located;

(2) inspect the storage tank system and obtain samples of its contents;

(3) conduct monitoring or testing of the tanks, associated equipment, contents, or surrounding soils, air, surface water, or groundwater; and

(4) retrieve all data from any electronic release detection equipment or device.

B. The department shall commence and complete each inspection with reasonable promptness. If the secretary or department representative obtains any samples, prior to leaving the premises he shall give to the owner, operator or agent in charge a receipt describing the sample obtained and, if requested, a portion of each sample equal in volume or weight to the portion retained. If any analysis is made of the samples, a copy of the results of the analysis shall be furnished promptly to the owner, operator or agent in charge.

C. Owners and operators shall permit the department or authorized department representative to be present at and inspect all storage tank system installations, replacements, repairs, substantial modifications, installations of leak detection systems and storage tank system closures.

D. Owners and operators shall not intentionally delete any history from any electronic release detection equipment or device.

[20.5.110.1011 NMAC - N, 07/24/2018]

20.5.110.1012 REQUIRED NOTIFICATION PRIOR TO REPLACEMENT, REPAIR AND MODIFICATION:

To ensure that an inspector has an opportunity to be present during the steps in procedures which are important to the prevention of releases, owners, operators, and certified tank installers shall give the department notice of the dates on which critical junctures in the replacement, repair, and modification of the storage tank system are to take place. Notice need not be provided for normal maintenance. The inspector may require that critical junctures be performed from Monday through Friday during regular business hours.

A. For replacements, modifications (including internal lining or changes to cathodic protection systems), and repairs, the term "critical junctures" means:

- (1) completion of pouring a concrete pad or footings;
- (2) completion of the excavation of existing piping;
- (3) actual performance of the repair, lining, or modification;
- (4) any time during the project in which components of piping are connected;
- (5) any time during the project in which a tank, its associated piping, spill prevention equipment, or secondary containment sumps are tested; and
- (6) any time during the project when overflow prevention equipment is inspected to ensure it meets the requirements in 20.5.110.1005 NMAC.

B. Owners, operators and certified tank installers shall give at least 30 days written notice before the replacement, modification or repair of a storage tank system. Owners and operators shall also give at least 30 days written notice before the application of a secondary containment coating. It may not be feasible for owners, operators, and certified tank installers to provide advance notice of emergency repairs; however, owners, operators, and certified tank installers shall provide notice of emergency repairs as soon as possible after completing emergency repairs. At a minimum, the notice for replacements, modifications, and repairs shall contain the following information:

- (1) date the form is completed;
- (2) facility name, facility ID number, address (with county), and telephone number;
- (3) owner name, owner ID number, address, and telephone number;
- (4) contractor name, address, and telephone number;
- (5) description of type of replacement, modification or repair to be performed (such as spill containment, overfill prevention, release detection, piping or other);
- (6) expected date on which replacement, modification or repair will be performed;
- (7) whether any part of the system is within 1,000 feet of a community water system or a potable drinking water well; and
- (8) signature of owner, operator or an authorized representative.

C. In addition to the written notices described in this section, owners, operators and certified tank installers shall give oral notice at least 24 hours in advance of the commencement of the procedure. In the oral notice, owners, operators and certified tank installers shall describe any changes to the 30-day written notice required in Subsection B of this section, such as different equipment or installation methods.

D. If owners, operators and certified tank installers are separate persons, only one person is required to comply with the notice requirements of this section; however, all parties are liable in the event of noncompliance.

[20.5.110.1012 NMAC - N, 07/24/2018]

[The bureau provides an optional form that may be used for notification of replacement, repair and modification. The form is available on the petroleum storage tank bureau's pages on the department website or by contacting the Petroleum Storage Tank Bureau at 505-476-4397 or 2905 Rodeo Park Drive East, Santa Fe, NM 87505.]

20.5.110.1013 DEPARTMENT REVIEW AND APPROVAL OF PLANS, INSTALLATION, OPERATION, AND MAINTENANCE:

Owners and operators shall view any inspection, review or approval by the department as permission to proceed in accordance with all applicable rules, codes and standards. Review and approval by the department shall not relieve any owner, operator, or certified tank installer of his responsibility for compliance. If the department overlooks any deficiencies or violations in the course of plan review or inspection provided in 20.5 NMAC, the department may later require correction and compliance.

[20.5.110.1013 NMAC - N, 07/24/2018]

20.5.110.1014 ALTERNATE METHODS:

A. If owners and operators want to operate, maintain, replace, repair or modify any part of a storage tank system with materials or methods that are not in accordance with the current edition of an industry standard or code of practice developed by a nationally recognized association or independent testing laboratory, owners and operators shall apply in writing to the department, shall provide supporting documentation, and shall not begin to operate, maintain, replace, repair or modify the system, unless and until the department approves the request in writing. At a minimum, the request for an alternate method shall contain the following:

- (1) date the form is completed;
- (2) facility name, facility ID number, address (with county) and telephone number;
- (3) owner name, owner ID number, address and telephone number;
- (4) citation to regulation for which alternate method or material (such as type of piping) is requested;
- (5) brief description of the proposed alternate method or material;
- (6) justification of proposed alternate method or material, including citation to a standard or code supporting its use, if available; and
- (7) demonstration of its equivalent protection of public health, safety and welfare and the environment.

B. The department shall not grant the request unless owners and operators demonstrate that the request will provide equivalent protection of public health, safety and welfare and the environment.

[20.5.110.1014 NMAC - N, 07/24/2018]

[The bureau provides an optional form that may be used to request approval of an alternate method. The form is available on the petroleum storage tank bureau's pages on the department website or by contacting the Petroleum Storage Tank Bureau at 505-476-4397 or 2905 Rodeo Park Drive East, Building 1, Santa Fe, NM 87505.]

20.5.110.1015 RECORD KEEPING:

A. Owners and operators shall maintain the following information for the life of the storage tank system:

- (1) documentation of operation of corrosion protection equipment that demonstrates compliance with 20.5.110.1006 NMAC;
- (2) documentation of storage tank system repairs, replacements and modifications that demonstrate compliance with 20.5 NMAC;
- (3) documentation of compliance with release detection requirements in accordance with 20.5.11 NMAC;
- (4) inspection logs required by 20.5.110 NMAC and 20.5.111 NMAC;
- (5) tank tightness, internal inspection and integrity test documents required by 20.5 NMAC;
- (6) any document approving any alternate method;
- (7) spill and overfill prevention equipment testing/inspection records;
- (8) containment sump testing records;
- (9) documentation of compatibility for AST systems;
- (10) documentation of compliance for spill and overfill prevention equipment and containment sumps used for interstitial monitoring of piping;
- (11) documentation of periodic walkthroughs;
- (12) documentation of operator training in accordance with 20.5.104 NMAC;
- (13) the operation and maintenance plan and related documentation as required by 20.5.10.1001 NMAC; and
- (14) any other record or written approval required in 20.5 NMAC.

B. Availability and maintenance of records. Owners and operators shall keep the required records for the operational life of a tank, piping and tank system either:

(1) at the storage tank site and immediately available for inspection by the department; or

(2) at a readily available alternative site and the records shall be provided for inspection to the department upon request; if records are not available at a site during inspection, owners and operators shall send to the inspector within 10 working days all records requested by the inspector.

C. Owners and operators shall maintain permanent closure records required under 20.5.115 NMAC. Owners and operators are also provided with the additional alternative of mailing closure records to the department if they cannot be kept at the site or an alternative site as indicated above.

D. If the owner and operator of a storage tank are separate persons, only one person is required to comply with the requirements of this section; however, both parties are liable in the event of noncompliance.

[20.5.110.1015 NMAC - N, 07/24/2018]

20.5.110.1016 REPORTING:

Owners and operators of a storage tank system shall cooperate fully with inspections, monitoring and testing conducted by the department, as well as requests for document submission, testing, and monitoring by the owner or operator.

A. Owners and operators shall provide the following information to the department:

(1) registration for all storage tank systems in accordance with 20.5.102 NMAC, which includes certification of installation for new AST systems in accordance with Subsection C of 20.5.109.919 NMAC; (2) reports of all releases in accordance with 20.5.102 NMAC and the requirements in 20.5.18 NMAC for reporting suspected releases, spills and overfills and confirmed releases;

(3) corrective actions planned or taken as required by 20.5.119 NMAC and 20.5.200 NMAC;

(4) notification before storage tank system installation, replacement, repair or modification in accordance with 20.5.109 NMAC and 20.5.110 NMAC; notification when any person assumes ownership of a storage tank system in accordance with 20.5.102 NMAC and notification before permanent closure or change in service in accordance with 20.5.115 NMAC; it may not be feasible for owners and operators to provide advance notice of emergency repairs; however, owners and operators shall provide notice of emergency repairs as soon as possible after completing emergency repairs;

(5) notification prior to storage tank systems changing to certain regulated substances in accordance with Subsection A of 20.5.110.1009 NMAC; and

(6) updated project drawings for any addition, replacement or modification of a storage tank system.

B. Owners and operators shall provide to the department all reports as required in 20.5.110 NMAC within 60 days of completion of the tests.

C. Owners and operators shall report any failed tests or inspections to the department within 24 hours of completion of the test or inspection in accordance with 20.5.118.1801 NMAC.

D. Owners and operators shall ensure all reports required in 20.5.110 NMAC contain, at a minimum, the following:

- (1)** facility name and address;
- (2)** facility ID number;
- (3)** owner and operator name and address;
- (4)** owner ID number;
- (5)** date report was completed;
- (6)** date of the test;
- (7)** duration of the test;
- (8)** brand name and model number of equipment being tested or sufficient description to allow identification of the equipment;
- (9)** type of equipment being tested;
- (10)** type of test, including test procedures and methods;
- (11)** results of the test;
- (12)** name of the person who performed the inspection or test, and their qualifications as specified in 20.5.105 NMAC;
- (13)** name of the regulated substance stored in the tank associated with the equipment being tested; and
- (14)** for the inspections and testing of spill prevention equipment, overflow prevention equipment, and containment sumps, include the information from the following forms, as applicable, from *Petroleum Equipment Institute Publication RP 1200*,

"Recommended Practices for the Testing and Verification of Spill, Overfill, Leak Detection and Secondary Containment Equipment at UST Facilities":

(a) *"Spill Bucket Integrity Testing, Hydrostatic Test Method, Single and Double-Walled Vacuum Method";*

(b) *"Containment Sump Integrity Testing, Hydrostatic Testing Method";*

(c) *"UST Overfill Equipment Inspection, Automatic Shutoff Device and Ball Float Valve";* or

(d) *"Automatic Tank Gauge Operation Inspection".*

[20.5.110.1 NMAC - N, 07/24/2018]

PART 111: RELEASE DETECTION FOR ABOVE GROUND STORAGE TANK SYSTEMS

20.5.111.1 ISSUING AGENCY:

New Mexico Environmental Improvement Board.

[20.5.111.1 NMAC - N, 07/24/2018]

20.5.111.2 SCOPE:

This part applies to owners and operators of above ground storage tanks as provided in 20.5.101 NMAC. If the owner and operator of a storage tank are separate persons, only one person is required to comply with the requirements of this part, including any notice and reporting requirements; however, both parties are liable in the event of noncompliance. Release detection requirements for above ground storage tank emergency generator systems are listed in 20.5.112 NMAC.

[20.5.111.2 NMAC - N, 07/24/2018]

20.5.111.3 STATUTORY AUTHORITY:

This part is promulgated pursuant to the provisions of the Hazardous Waste Act, Sections 74-4-1 through 74-4-14 NMSA 1978, and the general provisions of the Environmental Improvement Act, Sections 74-1-1 through 74-1-17 NMSA 1978.

[20.5.111.3 NMAC - N, 07/24/2018]

20.5.111.4 DURATION:

Permanent.

[20.5.111.4 NMAC - N, 07/24/2018]

20.5.111.5 EFFECTIVE DATE:

July 24, 2018, unless a later date is indicated in the bracketed history note at the end of a section.

[20.5.111.5 NMAC - N, 07/24/2018]

20.5.111.6 OBJECTIVE:

The purpose of 20.5.111 NMAC is to ensure that releases from above ground storage tanks are detected early to minimize potential harmful resulting effects, and to regulate storage tank systems in order to protect the public health, safety and welfare and the environment of the state.

[20.5.111.6 NMAC - N, 07/24/2018]

20.5.111.7 DEFINITIONS:

The definitions in 20.5.101 NMAC apply to this part.

[20.5.111.7 NMAC - N, 07/24/2018]

20.5.111.8-20.5.111.1099 [RESERVED]

20.5.111.1100 REQUIREMENTS AND DEADLINES FOR RELEASE DETECTION FOR AST SYSTEMS:

A. Owners and operators of new and existing AST systems shall monitor monthly for releases using a method, or combination of methods, of release detection that can detect a release from any portion of the tank, connected piping and ancillary equipment that routinely contains a regulated substance and meets the following:

(1) the method:

(a) meets the performance requirements in 20.5.111 NMAC;

(b) is installed and calibrated in accordance with the manufacturer's instructions;

(c) is operated and maintained in accordance with one of the following, beginning on the effective date of these regulations:

(i) manufacturer's instructions;

(ii) the current edition of an industry standard or code of practice developed by a nationally recognized association or independent testing laboratory approved in advance by the department; or

(iii) an approved method that has been determined by the implementing agency to be no less protective of human health and the environment than Subparagraph (a) and (b) of Subsection (1) above; and

(d) has electronic and mechanical components that are tested to ensure proper operation; or

(2) the method meets all the requirements for visual inspections in 20.5.111.1102 NMAC.

B. Owners and operators of AST systems shall meet release detection requirements as follows:

(1) for AST systems installed on, or before, August 14, 2003 must have met release detection requirements no later than August 15, 2004; and

(2) for AST systems installed on, or after, August 15, 2003 must meet release detection requirements upon installation.

C. For existing AST systems installed before July 1, 1991, or where the installation date is unknown, owners and operators shall perform either a tightness test, or an internal inspection on the AST system by August 15, 2004. The tightness test or internal inspection shall be conducted in accordance with the current edition of an industry standard or code of practice developed by a nationally recognized association or independent testing laboratory, and shall be approved in advance by the department. If a tightness test or internal inspection shows that an AST system has a suspected release, then owners and operators shall comply with the requirements of 20.5.118 NMAC. Owners and operators shall use one or more of the following, as applicable, to comply with the above testing requirements:

(1) *American Petroleum Institute Specification 12F: "Shop-welded Tanks For Storage Of Production Liquids";*

(2) *American Petroleum Institute Standard 650, "Welded Tanks for Oil Storage",* with applicable addenda;

(3) *American Petroleum Institute Standard 653, "Tank Inspection, Repair, Alteration, and Reconstruction";*

(4) *Petroleum Equipment Institute RP200, "Recommended Practices for Installation of Aboveground Storage Systems for Motor Vehicle Fueling";*

(5) *Underwriter's Laboratories Standards: UL 142, "Standard for Steel Aboveground Tanks for Flammable and Combustible Liquids"; or*

(6) *Steel Tank Institute Standard SP001, "Standard for the Inspection of Aboveground Storage Tanks".*

D. Owners and operators shall ensure that any person who performs a test on their AST system in order to meet the requirements of 20.5.111 NMAC shall comply with the requirements in 20.5.105 NMAC.

E. Owners and operators shall ensure that equipment used to perform a test on their storage tank system is calibrated and maintained according to the manufacturer's requirements.

F. When a release detection method operated in accordance with the performance standards in 20.5.111 NMAC indicates a release may have occurred, owners and operators shall notify the department in accordance with 20.5.102.204 and 20.5.118 NMAC.

G. Owners and operators shall meet permanent closure requirements in 20.5.115 NMAC for any existing AST system to which an owner and operator cannot apply a method of release detection that complies with the requirements of 20.5.111 NMAC.

[20.5.111.1100 NMAC - N, 07/24/2018]

20.5.111.1101 REQUIREMENTS FOR INTEGRITY TESTING OR TANK TIGHTNESS TESTING OF ASTS:

A. Owners and operators shall perform a tightness test or internal inspection of ASTs 10 years after installation, unless the AST is in secondary containment that complies with the requirements of 20.5.109 NMAC. Owners or operators shall use one or more of the standards and codes listed in Subsection A of this section, as applicable, to comply with this requirement.

B. Owners and operators of ASTs shall ensure that integrity testing and tank tightness testing:

(1) detect a two-tenth gallon per hour leak rate from any portion of the AST that routinely contains a regulated substance while accounting for the effects of thermal expansion or contraction of the regulated substance, vapor pockets, tank deformation, and evaporation or condensation;

(2) comply with manufacturer's published testing procedures; and

(3) comply with a current edition of an industry standard or code of practice developed by a nationally recognized association or independent testing laboratory, and

shall be approved in advance by the department. Owners and operators shall use one or more of following to comply with the requirements of this section:

(a) *American Petroleum Institute Specification 12F: "Specification for Shop Welded Tanks for Storage of Production Liquids"*.

(b) *American Petroleum Institute Standard 650, "Welded Tanks for Oil Storage"*, with applicable addenda;

(c) *American Petroleum Institute Standard 653, "Tank Inspection, Repair, Alteration, and Reconstruction"*;

(d) *Petroleum Equipment Institute RP200, "Recommended Practices for Installation of Aboveground Storage Systems for Motor Vehicle Fueling"*;

(e) *Underwriter's Laboratories Standards: UL 142, "Standard for Steel Aboveground Tanks for Flammable and Combustible Liquids"*;

(f) *Steel Tank Institute Standard SP001, "Standard for the Inspection of Aboveground Storage Tanks"*; or

(g) *National Fire Protection Association Standard 30, "Flammable and Combustible Liquids Code"*.

[20.5.111.1101 NMAC - N, 07/24/2018]

20.5.111.1102 VISUAL INSPECTION REQUIREMENTS FOR ASTS:

A. Owners and operators of ASTs may use visual inspection as a method of release detection if:

(1) all portions of the ASTs, including the AST bottoms, are completely visible, readily accessible and are inspected monthly;

(2) owners and operators maintain a written log of the visual inspections for each AST conducted monthly to include the following:

(a) the date and time the inspection was conducted;

(b) name and signature of the person who conducted the inspection;

(c) comments on the condition of each AST;

(d) the results of each inspection; and

(e) the volume of water found in the AST and if the water has been removed from the tank; and

(3) owners and operators keep visual inspection logs available at the facility.

B. Owners and operators of double-walled and double-bottomed AST systems shall include inspection of the interstice in the monthly visual inspection which shall be recorded in the log required in Paragraph (2) of Subsection A. Owners and operators of AST systems that use interstitial monitoring with an electronic liquid sensor as their monthly method of release detection in accordance with 20.5.111.1103 NMAC do not have to meet the requirements of this subsection. The monthly inspection of the interstice shall use one of the following methods:

(1) manually stick or gauge the monitoring ports of the tank by use of a tank gauging stick that is calibrated to the nearest one-eighth of an inch;

(2) where the interstice is equipped with a mechanical float device that will visually signal when a liquid is present in the interstice, inspect the device;

(3) for double-bottomed vertical ASTs with drain valves for the interstice, check for the accumulation of regulated substances or water;

(4) inspect the interstice per manufacturer's instructions; or

(5) visually inspect vertical ASTs inside secondary containment that meet the requirements of 20.5.109 NMAC where the secondary containment has been constructed so the space between the tank bottom and the concrete floor can be monitored or visually inspected.

[20.5.111.1102 NMAC - N, 07/24/2018]

20.5.111.1103 INTERSTITIAL MONITORING REQUIREMENTS FOR ASTS:

Owners and operators of ASTs may use interstitial monitoring to continuously monitor between the AST and a secondary barrier immediately around and underneath the tank, but only if the AST system meets all of the following requirements:

A. the ASTs are manufactured or upgraded to include a double-walled bottom in accordance with the current edition of an industry standard or code of practice developed by a nationally recognized association or independent testing laboratory which can be remotely monitored, or the ASTs are installed inside secondary containment with an impervious barrier beneath the ASTs meeting the requirements of 20.5.109.904 NMAC and the interstice between them can be remotely monitored;

B. the monitoring system between the AST and the secondary barrier shall meet all of the following requirements;

(1) for cathodically protected ASTs, the secondary barrier shall be installed so that it does not interfere with the proper operation of the cathodic protection system;

(2) the groundwater, soil moisture, or rainfall will not render the testing or sampling method used inoperative so that a release could go undetected for more than 30 days;

(3) the site is assessed to ensure that the secondary barrier is always above the groundwater and not in a 25-year flood plain, unless the barrier and monitoring designs are for use under such conditions;

(4) the locations and ports of monitoring wells are clearly marked and secured to avoid unauthorized access and tampering;

C. owners and operators shall have a qualified tester annually test to ensure proper operation of sensors and electrical or mechanical devices, which includes but is not limited to testing alarm operability, communication with controller, and proper height and location of sensors installed. Testing shall be conducted in accordance with the equipment manufacturers' testing instructions or in accordance with the current edition of an industry standard or code of practice developed by a nationally recognized association or independent testing laboratory.

D. Owners and operators shall ensure the requirements in 20.5.111.1100 NMAC are met prior to implementing this method.

E. Owners and operators shall maintain and provide the department reports relating to the requirements of this section in accordance with 20.5.111.1111 NMAC and 20.5.111.1112 NMAC.

[20.5.111.1103 NMAC - N, 07/24/2018]

20.5.111.1104 AUTOMATIC TANK GAUGING REQUIREMENTS FOR ASTS:

A. Owners and operators shall use automatic tank gauging systems that are third party certified for the size and capacity of the AST. Only third-party certifications that have been reviewed and approved by the national work group on leak detection evaluations (NWGLDE) for AST use, as evidenced by their posting on the NWGLDE website, nwgle.org, will be accepted.

B. Owners and operators of ASTs may use automatic tank gauging as a method of release detection, every 30 days, if the automatic tank gauging system:

(1) tests for the loss of product and can detect a two-tenth gallon per hour leak rate from any portion of the tank that routinely contains regulated substances; and

(2) can conduct inventory control or another test of equivalent performance in accordance with all of the following:

(a) inventory volume measurements for regulated substance inputs, withdrawals, and the amount still remaining in the AST are recorded each operating day;

(b) the equipment used is capable of measuring the level of regulated substance over the full range of the AST's height to the nearest one-eighth of an inch;

(c) the regulated substance inputs are reconciled with delivery receipts by measurement of the AST inventory volume before and after delivery;

(d) deliveries are made through a drop tube that extends to within one foot of the AST bottom, unless the AST is bottom loaded;

(e) regulated substance dispensing is metered and recorded within the state standards for meter calibration or an accuracy of six cubic inches for every five gallons of regulated substance withdrawn;

(f) the measurement of any water level in the bottom of the AST is made to the nearest one-eighth of an inch at least once a month; and

(g) practices described in the *American Petroleum Institute Publication RP1621, "Bulk Liquid Stock Control at Retail Outlets"* may be used, where applicable, as guidance in meeting the requirements of this section.

C. Owners and operators shall ensure a test of the proper operation of the automatic tank gauging system is performed at least annually starting three years after the effective date of these regulations and, at a minimum, as applicable to the facility, cover the following components and criteria:

(1) automatic tank gauge and other controllers: test alarm; verify system programming and configuration; test battery backup;

(2) probes and sensors: inspect for residual buildup; ensure floats move freely; ensure shaft is not damaged; ensure cables are free of kinks and breaks; test alarm operability and communication with controller;

(3) vacuum and pressure pumps and gauges: ensure proper communication with sensors and controller; and

(4) Inspections and testing shall be conducted by a person who is certified as a technician by the manufacturer of the automatic tank gauging system and meets the requirements for qualified testers in 20.5.105 NMAC.

D. Owners and operator shall use one of the following to comply with Paragraph C of this section:

(1) *Petroleum Equipment Institute Publication RP 1200, "Recommended Practices for the Testing and Verification of Spill, Overfill, Leak Detection and Secondary Containment Equipment at UST Facilities";* or

(2) The manufacturer's testing or inspection instructions.

E. Owners and operators shall review the monitoring reports on a monthly basis and notify the department in accordance with 20.5.118 NMAC if there is a failed or inconclusive result.

F. Owners and operator shall produce a report for all inspections and testing required in this section which includes the results of the inspection or test and it shall be maintained and submitted in accordance with 20.5.111.1111 NMAC and 20.5.111.1112 NMAC.

[20.5.111.1104 NMAC - N, 07/24/2018]

20.5.111.1105 REQUIREMENTS FOR AST UNDERGROUND PRESSURIZED PIPING INSTALLED PRIOR TO JULY 24, 2018:

Owners and operators of above ground storage tank systems with underground pressurized piping installed prior to the effective date of these regulations must have implemented a method, or a combination of methods, of release detection for the piping. The monitoring method, or combination of methods, shall follow the current edition of an industry standard or code of practice developed by a nationally recognized association or independent testing laboratory approved in advance by the department.

A. Owners and operators of AST systems shall:

(1) use automatic line leak detectors (including mechanical or electronic detectors) that alert the operator to the presence of a leak by restricting or shutting off the flow of regulated substances through piping when a leak is detected at three gallons per hour at 10 pounds per square inch line pressure within one hour;

(2) perform an annual test of the operation of the leak detector which includes a simulated leak, is conducted in accordance with the manufacturer's testing protocol, and confirms the automatic line leak detector detects a leak at three gallons per hour at 10 pounds per square inch line pressure within one hour; and

and

(3) use a method, or combination of methods, for monitoring the piping for releases that complies with one of the following:

(a) a precision line tightness test is conducted every 12 months that is capable of detecting a leak of one-tenth gallons per hour at one and one-half times the operating pressure; or

(b) use interstitial monitoring that complies with all of the requirements in 20.5.111.1103 NMAC, 20.5.111.1106 NMAC, and all of the following:

(i) shall automatically shut off the submersible turbine pump for the AST if the sensors used for interstitial monitoring detect regulated substances or water within the interstice or in the containment sumps associated with the piping; and

(ii) all sensors shall be tested annually in accordance with Subsection C of 20.5.11.1104 NMAC;

B. Automatic line leak detectors and sensors required in this section that either fail a test or are found to be damaged shall be repaired or replaced, and a line tightness test shall be conducted in accordance with Subparagraph (a) of Paragraph (3) of Subsection A of this section once the repairs or replacements have been completed;

C. Equipment and methods used to monitor the piping shall be appropriate for the type and length of piping.

D. Owners and operators shall use one or more of the following to comply with the requirements of this section:

(1) *Petroleum Equipment Institute Publication RP100, "Recommended Practices for Installation of Underground Liquid Storage Systems";*

(2) *Petroleum Equipment Institute RP200, "Recommended Practices for Installation of Aboveground Storage Systems for Motor Vehicle Fueling";*

(3) *American Petroleum Institute Publication RP 1615, "Installation of Underground Hazardous Substances or Petroleum Storage Systems";*

(4) *American Petroleum Institute 570, "Piping Inspection Code: In-Service Inspection, Repair, and Alteration of Piping Systems";* and

(5) *American Society of Mechanical Engineering Standard B31.3, "Process Piping".*

E. Owners and operators shall maintain all records of release detection and testing in accordance with 20.5.111.1111 NMAC and provide to the department reports for all leak detector testing, line tightness testing, and sensor testing in accordance with 20.5.111.1112 NMAC.

[20.5.111.1105 NMAC - N, 07/24/2018]

20.5.111.1106 REQUIREMENTS FOR AST UNDERGROUND PRESSURIZED PIPING INSTALLED OR MODIFIED ON, OR AFTER JULY 24, 2018:

Owners and operators of above ground storage tank systems with underground pressurized piping installed or modified on, or after the effective date of these regulations shall use interstitial monitoring as the method of release detection for the piping. The interstitial monitoring method shall follow the current edition of an industry standard or code of practice developed by a nationally recognized association or independent testing laboratory approved in advance by the department.

A. Owners and operators of AST systems shall:

(1) use automatic line leak detectors (including mechanical or electronic detectors) that alert the operator to the presence of a leak by restricting or shutting off the flow of regulated substances through piping when a leak is detected at three gallons per hour at 10 pounds per square inch line pressure within one hour;

(2) perform an annual test of the operation of the leak detector which includes a simulated leak, is conducted in accordance with the manufacturer's testing protocol, and confirms the automatic line leak detector detects a leak at three gallons per hour at 10 pounds per square inch line pressure within one hour;

(3) use interstitial monitoring that complies with all of the requirements in 20.5.111.1103 NMAC and all of the following:

(a) Sensors shall be installed in all containment sumps associated with the piping, including under-dispenser containment, transition sumps, and submersible turbine pump containment sumps used to monitor the interstice;

(b) Sensors shall:

(i) monitor the interstice;

(ii) monitor all containment sumps associated with the piping;

(iii) sound an alarm and automatically shut off the submersible turbine pump when a regulated substance or water is detected;

(iv) be positioned in the lowest point of the containment sump; and

(v) be tested annually in accordance with Subsection C of 20.5.111.1104 NMAC;

(c) Containment sumps used for interstitial monitoring shall be tested every three years starting three years after the effective date of these regulations. The testing of the containment sumps shall comply with one of the following:

(i) the testing procedures as described in *Petroleum Equipment Institute Publication RP 1200, "Recommended Practices for the Testing and Verification of Spill, Overfill, Leak Detection and Secondary Containment Equipment at UST Facilities"*; or

(ii) the equipment manufacturer's published testing procedures.

B. Automatic line leak detectors and sensors required in this section that either fail a test or are found to be damaged shall be repaired or replaced, and a line tightness test shall be conducted in accordance with Subparagraph (a) of Paragraph (3) of Subsection A of 20.5.11.1105 NMAC once the repairs or replacements have been completed;

C. Equipment and methods used to monitor the piping shall be appropriate for the type and length of piping.

D. Owners and operators shall use one or more of the following to comply with the requirements of this section:

(1) *Petroleum Equipment Institute Publication RP100, "Recommended Practices for Installation of Underground Liquid Storage Systems"*;

(2) *Petroleum Equipment Institute RP200, "Recommended Practices for Installation of Aboveground Storage Systems for Motor Vehicle Fueling"*;

(3) *American Petroleum Institute Publication RP 1615, "Installation of Underground Hazardous Substances or Petroleum Storage Systems"*;

(4) *American Petroleum Institute 570, "Piping Inspection Code: In-Service Inspection, Repair, and Alteration of Piping Systems"*; and

(5) *American Society of Mechanical Engineering Standard B31.3, "Process Piping"*.

E. Owners and operators shall maintain all records of release detection and testing in accordance with 20.5.111.1111 NMAC and provide to the department reports for all release detector testing, line tightness testing, containment sump testing, and sensor testing in accordance with 20.5.111.1112 NMAC.

[20.5.111.1106 NMAC - N, 07/24/2018]

20.5.111.1107 REQUIREMENTS FOR AST UNDERGROUND SUCTION PIPING INSTALLED PRIOR TO JULY 24, 2018:

A. Owners and operators of above ground storage tank systems where piping conveys regulated substances under suction and was installed prior to the effective date

of these regulations shall use one of the following methods. These methods shall be designed to detect a release from any portion of underground piping:

(1) An annual line tightness test shall be conducted and the tightness testing shall be capable of detecting a one-tenth gallon per hour leak at one and one-half times the operating pressure; or

(2) Interstitial monitoring shall be used in accordance with all of the requirements in 20.5.11.1103 NMAC and 20.5.11.1105 NMAC;

B. Release detection is not required for suction piping that is designed and constructed to meet all of the following standards:

(1) the below-grade piping operates at less than atmospheric pressure;

(2) the below-grade piping is sloped so that the contents of the pipe will drain back into the storage tank if the suction is released;

(3) only one check valve is included in each suction line;

(4) the check valve is located directly below and as close as practical to the suction pump; and

(5) compliance with Paragraphs (2) through (4) of Subsection B of this section is demonstrated.

C. Owners and operators shall use one or more of the following to comply with the requirements of this section:

(1) *Petroleum Equipment Institute Publication RP100, "Recommended Practices for Installation of Underground Liquid Storage Systems";*

(2) *Petroleum Equipment Institute RP200, "Recommended Practices for Installation of Aboveground Storage Systems for Motor Vehicle Fueling";*

(3) *American Petroleum Institute Publication RP 1615, "Installation of Underground Hazardous Substances or Petroleum Storage Systems";*

(4) *American Petroleum Institute 570, "Piping Inspection Code: In-Service Inspection, Repair, and Alteration of Piping Systems";* and

(5) *American Society of Mechanical Engineering Standard B31.3, "Process Piping".*

D. Owners and operators shall maintain all records of release detection and testing in accordance with 20.5.111.1111 NMAC and provide to the department reports for all

release detector testing, line tightness testing, and sensor testing in accordance with 20.5.111.1112 NMAC.

[20.5.111.1107 NMAC - N, 07/24/2018]

20.5.111.1108 REQUIREMENTS FOR AST UNDERGROUND SUCTION PIPING INSTALLED ON OR AFTER JULY 24, 2018:

A. Owners and operators of above ground storage tank systems where piping conveys regulated substances under suction and was installed after the effective date of these regulations shall meet the requirements for interstitial monitoring in 20.5.111.1103 NMAC and the following:

(1) Sensors shall be installed in all containment sumps associated with the piping, including under-dispenser containment, transition sumps, and secondary containment sumps used to monitor the interstice.

(2) Sensors shall:

(a) monitor the interstice;

(b) monitor all containment sumps associated with the piping;

(c) sound an alarm and automatically shut off the pump when a regulated substance or water is detected;

(d) be positioned in the lowest point of the containment sump; and

(e) be tested annually in accordance with Subsection C of 20.5.111.1104 NMAC.

(3) Containment sumps used for interstitial monitoring shall be tested every three years beginning three years after the effective date of the regulations. The testing of the containment sumps shall comply with one of the following:

(a) the testing procedures as described in *Petroleum Equipment Institute Publication RP 1200, "Recommended Practices for the Testing and Verification of Spill, Overfill, Leak Detection and Secondary Containment Equipment at UST Facilities"*; or

(b) the equipment manufacturer's published testing procedures.

B. Release detection is not required for suction piping that is designed and constructed to meet all of the following standards:

(1) the below-grade piping operates at less than atmospheric pressure;

(2) the below-grade piping is sloped so that the contents of the pipe will drain back into the storage tank if the suction is released;

(3) only one check valve is included in each suction line;

(4) the check valve is located directly below and as close as practical to the suction pump; and

(5) compliance with Paragraphs (2) through (4) of Subsection B of this section is demonstrated.

C. Owners and operators shall use one or more of the following to comply with the requirements of this section:

(1) *Petroleum Equipment Institute Publication RP 100, "Recommended Practices for Installation of Underground Liquid Storage Systems";*

(2) *Petroleum Equipment Institute RP 200, "Recommended Practices for Installation of Aboveground Storage Systems for Motor Vehicle Fueling";*

(3) *American Petroleum Institute Publication RP 1615, "Installation of Underground Hazardous Substances or Petroleum Storage Systems";*

(4) *American Petroleum Institute 570, "Piping Inspection Code: In-Service Inspection, Repair, and Alteration of Piping Systems";* and

(5) *American Society of Mechanical Engineering Standard B31.3, "Process Piping".*

D. Owners and operators shall maintain all records of release detection and testing in accordance with 20.5.11.1111 NMAC and provide to the department reports for all release detector testing, line tightness testing, and sensor testing in accordance with 20.5.11.1112 NMAC.

[20.5.111.1108 NMAC - N, 07/24/2018]

20.5.111.1109 REQUIREMENTS FOR AST ABOVE GROUND PIPING:

A. Owners and operators of above ground storage tanks with above ground piping that conveys regulated substances either by suction or pressure shall monitor for releases every 30 days and may use visual inspection if all portions of the piping are completely visible, readily accessible, and not in contact with the ground or soil. Owners and operators shall keep a log of visual inspection of piping that meets the requirements of 20.5.111.1102 NMAC.

B. Owners and operators of above ground storage tank systems with above ground piping that conveys a regulated substance under pressure shall not be required to install automatic line leak detectors as long as the entire piping run is above ground and a solenoid valve has been installed on the piping at the submersible turbine pump. Also, a manually activated control shall be installed that will permit the submersible turbine pump to operate only when a dispensing nozzle is removed from its bracket or normal position with respect to the dispensing device and shall stop the submersible turbine pump when the dispensing nozzle is returned to the bracket.

C. For piping that does not meet these requirements, owners and operators shall use a method, or combination of methods, that meet the requirements in 20.5.111.1105 NMAC through 20.5.111.1108 NMAC depending on the piping type and when the piping was installed or modified.

D. Owners and operators shall use one or more of the following to comply with the requirements of this section:

(1) *Petroleum Equipment Institute Publication RP 100, "Recommended Practices for Installation of Underground Liquid Storage Systems";*

(2) *Petroleum Equipment Institute RP 200, "Recommended Practices for Installation of Aboveground Storage Systems for Motor Vehicle Fueling";*

(3) *American Petroleum Institute Publication RP 1615, "Installation of Underground Hazardous Substances or Petroleum Storage Systems";*

(4) *American Petroleum Institute 570, "Piping Inspection Code: In-Service Inspection, Repair, and Alteration of Piping Systems";*

(5) *American Society of Mechanical Engineering Standard B31.3, "Process Piping";*

(6) *National Fire Protection Association Standard NFPA 110, "Standard for Emergency and Standby Power Systems";* and

(7) *Petroleum Equipment Institute Publication RP1400, "Recommended Practices for the Design and Installation of Fueling Systems for Emergency Generators, Stationary Diesel Engines, and Oil Burner Systems".*

[20.5.111.1109 NMAC - N, 07/24/2018]

20.5.111.1110 ALTERNATE METHODS:

A. If owners and operators want to install materials or methods of release detection equipment for tanks or piping required in 20.5.111 NMAC that are not in accordance with the current edition of an industry standard or code of practice developed by a

nationally recognized association or independent testing laboratory, owners and operators shall apply in writing to the department, shall provide supporting documentation, and shall not begin the installation unless and until the department approves the request in writing. At a minimum, the request for an alternate method shall contain the following:

- (1) date the form is completed;
- (2) facility name, facility ID number, address (with county) and telephone number;
- (3) owner name, owner ID number, address and telephone number;
- (4) citation to regulation for which alternate method or material (such as type of piping) is requested;
- (5) brief description of the proposed alternate method or material;
- (6) justification of proposed alternate method or material, including citation to a standard or code supporting its use, if available; and
- (7) demonstration of its equivalent protection of public health, safety and welfare and the environment.

B. Another type of release detection method, or combination of methods, may be used if approved pursuant to this section, and if, for ASTs, it can detect a two-tenth gallon per hour leak rate monthly or a release of 150 gallons within a month from a tank with a probability of detection of 0.95 and a probability of false alarm of 0.05.

C. The department may approve another method if owners and operators can demonstrate that the method can detect a release as effectively as any of the applicable methods allowed in 20.5.111 NMAC. In comparing methods, the department shall consider the size of release that the method can detect and the frequency and reliability with which it can be detected. If the method is approved, the owner and operator shall comply with any conditions imposed by the department on its use to ensure the protection of public health, safety and welfare and the environment. The department shall not grant the request unless owners and operators demonstrate that the request will provide equivalent protection of public health, safety and welfare and the environment as the methods provided in this section.

[20.5.111.1110 NMAC - N, 07/24/2018]

[The department provides an optional form that may be used to request approval of an alternate method. The form is available on the petroleum storage tank bureau's pages on the department website or by contacting the Petroleum Storage Tank Bureau at 505-476-4397 or 2905 Rodeo Park Drive East, Building 1, Santa Fe, New Mexico 87505.]

20.5.111.1111 RELEASE DETECTION RECORDKEEPING:

A. All storage tank system owners and operators shall maintain records in accordance with 20.5.110 NMAC demonstrating compliance with all applicable requirements of 20.5.111 NMAC. If the owner and operator of a storage tank are separate persons, only one person is required to maintain the records required by this section; however, both parties are liable in the event of noncompliance.

B. Records to be maintained shall include, but not be limited to:

(1) all written performance claims pertaining to any release detection system used, and the manner in which these claims have been justified or tested by the equipment manufacturer or installer;

(2) the results of any sampling, testing, or monitoring;

(3) written documentation of all calibration, maintenance, and repair of release detection equipment permanently located on-site and any schedules of calibration and maintenance required by the release detection equipment manufacturer;

(4) the results of annual operational tests of release detection equipment. At a minimum, the results must list each component tested, indicate whether each component tested meets criteria for the specified equipment or needs to have action taken, and describe any action taken to correct an issue.

[20.5.111.1111 NMAC - N, 07/24/2018]

20.5.111.1112 REPORTING:

A. Owners and operators shall provide to the department all reports as required in 20.5.111 NMAC within 60 days of completion of the tests.

B. Owners and operators shall report any test or inspection results that are anything other than a "pass" or "normal" result to the department within 24 hours of completion of the test or inspection in accordance with 20.5.118.1801 NMAC.

C. Owners and operators shall ensure all reports required in 20.5.111 NMAC contain, at a minimum, the following:

(1) facility name and address;

(2) facility ID number;

(3) owner and operator name and address;

(4) owner ID number;

- (5)** date report was completed;
- (6)** date of the test;
- (7)** duration of the test;
- (8)** brand name and model number of equipment being tested or sufficient description to allow identification of the equipment;
- (9)** type of equipment being tested;
- (10)** type of test, including test procedures and methods;
- (11)** results of the test;
- (12)** name of the person who performed the inspection or test and their qualifications as specified in 20.5.105 NMAC;
- (13)** brand name and model number of the testing equipment used during the test and the date the testing equipment was last calibrated;
- (14)** for inspections and testing of automatic tank gauge systems as required in 20.5.111.1104 NMAC, a completed copy of the automatic tank gauge operation inspection form in *Petroleum Equipment Institute Publication RP 1200, "Recommended Practices for the Testing and Verification of Spill, Overfill, Leak Detection and Secondary Containment Equipment at UST Facilities"*;
- (15)** for testing of automatic line leak detectors:
 - (a)** serial number of the leak detector;
 - (b)** description of storage tank system;
 - (c)** detected leak rate in gallons per hour;
 - (d)** line pressure and functional element holding pressure in pounds per square inch;
 - (e)** type, diameter and length of piping; and
 - (f)** test results, including the following:
 - (i)** whether flow is restricted by a mechanical line leak detector when a leak is detected;

(ii) whether the turbine shuts down, an alarm is triggered, or both, when a simulated leak is induced during the testing of an electronic line leak detector;

(16) for testing of sensors used for monitoring secondary containment and interstitial spaces:

(a) the information in the liquid sensor functionality testing form in the *Petroleum Equipment Institute Publication RP 1200, "Recommended Practices for the Testing and Verification of Spill, Overfill, Leak Detection and Secondary Containment Equipment at UST Facilities"*; and

(b) information on whether each individual sensor used for interstitial monitoring meets automatic shutdown requirements in 20.5.111 NMAC; and

(17) for line tightness testing:

(a) leak rate;

(b) testing pressure;

(c) bleed back;

(d) piping type;

(e) piping diameter; and

(f) length of piping.

D. Owners and operators may use forms and checklist developed by the department, when available, to meet the reporting requirements in 20.5.111 NMAC.

[20.5.111.1112 NMAC - N, 07/24/2018]

[Provide reports as required in Subsection A of this section as directed at the petroleum storage tank bureau's pages on the department website. The forms or checklists referred to in Subsection E of this section, if available, may be found either on the department's website or by calling the Petroleum Storage Tank Bureau at 505-476-4397.]

PART 112: ABOVE GROUND STORAGE TANK EMERGENCY GENERATOR SYSTEMS

20.5.112.1 ISSUING AGENCY:

New Mexico Environmental Improvement Board.

[20.5.112.1 NMAC - N, 07/24/2018]

20.5.112.2 SCOPE:

This part applies to owners and operators of above ground storage tank emergency generator systems as provided in 20.5.101 NMAC. If the owner and operator of an above ground storage tank emergency generator system are separate persons, only one person is required to comply with the requirements of this part, including any notice and reporting requirements; however, both parties are liable in the event of noncompliance.

[20.5.112.2 NMAC - N, 07/24/2018]

20.5.112.3 STATUTORY AUTHORITY:

This part is promulgated pursuant to the provisions of the Hazardous Waste Act, Sections 74-4-1 through 74-4-14 NMSA 1978; and the general provisions of the Environmental Improvement Act, Sections 74-1-1 through 74-1-17 NMSA 1978.

[20.5.112.3 NMAC - N, 07/24/2018]

20.5.112.4 DURATION:

Permanent.

[20.5.112.4 NMAC - N, 07/24/2018]

20.5.112.5 EFFECTIVE DATE:

July 24, 2018, unless a later date is indicated in the bracketed history note at the end of a section.

[20.5.112.5 NMAC - N, 07/24/2018]

20.5.112.6 OBJECTIVE:

The purpose of 20.5.112 NMAC is to ensure that above ground storage tank emergency generator systems are designed, constructed, installed, modified, repaired, operated, and maintained to minimize releases, to ensure that releases from storage tanks are detected early to minimize potential harmful resulting effects, and to regulate storage tank systems in order to protect the public health, safety and welfare and the environment of the state.

[20.5.112.6 NMAC - N, 07/24/2018]

20.5.112.7 DEFINITIONS:

The definitions in 20.5.101 NMAC apply to this part.

[20.5.12.7 NMAC – N, 07/24/2018]

20.5.112.8-20.5.112.1199 [RESERVED]

20.5.112.1200 GENERAL REQUIREMENTS:

Owners and operators of above ground storage tank emergency generator systems shall meet the requirements in this part in addition to all of the applicable requirements in the rest of 20.5 NMAC.

[20.5.112.1200 NMAC - N, 07/24/2018]

20.5.112.1201 DEADLINES FOR CLOSING OR UPGRADING ABOVE GROUND STORAGE TANK EMERGENCY GENERATOR SYSTEMS:

Not later than July 1, 2013 owners and operators of AST emergency generator systems must have:

A. upgraded AST emergency generator systems to meet all performance standards for AST systems in 20.5.109 NMAC, with the exception that existing systems need not submit project drawings; or

B. permanently closed any AST emergency generator system that does not meet the performance standards in 20.5.109 NMAC in accordance with 20.5.115.1502 NMAC.

[20.5.112.1201 NMAC - N, 07/24/2018]

20.5.112.1202 DESIGN, CONSTRUCTION, AND INSTALLATION OF NEW AND UPGRADED ABOVE GROUND STORAGE TANK EMERGENCY GENERATOR SYSTEMS:

Owners and operators of above ground storage tank emergency generator systems shall meet all of the requirements in this section in addition to all of the applicable requirements in 20.5.109 NMAC.

A. Owners and operators of ASTs used for emergency power generation where the loss of electrical power will not result in the loss of human life or serious injury may install motor fuel dispensers only if the dispensers are connected to the AST by a separate pump and piping system other than that which supplies a regulated substance to the emergency generator.

B. Owners and operator who install a normally closed solenoid valve in accordance with Subsection D of 20.5.109.902 NMAC on the supply piping so that a leak will not drain the system by siphon shall meet one of the following:

(1) solenoid valve shall operate from battery voltage and have manual (nonelectric) operation; or

(2) install a manual bypass valve.

C. Owners and operators of above ground storage tank emergency generator systems shall use national codes and standards in 20.5.109 NMAC. Owners and operators shall also use or more of the following to comply with the requirements of this part:

(1) *National Fire Protection Association Standard 110, "Standard for Emergency and Standby Power Systems"; and*

(2) *Petroleum Equipment Institute Publication RP1400, "Recommended Practices for the Design and Installation of Fueling Systems for Emergency Generators, Stationary Diesel Engines, and Oil Burner Systems".*

[20.5.112.1202 NMAC - N, 07/24/2018]

20.5.112.1203 DESIGN, CONSTRUCTION, AND INSTALLATION OF NEW AND UPGRADED ABOVE GROUND SUB-BASE TANK EMERGENCY GENERATOR SYSTEMS:

Owners and operators of above ground storage tanks that are installed underneath emergency generators, and are also known as belly tanks or sub-base generator tanks, shall meet all of the requirements in this section in addition to all of the applicable requirements in 20.5.109 NMAC.

A. Owners and operators shall be required to meet the certified installer requirements in 20.5.105 NMAC for new sub-base ASTs.

B. Owners and operators shall not be required to meet installation requirements for above ground piping for any above ground piping that connects the sub-base AST to the emergency generator.

C. Owners and operators of sub-base AST systems shall comply with release detection requirements for tanks and piping in 20.5.111 NMAC no later than three years after the effective date of these regulations.

[20.5.112.1203 NMAC - N, 07/24/2018]

20.5.112.1204 OPERATION AND MAINTENANCE REQUIREMENTS FOR ABOVE GROUND STORAGE TANK EMERGENCY GENERATOR SYSTEMS:

Owners and operators of above ground storage tank emergency generator systems shall meet all of the requirements for operation and maintenance in 20.5.110 NMAC in addition to all of the applicable requirements in the rest of 20.5 NMAC.

[20.5.112.1204 NMAC - N, 07/24/2018]

20.5.112.1205 RELEASE DETECTION REQUIREMENTS FOR ABOVE GROUND STORAGE TANK EMERGENCY GENERATOR SYSTEMS INSTALLED PRIOR TO JULY 24, 2018:

Owners and operators of AST emergency generator systems installed prior to the effective date of these regulations shall meet all of the requirements in this section in addition to all of the applicable requirements in 20.5.111 NMAC.

A. Owners and operators of AST emergency generator systems shall implement a method, or combination of methods, no later than three years after the effective date of these regulations that monitors above ground storage tanks every 30 days for releases.

B. Owners and operators of AST emergency generator systems shall provide a method, or combination of methods, of release detection for underground piping no later than three years after the effective date of these regulations. The method, or combination of methods, shall follow the current edition of an industry standard or code of practice developed by a nationally recognized association or independent testing laboratory approved in advance by the department. Owners and operators shall comply with the requirements for release detection for underground piping as follows:

(1) Owners and operators of AST emergency generator systems with piping that conveys a regulated substance under pressure shall use automatic line leak detectors for emergency generators that alert the operator to the presence of a leak by activating a visual and audible alarm when a leak is detected and that comply with the requirements of 20.5.111.1105 NMAC, except:

(a) Automatic line leak detectors for emergency generators shall not be required to restrict or shut off the flow of regulated substances.

(b) Sensors used for interstitial monitoring shall not be required to automatically shut off the submersible turbine pump when a leak is detected in the interstice of the piping or in containment sumps. Sensors used for interstitial monitoring shall activate an external audible and visual alarm when liquid is detected.

(2) Owners and operators of ASTs with piping that conveys a regulated substance by suction shall comply with the requirements in 20.5.111.1107 NMAC, except the sensors used for interstitial monitoring shall not be required to restrict or shut off the flow of regulated substances. Sensors used for interstitial monitoring shall activate an audible and visual external alarm when a liquid is detected.

C. Owners and operators shall use one or more of the following to comply with the requirements of this section:

- (1) *Petroleum Equipment Institute Publication RP100, "Recommended Practices for Installation of Underground Liquid Storage Systems";*
- (2) *Petroleum Equipment Institute RP200, "Recommended Practices for Installation of Aboveground Storage Systems for Motor Vehicle Fueling";*
- (3) *American Petroleum Institute Publication RP 1615, "Installation of Underground Hazardous Substances or Petroleum Storage Systems";*
- (4) *American Petroleum Institute 570, "Pipe Inspection Code: In-Service Inspection, Repair, and Alteration of Piping Systems";*
- (5) *American Society of Mechanical Engineering Standard B31.3, "Process Piping";*
- (6) *National Fire Protection Association Standard NFPA 110, "Standard for Emergency and Standby Power Systems"; and*
- (7) *Petroleum Equipment Institute Publication RP1400, "Recommended Practices for the Design and Installation of Fueling Systems for Emergency Generators, Stationary Diesel Engines, and Oil Burner Systems".*

[20.5.112.1205 NMAC - N, 07/24/2018]

20.5.112.1206 RELEASE DETECTION REQUIREMENTS FOR ABOVE GROUND STORAGE TANK EMERGENCY GENERATOR SYSTEMS INSTALLED OR MODIFIED ON, OR AFTER, JULY 24, 2018:

Owners and operators of AST emergency generator systems installed on, or after, the effective date of these regulations shall meet all of the requirements in this section in addition to all of the applicable requirements in 20.5.111 NMAC upon installation.

A. Owners and operators of AST emergency generator systems installed or modified on or after the effective date of these regulations must implement a method, or combination of methods, that monitors above ground storage tanks every 30 days for releases using an applicable method in 20.5.111 NMAC.

B. Owners and operators of AST emergency generator systems where the piping is installed or replaced on, or after, the effective date of these regulations, and the piping conveys a regulated substance under pressure shall use interstitial monitoring and automatic line leak detectors that alert the operator to the presence of a leak by activating an external audible and visual alarm when liquid is detected. Owners and

operators of AST emergency generator systems shall comply with the requirements of 20.5.111.1106 NMAC, except:

(1) automatic line leak detectors for AST emergency generator systems shall not be required to shut off the flow of regulated substances; and

(2) sensors used to meet the interstitial monitoring requirements for AST emergency generator systems shall not be required to automatically shut off the flow of product when liquid is detected in the interstice of the piping or in containment sumps. Sensors used for interstitial monitoring shall activate a secondary audible or visual alarm when liquid is detected.

C. Owners and operators of ASTs where the piping is installed or replaced on, or after, the effective date of these regulations and the piping conveys a regulated substance by suction shall comply with the requirements in 20.5.111.1108 NMAC, except the sensors used for interstitial monitoring shall activate an external audible and visual alarm when a leak is detected either in the interstice of the piping or in containment sumps. Sensors used to meet the interstitial monitoring requirements for AST emergency generator systems shall not be required to automatically shut off the flow of product when liquid is detected in the interstice of the piping or in containment sumps.

D. Owners and operators shall use one or more of the following to comply with the requirements of this section:

(1) *Petroleum Equipment Institute publication RP100, "Recommended Practices for Installation of Underground Liquid Storage Systems";*

(2) *Petroleum Equipment Institute RP200, "Recommended Practices for Installation of Aboveground Storage Systems for Motor Vehicle Fueling";*

(3) *American Petroleum Institute publication RP 1615, "Installation of Underground Petroleum Storage Systems";*

(4) *American Petroleum Institute 570, "Pipe Inspection Code: In-Service Inspection, Repair, and Alteration of Piping Systems";*

(5) *American Society of Mechanical Engineering Standard B31.3, "Process Piping".*

(6) *National Fire Protection Association Standard NFPA 110, "Standard for Emergency and Standby Power Systems"; and*

(7) *Petroleum Equipment Institute Publication RP1400, "Recommended Practices for the Design and Installation of Fueling Systems for Emergency Generators, Stationary Diesel Engines, and Oil Burner Systems".*

[20.5.112.1206 NMAC - N, 07/24/2018]

20.5.112.1207 CERTIFIED INSTALLERS:

Owners and operators of above ground storage tank emergency generator systems shall meet the requirements for certified installers in 20.5.105 NMAC in addition to all of the applicable requirements in the rest of 20.5 NMAC.

[20.5.112.1207 NMAC - N, 07/24/2018]

20.5.112.1208 ALTERNATE METHODS:

A. If owners and operators want to install AST emergency generator systems to meet the requirements in this part or want to install release detection equipment for tanks or piping installed prior to the effective date of these regulations with materials and methods that are not in accordance with the current edition of an industry standard or code of practice developed by a nationally recognized association or independent testing laboratory, owners and operators shall apply in writing to the department, shall provide supporting documentation, and shall not begin the installation unless and until the department approves the request in writing. At a minimum, the request for an alternate method shall contain the following:

- (1) date the form is completed;
- (2) facility name, facility ID number, address (with county) and telephone number;
- (3) owner name, owner ID number, address and telephone number;
- (4) citation to regulation for which alternate method or material (such as type of piping) is requested;
- (5) brief description of the proposed alternate method or material;
- (6) justification of proposed alternate method or material, including citation to a standard or code supporting its use, if available; and
- (7) demonstration of its equivalent protection of public health, safety and welfare and the environment.

B. Another type of release detection method, or combination of methods, may be used if approved pursuant to this section for tanks and piping installed prior to the effective date of these regulations, and if, for ASTs, it can detect a 0.2 gallon per hour leak rate monthly or a release of 150 gallons within a month from a tank with a probability of detection of 0.95 and a probability of false alarm of 0.05.

C. The department may approve another release detection method for tanks and piping installed prior to the effective date of these regulations if owners and operators can demonstrate that the method can detect a release as effectively as any of the applicable methods allowed in 20.5.111 NMAC. In comparing methods, the department shall consider the size of release that the method can detect and the frequency and reliability with which it can be detected. If the method is approved, the owner and operator shall comply with any conditions imposed by the department on its use to ensure the protection of public health, safety and welfare and the environment. The department shall not grant the request unless owners and operators demonstrate that the request will provide protection of public health, safety and welfare and the environment equivalent to the protection provided by the methods in this part.

[20.5.112.1208 NMAC - N, 07/24/2018]

20.5.112.1209 RECORDKEEPING:

Owners and operators of AST emergency generator systems shall meet the requirements for recordkeeping in this part in addition to all of the applicable requirements in 20.5.110 NMAC and 20.5.111 NMAC.

[20.5.112.1209 NMAC - N, 07/24/2018]

20.5.112.1210 REPORTING:

Owners and operators of AST emergency generator systems shall meet the requirements for reporting in this part in addition to all of the applicable requirements in 20.5.110 NMAC and 20.5.111 NMAC.

[20.5.112.1210 NMAC - N, 07/24/2018]

PART 113: UNDERGROUND STORAGE TANK EMERGENCY GENERATOR SYSTEMS

20.5.113.1 ISSUING AGENCY:

New Mexico Environmental Improvement Board.

[20.5.113.1 NMAC - N, 07/24/2018]

20.5.113.2 SCOPE:

This part applies to owners and operators of underground storage tank emergency generator systems as provided in 20.5.101 NMAC. If the owner and operator of an underground storage tank emergency generator system are separate persons, only one person is required to comply with the requirements of this part, including any notice and reporting requirements; however, both parties are liable in the event of noncompliance.

[20.5.113.2 NMAC - N, 07/24/2018]

20.5.113.3 STATUTORY AUTHORITY:

This part is promulgated pursuant to the provisions of the Hazardous Waste Act, Sections 74-4-1 through 74-4-14 NMSA 1978; and the general provisions of the Environmental Improvement Act, Sections 74-1-1 through 74-1-17 NMSA 1978.

[20.5.113.3 NMAC - N, 07/24/2018]

20.5.113.4 DURATION:

Permanent.

[20.5.113.4 NMAC - N, 07/24/2018]

20.5.113.5 EFFECTIVE DATE:

July 24, 2018, unless a later date is indicated in the bracketed history note at the end of a section.

[20.5.113.5 NMAC - N, 07/24/2018]

20.5.113.6 OBJECTIVE:

The purpose of 20.5.113 NMAC is to ensure that underground storage tank emergency generator systems are designed, constructed, installed, modified, repaired, operated, and maintained to minimize releases, to ensure that releases from storage tanks are detected early to minimize potential harmful resulting effects, and to regulate storage tank systems in order to protect the public health, safety and welfare and the environment of the state.

[20.5.113.6 NMAC - N, 07/24/2018]

20.5.113.7 DEFINITIONS:

The definitions in 20.5.101 NMAC apply to this part.

[20.5.113.7 NMAC - N, 07/24/2018]

20.5.113.8-20.5.113.1299 [RESERVED]

20.5.113.1300 GENERAL REQUIREMENTS:

Owners and operators of underground storage tank emergency generator systems shall meet the requirements in this part in addition to all of the applicable requirements in the rest of 20.5 NMAC.

[20.5.113.1300 NMAC - N, 07/24/2018]

20.5.113.1301 DEADLINES FOR CLOSING OR UPGRADING EXISTING UST EMERGENCY GENERATOR SYSTEMS:

Not later than July 1, 2013, owners and operators of UST emergency generator systems installed prior to April 4, 2008, must have:

A. upgraded UST emergency generator systems to meet all performance standards for UST systems in this part and 20.5.106 NMAC; or

B. permanently closed any UST emergency generator system that does not meet the performance standards in this part and 20.5.106 NMAC in accordance with 20.5.115.1502 NMAC.

[20.5.113.1301 NMAC - N, 07/24/2018]

20.5.113.1302 DESIGN, CONSTRUCTION, AND INSTALLATION OF NEW AND UPGRADED UNDERGROUND STORAGE TANK EMERGENCY GENERATOR SYSTEMS:

Owners and operators of underground storage tank emergency generator systems shall meet all of the requirements in this section in addition to all of the applicable requirements in 20.5.106 NMAC.

A. Owners and operators of USTs used for emergency power generation where the loss of electrical power will not result in the loss of human life or serious injury may install motor fuel dispensers only if the dispensers are connected to the UST by a separate pump and piping system other than that which supplies a regulated substance to the emergency generator;

B. Owners and operators who install a normally closed solenoid valve on the supply piping so that a leak will not drain the system by siphon shall meet one of the following:

(1) the solenoid valve shall operate from battery voltage and have manual (nonelectric) operation; or

(2) owners and operators shall install a manual bypass valve.

C. Owners and operators of underground storage tank emergency generator systems shall use national codes and standards as required in 20.5.106 NMAC. Owners

and operators shall also use one or more of the following to comply with the requirements of this part:

(1) *National Fire Protection Association Standard 110, "Standard for Emergency and Standby Power Systems"; and*

(2) *Petroleum Equipment Institute publication RP1400, "Recommended Practices for the Design and Installation of Fueling Systems for Emergency Generators, Stationary Diesel Engines, and Oil Burner Systems".*

D. Owners and operators of UST emergency generator systems installed prior to April 4, 2008 must have either met the requirements for new UST systems in 20.5.106.606 NMAC or have upgraded the UST systems in accordance with the requirements in 20.5.106.607 NMAC.

E. Owners and operators of UST emergency generator systems installed on or after April 4, 2008 shall meet the secondary containment requirements in 20.5.106.606 NMAC at installation.

F. Owners and operators shall use one or more of the following to meet the requirements for this section:

(1) *Petroleum Equipment Institute Publication RP100, "Recommended Practices for Installation of Underground Liquid Storage Systems";*

(2) *American Petroleum Institute Publication RP 1615, "Installation of Underground Hazardous Substances or Petroleum Storage Systems";*

(3) *American Petroleum Institute 570, "Pipe Inspection Code: In-Service Inspection, Rating, Repair, and Alteration of Piping Systems";*

(4) *American Society of Mechanical Engineers Standard B31.3, "Process Piping";*

(5) *National Fire Protection Association Standard 110, "Standard for Emergency and Standby Power Systems"; and*

(6) *Petroleum Equipment Institute Publication RP1400, "Recommended Practices for the Design and Installation of Fueling Systems for Emergency Generators, Stationary Diesel Engines, and Oil Burner Systems".*

[20.5.113.1302 NMAC - N, 07/24/2018]

20.5.113.1303 RELEASE DETECTION REQUIREMENTS FOR UST EMERGENCY GENERATOR SYSTEMS INSTALLED PRIOR TO JULY 24, 2018:

Owners and operators of UST emergency generator systems installed prior to the effective date of these regulations shall meet all of the requirements in this section in addition to all of the applicable requirements in 20.5.108 NMAC.

A. Owners and operators of UST emergency generator systems shall implement a method, or combination of methods, no later than three years after the effective date of these regulations that monitors underground storage tanks every 30 days for releases.

B. Owners and operators of UST emergency generator systems shall provide a method, or combination of methods, of release detection for underground piping no later than three years after the effective date of these regulations. The method, or combination of methods, shall follow the current edition of an industry standard or code of practice developed by a nationally recognized association or independent testing laboratory approved in advance by the department. Owners and operators shall comply with the requirements for release detection for underground piping as follows:

(1) Owners and operators of UST emergency generator systems with piping that conveys a regulated substance under pressure shall use automatic line leak detectors for emergency generators that alert the operator to the presence of a leak by activating a visual and audible alarm when a leak is detected and that meet the requirements of 20.5.108.810 NMAC, except:

(a) Automatic line leak detectors for emergency generators shall not be required to restrict or shut off the flow of regulated substances.

(b) Sensors used to meet the interstitial monitoring requirements shall not be required to automatically shut off the submersible turbine pump when a liquid is detected in the interstice of the piping or in containment sumps. Sensors used for interstitial monitoring shall activate an external audible and visual alarm when liquid is detected.

(2) Owners and operators of UST emergency generator systems with piping that conveys a regulated substance by suction shall comply with the requirements in 20.5.108.812 NMAC, except sensors used for interstitial monitoring shall not be required to restrict or shut off the flow of regulated substances. Sensors used for interstitial monitoring shall activate an audible and visual external alarm when liquid is detected.

C. Owners and operators shall use one or more of the following to comply with the requirements of this section:

(1) *Petroleum Equipment Institute Publication RP100, "Recommended Practices for Installation of Underground Liquid Storage Systems";*

(2) *American Petroleum Institute Publication RP 1615, "Installation of Underground Hazardous Substances or Petroleum Storage Systems";*

(3) *American Petroleum Institute 570, "Pipe Inspection Code: In-Service Inspection, Repair, and Alteration of Piping Systems";*

(4) *American Society of Mechanical Engineers Standard B31.3, "Process Piping";*

(5) *National Fire Protection Association Standard 110, "Standard for Emergency and Standby Power Systems";* and

(6) *Petroleum Equipment Institute publication RP1400, "Recommended Practices for the Design and Installation of Fueling Systems for Emergency Generators, Stationary Diesel Engines, and Oil Burner Systems".*

[20.5.113.1303 NMAC - N, 07/24/2018]

20.5.113.1304 RELEASE DETECTION REQUIREMENTS FOR UST EMERGENCY GENERATOR SYSTEMS INSTALLED OR MODIFIED ON, OR AFTER JULY 24, 2018:

Owners and operators of UST emergency generator systems installed on or after the effective date of these regulations shall meet all of the requirements in this section in addition to all of the applicable requirements in 20.5.106 NMAC upon installation.

A. Owners and operators of UST emergency generator systems installed or modified on or after the effective date of these regulations shall use interstitial monitoring in accordance with 20.5.108.810 NMAC to meet the requirements for monthly monitoring.

B. Owners and operators of UST emergency generator systems where the piping is installed or replaced on or after the effective date of these regulations, and the piping conveys a regulated substance under pressure shall use interstitial monitoring and automatic line leak detectors that alert the operator to the presence of a leak by activating an external audible and visual alarm when liquid is detected. Owners and operators of UST emergency generator systems shall meet the requirements of 20.5.108.811 NMAC, except:

(1) Automatic line leak detectors for UST emergency generator systems shall not be required to restrict or shut off the flow of regulated substances; and

(2) Sensors used to meet the interstitial monitoring requirements for UST emergency generator systems shall not be required to automatically shut off the flow of product when liquid is detected in the interstice of the piping or in containment sumps. Sensors used for interstitial monitoring shall activate a secondary audible and visual alarm when liquid is detected.

C. Owners and operators of UST emergency generator systems where the piping is installed or replaced on or after the effective date of these regulations and the piping

conveys a regulated substance by suction shall comply with the requirements in 20.5.108.813 NMAC, except that the sensors used for interstitial monitoring shall activate an external audible and visual alarm when liquid is detected either in the interstice of the piping or in containment sumps. Sensors used to meet the interstitial monitoring requirements for UST emergency generator systems shall not be required to automatically shut off the flow of product when liquid is detected in the interstice of the piping or in containment sumps.

D. Owners and operators shall use one or more of the following to comply with the requirements of this section:

(1) *Petroleum Equipment Institute Publication RP100, "Recommended Practices for Installation of Underground Liquid Storage Systems";*

(2) *American Petroleum Institute Publication RP 1615, "Installation of Underground Hazardous Substances or Petroleum Storage Systems";*

(3) *American Petroleum Institute 570, "Pipe Inspection Code: In-Service Inspection, Repair, and Alteration of Piping Systems";*

(4) *American Society of Mechanical Engineers Standard B31.3, "Process Piping";*

(5) *National Fire Protection Association Standard 110, "Standard for Emergency and Standby Power Systems";* and

(6) *Petroleum Equipment Institute publication RP1400, "Recommended Practices for the Design and Installation of Fueling Systems for Emergency Generators, Stationary Diesel Engines, and Oil Burner Systems".*

[20.5.113.1304 NMAC - N, 07/24/2018]

20.5.113.1305 CERTIFIED INSTALLERS:

Owners and operators of underground storage tank emergency generator systems shall meet the requirements for certified installers in 20.5.105 NMAC in addition to all of the applicable requirements in the rest of 20.5 NMAC.

[20.5.113.1305 NMAC - N, 07/24/2018]

20.5.113.1306 ALTERNATE METHODS:

A. If owners and operators want to install UST emergency generator systems to meet requirements in this part or want to install release detection equipment for tanks or piping installed prior to the effective date of these regulations with materials or methods that are not in accordance with the current edition of an industry standard or code of

practice developed by a nationally recognized association or independent testing laboratory, owners and operators shall apply in writing to the department, shall provide supporting documentation, and shall not begin the installation unless and until the department approves the request in writing. At a minimum, the request for an alternate method shall contain the following:

- (1) date the form is completed;
- (2) facility name, facility ID number, address (with county) and telephone number;
- (3) owner name, owner ID number, address and telephone number;
- (4) citation to regulation for which alternate method or material (such as type of piping) is requested;
- (5) brief description of the proposed alternate method or material;
- (6) justification of proposed alternate method or material, including citation to a standard or code supporting its use, if available; and
- (7) demonstration of its equivalent protection of public health, safety and welfare and the environment.

B. Another type of release detection method, or combination of methods, may be used if approved pursuant to this section for tanks or piping installed prior to the effective date of the regulations, and if, for USTs, the method can detect a two-tenth gallon per hour leak rate monthly or a release of 150 gallons within a month from a tank with a probability of detection of 0.95 and a probability of false alarm of 0.05.

C. The department may approve another release detection method for tanks or piping installed prior to the effective date of the regulations if owners and operators can demonstrate that the method can detect a release as effectively as any of the applicable methods allowed in 20.5.108 NMAC. In comparing methods, the department shall consider the size of release that the method can detect and the frequency and reliability with which it can be detected. If the method is approved, the owner and operator shall comply with any conditions imposed by the department on its use to ensure the protection of public health, safety and welfare and the environment. The department shall not grant the request unless owners and operators demonstrate that the request will provide protection of public health, safety and welfare and the environment equivalent to the protection provided by the methods in this part.

[20.5.113.1306 NMAC - N, 07/24/2018]

20.5.113.1307 RECORDKEEPING:

Owners and operators of underground storage tank emergency generator systems shall meet the requirements for recordkeeping in this part in addition to all of the applicable requirements in 20.5.107 NMAC and 20.5.108 NMAC.

[20.5.113.1307 NMAC - N, 07/24/2018]

20.5.113.1308 REPORTING:

Owners and operators of underground storage tank emergency generator systems shall meet the requirements for reporting in this part in addition to all of the applicable requirements in 20.5.107.715 NMAC and 20.5.108.816 NMAC.

[20.5.113.1308 NMAC - N, 07/24/2018]

PART 114: AIRPORT HYDRANT FUEL DISTRIBUTION SYSTEMS, UST SYSTEMS WITH FIELD-CONSTRUCTED TANKS AND HYBRID STORAGE TANK SYSTEMS

20.5.114.1 ISSUING AGENCY:

New Mexico Environmental Improvement Board.

[20.5.114.1 NMAC - N, 07/24/2018]

20.5.114.2 SCOPE:

This part applies to owners and operators of airport hydrant fuel distribution systems, UST systems with field-constructed tanks, and hybrid storage tank systems as provided in 20.5.101 NMAC. If the owner and operator of an airport hydrant fuel distribution system, UST system with field-constructed tanks, or hybrid storage tank system are separate persons, only one person is required to comply with the requirements of this part, including any notice and reporting requirements; however, both parties are liable in the event of noncompliance.

[20.5.114.2 NMAC - N, 07/24/2018]

20.5.114.3 STATUTORY AUTHORITY:

This part is promulgated pursuant to the provisions of the Hazardous Waste Act, Sections 74-4-1 through 74-4-14 NMSA 1978; and the general provisions of the Environmental Improvement Act, Sections 74-1-1 through 74-1-17 NMSA 1978.

[20.5.114.7 NMAC - N, 07/24/2018]

20.5.114.8-20.5.114.1399 [RESERVED]

20.5.114.1400 GENERAL REQUIREMENTS FOR AIRPORT HYDRANT FUEL DISTRIBUTION SYSTEMS, UST SYSTEMS WITH FIELD-CONSTRUCTED TANKS, AND HYBRID STORAGE TANK SYSTEMS:

A. Owners and operators of airport hydrant fuel distribution systems, field-constructed tanks, and hybrid storage tank systems shall comply with the requirements of 20.5.114 NMAC in addition to all the applicable requirements in the rest of 20.5 NMAC.

B. Owners and operators of USTs that are part of an airport hydrant fuel distribution system shall comply with the registration requirements in 20.5.102 NMAC no later than three years after the effective date of the regulations.

C. Owners and operators of USTs with field-constructed tanks shall comply with the registration requirements in 20.5.102 NMAC no later than three years after the effective date of the regulations.

D. Owners and operators of ASTs and USTs that are part of hybrid storage tank systems shall comply with the registration requirements in 20.5.102 NMAC no later than three years after the effective date of the regulations.

E. Owners and operators of airport hydrant fuel distribution systems, field-constructed tanks, and hybrid storage tank systems shall comply with the following requirements on the effective date of the regulations:

- (1) release reporting requirements in 20.5.118 NMAC;
- (2) corrective action requirements in 20.5.119 through 20.5.123 NMAC;
- (3) closure requirements in 20.5.115 NMAC;
- (4) financial responsibility requirements in 20.5.117 NMAC; and
- (5) lender liability requirements in 20.5.124 NMAC.

F. Owners and operators of airport hydrant fuel distribution systems, field-constructed tanks, and hybrid storage tank systems shall have new storage tank systems and upgrades to existing storage tank systems designed and the construction overseen by a professional engineer with training and experience in these types of storage tank systems. The professional engineer shall prepare, sign, and stamp as-built drawings, and the owner and operator shall maintain records documenting compliance with this requirement in accordance with 20.5.107 NMAC and 20.5.110 NMAC.

(1) Owners and operators shall submit a set of plans to the department at least 60 days in advance of the start of construction.

(2) Owners and operators who install new or upgrade existing airport hydrant fuel distribution systems, field-constructed tanks, and hybrid storage tank systems shall hire a contractor who employs a person with at least two years of experience in the installation of these types of systems.

(3) Owners and operators may use the *Unified Facilities Criteria (UFC) 3-460-01, "Design: Petroleum Fuel Facilities"* when designing, constructing and installing these types of systems.

G. Owners and operators of hybrid storage tank systems shall do one of the following:

(1) submit to the department no later than one year after the effective date of these regulations:

(a) an approval from the New Mexico state fire marshal's office for the hybrid storage tank system;

(b) an approval from the New Mexico state fire marshal's office for an AST at a retail fueling facility that exceeds the size limit on ASTs for these facilities, as set forth in the international fire code; and

(c) documentation that the UST can withstand the head pressure from the AST anytime a transfer of regulated substance is made. The documentation must include an evaluation by a New Mexico professional engineer who has education and experience in petroleum storage tank systems; or

(2) disconnect the piping feeding the UST system from the AST and permanently close the AST system in accordance with the requirements in 20.5.114.1410 NMAC and 20.5.115 NMAC.

[20.5.114.1400 NMAC - N, 07/24/2018]

20.5.114.1401 UPGRADE REQUIREMENTS FOR EXISTING AIRPORT HYDRANT FUEL DISTRIBUTION SYSTEMS, UST SYSTEMS WITH FIELD-CONSTRUCTED TANKS, AND HYBRID STORAGE TANK SYSTEMS:

No later than three years after the effective date of the regulations, all airport hydrant fuel distribution systems, UST systems with field-constructed tanks, and hybrid storage tank systems installed prior to the effective date of these regulations shall comply with the following requirements:

A. Above ground storage tank systems. Tanks greater than 10 years old without cathodic protection must be assessed to ensure the tank is structurally sound and free of corrosion holes prior to adding cathodic protection. The assessment must be by internal inspection or another method determined by the department to adequately assess the tank for structural soundness and corrosion holes. AST systems or system components found to be structurally unsound or to have corrosion holes or damage shall be replaced in accordance with the requirements for a new AST system in 20.5.109 NMAC or permanently closed in accordance with 20.5.115 NMAC. AST systems shall be protected from corrosion in accordance with 20.5.109 NMAC and 20.5.110 NMAC and shall comply with spill and overfill prevention equipment requirements in accordance with 20.5.109 NMAC and 20.5.110 NMAC.

B. Underground storage tank systems. UST system components in contact with an electrolyte and that routinely contain regulated substances shall meet one of the following:

(1) be constructed of a non-corrodible material or steel clad with a non-corrodible material that meets the performance standards in 20.5.106.603 NMAC and 20.5.106.609 NMAC; or

(2) be constructed of metal and cathodically protected in accordance with the requirements in 20.5.106 NMAC, 20.5.107 NMAC, and in accordance with a code of practice developed by a nationally recognized association or independent testing laboratory and meet the following:

(a) Tanks greater than 10 years old without cathodic protection must be assessed to ensure the tank is structurally sound and free of corrosion holes prior to adding cathodic protection. The assessment must be by internal inspection or another method determined by the department to adequately assess the tank for structural soundness and corrosion holes.

(b) Existing steel tanks shall comply with the upgrade requirements in 20.5.106.607 NMAC.

C. Piping.

(1) Metal piping on an airport hydrant system or field-constructed UST system that is in contact with an electrolyte must be cathodically protected in accordance with requirements of 20.5.106 NMAC, 20.5.107 NMAC, and in accordance with a code of practice developed by a nationally recognized association or independent testing laboratory.

(2) Metal underground piping or piping in contact with an electrolyte on a hybrid storage tank system shall be either secondarily contained or replaced with double walled non-corrodible piping with containment sumps at both ends.

D. Spill and overflow prevention equipment. Owners and operators shall comply with the spill and overflow prevention requirements as follows:

(1) AST systems with capacities of less than 55,000 gallons and greater than 1320 gallons and associated with airport hydrant systems or USTs with field-constructed tanks shall meet the requirements for spill and overflow prevention equipment in 20.5.109.910 NMAC;

(2) UST systems associated with airport hydrant systems or USTs with field-constructed tanks shall meet the requirements for spill and overflow prevention equipment in 20.5.106.613 NMAC.

E. Hybrid storage tank systems.

(1) Any UST receiving deliveries of regulated substance by a remote fill pipe connected to an above ground storage tank shall be equipped with a containment sump at the connection to the UST.

(2) Any remote fill piping shall be constructed of double walled piping and be interstitially monitored in accordance with 20.5.108.811 NMAC or 20.5.108.813 NMAC as applicable.

(3) Remote fill piping shall be equipped with a transition sump where the piping enters the ground from the AST.

(4) Any UST receiving deliveries of regulated substance by a remote fill pipe connected to an AST shall be equipped with redundant overfill prevention and pressure regulating devices to include the following:

(a) an overfill prevention device that shall activate an audible and visual alarm at eighty-five percent of the UST capacity;

(b) an overfill prevention device that shall automatically restrict fuel delivery without increasing pressure on the UST at ninety percent of the UST capacity;

(c) an overfill prevention device that shall automatically shut off the delivery at ninety-five percent of the UST capacity;

(d) devices that monitor and limit both the flow and pressure placed on the UST and the piping from the AST to the UST during the delivery of regulated substance such that the delivery pipe pressure shall not exceed normal operating pressure in accordance with the manufacturer's specification; and

(e) a tank venting system, which must be adequately sized to ensure that atmospheric pressure is continuously maintained, including during filling and emptying of tank.

F. Secondary containment. Owners and operators shall comply with the secondary containment requirements as follows:

(1) Tanks and piping for UST systems with field-constructed tanks replaced after the effective date of these regulations shall be secondarily contained upon installation for tanks with capacities of 50,000 gallons or less that are not part of an airport hydrant system.

(2) Secondary containment shall not be required for piping on UST systems with field-constructed tanks that are replaced after the effective date of these regulations where the tank capacity is greater than 50,000 gallons.

(3) Hydrant pits installed on existing airport hydrant systems after the effective date of these regulations shall be secondarily contained.

G. Owners and operators shall use one of the following codes of practice to comply with corrosion protection requirements in this section:

(1) NACE International Standard Practice SP 0285, "External Corrosion Control of Underground Storage Tank Systems by Cathodic Protection";

(2) NACE International Standard Practice SP 0169, "Control of External Corrosion on Underground or Submerged Metallic Piping Systems";

(3) National Leak Prevention Association Standard 631, Chapter C, "Internal Inspection of Steel Tanks for Retrofit of Cathodic Protection"; or

(4) American Society for Testing and Materials Standard G158, "Standard Guide for Three Methods of Assessing Buried Steel Tanks".

H. In addition to the industry codes of practice and standards listed in 20.5.106 NMAC and 20.5.109 NMAC owners and operators may use *Unified Facilities Criteria (UFC) 3-460-01, "Design: Petroleum Fuel Facilities"* to comply with these requirements.

[20.5.114.1401 NMAC - N, 07/24/2018]

20.5.114.1402 ADDITIONAL REQUIREMENTS FOR HYBRID STORAGE TANK SYSTEMS:

A. Owners and operators of hybrid storage tank systems shall, no later than one year after the effective date of these regulations, install redundant automatic shut off and manual override equipment on the piping transferring a regulated substance from the AST to the UST in order to prevent overfills.

B. Owners and operators of existing hybrid storage tank systems who replace the underground piping on or after the effective date of these regulations shall install double walled piping including but not limited to the underground remote fill piping. Containment sumps shall be installed at both ends of the underground piping. The new underground piping shall be interstitially monitored monthly in accordance with 20.5.108.811 NMAC or 20.5.8.813 NMAC as applicable upon installation.

[20.5.114.1402 NMAC - N, 07/24/2018]

20.5.114.1403 NEW AIRPORT HYDRANT SYSTEMS, UST SYSTEMS WITH FIELD-CONSTRUCTED TANKS, AND HYBRID STORAGE TANK SYSTEMS:

A. Owners and operators of airport hydrant systems and field-constructed USTs installed after the effective date of the regulations shall comply with all applicable parts of 20.5 NMAC upon installation.

B. Airport hydrant systems shall not be required to meet secondary containment requirements for piping.

C. UST systems with field-constructed tanks with a tank capacity greater than 50,000 gallons shall not be required to meet secondary containment requirements for piping.

D. Owners and operators shall not install hybrid storage tank systems after the effective date of these regulations.

[20.5.114.1403 NMAC - N, 07/24/2018]

20.5.114.1404 OPERATION AND MAINTENANCE OF AIRPORT HYDRANT SYSTEMS, USTS WITH FIELD-CONSTRUCTED TANKS, AND HYBRID STORAGE TANK SYSTEMS:

Owners and operators shall comply with the requirements in 20.5.107 NMAC and 20.5.110 NMAC no later than three years after the effective date of these regulations for existing systems and upon installation for new systems. In addition to the monthly inspection requirements in 20.5.107.707 NMAC, owners and operators must inspect the following additional areas for airport hydrant systems at least once every 30 days if confined space entry per the occupational safety and health administration (see 29 CFR part 1910) is not required or at least annually if confined space entry is required and keep documentation of the inspection per 20.5.107.714 NMAC.

A. Hydrant pits--visually check for any damage; remove any liquid or debris; and check for any leaks, and

B. Hydrant piping vaults--check for any hydrant piping leaks.

[20.5.114.1404 NMAC - N, 07/24/2018]

20.5.114.1405 OPERATOR TRAINING REQUIREMENTS FOR AIRPORT HYDRANT SYSTEMS, UST SYSTEMS WITH FIELD-CONSTRUCTED TANKS, AND HYBRID STORAGE TANK SYSTEMS:

Owners and operators shall comply with the requirements in 20.5.104 NMAC no later than three years after the effective date of these regulations for existing systems and upon installation for new systems.

[20.5.114.1405 NMAC - N, 07/24/2018]

20.5.114.1406 DEADLINE FOR IMPLEMENTATION OF RELEASE DETECTION:

Owners and operators of existing airport hydrant fuel distribution systems, UST systems with field-constructed tanks, and hybrid storage tank systems shall meet release detection requirements described in this part no later than three years after the effective date of these regulations.

[20.5.114.1406 NMAC - N, 07/24/2018]

20.5.114.1407 METHODS OF RELEASE DETECTION FOR UST SYSTEMS WITH FIELD-CONSTRUCTED TANKS:

A. Owners and operators of field-constructed tanks with a capacity less than or equal to 50,000 gallons shall meet the release detection requirements in 20.5.108 NMAC.

B. Owners and operators of field-constructed tanks with a capacity greater than 50,000 gallons shall meet either the requirements in 20.5.108 NMAC (except 20.5.108.806 NMAC and 20.5.108.807 NMAC shall be combined with inventory control as stated below) or use one or a combination of the following alternative methods of release detection:

(1) conduct an annual tank tightness test that can detect a 0.5 gallon per hour leak rate;

(2) use an automatic tank gauging system that can detect a leak rate less than or equal to one gallon per hour to perform release detection at least every 30 days. This method shall be combined with a tank tightness test that can detect a 0.2 gallon per hour leak rate that is performed at least every three years;

(3) use an automatic tank gauging system that can detect a leak rate less than or equal to two gallons per hour to perform release detection at least every 30 days. This method shall be combined with a tank tightness test that can detect a 0.2 gallon per hour leak rate that is performed at least every two years;

(4) perform vapor monitoring (conducted in accordance with 20.5.108.806 NMAC for a tracer compound placed in the storage tank system) capable of detecting a 0.1 gallon per hour leak rate at least every two years;

(5) perform inventory control (conducted in accordance with department of defense *Directive 4140.25-M; ATA Airport Fuel Facility Operations and Maintenance Guidance Manual*; or equivalent procedures) at least every 30 days that can detect a leak equal to or less than 0.5 percent of flow-through; and

(a) perform a tank tightness test that can detect a 0.5 gallon per hour leak rate at least every two years; or

(b) perform vapor monitoring or groundwater monitoring (conducted in accordance with 20.5.108.806 NMAC and 20.5.108.807 NMAC, respectively, for the stored regulated substance) at least every 30 days.

[20.5.114.1407 NMAC - N, 07/24/2018]

20.5.114.1408 METHODS OF RELEASE DETECTION FOR PIPING:

A. Owners and operators of underground piping associated with USTs with field-constructed tanks less than or equal to 50,000 gallons shall meet the release detection requirements in 20.5.108 NMAC.

B. Owners and operators of underground piping associated with airport hydrant systems and USTs with field-constructed tanks greater than 50,000 gallons shall follow either the requirements in 20.5.108 NMAC (except 20.5.108.806 NMAC and 20.5.108.807 NMAC shall be combined with inventory control as stated below) or use one or a combination of the following alternative methods of release detection:

(1) Perform a semiannual or annual line tightness test at or above the piping operating pressure in accordance with the table below.

Maximum Leak Detection Rate Per Test Section Volume		
Test Section Volume (Gallons)	Semiannual Test - Leak Detection Rate Not to Exceed (Gallons Per Hour)	Annual Test - Leak Detection Rate Not to Exceed (Gallons Per Hour)
< 50,000	1.0	0.5
≥ 50,000 to < 75,000	1.5	0.75
≥ 75,000 to < 100,000	2.0	1.0
≥ 100,000	3.0	1.5

(2) Piping segment volumes greater than or equal to 100,000 gallons not capable of meeting the maximum 3.0 gallon per hour leak rate for the semiannual test shall test according to the following schedule:

(a) First test shall be conducted no later than three years after the effective date of these regulations and the leak rate the test shall be no greater than six gallons per hour.

(b) Second test shall be conducted no later than six years after the effective date of these regulations and the leak rate for the test shall be no greater than six gallons per hour.

(c) Third test shall be conducted no later than seven years after the effective date of these regulations and the leak rate for the test shall be three gallons per hour.

(d) Subsequent tests conducted after seven years from the effective date of these regulations shall be semiannual or annual and conducted in accordance with Subparagraph (1) of this section.

(3) Perform vapor monitoring (conducted in accordance with 20.5.108.806 NMAC for a tracer compound placed in the storage tank system) capable of detecting a 0.1 gallon per hour leak rate at least every two years;

(4) Perform inventory control (conducted in accordance with department of defense *Directive 4140.25-M; ATA Airport Fuel Facility Operations and Maintenance Guidance Manual*; or equivalent procedures) at least every 30 days that can detect a leak equal to or less than 0.5 percent of flow-through; and

(a) perform a line tightness test (conducted in accordance with Paragraph (1) of this section using the leak rates for the semiannual test) at least every two years; or

(b) perform vapor monitoring or groundwater monitoring (conducted in accordance with 20.5.108.806 NMAC and 20.5.108.807 NMAC, respectively, for the stored regulated substance) at least every 30 days; or

(5) Another method approved by the implementing agency if the owner and operator can demonstrate that the method can detect a release as effectively as any of the methods allowed in Paragraphs (1) through (4) of this section. In comparing methods, the implementing agency shall consider the size of release that the method can detect as well as the frequency and reliability of detection.

C. Owners and operators of hybrid storage tank systems shall meet release detection requirements for the piping between the above ground tank and the underground tank as follows:

(1) existing above ground piping may be monthly monitored by use of visual inspection if the requirements in 20.5.111.1102 NMAC are met; or

(2) existing underground piping shall meet the requirements for release detection in 20.5.108 NMAC.

[20.5.114.1408 NMAC - N, 07/24/2018]

20.5.114.1409 RELEASE REPORTING:

Owners and operators shall report any suspected or confirmed releases to the department in accordance with the requirements in 20.5.118 NMAC.

[20.5.114.1409 NMAC - N, 07/24/2018]

20.5.114.1410 CLOSURE REQUIREMENTS:

Owners and operators of airport hydrant fuel distribution systems, UST systems with field-constructed tanks, and hybrid storage tank systems shall comply with closure requirements in 20.5.115 NMAC for temporary closure, return to service, and permanent closures.

A. Owners and operators of hybrid storage tank systems shall permanently close any above ground storage tanks in accordance with the requirements in 20.5.115.1502 NMAC within 12 months of placing them in temporary closure. Once owners and operators have placed the above ground storage tanks into temporary closure they can no longer return them to service.

B. Owners and operators shall use the *Unified Facilities Criteria (UFC) 3-460-01, "Design: Petroleum Fuel Facilities"* to comply with the requirements in this section.

[20.5.114.1410 NMAC - N, 07/24/2018]

20.5.114.1411 APPLICABILITY OF CLOSURE REQUIREMENTS TO PREVIOUSLY CLOSED STORAGE TANK SYSTEMS:

When directed by the department, the owner and operator of an UST system with field-constructed tanks, airport hydrant system, or hybrid storage tank system permanently closed before the effective date of these regulations must assess the excavation zone and close the storage tank system in accordance with 20.5.115 NMAC if releases from the storage tank system may, in the judgment of the department, pose a current or potential threat to human health and the environment.

[20.5.114.1411 NMAC - N, 07/24/2018]

20.5.114.1412 ALTERNATE METHOD REQUEST:

Owners and operators of airport hydrant fuel distribution systems and UST systems with field-constructed tanks shall comply with either 20.5.106.617 NMAC, 20.5.107.713 NMAC, 20.5.109.920 NMAC, and 20.5.110.1014 NMAC when submitting an alternate methods request.

[20.5.114.1412 NMAC - N, 07/24/2018]

20.5.114.1413 RECORDKEEPING:

Owners and operators shall maintain records, including release detection records, according to the recordkeeping requirements in 20.5.107.714 NMAC, 20.5.108.815 NMAC, 20.5.110.1015 NMAC and 20.5.111.1111 NMAC.

[20.5.114.1413 NMAC - N, 07/24/2018]

20.5.114.1414 REPORTING:

Owners and operators shall meet the reporting requirements in 20.5.107.715 NMAC, 20.5.108.816 NMAC, 20.5.110.1016 and 20.5.111.1112 NMAC.

[20.5.114.1414 NMAC - N, 07/24/2018]

PART 115: OUT-OF-SERVICE STORAGE TANK SYSTEMS AND CLOSURE

20.5.115.1 ISSUING AGENCY:

New Mexico Environmental Improvement Board.

[20.5.115.1 NMAC - N, 07/24/2018]

20.5.115.2 SCOPE:

This part applies to owners and operators of storage tanks as provided in 20.5.101 NMAC. If the owner and operator of a storage tank are separate persons, only one person is required to comply with the requirements of this part, including any notice and reporting requirements; however, both parties are liable in the event of noncompliance. Owners and operators of airport hydrant systems, field-constructed tanks, and hybrid storage tank systems shall follow the requirements for temporary closure and return to service requirements in 20.5.114 NMAC in addition to the requirements in this part.

[20.5.115.2 NMAC - N, 07/24/2018]

20.5.115.3 STATUTORY AUTHORITY:

This part is promulgated pursuant to the provisions of the Hazardous Waste Act, Sections 74-4-1 through 74-4-14 NMSA 1978, and the general provisions of the Environmental Improvement Act, Sections 74-1-1 through 74-1-16 NMSA 1978.

[20.5.115.3 NMAC - N, 07/24/2018]

20.5.115.4 DURATION:

Permanent.

[20.5.115.4 NMAC - N, 07/24/2018]

20.5.115.5 EFFECTIVE DATE:

July 24, 2018, unless a later date is indicated in the bracketed history note at the end of a section.

[20.5.115.5 NMAC - N, 07/24/2018]

20.5.115.6 OBJECTIVE:

The purpose of 20.5.115 NMAC is to regulate storage tank systems to protect the public health, safety and welfare and the environment of the state, and to provide safe and effective closure requirements for out-of-service systems.

[20.5.115.6 NMAC - N, 07/24/2018]

20.5.115.7 DEFINITIONS:

The definitions in 20.5.101 NMAC apply to this part.

[20.5.115.7 NMAC - N, 07/24/2018]

20.5.115.8-20.5.115.1499 [RESERVED]

20.5.115.1500 REQUIRED NOTIFICATION PRIOR TO TEMPORARY OR PERMANENT CLOSURE, RETURN TO SERVICE, REMOVAL, OR CHANGE IN SERVICE:

A. Notice required.

(1) At least 30 days before beginning either permanent closure, temporary closure, return to service, change in service, or removal of a tank pursuant to this part, or within another reasonable time period if approved in advance by the department, owners and operators shall notify the department in writing of their intent to remove, close or make the return to or change in service, unless such action is in response to corrective action.

(2) If owners and operators do not notify the department that a tank is out of service, the tank shall be considered to be in service for the purpose of these regulations.

(3) Additionally, owners and operators shall notify the department in writing at least 30 days prior to placing any regulated substance into a tank that has been in temporary or permanent closure, or before a return to service.

B. Opportunity for inspector to be present. To ensure that a department inspector has an opportunity to be present during the steps in procedures which are important to the prevention of releases, owners, operators, and certified tank installers shall give the department notice of the dates on which critical junctures in the removal, change in service, return to service and closure of the storage tank system are to take place. This notice shall be given at least 24 hours before any critical juncture begins, and shall be either oral or written. The inspector may require that critical junctures be performed from Monday through Friday during regular business hours.

C. Critical junctures. For removal, change in service, return to service, or storage tank system closure, the term "critical junctures" means:

- (1) completion of the excavation of a UST or piping;
- (2) cleaning and inerting of a tank;
- (3) the actual removal of a UST or its associated piping from the ground, or the filling of a UST in place;
- (4) actual permanent closure of an AST and its associated piping from any location where it has been in use; and
- (5) assessment of a tank site for releases.

D. At a minimum, the notice for removal, change in service, return to service or temporary or permanent closure of a storage tank system shall contain the following information:

- (1) date the form is completed;
- (2) facility name, facility ID number, address (with county), and telephone number;
- (3) owner name, owner ID number, and address, and telephone number;
- (4) description of type of change of status (change in service, return to service or closure);
- (5) expected date of change in service, return to service or closure; and
- (6) signature of owner, operator or an authorized representative.

E. In addition to the written notices described in this section, owners, operators and certified tank installers shall give oral notice at least 24 hours in advance of the commencement of the procedure. In the oral notice, owners, operators and certified tank installers shall describe any changes to the 30-day written notice required in Subsection D of this section, such as different equipment or removal methods.

F. If owners, operators and certified tank installers are separate persons, only one person is required to comply with the notice requirements of this section; however, all parties are liable in the event of noncompliance.

[20.5.115.1500 NMAC - N, 07/24/2018]

[The bureau provides an optional form that may be used. The form is available on the petroleum storage tank bureau's pages on the department website or by contacting the petroleum storage tank bureau at 505-476-4397 or 2905 Rodeo Park Drive East, Building 1, Santa Fe, NM 87505.]

20.5.115.1501 TEMPORARY CLOSURE AND RETURN TO SERVICE:

A. When a storage tank system is in temporary closure and the tank contains greater than one inch or 0.3 percent by weight of the total capacity of the storage tank system of a regulated substance, owners and operators shall:

- (1) continue to operate, maintain, and monitor corrosion protection systems in accordance with 20.5.107 NMAC and 20.5.110 NMAC;
- (2) continue to maintain financial responsibility in accordance with 20.5.117 NMAC;
- (3) continue to meet the requirements for operator training in 20.5.104 NMAC;
- (4) continue to meet operation and maintenance requirements for secondary containment, spill prevention equipment, overfill prevention equipment, and release detection, in accordance with 20.5.107 NMAC and 20.5.110 NMAC;
- (5) continue to meet release detection requirements in 20.5.108 NMAC and 20.5.111 NMAC;
- (6) continue to meet piping release detection requirements in 20.5.108 NMAC or 20.5.111 NMAC until the piping is purged of regulated substances and capped; and
- (7) continue to comply with 20.5.118 NMAC, 20.5.119 NMAC, and 20.5.120 NMAC if a release is suspected or confirmed.

B. As long as a storage tank system is in temporary closure and the tank contains one inch or less or the storage tank system contains 0.3 percent by weight or less of the total capacity of the storage tank system of a regulated substance, owners and operators shall comply with Subsection A of this section except for the following:

- (1) release detection requirements in 20.5.108 NMAC and 20.5.111 NMAC;
- (2) periodic testing and inspection requirements for spill prevention, overfill prevention, release detection, and secondary containment in 20.5.107 NMAC and 20.5.110 NMAC;
- (3) periodic operation and maintenance walk-through inspections in 20.5.107.707 NMAC and 20.5.110.1008 NMAC; and

(4) If the storage tank system does not have steel components that are in contact with soil, water, or concrete, owners and operators are exempt from operator re-training requirements in 20.5.104 NMAC.

C. When a storage tank system is temporarily closed for three months or more, owners and operators shall also comply with all of the following requirements:

(1) leave vent lines open and functioning;

(2) cap and secure all other lines, pumps, manways, and ancillary equipment;
and

(3) for AST systems, disconnect and cap all associated piping from the AST as soon as the tank is emptied in accordance with Subsection B of this section.

D. When a UST system is temporarily closed for more than 12 months, owners and operators shall permanently close the UST system if it does not meet either performance standards for new UST systems or the UST system upgrade requirements in 20.5.106 NMAC, except that the spill and overfill equipment requirements do not have to be met. Owners and operators shall permanently close any substandard storage tank systems at the end of this 12-month period in accordance with 20.5.115 NMAC, unless the department provides an extension of the 12-month temporary closure period. Owners and operators shall complete a site assessment in accordance with 20.5.115 NMAC and shall be current with all tank fees before applying for such an extension.

E. When an AST system is temporarily closed for more than 12 months, owners and operators shall permanently close the AST system if it does not meet the performance standards for new AST systems in 20.5.109 NMAC except that the spill and overfill equipment requirements do not have to be met. Owners and operators shall permanently close any substandard storage tank systems at the end of this 12-month period in accordance with 20.5.115 NMAC, unless the department provides an extension of the 12-month temporary closure period. Owners and operators shall complete a site assessment in accordance with 20.5.115 NMAC and shall be current with all tank fees before applying for such an extension.

F. When a storage tank system will be temporarily closed for more than 12 cumulative months, owners and operators must apply for an extension at least 30 days prior to the end of the twelfth cumulative month. In order to apply for an extension, owners and operators shall:

(1) empty the tank and purge the piping of regulated substances so that the tank contains one inch or less or the system contains three-tenths percent by weight or less of the total capacity of the storage tank system of a regulated substance;

(2) perform a site assessment in accordance with 20.5.115.1504 NMAC;

(3) pay all annual tank fees and all accrued late fees for all tanks they own or operate in accordance with 20.5.103 NMAC;

(4) meet financial responsibility requirements in 20.5.117 NMAC;

(5) apply in writing to the department and include records demonstrating completion of Paragraphs (1) through (4) of Subsection F of this section and include all of the information in Subsection D of 20.5.115.1500 NMAC.

G. When a field-erected AST system or field constructed UST system has been temporarily closed for three months or more and meets the performance standards for new storage tank systems in 20.5.106 NMAC, 20.5.109 NMAC, or 20.5.114 NMAC, prior to placing any regulated substance in the system, owners and operators shall:

(1) perform an internal inspection, integrity test, or tightness test on the tank in accordance with the requirements in 20.5.108 NMAC, 20.5.111 NMAC, or 20.5.114 NMAC;

(2) perform a tightness test on all piping in accordance with the requirements in 20.5.108 NMAC, 20.5.111 NMAC, or 20.5.114 NMAC; and

(3) perform functionality testing or inspections on leak detection equipment in accordance with the requirements for annual or periodic testing in 20.5.108 NMAC, 20.5.111 NMAC, or 20.5.114 NMAC.

H. After temporary or permanent closure and before returning any part of a storage tank system to service, owners and operators shall demonstrate the integrity of the entire storage tank system in a manner approved in advance by the department.

I. A delivery of a regulated substance into a tank in temporary closure shall be considered a return to service and all of the requirements for a tank in service shall be met.

J. Owners and operators of temporarily or permanently closed storage tank systems shall use one or more of the following as applicable to the type of storage tank system to meet the requirements in this section:

(1) *American Petroleum Institute Publication RP 1615, "Installation of Underground Petroleum Storage Systems";*

(2) *American Petroleum Institute Standard 653, "Tank Inspection, Repair, Alteration, and Reconstruction";*

(3) *American Petroleum Institute Publication RP 1110, "Recommended Practice for the Pressure Testing of Steel Pipelines for the Transportation of Gas, Petroleum Gas, Hazardous Liquids, Highly Volatile Liquid, or Carbon Dioxide";*

(4) *Petroleum Equipment Institute Recommended Practice RP 200, "Recommended Practices for Installation of Aboveground Storage Systems for Motor-Vehicle Fueling";*

(5) *Unified Facilities Criteria (UFC) 3-460-01, "Petroleum Fuel Facilities";* or

(6) *National Fire Protection Association Standard 30, "Flammable and Combustible Liquids Code".*

[20.5.115.1501 NMAC - N, 07/24/2018]

20.5.115.1502 PERMANENT CLOSURE:

A. To permanently close a tank, owners and operators shall empty and clean it by removing all liquids, accumulated sludges, and vapors. Owners and operators shall properly dispose of any liquids and sludge removed from a storage tank.

(1) Owners and operators shall either remove from the ground all USTs closed permanently, fill them with an inert solid material or close in place in a manner approved by the department.

(2) Owners and operators shall perform the following closure operations on AST systems:

(a) ASTs being closed in place shall be rendered vapor free; owners and operators shall make provisions for adequate ventilation to ensure that the AST remains vapor free;

(b) vent lines shall remain open and shall be maintained in accordance with the current edition of a standard or code of practice developed by a nationally recognized association or independent testing laboratory, or manufacturer's recommendations;

(c) all access openings shall be secured, normally with spacers, to assist ventilation;

(d) ASTs shall be secured against tampering and flooding;

(e) the name of the product last stored, the date of permanent closure and "PERMANENTLY CLOSED" shall be stenciled in a readily visible location on each AST;

(f) piping shall be removed or closed in place; if closed in place, piping shall be disconnected from ASTs, rendered vapor free, and filled with inert material, capped or blind flanged; owners and operators seeking to close piping in place shall propose a closure plan for the piping in writing to the department at least 30 days prior to closure; the department may approve the plan on a case-by-case basis, after considering the

extent and depth of piping, the proximity of the piping to buildings, the extent of pavement at the facility, and other factors raised by owners and operators; if the department does not approve a closure plan, owners and operators shall remove the piping; and

(g) owners and operators shall dismantle or remove AST systems and secondary containment to the extent needed to conduct the site assessment required in 20.5.115.1504 NMAC.

(3) For mobile AST systems, owners and operators shall perform all of the closure requirements in Paragraph (2) of this subsection, except they need not perform the requirements of Subparagraph (e) of Paragraph (2) of this subsection. Owners and operators shall remove or cap piping when permanently closing a mobile AST. Owners and operators shall perform a site assessment that complies with the requirements of 20.5.115.1504 NMAC before permanent closure of any permanently installed mobile tank is completed.

B. The current edition of the following cleaning and closure procedures shall be used to comply with this section as applicable:

(1) *American Petroleum Institute Publication RP 1604, "Closure of Underground Petroleum Storage Tanks";*

(2) *American Petroleum Institute Standard 2015, "Requirements for Safe Entry and Cleaning of Petroleum Storage Tanks";*

(3) *American Petroleum Institute Publication RP 2016, "Guidelines and Procedures for Entering and Cleaning Petroleum Storage Tanks";*

(4) *American Petroleum Institute Publication 2202, "Guidelines for Protecting Against Lead Hazards when Dismantling and Disposing of Steel from Tanks that have Contained Leaded Gasoline";*

(5) *American Petroleum Institute Publication RP 1631, "Interior Lining and Periodic Inspections of Underground Storage Tanks";* or

(6) *The National Institute for Occupational Safety and Health "Criteria for a Recommended Standard: Working in Confined Space".*

C. Owners and operators shall perform an assessment meeting the requirements of 20.5.115.1504 NMAC after notifying the department but before completion of permanent closure.

D. Owners and operators that have installed any monitoring wells as release detection pursuant to 20.5.108 NMAC shall properly close the wells in a manner approved by the department as part of permanent closure activities.

[20.5.115.1502 NMAC - N, 07/24/2018]

20.5.115.1503 CHANGES IN SERVICE:

A. Continued use of a storage tank system to store a non-regulated substance is a change in service.

B. Owners and operators shall notify the department in compliance with 20.5.115.1500 NMAC of any change in service, and any change in location of AST systems that are operational and registered pursuant to 20.5.102 NMAC.

C. Before a change in service, owners and operators shall empty and clean the tank by removing all liquid and accumulated sludge, and shall properly dispose of any liquids and sludge removed from a storage tank. Owners and operators shall also conduct a site assessment meeting the requirements of 20.5.115.1504 NMAC. The current edition of the following cleaning and closure procedures shall be used as applicable to comply with the requirements of this section:

(1) *American Petroleum Institute Publication RP 1604, "Closure of Underground Petroleum Storage Tanks";*

(2) *American Petroleum Institute Standard 2015, "Requirements for Safe Entry and Cleaning of Petroleum Storage Tanks";*

(3) *American Petroleum Institute Publication RP 2016, "Guidelines and Procedures for Entering and Cleaning Petroleum Storage Tanks";*

(4) *American Petroleum Institute Publication 2202, "Guidelines for Protecting Against Lead Hazards when Dismantling and Disposing of Steel from Tanks that have Contained Leaded Gasoline";*

(5) *American Petroleum Institute Publication RP 1631, "Interior Lining and Periodic Inspections of Underground Storage Tanks";* or

(6) *The National Institute for Occupational Safety and Health "Criteria for a Recommended Standard: Working in Confined Space".*

[20.5.115.1503 NMAC - N, 07/24/2018]

20.5.115.1504 ASSESSING THE SITE AT CLOSURE OR CHANGE IN SERVICE:

A. Before permanent closure or a change in service is completed, owners and operators shall measure for the presence of a release where contamination is most likely to be present at the storage tank site.

(1) In selecting sample types, sample locations, and measurement methods, the bureau shall consider the method of closure, the nature of the stored regulated substance, the type of backfill for any USTs, the depth to groundwater, and other factors appropriate for identifying the presence of a release. Examples of sample locations may include but are not limited to piping junctions, under dispensers and under storage tanks.

(2) A bureau inspector may waive the requirement for soil sampling when an AST is closed or may require alternate tests for the presence of a release, based on site specific conditions that demonstrate equivalent environmental protection. For example, at a site where an AST has been operated for less than 10 years with impervious secondary containment, the inspector may waive soil sampling as the secondary containment would have effectively prevented any release outside the containment. The bureau may require soil sampling or a site assessment at a later date if site-specific circumstances indicate that a release may have occurred.

(3) The requirements of this section are satisfied if one of the external release detection methods allowed in 20.5.108.806 NMAC and 20.5.108.807 NMAC is operating in accordance with the requirements in 20.5.108 NMAC at the time of closure, and indicates no release has occurred.

B. If contaminated soils, contaminated groundwater, non-aqueous phase liquid or vapor is discovered as a result of activities required by this section, or by any other manner, owners and operators shall notify the department in accordance with 20.5.118 NMAC and begin corrective action in accordance with 20.5.119 NMAC and 20.5.120 NMAC.

[20.5.115.1504 NMAC - N, 07/24/2018]

20.5.115.1505 APPLICABILITY TO PREVIOUSLY CLOSED STORAGE TANK SYSTEMS:

A. When directed by the department, owners and operators of UST systems permanently closed before December 22, 1988, shall assess the excavation zone and close the UST systems in accordance with this part if releases from the UST system may, in the judgment of the department, pose a current or potential threat to public health, safety and welfare and the environment.

B. When directed by the department, owners and operators of AST systems permanently closed before August 15, 2003, shall assess the entire AST system area and close the AST systems in accordance with this part if releases from the AST system may, in the judgment of the department, pose a current or potential threat to public health, safety and welfare and the environment.

[20.5.115.1505 NMAC - N, 07/24/2018]

20.5.115.1506 CLOSURE RECORDS:

A. Owners and operators shall maintain records in accordance with 20.5.107 NMAC and 20.5.110 NMAC that demonstrate compliance with all closure requirements of this part.

B. Owners and operators shall ensure that the results of the assessment required in 20.5.115.1504 NMAC are maintained in accordance with 20.5.107.714 NMAC and 20.5.110.1015 NMAC after completion of permanent closure or change in service in one of the following ways:

- (1)** by the owners and operators who took the storage tank system out of service;
- (2)** by the current owners and operators of the storage tank system site; or
- (3)** by mailing these records to the department if they cannot be maintained at the closed facility.

[20.5.115.1506 NMAC - N, 07/24/2018]

PART 116: DELIVERY PROHIBITION

20.5.116.1 ISSUING AGENCY:

New Mexico Environmental Improvement Board.

[20.5.116.1 NMAC - N, 07/24/2018]

20.5.116.2 SCOPE:

This part applies to owners and operators of storage tanks and facilities holding petroleum and to product deliverers, as defined in 20.5.101 NMAC, who deliver petroleum, and to any person subject to the provisions of 20.5 NMAC.

[20.5.116.2 NMAC - N, 07/24/2018]

20.5.116.3 STATUTORY AUTHORITY:

This part is promulgated pursuant to the provisions of the Hazardous Waste Act, Sections 74-4-1 through 74-4-14 NMSA 1978; the Groundwater Protection Act, Sections 74-6B-1 through 74-6B-14 NMSA 1978; and the general provisions of the Environmental Improvement Act, Sections 74-1-1 through 74-1-17 NMSA 1978.

[20.5.116.3 NMAC - N, 07/24/2018]

20.5.116.4 DURATION:

Permanent.

[20.5.116.4 NMAC - N, 07/24/2018]

20.5.116.5 EFFECTIVE DATE:

July 24, 2018, unless a later date is indicated in the bracketed history note at the end of a section.

[20.5.116.5 NMAC - N, 07/24/2018]

20.5.116.6 OBJECTIVE:

The purpose of this part is to set forth the prohibitions for the delivery, deposit, or acceptance of product at or to a storage tank or a facility that has been determined by the department to be ineligible for such delivery, deposit or acceptance, in order to protect the public health, safety and welfare and the environment of the state.

[20.5.116.6 NMAC - N, 07/24/2018]

20.5.116.7 DEFINITIONS:

The definitions in 20.5.101 NMAC shall apply to this part.

[20.5.116.7 NMAC - N, 07/24/2018]

20.5.116.8-20.5.116.1599 [RESERVED]

20.5.116.1600 GENERAL:

It shall be unlawful for any owner, operator or product deliverer to deliver to, deposit into or accept a regulated substance at or to a storage tank or a facility that has been identified by the department as ineligible for product delivery, deposit or acceptance. It shall also be unlawful for any person to remove, tamper with, destroy or damage a red tag or certificate posted pursuant to this part.

[20.5.116.1600 NMAC - N, 07/24/2018]

20.5.116.1601 DELIVERY PROHIBITIONS:

A. Mandatory ineligibility. The department shall classify a storage tank as ineligible for delivery, deposit or acceptance of product if any of the following conditions exist at the storage tank, or shall classify a facility as ineligible for delivery or acceptance of product if any of the following conditions exist at every storage tank at the facility:

- (1) required spill prevention equipment is not installed;
- (2) required overfill protection equipment is not installed;
- (3) required leak detection equipment is not installed; or
- (4) required corrosion protection equipment is not installed, including required corrosion protection equipment for a buried metal flexible connector.

B. Discretionary ineligibility. The department may, in its sole discretion, classify a storage tank as ineligible for delivery, deposit or acceptance of product if any of the following conditions exist at the storage tank, or may classify a facility as ineligible for delivery, deposit or acceptance of product if any of the following conditions exist at every storage tank at the facility:

- (1) improper operation or maintenance of required equipment for:
 - (a) spill prevention;
 - (b) overfill prevention;
 - (c) leak detection;
 - (d) corrosion protection; or
- (2) operation of the storage tank or facility in a manner that creates an imminent threat to public health and the environment.

[20.5.116.1601 NMAC - N, 07/24/2018]

20.5.116.1602 PROCEDURES FOR CLASSIFYING A STORAGE TANK OR FACILITY AS INELIGIBLE:

A. Mandatory ineligibility. Notice of intent to red tag: Upon identification of a condition or conditions at one or more storage tanks at a facility under Subsection A of 20.5.116.1601 NMAC, the department shall issue the owner and operator a notice of intent to red tag stating the violations and providing the owner or operator 30 days from the date of the notice to correct the violations. The notice of intent to red tag shall inform the owner and operator that the department will prohibit delivery to each storage tank with one or more conditions identified under 20.5.116.1601 NMAC at the facility if the violations are not corrected. The notice of intent to red tag shall state if the facility is in a rural and remote area as defined in 20.5.101.7 NMAC, and shall grant a deferral as provided in 20.5.116.1608 NMAC.

B. Discretionary ineligibility.

(1) Notice of violation. Upon identification of a condition or conditions at one or more storage tanks at a facility under Subsection B of 20.5.116.1601 NMAC, the department shall issue the owner and operator a notice of violation stating the violation and providing the owner or operator 30 days from the date of the notice to correct the violation. The notice of violation shall inform the owner and operator that the violation cited could subject the owner and operator to delivery prohibition at the identified tanks if the violations are not corrected.

(2) Notice of deficiency. If the owner or operator fails to correct the violations within the timeframe provided in the notice of violation, the department shall issue the owner or operator a notice of deficiency re-stating the violations and providing the owner or operator an additional 30 days from the date of the notice to correct the violations. The notice of deficiency shall inform the owner and operator that the violations cited could subject the owner and operator to delivery prohibition at the identified tanks if the violations are not corrected.

(3) Notice of intent to red tag. If the owner or operator fails to correct the violations within the timeframe provided in the notice of deficiency, the department shall issue the owner or operator a notice of intent to red tag re-stating the violations and providing the owner or operator an additional 30 days from the date of the notice to correct the violations. The notice of intent to red tag shall inform the owner and operator that the department will prohibit delivery to the identified tanks at the facility if the violations are not corrected. The notice of intent to red tag shall state if the facility is in a rural and remote area as defined in 20.5.101.7 NMAC, and shall grant a deferral as provided in 20.5.116.1608 NMAC.

C. Red tag placement and ineligibility for delivery. If the owner or operator fails to correct the violations within the timeframe provided in the notice of intent to red tag, the department shall affix a red tag to the fill pipe of every storage tank with one or more conditions identified under 20.5.116.1601 NMAC at the facility pursuant to 20.5.116.1603 NMAC.

D. Notification of installation, replacement, repair or modification. Owners and operators shall give the department notice of any installation, replacement, repair or modification performed to correct the conditions listed in the notice of violation, notice of deficiency or notice of intent to red tag in accordance with 20.5.106 NMAC, 20.5.107 NMAC, 20.5.109 NMAC, and 20.5.110 NMAC. The department may grant a waiver shortening the notification time periods required by those parts if warranted by the circumstances.

[20.5.116.1602 NMAC - N, 07/24/2018]

20.5.116.1603 IDENTIFICATION OF INELIGIBLE STORAGE TANKS OR FACILITIES:

A. Red tag. In order to prevent the delivery, deposit or acceptance of product at or to a storage tank or a facility that has been identified by the department as ineligible under 20.5.116.1601 NMAC and 20.5.116.1602 NMAC, the department shall affix a tamper-proof red tag to the fill pipe of every storage tank with one or more conditions identified under 20.5.116.1601 NMAC at the facility 48 hours after posting the name and address of the facility on the department's website list of facilities that are ineligible for delivery. The department shall document the level of stored product in each storage tank with one or more conditions identified under 20.5.116.1601 NMAC prior to affixing a red tag to the fill pipe(s) of the storage tank.

B. Certificate. In order to prevent the delivery, deposit or acceptance of product at or to a storage tank or a facility that has been classified by the department as ineligible under 20.5.116.1601 NMAC, the department shall post a certificate, conspicuously displayed at the facility, clearly prohibiting the delivery, deposit or acceptance of product at every storage tank at the facility to which the department has affixed a red tag.

C. Red tag tampering prohibited. It shall be unlawful for any person, other than an authorized representative of the department, to remove, tamper with, destroy or damage a red tag affixed to any storage tank or a certificate posted at a storage tank facility by department personnel.

D. Performance standards. Owners and operators shall continue to adhere to all performance standards of 20.5 NMAC after placement of one or more red tags and a certificate at a facility, including but not limited to leak detection, corrosion protection and monthly inspections.

[20.5.116.1603 NMAC - N, 07/24/2018]

20.5.116.1604 REGULATED SUBSTANCE REMOVAL:

Owners and operators shall empty all regulated substances from storage tanks that have been affixed with a red tag if the violations have not been corrected within 30 days of the placement of the red tag. This section shall not limit or supersede the application of 20.5.118 NMAC in the event of a suspected or confirmed release. If no suspected or confirmed release exists, owners and operators shall:

A. empty all regulated substances from each storage tank at the facility that has been affixed with a red tag in accordance with 20.5.115 NMAC, and shall provide written notice to the inspector who issued the red tag when each tank has been emptied, with the name, address, telephone number and email address of the person who removed the regulated substances from the tank; and

B. continue to meet all requirements for temporary closure in 20.5.115.1501 NMAC, including operation of cathodic protection and release detection equipment and payment of the annual fee, or shall permanently close the storage tank system in accordance with 20.5.115.1502 NMAC.

[20.5.116.1604 NMAC - N, 07/24/2018]

20.5.116.1605 PERMANENT CLOSURE:

Owners and operators shall permanently close a storage tank system that has been affixed with a red tag if the violations associated with the red tag have not been corrected within 12 months of the placement of the red tag. Permanent closure must meet the requirements in 20.5.115.1502 NMAC, including notification requirements.

[20.5.116.1605 NMAC - N, 07/24/2018]

20.5.116.1606 RED TAG PLACEMENT AND NOTIFICATION PROCESSES FOR STORAGE TANK OWNERS AND OPERATORS AND PRODUCT DELIVERERS:

A. Owners and operators. Notification of red tag placement, including a tank's status as being ineligible for deliveries, shall be provided to an owner or operator in the following manner:

(1) Owner or operator present. If the owner or operator is present on the site, the department shall provide to the owner or operator the notice of red tag placement and ineligibility for delivery.

(2) Owner and operator not present. If neither the owner nor operator is present on the site, the department shall immediately notify an employee in charge of the facility, if such employee is present, of red tag placement and ineligibility for delivery and shall send a copy of the written notice to the owner and operator within 24 hours of notifying the employee in charge of the facility or of affixing a red tag and certificate.

B. Product deliverers. The department shall notify all product deliverers 48 hours before the department affixes a red tag to the fill pipes of each storage tank with one or more conditions identified under 20.5.116.1601 NMAC by posting the name and address of the facility on the department's website list of facilities that contain storage tanks which are ineligible for delivery. Product deliverers shall be responsible for checking the website or contacting the department prior to any product delivery.

[20.5.116.1606 NMAC - N, 07/24/2018]

[The department provides a list of storage tank facilities containing storage tanks with delivery prohibitions. The list is available on the petroleum storage tank bureau's pages on the department website or by contacting the Petroleum Storage Tank Bureau at 505-476-4397 or 2905 Rodeo Park Drive East, Building 1, Santa Fe, New Mexico 87505.]

20.5.116.1607 RECLASSIFYING INELIGIBLE STORAGE TANKS OR FACILITIES AS ELIGIBLE TO RECEIVE PRODUCT:

A. Statement of compliance from owner or operator. In order for an owner or operator of a storage tank or facility which has been determined by the department as ineligible under this rule to have the storage tank or facility reclassified by the department as eligible to receive delivery of product, the owner or operator shall provide a written statement of compliance to the department and the inspector listed in the notice that the conditions listed in the notice of intent to red tag have been corrected. The written statement shall contain the date, owner or operator's name, how the conditions have been corrected, by whom, and the date of correction.

B. Department confirmation. The department shall, in its sole discretion, determine whether the conditions listed in the notice of intent to red tag have been corrected as soon as practicable but within no more than three business days after receipt of the owner's written statement of compliance. If the conditions have not been corrected, the department shall notify the owner or operator in the manner prescribed by 20.5.116.1606 NMAC.

C. Removal of red tag and notice of ineligibility. Upon verification of compliance, department personnel shall:

(1) immediately remove each red tag and certificate at the facility, and document the level of product in each tank; and

(2) as soon as practicable, but in no event longer than three business days, remove the facility from the department's website list of facilities that contain storage tanks which are ineligible for delivery.

[20.5.116.1607 NMAC - N, 07/24/2018]

[The department provides an optional form for compliance with Subsection A. The form is available on the petroleum storage tank bureau's pages on the department's website or by contacting the Petroleum Storage Tank Bureau at 505-476-4397 or 2905 Rodeo Park Drive East, Building 1, Santa Fe, New Mexico 87505.]

20.5.116.1608 DELIVERY PROHIBITION DEFERRAL IN RURAL AND REMOTE AREA AND FOR MATTERS OF NATIONAL SECURITY:

The department shall defer classifying a storage tank or facility as ineligible for delivery, deposit or acceptance of product if such classification would jeopardize the availability of, or access to, motor fuel in a rural and remote area as defined in 20.5.101.7 NMAC, or where the United States department of defense operates a storage tank and notifies the department that continued operation of the tank is a matter of national security. The department may only defer application of delivery prohibition for up to 180 days from the date of the issuance of the notice of intent to red tag pursuant to Subsection A of 20.5.116.1602 NMAC or Paragraph (3) of Subsection B of 20.5.116.1602 NMAC.

[20.5.116.1608 NMAC - N, 07/24/2018]

20.5.116.1609 DELIVERY AUTHORIZATION IN EMERGENCY SITUATIONS OR FOR TANK TESTING:

A. Emergency situations. The department may authorize delivery or deposit of product to an emergency generator tank that is otherwise ineligible for delivery or deposit if the owner or operator can demonstrate to the satisfaction of the department that:

(1) a commercial power failure or other declared state of emergency exists;
and

(2) the emergency generator tank:

(a) provides power supply;

(b) stores petroleum; and

(c) is used solely in connection with an emergency system, legally required standby system or optional standby system.

B. Tank testing. The department may authorize delivery or deposit of product to a storage tank that is otherwise ineligible for delivery or deposit if the owner or operator can demonstrate to the satisfaction of the department that delivery or deposit is necessary to test or calibrate a tank.

[20.5.116.1609 NMAC - N, 07/24/2018]

20.5.116.1610 ADDITIONAL REQUIREMENTS:

A. Storage tank equipment tampering prohibited. It shall be unlawful for any person, including product deliverers, to remove, tamper with, destroy, damage or disable storage tank equipment, including but not limited to release detection and other safety mechanisms, in the course of delivery of any product.

B. Compliance with rules. A product deliverer shall be responsible for ensuring that all deliveries are made in compliance with 20.5 NMAC.

[20.5.116.1610 NMAC - N, 07/24/2018]

20.5.116.1611 ADMINISTRATIVE APPEALS:

Any owner or operator of a facility that contains storage tanks to which the department has affixed a red tag prohibiting delivery pursuant to this part may appeal to the secretary by submitting a written request for hearing.

A. Timelines. The request must be made in writing to the secretary by the owner or operator within five business days after the notice of red tag placement has been issued or the decision of the department shall be final. If an appeal is received within the five-business day time limit, the secretary shall hold a hearing within seven business days after receipt of the request, unless the parties agree to an alternate timeframe. The secretary shall notify the person who requested the hearing of the date, time and place of the hearing by certified mail.

B. Burden of proof. In the appeal hearing, the burden of proof is on the person who requested the hearing.

C. Procedures.

(1) Appeal hearings shall be held at a place designated by the secretary, unless other mutually agreed upon arrangements are made. The secretary may designate a person to conduct the hearing and make a final decision or make recommendations for a final decision. The secretary's hearing notice shall indicate who will conduct the hearing and make the final decision.

(2) The department shall make an audio recording of the hearing. If either party wants the hearing transcribed, that party shall bear the costs of transcription.

(3) In appeal hearings, the rules governing civil procedure and evidence in district court shall not apply. Hearings shall be conducted so that all relevant views, arguments and testimony are amply and fairly presented without undue repetition. The secretary shall allow department staff and the hearing requestor to call and examine witnesses, to submit written and oral evidence and arguments, to introduce exhibits and to cross-examine persons who testify. All testimony shall be taken under oath. At the end of the hearing, the secretary shall decide and announce if the hearing record will remain open, for how long, and for what reason it will be left open.

D. Secretary's decision. Based upon the evidence presented at the hearing, the secretary shall sustain, modify or reverse the action of the department. The secretary's decision shall be by written order within seven business days following the close of the hearing record. The decision shall state the reasons therefore and shall be sent by certified mail to the hearing requestor and any other affected person who requests notice.

E. No stay of action. The filing of an administrative appeal shall not stay any action, compliance or corrective action required by the red tag issued by the department.

F. Judicial review. Judicial review of the secretary's final order shall be as provided by law. The filing of a judicial appeal shall not stay any action, compliance or corrective action required by the secretary's decision.

PART 117: FINANCIAL RESPONSIBILITY

20.5.117.1 ISSUING AGENCY:

New Mexico Environmental Improvement Board.

[20.5.117.1 NMAC - N, 07/24/2018]

20.5.117.2 SCOPE:

This part applies to owners and operators of petroleum storage tanks as defined in 20.5.101 NMAC. This part also applies to owners and operators of AST systems with capacities of 55,000 gallons or more associated with airport hydrant fuel distribution systems and owners and operators of AST systems with capacities of 55,000 gallons or more associated with UST systems with field-constructed tanks as these terms are defined in 20.5.101 NMAC. If the owner and operator are separate persons, only one person is required to demonstrate financial responsibility; however, both parties are liable in the event of noncompliance.

[20.5.117.2 NMAC - N, 07/24/2018]

20.5.117.3 STATUTORY AUTHORITY:

This part is promulgated pursuant to the provisions of the Hazardous Waste Act, Sections 74-4-1 through 74-4-14 NMSA 1978, and the general provisions of the Environmental Improvement Act, Sections 74-1-1 through 74-1-15 NMSA 1978.

[20.5.117.3 NMAC - N, 07/24/2018]

20.5.117.4 DURATION:

Permanent.

[20.5.117.4 NMAC - N, 07/24/2018]

20.5.117.5 EFFECTIVE DATE:

July 24, 2018, unless a later date is indicated in the bracketed history note at the end of a section.

[20.5.117.5 NMAC - N, 07/24/2018]

20.5.117.6 OBJECTIVE:

The purpose of this part is to require owners and operators of petroleum storage tanks systems to demonstrate financial responsibility for their systems and to protect the public health, safety and welfare and the environment of the state.

[20.5.117.6 NMAC - N, 07/24/2018]

20.5.117.7 DEFINITIONS:

The definitions in 20.5.101 NMAC apply to this part.

[20.5.117.7 NMAC - N, 07/24/2018]

20.5.117.8-20.5.17.1699 [RESERVED]

20.5.117.1700 APPLICABILITY:

A. This part applies to owners and operators of all petroleum storage tank systems except as otherwise provided in this section.

B. Owners and operators of petroleum above ground storage tank systems are subject to these requirements in accordance with 20.5.117.1701 NMAC.

C. State and federal government entities whose debts and liabilities are the debts and liabilities of a state or the United States are exempt from the requirements of this part.

D. The requirements of this part do not apply to owners and operators of storage tank systems described in Subsection B or D of 20.5.101.2 NMAC.

E. If the owner and operator of a petroleum storage tank are separate persons, only one person is required to demonstrate financial responsibility; however, both parties are liable in the event of noncompliance.

[20.5.117.1700 NMAC - N, 07/24/2018]

20.5.117.1701 PHASE-IN FOR ABOVE GROUND STORAGE TANKS:

Owners and operators of above ground storage tanks shall comply with the requirements of 20.5.117 NMAC by July 1, 2007.

[20.5.117.1701 NMAC - N, 07/24/2018]

20.5.117.1702 [RESERVED]

20.5.117.1703 AMOUNT AND SCOPE OF REQUIRED FINANCIAL RESPONSIBILITY:

A. Owners and operators of petroleum storage tanks shall demonstrate financial responsibility for taking corrective action and for compensating third parties for bodily injury and property damage caused by accidental releases arising from the operation of petroleum storage tanks in at least the following per-occurrence amounts:

(1) For owners or operators of petroleum storage tanks that are located at petroleum marketing facilities, or that handle an average of more than 10,000 gallons of petroleum per month based on annual throughput for the previous calendar year, \$1,000,000; and

(2) For all other owners or operators of petroleum storage tanks, \$500,000.

B. Owners and operators of petroleum underground storage tanks shall demonstrate financial responsibility for taking corrective action and for compensating third parties for bodily injury and property damage caused by accidental releases arising from the operation of petroleum underground storage tanks in at least the following annual aggregate amounts:

(1) for owners or operators of one to 100 petroleum underground storage tanks, \$1,000,000; and

(2) for owners or operators of 101 or more petroleum underground storage tanks, \$2,000,000.

C. Owners and operators of petroleum above ground storage tanks shall demonstrate financial responsibility for taking corrective action and for compensating third parties for bodily injury and property damage caused by accidental releases arising from the operation of petroleum above ground storage tanks in at least the following annual aggregate amounts:

(1) for owners or operators of one to 100 petroleum above ground storage tanks, \$1,000,000; and

(2) for owners or operators of 101 or more petroleum above ground storage tanks, \$2,000,000.

The annual aggregate on above ground storage tanks is separate from the annual aggregate on underground storage tanks, although an owner or operator of both above ground and underground storage tanks may include both types of tanks within the same annual aggregate if the aggregate is no less than the total of the annual aggregates required for each type of tank.

D. For the purposes of Subsections B, C and G of this section only, "a petroleum underground storage tank" or "a petroleum above ground storage tank" means a single containment unit and does not mean combinations of single containment units.

E. Except as provided in Subsection F of this section, if the owner or operator uses separate mechanisms or separate combinations of mechanisms to demonstrate financial responsibility for:

- (1)** taking corrective action;
- (2)** compensating third parties for bodily injury and property damage caused by sudden accidental releases; or
- (3)** compensating third parties for bodily injury and property damage caused by non-sudden accidental releases, the amount of assurance provided by each mechanism or combination of mechanisms shall be in the full amount specified in Subsections A, B and C of this section.

F. If an owner or operator uses separate mechanisms or separate combinations of mechanisms to demonstrate financial responsibility for different petroleum storage tanks, the annual aggregate required shall be based on the number of tanks covered by each such separate mechanism or combination of mechanism.

G. Owners and operators shall review the amount of aggregate assurance provided whenever additional petroleum storage tanks are acquired or installed. If the number of either petroleum underground storage tanks or petroleum above ground storage tanks for which assurance shall be provided exceeds 100, the owner or operator shall demonstrate financial responsibility in the amount of at least \$2,000,000 of annual aggregate assurance for that particular type of tank (UST or AST) by the anniversary of the date on which the mechanism demonstrating financial responsibility became effective. If assurance is being demonstrated by a combination of mechanisms, owner and operators shall demonstrate financial responsibility in the amount of at least \$2,000,000 of annual aggregate assurance by the first-occurring effective date anniversary of any one of the mechanisms combined (other than a financial test or guarantee) to provide assurance.

H. The amounts of assurance required under this section exclude legal defense costs.

I. The required per-occurrence and annual aggregate coverage amounts do not in any way limit the liability of the owner or operator.

[20.5.117.1703 NMAC - N, 07/24/2018]

20.5.117.1704 ALLOWABLE MECHANISMS AND COMBINATIONS OF MECHANISMS:

A. Subject to the limitations of Subsections B and C and the requirements of Subsection D of this section:

(1) an owner or operator may use any one or combination of the mechanisms listed in 20.5.117.1705 NMAC through 20.5.117.1713 NMAC to demonstrate financial responsibility under this part for one or more storage tanks; and

(2) a local government owner or operator may use any one or combination of the mechanisms listed in 20.5.117.1705 NMAC through 20.5.117.1717 NMAC to demonstrate financial responsibility under this part for one or more storage tanks.

B. An owner or operator may use a guarantee or surety bond under 20.5.117.1708 NMAC to establish financial responsibility only if the attorney general of the state has submitted a written statement to the department that a guarantee or surety bond executed as described in this section is a legally valid and enforceable obligation in this state. The department received this statement on July 24, 1988.

C. An owner or operator may use self-insurance in combination with a guarantee only if, for the purpose of meeting the requirements of the financial test under this rule, the financial statements of the owner or operator are not consolidated with the financial statements of the guarantor.

D. An owner or operator who intend to use one mechanism or a combination of mechanisms for tanks in more than one state may use the federal forms found in 40 CFR Part 280. If an owner or operator uses the federal forms, the owner or operator shall attach the following addendum: It is hereby acknowledged and agreed that, with respect to the storage tanks located in New Mexico, any and all references to Subtitle I of the federal Resource Conservation and Recovery Act or to one or more of the regulations of the United States environmental protection agency promulgated under Subtitle I and included in 40 CFR Part 280 are deemed references to the New Mexico Hazardous Waste Act and the applicable provisions of 20.5 NMAC, the New Mexico petroleum storage tank regulations.

[20.5.117.1704 NMAC - N, 07/24/2018]

20.5.117.1705 FINANCIAL TEST OF SELF INSURANCE:

A. An owner or operator, or guarantor, may satisfy the requirements of 20.5.117.1703 NMAC by passing a financial test as specified in this section. To pass the financial test of self-insurance, the owner or operator, or guarantor, shall meet the criteria of Subsection B or C of this section based on year-end financial statements for the latest completed fiscal year.

B. Criteria for option one.

(1) The owner or operator, or guarantor, shall have a tangible net worth of at least 10 times:

(a) the total of the applicable aggregate amounts required by 20.5.117.1703 NMAC based on the number of storage tanks for which a financial test is used to demonstrate financial responsibility to the department under this section;

(b) the sum of the corrective action cost estimates, the current closure and post-closure care cost estimates, and amount of liability coverage for which a financial test is used to demonstrate financial responsibility to EPA under 40 CFR 264.101, Sections 264.143, 264.145, 265.143, 265.145, 264.147, and 265.147 or to a state implementing agency under a state program authorized by EPA under 40 CFR Part 271; and

(c) The sum of current plugging and abandonment cost estimates for which a financial test is used to demonstrate financial responsibility to EPA under 40 CFR Sections 144.63 or to a state implementing agency under a state program authorized by EPA under 40 CFR Part 145.

(2) The owner or operator, or guarantor, shall have a tangible net worth of at least \$10,000,000.

(3) The owner or operator, or guarantor, shall have a letter signed by the chief financial officer worded as specified in 20.5.117.1755 NMAC.

(4) The owner or operator, or guarantor, shall either:

(a) file financial statements annually with the United States securities and exchange commission, the energy information administration, or the rural utilities service; or

(b) report annually the firm's tangible net worth to Dun and Bradstreet, and Dun and Bradstreet shall have assigned the firm a financial strength rating of 4A or 5A.

(5) The firm's year-end financial statements, if independently audited, cannot include an adverse auditor's opinion, a disclaimer of opinion, or a "going concern" qualification.

C. Criteria for option two.

(1) The owner or operator, or guarantor, shall meet the financial test requirements of 40 CFR Section 264.147(f)(1), substituting the appropriate amounts specified in Paragraphs (1) and (2) of Subsection B of 20.5.117.1703 NMAC for the "amount of liability coverage" each time specified in that section.

(2) The fiscal year-end financial statements of the owner or operator, or guarantor, shall be examined by an independent certified public accountant and be accompanied by the accountant's report of the examination.

(3) The firm's year-end financial statements cannot include an adverse auditor's opinion, a disclaimer of opinion, or a "going concern" qualification.

(4) The owner or operator, or guarantor, shall have a letter signed by the chief financial officer, worded as specified in 20.5.117.1755 NMAC.

(5) If the financial statements of the owner or operator, or guarantor, are not submitted annually to the United States securities and exchange commission, the energy information administration or the rural utilities service, the owner or operator, or guarantor, shall obtain a special report by an independent certified public accountant stating that:

(a) the accountant has compared the data that the letter from the chief financial officer specifies as having been derived from the latest year-end financial statements of the owner or operator, or guarantor, with the amounts in such financial statements; and

(b) in connection with that comparison, no matters came to the accountant's attention which caused the accountant to believe that the specified data should be adjusted.

D. To demonstrate that it meets the financial test under Subsection B or C of this section, the chief financial officer of the owner or operator, or guarantor, shall sign, within 120 days of the close of each financial reporting year, as defined by the 12-month period for which financial statements used to support the financial test are prepared, a letter worded exactly as shown in 20.5.117.1755 NMAC.

E. If owners or operators using the test to provide financial assurance finds that they no longer meet the requirements of the financial test based on the year-end financial statements, the owner or operator shall obtain alternative coverage within 150 days of the end of the year for which financial statements have been prepared.

F. The secretary may require reports of financial condition at any time from the owner or operator, or guarantor. If the secretary finds, on the basis of such reports or other information, that the owner or operator, or guarantor, no longer meets the financial test requirements of Subsections B or C and D of 20.5.117.1705 NMAC, the owner or operator shall obtain alternate coverage within 30 days after notification of such a finding.

G. If owners or operators fail to obtain alternate assurance within 150 days of finding that they no longer meet the requirements of the financial test based on the year-end financial statements, or within 30 days of notification by the secretary that they no longer meet the requirements of the financial test, the owner or operator shall notify the secretary of such failure within 10 days.

[20.5.117.1705 NMAC - N, 07/24/2018]

20.5.117.1706 GUARANTEE:

A. An owner or operator may satisfy the requirements of 20.5.117.1703 NMAC by obtaining a guarantee that conforms to the requirements of this section. The guarantor shall be:

(1) a firm that:

(a) possesses a controlling interest in the owner or operator;

(b) possesses a controlling interest in a firm described under Subparagraph (a) of Paragraph (1) of Subsection A of this section; or

(c) is controlled through stock ownership by a common parent firm that possesses a controlling interest in the owner or operator; or

(2) a firm engaged in a substantial business relationship with the owner or operator and issuing the guarantee as an act incident to that business relationship.

B. Within 120 days of the close of each financial reporting year the guarantor shall demonstrate that it meets the financial test criteria of 20.5.117.1705 NMAC based on year-end financial statements for the latest completed financial reporting year by completing the letter from the chief financial officer described in 20.5.117.1755 NMAC and shall deliver the letter to the owner or operator. If the guarantor fails to meet the requirements of the financial test at the end of any financial reporting year, within 120 days of the end of that financial reporting year the guarantor shall send by certified mail, before cancellation or non-renewal of the guarantee, notice to the owner or operator. If the secretary notifies the guarantor that he no longer meets the requirements of the financial test of Subsection B or C of 20.5.117.1705 NMAC and 20.5.117.1755 NMAC, the guarantor shall notify the owner or operator within 10 days of receiving such notification from the secretary. In both cases, the guarantee will terminate no less than 120 days after the date the owner or operator receives the notification, as evidenced by the return receipt. The owner or operator shall obtain alternate coverage as specified in Subsection E of 20.5.117.1724 NMAC.

C. The guarantee shall be worded as specified in 20.5.117.1756 NMAC.

D. An owner or operator who uses a guarantee to satisfy the requirements of 20.5.117.1703 NMAC shall establish a standby trust fund when the guarantee is obtained. Under the terms of the guarantee, all amounts paid by the guarantor under the guarantee will be deposited directly into the standby trust fund in accordance with instructions from the secretary under 20.5.117.1722 NMAC. This standby trust fund shall meet the requirements specified in 20.5.117.1713 NMAC.

[20.5.117.1706 NMAC - N, 07/24/2018]

20.5.117.1707 INSURANCE AND RISK RETENTION GROUP COVERAGE:

A. An owner or operator may satisfy the requirements of 20.5.117.1703 NMAC by obtaining liability insurance that conforms to the requirements of this section from a qualified insurer or risk retention group. Such insurance may be in the form of a separate insurance policy or an endorsement to an existing insurance policy.

B. Each insurance policy shall be amended by an endorsement worded as specified in Subsection A of 20.5.117.1757 NMAC or evidenced by a certificate of insurance worded as specified in Subsection B of 20.5.117.1757 NMAC, except that instructions in brackets shall be replaced with the relevant information and the brackets deleted.

C. Each insurance policy shall be issued by an insurer or a risk retention group that, at a minimum, is licensed to transact the business of insurance or eligible to provide insurance as an excess or surplus lines insurer in one or more states.

[20.5.117.1707 NMAC - N, 07/24/2018]

20.5.117.1708 SURETY BOND:

A. An owner or operator may satisfy the requirements of 20.5.117.1703 NMAC by obtaining a surety bond that conforms to the requirements of this section. The surety company issuing the bond shall be among those listed as acceptable sureties on federal bonds in the latest *Circular 570* of the United States department of the treasury.

B. The surety bond shall be worded as specified in 20.5.117.1758 NMAC.

C. Under the terms of the bond, the surety will become liable on the bond obligation when the owner or operator fails to perform as guaranteed by the bond. In all cases, the surety's liability is limited to the per-occurrence and annual aggregate penal sums.

D. The owner or operator who uses a surety bond to satisfy the requirements of 20.5.117.1703 NMAC shall establish a standby trust fund when the surety bond is acquired. Under the terms of the bond, all amounts paid by the surety under the bond will be deposited directly into the standby trust fund in accordance with instructions from the secretary under 20.5.117.1722 NMAC. This standby trust fund shall meet the requirements specified in 20.5.117.1713 NMAC.

[20.5.117.1708 NMAC - N, 07/24/2018]

20.5.117.1709 LETTER OF CREDIT:

A. An owner or operator may satisfy the requirements of 20.5.117.1703 NMAC by obtaining an irrevocable standby letter of credit that conforms to the requirements of this section. The issuing institution shall be an entity that has the authority to issue letters of

credit in each state where used and whose letter-of-credit operations are regulated and examined by a federal or state agency.

B. The letter of credit shall be worded as specified in 20.5.117.1759 NMAC.

C. An owner or operator who uses a letter of credit to satisfy the requirements of 20.5.117.1703 NMAC shall also establish a standby trust fund when the letter of credit is acquired. Under the terms of the letter of credit, all amounts paid pursuant to a draft by the secretary will be deposited by the issuing institution directly into the standby trust fund in accordance with instructions from the secretary under 20.5.117.1722 NMAC. This standby trust fund shall meet the requirements specified in 20.5.117.1713 NMAC.

D. The letter of credit shall be irrevocable with a term specified by the issuing institution. The letter of credit shall provide that credit be automatically renewed for the same term as the original term, unless, at least 120 days before the current expiration date, the issuing institution notifies the owner or operator by certified mail of its decision not to renew the letter of credit. Under the terms of the letter of credit, the 120 days will begin on the date when the owner or operator receives the notice, as evidenced by the return receipt.

[20.5.117.1709 NMAC - N, 07/24/2018]

20.5.117.1710 USE OF STATE REQUIRED MECHANISM:

A. An owner or operator may use a state-required financial mechanism to meet the requirements of 20.5.117.1703 NMAC if the secretary determines that the state mechanism is at least equivalent to the financial mechanisms specified in this part.

B. The secretary will evaluate the equivalency of a state-required mechanism principally in terms of: certainty of the availability of funds for taking corrective action or for compensating third parties; the amount of funds that will be made available; and the types of costs covered. The secretary may also consider other factors as is necessary.

C. The state, an owner or operator, or any other interested party may submit to the secretary a written petition requesting that one or more of the state-required mechanisms be considered acceptable for meeting the requirements of 20.5.117.1703 NMAC. The submission shall include copies of the appropriate state statutory and regulatory requirements and shall show the amount of funds for corrective action or for compensating third parties assured by the mechanism(s). The secretary may require the petitioner to submit additional information as is deemed necessary to make this determination.

D. Any petition under this section may be submitted on behalf of all of the state's petroleum underground storage tank owners and operators, petroleum above ground storage tank owners and operators, or both petroleum underground and above ground storage tank owners and operators.

E. The secretary will notify the petitioner of the determination regarding the mechanism's acceptability in lieu of financial mechanisms specified in this part. Pending this determination, the owners and operators using such mechanisms will be deemed to be in compliance with the requirements of 20.5.117.1703 NMAC for storage tanks located in the state for the amounts and types of costs covered by such mechanisms.

[20.5.117.1710 NMAC - N, 07/24/2018]

20.5.117.1711 STATE FUND OR OTHER STATE ASSURANCE:

A. An owner or operator may satisfy the requirements of 20.5.117.1703 NMAC for storage tanks located in New Mexico if the state assures that monies will be available from a state fund or state assurance program to cover costs up to the limits specified in 20.5.117.1703 NMAC or otherwise assures that such costs will be paid if the secretary determines that the state's assurance is at least equivalent to the financial mechanisms specified in this part.

B. The secretary will evaluate the equivalency of a state fund or other state assurance principally in terms of: certainty of the availability of funds for taking corrective action; the amount of funds that will be made available; and the types of costs covered. The secretary may also consider other factors as is necessary.

C. The secretary shall consider a description of the state fund or other state assurance to be supplied as financial assurance, along with a list of the classes of storage tanks to which the funds may be applied. The secretary may also consider additional information as is deemed necessary to make a determination regarding the acceptability of the state fund or other state assurance. Pending the determination by the secretary, the owner or operator of a covered class of storage tanks will be deemed to be in compliance with the requirements of 20.5.117.1703 NMAC for the amounts and types of costs covered by the state fund or other state assurance.

D. Within 60 days after the secretary determines the state's fund or other assurance is acceptable in lieu of other financial mechanisms specified in 20.5.117 NMAC the secretary shall provide to each owner or operator for which it is assuming financial responsibility a letter or certificate describing the nature of the state's assumption of responsibility. The letter or certificate from the secretary shall include, or have attached to it, the following information: the facility's name and address and the amount of funds for corrective action or for compensating third parties that is assured by the state. The owner or operator shall maintain this letter or certificate on file as proof of financial responsibility in accordance with Paragraph (8) of Subsection B of 20.5.117.1721 NMAC.

[20.5.117.1711 NMAC - N, 07/24/2018]

20.5.117.1712 TRUST FUND:

A. An owner or operator may satisfy the requirements of 20.5.117.1703 NMAC by establishing a trust fund that conforms to the requirements of this section. The trustee shall be an entity that has the authority to act as a trustee and whose trust operations are regulated and examined by a federal agency or an agency of the state in which the fund is established.

B. The wording of the trust agreement shall be identical to the wording specified in 20.5.117.1763 NMAC with the addition of the addendum required by Subsection D of 20.5.117.1704 NMAC, and shall be accompanied by a formal certification of acknowledgment as specified in Subsection B of 20.5.117.1763 NMAC.

C. The trust fund, when established, shall be funded for the full required amount of coverage, or funded for part of the required amount of coverage and used in combination with other mechanism(s) that provide the remaining required coverage.

D. If the value of the trust fund is greater than the required amount of coverage, the owner or operator may submit a written request to the secretary for release of the excess.

E. If other financial assurance as specified in this part is substituted for all or part of the trust fund, the owner or operator may submit a written request to the secretary for release of the excess.

F. Within 60 days after receiving a request from the owner or operator for release of funds as specified in Subsection D or E of this section, the secretary will instruct the trustee to release to the owner or operator such funds as the secretary specifies in writing.

[20.5.117.1712 NMAC - N, 07/24/2018]

20.5.117.1713 STANDBY TRUST FUND:

A. An owner or operator using any one of the mechanisms authorized by 20.5.117.1706, 1708, or 1709 NMAC shall establish a standby trust fund when the mechanism is acquired. The trustee of the standby trust fund shall be an entity that has the authority to act as a trustee and whose trust operations are regulated and examined by a federal agency or an agency of the state in which the fund is established.

B. The standby trust agreement shall be worded as specified in 20.5.117.1763 NMAC.

C. The secretary will instruct the trustee to refund the balance of the standby trust fund to the provider of financial assurance if the secretary determines that no additional corrective action costs or third-party liability claims will occur as a result of a release covered by the financial assurance mechanism for which the standby trust fund was established.

D. An owner or operator may establish one trust fund as the depository mechanism for all funds assured in compliance with this rule.

[20.5.117.1713 NMAC - N, 07/24/2018]

20.5.117.1714 LOCAL GOVERNMENT BOND RATING TEST:

A. A general purpose local government owner or operator or local government serving as a guarantor, or a local government owner or operator or guarantor which is not a general purpose local government but which has the legal authority to issue general obligation bonds, may satisfy the requirements of 20.5.117.1703 NMAC by having a currently outstanding issue or issues of general obligation bonds of \$1,000.000 or more, excluding refunded obligations, with a Moody's rating of Aaa, Aa, A, or Baa, or a Standard & Poor's rating of AAA, AA, A, or BBB. Where a local government has multiple outstanding issues, or where a local government's bonds are rated by both Moody's and Standard and Poor's, the lowest rating shall be used to determine eligibility. Bonds that are backed by credit enhancement other than municipal bond insurance may not be considered in determining the amount of applicable bonds outstanding.

B. A local government owner or operator or local government serving as a guarantor that is not a general-purpose local government and also does not have the legal authority to issue general obligation bonds may satisfy the requirements of 20.5.117.1703 NMAC by having both a currently outstanding issue or issues of revenue bonds of \$1,000.000 or more, excluding refunded issues, and a Moody's rating of Aaa, Aa, A, or Baa, or a Standard & Poor's rating of AAA, AA, A, or BBB as the lowest rating for any rated revenue bond issued by the local government. Where bonds are rated by both Moody's and Standard and Poor's, the lower rating for each bond shall be used to determine eligibility. Bonds that are backed by credit enhancement may not be considered in determining the amount of applicable bonds outstanding.

C. The local government owner or operator or guarantor shall maintain a copy of its bond rating published within the last 12 months by Moody's or Standard & Poor's.

D. To demonstrate that it meets the local government bond rating test, the chief financial officer of a local government owner or operator or guarantor described in Subsection A of this section shall sign a letter worded exactly as specified in Subsection A of 20.5.117.1764 NMAC.

E. To demonstrate that it meets the local government bond rating test, the chief financial officer of a local government owner or operator or guarantor described in Subsection B of this section shall sign a letter worded exactly as specified in Subsection B of 20.5.117.1764 NMAC.

F. The secretary may require reports of financial condition at any time from the local government owner or operator, or local government guarantor. If the secretary finds, on

the basis of such reports or other information, that the local government owner or operator, or guarantor, no longer meets the local government bond rating test requirements of this section, the local government owner or operator shall obtain alternative coverage within 30 days after notification of such a finding.

G. If a local government owner or operator using the bond rating test to provide financial assurance finds that it no longer meets the bond rating test requirements, the local government owner or operator shall obtain alternative coverage within 150 days of the change in status.

H. If the local government owner or operator fails to obtain alternate assurance within 150 days of finding that it no longer meets the requirements of the bond rating test or within 30 days of notification by the director of the implementing agency that it no longer meets the requirements of the bond rating test, the owner or operator must notify the director of such failure within 10 days.

[20.5.117.1714 NMAC - N, 07/24/2018]

20.5.117.1715 LOCAL GOVERNMENT FINANCIAL TEST:

A. A local government owner or operator may satisfy the requirements of 20.5.117.1703 NMAC by passing the financial test specified in this section. To be eligible to use the financial test, the local government owner or operator shall have the ability and authority to assess and levy taxes or to freely establish fees and charges. To pass the local government financial test, the owner or operator shall meet the criteria of Paragraphs (2) and (3) of Subsection B of this section based on year-end financial statements for the latest completed fiscal year.

B. The criteria for local government financial test.

(1) The local government owner or operator shall have the following information available, as shown in the year-end financial statements for the latest completed fiscal year.

(a) Total revenues. "Total revenues" is the sum of general fund operating and non-operating revenues including net local taxes, licenses and permits, fines and forfeitures, revenues from use of money and property, charges for services, investment earnings, sales (property, publications, etc.), intergovernmental revenues (restricted and unrestricted), and total revenues from all other governmental funds including enterprise, debt service, capital projects, and special revenues, but excluding revenues to funds held in a trust or agency capacity. For purposes of this test, the calculation of total revenues shall exclude all transfers between funds under the direct control of the local government using the financial test (interfund transfers), liquidation of investments, and issuance of debt.

(b) Total expenditures. "Total expenditures" is the sum of general fund operating and non-operating expenditures including public safety, public utilities, transportation, public works, environmental protection, cultural and recreational, community development, revenue sharing, employee benefits and compensation, office management, planning and zoning, capital projects, interest payments on debt, payments for retirement of debt principal, and total expenditures from all other governmental funds including enterprise, debt service, capital projects, and special revenues. For purposes of this test, the calculation of total expenditures shall exclude all transfers between funds under the direct control of the local government using the financial test (interfund transfers).

(c) Local revenues. "Local revenues" is total revenues as defined in Subparagraph (a) of Paragraph (1) of Subsection B of this section minus the sum of all transfers from other governmental entities, including all monies received from federal, state, or local government sources.

(d) Debt service. "Debt service" is the sum of all interest and principal payments on all long-term credit obligations and all interest-bearing short-term credit obligations. It includes interest and principal payments on general obligation bonds, revenue bonds, notes, mortgages, judgments, and interest-bearing warrants. It excludes payments on non-interest-bearing short-term obligations, interfund obligations, amounts owed in a trust or agency capacity, and advances and contingent loans from other governments.

(e) Total funds. "Total funds" is the sum of cash and investment securities from all funds, including general, enterprise, debt service, capital projects, and special revenue funds, but excluding employee retirement funds, at the end of the local government's financial reporting year. It includes federal securities, federal agency securities, state and local government securities, and other securities such as bonds, notes and mortgages. For purposes of this test, the calculation of total funds shall exclude agency funds, private trust funds, accounts receivable, value of real property, and other non-security assets.

(f) Population is the number of people in the area served by the local government.

(2) The local government's year-end financial statements, if independently audited, cannot include an adverse auditor's opinion or a disclaimer of opinion. The local government cannot have outstanding issues of general obligation or revenue bonds that are rated as less than investment grade.

(3) The local government owner or operator shall have a letter signed by the chief financial officer worded as specified in Subsection C of this section and 20.5.117.1765 NMAC.

C. To demonstrate that it meets the financial test under Subsection B of this section, the chief financial officer of the local government owner or operator, shall sign, within 120 days of the close of each financial reporting year, as defined by the 12-month period for which financial statements used to support the financial test are prepared, a letter worded exactly as specified in 20.5.117.1765 NMAC.

D. If a local government owner or operator using the test to provide financial assurance finds that it no longer meets the requirements of the financial test based on the year-end financial statements, the owner or operator shall obtain alternative coverage within 150 days of the end of the year for which financial statements have been prepared.

E. The secretary may require reports of financial condition at any time from the local government owner or operator. If the secretary finds, on the basis of such reports or other information, that the local government owner or operator no longer meets the financial test requirements of Subsections B and C of this section, the owner or operator shall obtain alternate coverage within 30 days after notification of such a finding.

F. If the local government owner or operator fails to obtain alternate assurance within 150 days of finding that it no longer meets the requirements of the financial test based on the year-end financial statements or within 30 days of notification by the secretary that it no longer meets the requirements of the financial test, the owner or operator shall notify the secretary of such failure within 10 days.

[20.5.117.1715 NMAC - N, 07/24/2018]

20.5.117.1716 LOCAL GOVERNMENT GUARANTEE:

A. A local government owner or operator may satisfy the requirements of 20.5.117.1703 NMAC by obtaining a guarantee that conforms to the requirements of this section. The guarantor shall be either the state or a local government having a "substantial governmental relationship" with the owner and operator and issuing the guarantee as an act incident to that relationship. A local government acting as the guarantor shall do one of the following:

(1) demonstrate that it meets the bond rating test requirement of 20.5.117.1714 NMAC and deliver a copy of the chief financial officer's letter as contained in 20.5.117.1764 NMAC to the local government owner or operator;

(2) demonstrate that it meets the worksheet test requirements of 20.5.117.1715 and 20.5.17.1765 NMAC and deliver a copy of the chief financial officer's letter as contained in 20.5.117.1765 NMAC to the local government owner or operator;
or

(3) demonstrate that it meets the local government fund requirements of Subsection A, B or C of 20.5.117.1717 NMAC and deliver a copy of the chief financial

officer's letter as contained in 20.5.117.1767 NMAC to the local government owner or operator.

B. If the local government guarantor is unable to demonstrate financial assurance under any provision of 20.5.117.1714 or 20.5.117.1715 NMAC or Subsection A, B, or C of 20.5.117.1717 NMAC at the end of the financial reporting year, the guarantor shall send by certified mail, before cancellation or non-renewal of the guarantee, notice to the owner or operator. The guarantee will terminate no less than 120 days after the date the owner or operator receives the notification, as evidenced by the return receipt. The owner or operator shall obtain alternative coverage as specified in Subsection E of 20.5.117.1724 NMAC.

C. The guarantee agreement shall be worded as specified in Subsection A or B of 20.5.117.1766 NMAC, depending on which of the following alternative guarantee arrangements is selected.

(1) If, in the default or incapacity of the owner or operator, the guarantor guarantees to fund a standby trust as directed by the secretary, the guarantee shall be worded as specified in Subsection A of 20.5.117.1766 NMAC.

(2) If, in the default or incapacity of the owner or operator, the guarantor guarantees to make payments as directed by the secretary for taking corrective action or compensating third parties for bodily injury and property damage, the guarantee shall be worded as specified in Subsection B of 20.5.117.1766 NMAC.

D. If the guarantor is the state, the local government guarantee with standby trust shall be worded as specified in Paragraph (1) of Subsection A of 20.5.117.1766 NMAC except that instructions in brackets are to be replaced with relevant information and the brackets deleted. If the guarantor is a local government, the local government guarantee with standby trust shall be worded as specified in Paragraph (2) of Subsection A of 20.5.117.1766 NMAC except that instructions in brackets are to be replaced with relevant information and the brackets deleted.

E. If the guarantor is the state, the local government guarantee without standby trust shall be worded as specified in Paragraph (1) of Subsection B of 20.5.117.1766 NMAC except that instructions in brackets are to be replaced with relevant information and the brackets deleted. If the guarantor is a local government, the local government guarantee without standby trust shall be worded as specified in Paragraph (2) of Subsection B of 20.5.117.1766 NMAC, except that instructions in brackets are to be replaced with relevant information and the brackets deleted.

[20.5.117.1716 NMAC - N, 07/24/2018]

20.5.117.1717 LOCAL GOVERNMENT FUND:

A local government owner or operator may satisfy the requirements of 20.5.117.1703 NMAC by establishing a dedicated fund account that conforms to the requirements of this section. Except as specified in Subsection B of this section, a dedicated fund may not be commingled with other funds or otherwise used in normal operations. A dedicated fund will be considered eligible if it meets the requirements in either Subsection A, B or C of this section.

A. The fund is dedicated by state constitutional provision, or local government statute, charter, ordinance, or order to pay for taking corrective action and for compensating third parties for bodily injury and property damage caused by accidental releases arising from the operation of petroleum underground storage tanks, petroleum above ground storage tanks, or both and is funded for the full amount of coverage required under 20.5.117.1703 NMAC, or funded for part of the required amount of coverage and used in combination with other mechanism(s) that provide the remaining coverage.

B. The fund is dedicated by state constitutional provision, or local government statute, charter, ordinance, or order as a contingency fund for general emergencies, including taking corrective action and compensating third parties for bodily injury and property damage caused by accidental releases arising from the operation of petroleum underground storage tanks, petroleum above ground storage tanks, or both and is funded for five times the full amount of coverage required under 20.5.117.1703 NMAC, or funded for part of the required amount of coverage and used in combination with other mechanism(s) that provide the remaining coverage. If the fund is funded for less than five times the amount of coverage required under 20.5.117.1703 NMAC, the amount of financial responsibility demonstrated by the fund may not exceed one-fifth the amount in the fund.

C. The fund is dedicated by state constitutional provision, or local government statute, charter, ordinance or order to pay for taking corrective action and for compensating third parties for bodily injury and property damage caused by accidental releases arising from the operation of petroleum underground storage tanks. A payment is made to the fund once every year for seven years until the fund is fully-funded. This seven-year period is hereafter referred to as the "pay-in-period." The amount of each payment shall be determined by this formula: $(TF - CF)/Y$, where TF is the total required financial assurance for the owner or operator, CF is the current amount in the fund, and Y is the number of years remaining in the pay-in-period, and

(1) the local government owner or operator has available bonding authority, approved through voter referendum (if such approval is necessary prior to the issuance of bonds), for an amount equal to the difference between the required amount of coverage and the amount held in the dedicated fund. This bonding authority shall be available for taking corrective action and for compensating third parties for bodily injury and property damage caused by accidental releases arising from the operation of petroleum underground storage tanks, petroleum above ground storage tanks, or both; or

(2) the local government owner or operator has a letter signed by the state attorney general stating that the use of the bonding authority will not increase the local government's debt beyond the legal debt ceilings established by the relevant state laws. The letter shall also state that prior voter approval is not necessary before use of the bonding authority.

D. To demonstrate that it meets the requirements of the local government fund, the chief financial officer of the local government owner or operator or guarantor shall sign a letter worded exactly as specified in 20.5.117.1767 NMAC.

[20.5.117.1717 NMAC - N, 07/24/2018]

20.5.117.1718 SUBSTITUTION OF FINANCIAL ASSURANCE MECHANISMS BY OWNER OR OPERATOR:

A. Owners and operators may substitute any alternate financial assurance mechanisms as specified in this part, provided that at all times they maintain an effective financial assurance mechanism or combination of mechanisms that satisfies the requirements of 20.5.117.1703 NMAC.

B. After obtaining alternate financial assurance as specified in this part, an owner or operator may cancel a financial assurance mechanism by providing notice to the provider of financial assurance.

[20.5.117.1718 NMAC - N, 07/24/2018]

20.5.117.1719 CANCELLATION OR NON-RENEWAL BY A PROVIDER OF FINANCIAL ASSURANCE:

A. Except as otherwise provided, a provider of financial assurance may cancel or fail to renew an assurance mechanism by sending a notice of termination by certified mail to the owner or operator.

(1) Termination of a local government guarantee, a guarantee, a surety bond, or a letter of credit may not occur until 120 days after the date on which the owner or operator receives the notice of termination, as evidenced by the return receipt.

(2) Termination of insurance or risk retention group coverage, except for non-payment or misrepresentation by the insured, or state-funded assurance may not occur until 60 days after the date on which the owner or operator receives the notice of termination, as evidenced by the return receipt. Termination for non-payment of premium or misrepresentation by the insured may not occur until a minimum of 10 days after the date on which the owner or operator receives the notice of termination, as evidenced by the return receipt.

B. If a provider of financial responsibility cancels or fails to renew for reasons other than incapacity of the provider as specified in 20.5.117.1724 NMAC, the owner or operator shall obtain alternate coverage as specified in this section within 60 days after receipt of the notice of termination. If the owner or operator fails to obtain alternate coverage within 60 days after receipt of the notice of termination, the owner or operator shall notify the secretary of such failure and submit:

- (1) the name and address of the provider of financial assurance;
- (2) the effective date of termination; and
- (3) the evidence of the financial assurance mechanism subject to the termination maintained in accordance with Subsection B of 20.5.117.1721 NMAC.

[20.5.117.1719 NMAC - N, 07/24/2018]

20.5.117.1720 REPORTING BY OWNER OR OPERATOR:

A. Owners and operators shall submit the appropriate forms listed in Subsection B of 20.5.117.1721 NMAC documenting current evidence of financial responsibility to the secretary:

(1) within 30 days after the owner or operator identifies a release from a storage tank required to be reported under 20.5.102.204 NMAC or 20.5.118 NMAC;

(2) if the owner or operator fails to obtain alternate coverage as required by this part, within 30 days after the owner or operator receives notice of:

(a) commencement of a voluntary or involuntary proceeding under the Bankruptcy Code, 11 U.S.C., naming a provider of financial assurance as a debtor,

(b) suspension or revocation of the authority of a provider of financial assurance to issue a financial assurance mechanism,

(c) failure of a guarantor to meet the requirements of the financial test, or

(d) other incapacity of a provider of financial assurance, except as provided

in Paragraph (3) of this subsection;

(3) if the owner or operator fails to obtain alternate coverage as required by this part, within 60 days after the owner or operator receives notice that a state fund or other state assurance has become incapable of paying for assured corrective action or third-party compensation costs; or

(4) as required by Subsection G of 20.5.117.1705 NMAC and Subsection B of 20.5.117.1719 NMAC.

B. Owners and operators shall certify compliance with the financial responsibility requirements of this part as specified in the new tank registration form when registering a new storage tank under 20.5.102.202 NMAC.

C. The secretary may require an owner or operator to submit evidence of financial assurance as described in Subsection B of 20.5.117.1721 NMAC or other information relevant to compliance with this part at any time.

[20.5.117.1720 NMAC - N, 07/24/2018]

20.5.117.1721 RECORD KEEPING:

A. Owners and operators shall maintain evidence of all financial assurance mechanisms used to demonstrate financial responsibility under this part for a storage tank until released from the requirements of this part under 20.5.117.1723 NMAC. An owner or operator shall maintain such evidence at the storage tank site or the owner's or operator's place of business. Records maintained off-site shall be made available upon request of the department.

B. Owners and operators shall maintain the following types of evidence of financial responsibility:

(1) An owner or operator using an assurance mechanism specified in 20.5.117.1705 NMAC through 20.5.117.1710 NMAC or 20.5.117.1712 NMAC or 20.5.117.1714 through 20.5.117.1717 NMAC shall maintain a copy of the instrument worded as specified in this part.

(2) An owner or operator using a financial test or guarantee, a local government financial test a local government guarantee supported by the local government financial test shall maintain a copy of the chief financial officer's letter based on year-end financial statements for the most recent completed financial reporting year. Such evidence shall be on file no later than 120 days after the close of the financial reporting year.

(3) An owner or operator using a guarantee, surety bond, or letter of credit shall maintain a copy of the signed standby trust fund agreement and copies of any amendments to the agreement.

(4) A local government owner or operator using a local government guarantee under Subsection D of 20.5.117.1716 NMAC shall maintain a copy of the signed standby trust fund agreement and copies of any amendments to the agreement.

(5) A local government owner or operator using the local government bond rating test under 20.5.117.1714 NMAC shall maintain a copy of its bond rating published within the last 12 months by Moody's or Standard & Poor's.

(6) A local government owner or operator using the local government guarantee under 20.5.117.1716 NMAC, where the guarantor's demonstration of financial responsibility relies on the bond rating test under 20.5.117.1714 NMAC shall maintain a copy of the guarantor's bond rating published within the last 12 months by Moody's or Standard & Poor's.

(7) An owner or operator using an insurance policy or risk retention group coverage shall maintain a copy of the signed insurance policy or risk retention group coverage policy, with the endorsement or certificate of insurance and any amendments to the agreements.

(8) An owner or operator covered by a state fund or other state assurance shall maintain on file a copy of any evidence of coverage supplied by or required by the state under Subsection D of 20.5.117.1711 NMAC.

(9) An owner or operator using a local government fund under 20.5.117.1717 NMAC shall maintain the following documents:

(a) a copy of the state constitutional provision or local government statute charter, ordinance, or order dedicating the fund, and

(b) year-end financial statements for the most recent completed financial reporting year showing the amount in the fund. If the fund is established under Subsection A of 20.5.117.1717 NMAC using incremental funding backed by bonding authority, the financial statements shall show the previous year's balance the amount of funding during the year, and the closing balance in the fund.

(c) If the fund is established under Subsection A of 20.5.117.1717 NMAC using incremental funding backed by bonding authority, the owner or operator shall also maintain documentation of the required bonding authority, including either the results of a voter referendum under Paragraph (1) of Subsection C of 20.5.117.1717 NMAC or attestation by the state attorney general as specified under Paragraph (2) of Subsection C of 20.5.117.1717 NMAC.

(10) A local government owner or operator using the local government guarantee supported by the local government fund shall maintain a copy of the guarantor's year-end financial statements for the most recent completed financial reporting year showing the amount of the fund.

(11) Owners and operators using an assurance mechanism specified in 20.5.117.1705 through 20.5.117.1717 NMAC shall maintain an updated copy of a certification of financial responsibility worded as specified in 20.5.117.1771 NMAC. The

owner or operator shall update this certification whenever the financial assurance mechanism(s) used to demonstrate financial responsibility change(s).

[20.5.117.1721 NMAC - N, 07/24/2018]

20.5.117.1722 DRAWING ON FINANCIAL ASSURANCE MECHANISMS:

A. The secretary shall require the guarantor, surety, or institution issuing a letter of credit to place the amount of funds stipulated by the secretary, up to the limit of funds provided by the financial assurance mechanism, into the standby trust under certain conditions:

(1) The owner or operator fails to establish alternate financial assurance within 60 days after receiving notice of cancellation of the guarantee, surety bond, letter of credit, or, as applicable, other financial assurance mechanism; and the secretary determines or suspects that a release from a storage tank covered by the mechanism has occurred and so notifies the owner or operator or the owner or operator has notified the secretary pursuant to 20.5.102 or 20.5.118 NMAC of a release from a storage tank covered by the mechanism; or

(2) The conditions of Paragraph (1) or Paragraph (2) of Subsection B of this section are satisfied.

B. The secretary may draw on a standby trust fund when:

(1) the secretary makes a final determination that a release has occurred and immediate or long-term corrective action for the release is needed, and the owner or operator, after appropriate notice and opportunity to comply, has not conducted corrective action as required under 20.5.119 NMAC; or

(2) the secretary has received one of the following:

(a) certification from the owner or operator and the third-party liability claimant(s) and from attorneys representing the owner or operator and the third-party liability claimant(s) that a third-party liability claim should be paid, worded as specified in 20.5.117.1772 NMAC; or

(b) a valid final court order establishing a judgment against the owner or operator for bodily injury or property damage caused by an accidental release from a storage tank covered by financial assurance under this part and the secretary determines that the owner or operator has not satisfied the judgment.

C. If the secretary determines that the amount of corrective action costs and third-party liability claims eligible for payment under Subsection B of this section may exceed the balance of the standby trust fund and the obligation of the provider of financial assurance, the first priority for payment shall be corrective action costs necessary to

protect human health and the environment. The secretary shall pay third-party liability claims in the order in which the secretary receives certifications under Subparagraph (a) of Paragraph (2) and valid court orders under Subparagraph (b) of Paragraph (2) of Subsection B of this section.

D. A governmental entity acting as guarantor under Subsection E of 20.5.117.1716 NMAC shall make payments as directed by the secretary under the circumstances described in Subsections A, B and C of this section.

[20.5.117.1722 NMAC - N, 07/24/2018]

20.5.117.1723 RELEASE FROM THE REQUIREMENTS:

An owner or operator is no longer required to maintain financial responsibility under this part for a storage tank after the tank has been permanently closed or undergoes a change in service or, if corrective action is required, after corrective action has been completed and the tank has been permanently closed or undergoes a change in service as required by 20.5.115 NMAC.

[20.5.117.1723 NMAC - N, 07/24/2018]

20.5.117.1724 BANKRUPTCY OR OTHER INCAPACITY OF OWNER OR OPERATOR OR PROVIDER OF FINANCIAL ASSURANCE:

A. Within 10 days after commencement of a voluntary or involuntary proceeding under the Bankruptcy Code, 11 U.S.C., naming an owner or operator as debtor, the owner or operator shall notify the secretary by certified mail of such commencement and submit the appropriate forms listed in Subsection B of 20.5.117.1721 NMAC documenting current financial responsibility.

B. Within 10 days after commencement of a voluntary or involuntary proceeding under the Bankruptcy Code, 11 U.S.C., naming a guarantor providing financial assurance as debtor, such guarantor shall notify the owner or operator by certified mail of such commencement as required under the terms of the guarantee specified in 20.5.117.1706 NMAC.

C. Within 10 days after commencement of a voluntary or involuntary proceeding under the Bankruptcy Code, 11 U.S.C., naming a local government owner or operator as debtor, the local government owner or operator shall notify the secretary by certified mail of such commencement and submit the appropriate forms listed in Subsection B of 20.5.117.1721 NMAC documenting current financial responsibility.

D. Within 10 days after commencement of a voluntary or involuntary proceeding under the Bankruptcy Code, 11 U.S.C., naming a guarantor providing a local government financial assurance as debtor, such guarantor shall notify the local

government owner or operator by certified mail of such commencement as required under the terms of the guarantee specified in 20.5.117.1716 NMAC.

E. An owner or operator who obtains financial assurance by a mechanism other than the financial test of self-insurance will be deemed to be without the required financial assurance in the event of a bankruptcy or incapacity of its provider of financial assurance, or a suspension or revocation of the authority of the provider of financial assurance to issue a guarantee, insurance policy, risk retention group coverage policy, surety bond, letter of credit, or state-required mechanism. The owner or operator shall obtain alternate financial assurance as specified in this part within 30 days after receiving notice of such an event. If the owner or operator does not obtain alternate coverage within 30 days after such notification, he shall notify the secretary.

F. Within 60 days after receipt of notification that a state fund or other state assurance has become incapable of paying for assured corrective action or third-party compensation costs, the owner or operator shall obtain alternate financial assurance.

[20.5.117.1724 NMAC - N, 07/24/2018]

20.5.117.1725 REPLENISHMENT OF GUARANTEES, LETTERS OF CREDIT, OR SURETY BONDS:

A. If at any time after a standby trust is funded upon the instruction of the secretary with funds drawn from a guarantee, local government guarantee with standby trust, letter of credit, or surety bond, and the amount in the standby trust is reduced below the full amount of coverage required, the owner or operator shall by the anniversary date of the financial mechanism from which the funds were drawn:

(1) replenish the value of financial assurance to equal the full amount of coverage required; or

(2) acquire another financial assurance mechanism for the amount by which funds in the standby trust have been reduced.

B. For purposes of this section, the full amount of coverage required is the amount of coverage to be provided by 20.5.117.1703 NMAC. If a combination of mechanisms was used to provide the assurance funds which were drawn upon, replenishment shall occur by the earliest anniversary date among the mechanisms.

[20.5.117.1725 NMAC - N, 07/24/2018]

20.5.117.1726-20.5.117.1754 [RESERVED]

20.5.117.1755 FORM DOCUMENTS FOR FINANCIAL TEST OF SELF INSURANCE:

To demonstrate that it meets the financial test under Subsection B or C of 20.5.117.1705 NMAC, the chief financial officer of the owner or operator, or guarantor, shall sign, within 120 days of the close of each financial reporting year, as defined by the 12-month period for which financial statements used to support the financial test are prepared, a letter worded exactly as follows, except that the instructions in brackets are to be replaced by the relevant information and the brackets deleted:

LETTER FROM CHIEF FINANCIAL OFFICER

I am the chief financial officer of [insert: name and address of the owner or operator, or guarantor]. This letter is in support of the use of [insert: "the financial test of self-insurance," or "guarantee"] to demonstrate financial responsibility for [insert: "taking corrective action" and/or "compensating third parties for bodily injury and property damage"] caused by [insert: "sudden accidental releases" or "non-sudden accidental releases" or "accidental releases"] in the amount of at least [insert: dollar amount] per occurrence and [insert: dollar amount] annual tank assured by this financial test by the tank identification number provided in the notification submitted pursuant to 20.5.102.202 NMAC. If this financial test is used to assure both underground and above ground storage tanks, identify each tank as underground or above ground and list the tank identification number provided in the notification submitted pursuant to 20.5.102.202 NMAC.]

A [insert: "financial test," and/or "guarantee"] is also used by this [insert: "owner or operator," or aggregate arising from operating (an) underground storage tank(s) and at least [insert dollar amount] per occurrence and [insert: dollar amount] annual aggregate arising from operating (an) above ground storage tank(s).

Storage tanks at the following facilities are assured by this financial test by this [insert: "owner or operator," and/or "guarantor"]: [List for each facility: the name and address of the facility where tanks assured by this financial test are located, and whether tanks are assured by this financial test or another financial test under 20.5.117 New Mexico Administrative Code (NMAC). If separate mechanisms or combinations of mechanisms are being used to assure any of the tanks at this facility, list each

"guarantor"] to demonstrate evidence of financial responsibility in the following amounts under other EPA regulations or state programs authorized by EPA under 40 CFR Parts 271 and 145:

EPA Regulations	Amount
Closure (264.143 and 265.143)	\$_____
Post-Closure Care (264.145 and 265.145)	\$_____

Liability Coverage (264.147 and 265.147)	\$ _____
Corrective Action (264.101(b))	\$ _____
Plugging and Abandonment (144.63)	\$ _____
Closure	\$ _____
Post-Closure Care	\$ _____
Liability Coverage	\$ _____
Corrective Action	\$ _____
Plugging and Abandonment	\$ _____
Total	\$ _____

This [insert: "owner or operator," or "guarantor"] has not received an adverse opinion, a disclaimer of opinion, or a "going concern" qualification from an independent auditor on his financial statements for the latest completed fiscal year.

[Fill in the information for Alternative I if the criteria of Subsection B of 20.5.117.1705 NMAC are being used to demonstrate compliance with the financial test requirements. Fill in the information for Alternative II if the criteria of Subsection C of 20.5.117.1705 NMAC are being used to demonstrate compliance with the financial test requirements.]

Alternative I

1. Amount of annual aggregate coverage for storage tanks being assured by a financial test, and/or guarantee \$ _____

2. Amount of corrective action, closure and post-closure care costs, liability coverage, and plugging and abandonment costs covered by a financial test, and/or guarantee \$ _____

3. Sum of lines 1 and 2 \$ _____

4. Total tangible assets \$ _____

5. Total liabilities [if any of the amount reported on line 3 is included in total liabilities, you may deduct that amount from this line and add that amount to line 6] \$_____

6. Tangible net worth [subtract line 5 from line 4] \$_____

Yes No

7. Is line 6 at least \$10,000,000? _____

8. Is line 6 at least 10 times line 3? _____

9. Have financial statements for the latest fiscal year been filed with the Securities and Exchange Commission? _____

10. Have financial statements for the latest fiscal year been filed with the Energy Information Administration? _____

11. Have financial statements for the latest fiscal year been filed with the Rural Utilities Service? _____

12. Has financial information been provided to Dun and Bradstreet, and has Dun and Bradstreet provided a financial strength rating of 4A or 5A? [Answer "Yes" only if both criteria have been met.] _____

Alternative II

1. Amount of annual aggregate coverage for storage tanks being assured by a financial test, and/or guarantee \$_____

2. Amount of corrective action, closure and post-closure care costs, liability coverage, and plugging and abandonment costs covered by a financial test, and/or guarantee			\$_____
3. Sum of lines 1 and 2			\$_____
4. Total tangible assets			\$_____
5. Total liabilities [if any of the amount reported on line 3 is included in total liabilities, you may deduct that amount from this line and add that amount to line 6]			\$_____
6. Tangible net worth [subtract line 5 from line 4]			\$_____
7. Total assets in the U.S. [required only if less than 90 percent of assets are located in the U.S.]			\$_____
	Yes	No	
8. Is line 6 at least \$10,000,000?	___	___	
9. Is line 6 at least 6 times line 3?	___	___	
10. Are at least 90 percent of assets located in the U.S.? ___		___	
[If "No," complete line 11.]			
11. Is line 7 at least 6 times line 3? ___			___
[Fill in either lines 12-15 or lines 16-18:]			
12. Current assets			\$_____
13. Current liabilities			\$_____
14. Net working capital [subtract line 13 from line 12]			\$_____
	Yes	No	

15. Is line 14 at least 6 times line 3? _____

16. Current bond rating of most recent bond issue _____

17. Name of rating service

18. Date of maturity of bond

Yes No

19. Have financial statements for the latest fiscal year
been filed with the SEC, the Energy Information
Administration, or the Rural Utilities Service? _____ _____

[If "No," please attach a report from an independent certified
public accountant certifying that there are no material
differences between the data as reported in lines 4-18 above
and the financial statements for the latest fiscal year.]

For both Alternative I and Alternative II complete the certification with this statement:

I hereby certify that the wording of this letter is identical to the wording
specified in 20.5.117.1755 NMAC as such regulations were constituted on the date
shown immediately below.

[Name]

[Title]

[Date]

[20.5.117.1755 NMAC - N, 07/24/2018]

20.5.117.1756 FORM DOCUMENT FOR GUARANTEE:

The guarantee shall be worded as follows, except that instructions in brackets are to be replaced with the relevant information and the brackets deleted:

GUARANTEE

Guarantee made this [date] by [name of guaranteeing entity], a business entity organized under the laws of the state of [name of state], herein referred to as guarantor, to the New Mexico Environment Department and to any and all third parties, and obligees, on behalf of [owner or operator] of [business address].

Recitals

(1) Guarantor meets or exceeds the financial test criteria of Subsection B, C or D of 20.5.117.1705 New Mexico Administrative Code (NMAC) and agrees to comply with the requirements for guarantors as specified in Subsection B of 20.5.117.1706 NMAC.

(2) [Owner or operator] owns or operates the following storage tank(s) covered by this guarantee: [List the number of tanks at each facility and the name(s) and address(es) of the facility(ies) where the tanks are located. If more than one instrument is used to assure different tanks at any one facility, for each tank covered by this instrument, list the tank identification number provided in the notification submitted pursuant to 20.5.102.202 NMAC and the name and address of the facility.] This guarantee satisfies 20.5.117.1703 NMAC requirements for assuring funding for [insert: "taking corrective action" and/or "compensating third parties for bodily injury and property damage caused by" either "sudden accidental releases" or "non-sudden accidental releases" or "accidental releases" [if coverage is different for different tanks or locations, indicate the type of coverage applicable to each tank or location] arising from operating the above-identified underground storage tank(s) in the amount of [insert dollar amount] per occurrence and [insert dollar amount] annual aggregate and at least [insert dollar amount] per occurrence and [insert: dollar amount] annual aggregate arising from operating the above-identified above ground storage tank(s).

(3) [Insert appropriate phrase: "On behalf of our subsidiary" (if guarantor is corporate parent of the owner or operator); "On behalf of our affiliate" (if guarantor is a related firm of the owner or operator); or "Incident to our business relationship with" (if guarantor is providing the guarantee as an incident to a substantial business relationship with owner or operator)] [owner or operator], guarantor guarantees to the department and to any and all third parties that:

In the event that [owner or operator] fails to provide alternate coverage within 60 days after receipt of a notice of cancellation of this guarantee and the secretary has determined or suspects that a release has occurred at a storage tank covered by this guarantee, the guarantor, upon instructions from the secretary of the Environment Department, shall fund a standby trust fund in accordance with the

provisions of 20.5.117.1713 NMAC, in an amount not to exceed the coverage limits specified above.

In the event that the secretary determines that [owner or operator] has failed to perform corrective action for releases arising out of the operation of the above-identified tank(s) in accordance with 20.5.119 NMAC, the guarantor upon written instructions from the secretary shall fund a standby trust in accordance with the provisions of 20.5.117.1713 NMAC in an amount not to exceed the coverage limits specified above.

If [owner or operator] fails to satisfy a judgment or award based on a determination of liability for bodily injury or property damage to third parties caused by ["sudden" and/or "non-sudden"] accidental releases arising from the operation of the above-identified tank(s), or fails to pay an amount agreed to in settlement of a claim arising from or alleged to arise from such injury or damage, the guarantor, upon written instructions from the secretary, shall fund a standby trust in accordance with the provisions of 20.5.117.1713 NMAC to satisfy such judgment(s), award(s), or settlement agreement(s) up to the limits of coverage specified above.

(4) Guarantor agrees that if, at the end of any fiscal year before cancellation of this guarantee, the guarantor fails to meet the financial test criteria of Subsections B, C and D of 20.5.117.1705 NMAC, guarantor shall send within 120 days of such failure, by certified mail, notice to [owner or operator]. The guarantee will terminate 120 days from the date of receipt of the notice by [owner or operator], as evidenced by the return receipt.

(5) Guarantor agrees to notify [owner or operator] by certified mail of a voluntary or involuntary proceeding the Bankruptcy Code, 11 U.S.C., naming guarantor as debtor, within 10 days after commencement of the proceeding.

(6) Guarantor agrees to remain bound under this guarantee notwithstanding any modification or alteration of any obligation of [owner or operator] pursuant to 20.5 NMAC, the New Mexico Petroleum Storage Tank Regulations.

(7) Guarantor agrees to remain bound under this guarantee for so long as [owner or operator] shall comply with the applicable financial responsibility requirements of 20.5.119 NMAC for the above-identified tank(s), except that guarantor may cancel this guarantee by sending notice by certified mail to [owner or operator], such cancellation to become effective no earlier than 120 days after receipt of such notice by [owner or operator], as evidenced by the return receipt.

(8) The guarantor's obligation does not apply to any of the following:

(a) Any obligation of [insert owner or operator] under a workers' compensation, disability benefits, or unemployment compensation law or other similar law;

(b) Bodily injury to an employee of [insert owner or operator] arising from, and in the course of, employment by [insert owner or operator];

(c) Bodily injury or property damage arising from the ownership, maintenance, use, or entrustment to others of any aircraft, motor vehicle, or watercraft;

(d) Property damage to any property owned, rented, loaned to, in the care, custody, or control of, or occupied by [insert owner or operator] that is not the direct result of a release from a petroleum storage tank;

(e) Bodily damage or property damage for which [insert owner or operator] is obligated to pay damages by reason of the assumption of liability in a contract or agreement other than a contract or agreement entered into to meet the requirements of 20.5.117.1703 NMAC.

(9) Guarantor expressly waives notice of acceptance of this guarantee by [the implementing agency], by any or all third parties, or by [owner or operator].

I hereby certify that the wording of this guarantee is identical to the wording specified in 20.5.117.1756 NMAC, as such regulations were constituted on the effective date shown immediately below.

[20.5.117.1756 NMAC - N, 07/24/2018]

20.5.117.1757 FORM DOCUMENTS FOR INSURANCE AND RISK RETENTION GROUP COVERAGE:

To use insurance to satisfy requirements of 20.5.117.1703 NMAC, as described in 20.5.117.1707 NMAC, each insurance policy shall be amended by an endorsement

worded as specified in Subsection A of this section or evidenced by a certificate of insurance worded as specified in Subsection B of this section, except that instructions in brackets shall be replaced with the relevant information and the brackets deleted:

A. Required wording for endorsement.

ENDORSEMENT

Name: [name of each covered location]

Address: [address of each covered location]

Policy Number:

Period of Coverage: [current policy period]

Name of [Insurer or Risk Retention Group]:

Address of [Insurer or Risk Retention Group]:

Name of Insured:

Address of Insured:

Endorsement

1. This endorsement certifies that the policy to which the endorsement is attached provides liability insurance covering the following storage tanks:

[List the number of tanks at each facility and the name(s) and address(es) of the facility(ies) where the tanks are located. If this instrument is used to assure both underground and above ground storage tanks, identify each storage tank as underground or above ground and list the tank identification number provided in the notification submitted pursuant to 20.5.102.202 New Mexico Administrative Code (NMAC). If more than one instrument is used to assure different tanks at any one facility, for each tank covered by this instrument, list the tank identification number provided in the notification submitted pursuant to 20.5.102.202 NMAC and the name and address of the facility.]

For [insert: "taking corrective action" and/or "compensating third parties for bodily injury and property damage caused by" either "sudden accidental releases" or "non-sudden accidental releases" or "accidental release"; in accordance with and subject to the limits of liability, exclusions, conditions, and other terms of the policy; if coverage is different for different tanks or locations, indicate the type of coverage

applicable to each tank or location] arising from operating the storage tank(s) identified above.

The limits of liability are [insert the dollar amount of the "each occurrence" and "annual aggregate" limits of the Insurer's or Group's liability; if the amount of coverage is different for different types of coverage or for different storage tanks or locations, indicate the amount of coverage for each type of coverage and/or for each storage tank or location], exclusive of legal defense costs, which are subject to a separate limit under the policy. This coverage is provided under [policy number]. The effective date of said policy is [date].

2. The insurance afforded with respect to such occurrences is subject to all of the terms and conditions of the policy; provided, however, that any provisions inconsistent with Subsections a through e of this Paragraph 2 are hereby amended to conform with Subsections a through e:

a. Bankruptcy or insolvency of the insured shall not relieve the ["Insurer" or "Group"] of its obligations under the policy to which this endorsement is attached.

b. The ["Insurer" or "Group"] is liable for the payment of amounts within any deductible applicable to the policy to the provider of corrective action or a damaged third-party, with a right of reimbursement by the insured for any such payment made by the ["Insurer" or "Group"]. This provision does not apply with respect to that amount of any deductible for which coverage is demonstrated under another mechanism or combination of mechanisms as specified in 20.5.117.1705 through 20.5.117.1712 NMAC and 20.5.117.1714 NMAC through 20.5.117.1717 NMAC.

c. Whenever requested by the Secretary of the Environment Department, ["Insurer" or "Group"] agrees to furnish to the Secretary a signed duplicate original of the policy and endorsements.

d. Cancellation or any other termination of the insurance by the ["Insurer" or "Group"], except for non-payment of premium or misrepresentation by the insured, will be effective only upon written notice and only after the expiration of 60 days after a copy of such written notice is received by the insured. Cancellation for non-payment of premium or misrepresentation by the insured will be effective only upon written notice and only after expiration of a minimum of 10 days after a copy of such written notice is received by the insured.

[Insert for claims-made policies:

e. The insurance covers claims otherwise covered by the policy that are reported to the ["Insurer" or "Group"] within six months of the effective date of cancellation or non-renewal of the policy except where the new or renewed policy has the same retroactive date or a retroactive date earlier than that of the prior policy, and which arise out of any covered occurrence that commenced after the

policy retroactive date, if applicable, and prior to such policy renewal or termination date. Claims reported during such extended reporting period are subject to the terms, conditions, limits, including limits of liability, and exclusions of the policy.]

I hereby certify that the wording of this instrument is identical to the wording in Paragraph (1) of Subsection A of 20.5.117.1757 NMAC and that the ["Insurer" or "Group"] is ["licensed to transact the business of insurance or eligible to provide insurance as an excess or surplus lines insurer in one or more states"].

Certification

1. [Name of Insurer or Risk Retention Group], [the "Insurer" or "Group"], as identified above, hereby certifies that it has issued liability insurance covering the following storage tank(s):

[List the number of tanks at each facility and the name(s) and address(es) of the facility(ies) where the tanks are located. If this instrument is used to assure both underground and above ground storage tanks, identify each storage tank as above ground or underground and list the tank identification number provided in the notification submitted pursuant to 20.5.102.202 New Mexico Administrative Code (NMAC). If more than one instrument is used to assure different tanks at any one facility, for each tank covered by this instrument, list the tank identification number provided in the notification submitted pursuant to 20.5.102.202 NMAC and the name and address of the facility.]

For [insert: "taking corrective action" and/or "compensating third parties for bodily injury and property damage caused by" either "sudden accidental releases" or "non-sudden accidental releases" or "accidental releases"; in accordance with and subject to the limits of liability, exclusions, conditions, and other terms of the policy; if coverage is different for different tanks or locations, indicate the type of coverage applicable to each tank or location] arising from operating the storage tank(s) identified above.

The limits of liability are [insert the dollar amount of the "each occurrence" and "annual aggregate" limits of the Insurer's or Group's liability; if the amount of coverage is different for different types of coverage or for different storage tanks or locations, indicate the amount of coverage for each type of coverage and/or for each storage tank or location], exclusive of legal defense costs, which are subject to a separate limit under the policy. This coverage is provided under [policy number]. The effective date of said policy is [date].

2. The ["Insurer" or "Group"] further certifies the following with respect to the insurance described in Paragraph 1:

a. Bankruptcy or insolvency of the insured shall not relieve the ["Insurer" or "Group"] of its obligations under the policy to which this certificate applies.

b. The ["Insurer" or "Group"] is liable for the payment of amounts within any deductible applicable to the policy to the provider of corrective action or a damaged third-party, with a right of reimbursement by the insured for any such payment made by the ["Insurer" or "Group"]. This provision does not apply with respect to that amount of any deductible for which coverage is demonstrated under another mechanism or combination of mechanisms as specified in 20.5.117.1705 through 20.5.117.1712 NMAC and 20.5.117.1714 NMAC through 20.5.117.1717 NMAC.

c. Whenever requested by the Secretary of the Environment Department, the ["Insurer" or "Group"] agrees to furnish to the Secretary a signed duplicate original of the policy and all endorsements.

d. Cancellation or any other termination of the insurance by the ["Insurer" or "Group"], except for non-payment of premium or misrepresentation by the insured,

will be effective only upon written notice and only after the expiration of 60 days after a copy of such written notice is received by the insured. Cancellation for non-payment of premium or misrepresentation by the insured will be effective only upon written notice and only after expiration of a minimum of 10 days after a copy of such written notice is received by the insured.

[Insert for claims-made policies:

e. The insurance covers claims otherwise covered by the policy that are reported to the ["Insurer" or "Group"] within six months of the effective date of cancellation or non-renewal of the policy except where the new or renewed policy has the same retroactive date or a retroactive date earlier than that of the prior policy, and which arise out of any covered occurrence that commenced after the policy retroactive date, if applicable, and prior to such policy renewal or termination date. Claims reported during such extended reporting period are subject to the terms, conditions, limits, including limits of liability, and exclusions of the policy.]

I hereby certify that the wording of this instrument is identical to the wording in Subsection B of 20.5.117.1757 NMAC and that the ["Insurer" or "Group"] is ["licensed to transact the business of insurance, or eligible to provide insurance as an excess or surplus lines insurer, in one or more states"].

[20.5.117.1757 NMAC - N, 07/24/2018]

20.5.117.1758 FORM DOCUMENT FOR SURETY BOND:

To satisfy the requirements of 20.5.117.1708 NMAC, the surety bond shall be worded as follows, except that instructions in brackets shall be replaced with the relevant information and the brackets deleted:

PERFORMANCE BOND

Date bond executed:

Period of coverage:

Principal: [legal name and business address of owner or operator]

Type of organization: [insert "individual," "joint venture," "partnership," or "corporation"]

State of incorporation (if applicable):

Surety(ies): [name(s) and business address(es)]

Scope of Coverage: [List the number of tanks at each facility and the name(s) and address(es) of the facility(ies) where the tanks are located. If this instrument is used to assure both underground and above ground storage tanks, identify each storage tank as underground or above ground and list the tank identification number provided in the notification submitted pursuant to 20.5.102.202 New Mexico Administrative Code (NMAC). If more than one instrument is used to assure different tanks at any one facility, for each tank covered by this instrument, list the tank identification number provided in the notification submitted pursuant to 20.5.102.202 NMAC, and the name and address of the facility. List the coverage guaranteed by the bond: "taking corrective action" and/or "compensating third parties for bodily injury and property damage caused by" either "sudden accidental releases" or "non-sudden accidental releases" or "accidental releases" "arising from operating the storage tank"].

Penal sums of bond:

Per occurrence \$ _____

Annual aggregate \$ _____

Surety's bond number: _____

Know All Persons by These Presents, that we, the Principal and Surety(ies), hereto are firmly bound to the New Mexico Environment Department, in the above penal sums for the payment of which we bind ourselves, our heirs, executors, administrators, successors, and assigns jointly and severally; provided that, where the Surety(ies) are corporations acting as co-sureties, we, the Sureties, bind ourselves in such sums jointly and severally only for the purpose of allowing a joint action or actions against any or all of us, and for all other purposes each Surety binds itself, jointly and severally with the Principal, for the payment of such sums only as is set forth opposite the name of such Surety, but if no limit of liability is indicated, the limit of liability shall be the full amount of the penal sums.

Whereas said Principal is required under Subtitle I of the federal Solid Waste Disposal Act, as amended, and the New Mexico Hazardous Waste Act, as amended, to provide financial assurance for [insert: "taking corrective action" and/or "compensating third parties for bodily injury and property damage caused by" either

"sudden accidental releases" or "non-sudden accidental releases" or "accidental releases"; if coverage is different for different tanks or locations, indicate the type of coverage applicable to each tank or location] arising from operating the storage tanks identified above, and

Whereas said Principal shall establish a standby trust fund as is required when a surety bond is used to provide such financial assurance;

Now, therefore, the conditions of the obligation are such that if the Principal shall faithfully ["take corrective action, in accordance with 20.5.119 NMAC and the instructions of the Secretary of the New Mexico Environment Department for," and/or "compensate injured third parties for bodily injury and property damage caused by" either "sudden accidental releases" or "non-sudden accidental releases" or "accidental releases"] arising from operating the tank(s) identified above, or if the Principal shall provide alternate financial assurance, as specified in 20.5.117 NMAC, within 120 days after the date the notice of cancellation is received by the Principal from the Surety(ies), then this obligation shall be null and void; otherwise it is to remain in full force and effect.

Such obligation does not apply to any of the following:

(a) Any obligation of [insert owner or operator] under a workers' compensation, disability benefits, or unemployment compensation law or other similar law;

(b) Bodily injury to an employee of [insert owner or operator] arising from, and in the course of, employment by [insert owner or operator];

(c) Bodily injury or property damage arising from the ownership, maintenance, use, or entrustment to others of any aircraft, motor vehicle, or watercraft;

(d) Property damage to any property owned, rented, loaned to, in the care, custody, or control of, or occupied by [insert owner or operator] that is not the direct result of a release from a petroleum storage tank;

(e) Bodily injury or property damage for which [insert owner or operator] is obligated to pay damages by reason of the assumption of liability in a contract or agreement other than a contract or agreement entered into to meet the requirements of 20.5.117.1703 NMAC.

The Surety(ies) shall become liable on this bond obligation only when the Principal has failed to fulfill the conditions described above.

Upon notification by the Secretary that the Principal has failed to ["take corrective action, in accordance with 20.5.119 NMAC and the Secretary's instructions," and/or "compensate injured third parties"] as guaranteed by this bond,

the Surety(ies) shall either perform ["corrective action in accordance with 20.5.119 NMAC and the Secretary's instructions," and/or "third-party liability compensation"] or place funds in an amount up to the annual aggregate penal sum into the standby trust fund as directed by the Secretary under 20.5.117.1713 NMAC.

Upon notification by the Secretary that the Principal has failed to provide alternate financial assurance within 60 days after the date the notice of cancellation is received by the Principal from the Surety(ies) and that the Secretary has determined or suspects that a release has occurred, the Surety(ies) shall place funds in an amount not exceeding the annual aggregate penal sum into the standby trust fund as directed by the Secretary under 20.5.117.1713 NMAC.

The Surety(ies) hereby waive(s) notification of amendments to applicable laws, statutes, rules, and regulations and agrees that no such amendment shall in any way alleviate its (their) obligation on this bond.

The liability of the Surety(ies) shall not be discharged by any payment or succession of payments hereunder, unless and until such payment or payments shall amount in the annual aggregate to the penal sum shown on the face of the bond, but in no event shall the obligation of the Surety(ies) hereunder exceed the amount of said annual aggregate penal sum.

The Surety(ies) may cancel the bond by sending notice of cancellation by certified mail to the Principal, provided, however, that cancellation shall not occur during the 120 days beginning on the date of receipt of the notice of cancellation by the Principal, as evidenced by the return receipt.

The Principal may terminate this bond by sending written notice to the Surety(ies).

In Witness Whereof, the Principal and Surety(ies) have executed this Bond and have affixed their seals on the date set forth above.

The persons whose signatures appear below hereby certify that they are authorized to execute this surety bond on behalf of the Principal and Surety(ies) and that the wording of this surety bond is identical to the wording specified in 20.5.117.1758 NMAC, as such regulations were constituted on the date this bond was executed.

20.5.117.1759 FORM DOCUMENT FOR LETTER OF CREDIT:

To satisfy the requirements of 20.5.117.1709 NMAC, the letter of credit shall be worded as follows, except that instructions in brackets are to be replaced with the relevant information and the brackets deleted:

IRREVOCABLE STANDBY LETTER OF CREDIT

[Name and address of issuing institution]

[Name and address of the Secretary of the New Mexico Environment Department]

Dear Sir or Madam:

We hereby establish our Irrevocable Standby Letter of Credit No. in your favor, at the request and for the account of [owner or operator name] of [address] up to the aggregate amount of [in words] U.S. dollars (\$[insert dollar amount]), available upon presentation of:

(1) your sight draft, bearing reference to this letter of credit, No. _____, and

(2) your signed statement reading as follows: "I certify that the amount of the draft is payable pursuant to regulations issued under authority of Subtitle I of the federal Solid Waste Disposal Act, as amended, and the New Mexico Hazardous Waste Act, as amended."

This letter of credit may be drawn on to cover [insert: "taking corrective action" and/or "compensating third parties for bodily injury and property damage caused by" either "sudden accidental releases" or "non-sudden accidental releases" or "accidental releases"] arising from operating the underground storage tank(s) identified below in the amount of [in words] \$[insert dollar amount] per occurrence and [in words] \$[insert dollar amount] annual aggregate and the above ground storage tank(s) identified below in the amount of [in words] \$[insert dollar amount] per occurrence and [in words] \$[insert dollar amount] annual aggregate:

[List the number of tanks at each facility and the name(s) and address(es) of the facility(ies) where the tanks are located. If this instrument is used to assure both underground and above ground storage tanks, identify each storage tank as underground and above ground and list the tank identification number provided in the notification submitted pursuant to 20.5.102.202 New Mexico Administrative Code (NMAC). If more than one instrument is used to assure different tanks at any one facility, for each tank covered by this instrument, list the tank identification number provided in the notification submitted pursuant to 20.5.102.202 NMAC and the name and address of the facility.]

The letter of credit may not be drawn on to cover any of the following:

(a) Any obligation of [insert owner or operator] under a workers' compensation, disability benefits, or unemployment compensation law or other similar law;

(b) Bodily injury to an employee of [insert owner or operator] arising from, and in the course of, employment by [insert owner or operator];

(c) Bodily injury or property damage arising from the ownership, maintenance, use, or entrustment to others of any aircraft, motor vehicle, or watercraft;

(d) Property damage to any property owned, rented, loaned to, in the care, custody, or control of, or occupied by [insert owner or operator] that is not the direct result of a release from a petroleum storage tank;

(e) Bodily injury or property damage for which [insert owner or operator] is obligated to pay damages by reason of the assumption of liability in a contract or

agreement other than a contract or agreement entered into to meet the requirements of 20.5.117.1703 NMAC.

This letter of credit is effective as of [date] and shall expire on [date], but such expiration date shall be automatically extended for a period of [at least the length of the original term] on [expiration date] and on each successive expiration date, unless, at least 120 days before the current expiration date, we notify [owner or operator] by certified mail that we have decided not to extend this letter of credit beyond the current expiration date. In the event that [owner or operator] is so notified, any unused portion of the credit shall be available upon presentation of your sight draft for 120 days after the date of receipt by [owner or operator], as shown on the signed return receipt.

Whenever this letter of credit is drawn on under and in compliance with the terms of this credit, we shall duly honor such draft upon presentation to us, and we shall deposit the amount of the draft directly into the standby trust fund of [owner or operator] in accordance with your instructions.

We certify that the wording of this letter of credit is identical to the wording specified in 20.5.117.1759 NMAC, as such regulations were constituted on the date shown immediately below.

[Signature(s) and title(s) of official(s) of issuing institution]

[Date]

This credit is subject to [insert "the most recent edition of the Uniform Customs and Practice for Documentary Credits, published by the International Chamber of Commerce," or "the Uniform Commercial Code"].

[20.5.117.1759 NMAC - N, 07/24/2018]

20.5.117.1760-20.5.117.1762 [RESERVED]

20.5.117.1763 FORM DOCUMENTS FOR STANDBY TRUST FUND:

To satisfy the requirements of 20.5.117.1712 NMAC, the standby trust agreement shall be worded as follows, except that instructions in brackets are to be replaced with the relevant information and the brackets deleted:

TRUST AGREEMENT

Trust agreement, the "Agreement," entered into as of [date] by and between [name of the owner or operator], a [name of state] [insert "corporation," "partnership,"

"association," or "proprietorship"], the "Grantor," and [name of corporate trustee], [insert "Incorporated in the state of ____" or "a national bank"], the "Trustee."

Whereas, the New Mexico Environmental Improvement Board, "EIB," has established certain regulations applicable to the Grantor, requiring that an owner or operator of a storage tank shall provide assurance that funds will be available when needed for corrective action and third-party compensation for bodily injury and property damage caused by sudden and non-sudden accidental releases arising from the operation of the storage tank. The attached Schedule A lists the number of tanks at each facility and the name(s) and address(es) of the facility(ies) where the tanks are located that are covered by the standby trust agreement.

[Whereas, the Grantor has elected to establish [insert either "a guarantee," "surety bond," or "letter of credit"] to provide all or part of such financial assurance for the storage tanks identified herein and is required to establish a standby trust fund able to accept payments from the instrument (This paragraph is only applicable to the standby trust agreement.);

Whereas, the Grantor, acting through its duly authorized officers, has selected the Trustee to be the trustee under this agreement, and the Trustee is willing to act as trustee;

Now, therefore, the Grantor and the Trustee agree as follows:

Section 1. Definitions

As used in this Agreement:

(a) The term "Grantor" means the owner or operator who enters into this Agreement and any successors or assigns of the Grantor.

(b) The term "Trustee" means the Trustee who enters into this Agreement and any successor Trustee.

Section 2. Identification of the Financial Assurance Mechanism

This Agreement pertains to the [identify the financial assurance mechanism, either a guarantee, surety bond, or letter of credit, from which the standby trust fund is established to receive payments (This paragraph is only applicable to the standby trust agreement.)].

Section 3. Establishment of Fund

The Grantor and the Trustee hereby establish a trust fund, the "Fund," for the benefit of [implementing agency]. The Grantor and the Trustee intend that no third party have access to the Fund except as herein provided. [The Fund is established

initially as a standby to receive payments and shall not consist of any property.] Payments made by the provider of financial assurance pursuant to the Secretary of the New Mexico Environment Department's instructions are transferred to the Trustee and are referred to as the Fund, together with all earnings and profits thereon, less any payments or distributions made by the Trustee pursuant to this Agreement. The Fund shall be held by the Trustee, IN TRUST, as hereinafter provided. The Trustee shall not be responsible nor shall it undertake any responsibility for the amount or adequacy of, nor any duty to collect from the Grantor as provider of financial assurance, any payments necessary to discharge any liability of the Grantor established by the Environment Department.

Section 4. Payment for ["Corrective Action" and/or "Third-Party Liability Claims"]

The Trustee shall make payments from the Fund as the Secretary shall direct, in writing, to provide for the payment of the costs of [insert: "taking corrective action" and/or "compensating third parties for bodily injury and property damage caused by" either "sudden accidental releases" or "non-sudden accidental releases" or "accidental releases"] arising from operating the tanks covered by the financial assurance mechanism identified in this Agreement.

The Fund may not be drawn upon to cover any of the following:

- (a) Any obligation of [insert owner or operator] under a workers' compensation, disability benefits, or unemployment compensation law or other similar law;
- (b) Bodily injury to an employee of [insert owner or operator] arising from, and in the course of, employment by [insert owner or operator];
- (c) Bodily injury or property damage arising from the ownership, maintenance, use, or entrustment to others of any aircraft, motor vehicle, or watercraft;
- (d) Property damage to any property owned, rented, loaned to, in the care, custody, or control of, or occupied by [insert owner or operator] that is not the direct result of a release from a petroleum underground storage tank;
- (e) Bodily injury or property damage for which [insert owner or operator] is obligated to pay damages by reason of the assumption of liability in a contract or agreement other than a contract or agreement entered into to meet the requirements of 20.5.117.1703 New Mexico Administrative Code (NMAC).

The Trustee shall reimburse the Grantor, or other persons as specified by the Secretary, from the Fund for corrective action expenditures and/or third-party liability claims in such amounts as the Secretary shall direct in writing. In addition, the Trustee shall refund to the Grantor such amounts as the Secretary specifies in

writing. Upon refund, such funds shall no longer constitute part of the Fund as defined herein.

Section 5. Payments Comprising the Fund

Payments made to the Trustee for the Fund shall consist of cash and securities acceptable to the Trustee.

Section 6. Trustee Management

The Trustee shall invest and reinvest the principal and income of the Fund and keep the Fund invested as a single fund, without distinction between principal and income, in accordance with general investment policies and guidelines which the Grantor may communicate in writing to the Trustee from time to time, subject, however, to the provisions of this section. In investing, reinvesting, exchanging, selling, and managing the Fund, the Trustee shall discharge his duties with respect to the trust fund solely in the interest of the beneficiaries and with the care, skill, prudence, and diligence under the circumstances then prevailing which persons of prudence, acting in a like capacity and familiar with such matters, would use in the conduct of an enterprise of a like character and with like aims, except that:

(a) Securities or other obligations of the Grantor, or any other owner or operator of the tanks, or any of their affiliates as defined in the Investment Company Act of 1940, as amended, 15 U.S.C. 80a-2(a), shall not be acquired or held, unless they are securities or other obligations of the federal or a state government;

(b) The Trustee is authorized to invest the Fund in time or demand deposits of the Trustee, to the extent insured by an agency of the federal or state government; and

(c) The Trustee is authorized to hold cash awaiting investment or distribution uninvested for a reasonable time and without liability for the payment of interest thereon.

Section 7. Commingling and Investment

The Trustee is expressly authorized in its discretion:

(a) To transfer from time to time any or all of the assets of the Fund to any common, commingled, or collective trust fund created by the Trustee in which the Fund is eligible to participate, subject to all of the provisions thereof, to be commingled with the assets of other trusts participating therein; and

(b) To purchase shares in any investment company registered under the Investment Company Act of 1940, 15 U.S.C. 80a-1 et seq., including one which may be created, managed, underwritten, or to which investment advice is rendered or the

shares of which are sold by the Trustee. The Trustee may vote such shares in its discretion.

Section 8. Express Powers of Trustee

Without in any way limiting the powers and discretions conferred upon the Trustee by the other provisions of this Agreement or by law, the Trustee is expressly authorized and empowered:

(a) To sell, exchange, convey, transfer, or otherwise dispose of any property held by it, by public or private sale. No person dealing with the Trustee shall be bound to see to the application of the purchase money or to inquire into the validity or expediency of any such sale or other disposition;

(b) To make, execute, acknowledge, and deliver any and all documents of transfer and conveyance and any and all other instruments that may be necessary or appropriate to carry out the powers herein granted;

(c) To register any securities held in the Fund in its own name or in the name of a nominee and to hold any security in bearer form or in book entry, or to combine certificates representing such securities with certificates of the same issue held by the Trustee in other fiduciary capacities, or to deposit or arrange for the deposit of such securities in a qualified central depository even though, when so deposited, such securities may be merged and held in bulk in the name of the nominee of such depository with other securities deposited therein by another person, or to deposit or arrange for the deposit of any securities issued by the United States Government, or any agency or instrumentality thereof, with a Federal Reserve bank, but the books and records of the Trustee shall at all times show that all such securities are part of the Fund;

(d) To deposit any cash in the Fund in interest-bearing accounts maintained or savings certificates issued by the Trustee, in its separate corporate capacity, or in any other banking institution affiliated with the Trustee, to the extent insured by an agency of the federal or state government; and

(e) To compromise or otherwise adjust all claims in favor of or against the Fund.

Section 9. Taxes and Expenses

All taxes of any kind that may be assessed or levied against or in respect of the Fund and all brokerage commissions incurred by the Fund shall be paid from the Fund. All other expenses incurred by the Trustee in connection with the administration of this Trust, including fees for legal services rendered to the Trustee,

the compensation of the Trustee to the extent not paid directly by the Grantor, and all other proper charges and disbursements of the Trustee shall be paid from the Fund.

Section 10. Advice of Counsel

The Trustee may from time to time consult with counsel, who may be counsel to the Grantor, with respect to any questions arising as to the construction of this Agreement or any action to be taken hereunder. The Trustee shall be fully protected, to the extent permitted by law, in acting upon the advice of counsel.

Section 11. Trustee Compensation

The Trustee shall be entitled to reasonable compensation for its services as agreed upon in writing from time to time with the Grantor.

Section 12. Successor Trustee

The Trustee may resign or the Grantor may replace the Trustee, but such resignation or replacement shall not be effective until the Grantor has appointed a successor trustee and this successor accepts the appointment. The successor trustee shall have the same powers and duties as those conferred upon the Trustee hereunder. Upon the successor trustee's acceptance of the appointment, the Trustee shall assign, transfer, and pay over to the successor trustee the funds and properties then constituting the Fund. If for any reason the Grantor cannot or does not act in the event of the resignation of the Trustee, the Trustee may apply to a court of competent jurisdiction for the appointment of a successor trustee or for instructions. The successor trustee shall specify the date on which it assumes administration of the trust in writing sent to the Grantor and the present Trustee by certified mail 10 days before such change becomes effective. Any expenses incurred by the Trustee as a result of any of the acts contemplated by this section shall be paid as provided in 20.5.117 NMAC.

Section 13. Instructions to the Trustee

All orders, requests, and instructions by the Grantor to the Trustee shall be in writing, signed by such persons as are designated in the attached Schedule B or such other designees as the Grantor may designate by amendment to Schedule B. The Trustee shall be fully protected in acting without inquiry in accordance with the Grantor's orders, requests, and instructions. All orders, requests, and instructions by the Secretary to the Trustee shall be in writing, signed by the Secretary, and the Trustee shall act and shall be fully protected in acting in accordance with such orders, requests, and instructions. The Trustee shall have the right to assume, in the absence of written notice to the contrary, that no event constituting a change or a termination of the authority of any person to act on behalf of the Grantor or the Secretary hereunder has occurred. The Trustee shall have no duty to act in the

absence of such orders, requests, and instructions from the Grantor and/or the Secretary, except as provided for herein.

Section 14. Amendment of Agreement

This Agreement may be amended by an instrument in writing executed by the Grantor and the Trustee, or by the Trustee and the Secretary if the Grantor ceases to exist.

Section 15. Irrevocability and Termination

Subject to the right of the parties to amend this Agreement as provided in Section 14, this Trust shall be irrevocable and shall continue until terminated at the written direction of the Grantor and the Trustee, or by the Trustee and the Secretary, if the Grantor ceases to exist. Upon termination of the Trust, all remaining trust property, less final trust administration expenses, shall be delivered to the Grantor.

Section 16. Immunity and Indemnification

The Trustee shall not incur personal liability of any nature in connection with any act or omission, made in good faith, in the administration of this Trust, or in carrying out any directions by the Grantor or the Secretary issued in accordance with this Agreement. The Trustee shall be indemnified and saved harmless by the Grantor, from and against any personal liability to which the Trustee may be subjected by reason of any act or conduct in its official capacity, including all expenses reasonably incurred in its defense in the event the Grantor fails to provide such defense.

Section 17. Choice of Law

This Agreement shall be administered, construed, and enforced according to the laws of the state of New Mexico, or the Comptroller of the Currency in the case of National Association banks.

Section 18. Interpretation

As used in this Agreement, words in the singular include the plural and words in the plural include the singular. The descriptive headings for each section of this Agreement shall not affect the interpretation or the legal efficacy of this Agreement.

In witness whereof the parties have caused this Agreement to be executed by their respective officers duly authorized and their corporate seals (if applicable) to be hereunto affixed and attested as of the date first above written. The parties below certify that the wording of this Agreement is identical to the wording specified in

20.5.117.1763 NMAC and Paragraph (1) of Subsection B of 20.5.117.1713 NMAC as such regulations were constituted on the date written above.

20.5.117.1764 FORM DOCUMENTS FOR LOCAL GOVERNMENT BOND RATING TEST:

A. To demonstrate that it meets the local government bond rating test, the chief financial officer of a local government owner or operator and/or guarantor described in Subsection A of 20.5.117.1714 NMAC shall sign a letter worded exactly as follows, except that the instructions in brackets are to be replaced by the relevant information and the brackets deleted:

LETTER FROM CHIEF FINANCIAL OFFICER

I am the chief financial officer of [insert: name and address of local government owner or operator, or guarantor]. This letter is in support of the use of the bond rating test to demonstrate financial responsibility for [insert: "taking corrective action" and/or "compensating third parties for bodily injury and property damage"] caused by [insert: "sudden accidental releases" or "non-sudden accidental releases" or "accidental releases"] in the amount of at least [insert: dollar amount] per occurrence and [insert: dollar amount] annual aggregate arising from operating (an) underground storage tank(s) and at least [insert: dollar amount] per occurrence and [insert: dollar amount] annual aggregate arising from operating (an) above ground storage tank(s).

Storage tanks at the following facilities are assured by this bond rating test: [List for each facility: the name and address of the facility where tanks are assured by the bond rating test].

The details of the issue date, maturity, outstanding amount, bond rating, and bond rating agency of all outstanding bond issues that are being used by [name of local government owner or operator, or guarantor] to demonstrate financial responsibility are as follows: [complete table]

Issue Date	Maturity Date	Outstanding Amount	Bond Rating	Rating Agency
------------	---------------	--------------------	-------------	---------------

[Moody's or Standard & Poor's]

The total outstanding obligation of [insert amount], excluding refunded bond issues, exceeds the minimum amount of \$1,000,000. All outstanding general obligation bonds issued by this government that have been rated by Moody's or Standard & Poor's are rated as at least investment grade (Moody's Baa or Standard & Poor's BBB) based on the most recent ratings published within the last 12 months. Neither rating service has provided notification within the last 12 months of downgrading of bond ratings below investment grade or of withdrawal of bond rating other than for repayment of outstanding bond issues.

I hereby certify that the wording of this letter is identical to the wording specified in Subsection A of 20.5.117.1764 New Mexico Administrative Code (NMAC) as such regulations were constituted on the date shown immediately below.

B. To demonstrate that it meets the local government bond rating test, the chief financial officer of a local government owner or operator and/or guarantor described in Subsection B of 20.5.117.1714 NMAC shall sign a letter worded exactly as follows, except that the instructions in brackets are to be replaced by the relevant information and the brackets deleted:

LETTER FROM CHIEF FINANCIAL OFFICER

I am the chief financial officer of [insert: name and address of local government owner or operator, or guarantor]. This letter is in support of the use of the bond rating test to demonstrate financial responsibility for [insert: "taking corrective action" and/or "compensating third parties for bodily injury and property damage"] caused by [insert: "sudden accidental releases" or "non-sudden accidental releases" or "accidental releases"] in the amount of at least [insert: dollar amount] per occurrence and [insert: dollar amount] annual aggregate arising from operating (an) underground storage tank(s) and at least [insert: dollar amount] per occurrence and [insert: dollar amount] annual aggregate arising from operating (an) above ground storage tank(s). This local government is not organized to provide general governmental services and does not have the legal authority under state law or constitutional provisions to issue general obligation debt.

Storage tanks at the following facilities are assured by this bond rating test: [List for each facility: the name and address of the facility where tanks are assured by the bond rating test].

The details of the issue date, maturity, outstanding amount, bond rating, and bond rating agency of all outstanding revenue bond issues that are being used by [name of local government owner or operator, or guarantor] to demonstrate financial responsibility are as follows: [complete table]

Issue Date	Maturity Date	Outstanding Amount	Bond Rating	Rating Agency

[Moody's or Standard & Poor's]

The total outstanding obligation of [insert amount], excluding refunded bond issues, exceeds the minimum amount of \$1,000,000. All outstanding revenue bonds issued by this government that have been rated by Moody's or Standard & Poor's are rated as at least investment grade (Moody's Baa or Standard & Poor's BBB) based on the most recent ratings published within the last 12 months. The revenue bonds listed are not backed by third-party credit enhancement or are insured by a municipal bond insurance company. Neither rating service has provided notification within the last 12 months of downgrading of bond ratings below investment grade or of withdrawal of bond rating other than for repayment of outstanding bond issues.

I hereby certify that the wording of this letter is identical to the wording specified in Subsection B of 20.5.117.1764 New Mexico Administrative Code (NMAC) as such regulations were constituted on the date shown immediately below.

20.5.117.1765 FORM DOCUMENT FOR LOCAL GOVERNMENT FINANCIAL TEST:

To demonstrate that it meets the financial test under Subsection B of 20.5.117.1714 NMAC, the chief financial officer of the local government owner or operator, shall sign, within 120 days of the close of each financial reporting year, as defined by the 12-month period for which financial statements used to support the financial test are prepared, a letter worded exactly as follows, except that the instructions in brackets are to be replaced by the relevant information and the brackets deleted:

LETTER FROM CHIEF FINANCIAL OFFICER

I am the chief financial officer of [insert: name and address of the owner or operator]. This letter is in support of the use of the local government financial test to demonstrate financial responsibility for [insert: "taking corrective action" and/or "compensating third parties for bodily injury and property damage"] caused by [insert: "sudden accidental releases" or "non-sudden accidental releases" or "accidental releases"] in the amount of at least [insert: dollar amount] per occurrence and [insert: dollar amount] annual aggregate arising from operating (an) underground storage

tank(s) and at least [insert: dollar amount] per occurrence and [insert: dollar amount] annual aggregate arising from operating (an) above ground storage tank(s).

Storage tanks at the following facilities are assured by this financial test [List for each facility: the name and address of the facility where tanks assured by this financial test are located. If this instrument is used to assure both underground and above ground storage tanks, identify each storage tank as underground or above ground and list the tank identification number provided in the notification submitted pursuant to 20.5.102.202 New Mexico Administrative Code (NMAC). If separate mechanisms or combinations of mechanisms are being used to assure any of the tanks at this facility, list each tank assured by this financial test by the tank identification number provided in the notification submitted pursuant to 20.5.102.202 NMAC.]

This owner or operator has not received an adverse opinion, or a disclaimer of opinion from an independent auditor on its financial statements for the latest completed fiscal year. Any outstanding issues of general obligation or revenue bonds, if rated, have a Moody's rating of Aaa, Aa, A, or Baa or a Standard and Poor's rating of AAA, AA, A, or BBB; if rated by both firms, the bonds have a Moody's rating of Aaa, Aa, A, or Baa and a Standard and Poor's rating of AAA, AA, A, or BBB.

WORKSHEET FOR MUNICIPAL FINANCIAL TEST

PART I: BASIC INFORMATION

1. Total Revenues

a. Revenues (dollars)

Value of revenues excludes liquidation of investments and issuance of debt. Value includes all general fund operating and non-operating revenues, as well as all revenues from all other governmental funds including enterprise, debt service, capital projects, and special revenues, but excluding revenues to funds held in a trust or agency capacity.

b. Subtract interfund transfers (dollars)

c. Total Revenues (dollars)

2. Total Expenditures

a. Expenditures (dollars)

Value consists of the sum of general fund operating and non-operating expenditures including interest payments on debt, payments for retirement of debt

principal, and total expenditures from all other governmental funds including enterprise, debt service, capital projects, and special revenues.

b. Subtract interfund transfers (dollars)

c. Total Expenditures (dollars)

3. Local Revenues

a. Total Revenues (from 1c) (dollars)

b. Subtract total intergovernmental transfers (dollars)

c. Local Revenues (dollars)

4. Debt Service

a. Interest and fiscal charges (dollars)

b. Add debt retirement (dollars)

c. Total Debt Service (dollars)

5. Total Funds (dollars)

(Sum of amounts held as cash and investment securities from all funds, excluding amounts held for employee retirement funds, agency funds, and trust funds)

6. Population (persons)

PART II: APPLICATION OF TEST

7. Total Revenues to Population

a. Total Revenues (from 1c)

b. Population (from 6)

c. Divide 7a by 7b

d. Subtract 417

e. Divide by 5,212

f. Multiply by 4.095

8. Total Expenses to Population

a. Total Expenses (from 2c)

b. Population (from 6)

c. Divide 8a by 8b

d. Subtract 524

e. Divide by 5,401

f. Multiply by 4.095

9. Local Revenues to Total Revenues

a. Local Revenues (from 3c)

b. Total Revenues (from 1c)

c. Divide 9a by 9b

d. Subtract .695

e. Divide by .205

f. Multiply by 2.840

10. Debt Service to Population

a. Debt Service (from 4c)

b. Population (from 6)

c. Divide 10a by 10b

d. Subtract 51

e. Divide by 1,038

f. Multiply by -1.866

11. Debt Service to Total Revenues

- a. Debt Service (from 4c)
- b. Total Revenues (from 1c)
- c. Divide 11a by 11b
- d. Subtract .068
- e. Divide by .259
- f. Multiply by -3.533

12. Total Revenues to Total Expenses

- a. Total Revenues (from 1c)
- b. Total Expenses (from 2c)
- c. Divide 12a by 12b
- d. Subtract .910
- e. Divide by .899
- f. Multiply by 3.458

13. Funds Balance to Total Revenues

- a. Total Funds (from 5)
- b. Total Revenues (from 1c)
- c. Divide 13a by 13b
- d. Subtract .891
- e. Divide by 9.156
- f. Multiply by 3.270

14. Funds Balance to Total Expenses

- a. Total Funds (from 5)
- b. Total Expenses (from 2c)

c. Divide 14a by 14b

d. Subtract .866

e. Divide by 6.409

f. Multiply by 3.270

15. Total Funds to Population

a. Total Funds (from 5)

b. Population (from 6)

c. Divide 15a by 15b

d. Subtract 270

e. Divide by 4,548

f. Multiply by 1.866

16. Add $7f + 8f + 9f + 10f + 11f + 12f + 13f + 14f + 15f + 4.937$

I hereby certify that the financial index shown on line 16 of the worksheet is greater than zero and that the wording of this letter is identical to the wording specified in 20.5.117.1765 NMAC, as such regulations were constituted on the date shown immediately below.

**20.5.117.1766 FORM DOCUMENTS FOR LOCAL GOVERNMENT
GUARANTEE:**

A. Required form documents for guarantees with standby trusts.

(1) Local government guarantee with standby trust made by the state. The guarantee agreement shall be worded as follows:

GUARANTEE

Guarantee made this [date] by the State of New Mexico, herein referred to as Guarantor, to the New Mexico Environment Department and to any and all third parties, and obliges, on behalf of [local government owner or operator].

Recitals

(1) Guarantor is a state.

(2) [Local government owner or operator] owns or operates the following storage tank(s) covered by this guarantee: [List the number of tanks at each facility and the name(s) and address(es) of the facility(ies) where the tanks are located. If this instrument is used to assure both underground and above ground storage tanks, identify each storage tank as underground or above ground and list the tank identification number provided in the notification submitted pursuant to 20.5.102.202 New Mexico Administrative Code (NMAC). If more than one instrument is used to assure different tanks at any one facility, for each tank covered by this instrument, list the tank identification number provided in the notification submitted pursuant to 20.5.102.202 NMAC and the name and address of the facility.] This guarantee satisfies the requirements of 20.5.117 NMAC for assuring funding for [insert: "taking corrective action" and/or "compensating third parties for bodily injury and property damage caused by" either "sudden accidental releases" or "non-sudden accidental releases" or "accidental releases"; if coverage is different for different tanks or locations, indicate the type of coverage applicable to each tank or location] arising from operating the above-identified underground storage tank(s) in the amount of [insert dollar amount] per occurrence and [insert dollar amount] annual aggregate and the above-identified above ground storage tank(s) in the amount of [insert dollar amount] per occurrence and [insert dollar amount] annual aggregate.

(3) Guarantor guarantees to the New Mexico Environment Department (Department) and to any and all third parties that:

In the event that [local government owner or operator] fails to provide alternative coverage within 60 days after receipt of a notice of cancellation of this guarantee and the Secretary of the New Mexico Environment Department has determined or suspects that a release has occurred at a storage tank covered by this guarantee, the Guarantor, upon instructions from the Secretary shall fund a standby trust fund in accordance with the provisions of 20.5.117.1722 NMAC; in an amount not to exceed the coverage limits specified above.

In the event that the Secretary determines that [local government owner or operator] has failed to perform corrective action for releases arising out of the operation of the above-identified tank(s) in accordance with 20.5.119 NMAC, the Guarantor upon written instructions from the Secretary shall fund a standby trust

fund in accordance with the provisions of 20.5.117.1722 NMAC, in an amount not to exceed the coverage limits specified above.

If [owner or operator] fails to satisfy a judgment or award based on a determination of liability for bodily injury or property damage to third parties caused by ["sudden" and/or "non-sudden"] accidental releases arising from the operation of the above-identified tank(s), or fails to pay an amount agreed to in settlement of a claim arising from or alleged to arise from such injury or damage, the guarantor, upon written instructions from the Secretary, shall fund a standby trust in accordance with the provisions of 20.5.117.1722 NMAC to satisfy such judgment(s), award(s), or settlement agreement(s) up to the limits of coverage specified above.

(4) Guarantor agrees to notify [owner or operator] by certified mail of a voluntary or involuntary proceeding under the Bankruptcy Code, 11 U.S.C., naming Guarantor as debtor, within 10 days after commencement of the proceeding.

(5) Guarantor agrees to remain bound under this guarantee notwithstanding any modification or alteration of any obligation of [owner or operator] pursuant to 20.5 NMAC.

(6) Guarantor agrees to remain bound under this guarantee for so long as [local government owner or operator] shall comply with the applicable financial responsibility requirements of 20.5.117 NMAC for the above identified tank(s), except that Guarantor may cancel this guarantee by sending notice by certified mail to [owner or operator], such cancellation to become effective no earlier than 120 days after receipt of such notice by [owner or operator], as evidenced by the return receipt.

(7) The Guarantor's obligation does not apply to any of the following:

(a) Any obligation of [local government owner or operator] under a workers' compensation, disability benefits, or unemployment compensation law or other similar law;

(b) Bodily injury to an employee of [insert: local government owner or operator] arising from, and in the course of, employment by [insert: local government owner or operator];

(c) Bodily injury or property damage arising from the ownership, maintenance, use, or entrustment to others of any aircraft, motor vehicle, or watercraft;

(d) Property damage to any property owned, rented, loaned to, in the care, custody, or control of, or occupied by [insert: local government owner or operator] that is not the direct result of a release from a petroleum storage tank;

(e) Bodily damage or property damage for which [insert owner or operator] is obligated to pay damages by reason of the assumption of liability in a contract or agreement other than a contract or agreement entered into to meet the requirements of 20.5.117.1703 NMAC.

(8) Guarantor expressly waives notice of acceptance of this guarantee by the Department, by any or all third parties, or by [local government owner or operator],

I hereby certify that the wording of this guarantee is identical to the wording specified in Paragraph (1) of Subsection A of 20.5.117.1766 NMAC, as such regulations were constituted on the effective date shown immediately below.

Effective date:

[Name of Guarantor]

[Authorized signature for Guarantor]

[Name of person signing]

[Title of person signing]

Signature of witness or notary:

(2) Local government guarantee with standby trust made by a local government. The guarantee agreement shall be worded as follows:

GUARANTEE

Guarantee made this [date] by [name of guaranteeing entity], a local government organized under the laws of New Mexico, herein referred to as Guarantor, to the New Mexico Environment Department and to any and all third parties, and obliges, on behalf of [local government owner or operator].

Recitals

(1) Guarantor meets or exceeds [select one: the local government bond rating test requirements of 20.5.117.1714 New Mexico Administrative Code (NMAC), the local government financial test requirements of 20.5.117.1715

NMAC, or the local government fund under Subsection A, B or C of 20.5.117.1717 NMAC.]

(2) [Local government owner or operator] owns or operates the following storage tank(s) covered by this guarantee: [List the number of tanks at each facility and the name(s) and address(es) of the facility(ies) where the tanks are located. If this instrument is used to assure both underground and above ground storage tanks, identify each storage tank as underground or above ground and list the tank identification number provided in the notification submitted pursuant to 20.5.102.202 NMAC. If more than one instrument is used to assure different tanks at any one facility, for each tank covered by this instrument, list the tank identification number provided in the notification submitted pursuant to 20.5.102.202 NMAC and the name and address of the facility.] This guarantee satisfies requirements of 20.5.117 NMAC for assuring funding for [insert: "taking corrective action" and/or "compensating third parties for bodily injury and property damage caused by" either "sudden accidental releases" or "non-sudden accidental releases" or "accidental releases"; if coverage is different for different tanks or locations, indicate the type of coverage applicable to each tank or location] arising from operating the above-identified underground storage tank(s) in the amount of [insert dollar amount] per occurrence and [insert: dollar amount] annual aggregate and the above-identified above ground storage tank(s) in the amount of [insert dollar amount] per occurrence and [insert: dollar amount] annual aggregate.

(3) Incident to our substantial governmental relationship with [local government owner or operator], Guarantor guarantees to the New Mexico Environment Department (Department) and to any and all third parties that:

In the event that [local government owner or operator] fails to provide alternative coverage within 60 days after receipt of a notice of cancellation of this guarantee and the Secretary of the New Mexico Environment Department (Secretary) has determined or suspects that a release has occurred at a storage tank covered by this guarantee, the Guarantor, upon instructions from the Secretary shall fund a standby trust fund in accordance with the provisions of 20.5.117.1722 NMAC, in an amount not to exceed the coverage limits specified above.

In the event that the Secretary determines that [local government owner or operator] has failed to perform corrective action for releases arising out of the operation of the above-identified tank(s) in accordance with 20.5.119 NMAC, the Guarantor upon written instructions from the Secretary shall fund a standby trust fund in accordance with the provisions of 20.5.117.1722 NMAC, in an amount not to exceed the coverage limits specified above.

If [owner or operator] fails to satisfy a judgment or award based on a determination of liability for bodily injury or property damage to third parties caused by ["sudden" and/or "non-sudden"] accidental releases arising from the operation

of the above-identified tank(s), or fails to pay an amount agreed to in settlement of a claim arising from or alleged to arise from such injury or damage, the Guarantor, upon written instructions from the Secretary, shall fund a standby trust in accordance with the provisions of 20.5.117.1722 NMAC to satisfy such judgment(s), award(s), or settlement agreement(s) up to the limits of coverage specified above.

(4) Guarantor agrees that, if at the end of any fiscal year before cancellation of this guarantee, the Guarantor fails to meet or exceed the requirements of the financial responsibility mechanism specified in Paragraph (1), Guarantor shall send within 120 days of such failure, by certified mail, notice to [local government owner or operator], as evidenced by the return receipt.

(5) Guarantor agrees to notify [owner or operator] by certified mail of a voluntary or involuntary proceeding under the Bankruptcy Code, 11 U.S.C., naming Guarantor as debtor, within 10 days after commencement of the proceeding.

(6) Guarantor agrees to remain bound under this guarantee notwithstanding any modification or alteration of any obligation of [owner or operator] pursuant to the New Mexico Petroleum Storage Tank Regulations (20.5 NMAC).

(7) Guarantor agrees to remain bound under this guarantee for so long as [local government owner or operator] shall comply with the applicable financial responsibility requirements of 20.5.117 NMAC for the above identified tank(s), except that Guarantor may cancel this guarantee by sending notice by certified mail to [owner or operator], such cancellation to become effective no earlier than 120 days after receipt of such notice by [owner or operator], as evidenced by the return receipt.

(8) The Guarantor's obligation does not apply to any of the following:

(a) Any obligation of [local government owner or operator] under a workers' compensation, disability benefits, or unemployment compensation law or other similar law;

(b) Bodily injury to an employee of [insert: local government owner or operator] arising from, and in the course of, employment by [insert: local government owner or operator];

(c) Bodily injury or property damage arising from the ownership, maintenance, use, or entrustment to others of any aircraft, motor vehicle, or watercraft;

(d) Property damage to any property owned, rented, loaned to, in the care, custody, or control of, or occupied by [insert: local government owner or operator] that is not the direct result of a release from a petroleum storage tank;

(e) Bodily damage or property damage for which [insert: owner or operator] is obligated to pay damages by reason of the assumption of liability in a contract or agreement other than a contract or agreement entered into to meet the requirements of 20.5.117.1703 NMAC.

(9) Guarantor expressly waives notice of acceptance of this guarantee by the Department, by any or all third parties, or by [local government owner or operator].

I hereby certify that the wording of this guarantee is identical to the wording specified in Paragraph (2) of Subsection A of 20.5.117.1766 NMAC, as such regulations were constituted on the effective date shown immediately below.

B. Required form documents for guarantees without standby trusts.

(1) Local government guarantee without standby trust made by the state. The guarantee agreement shall be worded as follows:

GUARANTEE

Guarantee made this [date] by the State of New Mexico, herein referred to as Guarantor, to the New Mexico Environment Department and to any and all third parties, and obliges, on behalf of [local government owner or operator].

Recitals

(1) Guarantor is a state.

(2) [Local government owner or operator] owns or operates the following storage tank(s) covered by this guarantee: [List the number of tanks at each

facility and the name(s) and address(es) of the facility(ies) where the tanks are located. If this instrument is used to assure both underground and above ground storage tanks, identify each storage tank as underground or above ground and list the tank identification number provided in the notification submitted pursuant to 20.5.102.202 New Mexico Administrative Code (NMAC). If more than one instrument is used to assure different tanks at any one facility, for each tank covered by this instrument, list the tank identification number provided in the notification submitted pursuant to 20.5.102.202 NMAC and the name and address of the facility.] This guarantee satisfies requirements of 20.5.117 NMAC for assuring funding for [insert: "taking corrective action" and/or "compensating third parties for bodily injury and property damage caused by" either "sudden accidental releases" or "non-sudden accidental releases" or "accidental releases"; if coverage is different for different tanks or locations, indicate the type of coverage applicable to each tank or location] arising from operating the above-identified underground storage tank(s) in the amount of [insert: dollar amount] per occurrence and [insert: dollar amount] annual aggregate and the above-identified above ground storage tank(s) in the amount of [insert: dollar amount] per occurrence and [insert: dollar amount] annual aggregate.

(3) Guarantor guarantees to the New Mexico Environment Department (Department) and to any and all third parties and obliges that:

In the event that [local government owner or operator] fails to provide alternative coverage within 60 days after receipt of a notice of cancellation of this guarantee and the Secretary of the New Mexico Environment Department (Secretary) has determined or suspects that a release has occurred at a storage tank covered by this guarantee, the Guarantor, upon written instructions from the Secretary shall make funds available to pay for corrective actions and compensate third parties for bodily injury and property damage in an amount not to exceed the coverage limits specified above.

In the event that the Secretary determines that [local government owner or operator] has failed to perform corrective action for releases arising out of the operation of the above-identified tank(s) in accordance with 20.5.119 NMAC, the Guarantor upon written instructions from the Secretary shall make funds available to pay for corrective actions in an amount not to exceed the coverage limits specified above.

If [owner or operator] fails to satisfy a judgment or award based on a determination of liability for bodily injury or property damage to third parties caused by ["sudden" and/or "non-sudden"] accidental releases arising from the operation of the above-identified tank(s), or fails to pay an amount agreed to in settlement of a claim arising from or alleged to arise from such injury or damage, the Guarantor, upon written instructions from the Secretary, shall make funds available to

compensate third parties for bodily injury and property damage in an amount not to exceed the coverage limits specified above.

(4) Guarantor agrees to notify [owner or operator] by certified mail of a voluntary or involuntary proceeding under the Bankruptcy Code, 11 U.S.C., naming Guarantor as debtor, within 10 days after commencement of the proceeding.

(5) Guarantor agrees to remain bound under this guarantee notwithstanding any modification or alteration of any obligation of [owner or operator] pursuant to 20.5 NMAC.

(6) Guarantor agrees to remain bound under this guarantee for so long as [local government owner or operator] shall comply with the applicable financial responsibility requirements of 20.5.117 NMAC for the above identified tank(s), except that Guarantor may cancel this guarantee by sending notice by certified mail to [owner or operator], such cancellation to become effective no earlier than 120 days after receipt of such notice by [owner or operator], as evidenced by the return receipt. If notified of a probable release, the Guarantor agrees to remain bound to the terms of this guarantee for all charges arising from the release, up to the coverage limits specified above, notwithstanding the cancellation of the guarantee with respect to future releases.

(7) The Guarantor's obligation does not apply to any of the following:

(a) Any obligation of [local government owner or operator] under a workers' compensation disability benefits, or unemployment compensation law or other similar law;

(b) Bodily injury to an employee of [insert local government owner or operator] arising from, and in the course of, employment by [insert: local government owner or operator];

(c) Bodily injury or property damage arising from the ownership, maintenance, use, or entrustment to others of any aircraft, motor vehicle, or watercraft;

(d) Property damage to any property owned, rented, loaned to, in the care, custody, or control of, or occupied by [insert: local government owner or operator] that is not the direct result of a release from a petroleum storage tank;

(e) Bodily damage or property damage for which [insert: owner or operator] is obligated to pay damages by reason of the assumption of liability in a contract or agreement other than a contract or agreement entered into to meet the requirements of 20.5.117.1703 NMAC.

(8) Guarantor expressly waives notice of acceptance of this guarantee by the Department, by any or all third parties, or by [local government owner or operator].

I hereby certify that the wording of this guarantee is identical to the wording specified in Paragraph (1) of Subsection B of 20.5.117.1766 NMAC, as such regulations were constituted on the effective date shown immediately below.

Effective date:

[Name of Guarantor]

[Authorized signature for Guarantor]

[Name of person signing]

[Title of person signing]

Signature of witness or notary:

(2) Local government guarantee without standby trust made by a local government. The guarantee agreement shall be worded as follows:

GUARANTEE

Guarantee made this [date] by [name of guaranteeing entity], a local government organized under the laws of New Mexico, herein referred to as Guarantor, to the New Mexico Environment Department and to any and all third parties, and obliges, on behalf of [local government owner or operator].

Recitals

(1) Guarantor meets or exceeds [select one: the local government bond rating test requirements of 20.5.117.1714 New Mexico Administrative Code (NMAC), the local government financial test requirements of 20.5.117.1715 NMAC, the local government fund under of Subsections A, B and C of 20.5.117.1717 NMAC.]

(2) [Local government owner or operator] owns or operates the following storage tank(s) covered by this guarantee: [List the number of tanks at each facility and the name(s) and address(es) of the facility(ies) where the tanks are located. If this instrument is used to assure both underground and above ground storage tanks, identify each storage tank as underground or above ground and list the tank identification number provided in the notification submitted pursuant to 20.5.102.202 NMAC. If more than one instrument is used to assure different tanks at any one facility, for each tank covered by this instrument, list the tank identification number provided in the notification submitted pursuant to 20.5.102.202 NMAC and the name

and address of the facility.] This guarantee satisfies requirements of 20.5.117 NMAC for assuring funding for [insert: "taking corrective action" and/or "compensating third parties for bodily injury and property damage caused by" either "sudden accidental releases" or "non-sudden accidental releases" or "accidental releases"; if coverage is different for different tanks or locations, indicate the type of coverage applicable to each tank or location] arising from operating the above-identified underground storage tank(s) in the amount of [insert: dollar amount] per occurrence and [insert: dollar amount] annual aggregate and the above-identified above ground storage tank(s) in the amount of [insert: dollar amount] per occurrence and [insert: dollar amount] annual aggregate.

(3) Incident to our substantial governmental relationship with [local government owner or operator], Guarantor guarantees to the New Mexico Environment Department (Department) and to any and all third parties and obliges that:

In the event that [local government owner or operator] fails to provide alternative coverage within 60 days after receipt of a notice of cancellation of this guarantee and the Secretary of the New Mexico Environment Department (Secretary) has determined or suspects that a release has occurred at a storage tank covered by this guarantee, the Guarantor, upon written instructions from the Secretary shall make funds available to pay for corrective actions and compensate third parties for bodily injury and property damage in an amount not to exceed the coverage limits specified above.

In the event that the Secretary determines that [local government owner or operator] has failed to perform corrective action for releases arising out of the operation of the above-identified tank(s) in accordance with 20.5.119 NMAC, the Guarantor upon written instructions from the Secretary shall make funds available to pay for corrective actions in an amount not to exceed the coverage limits specified above.

If [owner or operator] fails to satisfy a judgment or award based on a determination of liability for bodily injury or property damage to third parties caused by ["sudden" and/or "non-sudden"] accidental releases arising from the operation of the above-identified tank(s), or fails to pay an amount agreed to in settlement of a claim arising from or alleged to arise from such injury or damage, the Guarantor, upon written instructions from the Secretary, shall make funds available to compensate third parties for bodily injury and property damage in an amount not to exceed the coverage limits specified above.

(4) Guarantor agrees that if at the end of any fiscal year before cancellation of this guarantee, the Guarantor fails to meet or exceed the requirements of the financial responsibility mechanism specified in Paragraph (1), Guarantor shall send

within 120 days of such failure, by certified mail, notice to [local government owner or operator], as evidenced by the return receipt.

(5) Guarantor agrees to notify [owner or operator] by certified mail of a voluntary or involuntary proceeding under the Bankruptcy Code, 11 U.S.C., naming Guarantor as debtor, within 10 days after commencement of the proceeding.

(6) Guarantor agrees to remain bound under this guarantee notwithstanding any modification or alteration of any obligation of [owner or operator] pursuant to 20.5.117 NMAC.

(7) Guarantor agrees to remain bound under this guarantee for so long as [local government owner or operator] shall comply with the applicable financial responsibility requirements of 20.5.117 NMAC for the above identified tank(s), except that Guarantor may cancel this guarantee by sending notice by certified mail to [owner or operator], such cancellation to become effective no earlier than 120 days after receipt of such notice by [owner or operator], as evidenced by the return receipt. If notified of a probable release, the Guarantor agrees to remain bound to the terms of this guarantee for all charges arising from the release, up to the coverage limits specified above, notwithstanding the cancellation of the guarantee with respect to future releases.

(8) The Guarantor's obligation does not apply to any of the following:

(a) Any obligation of [local government owner or operator] under a workers' compensation disability benefits, or unemployment compensation law or other similar law;

(b) Bodily injury to an employee of [insert: local government owner or operator] arising from, and in the course of, employment by [insert: local government owner or operator];

(c) Bodily injury or property damage arising from the ownership, maintenance, use, or entrustment to others of any aircraft, motor vehicle, or watercraft;

(d) Property damage to any property owned, rented, loaned to, in the care, custody, or control of, or occupied by [insert: local government owner or operator] that is not the direct result of a release from a petroleum storage tank;

(e) Bodily damage or property damage for which [insert: owner or operator] is obligated to pay damages by reason of the assumption of liability in a contract or agreement other than a contract or agreement entered into to meet the requirements of 20.5.117.1703 NMAC.

(9) Guarantor expressly waives notice of acceptance of this guarantee by the Department, by any or all third parties, or by [local government owner or operator],

I hereby certify that the wording of this guarantee is identical to the wording specified in Paragraph (2) of Subsection B of 20.5.117.1766 NMAC as such regulations were constituted on the effective date shown immediately below.

Signature of witness or notary:

[20.5.117.1766 NMAC - N, 07/24/2018]

20.5.117.1767 FORM DOCUMENT FOR LOCAL GOVERNMENT FUND:

To demonstrate that it meets the requirements of the local government fund, as specified in 20.5.117.1717 NMAC, the chief financial officer of the local government owner or operator and/or guarantor shall sign a letter worded exactly as follows, except that the instructions in brackets are to be replaced by the relevant information and the brackets deleted:

LETTER FROM CHIEF FINANCIAL OFFICER

I am the chief financial officer of [insert: name and address of local government owner or operator, or guarantor]. This letter is in support of the use of the local government fund mechanism to demonstrate financial responsibility for [insert: "taking corrective action" and/or "compensating third parties for bodily injury and property damage"] caused by [insert: "sudden accidental releases" or "non-sudden accidental releases" or "accidental releases"] in the amount of at least [insert: dollar amount] per occurrence and [insert: dollar amount] annual aggregate arising from operating an underground storage tank(s) and at least [insert: dollar amount] per occurrence and [insert: dollar amount] annual aggregate arising from operating (an) above ground storage tank(s).

Storage tanks at the following facilities are assured by this local government fund mechanism: [List for each facility: the name and address of the facility where tanks are assured by the local government fund].

[Insert: "The local government fund is funded for the full amount of coverage required under 20.5.117.1703 New Mexico Administrative Code (NMAC) or funded for part of the required amount of coverage and used in combination with other mechanism(s) that provide the remaining coverage." or "The local government fund is funded for five times the full amount of coverage required under 20.5.117.1703 New Mexico Administrative Code (NMAC) or funded for part of the required amount of coverage and used in combination with other mechanisms(s) that provide the remaining coverage," or "A payment is made to the fund once every year for seven years until the fund is fully-funded and [name of local government owner or operator] has available bonding authority, approved through voter referendum, of an amount equal to the difference between the required amount of coverage and the amount held in the dedicated fund" or "A payment is made to the fund once every year for seven years until the fund is fully-funded and I have attached a letter signed by the State Attorney General stating that (1) the use of the bonding authority will not increase the local government's debt beyond the legal debt ceilings established by the relevant state laws and (2) that prior voter approval is not necessary before use of the bonding authority"].

The details of the local government fund are as follows:

Amount in Fund (market value of fund of close of last fiscal year):

[If fund balance is incrementally funded as specified in Subsection C of 20.5.117.1717 NMAC, insert:

Amount added to fund in the most recently completed fiscal year:

Number of years remaining in the pay-in period:

A copy of the state constitutional provision, or local government statute, charter, ordinance or order dedicating the fund is attached.

I hereby certify that the wording of this letter is identical to the wording specified in 20.5.117.1767 NMAC, as such regulations were constituted on the date shown immediately below.

PART 118: REPORTING AND INVESTIGATION OF SUSPECTED AND CONFIRMED RELEASES

20.5.118.1 ISSUING AGENCY:

New Mexico Environmental Improvement Board.

[20.5.118.1 NMAC - N, 07/24/2018]

20.5.118.2 SCOPE:

This part applies to owners and operators of storage tanks as defined in 20.5.101 NMAC. This part also applies to owners and operators of AST systems with capacities of 55,000 gallons or more associated with airport hydrant fuel distribution systems and owners and operators of AST systems with capacities of 55,000 gallons or more

associated with UST systems with field-constructed tanks as these terms are defined in 20.5.1 NMAC. If the owner and operator of a storage tank are separate persons, only one person is required to comply with the requirements of this part, including any notice and reporting requirements; however, both parties are liable in the event of noncompliance.

[20.5.118.2 NMAC - N, 07/24/2018]

20.5.118.3 STATUTORY AUTHORITY:

This part is promulgated pursuant to the provisions of the Hazardous Waste Act, Sections 74-4-1 through 74-4-14, NMSA 1978, and the general provisions of the Environmental Improvement Act, Sections 74-1-1 through 74-1-17, NMSA 1978.

[20.5.118.3 NMAC - N, 07/24/2018]

20.5.118.4 DURATION:

Permanent.

[20.5.118.4 NMAC - N, 07/24/2018]

20.5.118.5 EFFECTIVE DATE:

July 24, 2018, unless a later date is indicated in the bracketed history note at the end of a section.

[20.5.118.5 NMAC - N, 07/24/2018]

20.5.118.6 OBJECTIVE:

The purpose of 20.5.118 NMAC is to regulate storage tank systems in order to protect the public health, safety and welfare and the environment of the state, and to ensure that suspected and confirmed releases from storage tank systems are promptly reported and investigated and that corrective action is promptly initiated.

[20.5.118.6 NMAC - N, 07/24/2018]

20.5.118.7 DEFINITIONS:

The definitions in 20.5.101 NMAC apply to this part.

[20.5.118.7 NMAC - N, 07/24/2018]

20.5.118.8-20.5.118.1799 [RESERVED]

20.5.118.1800 REPORTING OF SPILL OR RELEASE:

A. Owners, operators, certified installers, certified junior installers, and testers shall give notice of any suspected or confirmed release from a storage tank system pursuant to 20.5.118.1801 or 20.5.118.1802 NMAC, or any spill or any other relevant emergency situation to the department by telephone within 24 hours. The owner, operator, certified installer, certified junior installer, or tester giving the notice shall provide the following items of information to the best of the owner's, operator's, certified installer's, certified junior installer's, or tester's knowledge:

(1) the name, address, and telephone number of the agent in charge of the site at which the storage tank system is located, as well as the name, address and telephone number of the owner and the operator of the storage tank system;

(2) the name, address, facility ID number, and owner ID number of the site at which the storage tank system is located, as listed on the tank registration certificate, and the location of the storage tank system on that site;

(3) the date, time, location and duration of the spill, release or suspected release;

(4) the source and cause of the spill, release or suspected release;

(5) the storage tank system description;

(6) a description of the spill, release or suspected release, including its chemical composition;

(7) the estimated volume of the spill, release or suspected release; and

(8) any actions taken to mitigate immediate damage from the spill, release or suspected release.

B. Owners and operators shall provide a seven-day report describing the spill, release or suspected release and any investigation or follow-up action to the department within seven days of the incident. The written report shall verify the prior oral notification as to each of the items of information listed in Subsection A of this section and provide any appropriate amendments to the information contained in the prior oral notification.

C. The department shall determine whether a release is a confirmed release based on the 24-hour and seven-day reports prepared in accordance with this section, 20.5.118.1801 NMAC and 20.5.18.1802 NMAC, monitoring results, system checks, the investigation performed in accordance with 20.5.18.1801 NMAC, and any other information available to the department. The department shall provide a written

determination that a release is a confirmed release to all affected owners and operators, and shall state the basis for the determination.

[20.5.118.1800 NMAC - N, 07/24/2018]

[To provide notice to the department under Subsection A of this section, telephone the department staff person currently on duty. The petroleum storage tank bureau's pages on the department website provide the phone number and an optional incident reporting form.]

20.5.118.1801 SUSPECTED RELEASES:

A. Owners, operators, certified installers, certified junior installers, and testers of storage tank systems shall report the following conditions, which are considered suspected releases, to the department within 24 hours, in accordance with 20.5.118.1800 NMAC, and follow the procedures in Subsection B of this section:

(1) evidence of released regulated substances in the vicinity of the storage tank site, including but not limited to, the presence of non-aqueous phase liquid or vapors in soils, basements, sewer and utility lines, groundwater, drinking water or nearby surface water;

(2) unusual operating conditions such as, but not limited to, no flow of product, slow flow of product, the erratic function of product dispensing equipment, the sudden loss of a regulated substance from the storage tank system, an unexplained presence of water in the storage tank system, the presence of a regulated substance in containment sumps or in the annular or interstitial space of secondarily contained tanks or piping, or interstitial sensor alarm conditions, unless after an investigation:

(a) the storage tank system equipment or component is determined not to have released regulated substances into the environment;

(b) all defective storage tank system equipment or components are immediately repaired or replaced; and

(c) for secondarily contained storage tank systems, except as provided for in Subparagraph (d) of Paragraph (2) of Subsection A of 20.5.108.808 NMAC, any liquid in the interstitial space not used as part of the interstitial monitoring method (for example brine filled) is immediately removed.

(3) monitoring or test results, including investigation of an alarm, that are anything other than a "pass" or "normal" result from any release detection method in 20.5.108 NMAC and 20.5.111 NMAC, or that indicate a release may have occurred unless:

(a) the monitoring device is found to be defective, and is immediately repaired, recalibrated or replaced, and additional monitoring is performed which does not indicate that a release has occurred;

(b) the leak is contained in the secondary containment; and

(i) except as provided for in Subparagraph (d) of Paragraph (2) of Subsection A of 20.5.108.808 NMAC, any liquid in the interstitial space not used as part of the interstitial monitoring method (for example, brine filled) is immediately removed; and

(ii) all defective storage tank system equipment or components are immediately repaired or replaced.

(c) the investigation determines no release has occurred;

(d) in the case of statistical inventory reconciliation, described in 20.5.108 NMAC, inconclusive or failed monthly results are overturned by the third-party vendor within 24 hours of the receipt of the report from the vendor; or

(e) the alarm was investigated and determined to be a non-release event (for example, from a power surge or caused by filling or dispensing from the tank during release detection testing).

(4) failing results from continuous monitoring or periodic testing of spill prevention equipment and containment sumps; or

(5) other evidence of failure or deterioration such as but not limited to holes, cracks, or corrosion in the storage tank system.

B. Owners and operators shall investigate all suspected releases of regulated substances within seven days of discovery of the suspected release. Owners and operators shall conduct appropriate storage tank system testing, site check or another procedure, with prior approval by the department of the procedure.

(1) System test. Owners and operators shall conduct appropriate system tests approved by the department according to the requirements for tightness testing for USTs in 20.5.108.804 NMAC and in Subparagraph (a) of Paragraph (3) of Subsection A of 20.5.108.810 NMAC, and for ASTs in 20.5.111.1101 NMAC and Subparagraph (a) of Paragraph (3) of Subsection A of 20.5.111.1105 NMAC, or as appropriate, secondary containment testing described in 20.5.107 NMAC or 20.5.110 NMAC.

(a) The test must determine whether:

(i) a leak exists in any portion of the tank or piping that has the potential to contain a regulated substance;

(ii) a breach of the inner or outer wall of the secondary containment has occurred; or

(iii) the integrity of the tank system is compromised such that a release has occurred.

(b) If the system test confirms a leak into the interstice or a release, owners and operators must repair, replace, upgrade or close the storage tank system. In addition, owners and operators must begin corrective action in accordance with 20.5.119 NMAC if test results for the storage tank system indicate that a release has occurred.

(c) Further investigation is not required if test results for the storage tank system do not show a leak exists and if environmental contamination is not the basis for suspecting a release.

(2) Site check. When there is evidence of a release of a regulated substance in the vicinity of a storage tank system, owners and operators shall conduct a site check as directed by the department.

(a) Owners and operators shall investigate a release in the locations where contamination is most likely to be present at the storage tank site.

(b) In selecting sample types, sample locations, and measurement methods, owners and operators shall consider the nature of the stored regulated substance, the basis for the suspected release report, the type of backfill, depth to groundwater, and other appropriate site-specific conditions.

(c) The department shall approve sample types, locations and methods of measurement.

(3) In the case of a suspected release indicated by statistical inventory reconciliation, after following the process outlined in 20.5.108.809.C NMAC, owners and operators shall conduct appropriate system tests or site checks approved by the department.

C. In the event of a suspected release, the secretary may take any action necessary, including suspension of the use of a storage tank system and requiring additional testing or other actions to investigate whether a release has occurred.

D. Owners and operators who do not demonstrate that a release has not occurred within 30 days of the reporting of a suspected release, or another timeframe approved by the department, shall be subject to the requirements of 20.5.118.1802 NMAC and the requirements of 20.5.119 NMAC or 20.5.120 NMAC for confirmed releases.

E. Owners and operators shall report to the department in writing all results of the storage tank system test, site check or other procedure approved by the department in accordance with this part. Any report submitted in accordance with this section shall contain, at a minimum, the information required in Subsection A of 20.5.118.1800 NMAC.

[20.5.118.1801 NMAC - N, 07/24/2018]

[To provide notice to the department under this section, telephone the department staff person currently on duty; to obtain this number, check the petroleum storage tank bureau's pages on the department website.]

20.5.118.1802 CONFIRMED RELEASES:

A. Owners, operators, certified installers, certified junior installers, and testers of storage tank systems shall report the following conditions to the department within 24 hours, in accordance with 20.5.118.1800 NMAC:

- (1) visible leaks or seeps from any part of a storage tank system;
- (2) evidence of released regulated substances at the storage tank site including, but not limited to, the presence of non-aqueous phase liquid or vapors in soils, basements, sewer and utility lines, groundwater, drinking water or nearby surface water; and
- (3) evidence of released regulated substances in soils, including, but not limited to:
 - (a) any soil analytical results that indicate the presence of total petroleum hydrocarbons at concentrations equal to or exceeding 100 parts per million;
 - (b) any petroleum hydrocarbon vapor field screening results that exceed 100 whole instrument units; or
 - (c) significant visible staining or obvious petroleum odors.

B. If a release is confirmed, the secretary may take any action necessary, including suspension of the use of a storage tank system, until the owner or operator identifies and stops the release.

C. Owners and operators of storage tank systems shall address confirmed releases in accordance with 20.5.119 and 20.5.120 NMAC, and shall empty the storage tank and close the storage tank system in accordance with 20.5.115 NMAC until the storage tank system is repaired or replaced so that the release will not recur.

[20.5.118.1802 NMAC - N, 07/24/2018]

[To provide notice to the department under this section, telephone the department staff person currently on duty; to obtain this number, check the petroleum storage tank bureau's pages on the department website.]

20.5.118.1803 SPILLS AND OVERFILLS:

A. Owners and operators of storage tank systems shall contain and immediately clean up a spill or overflow, and report the spill or overflow to the department within 24 hours in accordance with 20.5.118.1800 NMAC except as provided in Subsection C of this section, and begin corrective action in accordance with 20.5.119 and 20.5.120 NMAC in the following cases:

(1) any spill or overflow of petroleum that results in a release to the environment that exceeds 25 gallons, that causes a sheen on nearby surface water, or that creates a vapor hazard pursuant to 20.5.119.1902 NMAC; and

(2) any spill or overflow of a hazardous substance that results in a release to the environment that equals or exceeds its reportable quantity under the Comprehensive Environmental Response, Compensation, and Liability Act of 1980 (CERCLA), and 40 CFR part 302.

B. Owners and operators of storage tank systems shall contain and immediately clean up a spill or overflow of petroleum that is less than 25 gallons, and a spill or overflow of a hazardous substance that is less than the reportable quantity. Owners and operators shall notify the department if cleanup cannot be accomplished within 24 hours, or within another reasonable time period which has been established by the department.

C. Pursuant to 40 CFR parts 302.7 and 355.40, owners and operators shall also immediately report a release of a hazardous substance equal to or in excess of its reportable quantity to the national response center under sections 102 and 103 of CERCLA and to appropriate state and local authorities under Title III of the Superfund Amendments and Reauthorization Act of 1986.

[20.5.118.1803 NMAC - N, 07/24/2018]

[To provide notice to the department under this section, telephone the department staff person currently on duty; to obtain this number, check the petroleum storage tank bureau's pages on the department website.]

PART 119: CORRECTIVE ACTION FOR STORAGE TANK SYSTEMS CONTAINING PETROLEUM PRODUCTS

20.5.119.1 ISSUING AGENCY:

New Mexico Environmental Improvement Board.

[20.5.119.1 NMAC - N, 07/24/2018]

20.5.119.2 SCOPE:

This part applies to owners and operators of petroleum storage tanks as defined in 20.5.101 NMAC. This part also applies to owners and operators of AST systems with capacities of 55,000 gallons or more associated with airport hydrant fuel distribution systems and owners and operators of AST systems with capacities of 55,000 gallons or more associated with UST systems with field-constructed tanks as these terms are defined in 20.5.101 NMAC. If the owner and operator of a petroleum storage tank are separate persons, only one person is required to comply with the requirements of this part, including any notice and reporting requirements; however, both parties are liable in the event of non-compliance.

[20.5.119.2 NMAC - N, 07/24/2018]

20.5.119.3 STATUTORY AUTHORITY:

This part is promulgated pursuant to the provisions of the Hazardous Waste Act, Sections 74-4-1 through 74-4-14 NMSA 1978, the Ground Water Protection Act, Sections 74-6B-1 through 74-6B-14, NMSA 1978; the Water Quality Act, Sections 74-6-1 through 74-6-17, NMSA 1978; and the general provisions of the Environmental Improvement Act, Sections 74-1-1 through 74-1-17, NMSA 1978.

[20.5.119.3 NMAC - N, 07/24/2018]

20.5.119.4 DURATION:

Permanent.

[20.5.119.4 NMAC - N, 07/24/2018]

20.5.119.5 EFFECTIVE DATE:

July 24, 2018, unless a later date is indicated in the bracketed history note at the end of a section.

[20.5.119.5 NMAC - N, 07/24/2018]

20.5.119.6 OBJECTIVE:

The purpose of this part is to provide for corrective action at sites contaminated by releases from petroleum storage tank systems and to protect the public health, safety and welfare and the environment of the state.

[20.5.119.6 NMAC - N, 07/24/2018]

20.5.119.7 DEFINITIONS:

The definitions in 20.5.101 NMAC apply to this part.

[20.5.119.7 NMAC - N, 07/24/2018]

20.5.119.8-20.5.119.1899 [RESERVED]

20.5.119.1900 GENERAL:

A. Owners and operators of petroleum storage tank systems shall take corrective action to address all releases, including such action as collection and analysis of relevant site-specific data, soil remediation, groundwater and surface water remediation and any other appropriate actions pursuant to this part, in a manner protective of public health, safety and welfare and the environment.

B. Upon confirmation of a release pursuant to 20.5.118 NMAC or identification and reporting of a release in any other manner, owners and operators of petroleum storage tank systems shall comply with the requirements of this part if the release:

(1) is of unknown volume or is greater in volume than 25 gallons; or

(2) is of any size and the owner or operator is directed by the department to comply with this part.

C. Owners and operators shall maintain and provide to the department all reports required in 20.5.119.1932 and 20.5.119.1933 NMAC.

D. Owners and operators shall mail or deliver and provide paper and electronic copies of all written notices and reports required under this part to be submitted to the department to the owner or operator’s assigned project manager from the petroleum storage tank bureau, New Mexico environment department.

E. Owners and operators shall comply with any site-specific timeline or deadline that is approved in writing by the department at the time of workplan approval. If no applicable site-specific timeline has been approved, the following timeline shall apply to all corrective action requirements under this part. The time deadlines set forth in this part are computed from the date of reporting of a release or of reporting of the confirmation of a suspected release pursuant to 20.5.118.1800 NMAC unless another event is specified in these.

Default Corrective Action Timeline

Deadline, in days from report:	Action or deliverable due date, as defined above:
0	report discovery or confirmation of a release

3	72-hour report
14	14-day report
60	submit NAPL assessment
60	initiate interim removal of contaminated soil
60	preliminary investigation report
120	secondary investigation report
When monitored natural attenuation is used:	
510	monitored natural attenuation (MNA) plan
570	implementation of MNA
935	first annual MNA monitoring report
935	annual evaluation of MNA report
When other remediation is used:	
510	conceptual remediation plan
540	final remediation plan
600	implementation of remediation
690	first quarterly monitoring report
965	annual evaluation of remediation system report

F. All owners and operators are responsible for compliance with all provisions of this part. An owner or operator may designate a representative to facilitate compliance with this part. The designation of such a representative shall not affect the department's right to seek compliance at any time from any owner or operator and shall not relieve owners or operators of any legal liabilities or responsibilities they may have under this part or otherwise under the law.

G. Except for 20.5.119.1901, 20.5.119.1902 and 20.5.119.1903 NMAC, owners and operators shall submit to the department written workplans for all corrective action, including voluntary corrective action, as required under this part. Owners and operators may submit workplans in stages to reflect the sequence or types of corrective action described in 20.5.119 NMAC at the site, but the owners and operators shall submit all workplans to and obtain approval by the department in writing for technical adequacy before the corrective action is commenced.

H. Unless otherwise approved, a qualified firm as specified in 20.5.122 NMAC shall perform all corrective action and, when required by the rules in Title 20, Chapter 5 NMAC, a professional engineer as defined in 20.5.101.7 NMAC.

(1) All contractors and their subcontractors shall have appropriate licenses and certifications and be in compliance with applicable local, state and federal laws and regulations, including but not limited to the rules in Title 16, Chapter 39 NMAC governing engineers, 14.6.3 NMAC governing contractors and 29 CFR part 1910 governing worker health and safety.

(2) Owners and operators shall identify all prime contractors and all subcontractors in all workplans submitted to the department.

I. Where site conditions are amenable, owners and operators may use accelerated site characterization techniques if pre-approved by the department.

J. All monitoring wells shall be permitted in conformance with applicable federal, state and local laws and regulations in effect at the time of installation.

K. Owners and operators shall clearly mark and secure monitoring wells and major remediation equipment to prevent unauthorized access, tampering and damage. Owners and operators shall close or abandon all wells in accordance with the requirements of applicable federal, state and local laws and regulations.

L. The department shall notify owners and operators taking corrective action and contractors of state-lead sites in writing when it has determined that a deliverable completed under an approved workplan is satisfactory. The written notice shall also inform the owner, operator or contractor that any application for payment from the fund of costs associated with the approved deliverable must be received by the department within 90 days of the date the owner, operator or contractor received written notice of approval and that the department shall not grant extensions of the deadline except for good cause as shown pursuant to 20.5.123.2318 NMAC.

[20.5.119.1900 NMAC - N, 07/24/2018]

[The address of the petroleum storage tank bureau, remedial action program, is: 2905 Rodeo Park Drive East, Building 1, Santa Fe, New Mexico 87505.]

20.5.119.1901 MINIMUM SITE ASSESSMENT, INITIAL RESPONSE:

A. Upon discovery or confirmation of a release, owners and operators of the storage tank system shall immediately prevent any further release from the storage tank system by whatever means necessary, including removing product from the storage tank system or any part of the storage tank system that is known to leak or is suspected of leaking. If necessary, owners and operators shall remove the storage tank system from service in accordance with 20.5.115 NMAC.

B. Owners and operators shall inform the department in accordance with 20.5.118.1800 NMAC of any release and action taken to mitigate immediate damage from the release.

[20.5.119.1901 NMAC - N, 07/24/2018]

20.5.119.1902 MINIMUM SITE ASSESSMENT, INITIAL ABATEMENT:

A. Owners and operators shall undertake the initial abatement and site investigation actions specified in this section within 72 hours of discovery or confirmation of a release pursuant to 20.5.118 NMAC, using the default timeline as set forth in Subsection E of 20.5.119.1900 NMAC or as otherwise approved by the department.

B. Owners and operators shall identify the location and details of construction of all private water supply wells, using readily accessible public records, within a 1,000-foot radius, and all public water supply wells within a one mile radius of the storage tank system, and shall determine if the identified wells lie within a designated wellhead protection area. Owners and operators shall take appropriate measures to protect these water supplies from contamination.

C. Owners and operators shall contain or remediate releases which present an imminent threat of contamination to or are within 500 feet of a surface water course as soon as practicable to prevent contamination of surface water. If the surface water course is a drinking water supply, within 24 hours owners and operators shall notify the owners or operators of all drinking water supplies likely to be affected by the release.

D. If the release has contaminated a water supply, owners and operators shall immediately provide a temporary replacement drinking water supply, as well as adequate warnings or other mechanisms to prevent persons from drinking or otherwise contacting water contaminated by the release. Within seven days of the discovery or confirmation of a release pursuant to 20.5.118 NMAC that has contaminated a water supply, owners and operators shall provide a replacement water supply which is of adequate quality and quantity for drinking, bathing, cooking and washing. Owners and operators shall maintain the replacement water supply until an alternate water supply sufficient for all domestic purposes is available.

E. Owners and operators shall identify the depth, location, composition and construction of all underground utilities including water lines, sewer lines, communication cables, electric lines, and natural gas lines within the area of the release to assess the susceptibility of these utilities to permeation by contaminants or deterioration caused by contaminants. Owners and operators shall notify the utility owner that the release has occurred and obtain permission to perform a site check of the utilities or other subsurface structures most likely to be contaminated by the release to determine whether petroleum products or vapors are present.

F. Owners and operators shall complete an investigation to determine whether potentially explosive or harmful vapors are present in any building, utility corridor, basement, or other surface or subsurface structure on or adjacent to the release site.

1) The investigation shall include testing for vapors using the following:

(a) a combustible gas indicator or equivalent instrument calibrated according to the manufacturer's instructions to test for potentially explosive levels of petroleum hydrocarbon vapors; and

(b) a photoionization detector, flame ionization detector or another method approved by the department calibrated according to the manufacturer's instructions to test for potentially harmful petroleum hydrocarbon vapors.

(2) In the event owners and operators discover potentially explosive levels of petroleum hydrocarbon vapors or potentially harmful petroleum hydrocarbon vapors in any structure in the vicinity of the release site, owners and operators shall take immediate action to mitigate the vapor hazard. Within seven days of the discovery of the vapors, owners and operators shall install and place into operation a vapor mitigation system capable of reducing petroleum hydrocarbon vapors to safe levels within the shortest reasonable time. The vapor mitigation system shall be designed by and constructed under the direct, responsible, supervisory control of a professional engineer, when required by the department.

(a) Once a vapor mitigation system has been installed, owners and operators shall monitor and report in writing to the department the levels of petroleum hydrocarbon vapors in the affected structures weekly for the first month and monthly thereafter unless a different monitoring schedule is approved in writing by the department. This monitoring shall be performed in accordance with Subparagraphs (a) and (b) of Paragraph (1) of this subsection.

(b) After the vapor mitigation system has been in operation for three months, owners and operators shall have 30 days to submit to the department a written summary report containing the monitoring results. The department may direct the owner and operator to modify the vapor mitigation system as necessary to reduce petroleum hydrocarbon vapors to safe levels. Owners and operators shall submit monitoring results to the department at three-month intervals until operation of the vapor mitigation system is discontinued in accordance with this section.

(3) Owners and operators shall continue to operate the vapor mitigation system until the results of three consecutive monthly monitoring events indicate the following:

(a) levels of petroleum hydrocarbon vapors are less than ten percent LEL;
and
