the signs shall be posted in such a manner and location that a person can easily read the legend and conform to the requirements of 20 inches by 14 inches upright format signs specified in 29 CFR 1910.145(d)(4) (or equivalent regulation adopted by the board under the Occupational Health and Safety Act); spacing between any two lines shall be at least equal to the height of the upper of the two lines; and

(3) have at least one employee who has received at least 32 hours of course work in a U.S. EPA certified training course which deals with the identification, hazards and management of asbestos wastes. An employee with this training shall be present at all times when asbestos wastes are being disposed.

[20.9.8.12 NMAC - Rp, 20 NMAC 9.1.VII.705, 8/2/2007]

20.9.8.13 INFECTIOUS WASTE:

A. This section applies:

(1) without regard to the quantity of infectious waste generated, to any generator of infectious waste including, but not limited to:

- (a) general acute care hospitals;
- (b) skilled nursing facility or convalescent hospitals;
- (c) intermediate care facilities;
- (d) in-patient care facilities for the developmentally disabled;
- (e) dialysis clinics;
- (f) free clinics;
- (g) community clinics;
- (h) employee clinics;
- (i) health maintenance organizations;
- (j) home health agencies;
- (k) surgical clinics;
- (l) urgent care clinics;
- (m) acute psychiatric hospitals;
- (n) blood/plasma centers;
- (o) laboratories;
- (p) medical buildings;
- (q) physicians offices;
- (r) veterinarians;
- (s) dental offices;
- (t) acupuncturists;
- (u) funeral homes;
- (v) eye clinics; and

(w) tattoo parlors and body-piercing establishments; and

(2) to all infectious waste storage areas, processing, transformation, transfer and disposal facilities, other than sewage treatment systems that provide secondary treatment of waste.

B. All material that has been rendered non-infectious is not subject to the handling requirements of this section, provided:

(1) if it is an otherwise regulated, hazardous, special, or radioactive waste, it shall be handled according to regulations applicable to that type of waste;

(2) any person that processes or transforms infectious waste shall certify in writing on at least an annual basis, or upon any change that could affect the efficacy of the treatment that the waste has been rendered non-infectious by sterilization, incineration or another method approved by the secretary; a certification that the waste has been rendered non-infectious shall be provided to the generator, transporter, and disposal facility; the generator, processing or transformation facility, and disposal facility shall maintain copies of certifications for a period of three years and the records shall be made available to the department upon request; and

(3) the operator of the disposal facility applies daily cover as required in 20.9.5.9 NMAC prior to any compaction of the sharps.

C. The following storage and containment requirements apply to all infectious waste.

(1) Containment shall be in a manner and location which affords protection from animal intrusion, does not provide a breeding place or a food source for insects and rodents, and minimizes exposure to the public.

(2) Infectious waste shall be segregated by separate containment from other waste at the point of origin.

(3) Except for sharps, infectious waste shall be contained in plastic bags inside rigid containers. The bags shall meet the testing requirements specified by 40 CFR 173.197. All bags used for containment purposes shall be red or orange and clearly identified as specified in 29 CFR 1910.145(f). The bags shall be securely tied to prevent leakage or expulsion of solid or liquid wastes during storage, handling or transport.

(4) Sharps shall be contained for storage, transportation, transfer, processing, transformation, and disposal in leak-proof, rigid, puncture-resistant containers which are manufactured for the purpose of sharps containment and are taped closed or tightly lidded to preclude loss of contents.

(5) Rigid containers shall be labeled "biomedical waste", or otherwise conspicuously labeled as holding infectious waste, or placed in disposable bags used for other infectious waste. Rigid containers shall meet or exceed the requirements of 49 CFR 173.197 including that the containers be:

- (a) rigid;
- (b) leak resistant;
- (c) impervious to moisture;
- (d) of sufficient strength to prevent tearing or bursting under normal conditions of use;
- (e) sealed to prevent leakage during transport; and
- (f) puncture resistant for sharps and sharps with residual fluids.

(6) If other waste is placed in the same container as regulated infectious waste, then the generator shall package, label and mark the container and its entire contents as infectious waste.

(7) Rigid infectious waste containers may be reused for infectious or non-infectious waste if they are thoroughly washed and decontaminated each time they are emptied or the surfaces of the containers have been completely protected from contamination by disposable, unpunctured or undamaged liners, bags, or other devices that are removed with the infectious waste, and the surface of the containers have not been damaged or punctured.

(8) Storage and containment areas shall protect infectious waste from the elements, be ventilated to the outdoors (unless refrigerated), provide refrigeration as necessary, be only accessible to authorized persons, and be marked with prominent warning signs on, or adjacent to, the exterior doors or gates. The warning signs shall be easily read during daylight from a distance of 25 feet.

(9) Generators of infectious waste, shall place sufficient absorbent material inside the rigid container or liner of the rigid container sufficient to absorb the entire amount of liquid present in the event of an unintentional release of contents, as specified in 49 CFR 173.197.

(10) Compactors, grinders or similar devices shall not be used to reduce the volume of infectious waste before the waste has been rendered non-infectious unless prior approval has been obtained from the department.

D. All generators of infectious waste shall dispose of the infectious waste at a facility permitted to process, store or dispose of infectious waste.

E. All infectious waste generation, processing, transformation, transfer, storage and disposal facilities subject to this section shall comply with the following operational requirements.

(1) Every person who generates, transports, stores, processes, or disposes of infectious waste shall prepare and maintain on file a management plan for the waste that identifies the type of waste the person generates or handles, the segregation, packaging, labeling, collection, storage, method of storage, and transportation procedures to be implemented, the processing, transformation or disposal methods that will be used, the transporter and disposal facility that will be used, and the person responsible for the management of the infectious waste.

(2) All infectious waste management facilities may only accept infectious waste that is accompanied by a manifest that contains the information required by 20.9.8.19 NMAC.

(3) Report to the secretary any delivery of unauthorized waste, contamination of any person, or other emergencies immediately upon recognition.

(4) Human fetal remains, as defined by the state medical investigator, when measured to be 500 grams or greater, shall be disposed by incineration or interment.

(5) Infectious waste consisting of recognizable human anatomical remains shall be disposed by incineration or interment, unless such remains are subject to different treatment or disposal standards due to contamination by a hazardous or radioactive substance. Recognizable human anatomical remains may be released to the patient, proper governmental authority, or designated family member for interment or incineration, as long as all forensic needs of the facility have been met and the release is not in violation of any other law.

F. Processing, transformation and disposal of infectious waste shall be by one of the following methods:

(1) incineration in a controlled air multi-chambered incinerator which provides complete combustion of the waste to carbonized or mineralized ash:

(a) ash from the incinerator shall be sampled in accordance with Subsection B of 20.9.8.11 NMAC;

(b) the sample shall be analyzed by the U.S. EPA test method 1311: toxic characteristics leaching procedure (TCLP) to determine if it is a hazardous waste; if hazardous, it shall be managed by applicable state regulations;

(c) the retention times and temperatures for each chamber shall be continuously measured and recorded, or other equivalent tests approved by the

department to determine if it is still infectious shall be performed; if infectious, it shall be re-incinerated in accordance with this section; and

(d) charge rates shall be maintained and recorded;

(2) sterilization by heating in a steam sterilizer so as to render the waste non-infectious:

(a) the operator shall have available and shall certify in writing that she or he understands written operating procedures for each steam sterilizer including time, temperature, pressure, type of waste, type of container(s), closure on container(s), pattern of loading, water content, and maximum load quantity;

(b) infectious waste shall be subjected to sufficient temperature, pressure and time to kill *Geobacillus stearothermophilus* spores or induce a complete color change in an approved steam sterilization integrator when either indicator is located in the center of the waste load being decontaminated;

(c) unless a steam sterilizer is equipped to continuously monitor and generate a printed paper record of time, temperature and pressure during the entire length of each sterilization cycle, a chemical indicator shall be attached to each package of infectious waste that will visually demonstrate at the end of the autoclave cycle that each package was exposed to a temperature of at least 250 degrees fahrenheit or 121 degrees celsius in the presence of steam under pressure was reached during the process; the original printed record generated by the autoclave must be maintained for three years;

(d) each sterilization unit shall be evaluated for effectiveness with spores of *Geobacillus stearothermophilus* or approved steam sterilization integrator at least once each 40 hours of operation; and

(e) a written log shall be maintained for each sterilization unit which contains:

- (i) date, time and load number for each load;
- (ii) amount per load;
- (iii) duration of the cycle; and
- (iv) the operator's name;

(3) discharge to a sewage treatment system that provides secondary treatment of waste, if the waste is liquid or semi-solid and approved in writing by the operator of the sewage treatment system; or

(4) other products or methods may be approved by order of the secretary which provide:

(a) a 6Log10 reduction in *mycobacteria* of *Mycobacterium phlei* or *Mycobacterium bovis* (BCG) or if specifically approved, other *Mycobacterium* species;

(b) a 4Log10 reduction in bacterial spores of *Geobacillus stearothermophilus*, *Bacillus atrophaeus* or if specifically approved, other species of spore-forming bacterium; and

(c) verification that the species used in Subparagraphs (a) and (b) of Paragraph (4) of this subsection are the species indicated and that the strain used is appropriate for the proposed method.

G. The following requirements and condition shall apply to any person seeking approval from the secretary for a treatment method under Paragraph (4) of Subsection F of this section:

(1) the person shall provide any information requested by the secretary within the time period specified by the secretary;

(2) the request for approval shall be approved, approved with terms and conditions, or denied by the secretary;

(3) within 45 days from the end of each calendar year, manufacturers of on-site treatment or processing products approved by the secretary shall submit an annual report to the department that includes:

(i) current manufacturer's company name, contact names, addresses, and telephone numbers;

(ii) a current list of product consumers or clients in New Mexico identified as generators of infectious waste under Subsection A of 20.9.8.13 NMAC, with contact names, addresses, and telephone numbers;

(iii) proof of current registration with the U.S. EPA, if required under the Federal Insecticide, Fungicide, and Rodenticide Act;

(iv) a current material safety data sheet for any materials used in the treatment method;

(v) a current copy of the manufacturer's instructions as printed on the product and a copy of the most recent operator's manual, if not previously submitted; and

(vi) proof of current registration with the New Mexico department of agriculture, if required under the New Mexico Pesticide Control Act;

(4) the secretary may withdraw the approval of an on-site processing product if the product fails to properly treat infectious waste as claimed, or if the on-site processing product or method is altered in any manner; to withdraw the approval, the secretary shall issue an order withdrawing the approval; the interested person may appeal the secretary's order by filing a request for hearing within 30 days of the date of the secretary's order; the procedures set forth in Adjudicatory Procedures - Environment Department, 20.1.5 NMAC shall apply to the appeal.

[20.9.8.13 NMAC - Rp, 20 NMAC 9.1.VII.706, 8/2/2007]

20.9.8.14 ASH:

A. Transporters of ash shall:

(1) not accept or transport ash unless it has been treated or is securely covered or containerized to prevent release of fugitive dust;

(2) cover vehicles to prevent fugitive dust loss during transport; and

(3) line or seal vehicles in a manner to prevent any leakage of liquids or fugitive dust during transport.

B. The landfill owner or operator that accepts ash shall:

(1) prepare an excavation to receive non-hazardous ash;

(2) provide a ground water monitoring system and a leachate collection system unless an adequate demonstration is made to the secretary that such systems are not necessary;

(3) keep the ash wetted to prevent fugitive emissions prior to covering;

(4) unload transport vehicles at the bottom of the excavations; and

(5) completely cover the ash within 24 hours with a minimum of six inches of clean non-waste containing material, or other material approved by the secretary; if the ash is containerized, an alternate frequency may be specifically approved.

C. The landfill owner or operator that accepts ash shall provide barriers adequate to control public access and shall:

(1) limit access to the ash site to no more than two entrances, by:

(a) gates that can be locked when left unattended; and

(b) fencing adequate to deter access by the general public; or

(2) when excavations are used at a landfill, isolate such excavations from the rest of the facility in a manner to deter access by the general public.

D. Ash that is temporarily stored at a generation site awaiting transportation shall be stored in a manner so as to prevent fugitive dust emissions.

[20.9.8.14 NMAC - Rp, 20 NMAC 9.1.VII.707, 8/2/2007]

20.9.8.15 PETROLEUM CONTAMINATED SOILS:

A. The generator of petroleum contaminated soil shall assure that all petroleum contaminated soils to be disposed, processed, composted, or transformed at a solid waste facility shall be tested under the requirements of 20.9.8.11 NMAC.

(1) All soils that are suspected to be contaminated with petroleum products shall be tested for total petroleum hydrocarbons (TPH) and other contaminants as required by the disposal management plan to determine the contaminants of the soil.

(2) The frequency of sampling shall be one representative sample per 100 cubic yards of contaminated soil, unless an alternate frequency is permitted or specifically approved by the secretary upon a demonstration that the contaminated soil is homogeneous.

(3) Copies of the results from the laboratory analyses shall be placed in the operating record.

B. Petroleum contaminated soils containing free liquid shall not be accepted at a solid waste facility. When the soil can pass the paint filter liquids test, the test results shall be placed in the daily operating record and made available to the secretary upon request.

C. Petroleum contaminated soil may be stored temporarily or remediated at a solid waste facility in a bermed area on an impermeable liner or in a manner that does not contaminate ground water, surface water, or uncontaminated soil above regulatory limits. The method of storage, remediation, and testing shall be described in the disposal management plan. Remediation shall be complete when the following conditions are met in a soil sample:

(1) the sum of benzene, toluene, ethylbenzene, and xylene isomer concentrations is less than 500 mg/Kg, with benzene individually less than 10 mg/Kg; and

(2) the TPH concentration is less than 1,000 mg/Kg.

D. Remediated petroleum contaminated soil may be disposed at a landfill authorized to accept petroleum contaminated soils. Petroleum contaminated soils that have been remediated at the landfill may be removed only if the soil complies with applicable environmental laws. Remediated petroleum contaminated soil may not be removed from the facility for beneficial use as clean fill, as the soil does not constitute clean fill as defined in Paragraph (4) of Subsection C of 20.9.2.7 NMAC.

E. Uncontaminated or remediated soils shall not be mixed with contaminated soils.

F. The owner or operator shall provide a written report to the department documenting remediation.

G. Permitted facilities not otherwise authorized to accept petroleum contaminated soil for remediation may remediate petroleum contaminated soil generated at the facility, provided the volume of contaminated soil does not exceed 50 cubic yards and the area where the petroleum contaminated soil is remediated is restricted from public access. Remediation shall be complete when the soil meets the standards in 20.5.12.1202 NMAC or other applicable standards.

[20.9.8.15 NMAC - Rp, 20 NMAC 9.1.VII.708, 8/2/2007]

20.9.8.16 SLUDGE:

A. The owner or operator of a landfill may dispose or use sludge as an amendment to intermediate or final cover material provided:

(1) the landfill owner or operator has been issued a permit to dispose of sludge or has received specific approval from the secretary to use sludge as an amendment to intermediate or final cover material, respectively;

(2) the sludge does not exceed the test parameters specified in Subsection D of this section; and

(3) the sludge contains no free liquids as determined by the paint filter liquids Test (U.S. EPA test method 9095), unless permitted to do otherwise under 20.9.4.17 NMAC.

B. The owner or operator of a solid waste facility that is authorized to accept sludge shall have an approved disposal management plan that shall, at a minimum:

(1) describe the methods used to:

(a) obtain representative samples of sludge for analysis; and

(b) analyze the sludge for the parameters specified in Subsection D of this section to demonstrate the sludge is non-hazardous and passes the paint filter liquids test, unless otherwise permitted under 20.9.4.17 NMAC;

(2) identify the laboratory used to analyze the sludge and include a certification that, to the best of the preparer's knowledge and belief, the laboratory follows quality assurance and quality control procedures in accordance with U.S. EPA approved methods;

(3) describe the transport method, indicate transportation routes that will be used by the transport vehicles, and demonstrate that the transport method will prevent leaks and litter;

(4) describe the anticipated volumes to be transported and total time period for disposal of any sludges;

(5) describe any plans for continuation of landfill disposal of the sludge, including how often sludge will be tested and transported to the landfill and how long the sludge will be stored at the landfill prior to disposal;

(6) provide a site map indicating the solid waste facility boundaries, the location of the sludge disposal area, and the routes of the disposal vehicles once they enter the facility; and

(7) include the portion of the facility's contingency plan a section describing methods for clean-up if an accident should occur during transport or disposal;

C. In addition to the requirements of Subsection A of this section, all owners or operators that dispose of sewage sludge or use sewage sludge as an amendment to cover material at a landfill shall meet the following requirements prior to disposal or use as a cover material amendment:

(1) obtain at least one representative sample per 100 cubic yards of sludge for analysis of the parameters listed in Subsection D of this section, but an alternate frequency may be permitted or specifically approved by the secretary if a demonstration is made that the sludge is homogeneous;

(2) cover the sludge with six inches of clean earthen material or other suitable material at the end of the day in order to be excluded from the 40 CFR Part 503 pathogen reduction criteria;

(3) restrict the treatment area from public access until the sludge is either placed in a disposal cell and covered or until it meets the requirements of 40 CFR Part 503; and

(4) ensure that all sewage sludge complies with 40 CFR Part 503, Subpart B before it is used as an amendment to intermediate or final cover.

D. Prior to delivery of sludge to a solid waste facility for disposal, the generator shall test a representative sample for the following parameters to determine if it exceeds the specified limits below:

(1) no free liquids as determined by paint filter liquids test (U.S. EPA test method 9095), unless exempt in accordance with 20.9.4.17 NMAC;

(2) percent solids (no specified limits);

(3) pH, within the range of 2.0 to 12.5;

(4) polychlorinated biphenyls (PCB's), less than 50 mg/Kg; and

(5) toxicity characteristic leaching procedure (TCLP) (U.S. EPA test method 1311), for the following parameters and maximum allowable concentrations:

(a) arsenic, 5.0 mg/L;

(b) benzene, 0.5 mg/L;

(c) cadmium, 1.0 mg/L;

(d) chlordane, 0.03 mg/L;

(e) chromium, 5.0 mg/L;

(f) 2,4-Dichlorophenoxy-acetic acid, 10.0 mg/L;

(g) lead, 5.0 mg/L;

(h) lindane, 0.4 mg/L;

(i) mercury, 0.2 mg/L;

(j) methyl ethyl ketone, 200.0 mg/L; and

(k) toxaphene, 0.5 mg/L.

[20.9.8.16 NMAC - Rp, 20 NMAC 9.1.VII.709, 8/2/2007]

20.9.8.17 PACKING HOUSE AND KILLING PLANT OFFAL:

The owner or operator of a solid waste facility that is authorized to accept offal shall have an approved disposal management plans for packing house and killing plant offal ensuring that, prior to disposal at the working face of a landfill, the wastes shall:

- A. pass the paint filter liquids test (U.S. EPA test method 9095);
- B. be mixed with soil, in a separate area of the facility, to a consistency that will support compaction and cover material; and
- C. be covered immediately after disposal.

[20.9.8.17 NMAC - Rp, 20 NMAC 9.1.VII.710, 8/2/2007]

20.9.8.18 DISPOSAL OF SPECIAL WASTE NOT OTHERWISE SPECIFIED:

Any solid waste facility owner or operator who wishes to be permitted to receive special wastes that do not have specified disposal requirements shall submit a disposal management plan, as specified in Subsection C of 20.9.3.9 NMAC, to the department for approval.

[20.9.8.18 NMAC - Rp, 20 NMAC 9.1.VII.711, 8/2/2007]

20.9.8.19 MANIFEST REQUIREMENTS:

A. Each generator or his authorized agent shall prepare a manifest to accompany each load of special waste, including:

- (1) the name, address and telephone number of the generator and origin of the special waste;
- (2) the name, address and telephone number of all haulers in the order each will be transporting the waste;
- (3) the name, site address, telephone number and identification number of the solid waste facility to which the waste is to be delivered;
- (4) the type and proper name of waste being shipped;
- (5) the total weight or volume of waste prior to shipment from the generator;
- (6) the type and number of containers in the shipment; and
- (7) any special handling instructions.

B. The generator or his authorized agent shall sign the manifest and obtain the signature of the initial transporter and date of acceptance on the manifest, and shall

retain a copy of the manifest. Each hauler shall obtain the signature of the individual who accepts the special waste for storage, further transportation or disposal, retain a copy of the manifest, and provide the original manifest to the next hauler or solid waste facility operator who receives the special waste.

C. The manifest shall accurately reflect the required information and shall be signed and dated by the generator and each hauler of the special waste, and by the solid waste facility owner or operator, acknowledging delivery, weight or volume, and receipt of the special waste. All signatories shall be duly authorized agents of their organizations. The generator shall keep a copy of the originating manifest for three years.

D. Upon discovery of any significant discrepancy including, but not limited to, factual misrepresentation on the manifest, irregularities in transportation, discharges, or any unauthorized action in regard to the shipment, delivery, or disposal of the solid waste, the person discovering the discrepancy shall notify the department, the generator, hauler, and the solid waste facility operator in writing within 24 hours.

E. Within 30 days of receipt of a special waste shipment at the solid waste facility, the owner or operator shall send the original signed copy of the manifest to the generator, acknowledging receipt of the shipment. The facility owner or operator shall list any discrepancies on the manifest. Other methods of return of the manifest may be allowed upon specific approval from the secretary.

F. A copy of the manifest shall be retained by each hauler, and solid waste facility operator for their operating records. The generator shall retain for a period of three years both the originating copy and the returned original manifest signed by the solid waste facility owner or operator and all haulers transporting the waste. Haulers shall retain a copy of the manifest for a period of three years.

G. Copies of the manifest shall be retained by the facility owner or operator throughout any post-closure period.

20.9.9.7 DEFINITIONS:

[RESERVED]

[See 20.9.1 NMAC for Definitions.]

20.9.9.8 GROUND WATER MONITORING APPLICABILITY:

A. The owner or operator of a municipal or special waste landfill, unless it is a category 1 landfill, is waived under 20.9.2.14 NMAC, or is suspended under Subsection C of this section, shall submit, obtain approval of, and implement a ground water monitoring system plan and a ground water monitoring plan in accordance with the following:

(1) owners or operators of category 4 landfills and landfills seeking approval of lateral expansions shall obtain approval of a ground water monitoring system plan

and ground water monitoring plan in compliance with 20.9.9 NMAC prior to placement of waste in the landfill or lateral expansion, as part of their permit or permit modification; owners or operators of category 4 landfills and landfills making lateral expansions shall implement and comply with their ground water monitoring system plan and ground water monitoring plan as approved;

(2) owners or operators of category 3 landfills or landfills that closed on or after October 9, 1993 shall submit and obtain approval of a ground water monitoring system plan and ground water monitoring plan in compliance with 20.9.9 NMAC as part of their permit or closure or post closure care plan, and shall implement and comply with the approved ground water monitoring system plan and ground water monitoring plan; and

(3) owners or operators of category 2 landfills shall comply with 20.9.9 NMAC, with the exception that the ground water sampling parameters may be limited to those approved in the closure and post-closure care plan;

(4) the secretary may require monitoring for additional parameters as necessary to protect the public health, welfare and the environment.

B. Construction and demolition landfills, scrap tire monofills, and asbestos monofills are not required to comply with the ground water monitoring requirements of 20.9.9 NMAC unless required in the permit, or if the secretary orders groundwater monitoring, based on a finding that there is a potential for constituents to migrate from the facility to the uppermost aquifer. If contamination is detected at a construction and demolition landfill, scrap tire monofill or asbestos monofill, the requirements of 20.9.9 NMAC shall thereafter apply.

C. The secretary may suspend part or all of the ground water monitoring requirements of 20.9.9.9 - 20.9.9.13 NMAC if the owner or operator demonstrates that there is no potential for migration of constituents referenced in 20.9.9.20 NMAC from the landfill to the uppermost aquifer during the active life or post-closure care period of the landfill. This demonstration shall be certified by a qualified ground water scientist and presented in the permit application or a permit modification or petition (from non-permitted landfills) for approval by the secretary. For category 2 landfills that closed prior to receiving a solid waste facility permit, the demonstration shall be presented in an application for a closure and post closure care plan or an application to modify the approved closure and post closure care plan. The demonstration shall include:

(1) site-specific field measurements, sampling, and analysis of physical, chemical, and biological processes affecting contaminant fate and transport;

(2) contaminant fate and transport predictions that maximize contaminant migration and consider impacts on public health, welfare and environment; and

(3) a plan for periodic leak detection or vadose zone monitoring or ground water monitoring in compliance with Subsection N of 20.9.9.9 NMAC may be implemented as a secondary monitoring approach to support approval of a monitoring suspension.

D. If a suspension is granted, the secretary may require the owner or operator to conduct periodic ground water or vadose zone monitoring and leak detection at any landfill during the active life or post-closure care period as necessary to protect the public health, welfare or environment.

E. If ground water contamination is detected after a suspension has been granted pursuant to Subsection C of this section, the suspension is revoked and the requirements of 20.9.9 NMAC shall apply, unless the owner or operator can demonstrate that ground water cannot be adversely affected and there is no risk to human health or the environment. If contaminants are detected in vadose zone monitoring instruments or a leak is detected after a suspension has been granted pursuant to Subsection C of this section, actions specified in the vadose zone monitoring or leak detection plan must be undertaken to respond.

F. The secretary may require the owner or operator to conduct periodic ground water or vadose zone monitoring at any landfill for which ground water monitoring has been waived under 20.9.2.14 NMAC during the active life or post-closure care period to demonstrate the landfill is not contaminating ground water.

[20.9.9.8 NMAC - Rp, 20 NMAC 9.1.VIII.801, 8/2/2007]

20.9.9.9 GROUND WATER MONITORING SYSTEMS AND GROUND WATER MONITORING SYSTEM PLANS:

A. A ground water monitoring system shall consist of a sufficient number of wells, installed at appropriate locations and depths, to yield ground water samples from the uppermost aquifer that:

(1) represent the background quality of ground water that has not been affected by a release from the landfill as determined under 20.9.9.10 NMAC; and

(2) represent the quality of ground water passing the detection monitoring point which shall be at the waste management unit boundaries on land owned by the owner of the landfill:

(a) the downgradient monitoring system shall be installed at the detection monitoring point;

(b) when physical obstacles preclude installation of ground water monitoring wells immediately downgradient from an existing landfills, the secretary may approve a monitoring system plan that provides for an alternative detection monitoring point at the

closest practicable distances hydraulically downgradient from the landfill that ensure detection of ground water contamination in the uppermost aquifer.

B. The ground water monitoring system plan shall comply with this section and shall include a detailed plan for all wells, piezometers or other measurement and sampling devices and an explanation of the purpose and placement of each (with maps). The ground water monitoring system plan shall be certified that it is in compliance with this section by a qualified ground water scientist on a form provided by the department.

C. The ground water monitoring plan shall include a description of the hydrogeologic characteristics of the site, a geologic cross-section of the site, a description of ground water sampling and analysis procedures, and a detection monitoring plan, and shall comply with 20.9.9 NMAC. The ground water monitoring plan shall be certified that it is in compliance with 20.9.9 NMAC by a qualified ground water scientist on a form provided by the department.

D. The owner or operator shall comply with the ground water monitoring system plan and ground water monitoring plan approved by the department throughout the active life and post-closure care period of each landfill subject to the requirements of 20.9.9 NMAC. The secretary may require monitoring for additional constituents, parameters and frequency as necessary to protect the public health, welfare and the environment. No change shall be made to the approved ground water monitoring system plan or ground water monitoring plan without a specific approval by the department.

E. Owners or operators shall not install or decommission any monitoring well, piezometer, or other ground water measurement, sampling, or analytical device unless it is in accordance with an approved ground water monitoring system plan. The owner or operator shall submit a written notice of intent to the department at least 14 days prior to the installation or decommissioning of any monitoring wells or piezometers. The notice shall include a statement, on a form provided by the department, that the installation or decommissioning of any monitoring well complies with this section and the approved ground water monitoring system plan.

F. The owner or operator shall submit an installation report to the department within 90 days after the installation of a monitoring well or piezometer. The report shall include the following documentation.

(1) A certification by a qualified ground water scientist that the monitoring device has been installed in compliance with the approved ground water monitoring system plan and 20.9.9 NMAC.

(2) A construction and lithologic log for each monitoring well or piezometer. The lithologic log shall be drawn to a scale of one inch equals ten feet, except if the boring is greater than 200 feet, then a scale of one-half inch equals ten feet may be

used, graphically depicting the initial depth at which ground water was encountered and the soil or rock strata penetrated and describing each layer.

(a) If soil was encountered, the log should indicate the color, degree of compaction, moisture content plus any additional information necessary for an adequate visual description and classification of each stratum based on the unified soils classification system.

(b) If rock was encountered, the log should include a detailed lithologic description, including rock type, degree of induration, presence of fractures, fissility, and porosity (including vugs) plus any other information necessary for an adequate description. All field notes made by the qualified ground water scientist shall be made available on request of the department.

G. A copy of all construction and lithologic logs, and all sampling data from groundwater monitoring shall be placed in the operating record.

H. The secretary may approve an alternate detection monitoring point in the monitoring system plan if it is located 150 meters or less from the waste management unit boundary and it is located on land owned by the owner of the landfill. When approving an alternate detection monitoring point under this section, the secretary shall consider at least the following factors:

- (1) the hydrogeologic characteristics of the facility and surrounding land;
- (2) the volume and physical and chemical characteristics of the leachate;
- (3) the quantity, quality, and direction of flow of the ground water;
- (4) the proximity and withdrawal rate of the ground water users;
- (5) the availability of alternative drinking water supplies;
- (6) the existing quality of the ground water, including other sources of contamination and their cumulative impacts on the ground water, and whether the ground water is currently used or reasonably expected to be used for drinking water;
- (7) public health, safety, and welfare effects; and
- (8) the practicable capability of the owner or operator.

I. The secretary may approve, in the ground water monitoring system plan or closure and post-closure care plan, a multiunit ground water monitoring system instead of separate systems for each landfill where the facility has several landfills, provided the multiunit system meets the appropriate requirements of this part and will be as

protective of public health, welfare and the environment as individual monitoring systems for each landfill, based on the following factors:

- (1) number, spacing, and orientation of the landfills;
- (2) hydrogeologic setting;
- (3) site history;
- (4) engineering design of the landfills; and
- (5) types of waste accepted at the landfills.

J. Unless otherwise approved by the department in the ground water monitoring system plan or by specific approval, monitoring wells shall be constructed in such a manner that the integrity of the bore-hole and well is maintained and is in accordance with American society of testing materials method D-5092 or the following requirements:

- (1) the bore-hole shall be drilled a minimum of 4 inches larger than the casing diameter to allow for the emplacement of sand and sealant;
- (2) care shall be taken not to introduce contamination to the well;
- (3) the well shall be developed so that ground water flows freely through the screen and to decrease turbidity, and that all sediment is removed from the well;
- (4) the casing shall, unless otherwise approved by the secretary, consist of schedule 40 or heavier threaded PVC pipe of not less than 2 inches diameter;
 - (a) the casing shall extend from the top of the screen to at least one foot above ground surface;
 - (b) the casing top shall be protected by a cap and a locking shroud shall protect the exposed casing; and
 - (c) the shroud shall be large enough to allow easy access for removal of the plastic cap;
- (5) the screen shall be at least a 20-foot section of machine slotted or other manufactured screen; a slot size of 0.01-inch generally is adequate for most installations; no on-site or hack-saw slotting is permitted;
- (6) if the uppermost aquifer is unconfined; the top of the screen shall be 5 feet above the water table to allow for seasonal fluctuations;

(7) if the uppermost aquifer is confined, the top of the screen shall be at the location of the geologic boundary between the top of the aquifer and the bottom of the confining unit;

(8) centralizers shall be placed at the top and the bottom of the screen;

(9) an annular space from 2 feet below to 2 feet above the screen shall be packed with sand;

(a) the sand shall be clean and medium to coarse grained;

(b) the sand shall be properly sized to prevent fines from entering the well;
and

(c) a tremmie pipe shall be used for sand placement in deeper wells when appropriate;

(10) the annular space for at least 2 feet above the sand pack shall be grouted or sealed;

(a) pressure grouting with bentonite or cement using a tremmie pipe is preferred; or

(b) alternatively, a bentonite seal may be installed using bentonite pellets, 1/4 or 1/2 inch in size;

(11) the annular space above the seal shall be fully sealed using grout or bentonite to within 3 feet of the ground surface;

(12) the annular space above the cuttings shall be filled with bentonite-cement grout to within 3 feet of the ground surface;

(13) the remaining 3 feet shall be filled with concrete (expanding cement); and

(14) a concrete slab with a minimum 2-foot radius and a 4-inch thickness shall be poured around the shroud; the pad shall be sloped so that rainfall and run-off flows away from the shroud.

K. The casing of each well or wells that will be used to monitor ground water shall be surveyed, referenced to a standard grid, and subsequently mapped by a licensed surveyor. The location of the well shall be determined within one-tenth of a foot, and the height above sea level at the top of the casing shall be determined within one-hundredth of a foot. This information shall be submitted to the department with the installation report required in Subsection F of 20.9.9.9 NMAC.

L. The monitoring wells, piezometers, and other measurement, sampling, and analytical devices shall be operated and maintained so that they perform to design specifications throughout the life of the monitoring plan.

M. The number, spacing, and depths of monitoring systems shall be based upon site-specific technical information that includes thorough characterization of:

(1) aquifer thickness, ground water flow rate, and flow direction, including seasonal and temporal fluctuations in ground water flow; and

(2) saturated and unsaturated geologic units and fill materials overlying the uppermost aquifer, materials comprising the uppermost aquifer; and materials comprising the confining unit defining the lower boundary of the uppermost aquifer; including, but not limited to: thicknesses, stratigraphy, lithology, hydraulic conductivities, porosities, and effective porosities.

N. Vadose zone monitoring or leak detection systems, if required by the secretary pursuant to Subsections C or F of 20.9.9.8 NMAC, shall include:

(1) direct and indirect monitoring techniques such as:

(a) permanent monitoring stations such as those which utilize access tubes for neutron moderation instrumentation, time domain reflectometry (TDR) probes, capacitance probes or other permanently installed devices;

(b) nested piezometers when used for monitoring perched water or locally saturated portions of the vadose zone;

(c) soil gas measurements;

(d) lysimeters;

(e) electronic leak detectors; and

(f) other devices or methods as approved in the permit ;

(2) an adequate frequency of testing and a sufficient number of sampling points at appropriate locations and depths to determine a change in soil characteristics; and

(3) an action plan that addresses potential vadose zone contamination and the sources of the contamination.

O. Amendments to an approved groundwater monitoring system plan shall be by specific approval.

[20.9.9.9 NMAC - Rp, 20 NMAC 9.1.VIII.802, 8/2/2007]

20.9.9.10 GROUND WATER MONITORING PLAN; SAMPLING AND ANALYSIS; ESTABLISHING BACKGROUND CONCENTRATION LEVELS AND ASSESSMENT MONITORING LEVELS:

A. Ground water monitoring plans shall describe in detail all aspects of the landfill's proposed ground water monitoring program. It shall include descriptions of sampling and analysis procedures to be used, proposed sampling frequencies, test methodologies, procedures that will be used to establish background concentrations of all constituents and parameters listed in 20.9.9.20 NMAC, assessment monitoring levels (AMLs), and practical quantitation limits (PQL) for each constituent listed in 20.9.9.20 NMAC, and any other information describing the program as required by this section.

B. The ground water monitoring plan shall include consistent sampling and analysis procedures that are designed to ensure monitoring results that provide an accurate representation of ground water quality at the upgradient and downgradient wells. The plan shall include procedures and techniques for:

- (1) sample collection;
- (2) sample preservation and shipment;
- (3) analytical procedures;
- (4) chain of custody control; and
- (5) quality assurance and quality control.

C. The ground water monitoring plan shall describe sampling and analytical methods that are appropriate for ground water sampling and that accurately measure constituents and other monitoring parameters in ground water samples. A PQL for each constituent listed in 20.9.9.20 NMAC shall be proposed in the plan based on the proposed sampling and analytical method. A PQL will not be approved unless the level is the lowest concentration that can be reliably determined by an analytic methodology acceptable to the department. Ground water samples shall not be field-filtered prior to laboratory analysis unless otherwise allowed under 40 CFR Part 258 and the approved ground water monitoring plan. The owner or operator shall conduct ground water sampling in accordance with the "*EPA solid waste disposal facility criteria technical manual*" (1998, EPA 530-R-93-017, revised April 13, 1998) unless otherwise approved in the ground water monitoring plan.

D. Ground water elevations shall be measured within one-hundredth of a foot in each well immediately prior to purging, each time ground water is sampled. The owner or operator shall determine the rate and direction of ground water flow each time ground water is sampled. Ground water elevations in wells which monitor the same waste

management area shall be measured within a period of time short enough to avoid temporal variations in ground water flow which could preclude accurate determination of ground water flow rate and direction.

E. The owner or operator of a landfill seeking a background determination shall apply for specific approval of background ground water quality concentrations for each constituent and parameter referenced in Subsections A and C of 20.9.9.20 NMAC, and as required in the landfill's approved ground water monitoring plan within 14 months after any waste disposal at the landfill or lateral expansion. The application shall propose background concentrations based upon the following:

(1) the sampling results from at least four independent samples taken during the first semiannual sampling event and at least one additional sample during the subsequent semiannual sampling event for each individual monitoring well;

(2) the first sampling event shall occur prior to any waste disposal at a new landfill or lateral expansion; and

(3) if a constituent is not detected in the sampling used to establish background concentrations, the owner or operator shall propose the PQL approved in the ground water quality monitoring plan as the background concentration.

F. The background ground water quality concentrations and values must be approved by the department in writing. Once background ground water quality concentrations and values for the constituents and the parameters referenced in Subsections A and C of 20.9.9.20 NMAC are approved for a landfill, an individual well comparison procedure shall be used to compare constituent concentrations and parameter values with background constituent concentrations, ground water protection standards and parameter values for purposes of detection and assessment monitoring. Alternatively, if it is in accordance with the approved ground water quality monitoring plan, the background levels established from hydraulically upgradient wells may be used for comparison purposes.

G. For category 4 and 5 landfills, a background determination shall be made at each monitoring well as specified in Subsection E of this section unless the owner operator demonstrates that hydrogeological conditions are such that sampling at upgradient wells will provide an indication of background ground water quality that is as representative or more representative than that provided by making a determination at each monitoring well.

H. For category 2 and 3 landfills, a background determination shall be made at each individual monitoring well as specified in Subsection E of this section, except when the concentration of a hazardous constituent at an upgradient well is lower than the concentration at a downgradient well, in which case the concentration of that constituent at the upgradient well shall be used as the background concentration, unless the owner or operator demonstrates that use of the downgradient well to determine the

background concentration of that constituent will provide an indication of background ground water quality that is as representative or more representative than that provided by the upgradient well.

I. The owner or operator shall identify ground water protection standards for which a numeric standard has been established and shall apply for specific approval of proposed assessment monitoring levels (AMLs) in compliance with 20.9.9.12 NMAC for constituents listed or referenced in Subsection A of 20.9.9.20 NMAC, and for the parameter of pH, within 90 days following approval of background ground water quality concentrations by the department. The ground water protection standard for a constituent and for pH shall be the more stringent of the maximum contaminant level (MCL) promulgated at 40 CFR 141, or the ground water protection standard established by the commission at 20.6.2.3103 NMAC.

J. The number of samples collected to establish ground water quality data shall be consistent with the appropriate statistical procedures determined pursuant to this section.

K. The owner or operator of a landfill using an individual well comparison procedure shall use one of the following statistical methods to compare an individual compliance well constituent concentration and parameter value with background constituent concentration and parameter value or the relevant ground water protection standard:

(1) a comparison using a t-interval or t-test with a type I error level of no less than 0.01 shall be made between the approved background concentration or value and any subsequent sample analysis results for each parameter or constituent from each individual well;

(a) background values and concentrations shall be established for each parameter or constituent for each individual well from at least four independent samples during the first semiannual sampling event and at least one additional sample during the subsequent semi-annual sampling event; and

(b) if the background concentration is below the practical quantitation limit (PQL), the PQL shall be used to establish background. A statistical method is not necessary for a comparison between the analytical results and the PQL; or

(2) another method that meets the performance standards of 40 CFR 258.53(h). The alternative must be approved in the ground water monitoring plan, and the owner or operator must demonstrate the method meets the performance standards of 40 CFR 258.53(h).

L. The owner or operator of a landfill using an upgradient well to establish background concentrations shall specify in the ground water monitoring plan one of the statistical methods described in 40 CFR 258.53(g). The statistical method to be used in

evaluating ground water monitoring data must be demonstrated to meet the performance criteria of 40 CFR 254.53(h).

(1) If the background concentration at the upgradient well is below the practical quantitation limit (PQL), the PQL shall be used to establish background; a statistical method is not necessary for a comparison between the analytical results and the PQL.

(2) The number of samples collected to establish ground water quality data must be consistent with the appropriate statistical procedure that meets the performance standards of 40 CFR 258.53(h).

M. Ground water samples for the constituents and values referenced in Subsections A and C of 20.9.9.20 NMAC shall be collected from each monitoring well at least semi-annually during the active life of the facility.

(1) At a new landfill, or at a lateral expansion, the first sampling event shall be prior to the receipt of any waste.

(2) Once background concentrations and values have been established and approved, the owner or operator shall conduct detection monitoring for all constituents and parameters listed in or referenced in Subsections A and C of 20.9.9.20 NMAC and determine whether or not the AML has been exceeded for any constituent referenced in Subsection A of 20.9.9.20 NMAC and for the parameter of pH, or as required in the particular ground water monitoring plan that applies to the landfill.

(3) In determining whether the AML has been exceeded, the owner or operator shall compare the ground water quality for each constituent at each monitoring well to the background value for that constituent, according to the statistical procedures and performance standards specified in the ground water monitoring plan and this section.

N. Ground water documentation shall be submitted to the department within 90 days of completing sampling, in a form acceptable to the department, for each sample, and a copy of all monitoring results shall be kept in the operating record. The documentation shall include:

- (1) the constituents and parameter tested;
- (2) the test method (U.S. EPA or equivalent) for each constituent and parameter;
- (3) the ground water protection standard for each constituent detected (if a numeric standard has been established);
- (4) the method detection limit (MDL) for each constituent;

- (5) the practical quantitation limit (PQL) for each constituent and parameter;
- (6) the well number and location for each sample;
- (7) the laboratory ID sample number;
- (8) chain of custody documentation;
- (9) the date sampled;
- (10) the date received at the laboratory;
- (11) the date analysis commenced;
- (12) results, with constituent or parameter, chemical abstract system number, concentration with units, approved AML, ground water protection standard, PQL, qualifier code (e.g., J, B, U, etc.), well number, and sample date;
- (13) sample preservation (field data);
- (14) field blank results, and trip blank results;
- (15) quality assurance/quality control summary report (laboratory blanks, spike recoveries, etc.);
- (16) anomaly report (non-conformance with quality assurance/quality control plan, corrective actions, etc.);
- (17) laboratory review (signature and date);
- (18) an updated ground water elevation contour map for the facility or, if ground water elevation data is insufficient to contour, then the ground water elevation for each monitoring well, prior to purging, reported on a well location map;
- (19) the approved background concentration levels as determined in accordance with Subsection E of this section; and
- (20) a certification by a qualified ground water scientist that AMLs have or have not been exceeded.

O. Amendments to an approved ground water monitoring plan shall be by specific approval.

[20.9.9.10 NMAC - Rp, 20 NMAC 9.1.VIII.803, 8/2/2007]

20.9.9.11 DETECTION MONITORING PLAN:

A. The owner or operator shall conduct detection monitoring at all ground water detection monitoring wells unless such monitoring has been suspended in accordance with Subsection C of 20.9.9.8 NMAC. The detection monitoring program shall include the monitoring for constituents and parameters listed and referenced in Subsection A of 20.9.9.20 NMAC, and shall be conducted at least semiannually during the active life and post-closure care period of the facility. After background concentrations have been approved as required in Subsection E of 20.9.9.10 NMAC for all constituents in Subsection A of 20.9.9.20 NMAC, the owner or operator may request a specific approval that the ground water detection monitoring program description be amended to:

(1) not require testing for particular constituents in Subsection A of 20.9.9.20 NMAC for a municipal landfill if it can be shown that the particular constituents are not reasonably expected to be in or derived from the waste contained in the landfill; and

(2) establish an alternate list of inorganic indicator parameters constituents for a landfill in lieu of some or all of the heavy metals listed or referenced in Subsection A of 20.9.9.20 NMAC if the alternative constituents provide a reliable indication of inorganic releases from the landfill to the ground water; in determining alternative constituents, the department shall consider the following factors:

(a) the types, quantities, and concentrations of constituents in wastes managed at the landfill;

(b) the mobility, stability, and persistence of constituents or their reaction products in the unsaturated earth zone beneath the landfill;

(c) the detectability of the constituents, and reaction products in the ground water; and

(d) the concentrations or values and coefficients of variation of levels of the constituents in the ground water;

(3) allow annual sampling of the approved alternate list after the first year based on the following factors:

(a) lithology of the aquifer and unsaturated zone;

(b) hydraulic conductivity of the aquifer and unsaturated zone;

(c) ground water flow rates;

(d) minimum distance between upgradient edge of the landfill and downgradient monitoring well screen (minimum distance of travel); and

(e) resource value of the aquifer.

B. Regardless of approval by the department of an alternate constituent list under Subsection A of this section, the minimum frequency for testing for all the constituents in Subsection A of 20.9.9.20 NMAC shall be at least once every five years in addition to the required frequencies for the alternate list.

C. If the owner or operator determines, as evidenced in the ground water monitoring data, that the AML has been exceeded for one or more of the constituents or parameters referenced in Subsection A of 20.9.9.20 NMAC or approved alternate constituent list at any monitoring well, the owner or operator:

(1) shall, within 14 days of this finding, notify the department of the exceedance and place a notice in the operating record indicating which constituents or values have exceeded approved AMLs; and

(2) shall submit, within 60 days of the finding, an assessment monitoring plan that meets the requirements of 20.9.9.13 NMAC;

(3) in addition, the owner or operator may submit, within 60 days after the finding, a demonstration that a source other than a landfill caused the contamination or that the AML exceedance resulted from an error in sampling, analysis, statistical evaluation, or natural variation in ground water quality; a report documenting this demonstration shall be certified by a qualified ground water scientist, shall be placed in the operating record, and shall be submitted to the department for specific approval; the department shall issue a specific approval or denial within 90 days approving or denying the demonstration; if the demonstration is denied, the assessment monitoring shall proceed according to the submitted plan within 90 days after the denial.

[20.9.9.11 NMAC - Rp, 20 NMAC 9.1.VIII.804, 8/2/2007]

20.9.9.12 ASSESSMENT MONITORING LEVELS:

A. Approved background ground water quality determinations shall be used as the baseline for determination of AMLs.

B. For all hazardous constituents, AMLs shall be 50 percent of the ground water protection standard.

C. If the background concentrations of any hazardous constituents is above 50 percent of the ground water protection standards, then the background concentration shall be the AML. Any statistically significant increase above the AML shall be an exceedance of the AML for that constituent.

D. If a ground water protection standard has not been established for a hazardous constituent, the AML shall be the background concentration or a 95 percent increase over the PQL of the constituent, whichever is greater.

E. For constituents identified in Subsections B and C of 20.6.2.3103 NMAC, the AMLs shall be 75 percent of the ground water protection standard, except pH, which shall be within the range of values shown in Subsection B of 20.6.2.3103 NMAC

F. If the background concentration of any constituent identified in Subsections B and C of 20.6.2.3103 NMAC is above 75 percent of the ground water protection standard, then the background concentration shall be the AML. Any statistically significant increase above the AML shall be an exceedance of the AML for that constituent.

G. If more than one toxic pollutant identified in 20.6.2.7 NMAC is detected, the toxic pollutant criteria of the commission rules for the combination of constituents shall be used to determine a ground water standard, using the methods described in Subsection I of 20.9.9.13 NMAC. The AML shall be 50 percent of the ground water standard, or the background concentration, whichever is greater. If the background concentration is greater than the ground water standard, then any statistically significant increase above the background concentration shall be an exceedance of the AML. However, this shall apply only in cases where such AMLs are more stringent than the AMLs otherwise determined under this section.

[20.9.9.12 NMAC - Rp, 20 NMAC 9.1.VIII.805, 8/2/2007]

20.9.9.13 ASSESSMENT MONITORING:

A. Owners and operators shall conduct assessment monitoring whenever the AML has been exceeded for one or more constituent of Subsection A of 20.9.9.20 NMAC or an alternate constituent list approved under Subsection A of 20.9.9.11 NMAC unless a demonstration has been approved pursuant to Paragraph (3) of Subsection C of 20.9.9.11 NMAC. Assessment monitoring shall be conducted in accordance with an assessment monitoring plan, approved in accordance with Subsection C of 20.9.9.11 NMAC.

B. Within 90 days of the determination of an exceedance under Subsection M of 20.9.9.10 NMAC, and annually thereafter, the owner or operator shall sample and analyze the ground water for all constituents and parameters referenced and listed in Subsections B and C of 20.9.9.20 NMAC for each downgradient well. For any constituents detected in the downgradient wells as a result of the complete analysis, a minimum of four independent samples from each well (upgradient and downgradient) shall be collected and analyzed to establish background for the constituents for which background has not been established. Sampling data and proposed background concentration shall be submitted to the department within 180 days of the determination of an exceedance under Subsection M of 20.9.9.10 NMAC. The upgradient concentrations shall be presumed to be the background unless the owner or operator demonstrates that hydrogeological conditions are such that sampling at other points will provide an indication of background ground water quality that is as representative or more representative than that provided at the upgradient wells. The department shall

approve background levels for those detected constituents for which background concentrations have not previously been determined within 60 days, or the upgradient concentrations shall be deemed to be the background concentrations.

C. The department may specifically approve an alternative frequency or subset of wells for repeated sampling for assessment monitoring during the active life and post-closure care period of the facility. In determining an alternative frequency or subset of wells, the department shall consider:

- (1) lithology of the aquifer and unsaturated zone;
- (2) hydraulic conductivity of the aquifer and unsaturated zone;
- (3) ground water flow rate;
- (4) minimum distance between the waste management unit boundary and downgradient monitoring well screen;
- (5) resource value of the aquifer; and
- (6) nature of any constituents detected.

D. After obtaining the results from the sampling required by Subsection B of this section, the owner or operator shall:

- (1) within 14 days, notify the department in writing and document in the operating record any constituents that have been detected;
- (2) within 90 days and at least semiannually, resample all wells and analyze for all constituents in Subsections A and C of 20.9.9.20 NMAC and any constituents in Subsection B of 20.9.9.20 NMAC or an approved alternate list that have been detected; the department may specify an alternate monitoring frequency in accordance with Subsection A of 20.9.9.11 NMAC, but all constituents in Subsection B of 20.9.9.20 NMAC shall be sampled no less frequently than once every five years during the active life and post-closure care period.

E. If the concentration of each constituents in Subsection A of 20.9.9.20 NMAC, and each detected constituent of Subsection B of 20.9.9.20 NMAC is determined to be at or below the approved AML after two sampling events, the owner or operator shall notify the department in writing and may return to detection monitoring.

F. If the concentration of any constituent in 20.9.9.20 NMAC is above the AML, but below the corrective action level (CAL), the owner or operator shall continue assessment monitoring in accordance with this section.

G. If one or more constituents in 20.9.9.20 NMAC is detected above the CALs in any sampling event, the owner or operator shall:

(1) within 14 days of this finding, notify the department and all appropriate local government officials in writing;

(2) install at least one additional monitoring well at the facility boundary in the direction of contaminant migration and sample this well in accordance with this section within six months; the department may approve an extension for this installation and sampling for good cause for up to an additional six months of the finding of the exceedance;

(3) characterize the nature and extent of the release by installing additional monitoring wells as necessary within one year of the finding of the exceedance;

(4) notify area residents and land owners in the same manner as described in Subsection B of 20.6.2.4108 NMAC; and

(5) initiate an assessment of corrective measures as required by 20.9.9.15 NMAC within 90 days; or

(6) the owner or operator may demonstrate that a source other than the facility caused the contamination, or that the increase resulted from error in sampling, analysis, statistical evaluation, or natural variation in ground water quality; a report documenting this demonstration shall be certified by a qualified ground water scientist and submitted to the department for review and approval; if a demonstration is specifically approved by the department, the owner or operator may return to detection monitoring; until a successful demonstration is made, the owner or operator shall comply with 20.9.9.12 - 20.9.9.20 NMAC, including initiating an assessment of corrective action.

H. Within 90 days after any AML exceedance, the owner or operator shall identify the ground water protection standard for each constituent in 20.9.9.20 NMAC that exceeded the AML in the ground water that was not identified pursuant to Subsection I of 20.9.9.10 NMAC. The owner or operator shall propose for department approval ground water protection standards for any constituent that exceeded the AML pursuant to Subsection B of this section and Paragraph (2) of Subsection D of this section that does not have an MCL or numeric standard in commission rules. The owner or operator shall make a demonstration that the proposed standard will be protective of the public health and the environment, in accordance with Subsection I of this section.

(1) The ground water protection standards for constituents shall be the more stringent of the MCL promulgated at 40 CFR 141, or the numeric standard established by commission rules.

(2) For hazardous constituents for which the background concentration is higher than the ground water protection standard, the background concentration shall be used as the ground water protection standard.

I. The secretary may establish an alternative ground water protection standard for constituents for which MCLs or commission standards have not been established. These ground water protection standards shall be appropriate health based levels that satisfy the following:

(1) the level is derived in a manner consistent with U.S. EPA guidelines for assessing the health risks of environmental pollutants;

(2) the level is based on scientifically valid studies conducted in accordance with the Toxic Substances Control Act good laboratory practice standards or equivalent;

(3) for carcinogens, the level represents a concentration associated with an excess lifetime cancer risk of more than one cancer per 100,000 exposed persons; and

(4) for systemic toxicants, the level represents a concentration to which the human population could be exposed on a daily basis that is likely to be without appreciable risk of deleterious effects during a lifetime; systemic toxicants include toxic chemicals that cause effects other than cancer or mutation.

J. In establishing ground water protection standards under Subsection I of this section, the secretary may consider the following:

(1) multiple contaminants in the ground water;

(2) exposure threats to sensitive environmental receptors; and

(3) other site specific exposure or potential exposure to ground water.

[20.9.9.13 NMAC - Rp, 20 NMAC 9.1.VIII.806, 8/2/2007]

20.9.9.14 CORRECTIVE ACTION LEVELS:

A. Background water quality data approved by the department shall be used as the baseline to determine corrective action levels (CALs).

B. For all constituents, CALs shall be the ground water protection standard.

C. If the background concentrations of any constituent is above what would otherwise be the ground water protection standards, then the background concentration shall be used as the CAL. Any statistically significant increase above the CAL shall be considered an exceedence of the CAL for that constituent.

D. If more than one potential toxic pollutant, as defined in 20.6.2.7 NMAC, is detected, the potential toxic pollutant criteria of the commission rules for the combination of constituents shall be used to determine the CALs. If the background concentration is greater than the ground water standard, then any statistically significant increase above the background concentration shall be an exceedence of the CAL. However, this shall apply only in cases where such CALs are more stringent than the CALs otherwise determined under this section.

[20.9.9.14 NMAC - Rp, 20 NMAC 9.1.VIII.807, 8/2/2007]

20.9.9.15 ASSESSMENT OF CORRECTIVE MEASURES:

A. Upon finding that any constituent listed in 20.9.9.20 NMAC has exceeded its CAL, the owner or operator shall initiate an assessment of corrective measures. Such an assessment shall be submitted to the department within 180 days of the finding.

B. The owner or operator shall continue to monitor in accordance with the assessment monitoring program as specified in 20.9.9.13 NMAC.

C. The assessment shall include a demonstration of:

- (1) the extent and nature of contamination;
- (2) the practical capabilities of remedial technologies in achieving compliance with ground water protection standards and other objectives of the remedy;
- (3) the availability of treatment or disposal capacity for wastes managed during implementation of the remedy;
- (4) the desirability of utilizing technologies that are not currently available, but which may offer significant advantages over available technologies in terms of effectiveness, reliability, safety, or ability to achieve remedial objectives;
- (5) the potential risks to public health, welfare and the environment from exposure to contamination prior to completion of the remedy;
- (6) the resource value of the aquifer including:
 - (a) current and future uses;
 - (b) proximity and withdrawal rate of users;
 - (c) ground water quantity and quality;
 - (d) the potential damage to wildlife, crops, vegetation, and physical structures caused by exposure to waste constituents;

- (e) the hydrogeologic characteristic of the facility and surrounding land;
- (f) ground water removal and treatment costs; and
- (g) the cost and availability of alternative water supplies;
- (7) the practicable capability of the owner or operator;
- (8) the performance, reliability, ease of implementation, and potential impacts of appropriate potential remedies, including safety impacts, cross-media impacts and control of exposure to any residual contamination;
- (9) the time required to begin and complete the remedy;
- (10) the costs of remedy implementation;
- (11) the institutional requirements for local permits or other environmental or public health requirements that may substantially affect implementation of the remedy(s);
- (12) the need for interim measures in accordance with provisions of Paragraph (3) of Subsection A of 20.9.9.17 NMAC;
- (13) an analysis of the effectiveness of potential corrective measures in meeting all of the requirements and objectives and evaluation factors of the remedy as described in 20.9.9.16 NMAC; and
- (14) other relevant factors.

D. The owner or operator shall discuss the results of the corrective measures assessment, prior to the selection of remedy, in a public meeting with interested and affected parties. Notice of the public meeting shall be provided the same as that specified in the Solid Waste Act for permit applications and Paragraph (4) of Subsection G of 20.9.9.13 NMAC. The public notice shall also contain the following information:

- (1) name, address, and telephone number of the owner or operator and contact person;
- (2) name and location of the facility;
- (3) meeting location, date, and time;
- (4) nature and extent of the plume;
- (5) brief description of the assessment of corrective measures and the preferred remedy of the owner or operator;

(6) location where the assessment of corrective measures can be reviewed;
and

(7) information regarding the opportunity to submit oral or written comments at the public meeting, and until 30 days after the public meeting, regarding the assessment and proposed remedy for consideration by the department.

E. The owner or operator shall make a record of the public meeting and submit it to the department.

F. The secretary may, based on the initial assessment, order interim measures, in accordance with Paragraph (3) of Subsection A of 20.9.9.17 NMAC.

[20.9.9.15 NMAC - Rp, 20 NMAC 9.1.VIII.808, 8/2/2007]

20.9.9.16 SELECTION OF REMEDY:

A. Based on the results of the corrective measures assessment conducted under 20.9.9.15 NMAC, the owner or operator shall, within 120 days following the submission of the assessment of corrective measures, submit a proposed remedy to the department for review and approval that meets the standards listed in this section. The secretary may issue an order approving, approving with conditions, denying the proposed remedy, may require submission of an alternative proposed remedy, or may impose a remedy whether or not proposed by the owner or operator.

B. Prior to approving or imposing a remedy, the department shall hold a hearing on the remedy proposed by the owner or operator and any draft remedy proposed by the department. The owner or operator shall be required to provide notice of hearing on the proposed remedy or remedies in accordance with Section 74-9-22 NMSA 1978. Hearing procedures shall be in accordance with Permit Procedures – Environment Department, 20.1.4 NMAC.

C. The selected remedy shall:

- (1) be protective of public health, welfare and the environment;
- (2) attain the CAL;
- (3) control the source(s) of releases so as to reduce or eliminate, to the maximum extent practicable, further releases into the environment that may pose a threat to public health, welfare or the environment;
- (4) comply with standards for management of wastes as specified in Subsection C of 20.9.9.17 NMAC.

D. In its submission of a proposed remedy that meets the standards listed above, the owner or operator shall provide evidence demonstrating:

(1) the long and short term effectiveness and protectiveness of the potential remedy, along with the degree of certainty that the remedy will prove successful based on consideration of the following:

(a) magnitude of reduction of existing risks;

(b) magnitude of residual risks in terms of likelihood of further releases due to waste remaining following implementation of a remedy;

(c) the type and degree of long term management required, including monitoring, operation, and maintenance;

(d) short term risks that might be posed to the community, workers, or the environment during implementation of such a remedy, including potential threats to public health, welfare and the environment associated with excavation, transportation, and redisposal of wastes;

(e) time until full protection is achieved;

(f) potential for exposure of humans and environmental receptors to remaining wastes, considering the potential threat to public health, welfare and the environment associated with excavation, transportation, redisposal, or containment;

(g) long term reliability of the engineering and institutional controls; and

(h) potential need for replacement of the remedy;

(2) the effectiveness of the remedy in controlling the source to reduce further releases based on consideration of the following factors:

(a) the extent to which containment practices will reduce further releases; and

(b) the extent to which treatment technologies may be used;

(3) the ease or difficulty of implementing a potential remedy based on consideration of the following factors:

(a) degree of difficulty associated with constructing the technology;

(b) expected operational reliability of the technology;

(c) need to coordinate with, and obtain necessary approvals and permits from, other agencies;

(d) availability of necessary equipment and specialists; and

(e) available capacity and location of needed treatment, storage, and disposal services;

(4) practicable capability of the owner or operator, including a consideration of the technical and economic capability; and

(5) the degree to which community concerns are addressed.

E. The owner or operator shall specify as part of the proposed selected remedy a schedule for initiating and completing remedial activities. Such a schedule shall provide for the initiation of remedial activities within a reasonable period of time, taking into consideration the factors listed in Subsection C of 20.9.9.15 NMAC.

F. In its submission of a proposed remedy under this section, the owner or operator may seek a determination that remediation of a contaminant to the CAL is not required as follows:

(1) if an exceedance of a commission standard would occur, the owner or operator shall seek a variance from the commission standard in accordance with Subsection E or F of 20.6.2.4103 NMAC and incorporate the terms and conditions of any such variance into the selected remedy and corrective action program; or

(2) the owner or operator may seek a determination from the secretary that remediation of a contaminant to the CAL (for CALs not based on a commission standard) is not required by submitting a written request to the secretary for a determination that attainment of the CAL is technically infeasible; the request shall include: a demonstration of technical or physical impossibility of attaining the CAL using potential remedies; the effectiveness of potential remedies; whether the proposed determination will allow a present or future hazard to public health or the environment; and any other information required by the secretary; in addition, the request shall propose an alternate CAL for the secretary's approval, based on the effectiveness of potential remedies and a site-specific risk assessment; the secretary may approve, approve with terms and conditions, or deny the requested determination.

G. A determination by the secretary pursuant to Subsection F of this section shall not affect the authority of the secretary to require the owner or operator to undertake source control measures or other measures that may be necessary to eliminate or minimize releases to the ground water, to prevent exposure of the ground water to concentrations that are technically practicable and significantly reduce threats to public health, welfare or the environment.

[20.9.9.16 NMAC - Rp, 20 NMAC 9.1.VIII.809, 8/2/2007]

20.9.9.17 IMPLEMENTATION OF A CORRECTIVE ACTION PROGRAM:

A. Based on the schedule approved by the secretary under Subsection F of 20.9.9.16 NMAC for initiation and completion of remedial activities, the owner or operator shall:

(1) establish and implement a corrective action ground water monitoring program that:

(a) at a minimum, meets the requirements of an assessment monitoring program under 20.9.9.13 NMAC;

(b) will indicate the effectiveness of the corrective action remedy; and

(c) demonstrates compliance with the corrective action levels;

(2) implement the corrective action remedy approved under 20.9.9.16 NMAC; and

(3) take any interim measures necessary to ensure the protection of public health, welfare and the environment; interim measures should, to the greatest extent practicable, be consistent with the objectives of, and contribute to the performance of, any remedy that may be required pursuant to 20.9.9.16 NMAC; the following factors shall be considered in determining whether interim measures are necessary:

(a) time required to develop and implement a final remedy;

(b) actual or potential exposure of nearby populations or environmental receptors to constituents;

(c) actual or potential contamination of drinking water supplies or sensitive ecosystems;

(d) further degradation of the ground water that may occur if remedial action is not initiated expeditiously;

(e) weather conditions that may cause constituents to migrate or be released;

(f) risks of fire or explosion, or potential for exposure to constituents as a result of an accident or failure of a container or handling system; and

(g) other situations that may pose threats to public health, welfare and the environment.

B. If the secretary determines, based on information developed after implementation of the remedy has begun or other information, that compliance with requirements of Subsection C of 20.9.9.16 NMAC are not being achieved through the remedy selected the secretary may issue an order requiring the owner or operator to propose, for

consideration by the secretary, other methods or techniques that could practicably achieve compliance with Subsection C of 20.9.9.16 NMAC. An owner or operator proposing an alternative remedy under this subsection shall comply with all factors and criteria of 20.9.9.15-16 NMAC.

C. All solid wastes that are generated pursuant to this section , or an interim measure required under Paragraph (3) of Subsection A of this section, shall be managed in a manner which:

- (1) is protective of public health, welfare and the environment; and
- (2) complies with applicable RCRA requirements, the Solid Waste Act and 20.9.2 - 20.9.10 NMAC.

D. Remedies selected pursuant to 20.9.9.16 NMAC shall be considered complete when:

(1) the owner or operator complies with the CALs at all points within the plume of contamination for a period of three consecutive years; the secretary may specify an alternative length of time during which the owner or operator shall demonstrate that concentrations of constituents referenced in 20.9.9.20 NMAC have not exceeded CALs provided the time is not less than eight consecutive calendar quarters with one sampling event per quarter, and taking into consideration:

- (a) extent and concentration of the release(s);
- (b) behavior characteristics of the hazardous constituents in the ground water;
- (c) accuracy of monitoring or modeling techniques, including any seasonal, meteorological, or other environmental variabilities that affect the accuracy; and
- (d) characteristics of the ground water; and

(2) all actions required to complete the remedy have been satisfied.

E. Upon completion of the remedy, the owner or operator shall notify the secretary in writing within 14 days with a certification that the remedy has been completed in compliance with the requirements of Subsection D of this section. The certification shall be signed by a qualified ground water scientist and submitted to the secretary for specific approval.

F. Upon approval of the certification that the corrective action remedy has been completed in accordance with the requirements under Subsection D of this section, the owner or operator shall be released from the requirements for financial assurance for corrective action under 20.9.10.12 NMAC.

G. In the event that new information becomes available which indicates a constituent release may pose a threat to human health or welfare or the environment, the department may require continued compliance with 20.9.9.17 NMAC, or further investigation or selection of a remedy as necessary.

[20.9.9.17 NMAC - Rp, 20 NMAC 9.1.VIII.810, 8/2/2007]

20.9.9.18 APPROVED LABORATORIES:

For the purpose of determining compliance with the requirements of 20.9.9 NMAC, within one year of the effective date of this part, analytical results may be considered only if they have been determined by a laboratory acceptable to the department as specified in this section. The department may accept analytical results if they have been determined by:

A. the scientific laboratory division of the New Mexico department of health or other laboratories certified by the U.S. EPA; a laboratory, other than the scientific laboratory division, shall provide the department documentation of its certification by the U.S. EPA;

B. a laboratory certified by an official agency of a state and approved by the department; a laboratory shall provide the department documentation of its certification by an official agency of a state for review and approval; or

C. a laboratory accredited by an approved third party accreditation organization and approved by the department; a third party accreditation organization shall submit a quality assurance project plan to the department for review and approval.

[20.9.9.18 NMAC - N, 8/2/2007]

20.9.9.19 DEPARTMENT APPROVAL OF BACKGROUND AND TOXIC POLLUTANT STANDARDS:

All background levels proposed by the owner or operator are subject to review and approval by the secretary. All ground water protection standards proposed for toxic pollutants listed in 20.6.2.7 NMAC are subject to review and approval by the secretary.

[20.9.9.19 NMAC - N, 8/2/2007]

20.9.9.20 CONSTITUENTS AND PARAMETERS:

Constituents and parameters to be evaluated under the requirements of 20.9.9.1 - 20.9.9.19 NMAC include:

A. every constituent listed in the following:

(1) 40 CFR 258 Appendix I;

(2) 20.6.2.3103 NMAC, including the parameter of pH;

B. all constituents listed in 40 CFR 258 Appendix II, 20.6.2.3103 NMAC, potential toxic pollutants listed in 20.6.2.7 NMAC; and

C. the following constituents and parameters:

- (1) calcium (CAS No. 7440-70-2);
- (2) magnesium (CAS No. 7439-95-4);
- (3) potassium (CAS No. 7440-09-7);
- (4) sodium (CAS No. 7440-23-5);
- (5) ammonia (CAS No. 1331-21-6);
- (6) bicarbonate alkalinity;
- (7) carbonate alkalinity;
- (8) total nitrogen;
- (9) total kjeldahl nitrogen;
- (10) total organic carbon;
- (11) phosphate;
- (12) specific conductance;
- (13) temperature;
- (14) depth to ground water; and
- (15) ground water elevation.

D. When additional constituents are added to ground water monitoring requirements through updates to the rules cited, the new constituents shall be added to the routine sampling frequency for a particular landfill. Background quality for the new constituent shall be determined after a sufficient number of samples are collected during routine sampling, unless a new constituent is detected above the AML, in which case the procedure in Subsection E of 20.9.9.10 NMAC shall be used to determine background concentration.

E. A list of constituents and parameters to be evaluated under the requirements of 20.9.9 NMAC will be made available to the public and posted on the NMED website.

[20.9.10.5 NMAC - Rp, 20 NMAC 9.1.1.005, 8/2/2007]

20.9.10.6 OBJECTIVE:

The objective of Part 10 of Chapter 9 is to establish a rule governing financial assurance requirements for solid waste facilities, composting facilities and recycling facilities.

[20.9.10.6 NMAC - Rp, 20 NMAC 9.1.1.006, 8/2/2007]

20.9.10.7 DEFINITIONS:

[RESERVED]

[See 20.9.2.7 NMAC for Definitions.]

20.9.10.8 APPLICABILITY AND EFFECTIVE DATE:

A. The requirements of 20.9.10 NMAC apply to owners and operators of all solid waste facilities and composting and recycling facilities required to provide financial assurance pursuant to Subsection C of 20.9.3.28 NMAC and Subsection E of 20.9.3.29 NMAC, except owners and operators who are the United States, the state of New Mexico, or any agency, department, instrumentality, office, or institution of those governments whose debts and liabilities are the debts and liabilities of the United States or the state of New Mexico. Owners or operators of composting and recycling facilities required to provide financial assurance pursuant to Subsection C of 20.9.3.28 NMAC and Subsection E of 20.9.3.29 NMAC are not required to provide financial assurance for post-closure care, phase I and II assessments or corrective action.

B. The owner or operator of a category 5 landfill or any solid waste facility modified after the initial effective date of this section shall submit to the department proof of financial assurance prior to the initial receipt of waste.

C. For municipal landfills operating on or after April 9, 1997, or solid waste facilities permitted after January 30, 1992, the requirements of 20.9.10 NMAC apply. For landfills that have been granted a waiver under 20.9.2.14 NMAC, the requirements of 20.9.10 NMAC apply.

D. Multiple facilities under one permit shall be treated individually for the purposes of 20.9.10 NMAC. Estimates and assurance must be given for each facility, but multiple facilities may be covered by the same mechanism(s).

[20.9.10.8 NMAC - Rp, 20 NMAC 9.1.IX.901, 8/2/2007]

20.9.10.9 FINANCIAL ASSURANCE FOR CLOSURE AND NUISANCE ABATEMENT:

A. The owner or operator of a solid waste facility shall develop a detailed written estimate, in current dollars, of the cost of hiring a third party to close the largest area of the facility ever requiring closure under 20.9.6 NMAC at any time during the active life. This estimated cost should include estimated costs for an independent project manager and contract administration. The estimate may contain a subsidiary schedule showing the amount necessary to perform closure of the facility in each year of the permit life of the facility. The owner or operator shall file a copy of the estimate with the department concurrently with proof of financial assurance and shall notify the department that copies have also been placed in the operating record.

(1) For landfills, the cost estimate shall be based upon the cost of closing the largest area of all landfill cells ever requiring a final cover at any time during the active life when the extent and manner of its operation would make closure the most expensive, as indicated by its closure plan. Should the owner or operator submit a subsidiary schedule, the amount guaranteed annually may be in accordance with this schedule upon approval by the secretary. If the owner or operator is found to be utilizing acreage in excess of the amount shown in the subsidiary schedule, final closure on the excess acreage shall be completed within sixty days of the subsidiary schedule and the amount of financial assurance shall be increased to reflect the excess acreage.

(2) For all other solid waste facilities, the cost estimate must be a detailed written estimate of the cost of closure to be performed in accordance with the applicable portions of 20.9.6.12 NMAC and also shall include the cost of hiring a third party to clean up and dispose of the largest inventory of material and end product expected at the facility and to clean up and dispose of all fugitive trash, solid waste, or other materials that could potentially create a nuisance at the facility. The cost estimate shall also include costs of an independent project manager and contract administration. For a recycling or composting facility required to provide financial assurance for nuisance abatement pursuant to Subsection C of 20.9.3.28 NMAC or Subsection E of 20.9.3.29 NMAC, the owner or operator shall develop a detailed written estimate, in current dollars, of the cost of hiring a third party to clean up and dispose of the largest inventory of compostable or recyclable material and end product expected at the facility and to clean up and dispose of all fugitive trash, solid waste, or other materials that could potentially create a nuisance at the facility. The cost estimate shall also include the costs of an independent project manager and contract administration.

(3) During the active life of the facility, the owner or operator shall annually adjust the closure cost estimate for inflation, installation of final cover material on any areas at final grade, and any other factors affecting closure costs. A copy of the adjusted closure cost estimate shall be placed in the operating record.

(4) The owner or operator shall increase the amount of financial assurance if changes to the closure plan or facility conditions increase the maximum cost of closure at any time during the remaining active life by over three percent of the current financial assurance amount.

(5) The owner or operator may reduce the amount of financial assurance for closure if the cost estimate exceeds the maximum cost of closure at any time during the remaining life of the facility, upon specific approval by the secretary. To seek approval, the owner or operator shall provide the adjusted cost estimate and supporting documentation to the department. If approved, the owner or operator may revise any financial assurance documents to reflect the adjusted closure cost estimate, and shall file a duplicate original of each financial assurance document with the department within 15 days following approval, and shall place a copy of the estimate and approval in the operating record.

B. The owner or operator of each solid waste facility shall establish a financial assurance mechanism for closure of the facility in compliance with 20.9.10.13 - 20.9.10.23 NMAC. The owner or operator shall provide continuous coverage for closure until released from financial assurance requirements by a written verification issued by the secretary pursuant to Subsection O of 20.9.6.8 NMAC.

[20.9.10.9 NMAC - Rp, 20 NMAC 9.1.IX.902, 8/2/2007]

20.9.10.10 FINANCIAL ASSURANCE FOR POST-CLOSURE CARE:

A. The owner or operator of a solid waste facility shall develop a detailed written estimate, in current dollars, of the cost of hiring a third party to conduct post-closure care for the facility in compliance with the post-closure care plan developed under 20.9.6 NMAC. The post-closure care cost estimate shall account for the total costs of conducting post-closure care, including annual and periodic costs as described in the post-closure care plan over the entire post-closure care period. This estimated cost should also include estimated costs for an independent project manager and contract administration. The owner or operator may submit a subsidiary schedule showing, for the permit life of the facility, the annual incremental acreage and total acreage needing post-closure care and the corresponding estimate of post-closure costs. The owner or operator shall file a copy of the estimate with the department concurrently with proof of financial assurance and shall notify the department that copies have also been placed in the operating record.

(1) The cost estimate for post-closure care shall be based on the most expensive costs for care during the post-closure period. Should the owner or operator submit a subsidiary schedule as described in Subsection A of this section, the amount guaranteed annually for post-closure care during the permit life of the facility may be in accordance with this schedule upon approval by the secretary. If the owner or operator, upon inspection, is found to have exceeded the acreage shown on the subsidiary schedule, the subsidiary schedule and the amount of financial assurance shall be increased within sixty days.

(2) During the active life of the facility and during the post-closure care period, the owner or operator shall annually adjust the post-closure care estimate for inflation, and any other factors affecting post-closure care costs. The owner or operator shall place a copy of the adjusted estimate in the operating record.

(3) The owner or operator shall increase the amount of financial assurance if changes in the post-closure care plan or facility conditions increase the maximum cost of post-closure care by over three percent of the current financial assurance amount.

(4) The owner or operator may reduce the amount of financial assurance if the adjusted cost estimate exceeds the maximum cost of care remaining over the post-closure period, upon specific approval by the secretary. To seek approval, the owner or

operator shall provide the reduced post-closure care cost estimate and any justification for the reduced estimate in a request to the department.

B. The owner or operator of each solid waste facility shall establish financial assurance for the costs of post-closure care in compliance with 20.9.10.13 - 20.9.10.23 NMAC. An originally signed duplicate of each financial assurance document shall be filed with the department. The owner or operator shall provide continuous coverage for post-closure care until released from financial assurance requirements by a written verification issued by the secretary pursuant to Subsection O of 20.9.6.8 NMAC.

[20.9.10.10 NMAC - Rp, 20 NMAC 9.1.IX.903, 8/2/2007]

20.9.10.11 FINANCIAL ASSURANCE FOR PHASE I & PHASE II ASSESSMENTS:

A. Unless suspended from the requirements of 20.9.9.9 - 20.9.9.13 NMAC in accordance with Subsection C of 20.9.9.8 NMAC, the owner or operator shall develop a detailed written estimate, in current dollars, of the cost of hiring a third party to conduct activities of the phase I (20.9.9.13 NMAC) and phase II (20.9.9.15 -20.9.9.16 NMAC) assessments. The phase I and phase II assessments cost estimate shall account for the entire cost of the phase I and phase II assessments for the entire assessment period. This estimated cost should also include estimated costs for an independent project manager and contract administration. The owner or operator shall file a copy of the estimate with the department concurrently with proof of financial assurance and shall notify the department that copies have also been placed in the operating record. The estimate may contain a subsidiary schedule showing the amount necessary to perform a phase I assessment if a release is detected. Should the owner or operator submit a subsidiary schedule, the amount guaranteed annually may be in accordance with this schedule upon approval by the secretary.

(1) During the permit life of the facility and during the post-closure care period, the owner or operator shall annually adjust the phase I and phase II assessments estimate for inflation and any other factors affecting phase I and phase II assessment costs.

(2) The owner or operator shall increase the amount of financial assurance for phase I and phase II assessment costs if changes in the phase I and phase II assessments or facility conditions increase the maximum costs of the phase I and phase II assessments by over three percent of the current financial assurance amounts for phase I and phase II costs.

(3) The owner or operator may reduce the amount of the phase I and phase II financial assurance if the cost estimate exceeds the maximum remaining cost for the phase I and phase II assessments, upon specific approval by the secretary. To seek approval, the owner or operator shall provide a revised cost estimate and supporting documentation to the department. If approved, the owner or operator shall place a copy of the revised cost estimate in the operating record, shall notify the secretary that the

estimate has been placed in the operating record and shall file a copy with the department.

B. Unless suspended from the requirements of 20.9.9.9 - 20.9.9.13 NMAC in accordance with Subsection C of 20.9.9.8 NMAC, the owner or operator of each solid waste facility shall secure financial assurance for the costs of phase I and phase II assessments as required under 20.9.9.13 - 20.9.9.16 NMAC. The owner or operator shall provide continuous coverage for the phase I and phase II assessments until released from financial assurance requirements by a written verification issued by the secretary pursuant to Subsection O of 20.9.6.8 NMAC.

[20.9.10.11 NMAC - Rp, 20 NMAC 9.1.IX.904, 8/2/2007]

20.9.10.12 FINANCIAL ASSURANCE FOR CORRECTIVE ACTION:

A. An owner or operator of a facility required to undertake a corrective action program under 20.9.9.13 -20.9.9.17 NMAC, or required to guarantee any portion of a corrective action program as a condition of any permit or order by the secretary, shall develop a detailed written estimate, in current dollars, of the cost of hiring a third party to perform the corrective action. The corrective action cost estimate shall account for the total costs of activities as described in the corrective action plan for the entire corrective action period. This estimated cost should also include estimated costs for an independent project manager and contract administration. The owner or operator shall file a copy of the estimate with the department concurrently with proof of financial assurance and shall notify the department that copies have also been placed in the operating record.

(1) The owner or operator shall annually adjust the estimate for inflation and any other factors affecting the corrective action costs until the corrective action program is completed.

(2) The owner or operator shall increase the amount of financial assurance if changes in the corrective action program or facility conditions increase the maximum costs of corrective action by over three percent of the current financial assurance amounts for corrective action costs.

(3) The owner or operator may reduce the amount of the financial assurance if the cost estimate exceeds the maximum remaining cost of corrective action, upon specific approval by the secretary. To seek approval, the owner or operator shall provide the revised cost estimate and supporting documentation to the department. If approved, the owner or operator shall notify the secretary when notice of the amount of financial assurance has been placed in the operating record.

B. The owner or operator of each solid waste facility required to implement a corrective action program shall secure financial assurance for the corrective action program in compliance with 20.9.10.13 - 20.9.10.23 NMAC. The owner or operator shall

provide continuous coverage for corrective action until released from corrective action financial assurance requirements by a written verification issued by the secretary pursuant to Subsection O of 20.9.6.8 NMAC.

[20.9.10.12 NMAC - Rp, 20 NMAC 9.1.IX.905, 8/2/2007]

20.9.10.13 ALLOWABLE MECHANISMS:

A. The owner or operator shall establish a financial assurance mechanism to ensure that the funds necessary to meet the costs of closure, post-closure care, phase I and phase II assessments, and corrective action for known releases will be available whenever they are needed. The allowed mechanisms are:

- (1) trust fund;
- (2) surety bond;
- (3) irrevocable letter of credit;
- (4) insurance;
- (5) risk management pool;
- (6) local government financial test;
- (7) local government guarantee;
- (8) local government reserve fund;
- (9) corporate financial test; or
- (10) multiple mechanisms.

B. Owners or operators shall implement one or more of the financial assurance mechanisms specified in 20.9.10.14 - 20.9.10.23 NMAC. Each selected mechanism shall be made payable to or name the New Mexico governmental entity or entities that own or operate the facility as the beneficiary of the instrument, but if no New Mexico governmental entity or entities own or operate the facility, then the instrument shall be made payable to or name the New Mexico environment department as the beneficiary.

[20.9.10.13 NMAC - Rp, 20 NMAC 9.1.IX.906, 8/2/2007]

20.9.10.14 TRUST FUND:

An owner or operator may demonstrate financial assurance for closure, post-closure care, phase I and phase II assessments, or corrective action by establishing a trust fund

that is worded as shown in forms supplied by the department. This trust fund may also be used as a repository for funds received from other financial assurance mechanisms. The trust fund shall be established as follows:

A. in the case of a trust fund for closure, post-closure care, or phase I and phase II assessments, payments into the trust fund shall be made at least annually over the term of the initial permit or over the remaining life of the facility, whichever is shorter; in the case of a trust fund for corrective action for known releases, payments into the trust fund shall be made annually over the first half of the estimated length of the corrective action period, or in the time period specified by the permit condition or the secretary's decision; this period is referred to as the pay-in period;

B. for a trust fund used to demonstrate financial assurance for closure, post-closure care, and phase I and phase II assessments, the first payment into the fund shall be at least equal to the current approved cost estimate divided by the number of years in the pay-in period; the amount of subsequent payments shall be determined by the following formula:

$$\text{Next Payment} = \frac{\text{CE} - \text{CV}}{\text{Y}}$$

where CE is the current cost estimate (updated for inflation or other changes), CV is the current value of the trust fund, and Y is the number of years remaining in the pay-in period;

C. for a trust fund used to demonstrate financial assurance for corrective action, the first payment into the trust fund shall be at least one-half of the current approved cost estimate for corrective action; the amount of subsequent annual payments shall be determined by the following formula:

$$\text{Next Payment} = \frac{\text{CE} - \text{CV}}{\text{Y}}$$

where CE is the current remaining cost estimate for corrective action, CV is the current value of the trust fund, and Y is the number of years remaining in the pay-in period;

D. in the case of closure, post-closure care, and phase I and phase II assessments, the initial payment into the trust fund shall be made prior to the initial receipt of waste; in the case of corrective action, the initial payment into the trust fund shall be made no

later than 120 days after the corrective action remedy has been approved by the secretary;

E. if the owner or operator establishes a trust fund after having used one or more other mechanisms, the initial payment into the trust fund shall be at least equal to the amount that the fund would contain if the trust fund had been established initially and annual payments had been made according to the specifications of Paragraphs (1), (2) and (3) of Subsection C of this section, as applicable;

F. the owner or operator, or other person authorized to conduct closure, post-closure care, phase I and phase II assessments, or corrective action activities may request reimbursement from the trust fund for these expenditures by submitting itemized bills to the secretary; unless there is an imminent threat to public health, welfare and safety or the environment, or undue economic hardship would delay or cease the required activities, requests for reimbursement shall be granted by the secretary only if the trust fund assets are sufficient to cover the remaining costs of required activities, and if justification and documentation of the expenditure is filed with the secretary and placed in the operating record; withdrawals of any funds from the trust fund shall be directed in writing to the trustee by the secretary;

G. the trust fund may be terminated only if the owner or operator substitutes alternate financial assurance as approved in writing by the secretary as specified in 20.9.10.13 - 20.9.10.23 NMAC or if the secretary determines that the owner or operator is no longer required to demonstrate financial assurance;

H. the trustees shall be a trust company or banks authorized to do business as a trust company in New Mexico under the Trust Company Act, NMSA 1978 Section 58-9-4 or 58-10-35, or authorized under federal law;

I. the trustee shall file annual reports on the trust fund balance with the department.

[20.9.10.14 NMAC - Rp, 20 NMAC 9.1.IX.906, 8/2/2007]

20.9.10.15 SURETY BOND GUARANTEEING PAYMENT OR PERFORMANCE:

An owner or operator may demonstrate financial assurance for closure, post-closure care, phase I and phase II assessments, or corrective action by obtaining a surety bond guaranteeing payment into a trust fund or standby trust fund established by the owner or operator. The surety bond and standby trust fund shall be worded as in the forms supplied by the department.

A. In the case of closure, post-closure care, and phase I and phase II assessments, the surety bond shall be effective prior to the initial receipt of waste. In the case of corrective action, the surety bond shall be effective no later than 120 days after the corrective action remedy has been approved by the secretary.

B. The owner or operator who uses a surety bond to satisfy its financial assurance requirements must also establish a trust fund or standby trust fund. Under the terms of the bond, all payments made thereunder must be deposited by the surety directly into the trust fund or standby trust fund in accordance with instructions from the secretary. A standby trust fund must meet all the requirements of the trust fund specified in 20.9.10.14 NMAC as applicable, except that, until the standby trust fund is funded pursuant to the requirements of this 20.9.10.14 NMAC and the surety agreement, annual payments into the standby trust fund are not required, updating of Schedule A to the trust agreement is not required, annual valuation as required by the trust agreement is not required, and notices of non-payment are not required.

C. Companies providing surety bonds shall be admitted carriers, licensed carriers, or registered carriers of surplus lines of insurance and authorized in the state of New Mexico to do business and be among those listed as acceptable sureties on federal bonds in circular 570 of the U.S. department of the treasury.

D. Except as provided in 20.9.10.23 NMAC, the penal sum of the bond shall be in an amount at least equal to the estimated costs to perform the activities assured by the bond.

E. Under the terms of the bond, the surety shall become liable on the bond obligation when the secretary determines that the owner or operator has failed to perform as guaranteed by the bond.

F. Payments made under the terms of the bond shall be deposited by the surety directly into the trust fund or standby trust fund in accordance with instructions by the secretary. No payments shall be made from the trust fund or standby trust fund unless approved in writing by the secretary.

G. The bond shall remain in effect until the closure and post-closure care or phase I and phase II assessments or any corrective action for which the bond was acting as financial assurance is certified as complete, or until it is replaced by an alternate financial assurance mechanism.

[20.9.10.15 NMAC - Rp, 20 NMAC 9.1.IX.906, 8/2/2007]

20.9.10.16 IRREVOCABLE STANDBY LETTER OF CREDIT:

An owner or operator may demonstrate financial assurance for closure, post-closure care, phase I and phase II assessments, and corrective action by obtaining an irrevocable standby letter of credit worded as in forms supplied by the department and payable to a trust fund or standby trust fund established in conformance with 20.9.10.14 NMAC.

A. In the case of closure, post-closure care, and phase I and phase II assessments, the letter of credit shall be effective prior to the initial receipt of waste. In the case of

corrective action, the letter of credit shall be effective no later than 120 days after the corrective action remedy has been approved by the secretary.

B. The issuing institution shall be an entity that has the authority to issue letters of credit and whose letter of credit operations are regulated and examined by a federal or state of New Mexico agency. The issuing institution shall be authorized to transact business in the state of New Mexico.

C. A letter from the owner or operator referring to the letter of credit by number, issuing institution, issue date, and providing the name and address of the facility, and the amount of funds assured, shall be submitted to the secretary along with the letter of credit. A copy of the letter from the owner or operator and a copy of the letter of credit shall be placed in the operating record.

D. The institution issuing the letter of credit shall be an institution with assets of at least one billion dollars (\$1,000,000,000). If the assets of the issuing institution are less than this amount, the letter of credit shall be fully collateralized by the owner or operator.

E. The letter of credit shall be irrevocable and issued for a period of at least one year. The letter of credit shall provide that the expiration date will be automatically extended for a period of at least one year unless the issuing institution has canceled the letter of credit by sending notice of cancellation by certified mail to the owner or operator and to the secretary 120 days in advance of cancellation. If the issuing institution notifies the owner or operator that it plans to cancel the letter of credit, the owner or operator shall obtain alternate financial assurance at least 30 days prior to the cancellation date. If the owner or operator fails to obtain alternate financial assurance in a timely manner, the secretary shall draw funds guaranteed by the letter of credit and place them in the trust fund or standby trust fund.

F. The trust fund or standby trust fund established by the owner or operator shall be worded as in forms supplied by the department.

G. The owner or operator may cancel the letter of credit only if alternate financial assurance is substituted as specified in 20.9.10.13 - 20.9.10.23 NMAC or if the owner or operator is notified in writing by the secretary that financial assurance is no longer required.

H. The owner or operator shall file an originally signed duplicate of the standby trust agreement and originally signed duplicate of the letter of credit with the department.

[20.9.10.16 NMAC - Rp, 20 NMAC 9.1.IX.906, 8/2/2007]

20.9.10.17 INSURANCE:

An owner or operator may demonstrate financial assurance for closure, post-closure care, and phase I and phase II assessments by obtaining insurance which conforms to the requirements of 20.9.10 NMAC. In the case of closure, post-closure care, and phase I and phase II assessments, the insurance shall be effective prior to the initial receipt of waste. In the case of corrective action, the insurance shall be effective no later than 120 days after the corrective action remedy has been approved by the secretary.

A. The insurer shall be authorized to transact the business of insurance in the state of New Mexico and:

- (1) have assets of one hundred million dollars (\$100,000,000) or more; or
- (2) be an admitted carrier, a licensed carrier or a registered carrier of surplus lines of insurance or reinsurance in one or more states and have either a surplus of not less than twenty-five million dollars (\$25,000,000) above undiscounted actuarial reserves (including incurred but not reported (IBNR) claims), or have an A.M. best rating of not less than a B+ or the equivalent rating of other recognized rating companies.

B. The certificate of insurance shall be worded as in a form supplied by the department.

C. The insurance policy shall guarantee that funds will be available for closure post-closure care, phase I and phase II assessments, and corrective action, as applicable. The policy shall also guarantee that the insurer will, as necessary, provide funds up to the face amount of the policy to persons authorized by the secretary to conduct activities covered by the policy. The face amount of the policy shall be at least equal to the most recent cost estimate for each of the covered activities.

D. Each policy shall contain a provision allowing assignment of the policy to a successor owner or operator. Such assignment may be conditional upon consent of the insurer, provided that such consent is not unreasonably refused.

E. The insurance policy shall provide that the insurer may not cancel, terminate or fail to renew the policy except for failure to pay the premium. The automatic renewal of the policy shall provide the insured with the option of renewal at the face amount of the expiring policy. If there is a failure to pay the premium, the insurer may cancel the policy by sending notice of cancellation by certified mail to the owner or operator, and to the secretary, 120 days in advance of cancellation. If the insurer notifies the owner or operator that it plans to cancel the policy, the owner or operator shall obtain alternate financial assurance at least 60 days prior to cancellation of the policy. Cancellation, termination, or failure to renew may not occur and the policy will remain in full force and effect in the event that on or before the date of expiration:

- (1) the secretary deems the facility abandoned;

- (2) the permit is terminated or revoked or a new permit is denied;
- (3) closure is ordered by the secretary or a court of competent jurisdiction;
- (4) the owner or operator is named a debtor in a voluntary or involuntary bankruptcy proceeding;
- (5) the premium due is paid.

F. For insurance policies providing coverage for post-closure care, commencing on the date that liability to make payments pursuant to the policy accrues, the insurer shall thereafter annually increase the face amount of the policy. Such increase shall be equivalent to the face amount of the policy, less any payments made, multiplied by an amount equivalent to 85 percent of the most recent investment rate or of the equivalent coupon-issue yield announced by the U.S. treasury for 26-week treasury securities.

G. The owner or operator may cancel the insurance policy only if alternate financial assurance is substituted or if the secretary notifies the owner or operator that financial assurance is no longer required.

H. The owner or operator shall file a copy of the certificate of insurance and insurance policy with the department. The owner or operator shall report any changes in either surplus or rating to the secretary. In addition, a copy of the latest annual rating (if applicable) and a copy of the latest audited financial statements shall be forwarded by the insurer to the owner or operator and the secretary.

[20.9.10.17 NMAC - Rp, 20 NMAC 9.1.IX.906, 8/2/2007]

20.9.10.18 RISK MANAGEMENT POOL:

An owner or operator may demonstrate financial assurance for closure, post-closure care, phase I and phase II assessments, or corrective action by joining a risk management pool. In the case of closure, post-closure care, and phase I and phase II assessments, participation in an approved risk management pool shall be effective prior to the initial receipt of waste. In the case of corrective action, participation shall be effective no later than 120 days after the corrective action remedy has been approved by the secretary.

A. A risk management pool shall not be an allowed mechanism unless the pool is approved by the secretary. Approved pools shall incorporate any mechanisms or combination of mechanisms in 20.9.10.13 - 20.9.10.23 NMAC and have the following characteristics:

- (1) be evidenced by a written contractual agreement among participating private entities or a joint powers agreement among participating governmental entities;

(2) would not be in violation of the anti-donation clause of the New Mexico State Constitution if funds were used;

(3) is liquid in nature, allowing for prompt initiation and payment of closure, post-closure care, phase I and phase II assessments, or corrective action activities;

(4) has a defined annual contribution table that provides for timely periodic payments from the risk sharers;

(5) provides for guaranteed and timely supplemental funding in the event of an incident that depletes the assets of the pool;

(6) has incorporated in its framework a trust fund or standby trust fund that conforms with 20.9.10.14 NMAC.

B. The risk management pool shall provide an explicit guarantee that funding in the amount of estimated closure, post closure care, phase I and phase II assessments and any corrective action costs will be paid by the pool into the trust fund or standby trust fund established by the facility in the event the owner or operator fails to undertake and complete the covered activities.

C. The owner or operator shall file a copy of the agreement establishing the risk management pool and the contribution table. The owner operator shall file an original duplicate of the trust fund agreement or standby trust fund agreement, and the guarantee by the pool to pay into the standby trust fund or trust fund for covered activities for the particular facility.

[20.9.10.18 NMAC - Rp, 20 NMAC 9.1.IX.906, 8/2/2007]

20.9.10.19 LOCAL GOVERNMENT FINANCIAL TEST:

A local government that satisfies the requirements of Subsections A through E of this section may demonstrate financial assurance pursuant to Subsection A of 20.9.10.13 NMAC up to the amount specified in Subsection F of this section for closure, post-closure care, phase I and phase II assessments, and corrective action.

A. Financial component. The local government shall satisfy one of the following:

(1) if the local government has outstanding general obligations bonds, it must have a current rating of Aaa, Aa, A, or Baa, as issued by Moody's, or AAA, AA, A, or BBB, as issued by Standard and Poor's on all outstanding general obligation bonds; or,

(2) if the local government does not have outstanding general obligation bonds, it must satisfy each of the following financial ratios based on the local government's most recent audited annual financial statement: a ratio of cash plus

marketable securities to total expenditures greater than or equal to 0.05; and a ratio of annual debt service to total expenditures less than or equal to 0.20.

B. The local government shall prepare its financial statements in conformity with generally accepted accounting principles for governments and have its financial statements audited by an independent certified public accountant or appropriate state agency.

C. A local government is not eligible to assure its obligations using the local government financial test if it is currently in default on any outstanding general obligation bonds; has any outstanding general obligation bonds rated lower than Baa as issued by Moody's or BBB as issued by Standard and Poor's; operated at a deficit equal to five percent or more of total annual revenue in either of the past two fiscal years; or receives an adverse opinion, disclaimer of opinion, or other qualified opinion from the independent certified public accountant (or appropriate state agency) auditing its financial statement. However, the secretary may evaluate qualified opinions on a case-by-case basis and allow use of the financial test in cases where the secretary deems the qualification insufficient to warrant disallowance of the test.

D. Public notice component. The local government shall place a reference to all closure, post-closure care, phase I and phase II assessments, and corrective action costs assured through the financial test into its comprehensive annual financial reports (CAFR) and budgets. Upon initial receipt of waste at the facility, the reference must be included in the next CAFR. In the case of existing facilities, for closure, post closure care, and the phase I and phase II assessment, the reference must be included prior to the effective date of 20.9.10.19 NMAC. In the case of corrective action, the reference must be included not later than 120 days after the corrective action remedy has been selected in accordance with the requirements of 20.9.9 NMAC, the permit issuance, or the secretary's decision. For the first year the financial test is used to assure costs at a particular facility, the reference may instead be placed in the operation record until insurance of the next available CAFR if timing does not permit the reference to be incorporated into the most recently issued CAFR or budget. The reference shall include the amount of each cost estimate and the year in which the local government expects these costs to be incurred. References in the budget must occur as budgeted line items if the activities are to occur in the period covered by the budget, but may appear in a supplemental data section if the activities will not occur until after the period covered by the budget.

E. Record keeping and reporting requirements.

(1) The local government shall submit the following items to the department:

(a) a letter signed by the local government's chief financial officer that lists all the current cost estimates covered by a financial test, as described in Subsection F of 20.9.10.19 NMAC, provides evidence and certifies that the local government meets the

conditions of Subsections A, B and C of 20.9.10.19 NMAC, and certifies that the local government meets the conditions of Subsections D and F of 20.9.10.19 NMAC;

(b) the local government's independently audited year-end financial statements for the latest fiscal year (except for local governments where audits are required every two years and where unaudited statements may be used in years when audits are not required), including the unqualified opinion of the auditor who must be an independent, certified public accountant or an appropriate state agency that conducts equivalent comprehensive audits; and

(c) a report to the local government from the local government's independent certified public accountant or the appropriate state agency stating that the certified public accountant or state agency has compared the data in the chief financial officer's letter with the owner's or operator's most recent independently audited, year-end financial statements, and in connection with that examination, no matters came to his attention which caused him to believe that the data in the chief financial officer's letter should be adjusted; a copy of the supporting documentation shall also be placed in the facility operating record.

(2) The items required in Subsection E of 20.9.10.19 NMAC must be placed in the facility operating record as follows: in the case of closure, post-closure care, and the phase I and phase II assessment, prior to the initial receipt of waste at the facility, or for existing facilities, prior to the effective date of this part; or in the case of corrective action, not later than 120 days after the corrective action remedy is selected in accordance with the requirements of 20.9.9 NMAC, the permit issuance, or the secretary's decision.

(3) After the initial placement of the items in the facility's operating record, the local government owner or operator shall update the information and place the updated information in the operating record within 180 days following the close of the local government's fiscal year.

(4) The local government owner or operator is no longer required to meet the requirements of Subsection E of 20.9.10.19 NMAC when the owner or operator substitutes alternate financial assurance as specified in 20.9.10.13 NMAC, or the owner or operator is released from the requirements of 20.9.10.13 - 20.9.10.23 NMAC in accordance with Subsection B of 20.9.10.9 NMAC, Subsection B of 20.9.10.10 NMAC, Subsection B of 20.9.10.11 NMAC, or Subsection B of 20.9.10.12 NMAC.

(5) A local government shall satisfy the requirements of the financial test at the close of each fiscal year. If the local government owner or operator no longer meets the requirements of the local government financial test it shall, within 210 days following the close of the owner or operator's fiscal year, obtain alternative or supplemental financial assurance, and place the required submissions for that assurance in the operating record.

(6) The secretary, based on a reasonable belief that the local government owner or operator may no longer meet the requirements of the local government financial test, may require additional reports of financial condition from the local government at any time. If the secretary finds that the local government no longer meets the requirements of the local government financial test, the local government shall provide alternate financial assurance that meets the requirements of 20.9.10 NMAC.

F. Calculation of costs to be assured. The portion of the closure, post-closure care, phase I and phase II assessments, and corrective action costs which a local government can assure under 20.9.10.19 NMAC is determined as follows:

(1) if the local government does not assure other environmental obligations through a financial test, it may assure closure, post-closure care, phase I and phase II assessments, and corrective action costs in an amount not to exceed 43 percent of the local government's total annual revenue;

(2) if the local government assures other environmental obligations through a financial test, including those associated with UIC facilities under 40 CFR 144.62, petroleum underground storage tank facilities under 40 CFR Part 280, PCB storage facilities under 40 CFR Part 761, and hazardous waste treatment, storage, and disposal facilities under 40 CFR Parts 264 and 265, it must add those costs to the closure, post-closure care, the phase I and phase II assessments, and corrective action costs it seeks to assure under this paragraph; the total shall not exceed 43 percent of the local government's total annual revenue;

(3) the local government shall obtain an alternate financial assurance instrument for those costs that exceed the limits set in Paragraphs (1) and (2) of Subsection F of 20.9.10.19 NMAC.

[20.9.10.19 NMAC - Rp, 20 NMAC 9.1.IX.906, 8/2/2007]

20.9.10.20 LOCAL GOVERNMENT RESERVE FUND:

A local government may demonstrate financial assurance for closure, post-closure care, phase I and phase II assessments, and corrective action by establishing a reserve fund within its existing financial accounting system.

A. The reserve fund shall be created by resolution of the governing body specifying the use of funds only for purposes of closure, post-closure care, phase I and phase II assessments, or corrective action for the facility. The reserve fund shall specify that the funds shall be used for closure, post-closure care, phase I and phase II assessments and corrective action costs in compliance with 20.9.2 - 20.9.10 NMAC and orders issued pursuant to such rules by the secretary. In the case of closure, post-closure care, and phase I and phase II assessments for new facilities, the resolution shall be effective prior to the initial receipt of waste. In the case of corrective action, the resolution shall be effective not later than 120 days after the corrective action remedy has been

approved by the secretary. The resolution shall specify withdrawals from the fund will shall only occur with approval by the secretary. Funding of the reserve fund shall be in conformance with the formulas specified for trust funds in 20.9.10.14 NMAC. The reserve fund shall be audited annually by the state auditor under the Single Audit Act.

B. The local government shall file a copy of the resolution with the department. The local government shall file audit reports of the reserve fund annually with the department.

[20.9.10.20 NMAC - Rp, 20 NMAC 9.1.IX.906, 8/2/2007]

20.9.10.21 LOCAL GOVERNMENT GUARANTEE:

A. An owner or operator may demonstrate financial assurance for closure, post-closure, phase I and phase II assessment, and corrective action, as required by 20.9.10.9 - 20.9.10.12 NMAC by obtaining a written guarantee provided by a local government. The guarantor must meet the requirements of the local government financial test in 20.9.10.19 NMAC, and must comply with the terms of a written guarantee.

B. Terms of the written guarantee. The guarantee must be effective prior to the initial receipt of waste, or in the case of existing facilities, prior to the effective date of this part. In the case of closure, post-closure care, or phase I and phase II assessments, or no later than 120 days after the corrective action remedy has been selected in accordance with the requirements of 20.9.9 NMAC, the permit issuance, or the secretary's decision. The guarantee must provide that if the owner or operator fails to perform closure, post-closure care, phase I and phase II assessments, or corrective action of a facility covered by the guarantee, the guarantor will perform, or pay a third party to perform, closure, post-closure care, and corrective action as required; or establish a fully funded trust fund as specified in 20.9.10.14 NMAC in the name of the owner or operator.

(1) The guarantee shall remain in force unless the guarantor sends notice of cancellation by certified mail to the owner or operator and to the secretary. Cancellation shall not occur, however, during the 120 days beginning on the date of receipt of the notice of cancellation by both the owner or operator and the secretary, as evidenced by the return receipts.

(2) If a guarantee is canceled, the owner or operator must within 90 days following receipt of the cancellation notice by the owner or operator and the secretary, obtain alternate financial assurance, place evidence of that alternate financial assurance in the facility operating record, and notify the secretary. If the owner or operator fails to provide alternate financial assurance within the 90-day period, the guarantor must provide that alternate assurance within 120 days following the close of the guarantor's fiscal year, obtain alternative assurance, place evidence of the alternate assurance in the facility operating record and notify the secretary.

C. Record keeping and reporting.

(1) The owner or operator must place a certified copy of the guarantee along with the items required under Subsection E of 20.9.10.19 NMAC into the facility's operating record prior to the initial receipt of waste, or in the case of existing facilities, prior to the effective date of this part. In the case of closure, post-closure care, or phase I and phase II assessments, or no later than 120 days after the corrective action remedy has been selected in accordance with the requirements of 20.9.9 NMAC, the permit issuance, or the secretary's decision.

(2) The owner or operator is no longer required to maintain the items specified in Subsection C of 20.9.10.21 NMAC when the owner or operator substitutes alternate financial assurance as specified in 20.9.10.13 NMAC through 20.9.10.23 NMAC; or the owner or operator is released from the requirements of 20.9.10.13 NMAC through 20.9.10.23 NMAC in accordance with Subsection B of 20.9.10.9 NMAC, Subsection B of 20.9.10.10 NMAC; Subsection B of 20.9.10.11 NMAC, or Subsection B of 20.9.10.12 NMAC.

(3) If a local government guarantor no longer meets the requirements of Subsection E of 20.9.10.19 NMAC the owner or operator must, within 90 days following the close of the guarantor's fiscal year obtain alternative assurance, place evidence of the alternate assurance in the facility operating record, and notify the secretary. If the owner or operator fails to provide alternate financial assurance within the 90-day period, the guarantor must provide that alternate assurance within 120 days.

[20.9.10.21 NMAC - Rp, 20 NMAC 9.1.IX.906, 8/2/2007]

20.9.10.22 CORPORATE FINANCIAL TEST:

A private entity that satisfies the financial test requirements of this section may provide a corporate guarantee for financial assurance up to the amounts specified in this section for closure, post-closure care, phase I and phase II assessments, and corrective action.

A. Financial component.

(1) The owner or operator shall satisfy at least one of the following three conditions:

(a) a current rating for its senior unsubordinated debt of AAA, AA, A, or BBB as issued by Standard and Poor's or Aaa, Aa, A or Baa as issued by Moody's;

(b) a ratio of less than 1.5 comparing total liabilities to net worth; or

(c) a ratio of greater than 0.10 comparing the sum of net income plus depreciation, depletion and amortization, minus \$10 million, to total liabilities.

(2) The tangible net worth of the owner or operator shall be greater than:

(a) the sum of the current closure, post-closure care, phase I and phase II assessments, and corrective action cost estimates and any other environmental obligations, including guarantees, covered by a financial test plus \$10 million; or

(b) \$10 million in net worth plus the amount of any guarantees that have not been recognized as liabilities on the financial statements, provided all of the current closure, post-closure care, phase I and phase II assessments and corrective action costs and any other environmental obligations covered by a financial test are recognized as liabilities on the owner's or operator's audited financial statements;

(c) the owner or operator shall have assets located in the United States amounting to at least the sum of current closure, post-closure care, phase I and phase II assessments, corrective action cost estimates, and any other environmental obligations covered by a financial test as described in Subsection C of 20.9.10.22 NMAC.

B. Recordkeeping and reporting requirements.

(1) An owner or operator seeking to demonstrate that it meets the corporate financial test shall file the following items with the department:

(a) a letter signed by the owner's or operator's chief financial officer that lists all the current cost estimates covered by a financial test, including, but not limited to, cost estimates required for municipal solid waste management facilities and cost estimates required for any facilities described in Subsection C of 20.9.10.22 NMAC, and provides evidence demonstrating that the firm meets the conditions of Subsection A of this section;

(b) a copy of the independent certified public accountant's unqualified opinion of the owner's or operator's financial statements for the latest completed fiscal year; to be eligible to use the financial test, the owner's or operator's financial statements must receive an unqualified opinion from the independent certified public accountant; an adverse opinion, disclaimer of opinion, or other qualified opinion shall be cause for disallowance, except that the secretary may evaluate qualified opinions on a case-by-case basis and allow use of the financial test in cases where the secretary deems that the matters which form the basis for the qualification are insufficient to warrant disallowance of the test;

(c) if the chief financial officer's letter providing evidence of financial assurance includes financial data showing that the owner or operator satisfies Subparagraphs (b) or (c) of Paragraph (1) of Subsection A of 20.9.10.22 NMAC that are different from data in the audited financial statements referred to in Subparagraph (b) of Paragraph (1) of Subsection B of 20.9.10.22 NMAC or any other audited financial statement or data filed with the securities and exchange commission, then a special report from the owner's or operator's independent certified public accountant to the

owner or operator is required; the special report shall be based upon an agreed upon procedures engagement in accordance with professional auditing standards and shall describe the procedures performed in comparing the data in the chief financial officer's letter derived from the independently audited, year-end financial statements for the latest fiscal year with the amounts in such financial statements, the findings of that comparison, and the reasons for any differences; and

(d) if the chief financial officer's letter provides a demonstration that the firm has assured for environmental obligations as provided in Subparagraph (b) of Paragraph (2) of Subsection A of 20.9.10.22 NMAC, then the letter shall include a report from the independent certified public accountant that verifies that all of the environmental obligations covered by a financial test have been recognized as liabilities on the audited financial statements, how these obligations have been measured and reported, and that the tangible net worth of the firm is at least \$10 million plus the amount of any guarantees provided.

(2) The owner or operator shall meet the requirements of 20.9.10.22 NMAC unless the owner or operator provides alternate financial assurance that is approved in writing by the secretary or if the secretary notifies him in writing that he is no longer required to provide financial assurance.

(3) The owner or operator shall satisfy the requirements of the corporate financial test at the close of each fiscal year. If the owner or operator no longer meets the requirements of the test, the owner or operator shall, within 60 days following the close of the owner or operator's fiscal year, obtain alternate financial assurance approved in writing by the secretary.

(4) The secretary, based on a reasonable belief that the owner or operator may no longer meet the requirements of the corporate financial test, may require the owner or operator to provide reports of its financial condition at any time. If the secretary finds that the owner or operator no longer meets the requirements of the corporate financial test, the owner or operator shall provide alternate financial assurance.

C. Calculation of costs to be assured. When calculating the current cost estimates for closure, post-closure care, phase I and phase II assessments, corrective action, or the sum of the combination of such costs to be covered, and any other environmental obligations assured by a corporate financial test, the owner or operator shall include cost estimates required for municipal solid waste management facilities under this part, as well as cost estimates required for the following environmental obligations, if they are assured through a corporate financial test: obligations associated with UIC facilities under 40 CFR Part 144, petroleum underground storage tank facilities under 40 CFR Part 280, PCB storage facilities under 40 CFR Part 761, and hazardous waste treatment, storage, and disposal facilities under 40 CFR Parts 264 and 265.

[20.9.10.22 NMAC - Rp, 20 NMAC 9.1.IX.906, 8/2/2007]

20.9.10.23 MULTIPLE FINANCIAL MECHANISMS:

An owner or operator may satisfy financial assurance requirements by establishing more than one financial mechanism per facility. The mechanisms shall be as specified in Subsection A of 20.9.10.13 NMAC, except that it is the combination of mechanisms, rather than the single mechanism, which must provide financial assurance for an amount at least equal to the current cost estimate approved by the secretary for closure, post-closure care, the phase I and phase II assessments, or corrective action, as applicable. The language of the mechanism listed in 20.9.10.13 NMAC through 20.9.10.23 NMAC must ensure that the instruments satisfy the following criteria:

A. the financial assurance mechanisms must ensure that amount of funds assured is sufficient to cover the cost of closure, post-closure care, phase I and phase II assessments, or corrective action for known releases when needed, as applicable;

B. the financial assurance mechanisms must ensure that funds will be available in a timely fashion when needed;

C. the financial assurance mechanisms must be obtained by the owner or operator by the effective date of these requirements or prior to the initial receipt of solid waste, whichever is later, in the case of closer and post-closure care, and no later than 120 days after the corrective action remedy has been selected in accordance with the requirements of 20.9.9.17 NMAC, until the owner of operation is released from the financial assurance requirements under 20.9.10.9.9 - 20.9.10.12 NMAC;

D. the financial assurance mechanisms must be legally valid, binding, and enforceable under state and federal law.

[20.9.10.23 NMAC - Rp, 20 NMAC 9.1.IX.906, 8/2/2007]

PART 11-19: [RESERVED]

PART 20: RECYCLING, ILLEGAL DUMPING AND SCRAP TIRE MANAGEMENT

20.9.20.1 ISSUING AGENCY:

New Mexico Environmental Improvement Board.

[20.9.20.1 NMAC - Rp, 20 NMAC 9.2.I.101, 8/2/2007]

20.9.20.2 SCOPE:

This part applies to the transporting, processing, storage, recycling, use, abatement, and generation of scrap tires. It establishes eligibility criteria for the Recycling and Illegal Dumping Fund. With the exception of 20.9.20.45 NMAC, 20.9.20.50 NMAC,

20.9.20.55 NMAC, 20.9.20.60 NMAC, and 20.9.20.63 NMAC, this part does not apply to permitted or registered solid waste facilities, registered recycling facilities, composting facilities or collection centers. A registered recycling facility, composting facility or collection center that stores 20,000 or more scrap tires or processes 200,000 or more scrap tires per year shall also comply with the requirements of 20.9.20.57 - 20.9.20.59 NMAC.

[20.9.20.2 NMAC - Rp, 20 NMAC 9.2.I.102, 8/2/2007]

20.9.20.3 STATUTORY AUTHORITY:

This part is adopted under the authority of the Recycling and Illegal Dumping Act, Sections 74-13-1 et seq. NMSA 1978 and the Solid Waste Act, Sections 74-9-1 et seq. NMSA 1978.

[20.9.20.3 NMAC - Rp, 20 NMAC 9.2.I.103, 8/2/2007]

20.9.20.4 DURATION:

Permanent.

[20.9.20.3 NMAC - Rp, 20 NMAC 9.2.I.104, 8/2/2007]

20.9.20.5 EFFECTIVE DATE:

August 2, 2007, unless a later date is cited at the end of a section.

[20.9.20.5 NMAC - Rp, 20 NMAC 9.2.I.105, 8/2/2007]

20.9.20.6 OBJECTIVE:

The objective of the Recycling, Illegal Dumping, and Scrap Tire Management rule is to implement the provisions of the act with the purposes stated in Section 74-13-2 NMSA 1978.

[20.9.20.6 NMAC - Rp, 20 NMAC 9.2.I.106, 8/2/2007]

20.9.20.7 DEFINITIONS:

As used in this part, the following definitions apply.

A. "Abatement" means to reduce in amount, degree or intensity or to eliminate.

B. "Act" means the Recycling and Illegal Dumping Act, Sections 74-13-1 et seq. NMSA 1978.

C. "Agricultural use" means the beneficial use of scrap tires in conjunction with the operations of a farm or ranch that includes construction projects and aids in the storage of feed, as defined in the act.

D. "Alliance" means the recycling and illegal dumping alliance.

E. "Board" means the environmental improvement board.

F. "Civil engineering application" means the use of scrap tires or other recycled material in conjunction with other aggregate materials in engineering applications.

G. "Composting" means the process by which biological decomposition of organic material is carried out under controlled conditions and the process stabilizes the organic fraction into a material that can be easily and safely stored, handled and used in an environmentally acceptable manner.

H. "Cooperative association" means a refuse disposal district created pursuant to the Refuse Disposal Act, Sections 4-52-1 et seq. NMSA 1978; a sanitation district created pursuant to the Water and Sanitation District Act, Sections 73-21-1 et seq. NMSA 1978; a special district created pursuant to the Special District Procedures Act, Sections 4-53-1 et seq. NMSA 1978; or other associations created pursuant to the Joint Powers Agreements Act, Sections 11-1-1 et seq. NMSA 1978; or the Solid Waste Authority Act, Sections 74-10-1 et seq. NMSA 1978.

I. "Department" means the New Mexico environment department.

J. "Dispose" means to deposit scrap tires or solid waste into or on any land or water.

K. "Hauler's temporary storage facility" means a facility where less than 100 scrap tires are stored for no more than 72 hours by a registered scrap tire hauler or registered commercial hauler for the purpose of separating scrap tires from tires that will be reused for their original purpose.

L. "Household" means any single and multiple residence, hotel or motel, bunkhouse, ranger station, crew quarters, campground, picnic ground or day-use recreation area.

M. "Illegal dumping" means disposal of trash, scrap tires or any solid waste in a manner that violates the Solid Waste Act or the Recycling and Illegal Dumping Act.

N. "Illegal dumpsite" means a place where illegal dumping has occurred.

O. "Land reclamation" means the filling and restoring of excavated land for the purpose of restoring the land to its approximate natural grade and to prepare or reclaim

the land for re-use. Disposal of scrap tires in a permitted or registered solid waste facility is not "land reclamation."

P. "Land reclamation project" means a civil engineering application designed to fill and restore land which had been excavated before the project and was not excavated for the burying of scrap tires, and does not include bank stabilization and erosion control projects.

Q. "Market development" means activities to expand or create markets for recyclable and reusable materials.

R. "Modify" means to change the terms or conditions of a permit or registration including:

- (1) any change in the fundamental method of processing of scrap tires;
- (2) any lateral or vertical expansion or alteration of the storage areas of the scrap tires, used tires, or tire derived products;
- (3) storage of scrap tires, used tires, or tire derived products beyond the permitted or registered boundaries; but
- (4) "modify" does not include:
 - (a) routine maintenance, repair, or replacement;
 - (b) an increase in the process rate, if such increase does not exceed the design capacity of the tire recycling facility, civil engineering application or violate any condition of the permit;
 - (c) a change in the hours of operation, unless such hours are specified in a permit condition;
 - (d) a change in the operating plan that is not the subject of a permit condition;and
 - (e) temporary changes allowed by the secretary under Subsection B of 20.9.20.39 NMAC and Subsection D of 20.9.20.41 NMAC when there is an imminent danger to public health, welfare, or the environment.

S. "Motor vehicle" means a vehicle or device that is propelled by an internal combustion engine or electric motor power that is used or may be used on the public highways for the purpose of transporting persons or property and includes any connected trailer or semi-trailer.

T. "Operator" means the person(s) responsible for the overall operation or construction of all or any portion of a tire recycling facility, civil engineering application, or business that generates or hauls scrap tires.

U. "Owner" means the person(s) who owns all or part of a tire recycling facility, civil engineering application, or business that generates or hauls scrap tires.

V. "Passenger tire equivalent" or "PTE" is a conversion factor for converting between numbers of scrap tires and weight; for passenger and light truck tires, the total weight of scrap tires, in pounds, divided by 22.5 pounds produces the passenger tire equivalent. For purposes of this part, any numerical requirement associated with scrap tires may be measured in either PTEs or the actual number of scrap tires.

W. "Person" means any individual, partnership, company, corporation, firm, association, trust, estate, or legal entity, including government entities.

X. "Processing" means techniques to change physical, chemical or biological character or composition of solid waste but does not include composting, transformation or open burning.

Y. "Public entity" means:

- (1) any state or local government;
- (2) any department, agency, special purpose district, or other instrumentality of federal, state or local government; or
- (3) any pueblo, tribe or Indian nation.

Z. "Recycling" means any process by which recyclable materials are collected, separated or processed and reused or returned to use in the form of raw materials or products.

AA. "Reusable tire" or "used tire" means a whole tire which has been used but is suitable for reuse for its originally intended purpose and has been specifically separated from scrap tires for reuse or resale. A used tire which appears to be suitable for its originally intended purpose but which has not been separated from scrap tires and stacked either vertically or horizontally shall be considered a scrap tire.

BB. "Reuse" of a tire means the return of a tire to use for its originally intended purpose without a change to its original form.

CC. "Scrap tire" means a tire, including a baled tire, that is no longer suitable for its originally intended purpose because of wear, damage, defect or obsolescence.

DD. "Scrap tire baling" means the process by which scrap tires are mechanically compressed and bound into block form.

EE. "Scrap tire generator" means a person who generates scrap tires, including retail tire dealers, retreaders, scrap tire processors, automobile dealers, automobile salvage yards, private company vehicle maintenance shops, garages, service stations and city, county and state government, but does not include persons who generate scrap tires in a household or in beneficial agricultural operations.

FF. "Scrap tire hauler" means a person who transports scrap tires for hire for the purpose of recycling, disposal, transformation or use in a civil engineering application.

GG. "Scrap tire manifest" means a document containing information as required by, Section 20.9.20.50, that is necessary to transport scrap tires in the state of New Mexico.

HH. "Secretary " means the secretary of the New Mexico environment department or his or her designee.

II. "Storage" or "temporary storage" means storage for a period of time allowed by a permit for storage of scrap tires. Storage or temporary storage does not include a staging area where scrap tires will be staged for 5 days or less during construction.

JJ. "Tire" means a continuous solid or pneumatic rubber covering that encircles the wheel of a motor vehicle.

KK. "Tire-derived fuel" means whole or chipped tires that produce a low sulfur, high-heating-value fuel.

LL. "Tire-derived product" means a usable product produced from the processing of a scrap tire but does not include baled tires.

MM. "Tire recycling" means a process in which scrap tires are collected, stored, separated or reprocessed for reuse as a different product or shredded into a form suitable for use in rubberized asphalt or as raw material for the manufacture of other products.

NN. "Tire recycling facility" means a place operated or maintained for tire recycling but does not include:

(1) retail business premises where tires are sold, if no more than five hundred loose scrap tires or two thousand scrap tires, if left in a closed conveyance or enclosure, are kept on the premises at one time;

(2) the premises of a tire retreading business, if no more than three thousand scrap tires are kept on the premises at one time;

(3) premises where tires are removed from motor vehicles in the ordinary course of business, if no more than five hundred scrap tires are kept on the premises at one time;

(4) a solid waste facility having a valid permit or registration issued pursuant to the provisions of the Solid Waste Act or regulations adopted pursuant to that act or registration issued pursuant to the Environmental Improvement Act; or

(5) a site where tires are stored or used for beneficial agricultural uses.

OO. "Vector" means any agent capable of transmitting a disease from one individual or organism to another. Vectors include, but are not limited to, mosquitoes, flies and other insects, rodents, and vermin.

[20.9.20.7 NMAC - Rp, 20 NMAC 9.2.I.107, 8/2/2007]

20.9.20.8 PROHIBITED ACTS:

A. A person shall not store or use in a civil engineering application, except for beneficial agricultural use, more than one hundred scrap tires anywhere in this state, unless the person has a valid permit or registration from the department, or is excluded from the definition of a tire recycling facility pursuant to Subsection NN of 20.9.20.7 NMAC.

B. A person shall not operate or maintain a tire recycling facility unless the facility has a valid permit issued pursuant to the provisions of the Recycling and Illegal Dumping Act or is a facility where tires are stored and used for beneficial agricultural uses and complies with rules enacted pursuant to the Recycling and Illegal Dumping Act.

C. A person shall not transport scrap tires for hire to a place other than a permitted tire recycling facility or permitted civil engineering application unless the place is specifically excluded from the definition of a "tire recycling facility".

D. A person shall not transport scrap tires for hire either for disposal or recycling purposes without being registered as a scrap tire hauler by the department pursuant to rules adopted in accordance with the Recycling and Illegal Dumping Act.

E. A scrap tire generator shall not release scrap tires to a person other than a registered scrap tire hauler pursuant to the Recycling and Illegal Dumping Act, a registered commercial waste hauler pursuant to the Solid Waste Act, or a self-hauling agricultural operation.

F. A person shall not engage in the open burning of scrap tires.

G. A person shall not store or dispose of scrap tires or tire-derived products in a manner that creates a public nuisance, promotes the breeding or harboring of disease vectors or creates a potential for fire or other health or environmental hazards.

H. A generator, scrap tire hauler or registered solid waste hauler shall not transport scrap tires without possessing a New Mexico scrap tire manifest approved by the department, except as otherwise provided in this part.

I. A person shall not engage in, maintain or allow illegal dumping.

[20.9.20.8 NMAC - Rp, 20 NMAC 9.2.I.108, 8/2/2007]

**20.9.20.9 TIRE RECYCLING FACILITIES; ENTRY BY DEPARTMENT;
AVAILABILITY OF RECORDS TO DEPARTMENT:**

The secretary or any authorized representative, employee or agent of the department may enter, inspect, monitor, sample, or obtain records of a tire recycling facility, civil engineering application, scrap tire generator, or scrap tire hauler as provided in Section 74-13-5 NMSA 1978. The secretary, authorized representative, employee, agent or other law enforcement officer shall present proper identification prior to inspection.

[20.9.20.9 NMAC - Rp, 20 NMAC 9.2.III.301, 8/2/2007]

**20.9.20.10 PERMITS FOR SCRAP TIRE STORAGE, RECYCLING FACILITIES,
AND CIVIL ENGINEERING APPLICATIONS AND REGISTRATIONS FOR SCRAP
TIRE HAULERS:**

A. Any person seeking to store more than 100 scrap tires or seeking to construct, operate, or modify a tire recycling facility or civil engineering application that uses more than 100 scrap tires shall first obtain a permit.

B. Any permit or registration for a civil engineering application granted prior to the effective date of these regulations shall remain in effect.

C. Permits are not required for a hauler's temporary storage facility that is used by a registered scrap tire hauler or a registered commercial hauler to separate scrap tires from reusable tires. Such facilities shall be included in the application for registration of the commercial hauler under Subsection A of 20.9.3.31 NMAC or registration of the scrap tire hauler under Subsection I of 20.9.20.26 NMAC.

D. A tire recycling facility or civil engineering application at a permitted or registered solid waste facility is not required to obtain a tire recycling or civil engineering application permit.

E. The department shall maintain a list of permitted and registered solid waste facilities and permitted tire recycling facilities and civil engineering applications on its solid waste bureau website.

[20.9.20.10 NMAC - Rp, 20.9.2.II.200, 8/2/2007]

20.9.20.11 APPLICATION REQUIREMENTS FOR TIRE RECYCLING FACILITY OR STORAGE PERMITS:

Any person seeking a tire recycling facility permit or storage permit to process or temporarily store scrap tires, including tire bales, shall file an application, which shall contain the following information.

A. A site layout plan of the proposed facility drawn to scale that is in compliance with the requirements of 20.9.20.36 NMAC and 20.9.20.37 NMAC. The map shall include at least the following information:

- (1) site/facility name;
- (2) labels of all features shown on the map;
- (3) north arrow;
- (4) map scale;
- (5) all structures and buildings that are or will be constructed at the facility including those used in collection, storage or processing operations;
- (6) location of equipment;
- (7) property boundaries;
- (8) water sources, arroyos, wetlands, ditches and other topographic features;
- (9) wells;
- (10) fences;
- (11) easements, and power lines;
- (12) all access routes and internal roads used for residential, commercial and emergency use;
- (13) loading and unloading areas;

(14) the location of the areas used for collection of scrap tires, processing of scrap tires, used tires, tire derived products, and residuals from processing; and

(15) the location and width of fire lanes.

B. The name, mailing address, telephone number and e-mail address, if available, of the proposed facility, facility owner, operator, and property owner.

C. The location of the front gate of the proposed facility in latitude and longitude, as determined by a geographic information system unit or survey, and the physical address, if available.

D. Total acreage of the proposed facility site.

E. A copy of the deed or other legal description of the site.

F. Zoning of the site, and the zoning of all adjacent properties, if applicable.

G. The anticipated start up date of the facility and hours of operation.

H. An emergency contingency plan that meets the requirements of 20.9.20.47 NMAC.

I. An affidavit certifying that the proposed site complies with the applicable regulations of all local governing bodies having jurisdiction over the proposed facility, including planning, zoning, building, code enforcement and drainage departments.

J. Affidavits certifying that all applicable notifications required by 20.9.20.19 NMAC have been published and posted.

K. Any other information deemed applicable and requested by the secretary.

L. The following operational information:

(1) a list and description of the equipment to be used for handling, processing, recycling, or disposing of scrap tires;

(2) a detailed narrative of the method of any processing;

(3) the maximum number of scrap tires to be processed in one year, if applicable;

(4) the maximum number of scrap tires to be processed in one month, if applicable;

(5) the maximum number of unprocessed scrap tires that will be located at the site at any one time;

(6) the maximum number of processed scrap tires that will be located at the site at any one time, if applicable;

(7) the plans for the transportation of scrap or processed tires or both to and from the site;

(8) a description of the methods to be employed to prevent, control or contain a tire fire, including a description of the facility's water source and capacity;

(9) a description of the methods to be employed to monitor and control vectors for scrap and processed tires in storage at the site;

(10) a description of the method to be used to remove residuals from the site; and

(11) any other information requested by the secretary.

M. Closure plans pursuant to 20.9.20.51 NMAC and 20.9.20.52 NMAC.

N. All applications shall be signed by the owner and operator, with a statement certifying that all information in the application is true and correct.

[20.9.20.11 NMAC - N, 8/2/2007]

20.9.20.12 ADDITIONAL PERMIT APPLICATION REQUIREMENTS FOR FACILITIES THAT STORE 20,000 OR MORE SCRAP TIRES AT ANY ONE TIME OR PROCESS 200,000 SCRAP TIRES OR MORE PER YEAR:

Any person seeking a permit for a facility that stores 20,000 or more scrap tires at any one time or processes 200,000 or more scrap tires per year shall submit the following information in addition to all information required in 20.9.20.11 NMAC:

A. an operation and maintenance manual that addresses all of the operating requirements; and

B. proposed financial assurance to meet the requirements of 20.9.20.57-20.9.20.59 NMAC.

[20.9.20.12 NMAC - N, 8/2/2007]

20.9.20.13 APPLICATION REQUIREMENTS FOR CIVIL ENGINEERING APPLICATION PERMITS:

A. Any person seeking a permit for a civil engineering application that uses 101 to 999 scrap tires and is two (2) bales high or less, other than a commercial feed operation that uses scrap tires as tarp weights, shall comply with the requirements of 20.9.20.36 NMAC and 20.9.20.37 NMAC and file an application which includes the following information. If the civil engineering application applicant has obtained an approval form the U.S. army corps of engineers or construction industries division for the siting or design of the civil engineering application, then it may file only the information in paragraphs (1), (2), (4), (6), (7), (8) and (9) of this subsection.

(1) The name, mailing address, telephone number, and e-mail address, if available, of the applicant, property owner, and builder of the civil engineering application.

(2) The location of the of the civil engineering application, including its physical address if available.

(3) A copy of the deed or other legal description of the property on which the proposed civil engineering application will be constructed.

(4) If different from the civil engineering application site, the location, including the physical address, if available, and the name, mailing address, telephone number, and the e-mail address, if available, of the property owner of the temporary storage site where scrap tires will be stored temporarily before and during construction.

(5) A detailed narrative describing the proposed civil engineering application, unless the civil engineering application has a set of plans signed and stamped by a registered professional engineer.

(6) If the civil engineering application is to be in a floodplain, a waterway, or a wetland, written authorization of the project by the U.S. army corps of engineers or other appropriate authorities.

(7) The anticipated date when scrap tires will be brought to the civil engineering application site or temporary storage site.

(8) The origins, if known, of the scrap tires to be used for the civil engineering application.

(9) The proposed dates of completion of the civil engineering application and removal of scrap tires kept in temporary storage.

(10) The method to be used to anchor scrap tires, if applicable.

(11) The method to be used to cover scrap tires, if applicable.

(12) The method to be used to fill scrap tires; if applicable.

(13) Any other information deemed applicable and requested by the department.

(14) An affidavit certifying that the proposed site complies with the applicable regulations of all local governing bodies having jurisdiction over the proposed facility, including planning, zoning, building, code enforcement and drainage departments.

B. A commercial feed operation that uses over 100 scrap tires for the weighting of tarps shall file an application, which shall include:

(1) the name, mailing address, telephone number, and e-mail address, if available, of the applicant, and property owner where the scrap tires will be used;

(2) the physical address or other description of the location where the scrap tires will be used;

(3) an affirmative statement that the scrap tires will be used only for tarp weights; and

(4) any other information deemed applicable and requested by the department.

C. All applications shall be signed by the applicant, with a statement certifying that all information in the application is true and correct.

[20.9.20.13 NMAC - N, 8/2/2007]

20.9.20.14 ADDITIONAL PERMIT APPLICATION REQUIREMENTS FOR CIVIL ENGINEERING APPLICATION THAT USES 1000 TO 99,999 SCRAP TIRES AND IS NO MORE THAN TWO BALES HIGH:

Any person seeking a permit for a civil engineering application that uses 1000 to 99,999 scrap tires and is no more than 2 bales high shall submit an application which includes the following information in addition to that required under 20.9.20.13 NMAC. If the civil engineering application applicant has obtained an approval from the army corps of engineers or construction industries division for the siting or design of the civil engineering application, then it may file only the information required in 20.9.20.13 NMAC.

A. A site layout plan of the proposed civil engineering application that is in compliance with the requirements of 20.9.20.37 NMAC, drawn to scale. The plan shall include at least the following information:

(1) labels of all features shown on the map;

(2) map scale;

- (3) north arrow;
- (4) the proposed civil engineering application;
- (5) all structures and buildings at the civil engineering application site if within 100 feet of the civil engineering application;
- (6) temporary storage areas for other material, equipment, and residuals from processing;
- (7) loading and unloading areas for scrap tires and other material to be used for the civil engineering project;
- (8) location of all storage areas for scrap tire, tire derived products, used tires and fire lanes;
- (9) property boundaries;
- (10) water sources, arroyos, wetlands, ditches and other topographic features;
- (11) wells;
- (12) fences;
- (13) easements, and power lines; and
- (14) all access routes and internal roads used for residential, commercial and emergency use.

B. If the scrap tires to be used for the proposed civil engineering application will be kept in temporary storage before and during construction on property that is different from the one described in Subsection A of 20.9.20.14 NMAC, the applicant must provide a plat map of the temporary storage facility that includes all items required in Subsection A of 20.9.20.14 NMAC for the civil engineering application.

C. An emergency contingency plan that meets the requirements of 20.9.20.47 NMAC.

[20.9.20.14 NMAC - N, 8/2/2007]

20.9.20.15 PERMIT APPLICATION REQUIREMENTS FOR CIVIL ENGINEERING APPLICATION THAT USES 100,000 SCRAP TIRES OR MORE OR IS MORE THAN TWO SCRAP TIRE BALES HIGH:

Any person seeking a permit for a civil engineering application that uses 100,000 scrap tires or more or is more than two scrap tire bales high shall submit the following information in addition to that required under 20.9.20.14 NMAC:

A. facility plans, elevations, drawings and cross sections of the proposed civil engineering application signed and sealed by a professional engineer registered in New Mexico; and

B. if the scrap tires to be used for the proposed civil engineering application will be kept in temporary storage before and during construction on property that is different from the proposed civil engineering application, demonstration that the temporary storage facility is in compliance with 20.9.20.37 NMAC.

[20.9.20.15 NMAC - N, 8/2/2007]

20.9.20.16 PERMIT APPLICATION REQUIREMENTS FOR CIVIL ENGINEERING APPLICATIONS USING SCRAP TIRES FOR LAND RECLAMATION:

Any person seeking a permit for a civil engineering application using scrap tires for land reclamation shall file an application which shall include:

A. the name, mailing address, telephone number and e-mail address, if available, of the proposed land reclamation site, the applicant, and the land reclamation site's property owner;

B. the physical address of the proposed land reclamation site, if available;

C. a copy of the deed or other legal description of the property on which the proposed land reclamation site will be constructed;

D. the anticipated start up date when tires will be brought to the site;

E. the anticipated completion date;

F. the origins, if known, of the scrap tires to be used for land reclamation;

G. a description of other fill materials and their application;

H. a description of compaction methods;

I. the method of placement and commingling of scrap tires below ground mixed in a proportion no greater than 33% scrap tires by volume with soil suitable as fill material;

J. the approximate volume, dimensions and depth of the depression to be filled;

K. the approximate number of scrap tires proposed to be placed in the site;

L. ground storage area that is in compliance with the requirements of 20.9.20.37 NMAC;

M. a description of the final cover;

N. an emergency contingency plan that meets the requirements of 20.9.20.47 NMAC;

O. a letter from the local county official or municipal authority in which the site is or will be located that the applicant has provided notice of the proposed civil engineering application to the county or municipality;

P. a sworn notarized affidavit signed by the property owner certifying that the excavated area, hole or disturbed land area existed before the project and was not excavated for the burying of scrap tires; and

Q. all applications shall be signed by the applicant, with a statement certifying that all information in the application is true and correct.

[20.9.20.16 NMAC - N, 8/2/2007]

20.9.20.17 ADDITIONAL PERMIT APPLICATION REQUIREMENTS FOR CIVIL ENGINEERING APPLICATIONS THAT PLAN TO USE 100,000 OR MORE SCRAP TIRES PER YEAR FOR LAND RECLAMATION:

Any person seeking a permit for a civil engineering application that plans to use more than 100,000 scrap tires per year for land reclamation shall submit the following information in addition to that required under 20.9.20.16 NMAC.

A. Site layout plan of the land reclamation site and any above ground storage areas signed and sealed by a professional engineer registered in New Mexico. The site layout plan shall include at least the following if applicable:

- (1) location of temporary storage areas of scrap tires and tire derived products;
- (2) location of fire lanes and fire control facilities;
- (3) security fencing, gates and gatehouse, site entrance and access roads and fire lanes in accordance with 20.9.20.37 NMAC;
- (4) locations of buildings; and
- (5) locations and descriptions of processing equipment.

B. An operation and maintenance manual that shall address all of the operating requirements.

C. Proposed financial assurance to meet the requirements of 20.9.20.57- 20.9.20.59 NMAC.

[20.9.20.17 NMAC - N, 8/2/2007]

20.9.20.18 PERMIT APPLICATION REVIEW:

A. Upon receipt of an application for a permit, the department shall review the application to determine if additional information is necessary or shall determine the application complete. If the department determines that additional information is necessary, it shall notify the applicant in writing.

B. The applicant shall submit any information requested within 60 days of receipt of a request for additional information, or the application shall be denied without prejudice. The department may extend the response time for good cause. When submitting the information, the applicant shall submit three copies. If the permit application is not complete after two requests for additional information, the secretary may deny the permit application without prejudice.

[20.9.20.18 NMAC - N, 8/2/2007]

20.9.20.19 PUBLIC NOTICES, HEARINGS AND MEETINGS:

A. Within thirty (30) days after an application for a facility that proposes to store 20,000 or more scrap tires at any one time or process 200,000 or more scrap tires per year or a land reclamation project that proposes to use 100,000 or more scrap tires per year is deemed complete, the applicant shall provide public notice. The notice shall be published once in a newspaper of general circulation in the county where the facility is proposed to be constructed, operated or closed. This notice shall appear in either the classified or legal advertisements section of the newspaper and at one other place in the newspaper expected to give the general public effective notice. A notice shall also be posted on the property boundary where the entrance to the facility will be. The posted notice shall be at least 1 1/2 feet by 2 1/2 feet in size with clear, legible letters. The notice shall be printed in both English and Spanish or other predominant language of the area. The notice shall include the following:

(1) name, address, and telephone number of the applicant and contact person;

(2) the anticipated start-up date of the facility or modification, and planned hours of operation;

(3) a description of the facility, including the general process, location, size, quantity, rate, and type of tires to be handled and a description of any proposed modification; and

(4) a statement that written comments regarding the application should be provided to the department and stating the date by which comments must be submitted.

B. Thirty (30) days shall be allowed for the public to submit written comments to the department. Should the secretary determine that there is significant public interest, a public hearing shall be held in the geographic area likely to be impacted by the tire facility.

[20.9.20.19 NMAC - N, 8/2/2007]

20.9.20.20 PERMIT ISSUANCE:

A. The secretary shall issue the permit, issue the permit with terms and conditions, or deny the permit within 60 days after the application is deemed complete or if a public hearing is held, within 120 days following the public hearing.

B. The secretary shall issue a permit if the applicant demonstrates that the requirements of this part and the act are met and that neither a hazard to public health, welfare or the environment nor undue risk to property will result.

C. The terms and conditions of the permit or permit modification shall be the approved representations made by the permit applicant in the application, together with any terms and conditions specifically identified by the secretary.

D. At the time of permit issuance, the tire recycling facility or civil engineering application will be assigned a permit number.

E. A permit issued for a new or existing tire recycling facility shall be for the active life of the facility as described in the approved permit, or for twenty years, whichever is less.

F. A permit issued for a civil engineering application shall terminate upon completion of the civil engineering application or within five years of issuance of the permit, whichever is less.

[20.9.20.20 NMAC - N, 8/2/2007]

20.9.20.21 PERMIT DENIAL, SUSPENSION OR REVOCATION:

A. In addition to the causes for suspension or revocation listed in Subsection B of 74-13-13 NMSA 1978, the secretary may deny, suspend or revoke a permit during its term for:

- (1) violation by the owner or operator of any term or condition of the permit, any requirement of the act, these rules or any subsequent rule adopted by the department;
- (2) failure of the applicant in the application or during the permit issuance process to disclose fully all relevant facts;
- (3) misrepresentation by the owner or operator of any relevant facts at any time;
- (4) a determination that the permitted activity endangers public health, welfare or the environment;
- (5) failure of the owner or operator to demonstrate the knowledge and ability to operate a facility in accordance with this part;
- (6) a history of non-compliance by the owner or operator with environmental regulations, rules or statutes at another facility;
- (7) having any permit revoked or permanently suspended for cause under the environmental laws of any state or the United States;
- (8) modifying a facility without the approval of the secretary; or
- (9) failure to respond to a request for additional information within sixty (60) days of notification.

B. A permit may be revoked in accordance with the procedures set forth in Adjudicatory Procedures - Environment Department, 20.1.5 NMAC. Construction, modification and interim operation, if any, shall cease upon the effective date of the revocation.

C. Once a permit or permit modification is issued and all appeals are final, operations or construction shall begin within one year. If operation or construction does not begin within one year, the secretary may revoke the permit, but in no event shall it be revoked pursuant to this subsection sooner than one year after the effective date of these regulations.

[20.9.20.21 NMAC - Rp, 20.9.2.212 NMAC, 8/2/2007]

20.9.20.22 EFFECT OF PERMIT OR REGISTRATION:

A. Any terms or conditions of the permit or registration shall be enforceable to the same extent as a regulation of the board.

B. The existence of a permit or registration issued under this part shall not constitute a defense to a violation of this part or the act.

C. The issuance of a permit does not convey any property rights of any sort, or any exclusive privilege.

[20.9.20.22 NMAC - N, 8/2/2007]

20.9.20.23 PERMIT MODIFICATION:

A. Any owner or operator of a tire recycling facility, storage facility or civil engineering application who seeks to modify such facility or permit conditions shall obtain a permit modification prior to making any modifications. A permit modification shall not extend the term of any permit.

B. An application for a modification shall demonstrate compliance with the portions of this part that pertain to such a modification.

C. The secretary may initiate the modification of permit conditions or require modification of the facility if:

(1) changes occur after permit issuance, which justify permit conditions that are different from or are not included in the existing permit;

(2) the secretary has received information that was not in the record at the time of permit issuance and would have justified the application of different permit conditions at the time of issuance;

(3) the standards or regulations on which the permit was based have changed by statute, through promulgation of new or amended standards or regulations, or by judicial decision after the permit was issued; or

(4) the secretary determines good cause exists for modification, such as an act of God, strike, flood, or materials shortage, or other events over which the permittee has little or no control and for which there is no reasonable remedy.

[20.9.20.23 NMAC - N, 8/2/2007]

20.9.20.24 TRANSFER OF PERMITS AND CHANGE IN PERMIT APPLICANT:

A. A change in ownership of a permittee requires a permit transfer and shall be allowed according to the following procedure.

(1) Where the entity owning the permit undergoes an ownership change, but the permitted entity remains the same, the new owner shall, within thirty days of the change, submit the following:

(a) a description of the change in ownership;

(b) the date of the change in ownership;

(c) if the change in ownership is for a facility that stores 20,000 or more scrap tires at any one time or processes 200,000 or more scrap tires per year or a land reclamation project that uses 100,000 or more scrap tires per year, a statement that the current financial assurance will remain in effect, or a new proposed financial assurance to meet the requirements of 20.9.20.57 - 20.9.20.59 NMAC has been obtained;

(d) a statement whether the new owner has been convicted of a felony or other crime within ten years immediately preceding the date of the transfer, and if so details of the crime and conviction;

(e) a statement whether the new owner has been fined within the past five years for alleged violations of any environmental laws of this state, any other state or the United States, and if so, details of any allegations, settlements or compliance orders; and

(f) any other information required by the department.

(2) If the change in ownership is for a facility that stores 20,000 or more scrap tires at any one time or processes 200,000 or more scrap tires per year or a land reclamation project that uses 100,000 or more scrap tires per year, the permittee shall provide proof of public notice of the ownership change using the procedures applicable to permit applications in Subsection A of 20.9.20.19 NMAC, and shall indicate in the public notice that the department will accept public comment on the ownership change for a period of 30 days after the date of publication.

(3) The existing financial assurance required by 20.9.20.57 - 20.9.20.59 NMAC shall remain in effect until the secretary has approved any new proposed financial assurance submitted by the new owner.

(4) The secretary shall, within 90 days after the submission of all required information, but not before the close of the public comment period, issue an order approving, approving with terms or conditions, or denying the application for permit transfer and revoking the permit. The secretary may condition the approval or deny the application and revoke the permit based on evidence in the administrative record. The secretary may deny the application for any reason set forth in Subsection A of 20.9.20.21 NMAC.

B. A change in the named permittee requires a permit transfer and shall be allowed according to the following procedure.

(1) Where the person owning the permit seeks to transfer the permit to a new person to be named as permittee, the existing owner and the proposed new owner shall

file an application with the department requesting transfer of the permit. The application shall contain the following information:

- (a)** a description of the proposed change of permittee;
- (b)** an explanation of whether the change in permittee will have any effect on the operations;
- (c)** If the change in permittee is for a tire recycling facility that stores 20,000 or more scrap tires at any one time or processes 200,000 or more scrap tires per year or a land reclamation project that uses 100,000 or more scrap tires, a new proposed financial assurance to meet the requirements of 20.9.20.57 - 20.9.20.59 NMAC;
- (d)** a statement whether the new owner has been convicted of a felony or other crime within ten years immediately preceding the date of the transfer, and if so, details of the crime and conviction;
- (e)** a statement whether the new owner has been fined within the past five years for alleged violations of any environmental laws of this state, any other state or the united states, and if so, details of any allegations, settlements or compliance orders;
- (f)** If the change in permittee is for a facility that stores 20,000 or more scrap tires at any one time or processes 200,000 or more scrap tires per year or a land reclamation project that uses 100,000 or more scrap tires; and
- (g)** any other information required by the secretary.

(2) The permittee shall provide public notice of a proposed permit transfer using the procedures applicable to permit applications in Subsection A of 20.9.20.19 NMAC, and shall indicate in the public notice that the department will accept public comment on the permit transfer for a period of 30 days after the date of publication.

(3) If applicable, the existing financial assurance required by 20.9.20.57 - 20.9.20.59 NMAC shall remain in effect until the secretary has approved any new proposed financial assurance submitted by the proposed new permittee.

(4) The secretary shall, within 90 days after the submission of all required information, but not before the close of the public comment period, issue an order approving, approving with terms or conditions, or denying the application for permit transfer, and if necessary, revoking the permit. The secretary may condition the approval or deny the application and if necessary revoke the permit based on evidence in the administrative record. The secretary may deny the application or if necessary revoke the permit for any reason set forth in 20.9.20.21 NMAC.

C. If a permit applicant changes ownership or seeks to transfer the application to a new proposed permittee, the applicant and transferee shall follow the procedures in this

section. If the application has already been deemed complete, the application shall be re-noticed and re-submitted.

[20.9.20.24 NMAC - N, 8/2/2007]

20.9.20.25 PERMIT EXPIRATION:

A. A permit issued for a new or existing tire recycling facility shall expire twenty years after issuance.

B. A permit issued for a civil engineering applications shall expire when the project has been completed and the final report in compliance with 20.9.20.53 NMAC has been submitted and approved in writing.

C. A permit shall automatically expire when the department verifies that the closure and any post-closure care plan, including corrective action, have been completed.

D. If a permitted facility begins operation, and thereafter does not operate for at least one year, authorization to accept scrap tires is suspended and closure activities shall begin immediately.

[20.9.20.25 NMAC -Rp, 20.9.2.II.211 NMAC, 8/2/2007]

20.9.20.26 APPLICATION REQUIREMENTS FOR SCRAP TIRE HAULER REGISTRATION:

Haulers of scrap tires shall register with the department 30 days prior to beginning operations. A scrap tire hauler operating prior to the effective date of these regulations shall file an application within one year of the effective date of these regulations, and shall be allowed to continue hauling until its application is either approved or denied. Commercial solid waste haulers registered pursuant to 20.9.3.31 NMAC who haul scrap tires using vehicles that are primarily used for the hauling of other solid waste are not required to register under this section. Registrations are not transferable. Applications for a scrap tire hauler registration shall include the following information;

A. the name, address, telephone number, and e-mail address of the operation for which registration is sought, and the name address, telephone number, date of birth, driver's license number, and social security number of the owner and operator, unless the owner and operator are public entities or are a publicly held corporation that has on file and in effect with the federal securities and exchange commission a registration statement required under 15 U.S.C. Section 77e(c);

B. the anticipated start up date, hours of operation, and days of collection;

C. location and zoning of vehicle maintenance and any storage yard(s) and a demonstration that the use meets all zoning and land use regulations and restrictive covenants;

D. certification that drivers and vehicles are, and will continue to be, properly licensed;

E. a statement whether any of the owners or operators have been fined for violation of any environmental laws of any state or the United States;

F. a statement of whether any of the owners or operators have had any permit or registration revoked or permanently suspended for cause under the environmental laws of any state or the United States;

G. a copy of a current warrant issued by the New Mexico public regulations commission, transportation division pursuant to Paragraph (5) of Subsection A of 18.3.2.8 NMAC, if applicable, or in the case of a public entity hauling special waste, proof of financial responsibility;

H. a list of all registered or permitted tire recycling facilities, beneficial agricultural sites or solid waste facilities where scrap tires are expected to be transported on a regular basis;

I. if the hauler has a temporary storage facility used to separate scrap tires from tires that will be sold for reuse, a separate permit for the hauler's temporary storage facility is not required, but the hauler must provide a statement in the application that no more than 99 scrap tires will be stored at any one time at the haulers temporary storage facility, and that scrap tires will be separated from reusable tires and will not be stored for a period exceeding 72 hours;

J. evidence that a surety bond in the amount of \$10,000 has been posted; and

K. any additional information required by the secretary.

L. All applications shall be signed by the owner and operator, with a statement certifying that all information in the application is true and correct.

[20.9.20.26 NMAC - N, 8/2/2007]

20.9.20.27 SCRAP TIRE HAULER BOND REQUIREMENTS:

A scrap tire hauler must acquire and maintain a surety bond in the amount of \$10,000 submitted on a form prepared by the department. This form may be obtained by contacting the department solid waste bureau, and will be posted on its website. The purpose of the surety bond is to provide limited financial assurance for the cleanup and proper disposal of scrap tires found to be illegally dumped by the scrap tire hauler.

A. The surety bond provided to the department must be issued subject to the laws and jurisdiction of the state of New Mexico and must be issued by a surety company authorized by the superintendent of insurance to do business in New Mexico. The surety bond provided to the department must have original signatures. The wording of the surety bond must be identical to the wording on the form supplied by the department.

B. The surety bond must name the secretary of the New Mexico environment department as the obligee for the surety bond. The secretary may designate a third party to receive any funds from the surety in an amount up to \$10,000 to pay for the costs of clean-up activities.

C. The surety bond must be continuous in nature, unless canceled by the surety company. The surety company must notify the department sixty (60) calendar days prior to cancellation of the surety bond. Notice must be provided in writing via certified mail to the solid waste bureau chief.

D. In the event of cancellation of a surety bond, the scrap tire hauler must provide a replacement surety bond, executed by an authorized surety company, within thirty (30) calendar days of the department's receipt of the notice of cancellation of the existing surety bond. Should the scrap tire hauler fail to submit alternate bond coverage by the thirty-first (31) calendar day following receipt by the department of the notice of cancellation, the scrap tire hauler's certificate of registration shall be immediately suspended.

E. The surety company shall become liable under the terms of the bond if the department determines that the scrap tire hauler has failed to comply with the provisions of the Solid Waste Act, the Recycling and Illegal Dumping Act and 20.9.2 NMAC through 20.9.10 NMAC or this part. The registered scrap tire hauler is jointly and severally liable for the bond amount and any penalties, clean-up costs, or judgments resulting from hauling activities in violation of the Solid Waste Act, the Recycling and Illegal Dumping Act and 20.9.2 NMAC through 20.9.10 NMAC or this part that exceed the bond amount.

F. The surety's liability is limited to the amount of the surety bond. The amount of monies recoverable from the scrap tire hauler is not limited to the amount of the bond. A scrap tire hauler shall be responsible for paying for any financial obligations, beyond \$10,000 should the department successfully obtain the \$10,000 from the surety pursuant to the terms of the surety bond, caused by improper disposal of scrap tires by the scrap tire hauler or the scrap tire hauler's employee while acting within the scope of employment, as determined by the department.

G. The owner or operator may cancel the surety if the department has given prior written consent. The department will provide such written consent when the scrap tire hauler has given written notification that the scrap tire hauler is no longer in business and/or the date that the scrap tire hauling activities ceased.

[20.9.20.27 NMAC - N, 8/2/2007]

20.9.20.28 SCRAP TIRE HAULER REGISTRATION PROCEDURES:

A. The registration procedures in 20.9.20.26 - 20.9.20.32 NMAC apply to scrap tire haulers.

B. Upon receipt of an application for registration, the department shall review the application to determine if additional information is necessary or shall deem the application complete. The department shall issue a notice of administrative completeness or a notice that additional information is necessary within 60 days after receipt of the application. The secretary may extend the time for good cause.

C. Within 60 days of receipt of a request for additional information regarding any scrap tire hauler registration application, the owner or operator shall submit the information requested by the department, or the secretary may deny the registration application without prejudice.

[20.9.20.28 NMAC - N, 8/2/2007]

20.9.20.29 SCRAP TIRE HAULER REGISTRATION DENIAL, REVOCATION, OR SUSPENSION:

A. The secretary may deny, revoke, or suspend a scrap tire hauler registration on the basis of information in the application or evidence in the administrative record, or other information that comes to the secretary's attention at any time.

B. Causes for denying, revoking, or suspending a registration include a finding that the applicant or owner or operator has:

- (1)** knowingly misrepresented a material fact in the application;
- (2)** refused to disclose or failed to disclose the information required under the provisions of this part or the act;
- (3)** exhibited a history of willful disregard for the environmental laws of any state or the United States;
- (4)** had any permit revoked or permanently suspended for cause under the environmental laws of any state or the United States;
- (5)** violated a term or condition of the registration, any requirement of this part, or any requirement of the act or otherwise endangered public health or welfare;
- (6)** knowingly misrepresented a material fact at any time after issuance of the registration;

(7) failed to maintain a valid warrant pursuant to 18.3.2 NMAC; or

(8) failed to comply with the Parental Responsibility Act, Sections 40-5A-1 et seq. NMSA 1978 (1998 Cum. Supp.).

C. If the department recommends denial of a scrap tire hauler registration, notice shall be provided to the applicant by registered mail. The applicant may request a hearing on the registration denial by filing a written request for hearing with the hearing clerk within 30 days of receipt of the notice. A request for hearing shall be treated as a hearing determination and the hearing conducted pursuant to 20.1.4 NMAC, Permit Procedures - Environment Department. If no request for hearing is filed within 30 days of receipt of the notice, the recommended denial shall become a final action of the secretary.

D. A scrap tire hauler registration may be revoked or suspended in accordance with the procedures set forth in 20.1.5 NMAC, Adjudicatory Procedures - Environment Department. Operation, if any, shall cease upon the effective date of the revocation or suspension.

[20.9.20.29 NMAC - N, 8/2/2007]

20.9.20.30 REGISTRATION ISSUANCE:

A. Within 30 days after an application for a scrap tire hauler registration is deemed complete, the secretary shall issue the registration, issue the registration with terms and conditions, or deny the registration.

B. The secretary shall issue a registration if the owner or operator demonstrates that the requirements of this part and the act are met and that neither a hazard to public health, welfare or the environment nor undue risk to property will result.

C. The terms and conditions of the registration shall be the approved representations made by the registration applicant in the application, together with any terms and conditions specifically identified by the secretary.

D. At the time of registration issuance, the scrap tire hauler will be assigned a registration number.

E. The department shall maintain a list of registered scrap tire haulers on its solid waste bureau website.

[20.9.20.30 NMAC - N, 8/2/2007]

20.9.20.31 SCRAP TIRE HAULER REGISTRATION RENEWAL:

A. A scrap tire hauler shall renew its registration every five years. To renew a registration, the scrap tire hauler shall file a complete renewal application no later than 30 days prior to the expiration date of the registration. A registration renewal application shall include the same information required in 20.9.20.26 NMAC, and in addition provide a complete description of its compliance history and any other information requested by the secretary. The existing registration shall remain in effect until the registration is granted, granted with conditions or denied.

B. A registered scrap tire hauler may continue to operate under the terms and conditions of the existing registration for a period not to exceed one year after the effective date of these rules or until the registration is renewed whichever is first provided that:

(1) the owner and operator are in compliance with the existing registration, this part, and any applicable federal regulations;

(2) a complete renewal application is submitted in a timely fashion in accordance with this section; and

(3) the owner or operator adequately submits any requested additional information by the deadline specified by the secretary.

[20.9.20.31 NMAC - N, 8/2/2007]

20.9.20.32 SCRAP TIRE HAULER REGISTRATION EXPIRATION:

A. A scrap tire hauler registration shall expire five (5) years from the date of issuance of the registration.

B. A scrap tire hauler registration shall terminate upon any change of owners or operators of the registered scrap tire hauler, and the new owner or operator shall obtain a new registration prior to operation.

[20.9.20.32 NMAC - N, 8/2/2007]

20.9.20.33 CURRENT HOLDERS OF TIRE RECYCLING FACILITY REGISTRATIONS, SPECIFIC TIRE RECYCLING FACILITY PERMITS AND LAND RECLAMATION SITES:

Registered tire recycling facilities, land reclamation sites, and holders of specific permits for tire recycling facilities shall apply for a permit and demonstrate compliance with the provisions of this rule within 180 days after its effective date.

[20.9.20.33 NMAC - N, 8/2/2007]

20.9.20.34 CONFIDENTIALITY OF INFORMATION:

A. Permit applicants, owners or operators of tire recycling facilities or civil engineering applications, or scrap tire haulers who submit information to the department may claim such information as confidential. Any claim of confidentiality must be asserted at the time of submittal.

B. To claim confidentiality of information in a submittal, the submitter must clearly mark each page in the document on which the submitter claims there is confidential information, and submit to the department a written description of the basis for the claim of confidentiality at the time of submission. The department shall review the claim of confidentiality based on the written submittal and determine whether the information may be maintained as confidential pursuant to the Inspection of Public Records Act, Section 14-2-1 et seq. NMSA 1978. If the department determines that information in a submittal is confidential, the department may require submission of redacted copies of the submittal for the public record.

C. If no claim of confidentiality is made at the time of submission, any such claims are deemed waived and the department may make the information available to the public without further notice.

D. Information that is determined by the department to be confidential may be disclosed to officers, employees, or authorized representatives of the state or the United States concerned with implementing law enforcement, or when relevant in any proceedings under the act or this part.

[20.9.20.34 NMAC - N, 8/2/2007]

20.9.20.35 FEE SCHEDULE:

There are no fees for tire recycling facility permits, storage permits, civil engineering application permits, or scrap tire haulers registrations.

[20.9.20.35 NMAC - N, 8/2/2007]

20.9.20.36 GENERAL SITING CRITERIA FOR TIRE RECYCLING FACILITIES, STORAGE FACILITIES AND CIVIL ENGINEERING APPLICATIONS:

A. No tire recycling or storage facility shall be located within 25 feet of a floodplain, a watercourse (including arroyos), or a wetland unless the floodplain, watercourse, or a wetland has been altered pursuant to an approval from the U.S. army corps of engineers or other appropriate authority.

B. No civil engineering application shall be constructed in a floodplain, a waterway, or a wetland without authorization by the U.S. army corps of engineers or other appropriate authority.

C. No tire recycling facility or civil engineering application shall be located within historically or archaeologically significant sites, unless in compliance with the Cultural Properties Act, Sections 18-6-1 et seq. NMSA 1978 and the Prehistoric and Historic Sites Preservation Act, Sections 18-8-1 et seq. NMSA 1978.

[20.9.20.36 NMAC - N, 8/2/2007]

20.9.20.37 REQUIREMENTS FOR STORAGE OF SCRAP TIRES AND TIRE DERIVED PRODUCT BY TIRE RECYCLING AND STORAGE FACILITIES AND FOR TEMPORARY STORAGE BY CIVIL ENGINEERING APPLICATIONS:

A. A scrap tire storage site shall be designed, constructed, and operated so that the health, welfare and safety of operators, haulers, and others who may utilize the site are maintained.

B. Outdoor storage of scrap tires shall not be located within the right of way of any electric power lines and in no event within 20 feet on either side of an electric power line.

C. Open burning is prohibited at all tire storage sites. Smoking shall be allowed only in designated areas.

D. Scrap tire piles or stacks of tire bales shall be no greater than 10 feet in height, nor shall the pile or stack be more than 50 feet wide by 100 feet long.

E. There shall be a minimum separation of 40 feet between outdoor scrap tire piles, bale stacks, and other stored materials. This 40 foot space shall be designated as a fire lane that totally encircles the tire piles and shall be maintained as an all-weather road.

F. Outdoor storage piles and bale stacks must be separated from grass and weeds by a minimum of 40 feet and from brush and forested areas including pinon and juniper by a minimum of 100 feet.

G. When there are more than three (3) outdoor storage piles of scrap tires or scrap tire bales that are 10 feet high by 50 feet wide by 100 feet long, the separation between the groups shall be at least 75 feet wide.

H. Tires shall not be stored under bridges, elevated trestles, elevated roadways, or elevated railroads.

I. When the bulk volume of scrap tires will be more than 20,000 cubic feet, a firmly anchored fence that is at least six feet high or other method of security that has been approved by the local fire authority is required.

J. All gates to the outdoor storage piles of scrap tires shall be locked when the facility is not staffed.

K. All gateways, fire breaks and separation lanes shall be free of obstructions at all times.

L. The scrap tire storage site shall have fire extinguishers that are in compliance with the local fire code.

M. Each site permitted as a tire recycling or storage facility shall conspicuously display at each entrance a sign at least 1 1/2 feet by 2 1/2 feet in size with clear, legible letters stating the name of the scrap tire storage site using the, name, location, and physical address of the site, the tire recycling or storage facility permit number, the hours of operation and emergency telephone numbers.

N. The facility must have suitable structures or features to prevent surface water run-on from surrounding areas as well as preventing surface runoff from leaving the facility.

O. The scrap tire storage site shall be designed, constructed and maintained in accordance with all local building codes, fire codes, and other applicable local codes and regulations including litter and nuisance codes.

P. An adequate means of suppression or extinguishing fires shall be provided.

[20.9.20.37 NMAC - N, 8/2/2007]

20.9.20.38 GENERAL OPERATING AND CONSTRUCTION REQUIREMENTS:

Owners and operators of all tire recycling facilities and civil engineering application sites shall operate and construct the tire recycling facility or civil engineering application in a manner that:

A. does not cause a public nuisance or create a potential hazard to public health, welfare or the environment;

B. is in compliance with rules adopted by state and local fire authorities; and

C. operates and maintains the facility in accordance with 20.9.20.37 NMAC.

[20.9.20.38 NMAC - N, 8/2/2007]

20.9.20.39 ADDITIONAL OPERATING REQUIREMENTS FOR ALL PERMITTED TIRE RECYCLING FACILITIES:

A. Owners and operators of all tire recycling facilities shall:

(1) ensure that copies of the emergency contingency plan that meets the requirements of 20.9.20.47 NMAC; are readily accessible to employees on duty;

(2) train employees when hired and at least annually thereafter on when and how to implement the emergency contingency plan that meets the requirements of 20.9.20.47 NMAC and document in the operating record that such training has been conducted;

(3) maintain a written operating record and manifests in compliance with 20.9.20.48 - 20.9.20.50 NMAC; and

(4) notify the department both orally and in writing within 24 hours of an incident that may negatively impact the environment, or human health or requires implementation of the facility's emergency contingency plan.

B. The secretary may order temporary changes in operation or facility design in emergency situations when the secretary determines there is an imminent danger to public health, welfare or the environment.

[20.9.20.39 NMAC - N, 8/2/2007]

20.9.20.40 ADDITIONAL OPERATING REQUIREMENTS FOR PERMITTED FACILITIES THAT STORE MORE THAN 20,000 SCRAP TIRES AT ANY ONE TIME OR PROCESSES MORE THAN 200,000 SCRAP TIRES PER YEAR:

Owners and operators of facilities that store 20,000 or more scrap tires at any one time or processes 200,000 or more than scrap tires per year shall:

A. post signs at the facility to indicate the name and address of the site, the hours of operation, the tire recycling facility permit number and emergency telephone numbers; and

B. prominently post key operational procedures.

[20.9.20.40 NMAC - N, 8/2/2007]

20.9.20.41 CIVIL ENGINEERING APPLICATION CONSTRUCTION AND MAINTENANCE REQUIREMENTS:

A. Scrap tires kept in temporary storage before and during construction of a civil engineering application will be stored in compliance with 20.9.20.37 NMAC.

B. Copies of the emergency contingency plan that meets the requirements of 20.9.20.47 NMAC shall be readily accessible to employees on duty.

C. All civil engineering applications shall be constructed in a stable manner.

D. The secretary may order temporary changes in storage, construction or design in emergency situations when the secretary determines there is an imminent danger to public health, welfare or the environment.

E. After completion, all civil engineering applications should be inspected on a regular basis by the site owner or operator to observe any weakness or failure of the structure.

F. In the event of a crack, break or collapse of the civil engineering application, the failure will be repaired in a timely manner so that scrap tires do not enter contiguously owned property or become a health hazard.

G. Loose tires used for civil engineering applications shall be filled with soil or other fill material to prevent the tires from becoming harborage for vectors.

H. The owner or operator of a civil engineering application shall maintain a written operating record and retain manifests in compliance with 20.9.20.48 - 20.9.20.50 NMAC.

I. Upon completion of the civil engineering application, all excess scrap tires held in temporary storage and equipment used for construction shall be removed, and a final report shall be submitted to the department pursuant to 20.9.20.53 NMAC.

[20.9.20.41 NMAC - N, 8/2/2007]

20.9.20.42 ADDITIONAL CONSTRUCTION AND MAINTENANCE REQUIREMENTS FOR A CIVIL ENGINEERING APPLICATION THAT USES 100,000 OR MORE SCRAP TIRES OR IS MORE THAN TWO BALES HIGH:

If the civil engineering application constructed is different from the plans submitted in the application, a professional engineer registered in New Mexico shall provide stamped and sealed as-built certification of the civil engineering application actually constructed.

[20.9.20.42 NMAC - N, 8/2/2007]

20.9.20.43 OPERATING REQUIREMENTS FOR CIVIL ENGINEERING APPLICATIONS USING SCRAP TIRES FOR LAND RECLAMATION:

A. Undisturbed land shall not be excavated for the purpose of filling the same land with a mixture of scrap tires and debris or soil. Any borrow area, hole or other disturbed land area to be used for a land reclamation project must have existed before the project, and it must have been excavated or soil removed for a purpose other than for the burial of tires or tire pieces.

B. Any person holding a permit for a civil engineering application using scrap tires for land reclamation shall:

(1) not adversely affect human health, public safety or the environment, either during fill operations or after the reclamation project is completed;

(2) not create a public nuisance;

(3) place scrap tires below ground mixed in a proportion no greater than 33% scrap tires by volume with soil suitable as fill material and compact and grade the structure in a manner that will prevent erosion;

(4) maintain a written operating record and retain manifests in compliance with 20.9.20.48 - 20.9.20.50 NMAC during the filling process; and

(5) not store scrap tires on the ground surface without burial and mixing with inert material for a period longer than one week.

[20.9.20.43 NMAC - N, 8/2/2007]

20.9.20.44 ADDITIONAL OPERATING REQUIREMENTS FOR CIVIL ENGINEERING APPLICATIONS THAT USE 10,000 OR MORE SCRAP TIRES PER YEAR FOR LAND RECLAMATION:

No more than 10 acres of land shall be reclaimed using scrap tires at any one location.

[20.9.20.44 NMAC - N, 8/2/2007]

20.9.20.45 OPERATING REQUIREMENTS FOR SCRAP TIRE HAULERS AND TRANSPORTERS:

A. Any person who transports scrap tires, whether or not for hire, shall:

(1) collect and transport tires so as to prevent environmental, safety, and public health or welfare hazards and nuisances; and

(2) securely tie, strap or use a fully enclosed container to transport scrap tires to prevent loss of contents during transportation.

B. Additional operating requirements for persons that haul scrap tires for hire follows.

(1) All registered scrap tire haulers shall conspicuously label all vehicles on both sides with the company's name, telephone number and registration number.

(2) Pursuant to 20.9.20.50 NMAC, registered scrap tire haulers shall provide a scrap tire manifest to the scrap tire generator for each load of scrap tires hauled.

(3) Registered scrap tire haulers shall comply with all manifesting requirements in 20.9.20.50 NMAC and record keeping requirements in 20.9.20.48 NMAC and 20.9.20.49 NMAC.

(4) Scrap tire haulers shall provide prior notification to the department in writing of any major changes in operation. A major change includes a change in ownership, a change in location of vehicle maintenance and storage yard and a change in the disposal facility being used. In the case of emergency, where prior notice cannot be given, written notice shall be given within 48 hours after the change.

(5) A scrap tire hauler is responsible for assuring that scrap tires are transported to a permitted or registered facility or beneficial agricultural operation within 30 days after leaving the site of the generator.

(6) A hauler's temporary storage facility shall contain no more than 99 scrap tires at any one time.

(7) Scrap tires shall be stored for no more than 72 hours at a hauler's temporary storage facility.

[20.9.20.45 NMAC - N, 8/2/2007]

20.9.20.46 SCRAP TIRE GENERATOR OPERATING REQUIREMENTS:

A. Each scrap tire generator is responsible for assuring that scrap tires are transported to a permitted or registered facility or beneficial agricultural operation.

B. Each scrap tire generator shall use manifests to document the removal and management of all scrap tires generated on-site.

C. Each scrap tire generator shall monitor and control vectors in outdoor tire storage areas.

D. Each scrap tire generator may transport its scrap tires from its own business locations to a permitted or registered facility or bona fide beneficial agricultural operation without a scrap tire hauler registration and shall provide the manifest to the final destination for completion. The scrap tire generator shall retain the manifest pursuant to 20.9.20.50 NMAC.

E. Each scrap tire generator shall comply with all manifesting requirements in 20.9.20.50 NMAC.

[20.9.20.46 NMAC - N, 8/2/2007]

20.9.20.47 CONTINGENCY PLAN FOR EMERGENCIES:

A. Holders of tire recycling facility permits shall maintain a current emergency contingency plan designed to minimize hazards to public health, welfare or the environment.

B. A copy of the emergency contingency plan shall be kept at the permitted facility and copies shall be provided to the appropriate emergency response authorities of the local government.

C. The provisions of the emergency contingency plan shall be carried out immediately whenever there is a fire, explosion, or release of contaminants which could pose an immediate or imminent threat to public health, welfare or the environment.

D. The emergency contingency plan shall be amended immediately whenever the following occurs.

(1) The facility permit is modified.

(2) The plan fails in an emergency.

(3) The facility's design, operations, maintenance, or other circumstances change in a way that increases the potential for fires, explosions, or releases of hazardous constituents, or necessitate changes to the planned emergency response.

(4) The list of emergency coordinators changes.

(5) The list of emergency equipment changes.

E. The emergency contingency plan for emergencies shall include the following, if applicable.

(1) A description of the actions facility personnel should take in response to fires or other disaster.

(2) A description of arrangements with local police departments, fire departments, hospitals, contractors, and state and local emergency response teams to coordinate emergency services.

(3) A list of the name(s) and telephone numbers of the emergency coordinator(s). If more than one person is listed, one must be named as the primary emergency coordinator.

(4) A list of all emergency equipment at the facility (such as fire extinguishing systems, communications and alarm systems), along with the location, physical description, and a summary of the capabilities of each item.

(5) An evacuation plan for facility personnel which describes signal(s) to be used to begin evacuation, evacuation routes, and alternate evacuation routes in cases where the primary routes could be blocked by fire or releases of toxins.

(6) Instructions for the emergency coordinator or his designee, in case of an imminent or actual emergency situation, to immediately:

(a) activate internal facility alarms or communication systems, where applicable, to notify all facility personnel; and

(b) notify appropriate state and local agencies with designated response roles if their assistance is needed.

(7) Instructions for the emergency coordinator, whenever there is a fire or other disaster, to as quickly as possible identify the nature, source, amount, and extent of any accident of fire by means of observation, review of facility records or manifests, or if necessary, by chemical analysis.

(8) Instructions for the emergency coordinator to assess possible hazards to public health, welfare or the environment that may result from the fire or explosion.

(9) Instructions for the emergency coordinator to provide for appropriate treatment, storage, or disposal of recovered waste, or any other material that results from a release, fire, or explosion at a facility, after the emergency situation is under control.

[20.9.20.47 NMAC - N, 8/2/2007]

20.9.20.48 RECORD KEEPING:

A. All persons holding a tire recycling facility permit shall maintain manifests and any records necessary to comply with its annual report requirements which shall include:

(1) the type of processing;

(2) the number of scrap tires or weight of the scrap tires received from each scrap tire generator or scrap tire hauler;

(3) the name, mailing address, contact name, telephone number and e-mail address if available, of each transporter that delivered scrap tires to the facility;

(4) the name, mailing address, contact name, telephone number and e-mail address if available, of the scrap tire generator where the scrap tires originated;

(5) the number of unprocessed scrap tire remaining at the site at the end of the calendar year;

(6) the number of processed scrap tire remaining at the site at the end of the calendar year; and

(7) the number of tire bales, if applicable, remaining at the site at the end of the calendar year.

B. Any person holding a civil engineering application permit shall maintain a record during the construction of the project that includes manifests and any records necessary to comply with applicable record keeping requirements and the final project report requirements which shall include:

(1) the number of scrap tires or weight of the scrap tires received from each scrap tire generator or scrap tire hauler;

(2) the name, mailing address, contact name, telephone number and e-mail address if available, of each transporter that delivered scrap tires to the civil engineering application; and

(3) the name, mailing address, contact name, telephone number and e-mail address if available, where the scrap tires originated.

C. Any person holding a scrap tire hauler registration shall maintain manifests and any records necessary to comply with its annual report requirements which shall include:

(1) the number of scrap tires or weight of the scrap tires for each month, by origin and destination;

(2) the name, mailing address, and e-mail address if available, of each scrap tire generator or scrap tire hauler; and

(3) the name, mailing address, and e-mail address if available, of each authorized facility where scrap tires are delivered.

D. Any person holding a scrap tire hauler registration shall retain all manifests showing the collection and disposition of all used or scrap tires.

E. All records, plans, manifests and information required by this part shall be furnished upon request and be made available at reasonable times for inspection by the department.

F. All records, plans, manifests and annual reports required by this part shall be retained by the facility during the operational life of the facility and for a period of three (3) years after closure of the facility.

G. Any person holding a tire recycling facility permit or a civil engineering application permit shall retain at the permitted site a copy of the terms and conditions of the permit or registration, the emergency contingency plan if applicable, and permit or registration certificate.

H. Any person holding a scrap tire hauler registration shall keep a copy of the certificate of registration and any terms and conditions in any vehicle used to transport the scrap tires.

[20.9.20.48 NMAC - Rp, 20 NMAC 9.2.III.301, 8/2/2007]

20.9.20.49 ANNUAL REPORTS AND FINAL REPORTS:

Any person having a tire recycling facility permit, civil engineering application permit or scrap tire hauler registration shall submit an annual report to the secretary within 60 days after the end of each calendar year describing the operations of the past year.

A. For tire recycling facilities, the report shall include the following information:

- (1) the type of processing;
- (2) the number of scrap tires or weight of the scrap tires received annually from each scrap tire generator or scrap tire hauler;
- (3) the name, mailing address, contact name, telephone number and e-mail address if available, of each transporter that delivered scrap tires to the facility;
- (4) the name, mailing address, contact name, telephone number and e-mail address if available, where the scrap tires originated;
- (5) the number of unprocessed scrap tire remaining at the site at the end of the calendar year;
- (6) the number of processed scrap tire remaining at the site at the end of the calendar year; and
- (7) the number of tire bales, if applicable, remaining at the site at the end of the calendar year.

B. For scrap tire haulers, the report shall include the following information:

(1) the number of scrap tires or weight of the scrap tires for each month, by origin and destination;

(2) the name, mailing address, contact name, telephone number and e-mail address if available, of each scrap tire generator or scrap tire hauler; and

(3) the name, mailing address, contact name, telephone number and e-mail address if available, of each authorized facility where scrap tires are delivered.

C. For civil engineering projects taking more than one year, the report shall include the following information:

(1) the number of scrap tires or weight of the scrap tires received from each scrap tire generator or scrap tire hauler;

(2) the name, mailing address, contact name, telephone number and e-mail address if available, of each scrap tire generator or scrap tire hauler;

(3) the name, mailing address, contact name, telephone number and e-mail address if available, where the scrap tires originated; and

(4) the status of the civil engineering application to include the number of scrap tires or weight of scrap tires that have not been used for the project yet, the number that is still needed, and the portion of the project that has already been completed.

D. For civil engineering projects taking less than one year, the report shall be submitted to the department 30 days after completion and shall include:

(1) as built drawings including cross section and plan view, if different from the proposed design; if the civil engineering application used 100,000 scrap tires or more or is more than two scrap tire bales high, the as built shall be signed and sealed by a professional engineer registered in New Mexico;

(2) the total number of scrap tires or tire bales used for the civil engineering application;

(3) the length, width and height of the civil engineering application; and

(4) photographs of the civil engineering application.

[20.9.20.49 NMAC - Rp, 20 NMAC 9.2.III.301, 8/2/2007]

20.9.20.50 SCRAP TIRE MANIFEST SYSTEM:

A. Each shipment of ten or more scrap tires generated, or recycled or disposed in New Mexico, and transported by a scrap tire generator or hauler shall be accompanied by a scrap tire manifest that complies with this section, in a format approved by the department. The department will place a copy of the approved format on the solid waste bureau website, and will also make it available at the department. The manifest form shall be provided by the transporter or if transportation is performed by the generator, then the generator shall supply the manifest. The manifest form shall include:

(1) the name, physical address, mailing address and telephone number of the generator;

(2) the name, address, and telephone number of all haulers in the order each will be transporting the scrap tires; if the scrap tires are being transported for hire, the scrap tire or commercial hauler's registration number shall be included;

(3) if the hauler removes scrap tires from the shipment for reuse, the number and type of tires removed, the name, phone number and physical address, of the used tire reseller or individual to whom the scrap tires were delivered;

(4) the name, telephone number and permit or registration number of the facility to which the scrap tires are to be delivered;

(5) the number and type of scrap tires released by the scrap tire generator;

(6) the number and type of scrap tires delivered to the final destination;

(7) sequential numbering; and

(8) a minimum of 4 copies; copy 4 will be retained by the scrap tire generator upon completion of tire loading; copy 3 will be retained by the scrap tire transporter upon delivery of tires to a permitted processing facility; copy 2 will be retained by the processing facility; copy 1, or the original copy, shall be returned to the generator by the processing facility in accordance with the requirements of this section.

B. The generator or his authorized agent shall sign and date the manifest and obtain the signature of the initial hauler and date of acceptance on the manifest. The generator shall retain a copy of the manifest. Each hauler shall obtain the signature and date of the individual who accepts the scrap tires for recycling, further transportation or disposal, retain a copy of the manifest, and provide the original manifest to the next hauler or facility operator who receives the scrap tires.

C. Once the scrap tires reach a permitted tire recycling facility, a permitted civil engineering application site, a bona fide beneficial agricultural use, or a solid waste facility having a valid permit or registration, that destination shall be considered the final destination and must return the signed and dated manifest to the generator. If the scrap

tires are transported from the permitted or registered facility or site, the facility or site shall be considered a generator of scrap tires, and a new manifest must be initiated.

D. If a registered scrap tire or registered commercial hauler removes tires for reuse or resale while transporting from a generator site to a permitted tire recycling facility, a permitted civil engineering application site, a bona fide beneficial agricultural use, or a solid waste facility having a valid permit or registration, he shall retain copies and invoices for the sale of any tires removed from the original shipment for a period of three (3) years, showing the name, address, and if available, the phone number of the customer.

E. If a registered scrap tire or registered commercial hauler removes for reuse all tires from an individually manifested shipment, the hauler shall return the original manifest to the generator within 60 days of the date of collection. If all are not removed, the manifest shall be adjusted to show the number of tires removed. The manifest shall follow the scrap tires to the next hauler or final destination.

F. The manifest shall accurately reflect the required information and shall be signed and dated by the generator, each hauler of the scrap tires, and by the final destination, acknowledging delivery, number or weight, and receipt of the scrap tires. All signatories shall be duly authorized agents of their organizations. The generator shall keep a copy of the originating manifest for three years.

G. The final destination of the scrap tires shall be a permitted tire recycling facility, a permitted civil engineering application site, a bona fide beneficial agricultural use, or a solid waste facility having a valid permit or registration issued pursuant to the Solid Waste Act 74-9-1, et seq. NMSA 1978.

H. A scrap tire hauler shall release the scrap tires and provide the accompanying scrap tire manifest(s) to the final destination within 30 days after the release of scrap tires from the scrap tire generator.

I. The generator shall contact the department if the original manifest is not received within 60 days of the date of release of the scrap tires.

J. Upon discovery of any significant discrepancy including, but not limited to, factual misrepresentation on the manifest, irregularities in transportation or any unauthorized action in regard to the shipment, delivery, or disposal of the scrap tires, the person discovering the discrepancy shall notify the department, the generator, the hauler, and the final destination in writing within 24 hours. A discrepancy of over 20% between the number of tires released by the generator site, if measured by number, and scrap tires accepted at the final destination, if measured by weight, and unless otherwise accounted for, shall be considered significant.

K. Within thirty days of receipt of a scrap tire shipment at the final destination, the owner or operator of the final destination shall send the original signed copy of the

manifest to the scrap tire generator, acknowledging receipt of the shipment. The facility owner or operator shall list any significant discrepancies on the manifest. Other methods of return of the manifest may be allowed upon specific approval from the secretary.

L. A copy of the manifest shall be retained by each hauler and final destination for their operating records. The scrap tire generator shall retain for a period of three years both the originating copy and the returned original manifest signed by the solid waste facility owner or operator and all haulers transporting the waste. Haulers shall retain a copy of the manifest for a period of three years.

M. Copies of the manifest shall be retained by the final destination throughout any closure period.

N. This section shall not apply to scrap tires that are collected incidentally to the collection and transportation of municipal solid waste to a permitted or registered facility.

O. The transportation of scrap tires between a permitted or registered solid waste facility and another permitted or registered solid waste facility or permitted civil engineering application shall be exempt from this section.

P. Transportation of scrap tires by the New Mexico department of transportation and its contractors is exempt from this section.

Q. Registered commercial waste haulers that are hired to transport scrap tires from an illegal dump site or an abatement project are exempt from this section.

[20.9.20.50 NMAC - N, 8/2/2007]

20.9.20.51 CLOSURE REQUIREMENTS FOR TIRE RECYCLING FACILITIES AND CIVIL ENGINEERING APPLICATIONS:

Closure plans are required in the application for a permit or permit modification, pursuant to 20.9.20.11 NMAC.

[20.9.20.51 NMAC - N, 8/2/2007]

20.9.20.52 CLOSURE REQUIREMENTS FOR TIRE RECYCLING FACILITIES:

A. The owner or operator of the tire recycling facility shall prepare a written closure plan that describes the steps necessary for closure of the tire recycling facility and any anticipated future uses of the property following closure.

B. The owner or operator of the tire recycling facility shall notify the department in writing of the intent to close at least 30 days before the last day tires are to be accepted

at the facility and shall notify the department in writing within 14 days after the closure is complete.

C. Within 30 days after site closure is complete, the owner or operator shall notify the department certifying that all requirements have been met.

D. If the facility was required to provide proof of financial assurance for closure, the department shall inspect the site within 30 days of closure. If the closure is found to be satisfactory, the department shall approve the closure in writing and release the financial assurance instruments.

E. Owners or operators of tire recycling facilities shall:

- (1)** remove all processed and unprocessed tires;
- (2)** dismantle and remove any improvements related to scrap tire handling and processing, if required in the approved closure plan; and
- (3)** comply with all other conditions of the approved closure plan of the permit.

[20.9.20.52 NMAC - N, 8/2/2007]

20.9.20.53 COMPLETION REQUIREMENTS FOR CIVIL ENGINEERING APPLICATIONS:

Upon completion of a civil engineering application, the owner or operator shall:

- A.** remove all scrap tires not used for the civil engineering application;
- B.** submit a completion report to the department within 60 days after completion. The report shall include photographs documenting that the project has been completed and that all scrap tires not used in the project have been removed; and
- C.** provide the department with a final report of the completed civil engineering application including as built drawings in accordance with Subsection D of 20.9.20.49 NMAC. If the civil engineering application used 100,000 scrap tires or more or is more than two scrap tire bales high, the as built shall be signed and sealed by a professional engineer registered in New Mexico.

[20.9.20.53 NMAC - N, 8/2/2007]

20.9.20.54 ADDITIONAL CLOSURE AND COMPLETION REQUIREMENTS FOR CIVIL ENGINEERING APPLICATIONS THAT USE SCRAP TIRES FOR LAND RECLAMATION:

A. For completion of a civil engineering application that uses scrap tires for land reclamation, the owner or operator shall cover the site with 30 inches of compacted native soils and 6 inches of top soil to provide a 36-inch final cover that meets original grade and implement measures where necessary to control erosion and rodent intrusion.

B. Upon completion of closure, a detailed description of the location of the land reclamation site, including a plat signed by a registered surveyor, shall be filed with the appropriate county land recording agent. The description and the plat shall be filed so that it will be found during a title search and proof of the filing shall be submitted to the department. The description shall perpetually notify any potential purchaser of the property that:

- (1) scrap tires have been used to reclaim the land; and
- (2) if applicable, its use is restricted as described in the post-closure care plan.

C. The owner or operator shall prepare a written closure and post-closure care plan that describes the steps necessary for closure and post-closure care of the project and any anticipated future uses of the property following closure. The written plan shall include the following:

- (1) a vegetation plan, if appropriate; and
- (2) a monitoring and repair plan that describes methods to be used to ensure cover integrity, including but not limited to settlement, ponding, water erosion, wind erosion, and inadequate drainage.

[20.9.20.54 NMAC - N, 8/2/2007]

20.9.20.55 ENFORCEMENT:

Enforcement of this part shall be done in compliance with the Recycling and Illegal Dumping Act, Sections 74-13-13 through 74-13-16 NMSA 1978 and the Solid Waste Act, Section 74-9-31 and Section 74-9-34 and Sections 74-9-36 through 74-9-38 NMSA 1978.

[20.9.20.55 NMAC - N, 8/2/2007]

20.9.20.56 RECYCLING AND ILLEGAL DUMPING FUND CRITERIA AND PROCEDURES FOR AWARDING GRANTS AND LOANS:

A. Counties, municipalities, cooperative associations, Indian nations, pueblos, tribes, or land grant communities may apply to the department for a grant, or loan for

the purposes stated in the Recycling and Illegal Dumping Act, Sections 74-13-12 and 74-13-17 NMSA 1978.

B. Counties, municipalities, cooperative associations, Indian nations, pueblos, tribes, or land grant communities seeking a contract for abatement of illegal dumpsites or the recycling of scrap tires shall submit an application on a form developed by the department. All dumpsite abatement contract applications will be prioritized for award using the following criteria:

- (1) number of scrap tires and estimated amount and type of other on-site solid waste;
- (2) population within a five-mile radius of the illegal dumpsite or stockpile;
- (3) schools, hospitals, businesses and industries within a five-mile radius of the illegal dumpsite or stockpile;
- (4) the distance to rivers, streams and arroyos;
- (5) the fire hazard posed; and
- (6) whether the illegal dumpsite or stockpile is still active, and if so, what action, if any, is being taken by the governing body of the county, municipality, cooperative association, Indian nation, pueblo or tribe, or land grant community to terminate the activity.

C. Counties, municipalities, cooperative associations, Indian nations, pueblos, tribes, or land grant communities seeking a grant or loan for the recycling of scrap tires, abatement of illegal scrap tire dumpsites, or other purposes described in Section 74-13-17 NMSA 1978 shall submit an application on a form developed by the department. All such grants or loans will be prioritized for award using the criteria in Subsection B above, or for the recycling of scrap tires or other purposes described in Section 74-13-17 NMSA 1978, using the following criteria:

- (1) need;
- (2) urgency;
- (3) amount of local funding available;
- (4) consistency with surrounding land use;
- (5) population served;
- (6) consistency with department priorities;

(7) alternative solutions available; and

8) in no event shall a grant, loan or contract for processing be awarded to a person who receives less than ninety-five percent of recyclable materials from sources in New Mexico.

D. The department shall allocate budgeted grant money consistent with the requirements of Section 74-13-17 NMSA 1978.

E. In accordance with Subsection C of Section 74-13-7 NMSA 1978, the recycling and illegal dumping alliance shall review and make recommendations to the department for establishing priorities for each funding and application cycle and for funding grant applications for grants from the recycling and illegal dumping fund.

F. The department shall establish funding and application cycles.

G. Once applications have been submitted, the department shall:

(1) review all applications for eligibility, completeness, and adequacy of technical and financial information;

(2) use a point system to evaluate each application; and

(3) make recommendations to the secretary for awarding grants and loans based on fund availability and points.

H. Grants or loans are contingent on the execution of an acceptable contract between the department and the entity awarded the grant or loan. Each contract shall, at a minimum:

(1) clearly state the proposed use of funds;

(2) establish a work plan and schedule;

(3) create a budget; and

(4) for abatement projects, state the mechanisms to be used by local authorities to prevent future illegal dumping at the site to be abated.

[20.9.20.56 NMAC - N, 8/2/2007]

20.9.20.57 FINANCIAL ASSURANCE APPLICABILITY AND EFFECTIVE DATE:

A. The requirements of 20.9.20.57 - 20.9.20.59 NMAC apply to owners and operators of all tire recycling facilities and civil engineering applications that use scrap tires for land reclamation required to provide financial assurance pursuant to Subsection

B of 20.9.20.12 NMAC and Subsection C of 20.9.20.17 NMAC, except owners and operators who are the United States, the state of New Mexico, or any agency, department, instrumentality, office, or institution of those governments whose debts and liabilities are the debts and liabilities of the United States or the state of New Mexico.

B. The owner or operator of a tire recycling facility modified after the effective date of these regulations shall have an approved financial assurance mechanism in place prior to implementing the modification.

C. For tire recycling facilities operating on or after September 1, 1995, the requirements of 20.9.20.57 - 20.9.20.59 NMAC apply beginning 180 days following the effective date of these regulations.

[20.9.20.57 NMAC - N, 8/2/2007]

20.9.20.58 FINANCIAL ASSURANCE FOR CLOSURES:

A. The owner or operator of a tire recycling facility or civil engineering application that uses scrap tires for land reclamation that is required to provide financial assurance pursuant to Subsection B of 20.9.20.12 NMAC and Subsection C of 20.9.20.17 NMAC shall develop a detailed written estimate, in current dollars, of the cost of hiring a third party to close the facility. The owner or operator shall file a copy of the estimate with the department concurrently with any request for approval of a financial assurance mechanism, and shall place a copy of the estimate in the operating record, and notify the department that the estimate has been placed in the operating record.

B. During the active life of the facility, the owner or operator shall annually adjust the cost estimate for inflation and any other factors affecting closure costs. A copy of the adjusted closure cost estimate shall be filed with the department, and a copy shall be placed in the operating record.

C. The owner or operator shall increase the amount of financial assurance if changes to the closure or facility conditions increase the maximum cost of closure or abatement at any time during the remaining active life by over 3 percent of the current financial assurance amount.

D. The owner or operator may reduce the amount of financial assurance for closure if the cost estimate exceeds the maximum cost of closure at any time during the remaining life of the facility, upon specific approval by the secretary. To seek approval, the owner or operator shall provide the adjusted cost estimate and supporting documentation to the department. If approved, the owner or operator may revise any financial assurance documents to reflect the adjusted closure cost estimate, and shall file a duplicate original of each financial assurance document with the department within 15 days following approval, and shall place a copy of the estimate and approval in the operating record.

E. Cost estimates for all facilities shall include department contract management costs of at least 10 percent of the estimated closure costs.

F. The owner or operator shall provide continuous coverage for closure until released from financial assurance requirements by a written verification issued by the secretary pursuant to Subsection D of 20.9.20.52 NMAC.

[20.9.20.58 NMAC - N, 8/2/2007]

20.9.20.59 ALLOWABLE MECHANISMS FOR FINANCIAL ASSURANCE:

The owner or operator of a tire recycling facility or civil engineering applications that use scrap tires for land reclamation that are required to post financial assurance shall select a financial assurance mechanism from those allowable mechanisms for closure identified in 20.9.10.13 NMAC.

[20.9.20.59 NMAC - N, 8/2/2007]

20.9.20.60 VARIANCES:

Any person seeking a variance from any requirement of this part shall do so in accordance with Permit Procedures - Environment Department, 20.1.4 NMAC.

[20.9.20.60 NMAC - N, 8/2/2007]

20.9.20.61 RECYCLING AND ILLEGAL DUMPING ALLIANCE:

The recycling and illegal dumping alliance shall complete the requirements of Subsection C of 74-13-7 NMSA 1978.

[20.9.20.61 NMAC - N, 8/2/2007]

20.9.20.62 EXEMPTIONS:

Any person claiming to be exempt from the act because the scrap tires will be used in an beneficial agricultural use shall demonstrate that the scrap tires will be used on land that has qualified as "Special Method of Valuation - Land Used Primarily For Agricultural Purposes", pursuant to 3.6.5.27 NMAC. Upon request, verification that the property upon which the tire recycling facility or civil engineering application is located has been granted an agricultural exemption by the assessor of the county where the tire recycling facility or civil engineering application is located shall be submitted to the secretary. In addition, any person claiming to be exempt from the act must show, upon request, that the scrap tires are being put to a beneficial agricultural use.

[20.9.20.62 NMAC - N, 8/2/2007]

20.9.20.63 REUSABLE TIRES:

Reusable tires shall be kept for resale for a period not to exceed one year. After that time, they are considered scrap tires subject to the Recycling and Illegal Dumping Act, Sections 74-13-1 et seq. NMSA 1978 and the Solid Waste Act, Sections 74-9-1 et seq. NMSA 1978.

[20.9.20.63 NMAC - N, 8/2/2007]

20.9.20.64 COMPLIANCE WITH OTHER REGULATIONS:

Compliance with this part does not relieve a person of the obligation to comply with other applicable local, state and federal laws.

[20.9.20.64 NMAC - Rp, 20 NMAC 9.2.109, 8/2/2007]

PART 21-24: [RESERVED]

PART 25: FACILITY GRANT FUND

20.9.25.1 ISSUING AGENCY:

Environment Department.

[11/30/95; 20.9.25.1 NMAC - Rn, 20 NMAC 9.3.I.100, 8/2/2007]

20.9.25.2 SCOPE:

This part applies to the use of the funds in the solid waste facility grant fund.

[7/16/91, 11/30/95; 20.9.25.2 NMAC - Rn, 20 NMAC 9.3.I.101, 8/2/2007]

20.9.25.3 STATUTORY AUTHORITY:

This part is adopted under the authority of NMSA 1978, Sections 9-7A-6.E and 74-9-40.

[7/16/91; 20.9.25.3 NMAC - Rn, 20 NMAC 9.3.I.102, 8/2/2007]

20.9.25.4 DURATION:

Permanent.

[11/30/95; 20.9.25.4 NMAC - Rn, 20 NMAC 9.3.I.103, 8/2/2007]

20.9.25.5 EFFECTIVE DATE:

November 30, 1995. This part amends and replaces the New Mexico environment department regulations, NMED 91-2, filed June 16, 1991.

[11/30/95; 20.9.25.5 NMAC - Rn, 20 NMAC 9.3.I.104, 8/2/2007]

20.9.25.6 OBJECTIVE:

This part governs the procedures by which municipalities and counties may apply for grants for solid waste management projects, and by which the department shall award such grants.

[7/16/91, 11/30/95; 20.9.25.6 NMAC - Rn, 20 NMAC.9.3.I.105, 8/2/2007]

20.9.25.7 DEFINITIONS:

As used in this part:

A. "applicant" means a municipality as defined in this section or a county that has submitted a grant application, or any number of such municipalities and/or counties that have submitted a grant application jointly;

B. "department" means the New Mexico environment department;

C. "fund" means the solid waste facility grant fund created by NMSA 1978, Section 74-9-41.A.

D. "municipality" means any incorporated city, town or village, whether incorporated under general act, special act or special charter, incorporated counties and H class counties;

E. "regionalization" means the combining of activities of legally and politically distinct municipalities as defined in this section and/or counties within a geographical area to address through joint effort or activity mutual solid waste management problems;

F. "secretary" means the secretary of the environment department;

G. "solid waste" means any garbage, refuse, sludge from a waste treatment plant, water supply treatment plant or air pollution control facility and other discarded material, including solid, liquid, semisolid or contained gaseous material resulting from industrial, commercial, mining and agricultural operations and from community activities; "solid waste" does not include:

(1) drilling fluids, produced waters and other non-domestic wastes associated with the exploration, development or production, transportation, storage, treatment or refinement of crude oil, natural gas, carbon dioxide gas or geothermal energy;

(2) fly ash waste, bottom ash waste, slag waste and flue gas emission control waste generated primarily from the combustion of coal or other fossil fuels and wastes produced in conjunction with the combustion of fossil fuels that are necessarily associated with the production of energy and that traditionally have been and actually are mixed with and are disposed of or treated at the same time with fly ash, bottom ash, boiler slag or flue gas emission control wastes from coal combustion;

(3) waste from the extraction, beneficiation and processing of ores and minerals, including phosphate rock and overburden from the mining of uranium ore, coal, copper, molybdenum and other ores and minerals;

(4) agricultural waste, including, but not limited to, manures and crop residues returned to the soil as fertilizer or soil conditioner;

(5) cement kiln dust waste;

(6) sand and gravel;

(7) solid or dissolved material in domestic sewage or solid or dissolved materials in irrigation return flows or industrial discharges that are point sources subject to permits under Section 402 of the Federal Water Pollution Control Act, 33 U.S.C. Section 1342 or source, special nuclear or by-product material as defined by the Atomic Energy Act of 1954, 42 U.S.C. Section 2011 et seq.;

(8) densified-refuse-derived fuel; or

(9) any material regulated by Subtitle C of the federal Resource Conservation and Recovery Act of 1976, substances regulated by the federal Toxic Substances Control Act or low-level radioactive waste;

H. "solid waste facility" means any public or private system, facility, location, improvements on the land, structures or other appurtenances or methods used for processing, transformation, recycling or disposal of solid waste, including landfill disposal facilities, transfer stations, resource recovery facilities, incinerators and other similar facilities not specified, but does not include equipment specifically approved by order of the secretary to render medical waste noninfectious or a facility which is permitted pursuant to the provisions of the Hazardous Waste Act and does not apply to a facility fueled by a densified-refuse-derived fuel that accepts no other solid waste.

[7/16/91, 20.9.25.7 NMAC - Rn, 20 NMAC.9.3.I.107, 8/2/2007]

20.9.25.8 SEVERABILITY:

If any part or application of this part is held invalid, the remainder, or its application to other situations or persons, shall not be affected.

[7/16/91, 20.9.25.8 NMAC - Rn, 20 NMAC.9.3.I.106, 8/2/2007]

20.9.25.9 GRANT APPLICATION:

A. General Grant Application Requirements. Assistance is available on a competitive basis to qualified municipalities and counties, individually or jointly. Joint applications will be allowed when two or more eligible municipalities and/or counties within reasonable proximity of each other propose to address a common problem.

B. Eligibility.

(1) Grants shall be made only to applicants that:

(a) agree to operate and maintain any facility proposed for funding so that the facility will function properly over its structural and material design life;

(b) require the contractor of any facility construction project to post a performance and payment bond in accordance with the requirements of NMSA 1978, 13-4-18;

(c) provide a written assurance, signed by an attorney, that it has proper title, easements leases, and right-of-ways to the property upon which any facility proposed for funding is to be constructed or improved;

(d) meet the requirements for financial capability set by the department to assure sufficient revenues to operate and maintain any facility proposed for funding for its useful life;

(e) agree to properly maintain financial records and to conduct an audit of the project's financial records;

(f) have a treasurer, clerk, secretary-treasurer, or other individual responsible for the financial aspects of the project who is bonded;

(g) employ a registered professional engineer licensed in the state of New Mexico to provide and be responsible for all engineering services on a project;

(h) provide a written notice to the department of completion and start of operation of any grant project;

(i) provide authorized state officials and representatives with access to all books, accounts, records, reports, files, and property or facilities pertaining to the project in order to make audits and inspections; and

(j) provide the department with quarterly accomplishment reports and an end-of-project report.

(2) Plans and specifications for a grant project, where applicable, shall be approved by the department before a grant is made to an applicant.

(3) Facilities or systems requiring department solid waste facility permits shall meet all requirements of the solid waste management regulations, 20.9.2 - 20.9.10 NMAC, and/or the Solid Waste Act, or have an approvable facility/system application on file at the time of application.

(4) An applicant that receives solid waste facility grant fund monies shall comply with all applicable federal, state, and local laws and regulations, including but not limited to those related to procurement practices, construction wage rates, and this part.

C. Eligible and Non-eligible Items.

(1) Eligible items include but are not limited to planning for the development of a regional solid waste disposal facility or for regional disposal services. Additionally eligible items may include the costs of engineering feasibility reports, contracted engineering design, inspection of construction, special engineering services which includes, but is not limited to, the preparation of operation and maintenance manuals, and contracted facility construction, operation or system operation.

(2) Ineligible items include but are not limited to the costs of water rights, land, easements and rights-of-way; legal costs; fiscal agents' fees; and applicant administrative costs.

D. Responsibilities of the Department; Application and Notification Procedures.

(1) The department shall administer the solid waste facility grant fund program.

(2) Application shall be made using standard application forms available from the department.

(3) All applications for assistance under the solid waste facility grant fund program are due on the date(s) specified by the department.

(4) The department shall review the applications for completeness, eligibility, technical merits, and financial capability, and rate the applications based on the priority ranking system described in 20.9.25.10 NMAC.

(5) The department shall require such additional information as it deems necessary and appropriate to conduct its evaluation of the applications.

(6) The department shall make grants to applicants in order of priority as determined by the priority ranking system and considering the following:

- (a) willingness of an applicant to accept a grant under the program;
 - (b) financial capability of the applicant to properly operate and maintain any project facility; and
 - (c) the applicant's readiness to proceed with the project.
- (7) The department shall make its grant determination and notify all applicants of its determination within ninety (90) days after the close of each application deadline.
- (8) Grant agreements will be prepared by the department and executed for those projects which can be financed with available funds.

E. Grant Disbursement Requirements. Payment(s) of awards will be on a reimbursement basis on a schedule to be developed by the grantee and approved by the department. Unexpended project funds remaining at the completion of the project shall revert to the solid waste facility grant fund.

[7/16/91, 11/30/95; 20.9.25.9 NMAC - Rn, 20 NMAC.9.3.II.204, 8/2/2007]

20.9.25.10 PRIORITY RANKING FOR FACILITY GRANTS:

A. Purpose. This section provides the procedures to rank applications so that highest priority is based on greatest need without ability to fund activity by other sources. These procedures also provide a mechanism to ensure an equitable and reasonable allocation of funds where there are not sufficient funds available to fund all eligible projects for which applications have been received.

B. Elements of Ranking Criteria.

(1) Applications shall be ranked on each of the criteria listed in this section. Each element shall be awarded a value from 0 to 10, with 10 being the optimum value. The sum of the numbers awarded each element multiplied by the weight given the element, will equal the total score of the application, which will determine its rank when compared to other applications. Maximum points attainable are 1,100.

(2) Criteria:	Weight
(a) Fiscal capacity/self-funding capability. Points will be awarded to the extent that local resources, including bonding capacity, gross receipts taxing authority, are unavailable or inadequate for use on the proposed project. The greater the absence of local funding capacity, the higher the score:	25
(i) complete absence of funding capacity	10 pts.
	6 pts
	3 pts.

(ii) available funding 1% to 29%	
(iii) available funding 30% to 59%	
(b) Ability to sustain operation w/o additional grant funding. Points will be awarded to the extent that the applicant can demonstrate sufficient financial support or revenues to sustain the operation of any facility or system after this award without additional grant funding. The greater the ability to sustain operation without additional grant funding the higher the score.	10
(i) Sufficient support	10 pts.
(ii) Insufficient support	0 pts.
(c) Estimated beneficial time period (i.e., life of facility). Points will be awarded based on the length of time which any facility or improvement will satisfy the requirements of the affected geographical area. The greater the length of time (up to twenty-five years) of beneficial use the higher the score.	10
(i) Minimum of 25 years	10 pts.
(ii) Minimum of 10 but fewer than 25 years	
(d) Size of target area/population served. One point will be awarded for each 1,000 population increment served up to 10 points. Credit will be given to combined populations in the event of joint applications. The larger the target area/population served, the higher the score. One point for each 1,000 population.	10
(e) Ability to operate and maintain 10 facility/system. Points will be awarded to the extent that the applicant can demonstrate satisfactory ability to operate and maintain any proposed facility. Such demonstration may include past facility/system operating experience or professional qualifications of key personnel. The greater the demonstrated ability to operate and maintain the proposed facility the higher the score.	10
(i) Good ability	10 pts.
(ii) Fair ability	5 pts.
(iii) Poor ability	0 pts.

(f) Demonstration of project need. Points will be awarded based on the extent to which any project is necessary. The more severe the project need for the project the higher the score.	20
(i) Severe need	10 pts.
(ii) Moderate need	5 pts.
(g) Regulatory non-compliance and nature of violations. Points will be awarded based on the extent to which any proposed facility or improvement will remedy underlying causes for regulatory non-compliance. The greater the significance of the corrected violation(s) in terms of protecting public health and the environment the higher the score.	10
(i) 100% correction of significant violations	10 pts.
(ii) Correction unaffected by project	0 pts.
(h) Project Urgency. Up to 10 points will be awarded based on the urgency of need for the project. The greater the urgency the higher the score.	5
(i) Project needed within 6 months	10 pts.
(ii) Project needed within 6 to 12 months	5 pts.
(i) Regionalization Effort. Up to 10 points will be awarded to the extent that an application is jointly made by more than one municipality or county. The greater the regionalization effort the higher the score.	10
(i) Project servicing the entirety of at least three counties	10 pts. 5 pts.
(ii) Project servicing the entirety of at least two counties	2 pts.
(iii) Project servicing the entirety of at least one county	

[7/16/91; 20.9.3.10 NMAC - Rn, 20 NMAC.9.3.III.300 - III.301, 8/2/2007]

CHAPTER 10: HEMP POST-HARVEST PROCESSING

PART 1: GENERAL PROVISIONS [RESERVED]

PART 2: HEMP EXTRACTION, PRODUCTION, TRANSPORTATION, WAREHOUSING AND TESTING

20.10.2.1 ISSUING AGENCY:

New Mexico Environment Department, P.O. Box 5469, Santa Fe, New Mexico 87502, Telephone No. (505) 827-2855.

[20.10.2.1 NMAC - N, 1/28/2020]

20.10.2.2 SCOPE:

All individuals, businesses, agencies, institutions, or other entities engaged in the transportation, extraction, storage, or processing of hemp products in New Mexico.

[20.10.2.2 NMAC - N, 1/28/2020]

20.10.2.3 STATUTORY AUTHORITY:

The Hemp Manufacturing Act, NMSA 1978, Sections 76-24-1 to 76-24-10 (2017 as amended through 2019); Department of Environment Act, NMSA 1978, Sections 9-7A-1 through 9-7A-15 (1991 as amended through 2003).

[20.10.2.3 NMAC - N, 1/28/2020]

20.10.2.4 DURATION:

Permanent.

[20.10.2.4 NMAC - N, 1/28/2020]

20.10.2.5 EFFECTIVE DATE:

January 28, 2020, unless a later date is cited at the end of a section.

[20.10.2.4 NMAC - N, 1/28/2020]

20.10.2.6 OBJECTIVE:

To establish uniform standards for the transportation, extraction, processing, and testing of hemp products for the purpose of ensuring the safe manufacture and accurate presentation of hemp products for human consumption, absorption, and inhalation.

[20.10.2.6 NMAC - N, 1/28/2020]

20.10.2.7 DEFINITIONS:

A. "**Act**" means the Hemp Manufacturing Act, Section 76-24-1, et seq., NMSA 1978.

B. "**Adulterated**" has the meaning stated in the New Mexico Food Act, Section 25-2-10 NMSA 1978.

C. "**Applicant**" means a person who has submitted a hemp facility application to the regulatory authority.

D. "**Application**" means documents provided by, and submitted to, the regulatory authority by an applicant as part of the process for obtaining a permit to extract, process, or engage in other manufacturing activities of hemp or hemp products.

E. "**Approved**" means acceptable to the regulatory authority based on the regulatory authority's determination of conformity with principles, practices, and generally recognized standards that protect public health and compliance with the requirements of this part and the act.

F. "**Blend**" means to combine into an integrated whole.

G. "**Board**" means the environmental improvement board.

H. "**Cannabis sativa L.**" means the plant cannabis sativa L. and any part of the plant, whether growing or not.

I. "**CBD**" means cannabidiol and is a cannabinoid and the primary non-psychoactive ingredient found in hemp.

J. "**Certificate of analysis**" means an official certificate issued by a hemp laboratory signed by an authorized official of the hemp laboratory that guarantees the results of the laboratory's testing of a sample.

K. "**Conditional employee**" means a potential hemp employee to whom a job offer is made, conditional on responses to subsequent medical questions or examinations designed to identify potential hemp employees who may be suffering from a disease that may be transmitted through hemp, hemp extract, hemp-derived material, or hemp finished product and done in compliance with Title 1 of the Americans with Disabilities Act of 1990.

L. "**Disposition**" means storing, transferring to another person, or disposal.

M. "**Drinking water**" means water that meets criteria as specified in 20.7.10 NMAC. Drinking water is traditionally known as "potable water" and includes the term "water"

except where the term used connotes that the water is not potable, such as "boiler water," "mop water," "rainwater," "wastewater," and "non-drinking" water.

N. "Employee" means the permit holder, person in charge, hemp employee, person having supervisory or management duties, person on the payroll, family member, volunteer, person performing work under contractual agreement, or other person working in a hemp facility.

O. "Hemp" means the plant *cannabis sativa* L. and any part of that plant, including seeds and all derivatives, extracts, cannabinoids, isomers, acids, salts and salts of isomers, whether growing or not, with a THC concentration of not more than three-tenths percent on a dry weight basis.

P. "Hemp-derived material" means any material containing THC in any concentration derived from *cannabis sativa* L. through any activity authorized pursuant to the act.

Q. "Hemp employee" means an individual working with unpackaged hemp products or equipment utensils, or surfaces that contact unpackaged hemp products.

R. "Hemp extract" means oil and extracts, including cannabidiol, cannabidiolic acid, and other identified and non-identified compounds derived from hemp.

S. "Hemp extraction facility" means an operation that produces hemp extract.

T. "Hemp facility" means a hemp extraction facility, hemp manufacturing facility, hemp processing facility or hemp warehouse.

U. "Hemp finished product" means a hemp product that is intended for retail sale and containing hemp or hemp extracts for human consumption, absorption, or inhalation that has a THC concentration of not more than three-tenths of one percent (0.30%).

V. "Hemp harvest certificate" means a document issued by the New Mexico department of agriculture to a person licensed to harvest hemp for distribution or sale certifying that a quantity of hemp meets the THC concentration required pursuant to 21.20.3 NMAC.

W. "Hemp laboratory" means an analytical laboratory approved by the regulatory authority to conduct laboratory analysis of hemp products.

X. "Hemp manufacturing facility" means an operation, other than a hemp extraction facility, that produces hemp products, other than hemp extract, and provides hemp products for sale or distribution to other business entities.

Y. "Hemp processing facility" means an operation, other than a hemp manufacturing facility, where hemp is processed or dried into a hemp finished product

or into a hemp product that does not require further processing before being offered as a hemp finished product.

Z. "Hemp products" means hemp, hemp-derived material, hemp extract, and hemp finished product.

AA. "Hemp transportation manifest" means a form used for identifying the quantity, composition, origin, and destination of hemp products during transportation.

BB. "Hemp transportation unit" means a motor vehicle department-licensed, driven or towed wheeled vehicle utilized to transport hemp products.

CC. "Hemp warehouse" means a location, other than a hemp extraction facility or hemp manufacturing facility, where hemp extract is stored.

DD. "Imminent health hazard" means a significant threat or danger to health that is considered to exist when there is evidence sufficient to show that a product, practice, circumstance, or event creates a situation that requires immediate correction or cessation of operation to prevent injury based on:

- (1) the number of potential injuries; and
- (2) the nature, severity, and duration of the anticipated injury.

EE. "Law" means applicable local, state, and federal statutes, regulations, and ordinances.

FF. "Licensee" means a person that possesses a valid license for hemp production issued by NMDA.

GG. "Misbranded" has the meaning stated in the New Mexico Food Act, Section 25-2-11 NMSA 1978.

HH. "NMDA" means the New Mexico department of agriculture.

II. "Operational plan" means a written plan outlining the product formulation, production steps, safety requirements, distribution, labeling, and recall procedures that will be implemented by a hemp facility when processing hemp products.

JJ. "Permit" means the document issued by the regulatory authority that authorizes a person to operate a hemp facility.

KK. "Permit holder" means the entity that:

- (1) is legally responsible for the operation of the hemp facility such as the owner, the owner's agent, or other person; and

(2) possesses a valid permit to operate a hemp facility.

LL. "Person" means an association, a corporation, individual, partnership, other legal entity, government, or governmental subdivision or agency.

MM. "Person in charge" means the individual present at a hemp facility who is responsible for the operation at the time of inspection.

NN. "Personal care items" means items or substances that may be poisonous, toxic, or a source of contamination and are used to maintain or enhance a person's health, hygiene, or appearance, and includes items such as medicines; first aid supplies; and other items such as cosmetics, and toiletries such as toothpaste and mouthwash.

OO. "Poisonous or toxic materials" means substances that are not intended for ingestion and are included in four categories:

(1) Cleaners and sanitizers, which include cleaning and sanitizing agents and agents such as caustics, acids, drying agents, polishes, and other chemicals;

(2) Pesticides, except sanitizers, which include substances such as insecticides and rodenticides;

(3) Substances necessary for the operation and maintenance of the establishment such as nonfood grade lubricants and personal care items that may be deleterious to health; and

(4) Substances that are not necessary for the operation and maintenance of the establishment and are on the premises for retail sale, such as petroleum products and paints.

PP. "Premises" means:

(1) The physical facility, its contents, and the contiguous land or property under the control of the permit hold; or

(2) The physical facility, its contents, and the land or property not described in paragraph (1) of this definition if its facilities and contents are under the control of the permit holder and may impact hemp facility personnel, facilities, or operations, and a hemp facility is only one component of a larger operation.

QQ. "Process authority" means an approved expert in the processes for controlling pathogenic microorganisms in food and/or hemp products, and as such, is qualified by education, training and experience to evaluate all of the aspects of pathogen control measures and determine if such control measures, when properly implemented, will control pathogens effectively.

RR. "Public water system" has the meaning stated in 20.7.10 NMAC.

SS. "Recall" means a return of hemp products that are either known or suspected to be adulterated, misbranded, or otherwise unsafe for human consumption, to the manufacturer or distributor, or that are disposed of by approved methods.

TT. "Regulatory authority" means the New Mexico environment department.

UU. "RLD / LP Gas Bureau" means the New Mexico regulation and licensing department, LP gas bureau.

VV. "Secretary" means the secretary of New Mexico environment department or a designee.

WW. "Sewage" means liquid waste containing animal or vegetable matter in suspension or solution and may include liquids containing chemicals in solution.

XX. "THC" means delta-9 tetrahydrocannabinol (CAS number 1972-08-3) as measured using a post-decarboxylation method and based on percentage dry weight.

YY. "THCA" means tetrahydrocannabinolic acid (CAS number 23978-85-0).

ZZ. "Variance" means a written document issued by the regulatory authority that authorizes a modification or waiver of one or more requirements of this part if the regulatory authority determines that no hazard to human health or the environment will result from the modification or waiver.

[20.10.2.7 NMAC - N, 1/28/2020]

20.10.2.8 GENERAL PROVISIONS:

A. Prerequisite and Responsibility for Operation:

(1) A person may not operate a hemp facility without a valid permit to operate as issued by the regulatory authority.

(2) When more than a single hemp facility is operated on the premises, each one shall be separately permitted.

(3) When a food processing plant permitted by the regulatory authority also operates as a hemp facility, both operations shall be permitted separately.

(4) Except as otherwise provided, the permit holder shall be responsible for all hemp facility operations conducted on the premises for which a permit is issued.

(5) When multiple hemp facilities are permitted by multiple permit holders on the same premises, each permit holder shall only be responsible for the hemp facility operations within the scope of their permit.

(6) Each permit holder shall be responsible for shared facilities or equipment on the premises.

(7) The permit holder shall ensure that the hemp facility remains in compliance with this part and the act. A violation of any provision of this part or the act may result in civil or criminal proceedings authorized in law, including but not limited to the assessment of civil penalties, the suspension or revocation of permit(s), destruction of hemp products, or other such actions.

(8) The issuance of a permit does not relieve any person operating a hemp facility from the

responsibility of complying with other applicable laws, ordinances and regulations.

B. Application, Plans, and Specifications Requirements:

(1) An applicant shall submit a written application for a permit, on a form provided by the regulatory authority, at least 30 calendar days prior to operating a hemp facility.

(2) An applicant or permit holder shall submit to the regulatory authority properly prepared plans and specifications for review and approval at least 30 calendar days before:

(a) the construction of a hemp facility;

(b) the conversion of an existing structure for use as a hemp facility;

(c) the remodeling of a hemp facility or a change of type of hemp facility if the regulatory authority determines that plans and specifications are necessary to ensure compliance with this part; or

(d) opening or changing ownership of an existing hemp facility, if current plans and specifications are not on file with the regulatory authority.

(3) It is the sole responsibility of the applicant to provide the regulatory authority with a complete permit application. The regulatory authority will not act on incomplete permit applications.

C. Operational Plans.

(1) Except as otherwise provided in paragraph (5) of this subsection, a hemp facility shall submit a written operational plan containing the following information, as applicable, for each product(s) to be extracted, manufactured and transported with the application for a permit:

- (a)** Planned source of hemp products.
- (b)** Names of the ingredient(s);
- (c)** The final product pH;
- (d)** The final product water activity (A_w);
- (e)** Names of preservative(s);
- (f)** The type of packaging to be used and whether the packaging is integral to product stability;
- (g)** The intended distribution and use condition of the product;
- (h)** If the product is to be distributed at ambient, refrigerated or frozen temperature;
- (i)** The expected shelf life during distribution, retail storage, and in the hands of the consumer;
- (j)** How the product should be prepared for consumption;
- (k)** What mishandling of the product might occur in the merchandising channels or in the hands of the consumer;
- (l)** A description of the batch/lot ID coding system, as required in this section;
- (m)** The proposed recall plan;
- (n)** The complete operational procedure for the intended process, using a flow chart, and the following, if applicable:
 - (i)** The proposed extraction method, and approval from RLD/LP Gas Bureau if utilizing propane or butane for extraction;
 - (ii)** The proposed process for the removal of all harmful solvents used during the extraction process;

(iii) The intended disposition for all unused hemp product and residual solvents;

(iv) The safety measures proposed to protect the public and employees from dangers associated with extraction methods;

(o) Proposed product labels that comply with all requirements of 20.10.2. 13 NMAC;

(p) Proposed record keeping system to assure traceability of hemp products from harvest to hemp finished products; and

(q) Proposed pest control plan.

(2) Prior to adding new hemp products, or changing the stated process for any existing product in the product line, the hemp facility shall provide to the regulatory authority:

(a) For each new hemp product, the same information as specified for the initial application in this section; and

(b) For each existing product for which a change will be made in the manufacturing process, the applicable changes to the information previously submitted pursuant to this section.

(3) The regulatory authority may require that the hemp facility's processes be reviewed by an approved process authority to verify all critical factors of public health significance are addressed.

(4) Recall procedures shall be prepared for hemp products that may be adulterated, misbranded, or otherwise unsafe for human consumption and shall include:

(a) Plans for identifying products which may be adulterated or misbranded;

(b) Procedures for collecting, warehousing, controlling, reworking, and/or disposal of recalled products;

(c) System for determining the effectiveness of recalls; and

(d) Persons to contact when implementing a recall, including the regulatory authority.

(5) A hemp warehouse is exempt from the requirements of Paragraph (1) of Subsection C of this section, except hemp warehouses shall provide:

(a) Proposed pest control plan;

(b) If the product is to be stored at ambient, refrigerated or frozen temperature;

(c) Proposed record keeping system to assure traceability of hemp products from receipt to release;

(d) Proposed recall plan meeting the requirements specified in Paragraph (4) of this subsection; and

(e) If storing non-hemp products in the same warehouse as hemp products, a complete operational procedure outlining how hemp products will remain clearly identified, segregated from non-hemp products, and unadulterated during storage.

D. Fees, Penalty Fees, and Expiration Dates:

(1) Initial and renewal application fees are non-refundable and shall be:

(a) \$1000.00 for a hemp extraction facility;

(b) \$1000.00 for a hemp manufacturing facility;

(c) \$1000.00 for a hemp warehouse; and

(d) \$500.00 for a hemp processing facility.

(2) Application fees specified in Paragraph (1) of Subsection D of this section shall be paid upon submission of an initial or renewal application. Except as specified in Paragraph (5) of Subsection D of this section, application fees shall include all applicable costs associated with administration of a hemp facility permit.

(3) Permits issued pursuant to Subsection E of this section shall expire on the last day of the anniversary month of the date of original issue.

(4) The expiration of permits issued prior to January 28, 2020 shall be extended to the last day of the anniversary month of the date of original issue.

(5) When a re-inspection is scheduled by the regulatory authority a penalty fee of \$250.00 shall be assessed and paid by the permit holder prior to the re-inspection being conducted as specified in Subsection B of 20.10.2.16 NMAC or prior to the approval of a renewal application.

E. Permit Issuance, Permit Denial, Permit Renewal, and Change of Ownership:

(1) To qualify for a permit, an applicant shall:

(a) be an owner of the hemp facility or an official authorized by the owner of a hemp facility;

(b) comply with the requirements of this part and the act;

(c) allow access to the hemp facility by the regulatory authority and to provide requested information; and

(d) pay the required fees as specified in Subsection D of this section.

(2) The regulatory authority shall issue a permit to the applicant after:

(a) a properly completed application is submitted;

(b) the required fee, as specified in Paragraph (1) of Subsection D of this section, is submitted;

(c) the requirements specified in Subsections B and C of this section are approved by the regulatory authority;

(d) a preoperational inspection by the regulatory authority is conducted and demonstrates that the hemp facility is built or remodeled in accordance with the approved plans and specifications; and,

(e) the hemp facility is in compliance with this part and the act.

(3) Upon acceptance of the permit issued by the regulatory authority, the permit holder, in order to retain the permit, shall:

(a) post the permit in a conspicuous location in the hemp facility;

(b) comply with the provisions of this part, including the approved operational plans;

(c) immediately contact the regulatory authority to report an illness of a hemp employee or conditional employee as specified under Subsection A of 20.10.2.9 NMAC;

(d) immediately discontinue operations and notify the regulatory authority if an imminent health hazard may exist as specified in 20.10.2.17 NMAC;

(e) allow representatives of the regulatory authority access to the hemp facility as specified in 20.10.2.11 and 20.10.2.16 NMAC;

(f) replace existing facilities and equipment that comply with this part if:

(i) the regulatory authority directs the replacement because the facilities and equipment constitute a public health hazard or nuisance or no longer comply with the criteria upon which the facilities and equipment were accepted;

(ii) the regulatory authority directs the replacement of the facilities and equipment because of a change of ownership; or

(iii) the facilities and equipment are replaced in the normal course of operation.

(g) comply with directives of the regulatory authority including time frames for corrective actions specified in inspection reports, notices, orders, warnings, and other directives issued by the regulatory authority in regard to the permit holder's hemp facility or in response to community emergencies.

(h) accept notices issued and served by the regulatory authority according to law.

(i) be subject to the administrative, civil, injunctive, and criminal remedies authorized in law for failure to comply with this part, the act, or a directive of the regulatory authority, including time frames for corrective actions specified in inspection reports, notices, orders, warnings, and other directives.

(j) provide the most recent hemp facility inspection report to consumers upon request.

(4) If an application for a permit to operate is denied, the regulatory authority shall provide the applicant with a written notice that includes:

(a) the specific reasons or regulation citations for the permit denial; and

(b) advisement of the applicant's right of appeal and the process and time frames for appeal that are provided in law.

(5) A permit may not be transferred. This includes a prohibition on transferring a permit from one person to another person, from one location to another location, or from one type of operation to another type of operation.

(6) The regulatory authority may issue a permit to a new owner of an existing hemp facility upon completion of requirements as specified in this subsection.

(7) The regulatory authority may renew a permit for a hemp facility upon submission of a renewal application provided by the regulatory authority and the required fee(s) as specified in Paragraph 1 of Subsection D of this section.

20.10.2.9 MANAGEMENT AND PERSONNEL:

A. Adoption of food code subparts 2-201, 2-301, and 2-401, and section 2-103.11. Except as otherwise provided, subpart 2-201, 2-301, and 2-401, and section 2-103.11 of the 2017 United States food and drug administration model food code is hereby adopted and incorporated in its entirety.

B. A hemp facility shall have written procedures for employees to follow when responding to vomiting or diarrheal events that involve the discharge of vomitus or fecal matter onto surfaces in the hemp facility. The procedures shall address the specific actions employees must take to minimize the spread of contamination and the exposure of employees, consumers, food, and surfaces to vomitus or fecal matter.

C. Except as otherwise provided, the permit holder shall be the person in charge or shall designate a person in charge and shall ensure that a person in charge is present at the hemp facility during all hours of operation.

D. In a hemp facility with two or more separately permitted departments that are the legal responsibility of the same permit holder and that are located on the same premises, the permit holder may designate a single person in charge who is present on the premises during all hours of operation, and who is responsible for each separately permitted hemp facility on the premises.

E. The person in charge shall have the education, training, or experience necessary to supervise the production of clean and safe hemp product and ensure the hemp facility remains in compliance with this part and the act at all times.

F. Personal care items on the premises shall be stored in a manner to protect hemp products, other ingredients, equipment, and utensils from contamination at all times.

[20.10.2.9 NMAC - N, 1/28/2020]

20.10.2.10 HEMP PRODUCT TRANSPORTATION REQUIREMENTS:

A. Hemp facilities shall only transport hemp product to NMED permitted hemp facilities or persons approved by the regulatory authority.

B. Except as provided in Subsections E and F of this section, hemp facilities shall create and utilize a hemp transportation manifest meeting the requirements of subsection C of this section when transporting hemp product.

C. A hemp transportation manifest created by a hemp facility shall contain the following information:

- (1)** Name, address, phone number, and permit number of the hemp facility;

(2) Name, address, and phone number of the person transporting the hemp product;

(3) The hemp transportation unit's:

(a) year, make, model, and color (if applicable); and

(b) license plate number;

(4) Batch/lot ID created by the hemp facility;

(5) Item(s) description/composition of hemp product;

(6) Quantity of hemp product;

(7) Shipping date; and,

(8) Destination of the hemp product, including the name, address, and phone number of the person receiving the hemp product.

D. Hemp facilities transporting hemp finished products intended for human consumption or hemp products that will be utilized as ingredients in hemp finished products intended for human consumption shall transport such items under conditions that will protect against allergen cross-contact and against biological, chemical (including radiological), and physical contamination of food, as well as against deterioration of the food and the container in accordance with the New Mexico Food Service Sanitation Act and the New Mexico Food Act.

E. Hemp facilities transporting small amounts of hemp to approved laboratories or research facilities in accordance with practices approved under this part and the Act shall have a hemp harvest certificate and a hemp transportation manifest containing the following information:

(1) Batch/lot ID of the hemp product;

(2) Item(s) description;

(3) Origin and destination; and

(4) Total volume/weight of each hemp product.

F. Hemp facilities transporting small amounts of hemp extract, hemp-derived material, or hemp finished product to approved laboratories or research facilities in accordance with practices approved under this part and the Act shall have a hemp transportation manifest containing the following information:

- (1) Batch/lot ID of the hemp product;
- (2) Item(s) description;
- (3) Origin and destination; and
- (4) Total volume/weight of each hemp product.

[20.10.2.10 NMAC - N, 1/28/2020]

20.10.2.11 HEMP FACILITY REQUIREMENTS:

A. After the effective date of this part and unless otherwise provided, it is illegal to operate a hemp facility which does not meet the requirements of this section.

B. Adoption of 21 CFR 117 Subparts A, B, and F. Except as otherwise provided, Subparts A, B, and F of the United States code of federal regulations, title 21, part 117 are hereby adopted and incorporated in their entirety.

C. Modifications. Except as otherwise provided, the following modifications are made to the incorporated subparts of 21 CFR 117:

(1) 117.301: All records required by this part are subject to all requirements of this subpart;

(2) 117.315(c): Offsite storage of records is permitted if such records can be retrieved and provided onsite within 24 hours of request for official review. Electronic records are considered to be onsite if they are accessible from an onsite location; and

(3) 117.320: All records required by this part must be made promptly available to the regulatory authority for official review and copying upon oral or written request.

D. Omissions. The following provisions are omitted from the incorporated subparts of 21 CFR 117:

- (1) 117.1;
- (2) 117.5;
- (3) 117.7;
- (4) 117.8;
- (5) 117.310;
- (6) 117.315(d);

(7) 117.325; and

(8) 117.335.

E. The current 21 CFR 111 and United States federal food, drug, and cosmetic act, title 21, chapter 9 are hereby adopted as a technical reference and interpretation guide.

F. Hemp and Hemp Product Source and Hemp Product Transportation.

(1) Hemp facilities shall not receive hemp without a hemp harvest certificate issued by NMDA or a person approved by the regulatory authority verifying the hemp being transported has a THC concentration of not more than three-tenths of one percent (0.30%) on a dry weight basis.

(2) Hemp facilities shall not receive hemp-derived material, hemp extract, or hemp finished product unless:

(a) it is received from an NMED permitted hemp facility or a person approved by the regulatory authority;

(b) it is accompanied by a hemp transportation manifest; and

(c) hemp finished products intended for human consumption or hemp products that will be utilized as ingredients in hemp finished products intended for human consumption were transported under conditions that will protect against allergen cross-contact and against biological, chemical (including radiological), and physical contamination of food, as well as against deterioration of the food and the container in accordance with the New Mexico Food Service Sanitation Act and the New Mexico Food Act.

G. Records and Traceability.

(1) Hemp facilities shall implement the approved record keeping system at all times and shall maintain traceability records for a period of two years.

(2) Hemp facilities shall maintain all shipping records and records of receipt for all hemp products for a period of two years, including but not limited to:

(a) Hemp harvest certificate;

(b) Hemp transportation manifest;

(c) Date of receipt; and

(d) Certificate of analysis, if hemp finished product.

H. Hemp facilities shall maintain the operational plans and recall plan, accepted by the regulatory authority, onsite during all hours of operation and shall make them available for review by the regulatory authority.

I. The final disposition of all unused hemp product and residual solvents shall be conducted as approved by the regulatory authority in Subsection C of 20.10.2.8 NMAC.

J. The permit holder shall be responsible to ensure the security of, and limit access to, hemp-derived material with a THC concentration of greater than three-tenths of one percent (0.30%).

[20.10.2.11 NMAC - N, 1/28/2020]

20.10.2.12 WATER SUPPLY:

A. Drinking water shall be obtained from an approved source that is:

(1) a public water system; or

(2) a non-public water system that is constructed, maintained, and operated according to law.

B. A drinking water system shall be flushed and disinfected before being placed in service after construction, repair, or modification and after an emergency situation, such as a flood, that may introduce contaminants to the system.

C. Except as specified under Subsection D of this section:

(1) Water from a public water system shall meet the construction and drinking water quality standards specified in 20.7.10 NMAC; and

(2) Water from a non-public water system shall meet:

(a) the construction requirements and drinking water quality standards of a non-community water system as specified in 20.7.10 NMAC; and

(b) the drinking water source setback requirements as specified in 20.7.3 NMAC.

D. A non-drinking water supply shall be used only if its use is approved and shall be used only for nonculinary purposes such as air conditioning, non-hemp equipment cooling, and fire protection.

E. Except when used as specified in Subsection D of this section, water from a non-public water system shall meet the sampling requirements of a non-community water system as specified in 20.7.10 NMAC.

F. The most recent sample report for the non-public water system shall be retained on file in the hemp facility or the report shall be maintained as specified by state water quality regulations.

G. Water shall be received from the source through the use of:

- (1) an approved public water main; or
- (2) one or more of the following that shall be constructed, maintained, and operated according to law:
 - (a) Non-public water main, water pumps, pipes, hoses, connections, and other appurtenances;
 - (b) Water transport vehicles; or
 - (c) Water containers.

[20.10.2.12 NMAC - N, 1/28/2020]

20.10.2.13 HEMP FINISHED PRODUCT LABELING:

A. After the effective date of this part and unless otherwise provided, hemp finished products produced for:

- (1) human consumption shall meet the applicable labeling requirements of 21 CFR 101 and the New Mexico Food Act; and
- (2) absorption by humans shall meet the applicable labeling requirements of 21 CFR 701 and 740.
- (3) inhalation by humans shall meet applicable state and federal labeling requirements.

B. In addition to the labeling requirements specified in Subsection A of this section, hemp finished products shall clearly identify on the principle display panel of the label:

- (1) CBD content in the package and/or container, labeled in milligrams; and
- (2) Total THC content in the package and/or container, labeled in milligrams.

C. In addition to the labeling requirements specified in Subsections A and B of this section, hemp finished products shall include the following statement on the label: "FDA has not evaluated this product for safety, effectiveness, and quality".

D. Unless otherwise approved, statements representing or inferring a hemp finished product contains no THC are prohibited.

E. Hemp facilities shall design, maintain and use a coding system that will identify the date and place of manufacture of each hemp product and shall be clearly visible on the product label or securely affixed to the body of the container.

F. Except as specified in paragraph (1) of Subsection D of 20.10.2.14 NMAC, product concentration and content stated on a hemp finished product label shall not deviate by more than ten percent of what is stated on the label.

G. Hemp finished products shall not contain medical, health, or benefit claims on the label.

[20.10.2.13 NMAC - N, 1/28/2020]

20.10.2.14 HEMP FINISHED PRODUCT TESTING:

A. After the effective date of this part and unless otherwise provided, hemp finished products that will be used for human consumption, absorption, or inhalation shall be tested by an approved laboratory and meet the requirements of this section before they leave the hemp facility and are transported, distributed, sold or otherwise made available to consumers.

B. Except as otherwise provided, each batch/lot of hemp finished product shall be tested as follows:

(1) Cannabinoid profile, including at a minimum the concentration of the following:

(a) Total THC calculated as $THC = (0.877 \times THCA) + THC$;

(b) D9-THC;

(c) THCA;

(d) CBD; and

(e) CBDA;

(2) Solvents (volatile organic compounds) utilized throughout the processing of the hemp product;

(3) Content of CBD, total THC, and other compounds derived from hemp stated on the label of the hemp finished product; and

(4) If dried usable hemp finished product:

- (a)** Water content;
- (b)** Total aerobic microbial count;
- (c)** Total combined yeast and mold count;
- (d)** Bile-tolerant gram-negative bacteria;
- (e)** Salmonella spp. and E. coli; and
- (f)** Total coliforms count.

C. Hemp processed or dried as a hemp finished product or hemp product that does not require further processing before being offered as a hemp finished product shall:

- (1)** meet the requirements of this section for hemp finished product; and
- (2)** be prepared for testing, as required in Subsection B of this section, as follows:

- (a)** Blending of the entire batch/lot prior to testing; or
- (b)** Tested in accordance with a testing plan approved by the regulatory authority.

D. Testing limits for hemp finished product shall be as follows:

- (1)** Total THC concentration shall not exceed more than three-tenths of one percent (0.30%);
- (2)** Solvents (volatile organic compounds) utilized throughout the processing of the hemp finished product shall not exceed the current United States Pharmacopeia recommended limits for residual solvents; and
- (3)** If dried usable hemp finished product:
 - (a)** Water content shall be less than fifteen percent by weight;
 - (b)** Total aerobic microbial count shall be less than 100,000 colony forming units per gram (cfu/g) or colony forming units per milliliter (cfu/mL);
 - (c)** Total combined yeast and mold count shall be less than 10,000 cfu/g or cfu/mL;

(d) Bile-tolerant gram-negative bacteria shall be less than 1,000 cfu/g or cfu/mL;

(e) Salmonella spp. and E. coli shall be absent in 10 grams cfu/g or cfu/mL;
and;

(f) Total coliforms count shall be less than 1,000 cfu/g or cfu/mL.

E. Hemp finished product that exceeds the testing limits specified in Subsection D of this section, or the testing results specified in Paragraph 3 of Subsection B of this section do not meet the requirements of Subsection E of 20.10.2.13 NMAC, may undergo a confirming test by a hemp laboratory. If the confirming test confirms the initial test results, the permit holder shall report the results to the regulatory authority within 24 hours.

F. Hemp finished products that exceed the testing limits specified in Subsection D of this section, or the testing results specified in Paragraph 3 of Subsection B of this section do not meet the requirements of Subsection E of 20.10.2.13 NMAC, shall not be distributed and shall be:

- (1) disposed of in an approved manner; or
- (2) re-worked in an approved manner.

G. Hemp finished product that is re-worked as specified in Paragraph 2 of Subsection F of this section shall meet requirements of this section before they are transported, distributed, sold or otherwise made available to consumers.

H. Hemp facilities shall obtain a certificate of analysis for each hemp finished product batch/lot from an approved laboratory. The certificate of analysis shall include the results of the required testing required in this section and shall include the following information:

- (1) The batch identification number;
- (2) The date received;
- (3) The date of testing completion;
- (4) The method of analysis for each test conducted; and
- (5) The signature of an authorized official of the hemp laboratory that guarantees the results of the laboratory's testing of a sample.

I. Hemp facilities shall provide the certificate of analysis with hemp finished products as follows:

(1) If shipped to another business entity, the certificate of analysis for each hemp finished product shall be provided to the business entity; or

(2) If shipped directly to the consumer, shall be provided to the consumer upon request.

[20.10.2.14 NMAC - N, 1/28/2020]

20.10.2.15 HEMP LABORATORIES:

Testing required in 20.10.2.14 NMAC shall be conducted by an approved laboratory that has no direct ownership or financial interest in the hemp facility for which the testing is being conducted.

[20.10.2.15 NMAC - N, 1/28/2020]

20.10.2.16 INSPECTION BY REGULATORY AUTHORITY:

A. The regulatory authority shall conduct inspections of hemp facilities to determine compliance with the act, Food Service Sanitation Act, the New Mexico Food Act, and this part.

B. When an inspection conducted by the regulatory authority reveals a violation or repeat violation of this part, and a re-inspection is scheduled by the regulatory authority, a re-inspection penalty fee shall be assessed by the regulatory authority and paid by the operator as specified in Paragraph 5 of Subsection D of 20.10.2.8 NMAC.

C. After the regulatory authority presents official credentials and provides notice of the purpose of, and an intent to conduct, an inspection, the person in charge shall allow the regulatory authority to determine if the hemp facility is in compliance with this part and the act by allowing access to the facility to make an inspection, interview employees, and take photos, and providing information and records requested and to which the regulatory authority is entitled according to law, during the hemp facility's hours of operation and other reasonable times.

D. The regulatory authority shall be allowed to copy any records pertaining to the manufacture, processing, packing, distribution, receipt, holding, or importation of hemp product maintained by or on behalf of a hemp facility in any format, including paper and electronic formats, and at any location. Proprietary documents shall be protected by the regulatory authority according to law.

E. If a person in charge denies access to the regulatory authority, the regulatory authority shall:

(1) inform the person that:

(a) the permit holder is required to allow access to the regulatory authority as specified in Subsection F of this section;

(b) access is a condition of the acceptance and retention of a hemp facility permit to operate as specified in Paragraph 3 of Subsection E of 20.10.2.8 NMAC;

(c) if access is denied, an order issued by the appropriate authority allowing access, hereinafter referred to as an inspection order, may be obtained according to law; and

(d) refusal to allow access is grounds for immediate permit suspension or revocation; and

(2) make a final request for access.

F. If after the regulatory authority presents credentials and provides notice as specified in Subsection C of this section, explains the authority upon which access is requested, and makes a final request for access as specified in Subsection E of this section, the person in charge continues to refuse access, the regulatory authority shall provide details of the denial of access on an inspection report form.

G. If denied access to a hemp facility for an authorized purpose and after complying with Subsection E of this section, the regulatory authority may issue, or apply for the issuance of, an inspection order to gain access as provided in law.

H. The regulatory authority shall document on an inspection report form:

(1) Specific factual observations of violative conditions or other deviations from this part that require correction by the permit holder; and

(2) Time frame for correction of the violations observed and documented.

I. Except as otherwise provided, a permit holder shall at the time of inspection correct violations of this part.

J. Considering the nature of the potential hazard involved and the complexity of the corrective action needed, the regulatory authority may agree to or specify a longer time frame.

K. After observing at the time of inspection a correction of a violation, the regulatory authority shall enter the violation and information about the corrective action on the inspection report.

L. As specified in Subsection J of this section, after receiving notification that the permit holder has corrected a violation, or at the end of the specified period of time, the

regulatory authority shall verify correction of the violation, document the information on an inspection report, and enter the report in the regulatory authority's records.

M. The regulatory authority shall request a signed acknowledgment of receipt and provide a copy of the completed inspection report and the notice to correct violations, as soon as possible after the inspection, to the permit holder or to the person in charge.

N. The regulatory authority shall inform a person who declines to sign an acknowledgment of receipt of inspectional findings as specified in Subsection I of this section that:

(1) An acknowledgment of receipt is not an agreement with findings;

(2) Refusal to sign an acknowledgment of receipt will not affect the permit holder's obligation to correct the violations noted in the inspection report within the time frames specified;

(3) A refusal to sign an acknowledgment of receipt is noted in the inspection report and conveyed to the regulatory authority's historical record for the hemp facility; and

(4) A final request to sign an acknowledgement receipt of inspectional findings will be made to the person in charge.

[20.10.2.16 NMAC - N, 1/28/2020]

20.10.2.17 CEASING OPERATIONS AND REPORTING:

A. Except as specified in Subsections B and C of this section, a permit holder shall immediately discontinue operations and notify the regulatory authority if an imminent health hazard may exist because of an emergency such as a fire, flood, extended interruption of electrical or water service, sewage backup, misuse of poisonous or toxic materials, onset of an apparent foodborne or hempborne illness outbreak, gross insanitary occurrence or condition, or other circumstance that may endanger public health, employees, or the environment.

B. A permit holder need not discontinue operations in an area of an establishment that is unaffected by the imminent health hazard.

C. Considering the nature of the potential hazard involved and the complexity of the corrective action needed, the regulatory authority may allow the permit holder to continue operations in the event of an extended interruption of electrical or water service if:

(1) a written emergency operating plan has been approved;

(2) immediate corrective action is taken to eliminate, prevent, or control any food safety risk and imminent health hazard associated with the electrical or water service interruption; and

(3) the regulatory authority is informed upon implementation of the written emergency operating plan.

D. If operations are discontinued as specified in Subsection A of this section or otherwise according to law, the permit holder shall obtain approval from the regulatory authority before resuming operations.

[20.10.2.17 NMAC - N, 1/28/2020]

20.10.2.18 PERMIT SUSPENSION AND REVOCATION:

A. The regulatory authority may immediately suspend a permit, without prior warning, notice of a hearing, or a hearing, if it determines through inspection, examination of employees, hemp product records, or other means as specified in this part, if:

(1) an imminent health hazard exists; or

(2) the permit holder:

(a) allows serious or repeated violations of the Food Service Sanitation Act, the New Mexico Food Act, the act, or this part;

(b) allows violations of this part to remain uncorrected beyond time frames for correction approved, directed, or ordered by the regulatory authority;

(c) violates any term or condition of a permit as specified under Paragraph 3 of Subsection E of 20.10.2.8 NMAC;

(d) fails to comply with Subsection C of 20.10.2.16 NMAC;

(e) fails to comply with a regulatory authority order issued concerning an employee or conditional employee suspected of having a disease transmissible through hemp products by infected persons; or

(f) fails to comply with a hold order as specified in Subsection A of 20.10.2.21 NMAC;

B. The regulatory authority shall provide written notice of the immediate suspension to the permit holder or person in charge.

C. After receiving a written request from the permit holder stating that the conditions cited in the immediate suspension notice no longer exist, the regulatory authority shall conduct a reinspection of the hemp facility for which the permit was summarily suspended.

D. A permit suspension shall remain in effect until the conditions cited in the immediate suspension notice no longer exist and their elimination has been confirmed by the regulatory authority through re-inspection and other means as appropriate as described in Subsection C of this section.

E. If a permit has been suspended more than one time, the regulatory authority may revoke the permit.

F. If a hemp facility fails to comply with an employee restriction order, an order to hold and not transport hemp product, or an immediate suspension notice, the regulatory authority may revoke the permit.

G. The regulatory authority shall conduct a hearing as specified in 20.10.2.19 NMAC prior to revoking a permit.

H. A permit that has been revoked shall not be considered for reapplication until the permit holder has demonstrated to the satisfaction of the regulatory authority that the hemp facility will comply with this part.

[20.10.2.18 NMAC - N, 1/28/2020]

20.10.2.19 APPEAL HEARINGS:

A. A permit holder may request an appeal hearing to address concerns about the regulatory authority's denial of an application for permit, suspension or revocation of a permit, or an enforcement action taken by the regulatory authority. A hearing request does not stay the regulatory authority's immediate suspension as specified in Subsection A of 20.10.2.18 NMAC.

B. The permit holder shall submit a written hearing request to the secretary within 10 calendar days from the date of receipt of the denial of an application for permit, permit suspension, permit revocation, or enforcement action.

C. The written request for hearing as specified in Subsection B of this section shall contain the following information:

- (1)** A statement of the issue of fact for which the hearing is requested;
- (2)** A statement of defense, mitigation, denial, or explanation concerning each allegation of fact;

(3) A statement indicating whether witnesses will be utilized during the hearing; and

(4) The name and address of the respondent's or requestor's legal counsel, if any.

D. If the regulatory authority receives a hearing request within the required timeframe, the regulatory authority shall issue a notice of hearing. The secretary may designate a person to conduct the hearing and make a final decision or make recommendations for a final decision. The secretary's hearing notice shall indicate who will conduct the hearing and make the final decision.

E. A notice of hearing shall contain the following information:

(1) Time, date and place of the hearing;

(2) Purpose of the hearing;

(3) The rights of the respondent, including the right to be represented by counsel and to present witnesses and evidence on the respondent's behalf as specified in Subsection M of this section; and

(4) The consequences of failing to appear at the hearing.

F. In the appeal hearing, the burden of proof is on the person who requested the hearing.

G. A complete digital recording of a hearing shall be made and maintained as part of the regulatory authority's records.

H. The rules of civil procedure and the rules of evidence shall not apply, but a hearing shall be conducted so that all relevant views, arguments, and testimony are amply and fairly presented.

I. Parties to a hearing may be represented by counsel, examine and cross examine witnesses, and present evidence in support of their position.

J. The regulatory authority shall present at the hearing its evidence, orders, directives, and reports related to the proposed or appealed administrative remedy.

K. Evidence shall be excluded that is irrelevant, immaterial, unduly repetitious, or excludable on constitutional or statutory grounds, or on the basis of evidentiary privilege.

L. Testimony of parties and witnesses shall be made under oath or affirmation administered by a duly authorized official.

M. Written evidence may be received if it will expedite the hearing without substantial prejudice to a party's interests.

N. Documentary evidence may be received in the form of a copy or excerpt.

O. At the end of the hearing, the secretary shall decide and announce if the hearing record will remain open and for how long and for what reason it will be left open. Based upon the evidence presented at the hearing, the secretary shall sustain, modify, or reverse the action of the regulatory authority. The secretary's decision shall be by written order within 15 working days following the close of the hearing record. The decision shall state the reasons therefore and shall be sent by certified mail to the hearing requestor and any other affected person who requests notice. Appeals from the secretary's final decision are by Rule 1-075 NMRA.

P. The regulatory authority may settle a case after a notice of hearing is served by providing a respondent with an opportunity to request a settlement before a hearing commences on the matter and by entering into a consent agreement with the respondent.

Q. Respondents accepting a consent agreement pursuant to Subsection P of this section waive their right to a hearing on the matter.

R. Failure by the permit holder to appear at the hearing shall result in the secretary upholding the regulatory authority's initial decision which led to the permit holder's hearing request.

[20.10.2.19 NMAC - N, 1/28/2020]

20.10.2.20 REMEDIES:

The regulatory authority may seek an administrative or judicial remedy to achieve compliance with the provisions of this part if a person operating a hemp facility:

A. fails to have a valid permit to operate a hemp facility as specified in Subsection A of Section 20.10.2.8 NMAC;

B. fails to comply with an employee restriction or exclusion order, an order to hold and not transport hemp product, or an immediate suspension notice issued by the regulatory authority as specified in Subsection A of 20.10.2.18 NMAC; or

C. denies the regulatory authority access to the premises of a hemp facility to:

(1) make an inspection, including taking photographs;

(2) examine and sample hemp products or other substances found on the premises; or

(3) examine and copy the records on the premises relating to hemp products as specified in Subsection C of 20.10.2.16 NMAC.

[20.10.2.20 NMAC - N, 1/28/2020]

20.10.2.21 HOLDING, EXAMINATION, AND DESTRUCTION OF HEMP PRODUCTS:

A. The regulatory authority may place a hold order on hemp products in a permitted hemp facility that:

- (1) originated from an unapproved source;
- (2) may be adulterated, misbranded, or otherwise unsafe for human consumption, or not accurately presented;
- (3) are not labeled according to law;
- (4) have a THC concentration of more than three-tenths percent, in hemp finished product; or
- (5) are otherwise not in compliance with this part or the act.

B. If the regulatory authority has reasonable cause to believe that the hold order will be violated, or finds that the order is violated, the regulatory authority may remove the hemp products that are subject to the order to a place of safekeeping.

C. The regulatory authority may issue a hold order to a permit holder or to a person who owns or controls the hemp products, as specified in Subsection A of this section, without prior warning, notice of a hearing, or a hearing on the hold order.

D. If the suspected hemp products have been transported, the permit holder shall be given the opportunity to recall the hemp products voluntarily at the permit holder's expense.

E. If the permit holder refuses to recall the suspected hemp products, the regulatory authority may order a mandatory recall of the suspected hemp products at the permit holder's expense.

F. The hold order notice shall:

- (1) state that hemp products subject to the order may not be used, sold, moved from the hemp facility, or destroyed without a written release of the order from the regulatory authority;

(2) state the specific reasons for placing the hemp products under the hold order with reference to the applicable provisions of this part and the hazard or adverse effect created by the observed condition;

(3) completely identify the hemp products subject to the hold order by the common name, the label information, a container description, the quantity, regulatory authority's tag or identification information, and location;

(4) state that the permit holder has the right to an appeal hearing and may request a hearing by submitting a timely request as specified in 20.10.2.19 NMAC;

(5) state that the regulatory authority may order the destruction of the hemp products if a timely request for an appeal hearing is not received; and

(6) provide the name and address of the regulatory authority representative to whom a request for an appeal hearing may be made.

G. The regulatory authority shall securely place an official tag or label on the hemp products or containers or otherwise conspicuously identify hemp products subject to the hold order.

H. The tag or other method used to identify a hemp product that is the subject of a hold order shall include a summary of the provisions specified in Subsection F of this section and shall be signed and dated by the regulatory authority.

I. Except as otherwise provided, hemp products placed under a hold order may not be used, sold, served, or moved from the establishment by any person.

J. The regulatory authority may allow the permit holder the opportunity to store the hemp products in an area of the hemp facility if the hemp products are protected from subsequent deterioration and the storage does not restrict operations of the establishment.

K. Only the regulatory authority may remove hold order tags, labels, or other identification from hemp products subject to a hold order.

L. The regulatory authority may examine, sample, and test the hemp products in order to determine its compliance with the Food Service Sanitation Act, the New Mexico Food Act, the act, and this part.

M. When hemp products are found to be adulterated, misbranded, or otherwise unsafe for human consumption, or not accurately presented; or found in any room, building, vehicle of transportation or other structure, any hemp products which are unsound or contain any filthy, decomposed or putrid substance, or that may be poisonous or deleterious to health or otherwise unsafe, the procedures outlined in Section 25-2-6 NMSA 1978 shall be followed.

N. When any product is found, by examination or laboratory analysis, to be in violation with this part or the act, the regulatory authority may order condemnation and disposal of the product lot, at the expense of the permit holder.

O. The regulatory authority shall issue a written notice of release from a hold order and shall remove hold tags, labels, or other identification from the hemp product if the hold order is vacated.

[20.10.2.21 NMAC - N, 1/28/2020]

20.10.2.22 SERVICE OF NOTICE:

A. A notice issued in accordance with this part shall be considered to be properly served if it is served by one of the following methods:

(1) The notice is personally served by the regulatory authority, a law enforcement officer, or a person authorized to serve a civil process to the permit holder, the person in charge, or person operating a hemp facility without a permit; or

(2) The notice is sent by the regulatory authority to the last known address of the permit holder or the person operating a hemp facility without a permit, by registered or certified mail or by other public means so that a written acknowledgment of receipt may be acquired.

B. An employee restriction or exclusion order, an order to hold and not transport hemp product, or an immediate suspension order shall be:

(1) served as specified in Paragraph (1) of Subsection A of this section; or

(2) clearly posted by the regulatory authority at a public entrance to the hemp facility and a copy of the notice sent by first class mail to the permit holder or to the owner or custodian of the hemp product, as appropriate.

C. Service is effective at the time of the notice's receipt or if service is made as specified in Paragraph (2) of Subsection B of this section, at the time of the notice's posting.

D. Proof of proper service may be made by affidavit of the person making service or by admission of the receipt signed by the permit holder, the person operating a hemp facility without a permit to operate, or an authorized agent.

[20.10.2.22 NMAC - N, 1/28/2020]

20.10.2.23 VARIANCES:

A. The regulatory authority may grant a variance by modifying or waiving the requirements of this part if the regulatory authority determines that no hazard to human health or the environment will result from the modification or waiver.

B. The person requesting a variance shall submit a written application on a form provided by the regulatory authority. The following information shall be provided by the person requesting the variance:

- (1)** A statement of the proposed variance;
- (2)** The applicable code citations from which the variance is requested;
- (3)** A detailed rationale for how the potential hazards to human health or the environment addressed by the applicable code citations will be alternatively addressed by the proposal; and
- (4)** If applicable, documentation supporting the rationale provided.

C. The regulatory shall grant the variance, grant the variance subject to conditions, or deny the variance within 15 working days following the receipt of the variance request.

D. If the regulatory authority grants a variance as specified in this section, the permit holder shall:

- (1)** comply with the procedures that were approved; and
- (2)** when required as a condition of the variance, maintain and provide to the regulatory authority, upon request, records that demonstrate compliance with the approved variance.

[20.10.2.23 NMAC - N, 1/28/2020]

20.110.2 NMAC, Hemp Extraction, Production, Transportation, Warehousing, and Testing, filed and effective August 1, 2019, duration expired by operation of law, January 27, 2020.

CHAPTER 11: ALBUQUERQUE - BERNALILLO COUNTY AIR QUALITY CONTROL BOARD

PART 1: GENERAL PROVISIONS

20.11.1.1 ISSUING AGENCY:

Albuquerque - Bernalillo County Air Quality Control Board. P.O. Box 1293,
Albuquerque, NM 87103. Telephone: (505) 768-2601.

[6/14/71. . .12/1/95; 20.11.1.1 NMAC - Rn, 20 NMAC 11.01.I.1, 10/1/02; A, 9/14/09]

20.11.1.2 SCOPE:

A. 20.11.1 NMAC is applicable within Bernalillo county.

B. **Exempt:** 20.11.1 NMAC does not apply to sources within Bernalillo county, which are located on Indian lands over which the Albuquerque - Bernalillo county air quality control board lacks jurisdiction.

[12/1/95. . .8/1/96; 20.11.1.2 NMAC - Rn, 20 NMAC 11.01.I.2, 10/1/02; A, 9/14/09]

20.11.1.3 STATUTORY AUTHORITY:

20.11.1 NMAC is adopted pursuant to the authority provided in the New Mexico Air Quality Control Act, NMSA 1978 Sections 74-2-4, 74-2-5.C; the Joint Air Quality Control Board Ordinance, Bernalillo County Ordinance 94-5 Sections 3 & 4; the Joint Air Quality Control Board Ordinance, Revised Ordinances of Albuquerque 1994 Sections 9-5-1-3 & 9-5-1-4.

[6/14/71. . .12/1/95; 20.11.1.3 NMAC - Rn, 20 NMAC 11.01.I.3, 10/1/02; A, 7/1/04; A, 9/14/09]

20.11.1.4 DURATION:

Permanent.

[12/1/95; 20.11.1.4 NMAC - Rn, 20 NMAC 11.01.I.4, 10/1/02]

20.11.1.5 EFFECTIVE DATE:

December 1, 1995, unless a later date is cited at the end of a section. The effective date of a specific section is located at the end of that section within the historical brackets. As required by the New Mexico Air Quality Control Act, Chapter 74, Article 2, Section 6 NMSA 1978, no regulation or emission control requirement or amendment thereto, or repeal thereof, shall become effective until 30 days after its filing under the State Rules Act, Chapter 14, Article 4 NMSA 1978.

[12/1/95. . .8/1/96; 20.11.1.5 NMAC - Rn, 20 NMAC 11.01.I.5 & A, 10/1/02; A, 12/1/03; A, 7/1/04; A, 9/14/09]

20.11.1.6 OBJECTIVE:

To provide definitions which are generally applicable to Albuquerque - Bernalillo county air quality control board regulations.

[12/1/95; 20.11.1.6 NMAC - Rn, 20 NMAC 11.01.1.6 & A, 10/1/02; A, 7/1/04; A, 9/14/09]

20.11.1.7 DEFINITIONS:

The definitions of 20.11.1 NMAC apply unless there is a conflict between definitions in other parts, in which case the definition found in the applicable part shall govern. The definitions include the measurements, abbreviations, and acronyms in Subsection GGGG, of 20.11.1.7 NMAC.

A. "Abnormal operating conditions" means the startup or shutdown of air pollution control device(s) or process equipment.

B. "Administrator" means the administrator of the United States environmental protection agency or his or her designee.

C. "Affected source" or "facility" means any stationary source, or any other source of air pollutants, that must comply with an applicable requirement.

D. "Air agency", "department" or "EHD" means the environmental health department (EHD) of the city of Albuquerque. The EHD, or its successor agency or authority, as represented by the department director or his/her designee, is the lead air quality planning agency for the Albuquerque - Bernalillo county nonattainment/maintenance area. The EHD serves as staff to the Albuquerque - Bernalillo county air quality control board, (A-BC AQCB), and is responsible for the administration and enforcement of the A-BC AQCB regulations.

E. "Air contaminant" or "air pollutant" means an air pollution agent or combination of such agents, including any physical, chemical, biological, radioactive (including source material, special nuclear material, and byproduct material) substance or matter which is emitted into or otherwise enters the ambient air. Such term includes any precursors to the formation of any air pollutant; to the extent the EPA has identified such precursor or precursors for the purpose for which the term "air pollutant" is used. This excludes water vapor, nitrogen (N₂), oxygen (O₂), and ethane.

F. "Air pollution" means the emission, except as such emission occurs in nature, into the outdoor atmosphere of one or more air contaminants in such quantities and duration as may with reasonable probability injure human health, animal or plant life, or as may unreasonably interfere with the public welfare, visibility or the reasonable use of property.

G. "Air quality control act" means the State of New Mexico Air Quality Control Act, Chapter 74, Article 2, NMSA 1978 as amended.

H. "Air quality control board", "board" or "A-BC AQCB" means the Albuquerque - Bernalillo county air quality control board, which is empowered by federal act, the Air Quality Control Act, and ordinances, to prevent or abate air pollution within the boundaries of Bernalillo county, except for Indian lands over which the board lacks jurisdiction.

I. "Allowable emissions" means:

(1) Any department or federally enforceable permit term or condition which limits the quantity, rate, or concentration of emissions of air pollutants on a continuous basis, including any requirements which limits the level of opacity, prescribe equipment, set fuel specifications, or prescribe operation or maintenance procedures for a source to assure continuous reduction that are requested by the applicant and approved by the department or, determined at the time of issuance or renewal of a permit to be an applicable requirement.

(2) Any federally enforceable emissions cap that the permittee has assumed to avoid an applicable requirement to which the source would otherwise be subject.

J. "Ambient" means that portion of the atmosphere, external to buildings, to which the general public has access.

K. "Applicable requirement" means any of the following (and includes requirements that have been promulgated or approved by the board or EPA through rulemaking):

(1) any standard or other requirement provided for in the New Mexico state implementation plan approved by EPA, or promulgated by EPA through rulemaking, under Title I, including Parts C or D, of the federal act;

(2) any term or condition of any pre-construction permit issued pursuant to regulations approved or promulgated through rulemaking under Title I, including parts C or D, of the federal act;

(3) any standard or other requirement:

(a) under Section 111 or 112 of the federal act;

(b) of the acid rain program under Title IV of the federal act or the regulations promulgated thereunder;

(c) governing solid waste incineration under Section 129 of the federal act;

(d) for consumer and commercial products under Section 183(e) of the federal act;

(e) of the regulations promulgated to protect stratospheric ozone under Title VI of the federal act, unless the administrator has determined that such requirements need not be contained in a Title V permit;

(4) any requirements established pursuant to Section 504(b) or Section 114(a)(3) of the federal act;

(5) any national or state ambient air quality standard;

(6) any increment or visibility requirement under Part C of Title I of the federal act applicable to temporary sources permitted pursuant to Section 504(e) of the federal act;

(7) any regulation adopted by the board in accordance with the joint air quality control board ordinances pursuant to the Air Quality Control Act, and the laws and regulations in effect pursuant to the Air Quality Control Act.

L. "Breakdown or upset" means any sudden, infrequent, and not reasonably preventable failure of air pollution control equipment, or process equipment, which causes a process to not operate in a normal manner. Failures that are caused by process imbalance, poor maintenance or careless operation are not breakdowns.

M. "Carbon monoxide" or "CO" means a colorless, odorless, poisonous gas composed of molecules containing a single atom of carbon and a single atom of oxygen with a molecular weight of 28.01 g/mole.

N. "Chemical process" means any manufacturing processing operation in which one or more changes in chemical composition or chemical properties are involved.

O. "Coal burning equipment" means any device used for the burning of coal for the primary purpose of producing heat or power by indirect heat transfer in which the products of combustion do not come into direct contact with other materials.

P. "Commenced" means that an owner or operator has undertaken a continuous program of construction or that an owner or operator has entered into a binding agreement or contractual obligation to undertake and complete, within a reasonable time, a continuous program of construction or modification.

Q. "Construction" means fabrication, erection, or installation of an affected facility.

R. "Crematory" means any combustion unit designed and used solely for cremating human or animal remains or parts and tissues thereof, and other items normally associated with the cremation process, but not including pathological waste.

S. "Department" means the Albuquerque environmental health department, which is the administrative agency of the Albuquerque - Bernalillo county air quality control board.

T. "Director" means the administrative head of the Albuquerque environmental health department or a designated representative(s).

U. "Emission limitation or standard" means a requirement established by EPA, the state implementation plan (SIP), the Air Quality Control Act, local ordinance, permit, or board regulation, that limits the quantity, rate or concentration, or combination thereof, of emissions of regulated air pollutants on a continuous basis, including any requirements relating to the operation or maintenance of a source to assure continuous reduction.

V. "EPA" means the United States environmental protection agency or the EPA's duly authorized representative.

W. "Excess emissions" means the emission of an air contaminant, including a fugitive emission, in excess of the quantity, rate, opacity or concentration specified by an air quality regulation or permit condition.

X. "Excess emissions report" means a report submitted by a stationary source at the request of the department in order to provide data on the source's compliance with emission limits and operating parameters.

Y. "Federal act", "act" or "CAA" means the Federal Clean Air Act, 42 U.S.C. Section 7401 through 7671 et seq., as amended.

Z. "Federal class I wilderness areas" means areas designated by the EPA as such. Federal class I wilderness areas within 100 kilometers of Bernalillo county are Bandelier wilderness, Pecos wilderness, and San Pedro Parks wilderness.

AA. "Fluid" means either of the two states of matter, liquid or gaseous.

BB. "Fugitive emissions" means any emissions which cannot reasonably pass through a stack, chimney, vent, or other functionally-equivalent opening or is not otherwise collected, unless the emission is otherwise regulated by the federal act, the Air Quality Control Act, or the laws and regulation in effect pursuant to the act.

CC. "Greenhouse gases" or "GHGs" means the air pollutant defined in § 86.1818–12(a) of Chapter I of Title 40 of the CFR, as the aggregate group of six greenhouse gases: carbon dioxide, nitrous oxide, methane, hydrofluorocarbons, perfluorocarbons, and sulfur hexafluoride.

DD. "Grain" means that unit of weight, which is equivalent to 0.0648 grams.

EE. "Hazardous air pollutant" means an air contaminant which has been classified pursuant to the federal act, the Air Quality Control Act, or laws and regulations in effect pursuant to the act.

FF. "Hydrocarbons" or "HC" means any chemical compound of a class of aliphatic, cyclic, or aromatic chemical compounds containing mostly hydrogen and carbon. Hydrocarbons are highly reactive in the presence of nitrogen oxides and sunlight. All are precursors to more serious air pollutants such as ozone and nitrogen dioxide.

GG. "Hydrogen sulfide" or "H₂S" means the chemical compound containing two atoms of hydrogen and one of sulfur with a molecular weight of 34.07 g/mole.

HH. "Incinerator" means any furnace used in the process of burning solid waste for the purpose of reducing the volume, by removing combustible matter.

II. "Inedible animal by-product processing" means operations primarily engaged in rendering, cooking, drying, dehydration, digesting, evaporating or concentrating of animal proteins and fats.

JJ. "Kraft mill" means any pulping process, which uses an alkaline solution for a cooking liquor.

KK. "Lead" or "Pb" means a heavy metal, with a molecular weight of 207.19 g/mole that is hazardous to health if breathed or swallowed.

LL. "Malfunction" means any sudden and unavoidable failure of air pollution control equipment or process equipment beyond the control of the owner or operator, including malfunction during startup or shutdown. A failure that is caused entirely or in part by poor maintenance, careless operation, or any other preventable equipment breakdown shall not be considered a malfunction.

MM. "Modification" means any physical change in or change in the method of operation of a source that results in an increase in the potential emission rate of any regulated air contaminant emitted by the source or that results in the emission of any regulated air contaminant not previously emitted, but does not include:

- (1) a change in ownership of the source;
- (2) routine maintenance, repair or replacement;
- (3) installation of air pollution control equipment, and all related process equipment and materials necessary for its operation, undertaken for the purpose of complying with regulations adopted by the environmental improvement board or the local board or pursuant to the federal act; or
- (4) unless previously limited by enforceable permit conditions:

(a) an increase in the production rate, if such increase does not exceed the operating design capacity of the source;

(b) an increase in the hours of operation; or

(c) use of an alternative fuel or raw material if, prior to January 6, 1975, the source was capable of accommodating such fuel or raw material, or if use of an alternate fuel or raw material is caused by any natural gas curtailment or emergency allocation or any other lack of supply of natural gas.

NN. "New source" means any stationary source, the construction or modification of which is commenced after the filing of a regulation applicable to the stationary source.

OO. "Nitrogen dioxide" or "NO₂" means a reddish brown, poisonous gas composed of molecules containing a single atom of nitrogen and two of oxygen with a molecular weight of 46.0 g/mole.

PP. "Nitrogen oxides or NO_x" is a class of chemicals containing varying quantities of nitrogen and oxygen that are created from combustion processes taking place at high temperatures and high pressures (e.g., inside automotive engine cylinders or in high temperature boilers). Examples of nitrogen oxides are NO, NO₂, NO₃, N₂O₂, and N₂O₅. Nitrogen oxides are also referred to as oxides of nitrogen.

QQ. "NMAC" means New Mexico administrative code, which contains the rules adopted by all rulemaking agencies of the state of New Mexico and the rules adopted by the A-BC AQCB.

RR. "Open burning" means the combustion of any material without the following characteristics:

(1) control of combustion air to maintain adequate temperature for efficient combustion;

(2) containment of the combustion reaction in an enclosed device to provide sufficient residence time and mixing for complete combustion; and

(3) emission controls for the gaseous combustion products.

SS. "Operator" means the person(s) responsible for the overall operation of a source.

TT. "Owner" means the person(s) who owns a source or part of a source.

UU. "Ozone or O₃" means a pungent, colorless gas composed of molecules containing three atoms of oxygen with a molecular weight of 48.0 g/mole.

VV. "Part" means the required NMAC designation for the normal division of a chapter. A part consists of a unified body of rule material applying to a specific function or devoted to a specific subject matter. Structurally, a part is the equivalent of a rule.

WW. "Particulate matter" or "PM" means any airborne finely divided solid or liquid material such as dust, smoke, mist, fumes or smog found in air or emissions.

XX. "Particulate matter emissions" means all finely divided solid or liquid material, other than uncombined water, emitted to the ambient air as measured by the reference method in 40 CFR 60, Appendix A, Method 5, or an equivalent method approved by the EPA.

YY. "Pathological waste destructor" means any equipment, which is used to dispose of pathological waste by combustion or other process, which is approved by EPA.

ZZ. "Performance test" means the data, which is the result of a test performed as required by the department to determine compliance.

AAA. "Permit" means any permit or group of permits, modifications, renewals or revisions authorizing the construction or operation of a stationary source pursuant to the federal act, the Air Quality Control Act, or laws and regulations in effect pursuant to the act.

BBB. "Permittee" means the owner or operator identified in any permit application or permit.

CCC. "Person" means any individual, partnership, firm, public or private corporation, association, trust, estate, political subdivision or agency, or any other legal entity or their legal representatives, agents or assigns.

DDD. "Photochemical oxidants" means an air pollutant, which is formed by the action of sunlight on oxides of nitrogen and hydrocarbons.

EEE. "PM₁₀", "PM_{2.5}" or "PM₁" means particulate matter with an aerodynamic diameter less than or equal to 10, 2.5, or 1 micrometers, respectively.

FFF. "PM_{2.5} emissions" means finely divided solid or liquid material with an aerodynamic diameter less than or equal to a nominal 2.5 micrometers emitted into the ambient air as measured by the reference method in 40 CFR Part 50, Appendix L, approved by the EPA.

GGG. "PM₁₀ emissions" means finely divided solid or liquid material with an aerodynamic diameter less than or equal to a nominal 10 micrometers emitted into the ambient air as measured by the reference method in 40 CFR Part 50, Appendix J and M, or equivalent method approved by the EPA.

HHH. "Pollution control device" or "air pollution control equipment" means any device, equipment, process or combination thereof, the operation of which may limit, capture, reduce, confine, or otherwise control regulated air pollutants or convert for the purposes of control any regulated air pollutant to another form, another chemical or another physical state. This includes, but is not limited to, sulfur recovery units, acid plants, baghouses, precipitators, scrubbers, cyclones, water sprays, enclosures, catalytic converters, and steam or water injection.

III. "Portable stationary source" or "temporary stationary source" means a stationary source capable of changing its location with limited dismantling or reassembly which is associated with a specific construction project or increased production demand.

JJJ. "Potential to emit" or "pre-controlled emission rate" means the maximum capacity of a stationary source to emit any air contaminant under its physical and operational design. Any physical or operational limitation on the capacity of a source to emit an air pollutant, including air pollution control equipment and restrictions on hours of operation or on the type or amount of material combusted, stored, or processed, shall be treated as part of its design if the limitation is federally enforceable or is included in a permit issued by the department. However, the potential to emit for nitrogen dioxide shall be based on total oxides of nitrogen.

KKK. "Process equipment" means any equipment used for storing, handling, transporting, processing or changing any materials whatsoever but excluding that equipment specifically defined in these regulations as incinerators, crematories, pathological waste destructors, pathological destructors and medical waste destructors.

LLL. "Process weight" means the total weight of all materials introduced into any specific process, which causes any discharge of air contaminants into the atmosphere. Solid fuels introduced into any specific process will be considered as part of the process weight, but liquid and gaseous fuels and combustion air will not.

MMM. "Process weight rate" means the hourly rate derived by dividing the total process weight by the number of hours in one complete operation from the beginning of any given process to the completion thereof, or from the beginning to the completion of a typical portion thereof, excluding any time during which the equipment is idle.

NNN. "Regulated air pollutant" means the following:

(1) any pollutant for which a national, state, or local ambient air quality standard has been promulgated;

(2) any pollutant that is subject to any standard promulgated under Section 111 of the federal act;

(3) any Class I or II substance subject to any standard promulgated under or established by Title VI of the federal act; or

(4) any pollutant subject to a standard promulgated under Section 112 or any other requirements established under Section 112 of the federal act.

OOO. "Responsible official" means one of the following:

(1) **for a corporation:** a president, secretary, treasurer, or vice-president of the corporation in charge of a principal business function, or any other person who performs similar policy or decision-making functions for the corporation, or a duly authorized representative of such person if the representative is responsible for the overall operation of one or more manufacturing, production, or operating facilities applying for, or subject to a permit and either:

(a) the facilities employ more than 250 persons or have gross annual sales or expenditures exceeding \$25 million (in second quarter 1980 dollars); or

(b) the delegation of authority to such representatives is approved in advance by the department;

(2) **for a partnership or sole proprietorship:** a general partner or the proprietor, respectively;

(3) **for a municipality, state, federal or other public agency:** either a principal executive officer or ranking elected official; for the purposes of 20.11.1 NMAC, a principal executive officer of a federal agency includes the chief executive officer having responsibility for the overall operations of a principal geographic unit of the agency (e.g., a regional administrator of EPA); or

(4) **for an acid rain source:**

(a) the designated representative (as defined in Section 402(26) of the federal act) in so far as actions, standards, requirements, or prohibitions under Title IV of the federal act or the regulations promulgated thereunder are concerned; and

(b) the designated representative for any other purposes under 40 CFR Part 70.

PPP. "Shutdown" means the cessation of operation of any air pollution control equipment, or process equipment.

QQQ. [RESERVED]

RRR. [RESERVED]

SSS. "Smoke" means small gas-borne particles resulting from incomplete combustion, consisting predominantly, but not exclusively, of carbon, soot and combustible material.

TTT. **"Solid waste"** means garbage; refuse; yard waste; food wastes; plastics; leather; rubber; sludge; and other discarded combustible or noncombustible waste, including solid, liquid, semisolid; or contained gaseous material resulting from industrial, commercial, mining, and agricultural operations, and from community or residential activities, and from waste treatment plants, water supply treatment plants, or air pollution control facilities; but does not include solid or dissolved material in domestic sewage, or solid or dissolved materials in irrigation return flows or industrial discharges which are point sources subject to permit under Section 402 of the Federal Water Pollution Control Act, or source, special nuclear, or byproduct material as defined by the Atomic Energy Act.

UUU. **[RESERVED]**

VVV. **"Stack, chimney, vent, or duct"** means any conduit or duct emitting particulate or gaseous emissions into the open air.

WWW. **"Standard conditions"** means the conditions existing at a temperature of 70° F (25° C) and pressure of 14.7 psia (760 mmHg).

XXX. **"Standard cubic foot"** means a measure of the volume of one cubic foot of gas at standard conditions.

YYY. **"Startup"** means setting into operation any air pollution control equipment, or process equipment.

ZZZ. **"Stationary source"** means any building, structure, facility or installation, which is either permanent or temporary, excluding a private residence, that emits or may emit any regulated air pollutant or any pollutant listed under Section 112(b) of the federal act, the Air Quality Control Act, or the laws and regulations in effect pursuant to the act. Several buildings, structures, facilities, or installations, or any combinations will be treated as a single stationary source if they belong to the same industrial grouping, are located on one or more contiguous or adjacent properties, and are under the control of the same person, or persons, or are under common control. Pollutant-emitting activities shall be treated as the same industrial grouping if they have the same first two digits of an applicable standard industrial classification (SIC) code as described in the standard industrial classification manual, or if they have the same first three digits of an applicable north american industry classification system (NAICS) code.

AAAA. **"Sulfur dioxide" or "SO₂"** means a pungent, colorless, poisonous gas composed of molecules containing a single atom of sulfur and two atoms of oxygen with a molecular weight of 64.07 g/mole.

BBBB. **"Total reduced sulfur"** means any combination of sulfur compounds, except sulfur dioxide and free sulfur, which test as reduced sulfur, including, but not limited to, hydrogen sulfide, methyl mercaptan, and ethyl mercaptan.

CCCC. "Total suspended particulate" or "TSP" means particulate matter as measured by the method described in 40 CFR Part 50, Appendix B.

DDDD. "Vapors" means the gaseous form of a substance, which exists in the liquid or solid state at standard conditions.

EEEE. "Visible emission" means an emission that can be seen because its opacity or optical density is above the threshold of vision.

FFFF. "Volatile organic compounds" or "VOC" means any compound of carbon, excluding carbon monoxide, carbon dioxide, carbonic acid, metallic carbides or carbonates, and ammonium carbonate, which participates in atmospheric photochemical reactions.

(1) VOC includes any such organic compound other than the following, which have been determined to have negligible photochemical reactivity: methane; ethane; methylene chloride (dichloromethane); 1,1,1-trichloroethane (methyl chloroform); 1,1,2-trichloro-1,2,2-trifluoroethane (CFC-113); trichlorofluoromethane (CFC-11); dichlorodifluoromethane (CFC-12); chlorodifluoromethane (HCFC-22); trifluoromethane (HFC-23); 1,2-dichloro 1,1,2,2-tetrafluoroethane (CFC-114); chloropentafluoroethane (CFC-115); 1,1,1-trifluoro 2,2-dichloroethane (HCFC-123); 1,1,1,2-tetrafluoroethane (HFC-134a); 1,1-dichloro 1-fluoroethane (HCFC-141b); 1-chloro 1,1-difluoroethane (HCFC-142b); 2-chloro-1,1,1,2-tetrafluoroethane (HCFC-124); pentafluoroethane (HCFC-125); 1,1,2,2-tetrafluoroethane (HFC-134); 1,1,1-trifluoroethane (HFC-143a); 1,1-difluoroethane (HFC-152a); parachlorobenzotrifluoride (PCBTF); cyclic, branched, or linear completely methylated siloxanes; acetone; perchloroethylene (tetrachloroethylene); 3,3-dichloro-1,1,1,2,2-pentafluoropropane (HCFC-225ca); 1,3-dichloro-1,1,2,2,3-pentafluoropropane (HCFC-225cb); 1,1,1,2,3,4,4,5,5,5-decafluoropentane (HFC 43-10mee); difluoromethane (HFC-32); ethyl fluoride (HFC-161); 1,1,1,3,3,3-hexafluoropropane (HFC-236fa); 1,1,2,2,3-pentafluoropropane (HFC-245ca); 1,1,2,3,3-pentafluoropropane (HFC-245ea); 1,1,1,2,3-pentafluoropropane (HFC-245eb); 1,1,1,3,3-pentafluoropropane (HFC-245fa); 1,1,1,2,3,3-hexafluoropropane (HFC-236ea); 1,1,1,3,3-pentafluorobutane (HFC-365mfc); chlorofluoromethane (HCFC-31); 1-chloro-1-fluoroethane (HCFC-151a); 1,2-dichloro-1,1,2-trifluoroethane (HCFC-123a); 1,1,1,2,2,3,3,4,4-nonafluoro-4-methoxy-butane ($C_4F_9OCH_3$ or HFE-7100); 2-(difluoromethoxymethyl)-1,1,1,2,3,3,3-heptafluoropropane ($(CF_3)_2CFCH_2OCH_3$); 1-ethoxy-1,1,2,2,3,3,4,4,4-nonafluorobutane ($C_4F_9OC_2H_5$ or HFE-7200); 2-(ethoxydifluoromethyl)-1,1,1,2,3,3,3-heptafluoropropane ($(CF_3)_2CFCH_2OC_2H_5$); methyl acetate; 1,1,1,2,2,3,3-heptafluoro-3-methoxy-propane ($n-C_3F_7OCH_3$ or HFE-7000); 3-ethoxy-1,1,1,2,3,4,4,5,5,6,6,6-dodecafluoro-2-(trifluoromethyl) hexane (HFE-7500); 1,1,1,2,3,3,3-heptafluoropropane (HFC 227ea); methyl formate ($HCOOCH_3$); 1,1,1,2,2,3,4,5,5,5-decafluoro-3-methoxy-4-trifluoromethyl-pentane (HFE-7300); propylene carbonate; dimethyl carbonate; and perfluorocarbon compounds which fall into these classes:

(a) cyclic, branched, or linear, completely fluorinated alkanes;

(b) cyclic, branched, or linear, completely fluorinated ethers with no unsaturations;

(c) cyclic, branched, or linear, completely fluorinated tertiary amines with no unsaturations; and

(d) sulfur containing perfluorocarbons with no unsaturations and with sulfur bonds only to carbon and fluorine.

(2) For purposes of determining compliance with emissions limits, VOC will be measured by the test methods in the approved state implementation plan (SIP) or 40 CFR Part 60, Appendix A, as applicable. Where such a method also measures compounds with negligible photochemical reactivity, these negligibility-reactive compounds may be excluded as VOC if the amount of such compounds is accurately quantified, and such exclusion is approved by the enforcement authority.

(3) As a precondition to excluding these compounds as VOC or at any time thereafter, the enforcement authority may require an owner or operator to provide monitoring or testing methods and results demonstrating, to the satisfaction of the enforcement authority, the amount of negligibly-reactive compounds in the source's emissions.

(4) For purposes of federal enforcement for a specific source, the EPA shall use the test methods specified in the applicable EPA-approved SIP, in a permit issued pursuant to a program approved or promulgated under Title V of the act, or under 40 CFR Part 51, Subpart I or Appendix S, or under 40 CFR Parts 52 or 60. The EPA shall not be bound by any state determination as to appropriate methods for testing or monitoring negligibly-reactive compounds if such determination is not reflected in any of the above provisions.

(5) The following compound(s) are VOC for purposes of all recordkeeping, emissions reporting, photochemical dispersion modeling and inventory requirements which apply to VOC and shall be uniquely identified in emission reports, but are not VOC for purposes of VOC emissions limitations or VOC content requirements: t-butyl acetate.

(6) For the purposes of determining compliance with California's aerosol coatings reactivity-based regulation, (as described in the California Code of Regulations, Title 17, Division 3, Chapter 1, Subchapter 8.5, Article 3), any organic compound in the volatile portion of an aerosol coating is counted towards that product's reactivity-based limit. Therefore, the compounds identified in Subsection FFFF of 20.11.1.7 NMAC as negligibly reactive and excluded from EPA's definition of VOCs are to be counted towards a product's reactivity limit for the purposes of determining compliance with California's aerosol coatings reactivity-based regulation.

(7) For the purposes of determining compliance with EPA's aerosol coatings reactivity based regulation (as described in 40 CFR Part 59 - National Volatile Organic Compound Emission Standards for Consumer and Commercial Products) any organic compound in the volatile portion of an aerosol coating is counted towards the product's reactivity-based limit, as provided in 40 CFR Part 59, Subpart E. Therefore, the compounds that are used in aerosol coating products and that are identified in Subsection FFFF of 20.11.1.7 NMAC as negligibly reactive and excluded from EPA's definition of VOC are to be counted towards a product's reactivity limit for the purposes of determining compliance with EPA's aerosol coatings reactivity-based national regulation, as provided in 40 CFR Part 59, Subpart E.

PART 2: FEES

20.11.2.1 ISSUING AGENCY:

Albuquerque - Bernalillo County Air Quality Control Board, c/o Environmental Health Department, P.O. Box 1293, Albuquerque, NM 87103. Telephone: (505) 768-2601.

[20.11.2.1 NMAC - Rp, 20 NMAC.11.02.I.1, 7/1/2001; A, 1/10/11]

20.11.2.2 SCOPE:

A. Applicability:

- (1) every person required to submit a source registration application pursuant to 20.11.40 NMAC, *Source Registration* or other board regulation;
- (2) except for sources subject to 20.11.42 NMAC, Operating Permits, every person required to submit a permit application pursuant to 20.11.20 NMAC, *Fugitive Dust Control*; 20.11.41 NMAC, *Authority to Construct*; 20.11.60 NMAC, *Permitting in Nonattainment Areas*; 20.11.61 NMAC, *Prevention of Significant Deterioration*; or other board regulation;
- (3) every person with a valid source registration or permit issued pursuant to 20.11.20 NMAC; 20.11.40 NMAC; 20.11.41 NMAC; 20.11.42 NMAC; 20.11.60 NMAC; 20.11.61 NMAC; or other board regulation;
- (4) every person who submits a permit modification pursuant to 20.11.41 NMAC, *Authority to Construct*; 20.11.60 NMAC, *Permitting in Nonattainment Areas*; or 20.11.61 NMAC, *Prevention of Significant Deterioration*;
- (5) every person who submits a technical permit revision pursuant to 20.11.41 NMAC, *Authority to Construct*;
- (6) every person who submits an administrative revision to either a source registration issued pursuant to 20.11.40 NMAC, *Source Registration*, or a permit issued pursuant to 20.11.41 NMAC, *Authority to Construct*;
- (7) every person required to submit a notification regarding removal of regulated asbestos containing material pursuant to 20.11.64 NMAC, *Emission Standards for Hazardous Air Pollutants for Stationary Sources*;
- (8) every person who submits a request for a variance pursuant to 20.11.7 NMAC, *Variance Procedure*;
- (9) every person who submits a request for a hearing before the board unless otherwise exempted; and
- (10) every person who submits a request for professional or administrative services or copies of public records.

B. Exempt: 20.11.2 NMAC does not apply to:

- (1) sources within Bernalillo county that are located on Indian lands over which the Albuquerque - Bernalillo county air quality control board lacks jurisdiction;

(2) requests for rulemaking hearings filed pursuant to 20.11.82 NMAC; and

(3) requests for hearings regarding decisions made by the vehicle pollution management program manager or designee concerning suspension or revocation of air care station certifications or air care inspector certifications.

C. Variance: Any person may request a timely variance from the requirements of 20.11.2 NMAC in accordance with 20.11.7 NMAC, *Variance Procedures*, unless prohibited by a federal, state or local law or regulation.

[20.11.2.2 NMAC - Rp, 20 NMAC 11.02.I.2 & 20 NMAC 11.02.I.8, 7/1/2001; A, 3/1/04; A, 1/10/11]

20.11.2.3 STATUTORY AUTHORITY:

20.11.2 NMAC is adopted pursuant to the authority provided in the New Mexico Air Quality Control Act, NMSA 1978 Sections 74-2-4, 74-2-5 and 74-2-7; the Joint Air Quality Control Board Ordinance, Bernalillo County Ordinance 94-5, Sections 3, 4 and 7; and the Joint Air Quality Control Board Ordinance, Revised Ordinances of Albuquerque 1994, Section 9-5-1-3, Section 9-5-1-4 and Section 9-5-1-7.

[20.11.2.3 NMAC - Rp, 20 NMAC 11.02.I.3, 7/1/2001; A, 3/1/04; A, 1/10/11]

20.11.2.4 DURATION:

Permanent.

[20.11.2.4 - Rp, 20 NMAC 11.02.I.4, 7/1/2001]

20.11.2.5 EFFECTIVE DATE:

July 1, 2001, unless a later date is cited at the end of a section or paragraph.

[20.11.2.5 NMAC - Rp, 20 NMAC 11.02.I.5, 7/1/2001]

20.11.2.6 OBJECTIVE:

To establish fees sufficient to cover the reasonable costs of implementing and enforcing the requirements of: the federal Clean Air Act (CAA); the New Mexico Air Quality Control Act, Chapter 74, Article 2, NMSA 1978; the city of Albuquerque and Bernalillo county joint air quality control board ordinances; and the Albuquerque-Bernalillo county air quality control board regulations, including:

A. reviewing and acting upon submittals made pursuant to Subsection A of 20.11.2.2 NMAC;

B. implementing and enforcing the terms and conditions of source registrations or permits, but not including any court costs or other costs associated with an enforcement action;

C. reviewing air dispersion modeling analysis and demonstrations;

D. reviewing emission inventory submittals, conducting electronic filing and maintaining inventories, preparing emission inventories and tracking emissions;

E. developing, adopting, promulgating, publishing, amending and repealing regulations;

F. conducting emissions monitoring and ambient air monitoring;

G. administering variance procedures;

H. administering administrative hearings before the board as authorized by 20.11.81 NMAC, *Adjudicatory Procedures – Air Quality Control Board*; and

I. administering a small business stationary source technical and environmental compliance assistance program pursuant to Section 507 of the federal CAA.

[20.11.2.6 NMAC - Rp, 20 NMAC 11.02.1.6, 7/1/2001; A, 3/1/04; A, 12/16/06; A, 1/10/11]

20.11.2.7 DEFINITIONS:

In addition to the definitions in 20.11.2.7 NMAC, the definitions in 20.11.1 NMAC apply unless there is a conflict between definitions, in which case the definition in 20.11.2.7 NMAC shall govern.

A. "Administrative revision" means a revision to either:

(1) a source registration issued pursuant to 20.11.40 NMAC, to incorporate a change in the stationary source information that does not result in the source being subject to 20.11.41 NMAC; or

(2) a permit that has been issued pursuant 20.11.41 NMAC in order to:

(a) correct a typographical error not made by the department;

(b) identify a change in ownership, name, address or contact information of any person identified in the permit; or

(c) incorporate a change in the permit to include a source or activity at the facility if the facility is exempted pursuant 20.11.41 NMAC.

B. "Allowable emission rate" means the fee-pollutant emission rate that has been established by a permit issued by the department.

C. "Asbestos Unit" or "AU" is the number derived by dividing the amount of asbestos removed, at or above the levels specified in 40 CFR 61.145, by the corresponding conversion factor and unit of measure in square feet, linear feet, or cubic feet respectively.

D. "Consumer price index all urban consumers" or "CPI-U" means a measure of the average change over time in the prices paid by urban consumers for a market basket of consumer goods and services as reported by the U.S. Department of Labor, Bureau of Labor Statistics.

E. "Division" means the department's air quality division or successor organizational unit.

F. "Efficiency control factor" means a factor used in conjunction with a fugitive dust source classification to determine the annual fee per acre to be paid for a programmatic permit issued pursuant to 20.11.20 NMAC. The four fugitive dust source classifications pertaining to programmatic permits are "no impact source", "low impact source", "moderate impact source" and "high impact source", which are defined in 20.11.2.7 NMAC.

G. "Emissions unit" means any part or activity of a stationary or portable source that emits or has the potential to emit a fee pollutant.

H. "Fee pollutant" means any regulated air pollutant as defined in 20.11.2.7 NMAC, not including any Class I or II substance subject to a standard established in Title VI of the federal Clean Air Act.

I. "Fugitive emissions" means emissions that cannot reasonably pass through a stack, chimney, vent or other functionally equivalent opening.

J. "High impact source" means a fugitive dust source to which a control strategy or combination of strategies has been applied, which strategies, when applied to an entire source or a portion of a source, can reasonably be expected to reduce fugitive dust leaving the source by approximately 10 percent compared to the level of fugitive dust leaving the source that would be expected if no control strategy or strategies were in place. The department shall determine the classification of fugitive dust source as a high impact source based on professional judgment, sound technical information or scientific evidence. The department shall provide a written explanation of the basis for making the determination of the classification if requested by the programmatic permit applicant. The purpose of classifying a fugitive dust source as a high impact source is to calculate the fees for a programmatic permit issued pursuant to 20.11.20 NMAC. For a high impact source, the applicable efficiency control factor for calculating fees is 0.9.

K. "Low impact source" means a fugitive dust source to which a control strategy or combination of strategies has been applied, which strategies, when applied to an entire source or a portion of a source, can reasonably be expected to reduce fugitive dust leaving the source by approximately 90 percent compared to the level of fugitive dust leaving the source that would be expected if no control strategy or strategies were in place. The department shall determine the classification of fugitive dust source as a low impact source based on professional judgment, sound technical information or scientific evidence. The department shall provide a written explanation of the basis for making the determination of the classification if requested by the programmatic permit applicant. The purpose of classifying a fugitive dust source as a low impact source is to calculate the fees for a programmatic permit issued pursuant to 20.11.20 NMAC. For a low impact source, the applicable efficiency control factor for calculating fees is 0.1.

L. "Major source" shall have the meaning defined in 40 CFR 70.2.

M. "Moderate impact source" means a fugitive dust source to which a control strategy or combination of strategies has been applied, which strategies, when applied to an entire source or a portion of a source, can reasonably be expected to reduce fugitive dust leaving the source by approximately 50 percent compared to the level of fugitive dust leaving the source that would be expected if no control strategy or strategies were in place. The department shall determine the classification of fugitive dust source as a moderate impact source based on professional judgment, sound technical information or scientific evidence. The department shall provide a written explanation of the basis for making the determination of the classification if requested by the programmatic permit applicant. The purpose of classifying a fugitive dust source as a moderate impact source is to calculate the fees for a programmatic permit issued pursuant to 20.11.20 NMAC. For a moderate impact source, the applicable efficiency control factor for calculating fees is 0.5.

N. "No impact source" means a fugitive dust source to which a control strategy or combination of strategies has been applied, which strategies, when applied to an entire source or a portion of a source, can reasonably be expected to reduce fugitive dust leaving the source by approximately 100 percent compared to the level of fugitive dust leaving the source that would be expected if no control strategy or strategies were in place. The department shall determine the classification of fugitive dust source as a no impact source based on professional judgment, sound technical information or scientific evidence. The department shall provide a written explanation of the basis for making the determination of the classification if requested by the programmatic permit applicant. Land that is classified as a no impact source is not required to obtain a programmatic permit issued under 20.11.20 NMAC and is not required to pay a programmatic permit fee for land classified as a no impact source.

O. "Proposed allowable emission rate" means the proposed fee pollutant emission rate that has been requested in a stationary source application submittal.

P. "Qualified small business" means a business that meets all of the following requirements:

- (1) a business that has 100 or fewer employees;
- (2) a small business concern as defined by the federal Small Business Act;
- (3) a source that emits less than 50 tons per year of any individual regulated air pollutant, or less than 75 tons per year of all regulated air pollutants combined; and
- (4) a source that is not a major source or major stationary source.

Q. "Regulated air pollutant" means:

- (1) nitrogen oxides, total suspended particulate matter, or any volatile organic compound as defined in 40 CFR 51.100(s);
- (2) any pollutant for which a national, state or local ambient air quality standard has been promulgated;
- (3) any pollutant that is subject to a standard established in Section 111 of the federal Clean Air Act;
- (4) any Class I or II substance subject to a standard established in Title VI of the federal Clean Air Act; and
- (5) any pollutant subject to standards or requirements established in Section 112 of the federal Clean Air Act, including:
 - (a) any pollutant subject to requirements under Section 112(j) of the federal Clean Air Act; and
 - (b) any pollutant for which the requirements of Section 112(g)(2) of the federal Clean Air Act have been met, but only with respect to the individual source subject to the requirements.

R. "Technical permit revision" or "technical revision" means a revision to a permit issued pursuant to 20.11.41 NMAC:

- (1) to incorporate a change in the permit if the change only involves a change in monitoring, record keeping or reporting requirements, if the department determines the change does not reduce the enforceability of the permit;
- (2) to incorporate a change in the permit if the change only involves incorporating permit conditions, including emissions limitations, but only if the source

existed on August 31, 1972, and the source has been in regular operation since that date;

(3) if the permittee wishes to impose a voluntary reduction of an emission limitation or retire an emission unit that was included as a specific permit condition;

(4) to incorporate a change at a facility by replacing an emissions unit for which an allowable emissions rate has been established in the permit, but only if the replacement emissions unit:

(a) is equivalent to the replaced emissions unit, and serves the same function within the facility and process;

(b) has the same or lower capacity and allowable emission rates;

(c) has the same or higher control efficiency, and stack parameters that are at least as effective in dispersing air pollutants;

(d) would not result in an increase of the allowable emission rate of any other equipment at the facility;

(e) is subject to the same or lower allowable emissions limits as the original permit prior to making the replacement and to all other original permit conditions prior to making the technical permit revision request;

(f) will not cause or contribute to a violation of any NAAQS and NMAAQs when operated under applicable permit conditions, and as determined by the department;

(g) will not require additional permit conditions to ensure the enforceability of the permit, such as additional record keeping or reporting in order to establish compliance, as determined by the department; and

(h) does not emit a regulated air contaminant not previously emitted;

(5) in order to reduce the allowable emission rate of a unit or source, by incorporating terms and conditions in the permit, such as a cap on hours of operation, limitations on throughput of a specific product or products, or limitations on equipment capacity; and

(6) to incorporate a change in the permit solely involving the addition of air pollution control equipment or the substitution of a different type of air pollution control equipment to existing equipment if the requested addition or substitution will not result in an increase in the allowable emission rate.

S. "Submittal", when used as a noun, means a document listed in 20.11.2.2 NMAC, and, when used as a verb, means the act of delivering a document listed in 20.11.2.2 NMAC either to the department or filing the document with the board hearing clerk, as required by the applicable procedure.

[20.11.2.7 NMAC - Rp, 20 NMAC 11.02.I.7, 7/1/2001; A, 3/1/04; A, 1/10/11]

20.11.2.8 SAVINGS CLAUSE:

Any amendment to 20.11.2 NMAC that is filed with the state records center shall not affect actions pending for violation of a federal or state statute or regulation, a city or county ordinance, or a board regulation. Prosecution for a violation under prior regulation wording shall be governed and prosecuted under the statute, ordinance, part or regulation section in effect at the time the violation was committed.

[20.11.2.8 NMAC - Rp, 20 NMAC 11.02.I.9, 7/1/2001; A, 1/10/11]

20.11.2.9 SEVERABILITY:

If for any reason any section, paragraph, sentence, clause or word of 20.11.2 NMAC or federal, state or local standard incorporated in 20.11.2 NMAC is determined to be unconstitutional or otherwise invalid by any court or the United States environmental protection agency, the decision shall not affect the validity of the remaining provisions of 20.11.2 NMAC.

[20.11.2.9 NMAC - Rp, 20 NMAC 11.02.I.10, 7/1/2001; A, 3/1/04; A, 1/10/11]

20.11.2.10 DOCUMENTS:

Documents cited and incorporated in 20.11.2 NMAC may be viewed at the Albuquerque Environmental Health Department, One Civic Plaza NW, 3rd Floor, Suite 3023, Albuquerque, NM 87102.

[20.11.2.10 NMAC - Rp, 20 NMAC 11.02.I.11, 7/1/2001; A, 3/1/04; A, 1/10/11]

20.11.2.11 GENERAL PROVISIONS:

A. Any person, including a federal, state or local governmental agency, who submits a document described in Subsection A of 20.11.2.2 NMAC, shall pay the total fee required by 20.11.2 NMAC at the time the document is submitted.

B. Every person with a valid source registration or a permit issued pursuant to 20.11.20 NMAC, 20.11.40 NMAC, 20.11.41 NMAC, 20.11.42 NMAC, 20.11.60 NMAC, 20.11.61 NMAC or another board regulation, shall pay an annual emission fee as required by 20.11.2 NMAC, with the exception of fugitive dust control construction permits, which do not require payment of an annual emission fee.

C. No notification or submittal will be reviewed or source registration or permit issued unless the owner or operator provides documentary proof satisfactory to the department that either all applicable fees have been paid as required by 20.11.2 NMAC or the owner or operator has been granted a variance pursuant to 20.11.7 NMAC, *Variance Procedures*.

D. All fees required to be paid at the time of notification or submittal shall be paid by check or money order payable to the "City of Albuquerque fund 242" and either be delivered in person to the Albuquerque Environmental Health Department, 3rd floor, Suite 3023 or Suite 3047, Albuquerque - Bernalillo County Government Center, south building, One Civic Plaza NW, Albuquerque, NM, or mailed to Attn: Air Quality Division, Albuquerque Environmental Health Department, P.O. Box 1293, Albuquerque, NM 87103. The department shall provide a receipt of payment to the applicant. The person delivering or filing a submittal shall attach a copy of the receipt of payment to the submittal as proof of payment.

E. Failure of the owner or operator of a source to pay an annual emission fee required by 20.11.2 NMAC, is a violation of 20.11.2 NMAC.

F. No fee or portion of a fee required by 20.11.2 NMAC shall be refunded unless the written approval of the manager is obtained using the procedure required by 20.11.2.16 NMAC.

G. As required by 74-2-16 NMSA, all money received by the department pursuant to 20.11.2.13 NMAC, shall be deposited by the city of Albuquerque in the city's air quality permit fund ("fund 242").

[20.11.2.11 NMAC - N, 7/1/2001; A, 3/1/04; A, 1/10/11]

20.11.2.12 AIR QUALITY SOURCE REGISTRATION AND STATIONARY SOURCE PERMIT APPLICATION FEES; FEE CALCULATIONS AND PROCEDURES:

A. Air quality source registration and permits for minor sources: A person who submits an application for an air quality source registration pursuant to 20.11.40 NMAC or a permit pursuant to 20.11.41 NMAC shall pay the applicable fees provided in Section 20.11.2.18 NMAC.

B. 20.11.41 NMAC, *Authority-to-Construct* permits required to be issued before construction of a stationary source whose applicability is determined by 'pound-per-hour' or 'ton-per-year' emissions:

(1) Authority-to-construct application review fees shall be calculated based on the proposed source's proposed allowable emission rate for fee pollutants. Federally approved state implementation plan limitations may be used to determine a source's proposed allowable emission rate.

(2) Fugitive emissions shall be included in the application submittal to determine the source's proposed allowable emission rate.

(3) For sources that become subject to 20.11.42 NMAC, emissions from operations that the department determines to be insignificant activities shall not be included in the calculation.

(4) For each fee pollutant, calculate the proposed allowable emission rate for each proposed emission unit to the nearest tenth of a ton. Total each of the fee pollutants from each proposed emission unit and express the value in tons per calendar year as a whole number. When rounding, if the number after the decimal point is less than 5, the whole number remains unchanged. If the number after the decimal point is 5 or greater, the whole number shall be rounded up to next whole number.

(5) The applicant shall determine the 20.11.41 NMAC application review fee by applying the proposed source's calculated proposed allowable emission rate for the single highest fee pollutant in tons per year to the applicable 20.11.41 NMAC application review fee provided in Subsection C of 20.11.2.18 NMAC.

(6) In addition to paying the application review fee, a person who proposes to construct an emission unit or units that must comply with the provisions of 20.11.60 NMAC, *Permitting in Nonattainment Areas*; 20.11.61 NMAC, *Prevention of Significant Deterioration*; 20.11.63 NMAC, *New Source Performance Standards for Stationary Sources*; or 20.11.64 NMAC, *Emission Standards for Hazardous Air Pollutants for Stationary Sources*, shall also pay the applicable federal program review fees listed in Subsection D of 20.11.2.18 NMAC.

(7) Example: A person proposes to build a facility with a NSPS boiler with a proposed allowable emission rate of greater than 100 tons per year of NO_x. The person shall determine and pay an application review fee of \$7,500.00, as required by Subsection C of 20.11.2.18 NMAC and a federal program review fee of \$1,000.00 for the NSPS boiler, as required by Subsection D of 20.11.2.18 NMAC, for a total fee of \$8,500.00. The total fee shall be submitted with the application as required by Subsections A, C, and D of 20.11.2.11 NMAC.

C. Authority-to-construct permits required to be issued before construction of a stationary source whose applicability is not determined by pound-per-hour or ton-per-year emissions shall pay the applicable application fee provided in Subsection B of 20.11.2.18 NMAC.

D. Permit revisions, portable stationary source relocations and permit modifications:

(1) The person requesting a permit revision, relocation or modification, as the terms are defined in the applicable board regulation, shall pay the fee required by the applicable provisions of 20.11.2.19 NMAC and 20.11.2.20 NMAC.

(2) Payment of an applicable federal program review fee, provided in Subsection D of 20.11.2.18 NMAC is required only with respect to the individual emission unit that is subject to relocation or modification.

E. Qualified small businesses shall pay one-half of the Application review fees for 20.11.41 NMAC, or other board regulation, and 100 % of all applicable federal program review fees.

[20.11.2.12 NMAC - Rp, 20 NMAC 11.02.II.1, 7/1/2001; A, 3/1/04; A, 1/10/11]

20.11.2.13 ANNUAL EMISSION FEES; FEE CALCULATIONS AND PROCEDURES:

A. By June 1 of each year, the department shall send each owner or operator with either a valid source registration pursuant to 20.11.40 NMAC, a fugitive dust control programmatic permit issued pursuant to 20.11.20 NMAC, or a permit issued pursuant to 20.11.41 NMAC, 20.11.42 NMAC, 20.11.60 NMAC, 20.11.61 NMAC, or other board regulation, a letter stating the annual emission fee amount. If the owner or operator wishes to challenge or request a correction to the letter, then within 30 days after the owner or operator has received the letter from the department, the owner or operator shall deliver a written request to the department challenging the letter or requesting a correction to the letter. An owner or operator who submits a request to challenge or correct an error regarding the annual emission fee shall state in writing the basis upon which the fee was computed and shall follow the procedures set out in 20.11.2.16 NMAC.

B. Beginning August 1 of each year the city of Albuquerque shall send each owner or operator with either a valid source registration pursuant to 20.11.40 NMAC, a fugitive dust control programmatic permit issued pursuant to 20.11.20 NMAC, or a permit issued pursuant to 20.11.41 NMAC, 20.11.42 NMAC, 20.11.60 NMAC, 20.11.61 NMAC, or other board regulation, an official invoice stating the annual emission fee due. The owner or operator shall pay the invoiced amount in full as directed in the invoice. All incorrect-fee challenges shall follow the appeal procedures set forth in 20.11.2.16 NMAC.

C. Calculating annual emission fees:

(1) For a fugitive dust control programmatic permit, the annual fee shall be calculated as required by Subsection J of 20.11.2.15 NMAC.

(2) For a source registration, the annual emission fee shall be the minimum annual emission

fee as provided in 20.11.2.21NMAC.

(3) For all other permitted sources, the allowable emission rate for each fee pollutant shall be totaled and expressed in tons per calendar year as a whole number. When rounding, if the number after the decimal point is less than five, the whole number remains unchanged. If the number after the decimal point is five or greater, the whole number shall be rounded up to next whole number. The sum of each fee pollutant expressed in tons, shall be multiplied by the applicable annual emission fee rate provided in Section 20.11.2.21 NMAC, then totaled to determine the annual emission fee due.

D. An owner or operator who wishes to reduce the annual emission fee for a source may apply for a modification to the existing permit and shall comply with the requirements of 20.11.20 NMAC, 20.11.41 NMAC, or 20.11.42 NMAC, as applicable.

E. Beginning January 1, 2011, and every January 1 thereafter, an increase based on the consumer price index shall be added to the annual emission fee rates. The annual emission fee rates pursuant to Subsection A of 20.11.2.21 NMAC shall be adjusted by an amount equal to the increase in the consumer price index for the immediately-preceding year. Annual emission fee adjustment amounts equal to or greater than fifty cents (\$0.50) shall be rounded up to the next highest whole dollar. Annual emission fee adjustments totaling less than fifty cents (\$0.50) shall be rounded down to the next lowest whole dollar. The department shall post the annual emission fee rates on the city of Albuquerque environmental health department air quality division website.

[20.11.2.13 NMAC - Rp, 20 NMAC 11.02.II.2, 7/1/2001; A, 3/1/04; A, 1/10/11]

20.11.2.14 FILING FEES FOR REMOVAL OF REGULATED ASBESTOS CONTAINING MATERIAL; FEE CALCULATIONS AND PROCEDURES:

A. A filing fee of \$21.00 per asbestos unit (AU), adjusted as required by Subsection D of 20.11.2.14 NMAC, shall be paid at the time notification is delivered to the department as required by 20.11.64 NMAC, *Emission Standards for Hazardous Air Pollutants for Stationary Sources*.

B. The filing fee shall be calculated by multiplying the total number of asbestos units proposed to be removed, by the fee per asbestos unit (AU) provided in Subsection A of 20.11.2.14 NMAC. Equation 1 at Paragraph (1) of Subsection B of 20.11.2.14 NMAC shall be used to calculate the total asbestos units (AU) removed and filing fee amount due at the time the notification is delivered to the department:

(1) **Equation 1:** Amount due at time of filing = AU x AU fee = [(SF / 160) + (LF / 260) + (CF / 35)] x AU fee; where: SF = square feet of asbestos containing material to be removed; LF = linear feet of asbestos containing material to be removed; CF = cubic feet of asbestos containing material to be removed; and AU fee = filing fee per asbestos unit.

(2) Example: A contractor proposes to remove 320 square feet (SF), 260 linear feet (LF) and 70 cubic feet (CF) of regulated asbestos containing material. Therefore, $[(SF / 160) + (LF / 260) + (CF / 35)] \times AU \text{ fee} = [(320 / 160) + (260 / 260) + (70 / 35)] \times \$21.00 = [(2) + (1) + (2)] \times \$21.00 = 5 \times \$21.00 = \105.00

C. All fees due pursuant to Section 20.11.2.14 NMAC shall be paid as required by Subsections A, C, and D, of 20.11.2.11 NMAC, except that the word "applicant" shall be substituted for the phrase "owner/operator".

D. Beginning January 1, 2011, and every January 1 thereafter, an increase based on the consumer price index shall be added to the asbestos unit fee. The asbestos unit fee established in Subsection A of 20.11.2.14 NMAC shall be adjusted by an amount equal to the increase in the consumer price index for the immediately-preceding year. The applicable consumer price index is the all-urban consumer price index published by the United States department of labor. Asbestos unit fee adjustment amounts equal to or greater than fifty cents (\$0.50) shall be rounded up to the next highest whole dollar. Asbestos unit fee adjustments totaling less than fifty cents (\$0.50) shall be rounded down to the next lowest whole dollar. The department shall post the asbestos unit fee rate on the city of Albuquerque environmental health department air quality division website.

E. If asbestos removal begins before both the notification and filing fee are delivered to the department as required by 20.11.2.14 NMAC, the person removing asbestos shall also pay a \$100.00 late fee, to partially offset the additional related costs. In addition to the late fee, penalties may be assessed pursuant to the New Mexico Air Quality Control Act, Chapter 74, Article 2, New Mexico Statutes Annotated 1978.

F. An annual fee is not required for sources that are solely subject to 20.11.2.14 NMAC.

[20.11.2.14 NMAC - Rp, 20 NMAC 11.02.II.2, 7/1/2001; A, 3/1/04; A, 1/10/11]

20.11.2.15 FEES FOR FUGITIVE DUST CONTROL PERMITS AND INSPECTIONS; FEE CALCULATIONS AND PROCEDURES:

A. Every person required to submit a permit application for a fugitive dust control construction permit as defined in 20.11.20.7 NMAC shall pay the total fee due at the time the permit application is submitted to the department.

B. The filing and review fee for a fugitive dust control construction permit for a project that is at least:

- (1) three-quarters of an acre or more, but less than 2 acres is \$250.00;
- (2) 2 acres, but less than 5 acres is \$350.00;

- (3) 5 acres, but less than 15 acres is \$450.00; and
- (4) 15 acres or more is \$550.00.

C. To calculate the fugitive dust control construction permit inspection fee, (which is in addition to the filing and review fee required by Subsection B of 20.11.2.15 NMAC), multiply the acreage on which active operations or disturbance will occur by \$115.00 per acre. The number of acres must be expressed as a whole number. When rounding, if the number after the decimal point is less than five, the whole number remains unchanged. If the number after the decimal point is five or greater, the whole number shall be rounded up to the next whole number. Rounding of acres shall occur before the fees are calculated.

D. All filing and review fees, and inspection fees required by 20.11.2.15 NMAC for a fugitive dust control construction permit shall be paid as required by Subsections A, C, and D of 20.11.2.11 NMAC.

E. If an application to obtain a fugitive dust control construction permit is submitted after active operations have commenced at the project location, a late fee of 50 percent of both the filing and review fee and the inspection fee shall be assessed to partially offset the additional related costs. In addition, penalties may be assessed pursuant to the New Mexico Air Quality Control Act, Chapter 74, Article 2 New Mexico Statutes Annotated 1978.

F. An annual fee is not required for sources that are solely subject to a fugitive dust control construction permit.

G. To calculate the fugitive dust control programmatic permit annual fee, multiply the acreage upon which routine maintenance or routine ongoing active operations will occur by the applicable emission control factor for a low impact source, moderate impact source, or high impact source as defined in Section 20.11.2.7 NMAC and then multiply by \$127.00. A "source classification guidebook" is available through the department which includes nonbinding examples of how to classify a no impact source, low impact source, a moderate impact source and a high impact source. The number of acres must be expressed as a whole number. When rounding, if the number after the decimal point is less than five, the whole number remains unchanged. If the number after the decimal point is five or greater, the whole number shall be rounded up to the next whole number. Rounding of acres shall occur before the fees are calculated using the applicable emission control factor in Section 20.11.2.7 NMAC. No filing and review fee is required for a programmatic permit. The total annual programmatic permit fee is:

- (1) the fee calculated for any low impact source acres; plus
- (2) the fee calculated for any moderate impact source acres; plus

(3) the fee calculated for any high impact source acres. However, the maximum combined fee shall not exceed \$10,000.00.

(4) No fee shall be paid for "no impact source" acreage.

H. Example: The application for a programmatic permit includes a total of 20 acres, of which 2 acres are no impact source acres, 8 acres are low impact source acres, 5 acres are moderate impact source acres, and 5 acres are high impact source acres. To calculate the programmatic permit fee: 2 no impact source acres x 0 = 0 acres. 8 low impact source acres x 0.1 = 0.8 acre. 5 moderate impact acres x 0.5 = 2.5 acres. 5 high impact source acres x 0.9 = 4.5 acres. Therefore, 0 acres, plus 0.8 acre, plus 2.5 acres, plus 4.5 acres = a total of 7.8 acres. 7.8 acres x \$127.00 per acre = a total programmatic permit fee of \$991.00.

I. When a programmatic permit application is submitted, the applicant may either ask the department to determine the annual fee to be paid by the applicant, or the applicant may submit a proposed annual fee calculation. No later than 10 business days after the department has received the programmatic permit application and the proposed fee calculation, the department shall notify the applicant in writing of the total fees due. The applicant and the department may agree in writing to extend the deadline for the department to issue the programmatic permit in order to attempt to resolve any pending issues, including any dispute over the source classification or fee calculation. A permit applicant may challenge the department's determination of source classification or annual programmatic fee calculation for a fugitive dust control permit by following the procedures provided in Section 20.11.20.25 NMAC.

J. The annual term of each programmatic permit will be from July 1 through the following June 30. Annual programmatic permit fees shall be paid for each additional annual term and shall be calculated in the same manner as the annual fee that is paid for a programmatic permit, as provided in Subsection G of 20.11.2.15 NMAC.

K. Annual fees required by Subsection J of 20.11.2.15 NMAC for a fugitive dust control programmatic permit shall be paid as required by Subsections B, D and E of Section 20.11.2.11 NMAC and Subsection J of 20.11.2.15 NMAC.

L. Beginning January 1, 2011, and every January 1 thereafter, an increase based on the consumer price index shall be added to each fugitive dust fee. The fugitive dust fee required by Subsections C and G of 20.11.2.15 NMAC shall be increased by an amount equal to the change in the consumer price index for the immediately-preceding year. The applicable consumer price index is the all-urban consumer price index published by the United States department of labor. Fugitive dust fee adjustments equal to or greater than fifty cents (\$0.50) shall be rounded up to the next highest whole dollar. Fugitive dust fee adjustment amounts less than fifty cents (\$0.50) shall be rounded down to the next lowest whole dollar. The department shall post the fugitive dust fee rates on the city of Albuquerque environmental health department air quality division website.

M. Demolition activities – fugitive dust control construction permit fee:

Pursuant to 20.11.20.22 NMAC, no person shall demolish any building containing over 75,000 cubic feet of space without first submitting to the department a fugitive dust control construction permit application and fugitive dust control plan, accompanied by a filing and review fee that shall be the same as the filing and review fee required by Paragraph (1) of Subsection B of 20.11.2.15 NMAC, plus the fee charged for a 1-acre site as required by Subsection C of 20.11.2.15 NMAC. The total fugitive dust control construction fee shall be paid as required by Subsections D through F of 20.11.2.15 NMAC.

[20.11.2.15 NMAC - N, 7/1/2001; A, 3/1/04; A, 1/10/11]

20.11.2.16 FEE ERRORS, CORRECTIONS AND REFUNDS:

A. Pursuant to 20.11.20.17 NMAC, *Filing Review and Inspection Fees*, the filing and review fees portion of the total permit application fee due at time of submittal for a fugitive dust control construction permit application are non-refundable.

B. For all review fees that are due at the time of submittal, the person submitting the document (payor) shall pay the required review fee in full. If the payor wishes to request correction of an alleged error or to challenge the basis of a fee calculation, then, within 30 days after the payor delivers the submittal and the fee, the payor shall deliver a written request for review by a manager of the division ("manager"). The written request shall be addressed as required by Subsection D of 20.11.2.16 NMAC. If the manager has not received a written request for review within 30 days of submittal, the fee shall be deemed final.

C. An owner or operator (payor) who does not agree with the annual fee amount due may deliver a written request to the manager asking for a correction of an alleged error or challenging the basis upon which the fee was computed. Requests must be delivered to the manager within 30 days of payor's receipt of an invoice from the city requiring payment of an annual fee. If the manager has not received a written request for correction of an alleged error or a challenge to the basis of the fee calculation within 30 days after the payor receives the invoice, the invoice shall be deemed final, and immediately paid by the payor.

D. All written requests for review of a submittal or an annual fee shall be sent to: Manager, Air Quality Division, Albuquerque Environmental Health Department, Air Quality Division, P.O. Box 1293, Albuquerque, NM 87103, or hand-delivered to: Manager, Air Quality Division, Albuquerque Environmental Health Department, 3rd floor, Suite 3023 or 3047, Albuquerque - Bernalillo County Government Center, south building, One Civic Plaza NW, Albuquerque, NM.

E. The request for review of a submittal or annual fee shall include:

- (1) the name, address and telephone number of the payor;

- (2) the dollar amount of the alleged error or challenged calculation; and
- (3) a description of the alleged error or basis of the challenge and any other information the payor believes may support the claim.

F. Within 45 days of receiving the request for review of the submittal or annual fee, the manager shall review the account and either:

- (1) amend the invoice and refund any money due the payor;
- (2) state that the invoice is correct; or
- (3) require additional fee payment if the manager determines that the payor delivered an insufficient fee to the department.

G. The manager may confer with the payor to obtain additional information during the review period.

H. Within 10 business days after the manager completes the manager's review, the manager's decision shall be sent by certified mail to the address provided by the payor

I. If the manager determines a refund is owed to the payor, the department shall refund all money due consistent with the policies and procedures of the city of Albuquerque. If a refund is owed, the manager may deduct a reasonable professional service fee to cover the costs of staff time involved in processing the review. However, if the manager determines the department or the city made the error, no deduction shall be made from the amount refunded.

J. As authorized by NMSA Section 74-2-9, the manager's decision may be appealed to the board using the procedures described in 20.11.81 NMAC, *Adjudicatory Procedures – Air Quality Control Board*.

[20.11.2.16 NMAC - N, 7/1/2001; A, 3/1/04; A, 1/10/11]

20.11.2.17 FAILURE TO PAY; LATE FEE:

A. Failure to pay any fee required by 20.11.2 NMAC, a manager's decision made pursuant to 20.11.2.16 NMAC, or a board regulation is a violation of 20.11.2 NMAC.

B. All incorrect-fee challenges shall follow the appeal procedures set forth in 20.11.2.16 NMAC. Stating an invoice is in error shall not be a defense to violation of Section 20.11.2.17 NMAC.

C. Every person who is required by 20.11.2 NMAC to pay an annual emission fee but who does not submit payment in full as directed in the invoice shall pay an additional 50 percent of the annual emission fee, plus interest, as a late fee to partially

offset related costs. Interest shall be computed in accordance with the section of the internal revenue code relating to computing interest on underpayment of federal taxes.

D. In addition to paying a late fee for late delivery of an annual emission fee, the payor may be required to pay a penalty, as authorized by the New Mexico Air Quality Control Act, Chapter 74, Article 2, New Mexico Statutes Annotated 1978.

[20.11.2.17 NMAC - Rp, 20 NMAC 11.02.II.2, 7/1/2001; A, 3/1/04; A, 1/10/11]

20.11.2.18 REVIEW FEES:

A. Source registration review fees: A person with a stationary source that is required by 20.11.40 NMAC to submit a source registration shall pay a registration review fee of \$500.00 when the registration application is delivered to the department.

B. Permit application review fees for stationary sources that require permits pursuant to 20.11.41 NMAC or other board regulation, and that are not subject to Subsection C of 20.11.2.18 NMAC: \$1,000.00.

C. Ton-per-year application review fees for stationary sources that require permits pursuant to 20.11.41 NMAC or other board regulation, and whose applicability is based on the source's pound per hour or ton per year emissions: A person with a stationary source that is required by Subsection C of 20.11.2.18 NMAC to obtain a permit and whose applicability is determined by pound per hour or ton per year emissions shall pay the following application review fee, based on the source's ton per year proposed allowable emission rate for the single highest fee pollutant:

(1) proposed sources with a proposed allowable emission rate equal to or greater than one ton per year and less than five tons per year: \$750.00;

(2) proposed sources with a proposed allowable emission rate equal to or greater than 5 tons per year and less than 25 tons per year: \$1,500.00;

(3) proposed sources with a proposed allowable emission rate equal to or greater than 25 tons per year and less than 50 tons per year: \$3,000.00;

(4) proposed sources with a proposed allowable emission rate equal to or greater than 50 tons per year and less than 75 tons per year: \$4,500.00;

(5) proposed sources with a proposed allowable emission rate equal to or greater than 75 tons per year and less than 100 tons per year: \$6,000.00; and

(6) proposed sources with a proposed allowable emission rate equal to or greater than 100 tons per year: \$7,500.00.

D. Federal program review fees due in addition to the stationary source permit application review fees: A person with a stationary source that is required by 20.11.41 to apply for a permit and pay a review fee pursuant to Subsection B or Subsection C of 20.11.2.18 NMAC shall also pay the federal program review fee for each applicable federal program standard or review listed in Paragraphs (1) through (5) of Subsection D of 20.11.2.18 NMAC:

- (1) for review of each 40 CFR 60 standard: \$1,000.00;
- (2) for review of each 40 CFR 61 standard: \$1,000.00;
- (3) for review of each 40 CFR 63 promulgated standard: \$1000.00;
- (4) for each case-by-case 20.11.64 NMAC, *Emission Standards for Hazardous Air Pollutants for Stationary Sources*, maximum achievable control technology (MACT) review: \$10,000.00; and
- (5) for each 20.11.61 NMAC, *Prevention of Significant Deterioration*, and 20.11.60 NMAC, *Permitting in Nonattainment Areas*, review: \$5,000.00.

E. Beginning January 1, 2011, and every January 1 thereafter, an increase based on the consumer price index shall be added to the application review fees. The application review fees established in Subsection A through D of 20.11.2.18 NMAC shall be adjusted by an amount equal to the increase in the consumer price index for the immediately-preceding year. Application review fees adjustments equal to or greater than fifty cents (\$0.50) shall be rounded up to the next highest whole dollar. Application review fees adjustments totaling less than fifty cents (\$0.50) shall be rounded down to the next lowest whole dollar. The department shall post the application review fees on the city of Albuquerque environmental health department air quality division website.

[20.11.2.18 NMAC - Rp, 20 NMAC 11.02.II.2, 7/1/2001; A, 3/1/04; A, 12/16/06; A, 1/10/11]

20.11.2.19 APPLICATION REVIEW FEES FOR MODIFICATION OF EXISTING PERMITS:

A. Modifications: A person who submits an application for a proposed modification to an existing stationary source permit shall pay either \$1000.00 if subject to Subsection B of 20.11.2.18 NMAC, or the applicable fee listed in Paragraphs (1)-(6) of Subsection A of 20.11.2.19 NMAC based on the source's ton-per-year proposed allowable emission rate for the single highest fee pollutant: The applicant shall round the calculations as described in Paragraph 4 of Subsection B of 20.11.2.12 NMAC:

- (1) proposed sources with a proposed allowable emission rate equal to or greater than one ton per year and less than five tons per year: \$750.00;

(2) proposed sources with a proposed allowable emission rate equal to or greater than 5 tons per year and less than 25 tons per year: \$1,500.00;

(3) proposed sources with a proposed allowable emission rate equal to or greater than 25 tons per year and less than 50 tons per year: \$3,000.00;

(4) proposed sources with a proposed allowable emission rate equal to or greater than 50 tons per year and less than 75 tons per year: \$4,500.00;

(5) proposed sources with a proposed allowable emission rate equal to or greater than 75 tons per year and less than 100 tons per year: \$6,000.00; and

(6) proposed sources with a proposed allowable emission rate equal to or greater than 100 tons per year: \$7,500.00.

B. Major modifications: A person, who submits an application for a proposed modification to an existing stationary source permit, shall pay the following fee as applicable in addition to the application review fee required by Subsection A of 20.11.2.19 NMAC. The applicant shall round the calculations as described in Paragraph 4 of Subsection B of 20.11.2.12 NMAC.

(1) 20.11.60 NMAC, *Permitting in Non-Attainment Areas*, major modification: \$5,000.00; and

(2) 20.11.61 NMAC, *Prevention of Significant Deterioration*, major modification: \$5,000.00.

C. Federal program review fees for modification of an existing permit: A person proposing a modification to an existing stationary source permit shall pay a review fee pursuant to Subsection A or Subsection B of 20.11.2.19 NMAC, and shall also pay the federal program review fee for each applicable federal program standard or review listed in Paragraphs (1) through (5) of Subsection C of 20.11.2.19 NMAC, if the federal program review is triggered by the modification:

(1) for review of each 40 CFR 60 standard: \$1,000.00;

(2) for review of each 40 CFR 61 standard: \$1,000.00;

(3) for review of each 40 CFR 63 standards promulgated standard: \$1000.00;

(4) for each case-by-case 20.11.64 NMAC, *Emission Standards for Hazardous Air Pollutants for Stationary Sources*, maximum achievable control technology (MACT) review: \$10,000.00; and

(5) for each 20.11.61 NMAC, *Prevention of Significant Deterioration*, and 20.11.60 NMAC, *Permitting in Nonattainment Areas*, review: \$5,000.00.

D. Beginning January 1, 2011, and every January 1 thereafter, an increase based on the consumer price index shall be added to the application review fees required by 20.11.2.19 NMAC. The application review fees established by Subsections A, B and C of 20.11.2.19 NMAC shall be adjusted by an amount equal to the increase in the consumer price index for the immediately-preceding year. Application review fee adjustments equal to or greater than fifty cents (\$0.50) shall be rounded up to the next highest whole dollar. Application review fee adjustments totaling less than fifty cents (\$0.50) shall be rounded down to the next lowest whole dollar. The department shall post the application review fee rates on the city of Albuquerque environmental health department air quality division website.

[20.11.2.19 NMAC - N, 1/10/11]

**20.11.2.20 ADMINISTRATIVE AND TECHNICAL REVISION APPLICATION FEES;
PORTABLE STATIONARY SOURCE RELOCATION FEES:**

A. Revision fees:

(1) administrative revisions to permits issued pursuant to 20.11.41 NMAC:
\$250.00;

(2) technical revisions to permits issued pursuant to 20.11.41 NMAC:
\$500.00.

B. Portable stationary source relocation fees:

(1) no new air dispersion modeling required: \$500.00;

(2) new air dispersion modeling required: \$750.00.

[20.11.2.20 NMAC - N, 1/10/11]

**20.11.2.21 ANNUAL EMISSIONS FEES AND RATES FOR STATIONARY
SOURCES:**

A. Source registration: \$185.00.

B. Permitted source: Sources issued a permit pursuant to 20.11.41 NMAC, 20.11.42 NMAC, 20.11.60 NMAC, 20.11.61 NMAC or other board regulation, shall pay a minimum annual emission fee of \$185.00 or \$44.00 per ton, whichever is greater. The annual emission fee shall be calculated as required by Subsection C of 20.11.2.13 NMAC.

C. Hazardous fee pollutants (major sources): \$308.00 per ton.

D. Stationary sources that require permits pursuant to 20.11.41 NMAC or other board regulation, and that are not subject to Subsection C of 20.11.2.18 NMAC shall pay an annual emission fee of \$185.00.

E. The following sources shall pay a minimum annual emission fee of \$308.00 or a fee of \$44.00 per ton whichever is greater, with the annual emission fee calculated as required by Subsection C of 20.11.2.13 NMAC:

- (1) emergency generators; and
- (2) gasoline service and fleet stations.

F. Beginning January 1, 2011, and every January 1 thereafter, an increase based on the consumer price index shall be added to the annual emission fee and rates required by 20.11.2.21 NMAC. The annual emission fees and rates pursuant to 20.11.2.21 NMAC shall be adjusted by an amount equal to the increase in the consumer price index for the immediately-preceding year. Annual emission fee and rate adjustments equal to or greater than fifty cents (\$0.50) shall be rounded up to the next highest whole dollar. Annual emission fee and rate adjustments totaling less than fifty cents (\$0.50) shall be rounded down to the next lowest whole dollar. The department shall post the annual emission fees and rates on the city of Albuquerque environmental health department air quality division website.

[20.11.2.21 NMAC - N, 1/10/11]

20.11.2.22 MISCELLANEOUS FEES -- ADMINISTRATIVE FEES; VARIANCE REQUEST FEES; BOARD HEARING FILING FEES:

A. Administrative fees:

- (1) Professional services fee: \$92.00 per staff hour.
- (2) Photocopying and other copies of public records: as provided by the New Mexico Inspection of Public Records Act and by the applicable city of Albuquerque ordinance and city administrative instruction number 1-7. The charge for copying public records shall not include a separate charge for staff time for locating and copying documents or for determining whether documents are exempt from inspection and copying.

B. Variance request fees: Every person who petitions for a variance shall pay a fee of \$1500.00, unless the board determines at a hearing that the variance fee imposes an undue economic burden on the petitioner.

C. Board hearing filing fees: Every person who requests a hearing before the board shall pay a filing fee of \$125.00, which shall be delivered to the board hearing clerk with the petition or other document that requests a hearing before the board.

However, the hearing filing fee does not apply to requests for rulemaking hearings or to board hearings regarding decisions made by the Albuquerque-Bernalillo County vehicle pollution management program manager or designee regarding the proposed suspension or revocation of an air car station certification or air car inspector certification.

[20.11.2.22 NMAC - N, 1/10/11]

PART 3: TRANSPORTATION CONFORMITY

20.11.3.1 ISSUING AGENCY:

Albuquerque-Bernalillo County Air Quality Control Board, c/o Environmental Health Department, P.O. Box 1293, Albuquerque, NM 87103. Telephone: (505) 768-2601.

[7/1/98; 20.11.3.1 NMAC - Rn, 20 NMAC 11.03.I.1, 6/1/02; A, 6/13/05; A, 12/17/08]

20.11.3.2 SCOPE:

A. Action applicability:

(1) Except as provided for in Subsection C of 20.11.3.2 NMAC or 20.11.3.126 NMAC, conformity determinations are required for:

(a) the adoption, acceptance, approval or support of transportation plans and transportation plan amendments developed pursuant to 23 CFR Part 450 or 49 CFR Part 613 by the metropolitan planning organization (MPO) or the United States department of transportation (DOT);

(b) the adoption, acceptance, approval or support of transportation improvement programs (TIPs) and TIP amendments developed pursuant to 23 CFR Part 450 or 49 CFR Part 613 by the MPO or DOT; and

(c) the approval, funding or implementation of federal highway administration/federal transit administration (FHWA/FTA) projects.

(2) Conformity determinations are not required under 20.11.3 NMAC for individual projects that are not FHWA/FTA projects. However, 20.11.3.121 NMAC does apply to such projects if they are regionally significant.

B. Geographic applicability: This transportation conformity regulation is an Albuquerque-Bernalillo county air quality control board (AQCB) regulation for Bernalillo county and is included in the state implementation plan (SIP) revision pertaining to transportation conformity for Bernalillo county. The provisions of 20.11.3 NMAC shall apply to the area within Bernalillo county for which the area is designated nonattainment or has a maintenance plan for transportation-related criteria pollutants, and shall not

apply to Indian lands over which the AQCB lacks jurisdiction, except that any FHWA/FTA project on Indian land that uses funds received from the FHWA or FTA or receives a federal permit must comply with 20.11.3 NMAC.

(1) The provisions of 20.11.3 NMAC apply with respect to emissions of the following criteria pollutants: ozone (O₃), carbon monoxide (CO), nitrogen dioxide (NO₂), particles with an aerodynamic diameter less than or equal to a nominal 10 micrometers (PM₁₀), and particles with an aerodynamic diameter less than or equal to a nominal 2.5 micrometers (PM_{2.5}).

(2) The provisions of 20.11.3 NMAC apply with respect to emissions of the following precursor pollutants:

(a) volatile organic compounds (VOCs) and nitrogen oxides (NO_x) in ozone areas;

(b) NO_x in NO₂ areas;

(c) VOC and NO_x in PM₁₀ areas if the environmental protection agency (EPA) regional administrator or the director of the air agency has made a finding that transportation-related emissions of one or both of these precursors within the nonattainment area are a significant contributor to the PM₁₀ nonattainment problem and has so notified the MPO and DOT, or if the applicable implementation plan (or implementation plan submission) establishes an approved (or adequate) budget for such emissions as part of the reasonable further progress, attainment or maintenance strategy;

(d) NO_x in PM_{2.5} areas, unless both the EPA regional administrator and the director of the state air agency have made a finding that transportation-related emissions of NO_x within the nonattainment area are not a significant contributor to the PM_{2.5} nonattainment problem and has so notified the MPO and DOT, or the applicable implementation plan (or implementation plan submission) does not establish an approved (or adequate) budget for such emissions as part of the reasonable further progress, attainment or maintenance strategy; and

(e) VOC, sulfur dioxide (SO₂) and ammonia (NH₃) in PM_{2.5} areas either if the EPA regional administrator or the director of the state air agency has made a finding that transportation-related emissions of any of these precursors within the nonattainment area are a significant contributor to the PM_{2.5} nonattainment problem and has so notified the MPO and DOT, or if the applicable implementation plan (or implementation plan submission) establishes an approved (or adequate) budget for such emissions as part of the reasonable further progress, attainment or maintenance strategy.

(3) The provisions of 20.11.3 NMAC apply to PM_{2.5} nonattainment and maintenance areas with respect to PM_{2.5} from re-entrained road dust if the EPA regional

administrator or the director of the air agency has made a finding that re-entrained road dust emissions within the area are a significant contributor to the PM_{2.5} nonattainment problem and has so notified the MPO and DOT, or if the applicable implementation plan (or implementation plan submission) includes re-entrained road dust in the approved (or adequate) budget as part of the reasonable further progress, attainment or maintenance strategy. Re-entrained road dust emissions are produced by travel on paved and unpaved roads (including emissions from anti-skid and deicing materials).

(4) The provisions of 20.11.3 NMAC apply to maintenance areas through the last year of a maintenance area's approved CAA Section 175A(b) maintenance plan, unless the applicable implementation plan specifies that the provisions of 20.11.3 NMAC shall apply for more than 20 years.

C. Limitations: In order to receive any FHWA/FTA approval or funding actions, including NEPA approvals, for a project phase subject to 20.11.3. NMAC, a currently conforming transportation plan and TIP shall be in place at the time of project approval as described in 20.11.3.114 NMAC, except as provided by Subsection B of 20.11.3.114 NMAC.

D. Grace period for new nonattainment areas: For areas or portions of areas which have been continuously designated attainment or not designated for any NAAQS for ozone, CO, PM₁₀, PM_{2.5} or NO₂ since 1990 and are subsequently redesignated to nonattainment or designated nonattainment for any NAAQS for any of these pollutants, the provisions of 20.11.3. NMAC shall not apply with respect to that NAAQS for 12 months following the effective date of final designation to nonattainment for each NAAQS for such pollutant.

[7/1/98; 20.11.3.2 NMAC - Rn, 20 NMAC 11.03.I.2, 6/1/02; A, 6/13/05; A, 12/17/08; A, 11/15/10]

20.11.3.3 STATUTORY AUTHORITY:

20.11.3 NMAC is adopted pursuant to the authority provided in the New Mexico Air Quality Control Act, NMSA 1978 Sections 74-2-4, 74-2-5.C; the Joint Air Quality Control Board Ordinance, Bernalillo County Ordinance 94-5 Section 4; and the Joint Air Quality Control Board Ordinance, Revised Ordinances of Albuquerque 1994 Section 9-5-1-4.

[7/1/98; 20.11.3.3 NMAC - Rn, 20 NMAC 11.03.I.3, 6/1/02]

20.11.3.4 DURATION:

Permanent.

[7/1/98; 20.11.3.4 NMAC - Rn, 20 NMAC 11.03.I.4, 6/1/02]

20.11.3.5 EFFECTIVE DATE:

July 1, 1998, unless a later date is cited at the end of a section.

[7/1/98; 20.11.3.5 NMAC - Rn, 20 NMAC 11.03.I.5, & A, 6/1/02]

20.11.3.6 OBJECTIVE:

To implement Section 176(c) of the CAA, as amended (42 U.S.C. 7401 et seq.), and the related requirements of 23 U.S.C. 109(j), with respect to the conformity of transportation plans, programs and projects which are developed, funded or approved by the United States DOT, and by the MPO or other recipients of funds under Title 23 U.S.C. or the Federal Transit Laws (49 U.S.C. Chapter 53) to the Bernalillo county portion of the SIP. 20.11.3 NMAC sets forth policy, criteria and procedures for demonstrating and assuring conformity of such activities to an applicable implementation plan developed pursuant to Section 110 and Part D of the CAA.

[7/1/98; 20.11.3.6 NMAC - Rn, 20 NMAC 11.03.I.6, 6/1/02; A, 6/13/05]

20.11.3.7 DEFINITIONS:

Terms used but not defined in 20.11.3 NMAC shall have the meaning given to them by the CAA, Titles 23 and 49 U.S.C., other EPA regulations, or other DOT regulations, in that order of priority. In addition to the definitions in Section 20.11.3.7 NMAC, the definitions in 20.11.1 NMAC shall apply unless there is a conflict between definitions, in which case the definition in 20.11.3 NMAC shall govern.

A. Reserved

B. Reserved

C. Reserved

D. Reserved

E. Reserved

F. "**Air agency**" means the air quality division (AQD) of the city of Albuquerque environmental health department (EHD). The EHD, or its successor agency or authority, as represented by the department director or his designee, is the lead air quality planning agency for Albuquerque-Bernalillo county nonattainment/ maintenance areas. The EHD serves as staff to the AQCB and is responsible for administering and enforcing AQCB regulations.

G. "**Albuquerque metropolitan planning area (AMPA)**" means the portion of New Mexico state planning and development district 3 that comprises the area for which federal transportation funding allocated for areas of a 200,000 or greater population is

expended. The AMPA is described in the MPO's most recent transportation planning documents.

H. Reserved

I. "Applicable implementation plan" is defined in Section 302(q) of the CAA and means the portion (or portions) of the implementation plan, or most recent revision thereof, which has been approved under Section 110, or promulgated under Section 110(c), or promulgated or approved pursuant to regulations promulgated under Section 301(d) and which implements the relevant requirements of the CAA.

J. "CAA" means the Clean Air Act, as amended (42 U.S.C. 7401 et seq.).

K. "Cause or contribute to a new violation" for a project means:

(1) to cause or contribute to a new violation of a standard in the area substantially affected by the project or over a region which would otherwise not be in violation of the standard during the future period in question if the project were not implemented; or

(2) to contribute to a new violation in a manner that would increase the frequency or severity of a new violation of a standard in such an area.

L. "Clean data" means air quality monitoring data determined by EPA to meet the applicable requirements of 40 CFR Parts 50 and 58 and to indicate attainment of a national ambient air quality standard.

M. "Conformity analysis" means any regional emissions analysis or localized hot-spot computer modeling assessments or any other analyses, which serve as the basis for the conformity determination.

N. "Conformity determination" means the demonstration of consistency with motor vehicle emissions budgets or with the appropriate interim emissions test identified at 20.11.3.118 NMAC for each pollutant and precursor identified in the applicable SIP. The conformity determination is the affirmative written documentation declaring conformity with the applicable implementation plan, which is submitted to FHWA and FTA for approval with EPA consultation. An affirmative conformity determination means conformity to the plan's purpose of eliminating or reducing the severity and number of violations of the national ambient air quality standards and achieving expeditious attainment of such standards; and that such activities shall not:

(1) cause or contribute to any new violations of any standard in any area;

(2) increase the frequency or severity of any existing violation of any standard in any area; or

(3) delay timely attainment of any standard or any required interim emission reductions or other milestones in any area.

O. "Consultation" means the process by which the affected agencies identified in 20.11.3.105 NMAC confer with each other, provide to the agencies all relevant information needed for meaningful input and, prior to taking any action, consider the views of the other agencies and (except with respect to those actions for which only notification is required and those actions subject to Subsection C of 20.11.3.105 NMAC and Subparagraph (g) of Paragraph (1) of Subsection D of 20.11.3.105 NMAC) respond in writing to substantive written comments in a timely manner prior to any final decision on such action.

P. "Control strategy implementation plan revision" means a revision to the implementation plan that contains specific strategies for controlling emissions of and reducing ambient levels of pollutants in order to satisfy CAA requirements for demonstrations of reasonable further progress and attainment (including implementation plan revisions submitted to satisfy CAA Sections 172 (c) , 182(b)(1), 182(c)(2)(A), 182(c)(2)(B), 187(a)(7), 187(g), 189(a)(1)(B), 189(b)(1)(A) and 189(d); Sections 192(a) and 192(b), for nitrogen dioxide; and any other applicable CAA provision requiring a demonstration of reasonable further progress or attainment).

Q. "Design concept" means the type of facility identified by the project, e.g., freeway, expressway, arterial highway, grade-separated highway, reserved right-of-way rail transit, mixed-traffic rail transit, exclusive busway, etc.

R. "Design scope" or "scope" means the design aspects that shall affect the proposed facility's impact on regional emissions, usually as they relate to vehicle or person carrying capacity and control, e.g., number of lanes or tracks to be constructed or added, length of project, signalization, access control including approximate number and location of interchanges, preferential treatment for high-occupancy vehicles, etc.

S. "Donut areas" means geographic areas outside a metropolitan planning area boundary, but inside the boundary of a nonattainment or maintenance area that contains any part of a metropolitan area(s). These areas are not isolated rural nonattainment and maintenance areas.

T. "DOT" means the United States department of transportation.

U. "EPA" means the United States environmental protection agency.

V. "FHWA" means the federal highway administration of the DOT.

W. "FHWA/FTA project" means any highway or transit project that is proposed to receive funding assistance and approval through the federal-aid highway program or the federal mass transit program, or requires federal highway administration (FHWA) or federal transit administration (FTA) approval for some aspect of the project, such as

connection to an interstate highway or deviation from applicable design standards on the interstate system.

X. "Fiscally constrained" means, consistent with DOT's metropolitan transportation planning regulations at 23 CFR Part 450.

Y. "Forecast period" means, with respect to a transportation plan, the time period covered by the transportation plan pursuant to 23 CFR Part 450.

Z. "FTA" means the federal transit administration of the DOT.

AA. "Highway project" means an undertaking to implement or modify a highway facility or highway-related program. Such an undertaking consists of all required phases necessary for implementation. For analytical purposes, it shall be defined sufficiently to:

(1) connect logical termini and be of sufficient length to address environmental matters on a broad scope;

(2) have independent utility or significance, i.e., be usable and be a reasonable expenditure even if no additional transportation improvements in the area are made; and

(3) not restrict consideration of alternatives for other reasonably foreseeable transportation improvements.

BB. "Horizon year" means a year for which the transportation plan describes the envisioned transportation system according to 20.11.3.106 NMAC.

CC. "Hot-spot analysis" means an estimation of likely future localized CO, PM₁₀ and PM_{2.5} pollutant concentrations and a comparison of those concentrations to the national ambient air quality standards. Hot-spot analysis assesses impacts on a scale smaller than the entire nonattainment or maintenance area including, for example, congested roadway intersections and highways or transit terminals, and uses an air quality dispersion model to determine the effects of emissions on air quality.

DD. "Increase the frequency or severity" means to cause a location or region to exceed a standard more often or to cause a violation at a greater concentration than previously existed or would otherwise exist during the future period in question if the project were not implemented.

EE. "Isolated rural nonattainment and maintenance areas" mean areas that do not contain or are not part of any metropolitan planning area as designated under the transportation planning regulations. Isolated rural areas do not have federally required metropolitan transportation plans or TIPs and do not have projects that are part of the emissions analysis of any MPO's metropolitan transportation plan or TIP. Projects

in such areas are instead included in statewide transportation improvement programs. These areas are not donut areas.

FF. "Lapse" means that the conformity determination for a transportation plan or a TIP has expired, and thus there is no currently conforming transportation plan and TIP.

GG. "Limited maintenance plan" means a maintenance plan that EPA has determined meets EPA's limited maintenance plan policy criteria for a given NAAQS and pollutant. To qualify for a limited maintenance plan, for example, an area shall have a design value that is significantly below a given NAAQS, and it shall be reasonable to expect that a NAAQS violation will not result from any level of future motor vehicle emissions growth.

HH. "Local publicly-owned transit operator" means the current transit operator, the city of Albuquerque.

II. "Maintenance area" means any geographic region of the United States previously designated nonattainment pursuant to the CAA Amendments of 1990 and subsequently redesignated to attainment subject to the requirement to develop a maintenance plan under Section 175A of the CAA, as amended.

JJ. "Maintenance plan" means an implementation plan under Section 175A of the CAA, as amended.

KK. "Metropolitan planning organization (MPO)" means the policy board of an organization created as a result of the designation process in 23 U.S.C. 134(d).

LL. "Mid-region council of governments (MRCOG)" means the association of local governments within New Mexico state planning and development district 3 (Bernalillo, Sandoval, Tarrant and Valencia counties) that is designated by the governor of New Mexico, in consultation with the elected officials of the area, as the MPO for the Albuquerque metropolitan planning area.

MM. "Milestone" has the meaning given in CAA Sections 182(g)(1) and 189(c) for serious and above ozone nonattainment areas and PM₁₀ nonattainment areas, respectively. For all other nonattainment areas, a milestone consists of an emissions level and the date when that level shall be achieved as required by the applicable CAA provision for reasonable further progress towards attainment.

NN. "Motor vehicle emissions budget (MVEB)" means the portion of the total allowable emissions defined in the submitted or approved control strategy implementation plan revision or maintenance plan for a certain date for the purpose of meeting reasonable further progress milestones or demonstrating attainment or maintenance of the NAAQS, for any criteria pollutant or its precursors, allocated to highway and transit vehicle use and emissions.

OO. "National ambient air quality standards (NAAQS)" are those standards established pursuant to Section 109 of the CAA.

PP. "NEPA" means the National Environmental Policy Act of 1969, as amended (42 U.S.C. 4321 et seq.).

QQ. "NEPA process completion" means, with respect to the FHWA and the FTA, the point at which there is a specific action to make a determination that a project is categorically excluded, to make a finding of no significant impact or to issue a record of decision on a final environmental impact statement under NEPA.

RR. "Nonattainment area" means any geographic region of the United States that has been designated as nonattainment under Section 107 of the CAA for any pollutant for which a national ambient air quality standard exists.

SS. "Project" means a highway project or a transit project.

TT. "Protective finding" means a determination by EPA that a submitted control strategy implementation plan revision contains adopted control measures or written commitments to adopt enforceable control measures that fully satisfy the emissions reductions requirement relevant to the statutory provision for which the implementation plan revision was submitted, such as reasonable further progress or attainment.

UU. "Public involvement committee (PIC)" means the permanent advisory committee established by the MRCOG to provide proactive public input to the transportation planning process.

VV. "Recipient of funds designated under Title 23 U.S.C. or the Federal Transit Laws" means any agency at any level of state, county, city, or regional government that routinely receives Title 23 U.S.C. or federal transit laws funds to construct FHWA/FTA projects, operate FHWA/FTA projects or equipment, purchase equipment or undertake other services or operations via contracts or agreements. This definition does not include private landowners or developers or contractors or entities that are only paid for services or products created by their own employees.

WW. "Regionally significant project" means a transportation project (other than an exempt project) that is on a facility which serves regional transportation needs (such as access to and from the area outside of the region, major activity centers in the region, major planned developments such as new retail malls, sports complexes, etc. or transportation terminals) and would normally be included in the modeling of a metropolitan area's transportation network, including at a minimum all principal arterial highways and all fixed guideway transit facilities that offer an alternative to regional highway travel.

XX. "Safety margin" means the amount by which the total projected emissions from all sources of a given pollutant are less than the total emissions that

would satisfy the applicable requirement for reasonable further progress, attainment or maintenance.

YY. "Standard" means a national ambient air quality standard.

ZZ. "State implementation plan (SIP)" (see applicable implementation plan).

AAA. "State DOT" means the New Mexico department of transportation or its successor agency or authority, as represented by the department secretary or his designee.

BBB. "Title 23 U.S.C." means Title 23 of the United States Code.

CCC. "Transit" is mass transportation by bus, rail or other conveyance that provides general or special service to the public on a regular and continuing basis. It does not include school buses or charter or sightseeing services.

DDD. "Transit project" means an undertaking to implement or modify a transit facility or transit-related program; purchase transit vehicles or equipment; or provide financial assistance for transit operations. It does not include actions that are solely within the jurisdiction of local transit agencies, such as changes in routes, schedules or fares and may consist of several phases. For analytical purposes, a transit project shall be defined inclusively enough to:

(1) connect logical termini and be of sufficient length to address environmental matters on a broad scope;

(2) have independent utility or independent significance, i.e., be a reasonable expenditure even if no additional transportation improvements in the area are made; and

(3) not restrict consideration of alternatives for other reasonably foreseeable transportation improvements.

EEE. "Transportation conformity technical committee (TCTC)" means the group that provides interagency consultation and consists of transportation, planning and air quality staff of the MPO, local government staff, staff from the state DOT, EPA, FHWA, FTA, and staff from the air agency, and that is responsible for evaluating and establishing the assumptions and circumstances for the application of transportation and air quality models.

FFF. "Transportation control measure (TCM)" means any measure that is specifically identified and committed to in the applicable implementation plan, including a substitute or additional TCM that is incorporated into the applicable SIP through the process established in CAA Section 176(c)(8), that is either one of the types listed in Section 108 of the CAA, or any other measure that reduces emissions or concentrations

of air pollutants from transportation sources by reducing vehicle use or changing traffic flow or congestion conditions. Notwithstanding the first sentence of this definition, vehicle technology-based, fuel-based and maintenance-based measures that control the emissions from vehicles under fixed traffic conditions are not TCMs for the purposes of 20.11.3 NMAC.

GGG. "Transportation improvement program (TIP)" means a transportation improvement program developed by a metropolitan planning organization under 23 U.S.C. 134(j).

HHH. "Transportation plan" means the official 20-year fiscally constrained intermodal metropolitan transportation plan (MTP) that is developed for the metropolitan planning area through the metropolitan planning process, pursuant to 23 CFR Part 450.

III. "Transportation project" is a highway project or a transit project.

JJJ. "Written commitment" means a written commitment that includes a description of the action to be taken; a schedule for the completion of the action; a demonstration that funding necessary to implement the action has been authorized by the appropriating or authorizing body; and an acknowledgment that the commitment is an enforceable obligation under the applicable implementation plan.

KKK. Acronyms

- (1) **AMPA**-Albuquerque metropolitan planning area
- (2) **AQCB**-Albuquerque-Bernalillo county air quality control board
- (3) **CAA**-Clean Air Act, as amended
- (4) **CFR**-code of federal regulations
- (5) **CO**-carbon monoxide
- (6) **DOT**-U.S. department of transportation
- (7) **EHD**-Albuquerque environmental health department
- (8) **EPA**-U.S. environmental protection agency
- (9) **FHWA**-federal highway administration, DOT
- (10) **FTA**-federal transit administration, DOT
- (11) **MPO**-metropolitan planning organization

- (12) **MRCOG**-mid-region council of governments
- (13) **MTB**-metropolitan transportation board
- (14) **MTP**-metropolitan transportation plan
- (15) **MVEB**-motor vehicle emissions budget
- (16) **NAAQS**-national ambient air quality standards
- (17) **NEPA**-National Environmental Policy Act
- (18) **NO_x** -oxides of nitrogen
- (19) **PIC**-public involvement committee
- (20) **PM_{2.5}**-particulate matter less than or equal to 2.5 micrometers in diameter
- (21) **PM₁₀**-particulate matter less than or equal to 10 micrometers in diameter
- (22) **SIP**-state implementation plan (applicable implementation plan)
- (23) **State DOT**-New Mexico department of transportation
- (24) **STIP**-state transportation improvement program
- (25) **TCC**-transportation coordinating committee
- (26) **TCM**-transportation control measure
- (27) **TCTC**-transportation conformity technical committee
- (28) **TIP**-transportation improvement program
- (29) **VOC**-volatile organic compound
- (30) **VMT**-vehicle miles traveled

20.11.3.13-20.11.3.102 [RESERVED]

20.11.3.103 PRIORITY:

When assisting or approving any action with air quality-related consequences, FHWA and FTA shall give priority to the implementation of those transportation portions of an applicable implementation plan prepared to attain and maintain the NAAQS. This priority shall be consistent with statutory requirements for allocation of funds among states or other jurisdictions.

[20.11.3.103 NMAC - Rn, 20.11.3.200 NMAC, 11/15/10]

20.11.3.104 FREQUENCY OF CONFORMITY DETERMINATIONS:

A. Conformity determinations and conformity redetermination for transportation plans, TIPs and FHWA/FTA projects shall be made according to the requirements of 20.11.3.104 NMAC and the applicable implementation plan.

B. Frequency of conformity determinations for transportation plans:

(1) Each new transportation plan shall be demonstrated to conform before the transportation plan is approved by the MPO or accepted by DOT.

(2) All transportation plan amendments shall be found to conform before the transportation plan amendments are approved by the MPO or accepted by DOT, unless the amendment merely adds or deletes exempt projects listed in 20.11.3.126 NMAC or 20.11.3.127 NMAC. The conformity determination shall be based on the transportation plan and the amendment taken as a whole.

(3) The MPO and DOT shall determine the conformity of the transportation plan (including a new regional emissions analysis) no less frequently than every four years. If more than four years elapse after DOT's conformity determination without the MPO and DOT determining conformity of the transportation plan, a 12-month grace period will be implemented as described in Subsection F of 20.11.3.104 NMAC. At the end of this 12-month grace period, the existing conformity determination shall lapse.

C. Frequency of conformity determinations for transportation improvement programs:

(1) A new TIP shall be demonstrated to conform before the TIP is approved by the MPO or accepted by DOT.

(2) A TIP amendment requires a new conformity determination for the entire TIP before the amendment is approved by the MPO or accepted by DOT, unless the amendment merely adds or deletes exempt projects listed in 20.11.3.126 NMAC or 20.11.3.127 NMAC and has been made in accordance with the notification provisions of Subparagraph (g) of Paragraph (1) of Subsection D of 20.11.3.105 NMAC.

(3) The MPO and DOT shall determine the conformity of the TIP (including a new regional emissions analysis) no less frequently than every four years. If more than four years elapse after DOT's conformity determination without the MPO and DOT determining conformity of the TIP, a 12-month grace period will be implemented as described in Subsection F of 20.11.3.104 NMAC. At the end of this 12-month grace period, the existing conformity determination shall lapse.

D. Projects: FHWA/FTA projects shall be found to conform before they are adopted, accepted, approved or funded. Conformity shall be re-determined for any FHWA/FTA project if one of the following occurs: a significant change in the project's design concept and scope; three years have elapsed since the most recent major step to advance the project; or initiation of a supplemental environmental document for air

quality purposes. Major steps include NEPA process completion; start of final design; acquisition of a significant portion of the right-of-way; and, construction (including federal approval of plans, specifications and estimates).

E. Triggers for transportation plan and TIP conformity determinations:

Conformity of existing transportation plans and TIPs shall be re-determined within two years of the following, or after a 12-month grace period (as described in Subsection F of 20.11.3.104 NMAC) the existing conformity determination shall lapse, and no new project-level conformity determinations may be made until conformity of the transportation plan and TIP has been determined by the MPO and DOT:

(1) the effective date of EPA's finding that motor vehicle emission budgets from an initially submitted control strategy implementation plan or maintenance plan are adequate pursuant to Subsection E of 20.11.3.118 NMAC and can be used for transportation conformity purposes;

(2) the effective date of EPA approval of a control strategy implementation plan revision or maintenance plan that establishes or revises a motor vehicle emissions budget if that budget has not yet been used in a conformity determination prior to approval; and

(3) the effective date of EPA promulgation of an implementation plan that establishes or revises a motor vehicle emissions budget or adds, deletes or changes TCMs.

F. Lapse grace period. During the 12-month grace period referenced in Paragraph (3) of Subsection B of 20.11.3.104 NMAC, Paragraph (3) of Subsection C of 20.11.3.113 NMAC, and Subsection E of 20.11.3.113 NMAC, a project may be found to conform according to the requirements of 20.11.3 NMAC:

(1) the project is included in the currently conforming transportation plan and TIP (or regional emissions analysis); or

(2) the project is included in the most recent conforming transportation plan and TIP (or regional emissions analysis).

[20.11.3.104 NMAC - Rn & A, 20.11.3.201 NMAC, 11/15/10]

20.11.3.105 CONSULTATION:

A. General: Transportation plans and programs shall be in conformity with the applicable implementation plan (SIP) for the nonattainment/maintenance area of Bernalillo county. The MRCOG, as the MPO, is responsible for conducting the air quality transportation conformity analyses for all of Bernalillo county. The applicable plans and programs are the TIP and the MTP. The document serving to demonstrate conformity is the transportation/air quality conformity finding. 20.11.3.105 NMAC

provides procedures for interagency consultation (federal, state and local) and resolution of conflicts. Such consultation procedures shall be undertaken by the MPO, state DOT and DOT with the air agency and EPA before making conformity determinations and by the air agency and EPA with the MPO, state DOT and DOT in developing applicable implementation plan revisions.

B. Interagency consultation procedures: General factors: The affected agencies shall participate in an interagency consultation process to assure that proposed transportation investments conform with the applicable implementation plan developed pursuant to the CAA. The affected agencies shall participate in a consultation process during the development of the transportation-related elements in the applicable SIP (i.e. TCMs, the MTP, and the TIP under 23 CFR Section 450.314 and 49 CFR Section 613.100), any significant revisions to the preceding documents and all conformity determinations required by 20.11.3 NMAC.

(1) The affected agencies acting in consultation include: EHD; EPA; FHWA; FTA; MPO; state DOT; local publicly-owned transit operator; appropriate local government transportation agencies and land use planning agencies (e.g. city of Albuquerque and Bernalillo county planning departments); and other federal and state agencies as appropriate.

(2) Each lead agency in the consultation process required under Subsection D of 20.11.3.105 NMAC (i.e. the agency responsible for preparing the final document subject to the interagency consultation process) shall provide reasonable opportunity for consultation with the affected agencies identified above. The lead agency shall provide to the affected agencies all information needed for meaningful input and shall consider the views of each agency and respond in writing to substantive written comments submitted during the formal comment period prior to making a final decision on such document. Such written response shall be made part of the record of any decision or action. Roles of these agencies are further described in Paragraph (1) of Subsection C of 20.11.3.105 NMAC below.

(3) Project planning, public involvement, management systems, project development and other requirements for the MPO, state DOT and the local publicly-owned transit operator are covered by the applicable DOT rules and regulations for MPOs and state DOTs (23 CFR Part 450, 500, 626 and 771, 49 CFR 613).

C. Interagency consultation procedures roles and responsibilities:

(1) **Development of transportation plans and programs and associated conformity determinations.**

(a) The MPO, as the lead transportation planning agency, has the primary responsibility in the AMPA for developing the MTP, TIP and technical analyses related to travel demand and other associated modeling, data collection and coordination of consultation for these activities with the agencies specified in Paragraph (1) of

Subsection B of 20.11.3.105 NMAC, in accordance with 23 CFR Part 450, 500 and 626. The MPO shall be responsible for regional emissions and travel demand analyses of the MTP and TIP in consultation with the EHD. Corridor and project-level hot spot and emissions analyses, developed in consultation with the EHD, shall be the responsibility of the project-implementing agency through the NEPA process or similar environmental evaluation process.

(b) The committees and member agencies, identified in the most recent MPO document regarding public involvement procedures for transportation plans and programs, entitled *Public Involvement Procedures for the Mid-Region Council of Governments Acting as the MPO for the Albuquerque Metropolitan Planning Area*, shall participate in the MPO process for the development, monitoring and revision of the MTP and the development of the TIP.

(i) The MPO shall forward a preliminary version of the MTP, the TIP and the draft conformity finding to the AQCB for review with a minimum of 14 calendar days to provide comments. Upon release of the final draft of the MTP and TIP for public review, the MPO shall submit the final drafts of the MTP, TIP and accompanying conformity documents to the AQCB and agencies in Paragraph (1) of Subsection B of 20.11.3.105 NMAC for review and comment before adoption and final approval by the MTB. Following review of the conformity determination, the AQCB shall state whether the TIP, the MTP or both are in compliance with the applicable implementation plan. The MPO shall provide a review and comment period consistent with the Metropolitan Planning Rule (23 CFR Section 450.316(a), 49 CFR Section 613). Briefings to the AQCB shall be provided upon request.

(ii) The MPO shall provide information and appropriate advance notification of meeting places, dates and times, agendas and supporting materials for all of its special and regularly scheduled meetings on transportation and air quality to each of the agencies specified in Paragraph (1) of Subsection B of 20.11.3.105 NMAC in accordance with the public involvement process adopted by the MPO, consistent with the Metropolitan Planning Rule (23 CFR Section 450.316(a), 49 CFR Section 613) and described in the MRCOG's public involvement document, entitled *Public Involvement Procedures for the Mid-Region Council of Governments Acting as the MPO for the Albuquerque Metropolitan Planning Area*. The MPO's compliance with the New Mexico Open Meetings Act is documented annually. Resolution of conflicts shall follow the provisions of Subsection E of 20.11.3.105 NMAC.

(2) **Development of applicable implementation plans:** Within the nonattainment/maintenance area, the EHD, in consultation with the MPO, shall be responsible for developing the transportation-related components for the applicable SIP, air quality modeling, general emissions analysis, emissions inventory, all related activities and coordination of these tasks with the agencies specified in Paragraph (1) of Subsection B of 20.11.3.105 NMAC through the TCTC as described in Subparagraph (a) of Paragraph (1) of Subsection D of 20.11.3.105 NMAC. Upon release of the final draft of the SIP revision for public review, the EHD shall submit the final draft document

to the MTB and agencies in Paragraph (1) of Subsection B of 20.11.3.105 NMAC for review and comment before final adoption by the AQCB. The EHD shall provide at least a 30 day review and comment period consistent with CAA requirements. Briefings to the MTB shall be provided upon request.

(3) The organizational level of regular consultation is described in Subsection B of 20.11.3.105 NMAC and Subsection C of 20.11.3.105 NMAC. All correspondence concerning consultation related to the transportation conformity SIP shall be addressed to the designated points of contact below:

- (a) EPA: regional administrator or designee;
- (b) FHWA: division administrator or designee;
- (c) FTA: regional administrator or designee;
- (d) State DOT: secretary of transportation or designee;
- (e) MPO: MRCOG executive director or designee;
- (f) EHD: director or designee;
- (g) local publicly-owned transit operator: chief administrative officer or designee;
- (h) local governments within the nonattainment/maintenance area: chief administrative officer or equivalent or designee.

(4) The MPO shall respond in writing to substantive written comments from the affected consultation agencies described in Paragraph (1) of Subsection B of 20.11.3.105 NMAC regarding the MTP, TIP and related conformity determinations. The project implementing agencies shall respond in writing to substantive written comments regarding projects in accordance with the provisions of 20.11.3 NMAC. The EHD shall respond in writing to substantive written comments from the affected consultation agencies described in Paragraph (1) of Subsection B of 20.11.3.105 NMAC regarding the transportation components of the applicable implementation plan for the nonattainment/maintenance area, in accordance with the provisions of 20.11.3 NMAC. All formal comments (e.g. those received during the public comment period) and responses to those comments shall be included within final documents before they are forwarded for review and final approval by the FHWA/FTA or EPA, as appropriate.

(5) Prior to AQCB adoption of a TCM in the applicable implementation plan, the MPO shall, in consultation and coordination with the agencies identified in Paragraph (1) of Subsection D of 20.11.3.105 NMAC, develop the proposed TCM in a manner consistent with the MTP and TIP transportation development processes. After approval of a TIP, MTP or both, the AQCB shall incorporate all proposed TCMs into the

applicable implementation plan. The necessary TCMs shall be specifically described in the applicable implementation plan. TCMs shall also be cross-referenced to the approved TIP, MTP or both. EHD shall coordinate the necessary efforts to achieve inclusion of the proposed TCM into the applicable implementation plan. The TCMs approved by the AQCB and subsequently by the EPA as part of the applicable implementation plan shall receive priority funding for implementation in a manner consistent with funding and phasing schedules specified in the MPO's TIP or MTP or both.

(a) In the event that implementation of a TCM is infeasible in the time frame for that measure in the applicable implementation plan (as defined in Subsection D of 20.11.3.7 NMAC), the parties in the interagency consultation process established pursuant to Paragraph (1) of Subsection D of 20.11.3.105 NMAC shall assess whether such a measure continues to be appropriate. When the MPO and the AQCB concur that a TCM identified in the applicable implementation plan is no longer appropriate, the agencies may initiate the process described in Subparagraph (b) through Subparagraph (e) of Paragraph (5) of Subsection C of 20.11.3.105 NMAC to identify and adopt a substitute TCM.

(b) **Substitution of TCMs.** Any TCM that is specified in the applicable implementation plan may be replaced or added to the implementation plan with alternate or additional TCMs without an implementation plan revision if the proposed measure meets the following provisions:

(i) upon request by the MPO, the EHD shall convene the TCTC to identify and evaluate possible substitute and additional measures; consultation with EPA may be accomplished by sending copies of all draft and final documents, agendas and reports to EPA Region 6;

(ii) the substitute TCM shall provide for equivalent or greater emissions reductions than the TCM to be replaced in the applicable implementation plan, as demonstrated by an emissions impact analysis that is consistent with the current methodology used for evaluating the replaced TCM in the implementation plan;

(iii) the substitute TCM shall be implemented in accordance with a schedule that is consistent with the schedule provided for the TCM contained in the applicable implementation plan; or if the implementation plan date for implementation of the TCM to be replaced has already passed, a TCM selected pursuant to 20.11.3 NMAC that requires funding shall be included in the first year of the next MTP and TIP adopted by the MPO; however, the substituted TCM shall be implemented as soon as possible, but not later than one year from the date of the original TCM, and in no case, later than the date on which emission reductions are necessary to achieve the purpose of the implementation plan;

(iv) in order for the AQCB to adopt substitute and additional TCMs, there shall be evidence of adequate personnel, funding and authority under state or

local law to implement, monitor and enforce the control measures; commitments to implement the substitute TCMs shall be made by the agency with legal authority for implementation;

(v) the TCMs substituted under 20.11.3.105 NMAC for purposes of the applicable implementation plan shall receive priority funding for implementation within the MPO's MTP and TIP funding processes; and

(vi) no TCM shall be replaced until the substitute TCM has been adopted and the existing TCM in the applicable implementation plan has been rescinded by the AQCB; adoption of a substitute TCM by the AQCB formally rescinds the previously applicable TCM and adopts the substitute TCM.

(c) **Public participation:** After the concurrence required under Subparagraph (a) of Paragraph (5) of Subsection C of 20.11.3.105 NMAC, the AQCB shall conduct a public hearing and comment process, in accordance with 40 CFR 52.102, on the proposed substitute TCM(s). The hearing can only be held after a reasonable public notice and comment period, which begins at least 30 days prior to the hearing date. The AQCB shall ensure that:

(i) the public is notified by prominent advertising in the area affected announcing the time, date and place of the hearing;

(ii) each proposed plan or revision is available for public inspection in at least one location in the applicable area;

(iii) the MPO, EPA, affected local agencies and other interested parties are notified; and

(iv) a description of the TCM(s), analysis supporting the proposal, assumptions and methodology are available to the public, the MPO and EPA for at least 30 days before the public hearing and at least 30 days prior to the close of the public comment period.

(d) **Concurrence process for substitute TCMs:**

(i) before initiating any public participation process, the AQCB, MPO and EPA shall concur with the appropriateness and equivalency of the substitute or additional TCM;

(ii) the AQCB shall respond to all public comments and submit to EPA a summary of comments received during the public comment period along with the responses following the close of the public comment period;

(iii) the EPA shall notify the AQCB within 14 days if EPA's concurrence with the substitution TCM has changed as a result of public comment;

(iv) all substitute TCMs shall be adopted by the AQCB following the public comment period and EPA's concurrence described in Subparagraph (d) of Paragraph (5) of Subsection C of 20.11.3.105 NMAC; if not adopted, the substitute TCM cannot replace the existing TCM.

(e) **Technical information:** The analysis of substitute TCMs shall be consistent with methodology used for evaluating TCMs in the nonattainment or maintenance plan. Where emissions models or transportation models have changed since those used for purposes of evaluating measures in the nonattainment or maintenance plan, the TCM to be replaced and the substitute TCMs shall be evaluated using the latest modeling techniques for purposes of demonstrating equivalency or greater emissions reductions. The key methodology and assumptions shall be consistent with EPA approved regional and hot-spot emissions models (for CO, PM₁₀ and PM_{2.5}), the area's transportation model, and population and employment growth projections.

(f) **Record keeping:** The AQCB shall maintain documentation of approved TCM substitutions. The documentation shall provide a description of the substitute and replaced TCMs, including requirements and schedules. The documentation shall also provide a description of the substitution process including the public and agency participation and coordination with the TCTC, the public hearing and comment process, EPA concurrence and AQCB adoption. The documentation shall be submitted to EPA following adoption of the substitute TCMs by the AQCB, and made available to the public as an attachment to the applicable implementation plan.

(g) **Adoption:**

(i) concurrence by the metropolitan planning organization, the state air pollution control agency and the administrator as required by Subparagraph (i) of Paragraph (d) of Subsection C of 20.11.3.105 NMAC, shall constitute adoption of the substitute or additional control measures so long as the requirements of Paragraph (b) of Subsection C of 20.11.3.105 NMAC are met;

(ii) once adopted, the substitute or additional control measures become, by operation of law, part of the state implementation plan and become federally enforceable;

(iii) within 90 days of its concurrence under Subparagraph (i) of Paragraph (d) of Subsection C of 20.11.3.105 NMAC, the state air pollution control agency shall submit the substitute or additional control measure to the administrator for incorporation in the codification of the applicable implementation plan; notwithstanding any other provision of the Clean Air Act, no additional state process shall be necessary to support such revision to the applicable plan.

(h) **No requirement for express permission.** The substitution or addition of a transportation control measure in accordance with Paragraph (5) of Subsection C of

20.11.3.105 NMAC and the funding or approval of such a control measure shall not be contingent upon the existence of any provision in the applicable implementation plan that expressly permits such a substitution or addition.

(i) **No requirement for new conformity determination.** The substitution or addition of a transportation control measure in accordance with Paragraph (5) of Subsection C of 20.11.3.105 NMAC shall not require:

- (i) a new conformity determination for the transportation plan; or
- (ii) a revision of the implementation plan.

D. Interagency consultation procedures: Specific processes.

(1) Interagency consultation procedures for the Bernalillo county nonattainment/maintenance area, in accordance with Subsection C of 20.11.3.105 NMAC, shall involve the MPO (transportation, land use and transit members from within the AMPA), state DOT, EPA, FHWA, FTA and the air agency. The TCTC's role in interagency consultation for the specific processes is described below. The TCTC shall include representatives as described in Paragraph (1) of Subsection B of 20.11.3.105 NMAC. The TCTC shall be established by the air agency in cooperation with the MPO. The TCTC shall meet on an as-needed basis. The air agency, in consultation with the MPO, shall be responsible for convening meetings and establishing meeting agendas.

(a) The TCTC shall evaluate and participate in establishing the circumstances for the application of a transportation or air quality model (or models). Committee review shall include VMT forecasting and associated methods and assumptions to be used in: 1) hot-spot and regional emissions analysis for establishing motor vehicle emissions budgets; 2) developing the MTP and the TIP; 3) developing implementation plan revisions directly applicable to transportation, and 4) making the conformity determinations and planning assumptions identified in 20.11.3.110 NMAC. The TCTC shall also review assumptions, analyses and results of the conformity and fiscal constraint determinations and other applicable implementation plan revisions or actions affecting the MTP and transportation programs. The TCTC shall function as a cooperative interagency effort to share mobile source modeling and transportation and air quality modeling information, and to evaluate modeling assumptions through interagency consultation. Regional modeling shall be the responsibility of the MPO and the air agency as appropriate. Hot-spot analysis shall be the responsibility of the lead agency of the project requiring the analysis. Before new models used in hot-spot or regional emissions analyses are adopted for general use, the TCTC shall be provided an opportunity to review and comment. This process also applies to consultation on the design, schedule and funding of research and data collection efforts regarding regional transportation models developed by the MPO (e.g. household travel transportation surveys) described in 20.11.3.110 NMAC. New modeling information shall be presented by the air agency and the MPO in regularly scheduled meetings.

(b) The TCTC shall determine which minor arterials and other transportation projects shall be considered regionally significant for the purposes of regional emissions analysis (in addition to those functionally classified as principal arterial or higher or fixed guideway systems or extensions that offer an alternative to regional highway travel), and which projects shall be considered to have a significant change in design concept, timing and scope from the MTP or TIP. When the TCTC determines that a significant change in design concept, timing and scope has occurred, the MPO and lead agency shall, as part of the MTP and TIP process, consult with the appropriate agencies identified in Paragraph (1) of Subsection D of 20.11.3.105 NMAC to assess the impact of this project change on the conformity determination. The MPO shall redetermine transportation conformity for air quality if a significant change occurs within the transportation network that is likely to lead to a meaningful increase in a pollutant for which the nonattainment area exceeds the NAAQS, or for an area that is designated as attainment and is subject to a maintenance plan.

(c) The TCTC shall evaluate whether projects otherwise exempt from meeting the regional or hot-spot conformity analysis requirements shall be treated as non-exempt in cases where potential adverse emissions impacts may exist for any reason. The MPO's conformity documents shall include a list of transportation projects exempted from inclusion in a regional conformity determination. Exempt projects are identified in 20.11.3.126 NMAC and 20.11.3.127 NMAC. The process used to reach a determination of exemption shall include an evaluation of whether or not the exempt project shall interfere with or impede the implementation of TCMs in the applicable implementation plan. If no substantive comments related to air quality impacts are received as part of the TIP review process, the lead agency for the project may proceed with implementation of the exempt project. If substantive air quality impact comments are received which indicate that an exempt project may adversely affect air quality, the lead agency for the project shall consult with the air agency and the MPO to determine the appropriate action necessary to address the adverse air quality impacts.

(d) If TCMs are included in the SIP, the MPO shall give maximum priority to approval or funding of those TCMs, report to the AQCB annually whether those TCMs are on schedule and, if not, what delays have been encountered, what obstacles to implementation have been identified and whether or not these obstacles are likely to be overcome. The AQCB shall also consider whether delays in TCM implementation necessitate a SIP revision to remove, substitute, or modify TCMs or identify other reduction measures. If substitute TCMs or other reduction measures beyond those already in the SIP are deemed necessary through the consultation process specified in 20.11.3.105 NMAC, the MPO shall work with the members of the TCTC to identify and coordinate appropriate modifications to the MTP, TIP and conformity determination. All revisions to the MTP, TIP and conformity determination shall be made as part of the MPO's transportation planning process.

(e) The MPO shall, through its transportation planning process, notify the agencies represented on the TCTC regarding revisions and amendments to the MTP and TIP that merely add or delete exempt projects identified in 20.11.3.126 NMAC.

(f) If Bernalillo county is designated nonattainment for PM₁₀ or PM_{2.5}, the consultative process as specified in Subsection D of 20.11.3.105 NMAC shall be used to coordinate the identification of projects located at sites that have vehicle and roadway emission and dispersion characteristics which are similar to those sites that have violations verified by monitoring. A quantitative PM₁₀ hot-spot analysis shall be required for these projects in accordance with Subsection B of 20.11.3.123 NMAC. The air agency, in consultation with the MPO, shall advise the appropriate lead agency responsible for project development of the projects identified and the basis for their identification.

(g) The MPO shall provide written notification to all agencies in the MTP, TIP and conformity determination processes, including the AQCB, of plan revisions or plan amendments that merely add or delete exempt projects identified in 20.11.3.126 NMAC.

(h) Requirements for conformity tests for isolated rural nonattainment and maintenance areas shall be governed by Subparagraph (c) of Paragraph (2) of Subsection G of 20.11.3.109 NMAC.

(2) Interagency consultation procedures shall include the agencies specified in Paragraph (1) of Subsection D of 20.11.3.105 NMAC. These agencies shall participate in the following processes.

(a) In addition to the triggers defined in 20.11.3.105 NMAC, the air agency may request a new conformity determination when an emergency project involves substantial functional, location or capacity changes, or when the project may otherwise adversely affect the transportation conformity determination.

(b) If an adjacent area is designated nonattainment and the area includes another MPO, the agencies involved shall cooperatively share the responsibility for conducting conformity determinations for transportation activities that cross borders of the MPOs or nonattainment areas. An agreement shall be developed between the MPOs and other appropriate local and state government agencies to address the responsibilities of each for regional emissions analysis.

(3) Although the metropolitan planning area may not include all of the nonattainment/ maintenance area of Bernalillo county, the MPO (which is also the regional planning organization for all of Bernalillo county), in coordination with the state DOT, shall be responsible for conducting conformity analyses and conformity determinations for transportation activities for the entire nonattainment/ maintenance area that is located within the MPO's area of planning responsibility.

(4) Interagency consultation on regionally significant non-FHWA/FTA projects:

(a) Any group, entity or individual planning to construct a regionally significant transportation project that is not a FHWA/FTA project (including a project for which

alternative locations, design concept and scope, or the no-build option is still being considered), including projects planned by recipients of funds designated under Title 23 U.S.C. or the Federal Transit Act, shall ensure that these plans are disclosed to the MPO on a regular basis through the MTP and TIP development processes, or as soon as they are identified, and shall notify the MPO immediately of any changes to an existing plan so that these transportation projects can be incorporated into the regional emissions analysis and modeling for the nonattainment/maintenance area. Any member of the TCTC may request that the TCTC make a determination regarding whether a project is regionally significant. Upon receipt of a written request stating the reasons why the TCTC should make a determination, the EHD in coordination with the MRCOG shall convene a meeting of the TCTC to make a determination regarding regional significance. If the TCTC determines that the non-FHWA/FTA project is not regionally significant, no further actions by the TCTC are required. If the TCTC determines that the non-FHWA/FTA project is regionally significant, the TCTC will follow the requirements of 20.11.3 NMAC and the MPO will incorporate the project into the regional emissions analysis, the TIP and the MTP.

(b) The sponsor of any regionally significant project, and other recipients of funds designated under Title 23 U.S.C. or the Federal Transit Act, who knows about any such project through applications for approval, permitting, funding or otherwise gains knowledge of a regionally significant project, shall promptly disclose the project to the MPO. Such disclosures shall be made not later than the first occasion on which any of the following actions is sought: any MTB action or other action by government decision making bodies necessary for the project to proceed, the issuance of administrative permits for the facility or for construction of the facility, the execution of a contract to design or construct the facility, the execution of any indebtedness for the facility, any final action of a board, commission or administrator authorizing or directing employees to proceed with design, permitting or construction of the project, or the execution of any contract to design or construct or any approval needed for any facility that is dependent upon the completion of a regionally significant project. At the earliest opportunity, the MPO shall apprise the agencies participating in the consultation process identified above in Paragraph (1) of Subsection D of 20.11.3.105 NMAC of these projects and include them in the conformity analysis networks.

(c) Procedures to address non-conforming regionally significant projects not in the TIP or MTP or both. When an regionally significant project has not been included in the TIP or MTP or both, the TCTC shall participate in the air quality evaluation of a non-conforming regionally significant project to ensure that the project is integrated into the regional emissions analysis, the TIP and the MTP in a manner consistent with the MPO's transportation planning process, the requirements of 20.11.3 NMAC and other applicable federal requirements. Section 23 CFR 450.316 lists factors that shall be considered as part of the planning process. Among the factors that shall be considered is an analysis of the effects of all transportation projects to be undertaken within the metropolitan planning area, without regard to the funding source. Therefore, a regionally significant project funded entirely with local funding is subject to the planning requirements of Section 23 CFR 450.316. The analysis shall consider the effectiveness,

cost effectiveness, and financing of alternative investments in meeting transportation demand and supporting the overall efficiency and effectiveness of transportation system performance and related impacts on community/central city goals regarding social and economic development, housing and employment. Another factor that shall be considered is the overall social, economic, energy and environmental effects of transportation decisions (including consideration of the effects and impacts of the transportation plan on the human, natural and man-made environment and consultation with appropriate resource and permit agencies to ensure early and continued coordination with environmental resource protection and management plans, and appropriate emphasis on transportation-related air quality problems in support of 23 U.S.C. 109(h) and Section 14 of the Federal Transit Act (49 U.S.C. 1610), Section 4(f) of the DOT Act (49 U.S.C. 303) and Section 174(b) of the Clean Air Act (42 U.S.C. 7504(b)). All projects, including regionally significant projects not yet included in a TIP or MTP or both, shall follow the requirement in 23 CFR 450.316 that calls for a proactive public involvement process that provides complete information, timely public notice, full public access to key decisions, and supports early and continuing involvement of the public in developing plans and TIPs and that provides for involvement of local, state and federal environment resource (e.g., EPA, EHD) and permit agencies as appropriate.

(d) If a regionally significant project has not been disclosed in a timely manner to the MPO and other agencies involved in the consultation process, then, for the purposes of 20.11.3.121 NMAC, the regionally significant project shall not qualify as a conforming project until the project complies with the requirements of 20.11.3 NMAC. When a regionally significant project has not been included in the regional emissions analysis for the current conforming TIP or MTP or both, proceeding toward implementing the project without complying with 20.11.3.105 NMAC and 20.11.3.121 NMAC may be inconsistent with federal and local laws including, but not limited to the following.

(i) **23 U.S.C. Section 109(i).** This requires that the secretary of transportation for the DOT consult with the administrator for the EPA to develop and promulgate guidelines to assure that highways constructed pursuant to Title 23 of the U.S. Code are consistent with the applicable implementation plan pertaining to a nonattainment area or an attainment area subject to a maintenance plan. 20.11.3 NMAC is part of the applicable implementation plan.

(ii) **23 CFR Section 450.312, metropolitan transportation planning: Responsibilities, cooperation, and coordination.** This prohibits the MRCOG from approving any transportation plan or program that does not conform to the applicable implementation plan. Regionally significant projects are required to be included in the regional emissions analysis for the transportation plan or program.

(iii) **23 CFR Section 450.324, transportation improvement program: General.** This requires that the TIP include all regionally significant projects to be funded with non-federal funds in the air quality analysis for nonattainment areas and areas subject to a maintenance plan.

(iv) **20.11.3 NMAC, *Transportation Conformity*.** This regulation requires that regionally significant projects be included in the transportation plans and the regional emissions analysis. Failure to include a regionally significant project in a transportation plan violates 20.11.3 NMAC and jeopardizes approval of the regional MTP and the TIP.

(e) **Consequences of implementing a non-conforming regionally significant project:** Violations of 20.11.3 NMAC may result in criminal, civil and administrative penalties, including a potential administrative penalty of \$15,000 per day of non-compliance. In addition, the EPA may determine that implementing a nonconforming regionally significant project violates the applicable implementation plan, and the EPA may impose federal sanctions that would jeopardize the receipt of federal transportation funds to the affected area, including Title 23, U.S.C. or Federal Transit Act funds. In addition, the FHWA must periodically review the transportation planning process used by the MRCOG, and failure to follow federal requirements may adversely affect FHWA's certification of the MRCOG process.

(f) For the purposes of 20.11.3.105 NMAC and 20.11.3.121 NMAC, the phrase "adopt or approve a regionally significant project" means the first time any action necessary to authorize a project occurs, such as any MTB action or other action by government decision making bodies necessary for the project to proceed, the issuance of administrative permits for the facility or for construction of the facility, the execution of a contract to construct the facility, any final action of a board, commission or administrator authorizing or directing employees to proceed with construction of the project, or any written decision or authorization from the MPO that the project may be adopted or approved.

(5) When there is insufficient information to model the projects described in Paragraph (4) of Subsection D of 20.11.3.105 NMAC, the MPO, in consultation with the lead agency for the project, shall make assumptions about the location, timing, design concept and scope for those projects that are disclosed to the MPO as required in Paragraph (4) of Subsection D of 20.11.3.105 NMAC.

(6) The MPO or other consulting agencies shall provide copies of adopted documents and supporting information on the approved MTP or TIP conformity determination or adopted SIP revisions to all agencies listed in Paragraph (1) of Subsection D of 20.11.3.105 NMAC.

E. Resolving conflicts:

(1) The air agency and the MPO (or state DOT when applicable) shall make a good-faith effort to address the major concerns of the other party and reach a resolution. Every reasonable effort shall be made to resolve differences. In the event that the parties cannot reach agreement, the conflict shall be escalated to the governor.

(2) In the event that the parties agree that every reasonable effort has been made to address major concerns but no further progress is possible, the MPO shall promptly notify the director of the air agency in writing of the inability to resolve concerns or agree upon the final decision or action. Notification shall be provided within 30 days and shall be provided by registered mail. The MPO shall cite this paragraph in any such notification to the air agency.

(3) The air agency has 14 calendar days from the date of receipt of notification as required in Paragraph (2) of Subsection E of 20.11.3.105 NMAC to appeal to the governor. Notification shall be provided by registered mail. The air agency shall cite this paragraph in any notification of a conflict that requires action by the governor or his designee. If the air agency appeals to the governor, the final conformity determination shall have the concurrence of the governor. The governor or his designee may issue a written decision on the appeal within 30 calendar days of receipt of the appeal. If the air agency does not appeal to the governor within 14 calendar days from receipt of written notification, the MPO may proceed with the final conformity determination. The governor may delegate his role in this process, but not to the members or staff of: the AQCB, director of the city or county EHD, secretary of the environment department, chief of the state air quality bureau, manager of the city of Albuquerque's air quality division, the environmental improvement board, secretary of the DOT, state highway commission or an MPO.

F. Public consultation procedures: Affected agencies making conformity determinations on transportation plans, programs and projects shall establish a proactive public involvement process that provides opportunity for public review and comment by, at a minimum, providing reasonable public access to technical and policy information considered by the agency at the beginning of the public comment period and prior to taking formal action on a conformity determination for the MTP and TIP, consistent with these requirements and those of 23 CFR 450.316(b). Any charges imposed for public inspection and copying shall be consistent with the fee schedule contained in 49 CFR 7.43 and NMSA 14-2-9.B.3. In addition, these agencies shall specifically address in writing all public comments stating that known plans for a regionally significant project, which is not receiving FHWA or FTA funding or approval, have not been properly reflected in the emissions analysis that supports a proposed conformity finding for the MTP or TIP. These agencies shall also provide opportunity for public involvement in conformity determinations for projects where otherwise required by law.

[20.11.3.105 NMAC - Rn & A, 20.11.3.202 NMAC, 11/15/10; A, 10/15/12]

20.11.3.106 CONTENT OF TRANSPORTATION PLANS AND TIME FRAME OF CONFORMITY DETERMINATIONS:

A. Transportation plans adopted after January 1, 1997 in serious, severe or extreme ozone non-attainment areas and in serious CO nonattainment areas. If the metropolitan planning area contains an urbanized area population greater than

200,000, the transportation plan shall specifically describe the transportation system envisioned for certain future years which shall be called horizon years.

(1) The MPO, in developing the transportation plan in consultation with the affected agencies identified in Paragraph (1) of Subsection D of 20.11.3.105 NMAC, may choose any years to be horizon years, subject to the following restrictions:

(a) horizon years may be no more than 10 years apart;

(b) the first horizon year may be no more than 10 years from the base year used to validate the transportation demand planning model;

(c) the attainment year must be a horizon year if it is in the time frame of the transportation plan and conformity determination;

(d) the last year of the transportation plan's forecast period shall be a horizon year; and

(e) if the time frame of the conformity determination has been shortened under Subsection D of 20.11.3 NMAC, the last year of the time frame of the conformity determination must be a horizon year.

(2) For these horizon years:

(a) the transportation plan shall quantify and document the demographic and employment factors influencing expected transportation demand, including land use forecasts, in accordance with implementation plan provisions and the consultation requirements specified by 20.11.3.105 NMAC;

(b) the highway and transit system shall be described in terms of the regionally significant additions or modifications to the existing transportation network which the transportation plan envisions to be operational in the horizon years; additions and modifications to the highway network shall be sufficiently identified to indicate intersections with existing regionally significant facilities, and to determine their effect on route options between transportation analysis zones; each added or modified highway segment shall also be sufficiently identified in terms of its design concept and design scope to allow modeling of travel times under various traffic volumes, consistent with the modeling methods for area-wide transportation analysis in use by the MPO; transit facilities, equipment and services envisioned for the future shall be identified in terms of design concept, design scope and operating policies that are sufficient for modeling transit ridership; additions and modifications to the transportation network shall be described sufficiently to demonstrate a reasonable relationship between expected land use and the envisioned transportation system; and

(c) other future transportation policies, requirements, services and activities, including intermodal activities, shall be described.

B. Two-year grace period for transportation plan requirements in certain ozone and CO areas: The requirements of Subsection A of 20.11.3.106 NMAC apply to such areas or portions of such areas that have previously not been required to meet these requirements for any existing NAAQS two years from the following:

(1) the effective date of EPA's reclassification of an ozone or CO nonattainment area that has an urbanized area population greater than 200,000 to serious or above;

(2) the official notice by the census bureau that determines the urbanized area population of a serious or above ozone or CO nonattainment area to be greater than 200,000; or,

(3) the effective date of EPA's action that classifies a newly designated ozone or CO nonattainment area that has an urbanized area population greater than 200,000 as serious or above.

C. Transportation plans for other areas: Transportation plans for other areas shall meet the requirements of Subsection A of 20.11.3.106 NMAC at least to the extent it has been the previous practice of the MPO to prepare plans which meet those requirements. Otherwise, the transportation system envisioned for the future shall be sufficiently described within the transportation plans so that a conformity determination can be made according to the criteria and procedures of 20.11.3.109 NMAC through 20.11.3.119 NMAC.

D. Time frame of conformity determination:

(1) Unless an election is made under Paragraph (2) or (3) of Subsection D of 20.11.3.106 NMAC, the time frame of the conformity determination shall be through the last year of the transportation plan's forecast period.

(2) For areas that do not have an adequate or approved CAA Section 175A(b) maintenance plan, the MPO may elect to shorten the time frame of the transportation plan and TIP conformity determination, after consultation with state and local air quality agencies, solicitation of public comments, and consideration of such comments.

(a) The shortened time frame of the conformity determination must extend at least to the latest of the following years:

(i) the tenth year of the transportation plan;

(ii) the latest year for which an adequate or approved motor vehicle emissions budget(s) is established in the submitted or applicable implementation plan;
or

(iii) the year after the completion date of a regionally significant project if the project is included in the TIP or the project requires approval before the subsequent conformity determination.

(b) The conformity determination must be accompanied by a regional emissions analysis (for informational purposes only) for the last year of the transportation plan and for any year shown to exceed motor vehicle emissions budgets in a prior regional emissions analysis, if such a year extends beyond the time frame of the conformity determination.

(3) For areas that have an adequate or approved CAA Section 175A(b) maintenance plan, the MPO may elect to shorten the time frame of the conformity determination to extend through the last year of such maintenance plan after consultation with state and local air quality agencies, solicitation of public comments, and consideration of such comments.

(4) Any election made by an MPO under Paragraph (2) or (3) of Subsection D of 20.11.3.106 NMAC shall continue in effect until the MPO elects otherwise, after consultation with state and local air quality agencies, solicitation of public comments, and consideration of such comments.

E. Savings: The requirements of 20.11.3.106 NMAC supplement other requirements of applicable law or regulation governing the format or content of transportation plans.

[20.11.3.106 NMAC - Rn & A, 20.11.3.203 NMAC, 11/15/10]

20.11.3.107 RELATIONSHIP OF TRANSPORTATION PLAN AND TIP CONFORMITY WITH THE NEPA PROCESS:

The degree of specificity required in the transportation plan and the specific travel network assumed for air quality modeling do not preclude the consideration of alternatives in the NEPA process or other project development studies. Should the NEPA process result in a project with design concept and scope significantly different from that in the transportation plan or TIP, the project shall meet the criteria in 20.11.3.109 NMAC through 20.11.3.119 NMAC for projects not from a TIP before NEPA process completion.

[20.11.3.107 NMAC - Rn & A, 20.11.3.204 NMAC, 11/15/10]

20.11.3.108 FISCAL CONSTRAINTS FOR TRANSPORTATION PLANS AND TIPS:

Transportation plans and TIPs shall be fiscally constrained consistent with DOT's metropolitan planning regulations at 23 CFR Part 450 in order to be found in conformity. The determination that the MTP and TIP are fiscally constrained is made through the

MPO's transportation planning process, which includes the agencies represented in the consultation process described in Paragraph (1) of Subsection D of 20.11.3.105 NMAC.

[20.11.3.108 NMAC - Rn & A, 20.11.3.205 NMAC, 11/15/10]

20.11.3.109 CRITERIA AND PROCEDURES FOR DETERMINING CONFORMITY OF TRANSPORTATION PLANS, PROGRAMS, AND PROJECTS: GENERAL:

A. In order for each transportation plan, program, and FHWA/FTA project to be found to conform, the MPO and DOT shall demonstrate that the applicable criteria and procedures in 20.11.3 NMAC are satisfied. The MPO and DOT shall comply with all applicable conformity requirements of implementation plans and court orders for the area which pertain specifically to conformity. The criteria for making conformity determinations differ based on the action under review (transportation plans, TIPs and FHWA/FTA projects), the relevant pollutant(s) and the status of the implementation plan.

B. Table 1 in Subsection B of 20.11.3.109 NMAC indicates the criteria and procedures in 20.11.3.110 NMAC through 20.11.3.119 NMAC, which apply for transportation plans, TIPs and FHWA/FTA projects. Subsection C of 20.11.3.109 NMAC explains when the budget, and interim emissions tests are required for each pollutant and NAAQS. Subsection D of 20.11.3.109 NMAC explains when a hot-spot test is required. Subsection E of 20.11.3.109 NMAC addresses conformity requirements for areas with approved or adequate limited maintenance plans. Subsection F of 20.11.3.109 NMAC addresses nonattainment and maintenance areas which EPA has determined have insignificant motor vehicle emissions. Subsection G of 20.11.3.109 NMAC addresses isolated rural nonattainment and maintenance areas. Table 1 follows:

TABLE 1. CONFORMITY CRITERIA

All Actions at all times:	
20.11.3.110 NMAC	Latest planning assumptions
20.11.3.111 NMAC	Latest emissions model
20.11.3.112 NMAC	Consultation
Transportation Plan:	
Subsection B of 20.11.3.113 NMAC	TCMs.
20.11.3.118 or 20.11.3.119 NMAC	Emissions budget or interim emissions
TIP:	

	Subsection C of 20.11.3.113 NMAC	TCMs.
emissions	20.11.3.118 or 20.11.3.119 NMAC	Emissions budget or interim
Project (from a conforming plan and TIP):		
	20.11.3.114 NMAC	Currently conforming plan and TIP
	20.11.3.115 NMAC	Project from a conforming plan and TIP
	20.11.3.116 NMAC	CO, PM ₁₀ and PM _{2.5} hot-spots
	20.11.3.117 NMAC	PM ₁₀ and PM _{2.5} control measures
Project (Not From a Conforming Plan and TIP):		
	Subsection D of 20.11.3.113 NMAC	TCMs.
	20.11.3.114 NMAC	Currently conforming plan and TIP
	20.11.3.116 NMAC	CO, PM ₁₀ and PM _{2.5} hot-spots
	20.11.3.117 NMAC	PM ₁₀ and PM _{2.5} control measures
emissions	20.11.3.118 or 20.11.3.119 NMAC	Emissions budget or interim

C. Regional conformity test requirements for all nonattainment and maintenance areas: This provision applies one year after the effective date of EPA's nonattainment designation for a NAAQS in accordance with Subsection D of 20.11.3.2 NMAC and until the effective date of revocation of such NAAQS for an area. In addition to the criteria listed in Table 1 in Subsection B of 20.11.3.109 NMAC that are required to be satisfied at all times, in such nonattainment and maintenance areas, conformity determinations shall include a demonstration that the budget or interim emissions tests are satisfied as described in the following:

(1) In all nonattainment and maintenance areas for a NAAQS the budget test shall be satisfied as required by 20.11.3.118 NMAC for conformity determinations for such NAAQS made on or after:

(a) the effective date of EPA's finding that a motor vehicle emissions budget in a submitted control strategy implementation plan revision or maintenance plan for such NAAQS is adequate for transportation conformity purposes;

(b) the publication date of EPA's approval of such a budget in the federal register; or

(c) the effective date of EPA's approval of such a budget in the federal register, if such approval is completed through direct final rulemaking.

(2) Prior to Paragraph (1) of Subsection C of 20.11.3.109 NMAC applying for a NAAQS, in a nonattainment area that has approved or adequate motor vehicle emissions budgets in an applicable implementation plan or implementation plan submission for another NAAQS of the same pollutant, the following tests must be satisfied:

(a) if the nonattainment area covers the same geographic area as another NAAQS of the same pollutant, the budget test as required by 20.11.3.118 NMAC using the approved or adequate motor vehicle emissions budgets for that other NAAQS;

(b) if the nonattainment area covers a smaller geographic area within an area for another NAAQS of the same pollutant, the budget test as required by 20.11.3.118 NMAC for either:

(i) the nonattainment area, using corresponding portion(s) of the approved or adequate motor vehicle emissions budgets for that other NAAQS, where such portion(s) can reasonably be identified through the interagency consultation process required by 20.11.3.105 NMAC; or

(ii) the area designated nonattainment for that other NAAQS, using the approved or adequate motor vehicle emissions budgets for that other NAAQS. If additional emissions reductions are necessary to meet the budget test for the nonattainment area for a NAAQS in such cases, these emissions reductions must come from within such nonattainment area;

(c) if the nonattainment area covers a larger geographic area and encompasses an entire area for another NAAQS of the same pollutant, then either Item (i) or (ii) of Subparagraph (c) of Paragraph (2) of Subsection C of 20.11.3.109 NMAC must be met:

(i) the budget test as required by 20.11.3.118 NMAC for the portion of the nonattainment area covered by the approved or adequate motor vehicle emissions budgets for that other NAAQS; and 2. the interim emissions tests as required by 20.11.3.119 NMAC for one of the following areas: the portion of the nonattainment area not covered by the approved or adequate budgets for that other NAAQS; the entire nonattainment area; or the entire portion of the nonattainment area within an individual state, in the case where separate adequate or approved motor vehicle emissions budgets for that other NAAQS are established for each state of a multistate nonattainment or maintenance area;

(ii) the budget test as required by 20.11.3.118 NMAC for the entire nonattainment area using the approved or adequate motor vehicle emissions budgets for that other NAAQS;

(d) if the nonattainment area partially covers an area for another NAAQS of the same pollutant:

(i) the budget test as required by 20.11.3.118 NMAC for the portion of the nonattainment area covered by the corresponding portion of the approved or adequate motor vehicle emissions budgets for that other NAAQS, where they can be reasonably identified through the interagency consultation process required by 20.11.3.105 NMAC; and

(ii) the interim emissions tests as required by 20.11.3.119 NMAC, when applicable, for either: the portion of the nonattainment area not covered by the approved or adequate budgets for that other NAAQS; the entire nonattainment area; or the entire portion of the nonattainment area within an individual state, in the case where separate adequate or approved motor vehicle emissions budgets for that other NAAQS are established for each state of a multistate nonattainment or maintenance area.

(3) In a nonattainment area, the interim emissions tests required by 20.11.3.119 NMAC must be satisfied for a NAAQS if neither Paragraph (1) nor Paragraph (2) of Subsection C of 20.11.3.109 NMAC applies for such NAAQS.

(4) An ozone nonattainment area shall satisfy the interim emissions test for NO_x, as required by 20.11.3.119 NMAC, if the implementation plan or plan submission that is applicable for the purposes of conformity determinations is a 15% plan or other control strategy SIP that does not include a motor vehicle emissions budget for NO_x. The implementation plan for an NAAQS shall be considered to establish a motor vehicle emissions budget for NO_x if the implementation plan or plan submission contains an explicit NO_x motor vehicle emissions budget that is intended to act as a ceiling on future NO_x emissions, and the NO_x motor vehicle emissions budget is a net reduction from NO_x emissions levels in the SIP's baseline year.

(5) Notwithstanding Paragraphs (1), (2) and (3) of Subsection C of 20.11.3.109 NMAC, nonattainment areas with clean data for NAAQS that have not submitted a maintenance plan and that EPA has determined are not subject to the Clean Air Act reasonable further progress and attainment demonstration requirements for that NAAQS shall satisfy one of the following requirements:

(a) the budget test or the interim emissions tests as required by 20.11.3.118 NMAC and 20.11.3.119 NMAC as described in Paragraph (2) and (3) of Subsection C of 20.11.3.109 NMAC;

(b) the budget test as required by 20.11.3.118 NMAC, using the adequate or approved motor vehicle emissions budgets in the submitted or applicable control

strategy implementation plan for the NAAQS for which the area is designated nonattainment (subject to the timing requirements of Paragraph (1) of Subsection C of 20.11.3.109 NMAC; or

(c) the budget test as required by 20.11.3.118 NMAC, using the motor vehicle emissions in the most recent year of attainment as motor vehicle emissions budgets, if the state or local air quality agency requests that the motor vehicle emissions in the most recent year of attainment be used as budgets, and EPA approves the request in conjunction with the rulemaking that determines that the area has attained the NAAQS for which the area is designated nonattainment.

(6) For the PM₁₀ NAAQS only, the interim emissions tests must be satisfied as required by 20.11.3.119 NMAC for conformity determinations made if the submitted implementation plan revision for a PM₁₀ nonattainment area is a demonstration of impracticability under CAA Section 189(a)(1)(B)(ii) and does not demonstrate attainment.

D. Hot-spot conformity test requirements for CO, PM_{2.5} and PM₁₀ nonattainment and maintenance areas: This provision applies in accordance with Subsection D of 20.11.3.2 NMAC for a NAAQS and until the effective date of any revocation of such NAAQS for an area. In addition to the criteria listed in Table 1 in Subsection B of 20.11.3.109 NMAC that are required to be satisfied at all times, project-level conformity determinations in CO, PM₁₀ and PM_{2.5} nonattainment and maintenance areas shall include a demonstration that the hot-spot tests for the applicable NAAQS are satisfied as described in the following:

(1) FHWA/FTA projects in CO nonattainment or maintenance areas shall satisfy the hot-spot test required by Subsection A of 20.11.3.116 NMAC at all times; until a CO attainment demonstration or maintenance plan is approved by EPA, FHWA/FTA projects shall also satisfy the hot-spot test required by Subsection B of 20.11.3.116 NMAC;

(2) FHWA/FTA projects in PM₁₀ non-attainment or maintenance areas shall satisfy the appropriate hot-spot test required by Subsection A of 20.11.3.116 NMAC; and

(3) FHWA/FTA projects in PM_{2.5} nonattainment or maintenance areas must satisfy the appropriate hot-spot test required by Subsection A of 20.11.3.116 NMAC.

E. Areas with limited maintenance plans: Notwithstanding the other subsections of 20.11.3.109 NMAC, an area is not required to satisfy the regional emissions analysis for 20.11.3.118 NMAC or 20.11.3.119 NMAC for a given pollutant and NAAQS if the area has an adequate or approved limited maintenance plan for such pollutant and NAAQS. A limited maintenance plan would have to demonstrate that it would be unreasonable to expect that such an area would experience enough motor vehicle emissions growth for a NAAQS violation to occur. A conformity determination that meets

other applicable criteria in Table 1 of Subsection B of 20.11.3.109 NMAC is still required, including the hot-spot requirements for projects in CO PM₁₀ and PM_{2.5} areas.

F. Areas with insignificant motor vehicle emissions: Notwithstanding the other subsections of 20.11.3.109 NMAC, an area is not required to satisfy a regional emissions analysis for 20.11.3.118 NMAC or 20.11.3.119 NMAC for a given pollutant/precursor and NAAQS, if EPA finds through the adequacy or approval process that a SIP demonstrates that regional motor vehicle emissions are an insignificant contributor to the air quality problem for that pollutant/precursor and NAAQS. The SIP would have to demonstrate that it would be unreasonable to expect that such an area would experience enough motor vehicle emissions growth in that pollutant/precursor for a NAAQS violation to occur. Such a finding would be based on a number of factors, including the percentage of motor vehicle emissions in the context of the total SIP inventory, the current state of air quality as determined by monitoring data for that NAAQS, the absence of SIP motor vehicle control measures and historical trends and future projections of the growth of motor vehicle emissions. A conformity determination that meets other applicable criteria in Table 1 in Subsection B of 20.11.3.109 NMAC is still required, including regional emissions analyses for 20.11.3.118 NMAC or 20.11.3.119 NMAC for other pollutants/precursors and NAAQS that apply. Hot-spot requirements for projects in CO, PM₁₀ and PM_{2.5} areas in 20.11.3.116 NMAC shall also be satisfied, unless EPA determines that the SIP also demonstrates that projects will not create new localized violations or increase the severity or number of existing violations of such NAAQS. If EPA subsequently finds that motor vehicle emissions of a given pollutant/precursor are significant, this subsection would no longer apply for future conformity determinations for that pollutant/precursor and NAAQS.

G. Isolated rural non-attainment and maintenance areas: This subsection applies to any nonattainment or maintenance area (or portion thereof) which does not have a metropolitan transportation plan or TIP and whose projects are not part of the emissions analysis of any MPO's metropolitan transportation plan or TIP. This paragraph does not apply to "donut" areas which are outside the metropolitan planning boundary and inside the nonattainment/maintenance area boundary.

(1) FHWA/FTA projects in all isolated rural nonattainment and maintenance areas must satisfy the requirements of 20.11.3.110 NMAC, 20.11.3.111 NMAC, 20.11.3.112 NMAC, 20.11.3.116 NMAC, 20.11.3.117 NMAC and Subsection D of 20.11.3.113 NMAC. Until EPA approves the control strategy implementation plan or maintenance plan for a rural CO nonattainment or maintenance area, FHWA/FTA projects shall also satisfy the requirements of Subsection B of 20.11.3.116 NMAC.

(2) Isolated rural nonattainment and maintenance areas are subject to the budget or interim emissions tests as described in Subsection C of 20.11.3.109 NMAC, with the following modifications:

(a) When the requirements of Subsection D of 20.11.3.106 NMAC, 20.11.3.116 NMAC, 20.11.3.118 NMAC and 20.11.3.119 NMAC apply to isolated rural

nonattainment and maintenance areas, references to "transportation plan" or "TIP" shall be taken to mean those projects in the statewide transportation plan or statewide TIP that are in the rural nonattainment or maintenance area. When the requirements of Subsection D of 20.11.3.106 NMAC apply to isolated rural nonattainment and maintenance areas, references to "MPO" shall be taken to mean the state department of transportation.

(b) In isolated rural nonattainment and maintenance areas that are subject to 20.11.3.118 NMAC, FHWA/FTA projects shall be consistent with motor vehicle emissions budget(s) for the years in the time frame of the attainment demonstration or maintenance plan. For years after the attainment year (if a maintenance plan has not been submitted) or after the last year of the maintenance plan, FHWA/FTA projects shall satisfy one of the following requirements:

(i) 20.11.3.118 NMAC;

(ii) 20.11.3.119 NMAC (including regional emissions analysis for NO_x in all ozone nonattainment and maintenance areas, notwithstanding Paragraph (2) of Subsection F of 20.11.3.119 NMAC);

(iii) as demonstrated by the air quality dispersion model or other air quality modeling technique used in the attainment demonstration or maintenance plan, the FHWA/FTA project, in combination with all other regionally significant projects expected in the area in the time frame of the statewide transportation plan, shall not cause or contribute to any new violation of any standard in any areas; increase the frequency or severity of any existing violation of any standard in any area; or delay timely attainment of any standard or any required interim emission reductions or other milestones in any area; control measures assumed in the analysis shall be enforceable.

(c) The choice of requirements in Subparagraph (b) of Paragraph (2) of Subsection G of 20.11.3.109 NMAC and the methodology used to meet the requirements of Item (iii) of Subparagraph (b) of Paragraph (2) of Subsection G of 20.11.3.109 NMAC shall be determined through the interagency consultation process required in Subparagraph (h) of Paragraph (1) of Subsection D of 20.11.3.105 NMAC through which the relevant recipients of Title 23 U.S.C. or Federal Transit Laws funds, the local air quality agency, the state air quality agency and the state DOT shall reach consensus about the option and methodology selected. EPA and DOT shall be consulted through this process as well. In the event of unresolved disputes, conflicts may be escalated to the governor consistent with the procedure in Subsection E of 20.11.3.105 NMAC, which applies for any state air agency comments on a conformity determination.

[20.11.3.109 NMAC - Rn & A, 20.11.3.206 NMAC, 11/15/10; A, 10/15/12]

20.11.3.110 CRITERIA AND PROCEDURES: LATEST PLANNING ASSUMPTIONS:

A. Except as provided in Subsection A of 20.11.3.110 NMAC, the conformity determination, with respect to all other applicable criteria in 20.11.3.111 NMAC through 20.11.3.119 NMAC, shall be based upon the most recent planning assumptions in force at the time the conformity analysis begins. The conformity determination shall satisfy the requirements of Subsections B through F of 20.11.3.110 NMAC using the planning assumptions available at the time the conformity analysis begins as determined through the interagency consultation process required in Subparagraph (a) of Paragraph (1) of Subsection D of 20.11.105 NMAC. The "time the conformity analysis begins" for a transportation plan or TIP determination is the point at which the MPO or other designated agency begins to model the impact of the proposed transportation plan or TIP on travel or emissions. New data that becomes available after an analysis begins is required to be used in the conformity determination only if a significant delay in the analysis has occurred, as determined through the interagency consultation procedures described in 20.11.3.105 NMAC.

B. Assumptions shall be derived from the estimates of current and future population, employment, travel, and congestion most recently developed by the MPO or other agency authorized to make such estimates and approved by the MPO. These assumptions shall be presented to and discussed by the TCTC as part of the interagency consultation procedures described in Paragraph (1) of Subsection D of 20.11.3.105 NMAC. The conformity determination shall also be based on the latest assumptions about current and future background concentrations.

C. The conformity determination for each transportation plan and TIP shall discuss how transit operating policies (including fares and service levels) and assumed transit ridership have changed since the previous conformity determination. These assumptions shall be presented to and discussed by the TCTC as part of the interagency consultation procedures described in Paragraph (1) of Subsection D of 20.11.3.105 NMAC.

D. The conformity determination shall include reasonable assumptions about transit service and increases in transit fares and road and bridge tolls over time. These assumptions shall be presented to and discussed by the TCTC as part of the interagency consultation procedures described in Paragraph (1) of Subsection D of 20.11.3.105 NMAC.

E. The conformity determination shall use the latest existing information regarding the effectiveness of the TCMs and other implementation plan measures that have already been implemented. This information shall be made as part of the interagency consultation procedures described in Paragraph (1) of Subsection D of 20.11.3.105 NMAC.

F. Key assumptions shall be specified and included in the draft documents and supporting materials used for the interagency and public consultation required by 20.11.3.105 NMAC.

[20.11.3.110 NMAC - Rn & A, 20.11.3.207 NMAC, 11/15/10]

20.11.3.111 CRITERIA AND PROCEDURES: LATEST EMISSIONS MODEL:

A. The conformity determination shall be based on the latest emission estimation model available. This criterion is satisfied if the most current version of the motor vehicle emissions model specified by EPA for use in the preparation or revision of implementation plans for Bernalillo county is used for the conformity analysis. When options are allowed by EPA, the TCTC, as part of the interagency consultation described in Paragraph (1) of Subsection D of 20.11.3.105 NMAC, shall be responsible for determining the most appropriate emission estimation model to be used.

B. EPA shall consult with DOT to establish a grace period following the specification of any new model.

(1) The grace period shall be no less than three months and no more than 24 months after notice of availability is published in the federal register.

(2) The length of the grace period shall depend on the degree of change in the model and the scope of re-planning likely to be necessary by MPOs in order to assure conformity. If the grace period shall be longer than three months, EPA shall announce the appropriate grace period in the federal register.

C. Transportation plan and TIP conformity analyses for which the emissions analysis was begun during the grace period or before the federal register notice of availability of the latest emission model may continue to use the previous version of the model. Conformity determinations for projects may also be based on the previous model if the analyses were begun during the grace period or before the federal register notice of availability, and if the final environmental document for the project is issued no more than three years after the issuance of the draft environmental document.

[20.11.3.111 NMAC - Rn & A, 20.11.3.208 NMAC, 11/15/10]

20.11.3.112 CRITERIA AND PROCEDURES: CONSULTATION:

Conformity shall be determined according to the consultation procedures in 20.11.3 NMAC and in the applicable implementation plan, and according to the public involvement procedures established in compliance with 23 CFR Part 450. Until the implementation plan revision required by 40 CFR 51.390 is fully approved by EPA, the conformity determination shall be made according to Subsection A and Subsection F of 20.11.3.105 NMAC and the requirements of 23 CFR Part 450.

[20.11.3.112 NMAC - Rn & A, 20.11.3.209 NMAC, 11/15/10]

20.11.3.113 CRITERIA AND PROCEDURES: TIMELY IMPLEMENTATIONS OF TCMS:

A. The transportation plan, TIP or any FHWA/FTA project, which is not from a conforming plan and TIP, shall provide for the timely implementation of TCMs from the applicable implementation plan.

B. For transportation plans, this criterion is satisfied if the following two conditions are met.

(1) The transportation plan, in describing the envisioned future transportation system, provides for the timely completion or implementation of all TCMs in the applicable implementation plan, which are eligible for funding under Title 23 U.S.C. or the Federal Transit Laws, consistent with schedules included in the applicable implementation plan.

(2) Nothing in the transportation plan interferes with the implementation of any TCM in the applicable implementation plan.

C. For TIPs, this criterion is satisfied if the following conditions are met.

(1) An examination of the specific steps and funding source(s) needed to fully implement each TCM indicates that TCMs which are eligible for funding under Title 23 U.S.C. or the Federal Transit Laws are on or ahead of the schedule established in the applicable implementation plan or, if such TCMs are behind the schedule established in the applicable implementation plan, the MPO and DOT have determined that past obstacles to implementation of the TCMs have been identified and have been or are being overcome, and that all and local agencies with influence over approvals or funding for TCMs are giving maximum priority to approval or funding of TCMs over other projects within their control, including projects in locations outside the nonattainment or maintenance area.

(2) If TCMs in the applicable implementation plan have previously been programmed for federal funding but the funds have not been obligated and the TCMs are behind the schedule in the implementation plan, then the TIP cannot be found to conform if the funds intended for those TCMs are reallocated to projects in the TIP other than TCMs, or if there are no other TCMs in the TIP, if the funds are reallocated to projects in the TIP other than projects which are eligible for federal funding intended for air quality improvement projects, e.g., the congestion mitigation and air quality improvement program.

(3) Nothing in the TIP may interfere with the implementation of any TCM in the applicable implementation plan.

D. For FHWA/FTA projects that are not from a conforming transportation plan and TIP, this criterion is satisfied if the project does not interfere with the implementation of any TCM in the applicable implementation plan.

20.11.3.114 CRITERIA AND PROCEDURES: CURRENTLY CONFORMING TRANSPORTATION PLAN AND TIP:

There shall be a currently conforming transportation plan and currently conforming TIP at the time of project approval, or a project must meet the requirements in Subsection F of 20.11.3.104 NMAC during the 12-month lapse grace period.

A. Only one conforming transportation plan or TIP may exist in an area at any time; conformity determinations of a previous transportation plan or TIP expire once the current plan or TIP is found to conform by DOT. The conformity determination on a transportation plan or TIP shall also lapse if conformity is not determined according to the frequency requirements specified in 20.11.3.104 NMAC.

B. This criterion is not required to be satisfied at the time of project approval for a TCM specifically included in the applicable implementation plan, provided that all other relevant criteria of 20.11.3 NMAC are satisfied.

[20.11.3.114 NMAC - Rn & A, 20.11.3.211 NMAC, 11/15/10]

20.11.3.115 CRITERIA AND PROCEDURES: PROJECTS FROM A TRANSPORTATION PLAN AND TIP:

A. The project shall come from a conforming plan and program: If this criterion is not satisfied, the project must satisfy all criteria in Table 1 of Subsection B of 20.11.3.109 NMAC for a project not from a conforming transportation plan and TIP. A project is considered to be from a conforming transportation plan if it meets the requirements of Subsection B of 20.11.3.115 NMAC and from a conforming program if it meets the requirements of Subsection C of 20.11.3.115 NMAC. Special provisions for TCMs in an applicable implementation plan are provided in Subsection D of 20.11.3.115 NMAC.

B. A project is considered to be from a conforming transportation plan if one of the following conditions applies:

(1) for projects that are required to be identified in the transportation plan in order to satisfy 20.11.3.106 NMAC (content of transportation plans), the project is specifically included in the conforming transportation plan and the project's design concept and scope have not changed significantly from those which were described in the transportation plan, or in a manner which would significantly impact use of the facility; or

(2) for projects that are not required to be specifically identified in the transportation plan, the project is identified in the conforming transportation plan, or is consistent with the policies and purpose of the transportation plan and shall not interfere with other projects specifically included in the transportation plan.

C. A project is considered to be from a conforming program if the following conditions are met:

(1) the project is included in the conforming TIP and the design concept and scope of the project were adequate at the time of the TIP conformity determination to determine its contribution to the TIP's regional emissions, and the project design concept and scope have not changed significantly from those that were described in the TIP; and

(2) if the TIP describes a project design concept and scope which includes project-level emissions mitigation or control measures, written commitments to implement such measures shall be obtained from the project sponsor or operator as required by Subsection A of 20.11.3.125 NMAC in order for the project to be considered from a conforming program; any change in these mitigation or control measures that would significantly reduce their effectiveness constitutes a change in the design concept and scope of the project.

D. TCMs: This criterion is not required to be satisfied for TCMs specifically included in an applicable implementation plan.

E. Notwithstanding the requirements of Subsections A, B and C of 20.11.3.115 NMAC, a project shall meet the requirements of Subsection F of 20.11.3.104 during the 12-month lapse grace period.

[20.11.3.115 NMAC - Rn & A, 20.11.3.212 NMAC, 11/15/10]

20.11.3.116 CRITERIA AND PROCEDURES: LOCALIZED CO, PM₁₀ AND PM_{2.5} VIOLATIONS (hot-spots):

A. Subsection A of 20.11.3.116 NMAC applies at all times. The FHWA/FTA project shall not cause or contribute to any new localized CO, PM₁₀ or PM_{2.5} violations or increase the frequency or severity of any existing CO, PM₁₀ or PM_{2.5} violations, or delay timely attainment of any NAAQS or any required interim emission reductions or other milestones in CO, PM₁₀ and PM_{2.5} nonattainment and maintenance areas. This criterion is satisfied without a hot-spot analysis in PM₁₀ and PM_{2.5} nonattainment and maintenance areas for FHWA/FTA projects that are not identified in Paragraph (1) of Subsection B of 20.11.3.123 NMAC. This criterion is satisfied for all other FHWA/FTA projects in CO, PM₁₀ and PM_{2.5} nonattainment and maintenance areas if it is demonstrated that during the time frame of the transportation plan no new local violations will be created and the severity or number of existing violations will not be increased as a result of the project, and the project has been included in a regional emissions analysis that meets applicable 20.11.3.118 NMAC or 20.11.3.119 NMAC requirements. The demonstration shall be performed according to the consultation requirements of Paragraph (1) of Subsection D of 20.11.3.105 NMAC and the methodology requirements of 20.11.3.123 NMAC.

B. Subsection B of 20.11.3.116 NMAC applies for CO nonattainment areas as described in Paragraph (1) of Subsection D of 20.11.3.109 NMAC. Each FHWA/FTA project shall eliminate or reduce the severity and number of localized CO violations in the area substantially affected by the project (in CO nonattainment areas). This criterion is satisfied with respect to existing localized CO violations if it is demonstrated that during the time frame of the transportation plan (or regional emissions analysis) existing localized CO violations shall be eliminated or reduced in severity and number as a result of the project. The demonstration shall be performed according to the consultation requirements of Subparagraph (a) of Paragraph (1) of Subsection D of 20.11.3.105 NMAC and the methodology requirements of 20.11.3.123 NMAC.

[20.11.3.116 NMAC - Rn & A, 20.11.3.213 NMAC, 11/15/10; A, 10/15/12]

20.11.3.117 CRITERIA AND PROCEDURES: COMPLIANCE WITH PM₁₀ and PM_{2.5} CONTROL MEASURES:

The FHWA/FTA project shall comply with any PM₁₀ and PM_{2.5} control measures in the applicable implementation plan. This criterion is satisfied if the project-level conformity determination contains a written commitment from the project sponsor to include in the final plans, specifications and estimates for the project those control measures (for the purpose of limiting PM₁₀ and PM_{2.5} emissions from the construction activities or normal use and operation associated with the project) that are contained in the applicable implementation plan.

[20.11.3.117 NMAC - Rn, 20.11.3.214 NMAC, 11/15/10]

20.11.3.118 CRITERIA AND PROCEDURES: MOTOR VEHICLE EMISSIONS BUDGET:

A. The transportation plan, TIP and project not from a conforming transportation plan and TIP shall be consistent with the motor vehicle emissions budget(s) in the applicable implementation plan (or implementation plan submission). This criterion applies as described in Subsections C through G of 20.11.3.109 NMAC. This criterion is satisfied if it is demonstrated that emissions of the pollutants or pollutant precursors described in Subsection C of 20.11.3.118 NMAC are less than or equal to the motor vehicle emissions budget(s) established in the applicable implementation plan or implementation plan submission.

B. Consistency with the motor vehicle emissions budget(s) shall be demonstrated for each year for which the applicable (or submitted) implementation plan specifically establishes a motor vehicle emissions budget(s), and for each year for which a regional emissions analysis is performed to fulfill the requirements in Subsection D of 20.11.3.118 NMAC, as follows:

- (1) **Until a maintenance plan is submitted:**

(a) emissions in each year (such as milestone years and the attainment year) for which the control strategy implementation plan revision establishes motor vehicle emissions budget(s) shall be less than or equal to that years motor vehicle emissions budget(s); and

(b) emissions in years for which no motor vehicle emissions budget(s) are specifically established shall be less than or equal to the motor vehicle emissions budget(s) established for the most recent prior year; for example, emissions in years after the attainment year for which the implementation plan does not establish a budget shall be less than or equal to the motor vehicle emissions budget(s) for the attainment year.

(2) When a maintenance plan has been submitted:

(a) emissions shall be less than or equal to the motor vehicle emissions budget(s) established for the last year of the maintenance plan, and for any other years for which the maintenance plan establishes motor vehicle emissions budgets; if the maintenance plan does not establish motor vehicle emissions budgets for any years other than the last year of the maintenance plan, the demonstration of consistency with the motor vehicle emission budget(s) shall be accompanied by a qualitative finding that there are no factors which would cause or contribute to a new violation or exacerbate an existing violation in the years before the last year of the maintenance plan; the interagency consultation process required by 20.11.3.105 NMAC shall determine what shall be considered in order to make such a finding;

(b) for years after the last year of the maintenance plan, emissions shall be less than or equal to the maintenance plan's motor vehicle emissions budget(s) for the last year of the maintenance plan;

(c) if an approved or submitted control strategy implementation plan has established motor vehicle emissions budgets for years in the time frame of the transportation plan, emissions in these years shall be less than or equal to the control strategy implementation plan's motor vehicle emissions budget(s) for these years; and

(d) for any analysis years before the last year of the maintenance plan, emissions shall be less than or equal to the motor vehicle emissions budget(s) established for the most recent prior year.

C. Consistency with the motor vehicle emissions budget(s) shall be demonstrated for each pollutant or pollutant precursor in Subsection B of 20.11.3.2 NMAC for which the area is in nonattainment or maintenance and for which the applicable implementation plan (or implementation plan submission) establishes a motor vehicle emissions budget.

D. Consistency with the motor vehicle emissions budget(s) shall be demonstrated by including emissions from the entire transportation system, including all regionally

significant projects contained in the transportation plan and all other regionally significant highway and transit projects expected in the nonattainment or maintenance area in the time frame of the transportation plan.

(1) Consistency with the motor vehicle emissions budget(s) shall be demonstrated with a regional emissions analysis that meets the requirements of 20.11.3.122 NMAC and Subparagraph (a) of Paragraph (1) of Subsection D of 20.11.3.105 NMAC.

(2) The regional emissions analysis may be performed for any years in the time frame of the conformity determination (as described under Subsection D of 20.11.3.106 NMAC) provided they are not more than 10 years apart and provided the analysis is performed for the attainment year (if it is in the time frame of the transportation plan and conformity determination) and the last year of the time frame of the conformity determination. Emissions in years for which consistency with motor vehicle emissions budgets shall be demonstrated, as required in Subsection B of 20.11.3.118 NMAC, may be determined by interpolating between the years for which the regional emissions analysis is performed.

(3) When the time frame of the conformity determination is shortened under Paragraph (2) of Subsection D of 20.11.3.106 NMAC, the conformity determination shall be accompanied by a regional emissions analysis (for informational purposes only) for the last year of the transportation plan, and for any year shown to exceed motor vehicle emissions budgets in a prior regional emissions analysis (if such a year extends beyond the time frame of the conformity determination).

E. Motor vehicle emissions budgets in submitted control strategy implementation plan revisions and submitted maintenance plans:

(1) Consistency with the motor vehicle emissions budgets in submitted control strategy implementation plan revisions or maintenance plans shall be demonstrated if EPA has declared the motor vehicle emissions budget(s) adequate for transportation conformity purposes and the adequacy finding is effective. However, motor vehicle emission budgets in submitted implementation plans do not supersede the motor vehicle emissions budgets in approved implementation plans for the same Clean Air Act requirement and the period of years addressed by the previously approved implementation plan, unless EPA specifies otherwise in its approval of a SIP.

(2) If EPA has not declared an implementation plan submission's motor vehicle emissions budget(s) adequate for transportation conformity purposes, the budget(s) shall not be used to satisfy the requirements of 20.11.3.118 NMAC. Consistency with the previously established motor vehicle emissions budget(s) shall be demonstrated. If there are no previously approved implementation plans or implementation plan submissions with adequate motor vehicle emissions budgets, the interim emission tests required by 20.11.3.119 NMAC shall be satisfied.

(3) If EPA declares an implementation plan submission's motor vehicle emissions budget(s) inadequate for transportation conformity purposes after EPA had previously found the budget(s) adequate, and conformity of a transportation plan or TIP has already been determined by DOT using the budget(s), the conformity determination shall remain valid. Projects included in that transportation plan or TIP could still satisfy 20.11.3.114 NMAC and 20.11.3.115 NMAC, which require a currently conforming transportation plan and TIP to be in place at the time of a project's conformity determination and that projects come from a conforming transportation plan and TIP.

(4) EPA shall not find a motor vehicle emissions budget in a submitted control strategy implementation plan revision or maintenance plan to be adequate for transportation conformity purposes unless the following minimum criteria are satisfied:

(a) the submitted control strategy implementation plan revision or maintenance plan was endorsed by the governor (or his designee) and was subject to a state public hearing;

(b) before the control strategy implementation plan or maintenance plan was submitted to EPA, consultation among federal, state and local agencies occurred; full implementation plan documentation was provided to EPA; and EPA's stated concerns, if any, were addressed;

(c) the motor vehicle emissions budget(s) is clearly identified and precisely quantified;

(d) the motor vehicle emissions budget(s), when considered together with all other emissions sources, is consistent with applicable requirements for reasonable further progress, attainment or maintenance (whichever is relevant to the given implementation plan submission);

(e) the motor vehicle emissions budget(s) is consistent with and clearly related to the emissions inventory and the control measures in the submitted control strategy implementation plan revision or maintenance plan; and

(f) revisions to previously submitted control strategy implementation plans or maintenance plans explain and document any changes to previously submitted budgets and control measures; impacts on point and area source emissions; any changes to established safety margins (see 20.11.3.7 NMAC for definition); and reasons for the changes (including the basis for any changes related to emission factors or estimates of vehicle miles traveled).

(5) Before determining the adequacy of a submitted motor vehicle emissions budget, EPA shall review the state's compilation of public comments and response to comments that are required to be submitted with any implementation plan. EPA shall document its consideration of such comments and responses in a letter to the state indicating the adequacy of the submitted motor vehicle emissions budget.

(6) When the motor vehicle emissions budget(s) used to satisfy the requirements of 20.11.3.118 NMAC are established by an implementation plan submittal that has not yet been approved or disapproved by EPA, the MPO and DOT's conformity determinations shall be deemed to be a statement that the MPO and DOT are not aware of any information that would indicate that emissions consistent with the motor vehicle emissions budget shall cause or contribute to any new violation of any standard; increase the frequency or severity of any existing violation of any standard; or delay timely attainment of any standard or any required interim emission reductions or other milestones.

F. Adequacy review process for implementation plan submissions: EPA will use the procedure listed in Paragraph (1) or Paragraph (2) of Subsection F of 20.11.3.118 NMAC to review the adequacy of an implementation plan submission:

(1) When EPA reviews the adequacy of an implementation plan submission prior to EPA's final action on the implementation plan,

(a) EPA will notify the public through EPA's website when EPA receives an implementation plan submission that will be reviewed for adequacy;

(b) the public will have a minimum of 30 days to comment on the adequacy of the implementation plan submission; if the complete implementation plan is not accessible electronically through the internet and a copy is requested within 15 days of the date of the website notice, the comment period will be extended for 30 days from the date that a copy of the implementation plan is mailed;

(c) after the public comment period closes, EPA will inform the state in writing whether EPA has found the submission adequate or inadequate for use in transportation conformity, including response to any comments submitted directly and review of comments submitted through the state process, or EPA will include the determination of adequacy or inadequacy in a proposed or final action approving or disapproving the implementation plan under Subparagraph (c) of Paragraph (2) of Subsection F of 20.11.3.118 NMAC;

(d) EPA will publish a federal register notice to inform the public of EPA's finding; if EPA finds the submission adequate, the effective date of this finding will be 15 days from the date the notice is published as established in the federal register notice, unless EPA is taking a final approval action on the SIP as described in Subparagraph (c) of Paragraph (2) of Subsection F of 20.11.3.118 NMAC;

(e) EPA will announce whether the implementation plan submission is adequate or inadequate for use in transportation conformity on EPA's website; the website will also include EPA's response to comments if any comments were received during the public comment period;

(f) if after EPA has found a submission adequate, EPA has cause to reconsider this finding, EPA will repeat actions described in Subparagraphs (a) through (e) of Paragraph (1) or Paragraph (2) of Subsection F of 20.11.3.118 NMAC unless EPA determines that there is no need for additional public comment given the deficiencies of the implementation plan submission; in all cases where EPA reverses its previous finding to a finding of inadequacy under Paragraph (1) of Subsection F of 20.11.3.118 NMAC, such a finding will become effective immediately upon the date of EPA's letter to the state;

(g) if after EPA has found a submission inadequate, EPA has cause to reconsider the adequacy of that budget, EPA will repeat actions described in Subparagraphs (a) through (e) of Paragraph (1) or Paragraph (2) of Subsection F of 20.11.3.118 NMAC.

(2) When EPA reviews the adequacy of an implementation plan submission simultaneously with EPA's approval or disapproval of the implementation plan,

(a) EPA's federal register notice of proposed or direct final rulemaking will serve to notify the public that EPA will be reviewing the implementation plan submission for adequacy;

(b) the publication of the notice of proposed rulemaking will start a public comment period of at least 30 days;

(c) EPA will indicate whether the implementation plan submission is adequate and thus can be used for conformity either in EPA's final rulemaking or through the process described in Subparagraphs (c) through (e) of Paragraphs (1) of Subsection F of 20.11.3.118 NMAC; if EPA makes an adequacy finding through a final rulemaking that approves the implementation plan submission, such a finding will become effective upon the publication date of EPA's approval in the federal register, or upon the effective date of EPA's approval if such action is conducted through direct final rulemaking; EPA will respond to comments received directly and review comments submitted through the state process and include the response to comments in the applicable docket.

[20.11.3.118 NMAC - Rn & A, 20.11.3.215 NMAC, 11/15/10; A, 10/15/12]

20.11.3.119 CRITERIA AND PROCEDURES: INTERIM EMISSIONS IN AREAS WITHOUT MOTOR VEHICLE EMISSIONS BUDGETS:

A. The transportation plan, TIP and project not from a conforming transportation plan and TIP shall satisfy the interim emissions test(s) as described in Subsections C through G of 20.11.3.109 NMAC. This criterion applies to the net effect of the action (transportation plan, TIP or project not from a conforming transportation plan and TIP) on motor vehicle emissions from the entire transportation system.

B. Ozone areas: The requirements of Subsection B of 20.11.3.119 NMAC apply to all ozone NAAQS areas, except for certain requirements as indicated. This criterion may be met:

(1) in moderate and above ozone nonattainment areas that are subject to the reasonable further progress requirements of CAA Section 182(b)(1) if a regional emissions analysis that satisfies the requirements of 20.11.3.122 NMAC and Subsections G through J of 20.11.3.119 NMAC demonstrates that for each analysis year and for each of the pollutants described in Subsection F of 20.11.3.119 NMAC:

(a) the emissions predicted in the "action" scenario are less than the emissions predicted in the "baseline" scenario, and this can be reasonably expected to be true in the periods between the analysis years; and

(b) the emissions predicted in the "action" scenario are lower than emissions in the baseline year for that NAAQS as described in Subsection E of 20.11.3.119 NMAC by any nonzero amount;

(2) in marginal and below ozone nonattainment areas and other ozone nonattainment areas that are not subject to the reasonable further progress requirements of CAA Section 182(b)(1) if a regional emissions analysis that satisfies the requirements of 20.11.3.122 NMAC and Subsections G through J of 20.11.3.119 NMAC demonstrates that for each analysis year and for each of the pollutants described in Subsection F of 20.11.3.119 NMAC:

(a) the emissions predicted in the "action" scenario are not greater than the emissions predicted in the "baseline" scenario, and this can be reasonably expected to be true in the periods between the analysis years; or

(b) the emissions predicted in the "action" scenario are not greater than emissions in the baseline year for that NAAQS as described in Subsection E of 20.11.3.119 NMAC.

C. CO areas: This criterion may be met:

(1) in moderate areas with design value greater than 12.7 ppm and serious CO nonattainment areas that are subject to CAA Section 187(a)(7) if a regional emissions analysis that satisfies the requirements of 20.11.3.122 NMAC and Subsections G through J of 20.11.3.119 NMAC demonstrates that for each analysis year and for each of the pollutants described in Subsection F of 20.11.3.119 NMAC:

(a) the emissions predicted in the "action" scenario are less than the emissions predicted in the "baseline" scenario, and this can be reasonably expected to be true in the periods between the analysis years; and

(b) the emissions predicted in the "action" scenario are lower than emissions in the baseline year for that NAAQS as described in Subsection E of 20.11.3.119 NMAC by any nonzero amount;

(2) in moderate areas with design value less than 12.7 ppm and not classified CO nonattainment areas if a regional emissions analysis that satisfies the requirements of 20.11.3.122 NMAC and Subsections G through J of 20.11.3.119 NMAC demonstrates that for each analysis year and for each of the pollutants described in Subsection F of 20.11.3.119 NMAC:

(a) the emissions predicted in the "action" scenario are not greater than the emissions predicted in the "baseline" scenario, and this can be reasonably expected to be true in the periods between the analysis years; or

(b) the emissions predicted in the "action" scenario are not greater than emissions in the baseline year for that NAAQS as described in Subsection E of 20.11.3.119 NMAC.

D. PM_{2.5}, PM₁₀ and NO₂ areas: This criterion may be met in PM_{2.5}, PM₁₀ and NO₂ nonattainment areas if a regional emissions analysis that satisfies the requirements of 20.11.3.122 NMAC and Subsections G through J of 20.11.3.119 NMAC demonstrates that for each analysis year and for each of the pollutants described in Subsection F of 20.11.3.119 NMAC, one of the following requirements is met:

(1) the emissions predicted in the "action" scenario are not greater than the emissions predicted in the "baseline" scenario, and this can be reasonably expected to be true in the periods between the analysis years; or

(2) the emissions predicted in the "action" scenario are not greater than emissions in the baseline year for that NAAQS as described in Subsection E of 20.11.3.119 NMAC; baseline emissions are those estimated to have occurred during calendar year 1990, unless the conformity implementation plan revision required by 40 CFR 51.390 defines the baseline emissions for a PM₁₀ area to be those occurring in a different calendar year for which a baseline emissions inventory was developed for the purpose of developing a control strategy implementation plan.

E. Baseline year for various NAAQS: The baseline year is defined as follows:

(1) 1990, in areas designated nonattainment for the 1990 CO NAAQS or the 1990 NO₂ NAAQS.

(2) 1990, in areas designated nonattainment for the 1990 PM₁₀ NAAQS, unless the conformity implementation plan revision required by 40 CFR 51.390 defines the baseline emissions for a PM₁₀ area to be those occurring in a different calendar year for which a baseline emissions inventory was developed for the purpose of developing a control strategy implementation plan.

(3) 2002, in areas designated nonattainment for the 1997 ozone NAAQS or 1997 PM_{2.5} NAAQS.

(4) the most recent year for which EPA's Air Emissions Reporting Rule (40 CFR Part 51, Subpart A) requires submission of on-road mobile source emissions inventories, as of the effective date of designations in areas designated nonattainment for a NAAQS that is promulgated after 1997.

F. Pollutants: The regional emissions analysis shall be performed for the following pollutants:

- (1) VOC in ozone areas;
- (2) NO_x in ozone areas, unless the EPA administrator determines that additional reductions of NO_x would not contribute to attainment;
- (3) CO in CO areas;
- (4) PM₁₀ in PM₁₀ areas;
- (5) VOC and NO_x in PM₁₀ areas if the EPA regional administrator or the director of the air agency has made a finding that one or both of such precursor emissions from within the area are a significant contributor to the PM₁₀ nonattainment problem and has so notified the MPO and DOT;
- (6) NO_x in NO₂ areas;
- (7) PM_{2.5} in PM_{2.5} areas;
- (8) re-entrained road dust in PM_{2.5} areas only if the EPA regional administrator or the director of the air agency has made a finding that emissions from re-entrained road dust within the area are a significant contributor to the PM_{2.5} nonattainment problem and has so notified the MPO and DOT;
- (9) NO_x in PM_{2.5} areas, unless the EPA regional administrator and the director of the state air agency have made a finding that emissions of NO_x from within the area are not a significant contributor to the PM_{2.5} nonattainment problem and has so notified the MPO and DOT; and
- (10) VOC, SO₂ and ammonia in PM_{2.5} areas if the EPA regional administrator or the director of the state air agency has made a finding that any of such precursor emissions from within the area are a significant contributor to the PM_{2.5} nonattainment problem and has so notified the MPO and DOT.

G. Analysis Years:

(1) The regional emissions analysis shall be performed for analysis years that are no more than 10 years apart. The first analysis year shall be no more than five years beyond the year in which the conformity determination is being made. The last year of the time frame of the conformity determination (as described under Subsection D of 20.11.3.106 NMAC) shall also be an analysis year.

(2) For areas using Subparagraph (a) of Paragraph (2) of Subsection B, Subparagraph (a) of Paragraph (2) of Subsection C, and Paragraph (1) of Subsection D of 20.11.3.119 NMAC, a regional emissions analysis that satisfies the requirements of 20.11.3.122 NMAC and Subsections G through J of 20.11.3.119 NMAC would not be required for analysis years in which the transportation projects and planning assumptions in the action and "baseline" scenarios are exactly the same. In such a case, Subsection A of 20.11.3.119 NMAC can be satisfied by documenting that the transportation projects and planning assumptions in both scenarios are exactly the same, and consequently, the emissions predicted in the "action" scenario are not greater than the emissions predicted in the "baseline" scenario for such analysis years.

(3) When the time frame of the conformity determination is shortened under Paragraph (2) of Subsection D of 20.11.3.106 NMAC, the conformity determination must be accompanied by a regional emissions analysis (for informational purposes only) for the last year of the transportation plan.

H. "Baseline" scenario: The regional emissions analysis required by Subsections B through E of 20.11.3.119 NMAC shall estimate the emissions that would result from the "baseline" scenario in each analysis year. The "baseline" scenario shall be defined for each of the analysis years. The "baseline" scenario is the future transportation system that shall result from current programs; including the following (except that exempt projects list in 20.11.3.126 NMAC and projects exempt from regional emissions analysis as listed in 20.11.3.127 NMAC need not be explicitly considered):

(1) all in-place regionally significant highway and transit facilities, services and activities;

(2) all ongoing travel demand management or transportation system management activities; and

(3) completion of all regionally significant projects, regardless of funding source, which are currently under construction or are undergoing right-of-way acquisition (except for hardship acquisition and protective buying); come from the first year of the previously conforming transportation plan or TIP; or have completed the NEPA process.

I. "Action" scenario: The regional emissions analysis required by Subsections B through E of 20.11.3.119 NMAC shall estimate the emissions that would result from the "action" scenario in each analysis year. The "action" scenario shall be defined for each of the analysis years. The "action" scenario is the transportation system that would

result from the implementation of the proposed action (MTP, TIP or project not from a conforming transportation plan and TIP) and all other expected regionally significant projects in the nonattainment area. The "action" scenario shall include the following (except that exempt projects listed in 20.11.3.126 NMAC and projects exempt from regional emissions analysis as listed in 20.11.3.127 NMAC need not be explicitly considered):

- (1) all facilities, services and activities in the "baseline" scenario;
- (2) completion of all TCMs and regionally significant projects (including facilities, services, and activities) specifically identified in the proposed transportation plan which shall be operational or in effect in the analysis year, except that regulatory TCMs may not be assumed to begin at a future time unless the regulation is already adopted by the enforcing jurisdiction or the TCM is identified in the applicable implementation plan;
- (3) all travel demand management programs and transportation system management activities known to the MPO, but not included in the applicable implementation plan or utilizing any federal funding or approval, which have been fully adopted or funded by the enforcing jurisdiction or sponsoring agency since the last conformity determination;
- (4) the incremental effects of any travel demand management programs and transportation system management activities known to the MPO, but not included in the applicable implementation plan or utilizing any federal funding or approval, which were adopted or funded prior to the date of the last conformity determination, but which have been modified since then to be more stringent or effective;
- (5) completion of all expected regionally significant highway and transit projects which are not from a conforming transportation plan and TIP; and
- (6) completion of all expected regionally significant non-FHWA/FTA highway and transit projects that have clear funding sources and commitments leading toward their implementation and completion by the analysis year.

J. Projects not from a conforming transportation plan and TIP: For the regional emissions analysis required by Subsections B through E of 20.11.3.119 NMAC, if the project which is not from a conforming transportation plan and TIP is a modification of a project currently in the plan or TIP, the "baseline" scenario shall include the project with its original design concept and scope, and the "action" scenario shall include the project with its new design concept and scope.

[20.11.3.119 NMAC - Rn & A, 20.11.3.216 NMAC, 11/15/10; A, 10/15/12]

20.11.3.120 CONSEQUENCES OF CONTROL STRATEGY IMPLEMENTATION PLAN FAILURES:

A. Disapprovals:

(1) If EPA disapproves any submitted control strategy implementation plan revision (with or without a protective finding), the conformity status of the transportation plan and TIP shall lapse on the date that highway sanctions as a result of the disapproval are imposed on the nonattainment area under Section 179(b)(1) of the CAA. No new transportation plan, TIP or project may be found to conform until another control strategy implementation plan revision fulfilling the same CAA requirements is submitted and conformity to this submission is determined.

(2) If EPA disapproves a submitted control strategy implementation plan revision without making a protective finding, only projects in the first four years of the currently conforming transportation plan and TIP or that meet the requirements of Subsection F of 20.11.3.104 NMAC during the 12-month lapse grace period may be found to conform. This means that beginning on the effective date of a disapproval without a protective finding, no transportation plan, TIP or project not in the first four years of the currently conforming transportation plan and TIP or that meets the requirements of Subsection F of 20.11.3.104 NMAC during the 12-month lapse grace period may be found to conform until another control strategy implementation plan revision fulfilling the same CAA requirements is submitted, EPA finds its motor vehicle emissions budget(s) adequate pursuant to 20.11.3.118 NMAC or approves the submission, and conformity to the implementation plan revision is determined.

(3) In disapproving a control strategy implementation plan revision, EPA would give a protective finding where a submitted plan contains adopted control measures or written commitments to adopt enforceable control measures that fully satisfy the emissions reductions requirements relevant to the statutory provision for which the implementation plan revision was submitted, such as reasonable further progress or attainment.

B. Failure to submit and incompleteness: In areas where EPA notifies the state, MPO and DOT of the state's failure to submit a control strategy implementation plan or submission of an incomplete control strategy implementation plan revision (either of which initiates the sanction process under CAA Sections 179 or 110(m)), the conformity status of the transportation plan and TIP shall lapse on the date that highway sanctions are imposed on the nonattainment area for such failure under Section 179(b)(1) of the CAA, unless the failure has been remedied and acknowledged by a letter from the EPA regional administrator.

C. Federal implementation plans: If EPA promulgates a federal implementation plan that contains motor vehicle emissions budget(s) as a result of a state failure, the conformity lapse imposed by 20.11.3.120 NMAC because of that failure is removed.

[20.11.3.120 NMAC - Rn & A, 20.11.3.217 NMAC, 11/15/10]

20.11.3.121 REQUIREMENTS FOR ADOPTION OR APPROVAL OF PROJECTS BY OTHER RECIPIENTS OF FUNDS DESIGNATED UNDER TITLE 23 U.S.C. OR THE FEDERAL TRANSIT LAWS.

A. Except as provided in Subsection B of 20.11.3.121 NMAC, no recipient of federal funds designated under Title 23 U.S.C. or the Federal Transit Laws shall adopt or approve a regionally significant highway or transit project, regardless of funding source, unless the recipient finds that the requirements of one of the following are met:

(1) the project comes from the currently conforming transportation plan and TIP (or meets the requirements of Subsection F of 20.11.3.104 NMAC during the 12-month lapse grace period), and the project's design concept and scope have not changed significantly from those which were included in the regional emissions analysis for that transportation plan and TIP;

(2) the project is included in the regional emissions analysis for the currently conforming transportation plan and TIP conformity determination (or meets the requirements of Subsection F of 20.11.3.104 NMAC during the 12-month lapse grace period), even if the project is not strictly included in the transportation plan or TIP for the purpose of MPO project selection or endorsement, and the project's design concept and scope have not changed significantly from those which were included in the regional emissions analysis; or

(3) a new regional emissions analysis including the project and the currently conforming transportation plan and TIP demonstrates that the transportation plan and TIP would still conform if the project were implemented (consistent with the requirements of 20.11.3.118 NMAC or 20.11.3.119 NMAC for a project not from a conforming transportation plan and TIP).

B. In isolated rural nonattainment and maintenance areas subject to Subsection G of 20.11.3.109 NMAC, no recipient of federal funds designated under Title 23 U.S.C. or the Federal Transit Laws shall adopt or approve a regionally significant highway or transit project, regardless of funding source, unless the recipient finds that the requirements of one of the following are met:

(1) the project was included in the regional emissions analysis supporting the most recent conformity determination that reflects the portion of the statewide transportation plan and statewide TIP which are in the nonattainment or maintenance area, and the project's design concept and scope have not changed significantly; or

(2) a new regional emissions analysis including the project and all other regionally significant projects expected in the nonattainment or maintenance area demonstrates that those projects in the statewide transportation plan and statewide TIP which are in the nonattainment or maintenance area would still conform if the project were implemented (consistent with the requirements 20.11.3.118 NMAC or 20.11.3.119 NMAC for projects not from a conforming transportation plan and TIP).

C. Notwithstanding Subsection A and Subsection B of 20.11.3.121 NMAC, in nonattainment and maintenance areas subject to Subsection E or Subsection F of 20.11.3.109 NMAC for a given pollutant/precursor and NAAQS, no recipient of federal funds designated under Title 23 U.S.C. or the Federal Transit Laws shall adopt or approve a regionally significant highway or transit project, regardless of funding source, unless the recipient finds that the requirements of one of the following are met for that pollutant/precursor and NAAQS:

(1) the project was included in the most recent conformity determination for the transportation plan and TIP and the project's design concept and scope has not changed significantly; or

(2) the project was included in the most recent conformity determination that reflects the portion of the statewide transportation plan and statewide TIP which are in the nonattainment or maintenance area, and the project's design concept and scope have not changed significantly.

[20.11.3.121 NMAC - Rn & A, 20.11.3.218 NMAC, 11/15/10; A, 10/15/12]

20.11.3.122 PROCEDURES FOR DETERMINING REGIONAL TRANSPORTATION-RELATED EMISSIONS:

A. General requirements:

(1) The regional emissions analysis required by 20.11.3.118 NMAC and 20.11.3.119 NMAC for the transportation plan, TIP or project not from a conforming plan and TIP shall include all regionally significant projects expected in the nonattainment or maintenance area. The analysis shall include FHWA/FTA projects proposed in the transportation plan and TIP and all other regionally significant projects which are disclosed to the MPO as required by 20.11.3.105 NMAC. Projects which are not regionally significant are not required to be explicitly modeled, but vehicle miles traveled (VMT) from such projects shall be estimated in accordance with reasonable professional practice and shall be reviewed by the TCTC as part of the interagency consultation described in Paragraph (1) of Subsection D of 20.11.3.105 NMAC. The effects of TCMs and similar projects that are not regionally significant may also be estimated in accordance with reasonable professional practice and shall be reviewed by the TCTC as part of the interagency consultation described in Paragraph (1) of Subsection D of 20.11.3.105 NMAC.

(2) The emissions analysis may not include for emissions reduction credit any TCMs or other measures in the applicable implementation plan which have been delayed beyond the scheduled date(s) until such time as their implementation has been assured. If the measure has been partially implemented and it can be demonstrated that it is providing quantifiable emission reduction benefits, the emissions analysis may include that emissions reduction credit.

(3) Emissions reduction credit from projects, programs or activities which require a regulatory action in order to be implemented may not be included in the emissions analysis unless:

(a) the regulatory action is already adopted by the enforcing jurisdiction;

(b) the project, program or activity is included in the applicable implementation plan;

(c) the control strategy implementation plan submission or maintenance plan submission that establishes the motor vehicle emissions budget(s) for the purposes of 20.11.3.118 NMAC contains a written commitment to the project, program or activity by the agency with authority to implement it; or

(d) EPA has approved an opt-in to a federally enforced program, EPA has promulgated the program (if the control program is a federal responsibility, such as vehicle tailpipe standards), or the Clean Air Act requires the program without need for individual state action and without any discretionary authority for EPA to set its stringency, delay its effective date or not implement the program.

(4) Emissions reduction credit from control measures that are not included in the transportation plan and TIP and that do not require a regulatory action in order to be implemented may not be included in the emissions analysis unless the conformity determination includes written commitments to implementation from the appropriate entities.

(a) Persons or entities voluntarily committing to control measures shall comply with the obligations of such commitments.

(b) The conformity implementation plan revision required in 40 CFR 51.390 shall provide that written commitments to control measures that are not included in the transportation plan and TIP shall be obtained prior to a conformity determination and that such commitments shall be fulfilled.

(5) A regional emissions analysis for the purpose of satisfying the requirements of 20.11.3.119 NMAC shall make the same assumptions in both the baseline and "action" scenarios regarding control measures that are external to the transportation system itself, such as vehicle tailpipe or evaporative emission standards, limits on gasoline volatility, vehicle inspection and maintenance programs, and oxygenated or reformulated gasoline or diesel fuel.

(6) The ambient temperatures used for the regional emissions analysis shall be consistent with those used to establish the emissions budget in the applicable implementation plan. All other factors, for example the fraction of travel in a hot stabilized engine mode, shall be consistent with the applicable implementation plan, unless modified after interagency consultation according to Subparagraph (a) of

Paragraph (1) of Subsection D of 20.11.3.105 NMAC to incorporate additional or more geographically specific information or represent a logically estimated trend in such factors beyond the period considered in the applicable implementation plan.

(7) Reasonable methods shall be used to estimate nonattainment or maintenance area VMT on off-network roadways within the urban transportation planning area, and on roadways outside the urban transportation planning area.

B. Regional emissions analysis in serious, severe and extreme ozone nonattainment areas and serious CO nonattainment areas shall meet the requirements of Paragraphs (1) through (3) of Subsection B of 20.11.3.122 NMAC if their metropolitan planning area contains an urbanized area population over 200,000.

(1) By January 1, 1997, estimates of regional transportation-related emissions used to support conformity determinations shall be made at a minimum using network-based travel models according to procedures and methods that are available and in practice and supported by current and available documentation. These procedures, methods and practices are available from DOT and shall be updated periodically. Agencies shall discuss these modeling procedures and practices through the interagency consultation process as required by Subparagraph (a) of Paragraph (1) of Subsection D of 20.11.3.105 NMAC. Network-based travel models shall at a minimum satisfy the following requirements:

(a) network-based travel models shall be validated against observed counts (peak and off-peak, if possible) for a base year that is not more than 10 years prior to the date of the conformity determination; model forecasts shall be analyzed for reasonableness and compared to historical trends and other factors, and the results shall be documented;

(b) land use, population, employment and other network-based travel model assumptions shall be documented and based on the best available information; future speeds shall be determined through interagency consultation as described in Paragraph (1) of Subsection D of 20.11.3.105 NMAC;

(c) scenarios of land development and use shall be consistent with the future transportation system alternatives for which emissions are being estimated; the distribution of employment and residences for different transportation options shall be reasonable;

(d) a capacity-sensitive assignment methodology shall be used, and emissions estimates shall be based on a methodology which differentiates between peak and off-peak link volumes and speeds and uses speeds based on final assigned volumes;

(e) zone-to-zone travel impedances used to distribute trips between origin and destination pairs shall be in reasonable agreement with the travel times that are

estimated from final assigned traffic volumes and shall be determined through interagency consultation described in Paragraph (1) of Subsection D of 20.11.3.105 NMAC; where use of transit currently is anticipated to be a significant factor in satisfying transportation demand, these times shall also be used for modeling mode splits; and

(f) network-based travel models shall be reasonably sensitive to changes in the time(s), cost(s) and other factors affecting travel choices.

(2) Reasonable methods in accordance with good practice shall be used to estimate traffic speeds and delays in a manner that is sensitive to the estimated volume of travel on each roadway segment represented in the network-based travel model.

(3) Highway performance monitoring system (HPMS) estimates of vehicle miles traveled (VMT) shall be considered the primary measure of VMT within the portion of the nonattainment or maintenance area and for the functional classes of roadways included in HPMS, for urban areas which are sampled on a separate urban area basis. For areas with network-based travel models, a factor (or factors) may be developed to reconcile and calibrate the network-based travel model estimates of VMT in the base year of its validation to the HPMS estimates for the same period. These factors may then be applied to model estimates of future VMT. In this factoring process, consideration shall be given to differences between HPMS and network-based travel models, such as differences in the facility coverage of the HPMS and the modeled network description. Locally developed count-based programs and other departures from these procedures are permitted subject to the interagency consultation procedures Subparagraph (a) of Paragraph (1) of Subsection D of 20.11.3.105 NMAC.

C. Two-year grace period for regional emissions analysis requirements in certain ozone and CO areas: The requirements of Subsection B of 20.11.3.122 NMAC apply to such areas or portions of such areas that have not previously been required to meet these requirements for any existing NAAQS two years from the following:

(1) the effective date of EPA's reclassification of an ozone or CO nonattainment area that has an urbanized area population greater than 200,000 to serious or above;

(2) the official notice by the census bureau that determines the urbanized area population of a serious or above ozone or CO nonattainment area to be greater than 200,000; or

(3) the effective date of EPA's action that classifies a newly designated ozone or CO nonattainment area that has an urbanized area population greater than 200,000 as serious or above.

D. In all areas not otherwise subject to Subsection B of 20.11.3.122 NMAC, regional emissions analyses shall use those procedures described in Subsection B of 20.11.3.122 NMAC if the use of those procedures has been the previous practice of the

MPO. Otherwise, areas not subject to Subsection B of 20.11.3.122 NMAC may estimate regional emissions using any appropriate methods that account for VMT growth by, for example, extrapolating historical VMT or projecting future VMT by considering growth in population and historical growth trends for VMT per person. These methods shall also consider future economic activity, transit alternatives and transportation system policies.

E. PM₁₀ from construction-related fugitive dust:

(1) For areas in which the implementation plan does not identify construction-related fugitive PM₁₀ as a contributor to the nonattainment problem, the fugitive PM₁₀ emissions associated with highway and transit project construction are not required to be considered in the regional emissions analysis.

(2) In PM₁₀ nonattainment and maintenance areas with implementation plans that identify construction-related fugitive PM₁₀ as a contributor to the nonattainment problem, the regional PM₁₀ emissions analysis shall consider construction-related fugitive PM₁₀ and shall account for the level of construction activity, the fugitive PM₁₀ control measures in the applicable implementation plan and the dust-producing capacity of the proposed activities.

F. PM_{2.5} from construction-related fugitive dust:

(1) For PM_{2.5} areas in which the implementation plan does not identify construction-related fugitive PM_{2.5} as a significant contributor to the nonattainment problem, the fugitive PM_{2.5} emissions associated with highway and transit project construction are not required to be considered in the regional emissions analysis.

(2) In PM_{2.5} nonattainment and maintenance areas with implementation plans that identify construction-related fugitive PM_{2.5} as a significant contributor to the nonattainment problem, the regional PM_{2.5} emissions analysis shall consider construction-related fugitive PM_{2.5} and shall account for the level of construction activity, the fugitive PM_{2.5} control measures in the applicable implementation plan, and the dust-producing capacity of the proposed activities.

G. Reliance on previous regional emissions analysis:

(1) Conformity determinations for a new transportation plan or TIP may be demonstrated to satisfy the requirements of 20.11.3.118 NMAC, *Criteria and Procedures: Motor Vehicle Emissions Budget*, or 20.11.3.119 NMAC, *Criteria and Procedures: Interim Emissions in Areas Without Motor Vehicle Emissions Budgets*, without new regional emissions analysis if the previous regional emissions analysis also applies to the new plan or TIP. This requires a demonstration that:

(a) the new plan or TIP contains all projects that shall be started in the TIP's time frame in order to achieve the highway and transit system envisioned by the transportation plan;

(b) all plan and TIP projects that are regionally significant are included in the transportation plan with design concept and scope adequate to determine their contribution to the transportation plan's or TIP's regional emissions at the time of the previous conformity determination;

(c) the design concept and scope of each regionally significant project in the new plan or TIP are not significantly different from that described in the previous transportation plan; and

(d) the previous regional emissions analysis is consistent with the requirements of 20.11.3.118 NMAC (including that conformity to all currently applicable budgets is demonstrated) or 20.11.3.119 NMAC, as applicable.

(2) A project which is not from a conforming transportation plan and a conforming TIP may be demonstrated to satisfy the requirements of 20.11.3.118 NMAC or 20.11.3.119 NMAC without additional regional emissions analysis if allocating funds to the project shall not delay the implementation of projects in the transportation plan or TIP which are necessary to achieve the highway and transit system envisioned by the transportation plan the previous regional emissions analysis is still consistent with the requirements of 20.11.3.118 NMAC (including that conformity to all currently applicable budgets is demonstrated) or 20.11.3.119 NMAC, as applicable, and if the project is either:

(a) not regionally significant; or

(b) included in the conforming transportation plan (even if it is not specifically included in the latest conforming TIP) with design concept and scope adequate to determine its contribution to the transportation plan's regional emissions at the time of the transportation plan's conformity determination, and the design concept and scope of the project is not significantly different from that described in the transportation plan.

(3) A conformity determination that relies on Subsection G of 20.11.3.122 NMAC does not satisfy the frequency requirements of Subsection B or Subsection C of 20.11.3.104 NMAC.

[20.11.3.122 NMAC - Rn & A, 20.11.3.219 NMAC, 11/15/10]

20.11.3.123 PROCEDURES FOR DETERMINING LOCALIZED CO, PM₁₀ AND PM_{2.5} CONCENTRATIONS (Hot-Spot Analysis):

A. CO hot spot analysis:

(1) The demonstrations required by 20.11.3.116 NMAC (Criteria and Procedures: Localized CO, PM₁₀ and PM_{2.5} Violations) shall be based on quantitative analysis using the applicable air quality models, data bases and other requirements specified in 40 CFR Part 51, Appendix W (guideline on air quality models). These

procedures shall be used in the following cases, unless different procedures developed through the interagency consultation process required in 20.11.3.105 NMAC and approved by the EPA regional administrator are used for:

(a) projects in or affecting locations, areas or categories of sites which are identified in the applicable implementation plan as sites of violation or possible violation;

(b) projects affecting intersections that are at level-of-service D, E or F, or those that shall change to level-of-service D, E or F because of increased traffic volumes related to the project;

(c) any project affecting one or more of the top three intersections in the nonattainment or maintenance area with highest traffic volumes, as identified in the applicable implementation plan or which are identified through the interagency consultation process as described in Paragraph (1) of Subsection D of 20.11.3.105 NMAC; and

(d) any project affecting one or more of the top three intersections in the nonattainment or maintenance area with the worst level of service, as identified in the applicable implementation plan or which are identified through the interagency consultation process as described in Paragraph (1) of Subsection D of 20.11.3.105 NMAC.

(2) In cases other than those described in Paragraph (1) of Subsection A of 20.11.3.123 NMAC, the demonstrations required by 20.11.3.116 NMAC may be based on either:

(a) quantitative methods that represent reasonable and common professional practice as determined through the interagency consultation process, described in Paragraph (1) of Subsection D of 20.11.3.105 NMAC; or

(b) a qualitative consideration of local factors, if this can provide a clear demonstration that the requirements of 20.11.3.116 NMAC are met.

(3) DOT, in consultation with EPA, may also choose to make a categorical hot-spot finding that Subsection A of 20.11.3.116 NMAC is met without further hot-spot analysis for any project described in Paragraphs (1) and (2) of Subsection A of 20.11.3.123 NMAC based on appropriate modeling. DOT, in consultation with EPA, may also consider the current air quality circumstances of a given CO nonattainment or maintenance area in categorical hot-spot findings for applicable FHWA or FTA projects.

B. PM₁₀ and PM_{2.5} hot-spot analyses:

(1) The hot-spot demonstration required by 20.11.3.116 NMAC shall be based on quantitative analysis methods for the following types of projects:

(a) new highway projects that have a significant number of diesel vehicles, and expanded highway projects that have a significant increase in the number of diesel vehicles;

(b) projects affecting intersections that are at level-of-service D, E, or F with a significant number of diesel vehicles, or those that will change to level-of-service D, E, or F because of increased traffic volumes from a significant number of diesel vehicles related to the project;

(c) new bus and rail terminals and transfer points that have a significant number of diesel vehicles congregating at a single location;

(d) expanded bus and rail terminals and transfer points that significantly increase the number of diesel vehicles congregating at a single location; and

(e) projects in or affecting locations, areas, or categories of sites which are identified in the PM₁₀ or PM_{2.5} applicable implementation plan or implementation plan submission, as appropriate, as sites of violation or possible violation.

(2) Where quantitative analysis methods are not available, the demonstration required by 20.11.3.116 NMAC for projects described in Paragraph (1) of Subsection B of 20.11.3.123 NMAC shall be based on a qualitative consideration of local factors.

(3) DOT, in consultation with EPA, may also choose to make a categorical hot-spot finding that 20.11.3.116 NMAC is met without further hot-spot analysis for any project described in Paragraph (1) of Subsection B of 20.11.3.123 NMAC based on appropriate modeling. DOT, in consultation with EPA, may also consider the current air quality circumstances of a given PM_{2.5} or PM₁₀ nonattainment or maintenance area in categorical hot-spot findings for applicable FHWA or FTA projects.

(4) The requirements for quantitative analysis contained in Subsection B of 20.11.3.123 NMAC shall not take effect until EPA releases modeling guidance on this subject and announces in the federal register that these requirements are in effect.

C. General requirements:

(1) Estimated pollutant concentrations shall be based on the total emissions burden that may result from the implementation of the project, summed together with future background concentrations. The total concentration shall be estimated and analyzed at appropriate receptor locations in the area substantially affected by the project.

(2) Hot-spot analyses shall include the entire project, and may be performed only after the major design features that shall significantly impact concentrations have been identified. The future background concentration shall be estimated by multiplying current background by the ratio of future to current traffic and the ratio of future to

current emission factors as determined through the interagency consultation process described in Paragraph (1) of Subsection D of 20.11.3.105 NMAC.

(3) Hot-spot analysis assumptions shall be consistent with those in the regional emissions analysis for those inputs which are required for both analyses as determined through the interagency consultation process described in Paragraph (1) of Subsection D of 20.11.3.105 NMAC.

(4) CO, PM₁₀ or PM_{2.5} mitigation or control measures shall be assumed in the hot-spot analysis only where there are written commitments from the project sponsor or operator to implement such measures, as required by Subsection A of 20.11.3.125 NMAC.

(5) CO, PM₁₀ and PM_{2.5} hot-spot analyses are not required to consider construction-related activities which cause temporary increases in emissions. Each site that is affected by construction-related activities shall be considered separately through the interagency consultation process described in Paragraph (1) of Subsection B of 20.11.3.105 NMAC, using established guideline methods. Temporary increases are defined as those which occur only during the construction phase and last five years or less at any individual site.

[20.11.3.123 NMAC - Rn & A, 20.11.3.220 NMAC, 11/15/10]

20.11.3.124 USING THE MOTOR VEHICLE EMISSIONS BUDGET IN THE APPLICABLE IMPLEMENTATION PLAN (OR IMPLEMENTATION PLAN SUBMISSION):

A. In interpreting an applicable implementation plan (or implementation plan submission) with respect to its motor vehicle emissions budget(s), the MPO and DOT may not infer additions to the budget(s) that are not explicitly intended by the implementation plan (or submission). Unless the implementation plan explicitly quantifies the amount by which motor vehicle emissions could be higher while still allowing a demonstration of compliance with the milestone, attainment or maintenance requirement and explicitly states an intent that some or all of this additional amount shall be available to the MPO and DOT in the emissions budget for conformity purposes, the MPO may not interpret the budget to be higher than the implementation plan's estimate of future emissions. This applies in particular to applicable implementation plans (or submissions) which demonstrate that after implementation of control measures in the implementation plan:

(1) emissions from all sources shall be less than the total emissions that would be consistent with a required demonstration of an emissions reduction milestone;

(2) emissions from all sources shall result in achieving attainment prior to the attainment deadline or ambient concentrations in the attainment deadline year shall be lower than needed to demonstrate attainment; or

(3) emissions shall be lower than needed to provide for continued maintenance.

B. A conformity demonstration shall not trade emissions among budgets which the applicable implementation plan (or implementation plan submission) allocates for different pollutants or precursors, or among budgets allocated to motor vehicles and other sources, unless the implementation plan establishes appropriate mechanisms for such trades.

C. If the applicable implementation plan (or implementation plan submission) estimates future emissions by geographic subarea of the nonattainment area, the MPO and DOT are not required to consider this to establish subarea budgets, unless the applicable implementation plan (or implementation plan submission) explicitly indicates an intent to create such subarea budgets for the purposes of conformity.

D. If a nonattainment area includes more than one MPO, the implementation plan may establish motor vehicle emissions budgets for each MPO, or else the MPOs shall collectively make a conformity determination for the entire nonattainment area.

[20.11.3.124 NMAC - Rn, 20.11.3.221 NMAC, 11/15/10]

20.11.3.125 ENFORCEABILITY OF DESIGN CONCEPT AND SCOPE AND PROJECT-LEVEL MITIGATION AND CONTROL MEASURES:

A. Prior to determining that a transportation project is in conformity, the MPO, other recipient of funds designated under Title 23 U.S.C. or the Federal Transit Laws, FHWA or FTA shall obtain from the project sponsor or operator written commitments to implement in the construction of the project and operation of the resulting facility or service any project-level mitigation or control measures that are identified as conditions for NEPA process completion with respect to local PM₁₀, PM_{2.5} or CO impacts. Before a conformity determination is made, written commitments shall also be obtained for project-level mitigation or control measures that are conditions for making conformity determinations for a transportation plan or TIP and are included in the project design concept and scope which is used in the regional emissions analysis required by 20.11.3.118 NMAC (motor vehicle emissions budget) and 20.11.3.119 NMAC (interim emissions in areas without motor vehicle emissions budgets) or used in the project-level hot-spot analysis required by 20.11.3.116 NMAC.

B. Project sponsors voluntarily committing to mitigation measures to facilitate positive conformity determinations shall comply with the obligations of such commitments.

C. The implementation plan revision required in 40 CFR 51.390 shall provide that written commitments to mitigation measures shall be obtained prior to a positive conformity determination, and that project sponsors must comply with such commitments.

D. If the MPO or project sponsor believes the mitigation or control measure is no longer necessary for conformity, the project sponsor or operator may be relieved of its obligation to implement the mitigation or control measure if it can demonstrate that the applicable hot-spot requirements of 20.11.3.116 NMAC, emission budget requirements of 20.11.3.118 NMAC, and interim emissions requirements of 20.11.3.119 NMAC are satisfied without the mitigation or control measure, and so notifies the agencies involved in the interagency consultation process required under 20.11.3.105 NMAC. The MPO and DOT shall find that the transportation plan and TIP still satisfy the applicable requirements of 20.11.3.118 NMAC or 20.11.3.119 NMAC and that the project still satisfies the requirements of 20.11.3.116 NMAC, and therefore that the conformity determinations for the transportation plan, TIP and project are still valid. This finding is subject to the applicable public consultation requirements in Subsection F of 20.11.3.105 NMAC for conformity determinations for projects.

[20.11.3.125 NMAC - Rn & A, 20.11.3.222 NMAC, 11/15/10]

20.11.3.126 EXEMPT PROJECTS:

Notwithstanding the other requirements of 20.11.3 NMAC, highway and transit projects of the types listed in Table 2 of 20.11.3.126 NMAC are exempt from the requirement to determine conformity. Such projects may proceed toward implementation even in the absence of a conforming transportation plan and TIP. A particular action of the type listed in Table 2 of 20.11.3.126 NMAC is not exempt if the MPO in consultation with other agencies (see Subparagraph (c) of Paragraph (1) of Subsection D of 20.11.3.105 NMAC), the EPA and the FHWA (in the case of a highway project) or the FTA (in the case of a transit project) concur that it has potentially adverse emissions impacts for any reason. States and MPOs shall ensure that exempt projects do not interfere with TCM implementation. Table 2 follows:

TABLE 2. EXEMPT PROJECTS SAFETY

Railroad/highway crossing

Projects that correct, improve or eliminate a hazardous location or feature

Safer non-federal-aid system roads

Shoulder improvements

Increasing sight distance

Highway safety improvement program implementation

Traffic control devices and operating assistance other than signalization projects

Railroad/highway crossing warning devices

Guardrails, median barriers, crash cushions

Pavement resurfacing or rehabilitation

Pavement marking

Emergency relief (23 U.S.C. 125)

Fencing

Skid treatments

Safety roadside rest areas

Adding medians

Truck climbing lanes outside the urbanized area

Lighting improvements

Widening narrow pavements or reconstructing bridges (no additional travel lanes)

Emergency truck pullovers

MASS TRANSIT

Operating assistance to transit agencies

Purchase of support vehicles

Rehabilitation of transit vehicles¹

Purchase of office, shop and operating equipment for existing facilities

Purchase of operating equipment for vehicles (e.g., radios, fare boxes, lifts, etc.)

Construction or renovation of power, signal and communications systems

Construction of small passenger shelters and information kiosks

Reconstruction or renovation of transit buildings and structures (e.g., rail or bus buildings, storage and maintenance facilities, stations, terminals and ancillary structures)

Rehabilitation or reconstruction of track structures, track, and trackbed in existing rights-of-way

Purchase of new buses and rail cars to replace existing vehicles or for minor expansions of the fleet¹

Construction of new bus or rail storage/maintenance facilities categorically excluded in 23 CFR Part 771

AIR QUALITY

Continuation of ride-sharing and van-pooling promotion activities at current levels

Bicycle and pedestrian facilities

OTHER

Specific activities which do not involve or lead directly to construction, such as:

Planning and technical studies

Grants for training and research programs

Planning activities conducted pursuant to Titles 23 and 49 U.S.C.

Federal-aid systems revisions

Engineering to assess social, economic and environmental effects of the proposed action or alternatives to that action

Noise attenuation

Emergency or hardship advance land acquisitions 23 CFR Part 710.503

Acquisition of scenic easements

Plantings, landscaping, etc.

Sign removal

Directional and informational signs

Transportation enhancement activities (except rehabilitation and operation of historic transportation buildings, structures or facilities)

Repair of damage caused by natural disasters, civil unrest or terrorist acts, except projects involving substantial functional, locational or capacity changes

Note: ¹In PM₁₀ and PM_{2.5} nonattainment or maintenance areas, such projects are exempt only if they are in compliance with control measures in the applicable implementation plan.

[20.11.3.126 NMAC - Rn & A, 20.11.3.223 NMAC, 11/15/10]

20.11.3.127 PROJECTS EXEMPT FROM REGIONAL EMISSIONS ANALYSES:

Notwithstanding the other requirements of 20.11.3 NMAC, highway and transit projects of the types listed in Table 3 of 20.11.3.127 NMAC are exempt from regional emissions analysis requirements. The local effects of these projects with respect to CO, PM_{2.5} or PM₁₀ concentrations shall be considered to determine if a hot-spot analysis is required prior to making a project-level conformity determination. These projects may then proceed to the project development process even in the absence of a conforming transportation plan and TIP. A particular action of the type listed in Table 3 of 20.11.3.127 NMAC is not exempt from regional emissions analysis if the MPO in consultation with other agencies (see Subparagraph (c) Paragraph (1) of Subsection D of 20.11.3.105 NMAC), the EPA and the FHWA (in the case of a highway project) or the FTA (in the case of a transit project) concur that it has potential regional impacts for any reason. Table 3 follows:

TABLE 3. PROJECTS EXEMPT FROM REGIONAL EMISSIONS ANALYSES

Intersection channelization projects

Intersection signalization projects at individual intersections

Interchange reconfiguration projects

Changes in vertical and horizontal alignment

Truck size and weight inspection stations

Bus terminals and transfer points

[20.11.3.127 NMAC - Rn & A, 20.11.3.224 NMAC, 11/15/10]

20.11.3.128 TRAFFIC SIGNAL SYNCHRONIZATION PROJECTS:

Traffic signal synchronization projects may be approved, funded and implemented without satisfying the requirements of 20.11.3 NMAC. However, all subsequent regional emissions analyses required by 20.11.3.118 NMAC and 20.11.3.119 NMAC for transportation plans, TIPs or projects not from a conforming plan and TIP shall include such regionally significant traffic signal synchronization projects.

[20.11.3.128 NMAC - Rn & A, 20.11.3.225 NMAC, 11/15/10]

20.11.3.129 SPECIAL EXEMPTIONS FROM CONFORMITY REQUIREMENTS FOR PILOT PROGRAM AREAS:

EPA and DOT may exempt no more than six areas for no more than three years from certain requirements of 20.11.3 NMAC if these areas are selected to participate in a conformity pilot program and have developed alternative requirements that have been approved by EPA as an implementation plan revision in accordance with 40 CFR 51.390. For the duration of the pilot program, areas selected to participate in the pilot program shall comply with the conformity requirements of the pilot area's implementation plan revision for 40 CFR 51.390 and all other requirements in 40 CFR parts 51 and 93 that are not covered by the pilot area's implementation plan revision for 40 CFR 51.390. The alternative conformity requirements in conjunction with any applicable state or federal conformity requirements shall be proposed to fulfill all of the requirements of and achieve results equivalent to or better than Section 176(c) of the Clean Air Act. After the three-year duration of the pilot program has expired, areas will again be subject to all of the requirements of 20.11.3 NMAC and 40 CFR Part 51, Subpart T, or to the requirements of any implementation plan revision that was previously approved by EPA in accordance with 40 CFR 51.390.

[20.11.3.129 NMAC - Rn, 20.11.3.227 NMAC, 11/15/10]

20.11.3.130-20.11.3.199 [RESERVED]

20.11.3.200-20.11.3.227 [RESERVED]

[Sections 200-227 renumbered to Sections 103-129, 11/15/10]

20.11.3.228-20.11.3.389 [RESERVED]

20.11.3.390 APPLICABLE LAW:

The federal conformity rules under 40 CFR Part 93 Subpart A, in addition to any existing applicable state requirements, establish the conformity criteria and procedures necessary to meet the requirements of CAA Section 176(c) until such time as this conformity implementation plan revision is approved by EPA. Following EPA approval of this revision to the applicable implementation plan (or a portion thereof), the approved (or approved portion of the) criteria and procedures in 20.11.3 NMAC shall govern conformity determinations and the federal conformity regulations contained in 40 CFR Part 93 shall apply only for the portion, if any, of 20.11.3 NMAC conformity provisions that is not approved by EPA. In addition, any previously applicable implementation plan requirements relating to conformity remain enforceable until 20.11.3 NMAC is adopted.

[20.11.3.390 NMAC - N, 11/15/10]

PART 4: GENERAL CONFORMITY

20.11.4.1 ISSUING AGENCY:

Albuquerque - Bernalillo County Air Quality Control Board. P.O. Box 1293, Albuquerque, NM 87103. Telephone: (505) 768-2601.

[12/16/94. . .12/1/95; 20.11.4.1 NMAC – Rn, 20 NMAC 11.04.I.1, 10/1/02; A, 3/14/11]

20.11.4.2 SCOPE:

The provisions of 20.11.4 NMAC shall apply in all nonattainment and maintenance areas of and within Bernalillo county.

A. Prohibition: Pursuant to 40 CFR 93.150:

(1) No department, agency or instrumentality of the federal government shall engage in, support in any way or provide financial assistance for, license or permit, or approve any activity that does not conform to an applicable implementation plan or maintenance plan.

(2) A federal agency must make a determination that a federal action conforms to the applicable implementation plan or maintenance plan in accordance with the requirements of 20.11.4 NMAC before the action is taken.

(3) Reserved.

(4) Notwithstanding any provision of 20.11.4 NMAC, a determination that an action is in conformance with the applicable implementation plan or maintenance plan does not exempt the action from any other requirements of the applicable implementation plan or maintenance plan, the NEPA or the Clean Air Act (CAA).

(5) If an action would result in emissions originating in more than one nonattainment or maintenance area, the conformity must be evaluated for each area separately.

B. Exempt: 20.11.4 NMAC does not apply to sources within Bernalillo county, which are located on Indian lands over which the Albuquerque - Bernalillo county air quality control board lacks jurisdiction.

[12/16/94. . .12/1/95; 20.11.4.2 NMAC – Rn, 20 NMAC 11.04.I.2, 10/1/02; A, 3/14/11]

20.11.4.3 STATUTORY AUTHORITY:

20.11.4 NMAC is adopted pursuant to the authority provided in the New Mexico Air Quality Control Act, NMSA 1978 74-2-4, 74-2-5.C; the Joint Air Quality Control Board Ordinance, Bernalillo County Ordinance 94-5 4; and the Joint Air Quality Control Board Ordinance, Revised Ordinances of Albuquerque 1994 9-5-1-4.

[12/16/94. . .12/1/95; 20.11.4.3 NMAC – Rn, 20 NMAC 11.04.I.3, 10/1/02; A, 3/14/11]

20.11.4.4 DURATION:

Permanent.

[12/1/95; 20.11.4.4 NMAC – Rn, 20 NMAC 11.04.I.4, 10/1/02]

20.11.4.5 EFFECTIVE DATE:

December 1, 1995, unless a later date is cited at the end of a section.

[12/1/95; 20.11.4.5 NMAC – Rn, 20 NMAC 11.04.I.5 & A, 10/1/02]

20.11.4.6 OBJECTIVE:

To implement Section 176(c) of the Clean Air Act (CAA), as amended (42 U.S.C. 7401 et seq.) and the related requirements of 23 U.S.C. 109(j), with respect to the conformity of transportation plans, programs, and projects which are developed, funded, or approved by the United States department of transportation (DOT), and by metropolitan planning organizations (MPOs) or other recipients of funds under Title 23 U.S.C. or the Federal Transit Laws (49 U.S.C. Chapter 53). This rule sets forth policy, criteria, and procedures for demonstrating and assuring conformity of such activities to an applicable implementation plan developed pursuant to Section 110 and Part D of the CAA.

[12/16/94. . .12/1/95; 20.11.4.6 NMAC – Rn, 20 NMAC 11.04.I.6, 10/1/02; A, 3/14/11]

20.11.4.7 DEFINITIONS:

Terms used but not defined in 20.11.4 NMAC shall have the meaning given them by the CAA and EPA's regulations, (40 CFR Chapter I), in that order of priority. In addition to the definitions in 20.11.4.7 NMAC the definitions in 20.11.1.7 NMAC apply unless there is a conflict between definitions, in which case the definition in 20.11.4 NMAC shall govern.

A. "Affected federal land manager" means the federal agency or the federal official charged with direct responsibility for management of an area designated as Class I under the CAA (42 U.S.C. 7472) that is located within 100 km of the proposed federal action.

B. "Air agency" means the Air Quality Division (AQD) of the city of Albuquerque environmental health department (EHD). The EHD, or its successor agency or authority, as represented by the department director or his/her designee, is the lead air quality planning agency for the Albuquerque - Bernalillo county nonattainment/maintenance area. The EHD serves as staff to the Albuquerque - Bernalillo county (ABC) air quality

control board (AQCB), also referred to as the ABC/AQCB, and is responsible for implementing AQCB regulations.

C. "Applicability analysis" is the process of determining if a federal action must be supported by a conformity determination.

D. "Applicable implementation plan" or "applicable state implementation plan" or "applicable SIP" means the portion (or portions) of the SIP or most recent revision thereof, which has been approved under Section 110(k) of the CAA, a federal implementation plan (FIP) promulgated under Section 110(c) of the CAA, or a plan promulgated or approved pursuant to Section 301(d) of the CAA (tribal implementation plan or TIP) and which implements the relevant requirements of the CAA.

E. "Area-wide air quality modeling analysis" means an assessment on a scale that includes the entire nonattainment or maintenance area using an air quality dispersion model or photochemical grid model to determine the effects of emissions on air quality, for example, an assessment using EPA's community multiscale air quality (CMAQ) modeling system.

F. "Cause or contribute to a new violation" means a federal action that:

(1) Causes a new violation of a national ambient air quality standard (NAAQS) at a location in a nonattainment or maintenance area which would otherwise not be in violation of the standard during the future period in question if the federal action were not taken; or

(2) Contributes, in conjunction with other reasonably foreseeable actions, to a new violation of a NAAQS at a location in a nonattainment or maintenance area in a manner that would increase the frequency or severity of the new violation.

G. "Caused by" as used in the terms "direct emissions," and "indirect emissions" means emissions that would not otherwise occur in the absence of the federal action.

H. "Confidential business information" or "CBI" means information that has been determined by a federal agency, in accordance with its applicable regulations, to be a trade secret, or commercial or financial information obtained from a person and privileged or confidential and it is exempt from required disclosure under the Freedom of Information Act (5 U.S.C.552(b)(4)).

I. "Conformity determination" means the evaluation (made after an applicability analysis is completed) that a federal action conforms to the applicable implementation plan or maintenance plan and meets the requirements of 20.11.4 NMAC.

J. "Conformity evaluation" means the entire process from the applicability analysis through the conformity determination that is used to demonstrate that the federal action conforms to the requirements of 20.11.4 NMAC.

K. "Continuing program responsibility" means a federal agency has responsibility for emissions caused by:

- (1) actions it takes itself; or
- (2) actions of non-federal entities that the federal agency, in exercising its normal programs and authorities, approves, funds, licenses or permits, provided the agency can impose conditions on any portion of the action that could affect the emissions.

L. "Continuous program to implement" means that the federal agency has started the action identified in the plan and does not stop the actions for more than an 18-month period, unless it can demonstrate that such a stoppage was included in the original plan.

M. "Criteria pollutant or standard" means any pollutant for which there is established a NAAQS at 40 CFR Part 50.

N. "Direct emissions" means those emissions of a criteria pollutant or its precursors that are caused or initiated by the federal action and originate in a nonattainment or maintenance area and occur at the same time and place as the action and are reasonably foreseeable.

O. "Emergency" means a situation where extremely quick action on the part of the federal agencies involved is needed and where the timing of such federal activities makes it impractical to meet the requirements of 20.11.4 NMAC, such as natural disasters like hurricanes or earthquakes, civil disturbances such as terrorist acts, and military mobilizations such as assembling and organizing troops and matériel for the defense of a nation in time of war or national emergency.

P. "Emissions budgets" are those portions of the applicable SIP's projected emissions inventories that describe the levels of emissions (mobile, stationary, area, etc.) that provide for meeting reasonable further progress milestones, attainment, or maintenance for any criteria pollutant or its precursors.

Q. "Emissions inventory" means a listing of information on the location, type of source, type and quantity of pollutant emitted as well as other parameters of the emissions.

R. "Emissions offsets" for purposes of 20.11.4.158 NMAC are emissions reductions which are quantifiable, consistent with the applicable SIP attainment and reasonable further progress demonstrations, surplus to reductions required by, and credited to, other applicable SIP provisions, enforceable at both the state and federal levels, and permanent within the timeframe specified by the program.

S. "Emissions that a federal agency has a continuing program responsibility for" means emissions that are specifically caused by an agency carrying out its authorities, and does not include emissions that occur due to subsequent activities, unless such activities are required by the federal agency. Where an agency, in performing its normal program responsibilities, takes actions itself or imposes conditions that result in air pollutant emissions by a non-federal entity taking subsequent actions, such emissions are covered by the meaning of a continuing program responsibility.

T. "Federal action" means any activity engaged in by a department, agency, or instrumentality of the federal government, or any activity that a department, agency or instrumentality of the federal government supports in any way, provides financial assistance for, licenses, permits, or approves, other than activities related to transportation plans, programs, and projects developed, funded, or approved under Title 23 U.S.C. or the federal Transit Act (49 U.S.C. 1601 *et seq.*). Where the federal action is a permit, license, or other approval for some aspect of a non-federal undertaking, the relevant activity is the part, portion, or phase of the non-federal undertaking that requires the federal permit, license, or approval.

U. "Federal agency" means a federal department, agency, or instrumentality of the federal government.

V. "Increase the frequency or severity of any existing violation of any standard in any area" means to cause a nonattainment area to exceed a standard more often or to cause a violation at a greater concentration than previously existed or would otherwise exist during the future period in question, if the project were not implemented.

W. "Indirect emissions"

(1) means those emissions of a criteria pollutant or its precursors:

(a) that are caused or initiated by the federal action and originate in the same nonattainment or maintenance area but occur at a different time or place as the action;

(b) that are reasonably foreseeable;

(c) that the agency can practicably control; and

(d) for which the agency has continuing program responsibility.

(2) For the purposes of this definition, even if a federal licensing, rulemaking or other approving action is a required initial step for a subsequent activity that causes emissions, such initial steps do not mean that a federal agency can practically control any resulting emissions.

X. "Local air quality modeling analysis" means an assessment of localized impacts on a scale smaller than the entire nonattainment or maintenance area, including, for example, congested roadways on a federal facility, which uses an air quality dispersion model, (e.g., industrial source complex model or emission and dispersion model system), to determine the effects of emissions on air quality.

Y. "Maintenance area" means an area that was designated as nonattainment and has been re-designated in 40 CFR Part 81 to attainment, meeting the provisions of Section 107(d)(3)(E) of the CAA and has a maintenance plan approved under Section 175A of the CAA.

Z. "Maintenance plan" means a revision to the applicable SIP, meeting the requirements of Section 175A of the CAA.

AA. "Metropolitan planning organization" or "MPO" means the policy board of an organization created as a result of the designation process in 23 U.S.C. 134(d).

BB. "Milestone" has the meaning given in Sections 182(g)(1) and 189(c)(1) of the CAA. A milestone consists of an emissions level and date on which it is required to be achieved.

CC. "Mitigation measure" means any method of reducing emissions of the pollutant or its precursor taken at the location of the federal action and used to reduce the impact of the emissions of that pollutant caused by the action.

DD. "National ambient air quality standards" or "NAAQS" are those standards established pursuant to Section 109 of the CAA and include standards for carbon monoxide (CO), lead (Pb), nitrogen dioxide (NO₂), ozone, particulate matter (PM₁₀ and PM_{2.5}), and sulfur dioxide (SO₂).

EE. "NEPA" is the National Environmental Policy Act of 1969, as amended (42 U.S.C. 4321 et seq.).

FF. "Nonattainment Area" or "NAA" means an area designated as nonattainment under Section 107 of the CAA and described in 40 CFR Part 81.

GG. "Precursors of a criteria pollutant" are:

(1) for ozone, nitrogen oxides (NO_x), unless an area is exempted from NO_x requirements under Section 182(f) of the CAA, and volatile organic compounds (VOC); and

(2) for PM₁₀, those pollutants described in the PM₁₀ nonattainment area applicable SIP as significant contributors to the PM₁₀ levels.

(3) For PM_{2.5}:

(a) sulfur dioxide (SO₂) in all PM_{2.5} nonattainment and maintenance areas,

(b) nitrogen oxides in all PM_{2.5} nonattainment and maintenance areas unless both the department and EPA determine that it is not a significant precursor, and

(c) volatile organic compounds (VOC) and ammonia (NH₃) only in PM_{2.5} nonattainment or maintenance areas where either the department or EPA determines that they are significant precursors.

HH. "Reasonably foreseeable emissions" are projected future direct and indirect emissions that are identified at the time the conformity determination is made; the location of such emissions is known and the emissions are quantifiable, as described and documented by the federal agency based on its own information and after reviewing any information presented to the federal agency.

II. "Regional water or wastewater projects" include construction, operation, and maintenance of water or wastewater conveyances, water or wastewater treatment facilities, and water storage reservoirs, which affect a large portion of a nonattainment or maintenance area.

JJ. "Regionally significant action" means a federal action for which the direct and indirect emissions of any pollutant represent 10 percent or more of a nonattainment or maintenance area's emissions inventory for that pollutant.

KK. "Restricted information" means information that is privileged or that is otherwise protected from disclosure pursuant to applicable statutes, executive orders, or regulations. Such information includes, but is not limited to: Classified national security information, protected critical infrastructure information, sensitive security information, and proprietary business information.

LL. "Smoke management program" or "SMP" establishes a basic framework of procedures and requirements for managing smoke from fires that are managed for resource benefits. The purposes of SMPs are to mitigate the nuisance and public safety hazards (e.g., on roadways and at airports) posed by smoke intrusions into populated areas; to prevent deterioration of air quality and NAAQS violations; and to address visibility impacts in mandatory Class I federal areas in accordance with the regional haze rules.

MM. "Take or start the federal action" means the date that the federal agency signs or approves the permit, license, grant or contract or otherwise physically begins the federal action that requires a conformity evaluation under 20.11.4 NMAC.

NN. "Total of direct and indirect emissions" means the sum of direct and indirect emissions increases and decreases caused by the federal action (i.e., the "net"

emissions considering all direct and indirect emissions). The portion of emissions which are exempt or presumed to conform under Subsections C, D, E or F of 20.11.4.153 NMAC are not included in the "total of direct and indirect emissions." The "total of direct and indirect emissions" includes emissions of criteria pollutants and emissions of precursors of criteria pollutants.

OO. "Tribal implementation plan" or "TIP" means a plan to implement the national ambient air quality standards adopted and submitted by a federally recognized indian tribal government determined to be eligible under 40 CFR 49.9 and the plan has been approved by the EPA.

[12/16/94. . .12/1/95; 20.11.4.7 NMAC – Rn, 20 NMAC 11.04.I.7, 10/1/02; A, 3/14/11]

20.11.4.8 VARIANCES:

[RESERVED]

[12/1/95; 20.11.4.8 NMAC - Rn, 20 NMAC 11.04.I.8, 10/1/02]

20.11.4.9 SAVINGS CLAUSE:

Any amendment to 20.11.4 NMAC, which is filed, with the state records center shall not affect actions pending for violation of a city or county ordinance or 20.11.4 NMAC. Prosecution for a violation under prior regulation wording shall be governed and prosecuted under the statute, ordinance, part, or regulation section in effect at the time the violation was committed.

[12/16/94. . .12/1/95; 20.11.4.9 NMAC – Rn, 20 NMAC 11.04.I.9, 10/1/02; A, 3/14/11]

20.11.4.10 SEVERABILITY:

If any section, paragraph, sentence, clause, or word of 20.11.4 NMAC is for any reason held to be unconstitutional or otherwise invalid by any court, the decision shall not affect the validity of remaining provisions of 20.11.4 NMAC.

[12/16/94. . .12/1/95; 20.11.4.10 NMAC – Rn, 20 NMAC 11.04.I.10, 10/1/02; A, 3/14/11]

20.11.4.11 DOCUMENTS:

Documents incorporated and cited in 20.11.4 NMAC may be viewed at the Albuquerque Environmental Health Department, 400 Marquette Ave. NW, Albuquerque, NM.

[12/1/95; 20.11.4.11 NMAC – Rn, 20 NMAC 11.04.I.11 & A, 10/1/02; A, 3/14/11]

20.11.4.12-20.11.4.152 [RESERVED]

20.11.4.153 APPLICABILITY ANALYSIS:

A. Conformity determinations for federal actions related to transportation plans, programs, and projects developed, funded, or approved under Title 23 U.S.C. or 49 U.S.C. Chapter 53 must meet the procedures and criteria of 40 CFR Part 51, Subpart T, in lieu of the procedures set forth in 20.11.4 NMAC.

B. For federal actions not covered by Subsection A of 20.11.4.153 NMAC, a conformity determination is required for each criteria pollutant or precursor where the total of direct and indirect emissions in a nonattainment or maintenance area caused by a federal action would equal or exceed any of the rates in Paragraph (1) or (2) of Subsection B of 20.11.4.153 NMAC.

(1) For purposes of Subsection B of 20.11.4.153 NMAC, the following rates apply in **nonattainment areas**:

Criteria Pollutant or Precursor			Rate (Tons/Year)
Ozone (VOC's or NOx):			
	Serious NAA's		50
	Severe NAA's		25
	Extreme NAA's		10
	Other ozone NAA's outside an ozone transport region		100
	Other ozone NAA's inside an ozone transport region:		
		VOC	50
		NO _x	100
Carbon monoxide:			
	All NAA's		100
SO₂ or NO₂:			
	All NAA's		100
PM₁₀:			
	Moderate NAA's		100
	Serious NAA's		70
PM 2.5:			
	Direct emissions		100
	SO ₂		100
	NO _x (unless determined not to be significant precursors)		100

	VOC or ammonia (if determined to be significant precursors)		100
Pb:			
	All NAA's		25

(2) For the purposes of Subsection B of 20.11.4.153 NMAC, the following rates apply in **maintenance areas**:

Criteria Pollutant or Precursor			Rate (Tons/Year)
Ozone (NO_x, SO₂ or NO₂):			
	All maintenance areas		100
Ozone (VOC's):			
	Maintenance areas inside an ozone transport region		50
	Maintenance areas outside an ozone transport region		100
Carbon monoxide:			
	All maintenance areas		100
PM₁₀:			
	All maintenance areas		100
PM 2.5:			
	Direct emissions		100
	SO ₂		100
	NO _x (unless determined not to be significant precursors)		100
	VOC or ammonia (if determined to be significant precursors)		100
Pb:			
	All maintenance areas		25

C. The requirements of 20.11.4 NMAC shall not apply to the following federal actions:

(1) actions where the total of direct and indirect emissions are below the emissions levels specified in Subsection B of 20.11.4.153 NMAC.

(2) the following actions which would result in no emissions increase or an increase in emissions that is clearly de minimis:

(a) Judicial and legislative proceedings.

(b) Continuing and recurring activities such as permit renewals where activities conducted will be similar in scope and operation to activities currently being conducted.

(c) Rulemaking and policy development and issuance.

(d) Routine maintenance and repair activities including repair and maintenance of administrative sites, roads, trails, and facilities.

(e) Civil and criminal enforcement activities, such as investigations, audits, inspections, examinations, prosecutions, and the training of law enforcement personnel.

(f) Administrative actions such as personnel actions, organizational changes, debt management or collection, cash management, internal agency audits, program budget proposals, and matters relating to the administration and collection of taxes, duties and fees.

(g) The routine, recurring transportation of matériel and personnel.

(h) Routine movement of mobile assets, such as ships and aircraft, in home port reassignments and stations (when no new support facilities or personnel are required) to perform as operational groups or for repair or overhaul.

(i) Maintenance dredging and debris disposal where no new depths are required, applicable permits are secured, and disposal will be at an approved disposal site.

(j) Actions, such as the following, with respect to existing structures, properties, facilities and lands where future activities conducted will be similar in scope and operation to activities currently being conducted at the existing structures, properties, facilities, and lands; for example, relocation of personnel, disposition of federally-owned existing structures, properties, facilities, and lands, rent subsidies, operation and maintenance cost subsidies, the exercise of receivership or

conservatorship authority, assistance in purchasing structures, and the production of coins and currency.

(k) The granting of leases, licenses such as for exports and trade, permits, and easements where activities conducted will be similar in scope and operation to activities currently being conducted.

(l) Planning, studies, and provision of technical assistance.

(m) Routine operation of facilities, mobile assets and equipment.

(n) Transfers of ownership, interests, and titles in land, facilities, and real and personal properties, regardless of the form or method of the transfer.

(o) The designation of empowerment zones, enterprise communities, or viticultural areas.

(p) Actions by any of the federal banking agencies or the federal reserve banks, including actions regarding charters, applications, notices, licenses, the supervision or examination of depository institutions or depository institution holding companies, access to the discount window, or the provision of financial services to banking organizations or to any department, agency or instrumentality of the United States.

(q) Actions by the board of governors of the federal reserve system or any federal reserve bank to effect monetary or exchange rate policy.

(r) Actions that implement a foreign affairs function of the United States.

(s) Actions (or portions thereof) associated with transfers of land, facilities, title, and real properties through an enforceable contract or lease agreement where the delivery of the deed is required to occur promptly after a specific, reasonable condition is met, such as promptly after the land is certified as meeting the requirements of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), and where the federal agency does not retain continuing authority to control emissions associated with the lands, facilities, title, or real properties.

(t) Transfers of real property, including land, facilities, and related personal property from a federal entity to another federal entity and assignments of real property, including land, facilities, and related personal property from a federal entity, to another federal entity for subsequent deeding to eligible applicants.

(u) Actions by the department of the treasury to effect fiscal policy and to exercise the borrowing authority of the United States.

(v) Air traffic control activities and adopting approach, departure and enroute procedures for aircraft operations above the mixing height specified in the applicable SIP or TIP. Where the applicable SIP or TIP does not specify a mixing height, the federal agency can use the 3,000 feet above ground level as a default mixing height, unless the agency demonstrates that use of a different mixing height is appropriate because the change in emissions at and above that height caused by the federal action is *de minimis*.

(3) Actions where the emissions are not reasonably foreseeable, such as the following:

(a) Initial outer continental shelf lease sales which are made on a broad scale and are followed by exploration and development plans on a project level.

(b) Electric power marketing activities that involve the acquisition, sale and transmission of electric energy.

(4) Actions which implement a decision to conduct or carry out a conforming program such as prescribed burning actions which are consistent with a conforming land management plan.

D. Notwithstanding the other requirements of 20.11.4 NMAC, a conformity determination is not required for the following federal actions (or portion thereof):

(1) The portion of an action that includes major or minor new or modified stationary sources that require a permit under the new source review (NSR) program (Section 110(a)(2)(c) and Section 173 of the CAA) or the prevention of significant deterioration (PSD) program (Title I, Part C of the CAA).

(2) Actions in response to emergencies which are typically commenced on the order of hours or days after the emergency and, if applicable, which meet the requirements of Subsection E of 20.11.4.153 NMAC.

(3) Research, investigations, studies, demonstrations, or training (other than those exempted under Paragraph (2) of Subsection C of 20.11.4.153 NMAC), where no environmental detriment is incurred or, the particular action furthers air quality research, as determined by the air agency primarily responsible for the applicable SIP.

(4) Alteration and additions of existing structures as specifically required by new or existing applicable environmental legislation or environmental regulations (e.g., hush houses for aircraft engines and scrubbers for air emissions).

(5) Direct emissions from remedial and removal actions carried out under the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) and associated regulations to the extent such emissions either comply with the substantive requirements of the PSD/NSR permitting program or are exempted from

other environmental regulation under the provisions of CERCLA and applicable regulations issued under CERCLA.

E. Federal actions which are part of a continuing response to an emergency or disaster under Paragraph (2) of Subsection D of 20.11.4.153 NMAC and which are to be taken more than six months after the commencement of the response to the emergency or disaster under Paragraph (2) of Subsection D of 20.11.4.153 NMAC are exempt from the requirements of this regulation only if:

(1) the federal agency taking the actions makes a written determination that, for a specified period not to exceed an additional 6 months, it is impractical to prepare the conformity analyses which would otherwise be required and the actions cannot be delayed due to overriding concerns for public health and welfare, national security interests and foreign policy commitments, or

(2) for actions which are to be taken after those actions covered by Paragraph (1) of Subsection E of 20.11.4.153 NMAC, the federal agency makes a new determination as provided in Paragraph (1) of Subsection E of 20.11.4.153 NMAC and:

(a) provides a draft copy of the written determinations required to affected EPA regional office(s), the affected state(s) or air pollution control agencies, and any federal recognized indian tribal government in the nonattainment or maintenance area; those organizations must be allowed 15 days from the beginning of the extension period to comment on the draft determination; and

(b) within 30 days after making the determination, publish a notice of the determination by placing a prominent advertisement in a daily newspaper of general circulation in the area affected by the action.

(3) If additional actions are necessary in response to an emergency or disaster under Paragraph (2), of Subsection D of 20.11.4.153 NMAC beyond the specified time period in Paragraph (2) of Subsection E of 20.11.4.153 NMAC, a federal agency can make a new written determination as described in Paragraph (2) of Subsection E of 20.11.4.153 NMAC for as many 6-month periods as needed, but in no case shall this exemption extend beyond three 6-month periods except where an agency:

(a) provides information to EPA and the state or tribe stating that the conditions that gave rise to the emergency exemption continue to exist and how such conditions effectively prevent the agency from conducting a conformity evaluation.

(b) Reserved.

F. Notwithstanding other requirements of 20.11.4 NMAC, actions specified by individual federal agencies that have met the criteria set forth in either Paragraphs (1), (2) or (3) of Subsection G of 20.11.4.153 NMAC and the procedures set forth in

Subsection H of 20.11.4.153 NMAC are "presumed to conform", except as provided in Subsection J of 20.11.4.153 NMAC. Actions specified by individual federal agencies as "presumed to conform" may not be used in combination with one another when the total direct and indirect emissions from the combination of actions would equal or exceed any of the rates specified in Paragraphs (1) or (2) of Subsection B of 20.11.4.153 NMAC.

G. The federal agency must meet the criteria for establishing activities that are "presumed to conform" by fulfilling the requirements set forth in either Paragraphs (1), (2) or (3) of Subsection G of 20.11.4.153 NMAC:

(1) The federal agency must clearly demonstrate using methods consistent with 20.11.4 NMAC that the total of direct and indirect emissions from the type of activities which would be presumed to conform would not:

(a) cause or contribute to any new violation of any standard in any area;

(b) interfere with provisions in the applicable SIP for maintenance of any standard;

(c) increase the frequency or severity of any existing violation of any standard in any area; or

(d) delay timely attainment of any standard or any required interim emission reductions or other milestones in any area including, where applicable, emission levels specified in the applicable SIP for purposes of:

(i) a demonstration of reasonable further progress;

(ii) a demonstration of attainment; or

(iii) a maintenance plan; or

(2) The federal agency must provide documentation that the total of direct and indirect emissions from such future actions would be below the emission rates for a conformity determination that are established in Subsection B of 20.11.4.153 NMAC, based, for example, on similar actions taken over recent years.

(3) The federal agency must clearly demonstrate that the emissions from the type or category of actions and the amount of emissions from the action are included in the applicable SIP or maintenance plan, and the state, local or tribal air quality agencies responsible for the SIP(s) or TIP(s) provide written concurrence that the emissions from the actions along with all other expected emissions in the area will not exceed the emission budget in the SIP.

H. In addition to meeting the criteria for establishing exemptions set forth in Paragraphs (1), (2) or (3) of Subsection G of 20.11.4.153 NMAC, the following procedures must also be complied with to presume that activities will conform:

(1) the federal agency must identify through publication in the federal register its list of proposed activities that are "presumed to conform" and the basis for the presumptions; the notice must clearly identify the type and size of the action that would be "presumed to conform" and provide criteria for determining if the type and size action qualifies it for the presumption;

(2) the federal agency must notify the EPA region VI office, state, local and tribal air agencies, and, where applicable, the agency designated under Section 174 of the CAA and the MPO and provide at least 30 days for the public to comment on the list of proposed activities "presumed to conform"; If the "presumed to conform" action has regional or national application (e.g., the action will cause emission increases in excess of the *de minimis* levels identified in Subsection B of 20.11.4.153 NMAC in more than one of EPA's regions), the federal agency, as an alternative to sending it to the EPA Region VI Office, can send the draft conformity determination to U.S. EPA, office of air quality planning and standards (OAQPS);

(3) the federal agency must document its response to all the comments received and make the comments, response, and final list of activities available to the public upon request; and

(4) the federal agency must publish the final list of such activities in the federal register.

I. Emissions from the following actions are "presumed to conform":

(1) Actions at installations with facility-wide emission budgets meeting the requirements in Section 93.161 provided that the state or tribe has included the emission budget in the EPA-approved SIP or maintenance plan and the emissions from the action along with all other emissions from the installation will not exceed the facility-wide emission budget.

(2) Prescribed fires conducted in accordance with a smoke management program (SMP) which meets the requirements of EPA's *interim air quality policy on wildland and prescribed fires* or, an equivalent replacement EPA policy.

(3) Emissions for actions that the state or tribe identifies in the EPA approved SIP or TIP as "presumed to conform".

J. Even though an action would otherwise be "presumed to conform" under Subsection F or I, of 20.11.4.153 NMAC, an action shall not be "presumed to conform" and the requirements of Section 40 CFR 93.151, Subsection A of 20.11.4.2 NMAC,

Sections 13 through 19 and Sections 21 through 23 of 20.11.4 NMAC shall apply to the action if EPA or a third party shows that the action would:

- (1) cause or contribute to any new violation of any standard in any area;
- (2) interfere with provisions in the applicable SIP or TIP for maintenance of any standard;
- (3) increase the frequency or severity of any existing violation of any standard in any area; or
- (4) delay timely attainment of any standard or any required interim emissions reductions or other milestones in any area including, where applicable, emission levels specified in the applicable SIP or TIP for purposes of:
 - (a) a demonstration of reasonable further progress;
 - (b) a demonstration of attainment; or
 - (c) a maintenance plan.

K. The provisions of 20.11.4 NMAC shall apply in all nonattainment and maintenance areas except conformity requirements for newly designated nonattainment areas are not applicable until one year after the effective date of the final nonattainment designation for each NAAQS and pollutant in accordance with Section 176(c)(6) of the act.

[20.11.4.153 NMAC - Rn & A, 20.11.4.12 NMAC, 3/14/11]

20.11.4.154 FEDERAL AGENCY CONFORMITY RESPONSIBILITY:

Any department, agency, or instrumentality of the federal government taking an action subject to 20.11.4 NMAC must make its own conformity determination consistent with the requirements of 20.11.4 NMAC. In making its conformity determination, a federal agency must follow the requirements in Sections 14 through 19 and 21 through 24 of 20.11.4 NMAC and must consider comments from any interested parties. Where multiple federal agencies have jurisdiction for various aspects of a project, a federal agency may choose to adopt the analysis of another federal agency (to the extent the proposed action and impacts analyzed are the same as the project for which a conformity determination is required) or develop its own analysis in order to make its conformity determination.

[20.11.4.154 NMAC - Rn & A, 20.11.4.13 NMAC, 3/14/11]

20.11.4.155 REPORTING REQUIREMENTS:

A. A federal agency making a conformity determination under Sections 13 through 19 and 21 through 23 of 20.11.4 NMAC must provide to the EPA Region VI Office, state and local air agencies, any federally-recognized indian tribal government in the nonattainment or maintenance area, and, where applicable, affected federal land managers, the agency designated under Section 174 of the CAA and the MPO a 30-day notice which describes the proposed action and the federal agency's draft conformity determination on the action. If the action has multi-regional or national impacts (e.g., the action will cause emission increases in excess of the *de minimis* levels identified in Subsection B of 20.11.4.153 NMAC in three or more of EPA's regions), the federal agency, as an alternative to sending it to EPA regional offices, can provide the notice to EPA's office of air quality planning and standards.

B. A federal agency must notify the EPA Region VI office, state and local air agencies, any federally-recognized indian tribal government in the nonattainment or maintenance area, and, where applicable, affected federal land managers, the agency designated under Section 174 of the CAA and the MPO, within 30 days after making a final conformity determination under 20.11.4 NMAC.

C. The draft and final conformity determination shall exclude any restricted information or confidential business information. The disclosure of restricted information and confidential business information shall be controlled by the applicable laws, regulations, security manuals, or executive orders concerning the use, access, and release of such materials. Subject to applicable procedures to protect restricted information from public disclosure, any information or materials excluded from the draft or final conformity determination or supporting materials may be made available in a restricted information annex to the determination for review by federal and state representatives who have received appropriate clearances to review the information.

[20.11.4.155 NMAC - Rn & A, 20.11.4.14 NMAC, 3/14/11]

20.11.4.156 PUBLIC PARTICIPATION:

A. Upon request by any person regarding a specific federal action, a federal agency must make available, subject to the limitation in Subsection E of 20.11.4.156 NMAC, for review its draft conformity determination under 20.11.4.154 NMAC with supporting materials which describe the analytical methods and conclusions relied upon in making the applicability analysis and draft conformity determination.

B. A federal agency must make public its draft conformity determination under 20.11.4.154 NMAC by placing a notice by prominent advertisement in a daily newspaper of general circulation in the area affected by the action and by providing 30 days for written public comment prior to taking any formal action on the draft determination. This comment period may be concurrent with any other public involvement, such as occurs in the NEPA process. If the action has multi-regional or national impacts (e.g., the action will cause emission increases in excess of the *de minimis* levels identified in Subsection B of 20.11.4.153 NMAC in three or more of

EPA's regions), the federal agency, as an alternative to publishing separate notices, can publish a notice in the federal register.

C. A federal agency must document its response to all the comments received on its draft conformity determination under 20.11.4.154 NMAC and make the comments and responses available, subject to the limitation in Subsection E of 20.11.4.156 NMAC, upon request by any person regarding a specific federal action, within 30 days of the final conformity determination.

D. A federal agency must make public its final conformity determination under 20.11.4.154 NMAC for a federal action by placing a notice by prominent advertisement in a daily newspaper of general circulation in the area affected by the action within 30 days of the final conformity determination. If the action would have multi-regional or national impacts, the federal agency, as an alternative, can publish the notice in the federal register.

E. The draft and final conformity determination shall exclude any restricted information or confidential business information. The disclosure of restricted information and confidential business information shall be controlled by the applicable laws, regulations or executive orders concerning the release of such materials.

[20.11.4.156 NMAC - Rn & A, 20.11.4.15 NMAC, 3/14/11]

20.11.4.157 REEVALUATION OF CONFORMITY:

A. Once a conformity evaluation is completed by a federal agency, that determination is not required to be reevaluated if the agency has maintained a continuous program to implement the action; the determination has not lapsed as specified in Subsection B of 20.11.4.157 NMAC; or any modification to the action does not result in an increase in emissions above the levels specified in Subsection B of 20.11.4.153 NMAC. If a conformity determination is not required for the action at the time NEPA analysis is completed, the date of the finding of no significant impact (FONSI) for an environmental assessment, a record of decision (ROD) for an environmental impact statement, or a categorical exclusion determination can be used as a substitute date for the conformity determination date.

B. The conformity status of a federal action automatically lapses five years from the date a final conformity determination is reported under 20.11.4.155 NMAC, unless the federal action has been completed or a continuous program to implement the federal action has been commenced.

C. Ongoing federal activities at a given site showing continuous progress are not new actions and do not require periodic re-determination so long as such activities are within the scope of the final conformity determination reported under 20.11.4.155 NMAC.

D. If the federal agency originally determined through the applicability analysis that a conformity determination was not necessary because the emissions for the action were below the limits in Subsection B of 20.11.4.153 NMAC and changes to the action would result in the total emissions from the action being above the limits in Subsection B of 20.11.4.153 NMAC, then the federal agency must make a conformity determination.

[20.11.4.157 NMAC - Rn & A, 20.11.4.16 NMAC, 3/14/11]

20.11.4.158 CRITERIA FOR DETERMINING CONFORMITY OF GENERAL FEDERAL ACTIONS:

A. An action required under 20.11.4.153 NMAC to have a conformity determination for a specific pollutant, will be determined to conform to the applicable SIP if, for each pollutant that exceeds the rates in Subsection B of 20.11.4.153 NMAC, or otherwise requires a conformity determination due to the total of direct and indirect emissions from the action, the action meets the requirements of Subsection C of 20.11.4.158 NMAC, and meets any of the following requirements:

(1) for any criteria pollutant or precursor, the total of direct and indirect emissions from the action are specifically identified and accounted for in the applicable SIP's attainment or maintenance demonstration or reasonable further progress milestone or in a facility-wide emission budget included in a SIP accordance with 20.11.4.161 NMAC;

(2) for precursors of ozone, or nitrogen dioxide, or PM, the total of direct and indirect emissions from the action are fully offset within the same nonattainment or maintenance area (or nearby area of equal or higher classification provided the emissions from that area contribute to the violations, or have contributed to violations in the past, in the area with the federal action) through a revision to the applicable SIP or a similarly enforceable measure that effects emission reductions so that there is no net increase in emissions of that pollutant;

(3) for any directly-emitted criteria pollutant, the total of direct and indirect emissions from the action meet the requirements:

(a) specified in Subsection B of 20.11.4.158 NMAC, based on area-wide air quality modeling analysis and local air quality modeling analysis; or

(b) meet the requirements of Paragraph (5), of Subsection A of 20.11.4.158 NMAC and, for local air quality modeling analysis, the requirement of Subsection B of 20.11.4.158 NMAC.

(4) For CO or directly emitted PM:

(a) where the air agency primarily responsible for the applicable SIP determines that an area-wide air quality modeling analysis is not needed, the total of direct and indirect emissions from the action meet the requirements specified in Subsection B of 20.11.4.158 NMAC, based on local air quality modeling analysis; or

(b) where the air agency primarily responsible for the applicable SIP determines that an area-wide air quality modeling analysis is appropriate and that a local air quality modeling analysis is not needed, the total of direct and indirect emissions from the action meet the requirements specified in Subsection B of 20.11.4.158 NMAC, based on area-wide modeling, or meet the requirements of Paragraph (5) of Subsection A of 20.11.4.158 NMAC or

(5) For ozone or nitrogen dioxide, and for purposes of Subparagraph (b) of Paragraph (3) of Subsection A of 20.11.4.158 NMAC and Subparagraph (b) of Paragraph (4) of Subsection A of 20.11.4.158 NMAC, each portion of the action or the action as a whole meets any of the following requirements:

(a) Where EPA has approved a revision to the applicable implementation plan after the area was designated as nonattainment and the state or tribe makes a determination as provided in Item (i) of Subparagraph (a) of Paragraph (5) of Subsection A of 20.11.4.158 NMAC or where the state or tribe makes a commitment as provided in Item (ii) of Subparagraph (a) of Paragraph (5) of Subsection A of 20.11.4.158 NMAC:

(i) the total of direct and indirect emissions from the action (or portion thereof) is determined and documented by the air agency primarily responsible for the applicable SIP to result in a level of emissions which, together with all other emissions in the nonattainment (or maintenance) area, would not exceed the emissions budgets specified in the applicable SIP;

(ii) the total of direct and indirect emissions from the action (or portion thereof) is determined by the air agency responsible for the applicable SIP to result in a level of emissions which, together with all other emissions in the nonattainment (or maintenance) area, would exceed an emissions budget specified in the applicable SIP and the state governor or the governor's designee for SIP actions makes a written commitment to EPA which includes the following: 1. A specific schedule for adoption and submittal of a revision to the SIP which would achieve the needed emission reductions prior to the time emissions from the federal action would occur; 2. Identification of specific measures for incorporation into the SIP which would result in a level of emissions which, together with all other emissions in the nonattainment or maintenance area, would not exceed any emissions budget specified in the applicable SIP; 3. A demonstration that all existing applicable SIP requirements are being implemented in the area for the pollutants affected by the federal action, and that local authority to implement additional requirements has been fully pursued; 4. A determination that the responsible federal agencies have required all reasonable

mitigation measures associated with their action; and 5. Written documentation including all air quality analyses supporting the conformity determination;

(iii) Where a federal agency made a conformity determination based on a state's or tribe's commitment under Item (i) of Subparagraph (a) of Paragraph (5) of Subsection A of 20.11.4.158 NMAC, and the state has submitted a SIP or TIP to EPA covering the time period during which the emissions will occur or is scheduled to submit such a SIP or TIP within 18 months of the conformity determination, the state commitment is automatically deemed a call for a SIP or TIP revision by EPA under Section 110(k)(5) of the CAA, effective on the date of the federal conformity determination and requiring response within 18 months or any shorter time within which the state or tribe commits to revise the applicable SIP;

(iv) Where a federal agency made a conformity determination based on a state or tribal commitment under Item (ii) of Subparagraph (a) of Paragraph (5) of Subsection A of 20.11.4.158 NMAC and the state or tribe has not submitted a SIP covering the time period when the emissions will occur or is not scheduled to submit such a SIP within 18 months of the conformity determination, the state or tribe must, within 18 months, submit to EPA a revision to the existing SIP committing to include the emissions in the future SIP revision.

(b) The action (or portion thereof), as determined by the MPO, is specifically included in a current transportation plan and transportation improvement program which have been found to conform to the applicable SIP under 40 CFR Part 51, Subpart T, or 40 CFR Part 93, Subpart A;

(c) The action (or portion thereof) fully offsets its emissions within the same nonattainment or maintenance area (or nearby area of equal or higher classification provided the emissions from that area contribute to the violations, or have contributed to violation in the past, in the area with the federal action) through a revision to the applicable SIP or an equally enforceable measure that effects emission reductions equal to or greater than the total of direct and indirect emissions from the action so that there is no net increase in emissions of that pollutant;

(d) Where EPA has not approved a revision to the relevant SIP since the area was designated or reclassified, the total of direct and indirect emissions from the action for the future years (described in Subsection D of 20.11.4.159 NMAC) do not increase emissions with respect to the baseline emissions:

(i) the baseline emissions reflect the historical activity levels that occurred in the geographic area affected by the proposed federal action during: 1. The most current calendar year with a complete emission inventory available before an area is designated unless EPA sets another year, or; 2. The emission budget in the applicable SIP; or 3. The year of the baseline inventory in the PM₁₀ applicable SIP;

(ii) the baseline emissions are the total of direct and indirect emissions calculated for the future years (described in Subsection D of 20.11.4.159 NMAC) using the historic activity levels (described in Item (i) of Subparagraph (d) of Paragraph (5) of Subsection A of 20.11.4.158 NMAC) and appropriate emission factors for the future years; or

(e) Where the action involves regional water or wastewater projects, such projects are sized to meet only the needs of population projections that are in the applicable SIP.

B. The area-wide or local air quality modeling analyses must:

(1) meet the requirements in 20.11.4.159 NMAC; and

(2) show that the action does not:

(a) cause or contribute to any new violation of any standard in any area, or

(b) increase the frequency or severity of any existing violation of any standard in any area.

C. Notwithstanding any other requirements of 20.11.4.158 NMAC, an action subject to this regulation may not be determined to conform to the applicable SIP unless the total of direct and indirect emissions from the action is in compliance or consistent with all relevant requirements and milestones contained in the applicable SIP, such as elements identified as part of the reasonable further progress schedules, assumptions specified in the attainment or maintenance demonstration, prohibitions, numerical emission limits, and work practice requirements.

D. Any analyses required under 20.11.4.158 NMAC must be completed, and any mitigation requirements necessary for a finding of conformity must be identified before the determination of conformity is made.

[20.11.4.158 NMAC - Rn & A, 20.11.4.17 NMAC, 3/14/11]

20.11.4.159 PROCEDURES FOR CONFORMITY DETERMINATION OF FEDERAL ACTIONS:

A. The analyses required under 20.11.4 NMAC must be based on the latest planning assumptions.

(1) All planning assumptions (such as per capita water and sewer use, vehicle miles traveled per capita or per household, trip generation per household, vehicle occupancy, household size, vehicle fleet mix, vehicle ownership, woodstoves per household, and the geographic distribution of population growth) must be derived from

the estimates of population, employment, travel, and congestion most recently approved by the MPO, or other agency authorized to make such estimates, where available.

(2) Any revisions to these estimates used as part of the conformity determination, including projected shifts in geographic location or level of population, employment, travel, and congestion, must be approved by the MPO or other agency authorized to make such estimates for the urban area.

B. The analyses required under 20.11.4 NMAC must be based on the latest and most accurate emission estimation techniques available as described below, unless such techniques are inappropriate. If such techniques are inappropriate, the federal agency may obtain written approval from the regional administrator for EPA region VI for a modification or substitution, of another technique on a case-by-case basis or, where appropriate, on a generic basis for a specific federal agency program.

(1) For motor vehicle emissions, the most current version of the motor vehicle emissions model specified by EPA and available for use in the preparation or revision of the applicable SIP must be used for the conformity analysis as specified in Subparagraph (a) and (b), of Paragraph (1) of Subsection B of 20.11.4.159 NMAC:

(a) the EPA must publish in the federal Register a notice of availability of any new motor vehicle emissions model; and

(b) a grace period of three months shall apply during which the motor vehicle emissions model previously specified by EPA as the most current version may be used unless EPA announces a longer grace period in the federal register. Conformity analyses for which the analysis was begun during the grace period or no more than three months before the federal register notice of availability of the latest emission model may continue to use the previous version of the model specified by EPA.

(2) For non-motor vehicle sources, including stationary and area source emissions, the latest emission factors specified by EPA in the *Compilation of Air Pollutant Emission Factors* (AP-42, <http://www.epa.gov/ttn/chiefs/efpac>) must be used for the conformity analysis unless more accurate emission data are available, such as actual stack test data from stationary sources which are part of the conformity analysis.

C. The air quality modeling analyses required under 20.11.4 NMAC must be based on the applicable air quality models, data bases, and other requirements specified in the most recent version of the *Guideline on Air Quality Models* (Appendix W to 40 CFR Part 51), unless:

(1) the guideline techniques are inappropriate, in which case the model may be modified or another model substituted on a case-by-case basis or, where appropriate, on a generic basis for a specific federal agency program; and

(2) written approval of the EPA regional administrator is obtained for any modification or substitution.

D. The analyses required under 20.11.4 NMAC, must be based on the total of direct and indirect emissions from the action and must reflect emission scenarios that are expected to occur under each of the following cases:

(1) The attainment year specified in the SIP, or if the SIP does not specify an attainment year, the latest attainment year possible under the act; or

(2) the last year for which emissions are projected in the maintenance plan;

(3) the year during which the total of direct and indirect emissions from the action is expected to be the greatest on an annual basis; and

(4) any year for which the applicable SIP specifies an emissions budget.

[20.11.4.159 NMAC - Rn & A, 20.11.4.18 NMAC, 3/14/11]

20.11.4.160 MITIGATION OF AIR QUALITY IMPACTS:

A. Any measures that are intended to mitigate air quality impacts must be identified (such as the identification and quantification of all emission reductions claimed) and the process for implementation (such as any necessary funding of such measures and tracking of such emission reductions) and enforcement of such measures must be described, including an implementation schedule containing explicit timelines for implementation.

B. Prior to determining that a federal action is in conformity, the federal agency making the conformity determination must obtain written commitments from the appropriate persons or agencies to implement any mitigation measures, which are identified as conditions for making conformity determinations.

C. Persons or agencies voluntarily committing to mitigation measures to facilitate positive conformity determinations must comply with the obligations of such commitments.

D. In instances where the federal agency is licensing, permitting or otherwise approving the action of another governmental or private entity, approval by the federal agency must be conditioned on the other entity meeting the mitigation measures set forth in the conformity determination.

E. When necessary because of changed circumstances, mitigation measures may be modified so long as the new mitigation measures continue to support the conformity determination. Any proposed change in the mitigation measures is subject to the

reporting requirements of 20.11.4.155 NMAC and the public participation requirements of 20.11.4.157 NMAC.

F. Written commitments to mitigation measures must be obtained prior to a positive conformity determination and such commitments must be fulfilled.

G. After a state or tribe revises its SIP or TIP and EPA approves that SIP revision, any agreements, including mitigation measures, necessary for a conformity determination will be both state or tribal and federally enforceable. Enforceability through the applicable SIP or TIP will apply to all persons who agree to mitigate direct and indirect emissions associated with a federal action for a conformity determination.

[20.11.4.160 NMAC - Rn & A, 20.11.4.19 NMAC, 3/14/11]

20.11.4.161 CONFORMITY EVALUATION FOR FEDERAL INSTALLATIONS WITH FACILITY-WIDE EMISSION BUDGETS:

A. The state, local or tribal agency responsible for implementing and enforcing the SIP or TIP can in cooperation with federal agencies or third parties authorized by the agency that operate installations subject to federal oversight develop and adopt a facility-wide emission budget to be used for demonstrating conformity under Paragraph (1) of Subsection A of 20.11.4.158 NMAC. The facility-wide budget must meet the following criteria.

- (1) Be for a set time period.
- (2) Cover the pollutants or precursors of the pollutants for which the area is designated nonattainment or maintenance.
- (3) Include specific quantities allowed to be emitted on an annual or seasonal basis.
- (4) The emissions from the facility along with all other emissions in the area will not exceed the emission budget for the area.
- (5) Include specific measures to ensure compliance with the budget, such as periodic reporting requirements or compliance demonstration, when the federal agency is taking an action that would otherwise require a conformity determination.
- (6) Be submitted to EPA as a SIP revision.
- (7) The SIP revision must be approved by EPA.

B. The facility-wide budget developed and adopted in accordance with Subsection A of 20.11.4.161 NMAC can be revised by following the requirements in Subsection A of 20.11.4.161 NMAC.

C. Total direct and indirect emissions from federal actions in conjunction with all other emissions subject to general conformity from the facility that do not exceed the facility budget adopted pursuant to Subsection A of 20.11.4.161 NMAC are "presumed to conform" to the SIP and do not require a conformity analysis.

D. If the total direct and indirect emissions from the federal actions in conjunction with the other emissions subject to general conformity from the facility exceed the budget adopted pursuant to Subsection A of 20.11.4.161 NMAC, the action must be evaluated for conformity. A federal agency can use the compliance with the facility-wide emissions budget as part of the demonstration of conformity, i.e., the agency would have to mitigate or offset the emissions that exceed the emission budget.

E. If the SIP for the area includes a category for construction emissions, the negotiated budget can exempt construction emissions from further conformity analysis.

[20.11.4.161 NMAC - N, 3/14/11]

20.11.4.162 EMISSIONS BEYOND THE TIME PERIOD COVERED BY THE SIP:

If a federal action would result in total direct and indirect emissions above the applicable thresholds which would be emitted beyond the time period covered by the SIP, the federal agency can:

A. demonstrate conformity with the last emission budget in the SIP; or

B. request the state or tribe to adopt an emissions budget for the action for inclusion in the SIP. The state or tribe must submit a SIP or TIP revision to EPA within 18 months either including the emissions in the existing SIP or establishing an enforceable commitment to include the emissions in future SIP revisions based on the latest planning assumptions at the time of the SIP revision; no such commitment by a state or tribe shall restrict a state's or tribe's ability to require RACT, RACM or any other control measures within the state's or tribe's authority to ensure timely attainment of the NAAQS.

[20.11.4.162 NMAC - N, 3/14/11]

20.11.4.163 TIMING OF OFFSETS AND MITIGATION MEASURES:

A. The emissions reductions from an offset or mitigation measure used to demonstrate conformity must occur during the same calendar year as the emission increases from the action except, as provided in Subsection B of 20.11.4.163 NMAC.

B. The state or tribe may approve emissions reductions in other years provided:

(1) The reductions are greater than the emission increases by the following ratios:

- (a) extreme nonattainment areas: 1.5:1
- (b) severe nonattainment areas: 1.3:1
- (c) serious nonattainment areas: 1.2:1
- (d) moderate nonattainment areas: 1.15:1
- (e) all other areas: 1.1:1.

(2) The time period for completing the emissions reductions must not exceed twice the period of the emissions.

(3) The offset or mitigation measure with emissions reductions in another year will not:

- (a) cause or contribute to a new violation of any air quality standard,
- (b) increase the frequency or severity of any existing violation of any air quality standard; or
- (c) delay the timely attainment of any standard or any interim emissions reductions or other milestones in any area.

C. The approval by the state or tribe of an offset or mitigation measure with emissions reductions in another year does not relieve the state or tribe of any obligation to meet any SIP or CAA milestone or deadline. The approval of an alternate schedule for mitigation measures is at the discretion of the state or tribe, and they are not required to approve an alternate schedule.

[20.11.4.163 NMAC - N, 3/14/11]

20.11.4.164 INTER-PRECURSOR MITIGATION MEASURES AND OFFSETS:

Federal agencies must reduce the same type pollutant as being increased by the federal action except the state or tribe may approve offsets or mitigation measures of different precursors of the same criteria pollutant, if such trades are allowed by a state or tribe in a SIP or TIP approved new source review regulation, is technically justified, and has a demonstrated environmental benefit.

[20.11.4.164 NMAC - N, 3/14/11]

20.11.4.165 EARLY EMISSION REDUCTION CREDIT PROGRAMS AT FEDERAL FACILITIES AND INSTALLATION SUBJECT TO FEDERAL OVERSIGHT:

A. Federal facilities and installations subject to federal oversight can, with the approval of the state or tribal agency responsible for the SIP or TIP in that area, create an early emissions reductions credit program. The federal agency can create the emission reduction credits in accordance with the requirements in Subsection B of 20.11.4.165 NMAC and can use them in accordance with Subsection C of 20.11.4.165 NMAC.

B. Creation of emission reduction credits.

(1) Emissions reductions must be quantifiable through the use of standard emission factors or measurement techniques. If non-standard factors or techniques to quantify the emissions reductions are used, the federal agency must receive approval from the state or tribal agency responsible for the implementation of the SIP or TIP and from EPA's Region VI Office. The emission reduction credits do not have to be quantified before the reduction strategy is implemented, but must be quantified before the credits are used in the general conformity evaluation.

(2) The emission reduction methods must be consistent with the applicable SIP or TIP attainment and reasonable further progress demonstrations.

(3) The emissions reductions cannot be required by or credited to other applicable SIP or TIP provisions.

(4) Both the state or tribe and federal air quality agencies must be able to take legal action to ensure continued implementation of the emission reduction strategy. In addition, private citizens must also be able to initiate action to ensure compliance with the control requirement.

(5) The emissions reductions must be permanent or the timeframe for the reductions must be specified.

(6) The federal agency must document the emissions reductions and provide a copy of the document to the state or tribal air quality agency and the EPA region VI office for review. The documentation must include a detailed description of the emission reduction strategy and a discussion of how it meets the requirements of Paragraphs (1) through (5) of Subsection B of 20.11.4.165 NMAC.

C. Use of emission reduction credits. The emission reduction credits created in accordance with Subsection B of 20.11.4.165 NMAC can be used, subject to the following limitations, to reduce the emissions increase from a federal action at the facility for the conformity evaluation.

(1) If the technique used to create the emission reduction is implemented at the same facility as the federal action and could have occurred in conjunction with the federal action, then the credits can be used to reduce the total direct and indirect emissions used to determine the applicability of the regulation as required in

20.11.4.153 NMAC and as offsets or mitigation measures required by 20.11.4.158 NMAC.

(2) If the technique used to create the emission reduction is not implemented at the same facility as the federal action or could not have occurred in conjunction with the federal action, then the credits cannot be used to reduce the total direct and indirect emissions used to determine the applicability of the regulation as required in 20.11.4.153 NMAC, but can be used to offset or mitigate the emissions as required by 20.11.4.158 NMAC.

(3) Emissions reductions credits must be used in the same year in which they are generated.

(4) Once the emission reduction credits are used, they cannot be used as credits for another conformity evaluation. However, unused credits from a strategy used for one conformity evaluation can be used for another conformity evaluation as long as the reduction credits are not double counted.

(5) Federal agencies must notify the state or tribal air quality agency responsible for the implementation of the SIP or TIP and the EPA region VI office when the emission reduction credits are being used.

[20.11.4.165 NMAC - N, 3/14/11]

PART 5: VISIBLE AIR CONTAMINANTS

20.11.5.1 ISSUING AGENCY:

Albuquerque/Bernalillo County Air Quality Control Board. P.O. Box 1293, Albuquerque, NM 87103. Telephone: (505) 768-2600.

[3/21/77. . .11/1/95; 20.11.5.1 NMAC - Rn, 20 NMAC 11.05.I.1, 10/1/02]

20.11.5.2 SCOPE:

This Part is applicable to the following:

A. Exempt:

(1) This Part does not apply to sources within Bernalillo County which are located on Indian lands over which the Albuquerque/Bernalillo County Air Quality Control lacks jurisdiction.

(2) Upon the written request of an affected source, the Director may, on a case by case basis, exempt aircraft engine test facilities and enclosed research and development (R&D) fire test facilities from the opacity requirements of this Part. For

sources required to obtain a Part 42 operating permit, any exemption granted under this subpart shall be effective for the duration of the operating permit. For sources not required to obtain a Part 42 operating permit, any exemption granted under this subpart shall be effective for a period of up to five years. Exemptions granted under this subpart may be renewed by the Director on a case by case basis, upon the written request of the affected source.

B. Stationary Sources: Visible emissions and operational limitations shall be applicable to the sources listed in this Part.

C. Mobile Sources: Except for the mobile sources listed in this Part, motor vehicles are subject to the visible emission limitations required by 20.11.103 NMAC, and not this Part.

[3/24/82. . . 11/28/89, 11/1/95, 12/1/95; 20.11.5.2 NMAC - Rn, 20 NMAC 11.05.I.2, 10/1/02]

20.11.5.3 STATUTORY AUTHORITY:

This Part is adopted pursuant to the authority provided in the New Mexico Air Quality Act, NMSA 1978 Sections 74-2-4, 74-2-5.C: and the Joint Air Quality Board Ordinances, Bernalillo County Ordinance 94-5 Section 4, Revised Ordinances of Albuquerque ROA 1994 Section 9-5-1-4.

20.11.5.4 DURATION:

Permanent.

[11/1/95; 20.11.5.4 NMAC - Rn, 20 NMAC 11.05.I.4 & A, 10/1/02; 20.11.5.4 NMAC - Rn, 20.11.5.3 NMAC, 1/1/03]

20.11.5.5 EFFECTIVE DATE:

November 1, 1995, unless a later date is cited at the end of a section.

[11/28/89, 11/1/95; 20.11.5.5 NMAC - Rn, 20 NMAC 11.05.I.5, 10/1/02; 20.11.5.5 NMAC - Rn, 20.11.5.4 NMAC, 1/1/03]

20.11.5.6 OBJECTIVE:

The objective of this Part is to provide a simple and effective means to assess and reduce air pollution from sources that emit particulate matter, fumes, smoke, or aerosols in order to reduce visible air contaminants.

[11/28/89. . .11/1/95; 20.11.5.6 NMAC - Rn, 20 NMAC 11.05.I.6, 10/1/02]

[RESERVED]

[11/1/95; 20.11.5.8 NMAC - Rn, 20 NMAC 11.05.I.8, 10/1/02]

20.11.5.9 SAVINGS CLAUSE:

Any amendment to 20.11.5 NMAC, which is filed, with the State Records Center shall not affect actions pending for violation of a City or County ordinance or Air Quality Control Board Regulation 5. Prosecution for a violation under prior regulation wording shall be governed and prosecuted under the ordinance, Part, or regulation section in effect at the time the violation was committed.

[11/1/95; 20.11.5.9 NMAC - Rn, 20 NMAC 11.05.I.9, 10/1/02]

20.11.5.10 SEVERABILITY:

If any section, subsection, sentence, phrase, clause, or wording of this Part or the federal standards incorporated herein is for any reason held to be unconstitutional or otherwise invalid by any court, the decision shall not affect the validity of remaining portions of this Part.

[11/1/95; 20.11.5.10 NMAC - Rn, 20 NMAC 11.05.I.10, 10/1/02]

20.11.5.11 DOCUMENTS:

Documents incorporated and cited in this Part may be viewed at the Albuquerque Environmental Health Department, 400 Marquette NW, Albuquerque, NM.

[11/1/95; 20.11.5.11 NMAC - Rn, 20 NMAC 11.05.I.11 & A, 10/1/02]

20.11.5.12 GENERAL STATIONARY SOURCES:

No person owning or operating any stationary source, not otherwise addressed in this Part, shall cause or allow visible air contaminant emissions that exceed an opacity of 20 percent, 6 minute time-averaged.

[11/28/89. . .11/1/95; 20.11.5.12 NMAC - Rn, 20 NMAC 11.05.I.12 & Repealed; Rn, 20 NMAC 11.05.II.1, 10/1/02]

20.11.5.13 SPECIFIC STATIONARY SOURCES:

The following visible emissions and operational limitations shall be applicable to the sources listed.

A. Incinerator, Pathological Waste Destructor, or Crematorium: No person shall cause or allow visible emissions from an incinerator, pathological waste destructor, or crematorium, allowed pursuant to 20.11.68, or 69 NMAC, to exceed 5 percent opacity during any time interval including startup and shutdown.

B. Stationary Spark Ignition Engine: Except for the initial 10 seconds from startup, no person shall cause or allow visible emissions from any stationary spark ignition engine to exceed 5 percent opacity, 3 minute time-averaged.

C. Diesel-Powered Engine: No person shall cause or allow visible emissions from any stationary diesel-powered engine to exceed 20 percent opacity, 6 minute time-averaged. During the first 20 minutes of cold startup the visible emissions shall not exceed 40 percent opacity, 6 minute time-averaged. Additionally, no increase of load shall be applied so as to cause an emission having an opacity greater than 40 percent during any time interval.

D. Training: The operation of equipment specifically designed for the purposes of training certified smoke observers is permissible with no limits on visible emissions providing the equipment is operated so that the emissions do not pose an annoyance to any person, private residence, or business.

[11/28/89. . .11/1/95; 20.11.5.13 NMAC - Rn, 20 NMAC 11.05.II.2, 10/1/02]

20.11.5.14 MOBILE SOURCES:

A. Motor Vehicles: Except for the mobile sources listed below, motor vehicles are subject to the visible emission limitations required by 20.11.103 NMAC, and not this Part.

B. Railroad:

(1) No person shall cause or allow visible emissions from any moving railroad train to exceed 20 percent opacity, 6 minute time-averaged, except the restriction is not applicable in the following conditions:

(a) for a period of four consecutive minutes when a locomotive is loaded after a period of idle.

(b) for a period of one minute during acceleration under load from a throttle position other than idle to a higher throttle position.

(2) The owner or operator of any diesel powered locomotive that has been issued a Notice of Violation of this regulation, but which is not locally available for a compliance inspection, shall submit to the Department an affidavit attesting to those abatement measures which have been completed and shall state in that affidavit that the locomotive has achieved compliance with this regulation, as determined in accordance with EPA Method 9, (40 CFR 60, Appendix A).

C. Aircraft: No person shall cause or allow visible emissions from the operation of aircraft to exceed an opacity of 40 percent, 6 minute time-averaged. For the purposes of this regulation skywriting is excluded.

[3/24/82. . .11/28/89, 11/1/95; 20.11.5.14 NMAC - Rn, 20 NMAC 11.05.II.3, 10/1/02]

20.11.5.15 TEST PROCEDURES:

A. Visible emission limitations specified in this Part shall be determined by a certified observer using the standard visual method listed in 40 CFR 60 A, Method 9, or by operation of equipment approved by the Director that is known to produce equivalent or better accuracy.

B. Unless otherwise stated herein, emission observations shall be time-averaged over a minimum of 6 minutes. Where condensed water vapor is visible in an exhaust plume, the opacity assessment shall be made at a point consistent with the procedure stipulated in 40 CFR 60 Appendix A, Method 9.

[11/28/89. . .11/1/95; 20.11.5.15 NMAC - Rn, 20 NMAC 11.05.II.4, 10/1/02]

20.11.5.16 CIRCUMVENTION:

No person shall use any plan, activity, device or contrivance, which the Department determines will, without resulting in an actual reduction of air contaminants, conceal or appear to minimize the effects of an emission, which would otherwise violate this Part. Air introduced for dilution purposes only shall be considered circumvention of this Part.

[3/24/82. . .11/1/95; 20.11.5.16 NMAC - Rn, 20 NMAC 11.05.II.5, 10/1/02]

PART 6: EMERGENCY ACTION PLAN

20.11.6.1 ISSUING AGENCY:

Albuquerque/ Bernalillo County Air Quality Control Board. P.O. Box 1293, Albuquerque, NM 87103. Telephone: (505) 768-2600.

[3/24/82. . .12/1/95; 20.11.6.1 NMAC – Rn, 20 NMAC 11.06.I.1, 10/1/02]

20.11.6.2 SCOPE:

This Part is applicable to the Director of the air pollution control agency of Bernalillo County, New Mexico.

[12/1/95; 20.11.6.2 NMAC – Rn, 20 NMAC 11.06.I.2, 10/1/02]

20.11.6.3 STATUTORY AUTHORITY:

This Part is adopted pursuant to the authority provided in the New Mexico Air Quality Control Act, NMSA 1978 Sections 74-2-4, 74-2-5.C; the Joint Air Quality Control Board Ordinance, Bernalillo County Ordinance 94-5 Section 4; and the Joint Air Quality Control Board Ordinance, Revised Ordinances of Albuquerque 1994 Section 9-5-1-4.

[3/24/82. . .12/1/95; 20.11.6.3 NMAC – Rn, 20 NMAC 11.06.I.3, 10/1/02]

20.11.6.4 DURATION:

Permanent.

[12/1/95; 20.11.6.4 NMAC – Rn, 20 NMAC 11.06.I.4, 10/1/02]

20.11.6.5 EFFECTIVE DATE:

December 1, 1995, unless a later date is cited at the end of a section.

[12/1/95; 20.11.6.5 NMAC – Rn, 20 NMAC 11.06.I.5 & A. 10/1/02]

20.11.6.6 OBJECTIVE:

To have an air emissions plan to prevent ambient pollution concentrations from substantially endangering the public health.

[12/1/95; 20.11.6.6 NMAC – Rn, 20 NMAC 11.06.I.6, 10/1/02]

20.11.6.7 DEFINITIONS:

[RESERVED]

[12/1/95; 20.11.6.7 NMAC - Rn, 20 NMAC 11.06.I.7, 10/1/02]

20.11.6.8 VARIANCES:

[RESERVED]

[12/1/95; 20.11.6.8 NMAC - Rn, 20 NMAC 11.06.I.8, 10/1/02]

20.11.6.9 SAVINGS CLAUSE:

Any amendment to 20.11.6 NMAC, which is filed, with the State Records Center shall not affect actions pending for violation of a City or County ordinance, Air Quality Control Board Regulation 27, or 20.11.6 NMAC. Prosecution for a violation under prior regulation wording shall be governed and prosecuted under the statute, ordinance, Part, or regulation section in effect at the time the violation was committed.

[12/1/95; 20.11.6.9 NMAC – Rn, 20 NMAC 11.06.I.9, 10/1/02]

20.11.6.10 SEVERABILITY:

In any section, paragraph, sentence, clause, or word of this Part or any federal standards incorporated herein is for any reason held to be unconstitutional or otherwise invalid by any court, the decision shall not affect the validity of remaining provisions of this Part.

[12/1/95; 20.11.6.10 NMAC – Rn, 20 NMAC 11.06.I.10, 10/1/02]

20.11.6.11 DOCUMENTS:

Documents incorporated and cited in this Part may be viewed at the Albuquerque Environmental Health Department, 400 Marquette NW, Albuquerque, NM.

[12/1/95; 20.11.6.11 NMAC – Rn, 20 NMAC 11.06.I.11 & A, 10/1/02]

20.11.6.12 APPLICABLE REQUIREMENTS:

Under the general cognizance of the Board, the Director shall formulate and administer an emergency action plan approved by the Board and designed to provide for taking any emission control actions necessary to prevent ambient pollutant concentrations at any location in the county from reaching levels which would constitute imminent and substantial endangerment to the health of persons, which levels are described by the Director.

[3/24/82 . . . 12/1/95; 20.11.6.12 NMAC – Rn, 20 NMAC 11.06.I.12 & Repealed, 10/1/02; Rn, 20 NMAC 11.06.II.1, 10/1/02]

PART 7: VARIANCE PROCEDURE

20.11.7.1 ISSUING AGENCY:

Albuquerque-Bernalillo County Air Quality Control Board, c/o Environmental Health Department, P.O. Box 1293, Albuquerque, NM 87103. Telephone: (505) 768-2600.

[3/24/82. . .12/1/95; 20.11.7.1 NMAC - Rn, 20 NMAC 11.07.I.1, 10/1/02; A, 8/1/04]

20.11.7.2 SCOPE:

A. 20.11.7 NMAC establishes procedures and criteria for obtaining a variance from a limitation or other requirement (together referred to as "limitation" in 20.11.7 NMAC) prescribed under the Air Quality Control Act, a regulation of the Albuquerque-Bernalillo county air quality control board or a permit condition imposed by the department. However, the board cannot grant a variance from federal requirements in 20.11.8 NMAC, 20.11.41 NMAC, 20.11.42 NMAC, 20.11.60 NMAC, 20.11.61 NMAC, 20.11.62 NMAC, 20.11.63 NMAC and 20.11.64 NMAC. Granting or approval of a variance by the board does not mean automatic approval by the EPA.

B. Exempt: 20.11.7 NMAC does not apply to sources within Bernalillo county that are located on Indian lands over which the Albuquerque-Bernalillo county air quality control board lacks jurisdiction.

[12/1/95; 20.11.7.2 NMAC - Rn, 20 NMAC 11.07.I.2, 10/1/02; A, 8/1/04]

20.11.7.3 STATUTORY AUTHORITY:

20.11.7 NMAC is adopted pursuant to the authority provided in the New Mexico Air Quality Control Act, NMSA 1978 Sections 74-2-4, 74-2-5 and 74-2-8; the Joint Air Quality Control Board Ordinance, Bernalillo County Ordinance 94-5 Sections 3, 4 and 8; and the Joint Air Quality Control Board Ordinance, Revised Ordinances of Albuquerque 1994 Sections 9-5-1-3, 9-5-1-4 and 9-5-1-8.

[3/24/82. . .12/1/95; 20.11.7.3 NMAC - Rn, 20 NMAC 11.07.I.3, 10/1/02; A, 8/1/04]

20.11.7.4 DURATION:

Permanent.

[12/1/95; 20.11.7.4 NMAC - Rn, 20 NMAC 11.07.I.4, 10/1/02]

20.11.7.5 EFFECTIVE DATE:

December 1, 1995, unless a later date is cited at the end of a section.

[12/1/95; 20.11.7.5 NMAC - Rn, 20 NMAC 11.07.I.5 & A, 10/1/02]

20.11.7.6 OBJECTIVE:

The objective of 20.11.7 NMAC is to establish procedures and criteria by which a petitioner may seek a variance from a limitation prescribed under the Air Quality Control Act, a regulation of the Albuquerque-Bernalillo county air quality control board or a

permit condition imposed by the department. However, the board cannot grant a variance from federal requirements in 20.11.8 NMAC, 20.11.41 NMAC, 20.11.42 NMAC, 20.11.60 NMAC, 20.11.61 NMAC, 20.11.62 NMAC, 20.11.63 NMAC and 20.11.64 NMAC.

[12/1/95; 20.11.7.6 NMAC - Rn, 20 NMAC 11.07.I.6, 10/1/02; A, 8/1/04]

20.11.7.7 DEFINITIONS:

In addition to the definitions in 20.11.7.7 NMAC, the definitions 20.11.1 NMAC apply unless there is a conflict between definitions, in which case the definition in 20.11.7 NMAC shall govern.

A. "Division" means the air quality division of the city of Albuquerque environmental health department or its successor agency.

B. "Ex parte contact" means oral or other communication with a board member or the board hearing officer regarding the merits of a pending variance petition if the contact occurs between the date the petition for variance is filed and the conclusion of the variance procedure, and if the contact is intended to or may affect the board member's or hearing officer's opinion regarding the merits of the pending variance petition.

C. "Petitioner" means a person seeking a variance from a limitation of the Air Quality Control Act, the City of Albuquerque Joint Air Quality Control Board ordinance, the Bernalillo County Joint Air Quality Control Board ordinance, a regulation of the Albuquerque-Bernalillo county air quality control board, or a permit condition imposed by the department.

D. "Prima facie case" means evidence submitted by the petitioner during a hearing if the evidence is sufficient on its face to entitle the petitioner to prevail, before adverse evidence is presented at the hearing.

[12/1/95; 20.11.7.7 NMAC - Rn, 20 NMAC 11.07.I.7, 10/1/02; A, 8/1/04]

20.11.7.8 VARIANCES:

[RESERVED]

[12/1/95; 20.11.7.8 NMAC - Rn, 20 NMAC 11.07.I.8, 10/1/02]

20.11.7.9 SAVINGS CLAUSE:

Any amendment to 20.11.7 NMAC that is filed with the state records center shall not affect actions pending for violation of the Air Quality Control Act, a city of Albuquerque or county of Bernalillo ordinance, a regulation of the board or any permit condition

imposed by the department. Prosecution for a violation under prior regulation wording shall be governed and prosecuted under the statute, ordinance, regulation or permit condition in effect at the time the violation was committed.

[12/1/95; 20.11.7.9 NMAC - Rn, 20 NMAC 11.07.I.9, 10/1/02; A, 8/1/04]

20.11.7.10 SEVERABILITY:

If any section, paragraph, sentence, clause, or word of 20.11.7 NMAC is for any reason held to be unconstitutional or otherwise invalid by any court, the decision shall not affect the validity of remaining provisions of 20.11.7 NMAC.

[12/1/95; 20.11.7.10 NMAC - Rn, 20 NMAC 11.07.I.10, 10/1/02; A, 8/1/04]

20.11.7.11 DOCUMENTS:

Documents incorporated and cited in 20.11.7 NMAC may be viewed at the Albuquerque Environmental Health Department, 400 Marquette NW, Albuquerque, NM.

[12/1/95; 20.11.7.11 NMAC - Rn, 20 NMAC 11.07.I.11 & A, 10/1/02; A, 8/1/04]

20.11.7.12 PETITION FOR VARIANCE - FEE:

A. A person seeking a variance from a regulation of the board or a permit condition imposed by the department shall do so by delivering a written petition for variance to the director and the division manager. The petitioner shall use petition forms obtained from the department. The petition form shall include information regarding how the public may obtain additional information from the division regarding the petition, including information regarding the date, time and place of any variance petition hearing before the board.

B. Petitions shall:

(1) be delivered to the director and the division manager within 30 consecutive days after the date the petitioner had actual or constructive knowledge of the limitation regarding which the petitioner is seeking a variance;

(2) state the petitioner's name, address, telephone number, and, if available, facsimile number, cellular telephone number and other contact information;

(3) state the date the petition is delivered to the director and the division manager;

(4) describe the facility or activity regarding which the variance is sought, if applicable;

(5) state the address or description of the property upon which the facility is located, if applicable;

(6) identify and provide a citation to the limitation prescribed by the Air Quality Control Act, the regulation of the board or the permit condition imposed by the department regarding which the variance is sought;

(7) state in detail the extent to which the petitioner wishes to vary from the limitation;

(8) state why the petitioner believes the variance is justified and can be approved by the board consistent with the requirements of the Air Quality Control Act, specifically, Subsections A and B of 74-2-8 NMSA 1978, Variances;

(9) state any time periods, limitations and other conditions that must be included in the variance in order to comply with Subsection C of 74-2-8 NMSA 1978; and

(10) be signed by the petitioner or by a person who is authorized to sign on the petitioner's behalf. If the person signing is not the petitioner, the person signing shall state in writing the source of the authority to sign on petitioner's behalf and shall attach the proof of authority to the petition that is delivered to the division manager.

C. The fee for filing a variance petition that is required by Subsection J of 20.11.2.18 NMAC shall accompany the copy of the petition that is delivered to the division manager.

D. No later than five consecutive days after the petitioner delivers a copy of the variance petition to the director and division manager, the petitioner shall send by certified mail a copy of the variance petition to the president of each city of Albuquerque and county of Bernalillo neighborhood association within one-half mile of the existing or proposed stationary source or location, if any, that is the subject of the petition for variance. When it is considered to be warranted, because of the characteristics and mobility of the pollutant(s) and density of the population, the department and the petitioner may agree that the petitioner will notify by certified mail additional neighborhood associations beyond the one-half mile line. The address of each president shall be obtained from the city of Albuquerque government and the county of Bernalillo government, as applicable. The petitioner shall pay all costs related to the mailing. If the petitioner receives notice from the United States postal service that a certified letter was not delivered, the petitioner shall make a second, good faith effort to determine the valid neighborhood association contact and mailing address, and the petitioner shall mail or hand deliver a copy of the variance petition to that person. The petitioner shall complete a proof of delivery form obtained from the division, attach documentation establishing delivery of a copy of the petition and any additional good faith efforts to deliver, and shall deliver the completed proof of delivery form and related

documentation to the division seven consecutive days before the start of the evidentiary phase of the variance petition hearing.

[3/24/82. . .12/1/95; 20.11.7.12 NMAC - Rn, 20 NMAC 11.07.I.12 & Repealed, 10/1/02; Rn, 20 NMAC 11.07.II.1, 10/1/02; A, 8/1/04; A, 11/1/04]

20.11.7.13 ACTION BY THE DIRECTOR:

A. Within 15 consecutive days after receipt of the variance petition, the director shall promptly investigate and evaluate the petition, deliver a written recommendation to each member of the board, and mail a copy of the recommendation to the petitioner by certified mail. The director may deliver a second copy of the recommendation to the petitioner by facsimile or hand delivery. When the circumstances justify, the director may extend the period of time by which the director must submit the director's recommendation to the board. The director shall notify the board and the petitioner in writing of the length of the extension and the reason for the extension. Sufficient reasons for an extension shall include failure by the petitioner to provide technical information necessary for the director to determine whether to recommend that the board grant or deny a variance.

B. The director's recommendation shall:

- (1) state the date that the recommendation is made;
- (2) state the director's recommendation; and
- (3) state the director's reason for the recommendation.

[3/24/82. . .12/1/95; 20.11.7.13 NMAC - Rn, 20 NMAC 11.07.II.2, 10/1/02; A, 8/1/04]

20.11.7.14 PETITIONER, DIRECTOR AND BOARD DEADLINES AND ACTIONS:

A. When the board receives the director's written recommendation, if the director recommends that the board grant a variance in whole or in part, then the board shall hold a public variance hearing. The board shall meet and decide whether to appoint a board hearing officer for the evidentiary phase of the board variance hearing, whether any hearing officer shall provide the board with proposed findings of fact and conclusions of law and a recommended decision, and the date, time and place the board will make a final decision regarding the variance petition. The board shall make a final decision regarding the variance petition no sooner than 20 consecutive days after the petitioner receives the director's recommendation required by 20.11.7.13 NMAC, and no later than 65 consecutive days after the board receives the director's recommendation that the board grant a variance in whole or in part.

B. Within 10 consecutive days after the board makes the procedural decisions required by Subsection A of 20.11.7.14 NMAC, the board shall send notice by certified

mail to the petitioner regarding the date, time and place of the evidentiary phase of the hearing, and the date, time and place the board will make a final decision regarding the variance petition. Within the same 10-day period, the board shall deliver a copy of the notice to the division manager. The board may also deliver a second copy of the hearing notice to the petitioner by facsimile or hand delivery.

C. When the board receives the director's written recommendation, if the director is opposed to the board granting the variance as requested by the petitioner, the board shall only hold a public variance hearing if the board receives a timely written request for hearing from the petitioner. The petitioner shall deliver a written request for a board variance hearing to the director and the division manager within 15 consecutive days after the petitioner receives the director's recommendation that the board deny the variance. If the petitioner delivers a timely written request for a board variance hearing to the director and the division manager, the board shall meet and decide whether to appoint a board hearing officer for the evidentiary phase of the board variance hearing, whether any hearing officer shall provide the board with proposed findings of fact and conclusions of law and a recommended decision, and the date, time and place the board will make a final decision regarding the variance petition. The board shall make a final decision regarding the variance petition no sooner than 20 consecutive days after the petitioner delivers a timely written request for a board variance hearing as required by Subsection C of 20.11.7.14 NMAC, and no later than 80 consecutive days after the board receives the director's recommendation that the board not grant the variance.

D. Within 10 consecutive days after the board makes the procedural decisions required by Subsection C of 20.11.7.14 NMAC, the board shall send notice by certified mail to the petitioner regarding the date, time and place of the evidentiary phase of the hearing, and the date, time and place the board will make a final decision regarding the variance petition. Within the same 10-day period, the board shall deliver a copy of the notice to the division manager. The board may also deliver a second copy of the hearing notice to the petitioner by facsimile or hand delivery.

E. If the petitioner fails to deliver a timely request for a board variance hearing as required by Subsection C of 20.11.7.14 NMAC, the petition shall be deemed denied, with prejudice.

[3/24/82. . .12/1/95; 20.11.7.14 NMAC - Rn, 20 NMAC 11.07.II.3, 10/1/02; A, 8/1/04; A, 11/1/04]

20.11.7.15 NOTICE:

A. At least 14 consecutive days before the beginning of the evidentiary phase of a board variance hearing, the board shall publish notice of the subject of the variance hearing in a newspaper of general circulation in Bernalillo county, and shall also publish the date, time and place of the evidentiary phase of the hearing and the date, time and place the board will make a final decision regarding the variance petition.

B. The director shall maintain a file of persons who have delivered to the director a written statement of their interest in variance hearings. The director shall make a reasonable effort to mail notice to all persons who have delivered a written statement of interest within the previous 12 months. The director shall mail written notice regarding variance recommendations made by the director, upcoming variance hearings before the board, and variance decisions made by the board.

[3/24/82. . .12/1/95; 20.11.7.15 NMAC - Rn, 20 NMAC 11.07.II.4, 10/1/02; A, 8/1/04]

20.11.7.16 HEARINGS - ACTIONS BY BOARD - WRITTEN ORDER:

A. Board variance hearings shall be public and shall be held at a public facility with public seating available.

B. Between the dates the petition for variance is filed and the conclusion of the variance procedure, no ex parte contact shall be made with a board member or the board's hearing officer. No board member or board hearing officer shall knowingly accept or participate in ex parte contact with any person regarding the merits of a pending proceeding unless the petitioner, the department and all other parties are present.

C. The board may designate a hearing officer to take evidence at the evidentiary phase of the variance hearing, and may designate a hearing officer to conduct the entire variance hearing. The board may direct the hearing officer to provide the board with proposed findings of fact, proposed conclusions of law and a recommended decision. A board member shall review the hearing officer's proposed findings, conclusions and recommended decision before the board member makes a final decision regarding the variance petition.

D. A record shall be made at each variance hearing. If the board directs a hearing officer to hold the evidence phase of a board variance hearing, and if any of the board members who will make a decision regarding the petition for variance are absent during the evidence phase of the hearing, then the absent board members shall be provided with an audio recording or transcription of the evidence phase, and the hearing record will be made available to the absent board members before the absent members make a decision regarding the variance.

E. In a board variance hearing, the petitioner has the burden of proof, which requires the petitioner to present a prima facie case. The petitioner shall present the petitioner's case first and must prove by a preponderance of evidence the facts the petitioner is relying on to justify the relief the petitioner seeks in the petition for variance. If the petitioner has not established a prima facie case, the board shall dismiss or deny the petition for variance, and no other person shall be required to present evidence in opposition to the petition. If the petitioner has established a prima facie case, then any person opposed to the relief sought in the petition may present evidence in opposition to the petition to show why the petition should not be granted.

F. A petitioner may represent himself at the hearing or be represented by any other individual authorized to represent the petitioner.

G. In variance hearings, the technical rules of evidence and rules of civil procedure shall not apply, but the hearings shall be conducted so that all relevant views are amply and fairly presented without undue repetition. The board may require reasonable substantiation of statements or records tendered and may require any view to be stated in writing when the circumstances justify.

H. At the hearing, the board shall allow all persons a reasonable opportunity to submit non-technical written and oral evidence and arguments and to introduce non-technical exhibits. Persons ***including the petitioner, but not the division for purposes of this sentence, who want to*** present oral or written technical evidence must deliver a timely statement of intent to present technical evidence as required in Subsection I of 20.11.7.16 NMAC. No later than five business days before the beginning of the evidentiary phase of the board variance hearing begins, if the division wants to present oral or written technical evidence, the division must deliver to the petitioner a statement of intent as required in Paragraphs (1) through (6) of Subsection I of 20.11.7.16 NMAC.

I. No later than five business days before the beginning of the evidentiary phase of the board variance hearing begins, any person who wishes to present oral or written technical evidence shall deliver a statement of intent to the director on a form obtained from the division. The statement of intent to present technical evidence shall include:

- (1) the name of the person filing the statement;
- (2) an indication of whether the person filing the statement supports or opposes the petition at issue;
- (3) the name of each witness;
- (4) an estimate of the length of the direct testimony of each witness;
- (5) a list of exhibits, if any, to be offered into evidence at the hearing; and
- (6) a summary or outline of the anticipated direct testimony of each witness.

J. The petitioner, the division and any person at the hearing other than a board member may call witnesses and introduce exhibits. The petitioner, the division, board members and any person present at the hearing may cross-examine any person who testifies.

K. No variance shall be granted until the board has considered the relative interests of the petitioner, other owners of property likely to be affected by the variance if granted, or any discharge involved, and the interests of the general public.

L. The board may grant the requested variance, in whole or in part, or may deny the variance. The decision made by the board shall be by written order and, at the sole discretion of the board, may be issued by the board at the end of the hearing or by the next regularly scheduled board meeting after the variance hearing is closed, or, if the hearing was conducted before a hearing officer, by the next regularly scheduled board meeting after the date the transcript of the hearing and exhibits are available for review by board members who were absent from the hearing. A copy of the board's order shall be mailed to the petitioner by certified mail. The board shall send notice of the board's decision by regular mail to all persons who appeared before, or were represented at the hearing.

M. Orders of the board shall:

- (1) state the petitioner's name and address;
- (2) state the date the order is made;
- (3) describe the facility for which the variance is sought, if applicable;
- (4) identify the limitation prescribed under the Air Quality Control Act, the regulation of the board, or the permit condition imposed by the department regarding which the variance was sought;
- (5) state the decision of the board;
- (6) if a variance is granted, state the period of time for which it is granted and specify a compliance schedule, if applicable; and
- (7) state the reasons for the board's decision including whether and for what reasons the board has found, upon presentation of adequate proof, both (a) that compliance with the requirement of the Air Quality Control Act, the board regulation or the permit condition regarding which the variance is being granted either will result in an arbitrary and unreasonable taking of property or will impose an undue economic burden upon a lawful business, occupation or activity, and (b) that the granting of the variance will not either result in a condition injurious to health or safety, or cause or contribute to an air contaminant level in excess of any primary national ambient air quality standards; the order of the board also shall state that the board's decision regarding the variance petition complies with all applicable requirements of NMSA 1978 Section 74-2-8.

N. The director shall maintain a file of all variance orders issued by the board. The file shall be open for public inspection.

O. The requirements of 20.11.7.16 NMAC shall apply to the stay hearing authorized by Subsection B of 20.11.7.18 NMAC.

[3/24/82. . .12/1/95; 20.11.7.16 NMAC - Rn, 20 NMAC 11.07.II.5, 10/1/02; A, 8/1/04]

20.11.7.17 EFFECT OF ORDER OF BOARD - FAILURE TO APPEAR AT HEARING:

A. An order of the board is a final administrative decision and bars the petitioner from petitioning for the same variance without specific permission from the board. At a public hearing by the board to consider again petitioner's proposal regarding the same variance, the board may consider, among other things, the development of new information and techniques to be sufficient justification for hearing a second petition.

B. If the petitioner or his authorized representative fails to appear at a public hearing on the variance petition, the board shall proceed with the hearing on the basis of the petition.

[3/24/82. . .12/1/95; 20.11.7.17 NMAC - Rn, 20 NMAC 11.07.II.6, 10/1/02; A, 8/1/04]

20.11.7.18 STAY OF ENFORCEMENT:

A. From the date the petition for variance is delivered to the director and the division manager until the board takes final action on the petition for variance, the petitioner may file a motion for stay with the board, requesting a stay from enforcement action by the department. The board shall only grant the stay of enforcement if the motion for stay establishes:

- (1) the likelihood that the petitioner will prevail on the merits of the petition for variance;
- (2) a showing of irreparable harm to the petitioner unless the stay is granted;
- (3) evidence that no substantial harm will result to other interested persons if the stay is granted; and
- (4) a showing that there will be no resulting harm to the public interest if the stay is granted.

B. When the petitioner files the motion for stay with the board, the petitioner shall also deliver a copy of the motion for stay to the department. Within 65 days after the petitioner files the motion for stay and delivers a copy to the department, the board shall hold a hearing on the motion for stay ("stay hearing"). Twenty-one days before the board holds the stay hearing, the board shall deliver to the petitioner and to the department written notice of the date, time and place of the stay hearing before the board. The requirements of 20.11.7.16 NMAC, 20.11.7.17 NMAC, and 2.11.7.19 NMAC shall apply to the stay hearing as if the stay hearing were a variance hearing.

[3/24/82. . .12/1/95; 20.11.7.18 NMAC - Rn, 20 NMAC 11.07.II.7, 10/1/02; A, 8/1/04]

20.11.7.19 TIMELINESS:

When the last day for performing an act falls on a Saturday, Sunday or a city of Albuquerque or Bernalillo county legal holiday, the performance of the act is timely if performed on the next succeeding day that is not a Saturday, Sunday or a city of Albuquerque or Bernalillo county legal holiday.

[3/24/82. . .11/27/91; 20.11.7.19 NMAC - Rn, 20 NMAC 11.07.II.8, 10/1/02; A, 8/1/04]

PART 8: AMBIENT AIR QUALITY STANDARDS

20.11.8.1 ISSUING AGENCY:

Albuquerque - Bernalillo County Air Quality Control Board. P.O. Box 1293, Albuquerque, NM 87103. Telephone: (505) 768-2601.

[20.11.8.1 NMAC - N, 7/1/04; A, 9/14/09]

20.11.8.2 SCOPE:

A. 20.11.8 NMAC is applicable within Bernalillo county.

B. Exempt: 20.11.8 NMAC does not apply to sources within Bernalillo county, which are located on Indian lands over which the Albuquerque - Bernalillo county air quality control board lacks jurisdiction.

[20.11.8.2 NMAC - N, 7/1/04; A, 9/14/09]

20.11.8.3 STATUTORY AUTHORITY:

20.11.8 NMAC is adopted pursuant to the authority provided in the New Mexico Air Quality Control Act, NMSA 1978 Sections 74-2-4, 74-2-5C; the Joint Air Quality Control Board Ordinance, Bernalillo County Ordinance 94-5 Sections 3 & 4; the Joint Air Quality Control Board Ordinance, Revised Ordinances of Albuquerque 1994 Sections 9-5-1-3 & 9-5-1-4.

[20.11.8.3 NMAC - N, 7/1/04]

20.11.8.4 DURATION:

Permanent.

[20.11.8.4 NMAC - N, 7/1/04]

20.11.8.5 EFFECTIVE DATE:

July 1, 2004, unless a later date is cited at the end of a section. The effective date of a specific section is located at the end of each section within the historical brackets. As

required by the New Mexico Air Quality Control Act, Chapter 74, Article 2, Section 6 NMSA 1978, no regulation or emission control requirement or amendment thereto, or repeal thereof, shall become effective until 30 days after its filing under the State Rules Act, Chapter 14, Article 4 NMSA 1978.

[20.11.8.5 NMAC - N, 7/1/04; A, 9/14/09]

20.11.8.6 OBJECTIVE:

To adopt local ambient air quality standards that are identical to the federal National Primary and Secondary Ambient Air Quality Standards codified at 40 CFR Part 50, and to adopt applicable state *Ambient Air Quality Standards* codified at 20.2.3 NMAC.

[20.11.8.6 NMAC - N, 7/1/04; A, 9/14/09]

20.11.8.7 DEFINITIONS:

The definitions in 20.11.1 NMAC apply to 20.11.8 NMAC.

[20.11.8.7 NMAC - N, 7/1/04]

20.11.8.8 SAVINGS CLAUSE:

Any amendment to *Ambient Air Quality Standards*, 20.11.8 NMAC, which is filed with the state records center, shall not affect actions pending for violation of a city or county ordinance, the air quality regulations for Albuquerque and Bernalillo county or a permit issued by the department. Prosecution for a violation under a prior statute, ordinance, regulation or permit shall be governed and prosecuted under the statute, ordinance or regulation in effect at the time the violation was committed.

[20.11.8.8 NMAC - N, 7/1/04; A, 9/14/09]

20.11.8.9 SEVERABILITY:

If any section, paragraph, sentence, clause or word of 20.11.8 NMAC or any federal standards incorporated herein is for any reason held to be unconstitutional or otherwise invalid by any court, the decision shall not affect the validity of remaining provisions of 20.11.8 NMAC.

[20.11.8.9 NMAC - N, 7/1/04]

20.11.8.10 DOCUMENTS:

Documents incorporated and cited in 20.11.8 NMAC may be viewed at the Albuquerque environmental health department, 400 Marquette NW, Albuquerque, NM.

[20.11.8.10 NMAC - N, 7/1/04]

20.11.8.11 INCORPORATION OF FEDERAL AMBIENT AIR QUALITY STANDARDS:

Except as otherwise provided, the National Primary and Secondary Ambient Air Quality Standards of the United States environmental protection agency including the General Provisions thereto, codified at 40 CFR Part 50 (including appendices), as amended through October 9, 2024, are hereby incorporated into 20.11.8 NMAC. Section 20.11.8.13 NMAC is a summary of the federal and state standards incorporated in 20.11.8 NMAC.

[20.11.8.11 NMAC - N, 7/1/2004; A, 9/14/2009; A, 11/5/2024]

20.11.8.12 INCORPORATION OF STATE AMBIENT AIR QUALITY STANDARDS:

Except as otherwise provided, the state *Ambient Air Quality Standards* of the environmental improvement board codified at 20.2.3 NMAC, as amended through October 9, 2024, are hereby incorporated into 20.11.8 NMAC. Section 20.11.8.13 NMAC is a summary of the federal and state standards incorporated in 20.11.8 NMAC.

[20.11.8.12 NMAC - N, 7/1/2004; A, 9/14/2009; A, 11/5/2024]

20.11.8.13 SUMMARY OF FEDERAL AND STATE AMBIENT AIR QUALITY STANDARDS:

Pollutant	Standards			
	Reference	Federal Primary	Federal Secondary	New Mexico State
Carbon Monoxide (CO)				
8-hour average	40 CFR 50.8	9 ppm	none	8.7 ppm
1-hour average	40 CFR 50.8	35 ppm	none	13.1 ppm

20.11.8.14 INTERPRETATION:

Except as expressly provided to the contrary in these regulations, whenever two or more parts of these regulations limit, control or regulate the emissions of a particular air contaminant, the more restrictive or stringent shall govern.

[20.11.8.14 NMAC - N, 7/1/04]

PART 9-19: [RESERVED]

PART 20: FUGITIVE DUST CONTROL

20.11.20.1 ISSUING AGENCY:

Albuquerque - Bernalillo County Air Quality Control Board. P.O. Box 1293, Albuquerque, New Mexico 87103. Telephone: (505) 768-2601.

[20.11.20.1 NMAC - Rp, 20.11.20.1 NMAC, 3/17/08]

20.11.20.2 SCOPE:

A. 20.11.20 NMAC is applicable to all sources of fugitive dust in Bernalillo county, unless otherwise exempt.

B. Exempt: 20.11.20 NMAC does not apply to sources within Bernalillo county that are:

(1) located on Indian lands over which the Albuquerque - Bernalillo county air quality control board lacks jurisdiction;

(2) hard rock mining pits and operations contained within the mining pit and permitted pursuant to the state of New Mexico Mining Act; for the purposes of 20.11.20 NMAC, sand and gravel mining operations are not exempt;

(3) emergency maintenance operations that are intended to address an imminent threat to property or persons; however, reasonably available control measures must be employed once the emergency has been addressed, if appropriate, and a report of all activities shall be filed with the department no later than 10 days after the incident has been concluded and the department shall determine if additional action, including a permit application submittal, is required before additional non-emergency activities occur at the site; and

(4) stationary source operations subject to 20.11.41 NMAC, *Authority to Construct*, or 20.11.42 NMAC, *Operating Permits*, that produce fugitive dust as defined in 20.11.20 NMAC, but only if the source of fugitive dust is addressed and controlled through permit conditions required by a 20.11.41 NMAC or 20.11.42 NMAC permit; however construction at a stationary source site, whether it involves new construction or a site modification, is subject to 20.11.20 NMAC.

C. Conditionally Exempt: The following five sources of fugitive dust emissions in Bernalillo county shall be conditionally exempt from the requirements of 20.11.20 NMAC, unless the department determines that the fugitive dust emitted from a conditionally exempt source's active operations or inactive disturbed surface area may adversely and significantly affect human health within Bernalillo county:

(1) areas zoned for agriculture and used for growing a crop;

(2) bicycle trails, hiking paths and pedestrian paths, horse trails or similar paths used exclusively for purposes other than travel by motor vehicles;

(3) unpaved roadways on privately-owned easements serving residential dwellings;

(4) lots smaller than three-quarters of an acre used for any purpose; and

(5) unpaved roadways within properties used for ranching, or properties owned or controlled by the United States department of energy or department of defense, or United States department of agriculture forest service lands or United States department of interior park service lands if the public does not have motor vehicle access to the roadways.

[20.11.20.2 NMAC - Rp, 20.11.20.2 NMAC, 3/17/08]

20.11.20.3 STATUTORY AUTHORITY:

20.11.20 NMAC is adopted pursuant to the authority provided in the New Mexico Air Quality Control Act, NMSA 1978 Sections 74-2-4, 74-2-5; the Joint Air Quality Control Board Ordinance; Bernalillo county Ordinance No. 94-5, Sections 4 and 5; and the Joint Air Quality Control Board Ordinance, Revised Ordinances of Albuquerque 1994 Sections 9-5-1-4 and 9-5-1-5.

[20.11.20.3 NMAC - Rp, 20.11.20.3 NMAC, 3/17/08]

20.11.20.4 DURATION:

Permanent.

[20.11.20.4 NMAC - Rp, 20.11.20.4 NMAC, 3/17/08]

20.11.20.5 EFFECTIVE DATE:

March 17, 2008, unless a later date is cited at the end of a section.

[20.11.20.5 NMAC - Rp, 20.11.20.5 NMAC, 3/17/08]

20.11.20.6 OBJECTIVE:

To ensure that every person shall use reasonably available control measures or other effective measures on an ongoing basis to prevent or abate fugitive dust, if the fugitive dust may with reasonable probability injure human health or animal or plant life or as may unreasonably interfere with the public welfare, visibility or the reasonable use of property, as required by 20.11.20 NMAC.

[20.11.20.6 NMAC - Rp, 20.11.20.6 NMAC, 3/17/08]

20.11.20.7 DEFINITIONS:

In addition to the definitions in 20.11.20.7 NMAC, the definitions in 20.11.1 NMAC apply unless there is a conflict between definitions, in which case the definition in 20.11.20.7 NMAC shall govern.

A. "Active operations" means any anthropogenic activity that is capable of generating, or generates fugitive dust, including but not limited to: bulk material storage, handling or processing; earth moving; soil or surface disturbance (e.g. discing, trenching, blading, scraping, clearing, grubbing, topsoil removal); construction, renovation, or demolition activities; movement of motorized vehicles on any paved or unpaved roadway or surface, right-of-way, lot or parking area; or the tracking out or transport of bulk material onto any paved or unpaved roadway.

B. "Anthropogenic" means human-caused changes in the natural or built condition of the environment.

C. "Bulk material" means sand, gravel, soil, aggregate or any other inorganic or organic solid material capable of creating fugitive dust.

D. "Business day" means Monday through Friday, except city of Albuquerque holidays.

E. "Construction activity" means any activity preparatory to or related to building, altering, rehabilitating, demolishing or improving property that results in a disturbed surface area, including but not limited to grading, excavation, loading, crushing, pavement milling, cutting, clearing, grubbing, topsoil removal, blading, shaping, dry sweeping, blasting and ground breaking.

F. "Crop" means an agricultural plant harvested for consumption, utilization or sale.

G. "Disturbed surface area" or "surface disturbance" means the natural or manmade area of the earth's surface that, as a result of anthropogenic activity, may become a source of transported material, track-out, or visible fugitive dust.

H. "Division" means the city of Albuquerque air quality division or its successor agency.

I. "Dust suppressant" means hygroscopic materials, or non-toxic chemical stabilizers used to reduce or control fugitive dust emissions during suspended operations and as a long term reasonably available control measure.

J. "Earth moving activity" means grading, cutting, filling, soil disturbance (e.g. discing, trenching, blading, scraping, clearing, topsoil removal, grubbing), soil mulching,

loading or unloading of dirt or other bulk materials, including adding to or removing from open storage piles or stockpiles of bulk materials.

K. "Fugitive dust" or "dust" means organic or inorganic particulate matter. Water vapor, steam, or particulate matter emissions emanating from a duct or stack of process equipment are not fugitive dust.

L. "Fugitive dust control construction permit" or "permit" means a fugitive dust control permit approved by the department and issued pursuant to 20.11.20 NMAC that contains an approved fugitive dust control plan and authorizes active operations to begin when the permit is signed by a division manager, supervisor, scientist, field operations officer or health specialist.

M. "Fugitive dust control plan" or "plan" means the part or portion of the fugitive dust control construction permit or programmatic permit application that details the reasonably available control measures and other effective measures the permit applicant commits to use to reduce the quantity of visible fugitive dust, transported material, or track-out leaving the property or area under the control of the permittee and shall include contingency fugitive dust control measures, which shall be a requirement of every fugitive dust control permit.

N. "Greenwaste" means organic matter including, grass clippings, leaves, weeds, small shrub or tree limb cuttings, brush, stumps, and soils.

O. "High wind event" means a condition announced by the department consisting of wind speeds of approximately 30 miles per hour or greater that, when accompanied by dry soil conditions, that is likely to result in widespread reduced visibility due to blowing fugitive dust and that may result in elevated monitored particulate levels that may cause or contribute to an exceedance or violation of the national ambient air quality standards.

P. "Inactive disturbed surface area" means any disturbed surface area on which active operations have been suspended.

Q. "Large area disturbance" means a project or development, totaling more than 25 acres upon which active operations have been conducted and includes areas used for storage of bulk material, building or construction materials, machinery or vehicles.

R. "Open storage pile" means the accumulation of bulk material that is not fully enclosed, covered or chemically stabilized.

S. "Owner or operator" means a person who owns, leases, operates, controls, or supervises a source that directly or indirectly produces or is capable of producing fugitive dust.

T. "Parking lot" or "parking area" means a location where motor vehicles routinely park whether or not the area is zoned for parking.

U. "Paved" or "paving" or "paved roadway" means asphalt, recycled asphalt, concrete or asphaltic concrete, routinely-maintained asphalt millings, or combinations thereof, that cover a surface traveled or used by motor vehicles.

V. "Permittee" means a person and all legal heirs, successors, and assigns who has applied for and obtained a fugitive dust control construction or programmatic permit issued by the department pursuant to 20.11.20 NMAC.

W. "Person" means an individual, firm, partnership, corporation, association, organization, company, joint stock association, business trust, owner, or body politic, including a municipality, local, state or federal government agency or political subdivision, and includes an employee, officer, operator, contractor, supplier, installer, user, leaseholder, trustee, receiver, assignee or other person acting in a similar representative capacity with the authority to control transported material or emissions of particulate matter generated at a disturbed surface area or generated by activities associated with a disturbed surface area or inactive disturbed surface area.

X. "Privately-owned" means real property that is not wholly or partially owned, leased or otherwise controlled by a federal, state or local government or governmental agency or political subdivision.

Y. "Programmatic permit" means a fugitive dust control permit valid for up to five years issued to a permittee that performs routine maintenance or routine ongoing active operations on real property, but does not include full depth reconstruction of a roadway or substantial removal and replacement of a manmade facility. A programmatic permit shall include an approved fugitive dust control plan and shall be effective when signed by a division manager, supervisor, scientist, field operations officer or health specialist.

Z. "Property line" means the exterior boundary of real property, as indicated by plats, plot maps or other indication of ownership limits.

AA. "Publicly-maintained" means under the jurisdiction of, or maintained by a federal, state, or local government or governmental agency or political subdivision.

BB. "Publicly-owned" means real property that is wholly or partially owned, leased or otherwise controlled by a federal, state or local government or governmental agency or political subdivision. Publicly-owned real property includes easements and rights-of-ways, streets, roadways, sidewalks, alleys and other public ways, parks, irrigation and drainage facilities, and any other publicly controlled real property that can be the source of fugitive dust.

CC. "Reasonably available control measure" or "control measure" means a device, system, process modification, apparatus, technique, work practice, or

combination thereof, that mitigates fugitive dust and includes the measures in 20.11.20.23 NMAC and any other regulatory control program that results in equivalent protection of a disturbed surface or inactive disturbed surface area, whether or not the purpose of the control measure is to mitigate dust or to meet another requirement of 20.11.20 NMAC or any other statute or regulation.

DD. "Responsible person" means the person designated in a fugitive dust control permit application or permit amendment who agrees to be and shall be responsible for complying with 20.11.20 NMAC, and with the permit and plan to the extent specified in the permit.

EE. "Short cut" means a non-dedicated roadway or route used by motor vehicle drivers to save time by avoiding use of a dedicated and authorized roadway.

FF. "Silt" means bulk material that passes through a 200-mesh screen using the ASTM-D 2487-93, "*classification of soils for engineering purposes (united soil classification system)*" method, or most current ASTM (American society for testing and materials) method. Material that will pass through a 200-mesh screen is 74 microns or less in size.

GG. "Source" or "source of fugitive emissions" means the origin of fugitive dust emissions.

HH. "Stabilized" or "stabilization" means ongoing practices that are sufficient to prevent elevated monitored particulate levels that may cause or contribute to an exceedance or violation of the national ambient air quality standards by meeting the objective established in 20.11.20.6 NMAC and the requirements of the general provisions established in 20.11.20.12 NMAC.

II. "Stockpile" means the depositing of bulk material by mechanical means for the purpose of creating a pile formation on top of an existing natural or man-made surface.

JJ. "Stop work order" means an order issued by the department pursuant to the provisions of 20.11.20 NMAC that requires a person to cease active operations.

KK. "Track-out" or "tracking" means bulk material deposited by a motor vehicle or vehicles upon an unpaved or paved publicly or privately owned roadway if the bulk material can become airborne due to mechanical or wind action.

LL. "Transfer of permit" means an agreement approved in writing by the department that meets the conditions outlined in Paragraphs (1) through (6) of Subsection D of 20.11.20.14 NMAC.

MM. "Transported material" means particulate matter transported by wind, water or other action that, once deposited, can become airborne due to mechanical or wind action.

NN. "Unpaved roadway" means an unpaved route traveled by a motorized vehicle.

OO. "Visible fugitive dust" means airborne particulate matter from a source, resulting in particulate matter emissions that can be detected by the human eye or a detection method approved by the department. Visible fugitive dust can be an indicator of PM₁₀.

PP. "Visible fugitive dust detection method" means the method described in 20.11.20.26 NMAC, which is one method used to determine compliance with 20.11.20 NMAC.

[20.11.20.7 NMAC - Rp, 20.11.20.7 NMAC, 3/17/08]

20.11.20.8 VARIANCES:

A person may request a variance from 20.11.20 NMAC in accordance with the procedures established in 20.11.7 NMAC.

[20.11.20.8 NMAC - Rp, 20.11.20.8 NMAC, 3/17/08]

20.11.20.9 SAVINGS CLAUSE:

An amendment to *Fugitive Dust Control*, 20.11.20 NMAC, which is filed with the state records center and archives shall not affect actions pending for violation of a city or county ordinance, or prior versions of 20 NMAC 11.20 and 20.11.20 NMAC, *Airborne Particulate Matter*, 20.11.20 NMAC *Fugitive Dust Control*, or a permit. Prosecution for a violation of a prior statute, ordinance, part or permit shall be governed and prosecuted under the statute, ordinance, part or permit wording in effect at the time the violation was committed.

[20.11.20.9 NMAC - Rp, 20.11.20.9 NMAC, 3/17/08]

20.11.20.10 SEVERABILITY:

If any section, subsection, sentence, phrase, clause or wording of 20.11.20 NMAC or the federal standards incorporated herein is for any reason held to be unconstitutional or otherwise invalid by any court or the United States environmental protection agency, the decision shall not affect the validity of remaining portions of 20.11.20 NMAC.

[20.11.20.10 NMAC - Rp, 20.11.20.10 NMAC, 3/17/08]

20.11.20.11 DOCUMENTS:

Documents incorporated and cited in 20.11.20 NMAC may be viewed at the Albuquerque environmental health department, 400 Marquette NW, Albuquerque, NM.

[20.10.20.11 NMAC - Rp, 20.11.20.11 NMAC, 3/17/08]

20.11.20.12 GENERAL PROVISIONS:

A. Each person shall use reasonably available control measures or any other effective control measure during active operations or on inactive disturbed surface areas, as necessary to prevent the release of fugitive dust, whether or not the person is required by 20.11.20 NMAC to obtain a fugitive dust control permit. It shall be a violation of 20.11.20 NMAC to allow fugitive dust, track out, or transported material from any active operation, open storage pile, stockpile, paved or unpaved roadway disturbed surface area, or inactive disturbed surface area to cross or be carried beyond the property line, right-of-way, easement or any other area under control of the person generating or allowing the fugitive dust if the fugitive dust may:

- (1) with reasonable probability injure human health or animal or plant life;
- (2) unreasonably interfere with the public welfare, visibility or the reasonable use of property; or
- (3) be visible for a total of 15 minutes or more during any consecutive one hour observation period using the visible fugitive dust detection method in 20.11.20.26 NMAC or an equivalent method approved in writing by the department.

B. Failure to comply with 20.11.20.12 NMAC, a fugitive dust control permit, plan, term or condition shall be a violation of 20.11.20 NMAC.

C. Prior to issuing a fugitive dust control construction permit authorizing commencement of active operations, the department shall:

- (1) document, in the form of photographs in electronic or hard copy formats or video recordings, the conditions of the properties that are closest to the property subject to the permit and any other properties the department believes are appropriate;
- (2) maintain the documentation for one year after completion of the permitted project;
- (3) include in the permit a requirement that the permittee remedy damage to real properties caused by a violation of the permit; and
- (4) make the documentation available as evidence, upon request, to all parties involved in a property damage dispute allegedly caused by fugitive dust.

D. A permittee whose violation of 20.11.20 NMAC results in fugitive dust being deposited upon real property beyond the limits of the permitted area shall take all actions necessary to remedy damage caused by a violation proven with credible evidence. Such remedies may include, but not be limited to, compensation, removal of

the fugitive dust and/or repair of any damage after obtaining permission from property owners or operators before doing any remedial work on the damaged property. It shall be a separate violation of 20.11.20 NMAC to fail to remove the fugitive dust and repair the damage as specified in a written schedule or any extension agreed to by the permittee and the owner of the damaged property. If the parties cannot agree to a schedule, the department may establish deadlines and failure to comply with the deadlines shall be a separate violation of 20.11.20 NMAC. No violation will occur if the failure to perform the corrective action is for reasons beyond the control of the person performing the work including without limitation acts of God or government preemption in connection with a national emergency or if the owner of the allegedly damaged property refuses to grant reasonable permission and access to conduct the remediation activities.

E. Stockpiles shall be no higher than 15 feet above the existing natural or man-made grade that abuts the stockpile, unless otherwise approved in advance and in writing by the department.

F. Each person shall comply with all applicable provisions of the Clean Air Act, the New Mexico Air Quality Control Act, joint air quality control board ordinances, regulations of the board, and permits issued by the department.

[20.11.20.12 NMAC - Rp, 20.11.20.12 NMAC, 3/17/08]

20.11.20.13 FUGITIVE DUST CONTROL PROGRAMMATIC PERMITS:

A. A fugitive dust control programmatic permit is required for single or multiple facility locations to address real property totaling three-quarters of an acre or more that is subject to routine maintenance, routine surface disturbance activities, or routine ongoing active operations. A programmatic permit application and fugitive dust control plan shall be submitted on forms provided by the department. Programmatic permits are valid for up to five years. The permittee shall pay the annual programmatic permit fee required by 20.11.2 NMAC, *Fees*, for each year covered by the programmatic permit. Receipt of the annual fee by the department shall result in an automatic annual renewal of the programmatic permit. A new programmatic permit application and fugitive dust control plan shall be submitted every five years or sooner if the surface disturbance activities or fugitive dust abatement strategies are modified. A filing and review fee is not required for a programmatic permit.

B. A person responsible for sloped (i.e. slopes having a steepness of three-to-one or steeper) and bottom portions of interior and riverside drains and canals used for irrigation purposes, and arroyos and public flood control facilities subject to routine maintenance or repair, sedimentation and water erosion shall obtain either a variance as provided by 20.11.7 NMAC or a programmatic permit as provided by Subsection A of 20.11.20.13 NMAC if the person does not elect to submit an application and obtain a fugitive dust control construction permit pursuant to 20.11.20.14 NMAC.

C. No signs or photographic documentation shall be required for the permits or activities subject to 20.11.20.13 NMAC. Appropriate permit application documentation shall be determined by the department.

[20.11.20.13 NMAC - Rp, 20.11.20.13 NMAC, 3/17/08]

20.11.20.14 FUGITIVE DUST CONTROL CONSTRUCTION PERMITS:

A. A person who does not elect to obtain or who does not qualify for a fugitive dust control programmatic permit pursuant to 20.11.20.13 NMAC and who plans to conduct active operations that will disturb three-quarters of an acre or more shall comply with either Subsection A or B of 20.11.20.18 NMAC and obtain a fugitive dust control construction permit. No active operations shall commence until a department manager, supervisor, scientist, field operations officer or health specialist signs the fugitive dust control construction permit (permit) and a copy of the signed permit is available at the site of active operations. A permit shall consist of a complete permit application a fugitive dust control plan, any appended documents, any conditions attached to the permit by the department, and a signature and effective date affixed by a department manager, supervisor, scientist, field operations officer or health specialist.

B. The permittee shall comply with the terms of the permit unless the department approves a transfer of the permit or issues a new permit for the active or inactive disturbed surface area of operation to a new permittee. If three-quarters of an acre or more of the real property that is subject to the permit is transferred or sold the new owner is responsible for complying with either 20.11.20.13 NMAC or 20.11.20.14 NMAC unless exempt. Upon receipt of an amended permit signed by a department manager, supervisor, scientist, field operations officer or health specialist, the permittee who transferred or sold the real property no longer will be responsible for control of fugitive dust originating from the real property that has been transferred or sold. Permit amendment fees shall be paid as required by 20.11.20.14 NMAC.

C. If a person other than the permittee will be responsible for complying with the permit and 20.11.20 NMAC, then the permittee shall designate the responsible person or persons in the permit application who shall be responsible for active operations and inactive disturbed surface areas to the extent specified in the application. Before a responsible person shall be liable for a violation of the permit or 20.11.20 NMAC, the responsible person shall agree in writing to accept responsibility for compliance with the permit conditions. The responsible person shall be the first person the department attempts to contact regarding a violation of the permit or 20.11.20 NMAC. In addition, the department may approve, in writing, a permit amendment that adds or changes the responsible person who has agreed in writing to be responsible for complying with the permit and plan, to the extent specified in the permit. If the responsible person and permittee fail to comply with the provisions of 20.11.20 NMAC, the owner or operator, if different from the responsible person or permittee, shall be responsible for compliance with the permit.

D. An approved permit shall be valid for one year from the date of issuance by the department or until the project expiration date provided in the permit application, whichever is longer, but no more than five years from the date of issuance. If the project plan, expiration date, total disturbed surface area, completion date or the proposed control measures change in any manner, an amended or new permit is required. At least 10 business days before the expiration date, a fugitive dust control permit shall be renewed by the then-current permittee, or the permit shall expire as of the expiration date. Permit amendment or renewal fees shall be paid as required by Subsection H of 20.11.20.14 NMAC. Permits may be transferred to legal heirs, successors, and assigns, who shall become the new permittee. Permit transfers may qualify as an administrative amendment if:

(1) the department has received, on a form provided by the department, a written transfer agreement signed by the current and new permittee, and, if different than the new permittee, by the owner of the real property subject to the permit;

(2) a specific date of the transfer of the permit and plan responsibility, coverage, and liability is established in the transfer agreement;

(3) the department has determined that no change to the permit and plan other than the administrative change is necessary;

(4) the new permittee and owner have submitted the application information required by 20.11.20.15 NMAC if changes have been made to the permit and plan as deemed necessary by the department;

(5) no grounds exist for permit termination, as otherwise provided by 20.11.20 NMAC; and

(6) the transfer agreement has been approved in writing by the department.

E. After a permit is issued and before the start of active operations, the permittee shall install and maintain a project sign provided by the department or a project sign that meets the requirement of 20.11.20.14 NMAC. The department will establish uniform design guidelines for the sign to ensure that the sign is reasonably legible to the public. If the required information is provided in an existing project sign that has been established for another purpose, an additional sign shall not be required to comply with 20.11.20 NMAC. At a minimum, the sign shall contain the following:

(1) project name;

(2) permittee name;

(3) phone number of designated responsible person or owner;

(4) subcontractor name (optional);

- (5) subcontractor phone number (optional);
- (6) air quality division phone number;
- (7) fugitive dust control permit number; and
- (8) total acres of area to be disturbed.

F. The permittee or responsible person shall make the permit available to all employees, agents, sub-contractors, and other persons performing work in the area of active operations or inactive disturbed surface areas to assist in maintaining compliance with 20.11.20 NMAC. The permittee or responsible person shall explain the requirements of the permit to appropriate employees, contractors and agents working at the site. Upon request, the permittee shall provide information regarding how to obtain a copy of the permit from the department.

G. It is the responsibility of the permittee or responsible person to ensure that the permit or amended permit contains current contact information and that a copy is maintained at the work site and is provided to the department upon request. Failure to maintain and provide up-to-date contact information shall be a violation of 20.11.20 NMAC.

H. The department may amend or renew the permit if requested to do so by the permittee. No fee shall be charged for amending or renewing a permit, unless there will be an increase in the number of acres subject to surface disturbance. Both the department and the permittee must sign an amended permit before it will be effective. The department is not required to sign a renewed permit unless the renewed permit increases the number of acres subject to surface disturbance. An amended or renewed permit that involves an increase in the number of acres subject to surface disturbance shall require payment of fees as required by 20.11.2 NMAC.

[20.11.20.14 NMAC - Rp, 20.11.20.14 NMAC, 3/17/08]

20.11.20.15 FUGITIVE DUST CONTROL CONSTRUCTION PERMITS; MINIMUM PERMIT APPLICATION REQUIREMENTS:

Proposed fugitive dust control construction permit applications shall be submitted on forms provided by the department. Fugitive dust control plans may be submitted in any format including a copy of a program that complies with any other statute or regulation so long as the plan provides reasonably available control measures whose purpose is to mitigate fugitive dust and the plan meets the objectives of 20.11.20 NMAC. If extraneous information is supplied that does not apply to mitigation of fugitive dust, then the dust control measures shall be clearly identified in the plan or the permit application shall be deemed incomplete and shall be rejected. An incomplete permit application shall be processed as described in Subsection C of 20.11.20.18 NMAC. Proposed fugitive dust control permit applications shall include the following:

A. name, address, telephone number and fax number of permittee;

B. owner's name, address, telephone number and fax number if different from permittee;

C. if different than the permittee, the name, address, telephone number and fax number of the responsible person who is agreeing to, and shall be responsible for activities on the permitted site; the department shall first attempt to contact the responsible person regarding a violation of the permit;

D. anticipated project start date which shall be no fewer than 10 business days from the department's receipt of the permit application for areas containing greater than three quarters of an acre but no greater than 25 acres, and no fewer than 20 business days from the department's receipt of the permit application for areas containing more than 25 acres;

E. anticipated project completion date;

F. project description;

G. project location including, if available, street address, major cross streets or nearby intersection;

H. total area of disturbance in acres or square feet;

I. a check or money order for the fees due, calculated using the tables provided on the permit application form, payable to the 'city of Albuquerque permits program' (fund 242);

J. a description of the sequencing of the active operations, if phasing is used to reduce the total disturbed area at any time;

K. estimated total volume of bulk material being handled in cubic yards, including any bulk material being imported, exported or relocated;

L. location from which bulk material is being imported to the site and a statement regarding whether the site where the imported material originates will have a separate fugitive dust control permit, or provide written information to the department as soon as known;

M. location to which bulk material from the site is being exported and a statement regarding whether the site to which the material is to be exported will have a separate fugitive dust control permit, or provide written information to the department as soon as known;

N. whether an approved drainage plan exists pursuant to city of Albuquerque or Bernalillo county ordinances and, upon request by the department, provide a copy of the drainage plan;

O. site map (e.g. zone atlas page, aerial photograph);

P. type of work being performed and appropriate reasonably available control measures, as described in 20.11.20.23 NMAC, or other effective control measures proposed to be used in the fugitive dust control plan;

Q. a statement that effective contingency fugitive dust control measures shall be taken by the permittee if the control measures required by Subsection P of 20.11.20.15 NMAC are not effective in maintaining compliance with 20.11.20 NMAC;

R. a commitment to comply with provisions of Subsection B of 20.11.20.16 NMAC if the permittee chooses to preserve the ability to qualify for a high wind affirmative defense;

S. high wind contingency measures that will be implemented when high winds occur;

T. a description of the actions the permittee will take to mitigate damage caused by fugitive dust if generated by active operations or an inactive disturbed surface area on the permitted site;

U. other proposed conditions;

V. signature of the permittee, and, if a different person, signature of the owner, operator and/or any responsible person certifying that the information in the fugitive dust control permit application is true, accurate and complete, and certifying that all actions necessary to comply with 20.11.20 NMAC will be taken, including suspending active operations if necessary to comply with the provisions of 20.11.20 NMAC; and

W. a statement regarding whether bulk material will be stockpiled at the project site, the dimension of each stockpile, and the reasonably available control measures or other effective control measures that will be used at the stockpile area to comply with 20.11.20 NMAC.

[20.11.20.15 NMAC - Rp, 20.11.20.15 NMAC, 3/17/08]

20.11.20.16 HIGH WIND EVENT REQUIREMENTS; HIGH WIND EVENT AFFIRMATIVE DEFENSE:

A. General requirements: during a high wind event, all persons responsible for fugitive dust control activities on publicly or privately-owned real property where active operations are occurring or inactive disturbed surface areas exist shall use reasonably

available control measures or other effective measures to prevent fugitive dust from leaving the property. All such persons shall implement the control measure required by Paragraph (5) of Subsection C, of 20.11.20.16 NMAC.

B. High wind affirmative defense: if the department initiates an administrative enforcement action against either a permittee or a responsible person, or both (respondent) alleging a violation of a permit or 20.11.20 NMAC during a high wind event, the respondent may assert an affirmative defense in the enforcement action if the respondent establishes by credible evidence that respondent complied with the requirements established in Subsection C of 20.11.20.16 NMAC. In order to successfully assert the affirmative defense, during the entire duration of a permit the respondent shall utilize the applicable controls described in Subsection C of 20.11.20.16 NMAC, regardless of whether or not a high wind event exists, with the exception of Paragraph (5) of Subsection C of 20.11.20.16 NMAC, which shall be required during a high wind event. The affirmative defense shall not be available if respondent has failed to diligently perform the control measures specified in Paragraphs (1) through (5) of Subsection C of 20.11.20.16 NMAC. The availability of the affirmative defense shall not change the respondent's potential liability for any damage caused by fugitive dust leaving the permitted property, and the affirmative defense shall not change the permittee's obligation to remove fugitive dust originating from the permitted source, or otherwise remedy the damage, as required by Subsection D of 20.11.20.12 NMAC. The board, its members, and employees and officials of the city of Albuquerque and the county of Bernalillo shall not incur individual liability for damage to persons or property caused by fugitive dust leaving the permitted property.

C. Mandatory control measures: to assert a high wind event affirmative defense as described in Subsection B of 20.11.20.16 NMAC, a permittee shall utilize the applicable control measures in Paragraphs (1) and (2) of Subsection C of 20.11.20.16 NMAC on an ongoing basis. Without prior notice to the department, the permittee may use the measure in Paragraph (3) of Subsection C of 20.11.20.16 NMAC in place of the measure in Paragraph (1) of Subsection C of 20.11.20.16 NMAC. After receiving written permission from the department, the permittee may substitute the measures in Paragraph (4) for the measures in Paragraphs (1) and (2), or (2) and (3) of Subsection C of 20.11.20.16 NMAC. All permittees, whether or not they intend to assert a high wind affirmative defense, shall implement the measure in Paragraph (5) of Subsection C of 20.11.20.16 NMAC during a high wind event.

(1) Use of wet suppression sufficient to attain and maintain eighty percent of the optimal moisture content of the soil as determined by a proctor analysis performed by a certified public or private materials testing laboratory. For proctor analyses, either the standard proctor (ASTM D-698) or the modified proctor (ASTM D-1557) may be used. Daily, representative testing of the soil moisture content shall be taken on exposed new surfaces after the top one-half to one inch of the soil is removed at the sampling area. Three times each day, at intervals that are equally spaced throughout the work day, the respondent shall test and record the soil moisture content at three separate representative locations on the permitted property, which will result in a

minimum of nine tests each day. To demonstrate compliance, any set of three tests shall average 80 percent of the optimal moisture content of the soil and no individual test shall be less than 70 percent of the optimal moisture content of the soil. Failure to meet the soil moisture content standards as required by Subsection C of 20.11.20.16 NMAC for any set of three tests shall require that the respondent immediately apply necessary control measures at the portion or portions of the representative area where the soil moisture content tested as insufficient, and re-test the same representative locations, as necessary, until the soil moisture content complies with the standards as required by Subsection C of 20.11.20.16 NMAC. The respondent or the department shall use a reasonably accurate commercially-available instrument to determine soil moisture content. Where possible, methods for determining soil moisture content shall be consistent with ASTM standards (e.g. ASTM D-1556-90 - sand cone test, ASTM D2922-91 - nuclear density). All tests for soil moisture content shall be documented and retained for the duration of the permit, and shall be made available to the department upon request.

(2) Use of properly-maintained fabric fencing material around the perimeter of the disturbed surface area with openings no wider than necessary to allow vehicles to enter or exit the area. The fencing material shall be anchored approximately six inches below the surface on the bottom edge, and when installed shall be approximately 24 or more inches above the existing natural or man-made surface. The fence shall be installed in a durable manner. For example, one durable installation method involves use of steel T-posts spaced approximately eight to 10 feet apart with steel mesh wire used as a reinforcement backing to the fabric. Use of fabric fencing standards associated with the national pollutant discharge system may be approved by the department if they are consistent with the requirements of Paragraph (2) of Subsection C of 20.11.20.16 NMAC. The department may also approve alternative fencing material if it provides equal or better control of fugitive dust. Alternatives may include solid walls or sturdy fences that effectively control fugitive dust. To maintain effectiveness of the fence, fugitive dust that accumulates on either side of the fencing shall be removed promptly.

(3) Use of chemical dust suppressants applied in amounts, frequency and rates recommended by the manufacturer, and maintained as recommended by the manufacturer sufficient to substantially reduce fugitive dust leaving the fugitive dust source while active operations are idle, usually used when active operations are suspended for more than 48 hours.

(4) A department-approved alternative dust control measure or measures that provide fugitive dust control that is equal to or better than measures in Paragraphs (1) and (2), or (2) and (3) of Subsection C of 20.11.20.16 NMAC. Before a permittee may substitute an alternative control measure, the department must approve the control measure in writing as a permit amendment.

(5) Stopping active operations that are capable of producing fugitive dust.

D. Active operations during an announced high wind event: The department shall use national weather service (NWS) data, recorded at either the Albuquerque international airport (Sunport) or Double Eagle II airport, in order to determine forecasted or actual wind speeds when announcing that a high wind event may or will occur. Wind velocity measurements taken in the field by the department, the responsible person, or permittee shall be taken at a representative active operation area on the permitted property or by the department within 200 feet of the permitted property being evaluated to determine whether active operations can be continued, resumed or initiated. Wind measurement results shall be documented and retained throughout the duration of the permit, and shall be made available to the department and the permittee and/or person responsible for controlling fugitive dust at the permitted property. A continuous one-hour wind velocity measurement with an average wind speed of less than 20 miles per hour, along with on-site stable soil conditions and effective dust control measures, as stated in the fugitive dust control plan, shall be sufficient to allow active operations during an announced high wind event. However, fluctuations in average wind speed and high wind gusts may re-occur and can cause ineffective dust control during active operations, which may result in a violation of 20.11.20 NMAC. Therefore, the responsible person or permittee shall continuously assess wind conditions and on-site soil conditions during an announced high wind event and shall maintain the reasonably available control measures which include stopping active operations as required by Paragraph (5) of Subsection C of 20.11.20.16 NMAC.

E. Limitations on use of affirmative defense: A respondent may not assert the affirmative defense described in 20.11.20.16 NMAC:

- (1) against an action for injunctive relief; or
- (2) to prohibit the EPA or a citizen's group from taking an enforcement action.

[20.11.20.16 NMAC - Rp, 20.11.20.16 NMAC, 3/17/08]

20.11.20.17 FILING, REVIEW AND INSPECTION FEES:

The fees required by 20.11.20 NMAC are located in 20.11.2 NMAC, Fees. The filing and review fee portion of the total permit application fee due when a fugitive dust control construction application is filed is non-refundable.

[20.11.20.17 NMAC - Rp, 20.11.20.17 NMAC, 3/17/08]

20.11.20.18 FUGITIVE DUST CONTROL CONSTRUCTION PERMIT APPLICATION PROCESSING:

A. A person who is required to submit a fugitive dust control construction permit (permit) application and plan for active operations that will disturb at least three-quarters of an acre, but no more than 25 acres, shall submit the permit application and plan with the applicable fees to the department no fewer than 10 business days prior to the start

of active operations. Within 10 business days of the department receiving the permit application, plan and fees, the department will approve the permit, approve the permit with conditions or deny the permit.

B. A person who is required to submit a permit application and plan for active operations that will disturb more than 25 acres shall submit the permit application and plan with the applicable fees to the department no fewer than 20 business days prior to the start of active operations. Within 20 business days of the department receiving the permit application, plan and fees, the department will approve the permit, approve the permit with conditions or deny the permit.

C. The fugitive dust control plan may be in any form including a copy of a program that complies with any other statute or regulation so long as the plan provides reasonably available control measures whose purpose is to mitigate fugitive dust and the plan meets the objectives of 20.11.20 NMAC. If the plan does not specifically enumerate the control measures proposed to mitigate fugitive dust, the permit application shall be deemed incomplete and shall be rejected. If an incomplete application is rejected, a new or amended application may be filed and the time limits in Subsections A or B of 20.11.20.18 NMAC shall apply as if the initial application had not been filed.

D. If all requirements of 20.11.20 NMAC have been met by the applicant, the department shall issue a permit to the permittee, which shall authorize commencement of active operations. If the department has not approved, denied, or notified the applicant regarding the permit application within 30 business days of the department's receipt of the permit application, plan and fees, then the permit shall be automatically approved and operations may commence if the permittee uses the reasonably available control measures and fugitive dust control plan as submitted in the application. However, if the measures and plan are not effective, the department may initiate an enforcement action for violation of 20.11.20 NMAC.

[20.11.20.18 NMAC - Rp, 20.11.20.18 NMAC, 3/17/08]

20.11.20.19 PUBLIC AND PRIVATE UNPAVED ROADWAYS, SHORT-CUTS AND UNPAVED PARKING AREAS:

A. No unpaved roadway greater than one-quarter mile in length and no unpaved parking areas may be constructed or allowed to be constructed or reconstructed on any publicly-owned land or privately-owned real property, unless the owner has applied for and received a permit pursuant to 20.11.20.13 NMAC or 20.11.20.14 NMAC. Owners in possession of a valid fugitive dust control permit that wish to construct additional unpaved roadways shall apply for an amendment to their permit which shall include payment of any fees required by 20.11.2 NMAC. In addition, no unpaved short-cut of any length on private or public property may be constructed or be allowed to remain usable when it is evident the short cut is being used by motor vehicle drivers to save time by avoiding use of a dedicated and authorized roadway. A variance from

Subsection A of 20.11.20.19 NMAC may be granted by the board in a manner consistent with the variance procedures provided in 20.11.7 NMAC.

B. Owners or operators shall use reasonably available control measures on all unpaved roadways and unpaved parking areas and shall comply with the general provisions established in 20.11.20.12 NMAC.

C. Public unpaved roadway; complaints. If the department receives a fugitive dust complaint regarding an unpaved public roadway, the department will forward the complaint by hand delivery, inter-office mail delivery or certified mail, return receipt requested, to the governmental agency responsible for maintenance of the roadway. Within 45 calendar days from the date the complaint was received by the responsible agency, the responsible agency shall make a reasonable effort to address the complaint, and the governmental agency shall provide the department with a written report of the actions taken to resolve the complaint. Failure of the responsible agency to submit a timely report shall be a violation of 20.11.20 NMAC.

[20.11.20.19 NMAC - Rp, 20.11.20.19 NMAC, 3/17/08]

20.11.20.20 ABRASIVE PRESSURE BLASTING OPERATIONS:

A person who performs abrasive pressure blasting operations shall employ reasonably available control measures or other effective control measures at all times to comply with 20.11.20.12 NMAC and shall substantially reduce fugitive dust emissions that are leaving the property where the abrasive pressure blasting operations are taking place. A person who is conducting abrasive pressure blasting operations is not required to obtain a fugitive dust control permit from the department. However, stationary source permitting regulations, such as 20.11.41 NMAC and 20.11.42 NMAC, may apply to pressure blasting operations.

[20.11.20.20 NMAC - Rp, 20.11.20.20 NMAC, 3/17/08]

20.11.20.21 CONTROL OF GREENWASTE MATERIAL:

To prevent greenwaste from becoming ground up by the abrasive action of tires, which may then be entrained into the atmosphere as particulate matter, all persons causing, directing or authorizing greenwaste to be deposited on publicly-owned real property shall promptly remove or cause the removal of the greenwaste.

[20.11.20.21 NMAC - Rp, 20.11.20.21 NMAC, 3/17/08]

20.11.20.22 DEMOLITION AND RENOVATION ACTIVITIES; FUGITIVE DUST CONTROL CONSTRUCTION PERMIT AND ASBESTOS NOTIFICATION REQUIREMENTS:

No person shall demolish any building containing over 75,000 cubic feet of space without first delivering to the department a fugitive dust control construction permit application and fugitive dust control plan with the fee required by 20.11.2 NMAC. No active operations shall commence until a department manager, supervisor, scientist, field operations officer or health specialist signs a fugitive dust control construction permit and a copy of the signed permit is available at the site of active operations. Failure to obtain a fugitive dust control construction permit prior to commencement of demolition activities as described in 20.11.20.22 NMAC shall be a violation of 20.11.20 NMAC. All demolition and renovation activities shall employ reasonably available control measures at all times, and, when removing asbestos containing materials (ACM), shall also comply with the federal standards incorporated in 20.11.64 NMAC, *Emission Standards for Hazardous Air Pollutants for Stationary Sources*. A person who demolishes or renovates any commercial building, residential building containing five or more dwellings, or a residential structure that will be demolished in order to build a nonresidential structure or building shall file an asbestos notification with the department no fewer than 10 calendar days before the start of such activity. Written asbestos notification certifying to the presence of ACM is required even if regulated ACM is not or may not be present in such buildings or structures. Failure to provide proper asbestos notification shall be a violation of the requirements of 20.11.64 NMAC. Knowingly violating provisions of 20.11.64 NMAC is a fourth-degree felony pursuant to the New Mexico Air Quality Control Act, 74-2-14.C.3 NMSA 1978.

[20.11.20.22 NMAC - Rp, 20.11.20.22 NMAC, 3/17/08]

20.11.20.23 REASONABLY AVAILABLE CONTROL MEASURES FOR FUGITIVE DUST:

The permittee may include in the permit application one or more of the reasonably available control measures included in 20.11.20.23 NMAC or one or more alternative fugitive dust control measures, including measures taken to comply with any other statute or regulation if the measures will effectively control fugitive dust during active operations or on inactive disturbed surface areas. At minimum, all projects requiring a fugitive dust control construction permit shall utilize paved or gravel entry/exit aprons, steel grates or other devices capable of removing mud and bulk material from vehicle traffic tires, and erect a properly-maintained fabric fencing material around the perimeter of the disturbed surface area with openings no wider than necessary to allow vehicles to enter or exit the area. The fencing material shall be anchored approximately six inches below the surface on the bottom edge, and when installed shall be approximately 30 or more inches above the existing natural or man-made surface. To maintain effectiveness of the entry/exit apron, steel grate or other similar device (device), accumulated materials shall be removed promptly. To maintain effectiveness of the fence, fugitive dust that accumulates on either side of the fencing shall be removed promptly.

A. Unpaved roadways:

(1) paving using recycled asphalt, routinely-maintained asphalt millings, asphaltic concrete, concrete, or petroleum products legal for such use;

(2) using dust suppressants applied in amounts, frequency and rates recommended by the manufacturer and maintained as recommended by the manufacturer;

(3) using wet suppression; or

(4) using traffic controls, including decreased speed limits with appropriate enforcement; other traffic calming methods, vehicle access restrictions and controls; road closures or barricades; and off-road vehicle access controls and closures.

B. Paved roadways:

(1) cleaning up spillage and track out as necessary to prevent pulverized particulates from being entrained into the atmosphere;

(2) using on-site wheel washes; or

(3) performing regularly scheduled vacuum street cleaning or wet sweeping with a sweeper certified by the manufacturer to be efficient at removing particulate matter having an aerodynamic diameter of less than 10 microns (i.e. PM₁₀).

C. Trucks hauling bulk materials on public and private roadways:

(1) using properly secured tarps or cargo covering that covers the entire surface area of the load;

(2) preventing leakage from the truck bed, sideboards, tailgate, or bottom dump gate;

(3) using wet suppression to increase moisture content of the bulk materials being hauled;

(4) using dust suppressants applied in amounts, frequency and rates recommended by the manufacturer; or

(5) maintaining a minimum of six inches of freeboard from the rim of the truck bed; freeboard means the vertical distance from the highest portion of the load abutting the bed and the lowest part of the top rim of the truck bed.

D. Active operations in construction areas and other surface disturbances:

(1) Short term control measures may include:

(a) wet suppression;

(b) dust suppressants applied in amounts, frequency and rates recommended by the manufacturer and maintained as recommended by the manufacturer;

(c) watering the site at the end of each workday sufficiently to stabilize the work area;

(d) applying dust suppressants in amounts, frequency and rates recommended by the manufacturer on the worksite at the end of each workweek if no active operations are going to take place over the weekend or if active operations stop for more than two consecutive days;

(e) starting construction at the location that is upwind from the prevailing wind direction and stabilizing disturbed areas before disturbing additional areas;

(f) stopping active operations during high wind; or

(g) clean up and removal of track-out material.

(2) Long term control measures may include:

(a) site stabilization using dust suppressants applied in amounts, frequency and rates recommended by the manufacturer and maintained as recommended by the manufacturer;

(b) reseedling using native grasses as specified in 20.11.20.24 NMAC;

(c) xeriscaping;

(d) installing parallel rows of fabric fencing or other windbreaks set perpendicular to the prevailing wind direction either onsite or on a nearby property with the permission of the nearby property owner;

(e) surfacing with gravel or other mulch material with a size and density sufficient to prevent surface material from becoming airborne;

(f) mulching and crimping of straw or hay as specified in Subsection D of 20.11.20.24 NMAC;

(g) installing permanent perimeter and interior walls;

(h) using conventional landscaping techniques; or

(i) clean up and removal of track-out material.

E. Bulk material handling:

- (1) using spray bars;
- (2) applying wetting agents (surfactants) to bulk material;
- (3) using wet suppression through manual or mechanical application;
- (4) adding dust suppressants to bulk materials in amounts, frequency and rates recommended by the manufacturer and maintained as recommended by the manufacturer;
- (5) stopping bulk material handling, processing, loading or unloading during high wind conditions;
- (6) reducing process speeds; or
- (7) reducing drop heights.

F. Industrial sites:

- (1) paving roadways and parking area with recycled asphalt, asphaltic concrete, concrete, or petroleum products legal for use;
- (2) performing regularly scheduled vacuum street cleaning or wet sweeping;
- (3) regularly using wet suppression on unpaved areas;
- (4) using dust suppressants applied in amounts, frequency and rates recommended by the manufacturer, and maintained as recommended by the manufacturer;
- (5) installing wind breaks;
- (6) installing enclosures;
- (7) installing on-site anemometers to measure wind speed; the anemometer should trigger a suitable warning mechanism such as a strobe light or an audible alarm (that will not violate any applicable noise ordinance) to notify on-site personnel of high wind conditions;
- (8) increasing wet suppression applications before and during high wind conditions; or
- (9) stopping active operations during high wind conditions.

G. Demolition and renovation activities when asbestos-containing materials are not present:

- (1) using constant wet suppression on the debris piles during demolition;
- (2) using water or dust suppressants on the debris pile, applied in amounts, frequency and rates recommended by the manufacturer;
- (3) using enclosures;
- (4) using curtains or shrouds;
- (5) using negative pressure dust collectors; or
- (6) stopping demolition during high wind conditions.

H. Milling, grinding or cutting of paved or concrete surfaces:

- (1) constantly using wet suppression;
- (2) continuous wet sweeping during milling, grinding, or cutting operations;
- (3) using dust suppressants applied in amounts, frequency and rates recommended by the manufacturer, and maintained as recommended by the manufacturer;
- (4) using enclosures; or
- (5) using curtains or shrouds.

I. Pressure blasting operations:

- (1) using non-friable abrasive material;
- (2) using curtains, enclosures or shrouds;
- (3) using negative pressure dust collectors;
- (4) using constant wet suppression;
- (5) maintaining ongoing clean up of abrasive material; or
- (6) stopping active operations during high wind conditions.

J. Spray painting and other coatings:

- (1) using enclosures that comply with applicable fire codes; or
- (2) using curtains, enclosures or shrouds.

K. High wind contingency measures:

(1) installing and using on-site anemometers to measure wind speed; the anemometer should trigger a suitable warning mechanism such as a strobe light or an audible alarm that will not violate any applicable noise ordinance to notify on-site personnel of high wind conditions;

(2) using constant wet suppression;

(3) using dust suppressants applied in amounts, frequency and rates recommended by the manufacturer;

(4) using wetting agents or surfactants on disturbed areas, bulk materials or stockpiles;

(5) slowing down process; or

(6) shutting down active operations.

L. Stockpile Formation:

(1) **Active stockpiles:**

(a) applying wet suppression on a regular basis;

(b) utilizing wind breaks (fabric fencing or other materials);

(c) reducing vehicle speeds or using other traffic calming measures (e.g. sculpted piles); or

(d) restricting access to stockpile areas during non-work hours.

(2) **Inactive stockpiles:**

(a) maintaining a stable outer crust over stockpile area;

(b) using dust suppressants applied in amounts, frequency and rates recommended by the manufacturer, and maintained as recommended by manufacturer;

(c) restricting access to stockpile areas; or

(d) utilizing wind breaks (fabric fencing or other materials).

[20.11.20.23 NMAC - Rp, 20.11.20.23 NMAC, 3/17/08]

20.11.20.24 NATIVE GRASS SEEDING AND MULCH SPECIFICATIONS:

A. If the fugitive dust control permit includes provisions to revegetate a disturbed area, the permittee may use the specifications described in 20.11.20.24 NMAC. When properly applied and maintained, these specifications have provided reasonably successful results in the past in Bernalillo county. They are included here as a reference for permittees and others who choose to use native revegetation as a long-term reasonably available control measure. However, use of these specifications does not guarantee success. Failure of any revegetation method as a long-term reasonably available control measure requires re-application or other control method approved by the department. The disturbed area shall maintain compliance with 20.11.20 NMAC.

(1) The native seed species used and rate of application should be as provided in Subsection F of 20.11.20.24 NMAC.

(a) If the area to be seeded is along a recreational trail of any type, the seed mixes for either type of soil listed in Subsection F of 20.11.20.24 NMAC should not include four-wing saltbush and the seeding rate should be reduced by one pound per acre.

(b) Seeds may be pre-mixed by a seed dealer. Each pre-mixed bag of seed should be sealed and labeled by the seed dealer in accordance with federal seed laws and New Mexico department of agriculture labeling laws. The label should include: variety, kind of seed, lot number, purity, germination, percent crop, percent inert, percent weed (including noxious weeds), origin, test data and net weight. Federal seed laws require that analysis shall be no older than five months for seed shipped interstate and no older than nine months for seed shipped intra-state.

(c) 48 hours before seeding, the owner or operator should give written notice to the department by hand delivery or facsimile, requesting inspection of the sealed seed bags to be used. The department may inspect the sealed seed bags and labels.

(2) **Fertilizer and soil amendments:** unless otherwise specified in the fugitive dust control permit, no fertilizer or other soil amendments are required on areas to be reseeded.

(3) **Mulch:** areas to be reseeded should be mulched as described below unless otherwise specified in the permit.

(a) **Hay mulch:** perennial native or introduced grasses of fine-stemmed varieties should be used unless otherwise specified in the plan. At least 65 percent of the herbage by weight of each bale of hay should be 10 inches in length or longer. Hay with noxious seed or plants should not be used. Rotted, brittle, or moldy hay are not considered acceptable. Marsh grass or prairie hay composed of native grass of species

to be seeded is considered acceptable. Tall wheat grass, intermediate wheat grass, switch grass, or orchard hay will be acceptable if cut prior to seed formation. Marsh grass hay should be composed of mid and tall native, usually tough and wiry grass and grass-like plants found in the lowland areas within the Rocky Mountain region. Hay should be properly cured prior to use. Hay that is brittle, short fibered or improperly cured is not considered acceptable. Hay mulch should be crosshatched crimped to minimum depth of two inches.

(b) **Straw mulch:** small grain plants such as wheat, barley, rye, or oats should not be used. Alfalfa or the stalks of corn, maize or sorghum are not considered acceptable. Material which is brittle, shorter than 10 inches or which breaks or fragments during the crimping operation are not considered acceptable. Straw mulch should be crosshatched crimped to minimum depth of two inches.

(c) **Gravel mulch:** gravel mulch should be a maximum of three-quarter to one inch in diameter and must have been crushed or screened with a minimum of one angular face. Experience has demonstrated that gravel mulch provides very successful results on steep slopes and other areas that may be difficult to stabilize.

(d) **Erosion control mats, fabric or blankets:** the type of erosion control mats, fabric or blankets used should be specified in the fugitive dust control permit.

B. Seed bed preparation:

(1) Prior to starting seed bed preparation, the final grades of all earthwork should be inspected and certified by a New Mexico licensed engineer, and a copy of the certification should be delivered to the department:

(a) no soil preparation should be performed when the surface is wet or muddy or when the soil is so moist that the soil is not fully loosened by the discing operation;

(b) if erosion, crusting or re-compaction occurs in an area before seeding, mulching and crimping are successfully completed, the area should be reworked, beginning with seedbed preparation.

(2) Mechanical preparation: the seedbed should be loosened to a minimum depth of six inches by disc or harrow. Areas of heavy or compacted soil may require additional preparation by chiseling or ripping if discing alone does not result in preparation to the full minimum depth of six inches. The soil should be worked to a smooth surface and should be free of clods, stones four inches in diameter and larger, and debris or foreign material that could interfere with seeding or crimping operations.

(3) Hand preparation: areas which cannot be prepared with mechanized equipment because of small size, irregular shape or slope may be prepared to a minimum depth of two inches using hand tools or a rototiller, as specified in the permit.

C. Seeding:

(1) Should not start until the seed bed preparation has been inspected and certified by a New Mexico licensed engineer, a New Mexico licensed landscape architect, or other professional approved by the department (e.g. a department certified erosion control specialist). Notice in writing or by facsimile providing certification pertaining to the seed bed preparation should be given to the department at least 48 hours prior to beginning seeding operations so that the department has an opportunity to inspect the site. No seeding operations should be conducted when steady wind speeds exceed 10 miles per hour.

(2) Seed application:

(a) **Drill seeding:** drill seeding is highly recommended. Seed should be applied with a "rangeland" type seed drill equipped with packer wheels. Seed should be drilled to a maximum depth of one-half inch. Direction of seeding should be across slopes and on the contour whenever possible.

(b) **Broadcast seeding:** seed may be applied using the broadcast method when size, irregular shape, or slope exceeding three to one, prevents the use of a seed drill. Seed may be broadcast by hand or by a mechanical seeder provided that the seed is evenly distributed over the seeding area. Areas that are broadcast seeded should be seeded at a rate that is double the rate used for drill seeding. Areas of broadcast seeding should be hand raked to cover seed.

(c) **Seeding with gravel mulch:** areas to be gravel mulched should be seeded at double the standard seed rate with one-half the seed applied prior to application of gravel and one-half of the seed applied on the surface of the gravel. Water should be applied in a quantity sufficient to wash seed from the surface and into the gravel.

(d) **Hydro seeding:** hydro seeding with native grass will normally only be successful on areas that will be irrigated.

D. Hay or straw mulching:

(1) All seeded areas should be mulched unless otherwise specified in the fugitive dust control permit. On seeded areas that are level or have slopes that are a ratio of three to one or less, any of the four types of mulching below may be used. On erosion control areas or slopes steeper than a ratio of three to one, only gravel mulch or erosion control materials should be used.

(2) Hay mulch should be applied at a minimum rate of one and one-half tons per acre of air dry hay.

(3) Straw mulch should be applied at a minimum rate of two and one-half tons per acre of air dry straw.

(4) Hay or straw mulch should be crosshatched crimped into the soil to a minimum depth of two inches.

(a) The mulch should be spread uniformly over the area either by hand or with a mechanical mulch spreader.

(b) When spread by hand, the bales of mulch should be torn apart and fluffed before spreading.

(c) Mulching should stop when wind speeds exceed 15 miles per hour.

(d) The mulch should be wetted down and allowed to soften for approximately 15 to 20 minutes prior to crimping.

(e) A heavy disc should be used to crimp or anchor the mulch into the soil to a minimum depth of two inches. A mulch-tiller with flat serrated discs at least one-quarter of an inch in thickness, having dull edges with discs spaced six inches to eight inches apart or similar equipment should be used. The discs should be of sufficient diameter to prevent the frame of the equipment from dragging the mulch.

(f) The crimping operations should be across the slope where practical, but not parallel to prevailing winds. In general, crimping should be in a north-south direction or in tight interlocking "S" curves to avoid straight east-west crimp lines.

(g) If small grain straw mulch is used, the mulch should be crimped in two directions in a cross-hatch pattern.

(5) **Gravel mulch:** gravel mulch should be laid evenly by hand or by equipment to a thickness of two inches.

(6) **Erosion control mats, fabric or blankets:** the type of erosion control mats, fabric or blankets used should be as specified in the fugitive dust control permit. Anchoring of the erosion control materials should be consistent with the manufacturer's recommendations.

(7) Upon completion of the reseeding project, the permittee should deliver written notice to the department in a timely manner, certifying completion of seeding project.

E. Protection of native grass seeded area: the person, owner or operator who has elected to use native seeding as a control measure shall be responsible for protecting and caring for the seeded area until plants are fully established. After project completion, the owner or operator shall repair any damage to seeded areas caused by

pedestrian or vehicular traffic or vandalism. During periods of low rainfall, supplemental watering may be required to successfully establish the native grass seed. Because the owner is responsible for the fugitive emissions leaving the property, failure of the reseeded project shall not be a defense to enforcement of 20.11.20 NMAC. The owner or operator may find it necessary to reseed or use other reasonably available control measures to bring the property into compliance. The department strongly recommends that any area being seeded or mulched be adequately fenced and posted to prevent trespass traffic.

F. Seed specifications and rates should be used as established by the most recent edition of "*city of Albuquerque standard specifications for public works construction - native grass seeding*" section as updated by the city or as approved in writing by the department.

G. Variations in seeding due to special environmental conditions: the owner or operator may use a different seeding mixture in order to address special environmental conditions that make it unlikely for success of the reseeded effort. Use of an annual rye (*Lolium sp.*) or cool season grasses (e.g. barley at 10 pounds per acre) may be added to the seed specification in order to help stabilize soils, especially for disturbed areas comprising 25 acres or more when a significant amount of the publicly-owned land or privately-owned real property is not expected to be built upon within one year.

[20.11.20.24 NMAC - Rp, 20.11.20.24 NMAC, 3/17/08]

20.11.20.25 REVIEW MEETING:

TIMELY PETITION FOR HEARING BEFORE THE BOARD: If a permit applicant or permittee (requestor) asks the department to meet informally to review and reconsider the department's decision regarding the applicant's permit application in the manner provided by 20.11.20.25 NMAC, the process shall not extend the 30-day deadline for filling a timely petition for a hearing before the board as provided by 20.11.81 NMAC. If a requestor is adversely affected by, or disagrees with the department's decision regarding the requestor's permit application, the requestor may request an informal review meeting to discuss the department's decision. The request shall be in writing or on a form provided by the department. Within five business days after the requestor receives the department's decision regarding the permit application, the requestor shall deliver the written request to a division manager. Within five business days after a division manager receives the request, a division manager or designee shall hold an informal review meeting with the requestor and an additional division representative (e.g. the person assigned to the permit application review) in an attempt to resolve disagreements. Within two business days after the informal review meeting, a division representative shall mail, hand deliver or deliver by facsimile a statement to the requestor stating whether the department has changed its decision regarding the permit application, and, if so, specifying the change and the reason for the change. A person who participated in a 20.11.20 NMAC permitting action before the department and who

is adversely affected by the decision made by the department, may follow the procedures described in 20.11.81 NMAC to petition for a hearing before the board.

[20.11.20.25 NMAC - Rp, 20.11.20.25 NMAC, 3/17/08]

20.11.20.26 VISUAL DETERMINATION OF FUGITIVE DUST EMISSIONS:

The following method, hereafter called the "visible fugitive dust detection method", is used to visually determine the total amount of time that fugitive dust emissions are visible during a continuous one-hour observation period. If a trained department observer records visible fugitive dust crossing a property line of the property being investigated, for a total of 15 minutes or more during a continuous one-hour period, a violation of 20.11.20 NMAC has occurred. The observer does not have to be certified in procedures found in 40 CFR 60, Method 9, *Visual Determination of the Opacity of Emissions from Stationary Sources* (EPA Method 9). However, the observer shall receive training regarding how to identify a violation of 20.11.20 NMAC that is caused by anthropogenic activities and to distinguish fugitive dust that emanates from a source that is not required by a board regulation other than 20.11.20 NMAC to obtain a permit. Training shall consist of attendance at and completion of the lecture portion of a Method 9 certification course and familiarity with the written materials provided during the course. The method described in Subsections A through D of 20.11.20.26 NMAC does not require the opacity of emissions to be determined during the observation period.

A. To correctly perform this method, the observer shall use two stopwatches. One stopwatch shall be used to record the continuous one-hour time period during which the observation is conducted. This period shall be known as the "observation period." The second stopwatch shall be used to record the total accumulated amount of time that visible fugitive dust is crossing a property line during the observation period. The second stopwatch shall establish the "visible fugitive dust emission time".

B. Prior to the observation, the observer shall:

- (1) determine the location of potential fugitive dust source(s) and the location of the downwind property line for the source;
- (2) sketch the location of the fugitive dust source(s), and, when available during the observation, record the observer's location on a copy of the fugitive dust control permit map or aerial photograph;
- (3) sketch or photograph the location of the downwind property line and physical features that help define the property line;
- (4) sketch or photograph the observer's location during the observations;
- (5) sketch the position of the sun relative to the observer;

(6) document that the visible fugitive dust is not originating from an upwind source other than the source being evaluated; and

(7) maintain a minimum distance of at least 15 feet from the visible fugitive dust being observed, and a maximum distance of no more than one-quarter mile away.

C. The observer shall record:

- (1) observer's name and affiliation;
- (2) date of observation;
- (3) company name, property owner or operators, if known;
- (4) description of the fugitive dust sources;
- (5) wind speed and direction (explain method of determining the wind speed, i.e., hand-held anemometer); and
- (6) sky conditions.

D. The observer shall record the time of day when the observation begins. The observer shall start the first stopwatch to begin recording the observation period and shall observe along the property line. With the second stopwatch, the observer shall record the length of time visible fugitive dust is crossing the property line. The observer shall stop the second stopwatch when the visible fugitive dust is no longer detected crossing the property line. The observer shall continue this procedure during the continuous one-hour observation period or until the visible fugitive dust emission time totals 15 minutes or greater during the continuous one-hour observation period, which is a violation of 20.11.20 NMAC. The observer shall record the time of day when the observation ends. If the observer determines that the visible fugitive dust being observed is of an intensity that may cause immediate danger to human health or safety, then, before the observation period is completed, the observer shall attempt to immediately contact the responsible person, permittee or owner.

[20.11.20.26 NMAC - Rp, 20.11.20.26 NMAC, 3/17/08]

20.11.20.27 ENFORCEMENT:

A. All persons shall use control measures that are effective in maintaining compliance with 20.11.20 NMAC. Violation of a fugitive dust control permit or fugitive dust control plan approved by the department is a violation of 20.11.20 NMAC. If a violation occurs or is occurring, the department may issue a verbal warning, issue a written warning, initiate an administrative enforcement action and assess an administrative civil penalty, and take all other actions authorized by law and equity, including issuing a stop work order as authorized by 20.11.20.27 NMAC.

B. If the department determines a person has violated or is violating a requirement or prohibition of 20.11.20 NMAC, the department may initiate an administrative enforcement action and assess an administrative civil penalty for a past or current violation, or both, as authorized by 74-2-12.A.(1) NMSA. As also authorized by 74-2-12.A.(2) NMSA and 74-2-12.1 NMSA, the department may commence a civil action in New Mexico district court for appropriate relief, including a temporary or permanent injunction. In addition, as authorized by 74-2-14 NMSA, the department also may commence or cause a criminal action to be commenced.

C. As authorized by 74-2-12.H NMSA, in connection with an administrative enforcement action, the director may issue subpoenas for attendance and testimony of witnesses and the production of relevant papers, books and documents and may adopt rules for discovery procedures.

D. If a person (requestor) asks the department for an informal review meeting to consider the department's decision regarding an administrative compliance order in the manner provided by 20.11.20.27 NMAC, the process shall not extend the 30-day deadline for submitting a written request to the department director requesting a public hearing as provided by 74-2-12.C NMSA. If a person receives an administrative compliance order from the department, that person ("requestor") may request an informal review meeting to discuss the administrative compliance order. The request shall be in writing or on a form provided by the department. The requestor shall deliver the written request for an informal review meeting to the director and a division manager within five business days after the requestor has received the administrative compliance order. Within five business days of receiving the request, a division manager or designee shall hold an informal review meeting with the requestor and a division representative (e.g. division manager, compliance officer, or person issuing the order) in an attempt to resolve the administrative compliance order. Within two business days after the informal review meeting, a division representative shall mail, hand deliver or deliver by facsimile a statement to the requestor with the department's final decision regarding the administrative compliance order and the reasons for the decision. If the requestor is adversely affected by the final decision made by the department, the requestor may follow the procedures described in Subsection E of 20.11.20.27 NMAC.

E. A person who receives an administrative compliance order and chooses not to sign the compliance order or similar document as requested by the department, and comply with its terms, may request a hearing consistent with 74-2-12.C NMSA. The decision following the hearing may be appealed consistent with 74-2-9.A NMSA.

F. Payment of an administrative civil penalty shall not prevent the department from taking additional enforcement actions, if the violation is repeated or an additional violation occurs. Payment of an administrative civil penalty for a prior or additional violation shall not be a defense to a subsequent action taken by the department to resolve an additional violation. Actions by the department may include suspension or revocation of a permit, as provided by 74-2-12.B NMSA, and issuance of a stop work order.

G. The permittee or responsible person as identified in the permit shall take all actions required by the permit to prevent a violation of 20.11.20 NMAC, including stopping active operations, if necessary. If the permittee or responsible person as identified in the permit fails to take all required actions, the owner or operator, if different, shall take all actions required to prevent or satisfactorily resolve a violation of 20.11.20 NMAC, including stopping active operations, if necessary.

H. The department may issue a stop work order, which shall suspend all active operations except for the required application of reasonably available control measures. The department also may revoke a permit issued by the department if the permittee fails to implement the reasonably available control measures required by the fugitive dust control permit.

I. If a person fails to obtain a permit as required by 20.11.20 NMAC, the department may issue a stop work order which shall require all active operations at a site to stop except for application of reasonably available control measures.

J. The stop work order, which shall be effective 24 hours after the person, permittee, owner, operator, or responsible person named in a permit receives the stop work order, unless an earlier deadline for stopping work or other activities is imposed by the department for good reason. The stop work order shall remain in effect until the person, permittee, owner, operator, or responsible person named in the permit demonstrates to the satisfaction of the department that the activities of the person, permittee, owner, operator or responsible person named in the permit comply with the provisions of 20.11.20 NMAC.

[20.11.20.27 NMAC - Rp, 20.11.20.27 NMAC, 3/17/08]

20.11.20.28 PUBLIC OUTREACH AND TRAINING:

A. The department shall provide or approve public education regarding reducing fugitive dust. The department shall maintain an electronic information system using the Internet in order to provide access to the general public and regulated business community regarding fugitive dust control programs, activities, regulations, regulatory requirements, forms and information.

B. The department shall implement a program to provide training at no cost to individuals who are or may be required to comply with provisions of 20.11.20 NMAC. Approximately twice per year, the department shall provide or approve training workshops on fugitive dust and its control to persons who conduct or participate in projects involving active operations and to other interested persons. When a person attends the training and successfully passes a test, the department or approved trainer shall issue a certificate stating that the person has successfully completed the training.

[20.11.20.28 NMAC - Rp, 20.11.20.28 NMAC, 3/17/08]

20.11.20.29 COMPLAINTS:

The department shall respond to complaints from residents, businesses and others in a timely manner, but in no case shall the initial response take longer than three business days.

[20.11.20.29 NMAC - Rp, 20.11.20.29 NMAC, 3/17/08]

PART 21: OPEN BURNING

20.11.21.1 ISSUING AGENCY:

Albuquerque - Bernalillo County Air Quality Control Board. P.O. Box 1293, Albuquerque, NM 87103. Telephone: (505) 768-2601.

[6/14/71. . .12/1/95; 20.11.21.1 NMAC - Rn, 20 NMAC 11.21.I.1, 10/1/02; A, 7/11/11]

20.11.21.2 SCOPE:

A. 20.11.21 NMAC is applicable to sources within Bernalillo county.

B. Exempt: 20.11.21 NMAC does not apply to sources within Bernalillo county that are located on Indian lands over which the Albuquerque - Bernalillo county air quality control board lacks jurisdiction.

[12/1/95; 20.11.21.2 NMAC - Rn, 20 NMAC 11.21.I.2, 10/01/02; A, 12/31/03; A, 7/11/11]

20.11.21.3 STATUTORY AUTHORITY:

20.11.21 NMAC is adopted pursuant to the authority provided in the New Mexico Air Quality Control Act, NMSA 1978 Sections 74-2-4, 74-2-5.C; the Joint Air Quality Control Board Ordinance, Bernalillo County Ordinance 94-5 Sections 3 and 4; and the Joint Air Quality Control Board Ordinance, Revised Ordinances of Albuquerque 1994 Sections 9-5-1-3 and 9-5-1-4.

[6/14/71. . .12/1/95; 20.11.21.3 NMAC - Rn, 20 NMAC 11.21.I.3, 10/1/02; A, 12/31/03; A, 7/11/11]

20.11.21.4 DURATION:

Permanent.

[12/1/95; 20.11.21.4 NMAC - Rn, 20 NMAC 11.21.I.4, 10/1/02]

20.11.21.5 EFFECTIVE DATE:

December 1, 1995, unless a later date is cited at the end of a section.

[12/1/95; 20.11.21.5 NMAC - Rn, 20 NMAC 11.21.1.5 & A, 10/1/02]

20.11.21.6 OBJECTIVE:

To ensure that all persons conduct open burning in a manner that prevents or abates emissions from fires in the open, which, as a general class, produce visible emissions and noxious byproducts of combustion.

[3/24/82. . .12/1/95; 20.11.21.6 NMAC - Rn, 20 NMAC 11.21.1.6, 10/1/02; A, 12/31/03]

20.11.21.7 DEFINITIONS:

In addition to the definitions in Section 20.11.21.7 NMAC, the definitions in 20.11.1 NMAC apply unless there is a conflict between definitions, in which case the definition in 20.11.21 NMAC shall govern.

A. "Agricultural burning" means the burning of crop residues for field preparation or that is otherwise used for the production of a crop.

B. "Alternative to burning" means a treatment employing manual, mechanical, chemical, or biological methods to manage vegetation or fuel loads, or land management practices that treat vegetation (fuel) without using fire. A treatment or practice may only be considered an alternative if it has successfully been used to take the place of fire for at least three consecutive years. Suggested alternatives to burning are listed in Section 20.11.21.18 NMAC.

C. "Biomass utilization" means any method of removing and taking biomass material to a landfill, burn facility, a power generation facility, an ethanol production facility, a redistribution facility, a fiberboard or particleboard facility, using the material as compost or mulch, using it as animal bedding, for erosion control, etc.

D. "Broadcast burn" means the controlled application of fire to wildland fuels in their natural or modified state over a predetermined area. Broadcast burns do not include the burning of wildland fuels that have been concentrated in piles by manual or mechanical methods.

E. "Burn down" means that period of time, not to exceed three (3) hours, after a no-burn period is announced by the director, within which period a person operating a solid fuel heating device must cease combustion within any solid fuel heating device by withholding fuel or modifying the air-to-fuel ratio.

F. "Burner" means the person who is responsible for or in control of a prescribed fire project that is regulated under 20.11.21 NMAC.

G. "Burn project" means, in prescribed fires or in wildland fire use, a burn regulated by 20.11.21.15 NMAC on an area that is contiguous and is being treated or managed for the same land management objectives.

H. "Class I area" means all international parks, national wilderness areas which exceed 5,000 acres, national memorial parks which exceed 5,000 acres, and national park areas which exceed 6,000 acres in size and which were in existence on the date of enactment of the Clean Air Act Amendments of 1977. The extent of the areas designated as class I shall conform to any changes in the boundaries of such areas, which occurred subsequent to the date of the enactment of the Clean Air Act Amendments of 1977 or 1990.

I. "Department" means the Albuquerque environmental health department, which is the administrative agency of the Albuquerque - Bernalillo county air quality control board.

J. "Director" means the administrative head of the Albuquerque environmental health department or a designated representative(s).

K. "Division" means the city of Albuquerque air quality division or its successor agency.

L. "Emission reduction technique" or "ERT" means a control strategy used to reduce smoke from a prescribed fire that results in less smoke than would have been produced if the emission reduction technique were absent. A control strategy used for a period of fewer than three years is an emission reduction technique; if the control strategy replaces fire for three consecutive years or more, the control strategy is an alternative to burning.

M. "Environmentally non-essential burning" means the open burning of any unwanted combustible material which could otherwise reasonably be altered, destroyed, reduced or removed to a suitable disposal site without the potential to cause environmental harm or damage.

N. "Environmentally poor burning substances" include but are not limited to: refuse, paper, rubbish, books, magazines, fiberboard, packaging, rags, fabrics, animal waste, waste oil, liquid or gelatinous hydrocarbons, tar, paints and solvents, chemically treated wood, plastic or rubber, office records, sensitive or classified wastes, hazardous or toxic substances, interiors of wrecked vehicle bodies or other materials which are difficult to burn without producing significant amounts of noxious or toxic fumes or dense smoke.

O. "Health alert" means an air pollution alert, warning or emergency issued by the department.

P. "Hot torch" means a wand or burner fueled by propane, butane or compressed natural gas.

Q. "Hot torch burning" means burning of individual weeds at the point of the hot torch.

R. "No-burn period" means a period of time, declared by the director, during which no person with authority or power to control the operation of a solid fuel heating device shall allow the operation of a solid fuel heating device to continue, following a burn down period, within the wood smoke impacted area, unless the device is a wood heater that has been emission certified by the EPA. Exemptions may be granted by the director per 20.11.22.2 NMAC. No-burn periods may be declared any time from October 1 through February 28. The director shall declare a no-burn period after reviewing available meteorological data, air pollution monitoring data and other relevant information and determining that expected atmospheric conditions will not adequately disperse wood smoke.

S. "Open burning" means the combustion of any substance which is not confined in a device having controllable fuel/air mixture capable of achieving nearly complete combustion, and from which combustion products are discharged into the open air without passing through a stack, duct, chimney, or vent.

T. "PB-I" or "level I prescribed burn" means a smoke management burn project that emits less than one ton of PM₁₀ emissions per day or burns less than 5,000 cubic feet pile volume of vegetative material per day.

U. "PB-II" or "level II prescribed burn" means a smoke management burn project that emits one ton or more of PM₁₀ emissions per day or burns 5,000 cubic feet or more pile volume of vegetative material per day.

V. "Pile" means vegetative materials that have been relocated and heaped together either by hand or machinery.

W. "Pile volume" means the gross volume of a pile, including the air space between solid constituents, as calculated from the overall dimensions and shape of the pile.

X. "PM₁₀ emissions" or "PM₁₀" means finely divided solid or liquid material, with an aerodynamic diameter less than or equal to a nominal 10 micrometers emitted to the ambient air, as measured by the reference method in 40 CFR Part 50, Appendix J, or equivalent method approved by the EPA.

Y. "Population" means the total number of individuals occupying an area. Locations for individuals within an area include, but are not limited to, open campgrounds, single-family dwellings, hospitals, schools in use, villages, and open places of employment.

Z. "Prescribed fire" or "prescribed burn" or "PB" means any fire ignited by any person to meet specific non-agricultural land management objectives. For the purposes of 20.11.21 NMAC, wildland fire use is considered a prescribed fire.

AA. "Public notification" means any method that communicates burn information to the burners, air regulators, Bernalillo county fire department, the local fire authority, and to the general public.

BB. "Research and development activities" means scientific experimentation using open burning to prove a concept or produce information useful in planning.

CC. "Vegetative material" means untreated wood and untreated wood products, including tree stumps (whole or chipped), trees, tree limbs (whole or chipped), bark, sawdust, chips, scraps, slabs, millings, shavings, grass, grass clippings, weeds, leaves, conifer needles, bushes, shrubs, clippings from bushes and shrubs, and agricultural plant residue.

DD. "Ventilation index" means a technical rating used to establish the potential for smoke or other pollutants to ventilate away from its source.

EE. "Ventilation index category" means a category in the ventilation index that is determined as provided in Section 20.11.21.17 NMAC and is rated as excellent, very good, good, fair or poor.

FF. "Wildfire" means an unplanned or unwanted fire that burns vegetative material in a natural or modified state.

GG. "Wildland" means an area in which there is minimal development, except for roads, railroads, power lines and similar utilities and transportation facilities. Structures, if any, are widely scattered.

HH. "Wildland fire use" means the management of wildfire within a wildland that is ignited by natural forces, such as by lightning or volcanic eruption, following a decision to allow the wildfire to burn to accomplish specific pre-stated resource objectives in predefined geographic areas, also known as fire use, wildfire use, prescribed natural fire, and fire for resource benefit.

II. "Winter pollution advisory season" or "no-burn season" means the period from October 1st through February 28th each year when no-burn calls are made. The no-burn call is a control strategy designed to protect the air quality in Bernalillo county. This strategy helps mitigate particulate matter and carbon monoxide build up during the colder months of the year when temperature inversions trap pollutants closer to ground level.

JJ. "Wood smoke impacted area" means that portion of Bernalillo county that is the most adversely affected by the burning of wood during atmospheric conditions that the director concludes may not adequately disperse wood smoke. The wood smoke impacted area is bounded on the north and south by the Bernalillo county line, on the west by the universal transverse meridian (UTM) line 337000mE and on the east by the UTM line 367000mE, Zone 13.

[1/3/85. . .6/16/92, 12/1/95; 20.11.21.7 NMAC - Rn, 20 NMAC 11.21.I.7, 10/1/02; A, 12/31/03; A, 7/11/11]

20.11.21.8 VARIANCES:

[RESERVED]

[12/1/95; 20.11.21.8 NMAC - Rn, 20 NMAC 11.21.I.8, 10/1/02]

20.11.21.9 SAVINGS CLAUSE:

Any amendment to 20.11.21 NMAC, that is filed with the state records center shall not affect actions pending for violation of a city or county ordinance or 20.11.21 NMAC. Prosecution for a violation under a prior statute, ordinance or regulation shall be governed and prosecuted under the statute, ordinance or regulation in effect at the time the violation was committed.

[12/1/95; 20.11.21.9 NMAC - Rn, 20 NMAC 11.21.I.9 & A, 10/1/02; A, 12/31/03; A, 7/11/11]

20.11.21.10 SEVERABILITY:

If any section, paragraph, sentence, clause, or word of 20.11.21 NMAC or any federal standards incorporated herein is for any reason held to be unconstitutional or otherwise invalid by any court, the decision shall not affect the validity of remaining provisions of 20.11.21 NMAC.

[12/1/95; 20.11.21.10 NMAC - Rn, 20 NMAC 11.21.I.10, 10/1/02; A, 7/11/11]

20.11.21.11 DOCUMENTS:

Documents incorporated and cited in 20.11.21 NMAC may be viewed at the Albuquerque environmental health department, 400 Marquette NW, Albuquerque, NM.

[12/1/95; 20.11.21.11 NMAC - Rn, 20 NMAC 11.21.I.11 & A, 10/1/02; A, 7/11/11]

20.11.21.12 OPEN BURNING PROHIBITED:

A. Open burning on private or public property (including burning of environmentally poor burning substances and vegetative materials), is prohibited in Bernalillo county unless authorized under Section 13, 14, or 15 of 20.11.21 NMAC. In addition to complying with 20.11.21 NMAC, every person who plans to conduct open burning shall obtain all applicable permits and comply with all applicable restrictions of the Bernalillo county fire department and the Albuquerque fire department, prior to burning.

B. Compliance with 20.11.21 NMAC shall not relieve any person from complying with all other applicable statutes, ordinances and regulations.

C. Open burning allowed under Sections 13, 14, or 15 of 20.11.21 NMAC shall be suspended during declared "no burn periods" during the winter pollution advisory season or when an air pollution health alert is issued. A waiver from the no burn restriction may be granted for extenuating circumstances by following the process in Subsection D of 20.11.21.12 NMAC. A no burn waiver may be rescinded in the event of a health alert.

D. The burner may apply for a waiver by submitting a written application for waiver to the department at least two weeks prior to the planned burn event. The burner shall document the reasons for requesting the waiver in the application for a waiver. The department shall notify the burner no later than one week prior to the planned burn event whether the waiver is granted or denied, and, if denied, the reasons for the denial. The department shall consider each waiver request on a case-by-case basis. An applicant for a waiver may challenge the department's denial of a waiver by following the procedures established in 20.11.21.21 NMAC. A person adversely affected by the department's granting of a waiver may challenge the department's decision by following the procedures established in Subsection B of 20.11.21.21 NMAC.

[1/3/85, 12/1/95; 20.11.21.12 NMAC - Rn, 20 NMAC 11.21.I.12 & Repealed, 10/1/02; Rn, 20 NMAC 11.21.II.1, 10/1/02; A, 12/31/03; A, 7/11/11]

20.11.21.13 CONDITIONALLY ALLOWED OPEN BURNING WITH A PERMIT:

A. Open burning may be allowed for the purposes described in Table I if, prior to burning, an open burning permit has been obtained from: 1. the Albuquerque environmental health department (as required by Subsections B and C of 20.11.21.13 NMAC); and 2. the Bernalillo county fire department or the Albuquerque fire department as applicable.

Table I

OPEN BURNING PERMITS FOR MULTIPLE AND SINGLE EVENTS

Permit Basis		Purpose and Conditions
Multiple Event	Single Event	
X	X	1. Timber and forest management (permit required for burns one-quarter acre through 10 acres in size, or up to 1000 cubic feet of pile volume per day).
	X	2. Disease control of dead animals and plants.
X	X	3. Research and development activities (single-event permit required for burns of 2,000 gallons or more liquid fuel or 5,000 pounds or more solid fuel).
Up to 2,000 lbs	Greater than 2,000 lbs	4. Disposal of explosives by burning, to avoid hazards of transport or handling.
Up to 2,000 lbs	Greater than 2,000 lbs	5. <i>Above-ground</i> detonation of more than 20 pounds of explosives.
Up to 35,000 lbs	Greater than 35,000 lbs	6. <i>Below-ground</i> detonation of more than 20 pounds of explosives.
X	X	7. Ignition of rocket motors containing more than 4,000 pounds fuel (single-event permit required for motors containing more than 8,000 pounds fuel).
X		8. Fire fighter and rescue training (fuel and conditions appropriate for the activity). No environmentally poor burning substances may be burned unless essential to simulate the needed training conditions. Training burns shall comply with 20.11.64.11 NMAC and 40 CFR Part 61, National Emission Standards for Hazardous Air Pollutants, Subpart M, <i>National Emission Standard for Asbestos</i> .
X	X	9. Hot torch burning of weeds along ditches, channels, public rights of way, or other <i>public property</i> .
X	X	10. Agricultural burning (permit required for burns one-quarter acre through 10 acres in size, or up to 1000 cubic feet of pile volume per day).
	X	11. Any special condition which would otherwise be prohibited but for which there is an unusual need where burning would best serve the public interest overall.

B. A person seeking a multiple or single event permit for the purposes described in Table I shall deliver the following information to the department in letter form or by a department approved electronic notification method at least five business days in advance of the single or multiple event burn:

- (1) the requestor's name, address, and telephone number;
- (2) location where burning is to be conducted;
- (3) type and quantity of ignitable material and fuel; and
- (4) additional required information:
 - (a) date(s) when the burning is to be conducted;
 - (b) for multiple burn events, the estimated number, character, and schedule of fires to be conducted;
 - (c) general description of method to ignite, maintain, control, and terminate the burning;
 - (d) reasons why the requestor believes the burning is necessary;
 - (e) what alternatives to burning have been considered and why they were not chosen instead of burning; and
 - (f) for multiple event permits, the number and character of similar fires conducted during the previous permit cycle for which renewed approval is sought.

(5) In the event of an emergency necessitating a single event permit, the above process may be handled by telephone if the department is in agreement and the information is promptly delivered to the department in writing. In case of such emergency, the five-business-day notice requirement may be waived at the discretion of the department. Information supplied to the department relative to planned burning shall be construed to be part of the conditions of the permit issued pursuant thereto. Any later need to deviate from the original plan must be reported to and approved by the department in order to maintain the validity of the permit.

C. Upon receipt of a request for a single event or multiple event open burning permit, the department shall evaluate the application and decide whether to grant the permit, deny the permit or grant the permit with additional conditions that the department believes to be in the best interest of the local community and consistent with the board's intent, to eliminate "environmentally non-essential burning". Multiple event permits shall only be renewed by the department following a re-evaluation of all the

information provided in the renewal request. The department shall consider the need to burn, anticipated atmospheric conditions and other factors the department determines are relevant.

D. After evaluation of the applicant's request, the department shall respond to the applicant at least 24 hours in advance of the scheduled open burn event in writing or by a department-approved electronic notification method advising the applicant of its findings, including any additional conditions deemed necessary. In an emergency, preliminary information regarding the department's decision should first be telephoned to the applicant if possible, to expedite issues of immediate need.

E. If an applicant for a permit under 20.11.21.13 NMAC is not satisfied with either the conditions or denial of the applicant's request, the applicant may request an administrative hearing on the merits before the board consistent with 20.11.21.21 NMAC.

F. Any multiple or single event permit issued under this 20.11.21.13 NMAC may be revoked or suspended if the applicant fails to comply with the permit provisions therein, and the permittee may be subject to enforcement actions.

G. For permits issued pursuant to 20.11.21.13 NMAC: Single-event permits shall only be valid for one month and multiple-event permits shall only be valid for one year, unless stipulated otherwise in the permit.

[12/1/95; 20.11.21.13 NMAC - Rn, 20 NMAC 11.21.II.2, 10/1/02; A, 12/31/03; A, 7/11/11]

20.11.21.14 CONDITIONALLY ALLOWED OPEN BURNING NOT REQUIRING A PERMIT FROM THE ENVIRONMENTAL HEALTH DEPARTMENT:

Open burning is allowed for the purposes set forth in Table II if: 1. the burn complies with the time requirements specified in Table II; and 2. prior to burning, the person planning to conduct open burning obtains all permits and complies with all restrictions required by the Bernalillo county fire department and the Albuquerque fire department, as applicable (e.g. 25 feet from any structure; pile size no greater than three feet in diameter and two feet high; no offensive or objectionable smoke or odor emissions; atmospheric conditions or local circumstances that make such fires hazardous, etc.).

Table II

CONDITIONALLY ALLOWED OPEN BURNING

Type of Burning	Time Restrictions
1. Cooking food.	No limit on time of day
2. Recreational or ceremonial bonfires.	

3. Dead and dry weed removal on private residential, commercial or industrial property, and hot torch weed control on private residential property.	11 AM to 3 PM October through March 6 AM to 5 PM April through September
4. Small-scale fire extinguisher training (fewer than 50 participants).	No limit on time of day

[1/3/85. . .12/1/95; 20.11.21.14 NMAC - Rn, 20 NMAC 11.21.II.3, 10/1/02; A, 12/31/03; A, 7/11/11]

20.11.21.15 SMOKE MANAGEMENT; PRESCRIBED BURNS; WILDLAND FIRE USE; WILDFIRES UNDER SUPPRESSION:

20.11.21.15 NMAC applies to all persons who intend to use prescribed fire to burn more than 10 acres or more than 1,000 cubic feet of pile volume of vegetative material per day. Specified portions of 20.11.21.15 NMAC also apply to the land manager or owner of property on which a wildfire occurs.

A. Materials allowed to be burned: Only vegetative material shall be burned, with the following exceptions:

(1) auxiliary fuel or incendiary devices may be used to start the burning authorized by 20.11.21.15 NMAC, provided that:

(a) no oil heavier than No. 2 diesel shall be used; and

(b) no more than the minimum amount of auxiliary fuel necessary to start the fire shall be used.

(2) Polyethylene sheeting may be burned with the vegetative materials, provided that:

(a) the sheeting has been covering piled vegetative material for at least one month prior to burning;

(b) the amount of sheeting burned is no more than the minimum necessary to cover the pile;

(c) removal of the sheeting before burning is impractical; and

(d) the burner is able to provide evidence, such as purchase records or package labeling, that establish the sheeting is polyethylene and not some other form of plastic.

B. Requirements for PB-I: For any burn project expected to produce less than one ton of PM₁₀ emissions per day or burn less than 5,000 cubic feet pile volume per day, all of the following requirements shall apply.

(1) The burner shall burn only under appropriate dispersion conditions. In order to accomplish this objective, the burner shall follow either Subparagraph (a) **or** (b) of Paragraph (1) of Subsection B of 20.11.21.15 NMAC.

(a) The burner shall:

(i) ignite burns only during the hours from one hour after sunrise until one hour before sunset; the burner may apply for a waiver of this requirement by submitting a written application for waiver to the department at least two weeks prior to the planned burn project; the burner shall document the reasons for requesting the waiver in the application for a waiver; the department shall notify the burner no later than one week prior to the planned burn project whether the waiver is granted or denied, and, if denied, the reasons for the denial; the department shall consider each waiver request on a case-by-case basis; and

(ii) conduct burn projects at least 300 feet from any occupied dwelling, workplace, or place where people congregate, which is on property other than the burn project location; the burner may apply for a waiver of this requirement by submitting a written application for waiver to the department at least two weeks prior to the planned burn project; the burner shall document the reasons for requesting the waiver in the application for a waiver; the department shall notify the burner no later than one week prior to the planned burn project whether the waiver is granted or denied, and, if denied, the reasons for the denial; and the department shall consider each waiver request on a case-by-case basis; **or**

(b) The burner shall:

(i) only burn during times when the ventilation index category is rated "good" or better, as determined by using the methodology outlined in 20.11.21.17 NMAC, unless a waiver has been granted by the department; the burner may apply for a waiver of this requirement by submitting a written application for waiver to the department no later than 10:00 a.m. one business day prior to the planned burn project; the burner shall document the reasons for requesting the waiver in the application for a waiver; the department shall notify the burner no later than 3:00 p.m. one business day prior to the planned burn project whether the waiver is granted or denied, and, if denied, the reasons for the denial; the department shall consider each waiver request on a case-by-case basis; and

(ii) conduct visual monitoring and document the results in writing; the results shall evaluate the smoke dispersion by recording characteristics of the smoke (e.g., color, density), including the general compass direction of dispersion, the patterns of vertical dispersion, and the duration of the smoke plume(s), and corresponding time-

of-day information; use of onsite instruments to record the wind speed and direction is encouraged; no later than six months after the burn project, the burner shall submit records of these results to the department; for burn projects planned to be conducted within a one mile radius of a population, the department may require the burner to notify the department no later than two business days prior to the planned burn project so that the department may determine whether to conduct instrument monitoring, in addition to the visual monitoring conducted by the burner; and the need for instrument monitoring by the department shall be determined by the department on a case-by-case basis.

(2) The burner shall notify the local fire authorities prior to igniting a burn.

(3) The burner shall register the burn project with the department (on a registration form obtained from the department), no later than 10:00 a.m. one business day prior to the planned ignition of the burn project. The department shall provide the burner with a registration number for the burn project. Prior to igniting the burn project, if the burner has not received the registration number, the burner shall make a good faith effort to contact the department to obtain the registration number. If the burner is not able to obtain a registration number before igniting the burn, the burner shall obtain a registration number from the department as soon as possible. For burn projects longer than seven consecutive days, the burner shall notify the department every seven days when burning is to be conducted under that burn project registration. The burner shall not burn more area or volume than the burner has included in the registration form submitted to the department.

(4) The burner shall submit a completed burn project tracking form to the department (on a tracking form obtained from department), no later than two weeks following completion of the burn project.

(5) For burn projects conducted within a one-mile radius of a population, the burner shall comply with the following additional requirements:

(a) the burner shall conduct visual monitoring and document the results; the results shall evaluate the smoke dispersion by recording characteristics of the smoke (e.g., color, density), including the general compass direction of dispersion, the patterns of vertical dispersion, the duration of the smoke plume(s), and corresponding time-of-day information; use of onsite instruments to record the wind speed and direction is encouraged; documentation through use of photographs, with the date, time, and other relevant information noted on the photographs, is also encouraged; and no later than six months after the burn project, the burner shall submit records of these results to the department; and

(b) The burner shall conduct public notification of any population(s) within a one-mile radius of the burn project at least two days prior to, but no earlier than 30 days in advance of igniting a burn project; and the method of notification shall be an advertisement in a newspaper of general circulation in the area where the burn will take

place, or other means, as approved by the department to ensure that adequate notice is provided to the affected public.

(6) An applicant for a waiver may challenge the department's denial of a waiver by following the procedures established in 20.11.21.21 NMAC. A person adversely affected by the department's granting of a waiver may challenge the department's decision by following the procedures established in Subsection B of 20.11.21.21 NMAC.

C. Requirements for PB-II: For any burn project expected to produce emissions greater than or equal to one ton of PM₁₀ emissions per day or expected to burn 5,000 cubic feet pile volume per day or more, all of the following requirements shall apply.

(1) The burner shall review smoke management educational material supplied by the department or complete a department-approved smoke management training program prior to initiating burning.

(2) The burner shall consider alternatives to burning and shall document the alternatives considered and the rationale for not utilizing alternatives provided in 20.11.21.18 NMAC on a form obtained from department.

(3) The burner shall implement at least one emission reduction technique included in 20.11.21.19 NMAC and shall document the techniques implemented on a form obtained from the department. The burner may apply for a waiver of this requirement by submitting a written application to the department at least two weeks prior to the planned burn project. The burner shall document the reasons for requesting the waiver in the application for a waiver. The department shall notify the burner no later than 10:00 a.m. one week prior to the planned burn project whether the waiver is granted or denied, and, if denied, the reasons for the denial. The department shall consider each waiver request on a case-by-case basis.

(4) The burner shall only burn during times when the ventilation index category is "good" or better, as determined by using the methodology outlined in 20.11.21.17 NMAC, unless a waiver has been granted by the department. The burner may apply for a waiver of this requirement by submitting a written application to the department no later than 10:00 a.m. one business day prior to the planned burn. The burner shall document the reasons for requesting the waiver in the application for a waiver. The department shall notify the burner no later than 3:00 p.m. one business day prior to the planned burn whether the waiver is granted or denied, and, if denied, the reasons for the denial. The department shall consider each waiver request on a case-by-case basis.

(5) The burner shall conduct visual monitoring and shall document the results. The results shall evaluate the smoke dispersion by recording characteristics of the smoke (e.g., color, density), including the general compass direction of dispersion, the patterns of vertical dispersion, and the duration of the smoke plume(s). Use of onsite

instruments to record the wind speed and direction is encouraged. Documentation through use of photographs, with the date, time, and other relevant information noted on the photographs, is also encouraged. No later than six months after the burn project, the burner shall submit records of these results to the department.

(6) The burner shall notify the local fire authorities prior to igniting a burn.

(7) The burner shall register a burn project with the department on a registration form obtained from the department at least two weeks prior to planned ignition of the burn. The department shall provide the burner with a registration number for the burn project. Prior to igniting the burn project, if the burner has not received the registration number, the burner shall make a good faith effort to contact the department to obtain the registration number. If the burner is not able to obtain a registration number before igniting the burn, the burner shall obtain a registration number from the department as soon as possible. For burn projects longer than seven consecutive days, the burner shall notify the department every seven days when burning is to be conducted under that burn project registration. The burner shall not burn more area or volume than the burner has included in the registration form submitted to the department.

(8) The burner shall notify the department of the intent to burn on a specific date no later than 10:00 a.m. one business day prior to the planned burn project. The notification may be made up to a seven days prior to igniting the burn. The department shall notify the burner of the receipt of the notification by 11:00 a.m. on the day the department receives the notification. If the department has not notified the burner by 11:00 a.m., and prior to igniting the burn, the burner shall make a good faith effort to contact the department to verify that the department received the notification. The burner shall not burn more area or volume than the burner included in the registration. The department shall notify the burner no later than 3:00 p.m. one business day prior to the start of the burn project if a modification of the burn is being required by the department.

(9) The burner shall complete and submit to the department a fire activity tracking form, using a form obtained from the department no later than two weeks following the end of the burn project.

(10) The department may require the burner to notify the department no later than two business days prior to the planned burn so the department may determine whether to conduct instrument monitoring in addition to visual monitoring conducted by the burner. The need for instrument monitoring by the department shall be determined by the department on a case-by-case basis.

(11) The burner shall conduct public notification at least two business days prior to, and no earlier than 30 days prior to igniting a burn. The method of notification shall be an advertisement in a newspaper of general circulation in the area where the

burn will take place, or other means, as approved by the department to ensure that adequate notice is provided to the affected public.

(12) An applicant for a waiver may challenge the department's denial of a waiver by following the procedures established in 20.11.21.21 NMAC. A person adversely affected by the department's granting of a waiver may challenge the department's decision by following the procedures established in Subsection B of 20.11.21.21 NMAC.

D. Wildland fire use: For wildland fire use exceeding 10 acres in size, the following requirements shall apply:

(1) The burner shall register the burn project with the department on forms obtained from the department no later than one business day following the decision to manage a wildland fire use burn. The department shall provide the burner with a registration number for the burn project. Each day the wildland fire use burn project is burning, the burner shall notify the department daily by 10:00 a.m. on the status of the burn project.

(2) The burner shall notify the local fire authorities of the decision to manage a wildland fire use burn. For wildland fire use burns within Bernalillo county, the burner shall conduct public notification no later than one calendar day after the decision to manage the burn as a wildland fire use burn. The notification shall be appropriate to the population being notified.

(3) The burner shall conduct visual monitoring and shall document the results. The results shall evaluate the smoke dispersion by recording characteristics of the smoke (e.g., color, density), including the general compass direction of dispersion, the patterns of vertical dispersion, and the duration of the smoke plume(s). Use of onsite instruments to record the wind speed and direction is encouraged. Documentation through use of photographs, with the date, time, and other relevant information noted on the photographs, is also encouraged. No later than six months after the burn project, the burner shall submit records of these results to the department.

(4) The burner shall complete and submit to the department a fire activity tracking form obtained from the department no later than two weeks following the end of the burn project.

E. Wildfire under suppression: For all wildfires exceeding 100 acres in size, the land manager or owner of property on which the wildfire occurs shall complete a fire activity tracking form obtained from the department and submit it to the department no later than six weeks following the cessation of fire fighting activities on the wildfire.

[20.11.21.15 NMAC - N, 12/31/03; A, 7/11/11]

20.11.21.16 CALCULATION OF PM₁₀ EMISSIONS FOR PRESCRIBED BURNS:

To determine whether a prescribed burn has the potential to produce more than one ton of PM₁₀ emissions per day, use the emission factors listed below (adapted from AP-42) or any alternative method approved in writing by the department.

A. To calculate the quantity of PM₁₀ emissions in tons generated by a prescribed burn project or a wildfire, multiply the number of acres estimated to be burned:

- (1) by 0.04348 tons per acre for forest; and
- (2) by 0.02941 tons per acre for shrub land; and
- (3) by 0.01 tons per acre for grass land; and
- (4) by 0.01538 tons per acre for field crops.

B. For shrub and forest piles, multiply the number of cubic feet of piled material estimated to be burned by 0.0002 tons per cubic foot.

C. For all other prescribed burn projects or a wildfire uses that do not fall into the categories listed in this section, contact the department for assistance in determining a methodology to estimate emissions that is consistent with EPA methodologies.

[20.11.21.16 NMAC - N, 12/31/03]

20.11.21.17 DETERMINATION OF VENTILATION INDEX CATEGORY:

A. PB-I and PB-II prescribed burns are allowed to be ignited only with a ventilation index category rated "good" or better, unless a waiver has been granted by the department. The ventilation index category may be obtained by contacting the department, or the burner may make the determination by calculating and documenting the ventilation index category using the following methodology:

- (1) using a computer with internet access, enter the national weather fire forecast website at <http://www.srh.noaa.gov/abq/?n=forecasts-fireweather> or successor universal resource locator (URL) internet address;
- (2) select the appropriate zone for the location of the burn project within the New Mexico map showing the various zones;
- (3) examine the forecast and find the reference elevation to be used to determine the general ventilation index category for the Bernalillo county zone (e.g., Albuquerque - 5,300 feet above mean sea level or Mountainair - 6,500 feet above mean sea level);
- (4) record the mixing height for "today" or "tomorrow" as appropriate;

(5) calculate the mixing height at the burn location by adding the forecasted mixing height and the reference elevation obtained above. From the sum of these two items, subtract the elevation of the burn location; and

(6) calculate the ventilation index for the prescribed burn by multiplying the mixing height at the burn location by the average forecasted transport wind speed.

B. Once the ventilation index for the prescribed burn has been calculated, refer to the following table to see if the ventilation index for the burn project is acceptable to ignite the burn:

Category	Knot-Feet
Excellent - Acceptable	Greater than or equal to 150,000
Very Good - Acceptable	100,000 - 149,999
Good - Acceptable	60,000 - 99,999
Fair - Not Acceptable	40,000 - 59,999
Poor - Not Acceptable	Less than or equal to 40,000

[20.11.21.17 NMAC - N, 12/31/03; A, 7/11/11]

20.11.21.18 ALTERNATIVES TO BURNING:

As required by Subsection C of 20.11.21.15 NMAC, burners engaged in PB-II prescribed burns are required to consider the use of alternatives to burning, which include department-approved alternatives, as well as those listed in 20.11.21.18 NMAC. An effort will be made by the department to remove administrative barriers to the utilization of alternatives to burning.

A. Manual/handwork - Handwork involves picking up and moving limbs and brush, as well as cutting downed and standing materials using hand tools or chainsaws. Manual work involves lifting, cutting, and carrying forest materials, and is generally limited to materials of roughly nine inches or less in diameter. Larger materials can be handled, but efficiency, production rate and safety decrease rapidly as size increases. If the fuels requiring treatment exceed the nine-inch-diameter threshold, handwork is not a good option.

(1) **Cut and scatter** - Hand crews cut and scatter material to change the vertical and horizontal continuity of the fuel load. This technique increases the surface fuel load by redistributing ladder fuels onto the ground surface. It is appropriate where stand density is generally low and existing surface fuels are shallow.

(2) **Pile** - Cut material is piled, redistributing the fuel load rather than reducing it. Piling can be used in denser stand conditions than scattering can, because the piles can be situated to avoid fuel-loading problems. Drawbacks to piling include: slower decomposition than when scattered, labor intensive and dense stand conditions can result in a high number of piles.

B. Mechanical treatments - Employ equipment as the primary means of modifying or removing fuels. Generally, treatment areas must be within one-quarter mile of a road and have slopes less than 40 percent.

(1) **Pile** - Cut material is piled, redistributing the fuel load rather than reducing it.

(2) **Fuel modification** - Machinery is used to process the material into smaller pieces that can then be redistributed on the ground surface or removed from the site. Because materials processed in this fashion can be much more densely packed than materials that are scattered by hand or piled by hand, the available oxygen supply is reduced, thereby inhibiting spread of fire and flame height.

(i) **Masticate/mow** - Mastication involves the processing of standing or downed material where it occurs. Mastication is more suitable for denser stand conditions than is scattering or piling, and the redistributed fuel load decomposes more rapidly. It is most appropriate for treating both green and dead ladder fuels and the higher surface fuels. Mowing is primarily appropriate to treat grassland and light shrub land habitats. Like mastication, mowing processes the vegetation material on site and in place.

(ii) **Chip/grind/cut** - Material is placed into a piece of equipment and discharged, often through a chute. Because of this feature, material can be processed more selectively and transported off site for either disposal or utilization. It is the method of choice when biomass utilization is an option.

(iii) **Crush** - Another form of mastication; this technique is useful primarily for shrub land habitats dominated by brittle species.

(3) **Tree removal** - Numerous approaches to tree removal have been developed as the timber industry has evolved to operate in a variety of habitats and under myriad political and economic constraints.

(i) **Bole removal** - This is traditional harvesting. Trees are felled either by hand or mechanically and removed from the site for processing. Bole removal eliminates the vertical continuity of the fuel load, but increases surface fuels with the addition of leaf/needle and limb materials. Overall biomass is reduced.

(ii) **Whole tree yarding** - Trees are felled either by hand or mechanically. The entire tree is then brought intact to a staging area where they are processed. This method removes the vertical continuity of the fuel load, removes biomass, and adds very little to the surface fuel load. Moreover, the removal of leaf/needle and limb material is more important than bole removal in the context of fire behavior. Only suitable for trees 9-18 inches in diameter in order to avoid damage to soil and water quality caused by felling trees greater than 18 inches in diameter.

(iii) **Cut-to-length logging** - Utilizes specialized equipment to cut and process entire trees on site in the forest. While much of the biomass either remains onsite or must be addressed through secondary treatments, an important advantage of this technique is its efficacy in treating material of very small diameter.

C. Chemical - Chemical treatments entail the application of herbicides. Chemical treatments do not remove fuel, but kill existing vegetation or inhibit growth (i.e. maintenance of defensible fuel profile zones).

D. Grazing - Involves the use of livestock, primarily cattle and goats, to manage the growth and composition of brush and grasses. While it is of limited utility in forested habitats, it can be an effective technique in rural residential areas, in the wild land-urban interface and in selected grassland and shrub land habitats.

[20.11.21.18 NMAC - N, 12/31/03; A, 7/11/11]

20.11.21.19 EMISSIONS REDUCTION TECHNIQUES:

Emissions reductions techniques (ERTs) are control strategies that help reduce smoke from prescribed fires. ERTs are used in conjunction with fire and do not replace fire. In addition to department-approved ERTs, other ERTs are included below.

A. Reducing the area burned.

(1) **Burn concentrations** - Sometimes concentrations of fuels can be burned rather than using fire on 100 percent of an area requiring treatment. The fuel loading of the areas burned using this technique tends to be high.

(2) **Isolate fuels** - Large logs, snags, deep pockets of duff, sawdust piles, squirrel middens or other fuel concentrations that have the potential to smolder for long periods of time can be isolated from burning. Eliminating these fuels from burning is often faster, safer and less costly than mop-up, and allows targeted fuels to remain following the prescribed burn. This can be accomplished by several techniques including:

- (a) constructing a fireline around fuels of concern;
- (b) not lighting individual or concentrated fuels;
- (c) using natural barriers or snow;
- (d) scattering the fuels; and
- (e) spraying with foam or other fire retardant material.

(3) **Mosaic burning** - Landscapes often contain a variety of fuel types that are noncontinuous and vary in fuel moisture content. Prescribed fire prescriptions and lighting patterns can be assigned to use this fuel and fuel moisture non-homogeneity to mimic natural wildfire and create patches of burned and non-burned areas or burn only selected fuels. Areas or fuels that do not burn do not contribute to emissions.

B. Mechanical treatments - Mechanically removing fuels from a site reduces emissions proportionally to the amount of fuel removed. Treatments may include but are not limited to the following methods.

(1) **Firewood sales** - Firewood sales may result in sufficient removal of woody debris making on site burning unnecessary. This technique is particularly effective for piled material where the public has easy access.

(2) **Whole tree harvesting** - Whole trees can be removed through harvesting or thinning techniques and virtually eliminate the need for burning.

(3) **Mulch/chips** - Mechanical processing of dead and live vegetation into wood chips or shredded biomass is effective in reducing emissions if the material is removed from the site or biologically decomposed.

(4) **Fuel for power generation** - Vegetative biomass can be removed and used to provide electricity in regions with cogeneration facilities.

(5) **Biomass utilization** - Vegetative material can be used for many miscellaneous purposes including pulp for paper, methanol/ethanol production, wood pellets, garden bedding, furniture, specialty crafts, compost, mulch and fiberboard/particleboard.

C. Chemical pre-treatments - Broad spectrum and selective herbicides can be used to reduce or remove live vegetation, or alter species diversity respectively. Herbicides can be applied before burning to kill vegetation, which can create a much drier fuel, which in turn burns more efficiently.

D. Site conversion - Natural site productivity can be decreased by changing the vegetation composition.

E. Land use change - Changing wildlands / shrublands / rangelands / croplands to another land use category may result in elimination of the need to burn and vice versa.

F. Reduce fuel loading - Some or all of the fuel can be permanently removed from the site, biologically decomposed, or prevented from being produced. Overall, emissions can be reduced when fuel is permanently excluded from burning.

(1) **Mechanically removing fuel** - Mechanically removing fuels from a site reduces emissions proportionally to the amount of fuel removed.

(2) **Burn more frequently at low intensity** - This method prevents the fuels from building up and causing greater emissions.

(3) **Schedule burning before green up** - Burning in cover types with a grass or herbaceous fuel bed component can produce fewer emissions if burning takes place before these fuels green-up for the year.

(4) **Under burn before fall leaf drop** - When deciduous trees and shrubs drop their leaves, this ground litter contributes extra volume to the fuel bed.

(5) **Ungulates** - Grazing and browsing live grassy or brushy fuels by sheep, cattle or goats can reduce fuels prior to burning or reduce the burn frequency.

(6) **Isolating pockets of fuel** - See explanation under reducing the area burned.

G. Reduce fuel consumption - Emission reductions can be achieved when significant amounts of fuel are at or above the moisture of extinction, and therefore are unavailable for combustion.

(1) **Having high moisture content in non-target fuels** - This can result in only the fuels targeted being dry enough to burn.

(2) **High moisture in large woody fuels** - Burning when large-diameter woody fuels (three- plus inch diameter or greater) are wet can result in lower fuel consumption and less smoldering.

(3) **Moist litter or duff** - The organic layer that forms from decayed and partially decayed material on the forest floor often burns during the inefficient smoldering phase. Consequently, reducing the consumption of this material can be effective at reducing emissions.

(4) **Mass ignition/shortened fire duration/aerial ignition** - "Mass" ignition can occur through a combination of dry fine-fuels and rapid ignition, which can be achieved using a helitorch. The conditions necessary to create a true mass ignition situation include rapid ignition of a large open area with continuous dry fuels.

(5) **Burn before large fuels cure** - Living trees contain very high internal fuel moistures, which take a number of months to dry after harvest. If an area can be burned within 3-4 drying months of timber harvest, many of the large fuels will still contain a significant amount of live fuel moisture.

(6) **Rapid mop-up** - Rapidly extinguishing a fire can reduce fuel consumption and smoldering emissions somewhat, although this technique is not particularly effective at reducing total emissions and can be expensive.

(7) **Burn before precipitation** - Scheduling a prescribed fire before a precipitation event will often limit the consumption of large woody material, snags, stumps, and organic ground matter, thus reducing the potential for a long smoldering period and reducing the average emission factor.

H. Minimizing emissions by minimizing the emission factor - Using burning techniques that create a more efficient burn.

(1) **Burning fuels in piles or windrows** - Keeping piles dry and free of dirt and other debris generates greater heat and therefore, the piles burn more efficiently. The piles or windrows can be made mechanically or by hand.

(2) **Utilizing a backing fire** - Flaming combustion is cleaner than smoldering combustion. A backing fire takes advantage of this relationship by causing more fuel consumption to take place in the flaming phase than would occur if a heading fire were used.

(3) **Rapid mop-up** - See above.

(4) **Mass ignition/shortened fire duration/aerial ignition** - See above.

(5) **Dry conditions** - Burning under dry conditions increases combustion efficiency and fewer emissions may be produced.

I. Air curtain incinerator (ACI) - Use of an air curtain incinerator improves combustion and reduces emissions by introducing high velocity air into a combustion environment. As the air continuously rotates in and over the environment, a "curtain" is created over the fire thus trapping smoke and particulate matter. Constant airflow into and over the combustion environment allows temperatures to remain high, resulting in relatively complete combustion of all emission products. ACIs can burn a wider variety of materials from green fuel to red slash and produce lower smoke emissions as compared to pile or broadcast burning. They also reduce risk of an escaped fire since the fire is contained and can be quickly extinguished if necessary.

[20.11.21.19 NMAC - N, 12/31/03; A, 7/11/11]

20.11.21.20 AMBIENT AIR QUALITY STANDARD EXCEEDENCE:

The director shall have the authority to suspend any open burning allowed under 20.11.21 NMAC in the event of ongoing or projected violations of the federal, state, or local ambient air quality standards.

[20.11.21.20 NMAC - Rn, 20.11.21.15 NMAC & A, 12/31/03; A, 7/11/11]

20.11.21.21 REVIEW MEETING, HEARING ON THE MERITS REGARDING PERMIT APPLICATIONS AND PERMITS:

A. If a permit applicant is adversely affected by or disagrees with the division's proposed decision regarding the applicant's permit application, the applicant may request an informal review meeting to discuss the division's proposed decision. The request shall be in writing or on a form obtained from the division. Within 15 working days of the applicant receiving the proposed decision, the applicant shall deliver the request to the director and the division manager. Unless a timely request for an informal review meeting is received by the director, the division's proposed decision regarding the permit application shall be final. Within 10 working days after receiving the request, the director shall hold an informal review meeting with the applicant and a division representative (e.g., division manager or the person issuing the proposed decision regarding the permit application) in an attempt to resolve disagreements. Within two working days after the informal review meeting, the division representative shall issue a final decision regarding the permit application. If the permit applicant or permittee is adversely affected by the final decision made by the division representative, the permit applicant or permittee may follow the procedures described in Subsection B of 20.11.21.21 NMAC.

B. A person adversely affected by the decision of the division regarding a permit application or permit ("petitioner") may file a petition for a hearing on the merits before the board as provided by 20.11.81 NMAC, *Adjudicatory Procedures - AQCB*. Unless a timely petition for a hearing on the merits is received by the director, the decision of the division regarding the permit application or permit shall be final.

[20.11.21.21 NMAC - N, 12/31/03; A, 7/11/11]

PART 22: WOODBURNING

20.11.22.1 ISSUING AGENCY:

Albuquerque/ Bernalillo County Air Quality Control Board. P.O. Box 1293, Albuquerque, NM 87103. Telephone: (505) 768-2600.

[11/27/91. . .12/1/95; 20.11.22.1 NMAC – Rn, 20 NMAC 11.22.I.1, 10/1/02]

20.11.22.2 SCOPE:

This Part is applicable to woodburning sources within Bernalillo County.

A. Exempt: This Part does not apply to sources within Bernalillo County, which are located on Indian lands over which the Albuquerque/Bernalillo County Air Quality Control lacks jurisdiction.

B. Case-by-Case Exceptions: The following exemptions may be granted by the Director.

(1) A sole source exemption if the Director determines that a solid fuel heating device is the sole source of heat for the building in which it is situated. New sole source exemptions shall not be issued after December 31, 1990 unless approved in writing by the Director for good cause. Sole source exemptions issued prior to December 31, 1990 may be renewed annually.

(2) A temporary exemption for a specified period in the event of failure of the oil, natural gas, electricity or propane heating system.

(3) An economic or health exemption for economic or health reasons if the Director determines that the applicant qualifies for financial assistance according to the economic guidelines established under the Food Stamps, Medicaid or low income energy assistance programs as administered by the Income Support Division of the New Mexico Human Services Department, or equivalent program, as determined by the Director, or if the Director determines that failure to grant an exemption would endanger the health of the applicant.

C. Exemption Conditions: In no event shall an exemption be issued for more than 150 days. All exemptions shall be effective for only one no-burn season, unless a different period is specified in the exemption. An exemption only exempts a person from the requirements of Section 20.11.22.13 NMAC; a person holding an exemption must comply with all other provisions of this Part. An exemption may include conditions, which will be established by the Director and will be stated in the exemption. A violation of an exemption condition is a violation of this Part and also may be cause for revocation of the exemption by the Director. Each person seeking an exemption shall do so by filing an acceptable written application with the Director on the form required by the Director. Applications shall include:

- (1) the applicant's name and mailing address;
- (2) the address for which the exemption is sought;
- (3) the reasons for seeking the exemption; and
- (4) the supporting documentation required by the Director to verify the applicant's qualification for an exemption.

D. Following receipt of the application for exemption, the Director shall either grant the exemption, grant the exemption subject to conditions, or deny the exemption. The applicant shall be notified in writing of the decision of the Director.

E. In the event an applicant for an exemption is not satisfied with the Director action, the decision may be appealed to the Board. Such appeal shall be in writing and shall be submitted to the Director within 15 days after the Director mails or delivers the decision letter to the applicant of the Director's decision. The appeal shall be considered by the

Board at the next regularly scheduled business meeting at which a quorum is present. The decision of the Board shall be final.

[11/27/91. . .12/1/95; 20.11.22.2 NMAC – Rn, 20 NMAC 11.22.I.2, 10/1/02]

20.11.22.3 STATUTORY AUTHORITY:

This Part is adopted pursuant to the authority provided in the New Mexico Air Quality Control Act, NMSA 1978 Sections 74-2-4, 74-2-5.C; the Joint Air Quality Control Board Ordinance, Bernalillo County Ordinance 94-5 Section 4; and the Joint Air Quality Control Board Ordinance, Revised Ordinances of Albuquerque 1994 Section 9-5-1-4.

[11/27/91. . .12/1/95; 20.11.22.3 NMAC – Rn, 20 NMAC 11.22.I.3, 10/1/02]

20.11.22.4 DURATION:

Permanent.

[12/1/95; 20.11.22.4 NMAC – Rn, 20 NMAC 11.22.I.4, 10/1/02]

20.11.22.5 EFFECTIVE DATE:

December 1, 1995, unless a later date is cited at the end of a section.

[12/1/95; 20.11.22.5 NMAC – Rn, 20 NMAC 11.22.I.5, & A, 10/1/02]

20.11.22.6 OBJECTIVE:

The objective of this Part is to reduce the levels of carbon monoxide and particulate matter in the ambient air during atmospheric conditions that the Director concludes may not adequately disperse wood smoke, and to minimize the adverse health effects and nuisance effects that result from woodburning.

[11/27/91. . .12/1/95; 20.11.22.6 NMAC – Rn, 20 NMAC 11.22.I.6, 10/1/02]

20.11.22.7 DEFINITIONS:

In addition to the definitions in Section 20.11.22.7 NMAC the definition in 20.11.1 NMAC apply unless there is a conflict between definitions, in which case the definition in this Part shall govern.

A. "Burn Down" means that period of time, not to exceed three (3) hours, after a no-burn period is announced by the Director, within which period a person operating a solid fuel heating device must cease combustion within any solid fuel heating device by withholding fuel or modifying the air-to-fuel ratio.

B. "Inappropriate Fuel" includes but is not limited to: leaves, grass clippings, green plants, refuse, paper, rubbish, books, magazines, fiberboard, packaging, rags, fabrics, animal waste, waste oil, liquid or gelatinous hydrocarbons, tar, paints and solvents, chemically soaked wood, wood with a moisture content or greater than 30%, plastic or rubber, office records, sensitive or classified wastes, or other materials which are difficult to burn without producing vast amounts of noxious and toxic fumes or dense smoke.

C. "New Wood Heater" means:

(1) a wood heater that is sold at retail; is obtained as a result of a bargain or exchange; or is new and is given away for the first time by the manufacturer, the manufacturer's dealer or agency, or a retailer; and

(2) a wood heater which has not been used to an extent which has resulted in the heater being considered "used" or "second hand" within the ordinary meaning of those terms.

D. "Sole Source" means one or more solid fuel heating devices installed for the purpose of space heating and which constitute the only source of heat in a building. No solid fuel heating device(s) shall be the sole source of heat in a building if the building is equipped with a furnace or heating system which was designed to utilize oil, natural gas, electricity or propane to heat the building and the furnace or heating system at one time was permanently installed in the building, whether or not the furnace or system presently is connected with or disconnected from its energy source.

E. "Solid Fuel Heating Device" means any fireplace, wood heater, wood stove, wood fired boiler, coal fired furnace, coal stove or similar device burning any solid fuel and used inside a building for aesthetic, cooking (excluding commercial cooking) or heating purposes.

F. "Wood Heater" means an enclosed woodburning appliance, including a fireplace insert, capable of and intended for space heating or domestic water heating that meets all of the following criteria:

(1) an air-to-fuel ratio in the combustion chamber averaging less than 35-to-1 as determined by the test procedure described in 40 CFR Part 60.534,

(2) a usable firebox volume of less than 0.56 cubic meters,

(3) a minimum burn rate less than 5 kg/hr as determined by the test procedure described in 40 CFR Part 60.534, and

(4) a maximum weight of 800 kg, excluding devices and fixtures that are normally sold separately, such as flue pipe, chimney and masonry components that are not an integral part of the appliance or heat distribution ducting.

G. "Wood smoke Impacted Area" means that portion of Bernalillo County that is the most adversely affected by the burning of wood during atmospheric conditions that the Director concludes may not adequately disperse wood smoke. The wood smoke impacted area is delimited on the north and south by the Bernalillo County lines, on the west by the universal transverse meridian (UTM) line 337000mE and on the east by the UTM line 367000mE, Zone 13.

20.11.22.8 VARIANCES:

[RESERVED]

[12/1/95; 20.11.22.8 NMAC - Rn, 20 NMAC 11.22.I.8, 10/1/02]

20.11.22.9 SAVINGS CLAUSE:

Any amendment to 20.11.22 NMAC, which is filed, with the State Records Center shall not affect actions pending for violation of a City or County ordinance, or Board Regulation 34, or 20.11.22 NMAC. Prosecution for a violation under prior regulation wording shall be governed and prosecuted under the statute, ordinance, Part, or regulation section in effect at the time the violation was committed.

[12/16/94. . .12/1/95; 20.11.22.9 NMAC – Rn, 20 NMAC 11.22.I.9, 10/1/02]

20.11.22.10 SEVERABILITY:

If any section, paragraph, sentence, clause, or word of this Part or any federal standards incorporated herein is for any reason held to be unconstitutional or otherwise invalid by any court, the decision shall not affect the validity of remaining provisions of this Part.

[12/16/94. . .12/1/95; 20.11.22.10 NMAC – Rn, 20 NMAC 11.22.I.10, 10/1/02]

20.11.22.11 DOCUMENTS:

Documents incorporated and cited in this Part may be viewed at the Albuquerque Environmental Health Department, 400 Marquette NW, Albuquerque, NM.

[12/1/95; 20.11.22.11 NMAC – Rn, 20 NMAC 11.22.I.11, & A, 10/1/02]

20.11.22.12 SALE OF NEW WOOD HEATERS - CERTIFICATION REQUIRED:

No person shall sell, offer for sale, advertise for sale or barter for, exchange or give away any new wood heater unless the wood heater has been emission certified and labeled in accordance with 40 CFR Part 60.530 through 60.539b.

[11/27/91; 20.11.22.12 NMAC – Rn, 20 NMAC 11.22.II.1& Repealed, 10/1/02, Rn, 20 NMAC 11.22.II.1, 10/1/02]

20.11.22.13 NO-BURN PERIODS:

From October 1 through February 28, following a burn down period, no person with authority or power to control the operation of a solid fuel heating device shall allow the operation of a solid fuel heating device within the wood smoke impacted area during a no-burn period which as declared by the Director unless an exemption has been obtained or unless the device is a wood heater that has been emission certified by the EPA. No-burn periods shall be declared by the Director upon review of available meteorological data and a determination that expected atmospheric conditions will not adequately disperse wood smoke.

[11/27/91; 20.11.22.13 NMAC – Rn, 20 NMAC 11.22.II.2, 10/1/02]

20.11.22.14 NOTICE REQUIRED:

Notice of no-burn periods shall be sufficient if published in a newspaper of general circulation within Bernalillo County, or if presented orally at least three (3) times during a six (6) hour period by at least two (2) radio or television stations operating within Bernalillo County, or if presented to the general public in the form of a recorded telephone message, the telephone number for which is published in the telephone directory or newspaper of general circulation within Bernalillo County.

[11/27/91; 20.11.22.14 NMAC – Rn, 20 NMAC 11.22.II.3, 10/1/02]

20.11.22.15 VISIBLE EMISSION LIMITATIONS:

A. Certified wood heaters may be operated during a no-burn period provided that no visible emissions are produced after a twenty (20) minute period following start up or refueling. To determine compliance with this standard, the Director shall observe the point at which the certified wood heater releases emissions into the ambient air. If the emission point is producing any visible emissions twenty (20) minutes or longer after the initial observation, a violation of this Part has occurred.

B. During a period in which the Director has not declared a no-burn, no person shall operate a solid fuel heating device in a manner which produces emission into the atmosphere if the emissions exceed 30 % opacity twenty (20) minutes or longer after ignition or refueling of the solid fuel burning device. Visible emission opacity shall be determined by an observer certified by the Director. To determine opacity the observer shall:

(1) Use the standard visual method listed in 40 CFR 60, Appendix A, Method 9; or

(2) Use equipment approved by the Director and the EPA if, under the circumstances, the Director and the EPA determines the equipment is as accurate as, or is more accurate than use of the Method 9 procedure.

(3) If condensed water vapor is visible in an exhaust plume, the opacity assessment shall be made at a point consistent with the procedure stipulated in 40 CFR 60, Appendix A, Method 9.

[11/27/91. . .20.11.22.15 NMAC – Rn, 20 NMAC 11.22.II.4, 10/1/02]

20.11.22.16 MISFUELING OF SOLID FUEL HEATING DEVICES PROHIBITED:

A. No person shall use a fuel in a solid fuel heating device unless the fuel is a fuel recommended by the solid fuel heating device manufacturer. The person using the solid fuel heating device shall comply with all the manufacturers' installation and operation instructions; failure to do so is a violation of this Part.

B. No person shall burn inappropriate fuel in a solid fuel heating device.

[11/27/91; 20.11.22.16 NMAC – Rn, 20 NMAC 11.22.II.5, 10/1/02]

PART 23: STRATOSPHERIC OZONE PROTECTION

20.11.23.1 ISSUING AGENCY:

Albuquerque/Bernalillo County Air Quality Control Board. P.O. Box 1293, Albuquerque, NM 87103. Telephone: (505) 768-2600.

[3/26/91. . .12/1/95; 20.11.23.1 NMAC – Rn, 20 NMAC 11.23.I.1, 10/1/02]

20.11.23.2 SCOPE:

A. This Part is applicable to persons engaged in the sale, servicing, or wrecking of automotive air conditioning systems, or automotive air conditioning refrigerants.

B. Exempt: This Part does not apply to sources within Bernalillo County, which are located on Indian lands over which the Albuquerque/Bernalillo County Air Quality Control lacks jurisdiction.

[12/1/95; 20.11.23.2 NMAC – Rn, 20 NMAC 11.23.I.2, 10/1/02]

20.11.23.3 STATUTORY AUTHORITY:

This Part is adopted pursuant to the authority provided in the New Mexico Air Quality Control Act, NMSA 1978 Sections 74-2-4, 74-2-5.C; the Joint Air Quality Control Board

Ordinance, Bernalillo County Ordinance 94-5 Section 4; and the Joint Air Quality Control Board Ordinance, Revised Ordinances of Albuquerque 1994 Section 9-5-1-4.

20.11.23.4 DURATION:

Permanent.

[12/1/95; 20.11.23.4 NMAC – Rn, 20 NMAC 11.23.I.4, 10/1/02]

20.11.23.5 EFFECTIVE DATE:

December 1, 1995, unless a later date is cited at the end of a section.

[12/1/95; 20.11.23.5 NMAC – Rn, 20 NMAC 11.23.I.5 & A, 10/1/02]

20.11.23.6 OBJECTIVE:

The objective of this Part is to prevent or reduce deterioration of the stratospheric ozone layer.

[3/26/91. . .12/1/95; 20.11.23.6 NMAC – Rn, 20 NMAC 11.23.I.6, 10/1/02]

20.11.23.7 DEFINITIONS:

In addition to the definitions in Section 20.11.23.7 NMAC the definitions in 20.11.1 NMAC apply unless there is a conflict between definitions, in which case the definition in this Part shall govern.

A. "Approved Motor Vehicle Refrigerant Recycling or Recovery Equipment" means equipment models that have been certified to meet the Society of Automotive Engineers (SAE) standard for the extraction and reclamation of refrigerant from motor vehicle air conditioners (SAE standard J-1990) or other equipment as approved by the Director.

B. "Chlorofluorocarbons or CFCs" means the family of substances containing carbon, fluorine and chlorine, and having no hydrogen atoms and no double bonds. This includes but is not limited to the Freon used in air conditioning and refrigeration units.

C. "Refrigeration Unit" means automotive air conditioners and refrigerators and freezers, including both those intended to be household appliances and those, which are commercial and industrial models.

D. "Wrecker of Vehicles" means any person actively engaged in the business of acquiring vehicles, required to be registered under Motor Vehicle Code, Articles 1

through 8 of Chapter 66 NMSA 1978, for the purpose of dismantling such vehicles as scrap material or the resale of reclaimable parts.

[3/26/91. . .12/1/95; 20.11.23.7 NMAC – Rn, 20 NMAC 11.23.I.7, 10/1/02]

20.11.23.8 VARIANCES:

[RESERVED]

[12/1/95; 20.11.23.8 NMAC – Rn, 20 NMAC 11.23.I.8, 10/1/02]

20.11.23.9 SAVINGS CLAUSE:

Any amendment to 20.11.23 NMAC, which is filed, with the State Records Center shall not affect actions pending for violation of a City or County ordinance, Air Quality Control Board Regulation 37, or 20.11.23 NMAC. Prosecution for a violation under prior regulation wording shall be governed and prosecuted under the statute, ordinance, Part, or regulation section in effect at the time the violation was committed.

[12/1/95; 20.11.23.9 NMAC – Rn, 20 NMAC 11.23.I.9, 10/1/02]

20.11.23.10 SEVERABILITY:

If any section, paragraph, sentence, clause, or word of this Part or any federal standards incorporated herein is for any reason held to be unconstitutional or otherwise invalid by any court, the decision shall not affect the validity of remaining provisions of this Part.

[12/1/95; 20.11.23.10 NMAC – Rn, 20 NMAC 11.23.I.10, 10/1/02]

20.11.23.11 DOCUMENTS:

Documents incorporated and cited in this Part may be viewed at the Albuquerque Environmental Health Department, 400 Marquette NW, Albuquerque, NM.

[12/1/95; 20.11.23.11 NMAC – Rn, 20 NMAC 11.23.I.11 & A, 10/1/02]

20.11.23.12 AUTOMOTIVE AIR CONDITIONING REFRIGERANTS:

A. No person shall sell, offer for sale, or advertise for sale CFCs that can be used as a refrigerant in an automotive air conditioning system to any person who does not possess and provide evidence of having approved motor vehicle refrigerant recycling or recovery equipment.

B. No person shall repair, service, or attempt to repair or service automotive air conditioning systems unless approved motor vehicle refrigerant recycling or recovery equipment is used.

C. Wreckers of vehicles shall not allow CFC emissions to the ambient air and must use approved motor vehicle refrigerant recycling or recovery equipment prior to vehicle demolition.

[3/26/91; 20.11.23.12 NMAC – Rn, 20 NMAC 11.23.I.12 & Repealed, 10/1/02; Rn, 20 NMAC 11.23.II.1, 10/1/02]

PART 24-38: [RESERVED]

PART 39: PERMIT WAIVERS AND AIR QUALITY NOTIFICATIONS FOR CERTAIN SOURCE CATEGORIES

20.11.39.1 ISSUING AGENCY:

Albuquerque-Bernalillo County Air Quality Control Board, P.O. Box 1293, Albuquerque, NM 87103. Telephone: (505) 768-2601.

[20.11.39.1 NMAC - N, 12/21/17]

20.11.39.2 SCOPE:

A. Applicability: 20.11.39 NMAC applies to the following stationary source categories in the city of Albuquerque and Bernalillo county.

(1) Emergency stationary reciprocating internal combustion engines (ES-RICE) as defined in 20.11.39.7 NMAC, except as otherwise provided in this Part.

(2) Gasoline dispensing facilities (GDF) as defined in 20.11.39.7 NMAC, except as otherwise provided in this Part.

B. Exemptions:

(1) 20.11.39 NMAC does not apply to stationary sources within Bernalillo county that are located on Indian lands over which the Albuquerque-Bernalillo county air quality control board lacks jurisdiction.

(2) 20.11.39 NMAC does not apply to:

(a) stationary sources that, in the aggregate, constitute a major source under the applicable provisions of 20.11.42 NMAC, which are located on one or more contiguous or adjacent properties, and which are under common control of the same person;

- (b) any non-emergency stationary RICE engines;
- (c) sources which contain emission units:
 - (i) other than ES-RICE and GDFs, as defined in 20.11.39.7; and
 - (ii) that require a construction permit pursuant to 20.11.41 NMAC;
- (d) Part 39 sources that are part of a Title V permit; or
- (e) Part 39 sources located at a single family private residence.

[20.11.39.2 NMAC - N, 12/21/17]

20.11.39.3 STATUTORY AUTHORITY:

20.11.39 NMAC is adopted pursuant to the authority provided in the New Mexico Air Quality Control Act, NMSA 1978 Sections 74-2-5, 74-2-5.1, 74-2-6 and 74-2-7; the Joint Air Quality Control Board Ordinance, Revised Ordinances of Albuquerque 1994, Sections 9-5-1-4, 9-5-1-5, 9-5-1-6 and 9-5-1-7; and the Joint Air Quality Control Board Ordinance, Bernalillo County Code, Article II, Sections 30-33, 30-34, 30-35 and 30-36.

[20.11.39.3 NMAC - N, 12/21/17]

20.11.39.4 DURATION:

Permanent.

[20.11.39.4 NMAC - N, 12/21/17]

20.11.39.5 EFFECTIVE DATE:

December 21, 2017, unless a later date is cited at the end of a section.

[20.11.39.5 NMAC - N, 12/21/17]

20.11.39.6 OBJECTIVE:

A. To provide a procedure by which certain sources may qualify for waivers of source registration requirements pursuant to 20.11.40 NMAC or construction permit requirements pursuant to 20.11.41 NMAC;

B. To establish an alternative regulatory mechanism, other than those provided in 20.11.40 NMAC and 20.11.41 NMAC, by which to require some sources in certain source categories to comply with applicable air quality standards and regulations; and,

C. To authorize the department to issue Air Quality Notifications (AQN) for sources in certain source categories.

[20.11.39.6 NMAC - N, 12/21/17]

20.11.39.7 DEFINITIONS:

The definitions in 20.11.1 NMAC apply unless there is a conflict between definitions, in which case the definition in 20.11.39 NMAC shall govern. Definitions provided in the applicable federal standards referenced below shall apply to source categories subject to those federal standards which are incorporated by reference into board regulations.

A. "Air quality notification" or "AQN" means a document issued by the department to the owner or operator of a source in a source category to which this Part applies to require that source to comply with applicable regulatory requirements.

B. "Emergency stationary RICE" or "ES-RICE" means stationary reciprocating internal combustion engines that serve solely as a secondary source of mechanical or electrical power during the loss of commercial power and which meet one of the following criteria:

(1) emergency stationary reciprocating internal combustion engines not subject to 40 CFR Part 60, Subpart IIII, Standards of Performance for Stationary Compression Ignition Internal Combustion Engines, 40 CFR Part 60, Subpart JJJJ, Standards of Performance for Stationary Spark Ignition Internal Combustion Engines or 40 CFR Part 63, Subpart ZZZZ, National Emissions Standards for Hazardous Air Pollutants for Stationary Reciprocating Internal Combustion Engines, which emit more than 2,000 pounds per year of any regulated air contaminant and which would otherwise be subject to 20.11.40 NMAC, Source Registration or 20.11.41 NMAC, Construction Permits;

(2) compression ignition emergency stationary internal combustion engines as defined in 40 CFR Part 60, Subpart IIII which are subject to that regulation;

(3) spark ignition emergency stationary internal combustion engines as defined in 40 CFR Part 60, Subpart JJJJ which are subject to that regulation; or

(4) emergency stationary reciprocating internal combustion engines as defined in 40 CFR Part 63, Subpart ZZZZ which are subject to that regulation.

C. "Gasoline dispensing facility" or "GDF" means a gasoline dispensing facility as defined in 40 CFR Part 63 Subpart CCCCCC, National Emission Standards for Hazardous Air Pollutants for Gasoline Dispensing Facilities, as incorporated by reference in 20.11.64 NMAC, Emission Standards for Hazardous Air Pollutants for Stationary Sources.

D. "Part 39 source" means a stationary source eligible to receive an AQN pursuant to Part 39.

E. "Prior authorization" means a registration or construction permit for a Part 39 source which was issued pursuant to either 20.11.40 NMAC or 20.11.41 NMAC if such Part 39 source would have been eligible to receive an AQN pursuant to Part 39 had it been in effect at the time the registration or construction permit was issued.

F. "Qualified small business" means a business that meets all of the following requirements:

- (1) a business that has 100 or fewer employees;
- (2) a small business concern as defined by the federal Small Business Act;
- (3) a source that emits less than 50 tons per year of any individual regulated air pollutant, or less than 75 tons per year of all regulated air pollutants combined; and
- (4) a source that is not a major source or major stationary source.

[20.11.39.7 NMAC - N, 12/21/17]

20.11.39.8 VARIANCES:

A person may request a variance from 20.11.39 NMAC, in accordance with the procedures in 20.11.7 NMAC, Variance Procedure, except that no variances shall be granted from any applicable federal requirement.

[20.11.39.8 NMAC - N, 12/21/17]

20.11.39.9 SAVINGS CLAUSE:

Any amendment to 20.11.39 NMAC that is filed with the state records center and archives shall not affect actions pending for violation of the state act, a city or county ordinance, a prior version of 20.11.39 NMAC, another board regulation or a permit issued by the department. Prosecution for a violation under prior regulation wording shall be governed and prosecuted under the statute, ordinance or regulation in effect at the time the violation was committed.

[20.11.39.9 NMAC - N, 12/21/17]

20.11.39.10 SEVERABILITY:

If for any reason any section, paragraph, sentence, clause, wording or application of 20.11.39 NMAC or any federal or New Mexico standards incorporated herein is held unconstitutional or otherwise invalid by any court or the United States environmental

protection agency, the decision shall not affect the validity or application of the remaining provisions of 20.11.39 NMAC.

[20.11.39.10 NMAC - N, 12/21/17]

20.11.39.11 DOCUMENTS:

Documents incorporated and cited in 20.11.39 NMAC may be viewed at the Albuquerque Environmental Health Department, 400 Marquette NW, Albuquerque, NM, 87102. Information on internet access to these documents may be obtained by contacting the department at (505) 768-2601.

[20.11.39.11 NMAC - N, 12/21/17]

20.11.39.12 PERMIT WAIVERS:

A. Part 39 sources qualify for waivers from construction permit requirements pursuant to 20.11.41 NMAC. Owners and operators of Part 39 sources shall apply for an AQN rather than a construction permit when submitting an application to the department. If an owner or operator of a source establishes that it is a Part 39 source and demonstrates that the owner or operator will comply with all applicable regulations set out in Section 13 of this Part, the department shall waive compliance from further source registration or construction permitting requirements pursuant to 20.11.40 or 20.11.41 NMAC. This Part shall not waive any permit requirements for sources which are not ES-RICE or GDF.

B. Except as noted in Subsection C of 20.11.39.15 NMAC, no public notice is required if the department waives further permitting requirements for a Part 39 source. No department hearing shall be held for a Part 39 source.

C. The department's issuance of an AQN is not a permitting action and is not subject to petition to the Albuquerque-Bernalillo county air quality control board pursuant to Section 7 of the Air Quality Control Act, ROA Section 9-5-1-7 or Bernalillo County Ordinance Section 30-36.

[20.11.39.12 NMAC - N, 12/21/17]

20.11.39.13 REQUIREMENTS FOR SOURCE CATEGORIES TO WHICH PART 39 APPLIES:

A. General requirements: All sources in any source category listed in this section shall comply with the following general requirements, in addition to any specific requirements for a source category.

(1) All Part 39 sources shall comply with any federal regulations which are incorporated by reference into board regulations and which apply to that source category.

(2) No owner or operator of a source in a source category to which this part applies shall construct or operate a Part 39 source without having first applied to the department for and received an AQN.

(3) The owner or operator of each Part 39 source shall submit an annual emissions report to the department by March 15 of each year.

(a) For their annual emission report, GDFs granted an AQN shall submit a report of their annual gasoline throughput for the previous January through December.

(b) For their annual emission report, ES-RICE granted an AQN shall submit a report of their annual operating hours for the previous January through December.

(c) In addition to the information required in Subparagraphs (a) and (b) in Paragraph (3) of Subsection A of 20.11.39.13 NMAC, each emission report shall provide:

(i) the AQN number;

(ii) the name, address, if any, and physical location of the Part 39 source;

(iii) the name, telephone number, and email address of the person to contact regarding the emissions report; and

(iv) a certification signed by the owner, or operator, or a responsible official or designated representative, attesting that the statements and information contained in the emissions report are true and accurate to the best knowledge and belief of the certifying official, and including the full name, title, signature, date of signature, and telephone number and email address of the of the certifying official.

(d) When the department receives the emission report, the department may request other relevant information as deemed necessary.

(e) The owner or operator shall submit to the department a complete, correct and current emissions report in the format specified by the department; the report shall state accurately all information required by Paragraph (3) of Subsection A of 20.11.39.47 NMAC.

(f) The department shall provide a complete copy of an owner or operator's submitted emissions report when requested in writing by the owner or operator.

(4) Nothing in 20.11.39 NMAC relieves any owner or operator of any source from the responsibility to comply with any applicable requirement in local, state, or federal law.

(5) No Part 39 source shall emit any regulated air pollutant in quantities which would constitute a major source under the applicable provisions of 20.11.42 NMAC.

B. Emergency stationary RICE: These sources shall comply with the appropriate regulations identified below, as amended.

(1) **Emergency stationary RICE** not subject to the federal emissions standards listed in paragraphs (2) through (4) in Subsection B of 20.11.39.13 NMAC shall comply with all applicable board and federal regulations identified in the AQN.

(2) **Emergency stationary RICE** subject to 40 CFR Part 60 Subpart IIII, Standards of Performance for Stationary Compression Ignition Internal Combustion Engines shall comply with all applicable requirements in that federal regulation, incorporated by reference in 20.11.63 NMAC, New Source Performance Standards for Stationary Sources, as amended, and all applicable board regulations identified in the AQN.

(3) **Emergency stationary RICE** subject to 40 CFR Part 60 Subpart JJJJ, Standards of Performance for Stationary Spark Ignition Internal Combustion Engines, shall comply with all applicable requirements in that federal regulation, as incorporated by reference in 20.11.63 NMAC, New Source Performance Standards for Stationary Sources, as amended, and all applicable board regulations identified in the AQN.

(4) **Emergency stationary RICE** subject to 40 CFR Part 63 Subpart ZZZZ, National Emissions Standards for Hazardous Air Pollutants for Stationary Reciprocating Internal Combustion Engines, as incorporated by reference in 20.11.64 NMAC, Emission Standards for Hazardous Air Pollutants for Stationary Sources, as amended, and all applicable board regulations identified in the AQN.

C. Gasoline dispensing facilities: These sources shall comply with 20.11.65.15 NMAC and all applicable requirements in 40 CFR Part 63 Subpart CCCCCC, National Emission Standards for Hazardous Air Pollutants for Gasoline Dispensing Facilities, as incorporated by reference in 20.11.64 NMAC, Emission Standards for Hazardous Air Pollutants for Stationary Sources, as amended.

[20.11.39.13 NMAC - N, 12/21/17]

20.11.39.14 AIR QUALITY NOTIFICATION APPLICATION:

Each owner or operator of a Part 39 source shall apply for an AQN with the department in compliance with the requirements of this section.

A. A person applying to the department for an AQN shall submit a completed application provided by the department. The department shall reject any incomplete application for an AQN.

B. The following information is required for the department to determine that an application for an AQN is complete:

(1) the name, street address and post office address, if any, of the owner and any operators of the source;

(2) the name, street addresses and post office addresses, if any, of the applicant, if different from the owner or operators;

(3) sufficient attachments, including calculations, computations and all other analyses used by the applicant to provide information to describe the potential emission rate and nature of all regulated air contaminants that the source may emit and control measures used to comply with all applicable federal standards;

(4) for GDFs:

(a) the anticipated annual gasoline throughput;

(b) the total number of refueling positions;

(c) for each refueling position, identify whether it dispenses gasoline only, diesel only, both, or is for heavy duty truck diesel refueling;

(5) for ES-RICE, a statement that the engine will only be used for emergency purposes, other than as allowed by applicable regulations;

(6) any other relevant information that the department may reasonably require;

(7) the signature of the applicant, with the date it was signed, certifying that the information represented in the application and attachments, if any, is true, accurate and complete and that the owner and all operators will comply with all applicable requirements in board regulations for that source category; and

(8) a check, money order or other approved means of payment for the appropriate application fee required by 20.11.39.19 NMAC.

C. The department shall not require any Part 39 source to submit air dispersion modeling with its AQN application.

[20.11.39.14 NMAC - N, 12/21/17]

20.11.39.15 AQN APPLICATION REVIEW:

Upon the receipt of any application for an AQN, the department shall review the application as follows.

A. Within 45 days after the department has received a complete application for an AQN as required by 20.11.39.14 NMAC, the department shall issue or deny the AQN. If the AQN is issued, the department shall send a copy of the AQN to the applicant by electronic mail, or such other means as may be necessary. If the AQN is denied, the department shall send a notice of denial to the applicant by electronic mail, or such other means as may be necessary.

B. If the department determines that the application for the AQN is incomplete, that Part 39 does not authorize the source to receive an AQN, or that some other action is necessary, up to and including denial of an AQN, the department shall inform the applicant by electronic mail, or such other means as may be necessary.

C. On the first business day of each month, the department shall publish on its website a list of all AQNs issued within the previous month; including the name and location of each AQN issued. The department shall publish a current list of all active AQNs on its website quarterly. The department website shall prominently display information enabling members of the public to contact the department in regard to any AQN issued.

[20.11.39.15 NMAC - N, 12/21/17]

20.11.39.16 TRANSFER OF PRIOR AUTHORIZATIONS TO AQNS:

Prior authorizations shall remain in force, unless an owner or operator satisfies Subsection A or B.

A. The owner or operator of a prior authorization applies for a transfer to an AQN by submitting an AQN application.

B. The owner or operator submits a change in the information in a prior authorization, e.g., an application for an administrative permit revision, an application for a technical permit revision, or an application for a permit modification.

C. The department shall process transfer of a prior authorization to an AQN as set forth below.

(1) The department shall review the application within 30 days of receipt. If the application is complete and if the source is a Part 39 source which would have been eligible to receive an AQN had AQNs been available when the prior authorization was issued, the department shall issue an AQN and cancel the previous prior authorization.

The department shall send a copy of the AQN by electronic mail, or such other means as may be necessary. The department shall retain the original of the AQN.

(2) If the department determines that the application is incomplete, or some other action is necessary, the department shall inform the owner or operator of a prior authorization by electronic mail, or such other means as may be necessary.

(3) Upon being issued an AQN, the owner or operator shall comply with all requirements of Part 39 and the AQN.

[20.11.39.16 NMAC - N, 12/21/17]

20.11.39.17 COMPLIANCE AND ENFORCEMENT:

A. All owners or operators of Part 39 sources within Albuquerque-Bernalillo county shall comply with the requirements in 20.11.39 NMAC, whether set forth in their AQN or not.

B. The department issues AQNs relying on the accuracy and completeness of information provided in the application. Inaccurate or incomplete information in an application is a violation of 20.11.39 NMAC.

C. Any knowing and willful false statement in an AQN application is a violation of 20.11.39 NMAC.

D. An ES-RICE which has been issued an AQN pursuant to Paragraph (2) of Subpart B of 20.11.39.7 NMAC shall be operated for emergency use only or as necessary for exercising or maintenance of the engine.

E. The director may issue a compliance order requiring compliance and assessing a civil penalty not to exceed \$15,000.00 per day of noncompliance for any violation of any applicable board regulations by a Part 39 source. The director may also commence a civil action in district court for appropriate relief, including a temporary and permanent injunction.

F. The department may conduct scheduled and unscheduled inspections to ensure compliance with any applicable board regulations.

G. Upon presentation of credentials, the department:

(1) shall have a right of entry to, upon, or through any premises on which a Part 39 source is located or on which any records required to be maintained by any applicable board regulations;

(2) may at any reasonable time have access to and copy any records required to be established and maintained by any applicable board regulations;

(3) may inspect any monitoring equipment and method required by any applicable board regulations; and

(4) may sample any emissions that are required to be sampled pursuant to any applicable board regulations.

H. Any credible evidence may be used to establish whether an owner or operator of a Part 39 source has violated any applicable board regulations. Credible evidence and testing shall include, but is not limited to:

(1) compliance methods specified in any applicable board regulations; or

(2) other testing, monitoring or information-gathering methods that produce information comparable to that produced by any CFR method and approved by the department and EPA.

I. An owner or operator of a Part 39 source who violates an applicable board regulation may be subject to enforcement action as authorized in Sections 74-2-12, -12.1 and -14 NMSA 1978, and revised ordinances of Albuquerque Section 9-5-1-15, -98 and -99, or Bernalillo County Code, Article II, Sections 30-42 and -43.

[20.11.39.18 NMAC - N, 12/21/17]

20.11.39.18 AMENDING AN AIR QUALITY NOTIFICATION:

Owners and operators of sources to which this part applies shall notify the department within 30 days of any change in information in an effective AQN as follows.

A. Administrative Amendments:

(1) When information required by Paragraphs (1) or (2) of Subsection B of 20.11.39.14 NMAC changes, the owner or operator shall notify the department in writing of the new information within 30 days of the change. Failure to timely notify the department as required by this subsection is a violation of Part 39.

(2) The department shall notify the owner or operator within 30 days that it has received the changed information and shall issue an amended AQN by electronic mail or such other means as may be necessary.

(3) The owner or operator shall not be required to pay a fee for notifying the department of the change or receiving an amended AQN.

B. Technical Amendments:

(1) When an owner or operator proposes to change the operation of a Part 39 source which was described in information required by Paragraphs (3) or (6) of

Subsection B of 20.11.39.14 NMAC, the owner or operator shall submit an application for an amended AQN at least 30 days prior to making any change and shall pay the appropriate fee with the application. Failure to timely apply to the department as required by this subsection is a violation of Part 39. No change shall be made until the department issues an amended AQN or denies the amended AQN.

(2) Within 45 days after the department has received a complete application for an amended AQN, the department shall issue or deny the amended AQN. If the amended AQN is issued, the department shall send a copy of the amended AQN to the applicant by electronic mail, or such other means as may be necessary. If the amended AQN is denied, the department shall send a notice of denial to the applicant by electronic mail, or such other means as may be necessary.

(3) If the department determines that the application for an amended AQN is incomplete, that Part 39 does not authorize the source to receive an amended AQN, or that some other action is necessary, up to and including denial of an amended AQN, the department shall inform the applicant by electronic mail, or such other means as may be necessary.

(4) The department shall not require any Part 39 source to submit air dispersion modeling with its application for an amended AQN.

[20.11.39.18 NMAC - N, 12/21/17]

20.11.39.19 FEES:

A. General requirements:

(1) Any person who submits any AQN application shall pay fees as set forth below.

(2) The department shall not review or issue an AQN until the owner or operator provides documentary proof satisfactory to the department that all applicable fees have been paid as required by 20.11.39 NMAC.

(3) All fees required to be paid at the time of submittal shall be paid by check, money order or other means approved by the department payable to the "City of Albuquerque Air Quality Permit Fund" and either be delivered in person to the Albuquerque Environmental Health Department, 3rd floor, Suite 3023 or 3047, Albuquerque - Bernalillo County Government Center, south building, One Civic Plaza NW, Albuquerque, NM, or mailed to Attn: Air Quality Program, Albuquerque Environmental Health Department, P.O. Box 1293, Albuquerque, NM 87103, or on-line payment method approved by the department. The person delivering or filing a submittal shall attach a copy of the receipt of payment to the submittal as proof of payment.

(4) Failure of the owner or operator of a Part 39 source to pay a required fee is a violation of 20.11.39 NMAC.

(5) No fee or portion of a fee required by 20.11.39 NMAC shall be refunded.

(6) All money received by the department pursuant to this section shall be deposited by the city of Albuquerque in the city's permit fund.

B. Application review fees: Each person applying for an AQN shall pay a fee as follows.

(1) **New AQN applications:** An owner or operator who submits an application for a new AQN subject to 20.11.39 NMAC shall pay an application review fee of \$549.00, as adjusted, at the time the AQN application is delivered to the department.

(2) **Technical AQN amendments:** An owner or operator of a Part 39 source who applies for a technical amendment of an AQN shall submit a fee of \$300.00, as adjusted, with the application.

(3) **Transfer of prior authorization to AQN:** An owner or operator of a Part 39 source who applies to transfer a prior authorization to an AQN shall submit a fee of \$300.00, as adjusted, with the application.

(4) **Qualified small business fee:** All qualified small businesses shall pay half of the fees in Subsection B of 20.11.39.19 NMAC.

C. Annual fees: Each person with a valid AQN shall pay an annual emission fee upon receiving an invoice from the department as follows.

(1) **Annual fees for ES-RICE AQNs:** The owner or operator of a source with an ES-RICE AQN shall pay annual fee of \$400.00, as adjusted, for each active ES-RICE AQN; or

(2) **Annual fees for GDF AQNs:** The owner or operator of a source with a GDF AQN shall pay an annual fee for each AQN based on the annual gasoline throughput from January through December of the previous year. For owners or operators of GDF AQNs that have not yet submitted an annual emission inventory, the annual fee shall be based on the estimate of annual gasoline throughput that the owner or operator provided in the AQN application. The department may recover annual fees in the following year if the annual fee was underestimated based on the AQN application. For AQNs that were required to submit an annual emission inventory within the previous 12 months, the annual fee shall be based on the amount of gasoline throughput reported in the source's most recently submitted annual emissions inventory. If the source has not submitted the most recent required annual emission inventory, the department may rely on the most recent throughput information in its records to issue

an invoice, but may issue a supplemental invoice if appropriate. The fee schedule is as follows:

(a) \$400.00, as adjusted, for annual gasoline throughput less than 1,200,000 gallons per year.

(b) \$700.00, as adjusted, for annual gasoline throughput greater than or equal to 1,200,000 gallons per year and less than 2,000,000 gallons per year.

(c) \$1,000.00, as adjusted, for annual gasoline throughput greater than or equal to 2,000,000 gallons per year and less than 3,000,000 gallons per year.

(d) \$1,300.00, as adjusted, for annual gasoline throughput greater than or equal to 3,000,000 gallons per year and less than 4,000,000 gallons per year.

(e) \$1,600.00, as adjusted, for annual gasoline throughput greater than or equal to 4,000,000 gallons per year and less than 5,000,000 gallons per year.

(f) \$1,900.00, as adjusted, for annual gasoline throughput greater than or equal to 5,000,000 gallons per year and less than 6,000,000 gallons per year.

(g) \$2,200.00, as adjusted, for annual gasoline throughput greater than or equal to 6,000,000 gallons per year and less than 7,000,000 gallons per year.

(h) \$2,500.00, as adjusted, for annual gasoline throughput greater than or equal to 7,000,000 gallons per year and less than 8,000,000 gallons per year.

(i) \$2,800.00, as adjusted, for annual gasoline throughput greater than or equal to 8,000,000 gallons per year and less than 9,000,000 gallons per year.

(j) \$3,100.00, as adjusted, for annual gasoline throughput greater than or equal to 9,000,000 gallons per year and less than 10,000,000 gallons per year.

(k) \$3,400.00, as adjusted, for annual gasoline throughput greater than or equal to 10,000,000 gallons per year and less than 11,000,000 gallons per year.

(l) \$3,700.00, as adjusted, for annual gasoline throughput greater than or equal to 11,000,000 gallons per year and less than 12,000,000 gallons per year.

(m) \$4,000.00, as adjusted, for annual gasoline throughput greater than or equal to 12,000,000 gallons per year and less than 13,000,000 gallons per year.

(n) \$4,300.00, as adjusted, for annual gasoline throughput greater than or equal to 13,000,000 gallons per year and less than 14,000,000 gallons per year.

(o) \$4,700.00, as adjusted, for annual gasoline throughput greater than or equal to 14,000,000 gallons per year.

D. Consumer price index adjustments: Beginning January 1, 2019, and every January 1 thereafter, an increase based on the consumer price index shall be applied to all fees required by 20.11.39.19 NMAC. The fees shall be adjusted by an amount equal to the increase in the consumer price index for the immediately-preceding year. Fee adjustments equal to or less than 50 cents (\$0.50) shall be rounded down to the next lowest whole dollar. The department shall post the fee rates on the city of Albuquerque environmental health department website.

[20.11.39.19 NMAC - N, 12/21/17]

20.11.39.20 AQN CANCELLATION:

An owner or operator who receives an AQN must construct the source and begin its intended operations within two years of the date of the issuance of the AQN. AQNs for sources which have not been constructed and begun operations within two years shall be void.

[20.11.39.18 NMAC - N, 12/21/17]

PART 40: SOURCE REGISTRATION

20.11.40.1 ISSUING AGENCY:

Albuquerque/ Bernalillo County Air Quality Control Board. P.O. Box 1293, Albuquerque, NM 87103. Telephone: (505) 768-2600.

[3/21/77. . .12/1/95; 20.11.40.1 NMAC – Rn, 20 NMAC 11.40.I.1, 10/1/02]

20.11.40.2 SCOPE:

A. This Part is applicable to any stationary source located in Bernalillo County.

B. Exempt: This Part does not apply to sources within Bernalillo County, which are located on Indian lands over which the Albuquerque/Bernalillo County Air Quality Control Board lacks jurisdiction.

[12/1/95; 20.11.40.2 NMAC – Rn, 20 NMAC 11.40.I.2, 10/1/02]

20.11.40.3 STATUTORY AUTHORITY:

This Part is adopted pursuant to the authority provided in the New Mexico Air Quality Control Act, NMSA 1978 Sections 74-2-4, 74-2-5.C; the Joint Air Quality Control Board

Ordinance, Bernalillo County Ordinance 94-5 Section 4; and the Joint Air Quality Control Board Ordinance, Revised Ordinances of Albuquerque 1994 Section 9-5-1-4.

[3/21/77. . .12/1/95; 20.11.40.3 NMAC – Rn, 20 NMAC 11.40.I.3, 10/1/02]

20.11.40.4 DURATION:

Permanent.

[12/1/95; 20.11.40.4 NMAC – Rn, 20 NMAC 11.40.I.4, 10/1/02]

20.11.40.5 EFFECTIVE DATE:

December 1, 1995, unless a later date is cited at the end of the section.

[12/1/95; 20.11.40.5 NMAC – Rn, 20 NMAC 11.40.I.5 & A, 10/1/02]

20.11.40.6 OBJECTIVE:

By January 1, 1974, any person owning or operating any commercial or industrial stationary source, which emits more than two thousand pounds of any air contaminant per year or any amount of a hazardous air pollutant, must obtain a Registration Certificate for the source from the Director. Any person owning or operating any commercial or industrial stationary source constructed after September 1, 1973, and meeting the emission requirements of this section, must obtain a Registration Certificate for the source from the Director within one hundred and eighty days after the initial startup date of the source.

[3/21/77; 20.11.40.6 NMAC – Rn, 20 NMAC 11.40.I.6, 10/1/02]

20.11.40.7 DEFINITIONS:

[RESERVED]

20.11.40.9 SAVINGS CLAUSE:

Any amendment to 20.11.40 NMAC, which is filed, with the State Records Center shall not affect actions pending for violation of a City or County ordinance, Air Quality Control

Board Regulation 22, or 20.11.40 NMAC. Prosecution for a violation under prior regulation wording shall be governed and prosecuted under the statute, ordinance, Part, or regulation section in effect at the time the violation was committed.

[12/1/95; 20.11.40.9 NMAC – Rn, 20 NMAC 11.40.I.9, 10/1/02]

20.11.40.10 SEVERABILITY:

If any section, paragraph, sentence, clause, or word of this Part or any federal standards incorporated herein is for any reason held to be unconstitutional or otherwise invalid by any court, the decision shall not affect the validity of remaining provisions of this Part.

[12/1/95; 20.11.40.10 NMAC – Rn, 20 NMAC 11.40.I.10, 10/1/02]

20.11.40.11 DOCUMENTS:

Documents incorporated and cited in this Part may be viewed at the Albuquerque Environmental Health Department, 400 Marquette NW, Albuquerque, NM.

[12/1/95; 20.11.40.11 NMAC – Rn, 20 NMAC 11.40.I.11 & A, 10/1/02]

20.11.40.12 NOTICE OF INTENT:

[RESERVED]

[12/1/95; 20.11.40.12 NMAC – Rn, 20 NMAC 11.40.I.12 & Repealed, 10/1/02; Rn, 20 NMAC 11.40.II.1, 10/1/02]

20.11.40.13 REGISTRATION CERTIFICATE:

Any person seeking a Registration Certificate shall do so by filing a written application with the Director.

A. Applications shall:

- (1) Be made on forms furnished by the Director.
- (2) State the operator's name and mailing address.
- (3) State the owner's name and mailing address.
- (4) State the name and address of the source.
- (5) State the date of the application.

(6) Describe the nature and amounts of any air contaminants emitted from the source.

(7) Describe the nature of all processes and equipment which produce air contaminant emissions.

(8) Describe the nature and effectiveness of any air pollution control equipment used.

(9) State the type, quantity and purpose of any fuel used.

(10) State the normal operating schedule of the source in terms of hours per day, days per week, weeks per month, and months per year.

(11) Contain such other relevant information as the Director may require.

(12) Be signed by the applicant or his authorized representative.

(13) Be accompanied by a one-time registration fee of \$25.

B. Upon the receipt of the information and fee required to be submitted by Section 20.11.40.13 NMAC, the Director shall issue the Registration Certificate.

C. Whenever a change in the information required in Section 20.11.40.13 NMAC occurs, the person owning or operating such source shall, within 15 days, notify the Director in writing of the details and date of such change. Such person may be subject to Parts 20.11.2 and 20.11.41 NMAC.

D. The Director May:

(1) Exempt from the requirement contained in Section 20.11.40.13 NMAC for any stationary source or class of stationary sources.

(2) Reduce the informational requirements contained in Section 20.11.40.13 NMAC for any stationary source or class of stationary sources.

(3) Provide for the filing of a single application and issuance of a single Registration Certificate for two or more stationary sources owned or operated by the same person and encompassed within any circle 300 feet in diameter.

(4) Extend the deadline for registration of any source or class of sources.

[3/24/82; 20.11.40.13 NMAC – Rn, 20 NMAC 11.40.II.2, 10/1/02]

20.11.40.14 FEES:

The total of all registration fees paid to the Director on or before the effective date of this Part shall be applied to the prescribed fee due under this Part. No fee is refundable.

[3/24/82. . .12/1/95; 20.11.40.14 NMAC – Rn, 20 NMAC 11.40.II.3, 10/1/02]

20.11.40.15 RECORDS:

Any records or other information furnished to the Director relating to the Director relating to business matters, processes or production techniques unique to the applicant and considered to be confidential shall be clearly labeled as being confidential by the applicant and shall not be made a part of any public record unless the applicant expressly agrees to its publication.

[3/24/82; 20.11.40.15 NMAC – Rn, 20 NMAC 11.40.II.4, 10/1/02]

PART 41: CONSTRUCTION PERMITS

20.11.41.1 ISSUING AGENCY:

Albuquerque-Bernalillo County Air Quality Control Board, P.O. Box 1293, Albuquerque, NM 87103. Telephone: (505) 768-2601.

[20.11.41.1 NMAC - Rp, 20.11.41.1 NMAC, 1/1/14]

20.11.41.2 SCOPE:

20.11.41 NMAC applies to every person who intends to construct, operate, modify, relocate or make a technical revision to a source that is subject to 20.11.41 NMAC or who has authority to operate a source that triggers the emission thresholds in Subsection B of 20.11.41.2 NMAC, except as otherwise provided.

A. Applicability: Every stationary source subject to 20.11.41 NMAC shall obtain an air quality construction permit from the department as required by 20.11.41 NMAC before:

- (1) commencing construction of a new stationary source;
- (2) operating a stationary source that was required by 20.11.41 NMAC to obtain a construction permit before commencing construction or modification, but the stationary source has no active construction permit; or
- (3) modification of a stationary source.

B. Emission thresholds that require a construction permit before commencing construction, modification or operation of a stationary source subject to 20.11.41 NMAC:

(1) If a person proposes to construct or operate a new stationary source that will emit one or more regulated air contaminants for which a federal, state or board ambient air quality standard exists and if the source will emit, when calculated at the contaminant's potential emission rate, 10 pounds per hour or more or 25 tons per year or more of any single regulated air contaminant, then the person shall apply for and obtain a construction permit as required by 20.11.41 NMAC before the person commences construction or operation of the source.

(2) If a person proposes a modification of a stationary source and the modification will emit one or more regulated air contaminants for which a federal, state or board ambient air quality standard exists, and if, as a result of the modification, all activities at the source will emit, when calculated at the contaminant's potential emission rate, 10 pounds per hour or more or 25 tons per year or more of a regulated air contaminant, then the person shall apply for and obtain a construction permit or permit modification as required by 20.11.41 NMAC before the person commences construction or operation.

(3) If a person proposes to construct a new stationary source or proposes a modification of a stationary source permit, and if the source will emit, when calculated at the air contaminant's potential emission rate, two tons per year or more of a single hazardous air pollutant (HAP) as defined by Section 112(b) of the federal Clean Air Act, or five tons or more per year of any combination of HAP, then the proposed or existing source shall apply for and obtain a construction permit or construction permit modification as required by 20.11.41 NMAC before the person commences construction.

(4) If a stationary source was not required to obtain a construction permit pursuant to 20.11.41 NMAC because the source was operating before August 31, 1972, and if operations of the source have ceased for five or more consecutive years, and if an air contaminant proposed to be emitted by the source triggers the emission thresholds in Paragraphs (1) or (3) of Subsection B of 20.11.41.2 NMAC, then the owner or operator of the source shall apply for and obtain a construction permit as required by 20.11.41 NMAC before the person constructs, modifies or operates the source.

(5) If a person proposes to construct a new stationary source or proposes to modify an existing stationary source and if the source will emit, when calculated at the contaminant's potential emission rate, five tons per year or more of lead (Pb) or any combination of lead and its compounds, then the person shall apply for and obtain a construction permit or construction permit modification as required by 20.11.41 NMAC before the person commences construction, modification or operation.

(6) If a stationary source was constructed after August 31, 1972 and the source is subject to an existing or new board regulation that includes an equipment emission limitation, the source shall apply for and obtain a construction permit or construction permit modification as required by 20.11.41 NMAC.

C. Source classifications; source types: If a person proposes to construct a new stationary source, modify an existing stationary source, construct a portable or temporary stationary source, or proposes a technical permit revision and any of the following conditions apply, the person shall apply for and obtain a construction permit, a construction permit modification or technical permit revision approval pursuant to 20.11.41 NMAC before commencing construction or modification of:

(1) any equipment or process that is subject or becomes subject to 20.11.63 NMAC, New Source Performance Standards for Stationary Sources, or 20.11.64 NMAC, Emission Standards for Hazardous Air Pollutants for Stationary Sources;

(2) any stationary source that meets the applicability requirements of 20.11.41 NMAC; however, if the source is also a major stationary source or a major modification as defined in 20.11.60 NMAC, Permitting in Nonattainment Areas, then the source shall in addition be subject to 20.11.60 NMAC;

(3) any stationary source that meets the applicability requirements of 20.11.41 NMAC; however, if the source is also a major stationary source or a major modification as defined in 20.11.61 NMAC, Prevention of Significant Deterioration, then the source shall in addition be subject to 20.11.61 NMAC; and

(4) a major source of HAP as defined in 40 CFR Part 63.

D. Sources that become subject to new NSPS or NESHAP: If a person is operating a source that becomes subject to a new NSPS or NESHAP, the person shall apply for and obtain a construction permit as required by 20.11.41 NMAC.

E. Additional permit requirements:

(1) If a source includes more than one unit, the department may require a separate construction permit or permit conditions for each unit that is not substantially interrelated with another unit. A common connection leading to ductwork, pollution control equipment or a single stack shall not, by itself, constitute a substantial interrelationship.

(2) Although more than one air quality regulation adopted by the board may apply to a stationary source, including 20.11.39, 20.11.40, 20.11.60, 20.11.61, 20.11.63, and 20.11.64 NMAC, nothing in 20.11.41 NMAC shall be construed to require more than one permit application for each unit proposed for construction or modification. Definitions and provisions included in specific federal program regulations shall apply to permit review of any regulated air contaminant and source regulated by the federal NSPS, NESHAP, prevention of significant deterioration, visibility or nonattainment requirements.

(3) For all sources subject to 20.11.41 NMAC, applications for permits shall be filed before commencement of construction, modification, relocation or technical

revision. Regardless of the anticipated commencement date, no construction, modification, relocation or revision shall commence before the owner or operator has received a permit or written approval from the department.

F. Exemptions:

(1) 20.11.41 NMAC does not apply to sources within Bernalillo county that are located on Indian lands over which the Albuquerque-Bernalillo county air quality control board lacks jurisdiction.

(2) The following sources and activities shall not be reported in the permit application. Emissions from such activities shall not be included in the calculation of the facility-wide potential emission rate under Paragraphs (1)-(5) of Subsection B and Subsection C of 20.11.41.2 NMAC. The following activities may be commenced or changed without a permit or permit modification under 20.11.41 NMAC if the emissions and activities are not subject to any requirement under a local board regulation, the New Mexico Air Quality Control Act, NMSA 1978, NSPS or NESHAP:

(a) activities which occur strictly for maintenance of grounds or buildings, including: lawn care, pest control, grinding, cutting, welding, painting, woodworking, sweeping, general repairs, janitorial activities, and building roofing operations;

(b) activities for maintenance of equipment or pollution control equipment, either inside or outside of a building, including cutting, welding, painting and grinding;

(c) exhaust emissions from forklifts, courier vehicles, front end loaders, graders, carts, and maintenance trucks;

(d) use of firefighting equipment and firefighting training provided the emissions are not subject to any requirement of a NSPS or NESHAP;

(e) government military activities such as field exercises, explosions, weapons testing and demolition to the extent that such activities do not result in visible emissions entering publicly accessible areas;

(f) use of portable aerospace ground equipment (such as power generators, compressors, heaters, air conditions, lighting units) if the equipment is used in direct support of aircraft operations, and on or in the immediate vicinity of an airfield;

(g) use of portable support equipment such as power generation equipment, compressors, heaters, air conditioning and lighting equipment used for activities that include, but are not limited to maintenance and repair if the equipment is used fewer than 12 consecutive months at the same location and the equipment does not directly support an otherwise regulated portable stationary source (such as a screening plant, sand and gravel processing equipment, hot mix asphalt plant, concrete plant or soil vapor extraction system);

(h) gases used to calibrate plant instrumentation, including continuous emission monitoring (CEM) systems;

(3) An applicant for a permit is not required to obtain a permit for the following new or modified sources and activities at a facility, but is required to report the following on permit application forms available from the department: fuel burning equipment that is used solely for heating buildings for personal comfort or for producing hot water for personal use and that:

(a) uses gaseous fuel and has a design rate of five million BTU per hour or less; or

(b) uses distillate oil, but not including waste oil, and has a design rate of one million BTU per hour or less.

(4) After a permit has been issued, construction of the sources or commencement of the sources and activities described in Paragraph (3) of Subsection F of 20.11.41.2 NMAC shall comply with the administrative permit revision procedures in Subsection A of 20.11.41.28 NMAC. Emissions from the sources and activities described in Paragraph (3) of Subsection F of 20.11.41.2 NMAC shall not be included in the facility-wide potential emission rate calculation that is described in Subsections B and C of 20.11.41.2 NMAC.

G. Permissive waiver: An owner or operator of an emergency stationary reciprocating internal combustion engine or gasoline dispensing facility, as defined in 20.11.39 NMAC, may apply for an air quality notification pursuant to that Part. If the department grants an air quality notification, then the applicability requirements in Paragraphs (1), (2) and (4) of Subsection B and in Paragraph (1) of Subsection C of 20.11.41.2 NMAC shall not apply to the source that received the air quality notification.

[20.11.41.2 NMAC - Rp, 20.11.41.2 NMAC, 1/1/14; A, 12/21/17]

20.11.41.3 STATUTORY AUTHORITY:

20.11.41 NMAC is adopted pursuant to the authority provided in the New Mexico Air Quality Control Act, NMSA 1978 Sections 74-2-4, 74-2-5.C; the Joint Air Quality Control Board Ordinance, Bernalillo County Ordinance 94-5 Sections 3 & 4; and the Joint Air Quality Control Board Ordinance, Revised Ordinances of Albuquerque 1994 Sections 9-5-1-3 & 9-5-1-4.

[20.11.41.3 NMAC - Rp, 20.11.41.3 NMAC, 1/1/14]

20.11.41.4 DURATION:

Permanent.

[20.11.41.4 NMAC - Rp, 20.11.41.4 NMAC, 1/1/14]

20.11.41.5 EFFECTIVE DATE:

January 1, 2014, unless a later date is cited at the end of a section.

[20.11.41.5 NMAC - Rp, 20.11.41.5 NMAC, 1/1/14]

20.11.41.6 OBJECTIVE:

To establish the requirements for obtaining a construction permit, construction permit modification, relocation and administrative and technical permit revision.

[20.11.41.6 NMAC - Rp, 20.11.41.6 NMAC, 1/1/14]

20.11.41.7 DEFINITIONS:

In addition to the definitions in 20.11.41 NMAC, the definitions in 20.11.1 NMAC apply unless there is a conflict between definitions, in which case the definition in 20.11.41 NMAC shall govern.

A. "Act" or "state act" means the New Mexico Air Quality Control Act, Chapter 74, Article 2 NMSA 1978.

B. "Administrative permit revision" or "administrative revision" means a revision to a construction permit for a source that is requested and approved pursuant to Subsection A of 20.11.41.28 NMAC.

C. "Air contaminant" or "contaminant" means a substance, including particulate matter, fly ash, dust, fumes, gas, mist, smoke, vapor, micro-organisms, radioactive material, any combination thereof or any decay or reaction product thereof.

D. "Air pollutant", "pollutant", "air pollution" or "pollution" means the emission, except emission that occurs in nature, into the outdoor atmosphere of one or more air contaminants in quantities and of a duration that may with reasonable probability injure human health or animal or plant life or as may unreasonably interfere with the public welfare, visibility or the reasonable use of property.

E. "Air pollution control equipment" means any device, equipment, process or combination thereof the operation of which would limit, capture, reduce, confine, or otherwise control air contaminants or convert for the purposes of control any air contaminant to another form, another chemical or another physical state.

F. "Ambient air" means the outdoor atmosphere, but does not include the area entirely within the geographical boundaries of the source from which the air

contaminants are, or may be, emitted and where public access is restricted within the boundaries.

G. "Applicable requirement" means any of the following, and includes requirements that have been promulgated or approved by the board or EPA through rulemaking:

(1) any standard or other requirement provided in the New Mexico state implementation plan approved by EPA, or promulgated by EPA through rulemaking, under Title I of the federal act, including Parts C or D;

(2) any term or condition of a construction permit issued pursuant to regulations approved or promulgated through rulemaking under Title I of the federal act, including Parts C or D;

(3) any standard or other requirement:

(a) under Section 111 or 112 of the federal act;

(b) of the acid rain program under Title IV of the federal act or the regulations promulgated thereunder;

(c) governing solid waste incineration under Section 129 of the federal act;

(d) that applies to consumer and commercial products under Section 183(e) of the federal act; or

(e) of the regulations promulgated to protect stratospheric ozone under Title VI of the federal act, unless the EPA administrator has determined that the requirements need not be contained in a Title V permit;

(4) any requirements established pursuant to Section 504(b) or Section 114(a)(3) of the federal act;

(5) any national or New Mexico ambient air quality standard;

(6) any increment or visibility requirement under Part C of Title I of the federal act applicable to temporary sources permitted pursuant to Section 504(e) of the federal act; and

(7) any regulation adopted by the board in accordance with the city of Albuquerque and county of Bernalillo joint air quality control board ordinances pursuant to the Air Quality Control Act, and the laws and regulations in effect pursuant to the Air Quality Control Act.

H. "Board" means the Albuquerque-Bernalillo county air quality control board or its successor board pursuant to the state act.

I. "Commence", "commencement", "commencing" or "commences" means an owner or operator has undertaken a continuous program of construction or modification, has entered into a binding contractual obligation to undertake and complete a continuous program of construction within a reasonable time, or has acquired the right to operate a source that is subject to 20.11.41 NMAC and plans to commence operating the source.

J. "Conflict of interest" for the purposes of accelerated review, means any direct or indirect relationship between the qualified outside firm and the applicant or other interested person that would cause a reasonable person with knowledge of the relevant facts to question the integrity or impartiality of the qualified outside firm in review of the application. A conflict of interest does not include any gifts, gratuities, financial or contractual relationship that totals less than \$100 in value for the 12 month period preceding the department's receipt of the application. A conflict of interest includes:

(1) gifts or gratuities of value that have been exchanged between the qualified outside firm and the applicant;

(2) the qualified outside firm having provided goods or services to the applicant within one year before the start, or during the term, of the accelerated review process;

(3) an express or implied contractual relationship that exists between the qualified outside firm and the applicant, and the qualified outside firm has provided goods or services to the applicant as a result of the relationship within five years before the start of the accelerated review process; or

(4) a current financial relationship between the qualified outside firm and the applicant; current financial relationships include, but are not limited to:

(a) the qualified outside firm owes anything of value to, or is owed anything of value by the applicant; and

(b) the qualified outside firm has provided goods or services to the applicant and has issued a warranty or guarantee for the work that is still in effect during the time the contracted work for accelerated review is being performed;

(5) a director, officer or employee of the qualified outside firm that will perform services under a contract pursuant to 20.11.41.32 NMAC, and has one or more personal, business or financial interests or relationships with the applicant or any director, officer or employee of the applicant that would cause a reasonable person with knowledge of the relevant facts to question the integrity or impartiality of those who are or will be acting under a contract;

(6) a director, officer or employee of the qualified outside firm was a director, officer or employee of the applicant within one year before the start of the accelerated review process;

(7) a communication that has occurred between the qualified outside firm and the applicant regarding the substance of the application before a qualified outside firm has been selected to perform accelerated review of an application except as allowed by the department; direct communication between the qualified outside firm and the applicant may take place after the qualified outside firm has been selected by the department;

(8) an affiliate of the applicant has any of the above described relationships with the qualified outside firm;

(9) an affiliate of the qualified outside firm has any of the above described relationships with the applicant; and

(10) an affiliate of the applicant has any of the above described relationships with any affiliate of the qualified outside firm.

K. "Construction" means fabrication, erection, installation or relocation of a stationary source, including but not limited to temporary installations and portable stationary sources.

L. "Days" means consecutive days except as otherwise specifically provided.

M. "Department" means the Albuquerque environmental health department, which is the administrative agency of the Albuquerque-Bernalillo county air quality control board.

N. "Emergency" means unforeseen circumstances resulting in an imminent and substantial endangerment to health, safety, or welfare and that require immediate action.

O. "Emission limitation" means a requirement established by EPA, the state implementation plan (SIP), the state act, local ordinance, permit or board regulation that limits the quantity, rate or concentration, or combination thereof, of emissions of regulated air contaminants on a continuous basis, including any requirement relating to the operation or maintenance of a source to assure continuous reduction.

P. "Emission unit" or "unit" means any article, machine, equipment, contrivance, process or process line that emits or reduces, or may emit or reduce, the emissions of any air contaminant, except from motor vehicles.

Q. "EPA" means the United States environmental protection agency.

R. "Federal clean air act", "CAA" or "federal act" means the federal Clean Air Act, 42 U.S.C. Section 7401 through 7671 et seq., as amended.

S. "Federally enforceable" means all limitations and conditions that are enforceable by the administrator of the EPA, including all requirements adopted pursuant to 40 CFR Parts 60, 61 and 63; all requirements included in any applicable state implementation plan; and any permit requirements imposed pursuant to 40 CFR 52.21 or regulations approved pursuant to 40 CFR Part 51, Subpart I including 40 CFR 51.165 and 40 CFR 51.166.

T. "Malfunction" means any sudden, infrequent and not reasonably preventable failure of air pollution control equipment or process equipment, or the failure of a process to operate in a normal or expected manner. Failures that are caused in part by poor maintenance or careless operation are not malfunctions.

U. "Modification" or "to modify" means a physical change in, or change in the method of operation of a source that results in an increase in the potential emission rate of any regulated air contaminant emitted by the source or that results in the emission of any regulated air contaminant not previously emitted; a relocation of a stationary source, unless previously established as a portable stationary source subject to specific permit conditions; or a revision that involves substantive changes that exceed the scope of a revision as defined by 20.11.41.28 NMAC, but does not include:

- (1) a change in ownership of the source;
- (2) routine maintenance, repair or replacement;
- (3) installation of air pollution control equipment, and all related process equipment and materials necessary for its operation, undertaken for the purpose of complying with regulations adopted by the state or local board or pursuant to the CAA; or
- (4) unless previously limited by enforceable permit conditions:
 - (a) an increase in the production rate, if the increase does not exceed the operating design capacity of the source;
 - (b) an increase in the hours of operation; or
 - (c) use of an alternative fuel or raw material if, prior to January 6, 1975, the source was capable of accommodating the fuel or raw material or if use of an alternate fuel or raw material is caused by any natural gas curtailment or emergency allocation or any other lack of supply of natural gas.

V. "National ambient air quality standards" or "NAAQS" means the primary (health based) and secondary (welfare-related) federal ambient air quality standards promulgated by the EPA pursuant to Section 109 of the CAA.

W. "National emission standards for hazardous air pollutants" or "NESHAP" means the regulatory requirements, guidelines and emission limitations promulgated by the EPA pursuant to Section 112 of the CAA.

X. "New Mexico ambient air quality standards" or "NMAAQS" means the ambient air quality standards promulgated by the New Mexico environmental improvement board.

Y. "New source performance standard" or "NSPS" means the regulatory requirements, guidelines and emission limitations promulgated by the EPA pursuant to Section 111 of the CAA.

Z. "Nonattainment area" means for any air contaminant an area that is shown by monitoring data or that is calculated by air quality modeling (or by other methods determined by the director of the department or the administrator of the EPA to be reliable), to exceed either a state NMAAQS or NAAQS for the contaminant, including but not limited to areas identified under Section 107 (d)(1)(A) through (C) of the CAA.

AA. "North American industry classification system" or "NAICS" means the industry classification system that is used by the statistical agencies of the United States, is issued by the federal office of management and budget and replaced the standard industrial classification (SIC) system.

BB. "Operator" means the local organization or subdivision of the firm or person, whether private, corporate or public, that manages, on location, the operations of the stationary source.

CC. "Owner" means the person or persons who own a source.

DD. "Part" means an air quality control regulation organized under Title 20, Chapter 11 of the New Mexico Administrative Code that has been adopted or amended by the board, unless otherwise noted.

EE. "Permit" means a construction permit for a source or a construction permit modification, relocation, or administrative or technical permit revision that has been issued or approved by the department pursuant to 20.11.41 NMAC. A permit includes constraints, emissions limitations and other conditions and authorizes a person to commence construction, modification, relocation, or technical revision to the permitted source or operation; or commence operation of a facility that contains a source that is subject to 20.11.41 NMAC.

FF. "Permittee" means the person who has applied for and has obtained a construction permit for a source that has been issued a permit pursuant to 20.11.41 NMAC.

GG. "Portable stationary source" means a source that can be relocated to another operating site with limited dismantling and reassembly, including, as an example, movable sand and gravel processing operations, concrete plants, asphalt plants and soil vapor extraction systems.

HH. "Potential emission rate" means the emission rate of a source at its maximum capacity to emit a regulated air contaminant under its physical and operational design, provided any physical or operational limitation on the capacity of the source to emit a regulated air contaminant, (including air pollution control equipment and restrictions on hours of operation or on the type or amount of material combusted, stored or processed), shall be treated as part of its physical and operational design, but only if the limitation or the effect the limitation would have on emissions is enforceable by the department pursuant to the state act or the federal act.

II. "Process equipment" or "process equipment unit" means any equipment, apparatus or device, including chemical, industrial or manufacturing facilities such as ovens, mixing kettles, heating and reheating furnaces, kilns, stills, dryers, roasters and equipment used in connection therewith, and all other methods or forms of manufacturing or processing that may emit any air contaminant.

JJ. "Public information hearing" or "PIH" means the hearing provided by the department pursuant to 20.11.41.15 NMAC during which attendees can ask questions, provide comments and provide information; a PIH is not a hearing on the merits that results in a final decision at the close of the hearing.

KK. "Regulated air contaminant" means any air contaminant, the emission or ambient concentration of which is regulated pursuant to the New Mexico air quality control act or the federal act.

LL. "Relocation" means to physically move a portable stationary source.

MM. "Shutdown" means the cessation of operation of any air pollution control equipment, process equipment or process for any purpose, except routine phasing out of batch process units.

NN. "Significant impact" means to pollute to an extent that ambient air contaminant concentrations, including background, exceed any of the significance levels listed in Table 1 of 20.11.41.33 NMAC, as indicated by modeling techniques authorized by the department.

OO. "Standard industrial classification" or "SIC" means the code from the system used to classify all industries in the United States economy that was

administered by the federal statistical policy division of the office of management and budget and in 1997 was replaced by the North American industry classification system (NAICS).

PP. "Startup" means to put a stationary source that has been constructed or modified as authorized by a permit issued pursuant to 20.11.41 NMAC into operation complete with functional air pollution controls, so the process equipment or the process performs for the purpose intended. The operation may be cyclic in response to on-off controls. Repetition of cycles is not startup for purposes of 20.11.41 NMAC.

QQ. "Stationary source" or "source" means any building, structure, equipment, facility, portable stationary source or installation that is either permanent or temporary, excluding a private residence, that emits or may emit any regulated air contaminant or any pollutant listed under Section 112(b) of the federal act, the state act, or the laws and regulations in effect pursuant to the state act. Several buildings, structures, facilities, or installations, or any combination will be treated as a single stationary source if they belong to the same industrial grouping, are located on one or more contiguous or adjacent properties, and are under the control of the same person or persons, or are under common control. Air pollution activities shall be treated as the same industrial grouping if they have the same first two digits of an applicable North American industry classification system (NAICS) code.

RR. "Technical permit revision" or "technical revision" means a revision to a construction permit pursuant to Subsection B of 20.11.41.28 NMAC.

[20.11.41.7 NMAC - Rp, 20.11.41.7 NMAC, 1/1/14]

20.11.41.8 VARIANCES:

A person may request a variance from 20.11.41 NMAC in accordance with the procedures established in 20.11.7 NMAC, *Variance Procedure*.

[20.11.41.8 NMAC - Rp, 20.11.41.8 NMAC, 1/1/14]

20.11.41.9 SAVINGS CLAUSE:

Any amendment to 20.11.41 NMAC that is filed with the state records center and archives shall not affect actions pending for violation of the state act, a city or county ordinance, a prior version of 20.11.41 NMAC, another board regulation or a permit issued by the department. Prosecution for a violation under prior regulation wording shall be governed and prosecuted under the statute, ordinance or regulation in effect at the time the violation was committed.

[20.11.41.9 NMAC - Rp, 20.11.41.9 NMAC, 1/1/14]

20.11.41.10 SEVERABILITY:

If for any reason any section, paragraph, sentence, clause, wording or application of 20.11.41 NMAC or any federal or New Mexico standards incorporated herein is held unconstitutional or otherwise invalid by any court or the United States environmental protection agency, the decision shall not affect the validity or application of remaining provisions of 20.11.41 NMAC.

[20.11.41.10 NMAC - Rp, 20.11.41.10 NMAC, 1/1/14]

20.11.41.11 DOCUMENTS:

Documents incorporated and cited in 20.11.41 NMAC may be viewed at the Albuquerque environmental health department, One Civic Plaza NW, Albuquerque, NM 87102. Permit applications, supporting documentation, preliminary determinations made by the department, and draft permits, if completed, shall be available for public inspection at the department's air quality division office at One Civic Plaza NW, Albuquerque, New Mexico 87102.

[20.11.41.11 NMAC - Rp, 20.11.41.11 NMAC, 1/1/14]

20.11.41.12 FEES FOR PERMIT APPLICATION REVIEW:

An application for a permit shall be accompanied by a check or money order in the amount required by 20.11.2 NMAC, *Fees*. No application shall be complete until the entire fee has been paid. Checks shall be made payable to the city of Albuquerque as required by 20.11.2 NMAC, *Fees*.

[20.11.41.12 NMAC - Rp, 20.11.41.12 NMAC, 1/1/14]

20.11.41.13 APPLICATION FOR PERMIT:

A. Pre-application requirements: A person who is seeking a permit pursuant to 20.11.41 NMAC shall contact the department in writing and request a pre-application meeting for information regarding the contents of the application and the application process. The meeting shall include discussion of approved emission factors and control efficiencies, air dispersion modeling guidelines, department policies, air quality permit fees, public notice requirements and regulatory timelines. The department may waive the pre-application meeting requirement.

B. Applicant's public notice requirements: If the applicant is applying for a permit or permit modification, then before the applicant submits the application required by Subsection E of 20.11.41.13 NMAC, the applicant shall comply with the public notice requirements of Paragraphs (1) and (2) of Subsection B of 20.11.41.13 NMAC. If the applicant is applying for a portable stationary source relocation, then the department may require that the applicant comply with these same notice requirements. The applicant shall:

(1) provide public notice by certified mail or electronic mail to the designated representative(s) of the recognized neighborhood associations and recognized coalitions that are within one-half mile of the exterior boundaries of the property on which the source is or is proposed to be located; contact information shall be obtained from the most current records of the city of Albuquerque office of neighborhood coordination and the county of Bernalillo zoning, building and planning department; the public notice shall include all information required by Subsection C of 20.11.41.13 NMAC; the applicant may submit a written request to the department proposing an alternative approach to providing public notice if the proposed source or modification is located at a site with large property boundaries or campus-like facilities; the applicant shall obtain prior written approval from the department before using an alternative approach to providing public notice;

(2) prior to submitting the application, post and maintain a weather-proof sign provided by the department, posted at the more visible of either the proposed or existing facility entrance or, if approved in advance and in writing by the department, at another location on the property that is accessible to the public; the applicant shall list all information required by Subsection C of 20.11.41.13 NMAC, on the sign; the applicant shall keep the sign posted until the department takes final action on the permit application; if an applicant can establish to the department's satisfaction that the applicant is prohibited by law from posting, at either location required by Paragraph (2) of Subsection B of 20.11.41.13 NMAC, the department may waive the posting requirement and may impose different notification requirements.

C. Additional public notice requirements: The public notice specified in Paragraphs (1) and (2) of Subsection B of 20.11.41.13 NMAC shall include the following:

(1) the applicant's name and address, and the names and addresses of the owner or operator of the source or proposed source;

(2) the actual or estimated date the application will be submitted to the department;

(3) the exact location of the source or proposed source;

(4) a description of the source and related facility, if any; the nature of the business; the process or the change for which the permit is being requested, including a preliminary estimate of the maximum quantities of each regulated air contaminant the source will emit if the permit is issued and the proposed construction or modification is completed; and, if the source is being modified, the net change in emissions;

(5) the maximum and normal operating schedules proposed for the source or facility; and

(6) the current address of the applicant to which comments and inquiries may be directed.

D. A person who is seeking a construction permit pursuant to 20.11.41 NMAC shall complete a permit application and file one complete original and one duplicate copy with the department. A person who is seeking a general construction permit shall complete the applicable general construction form pursuant to Subsection C of 20.11.41.31 NMAC and file one complete original form and a duplicate copy with the department. All applications shall be submitted with the fee required by 20.11.2 NMAC.

E. Application contents: The following are the minimum elements that shall be included in the permit application before the department can determine whether the application is administratively complete and ready for technical review. It is not necessary to include an element if the department has issued a written waiver regarding the element and the waiver accompanies the application. However, the department shall not waive any federal requirements. The permit application shall include:

- (1) a completed permit application form provided by the department;
- (2) the name, street address and post office address, if any, of the applicant and the names, street addresses and post office addresses, if any, of the owner and all operators of the source if different than the applicant;
- (3) the date the application was submitted to the department;
- (4) sufficient attachments, including calculations, computations, EPA-approved air dispersion model as required, or models executed under a protocol as required that has been approved in advance and in writing by the department, and all other analyses used by the applicant to provide information to describe the potential emission rate and nature of all regulated air contaminants that the source may emit, and the actual emissions that the source will emit under routine operations after construction, modification, relocation or technical revision, and estimates of potential emissions during malfunction, startup and shutdown;
- (5) an operational and maintenance strategy detailing:
 - (a) the steps the applicant will take if a malfunction occurs that may cause emission of a regulated air contaminant to exceed a limit that is included in the permit;
 - (b) the nature of emissions during routine startup or shutdown of the source and the source's air pollution control equipment; and
 - (c) the steps the applicant will take to minimize emissions during routine startup or shutdown;

(6) a map, such as a 7.5 minute topographic quadrangle map published by the United States geological survey or a map of equivalent or greater scale, detail and precision, including a city of Albuquerque or county of Bernalillo zone atlas map that shows the proposed location of each process equipment unit involved in the proposed construction, modification, relocation or technical revision of the source;

(7) an aerial photograph showing the proposed location of each process equipment unit involved in the proposed construction, modification, relocation or technical revision of the source except for federal agencies or departments involved in national defense or national security as confirmed and agreed to by the department in writing;

(8) a complete description of all sources of regulated air contaminants and a process flow diagram depicting the process equipment unit or units at the facility, both existing and proposed, that are proposed to be involved in routine operations and from which regulated air contaminant emissions are expected to be emitted;

(9) a full description of air pollution control equipment, including all calculations and the basis for all control efficiencies presented, manufacturer's specifications sheets, and site layout and assembly drawings; UTM (universal transverse mercator) coordinates shall be used to identify the location of each emission unit;

(10) a description of the equipment or methods proposed by the applicant to be used for emission measurement;

(11) the maximum and normal operating time schedules of the source after completion of construction, modification, relocation or technical revision;

(12) any other relevant information as the department may reasonably require;

(13) the signature of the applicant, operator, owner or an authorized representative, certifying to the accuracy of all information as represented in the application and attachments, if any;

(14) a check or money order for the appropriate application fee or fees required by 20.11.2 NMAC, *Fees*; the fees are established to offset some or all of the reasonable costs of the department reviewing and acting upon an application for a permit and implementing and enforcing the terms and conditions of the permit, excluding costs associated with an enforcement action; and

(15) documentary proof that the applicant has complied with all public notice requirements, as required by Subsections B and C of 20.11.41.13 NMAC; documentary proof shall include proof of delivery of certified mail or e-mail of the public notice required by Paragraph (1) of Subsection B of 20.11.41.13 NMAC and a photograph of each notice posted as required by Paragraph (2) of Subsection B of 20.11.41.13 NMAC.

F. Changing, supplementing or correcting applications:

(1) Before the department makes a final decision regarding the application, the applicant shall have a duty to promptly supplement and correct information the applicant has submitted in the application to the department. Applicant's duty to supplement and correct the application includes relevant information acquired after the applicant has submitted the application and additional information the applicant otherwise determines is relevant to the application and the department's review and decision.

(2) While the department is processing an application, regardless of whether the department has determined the application is administratively complete, if the department determines additional information is necessary to evaluate or make a final decision regarding the application, the department may request, and the applicant shall provide the requested additional information. The request shall be in writing, identify the additional information requested, the reason the additional information is needed, and set a reasonable deadline for a response. The applicant shall submit the requested information in writing to the department on or before the response deadline.

G. Protection of confidential information:

(1) All records, reports or information relating to permit applications obtained by the department or the board from any person shall be available to the public for inspection and copying, unless a person has made a satisfactory showing to the department or the board, as confirmed and agreed to by the department in writing, that specific items or information or parts thereof, if made public, would divulge: confidential business records, methods or processes entitled to protection as trade secrets; information pertaining to national defense; or information pertaining to national security. If the items or information are specifically marked by the person as confidential at the time of submittal, the department and the board shall then protect the items and information listed in Subparagraphs (a) and (b) of Paragraph (1) of Subsection G of 20.11.41.13 NMAC as confidential and not to be made a part of any public record unless the person expressly agrees, in writing, to its inspection, copying, or publication:

(a) records, reports or information relating to methods, processes or production techniques unique to the person, and

(b) data relating to the person's profits and costs or other confidential business information which have not previously been released to the public.

(2) Subsection G of 20.11.41.13 NMAC shall not be construed to prohibit the release of information concerning the nature and amount of emissions from any source.

(3) The department shall review all claims of confidentiality made by any person pursuant to 20.11.41 NMAC and shall notify the person of the department's determination by certified mail or electronic mail in a timely manner and shall include the

reasons for the decision. The burden of proof for claims of confidentiality shall be upon the person submitting such claim.

(4) The department's determination regarding claims made pursuant to Subsection G of 20.11.41.13 NMAC shall be the final administrative determination.

(5) The department shall protect information claimed and subsequently found to be confidential in accordance with the provisions of 74-2-11 NMSA 1978 and 18 U.S.C. Section 1905, except that any such record, report or information may be disclosed:

(a) to other officers, employees or authorized representatives of the department, the board and the EPA; or

(b) in any proceeding pursuant to the federal act or the state act, when relevant.

[20.11.41.13 NMAC - Rp, 20.11.41.13 NMAC, 1/1/14; A, 12/13/17]

20.11.41.14 PUBLIC NOTICE BY DEPARTMENT - PUBLIC PARTICIPATION:

A. The department shall maintain a list of all pending applications for permits available for public inspection.

B. If the department makes an affirmative administrative completeness determination then:

(1) the department shall make the permit application and all supporting documentation available for public inspection at the department's air quality division office at One Civic Plaza NW, Albuquerque, NM 87102;

(2) the department shall publish the public notice on the web site of the city of Albuquerque environmental health department; the notice shall state:

(a) the applicant's name and address;

(b) the proposed or existing location;

(c) a brief description of the source and related facility, if any;

(d) a brief preliminary summary of proposed emissions and the proposed net emissions increase if a permit modification is proposed;

(e) the ambient air quality impact as determined by air dispersion modeling, if required by the department;

(f) the location where the permit application and the department's analysis if completed, are available for public review; the notice shall clearly state that any person who does not express such interest in writing prior to the end of the initial 30 day comment period will not receive notification of the availability of the analysis and so alert such a person of the need to express interest in writing if they desire to review and comment on the analysis;

(g) that the public has 30 days to submit written comments and evidence to the department regarding the proposed permit or to request a PIH regarding the application or both; the notice shall specify the date by which all comments and evidence or a request for a PIH shall be submitted;

(h) that the department shall hold a PIH pursuant to 20.11.41.15 NMAC if the director determines there is significant public interest and a significant air quality issue is involved; and

(i) that any person who does not participate in the permitting action will not receive notification of the department's decision regarding the proposed permit, unless the person has delivered a written request for notice to the department;

(3) the department shall provide the notice required by Paragraph (2) of Subsection B of 20.11.41.14 NMAC by regular mail or electronic mail to all individuals and organizations identified on a list maintained by the department of persons who have stated in writing a desire to receive notices of all applications filed pursuant to 20.11.41 NMAC;

(4) the department shall allow all interested persons 30 days from the date the public notice is published to deliver to the department written comment and evidence regarding the application for a permit;

(5) the department shall send notice of the department's action regarding the permit application and the reasons for the action to every person who participated in the permitting action; a request to inspect or copy shall not be considered participation for the purposes of Paragraph (5) of Subsection B of 20.11.41.14 NMAC; the applicant shall be notified by certified mail or electronic mail; all other interested persons who participated shall be notified by regular mail or electronic mail;

(6) the department shall provide a copy of the public notice by certified mail or electronic mail to the designated representative(s) of the recognized neighborhood associations and recognized coalitions, that are within one-half mile of the exterior boundaries of the property on which the source is or is proposed to be located; contact information, if available, shall be obtained from the most current records of the city of Albuquerque office of neighborhood coordination and the county of Bernalillo zoning, building and planning department;

(7) the department shall mail a copy of the public notice by regular or electronic mail to every person who submits a written request for a copy to the department;

(8) the department shall mail a copy of the public notice by regular or electronic mail to the state of New Mexico environment department within five days after the department deems the application complete; the department shall also mail a copy of the public notice by regular or electronic mail to EPA Region VI, if requested; and

(9) the department shall mail a copy of the public notice by regular or electronic mail to all municipalities, Indian tribes and counties that are within one-half mile of the exterior boundaries of the property on which the source is or is proposed to be located.

C. If a person expresses in writing an interest in the permit application, the department shall:

(1) notify that person of the date that the department's analysis was or will be available for review and where the analysis may be obtained; and

(2) not issue the permit until at least 30 days after the department's analysis is available for review. During the 30 day period, any person may submit written comments or request a PIH.

[20.11.41.14 NMAC - Rp, 20.11.41.14 NMAC, 1/1/14; A, 12/13/17]

20.11.41.15 PUBLIC INFORMATION HEARING (PIH):

A. Before the department makes a final decision regarding a permit application, the department shall hold a PIH if the director determines that there is significant public interest and a significant air quality issue is involved. A PIH is not an adjudicatory hearing on the merits. The PIH shall be held no fewer than 30 days before the deadline for the department to make a final decision regarding the permit application. The hearing officer shall determine whether to require attendees to be sworn before they can ask questions, provide comments or provide information. During the PIH, attendees can ask questions, provide comments and provide information regarding the requested air quality permitting action, but no final decision shall be made by the department at the close of the hearing.

B. The department shall make all arrangements and pay all expenses of the hearing including:

(1) arranging for a location for the PIH, which shall be held near the proposed source if reasonably feasible;

(2) providing an English-Spanish and Spanish-English translator at the PIH if determined to be necessary by the department;

(3) providing a hearing officer; the hearing officer shall preside over the PIH; shall give all attendees present at the hearing a reasonable opportunity to ask questions, provide comments and provide information regarding the requested air quality permitting action and to examine attendees commenting at the hearing; but shall not make a recommendation or a final decision regarding the permit application;

(4) requesting that the applicant present its proposal and to answer questions from attendees at the PIH;

(5) no fewer than 30 days before the PIH, providing a copy of the public notice by certified mail or electronic mail to the applicant, the designated representative(s) of the recognized neighborhood associations and recognized neighborhood coalitions that are within one-half mile of the exterior boundaries of the property on which the source is or is proposed to be located; contact information, if available, shall be obtained from the most current records of the city of Albuquerque office of neighborhood coordination and the county of Bernalillo zoning, building and planning department; the notice shall contain the information required by Paragraphs (1) and (3)-(5) of Subsection C of 20.11.41.13 NMAC, and the name of the contact person, the department and the address to which comments and inquiries may be directed; the notice of the PIH shall be in English and Spanish if the department determines notice in Spanish is necessary; if a PIH notice is returned to the department undelivered, the department shall promptly confirm the address through the appropriate local government entity, and, if an address is available, shall provide a second copy of applicant's PIH notice to the president or vice president of the neighborhood association or neighborhood coalition;

(6) publishing public notice of the PIH in the newspaper with the largest general circulation in Bernalillo county no fewer than 30 days before the PIH; the notice shall include the date, time, and location of the PIH, the number of the proposed permit, and a statement that a final decision has not been made by the department regarding the proposed permit;

(7) mailing notice of the PIH to all interested persons who have submitted written comments or evidence to the department and to all interested persons who have delivered to the department a written request for notice regarding the application; a request to inspect or copy shall not be considered a written comment for the purposes of Paragraph (7) of Subsection B of 20.11.41.15 NMAC;

(8) requiring department staff to attend the PIH; be present during the applicant's requested presentation and the comments and questions by the attendees; and answer questions regarding the application and the permitting process; and

(9) recording the PIH and including the recording in the administrative record for the permit application; the department shall provide a duplicate of the recording to any person who requests a copy; the person requesting shall reimburse the department for the cost of the copy before the department makes the copy; the person making the request for a copy may instead provide the department with recording media that meets the department specifications, and the department will not impose a charge for copying; if a person requests a transcript of the hearing (the requestor), the department shall obtain an estimate of the cost of the transcription and inform the requestor; the requestor shall pay the estimated cost before the department orders the transcription; if the actual cost of the transcription is more than the estimate, the requestor shall pay the additional amount before the department provides the transcription; if the actual cost of the transcription is less than the estimate, the department shall reimburse the difference.

[20.11.41.15 NMAC - Rp, 20.11.41.15 NMAC, 1/1/14; A, 12/13/17]

20.11.41.16 PERMIT DECISION AND AIR BOARD HEARING ON THE MERITS:

A. Within 30 days after the department has received an application for a new permit or permit modification, the department shall review the application and determine whether it is administratively complete.

(1) If the application is deemed administratively complete, the department shall send a letter by certified mail or electronic mail to the applicant stating the department's determination.

(2) If the application is deemed administratively incomplete or the department determines a different type of permit application is required, the department shall send a letter by certified mail or electronic mail to the applicant stating what additional information or fees are necessary before the department can deem the application administratively complete. The department may require information that is necessary to perform a thorough review of the application including: technical clarifications, emission calculations, emission factor usage, additional application review fees if any are required by 20.11.2 NMAC and new or additional air dispersion modeling. The letter shall state a reasonable deadline for the applicant to deliver the information, fees or air dispersion modeling. The applicant shall deliver the requested information, fees or air dispersion modeling by the deadline set by the department. The department may extend the deadline for good cause as determined by the department. If the department does not receive the additional information, fees or modeling by the deadline, the department may deny the application. If the department has ruled an application administratively incomplete three times, the department shall deny the permit application and send a letter by certified mail or electronic mail to the applicant stating that the permit application has been denied. Fees submitted for processing an application that has been denied shall not be refunded. If the department has denied the application, the applicant may submit a new application and the fee required for a new application.

(3) If the department determines the application is administratively complete but no permit is required, the department shall send a letter by certified mail or electronic mail to the applicant informing the applicant of the determination.

B. Within 90 days after the department has deemed the application administratively complete, the department shall issue the permit, issue the permit subject to conditions or deny the permit as authorized by the state act, unless the director grants an extension for not more than 90 days for good cause, including scheduling a PIH. If an extension of the 90 day deadline is needed to review and make a decision regarding the application, then 90 days after the department has deemed the application administratively complete, the department shall notify the applicant by certified mail or electronic mail that an extension of time is required. The notification shall specify in detail the grounds for the extension.

C. The department shall issue the permit, issue the permit subject to conditions or deny the requested permit or permit modification based on information contained in the department's administrative record of the permit application. The administrative record shall consist of the application, all other evidence submitted by the applicant, all evidence or written comments submitted by interested persons, all other evidence considered by the department, a statement of matters officially noticed and, if a PIH has been held, the PIH hearing record. The applicant has the burden of demonstrating that a permit should be issued.

D. Every person who participated in a permitting action before the department shall be notified by the department of the action taken and the reasons for the action. A request to inspect or copy information contained in the department's administrative record of the permit application shall not be considered participation for purposes of Subsection D of 20.11.41.16 NMAC. The department shall notify the applicant by certified mail as required by the state act. Applicants that request expedited receipt of the notification instead of receiving notice by certified mail may deliver a written request to the department and have an authorized representative of the applicant pick up the notification at the department. The authorized representative shall acknowledge receipt of the notification in writing. The department shall notify all other participating persons by regular mail sent to the legible address the participating person has provided to the department. Notification by mail shall be deemed complete and received three days after mailing postage paid to the participating person's address provided to the department.

E. A person who participated in a permitting action before the department and who is adversely affected by the permitting action may file a petition for hearing before the board. A request to inspect or copy shall not be considered participation for the purposes of Subsection E of 20.11.41.16 NMAC. The petition shall be in writing and shall be delivered to the board within 30 days from the date notice is given of the department's action. The petition shall conform to the requirements of Subsection B of 20.11.81.14 NMAC. The petitioner shall certify that a copy of the petition has been mailed or hand delivered to the applicant if the petitioner is not the applicant. A hearing

before the board shall be conducted as required by 20.11.81 NMAC. Unless a timely request for a hearing is made, the decision of the department shall be final.

F. If a timely request for a hearing is made, the board shall hold an adjudicatory hearing on the merits within 60 days of receipt of the petition as required by the state act at NMSA 1978, Section 74-2-7(I) and 20.11.81 NMAC. In the hearing before the board, the burden of proof shall be on the petitioner as required by the state act at NMSA 1978, Section 74-2-7(K).

G. Any person adversely affected by an administrative action taken by the board may appeal in accordance with the state act at 74-2-9 NMSA 1978.

[20.11.41.16 NMAC - Rp, 20.11.41.15 NMAC, 1/1/14]

20.11.41.17 BASIS FOR PERMIT DENIAL:

After the department has deemed a permit application administratively complete, the department may deny the application if:

A. the department determines the proposed construction, modification or technical revision will not meet an applicable standard, rule, regulation, provision or requirement of the federal act, the state act or a board regulation;

B. the department determines the source will cause or contribute to air contaminant levels in excess of a national or New Mexico ambient air quality standard;

C. the source will emit a hazardous air pollutant for which no NESHAP applies, if the HAP is emitted in a quantity and duration that may cause imminent danger to public health;

D. the department determines the construction, modification or technical revision would cause or contribute to ambient concentrations in excess of a prevention of significant deterioration (PSD) increment;

E. the department concludes that construction of a proposed new or modified source cannot or will not be completed within a reasonable time as determined by the department;

F. the department determines a conflict of interest existed or exists regarding an application that was submitted during accelerated review, as authorized by 20.11.41.32 NMAC;

G. the emission data that was submitted by the applicant as part of the application is not acceptable to the department for technical reasons;

H. the estimated emissions of air contaminants submitted by the applicant have not been appropriately identified or quantified;

I. the issuance of a permit, permit modification or technical revision will not be consistent with achieving progress toward attainment of the state ambient air quality standard that is being exceeded; or

J. the department has delivered three written notices requiring the applicant to provide specified information the department needs in order to take final action on the application and the applicant either has not provided the information by the deadline stated in the related notification or the applicant has submitted information that the department has determined to be technically unacceptable; the department may agree in writing to extend the deadline for good cause as determined by the department; a department request for information shall be for information that is necessary for the department to perform a thorough review of the application and to take final action on the application and may include technical clarifications, emission calculations, emission factor usage and replacement of air dispersion modeling.

[20.11.41.17 NMAC - Rp, 20.11.41.16 NMAC, 1/1/14]

20.11.41.18 APPLICANTS' ADDITIONAL LEGAL RESPONSIBILITIES:

The issuance of a permit does not relieve any person from responsibility for complying with applicable provisions of the federal act, the state act or a regulation of the board.

[20.11.41.18 NMAC - Rp, 20.11.41.17 NMAC, 1/1/14]

20.11.41.19 PERMIT CONDITIONS:

A. The contents of a permit application specifically identified by the department shall become terms and conditions of the permit.

B. The department shall impose conditions upon a permit as authorized by the state act and as the department determines to be appropriate, including:

(1) placement of individual emission limits on the source for which the permit is issued, as determined on a case-by-case basis, but the individual emission limits shall be only as restrictive as the more stringent of the following:

(a) the extent necessary to meet the requirements of the federal act, state act or board regulations; or

(b) the emission rate specified in the permit application;

(2) a requirement that the source install and operate control technology, determined on a case-by-case basis, sufficient to meet the requirements of the federal act, state act or board regulations;

(3) compliance with applicable NSPS and NESHAP;

(4) imposition of reasonable restrictions and limitations to prevent or abate air pollution not relating to emission limits or emission rates; examples include monitoring, recordkeeping and reporting; reporting administrative revisions; notifications; posting of permit; and substitution of equipment not resulting in an increase in emissions;

(5) any combination of the above; and

(6) in the case of a modification, the requirements of Subsection B of 20.11.41.19 NMAC apply only to the emission units involved in the modification.

C. The department may impose additional conditions in order to meet requirements of the federal act, the state act or a board regulation including:

(1) a schedule of construction;

(2) a condition requiring timely revision of permit terms or conditions;

(3) sampling ports of a size, number and location as the department may require;

(4) safe access to each port;

(5) instrumentation to monitor and record emission data including continuous emission monitoring;

(6) any other reasonable sampling, testing and ambient monitoring and meteorological facilities and protocols;

(7) periodic testing pursuant to 20.11.41.22 NMAC, *Performance Testing*;

(8) maintaining records of the nature and amount of emission;

(9) periodic reports to the department regarding the nature and amounts of emissions;

(10) maintaining records of air pollution control equipment performance; and

(11) monitoring, recordkeeping and reporting for hours of operation, throughput, capacity and other parametric information.

D. Every term or condition included in a permit is enforceable to the same extent as a regulation of the board.

[20.11.41.19 NMAC - Rp, 20.11.41.18 NMAC, 1/1/14]

20.11.41.20 PERMIT CANCELLATION, SUSPENSION OR REVOCATION:

A. The department shall cancel any permit for any source that ceases operation for five years or more, or permanently. Reactivation of any source after the five year period shall require a new permit.

B. The department may cancel a permit if the construction or modification is not commenced within two years from the date of issuance or, if during the construction or modification, work is suspended for a total of one year, such cancellation shall be subject to the following procedures:

(1) at least 30 days before canceling a permit, the department shall notify the permittee by certified mail of the impending cancellation; upon cancellation, the department shall notify the permittee by certified mail of the cancellation of the permit and the reasons therefor; construction, modification and, if required, interim operation shall cease upon the effective date of cancellation contained in the notice of cancellation; a permittee who has received notice that a permit is or will be cancelled may request a hearing before the board; the request must be made in writing to the board within 30 days after the notice of the department's action has been received by the permittee; unless a timely request for hearing is made, the decision of the department shall be final; and

(2) if a timely request for hearing is made, the board shall hold a hearing within 60 days after receipt of the request; the department shall notify the requestor by certified mail of the date, time and place of the hearing; in the hearing, the burden of proof shall be upon the requestor; the board may designate a hearing officer to take evidence in the hearing; based upon the evidence presented at the hearing, the board shall sustain, modify or reverse the action of the department; the hearing shall be conducted pursuant to 20.11.81 NMAC.

C. As authorized by the state act at NMSA 1978, Section 74-2-12, a violation of a requirement of the state act, a board regulation or a condition of a permit that has been issued pursuant to 20.11.41 NMAC may result in suspension or revocation of the permit. If the department initiates an enforcement action to suspend or revoke a permit, the department and the permittee shall comply with the procedures required by 20.11.80 NMAC, *Adjudicatory Procedures – Administrative Enforcement Hearings by Director*.

[20.11.41.20 NMAC - N, 1/1/14]

20.11.41.21 PERMITTEE'S OBLIGATION TO INFORM THE DEPARTMENT AND DELIVER AN ANNUAL EMISSIONS INVENTORY:

A. After a permit is issued pursuant to 20.11.41 NMAC, the permittee shall inform the department by letter, facsimile or electronic mail of:

(1) the date of anticipated initial startup of the source no fewer than 30 days before the anticipated initial startup date;

(2) the date of anticipated initial startup of a portable stationary source no fewer than two days before the anticipated initial startup date;

(3) the date of actual initial startup of the source or portable stationary source no more than 15 days after actual startup has occurred;

(4) the date a portable stationary source leaves or returns to Bernalillo county;

(5) any change of ownership, operator or permittee no more than 15 days after the change has occurred; and

(6) any permit update or correction as required by 20.11.41 NMAC no more than 60 days after the permittee knows or should have known about the condition that requires updating or correction of the permit.

B. The permittee shall submit an annual emissions inventory to the department as required by 20.11.47 NMAC, *Emissions Inventory Requirements*.

[20.11.41.21 NMAC - Rp, 20.11.41.20 NMAC, 1/1/14]

20.11.41.22 PERFORMANCE TESTING:

A. Within 60 days after achieving the maximum production rate at which the newly constructed or modified stationary source will be operated, but not later than 180 days after initial startup of the newly constructed or modified source, the owner or operator of the source may be required to conduct a performance test at the permittee's expense and in accordance with methods and under operating conditions approved by the department and to furnish the department with a written report of the results of the test. No more than 30 days after the test is completed, the permittee shall deliver the written report of the test results to the department. The permittee shall allow a representative of the department to be present at the test. The department may require the permittee to repeat the performance tests at the permittee's expense until compliance is demonstrated and testing is performed in a technically satisfactory manner as determined by the department.

B. The department may require the permittee to perform initial testing or additional testing if the department determines that:

(1) an inspection of the source indicates noncompliance with any regulation or permit condition;

(2) previous testing indicated noncompliance with emission limits established by the permit; or

(3) the test was technically unsatisfactory.

C. The permittee shall conduct performance testing at the permittee's expense as frequently as the department requires to determine that the source being tested demonstrates compliance with the permit. The department may waive testing; reduce testing frequency; extend testing deadlines; or authorize performance testing at less than 90% of the maximum production rate, rated capacity, or permitted rate if the permittee delivers a written request to the department no fewer than 60 days before the test. The department shall review all requests and notify the permittee of its decision in writing no fewer than 30 days before the performance test. The department's determination shall be final.

[20.11.41.22 NMAC - Rp, 20.11.41.21 NMAC, 1/1/14]

20.11.41.23 TEMPORARY RELOCATION OF PORTABLE STATIONARY SOURCES:

A. Portable aerospace ground equipment exempted by Subparagraph (f) of Paragraph (2) of Subsection F of 20.11.41.2 NMAC and portable support equipment exempted by Subparagraph (g) of Paragraph (2) of Subsection F of 20.11.41.2 NMAC are not subject to the requirements of 20.11.41.23 NMAC.

B. The permittee of a portable stationary source may submit a written request to the department seeking approval to temporarily relocate and operate the portable stationary source. Temporary relocations shall not exceed a total of 365 consecutive days.

C. The permittee of a portable stationary source shall not construct or operate at the new location until the department approves the relocation request in writing.

D. The permittee of a portable stationary source shall submit a relocation application no fewer than 45 days before the date the permittee proposes to commence operations at a new location within Bernalillo county. The permittee shall operate the portable stationary source at the proposed new location as required by the permit conditions unless the department imposes additional or more restrictive operational requirements or conditions in writing during the approval process. The relocation application shall:

(1) be submitted on forms provided by the department with fee required by 20.11.2 NMAC;

(2) include for each process unit an equipment list that shall include make, model and manufacture date; serial number; rated capacity; production rates; and emissions estimates;

(3) include a description of all stationary sources that have an air quality source registration or permit, and all residences, offices, schools, community centers and medical facilities that are located within one-quarter of a mile of the proposed new location of the portable stationary source;

(4) unless waived in writing by the department, include an EPA-approved air dispersion model executed for the proposed new location that demonstrates compliance with the NAAQS and the NMAAQS; the modeling protocol shall comply with the air dispersion modeling requirements of Paragraph (4) of Subsection E of 20.11.41.13 NMAC;

(5) include all information required by 20.11.41.13 NMAC determined to be relevant by the department and all additional information the department reasonably requires; and

(6) be signed by the operator, owner or an authorized representative certifying to the accuracy of all information included in the application and any attachments.

E. The department may take into consideration the proposed duration of operation, the proposed location, the nature and amount of emissions, anticipated public concerns and other relevant factors in determining whether to require public notice as specified in Subsection B of 20.11.41.13 NMAC. At a minimum, at the time the relocation application is submitted, the permittee shall provide proof that a weather-proof sign provided by the department has been posted at the more visible of either the proposed or existing facility entrance or other location on the property boundary. The applicant shall list on the sign all information required by Subsection C of 20.11.41.13 NMAC. The weather-proof sign shall remain posted and maintained until the department makes a final decision regarding the location request.

F. The department may hold a PIH for good cause.

G. The department may deny the request to relocate the portable stationary source if the relocation application does not include all information required by Subsection D of 20.11.41.23 NMAC, or if the relocation application is submitted to the department fewer than 45 days before the proposed relocation date.

H. The department shall not approve the relocation if the department determines the relocation will result in an exceedance of any NAAQS or NMAAQS at the proposed new location.

I. No more than 45 days after the department receives the relocation application, the department shall approve the relocation, deny the relocation, approve the relocation with conditions or hold a PIH regarding the relocation request. The department shall notify the permittee by certified mail regarding the department's decision.

J. If the stationary source has been issued a permit pursuant to a board regulation but has not been designated in the permit as a portable stationary source, and the source wishes to relocate within Bernalillo county or be classified as a portable stationary source, the request to relocate or reclassify the source shall be treated as a proposed permit modification and the permittee shall comply with the requirements of 20.11.41.29 NMAC.

[20.11.41.23 NMAC - N, 1/1/14]

20.11.41.24 EMERGENCY PERMITS:

A. The department may issue an emergency permit when the director determines an emergency situation exists that threatens public health, safety or welfare, and that a source subject to 20.11.41 NMAC should be immediately constructed, modified or relocated in order to mitigate, prevent or remedy the emergency.

B. In order to ensure that the public emergency is not worsened by excess emissions or inadequate air pollution control equipment, the department shall verify that the source, when operating in accordance with the permit to be issued, can and will meet all applicable standards, emission limitations and conditions before the department authorizes startup.

C. If the department makes an affirmative administrative completeness determination regarding a request for an emergency permit and the department decides to issue the emergency permit, then the department shall:

(1) make the request for an emergency permit, the issued emergency permit and all supporting documents available for public inspection at the department's air quality division office at One Civic Plaza NW, Albuquerque, New Mexico 87102;

(2) publish public notice in the newspaper with the largest general circulation in Bernalillo county; the notice shall state:

(a) the applicant's name and address, the proposed or existing location, a brief description of the source, a brief summary of proposed emissions and ambient air quality impacts as determined by air dispersion modeling if required by the department, the department's approval of the request for an emergency permit and that the department has issued the emergency permit;

(b) the location where the request for the emergency permit, the emergency permit and the department's analysis are available for public review;

(c) that the public has 30 days to submit written comment and evidence to the department regarding the emergency permit, the deadline for submitting written comments and evidence; and

(d) that the department shall hold a PIH pursuant to 20.11.41.15 NMAC if the director determines there is significant public interest and a significant air quality issue is involved;

(3) provide the notice required by Paragraph (2) of Subsection C of 20.11.41.24 NMAC by regular mail or electronic mail to all individuals and organizations identified on a list maintained by the department of persons who within the previous 12 months have delivered to the department a written request for notice of all applications filed pursuant to 20.11.41 NMAC;

(4) provide a copy of the public notice required by Paragraph (2) of Subsection C of 20.11.41.24 NMAC by certified mail or electronic mail to the designated representative(s) of the recognized neighborhood associations and recognized coalitions, that are within one-half mile of the exterior boundaries of the property on which the source is or is proposed to be located; contact information, if available, shall be obtained from the most current records of the city of Albuquerque office of neighborhood coordination and the county of Bernalillo zoning, building and planning department; and

(5) allow all interested persons 30 days from the date the public notice is published to deliver to the department written comment and evidence regarding the emergency permit.

D. If a person violates a board regulation or permit condition, including failure to apply in a timely manner for a permit, permit modification, relocation or technical revision, then the violation shall not qualify as an emergency for the purposes of 20.11.41.24 NMAC.

E. The following requirements shall not apply to emergency permits processed pursuant to 20.11.41.24 NMAC: Subsection B of 20.11.41.13 NMAC and Subsections A and B of 20.11.41.16 NMAC.

F. The permittee shall not commence emergency construction, modification or relocation until the department has issued an emergency permit.

[20.11.41.24 NMAC - Rp, 20.11.41.22 NMAC, 1/1/14]

20.11.41.25 NONATTAINMENT AREA REQUIREMENTS:

A. Applicability: 20.11.41.25 NMAC applies to:

(1) a new source or modification of an existing source that will emit a regulated air contaminant that will cause an ambient impact of the contaminant in excess of a significant ambient concentration established in 20.11.41.33 NMAC, *Significant Ambient Concentrations - Nonattainment*, Table 1, at a location that does not meet the standards incorporated in 20.11.8 NMAC, *Ambient Air Quality Standards*, for that contaminant;

(2) a new source or modification of an existing source that is not a major stationary source or major modification as defined in 20.11.60 NMAC, *Permitting in Nonattainment Areas*, and will emit a regulated air contaminant that will cause an ambient impact of the contaminant in excess of a significant ambient concentration established in 20.11.41.33 NMAC, *Significant Ambient Concentrations - Nonattainment*, Table 1, at a location that does not meet the NAAQS for that contaminant; and

(3) an existing source that does not propose an increase in emissions but emits or will emit a regulated air contaminant that will cause an ambient impact of the contaminant in excess of a significant ambient concentration included in 20.11.41.33 NMAC, *Significant Ambient Concentrations - Nonattainment*, Table 1, at any location that does not meet the 20.11.8 NMAC standards for that contaminant.

B. A new source or modification of an existing source subject to 20.11.41.25 NMAC shall offset the ambient impact of its emissions by:

(1) obtaining emission offsets for proposed emissions in an amount greater than one-to-one so that a net air quality benefit will result; and

(2) ensuring emission offsets are quantifiable, enforceable and permanent by complying with the following sections of 20.11.60 NMAC:

(a) 20.11.60.15, *Baseline for Determining Credit for Emission and Air Quality Offsets*;

(b) 20.11.60.18 NMAC, *Emission Offset Ratio*; and

(c) 20.11.60.25 NMAC, *Air Quality Benefit*.

C. An existing source that is subject to 20.11.41.25 NMAC shall demonstrate a net air quality benefit of at least a 20 percent reduction in ambient impact for each applicable contaminant. The 20 percent reduction shall be calculated by subtracting the projected source impact from the existing source impact and dividing the result by the existing source impact. The net air quality benefit shall also comply with 20.11.60.25 NMAC, *Air Quality Benefit*.

[20.11.41.25 NMAC - Rp, 20.11.41.24 NMAC, 1/1/14]

20.11.41.26 COMPLIANCE CERTIFICATION:

A. Notwithstanding any other provision in the New Mexico state implementation plan for air quality, a permittee may use monitoring required by 20.11.42 NMAC, *Operating Permits*, in addition to compliance methods specified in a permit issued to the source for the purpose of submitting a compliance certification.

B. 20.11.41.26 NMAC applies only to sources that are subject to 20.11.41 NMAC and are defined as a major source in 20.11.42 NMAC, *Operating Permits*.

[20.11.41.26 NMAC - Rp, 20.11.41.25 NMAC, 1/1/14]

20.11.41.27 ENFORCEMENT:

Notwithstanding any other provision in the New Mexico state implementation plan for air quality, any credible evidence may be used to determine whether a person has violated or is in violation of the terms or conditions of a permit issued pursuant to 20.11.41 NMAC, including a permit issued to a source that meets the applicability requirements 20.11.61 NMAC, *Prevention of Significant Deterioration*, or 20.11.60 NMAC, *Permitting in Nonattainment Areas*.

A. Information obtained by using the following methods is presumptively credible evidence of whether a violation has occurred at a source:

- (1)** a monitoring or information-gathering method approved for the source pursuant to 20.11.42 NMAC and incorporated in a 20.11.42 NMAC operating permit; or
- (2)** compliance methods specified by the New Mexico state implementation plan for air quality.

B. The following are presumptively credible testing, monitoring or information gathering methods:

- (1)** any federally enforceable monitoring or testing method, including methods authorized or required by 40 CFR, parts 51, 60, 61, 63 and 75; and
- (2)** other testing, monitoring or information gathering methods that produce information comparable to information produced by any method authorized by Subsection A of 20.11.41.27 NMAC or Paragraph (1) of Subsection B of 20.11.41.27 NMAC, as determined by the department.

[20.11.41.27 NMAC - Rp, 20.11.41.26 NMAC, 1/1/14]

20.11.41.28 ADMINISTRATIVE AND TECHNICAL PERMIT REVISIONS:

A. Administrative permit revision:

(1) An administrative permit revision may be used by the department or requested by a permittee to revise a permit that has been issued pursuant to 20.11.41 NMAC in order to:

- (a) correct a typographical error;
- (b) identify a change in ownership, name, address or contact information of any person identified in the permit; or
- (c) incorporate a change in the permit if the change is limited to retiring an emission unit at the facility, which shall be effective when the department receives written notice that the emission unit has ceased operation; and
- (d) incorporate a change in the permit to include a source or activity at the facility if the facility or activity is exempted by Paragraph (3) of Subsection F of 20.11.41.2 NMAC.

(2) An administrative permit revision shall:

- (a) not be subject to Subsection B of 20.11.41.13 NMAC, *Applicant's Public Notice Requirements*;
- (b) not be subject to 20.11.41.14 NMAC, *Public Notice by Department - Public Participation*;
- (c) be subject to 20.11.41.12 NMAC, *Fees for Permit Application Review*; and
- (d) be submitted on forms provided by the department.

(3) When the department receives a revision form, the department shall review the form. If the department determines the revision qualifies as an administrative revision, the department shall file the revision with the permit. However, the procedure authorized by Subsection A of 20.11.41.28 NMAC may not be used to create federally enforceable conditions or emissions limitations to avoid any applicable requirement.

B. Technical permit revision:

(1) A technical permit revision may be requested by a permittee provided that it does not require air dispersion modeling and meets one or more of the following criteria:

- (a) to incorporate a change in the permit if the change only involves a change in monitoring, record keeping or reporting requirements, if the department determines the change does not reduce the enforceability of the permit;

(b) to incorporate a change in the permit that only involves additional equipment with no increase in potential emission rate;

(c) to incorporate a change in the permit if the change only involves incorporating permit conditions, including emissions limitations, but only if the source existed on August 31, 1972, and the source has been in regular operation since that date;

(d) if the permittee wishes to impose a voluntary reduction of an emission limitation that was included as a specific permit conditions pursuant to Subsection B of 20.11.41.19 NMAC, *Permit Conditions*;

(e) to incorporate a change at a facility by replacing an emissions unit for which an allowable emissions limit has been established in the permit, but only if the replacement emissions unit as determined by the department:

(i) is equivalent to the replaced emissions unit and serves the same function within the facility and process;

(ii) has the same or lower capacity and potential emission rates;

(iii) has the same or higher control efficiency and stack parameters that are at least as effective in dispersing air pollutants;

(iv) would not result in an increase of the potential emission rate of any other equipment at the facility;

(v) is subject to the same or lower allowable emissions limits as the current permit prior to making the replacement and to all other original permit conditions prior to making the technical permit revision request;

(vi) will not cause or contribute to a violation of any NAAQS and NMAAQS when operated under applicable permit conditions;

(vii) will not require additional permit conditions to ensure the enforceability of the permit, such as additional record keeping or reporting in order to establish compliance; and

(viii) does not emit a regulated air contaminant not previously emitted;

(f) to reduce the potential emission rate of a unit or source, by incorporating terms and conditions in the permit, such as a cap on hours of operation, limitations on throughput of a specific product or products, or limitations on equipment capacity; or

(g) to incorporate a change in the permit that only involves the addition of air pollution control equipment or the substitution of a different type of air pollution control

equipment to existing equipment if the requested addition or substitution shall not result in an increase in the potential emission rate.

(2) An application for a technical revision to a permit shall:

(a) not be subject to 20.11.41.13 NMAC, *Applicant's Public Notice Requirements*;

(b) be subject to 20.11.41.12 NMAC, *Fees for Permit Application Review*;

(c) not be subject to 20.11.41.14 NMAC, *Public Notice by Department - Public Participation*; and

(d) be submitted on forms provided by the department, with all information submitted by the applicant certified as required by Paragraph (13) of Subsection E of 20.11.41.13 NMAC.

(3) Within 30 days of receipt of the application, the department shall approve or deny the application for the technical permit revision, or inform the applicant in writing that the request must be submitted as a permit modification.

(4) The department may deny an application for a technical permit revision or require that the application be submitted as a permit modification if:

(a) the proposed revision does not meet the criteria included in Subsection B of 20.11.41.28 NMAC;

(b) in the judgment of the department, the revision would require a decision on a significant or complex issue, or involve a substantive change; or

(c) in the judgment of the department, the permittee has submitted multiple or subsequent applications for technical permit revisions under 20.11.41.28 NMAC that segment a larger revision or modification that otherwise would not be eligible for a technical permit revision.

(5) The technical permit revision shall become effective when approved in writing by the department. The department shall file the technical permit revision with the permit. However, the procedure established in 20.11.41.28 NMAC may not be used to create federally enforceable conditions or emissions limitations to avoid an applicable requirement.

[20.11.41.28 NMAC - N, 1/1/14; A, 12/13/17]

20.11.41.29 PERMIT MODIFICATION:

A person who proposes to modify a stationary source shall comply with all requirements of 20.11.41 NMAC. Applications for permit modifications shall be processed in accordance with all requirements established by 20.11.41 NMAC for permit applications, including public notice, review, fees and hearing procedures.

[20.11.41.29 NMAC - N, 1/1/14]

20.11.41.30 PERMIT REOPENING, REVISION AND REISSUANCE:

A. The department may impose reasonable terms and conditions upon a permit, including a schedule of construction, the maximum period of time the permit shall be valid and a condition requiring timely revision of permit terms or conditions in order to meet new requirements, if any, under any federally required and approved state implementation plan revision. The department may reopen, revise and reissue a permit if the department determines:

(1) additional applicable requirements of the federal Act or the state act become applicable to the source, including excess emission requirements under the Title IV acid rain program;

(2) the permit contains a substantive material mistake or that an inaccurate statement was made in the permit application that resulted in incorrect or inappropriate evaluation of ambient air quality impacts or incorrect or inappropriate terms and conditions in the permit, including emissions limitations;

(3) the permit requires reopening, revision and reissuance to ensure compliance with all applicable requirements of the federal act, the state act and the board regulations;

(4) the permittee failed to disclose a material fact or a regulation that is applicable to the source as required in the permit application process, and the applicant knew or should have known about the material fact or regulation at the time the application was submitted; or

(5) the terms and conditions of a permit have not been or are not being met, as determined by the department.

B. The department shall notify the permittee by certified mail no fewer than 60 days before the date the department reopens the permit, except a shorter time period may be specified by the department in case of an emergency. The notification shall include a description of the reason or grounds for the reopening, the revisions required and any information that shall be submitted to the department by the permittee. The permittee shall submit all required additional information to the department no later than 30 days after receipt of the notification from the department. A permittee may request additional time to provide required information by delivering a written request to the department. The extension of time shall be effective if approved in writing by the department.

C. A permit that has been reopened and reissued may be appealed pursuant to 20.11.81 NMAC.

[20.11.41.30 NMAC - N, 1/1/14]

20.11.41.31 GENERAL CONSTRUCTION PERMITS:

A. General construction permits: General construction permits are issued to groups of sources that have similar operations, processes and emissions, are subject to the same or substantially similar requirements and have general construction permit forms that were approved by the department following the process described in Subsections B or C of 20.11.41.31 NMAC. A source that is required to obtain a permit pursuant to 20.11.41 NMAC but does not qualify for a general construction permit shall obtain a construction permit as required by 20.11.41.13 NMAC. A general construction permit shall not be issued for a major modification or a major stationary source as defined in either 20.11.60 NMAC, *Permitting in Nonattainment Areas*, or 20.11.61 NMAC, *Prevention of Significant Deterioration*, or for a major source as defined in 20.11.42 NMAC, *Operating Permits*.

B. Approval of general construction permit form and revised general construction permit form:

(1) The department shall provide notice of a proposed general construction permit form or revised general construction permit form (hereafter, "general construction form") by publication in the newspaper with the largest general circulation in Bernalillo county. The notice shall:

(a) provide a description of the groups of sources with similar operations, processes and emissions that are subject to the same or substantially similar requirements and would be able to use the proposed form within Bernalillo county to apply for an air quality permit if the form is approved;

(b) state the reason the department proposes approval of the general construction permit form;

(c) specify the notification period that the applicant will be required to provide to the public if the proposed form is approved by the department; and stipulate that an applicant shall use the form to apply for a permit; and public notice requirements that shall be met by the source as required by the 'general construction form' shall include at a minimum:

(i) provide public notice by certified mail or electronic mail to the designated representative(s) of the recognized neighborhood associations and recognized coalitions, as shown in the most current records of the city of Albuquerque office of neighborhood coordination and the Bernalillo County zoning, building and planning department, within one-half mile of the exterior boundaries of the property on

which the source is or is proposed to be located; the applicant may submit a written request to the department proposing an alternative approach to providing public notice if the proposed source or modification is located at a site with large property boundaries or campus-like facilities; the applicant shall obtain prior written approval from the department for any alternative approach to provide public notice; the public notice shall include all the information required by Subsection C of 20.11.41.13 NMAC; and

(ii) prior to submitting the application, post and maintain a weather-proof sign provided by the department, posted at the more visible of either the proposed or existing facility entrance or another location on the property that is accessible to the public, if approved in advance and in writing by the department; the applicant shall list on the sign all information required by Subsection C of 20.11.41.13 NMAC; the applicant shall keep the sign posted until the department takes final action on the permit application; if an applicant can establish to the department's satisfaction that the applicant is prohibited by law from posting at either location required by Paragraph (2) of Subsection B of 20.11.41.13 NMAC, the department may waive the posting requirement and may impose different notification requirements;

(d) provide a brief summary of the procedure that will be followed if an individual application is submitted on the proposed form;

(e) describe the location where the proposed general construction permit form may be obtained;

(f) state that the public has 30 days to submit written comments and evidence to the department regarding the proposed general construction permit form; and

(g) state that the department shall hold a PIH pursuant to 20.11.41.15 NMAC if the director determines there is significant public interest and a significant air quality issue is involved.

(2) The department shall provide the notice required by Paragraph (1) of Subsection B of 20.11.41.31 NMAC by regular mail or electronic mail to all individuals and organizations identified on a list maintained by the department of persons who have stated in writing a desire to receive notices of all applications filed pursuant to 20.11.41 NMAC.

(3) Each general construction permit form shall:

(a) describe which sources may qualify to apply for the general construction permit; and

(b) specify the contents required for a complete application for the general construction permit; in the general construction permit form, the department may

provide for an application that deviates from the requirements of 20.11.41.13 NMAC, if the application includes:

(i) all information necessary to determine qualification for, and to assure compliance with, the general construction permit; and

(ii) applicant's public notice requirements pursuant to Subparagraph (c) of Paragraph (1) of Subsection B of 20.11.41.31 NMAC and a statement that any person may provide written comment to the department within 15 days of receipt of the public notice;

(c) contain permit terms and conditions that apply to all sources that are issued the general construction permit, including:

(i) sufficient terms and conditions to assure that all sources permitted and operating in accordance with the general construction permit will meet all applicable requirements of the federal act, the state act and board regulations, including 20.11.63 NMAC, *New Source Performance Standards For Stationary Sources*, and 20.11.64 NMAC, *Emission Standards for Hazardous Air Pollutants For Stationary Sources*, and will not cause or contribute to air contaminant levels in excess of any NAAQS or NMAAQs; and

(ii) monitoring, record keeping and reporting requirements appropriate to the source and sufficient to ensure compliance with the general construction permit; at a minimum, the general construction permit shall specify where the records shall be maintained, how long the records shall be retained and that all records or reports shall be made available upon request by the department; and

(iii) as determined appropriate by the department, terms and conditions to address and report emissions that occur during upsets, startups and maintenance; and

(d) specify that every document, including every application form, report, compliance certification and supporting data, that is submitted pursuant to 20.11.41.31 NMAC shall contain a certification that meets the requirements of Paragraph (13) of Subsection E of 20.11.41.13 NMAC.

(4) Before the department makes a final decision regarding a general construction permit form, the department shall hold a PIH if the director determines that there is significant public interest and a significant air quality issue is involved. A PIH is not an adjudicatory hearing on the merits. During the PIH, attendees can ask questions, provide comments and provide information regarding the general construction permit form, but no final decision shall be made by the department at the close of the hearing. The department shall make all arrangements and pay all expenses of the hearing including:

(a) arranging a location for the PIH;

(b) providing a hearing officer; the hearing officer shall preside over the PIH, shall give all attendees present at the hearing a reasonable opportunity to ask questions, provide comments and provide information regarding the general construction permit form and to examine attendees commenting at the hearing, but shall not make a final recommendation or a final decision regarding the permit application;

(c) publishing public notice of the PIH in the newspaper with the largest general circulation in Bernalillo county no fewer than 10 days before the PIH; the notice shall include the date, time, and location of the PIH, a description of the general construction permit form, and a statement that a final decision has not been made by the department regarding the general construction permit form;

(d) mailing notice of PIH to all interested persons who have submitted written comments or evidence to the department and to all interested persons who have delivered to the department a written request for notice regarding the general construction permit form; a request to inspect or copy shall not be considered a written comment for the purposes of Subparagraph (d) of Paragraph (4) of Subsection B of 20.11.41.31 NMAC;

(e) requiring department staff to attend the PIH and be present during comments and questions by the attendees; and

(f) recording the PIH and including the recording in the administrative record regarding the general construction permit form; the department shall provide a duplicate of the recording to any person who requests a copy; the person requesting shall reimburse the department for the cost of the copy before the department makes the copy; the person making the request for a copy may instead provide the department with recording media that meets the department specifications, and the department will not impose a charge for copying; if a person requests a transcript of the hearing (the requestor), the department shall obtain an estimate of the cost of the transcription and inform the requestor; the requestor shall pay the estimated cost to the department before the department orders the transcription; if the actual cost of the transcription is more than the estimate, the requestor shall pay the additional amount before the department provides the transcription to the requestor; if the actual cost of the transcription is less than the estimate, the department shall reimburse the difference.

(5) The department may adopt the proposed general construction permit form or a substantially similar form if the requirements of Subsection B of 20.11.41.31 NMAC have been met.

C. Transition schedule for general construction permit form revision: When the department revises a general construction permit form, the department shall include a reasonable transition schedule before an existing source must comply.

D. Non-substantive changes: The department may make non-substantive changes to a general construction form without complying with Subsection B of 20.11.41.31 NMAC. Examples of non-substantive changes include correcting typographical or grammatical errors or adding clarification to instructions. When the department makes a non-substantive change to the form the department may change the date of the form to identify the new version.

[20.11.41.31 NMAC - N, 1/1/14]

20.11.41.32 ACCELERATED REVIEW OF APPLICATION:

A. Request for accelerated review of application: As provided by the state act at NMSA 1978 Section 74-2-7(B)(8) and (9), an applicant may request accelerated review if the applicant complies with the following requirements and all other requirements of 20.11.41.32 NMAC:

- (1) 20.11.41.12 NMAC, *Fees for Permit Application Review;*
- (2) 20.11.41.13 NMAC, *Application for Permit;*
- (3) 20.11.41.15 NMAC, *Public Information Hearing;*
- (4) 20.11.41.16 NMAC, *Permit Decisions and Air Board Hearing on the Merits;*
- (5) 20.11.41.18 NMAC, *Applicant's Additional Legal Responsibilities;*
- (6) 20.11.41.19 NMAC, *Permit Conditions;*
- (7) 20.11.41.20 NMAC, *Permit Cancellation, Suspension or Revocation;*
- (8) 20.11.41.21 NMAC, *Permittee's Obligation to Inform the Department and Deliver an Annual Emissions Inventory;*
- (9) 20.11.41.22 NMAC, *Performance Testing;*
- (10) 20.11.41.23 NMAC, *Temporary Relocation of Portable Stationary Sources;*
- (11) 20.11.41.24 NMAC, *Emergency Permits;*
- (12) 20.11.41.25 NMAC, *Nonattainment Area Requirements;*
- (13) 20.11.41.26 NMAC, *Compliance Certification;*
- (14) 20.11.41.27 NMAC, *Enforcement;*

- (15) 20.11.41.28 NMAC, *Administrative and Technical Permit Revisions*;
- (16) 20.11.41.29 NMAC, *Permit Modification*;
- (17) 20.11.41.30 NMAC, *Permit Reopening, Revision and Reissuance*;
- (18) 20.11.41.31 NMAC, *General Construction Permits*; and
- (19) 20.11.41.33 NMAC, *Significant Ambient Concentrations - Nonattainment*.

B. Public notice provided by the department: The department shall provide the public notice as required by Paragraphs (1) through (9) of Subsection B of 20.11.41.14 NMAC.

C. Qualified outside contractors:

(1) The department shall request proposals from persons interested in providing assistance as a qualified outside contractor in the accelerated review of permit applications pursuant to 20.11.41 NMAC.

(2) The department shall evaluate the proposals submitted by the interested persons. To be eligible to contract with the department as a qualified outside contractor, a person must be:

(a) legally qualified to contract with the department; and

(b) qualified to assist the department in review of permit applications, as determined by the department.

(3) Persons who are selected as qualified outside contractors shall be under contract with the department to provide accelerated review of permit applications pursuant to 20.11.41.32 NMAC.

D. Requests for accelerated review:

(1) An applicant for a permit pursuant to 20.11.41 NMAC may request accelerated permit review of the application by a qualified outside contractor. Applications for accelerated review shall be preceded by a pre-application meeting between the applicant and the department. Requests for accelerated review shall not be granted unless there is at least one qualified outside contractor under contract with the department as required by Paragraph (3) of Subsection C of 20.11.41.32 NMAC. If there are no persons under contract to provide accelerated review, the department shall review the application in accordance with 20.11.41.16 NMAC.

(2) A request for accelerated permit review shall be submitted with the permit application and a certified check or money order in the amount of the accelerated

review filing fee as required by 20.11.2 NMAC. The department shall notify the applicant of the names and addresses of the qualified outside contractors. The applicant shall deliver a copy of the application, by mail or hand delivery, to each qualified outside contractor identified by the department, unless the applicant is aware of a conflict of interest.

(3) Applicants who have chosen accelerated review pursuant to 20.11.41.32 NMAC shall pay the accelerated review fee required by 20.11.2 NMAC in addition to all other applicable fees imposed by 20.11.2 NMAC.

(4) Participation in the accelerated permit review process shall not relieve the applicant of any responsibilities imposed by a board regulation.

(5) Qualified outside contractors under contract that are interested in performing accelerated review of a specific application shall submit to the department:

(a) a statement of interest;

(b) a statement of qualifications for the specific application;

(c) an estimate of:

(i) the cost for the review;

(ii) the schedule for the review; and

(d) a notarized affidavit attesting that no conflict of interest exists regarding the specific permit application.

(6) The department shall review the submittals and determine which persons qualify to review a specific application.

(7) If no qualified outside person meets the requirements of Paragraph (5) of Subsection D of 20.11.41.32 NMAC, the department shall impose the accelerated review filing fee and the permit application review fee required by 20.11.2 NMAC and review the application on an accelerated schedule without the assistance of a qualified outside contractor and as required by 20.11.41.16 NMAC.

(8) Before the department determines whether an application for accelerated review is administratively complete, the department shall provide the applicant with a written bid summary of the qualified outside contractor submittals that shows the costs of the accelerated review and the anticipated schedule for reviewing the application, drafting the permit and issuing the permit. The department shall determine whether an application for accelerated review is administratively complete.

(9) Applicant's responsibilities for response to bid summary:

(a) Within five working days after the applicant receives the department's bid summary, the applicant shall either:

(i) submit to the department a written recommendation asking the department to accept one of the accelerated review bids, or a prioritized list of more than one of the accelerated review bids, including a brief justification for the recommendation, with a certified check or money order payable to the department in the amount specified in the bid summary and a notarized affidavit attesting that no conflict of interest exists regarding the applicant's recommended selections; or

(ii) submit to the department a written withdrawal of the request for accelerated review.

(b) The department shall deem the applicant's request for accelerated review withdrawn if the applicant fails to submit a written recommendation or written withdrawal within five working days after the applicant has received the department's bid summary unless the applicant has submitted a written request for an extension and the department has granted an extension in writing.

(10) Department's selection of qualified outside contractor:

(a) If the request for accelerated review is withdrawn, the department shall retain the accelerated review filing fee required by 20.11.2 NMAC and shall review the application without the assistance of a qualified outside contractor and pursuant to 20.11.41.16 NMAC.

(b) If the applicant recommends a qualified submittal, the department shall determine whether to accept the recommended submittal. If the department accepts the recommended submittal, the department shall instruct the qualified outside contractor to begin review of the application. If the department rejects the recommended submittal, the department shall inform the applicant and allow the applicant to recommend an alternate submittal pursuant to Paragraph (9) of Subsection D of 20.11.41.32 NMAC or, if there are no other qualified submittals, the department shall retain the accelerated review filing fee required by 20.11.2 NMAC and review the application without the assistance of a qualified outside contractor pursuant to 20.11.41.16 NMAC.

E. Disclosure of conflict of interest during accelerated review:

(1) The applicant and the qualified outside contractor have a continuing obligation to investigate potential conflicts of interest and to immediately disclose any conflict of interest to the department in writing. If a conflict of interest is not disclosed as required by Subparagraph (d) of Paragraph (5) of Subsection D of 20.11.41.32 NMAC and is later disclosed or discovered, the department may:

(a) deny the application pursuant to Subsection F of 20.11.41.17 NMAC;

(b) terminate accelerated review and review the application pursuant to 20.11.41.16 NMAC; or

(c) allow accelerated review to continue after elimination of the conflict.

(2) In choosing among the options provided by Subparagraphs (a)-(c) of Paragraph (1) of Subsection E of 20.11.41.32 NMAC, the department shall consider whether the conflict of interest was disclosed or discovered, the timing of the disclosure or discovery, the applicant's diligence in investigating potential conflicts of interest, any indication of intentional or willful failure to disclose, the significance of the conflict of interest, and the applicant's ability to eliminate the conflict of interest in a timely manner.

F. Issuance of a permit after accelerated review:

(1) Upon completion of the review, the qualified outside contractor shall provide the department with a draft permit and all documentation pertaining to the permit application, including all communications, notes and drafts. At any time during the review, the qualified outside contractor shall provide the department with all documentation pertaining to a specific application requested by the department in writing. The documentation shall be subject to the Inspection of Public Records Act, Chapter 14, Article 2 NMSA 1978, and the confidential information section of the state act at NMSA 1978, Section 74-2-11.

(2) The department shall review the analysis prepared by the qualified outside contractor and shall issue the permit, issue the permit subject to conditions or deny the requested permit pursuant to 20.11.41.17 NMAC. The department retains final authority to accept or reject the qualified outside contractor's analysis regarding the permit application.

(3) The department shall not issue the permit until the applicant has paid both the accelerated review processing fee and the permit review fee required by 20.11.2 NMAC.

[20.11.41.33 NMAC - Rp, 20.11.41.27 NMAC, 1/1/14]

20.11.41.34 PERMIT STREAMLINING SOURCE CLASS CATEGORIES:

[RESERVED]

[20.11.41.34 NMAC - N, 1/1/14]

PART 42: OPERATING PERMITS

20.11.42.1 ISSUING AGENCY:

Albuquerque-Bernalillo County Air Quality Control Board. P.O. Box 1293, Albuquerque, New Mexico 87103. Telephone: (505) 768-2601.

[20.11.42.1 NMAC - Rp, 20.11.42.1 NMAC, 11/05/2024]

20.11.42.2 SCOPE:

A. 20.11.42 NMAC sources: Operating permits must be obtained from the department for the following sources:

(1) any major source;

(2) any source, including an area source, subject to a standard or other requirement promulgated under Section 111 - *Standards of Performance for New Stationary Sources*, or Section 112 - *National Emission Standards for Hazardous Air Pollutants*, of the federal act, but not including any source which:

(a) is exempted under Subparagraph (b), of Paragraph (1), of Subsection C of 20.11.42.2 NMAC; or

(b) would be required to obtain a permit solely because it is subject to regulations or requirements under Section 112(r), *Prevention of Accidental Releases* of the federal act;

(3) any acid rain source; and

(4) any source in a source category so designated by the administrator, in whole or in part, by regulation, after notice and comment.

B. Requirement for a permit:

(1) A 20.11.42 NMAC source may operate after the time that it is required to submit a timely and complete application under 20.11.42 NMAC only if:

(a) the source is in compliance with an operating permit issued by the department or EPA; or

(b) a timely permit (including permit renewal) application has been submitted consistent with Subsection A of 20.11.42.12 NMAC; the ability to operate under these circumstances shall cease if the applicant fails to submit by the deadline specified in writing by the department any additional information identified as being needed to process the application.

(2) Revocation or termination of a permit by the department terminates the permittee's right to operate.

(3) The submittal of a complete operating permit application shall not protect any source from any applicable requirement, including any requirement that the source have a pre-construction permit under Title I of the federal act or board regulations.

C. Source category exemptions and deferrals:

(1) The following source categories are exempted from the obligation to obtain an operating permit:

(a) all sources and source categories that would be required to obtain a permit solely because they are subject to 40 CFR Part 60, Subpart AAA - *Standards of Performance for New Residential Wood Heaters*;

(b) all sources and source categories that would be required to obtain a permit solely because they are subject to 40 CFR Part 61, Subpart M - *National Emission Standard for Hazardous Air Pollutants for Asbestos*, Section 61.145, *Standard for Demolition and Renovation*;

(c) except as required under Section 20.11.42.14 NMAC, any source that would be required to obtain a permit solely because of emissions of radionuclides; and

(d) any source in a source category exempted by the administrator, by regulation, after notice and comment.

(2) Non-major sources, including those subject to Sections 111 or 112 of the federal act are exempt from the obligation to obtain a 20.11.42 NMAC permit until the administrator completes a rulemaking requiring such sources to obtain operating permits.

(3) Any source exempted from the requirement to obtain an operating permit may opt to apply for a permit under 20.11.42 NMAC.

D. Reserved.

E. Indian tribal jurisdiction: The requirements of 20.11.42 NMAC do not apply to sources within Indian tribal jurisdiction. For the operation of sources in that jurisdiction, the applicant shall make such applications to the tribal authority or to the administrator, as appropriate.

[20.11.42.2 NMAC - Rp, 20.11.42.2 NMAC, 11/5/2024]

20.11.42.3 STATUTORY AUTHORITY:

20.11.42 NMAC is adopted pursuant to the authority provided in the New Mexico Air Quality Control Act, Sections 74-2-4, 74-2-5.C NMSA 1978; the Joint Air Quality Control Board Ordinance, Bernalillo County Ordinance 94-5 Section 4; and the Joint Air Quality Control Board Ordinance, Revised Ordinances of Albuquerque 1994 Section 9-5-1-4.

[20.11.42.3 NMAC - Rp, 20.11.42.3 NMAC, 11/5/2024]

20.11.42.4 DURATION:

Permanent.

[20.11.42.4 NMAC - Rp, 20.11.42.4 NMAC, 11/5/2024]

20.11.42.5 EFFECTIVE DATE:

November 5, 2024, unless a later date is cited at the end of a section.

[20.11.42.5 NMAC - Rp, 20.11.42.5 NMAC, 11/5/2024]

20.11.42.6 OBJECTIVE:

To assure that major air pollution sources within Bernalillo county obtain an operating permit setting forth minimum requirements and conditions of operation pursuant to Title V of the Clean Air Act Amendments of 1990 (42 U.S.C. 7401, *et seq.*).

[20.11.42.6 NMAC - Rp, 20.11.42.6 NMAC, 11/5/2024]

20.11.42.7 DEFINITIONS:

In addition to the definitions in 20.11.42.7 NMAC, the definitions in 20.11.1 NMAC apply unless there is a conflict between definitions, in which case the definition in 20.11.42 NMAC shall govern.

A. "Acid rain source" has the meaning given to "affected source" in the regulations promulgated under Title IV of the federal act, and includes all sources subject to Title IV.

B. "Affected programs" means the state of New Mexico and Indian tribes and pueblos that are within 50 miles of the source.

C. "Air pollutant" means an air pollution agent or combination of such agents, including any physical, chemical, biological, radioactive (including source material, special nuclear material, and byproduct material) substance or matter, which is emitted into or otherwise, enters the ambient air. Such term includes any precursors to the formation of any air pollutant; to the extent the administrator has identified such precursor or precursors for the purpose for which the term "air pollutant" is used. This excludes water vapor, nitrogen (N₂), oxygen (O₂) and ethane.

D. "Air pollution control equipment" means any device, equipment, process or combination thereof, the operation of which would limit, capture, reduce, confine, or otherwise control regulated air pollutants or convert for the purposes of control any regulated air pollutant to another form, another chemical or another physical state. This includes, but is not limited to, sulfur recovery units, acid plants, baghouses, precipitators, scrubbers, cyclones, water sprays, enclosures, catalytic converters, and steam or water injection.

E. "Applicable requirement" means all of the following, as they apply to emissions units at a 20.11.42 NMAC source (including requirements that have been promulgated or approved by the board or EPA through rulemaking at the time of permit issuance but have future-effective compliance dates):

(1) any standard or other requirement provided for in the New Mexico state implementation plan approved by EPA, or promulgated by EPA through rulemaking, under Title I of the federal act to implement the relevant requirements of the federal act, including any revisions to that plan promulgated in 40 CFR, Part 52;

(2) any term or condition of any pre-construction permit issued pursuant to regulations approved or promulgated through rulemaking under Title I, including Parts C or D, of the federal act, unless that term or condition is determined by the department to be no longer pertinent;

- (3) any standard or other requirement under Section 111 of the federal act, including Section 111(d);
- (4) any standard or other requirement under Section 112 of the federal act, including any requirement concerning accident prevention under Section 112(r)(7) of the federal act;
- (5) any standard or other requirement of the acid rain program under Title IV of the federal act or the regulations promulgated thereunder;
- (6) any requirements established pursuant to Section 504(b) or Section 114(a)(3) of the federal act;
- (7) any standard or other requirement under Section 126(a)(1) and (c) of the federal act;
- (8) any standard or other requirement governing solid waste incineration under Section 129 of the federal act;
- (9) any standard or other requirement for consumer and commercial products, under Section 183(e) of the federal act;
- (10) any standard or other requirement for tank vessels under Section 183(f) of the federal act;
- (11) any standard or other requirement of the program to control air pollution from outer continental shelf sources, under Section 328 of the federal act;
- (12) any standard or other requirement of the regulations promulgated to protect stratospheric ozone under Title VI of the federal act, unless the administrator has determined that such requirements need not be contained in a Title V permit;
- (13) any national ambient air quality standard, or any increment or visibility requirement under Part C of Title I of the federal act, but only as it would apply to temporary sources permitted pursuant to Section 504(e) of the federal act; and
- (14) any regulation adopted by the board in accordance with the joint air quality control board ordinances pursuant to the New Mexico Air Quality Control Act, 74-2-5.B NMSA 1978.

F. "Department" means the Albuquerque environmental health department or its successor agency or authority, as represented by the department director or his or her designee.

G. "Draft permit" means a version of a permit, for which the department offers for public participation under Subsection B of 20.11.42.13 NMAC or affected program review under Subsection C of 20.11.42.13 NMAC.

H. "Emission limitation" means a requirement established by EPA, the board, or the department, that limits the quantity, rate or concentration, or combination thereof, of emissions of regulated air pollutants on a continuous basis, including any requirements relating to the operation or maintenance of a source to assure continuous reduction.

I. "Emissions allowable under the permit" means:

(1) any federally enforceable permit term or condition determined at issuance to be required by an applicable requirement that establishes an emission limit (including a work practice standard); or

(2) any federally enforceable emissions cap that the permittee has assumed to avoid an applicable requirement to which the source would otherwise be subject.

J. "Emissions unit" means any part or activity of a stationary source that emits or has the potential to emit any regulated air pollutant or any air pollutant listed pursuant to Section 112(b) of the federal act. This term is not meant to alter or affect the definition of the term "unit" for purposes of Title IV of the federal act.

K. "Federal act" means the federal Clean Air Act, as amended, 42 U.S.C. Section 7401, et seq.

L. "Federally enforceable" means all limitations and conditions which are enforceable by the administrator, including those requirements developed pursuant to 40 CFR Parts 60 and 61, requirements within the New Mexico state implementation plan, and any permit requirements established pursuant to 40 CFR 52.21 or under regulations approved pursuant to 40 CFR Part 51, Subpart I, including 40 CFR 51.165 and 40 CFR 51.166.

M. "Final permit" means the version of an operating permit issued by the department that has met all review requirements of Section 20.11.42.13 NMAC.

N. "Fugitive emissions" are those emissions, which could not reasonably pass through a stack, chimney, vent, or other functionally equivalent opening.

O. "General permit" means an operating permit that meets the requirements of Subsection D of 20.11.42.12 NMAC.

P. "Greenhouse gases" or "GHGs" means the air pollutant defined in § 86.1818–12(a) of Chapter I of Title 40 of the CFR, as the aggregate group of six greenhouse gases: carbon dioxide, nitrous oxide, methane, hydrofluorocarbons, perfluorocarbons, and sulfur hexafluoride.

Q. "Hazardous air pollutant" means an air contaminant that has been classified as a hazardous air pollutant pursuant to the federal act.

R. "Insignificant activities" means those activities listed by the department and approved by the administrator as insignificant on the basis of size, emissions or production rate.

S. "Major source" means any stationary source (or any group of stationary sources that are located on one or more contiguous or adjacent properties, and are under common control of the same person(s)) in which all of the pollutant emitting activities at such source belong to the same major group (i.e., all have the same two-digit code), as described in the *standard industrial classification manual*, 1987, and that is described in paragraphs (1), (2), or (3) below.

(1) A major source under Section 112 of the federal act, which is defined as:

(a) for pollutants other than radionuclides, any stationary source or group of stationary sources located within a contiguous area and under common control that emits or has the potential to emit, in the aggregate, 10 tons per year or more of any hazardous air pollutant which has been listed pursuant to Section 112 (b) of the federal act, 25 tons per year or more of any combination of such hazardous air pollutants, or such lesser quantity as the administrator may establish by rule; notwithstanding the preceding sentence, emissions from any oil or gas exploration or production well (with its associated equipment) and emissions from any pipeline compressor or pump station shall not be aggregated with emissions from other similar units, whether or not such units are in a contiguous area or under common control, to determine whether such units or stations are major sources; or

(b) for radionuclides, "major source" shall have the meaning specified by the administrator by rule.

(2) A major stationary source of air pollutants, as defined in Section 302 of the act, that directly emits or has the potential to emit, 100 tons per year or more of any air pollutant subject to regulation (including any major source of fugitive emissions of any such pollutant, as determined by rule by the administrator). The fugitive emissions of a stationary source shall not be considered in determining whether it is a major stationary source for the purposes of Section 302(j) of the act, unless the source belongs to one of the following categories of stationary sources:

(a) coal cleaning plants (with thermal dryers);

(b) kraft pulp mills;

(c) portland cement plants;

(d) primary zinc smelters;

- (e) iron and steel mills;
- (f) primary aluminum ore reduction plants;
- (g) primary copper smelters;
- (h) municipal incinerators capable of charging more than 250 tons of refuse per day;
- (i) hydrofluoric, sulfuric, or nitric acid plants;
- (j) petroleum refineries;
- (k) lime plants;
- (l) phosphate rock processing plants;
- (m) coke oven batteries;
- (n) sulfur recovery plants;
- (o) carbon black plants (furnace process);
- (p) primary lead smelters;
- (q) fuel conversion plant;
- (r) sintering plants;
- (s) secondary metal production plants;
- (t) chemical process plants - the term chemical processing plant shall not include ethanol production facilities that produce ethanol by natural fermentation included in NAICS codes 325193 or 312140;
- (u) fossil-fuel boilers (or combination thereof) totaling more than 250 million British thermal units per hour heat input;
- (v) petroleum storage and transfer units with a total storage capacity exceeding 300,000 barrels;
- (w) taconite ore processing plants;
- (x) glass fiber processing plants;
- (y) charcoal production plants;

(z) fossil fuel-fired steam electric plants of more than 250 million British thermal units per hour heat input; or

(aa) any other stationary source category, which as of August 7, 1980, is being regulated under Section 111 or 112 of the federal act.

(3) A major stationary source as defined in Part D of Title I of the federal act, including:

(a) for ozone non-attainment areas, sources with the potential to emit 100 tons per year or more of volatile organic compounds or nitrogen oxides in areas classified as "marginal" or "moderate", 50 tons per year or more in areas classified as "serious", 25 tons per year or more in areas classified as "severe", and 10 tons per year or more in areas classified as "extreme"; except that the references in Paragraph (3) of Subsection S of 20.11.42.7 NMAC to 100, 50, 25, and 10 tons per year of nitrogen oxides shall not apply to any source for which the administrator has made a finding, under Section 182(f)(1) or (2) of the federal act, that requirements under Section 182(f) of the act do not apply;

(b) for ozone transport regions established pursuant to Section 184 of the federal act, sources with the potential to emit 50 tons per year or more of volatile organic compounds;

(c) for carbon monoxide non-attainment areas:

(i) that are classified as "serious"; and

(ii) in which stationary sources contribute significantly to carbon monoxide levels as determined under rules issued by the administrator, sources with the potential to emit 50 tons per year or more of carbon monoxide; and

(d) for particulate matter (PM10) non-attainment areas classified as "serious", sources with the potential to emit 70 tons per year or more of PM10.

T. "Operating permit" or "permit" means any permit or group of permits covering a source that is issued, renewed, modified or revised pursuant to 20.11.42 NMAC.

U. "Operator" means the person(s) responsible for the overall operation of a facility.

V. "Owner" means the person(s) who owns a facility or part of a facility.

W. "Permit modification" means a revision to an operating permit that meets the requirements of significant permit modifications, minor permit modifications, or administrative permit amendments, as defined in Subsection E of 20.11.42.13 NMAC.

X. "Permittee" means the owner, operator or responsible official at a permitted 20.11.42 NMAC source, as identified in any permit application or modification.

Y. "Person" includes any individual, partnership, corporation, association, state or political subdivision of a state, and any agency, department or instrumentality of the United States, and any of their officers, agents or employees.

Z. "Potential to emit" means the maximum capacity of a stationary source to emit any air pollutant under its physical and operational design. Any physical or operational limitation on the capacity of a source to emit an air pollutant, including air pollution control equipment and restrictions on hours of operation or on the type or amount of material combusted, stored, or processed, shall be treated as part of its design if the limitation is federally enforceable. The potential to emit for nitrogen dioxide shall be based on total oxides of nitrogen.

AA. "Proposed permit" means the version of a permit that the department proposes to issue and forwards to the administrator for review in compliance with Subsection C of 20.11.42.13 NMAC.

BB. "Regulated air pollutant" means the following:

(1) nitrogen oxides, total suspended particulate matter, or any volatile organic compounds;

(2) any pollutant for which a national ambient air quality standard has been promulgated;

(3) any pollutant that is subject to any standard promulgated under Section 111 of the federal act;

(4) any class I or II substance subject to any standard promulgated under or established by Title VI of the federal act;

(5) any pollutant subject to a standard promulgated under Section 112 or any other requirements established under Section 112 of the federal act, including:

(a) any pollutant subject to requirements under Section 112(j) of the federal act; if the administrator fails to promulgate a standard by the date established pursuant to Section 112(e) of the federal act, any pollutant for which a subject source would be a major source shall be considered to be regulated on the date 18 months after the applicable date established pursuant to Section 112(e) of the federal act; and

(b) any pollutant for which the requirements of Section 112(g)(2) of the federal act have been met, but only with respect to the individual source subject to a Section 112(g)(2) requirement; or

(6) any other pollutant "subject to regulation" as defined in Subsection II of 20.11.42.7 NMAC.

CC. "Renewal" means the process by which a permit is reissued at the end of its term.

DD. "Responsible official" means one of the following:

(1) For a corporation: a president, secretary, treasurer, or vice-president of the corporation in charge of a principal business function, or any other person who performs similar policy or decision-making functions for the corporation, or a duly authorized representative of such person if the representative is responsible for the overall operation of one or more manufacturing, production, or operating facilities applying for or subject to a permit and either:

(a) the facilities employ more than 250 persons or have gross annual sales or expenditures exceeding \$25 million (in second quarter 1980 dollars); or

(b) the delegation of authority to such representatives is approved in advance by the department.

(2) For a partnership or sole proprietorship: a general partner or the proprietor, respectively.

(3) For a municipality, state, federal or other public agency: either a principal executive officer or ranking elected official. For the purposes of 20.11.42 NMAC, a principal executive officer of a federal agency includes the chief executive officer having responsibility for the overall operations of a principal geographic unit of the agency (e.g., a regional administrator of EPA).

(4) For an acid rain source:

(a) the designated representative (as defined in Section 402(26) of the federal act) in so far as actions, standards, requirements, or prohibitions under Title IV of the federal act or the regulations promulgated thereunder are concerned; and

(b) the designated representative for any other purposes under 40 CFR, Part 70.

EE. "Section 502(b)(10) changes" are changes that contravene an express permit term. Such changes do not include changes that would violate applicable requirements or contravene permit terms and conditions that are monitoring (including test methods), record keeping, reporting, or compliance certification requirements.

FF. "Shutdown" means the cessation of operation of any air pollution control equipment, process equipment or process for any purpose.

GG. "Startup" means the setting into operation of any air pollution control equipment, process equipment or process for any purpose.

HH. "Stationary source" or "source" means any building, structure, facility, or installation that emits or may emit any regulated air pollutant or any pollutant listed under Section 112(b) of the federal act.

II. "Subject to regulation" means, for any air pollutant, that the pollutant is subject to either a provision in the Clean Air Act, or a nationally-applicable regulation codified by the administrator in Subchapter C of 40 CFR Chapter I, that requires actual control of the quantity of emissions of that pollutant, and that such a control requirement has taken effect and is operative to control, limit or restrict the quantity of emissions of that pollutant released from the regulated activity. Except that:

(1) "Greenhouse gases" (GHGs), shall not be subject to regulation unless, as of July 1, 2011, the GHG emissions are at a stationary source emitting or having the potential to emit 100,000 tpy CO₂ equivalent emissions.

(2) The term "tpy CO₂ equivalent emissions" (CO₂e) shall represent an aggregate amount of GHGs emitted by the regulated activity, and shall be computed by multiplying the mass amount of emissions (tpy), for each of the six greenhouse gases in the pollutant GHGs, by the gas's associated global warming potential published at Table A-1 to Subpart A of 40 CFR Part 98, *Global Warming Potentials*, and summing the resultant value for each gas to compute a tpy CO₂e. For purposes of Paragraph (2) of Subsection II of 20.11.42.7 NMAC, prior to July 21, 2014, the mass of the greenhouse gas carbon dioxide shall not include carbon dioxide emissions resulting from the combustion or decomposition of non-fossilized and biodegradable organic material originating from plants, animals, or micro-organisms (including products, by-products, residues and waste from agriculture, forestry and related industries as well as the non-fossilized and biodegradable organic fractions of industrial and municipal wastes, including gases and liquids recovered from the decomposition of non-fossilized and biodegradable organic material).

JJ. "Subsidiary" means a business concern which is owned or controlled by, or is a partner of, the applicant or permittee.

KK. "Title I modification" means any modification under Sections 111 or 112 of the federal act and any physical change or change in method of operations that is subject to the pre-construction regulations promulgated under Parts C and D of the federal act.

[20.11.42.7 NMAC - Rp, 20.11.42.7 NMAC, 11/5/2024]

20.11.42.8 VARIANCES:

In accordance with the joint air quality control board ordinances pursuant to the New Mexico Air Quality Control Act Section 74-2-8 NMSA 1978, applicants and permittee's may seek a variance from the non-federally enforceable provisions of 20.11.42 NMAC.

[20.11.42.8 NMAC – Rp, 20.11.42.8 NMAC, 11/5/2024]

20.11.42.9 SAVINGS CLAUSE:

Any amendment to 20.11.42 NMAC, which is filed, with the state records center shall not affect actions pending for violation of a city or county ordinance, or 20.11.42 NMAC. Prosecution for a violation under prior regulation wording shall be governed and prosecuted under the statute, ordinance, part or regulation section in effect at the time the violation was committed.

[20.11.42.9 NMAC – Rp, 20.11.42.9 NMAC, 11/5/2024]

20.11.42.10 SEVERABILITY:

If any section, paragraph, sentence, clause, or word of 20.11.42 NMAC is for any reason held to be unconstitutional or otherwise invalid by any court, the decision shall not affect the validity of remaining provisions of 20.11.42 NMAC.

[20.11.42.10 NMAC – Rp, 20.11.42.10 NMAC, 11/5/2024]

20.11.42.11 DOCUMENTS:

Documents incorporated and cited in 20.11.42 NMAC may be viewed at the Albuquerque Environmental Health Department, 400 Marquette NW, Albuquerque, NM.

[20.11.42.11 NMAC – Rp, 20.11.42.11 NMAC, 11/5/2024]

20.11.42.12 PERMIT REQUIREMENTS:

A. Permit applications:

(1) **Duty to apply.** For each 20.11.42 NMAC source, the owner or operator shall submit a timely and complete permit application in accordance with 20.11.42 NMAC.

(2) **Timely application.**

(a) **A timely application is:**

(i) for first time applications, one that is submitted within 12 months after the source commences operation as a 20.11.42 NMAC source;

(ii) for purposes of permit renewal, one that is submitted at least 12 months prior to the date of permit expiration;

(iii) for the acid rain portion of permit applications for initial phase II acid rain sources under Title IV of the federal act, by January 1, 1996 for sulfur dioxide, and by January 1, 1998 for nitrogen oxides.

(b) Reserved.

(3) Completeness of application.

(a) To be deemed complete, an application must provide all information required pursuant to Paragraph (4), of Subsection A of 20.11.42.12 NMAC, except that applications for permit modifications need supply such information only if it is related to the proposed change.

(b) If, while processing an application, regardless of whether it has been determined or deemed to be complete, the department determines that additional information is necessary to evaluate or take final action on that application, it may request such information in writing and set a reasonable deadline for a response.

(c) Any applicant who fails to submit any relevant facts or who has submitted incorrect information in a permit application or in a supplemental submittal shall, upon becoming aware of such failure or incorrect submittal, promptly submit such supplementary facts or corrected information. In addition, an applicant shall provide further information as necessary to address any requirements that become applicable to the source after the date it filed a complete application but prior to release of a draft permit.

(d) The applicant's ability to operate without a permit, as set forth in Subparagraph (b), of Paragraph (1), of Subsection B of 20.11.42.2 NMAC, shall be in effect from the date a timely application is submitted until the final permit is issued or disapproved, provided that the applicant adequately submits any requested additional information by the deadline specified by the department.

(4) Content of application. Any person seeking a permit under 20.11.42 NMAC shall do so by filing a written application with the department. The applicant shall submit three copies of the permit application, or more, as requested by the department. An applicant may not omit information needed to determine the applicability of, or to impose, any applicable requirement, or to evaluate the fee amount required under 20.11.2 NMAC, *Fees*. Fugitive emissions shall be included in the permit application in the same manner as stack emissions, regardless of whether the source category in question is included in the list of sources contained in the definition of major source. All applications shall:

(a) be made on forms furnished by the department, which for the acid rain portions of permit applications and compliance plans shall be on nationally-standardized forms to the extent required by regulations promulgated under Title IV of the federal act;

(b) state the company's name and address (and, if different, plant name and address), together with the names and addresses of the owner(s), responsible official and the operator of the source, any subsidiaries or parent companies, the company's state of incorporation or principal registration to do business and corporate or partnership relationship to other permittee's subject to 20.11.42 NMAC, and the telephone numbers and names of the owners' agent(s) and the site contact(s) familiar with plant operations;

(c) state the date of the application;

(d) include a description of the source's processes and products (by standard industrial classification code) including any associated with alternative scenarios identified by the applicant, and a map, such as the 7.5 minute topographic quadrangle map published by the United States geological survey or the most detailed map available showing the exact location of the source; the location shall be identified by latitude and longitude or by UTM coordinates;

(e) for all emissions of all air pollutants for which the source is major and all emissions of regulated air pollutants, provide all emissions information, calculations and computations for the source and for each emissions unit, except for insignificant activities (as defined in Subsection R of 20.11.42.7 NMAC); this shall include:

(i) a process flow sheet of all components of the facility which would be involved in routine operations and emissions;

(ii) identification and description of all emission points in sufficient detail to establish the basis for fees and applicability of requirements of the state and federal acts;

(iii) emissions rates in tons per year, pounds per hour and other terms necessary to establish compliance consistent with the applicable standard reference test method;

(iv) specific information such as that regarding fuels, fuel use, raw materials, or production rates, to the extent it is needed to determine or regulate emissions;

(v) identification and full description, including all calculations and the basis for all control efficiencies presented, of air pollution control equipment and compliance monitoring devices or activities;

(vi) the maximum and standard operating schedules of the source, as well as any work practice standards or limitations on source operation which affect emissions of regulated pollutants;

(vii) an operational plan defining the measures to be taken to mitigate source emissions during startups, shutdowns and emergencies;

(viii) other relevant information as the department may reasonably require or which are required by any applicable requirements (including information related to stack height limitations developed pursuant to Section 123 of the federal act); and

(ix) for each alternative operating scenario identified by the applicant, all of the information required in Items (i) through (viii) above, as well as additional information determined to be necessary by the department to define such alternative operating scenarios;

(f) provide a list of insignificant activities (as defined in Subsection R of 20.11.42.7 NMAC) at the source, their emissions, to the extent required by the department, and any information necessary to determine applicable requirements;

(g) provide a citation and description of all applicable air pollution control requirements, including:

(i) sufficient information related to the emissions of regulated air pollutants to verify the requirements that are applicable to the source; and

(ii) a description of or reference to any applicable test method for determining compliance with each applicable requirement;

(h) provide an explanation of any proposed exemptions from otherwise applicable requirements;

(i) provide other specific information that may be necessary to implement and enforce other requirements of the state or federal acts or to determine the applicability of such requirements, including information necessary to collect any fees owed under 20.11.2 NMAC, *Fees*;

(j) for applications which:

(i) are required pursuant to the transition schedule in Subparagraph (b), of Paragraph (2), of Subsection A of 20.11.42.12 NMAC; or

(ii) for subsequent applications or modifications, where emissions or anticipated emissions have increased since modeling for a modification or new source construction was reviewed under 20.11.41 NMAC or 20.11.42 NMAC: submit a

dispersion modeling analysis, using EPA approved models and procedures, showing whether emissions from the source would cause air pollutant concentrations in excess of any New Mexico ambient air quality standard for nitrogen oxides, sulfur oxides, total suspended particulates or non-methane hydrocarbons, or any national ambient air quality standard; air pollutants that are not emitted in significant amounts (as defined in 40 CFR 52.21(b)(23)(i)) during routine operations need not be modeled; the department may waive modeling with respect to ozone if the department determines that emissions from the source are not likely to cause ozone concentrations in excess of the national ambient air quality standard;

(k) provide certification of compliance, including:

(i) a certification, by a responsible official consistent with Paragraph (5), of Subsection A of 20.11.42.12 NMAC of the source's compliance status for each applicable requirement;

(ii) a statement of methods used for determining compliance, including a description of monitoring, record keeping, and reporting requirements and test methods;

(iii) a statement that the source will continue to be in compliance with applicable requirements for which it is in compliance, and will, in a timely manner or at such schedule expressly required by the applicable requirement, meet additional applicable requirements that become effective during the permit term;

(iv) a schedule for submission of compliance certifications during the permit term, to be submitted no less frequently than annually, or more frequently if specified by the underlying applicable requirement or by the department; and

(v) a statement indicating the source's compliance status with any enhanced monitoring and compliance certification requirements of the federal act;

(l) for sources that are not in compliance with all applicable requirements at the time of permit application, provide a compliance plan that contains:

(i) a description of the compliance status of the source with respect to all applicable requirements;

(ii) a narrative description of how the source will achieve compliance with such requirements for which it is not in compliance;

(iii) a schedule of remedial measures, including an enforceable sequence of actions with milestones, leading to compliance with such applicable requirements; the schedule of compliance shall be at least as stringent as that contained in any consent decree or administrative order to which the source is subject, and the obligations of any consent decree or administrative order shall not be in any

way diminished by the schedule of compliance; any such schedule of compliance shall be supplemental to, and shall not prohibit the department from taking any enforcement action for noncompliance with, the applicable requirements on which it is based;

(iv) a schedule for submission of certified progress reports no less frequently than every six months; and

(v) for the portion of each acid rain source subject to the acid rain provisions of Title IV of the federal act, the compliance plan content requirements specified in this paragraph, except as specifically superseded by regulations promulgated under Title IV of the federal act with regard to the schedule and method(s) the source will use to achieve compliance with the acid rain emissions limitations.

(5) **Certification.** Any document, including any application form, report, or compliance certification, submitted pursuant to 20.11.42 NMAC shall contain certification by a responsible official of truth, accuracy, and completeness. This certification and any other certification required under this regulation shall state that, based on information and belief formed after reasonable inquiry, the statements and information in the document are true, accurate, and complete.

B. Confidential information protection:

(1) All confidentiality claims made regarding material submitted to the department under 20.11.42 NMAC shall be reviewed in accordance with the provisions of the joint air quality control board ordinances pursuant to the New Mexico Air Quality Control Act Section 74-2-11 NMSA 1978 and the New Mexico Inspection of Public Records Act, Section 14-2-1, et seq. NMSA 1978.

(2) In the case where an applicant or permittee has submitted information to the department under a claim of confidentiality, the department may also require the applicant or permittee to submit a copy of such information directly to the administrator.

(3) An operating permit is a public record, and not entitled to protection under Section 114(c) of the federal act.

C. Permit content:

(1) Permit conditions.

(a) The department shall specify conditions upon a permit, including emission limitations and sufficient operational requirements and limitations, to assure compliance with all applicable requirements at the time of permit issuance or as specified in the approved schedule of compliance. The permit shall:

(i) for major sources, include all applicable requirements for all relevant emissions units in the major source;

(ii) for any non-major source subject to Section 20.11.42.2 NMAC, include all applicable requirements which apply to emissions units that cause the source to be subject to 20.11.42 NMAC;

(iii) specify and reference the origin of and authority for each term or condition, and identify any difference in form as compared to the applicable requirement upon which the term or condition is based;

(iv) include a severability clause to ensure the continued validity of the various permit requirements in the event of a challenge to any portions of the permit; and

(v) include a provision to ensure that the permittee pays fees to the department consistent with the fee schedule in 20.11.2 NMAC, *Fees*;

(vi) for purposes of the permit shield, identify any requirement specifically identified in the application or significant permit modification that the department has determined is not applicable to the source, and state the basis for any such determination.

(b) Each permit issued shall, additionally, include provisions stating that:

(i) the permittee shall comply with all terms and conditions of the permit; any permit noncompliance is grounds for enforcement action; in addition, noncompliance with federally enforceable permit conditions constitutes a violation of the federal act;

(ii) it shall not be a defense for a permittee in an enforcement action that it would have been necessary to halt or reduce the permitted activity in order to maintain compliance with the conditions of the permit;

(iii) the permit may be modified, reopened and revised, revoked and reissued, or terminated for cause in accordance with Subsection F of 20.11.42.13 NMAC;

(iv) the filing of a request by the permittee for a permit modification, revocation and reissuance, or termination, or of a notification of planned changes or anticipated noncompliance shall not stay any permit condition;

(v) the permit does not convey any property rights of any sort, or any exclusive privilege;

(vi) within the period specified by the department, the permittee shall furnish any information that the department may request in writing to determine whether cause exists for reopening and revising, revoking and reissuing, or termination of the permit or to determine compliance with the permit; upon request, the permittee shall

also furnish to the department copies of records required by the permit to be maintained.

(c) The terms and conditions for all alternative operating scenarios identified in the application and approved by the department:

(i) shall require that the permittee maintain a log at the permitted facility which documents, contemporaneously with any change from one operating scenario to another, the scenario under which the facility is operating; and

(ii) shall, for each such alternative scenario, meet all applicable requirements and the requirements of 20.11.42 NMAC.

(d) The department may impose conditions regulating emissions during startup and shutdown.

(e) All permit terms and conditions which are required under the federal act or under any of its applicable requirements, including any provisions designed to limit a source's potential to emit, are enforceable by the administrator and citizens under the federal act. The permit shall specifically designate as not being federally enforceable under the federal act any terms or conditions included in the permit that are not required under the federal act or under any of its applicable requirements.

(f) The issuance of a permit, or the filing or approval of a compliance plan, does not relieve any person from civil or criminal liability for failure to comply with the provisions of the Air Quality Control Act, the federal act, federal regulations thereunder, any applicable regulations of the board, and any other applicable law or regulation.

(g) The department may include part or all of the contents of the application as terms and conditions of the permit or permit modification. The department shall not apply permit terms and conditions upon emissions of regulated pollutants for which there are no applicable requirements, unless the source is major for that pollutant.

(h) Fugitive emissions from a source shall be included in the operating permit in the same manner as stack emissions, regardless of whether the source category in question is included in the list of sources contained in the definition of major source.

(i) The acid rain portion of operating permits for acid rain sources shall:

(i) state that, where an applicable requirement of the federal act is more stringent than an applicable requirement of regulations promulgated under Title IV of the federal act, both provisions shall be incorporated into the permit and shall be enforceable by the administrator;

(ii) contain a permit condition prohibiting emissions exceeding any allowances that the acid rain source lawfully holds under Title IV of the federal act or the

regulations promulgated thereunder; no permit modification under this regulation shall be required for increases in emissions that are authorized by allowances acquired pursuant to the acid rain program, provided that such increases do not require a permit modification under any other applicable requirement; no limit shall be placed on the number of allowances held by the acid rain source; the permittee may not use allowances as a defense to noncompliance with any other applicable requirement; any such allowance shall be accounted for according to the procedures established in regulations promulgated under Title IV of the federal act.

(2) **Permit duration.** The department shall issue operating permits for a fixed term not to exceed five years.

(3) **Monitoring.**

(a) Each permit shall contain all emissions monitoring requirements, and analysis procedures or test methods, required to assure and verify compliance with the terms and conditions of the permit and applicable requirements, including any procedures and methods promulgated by the administrator.

(b) Where the applicable requirement does not require periodic testing or instrumental or non-instrumental monitoring (which may consist of record keeping designed to serve as monitoring), the permit shall require periodic monitoring sufficient to yield reliable data from the relevant time period that are representative of the source's compliance with the permit, as reported pursuant to Paragraph (5), of Subsection C of 20.11.42.12 NMAC. Such monitoring requirements shall assure use of terms, test methods, units, averaging periods, and other statistical conventions consistent with the applicable requirement.

(c) The permit shall also contain specific requirements concerning the use, maintenance, and, when appropriate, installation of monitoring equipment or methods.

(4) **Record keeping.**

(a) The permit shall require record keeping sufficient to assure and verify compliance with the terms and conditions of the permit, including:

(i) the date, place as defined in the permit, and time of sampling or measurements;

(ii) the date(s) analyses were performed;

(iii) the company or entity that performed the analyses;

(iv) the analytical techniques or methods used;

(v) the results of such analyses; and

(vi) the operating conditions existing at the time of sampling or measurement.

(b) Records of all monitoring data and support information shall be retained for a period of at least five years from the date of the monitoring sample, measurement, report, or application. Supporting information includes all calibration and maintenance records and all original strip-chart recordings for continuous monitoring instrumentation, and copies of all reports required by the permit.

(5) **Reporting.** The permit shall require reporting sufficient to assure and verify compliance with the terms and conditions of the permit and all applicable requirements, including:

(a) submittal of reports of any required monitoring at least every six months; the reports shall be due to the department within 45 days of the end of the permittee's reporting period; all instances of deviations from permit requirements, including emergencies, must be clearly identified in such reports; all required reports must be certified by a responsible official consistent with Paragraph (5), of Subsection A of 20.11.42.12 NMAC;

(b) prompt reporting of all deviations (including emergencies) from permit requirements, including the date, time, duration and probable cause of such deviations, the quantity and pollutant type of excess emissions resulting from the deviation, and any corrective actions or preventive measures taken; such reports shall include telephone, verbal, e-mail or facsimile communication within 24 hours of the start of the next business day and written notification within 10 days;

(c) submittal of compliance certification reports at least every 12 months (or more frequently if so specified by an applicable requirement) certifying the source's compliance status with all permit terms and conditions and all applicable requirements relevant to the source, including those related to emission limitations or work practices; the reports shall be due to the department within 30 days of the end of the permittee's reporting period; such compliance certifications shall be submitted to the administrator as well as to the department and shall include:

(i) the identification of each term or condition of the permit that is the basis of the certification;

(ii) the compliance status of the source;

(iii) whether compliance was continuous or intermittent;

(iv) the method(s) used for determining the compliance status of the source, currently and during the reporting period identified in the permit; and

(v) such other facts as the department may require to determine the compliance status of the source;

(d) such additional provisions as may be specified by the administrator to determine the compliance status of the source.

(6) **Compliance.** To assure and verify compliance with the terms and conditions of the permit and with 20.11.42 NMAC, permits shall also:

(a) require that, upon presentation of credentials and other documents as may be required by law, the permittee shall allow authorized representatives of the department to perform the following:

(i) enter upon the permittee's premises where a source is located or emission related activity is conducted, or where records must be kept under the conditions of the permit;

(ii) have access to and copy any records that must be kept under the conditions of the permit;

(iii) inspect any facilities, equipment (including monitoring and air pollution control equipment), practices, or operations regulated or required under the permit; and

(iv) sample or monitor any substances or parameters for the purpose of assuring compliance with the permit or applicable requirements or as otherwise authorized by the federal act;

(b) require that sources required under Subparagraph (k), of Paragraph (4), of Subsection A of 20.11.42.12 NMAC to have a schedule of compliance submit progress reports to the department at least semiannually, or more frequently if specified in the applicable requirement or by the department; such progress reports shall be consistent with the schedule of compliance and requirements of Subparagraph (k), of Paragraph (4), of Subsection A of 20.11.42.12 NMAC, and shall contain:

(i) dates for achieving the activities, milestones, or compliance required in the schedule of compliance, and dates when such activities, milestones or compliance were achieved; and

(ii) an explanation of why any dates in the schedule of compliance were not or will not be met, and any preventive or corrective measures adopted;

(c) include such other provisions as the department may require.

(7) **Operational flexibility.**

(a) Section 502(b)(10) changes.

(i) The permittee may make Section 502(b)(10) changes, as defined in Section 20.11.42.7 NMAC, without applying for a permit modification, if those changes are not Title I modifications and the changes do not cause the facility to exceed the emissions allowable under the permit (whether expressed as a rate of emissions or in terms of total emissions).

(ii) For each such change, the permittee shall provide written notification to the department and the administrator at least seven days in advance of the proposed changes. Such notification shall include a brief description of the change within the permitted facility, the date on which the change will occur, any change in emissions, and any permit term or condition that is no longer applicable as a result of the change.

(iii) The permittee and department shall attach each such notice to their copy of the relevant permit.

(iv) If the written notification and the change qualify under this provision, the permittee is not required to comply with the permit terms and conditions it has identified that restrict the change. If the change does not qualify under this provision, the original terms of the permit remain fully enforceable.

(b) Emissions trading within a facility.

(i) The department shall, if an applicant requests it, issue permits that contain terms and conditions allowing for the trading of emissions increases and decreases in the permitted facility solely for the purpose of complying with a federally-enforceable emissions cap that is established in the permit in addition to any applicable requirements. Such terms and conditions shall include all terms and conditions required under Subsection C of 20.11.42.12 NMAC to determine compliance. If applicable requirements apply to the requested emissions trading, permit conditions shall be issued only to the extent that the applicable requirements provide for trading such increases and decreases without a case-by-case approval.

(ii) The applicant shall include in the application proposed replicable procedures and permit terms that ensure the emissions trades are quantifiable and enforceable. The department shall not include in the emissions trading provisions any emissions units for which emissions are not quantifiable or for which there are no replicable procedures to enforce the emissions trades. The permit shall require compliance with all applicable requirements.

(iii) For each such change, the permittee shall provide written notification to the department and the administrator at least seven days in advance of the proposed changes. Such notification shall state when the change will occur and

shall describe the changes in emissions that will result and how these increases and decreases in emissions will comply with the terms and conditions of the permit.

(iv) The permittee and department shall attach each such notice to their copy of the relevant permit.

(8) Off-permit changes.

(a) Permittees are allowed to make, without a permit modification, changes that are not addressed or prohibited by the operating permit, if:

(i) each such change meets all applicable requirements and shall not violate any existing permit term or condition;

(ii) such changes are not subject to any requirements under Title IV of the federal act and are not Title I modifications;

(iii) such changes are not subject to permit modification procedures under Subsection E of 20.11.42.13 NMAC; and

(iv) the permittee provides contemporaneous written notice to the department and EPA of each such change, except for changes that qualify as insignificant activities; such written notice shall describe each such change, including the date, any change in emissions, pollutants emitted and any applicable requirement that would apply as a result of the change.

(b) The permittee shall keep a record describing changes made at the source that result in emissions of a regulated air pollutant subject to an applicable requirement, but not otherwise regulated under the permit, and the emissions resulting from those changes.

(9) Permit shield.

(a) Except as provided in 20.11.42 NMAC, the department shall expressly include in a 20.11.42 NMAC permit a provision stating that compliance with the conditions of the permit shall be deemed compliance with any applicable requirements as of the date of permit issuance, provided that:

(i) such applicable requirements are included and are specifically identified in the permit; or

(ii) the department, in acting on the permit application or significant permit modification, determines in writing that other requirements specifically identified are not applicable to the source, and the permit includes the determination or a concise summary thereof.

(b) A 20.11.42 NMAC permit that does not expressly state that a permit shield exists for a specific provision shall be presumed not to provide a shield for that provision.

(c) Nothing in 20.11.42.12 NMAC or in any 20.11.42 NMAC permit shall alter or affect the following:

(i) the provisions of Section 303 of the federal act - *Emergency Powers*, including the authority of the administrator under Section 303, or the provisions of the joint air quality control board ordinances pursuant to the New Mexico Air Quality Control Act, 74-2-10 NMSA 1978;

(ii) the liability of an owner or operator of a source for any violation of applicable requirements prior to or at the time of permit issuance;

(iii) the applicable requirements of the acid rain program, consistent with Section 408(a) of the federal act;

(iv) the ability of EPA to obtain information from a source pursuant to Section 114 of the federal act, or the department to obtain information in accordance with the joint air quality control board ordinances pursuant to the New Mexico Air Quality Control Act 74-2-13 NMSA 1978.

(d) The permit shield shall remain in effect if the permit terms and conditions are extended past the expiration date of the permit pursuant to Paragraph (4), of Subsection A of 20.11.42.13 NMAC.

(e) The permit shield may extend to terms and conditions that allow emission increases and decreases as part of emissions trading within a facility pursuant to Subparagraph (b), of Paragraph (7), of Subsection C of 20.11.42.12 NMAC, and to all terms and conditions under each operating scenario included pursuant to Subparagraph (e), of Paragraph (1), of Subsection C of 20.11.42.12 NMAC.

(f) The permit shield shall not extend to *administrative permit amendments* under Paragraph (1), of Subsection E of 20.11.42.13 NMAC, to *minor permit modifications* under Paragraph (2), of Subsection E of 20.11.42.13 NMAC, to Section 502(b)(10) changes under Subparagraph (a), of Paragraph (7) of Subsection C of 20.11.42.12 NMAC, or to permit terms or conditions for which notice has been given to reopen or revoke all or part under Subsection F of 20.11.42.13 NMAC.

D. General permits:

(1) Issuance of general permits.

(a) The department may, after notice and opportunity for public participation and EPA and affected program review, issue a general permit covering numerous

similar sources. Such sources shall be generally homogenous in terms of operations, processes and emissions, subject to the same or substantially similar requirements, and not subject to case-by-case standards or requirements.

(b) Any general permit shall comply with all requirements applicable to other operating permits and shall identify criteria by which sources may qualify for the general permit.

(2) Authorization to operate under a general permit.

(a) The owner or operator of a 20.11.42 NMAC source which qualifies for a general permit must:

(i) apply to the department for coverage under the terms of the general permit;

(ii) apply for an operating permit consistent with Subsection A of 20.11.42.12 NMAC.

(b) The department may, in the general permit, provide for applications which deviate from the requirements of Paragraph (4), of Subsection A of 20.11.42.12 NMAC, provided that such applications meet the requirements of the federal act and include all information necessary to determine qualification for, and to assure compliance with, the general permit. The department shall review the application for authorization to operate under a general permit for completeness within 30 days after its receipt of the application.

(c) The department shall authorize qualifying sources which apply for coverage under the general permit to operate under the terms and conditions of the general permit. The department shall take final action on a general permit authorization request within 90 days of deeming the application complete.

(d) The department may grant a request for authorization to operate under a general permit without repeating the public participation procedures required under Subsection B of 20.11.42.13 NMAC. Such an authorization shall not be a permitting action for purposes of administrative review under the joint air quality control board ordinances pursuant to the New Mexico Air Quality Control Act Section 74-2-7.H NMSA 1978.

(e) Authorization to operate under a general permit shall not be granted for acid rain sources unless provided for in regulations promulgated under Title IV of the federal act.

(f) The permittee shall be subject to enforcement action for operation without an operating permit if the source is later determined not to qualify for the conditions and terms of the general permit.

[20.11.42.12 NMAC - Rp, 20.11.42.12 NMAC, 11/5/2024]

20.11.42.13 PERMIT PROCESSING:

A. Action on permit applications:

(1) A permit (including permit renewal) or permit modification shall only be issued if all of the following conditions have been met:

(a) the department has received a complete application for a permit, permit modification, or permit renewal, except that a complete application need not be received before issuance of a general permit under Subsection D of 20.11.42.12 NMAC;

(b) except for administrative and minor permit modifications, the department has complied with the requirements for public participation procedures under Subsection B of 20.11.42.13 NMAC;

(c) except for administrative amendments, the department has complied with the requirements for notifying and responding to affected programs under Subsection C of 20.11.42.13 NMAC;

(d) the conditions of the permit provide for compliance with all applicable requirements; and

(e) the administrator has received a copy of the proposed permit and any notices required under Subsection C of 20.11.42.13 NMAC, and has not objected to issuance of the permit within the time period specified within that subsection.

(2) The department shall, within 60 days after its receipt of an application for a permit or significant permit modification, review such application for completeness. Unless the department determines that an application is not complete, requests additional information or otherwise notifies the applicant of incompleteness within 60 days of receipt of an application, the application shall be deemed complete. When additional information is requested by the department prior to ruling an application complete, receipt of such information shall be processed as a new application for purposes of 20.11.42.13 NMAC. If the application is judged complete, a certified letter to that effect shall be sent to the applicant. If the application is judged incomplete a certified letter shall be sent to the applicant stating what additional information or points of clarification are necessary to judge the application complete.

(3) The department shall take final action on each permit application (including a request for permit renewal) within 12 months after an application is ruled complete by the department, except that:

(a) for sources in operation on or before the effective date of 20.11.42 NMAC and which submit to the department timely and complete applications in accordance

with Subsection A of 20.11.42.12 NMAC, the department shall take final action on one-third of such applications annually over a period not to exceed three years after such effective date;

(b) any complete permit application containing an early reduction demonstration under Section 112(i)(5) of the federal act shall be acted on within nine months of deeming the application complete; and

(c) the acid rain portion of permits for acid rain sources shall be acted upon in accordance with the deadlines in Title IV of the federal act and the regulations promulgated thereunder.

(4) If a timely and complete application for a permit renewal is submitted, consistent with Subsection A of 20.11.42.12 NMAC, but the department has failed to issue or disapprove the renewal permit before the end of the term of the previous permit, then the permit shall not expire, and all the terms and conditions of the permit shall remain in effect until the renewal permit has been issued or disapproved.

(5) Permits being renewed are subject to the same procedural requirements, including those for public participation, affected program, and EPA review that apply to initial permit issuance.

(6) The department shall state within the draft permit the legal and factual basis for the draft permit conditions (including references to the applicable statutory or regulatory provisions with dates of latest amendments).

(7) The department shall grant or disapprove the permit based on information contained in the department's administrative record. The administrative record shall consist of the application, any additional information submitted by the applicant, any evidence or written comments submitted by interested persons, any other evidence considered by the department, and, if a public hearing is held, the evidence submitted at the hearing.

(8) If the department grants or disapproves a permit or permit modification, the department shall notify the applicant by certified mail of the action taken and the reasons, therefore. If the department grants a permit or modification, the department shall mail the permit or modification, including all terms and conditions, to the applicant by certified mail.

(9) **Voluntary discontinuation.** Upon request by the permittee, the department shall permanently discontinue a 20.11.42 NMAC permit. Permit discontinuance terminates the permittee's right to operate the source under the permit. The department shall confirm the permit discontinuance by certified letter to the permittee.

(10) No permit shall be issued by failure of the department to act on an application or renewal.

B. Public participation:

(1) Proceedings for all permit issuances (including renewals), significant permit modifications, reopenings, revocations and terminations, and all modifications to the department's list of insignificant activities, shall include public notice and provide an opportunity for public comment. The department shall provide 30 days for public and affected program comment. The department may hold a public hearing on the draft permit for any reason it deems appropriate, and shall hold such a hearing in the event of significant public interest. The department shall give notice of any public hearing at least 30 days in advance of the hearing.

(2) Public notice and notice of public hearing shall be given by publication in a newspaper of general circulation, to persons on a mailing list developed by the department (including those who request in writing to be on the list), and by other means if necessary to assure adequate notice to the affected public.

(3) The public notice shall identify:

(a) the affected facility;

(b) the names and addresses of the applicant or permittee and its owners;

(c) the name and address of the department;

(d) the activity or activities involved in the permit action;

(e) the emissions change(s) involved in any permit modification;

(f) the name, address and telephone number of a person from whom interested persons may obtain additional information, including copies of the permit draft, the application, and relevant supporting materials;

(g) a brief description of the comment procedures required by the department;
and

(h) as appropriate, a statement of procedures to request a hearing, or the time and place of any scheduled hearing.

(4) Notice of public hearing shall identify:

(a) the affected facility;

(b) the names and addresses of the applicant or permittee and its owners;

- (c) the name and address of the department;
- (d) the activity or activities involved in the permit action;
- (e) the name, address and telephone number of a person from whom interested persons may obtain additional information;
- (f) a brief description of hearing procedures; and
- (g) the time and place of the scheduled hearing.

(5) The time, date, and place of the hearing shall be determined by the department. The department shall appoint a hearing officer. A transcript of the hearing shall be made at the request of either the department or the applicant and at the expense of the person requesting the transcript. At the hearing, all interested persons shall be given a reasonable chance to submit data, views or arguments orally or in writing and to examine witnesses testifying at the hearing.

(6) The department shall keep a record of the commenters and also of the issues raised during the public participation process so that the administrator may fulfill his or her obligation under Section 505(b)(2) of the federal act to determine whether a citizen petition may be granted. Such records shall be available to the public upon request.

(7) The department shall provide such notice and opportunity for participation by affected programs as is provided for by Subsection C of 20.11.42.13 NMAC.

C. Review by the administrator and affected programs:

(1) **Notification.** The department shall not issue an operating permit (including permit renewal or reissuance), minor permit modification, or significant permit modification until affected programs and the administrator have had an opportunity to review the proposed permit as required under 20.11.42.13 NMAC. Permits for source categories waived by the administrator from this requirement and any permit terms or conditions, which are not required under the federal act or under any of its requirements, are not subject to administrator review or approval.

(a) Within five days of notification by the department that the application has been determined complete, the applicant shall provide a copy of the complete permit application (including the compliance plan and all additional materials submitted to the department) directly to the administrator. The permit or permit modification shall not be issued without certification to the department of such notification. The department shall provide to the administrator a copy of each draft permit, each proposed permit, each final operating permit, and any other relevant information requested by the administrator.

(b) The department shall provide notice of each draft permit to any affected program on or before the time that the department provides this notice to the public under Subsection B of 20.11.42.13 NMAC, except to the extent that minor permit modification procedures require the timing of the notice to be different.

(c) The department shall keep for five years such records and submit to the administrator such information as the administrator may reasonably require in order to ascertain whether the program complies with the requirements of the federal act or related applicable requirements.

(2) Responses to objections.

(a) No permit for which an application must be transmitted to the administrator under 20.11.42 NMAC shall be issued by the department if the administrator, after determining that issuance of the proposed permit would not be in compliance with applicable requirements, objects to such issuance in writing within 45 days of receipt of the proposed permit and all necessary supporting information.

(b) If the administrator does not object in writing under Subparagraph (a) above, any person may, within 60 days after the expiration of the administrator's 45-day review period, petition the administrator to make such objection. Any such petition shall be based only on objections to the permit that were raised with reasonable specificity during the public comment period provided for in Subsection B of 20.11.42.13 NMAC, unless the petitioner demonstrates that it was impracticable to raise such objections within such period, or unless the grounds for such objection arose after such period. If the administrator objects to the permit as a result of a petition filed under this subparagraph, the department shall not issue the permit until the administrator's objection has been resolved, except that a petition for review does not stay the effectiveness of a permit or its requirements if the permit was issued after the end of the 45-day review period and prior to the administrator's objection.

(c) The department, as part of the submittal of the proposed permit to the administrator (or as soon as possible after the submittal for minor permit modification procedures allowed under Paragraph (2), of Subsection E of 20.11.42.13 NMAC), shall notify the administrator and any affected program in writing of any refusal by the department to accept all recommendations for the proposed permit that the affected program submitted during the public or affected program review period. The notice shall include the department's reasons for not accepting any such recommendation. The department is not required to accept recommendations that are not based on federally enforceable applicable requirements.

D. Petitions for review of final action:

(1) Hearing before the board.

(a) Any person who participated in a permitting action before the department and who is adversely affected by such permitting action may file a petition for hearing before the board. For the purposes of 20.11.42.13 NMAC, permitting action shall include the failure of the department to take final action on an application for a permit (including renewal) or permit modification within the time specified in 20.11.42 NMAC.

(b) The petition shall be made in writing to the board within 30 days from the date notice is given of the department's action and shall specify the portions of the permitting action to which the petitioner objects, certify that a copy of the petition has been mailed or hand-delivered as required by this subparagraph, and attach a copy of the permitting action for which review is sought. Unless a timely request for hearing is made, the decision of the department shall be final. The petition shall be copied simultaneously to the department upon receipt of the appeal notice. If the petitioner is not the applicant or permittee, the petitioner shall mail or hand-deliver a copy of the petition to the applicant or permittee. The department shall certify the administrative record to the board.

(c) If a timely request for hearing is made, the board shall hold a hearing within 90 days of receipt of the petition in accordance with the joint air quality control board ordinances pursuant to the New Mexico Air Quality Control Act Section 74-2-7 NMSA 1978.

(2) Judicial review.

(a) Any person who is adversely affected by an administrative action taken by the board pursuant to Paragraph (1), of Subsection D of 20.11.42.13 NMAC may appeal to the court of appeals in accordance with the joint air quality control board ordinances pursuant to the New Mexico Air Quality Control Act Section 74-2-9 NMSA 1978. Petitions for judicial review must be filed no later than 30 days after the administrative action.

(b) The judicial review provided for by Subsection D of 20.11.42.13 NMAC shall be the exclusive means for obtaining judicial review of the terms and conditions of the permit.

E. Permit modifications:

(1) Administrative permit amendments.

(a) An administrative permit amendment is one that:

- (i) corrects typographical errors;
- (ii) provides for a minor administrative change at the source, such as a change in the address or phone number of any person identified in the permit;

- (iii) incorporates a change in the permit solely involving the retiring of an emissions unit;
- (iv) requires more frequent monitoring or reporting by the permittee; or
- (v) any other type of change which has been determined by the department and the administrator to be similar to those in this paragraph.

(b) Changes in ownership or operational control of a source may be made as administrative amendments provided that:

(i) a written agreement, containing a specific date for transfer of permit responsibility, coverage, and liability between the current and new permittee, has been submitted to the department, and either the department has determined that no other change in the permit is necessary, or changes deemed necessary by the department have been made;

(ii) the new owners have submitted the application information required in Subparagraph (b), of Paragraph (4), Subsection A of 20.11.42.12 NMAC;

(iii) no grounds exist for permit termination, as set out in Items (ii) and (iii), of Subparagraph (c), of Paragraph (1), of Subsection F of 20.11.42.13 NMAC; and

(iv) the permittee has published a public notice of the change in ownership of the source in a newspaper of general circulation in the area where the source is located.

(c) The department may incorporate administrative permit amendments without providing notice to the public or affected programs, provided that it designates any such permit modifications as administrative permit amendments and submits a copy of the revised permit to the administrator.

(d) The department shall take no more than 60 days from receipt of a request for an administrative permit amendment to take final action on such request. The permittee may implement the changes outlined in Items (i) through (iv), of Subparagraph (a), of Paragraph (1), of Subsection E of 20.11.42.13 NMAC immediately upon submittal of the request for the administrative amendment. The permittee may implement the changes outlined in Item (v), of Subparagraph (a), of Paragraph (1), of Subsection E of 20.11.42.13 NMAC or Subparagraph (b), of Paragraph (1), Subsection E of 20.11.42.13 NMAC above upon approval of the administrative amendment by the department.

(2) Minor permit modifications.

(a) Minor permit modification procedures may be used only for those permit modifications that:

- (i) do not violate any applicable requirement;
- (ii) do not involve relaxation of existing monitoring, reporting, or record keeping requirements in the permit;
- (iii) do not require or change a case-by-case determination of an emission limitation or other standard, or a source-specific determination for temporary sources of ambient impacts, or a visibility or increment analysis;
- (iv) do not seek to establish or change a permit term or condition for which there is no corresponding underlying applicable requirement and that the permittee has assumed to avoid an applicable requirement to which the source would otherwise be subject; such terms and conditions include any federally enforceable emissions cap assumed to avoid classification as a Title I modification and any alternative emissions limit approved pursuant to regulations promulgated under Section 112(i)(5) of the federal act;
- (v) are not Title I modifications; and
- (vi) are not required by the department to be processed as a significant modification pursuant to Paragraph (3), Subsection E of 20.11.42.13 NMAC.

(b) A permittee shall not submit multiple minor permit modification applications that may conceal a larger modification that would not be eligible for minor permit modification procedures. The department may, at its discretion, require that multiple related minor permit modification applications be submitted as a significant permit modification.

(c) An application requesting the use of minor permit modification procedures shall meet the requirements of Paragraphs (3) and (4), of Subsection A of 20.11.42.12 NMAC and shall include:

- (i) a description of the change, the emissions resulting from the change, and any new applicable requirements that will apply if the change occurs;
- (ii) the applicant's suggested draft permit;
- (iii) certification by a responsible official, consistent with Paragraph (5), of Subsection A of 20.11.42.12 NMAC, that the proposed modification meets the criteria for use of minor permit modification procedures and a request that such procedures be used; and
- (iv) if the requested permit modification would affect existing compliance plans or schedules, related progress reports, or certification of compliance requirements, an outline of such effects.

(d) The department shall, within 30 days after its receipt of an application for a minor permit modification, review such application for completeness. Unless the department determines that an application is not complete, requests additional information or otherwise notifies the applicant of incompleteness within 30 days of receipt of an application, the application shall be deemed complete. If the application is judged complete, a certified letter to that effect shall be sent to the applicant. If the application is judged incomplete a certified letter shall be sent to the applicant stating what additional information or points of clarification are necessary to judge the application complete.

(e) Within five working days of notification by the department that the minor permit modification application has been ruled complete, the applicant shall meet its obligation under Paragraph (1), of Subsection C of 20.11.42.13 NMAC to notify the administrator and affected programs of the requested permit modification. The department promptly shall send any notice required under Subparagraph (b), of Paragraph (1), of Subsection C of 20.11.42.13 NMAC and Paragraph (2), of Subsection C of 20.11.42.13 NMAC to the administrator and affected programs.

(f) The permittee may make the change proposed in its minor permit modification application immediately after such application is deemed complete. After the permittee makes the change allowed by the preceding sentence, and until the department takes any of the actions specified in Subparagraph (g), of Paragraph (2), of Subsection E of 20.11.42.13 NMAC below, the permittee must comply with both the applicable requirements governing the change and the proposed permit terms and conditions. During this time period, the permittee need not comply with the existing permit terms and conditions it seeks to modify. If the permittee fails to comply with its proposed permit terms and conditions during this time period, the existing permit terms and conditions it seeks to modify may be enforced against it.

(g) The department may not issue a final minor permit modification until after the administrator's 45-day review period of the proposed permit modification or until EPA has notified the department that the administrator will not object to issuance of the permit modification, although the department may approve the permit modification prior to that time. Within 90 days of ruling the application complete under minor permit modification procedures or within 15 days after the end of the administrator's 45-day review period under, whichever is later, the department shall:

- (i) issue the permit modification as it was proposed;
- (ii) disapprove the permit modification application;
- (iii) determine that the requested modification does not meet the minor permit modification criteria and should be reviewed under the significant modification procedures; or

(iv) revise the draft permit modification and transmit to the administrator the new proposed permit modification as required by Paragraph (1), of Subsection C of 20.11.42.13 NMAC.

(3) Significant permit modifications.

(a) A significant permit modification is:

(i) any revision to an operating permit that does not meet the criteria under the provisions for administrative permit amendments under Paragraph (1), of Subsection E of 20.11.42.13 NMAC or for minor permit modifications under Paragraph (2), of Subsection E of 20.11.42.13 NMAC above;

(ii) any modification that would result in any relaxation in existing monitoring, reporting or record keeping permit terms or conditions;

(iii) any modification for which action on the application would, in the judgment of the department, require decisions to be made on significant or complex issues; and

(iv) changes in ownership which do not meet the criteria of Subparagraph (b), of Paragraph (1), of Subsection E of 20.11.42.13 NMAC.

(b) For significant modifications which are not required to undergo pre-construction permit review and approval, changes to the source which qualify as significant permit modifications shall not be made until the department has issued the operating permit modification.

(c) For significant modifications which have undergone pre-construction permit review and approval, the permittee shall:

(i) before commencing operation, notify the department in writing of any applicable requirements and operating permit terms and conditions contravened by the modification, emissions units affected by the change, and allowable emissions increases resulting from the modification; and

(ii) within 12 months after commencing operation, file a complete operating permit modification application.

(d) Where an existing operating permit would specifically prohibit such change, the permittee must obtain an operating permit modification before commencing operation or implementing the change.

(e) Significant permit modifications shall meet all requirements of 20.11.42 NMAC for permit issuance, including those for applications, public participation, review by affected programs and review by the administrator.

(f) The department shall complete review on the majority of significant permit modification applications within nine months after the department rules the applications complete.

(4) **Modifications to acid rain sources.** Administrative permit amendments and permit modifications for purposes of the acid rain portion of the permit shall be governed by regulations promulgated by the administrator under Title IV of the federal act.

F. Permit reopening, revocation or termination:

(1) Action by the department.

(a) Each permit shall include provisions specifying the conditions under which the permit will be reopened prior to the expiration of the permit. A permit shall be reopened and revised for any of the following, and may be revoked and reissued for (iii) or (iv) of the following:

(i) additional applicable requirements under the federal act become applicable to a major source with a remaining permit term of three or more years; such a reopening shall be completed not later than 18 months after promulgation of the applicable requirement; no such reopening is required if the effective date of the requirement is later than the date on which the permit is due to expire, unless the original permit or any of its terms or conditions have been extended past the expiration date of the permit pursuant to Paragraph (4), Subsection A of 20.11.42.13 NMAC;

(ii) additional requirements (including excess emissions requirements) become applicable to a source under the acid rain program promulgated under Title IV of the federal act; upon approval by the administrator, excess emissions offset plans shall be deemed to be incorporated into the permit;

(iii) the department or the administrator determines that the permit contains a material mistake or that inaccurate statements were made in establishing the terms or conditions of the permit; or

(iv) the department or the administrator determines that the permit must be revised or revoked and reissued to assure compliance with the applicable requirements.

(b) Proceedings to reopen and revise, or revoke and reissue, a permit shall affect only those parts of the permit for which cause to reopen or revoke exists. Units for which permit conditions have been revoked shall not be operated until permit reissuance. Reopenings shall be made as expeditiously as practicable.

(c) A permit, or an authorization to operate under a general permit, may be terminated when:

- (i) the permittee fails to meet the requirements of an approved compliance plan;
- (ii) the permittee has been in significant or repetitious non-compliance with the operating permit terms or conditions;
- (iii) the applicant or permittee has exhibited a history of willful disregard for environmental laws of any state or tribal authority, or of the United States;
- (iv) the applicant or permittee has knowingly misrepresented a material fact in any application, record, report, plan, or other document filed or required to be maintained under the permit;
- (v) the permittee fails to pay fees required under the fee schedule in 20.11.2 NMAC;
- (vi) the permittee falsifies, tampers with or renders inaccurate any monitoring device or method required to be maintained under the permit;
- (vii) the administrator has found that cause exists to terminate the permit.

(d) The department shall, by certified mail, provide a notice of intent to the permittee at least 30 days in advance of the date on which a permit is to be reopened or revoked, or terminated, except that the department may provide a shorter time period in the case of an emergency.

(2) **Action by the administrator.** Within 90 days, or longer if the administrator extends this period, after receipt of written notification that the administrator has found that cause exists to terminate, modify or revoke and reissue a permit the department shall forward to the administrator a proposed determination of termination, modification, or revocation and reissuance, as appropriate. Within 90 days from receipt of an administrator objection to a proposed determination, the department shall address and act upon the administrator's objection.

(3) **Compliance orders.** Notwithstanding any action which may be taken by the department or the administrator under Paragraph (1) and (2), of Subsection F of 20.11.42.13 NMAC, a compliance order issued in accordance with the joint air quality control board ordinances pursuant to the New Mexico Air Quality Control Act Section 74-2-12 NMSA 1978 may include a suspension or revocation of any permit or portion thereof.

G. Citizen suit: Pursuant to Section 304 of the federal act, 42 USC 7604, any person may commence certain civil actions under the federal act.

H. Enforcement: Notwithstanding any other provision in the New Mexico state implementation plan approved by the administrator, any credible evidence may be used for the purpose of establishing whether a person has violated or is in violation of any such plan.

(1) **Presumptively credible evidence.** Information from the use of the following methods is presumptively credible evidence of whether a violation has occurred at the source:

(a) a monitoring method approved for the source pursuant to 20.11.42 NMAC and incorporated into an operating permit; or

(b) compliance methods specified in the applicable plan.

(2) **Presumptively credible testing, monitoring, or information gathering methods.** The following testing, monitoring or information gathering methods are presumptively credible testing, monitoring or information gathering methods:

(a) any federally enforceable monitoring or testing methods, including those in 40 CFR parts 51, 60, 61 and 75; and

(b) other testing, monitoring or information gathering methods that produce information comparable to that produced by any method in Paragraphs (1) or (2), of Subsection H of 20.11.42.13 NMAC.

[20.11.42.13 NMAC - Rp, 20.11.42.13 NMAC, 11/5/2024]

PART 43: STACK HEIGHT REQUIREMENTS

20.11.43.1 ISSUING AGENCY:

Albuquerque/ Bernalillo County Air Quality Control Board. P.O. Box 1293, Albuquerque, NM 87103. Telephone: (505) 768-2600.

[6/18/86. . .12/1/95; 20.11.43.1 NMAC – Rn, 20 NMAC 11.43.I.1, 10/1/02]

20.11.43.2 SCOPE:

This Part applies to sources with emission stacks, which are located in Bernalillo County, New Mexico.

A. Exempt: This Part does not apply to sources within Bernalillo County, which are located on Indian lands over which the Albuquerque/Bernalillo County Air Quality Control lacks jurisdiction.

B. Existing Stacks: The provisions of 20.11.43.13 NMAC shall not apply to:

(1) stack heights in existence, or dispersion techniques implemented, on or before December 31, 1970 except where air contaminants are being emitted from such stacks or using such dispersion techniques by sources as defined in Section 111(a)(3) of the Clean Air Act (CAA) which were constructed, or reconstructed, or for which major modifications as defined in 40 CFR Sections 51.165 (a)(1)(v)A, 51.166 b(2)i and 52.21 b(2)i were carried out after December 31, 1970, or;

(2) coal fired steam electric generating units subject to the provisions of Section 118 of the CAA, which commenced operation before July 1, 1957 and the stacks were constructed under a contract awarded before February 8, 1974.

[3/16/89. . .12/1/95; 20.11.43.2 NMAC – Rn, 20 NMAC 11.43.I.2, 10/1/02]

20.11.43.3 STATUTORY AUTHORITY:

This Part is adopted pursuant to the authority provided in the New Mexico Air Quality Control Act, NMSA 1978 Sections 74-2-4, 74-2-5.C; the Joint Air Quality Control Board Ordinance, Bernalillo County Ordinance 94-5 Section 4; and the Joint Air Quality Control Board Ordinance, Revised Ordinances of Albuquerque 1994 Section 9-5-1-4.

[6/18/86. . .12/1/95; 20.11.43.3 NMAC – Rn, 20 NMAC 11.43.I.3, 10/1/02]

20.11.43.4 DURATION:

Permanent.

[12/1/95; 20.11.43.4 NMAC – Rn, 20 NMAC 11.43.I.4, 10/1/02]

20.11.43.5 EFFECTIVE DATE:

December 1, 1995, unless a later date is cited at the end of a section.

[12/1/95; 20.11.43.5 NMAC – Rn, 20 NMAC 11.43.I.5 & A, 10/1/02]

20.11.43.6 OBJECTIVE:

The objective of this Part is to adopt local requirements that are identical to those required by federal new source review regulations assuring uniform procedures and formulae in determining, on a case-by-case basis, what stack heights or other dispersion techniques are creditable under the term "good engineering practice".

[3/16/89. . .12/1/95; 20.11.43.6 NMAC – Rn, 20 NMAC 11.43.I.6, 10/1/02]

20.11.43.7 DEFINITIONS:

For purposes of this Part, the definitions in 40 CFR Sections 51.100f, z, and ff through kk (1987), as well as 40 CFR 60.15b (1987) are hereby incorporated as regulations of the Board. In addition to the definitions in 20.11.43.7 NMAC the definitions in 20.11.1 NMAC apply unless there is a conflict between definitions, in which case the definition in this Part shall govern.

[3/16/89. . .12/1/95; 20.11.43.7 NMAC – Rn, 20 NMAC 11.43.I.7, 10/1/02]

20.11.43.8 VARIANCES:

Because sources subject to the federal stack height regulation cannot be granted variances from these requirements, insofar as variation from the requirements of this Part are concerned, such sources can not utilize the provisions of 20.11.7 NMAC, Variances Procedures, nor 9-5-1-4 ROA 1994; nor Bernalillo County Ordinance 94-5, all of which were adopted pursuant to Section 74-2-8 NMSA 1978.

[3/16/89. . .12/1/95; 20.11.43.8 NMAC – Rn, 20 NMAC 11.43.I.8, 10/1/02]

20.11.43.9 SAVINGS CLAUSE:

Any amendment to 20.11.43 NMAC, which is filed, with the State Records Center shall not affect actions pending for violation of a City or County ordinance, Air Quality Control Board Regulation 33, or 20.11.43 NMAC. Prosecution for a violation under prior regulation wording shall be governed and prosecuted under the statute, ordinance, Part, or regulation section in effect at the time the violation was committed.

[12/1/95; 20.11.43.9 NMAC – Rn, 20 NMAC 11.43.I.9, 10/1/02]

20.11.43.10 SEVERABILITY:

If any section, paragraph, sentence, clause, or word of this Part or any federal standards incorporated herein is for any reason held to be unconstitutional or otherwise invalid by any court, the decision shall not affect the validity of remaining provisions of this Part.

[12/1/95; 20.11.43.10 NMAC – Rn, 20 NMAC 11.43.I.10, 10/1/02]

20.11.43.11 DOCUMENTS:

Documents incorporated and cited in this Part may be viewed at the Albuquerque Environmental Health Department, 400 Marquette NW, Albuquerque, NM.

[12/1/95; 20.11.43.11 NMAC – Rn, 20 NMAC 11.43.I.11 & A, 10/1/02]

20.11.43.12 PUBLIC NOTICE:

A. Before the Department issues a permit pursuant to 20.11.41, 60, or 61 NMAC which contains a new, or revised emission limitation that is based on a good engineering stack height that exceeds the height allowed by 40 CFR Part 51, section 51.100 (ii) 1 or 2, 1987, the Department shall notify the public of the availability of the demonstration study. Such notice shall be given in the manner specified in the applicable regulation for the permit application. Interested parties shall have 30 days from the date of the notice to submit comments on the demonstration and to request a public hearing.

B. If the Director determines there is significant public interest a public hearing shall be held. If a public hearing is held, the Department shall give notice of the time, date and place of the hearing. The hearing shall be held within 45 days of the notice. The hearing may be combined with any other public hearing to be held on the permit application.

C. After the hearing, the Department shall make its final decision on the new or revised emission limitation.

[12/1/95; 20.11.43.12 NMAC – Rn, 20 NMAC 11.43.I.12 & Repealed, 10/1/02; ;Rn, 20 NMAC 11.43.II.1, 10/1/02]

20.11.43.13 CREDIT LIMITATIONS:

Except as otherwise provided, in evaluating air quality impacts for a proposed new source or modification of an existing source requiring a permit pursuant to 20.11.41 NMAC/ Authority to Construct; 20.11.61 NMAC, Prevention of Significant Deterioration; or 20.11.60 NMAC, Permitting in Nonattainment Areas, the Department shall give no credit for reductions in emissions due to so much of a source's stack height that exceeds good engineering practice or due to any other dispersion technique.

[3/16/89. . .12/1/95; 20.11.43.13 NMAC – Rn, 20 NMAC 11.43.II.2, 10/1/02]

PART 44: EMISSIONS TRADING [REPEALED]

[This part was repealed on June 15, 2007.]

PART 45: STATIONARY SOURCE CONFORMITY [REPEALED]

[This part was repealed on June 15, 2007.]

PART 46: SULFUR DIOXIDE EMISSIONS INVENTORY REQUIREMENTS; WESTERN BACKSTOP SULFUR DIOXIDE TRADING PROGRAM

20.11.46.1 ISSUING AGENCY:

Albuquerque-Bernalillo County Air Quality Control Board, P.O. Box 1293, Albuquerque, New Mexico, 87103.

[20.11.46.1 NMAC - N, 12/31/03]

20.11.46.2 SCOPE:

A. 20.11.46 NMAC is applicable to all geographic areas within Bernalillo county, New Mexico and within the jurisdiction of the Albuquerque-Bernalillo county air quality control board.

B. Exempt: 20.11.46 NMAC does not apply to sources within Bernalillo county that are located on Indian lands over which the Albuquerque-Bernalillo county air quality control board lacks jurisdiction.

[20.11.46.2 NMAC - N, 12/31/03; A, 9/15/08]

20.11.46.3 STATUTORY AUTHORITY:

20.11.46 NMAC is adopted pursuant to the authority provided in the New Mexico Air Quality Control Act, NMSA 1978 Sections 74-2-4, 74-2-5; the Joint Air Quality Control Board Ordinance; Bernalillo County Ordinance No. 94-5, Sections 4 and 5; and the Joint Air Quality Control Board Ordinance, Revised Ordinances of Albuquerque 1994 Sections 9-5-1-3 and 9-5-1-4.

[20.11.46.3 NMAC - N, 12/31/03; A, 9/15/08]

20.11.46.4 DURATION:

Permanent, except as provided in Section 20.11.46.5 NMAC.

[20.11.46.4 NMAC - N, 12/31/03]

20.11.46.5 EFFECTIVE DATE:

December 31, 2003, except where a later date is cited at the end of a section, or as provided in 20.11.46.10 NMAC. However, if the EPA disapproves the *Section 309 Regional Haze State Implementation Plan Element: Albuquerque-Bernalillo County, New Mexico*, then 20.11.46 NMAC will no longer be effective on the date of official notification by the EPA to the Governor of New Mexico that the *Section 309 Regional Haze State Implementation Plan Element: Albuquerque-Bernalillo County, New Mexico* has been disapproved.

[20.11.46.5 NMAC - N, 12/31/03; A, 9/15/08; A, 5/16/11]

20.11.46.6 OBJECTIVE:

A. 20.11.46 NMAC implements the western backstop (WEB) sulfur dioxide (SO₂) trading program provisions required under the federal Regional Haze Rule, 40 CFR 51.309, and the *concomitant* Albuquerque-Bernalillo county element of the state of New Mexico's regional haze implementation plan.

B. Nothing in 20.11.46 NMAC waives any requirement otherwise in effect or subsequently required under another program, including regulations governing new sources.

[20.11.46.6 NMAC - N, 12/31/03; A, 5/16/11]

20.11.46.7 DEFINITIONS:

In addition to the definitions in 20.11.46.7 NMAC, the definitions in 20.11.1 NMAC apply unless there is a conflict between definitions, in which case the definition in 20.11.46 NMAC shall govern.

A. "Account certificate of representation" means the completed and signed submission required to designate an account representative for a WEB source or an account representative for a general account.

B. "Account representative" means the individual who is authorized through an account certificate of representation to represent owners and operators of the WEB source with regard to matters under the WEB trading program or, for a general account, who is authorized through an account certificate of representation to represent the persons having an ownership interest in allowances in the general account with regard to matters concerning the general account.

C. "Act" means the federal Clean Air Act, as amended, 42 U.S.C. 7401, et seq.

D. "Actual emissions" means the total annual SO₂ emissions determined in accordance with 20.11.46.16 NMAC, *monitoring, record keeping and reporting*, or determined in accordance with 20.11.46.9 NMAC, *emission tracking requirements for sulfur dioxide emission inventories*, for sources that are not subject to 20.11.46.16 NMAC.

E. "Air quality control board" or "AQCB" means the Albuquerque-Bernalillo county air quality control board.

F. "Allocate" means to assign allowances to a WEB source, in accordance with Section C1 of the *Section 309 Regional Haze State Implementation Plan Element: Albuquerque - Bernalillo County, New Mexico*.

G. "Allowance" means the limited authorization under the WEB trading program to emit one ton of SO₂ during a specified control period or any control period thereafter

subject to the terms and conditions for use of unused allowances as established by 20.11.46 NMAC.

H. "Allowance limitation" means the tonnage of SO₂ emissions authorized by the allowances available for compliance deduction for a WEB source for a control period under 20.11.46.19 NMAC, *compliance*, on the allowance transfer deadline for that control period.

I. Reserved

J. Reserved

K. "Allowance transfer deadline" means the deadline established in Subsection B of 20.11.46.17 NMAC when allowance transfers must be submitted for recording in a WEB source's compliance account in order to demonstrate compliance for that control period.

L. "Compliance account" means an account established in the WEB EATS under Subsection A of 20.11.46.15 NMAC for the purpose of recording allowances that a WEB source might hold to demonstrate compliance with its allowance limitation.

M. "Compliance certification" means a submission to the department by the account representative as required under Subsection B of 20.11.46.19 NMAC to report a WEB source's compliance or noncompliance with 20.11.46 NMAC.

N. "Control period" means the period beginning January 1 of each year and ending on December 31 of the same year, inclusive.

O. "Emission report" or "inventory" means a listing, by source, of the amount of air pollutants discharged into the atmosphere.

P. Reserved

Q. "Emission unit" or "unit" means any part of a stationary source that emits or would have the potential to emit any pollutant regulated pursuant to the Clean Air Act.

R. "Existing source" means, a stationary source that commenced operation before the program trigger date.

S. "Fugitive emissions" are those emissions that could not reasonably pass through a stack, chimney, vent, or other functionally equivalent opening.

T. "General account" means an account established in the WEB EATS under 20.11.46.15 NMAC, *Establishment of Accounts*, for the purpose of recording allowances held by a person that are not to be used to show compliance with an allowance limitation.

U. "Milestone" means the maximum level of stationary source regional SO₂ emissions for each year from 2003 to 2018, established according to the procedures in Section A of the *Section 309 Regional Haze State Implementation Plan Element: Albuquerque - Bernalillo County, New Mexico*.

V. "New source set-aside" means a pool of allowances that are available for allocation to new sources in accordance with the provisions of Section C1.3 of the *Section 309 Regional Haze State Implementation Plan Element: Albuquerque - Bernalillo County, New Mexico*.

W. "New WEB source" means a WEB source that commenced operation on or after the program trigger date.

X. "Owner or operator" means any person who is an owner or who operates, controls or supervises a WEB source, and includes but is not limited to, any holding company, utility system or plant manager.

Y. "Part" means an air quality control regulation under Title 20, Chapter 11 of the New Mexico administrative code, unless otherwise noted, as adopted or amended by the AQCB.

Z. "Potential to emit" means the maximum capacity of a stationary source to emit any air pollutant under its physical and operational design. Any physical or operational limitation on the capacity of a source to emit an air pollutant, including air pollution control equipment and restrictions on hours of operation or on the type or amount of material combusted, stored or processed, shall be treated as part of its design if the limitation is enforceable by the EPA administrator.

AA. "Program trigger date" means the date that the department determines that the WEB trading program has been triggered in accordance with the provisions of Section A2 of the *Section 309 Regional Haze State Implementation Plan Element: Albuquerque - Bernalillo County, New Mexico*.

BB. "Program trigger years" means the years shown in Table 3, column 3, under Part C of the *Section 309 Regional Haze State Implementation Plan Element: Albuquerque - Bernalillo County, New Mexico* for the applicable milestone if the WEB trading program is triggered as described in Section A of the *Section 309 Regional Haze State Implementation Plan Element: Albuquerque - Bernalillo County, New Mexico*.

CC. "Renewable energy resource" means a resource that generates electricity by non-nuclear and non-fossil technologies that result in low or no air emissions. This term includes electricity generated by wind energy technologies; solar photovoltaic and solar thermal technologies; geothermal technologies; technologies based on landfill gas and biomass sources, and new low-impact hydropower that meet the low-impact hydropower institute criteria. Biomass includes agricultural, food and

wood wastes. The term does not include pumped storage or biomass from municipal solid waste, black liquor, or treated wood.

DD. "Retired source" means a WEB source that has received a retired source exemption as provided in Subsection E of 20.11.46.11 NMAC. Any retired source resuming operations under Subsection E of 20.11.46.11 NMAC, must submit its exemption as part of its registration materials.

EE. "Serial number" means, when referring to allowances, the unique identification number assigned to each allowance by the tracking systems administrator, in accordance with Subsection B of 20.11.46.14 NMAC.

FF. "SO₂ emitting unit" means any equipment that is located at a WEB source and that emits SO₂.

GG. Reserved

HH. "Special reserve compliance account" means an account established in the WEB EATS under Subsection A of 20.11.46.15 NMAC for the purpose of recording allowances that a WEB source might hold to demonstrate compliance with its allowance limitation for emission units that are monitored for SO₂ in accordance with Paragraph (2) of Subsection A of 20.11.46.16 NMAC.

II. "Stationary source" means any building, structure, facility or installation that emits or may emit any air pollutant subject to regulation under the Clean Air Act.

JJ. "Submit" means sent to the appropriate authority under the signature of the account representative. For purposes of determining when something is submitted, an official U.S. postal service postmark, or equivalent electronic time stamp, shall establish the date of submittal.

KK. "Ton" means 2000 pounds and, for any control period, any fraction of a ton equaling 1000 pounds or more shall be treated as one ton and any fraction of a ton equaling less than 1000 pounds shall be treated as zero tons.

LL. "Tracking system administrator" means the person designated by the department as the administrator of the WEB EATS.

MM. "WEB source" means a stationary source that meets the applicability requirements of 20.11.46.11 NMAC, *WEB trading program applicability*.

NN. "Western backstop sulfur dioxide (SO₂) trading program" or "WEB trading program" means all sections of 20.11.46 NMAC, but not Section 20.11.46.9 NMAC, *emission tracking requirements for sulfur dioxide emission inventories*, triggered as a backstop in accordance with the provisions in the *Section 309 Regional Haze State*

Implementation Plan Element: Albuquerque - Bernalillo County, New Mexico, to ensure that regional SO₂ emissions are reduced.

OO. "WEB Emissions and allowance tracking system" or "WEB EATS" means the central database where SO₂ emissions for WEB sources as recorded and reported in accordance with 20.11.46 NMAC are tracked to determine compliance with allowance limitations, and the system where allowances under the WEB trading program are recorded, held transferred and deducted.

PP. "WEB EATS account" means an account in the WEB EATS established for purposes of recording, holding, transferring and deducting allowances.

[20.11.46.7 NMAC - N, 12/31/03; A, 9/15/08; A, 5/16/11]

20.11.46.8 VARIANCES:

No variances will be granted from requirements of 20.11.46 NMAC.

[20.11.46.8 NMAC - N, 12/31/03; A, 9/15/08]

20.11.46.9 EMISSION TRACKING REQUIREMENTS FOR SULFUR DIOXIDE EMISSION INVENTORIES:

Beginning with the 2003 emission inventory, all stationary sources with actual emissions of one hundred (100) tons per year or more of SO₂ in the year 2000, or in any subsequent year, shall submit an annual inventory of SO₂ emissions. A source that meets these criteria, and then emits less than 100 tons per year in a later year shall submit a SO₂ inventory for tracking compliance with the regional SO₂ milestones until the western backstop sulfur dioxide trading program has been fully implemented and emission tracking has occurred under 20.11.46.16 NMAC, *monitoring, record keeping and reporting.*

A. All sources meeting the criteria immediately above in 20.11.46.9 NMAC will be subject to the following federally enforceable provisions:

- (1) submit an annual inventory of SO₂ emissions;
- (2) document the emissions monitoring/estimation methodology used to calculate their SO₂ emissions, and demonstrate that the selected methodology is acceptable under the inventory program;
- (3) include emissions from start up, shut down, and upset conditions in the annual total inventory;
- (4) use 40 CFR Part 75 methodology for reporting emissions for all sources subject to the federal acid rain program;

(5) maintain all records used in the calculation of the emissions, including but not limited to the following:

- (a) amount of fuel consumed;
- (b) percent sulfur content of fuel and how the content was determined;
- (c) quantity of product produced;
- (d) emissions monitoring data;
- (e) operating data; and
- (f) how the emissions are calculated;

(6) maintain records of any physical changes to facility operations or equipment, or any other changes that may affect the emissions projections; and

(7) retain records for a minimum of 10 years from the date of establishment, or if the record was the basis for an adjustment to the milestone, five years after the date of an implementation plan revision, whichever is longer.

B. Reporting requirements.

(1) Except as provided in Paragraph (2) of Subsection B of 20.11.46.9 NMAC, the owner or operator shall submit the emission report by April 1 each year immediately following the year for which the source is required to report emissions data.

(2) Sources for which a date for submitting an annual emission report is specified in a current operating permit issued under 20.11.42 NMAC, *operating permits*, shall submit such report on the date specified in the permit. The department shall provide a copy of the previous emissions report upon request by the owner or operator of such source.

C. Emissions report contents shall include:

- (1) the name, address, and physical location of the stationary source;
- (2) the name and telephone number of the person to contact regarding the emissions report;
- (3) a certification signed by the owner, or operator, or a responsible official as defined in 20.11.42 NMAC attesting that the statements and information contained in the emissions report are true and accurate to the best knowledge and belief of the certifying official, and including the full name, title, signature, date of signature, and

telephone number of the certifying official; for sources subject to 20.11.42 NMAC, the certification shall be made as required under 20.11.42 NMAC;

(4) smelters shall submit an annual report of sulfur input, in tons per year;

(5) for each emission point additional information may be required by the department:

(a) stack and exhaust gas parameters;

(b) type of control equipment and estimated control efficiency;

(c) schedule of operation;

(d) estimated actual emissions, including fugitive emissions and emissions occurring during maintenance, start-ups, shutdowns, upsets, and downtime, of sulfur oxides, in tons per year, and a description of the methods utilized to make such estimates, including calculations;

(e) the annual process or fuel combustion rates; and

(f) the fuel heat, sulfur, and ash content.

D. The department shall retain emission inventory records for non-utilities for 1996 and 1998 until the year 2018 to ensure that changes in emissions monitoring techniques can be tracked.

[20.11.46.9 NMAC - N, 12/31/03; A, 9/15/08; A, 5/16/11]

20.11.46.10 WEB TRADING PROGRAM TRIGGER:

A. Except as provided in Subsection B of 20.11.46.10 NMAC, Sections 20.11.46.11 NMAC through 20.11.46.22 NMAC shall become effective on the program trigger date that is established in accordance with the procedures outlined in Part C of the *Section 309 Regional Haze State Implementation Plan Element: Albuquerque - Bernalillo County, New Mexico*.

B. 20.11.46.20 NMAC, *special penalty provisions for the year 2018 milestone*, shall become effective on January 1, 2018 and shall remain effective until the provisions of 20.11.46.20 NMAC, *special penalty provisions for the year 2018 milestone*, have been fully implemented.

[20.11.46.10 NMAC - N, 12/31/03; A, 9/15/08; A, 5/16/11]

20.11.46.11 WEB TRADING PROGRAM APPLICABILITY:

A. General applicability: 20.11.46 NMAC applies to any stationary source or group of stationary sources that are located on one or more contiguous or adjacent properties and which are under the control of the same person or persons under common control, belonging to the same industrial grouping, and that are described in Paragraphs (1) through (4) of Subsection B of 20.11.46.11 NMAC. A stationary source or group of stationary sources shall be considered part of a single industrial grouping if all of the pollutant emitting activities at such source or group of sources on contiguous or adjacent properties belong to the same major group (i.e., all have the same two-digit code as described in the *standard industrial classification manual*, 1987, or three-digit code as described in the North American Industry Classification System (NAICS), 2007).

B. The following are WEB sources.

(1) All BART-eligible sources as defined in 40 CFR 51.301 that are subject to BART due to SO₂ emissions.

(2) All stationary sources not meeting the criteria of Paragraph (1) of Subsection B of 20.11.46.11 NMAC, that have actual SO₂ emissions of 100 tons or more per year in the program trigger years or any subsequent year. The fugitive emissions of a stationary source shall not be considered in determining whether it is a WEB source unless the source belongs to one of the following categories of stationary source:

- (a) coal cleaning plants (with thermal dryers);
- (b) kraft pulp mills;
- (c) portland cement plants;
- (d) primary zinc smelters;
- (e) iron and steel mills;
- (f) primary aluminum ore reduction plants;
- (g) primary copper smelters;
- (h) municipal incinerators capable of charging more than 250 tons of refuse per day;
- (i) hydrofluoric, sulfuric, or nitric acid plants;
- (j) petroleum refineries;
- (k) lime plants;

- (l) phosphate rock processing plants;
- (m) coke oven batteries;
- (n) sulfur recovery plants;
- (o) carbon black plants (furnace process);
- (p) primary lead smelters;
- (q) fuel conversion plants;
- (r) sintering plants;
- (s) secondary metal production plants;
- (t) chemical process plants;
- (u) fossil-fuel boilers (or combination thereof) totaling more than 250 million British thermal units per hour heat input;
- (v) petroleum storage and transfer units with a total storage capacity exceeding 300,000 barrels;
- (w) taconite ore processing plants;
- (x) glass fiber processing plants;
- (y) charcoal production plants;
- (z) fossil-fuel-fired steam electric plants of more than 250 million British thermal units per hour heat input; or
- (aa) any other stationary source category, which as of August 7, 1980 is being regulated under Section 111 or 112 of the Clean Air Act.

(3) A new source that begins operation after the program trigger date and has the potential to emit 100 tons or more of SO₂ per year.

(4) The department may determine on a case-by-case basis, with concurrence from the EPA administrator, that a source defined in Paragraph (2) of Subsection B of 20.11.46.11 NMAC is not a WEB source if the source:

(a) had actual SO₂ emissions of less than 100 tons per year, in each of the previous five years; and

(b) had actual SO₂ emissions of 100 tons or more in a single year due to a temporary emission increase that was caused by a sudden, infrequent, and not reasonably preventable failure of air pollution control equipment, failure of process equipment, or a failure to operate in a normal or usual manner; and

(c) took timely and reasonable action to minimize the temporary emission increase; and

(d) has corrected the failure of air pollution control equipment, process equipment, or process by the time of the department's determination under 20.11.46.11 NMAC; or

(e) had to switch fuels or feedstocks on a temporary basis and as a result of an emergency situation or unique and unusual circumstances besides cost of such fuels or feedstocks.

(5) A temporary emission increase due to poor maintenance or careless operation does not meet the criteria of 20.11.46.11 NMAC.

C. Duration of program participation: Except as provided for in Subsection D of 20.11.46.11 NMAC, once a source is subject to the WEB trading program, it will remain in the program every year thereafter.

D. Application for retired source exemption:

(1) Any WEB source that is permanently retired shall apply for a retired source exemption. The WEB source may be considered permanently retired only if all SO₂ emitting units at the source are permanently retired. The application shall contain the following information:

(a) identification of the WEB source, including plant name and an appropriate identification code in a format specified by the department;

(b) name of account representative;

(c) description of the status of the WEB source, including the date that the WEB source was retired;

(d) signed certification that the WEB source is permanently retired and will comply with the requirements of Subsection D of 20.11.46.11 NMAC; and

(e) verification that the WEB source has a general account where any unused allowances or future allocations will be recorded.

(2) **Notice:** The retired source exemption becomes effective when the department notifies the source that the retired source exemption has been granted.

(3) **Responsibilities of retired sources.** A retired source shall be exempt from 20.11.46.16 NMAC, *monitoring, record keeping and reporting* and 20.11.46.19 NMAC, *compliance*, except as provided below.

(a) A retired source shall not emit any SO₂ after the date the retired source exemption is issued.

(b) A WEB source shall submit SO₂ emissions reports, as required by Subsection H of 20.11.46.16 NMAC for any time period the source was operating prior to the effective date of the retired source exemption. The retired source shall be subject to the compliance provisions of 20.11.46.19 NMAC, *compliance*, including the requirement to hold allowances in the source's compliance account to cover all SO₂ emissions prior to the date the source was permanently retired.

(c) A retired source that is still in existence but no longer emitting SO₂ shall, for a period of five years from the date the records are created, retain records demonstrating that the source is permanently retired for purposes of 20.11.46 NMAC.

(4) **Resumption of operations.**

(a) Before resuming operation, the retired source shall submit registration materials as follows:

(i) if the source is required to obtain a new source review permit or operating permit under 20.11.41 NMAC, 20.11.42 NMAC, 20.11.60 NMAC or 20.11.61 NMAC prior to resuming operation, then the source shall submit registration information as described in 20.11.46.13 NMAC and a copy of the retired source exemption with the application required under 20.11.41 NMAC, 20.11.42 NMAC, 20.11.60 NMAC or 20.11.61 NMAC;

(ii) if the source is not required to obtain a new source review permit or operating permit under 20.11.41 NMAC, 20.11.42 NMAC, 20.11.60 NMAC or 20.11.61 NMAC prior to resuming operation, then the source shall submit registration information as described in Subsection A of 20.11.46.13 NMAC and a copy of the retired source exemption to the department at least 90 days prior to resumption of operation.

(b) The retired source exemption shall automatically expire on the day the source resumes operation.

(5) **Loss of future allowances:** A WEB source that is permanently retired and that does not apply to the department for a retired source exemption within 90 days of the date that the source is permanently retired shall forfeit any unused and future allowances. The abandoned allowances shall be retired by the tracking system administrator.

[20.11.46.11 NMAC - N, 12/31/03; A, 9/15/08; A, 5/16/11]

20.11.46.12 ACCOUNT REPRESENTATIVE FOR WEB SOURCES:

Each WEB source must identify one account representative and may also identify an alternate account representative who may act on behalf of the account representative. Any representation, action, inaction or submission by the alternate account representative will be deemed to be a representation, action, inaction or submission by the account representative.

A. Identification and certification of an account representative.

(1) The account representative and any alternate account representative shall be appointed by written agreement that makes the representations, actions, inactions or submissions of the account representative and any alternate account representative, binding on the owners and operators of the WEB source. A copy of the agreement shall be provided to the department.

(2) The account representative shall submit to the department and the tracking system administrator a signed and dated account certificate of representation (certificate) that contains the following elements:

(a) identification of the WEB source by plant name, state, and an appropriate identification code in a format specified by the department;

(b) the name, address, e-mail (if available), telephone and facsimile number of the account representative and any alternate;

(c) a list of owners and operators of the WEB source;

(d) information to be part of the emission tracking system database that is established in accordance with Part C of the *Section 309 Regional Haze State Implementation Plan Element: Albuquerque - Bernalillo County, New Mexico*; and the specific data elements shall be as specified by the department to be consistent with the data system structure, and may include basic facility information that may appear in other reports and notices submitted by the WEB source, such as county location, industrial classification codes, and similar general facility information; and

(e) the following certification statement: "I certify that I was selected as the account representative or alternate account representative, as applicable, by an agreement binding on the owners and operators of the WEB source. I certify that I have all the necessary authority to carry out my duties and responsibilities under the WEB trading program on behalf of the owners and operators of the WEB source and that each such owner and operator shall be fully bound by my representations, actions, inactions, or submissions and by any decision or order issued to me by the department regarding the WEB trading program."

(3) Upon receipt by the department of the complete certificate, the account representative and any alternate account representative represents and, by their representations, actions, inactions, or submissions, legally binds each owner and operator of the WEB source in all matters pertaining to the WEB trading program. The owners and operators shall be bound by any decision or order issued by the department regarding the WEB trading program.

(4) No WEB EATS account shall be established for the WEB source until the tracking system administrator has received a complete certificate. Once the account is established, the account representative shall make all submissions concerning the account, including the deduction or transfer of allowances.

B. Requirements and responsibilities.

(1) The responsibilities of the account representative include, but are not limited to, the transferring of allowances, and the submission of monitoring plans, registrations, certification applications, SO₂ emissions data and compliance reports as required by 20.11.46 NMAC, and representing the source in all matters pertaining to the WEB trading program.

(2) Each submission under this program shall be signed and certified by the account representative for the WEB source. Each submission shall include the following truth and accuracy certification statement by the account representative: "I am authorized to make this submission on behalf of the owners and operators of the WEB source for which the submission is made. I certify under penalty of law that I have personally examined, and am familiar with, the statements and information submitted in this document and all its attachments. Based on my inquiry of those individuals with primary responsibility for obtaining the information, I certify that the statements and information are to the best of my knowledge and belief true, accurate, and complete. I am aware that there are significant penalties for submitting false statements and information or omitting required statements and information, including the possibility of fine or imprisonment."

C. Changing the account representative or owners and operators.

(1) **Changes to the account representative or the alternate account representative.** The account representative or alternate account representative may be changed at any time by sending a complete superseding certificate to the department and the tracking system administrator under Paragraph (3) of Subsection A of 20.11.46.12 NMAC, with the change taking effect upon receipt of such certificate by the department. Notwithstanding any such change, all representations, actions, inactions, and submissions by the previous account representative or alternate prior to the time and date when the tracking system administrator receives the superseding certificate shall be binding on the new account representative and the owners and operators of the WEB source.

(2) Changes in owners and operators.

(a) Within 30 days of any change in the owners and operators of the WEB source, including the addition of a new owner or operator, the account representative shall submit a revised certificate amending the list of owners and operators to include such change.

(b) In the event a new owner or operator of a WEB source is not included in the list of owners and operators submitted in the certificate, such new owner or operator shall be deemed to be subject to and bound by the certificate, the representations, actions, inactions, and submissions of the account representative of the WEB source, and the decisions, orders, actions, and inactions of the department as if the new owner or operator were included in such list.

[20.11.46.12 NMAC - N, 12/31/03; A, 9/15/08; A, 5/16/11]

20.11.46.13 REGISTRATION:

A. Deadlines.

(1) Each source that is a WEB source on or before the program trigger date shall register by submitting the initial certificate required in Subsection A of 20.11.46.12 NMAC to the department no later than 180 days after the program trigger date.

(2) Any existing source that becomes a WEB source after the program trigger date shall register by submitting the initial certificate required in Subsection A of 20.11.46.12 NMAC to the department no later than September 30 of the year following the inventory year in which the source exceeded the emission threshold (100 tons SO₂).

(3) Any new WEB source shall register by submitting the initial certificate required in Subsection A of 20.11.46.12 NMAC to the department prior to the commencement of operation.

B. Integration into permits.

(1) Any allocation, transfer or deduction of allowance to or from the compliance account of a WEB source shall not require revision of the WEB source's operating permit under 20.11.42 NMAC.

(2) After 20.11.46 NMAC is effective, a WEB source that is not required to have a permit under 20.11.41 NMAC, 20.11.60 NMAC or 20.11.61 NMAC, must at all times possess a valid 20.11.42 NMAC permit that includes the requirements of 20.11.46 NMAC. If the WEB source does not possess a Title V permit under 20.11.42 NMAC, it may satisfy the requirements of Paragraph (2) of Subsection B of 20.11.46.13 NMAC by obtaining or modifying a permit under 20.11.41 NMAC, 20.11.60 NMAC or 20.11.61

NMAC that incorporates the requirements of 20.11.46 NMAC. The source must at all times possess a valid permit that includes these requirements.

[20.11.46.13 NMAC - N, 12/31/03; A, 5/16/11]

20.11.46.14 ALLOWANCE ALLOCATIONS:

A. The tracking system administrator shall record the allowances for each WEB source in the compliance account for a WEB source once the allowances are allocated by the department under Section C1 of the *Section 309 Regional Haze State Implementation Plan Element: Albuquerque - Bernalillo County, New Mexico*. If applicable, the tracking system administrator shall also record a portion of the SO₂ allowances in a WEB source's special reserve compliance account to account for any allowances to be held by the source that conducts monitoring in accordance with Paragraph (2) of Subsection A of 20.11.46.16 NMAC. Under no circumstances shall allocations be made that would exceed the allocations available.

B. The tracking system administrator shall assign a serial number to each allowance in accordance with Section C1.2 of the *Section 309 Regional Haze State Implementation Plan Element: Albuquerque - Bernalillo County, New Mexico*.

C. All allowances shall be allocated, recorded, transferred, or used as whole allowances. To determine the number of whole allowances, the number of allowances shall be rounded down for decimals less than 0.50 and rounded up for decimals of 0.50 or greater.

D. An allowance is not a property right, and is a limited authorization to emit one ton of SO₂ valid only for the purpose of meeting the requirements of 20.11.46 NMAC. No provision of this WEB trading program or other law should be construed to limit the authority of the United States or the department to terminate or limit such authorization.

E. Early reduction bonus allocation: Any non-utility WEB source that installs new control technology and that, between 2008 and the program trigger year, reduces its permitted annual SO₂ emissions to a level that is below the floor level allocation established for that source in Section C1 of the *Section 309 Regional Haze State Implementation Plan Element: Albuquerque - Bernalillo County, New Mexico*, or any utility that reduces its permitted annual SO₂ emissions to a level that is below best available control technology (BACT), may apply to the department for an early reduction bonus allocation. The bonus allocation shall be available for reductions that occur between 2008 and the program trigger year. The application shall be submitted no later than 90 days after the program trigger date. Any WEB source that applies and receives early reduction bonus allocations shall retain the records referenced below for a minimum of five years after the early reduction bonus allowance is certified in accordance with Section C1.1(a)(3) of the *Section 309 Regional Haze State Implementation Plan Element: Albuquerque - Bernalillo County, New Mexico*. The

application for an early reduction bonus allocation shall contain the following information:

(1) copies of all permits or other enforceable documents that include annual SO₂ emissions limits for the WEB source during the period the WEB source qualifies for an early reduction credit; and such permits or enforceable documents shall require monitoring for SO₂ emissions that meets the requirements in Paragraphs (1) and (3) of Subsection A of 20.11.46.16 NMAC and monitoring provisions that were in effect one year prior to the beginning of the credit generating period;

(2) Reserved;

(3) demonstration that the floor level established for the source in accordance with Section C1 of the implementation plan element was calculated using data that are consistent with the new monitoring methodology under Paragraph (1) of Subsection A of 20.11.46.16 NMAC; and if new monitoring techniques change the floor level for the source, then a demonstration of the new floor level based on new monitoring techniques shall be included in the application.

F. Request for allowances for new WEB sources or modified WEB sources.

(1) A new WEB source may apply to the department for an allocation from the new source set-aside, as outlined in Section C1.3 of the *Section 309 Regional Haze State Implementation Plan Element: Albuquerque - Bernalillo County, New Mexico*. Under no circumstances shall allocations be made that would exceed the allocations available.

(a) A new WEB source is eligible for an annual floor allocation equal to the lower of the permitted annual SO₂ emission limit for that source, or SO₂ annual emissions calculated based on a level of control equivalent to BACT and assuming 100% utilization of the WEB source, beginning of the first full calendar year of operation.

(b) Reserved

(2) An existing WEB source that has increased production capacity through a permitted change in operations under 20.11.41 NMAC, 20.11.60 NMAC or 20.11.61 NMAC, may apply for an allocation from the new source set-aside, as outlined in the *Section 309 Regional Haze State Implementation Plan Element: Albuquerque - Bernalillo County, New Mexico*. An existing WEB source is eligible for an annual allocation equal to:

(a) the permitted annual SO₂ emissions limit for a new unit; or

(b) the permitted annual SO₂ emission increase for the WEB source due to the replacement of an existing unit with a new unit or the modification of an existing unit that increased production capacity of the WEB source.

(3) A source that has received a retired source exemption under Subsection D of 20.11.46.11 NMAC is not eligible for an allocation from the new source set-aside.

(4) The application for an allocation from the new source set-aside shall contain the following information:

(a) for an existing WEB source, documentation that shows the permitted production capacity of the source before and after the new permit;

(b) for a new WEB source or a new unit, documentation of the actual date of the commencement of operation and a copy of the permit.

[20.11.46.14 NMAC - N, 12/31/03; A, 9/15/08; A, 5/16/11]

20.11.46.15 ESTABLISHMENT OF ACCOUNTS:

A. WEB EATS accounts: All WEB sources shall open a compliance account. Any person may open a general account for the purpose of holding and transferring allowances. In addition, if a WEB source conducts monitoring under Paragraph (2) of Subsection A of 20.11.46.16 NMAC, the WEB source shall open a special reserve compliance account for allowances associated with units monitored under those provisions. To open either type of account, an application that contains the following information shall be submitted:

(1) the name, mailing address, e-mail address, telephone number, and facsimile number of the account representative; for a compliance account, include a copy of the account certificate of representation of the account representative and any alternate as required in Paragraph (2) of Subsection A of 20.11.46.12 NMAC; and for a general account, include the account certificate of representation of the account representative and any alternate as required in Paragraph (2) of Subsection C of 20.11.46.15 NMAC;

(2) the WEB source or organization name;

(3) the type of account to be opened; and

(4) identification of the specific units that are being monitored under Paragraph (2) of Subsection A of 20.11.46.16 NMAC and that must demonstrate compliance with the allowance limitation in the special reserve compliance account; and

(5) a signed certification of truth and accuracy by the account representative according to Paragraph (2) of Subsection A of 20.11.46.12 NMAC and for compliance accounts and for general accounts, a certification of truth and accuracy by the account representative according to Subsection D of 20.11.46.15 NMAC.

B. Account representative for general accounts: For a general account, one account representative shall be identified and an alternate account representative may be identified and may act on behalf of the account representative. Any representation, action, inaction or submission by the alternate account representative shall be deemed to be a representation, action, inaction or submission by the account representative.

C. Identification and certification of an account representative for general accounts.

(1) The account representative and any alternate account representative shall be appointed by a written agreement that makes the representations, actions, inactions or submissions of the account representative and any alternate account representative binding on all persons who have an ownership interest with respect to allowances held in the general account. A copy of the signed agreement shall be provided to the department.

(2) The account representative shall submit to the department and the tracking system administrator a signed and dated account certificate of representation (certificate) that contains the following elements:

(a) the name, address, e-mail (if available), telephone and facsimile number of the account representative and any alternate;

(b) the organization name;

(c) the following certification statement: "I certify that I was selected as the account representative or alternate account representative, as applicable, by an agreement binding on all persons who have an ownership interest in allowances in the general account with regard to matters concerning the general account. I certify that I have all the necessary authority to carry out my duties and responsibilities under the WEB trading program on behalf of said persons and that each such person shall be fully bound by my representations, actions, inactions, or submissions and by any decision or order issued to me by the department regarding the general account."

(3) Upon receipt of the complete certificate by the tracking system administrator and the department, of the complete certificate, which the account representative represents and, by his or her representations, actions, inactions, or submissions, legally binds each person who has an ownership interest in allowances held in the general account with regard to all matters concerning the general account. Such persons shall be bound by any decision or order issued by the department.

(4) No WEB EATS general account shall be established until the tracking system administrator has received a complete certificate. Once the account is established, the account representative shall make all submissions concerning the account, including the deduction or transfer of allowances.

D. Requirements and responsibilities for general accounts: Each submission for the general account shall be signed and certified by the account representative for the general account. Each submission shall include the following truth and accuracy certification statement by the account representative: "I am authorized to make this submission on behalf of all persons who have an ownership interest in allowances held in the general account. I certify under penalty of law that I have personally examined, and am familiar with, the statements and information submitted in this document and all its attachments. Based on my inquiry of those individuals with primary responsibility for obtaining the information, I certify that the statements and information are to the best of my knowledge and belief true, accurate, and complete. I am aware that there are significant penalties for submitting false statements and information or omitting required statements and information, including the possibility of fine or imprisonment."

E. Changing the account representative for general accounts: The account representative or alternate account representative may be changed at any time by sending a complete superseding certificate to the department and the tracking system administrator under Paragraph (2) of Subsection C of 20.11.46.15 NMAC, with the change taking effect upon receipt of such certificate by the tracking system administrator and the department. Notwithstanding any such change, all representations, actions, inactions, and submissions by the previous account representative or alternate prior to the time and date when the tracking system administrator and the department receives the superseding certificate shall be binding on the new account representative and all persons having ownership interest with respect to allowances held in the general account.

F. Changes to the account: Any change to the information required in the application for an existing account under Subsection A of 20.11.46.15 NMAC shall require a revision of the application.

[20.11.46.15 NMAC - N, 12/31/03; A, 9/15/08; A, 5/16/11]

20.11.46.16 MONITORING, RECORD KEEPING AND REPORTING:

A. General requirements for monitoring methods:

(1) For each SO₂ emitting unit at a WEB source the owner or operator shall comply with the following, as applicable, to monitor and record SO₂ mass emissions:

(a) if a unit is subject to 40 CFR Part 75 under a requirement separate from the WEB trading program, the unit shall meet the requirements contained in 40 CFR Part 75 with respect to monitoring, recording and reporting SO₂ mass emissions;

(b) if a unit is not subject to 40 CFR Part 75 under a requirement separate from the WEB trading program, a unit shall use one of the following monitoring methods, as applicable:

(i) a continuous emission monitoring system (CEMS) for SO₂ and flow that complies with all applicable monitoring provisions in 40 CFR Part 75;

(ii) if the unit is a gas- or oil-fired combustion device, the excepted monitoring methodology in Appendix D to 40 CFR Part 75, or, if applicable, the low mass emissions (LME) provisions (with respect to SO₂ mass emissions only) of 40 CFR 75.19;

(iii) one of the optional WEB protocols, if applicable, in 20.11.46.21 NMAC, *SO₂ monitoring of fuel gas combustion devices* or 20.11.46.22 NMAC, *protocol WEB 2: predictive flow monitoring systems for kilns with positive pressure fabric filter*; or

(iv) a petition for site-specific monitoring that the source submits for approval by the department and approval by the EPA in accordance with Paragraph (5) of Subsection H of 20.11.46.16 NMAC;

(c) a permanently retired unit shall not be required to monitor under Section 20.11.46.15 NMAC if such unit was permanently retired and had no emissions for the entire period for which the WEB source implements Subparagraph (c) of Paragraph (1) of Subsection A of 20.11.46.16, and the account representative certifies in accordance with Subsection B of 20.11.46.19 NMAC that these conditions were met; and in the event that a permanently retired unit recommences operation, the WEB source shall meet the requirements of 20.11.46.16 NMAC in the same manner as if the unit was a new unit.

(2) Notwithstanding Paragraph (1) of Subsection A of 20.11.46.16 NMAC, the WEB source with a unit that meets one of the conditions of Subparagraph (a) of Paragraph (2) of Subsection A of 20.11.46.16 NMAC may elect to have the provisions of Paragraph (2) of Subsection A of 20.11.46.16 NMAC apply to that unit.

(a) Any of the following units may implement Paragraph (2) of Subsection A of 20.11.46.16 NMAC:

(i) any smelting operation where all of the emissions from the operation are not ducted to a stack; or

(ii) any flare, except to the extent such flares are used as a fuel gas combustion device at a petroleum refinery; or

(iii) any other type of unit without add-on SO₂ control equipment, if the unit belongs to one of the following source categories: cement kilns, pulp and paper recovery furnaces, lime kilns or glass manufacturing.

(b) For each unit covered by Paragraph (2) of Subsection B of 20.11.46.16 NMAC, the account representative shall submit a notice to request that Paragraph (2) of Subsection A of 20.11.46.16 NMAC applies to one or more SO₂ emitting units at a WEB

source. The notice shall be submitted in accordance with the compliance dates specified in Paragraph (1) of Subsection F of 20.11.46.16 NMAC, and shall include the following information (in a format specified by the department with such additional, related information as may be requested):

(i) a notice of all units at the applicable source, specifying which of the units are to be covered by Paragraph (2) of Subsection A of 20.11.46.16 NMAC; and

(ii) an identification of any such units that are permanently retired.

(c) For each new unit at an existing WEB source for which the WEB source seeks to comply with this Paragraph (2) of Subsection A of 20.11.46.16 NMAC, and for which the account representative applies for an allocation under the new source set-aside provisions of Subsection F of 20.11.46.14 NMAC, the account representative shall submit a modified notice under Subparagraph (b) of Paragraph (2) of Subsection A of 20.11.46.16 NMAC, that includes such new SO₂ emitting unit(s). The modified notice shall be submitted in accordance with the compliance dates in Paragraph (1) of Subsection F of 20.11.46.16 NMAC, but no later than the date on which a request must be submitted under Paragraph (1) of Subsection F of 20.11.46.14 NMAC for allocations from the set-aside.

(d) The account representative for a WEB source shall submit an annual emissions statement for each unit under Paragraph (2) of Subsection A of 20.11.46.16 NMAC in accordance with Subsection H of 20.11.46.16 NMAC. The WEB source shall maintain operating records sufficient to estimate annual SO₂ emissions in a manner consistent with the emission inventory submitted by the source for calendar year 2006. In addition, if the estimated emissions from all such units at the WEB source are greater than the allowances for the current control year held in the special reserve compliance account for the WEB source, the account representative shall report the excess amount as part of the annual report for the WEB source under 20.11.46.19 NMAC, *compliance* and the WEB source shall obtain and transfer allowances into the special reserve compliance account for the WEB source to account for such emissions, in accordance with 20.11.46.19 NMAC.

(e) The remaining provisions of 20.11.46.16 NMAC shall not apply to units covered by Subparagraph (c) of Paragraph (2) of Subsection A of 20.11.46.16 NMAC except where otherwise noted.

(f) A WEB source may opt to modify the monitoring for an SO₂ emitting unit to use monitoring under Paragraph (1) of Subsection A of 20.11.46.16 NMAC, but any such monitoring change shall take effect on January 1 of the next compliance year. In addition, the account representative shall submit an initial monitoring plan at least 180 days prior to the date on which the new monitoring will take effect and a detailed monitoring plan in accordance with Subsection B of 20.11.46.16 NMAC. The account representative shall also submit a revised notice under Subparagraph (b) of Paragraph

(2) of Subsection A of 20.11.46.16 NMAC at the same time that the initial monitoring plan is submitted.

(3) For any monitoring that the WEB source uses under 20.11.46.16 NMAC (including Paragraph (2) of Subsection A of Section 20.11.46.16 NMAC), the WEB source (and, as applicable, the account representative) shall implement, certify, and use such monitoring in accordance with 20.11.46.16 NMAC, and shall record and report the data from such monitoring as required in 20.11.46.16 NMAC. In addition, the WEB source (and, as applicable, the account representative) shall not:

(a) except for an alternative approved by the EPA administrator for a WEB source that implements monitoring under Subparagraph (a) of Paragraph (1) of Subsection A of 20.11.46.16 NMAC, use an alternative monitoring system, alternative reference method or another alternative for the required monitoring method without having obtained prior written approval in accordance with Paragraph (5) of Subsection H of 20.11.46.16 NMAC;

(b) operate an SO₂ emitting unit so as to discharge, or allow to be discharged, SO₂ emissions to the atmosphere without accounting for these emissions in accordance with the applicable provisions of 20.11.46.16 NMAC;

(c) disrupt the approved monitoring method or any portion thereof, and thereby avoid monitoring and recording SO₂ mass emissions discharged into the atmosphere, except for periods of recertification or periods when calibration, quality-assurance testing or maintenance is performed in accordance with the applicable provisions of 20.11.46.16 NMAC; or

(d) retire or permanently discontinue use of an approved monitoring method, except under one of the following circumstances:

(i) during a period when the unit is exempt from the requirements of 20.11.46.16 NMAC, including retirement of a unit as addressed in Subparagraph (c) of Paragraph (3) of Subsection A of 20.11.46.16 NMAC;

(ii) the WEB source is monitoring emissions from the unit with another certified monitoring method approved under 20.11.46.16 NMAC for use at the unit that provides data for the same parameter as the retired or discontinued monitoring method; or

(iii) the account representative submits notification of the date of certification testing of a replacement monitoring system in accordance with 20.11.46.16 NMAC, and the WEB source recertifies thereafter a replacement monitoring system in accordance with the applicable provisions of 20.11.46.16 NMAC.

B. Monitoring plan

(1) **General provisions:** The owner or operator of an SO₂ emitting unit that uses a monitoring method under Subparagraph (b) of Paragraph (1) of Subsection A of 20.11.46.16 NMAC shall meet the following requirements:

(a) prepare and submit to the department an initial monitoring plan for each monitoring method that the WEB source uses to comply with 20.11.46.16 NMAC; and in accordance with Paragraph (3) of Subsection B of 20.11.46.16 NMAC, the plan shall contain sufficient information on the units involved, the applicable method, and the use of data derived from that method to demonstrate that all unit SO₂ emissions are monitored and reported; and the plan shall be submitted in accordance with the compliance deadlines specified in Subsection F of 20.11.46.16 NMAC;

(b) prepare, maintain and submit to the department a detailed monitoring plan prior to the first day of certification testing in accordance with the compliance deadline specified in Subsection F of 20.11.46.16 NMAC; the plan shall contain the applicable information required by Subsection B of 20.11.46.16 NMAC; the department may require that the monitoring plan (or portions thereof) be submitted electronically; and the department also may require that the plan be submitted on an ongoing basis in electronic format as part of the quarterly report submitted under Paragraph (1) of Subsection H of 20.11.46.16 NMAC or resubmitted separately after any change is made to the plan in accordance with the following Paragraph (3) of Subsection B of 20.11.46.16 NMAC;

(c) whenever the WEB source makes a replacement, modification, or change in one of the systems or methodologies provided for in Subparagraph (b) of Paragraph (1) of Subsection A of 20.11.46.16 NMAC, including a change in the automated data acquisition and handling system or in the flue gas handling system, that affects information reported in the monitoring plan (e.g., a change to serial number for a component of a monitoring system), then the WEB source shall update the monitoring plan within 90 days of the replacement, modification, or change.

(2) A WEB source with an SO₂ emitting unit that uses a method under Subparagraph (a) of Paragraph (1) of Subsection A of 20.11.46.16 NMAC (a unit subject to 40 CFR Part 75 under a program other than this WEB trading program) shall meet the requirements of Subsection B of 20.11.46.16 NMAC by preparing, maintaining and submitting a monitoring plan in accordance with the requirements of 40 CFR Part 75, provided that the WEB source also shall submit the entire monitoring plan to the department upon request.

(3) **Initial monitoring plan:** The account representative shall submit an initial monitoring plan for each SO₂ emitting unit (or group of units sharing a common methodology) that, except as otherwise specified in an applicable provision in 20.11.46.21 NMAC, contains the following information:

(a) for all SO₂ emitting units involved in the monitoring plan:

- (i) plant name and location;
- (ii) plant and unit identification numbers assigned by the department;
- (iii) type of unit (or units for a group of units using a common monitoring methodology);
- (iv) identification of all stacks or pipes associated with the monitoring plan;
- (v) types of fuel(s) fired (or sulfur containing process materials used in the SO₂ emitting unit), and the fuel classification of the unit if combusting more than one type of fuel and using a 40 CFR Part 75 methodology;
- (vi) type(s) of emissions controls for SO₂ installed or to be installed, including specifications of whether such controls are pre-combustion, post-combustion, or integral to the combustion process;
- (vii) maximum hourly heat input capacity, or process throughput capacity, if applicable;
- (viii) identification of all units using a common stack; and
- (ix) indicator of whether any stack identified in the plan is a bypass stack;

(b) for each unit and parameter required to be monitored, identification of monitoring methodology information, consisting of monitoring methodology, monitor locations, substitute data approach for the methodology, and general identification of quality assurance procedures; and if the proposed methodology is a site-specific methodology submitted pursuant to Item (iv) of Subparagraph (b) of Paragraph (1) of Subsection A of 20.11.46.16 NMAC, the description under Subparagraph (b) of Paragraph (3) of Subsection B of 20.11.46.16 NMAC shall describe fully all aspects of the monitoring equipment, installation locations, operating characteristics, certification testing, ongoing quality assurance and maintenance procedures, and substitute data procedures;

(c) if the WEB source intends to petition for a change to any specific monitoring requirement otherwise required under 20.11.46.16 NMAC, such petition may be submitted as part of the initial monitoring plan;

(d) the department may issue a notice of approval or disapproval of the initial monitoring plan based on the compliance of the proposed methodology with the requirements for monitoring in 20.11.46.16 NMAC.

(4) **Detailed monitoring plan:** The account representative shall submit a detailed monitoring plan that, except as otherwise specified in an applicable provision in 20.11.46.21 NMAC, *SO₂ monitoring of fuel gas combustion devices* or 20.11.46.22 NMAC, *protocol WEB 2: predictive flow monitoring systems for kilns with positive pressure fabric filter*, shall contain the following information:

(a) identification and description of each monitoring component (including each monitor and its identifiable components, such as analyzer or probe) in a CEMS (e.g., SO₂ pollutant concentration monitor, flow monitor, moisture monitor), a 40 CFR Part 75, Appendix D monitoring system (e.g., fuel flowmeter, data acquisition and handling system), or a protocol in 20.11.46.21 NMAC or 20.11.46.22 NMAC, including:

- (i) manufacturer, model number and serial number;
- (ii) component or system identification code assigned by the facility to each identifiable monitoring component, such as the analyzer or probe;
- (iii) designation of the component type and method of sample acquisition or operation (e.g., in situ pollutant concentration monitor or thermal flow monitor);
- (iv) designation of the system as a primary or backup system;
- (v) first and last dates the system reported data;
- (vi) status of the monitoring component; and
- (vii) parameter monitored;

(b) identification and description of all major hardware and software components of the automated data acquisition and handling system, including:

- (i) hardware components that perform emission calculations or store data for quarterly reporting purposes (provide the manufacturer and model number); and
- (ii) software components (provide the identification of the provider and model or version number);

(c) explicit formulas for each measured emissions parameter, using component or system identification codes for the monitoring system used to measure the parameter that links the system observations with the reported concentrations and mass emissions; the formulas shall contain all constants and factors required to derive mass emissions from component or system code observations and an indication of whether the formula is being added, corrected, deleted, or is unchanged; and the WEB source with a low mass emissions unit for which the WEB source is using the optional

low mass emissions excepted methodology in 40 CFR 75.19(c) is not required to report such formulas;

(d) inside cross-sectional area (square feet) at flow monitoring location (for units with flow monitors, only);

(e) if using CEMS for SO₂ and flow, for each parameter monitored include: scale, maximum potential concentration (and method of calculation), maximum expected concentration (if applicable, and method of calculation), maximum potential flow rate (and method of calculations), span value, full-scale range, daily calibration units of measure, span effective date and hour, span inactivation date and hour, indication of whether dual spans are required, default high range value, flow rate span, and flow rate span value and full scale value in standard cubic feet per hour (scfh) for each unit or stack using SO₂ or flow component monitors;

(f) if the monitoring system or excepted methodology provides for use of a constant, assumed, or default value for a parameter under specific circumstances, then the following information for each value of such parameter shall be included:

- (i) identification of the parameter;
- (ii) default, maximum, minimum, or constant value, and units of measure for the value;
- (iii) purpose of the value;
- (iv) indicator of use during controlled and uncontrolled hours;
- (v) types of fuel;
- (vi) source of the value;
- (vii) value effective date and hour;
- (viii) date and hour value is no longer effective (if applicable); and
- (ix) for units using the excepted methodology under 40 CFR 75.19, the applicable SO₂ emission factor;

(g) unless otherwise specified in Section 6.5.2.1 of Appendix A to 40 CFR Part 75, for each unit or common stack on which hardware CEMS are installed:

- (i) the upper and lower boundaries of the range of operation (as defined in Section 6.5.2.1 of Appendix A to 40 CFR Part 75), or thousands of pounds per hour (lb/hr) of steam, or ft/sec (as applicable);

(ii) the load or operating level(s) designated as normal in Section 6.5.2.1 of Appendix A to 40 CFR Part 75, or thousands of lb/hr of steam, or feet per second ft/sec (as applicable);

(iii) the two load or operating levels (i.e., low, mid, or high) identified in Section 6.5.2.1 of Appendix A to 40 CFR Part 75 as the most frequently used;

(iv) the date of the data analysis used to determine the normal load (or operating) level(s) and the two most frequently-used load (or operating) levels; and

(v) activation and deactivation dates when the normal load or operating level(s) change and are updated;

(h) for each unit that is complying with 40 CFR Part 75 for which the optional fuel flow-to-load test in Section 2.1.7 of Appendix D to 40 CFR Part 75 is used:

(i) the upper and lower boundaries of the range of operation (as defined in Section 6.5.2.1 of Appendix A to 40 CFR Part 75), expressed in thousands of lb/hr of steam;

(ii) the load level designated as normal, pursuant to Section 6.5.2.1 of Appendix A to 40 CFR Part 75, expressed in thousands of lb/hr of steam; and

(iii) the date of the load analysis used to determine the normal load level;

(i) information related to quality assurance testing, including (as applicable): identification of the test strategy; protocol for the relative accuracy test audit; other relevant test information; calibration gas levels (percent of span) for the calibration error test and linearity check; calculations for determining maximum potential concentration, maximum expected concentration (if applicable), maximum potential flow rate, and span;

(j) if applicable, apportionment strategies under 40 CFR 75.10 through 75.18;

(k) description of site locations for each monitoring component in a monitoring system, including schematic diagrams and engineering drawings and any other documentation that demonstrates each monitor location meets the appropriate siting criteria; and for units monitored by a continuous emission monitoring system, diagrams shall include:

(i) a schematic diagram identifying entire gas handling system from unit to stack for all units, using identification numbers for units, monitor components, and stacks corresponding to the identification numbers provided in the initial monitoring plan and Subparagraphs (a) and (c) of Paragraph (4) of Subsection B of 20.11.46.16 NMAC; the schematic diagram must depict the height of any monitor locations; and

comprehensive or separate schematic diagrams shall be used to describe groups of units using a common stack; and

(ii) stack and duct engineering diagrams showing the dimensions and locations of fans, turning vanes, air preheaters, monitor components, probes, reference method sampling ports, and other equipment that affects the monitoring system location, performance, or quality control checks;

(l) a data flow diagram denoting the complete information-handling path from output signals of CEMS components to final reports.

(5) In addition to supplying the information in Paragraphs (3) and (4) of Subsection B of 20.11.46.16 NMAC above, the WEB source with an SO₂ emitting unit using either of the methodologies in Item (ii) of Subparagraph (b) of Paragraph (1) of Subsection A of 20.11.46.16 NMAC shall include the following information in its monitoring plan for the specific situations described:

(a) for each gas-fired or oil-fired SO₂ emitting unit for which the WEB source uses the optional protocol in Appendix D to 40 CFR Part 75 for SO₂ mass emissions, the account representative shall include the following information in the monitoring plan:

(i) parameter monitored;

(ii) type of fuel measured, maximum fuel flow rate, units of measure, and basis of maximum fuel flow rate (i.e., upper range value or unit maximum) for each fuel flowmeter;

(iii) test method used to check the accuracy of each fuel flowmeter;

(iv) submission status of the data;

(v) monitoring system identification code;

(vi) the method used to demonstrate that the unit qualifies for monthly *gross calorific value* (GCV) sampling or for daily or annual fuel sampling for sulfur content, as applicable;

(vii) a schematic diagram identifying the relationship between the unit, all fuel supply lines, the fuel flowmeter(s), and the stack(s); the schematic diagram must depict the installation location of each fuel flowmeter and the fuel sampling location(s); and comprehensive and separate schematic diagrams shall be used to describe groups of units using a common pipe;

(viii) for units using the optional default SO₂ emission rate for "pipeline natural gas" or "natural gas" in Appendix D to 40 CFR Part 75, the information on the

sulfur content of the gaseous fuel used to demonstrate compliance with either Section 2.3.1.4 or 2.3.2.4 of Appendix D to 40 CFR Part 75;

(ix) for units using the 720 hour test under Section 2.3.6 of Appendix D to 40 CFR Part 75 to determine the required sulfur sampling requirements, report the procedures and results of the test; and

(x) for units using the 720 hour test under Section 2.3.5 of Appendix D to 40 CFR Part 75 to determine the appropriate fuel GCV sampling frequency, report the procedures used and the results of the test;

(b) for each SO₂ emitting unit for which the WEB source uses the low mass emission excepted methodology of 40 CFR 75.19, the WEB source shall include the following information in the monitoring plan that accompanies the initial certification application:

(i) the results of the analysis performed to qualify as a low mass emissions unit under 40 CFR 75.19(c); this report shall include either the previous three years actual or projected emissions; and the following items shall be included: a) current calendar year of application; b) type of qualification; c) years one, two, and three; d) annual measured, estimated or projected SO₂ mass emissions for years one, two, and three; and e) annual operating hours for years one, two, and three;

(ii) a schematic diagram identifying the relationship between the unit, all fuel supply lines and tanks, any fuel flowmeter(s), and the stack(s); and comprehensive or separate schematic diagrams shall be used to describe groups of units using a common pipe;

(iii) for units which use the long term fuel flow methodology under 40 CFR 75.19(c)(3), a diagram of the fuel flow to each unit or group of units and a detailed description of the procedures used to determine the long term fuel flow for a unit or group of units for each fuel combusted by the unit or group of units;

(iv) a statement that the unit burns only gaseous fuel(s) or fuel oil and a list of the fuels that are burned or a statement that the unit is projected to burn only gaseous fuel(s) or fuel oil and a list of the fuels that are projected to be burned;

(v) a statement that the unit meets the applicability requirements in 40 CFR 75.19(a) and (b) with respect to SO₂ emissions; and

(vi) any unit historical actual, estimated and projected SO₂ emissions data and calculated SO₂ emissions data demonstrating that the unit qualifies as a low mass emissions unit under 40 CFR 75.19(a) and (b).

(c) for each gas-fired unit the account representative shall include the following in the monitoring plan: current calendar year, fuel usage data as specified in

the definition of "gas-fired" in 40 CFR 72.2, and an indication of whether the data are actual or projected data.

(6) The specific elements of a monitoring plan under 20.11.46.16 NMAC shall not be part of an operating permit for a WEB source issued in accordance with the Title V of the Clean Air Act, and modifications to the elements of the plan shall not require a permit modification.

C. Certification and recertification:

(1) All monitoring systems are subject to initial certification and recertification testing as specified in 40 CFR Part 75, 20.11.46.21 NMAC or; 20.11.46.22 NMAC. Certification or recertification of a monitoring system by the EPA for a WEB source that is subject to 40 CFR Part 75 under a requirement separate from 20.11.46 NMAC shall constitute certification under the WEB Trading Program.

(2) The WEB source with an SO₂ emitting unit not otherwise subject to 40 CFR Part 75 that monitors SO₂ mass emissions in accordance with 40 CFR Part 75 to satisfy the requirements of 20.11.46.16 NMAC shall perform all of the tests required by that regulation and shall submit the following:

(a) a test notice, not later than 21 days before the certification testing of the monitoring system, provided that the department may establish additional requirements for adjusting test dates after this notice as part of the approval of the initial monitoring plan under Paragraph (3) of Subsection B of 20.11.46.16 NMAC;

(b) an initial certification application within 45 days after testing is complete;

(3) a monitoring system shall be considered provisionally certified while the application is pending, and the system shall be deemed certified if the department does not approve or disapprove the system within six months after the date on which the application is submitted;

(4) both at the time of the initial certification or recertification application submission and at the time of the audit, if an audit of any monitoring certified under 20.11.46 NMAC, and a review of the initial certification or recertification application, reveal that any system or component should not have been certified or recertified because it did not meet a particular performance specification or other requirement of 20.11.46 NMAC, the department will issue a notice of disapproval of the certification status of such system or component; for the purposes of Paragraph (2) of Subsection C of 20.11.46.16 NMAC, an audit shall be either a field audit of the facility or an audit of any information submitted to the department regarding the facility; by issuing the notice of disapproval, the certification status is revoked prospectively, and the data measured and recorded shall not be considered valid quality-assured data from the date of issuance of the notification of the revoked certification status until the date and time that the WEB source completes subsequently approved initial certification or recertification

tests in accordance with the procedures in 20.11.46.16 NMAC; and the WEB source shall apply the substitute data procedures in 20.11.46.16 NMAC to replace, prospectively, all of the invalid, non-quality-assured data for each disapproved system or component.

D. Ongoing quality assurance and quality control: The WEB source shall satisfy the applicable quality-assurance and quality control requirements of 40 CFR Part 75 or, if the WEB source is subject to a WEB protocol in 20.11.46.21 NMAC, *SO₂ monitoring of fuel gas combustion devices*, the applicable quality-assurance and quality control requirements in 20.11.46.21 NMAC on and after the date that certification testing commences.

E. Substitute data procedures:

(1) For any period after certification testing is complete in which quality-assured, valid data are not being recorded by a monitoring system certified and operating in accordance with 20.11.46 NMAC, missing or invalid data shall be replaced with substitute data in accordance with 40 CFR Part 75 or, if the WEB source is subject to a WEB protocol in 20.11.46.21 NMAC, *SO₂ monitoring of fuel gas combustion devices* or 20.11.46.22 NMAC, *protocol WEB 2: predictive flow monitoring systems for kilns with positive pressure fabric filter*, with substitute data in accordance with 20.11.46.21 NMAC.

(2) For an SO₂ emitting unit that does not have a certified or provisionally certified monitoring system in place as of the beginning of the first control period for which the unit is subject to the WEB trading program, the WEB source shall use one of the following procedures:

(a) if the WEB Source will use a CEMS to comply with 20.11.46.16 NMAC, substitute the maximum potential concentration of SO₂ for the unit and the maximum potential flow rate, as determined in accordance with 40 CFR Part 75; and the procedures for conditional data validation under Section 75.20(b)(3) may be used for any monitoring system under 20.11.46 NMAC that uses these 40 CFR Part 75 procedures, as applicable;

(b) if the WEB source will use the 40 CFR Part 75 Appendix D methodology, substitute the maximum potential sulfur content, density or gross calorific value for the fuel and the maximum potential fuel flow rate, in accordance with Section 2.4 of Appendix D to 40 CFR Part 75;

(c) if the WEB source will use the 40 CFR Part 75 methodology for low mass emissions units, substitute the SO₂ emission factor required for the unit as specified in 40 CFR 75.19 and the maximum rated hourly heat input, as defined in 40 CFR 72.2; or

(d) if using a protocol in 20.11.46.21 NMAC or 20.11.46.22 NMAC, follow the procedures in the applicable protocol.

F. Compliance deadlines:

(1) The initial monitoring plan shall be submitted by the following dates:

(a) for each source that is a WEB source on or before the program trigger date, the monitoring plan shall be submitted 180 days after such program trigger date;

(b) for any existing source that becomes a WEB source after the program trigger date, the monitoring plan shall be submitted by September 30 of the year following the inventory year in which the source exceeded the emissions threshold (100 tpy SO₂);

(c) for any new WEB source, the monitoring plan shall be included with the permit application under 20.11.41 NMAC, 20.11.42 NMAC, 20.11.60 NMAC or 20.11.61 NMAC.

(2) A detailed monitoring plan required under Subparagraph (b) of Paragraph (1) of Subsection B of 20.11.46.16 NMAC shall be submitted no later than 45 days prior to commencing certification as required by Paragraph (3) of Subsection F of 20.11.46.16 NMAC. Modifications to the monitoring plan shall be submitted within 90 days of implementing revised monitoring plans.

(3) Emission monitoring systems shall be installed, operational and shall have met all of the certification testing requirements of 20.11.46.16 NMAC (including any referenced in 20.11.46.21 NMAC or 20.11.46.22 NMAC) by the following dates:

(a) for each source that is a WEB source on or before the program trigger date: two years prior to the start of the first control period as described in 20.11.46.19 NMAC, *compliance*;

(b) for any existing source that becomes a WEB source after the program trigger date: one year after the due date for the monitoring plan under Subparagraph (b) of Paragraph (1) of Subsection F of 20.11.46.16 NMAC;

(c) for any new WEB source, or any new unit at a WEB source under Subparagraph (a) or (b) of Paragraph (3) of Subsection F of 20.11.46.16 NMAC: the earlier of 90 unit operating days or 180 calendar days after the date the new source commences operation.

(4) The WEB source shall submit test notices and certification applications in accordance with the deadlines set forth in Paragraph (2) of Subsection C of 20.11.46.16 NMAC.

(5) For each applicable control period, the WEB source shall submit each quarterly report under Subsection H of 20.11.46.16 NMAC by no later than 30 days after

the end of each calendar quarter and shall submit the annual report under Subsection H of 20.11.46.16 NMAC no later than 60 days after the end of each calendar year.

G. Record keeping:

(1) The WEB source shall keep copies of all reports, registration materials, compliance certifications, sulfur dioxide emissions data, quality-assurance data, and other submissions under 20.11.46 NMAC for a period of five years. In addition, the WEB source shall keep a copy of all account certificates of representation for the duration of this program. Unless otherwise requested by the WEB source and approved by the department, the copies shall be kept on site at the source.

(2) The WEB source shall keep records of all operating hours, quality-assurance activities, fuel sampling measurements, hourly averages for SO₂, stack flow, fuel flow, or other continuous measurements, as applicable, and any other applicable data elements specified in 20.11.46.16 NMAC, 20.11.46.21 NMAC or in 20.11.46.22 NMAC. The WEB source shall maintain the applicable records specified in 40 CFR Part 75 for any SO₂ emitting unit that uses a 40 CFR Part 75 monitoring method to meet the requirements of 20.11.46.16 NMAC.

H. Reporting.

(1) **Quarterly reports.** For each SO₂ emitting unit, the account representative shall submit a quarterly report within 30 days after the end of each calendar quarter. The report shall be in a format specified by the department to include hourly and quality-assurance activity information and shall be submitted in a manner compatible with the WEB EATS. If the WEB source submits a quarterly report under 40 CFR Part 75 to the EPA administrator, no additional report under Paragraph (1) of Subsection H of 20.11.46.16 NMAC shall be required, provided, however, that the department may require that a copy of that report (or a separate statement of quarterly and cumulative annual SO₂ mass emissions) be submitted separately to the department.

(2) **Annual report.** Based on the quarterly reports, each WEB source shall submit an annual statement of total annual SO₂ emissions for all SO₂ emitting units at the source. The annual report shall identify the total emissions for all units monitored in accordance with Paragraph (1) of Subsection A of 20.11.46.16 NMAC and the total emissions for all units with emissions estimated in accordance with Paragraph (2) of Subsection A of 20.11.46.16 NMAC. The annual report shall be submitted within 60 days after the end of a control period.

(3) If the department so directs, any monitoring plan, report, certification, recertification, or emissions data required to be submitted under 20.11.46.16 NMAC shall be submitted to the tracking system administrator.

(4) The department may review and reject any report submitted under Subsection H of 20.11.46.16 NMAC that contains errors or fails to satisfy the

requirements of 20.11.46.16 NMAC, and the account representative shall resubmit the report to correct any deficiencies.

I. Petitions:

(1) A WEB source may petition for an alternative to any requirement specified in Subparagraph (b) of Paragraph (1) of Subsection A of 20.11.46.16 NMAC. The petition shall require approval of the department and the EPA administrator. Any petition submitted under Paragraph (1) of Subsection I of 20.11.46.16 NMAC shall include sufficient information for the evaluation of the petition, including, at a minimum, the following information:

(a) identification of the WEB source and applicable SO₂ emitting unit(s);

(b) a detailed explanation of why the proposed alternative is being suggested in lieu of the requirement;

(c) a description and diagram of any equipment and procedures used in the proposed alternative, if applicable;

(d) a demonstration that the proposed alternative is consistent with the purposes of the requirement for which the alternative is proposed and is consistent with the purposes of 20.11.46 NMAC and that any adverse effect of approving such alternative will be de minimis; and

(e) any other relevant information that the department may require.

J. For any monitoring plans, reports, or other information submitted under 20.11.46 NMAC, the account representative shall ensure that, where applicable, identifying information is consistent with the identifying information provided in the most recent certificate of representation for the WEB source submitted under 20.11.46.12 NMAC, *account representative for WEB sources*.

[20.11.46.16 NMAC - N, 12/31/03; A, 9/15/08; A, 5/16/11]

20.11.46.17 ALLOWANCE TRANSFERS:

A. Procedure: To transfer allowances, the account representative shall submit the following information to the tracking system administrator:

(1) the transfer account number(s) identifying the transferor account;

(2) the transfer account number(s) identifying the transferee account;

(3) the serial number of each allowance to be transferred; and

(4) the transferor's account representative's name and signature and date of submission.

B. Deadline: The allowance transfer deadline is midnight pacific standard time March 1 of each year (or if this date is not a business day, midnight of the first business day thereafter) following the end of the control period. By this time, the transfer of the allowances into the WEB source's compliance account must be correctly submitted to the tracking system administrator in order to demonstrate compliance under 20.11.46.19 NMAC for that control period.

C. Retirement of allowances: To transfer allowances for the purpose of retirement, the account representative shall submit the following information to the tracking system administrator:

(1) the transfer account number(s) identifying the transferor account;

(2) the serial number of each allowance to be retired; and

(3) the transferor's account representative's name and signature and date of submission accompanied by a signed statement acknowledging that each retired allowance is no longer available for future transfers from or to any account.

[20.11.46.17 NMAC - N, 12/31/03; A, 5/16/11]

20.11.46.18 USE OF ALLOWANCES FROM A PREVIOUS YEAR:

A. Any allowance that is held in a compliance account or general account shall remain in such an account unless and until the allowance is either deducted in conjunction with the compliance process, or transferred to another account.

B. In order to demonstrate compliance under Subsection A of 20.11.46.19 NMAC for a control period, WEB sources shall only use allowances allocated for that current control period or any previous year. Because all allowances held in a special reserve compliance account for a WEB source that monitors certain units in accordance with Paragraph (2) of Subsection A of 20.11.46.16 NMAC will be deducted for compliance for each control period, no banking of such allowances for use in a subsequent year is permitted by 20.11.46 NMAC.

C. If flow control procedures for the current control period have been triggered as outlined in Section C4.2 of the *Section 309 Regional Haze State Implementation Plan Element: Albuquerque - Bernalillo County, New Mexico*, then the use of allowances that were allocated for any previous year shall be limited as follows:

(1) the number of allowances that are held in each compliance account and general account as of the allowance transfer deadline for the immediately previous year and that were allocated for any previous year shall be determined;

(2) the number determined in Paragraph (1) of Subsection C of 20.11.46.18 NMAC shall be multiplied by the flow control ratio established in accordance with Section C4.2 of the *Section 309 Regional Haze State Implementation Plan Element: Albuquerque - Bernalillo County, New Mexico*, to determine the number of allowances that were allocated for a previous year that can be used without restriction for the current control period;

(3) allowances that were allocated for a previous year in excess of the number determined in Paragraph (2) of Subsection C of 20.11.46.18 NMAC may also be used for the current control period; and if such allowances are used to make a deduction, two allowances shall be deducted for each deduction of one allowance required under 20.11.46.19 NMAC, *compliance*.

D. Special provisions for the year 2018. After compliance with the 2017 allowance limitation has been determined in accordance with Subsection A of 20.11.46.19 NMAC, allowances allocated for any year prior to 2018 shall not be used for determining compliance with the 2018 allowance limitation or any future allowance limitation.

E. Special reserve compliance accounts. Unused allowances in any special reserve compliance account will be retired after the compliance deductions under 20.11.46.19 NMAC have been completed for each control period, and shall not be available for use in any future control period.

[20.11.46.18 NMAC - N, 12/31/03; A, 9/15/08; A, 5/16/11]

20.11.46.19 COMPLIANCE:

A. Compliance with allowance limitations:

(1) In accordance with Paragraphs (2) and (3) of Subsection A of 20.11.46.19 NMAC and 20.11.46.18 NMAC, the WEB source shall hold allowances, as of the allowance transfer deadline in the WEB source's compliance account (together with any current control year allowances held in the WEB source's special reserve compliance account under Paragraph (2) of Subsection A of 20.11.46.16 NMAC) in an amount not less than the total SO₂ emissions for the control period from the WEB source, as determined under the monitoring and reporting requirements of 20.11.46.16 NMAC.

(a) For each source that is a WEB source on or before the program trigger date, the first control period is the calendar year that is six years following the calendar year for which SO₂ emissions exceeded the milestone in accordance with procedures in Part A of the *Section 309 Regional Haze State Implementation Plan Element: Albuquerque - Bernalillo County, New Mexico*.

(b) For any existing source that becomes a WEB source after the program trigger date, the first control period is the calendar year that is four years following the inventory year in which the source exceeded the SO₂ emissions threshold.

(c) For any new WEB source after the program trigger date, the first control period is the first full calendar year that the source is in operation.

(d) If the WEB trading program is triggered in accordance with the 2013 review procedures in Section A4 of the *Section 309 Regional Haze State Implementation Plan Element: Albuquerque - Bernalillo County, New Mexico*, the first control period for each source that is a WEB source on or before the program trigger date is the year 2018.

(2) **Allowance transfer deadline:** An allowance may only be deducted from the WEB source's compliance account if:

(a) the allowance was allocated for the current control period or meets the requirements in 20.11.46.18 NMAC, *use of allowances from a previous year*, for use of allowances from a previous control period, and

(b) the allowance was held in the WEB source's compliance account as of the allowance transfer deadline for the current control period, or was transferred into the compliance account by an allowance transfer correctly submitted for recording by the allowance transfer deadline for the current control period.

(3) Compliance with allowance limitations shall be determined as follows:

(a) the total annual SO₂ emissions for all SO₂ emitting units at the source that are monitored under Paragraph (2) of Subsection A of 20.11.46.16 NMAC, as reported by the source in Paragraph (2) and Paragraph (4) of Subsection H of 20.11.46.16 NMAC, and recorded in the WEB EATS, shall be compared to the allowances held in the source's special reserve compliance account as of the allowance transfer deadline for the current control period, adjusted in accordance with 20.11.46.18 NMAC, *use of allowances from a previous year*, if the emissions are equal to or less than the allowances in such account, all such allowances shall be retired to satisfy the obligation to hold allowances for such emissions; and if the total emissions from such units exceeds the allowances in such special reserve compliance account, the WEB source shall account for such excess emissions in Subparagraph (b) of Paragraph (3) of Subsection A of 20.11.46.19 NMAC;

(b) the total annual SO₂ emissions for all SO₂ emitting units at the source that are monitored under Paragraph (1) of Subsection A of 20.11.46.16 NMAC, as reported by the source to the director, as required by Paragraph (2) and Paragraph (4) of Subsection H of 20.11.46.16 NMAC, and recorded in the WEB EATS, together with any excess emissions as calculated in the Subparagraph (a) of Paragraph (3) of Subsection A of 20.11.46.19 NMAC, shall be compared to the allowances held in the source's

compliance account as of the allowance transfer deadline for the current control period, adjusted in accordance with 20.11.46.18 NMAC, *use of allowances from a previous year*;

(c) if the comparison in Subparagraph (b) of Paragraph (3) of Subsection A of 20.11.46.19 NMAC results in emissions that exceed the allowances held in the source's compliance account, the source has exceeded its allowance limitation and the excess emissions are subject to the allowance deduction penalty in Subsection C of 20.11.46.19 NMAC.

(4) Other than allowances in a special reserve compliance account for units monitored under Paragraph (2) of Subsection A of 20.11.46.16 NMAC, to the extent consistent with 20.11.46.18 NMAC, *use of allowances from a previous year*, allowances shall be deducted for a WEB source for compliance with the allowance limitation as directed by the WEB source's account representative. Deduction of any other allowances as necessary for compliance with the allowance limitation shall be on a first-in, first-out accounting basis in the order of the date and time of their recording in the WEB source's compliance account, beginning with the allowances allocated to the WEB source and continuing with the allowances transferred to the WEB source's compliance account from another compliance account or general account. The allowances held in a special reserve compliance account pursuant to Paragraph (2) of Subsection A of 20.11.46.16 NMAC shall be deducted as specified in Subparagraph (a) of Paragraph (3) of Subsection A of 20.11.46.19 NMAC.

B. Certification of compliance:

(1) For each control period in which a WEB source is subject to the allowance limitation, the account representative of the source shall submit to the department a compliance certification report for the source.

(2) The compliance certification report shall be submitted no later than the allowance transfer deadline of each control period, and shall contain the following:

(a) identification of each WEB source;

(b) at the account representative's option, the serial numbers of the allowances that are to be deducted from a source's compliance account or special reserve compliance account for compliance with the allowance limitation; and

(c) the compliance certification report according to Paragraph (3) of Subsection B of 20.11.46.19 NMAC.

(3) In the compliance certification report, the account representative shall certify, based on reasonable inquiry of those persons with primary responsibility for operating the WEB source in compliance with the WEB trading program, whether the WEB source for which the compliance certification is submitted was operated, during

the control period covered by the report, in compliance with the requirements of the WEB trading program applicable to the source including:

(a) whether the WEB source operated in compliance with the SO₂ allowance limitation;

(b) whether SO₂ emissions data has been submitted to the department in accordance with 20.11.46.16 NMAC and other applicable guidance, for review, revision as necessary, and finalization for forwarding to the SO₂ allowance tracking system for recording;

(c) whether the monitoring plan that governs the WEB source has been maintained to reflect the actual operation and monitoring of the source, and contains all information necessary to attribute SO₂ emissions to the source, in accordance with Paragraph (1) of Subsection A of 20.11.46.16 NMAC;

(d) whether all the SO₂ emissions from the WEB source, if applicable, were monitored or accounted for either through the applicable monitoring or through application of the appropriate missing data procedures;

(e) if applicable, whether any SO₂ emitting unit for which the WEB source is not required to monitor in accordance with Subparagraph (c) of Paragraph (1) of Subsection A of 20.11.46.16 NMAC remained permanently retired and had no emissions for the entire applicable period; and

(f) whether there were any changes in the method of operating or monitoring the WEB source that required monitor recertification; and if there were any such changes, the report shall specify the nature, reason, and date of the change, the method to determine compliance status subsequent to the change, and specifically, the method to determine SO₂ emissions.

C. Penalties for any WEB source exceeding its allowance limitations:

(1) Allowance deduction penalty:

(a) If emissions from a WEB source exceed the allowance limitation for a control period, as determined in accordance with Subsection A of 20.11.46.19 NMAC, the source's allowances held in its compliance account will be reduced by an amount equal to three times the source's tons of excess emissions. If the compliance account does not have sufficient allowances allocated for that control period, the required number of allowances shall be deducted from the WEB source's compliance account regardless of the control period for which they were allocated, once allowances are recorded in the account.

(b) Any allowance deduction required under 20.11.46.19 NMAC shall not reduce or otherwise affect the liability of the owners and operators of the WEB source

for any fine, penalty or assessment or their obligation to comply with any other remedy, for the same violation, as ordered under the Clean Air Act, implementing regulations or applicable state or tribal law. Accordingly, a violation can be assessed each day of the control period for each ton of SO₂ emissions in excess of its allowance limitation if the department so chooses.

(2) Reserved

D. Liability:

(1) **WEB Source liability for non-compliance:** A WEB source that violates any requirement of 20.11.46 NMAC is subject to administrative, civil and criminal penalties under the Air Quality Control Act and the Clean Air Act, separate from and regardless of any automatic penalties assessed for allowance deduction penalty. Each day of the control period is a separate violation, and each ton of SO₂ emissions in excess of a source's allowance limitation is a separate violation.

(2) **General liability:**

(a) Any provision of the WEB trading program that applies to a source or an account representative shall apply also to the owners and operators of such source.

(b) Any person who violates any requirement or prohibition of the WEB trading program shall be subject to enforcement pursuant to applicable state, tribal or federal law.

(c) Any person who knowingly makes a false material statement in any record, submission, or report under this WEB trading program shall be subject to criminal enforcement pursuant to the applicable state, tribal or federal law.

[20.11.46.19 NMAC - N, 12/31/03; A, 9/15/08; A, 5/16/11]

20.11.46.20 SPECIAL PENALTY PROVISIONS FOR YEAR 2018 MILESTONE:

A. If the WEB trading program is triggered as outlined Part A of the *Section 309 Regional Haze State Implementation Plan Element: Albuquerque - Bernalillo County, New Mexico*, and the first control period will not occur until after the year 2018, the following provisions shall apply for the 2018 emissions year.

(1) All WEB sources shall register, and open a compliance account within 180 days after the program trigger date, in accordance with Subsection A of 20.11.46.13 NMAC and 20.11.46.15 NMAC.

(2) The tracking system administrator shall record the allowances for the 2018 control period for each WEB source in the source's compliance account once the department allocates the 2018 allowances under Section C1 and D1 of the *Section 309*

Regional Haze State Implementation Plan Element: Albuquerque - Bernalillo County, New Mexico.

(3) The allowance transfer deadline is midnight pacific standard time on May 31, 2021 (or if this date is not a business day, midnight of the first business day thereafter). WEB sources may transfer allowances as provided in Subsection A of 20.11.46.17 NMAC until the allowance transfer deadline.

(4) A WEB source shall hold allowances allocated for 2018 including those transferred into the compliance account or a special reserve account by an allowance transfer correctly submitted by the allowance transfer deadline, in an amount not less than the WEB source's total SO₂ emissions for 2018. Emissions shall be determined using the pre-trigger monitoring provisions in Part B of the *Section 309 Regional Haze State Implementation Plan Element: Albuquerque - Bernalillo County, New Mexico*, and 20.11.46.9 NMAC.

(5) In accordance with Subsection D of 20.11.46.18 NMAC, and Paragraph (4) of Subsection A of 20.11.46.20 NMAC, the department shall seek at least the minimum financial penalty of \$5000 per ton of SO₂ emissions in excess of the WEB source's allowance limitation.

(a) Any source may resolve its excess emissions violation by agreeing to a streamlined settlement approach whereby the source pays a penalty of \$5000 per ton or partial ton of excess emissions, and payment is received within 90 calendar days after the issuance of a notice of violation.

(b) Any source that does not resolve its excess emissions violation in accordance with the streamlined settlement approach in Subparagraph (a) of Paragraph (5) of Subsection A of 20.11.46.20 NMAC will be subject to formal enforcement action, in which the director shall seek a financial penalty for the excess emissions based on New Mexico's statutory maximum civil penalties.

(6) Each ton of SO₂ emissions in excess of a source's allowance limitation is a separate violation and each day of a control period is a separate violation.

B. If the program has been triggered and the provision in Subsection A of 20.11.46.20 NMAC is implemented the provisions in Subsection C of 20.11.46.20 NMAC shall continue to apply for each year after the 2018 emission year until:

(1) the first control period under the WEB trading program under Subparagraph (a) of Paragraph (1) of Subsection A of 20.11.46.19 NMAC; or

(2) the department determines, in accordance with Section A3.10 of the *Section 309 Regional Haze State Implementation Plan Element: Albuquerque - Bernalillo County, New Mexico*, that the 2018 SO₂ milestone has been met.

C. If the special penalty provisions continue after the year 2018 as outlined in Subsection B of 20.11.46.20 NMAC, the deadlines listed in Paragraphs (2)-(5) of Subsection A of 20.11.46.20 NMAC, will be adjusted as follows:

(1) for the 2019 control period, the dates will be adjusted forward by one year, except that the allowance transfer deadline shall be midnight Pacific Standard Time on May 31, 2021 (or if this date is not a business day, midnight of the first business day thereafter); and

(2) for each control period after 2018 that the special penalty provisions are assessed, the dates and deadlines in Paragraph (1) of Subsection C of 20.11.46.20 NMAC above for the 2019 control period will be adjusted forward by one year.

D. The tracking system administrator will record the same number of allowances for each WEB source as were recorded for the 2018 control period for each subsequent control period.

[20.11.46.20 NMAC - N, 12/31/03; A, 9/15/08; A, 5/16/11]

20.11.46.21 PROTOCOL WEB 1: SO₂ MONITORING OF FUEL GAS COMBUSTION DEVICES:

A. Applicability.

(1) The provisions of this protocol are applicable to fuel gas combustion devices at petroleum refineries.

(2) Fuel gas combustion devices include boilers, process heaters, and flares used to burn fuel gas generated at a petroleum refinery.

(3) Fuel gas means any gas, which is generated, and combusted at a petroleum refinery. Fuel gas does not include:

(a) natural gas, unless combined with other gases generated at a petroleum refinery;

(b) gases generated by a catalytic cracking unit catalyst regenerator;

(c) gases generated by fluid coking burners;

(d) gases combusted to produce sulfur or sulfuric acid; or

(e) process upset gases generated due to startup, shutdown, or malfunctions.

B. Monitoring requirements.

(1) Except as provided in Paragraph (2) and Paragraph (3) of Subsection B of 20.11.46.21 NMAC, fuel gas combustion devices shall use a *continuous fuel gas monitoring system* (CFGMS) to determine the total sulfur content (reported as H₂S) of the fuel gas mixture prior to combustion, and continuous fuel flow meters to determine the amount of fuel gas burned.

(a) Fuel gas combustion devices having a common source of fuel gas may be monitored for sulfur content at one location, if monitoring at that location is representative of the sulfur content of the fuel gas being burned in any fuel gas combustion device.

(b) The CFGMS shall meet the performance requirements in Performance Specification 2 in Appendix B to 40 CFR Part 60, and the following:

(i) continuously monitor and record the concentration by volume of total sulfur compounds in the gaseous fuel reported as ppmv H₂S;

(ii) have the span value set so that the majority of readings fall between 10 and 95% of the range;

(iii) record negative values of zero drift, for initial certification and daily calibration error tests;

(iv) calibration drift shall be 5.0% of the span; and

(v) use EPA Test Method 15A or 16, or an approved alternative test method to determine total reduced sulfur emissions; these are the reference methods for the relative accuracy test; and the relative accuracy test shall include a bias test in accordance with Paragraph (3) of Subsection D of 20.11.46.21 NMAC.

(c) All continuous fuel flow meters shall comply with the provisions of Section 2.1.5 of Appendix D to 40 CFR Part 75.

(d) The hourly mass SO₂ emissions rate for all the fuel combustion devices monitored by this approach shall be calculated using the following equation:

$E_t = (C_s)(Q_f)(K)$; where:

E_t = Total SO₂ emissions in lb/hr from applicable fuel gas combustion devices;

C_s = Sulfur content of the fuel gas as H₂S (ppmv);

Q_f = Fuel gas flow rate to the applicable fuel gas combustion devices (scf/hr); and

$K = 1.660 \times 10^{-7}$ (lb/scf)/ppmv.

(2) As an alternative to using a CFGMS as required by Paragraph (1) of Subsection B of 20.11.46.21 NMAC, fuel gas combustion devices having a common source of fuel gas may be monitored with an SO₂ CEMS and flow CEMS and (if necessary) a moisture monitoring system at only one location, if the CEMS monitoring at that location is representative of the SO₂ emission rate (lb SO₂/scf fuel gas burned) of all applicable fuel gas combustion devices. Continuous fuel flow meters shall be used in accordance with Paragraph (2) of Subsection B of 20.11.46.21 NMAC, and the fuel gas combustion device monitored by a CEMS shall have separate fuel metering.

(a) Each CEMS for SO₂ and flow, and (if applicable) moisture, shall comply with the operating requirements, performance specifications, and quality-assurance requirements of 40 CFR Part 75.

(b) All continuous fuel flow meters shall comply with the provisions of Section 2.1.5 of Appendix D to 40 CFR Part 75.

(c) The SO₂ hourly mass emissions rate for all the fuel gas combustion devices monitored by this approach shall be determined by the ratio of the amount of fuel gas burned by the CEMS-monitored fuel gas combustion device to the total fuel gas burned by all applicable fuel gas combustion devices using the following equation:

$E_t = (E_m)(Q_t)/(Q_m)$; where:

E_t = Total SO₂ emissions in lb/hr from applicable fuel gas combustion devices;

E_m = SO₂ emissions in lb/hr from the CEMS-monitored fuel gas combustion device, calculated using *Equation F-1* or (if applicable) *F-2* in Appendix F to 40 CFR Part 75;

Q_t = Fuel gas flow rate (scf/hr) from applicable fuel gas combustion devices; and

Q_m = Fuel gas flow rate (scf/hr) to the CEMS-monitored fuel gas combustion device.

(3) As an additional alternative to using a CFGMS as required by Paragraph (1) of Subsection B of 20.11.46.21 NMAC, fuel gas combustion devices having a common source of fuel gas may be monitored with an SO₂ - diluent CEMS at only one location, if the CEMS monitoring at that location is representative of the SO₂ emission rate (lb SO₂/mmBtu) of all applicable fuel gas combustion devices. If this option is selected, the owner or operator shall conduct fuel gas sampling and analysis for gross calorific value (GCV), and shall use continuous fuel flow metering in accordance with Paragraph (1) of Subsection B of 20.11.46.21 NMAC, with separate fuel metering for the CEMS-monitored fuel gas combustion device.

(a) Each SO₂ - diluent CEMS shall comply with the applicable provisions for SO₂ monitors and diluent monitors in 40 CFR Part 75, and shall use the procedures in Section 3 of Appendix F to 40 CFR Part 75 for determining SO₂ emission rate

(lb/mmBtu) by substituting the term SO₂ for NO_x in that section, and using a K factor of 1.660×10^{-7} (lb/scf) ppmv instead of the NO_x K factor.

(b) All continuous fuel flow meters and fuel gas sampling and analysis for GCV to determine the heat input ratio shall comply with the applicable provisions of Section 2.1.5 and 2.3.4 of Appendix D to 40 CFR Part 75.

(c) The SO₂ hourly mass emissions rate for all the fuel gas combustion devices monitored by this approach shall be determined by the ratio of the fuel gas heat input to the CEMS-monitored fuel gas combustion device to the total fuel gas heat input to all applicable fuel gas combustion devices using the following equation:

$E_t = (E_m)(Q_t)/(GCV) / 10^6$; where:

E_t = Total SO₂ emissions in lbs/hr from applicable fuel gas combustion devices;

E_m = SO₂ emissions in lb/mmBtu from the CEMS - monitored fuel gas combustion device;

Q_t = Fuel gas flow rate (scf/hr) to the applicable fuel gas combustion devices;

GCV = Fuel Gross Calorific Value (Btu/scf); and

10^6 = Conversion from Btu to million Btu.

(d) The owner or operator shall calculate total SO₂ mass emissions for each calendar quarter and each calendar year based on the emissions in lb/hr and *Equations F-3 and F-4* in Appendix F to 40 CFR Part 75.

C. Certification and recertification requirements. All monitoring systems are subject to initial certification and recertification testing as follows:

(1) the owner or operator shall comply with the initial testing and calibration requirements in performance specification 2 in Appendix B of 40 CFR Part 60 and Subparagraph (b) of Paragraph (1) of Subsection B of 20.11.46.21 NMAC for each CFGMS;

(2) each CEMS for SO₂ and flow or each SO₂-diluent CEMS shall comply with the testing and calibration requirements specified in 40 CFR 75.20 and Appendices A and B, except that each SO₂-diluent CEMS shall meet the relative accuracy requirements for a NO_x-diluent CEMS (lb/mmBtu);

(3) a continuous fuel flow meter shall comply with certification requirements in Section 2.1.5 of Appendix D of 40 CFR Part 75.

D. Quality-assurance/quality control requirements. A quality-assurance and quality control (QA/QC) plan shall be developed and implemented for each:

(1) CEMS for SO₂ and flow or the SO₂-diluent CEMS in compliance with Sections 1, 1.1, and 1.2 of Appendix B of 40 CFR Part 75.

(2) Continuous fuel flow meter and fuel sampling and analysis in compliance with Sections 1, 1.1, and 1.3 Appendix B of 40 CFR Part 75. The owner or operator shall meet the requirements in Section 2.1.6 of Appendix D to 40 CFR Part 75, and may use the procedures set forth in Section 2.1.7 of that appendix.

(3) CFGMS in compliance with Sections 1 and 1.1 of Appendix B to 40 CFR Part 75, and the following:

(a) perform a daily calibration error test of each CFGMS at two gas concentrations, one low level and one high level; and calculate the calibration error as described in Appendix A to 40 CFR Part 75; an out of control period occurs whenever the error is greater than 5.0 percent of the span value;

(b) in addition to the daily calibration error test, an additional calibration error test shall be performed whenever a daily calibration error test is failed, whenever a monitoring system is returned to service following repairs or corrective actions that may affect the monitor measurements, and after making manual calibration adjustments;

(c) perform a linearity test once every operating quarter; calculate the linearity as described in Appendix A to 40 CFR Part 75; and an out of control period occurs whenever the linearity error is greater than 5.0 percent of a reference value, and the absolute value of the difference between average monitor response values and a reference value is greater than 5.0 ppm;

(d) perform a relative accuracy test audit once every four operating quarters; calculate the relative accuracy as described in Appendix A to 40 CFR Part 75; and an out of control period occurs whenever the relative accuracy is greater than 20.0 percent of the mean value of the reference method measurements;

(e) using the results of the relative accuracy test audit, conduct a bias test in accordance with Appendix A to 40 CFR Part 75, and calculate and apply a bias adjustment factor if required.

E. Missing data procedures. For any period in which valid data are not being recorded by a(n)

(1) SO₂ CEMS or flow CEMS specified in 20.11.46.21 NMAC, missing or invalid data shall be replaced with substitute data in accordance with the requirements in Subpart D of 40 CFR Part 75.

(2) SO₂-diluent CEMS specified in 20.11.46.21 NMAC, missing or invalid data shall be replaced with substitute data on a rate basis (lb/mmBtu) in accordance with the requirements for SO₂ monitors in Subpart D of 40 CFR Part 75.

(3) Continuous fuel flow meter or for fuel gas GCV sampling and analysis specified in 20.11.46.21 NMAC, missing or invalid data shall be replaced with substitute data in accordance with missing data requirements in Section 2.4 of Appendix D to 40 CFR Part 75.

(4) CFGMS as specified in 20.11.46.21 NMAC, hourly missing or invalid data shall be replaced with substitute data in accordance with the missing data requirements for units performing hourly gaseous fuel sulfur sampling in Section 2.4 of Appendix D to 40 CFR Part 75.

F. Monitoring plan and reporting requirements. In addition to the general monitoring plan and reporting requirements of 20.11.46.16 NMAC, the owner or operator shall meet the following additional requirements:

(1) the monitoring plan shall identify each group of units that is monitored by a single monitoring system under 20.11.46.21 NMAC, and the plan shall designate an identifier for the group of units for emissions reporting purposes; and for purpose of submitting emissions reports, no apportionment of emissions to the individual units within the group is required;

(2) if the provisions of Paragraph (2) or Paragraph (3) of Subsection B of 20.11.46.21 NMAC are used, provide documentation and an explanation to demonstrate that the SO₂ emission rate from the monitored unit is representative of the rate from non-monitored units.

[20.11.46.21 NMAC - N, 12/31/03; A, 9/15/08; A, 5/16/11]

20.11.46.22 PROTOCOL WEB 2: PREDICTIVE FLOW MONITORING SYSTEMS FOR KILNS WITH POSITIVE PRESSURE FABRIC FILTER:

A. Applicability. The provisions of this protocol are applicable to cement kilns or lime kilns that:

(1) are controlled by a positive pressure fabric filter;

(2) combust only a single fuel, no fuel blends; and

(3) have operating conditions upstream of the fabric filter that the WEB source documents would reasonably prevent reliable flow monitor measurements; and this protocol does not modify the SO₂ monitoring requirements in 20.11.46.16 NMAC.

B. Monitoring requirements.

(1) A cement or lime kiln with a positive pressure fabric filter shall use a *predictive flow monitoring system* (PFMS) to determine the hourly kiln exhaust gas flow.

(2) A PFMS is the total equipment necessary for the determination of exhaust gas flow using process or control device operating parameter measurements and a conversion equation, a graph, or computer program to produce results in cubic feet per hour.

(3) The PFMS shall meet the following performance specifications:

(a) sensor readings and conversion of sensor data to flow in cubic feet per hour must be automated;

(b) the PFMS must allow for the automatic or manual determination of failed monitors; and at a minimum a daily determination must be performed;

(c) the PFMS shall have provisions to check the calibration error of each parameter that is individually measured; the owner or operator shall propose appropriate performance specifications in the initial monitoring plan for all parameters used in the PFMS comparable to the degree of accuracy required for other monitoring systems used to comply with 20.11.46 NMAC; the parameters shall be tested at two levels, low: 0 to 20 percent of full scale, and high: 50 to 100 percent of full scale; and the reference value need not be certified;

(d) the relative accuracy of the PFMS must be less than or equal to 10.0 percent of the reference method average value, and include a bias test in accordance with Paragraph (3) of Subsection D of 20.11.46.22 NMAC.

C. Certification requirements. The PFMS is subject to initial certification testing. The source owner or operator shall:

(1) demonstrate the ability of the PFMS to identify automatically or manually a failed monitor;

(2) provide evidence of calibration testing of all monitoring equipment; and any tests conducted within the previous 12 months of operation that are consistent with the QA/QC plan for the PFMS are acceptable for initial certification purposes; and

(3) perform an initial relative accuracy test over the normal range of operating conditions of the kiln. Using the results of the relative accuracy test audit, conduct a bias test in accordance with Appendix A to 40 CFR Part 75; and calculate and apply a bias adjustment factor if required.

D. Quality-assurance and quality control requirements. A quality-assurance and quality control plan shall be developed and implemented for each PFMS in compliance with Sections 1 and 1.1 of Appendix B of 40 CFR Part 75, and the following:

- (1) perform a daily monitor failure check;
- (2) perform calibration tests of all monitors for each parameter included in the PFMS; at a minimum, calibrations shall be conducted prior to each relative accuracy test audit; and
- (3) perform a relative accuracy test audit and accompanying bias test once every four operating quarters; and calculate the relative accuracy (and bias adjustment factor) as described in 20.11.46.21 NMAC and 40 CFR Part 75; an out of control period occurs whenever the flow relative accuracy is greater than 10.0 percent of the mean value of the reference method.

E. Missing data. For any period in which valid data are not being recorded by the PFMS specified in 20.11.46.22 NMAC, hourly missing or invalid data shall be replaced with substitute data in accordance with the flow monitor missing data requirements for non-load based units in Subpart D of 40 CFR Part 75.

F. Monitoring plan requirements. In addition to the general monitoring plan requirements of 20.11.46.16 NMAC, the owner or operator shall meet the following additional requirements:

- (1) the monitoring plan shall document the reasons why stack flow measurements upstream of the fabric filter are unlikely to provide reliable flow measurements over time;

- (2) the initial monitoring plan shall explain the relationship of the proposed parameters and stack flow, and discuss other parameters considered and the reasons for not using those parameters in the PFMS; and the department may require that the subsequent monitoring plan include additional explanation and documentation for the reasonableness of the proposed PFMS.

[20.11.46.22 NMAC - N, 12/31/03; A, 5/16/11]

20.11.46.23 SAVINGS CLAUSE:

Any amendment to *Sulfur Dioxide Emissions Inventory Requirements; Western Backstop Sulfur Dioxide Trading Program*, 20.11.46 NMAC, which is filed with the state records center and archives shall not affect actions pending for violation of a statute, ordinance, part, or permit. Prosecution for a violation of a prior statute, ordinance, part or permit shall be governed and prosecuted under the statute, ordinance, part or permit wording in effect at the time the violation was committed.

[20.11.46.23 NMAC - N, 12/31/03]

20.11.46.24 SEVERABILITY:

If any section, subsection, sentence, phrase, clause or wording of 20.11.46 NMAC or the federal standards incorporated herein is for any reason held to be unconstitutional or otherwise invalid by any court or the EPA, the decision shall not affect the validity of remaining portions of 20.11.46 NMAC.

[20.11.46.24 NMAC - N, 12/31/03; A, 9/15/08]

PART 47: EMISSIONS INVENTORY REQUIREMENTS

20.11.47.1 ISSUING AGENCY:

Albuquerque-Bernalillo County Air Quality Control Board, c/o Environmental Health Department, P.O. Box 1293, Albuquerque, New Mexico 87103. Telephone: (505) 768-2601.

[20.11.47.1 NMAC - N, 5/1/08]

20.11.47.2 SCOPE:

20.11.47 NMAC applies to each person who owns or operates a source or who intends to construct or modify a source within Bernalillo county, but does not apply to sources in Bernalillo county that are located on Indian lands over which the Albuquerque-Bernalillo county air quality control board lacks jurisdiction.

[20.11.47.2 NMAC - N, 5/1/08]

20.11.47.3 STATUTORY AUTHORITY:

20.11.47 NMAC is adopted pursuant to the authority provided in the New Mexico Air Quality Control Act, NMSA 1978 Sections 74-2-4, 74-2-5.C; the Joint Air Quality Control Board Ordinance, Bernalillo County Ordinance 94-5 Section 4; and the Joint Air Quality Control Board Ordinance, Revised Ordinances of Albuquerque ROA 1994 Section 9-5-1-4.

[20.11.47.3 NMAC - N, 5/1/08]

20.11.47.4 DURATION:

Permanent.

[20.11.47.4 NMAC - N, 5/1/08]

20.11.47.5 EFFECTIVE DATE:

May 1, 2008 except where a later date is cited at the end of a section.

[20.11.47.5 NMAC - N, 5/1/08]

20.11.47.6 OBJECTIVE:

To establish requirements for the submission of certain relevant information to ensure that the regulations and standards under the Air Quality Control Act and the federal act will not be violated.

[20.11.47.6 NMAC - N, 5/1/08; A, 11/12/12]

20.11.47.7 DEFINITIONS:

In addition to the definitions in 20.11.47 NMAC, the definitions in 20.11.1 NMAC apply unless there is a conflict between definitions, in which case the definition in 20.11.47 NMAC shall govern.

A. "Actual emissions" means the quantified emissions of a regulated air pollutant from a stationary source for every 12-month period. Valid continuous emission monitoring data or source test data shall be preferentially used to determine actual emissions. In the absence of valid continuous emissions monitoring data or source test data, the basis for determining actual emissions shall be quantified using actual operating hours, production rates, throughputs of process materials, throughputs of materials stored, usage of materials, data provided in manufacturer's product specifications, material volatile organic compound (VOC) content reports, laboratory analyses, or any other technically acceptable data as approved by the department in advance and in writing. All calculations of actual emissions shall use USEPA or department approved methods including emission factors and assumptions.

B. "Air pollution control equipment" means any device, equipment, process or combination thereof the operation of which would limit, capture, reduce, confine, or otherwise control regulated air pollutants or convert for the purposes of control any regulated air pollutant to another form, another chemical or another physical state.

C. Reserved

D. Reserved

E. "Commencement" or "commence" means that an owner or operator has undertaken a continuous program of construction or modification.

F. "Construction" means fabrication, erection, installation or relocation of a stationary source, including temporary installations and portable stationary sources.

G. "Emissions report" or "emissions inventory" means a listing, by source, of the amount of regulated air pollutants discharged into the atmosphere.

H. "Fuel carbon content" means the mass of carbon per unit of heat content of a fuel.

I. "Fugitive emissions" are those emissions that could not reasonably pass through a stack, chimney, vent, or other functionally-equivalent opening.

J. Reserved

K. Reserved

L. Reserved

M. Reserved

N. "Modification" means any physical change in, or change in the method of operation of, a stationary source that results in an increase in the potential emission rate of any regulated air pollutant emitted by the source or that results in the emission of any regulated air pollutant not previously emitted, but does not include:

(1) a change in ownership of the source;

(2) routine maintenance, repair or replacement;

(3) installation of air pollution control equipment, and all related process equipment and materials necessary for its operation, undertaken for the purpose of complying with regulations adopted by the board or pursuant to the federal Clean Air Act; or

(4) unless previously limited by enforceable permit conditions:

(a) an increase in the production rate, if the increase does not exceed the operating design capacity of the source;

(b) an increase in the hours of operation; or

(c) use of an alternative fuel or raw material if, prior to January 6, 1975, the source was capable of accommodating such fuel or raw material, or if use of an alternate fuel or raw material is caused by a natural gas curtailment or emergency allocation or any other lack of supply of natural gas.

O. Reserved

P. "Nonattainment area" means, for any regulated air pollutant, an area that has been designated as a nonattainment area under Section 107 of the federal act.

Q. "Operator" means the person or persons responsible for the overall operation of a facility.

R. "Owner" means the person or persons who own a facility or part of a facility.

S. Reserved

T. "Portable stationary source" means a source that can be relocated to another operating site with limited dismantling and reassembly, including as an example, moveable sand and gravel processing operations and asphalt plants.

U. "Potential emission rate" means the emission rate of a source at its maximum capacity to emit a regulated air pollutant under its physical and operational design, provided a physical or operational limitation on the capacity of the source to emit a regulated air pollutant, including air pollution control equipment and restrictions on hours of operation or on the type or amount of material combusted, stored or processed, shall be treated as part of its physical and operational design only if the limitation or the effect it would have on emissions is enforceable by the department pursuant to the Air Quality Control Act or the federal act.

V. "Potential to emit" means the maximum capacity of a stationary source to emit a regulated air pollutant under its physical and operational design, except that a physical or operational limitation on the capacity of a source to emit a regulated air pollutant, including air pollution control equipment and restrictions on hours of operation or on the type or amount of material combusted, stored, or processed, shall be treated as part of its design if the limitation is federally enforceable; however, the potential to emit for nitrogen dioxide shall be based on total oxides of nitrogen.

W. "Regulated air pollutant" means the following:

(1) any pollutant for which a national, state, or local ambient air quality standard has been promulgated;

(2) any pollutant that is subject to any standard promulgated under Section 111 of the federal act;

(3) any Class I or II substance subject to any standard promulgated under or established by Title VI of the federal act; or

(4) any pollutant subject to a standard promulgated under Section 112 or any other requirements established under Section 112 of the federal act; but

(5) excluding greenhouse gases as defined in Subsection CC of 20.11.1.7 NMAC.

X. "Responsible person" or "responsible official" means the person designated in a permit or source registration, who is responsible for complying with the permit, or source registration and 20.11.47 NMAC.

Y. "Shutdown" means the cessation of operation of air pollution control equipment, process equipment or process for any purpose, except routine phasing out of batch process units.

Z. "Stationary source" or "source" means a structure, building, equipment, facility, installation (including temporary installations), operation or portable stationary source that emits or may emit a regulated air pollutant; a research facility may group its sources for the purpose of 20.11.47 NMAC with the prior written approval of the director of the department.

AA. Reserved

BB. "Sulfur oxides" means compounds containing sulfur and oxygen, including sulfur dioxide (SO₂).

CC. Reserved

DD. "Western backstop sulfur dioxide trading program" means 20.11.46 NMAC, if triggered as a backstop in accordance with the provisions of the *section 309 regional haze state implementation plan element for Albuquerque-Bernalillo county, New Mexico*, to reduce regional sulfur dioxide emissions.

[20.11.47.7 NMAC - N, 5/1/08; A, 11/12/12]

20.11.47.8 VARIANCES:

No person can obtain a variance from the requirements of 20.11.47 NMAC.

[20.11.47.8 NMAC - N, 5/1/08]

20.11.47.9 SEVERABILITY:

If for any reason any section, subsection, sentence, phrase, clause or wording of 20.11.47 NMAC is held to be unconstitutional or otherwise invalid by any court or the United States environmental protection agency, the decision shall not affect the validity of remaining portions of 20.11.47 NMAC.

[20.11.47.9 NMAC - N, 5/1/08]

20.11.47.10 CONSTRUCTION:

20.11.47 NMAC shall be liberally construed to carry out its purpose.

[20.11.47.10 NMAC - N, 5/1/08]

20.11.47.11 SAVINGS CLAUSE:

The filing of 20.11.47 NMAC, *Emissions Inventory Requirements*, and the filing of any amendment to 20.11.47 NMAC with the state records center and archives shall not affect any action pending for violation of a city or county ordinance, a board regulation, or a permit, and shall not affect a petition filed pursuant to 20.11.47 NMAC. Prosecution for violation of a prior statute, ordinance, part or permit shall be governed and prosecuted under the statute, ordinance, part or permit wording in effect at the time the violation was committed.

[20.11.47.11 NMAC - N, 5/1/08]

20.11.47.12 COMPLIANCE WITH OTHER REGULATIONS:

Compliance with 20.11.47 NMAC does not relieve a person from responsibility for complying with any other applicable federal, state, or local regulations.

[20.11.47.12 NMAC - N, 5/1/08]

20.11.47.13 DOCUMENTS:

Documents incorporated and cited in 20.11.47 NMAC may be viewed at the Albuquerque environmental health department, Suite 3023, One Civic Plaza, 400 Marquette NW, Albuquerque, NM.

[20.11.47.13 NMAC - N, 5/1/08]

20.11.47.14 EMISSIONS INVENTORY REQUIREMENTS:

A. Applicability: 20.11.47.14 NMAC applies to the owner or operator of every stationary source, located within Bernalillo county that:

(1) has an active permit issued pursuant to 20.11.41 NMAC, *Authority to Construct*, or 20.11.42 NMAC, *Operating Permits*; or

(2) is required to file a source registration pursuant to 20.11.40 NMAC, *Source Registration*.

B. Reporting requirements:

(1) A source that meets requirements under Paragraph (1) of Subsection A of 20.11.47.14 NMAC shall submit an emissions report annually. A source is not required to submit an emissions report more frequently than annually.

(2) A source that meets requirements under Paragraph (2) of Subsection A of 20.11.47.14 NMAC shall submit an emissions report if required by the department. A source is not required to submit an emissions report more frequently than annually.

(3) The department will provide a complete copy of an owner or operator's submitted emissions report when requested in writing by the owner or operator.

(4) The owner or operator shall submit to the department a complete, correct and current emissions report in the format specified by the department; the report shall state accurately the emissions of all regulated air pollutants included in the permit requested for any specified calendar year.

(5) Except as provided in Paragraph (6) of Subsection B of 20.11.47.14 NMAC, if the owner or operator is required to submit an emissions report to the department, the owner or operator shall submit the report by March 15 for the previous calendar year or any other calendar year.

(6) Sources required by a permit to submit an annual emissions report on a specific date shall submit the report on the specified date.

C. Content of emissions reports: Emissions report contents for reports required by Subsection B of 20.11.47.14 NMAC shall include:

(1) the air quality stationary source permit number or source registration number;

(2) the name, address, if any, and physical location of the stationary source;

(3) the name and telephone number of the person to contact regarding the emissions report;

(4) a certification signed by the owner, or operator, or a responsible official or designated representative, attesting that the statements and information contained in the emissions report are true and accurate to the best knowledge and belief of the certifying official, and including the full name, title, signature, date of signature, and telephone number of the certifying official; for sources subject to 20.11.42 NMAC, the certification shall be made as required by 20.11.42 NMAC;

(5) for each emission point, in the format required by the department:

(a) stack and exhaust gas parameters and location information;

(b) type of control equipment and estimated control efficiency;

(c) schedule of operation;

(d) annual process or fuel combustion rates;

(e) fuel heat, sulfur, and ash content;

(f) actual emissions estimate in pounds per year of total suspended particulate, PM₁₀, PM_{2.5}, ammonia, sulfur oxides, nitrogen oxides, carbon monoxide, volatile organic compounds, and lead, including fugitive emissions and emissions occurring during maintenance, start-ups, shutdowns, upsets, and downtime;

(g) speciated hazardous air pollutants, if requested by the department; and

(h) a description of the methods utilized to make the estimates, including calculations;

(6) for smelters, an annual report of sulfur input stated in tons per year; and

(7) all information required by 40 CFR Part 51, Subpart A, *Emissions Inventory Reporting Requirements*, as amended.

D. Additional content for emissions reports from sources in ozone nonattainment areas: In addition to the contents required by Subsection C of 20.11.47.14 NMAC, emissions reports from sources located in ozone nonattainment areas that emit nitrogen oxides and volatile organic compounds shall also include the following information:

(1) typical daily process rate during the peak ozone season, where the peak ozone season is specified by the department;

(2) actual emissions estimate of nitrogen oxides and volatile organic compounds in pounds per day for a typical day during the peak ozone season for:

(a) each emissions point; and

(b) for each process and fuel type contributing to emissions from each point.

E. Waiver of reporting requirements for insignificant emissions: The department may waive the requirements of Paragraph (5) of Subsection C of 20.11.47.14 NMAC for emissions that the department determines to be insignificant pursuant to 20.11.42 NMAC, except the following shall not be waived:

(1) for sources in nonattainment areas, reporting of emissions of pollutants for which the area is in nonattainment; and

(2) emissions reporting required by the federal act.

F. Emission tracking requirements for sulfur dioxide emission inventories: In addition to complying with the requirements of Subsections A through E of 20.11.47.14 NMAC, an owner may be subject to 20.11.46 NMAC, *Sulfur Dioxide Emissions Inventory Requirements; Western Backstop Sulfur Dioxide Trading Program*.

[20.11.47.14 NMAC - N, 5/1/08; A, 11/16/09; A, 11/12/12]

20.11.47.15 [RESERVED]

[20.11.47.15 NMAC - N, 5/1/08; A, 11/16/09; Repealed, 11/12/12]

PART 48: GREENHOUSE GAS EMISSIONS REPORTING [REPEALED]

[This part was repealed effective November 12, 2012]

PART 49: EXCESS EMISSIONS

20.11.49.1 ISSUING AGENCY:

Albuquerque - Bernalillo County Air Quality Control Board, c/o Environmental Health Department. P.O. Box 1293, Albuquerque, New Mexico 87103. Telephone: (505) 768-2601.

[20.11.49.1 NMAC - N, 10/13/09]

20.11.49.2 SCOPE:

A. 20.11.49 NMAC is applicable to every stationary source within Bernalillo county.

B. Exempt: 20.11.49 NMAC does not apply to sources within Bernalillo county that are located on indian lands over which the Albuquerque-Bernalillo county air quality control board lacks jurisdiction.

[20.11.49.2 NMAC - N, 10/13/09]

20.11.49.3 STATUTORY AUTHORITY:

20.11.49 NMAC is adopted pursuant to the authority provided in the New Mexico Air Quality Control Act, NMSA 1978 Sections 74-2-4, 74-2-5; the Joint Air Quality Control Board Ordinance, Bernalillo County Ordinance No. 94-5, Sections 4 and 5; and the Joint Air Quality Control Board Ordinance, Revised Ordinances of Albuquerque 1994, Sections 9-5-1-4 and 9-5-1-5.

[20.11.49.3 NMAC - N, 10/13/09]

20.11.49.4 DURATION:

Permanent.

[20.11.49.4 NMAC - N, 10/13/09]

20.11.49.5 EFFECTIVE DATE:

10/13/09, unless a later date is cited at the end of a section.

[20.11.49.5 NMAC - N, 10/13/09]

20.11.49.6 OBJECTIVE:

To implement requirements for the reporting of excess emissions for facility owners and operators.

[20.11.49.6 NMAC - N, 10/13/09; A, 10/15/16]

20.11.49.7 DEFINITIONS:

In addition to the definitions in 20.11.49 NMAC, the definitions in 20.11.1 NMAC apply unless there is a conflict between definitions, in which case the definition in 20.11.49 NMAC shall govern.

A. "Air pollution control equipment" means any device, equipment, process or combination thereof, the operation of which may limit, capture, reduce, confine, or otherwise control regulated air pollutants or convert for the purposes of control any regulated air pollutant to another form, another chemical or another physical state (e.g. sulfur recovery units, acid plants, baghouses, precipitators, scrubbers, cyclones, water sprays, enclosures, catalytic converters, and steam or water injection).

B. "Air quality regulation or permit condition" means any regulation adopted by the board, including a federal new source performance standard or national emission standard for hazardous air pollutants incorporated by reference, or any condition of an air quality permit issued by the department.

C. "Bypass" means the diversion of a regulated air contaminant around air pollution control equipment or process equipment.

D. "Building, structure, facility, or installation" means all of the pollutant-emitting activities which belong to the same industrial grouping, are located on one or more contiguous or adjacent properties, and are under the control of the same person (or persons under common control) except the activities of any vessel. Pollutant-emitting activities shall be considered as part of the same industrial grouping if they belong to the same major group (i.e. , which have the same two-digit code) as described in the *standard industrial classification manual, 1972*, as amended by the 1977 supplement

(U.S. government printing office stock numbers 4101-0065 and 003-005-00176-0, respectively).

E. "Emergency" means any situation arising from sudden and reasonably unforeseeable events beyond the control of the permittee, including acts of God or nature, which situation requires immediate corrective action to restore normal operation, and that causes the source to exceed a technology-based emission limitation due to unavoidable increases in emissions attributable to the emergency. An emergency shall not include noncompliance to the extent caused by improperly designed equipment, lack of preventive maintenance, or careless or improper operation.

F. "Excess emission" means the emission of an air contaminant, including a fugitive emission, in excess of the quantity, rate, opacity or concentration specified by an air quality regulation or permit condition.

G. "Malfunction" means any sudden and unavoidable failure of air pollution control equipment or process equipment beyond the control of the owner or operator, including malfunction during startup or shutdown. A failure that is caused entirely or in part by poor maintenance, careless operation, or any other preventable equipment breakdown shall not be considered a malfunction.

H. [RESERVED]

I. "Regular business day" means any day on which city of Albuquerque government offices are open for normal business. Saturdays, Sundays, and official federal and city of Albuquerque holidays are not regular business days.

J. "Shutdown" means the cessation of operation of any air pollution control equipment or process equipment.

K. "Startup" means setting into operation any air pollution control equipment or process equipment.

L. "Stationary source" or "source" means any building, structure, facility, or installation which emits or may emit a regulated air pollutant.

[20.11.49.7 NMAC - N, 10/13/09]

20.11.49.8 VARIANCES:

[RESERVED]

[20.11.49.8 NMAC - N, 10/13/09]

20.11.49.9 SAVINGS CLAUSE:

Any amendment to 20.11.49 NMAC which is filed with the state records center shall not affect actions pending for violation of a city or county ordinance, or 20.11.49 NMAC. Prosecution for a violation under prior regulation wording shall be governed and prosecuted under the statute, ordinance, part, or regulation section in effect at the time the violation was committed.

[20.11.49.9 NMAC - N, 10/13/09]

20.11.49.10 SEVERABILITY:

If for any reason any section, subsection, sentence, phrase, clause, wording or application of 20.11.49 NMAC is held to be unconstitutional or otherwise invalid by any court or the United States environmental protection agency, the decision shall not affect the validity or application of remaining portions of 20.11.49 NMAC.

[20.11.49.10 NMAC - N, 10/13/09]

20.11.49.11 DOCUMENTS:

Documents incorporated and cited in 20.11.49 NMAC may be viewed at the Albuquerque environmental health department, 400 Marquette NW, Room 3023, Albuquerque, NM 87102.

[20.11.49.11 NMAC - N, 10/13/09]

20.11.49.12 COMPLIANCE WITH OTHER REGULATIONS:

Compliance with 20.11.49 NMAC does not relieve a person from the responsibility to comply with any other applicable federal, state, or local statute or regulation.

[20.11.49.12 NMAC - N, 10/13/09]

20.11.49.13 APPLICABILITY:

A. Any source:

(1) whose operation results in an emission of a regulated air pollutant, including a fugitive emission, in excess of the quantity, rate, opacity or concentration specified by an air quality regulation or permit condition; or

(2) subject to the requirements of 20.11.47 NMAC, *Emissions Inventory Requirements*, 20.11.41 NMAC, *Construction Permits*, 20.11.42 NMAC, *Operating Permits*, 20.11.61 NMAC, *Prevention of Significant Deterioration*, or 20.11.60 NMAC, *Permitting In Nonattainment Areas*.

B. Deviations under 20.11.42 NMAC, *Operating Permits*, which do not result in excess emissions, are not subject to the provisions of 20.11.49 NMAC.

C. 20.11.49 NMAC does not create a separate cause of action for failure to obtain a permit under 20.11.41 NMAC, *Construction Permits*, 20.11.42 NMAC, *Operating Permits*, 20.11.61 NMAC, *Prevention of Significant Deterioration*, or 20.11.60 NMAC, *Permitting In Nonattainment Areas*.

[20.11.49.13 NMAC - N, 10/13/09; A, 10/15/16]

20.11.49.14 OPERATION RESULTING IN AN EXCESS EMISSION:

The emission of a regulated air pollutant in excess of the quantity, rate, opacity, or concentration specified in an air quality regulation or permit condition that results in an excess emission is a violation of the air quality regulation or permit condition and may be subject to an enforcement action. If the owner or operator of a source having an excess emission chooses to continue to operate it while the excess emission continues, the owner or operator shall take all appropriate measures consistent with good air pollution control practices for minimizing emissions. The duration and extent of any excess emission and the owner or operator's efforts to minimize the excess emission may be considered by the department in any resulting enforcement action.

[20.11.49.14 NMAC - N, 10/13/09; A, 10/15/16]

20.11.49.15 NOTIFICATION:

A. The owner or operator of a source having an excess emission shall report the following information to the department on forms provided by the department. The department may authorize the submittal of such reports in electronic format. The department may require that the owner or operator of a source provide further information in addition to that already required by 20.11.49.15 NMAC by a deadline specified by the department.

(1) **Initial excess emission report:** The owner or operator shall file an initial report, no later than the end of the next regular business day after the time of discovery of an excess emission. The initial report shall include all available information regarding each item required by Subsection B of 20.11.49.15 NMAC.

(2) **Final excess emission report:** No later than 10 days after the end of the excess emission, the owner or operator shall file a final report that contains specific and detailed information for each item required by Subsection B of 20.11.49.15 NMAC.

B. Each excess emission report shall include the following information:

(1) the name of the source;

- (2) the name of the owner and operator of the source;
- (3) the name and title of the person preparing the report;
- (4) identifying information for the source (e.g. permit and database numbers);
- (5) the specific date(s), time(s), and duration of the excess emission;
- (6) identification of the equipment involved and the emission point(s) (including bypass) from which the excess emission occurred;
- (7) the air quality regulation or permit condition that was exceeded;
- (8) identification of the air contaminant(s) and the magnitude of the excess emission expressed in the units of the air quality regulation or permit condition;
- (9) the method for determining the magnitude and duration of the excess emission;
- (10) the cause and nature of the excess emission;
- (11) the steps taken to limit the duration and magnitude of the excess emission;
- (12) the corrective action(s) taken to eliminate the cause of the excess emission; if one or more corrective actions are required, the report shall include a schedule for implementation of those actions, with associated progress reports; if no corrective actions are required, the report shall include a detailed explanation for that conclusion.
- (13) the corrective action(s) taken to prevent a recurrence of the excess emission;
- (14) whether the owner or operator attributes the excess emission to malfunction, startup, shutdown or emergency;
- (15) whether the owner or operator intends to file a supplemental report under Subsections A, B, or C of 20.11.49.16 NMAC; and
- (16) the person signing the final report shall certify that it is true, accurate, and complete.

C. If the period of an excess emission extends beyond 10 days, the owner or operator shall submit the final report required by Subsection B of 20.11.49.15 NMAC to the department within 72 hours of the date and time the excess emission ceased.

D. Alternative reporting. If an owner or operator of a source is subject to both the excess emission reporting requirements of 20.11.49.15 NMAC and the reporting requirements of 40 CFR Parts 60, 61, and 63, and the federal reporting requirements duplicate the requirements of 20.11.49.15 NMAC, then the federal reporting requirements shall suffice.

[20.11.49.15 NMAC - N, 10/13/09; A, 10/15/16]

20.11.49.16 EXCESS EMISSIONS DURING STARTUP, SHUTDOWN, MALFUNCTION, OR EMERGENCY:

All periods of excess emissions regardless of cause are violations of the state Air Quality Control Act and rules promulgated thereunder, and any applicable permit. The owner or operator of a source who contends that an excess emission occurred during startup, shutdown, malfunction, or emergency may submit to the department a supplemental report addressing the criteria described in Subsections A, B, or C of 20.11.49.16 NMAC. To be considered by the department, the appropriate supplemental report described in Subsections A, B, or C of 20.1.49.16 NMAC below must be submitted to the department no later than 30 days after the final excess emissions report submitted pursuant to 20.11.49.15 NMAC. The department may grant written extensions to this deadline for good cause shown. An owner or operator of a source who contends that enforcement action for an excess emission is not warranted must provide information in a supplemental report as described in Subsections A, B, or C of 20.11.49.16 NMAC. If no supplemental report is timely received, the department will not consider the criteria described in Subsections A, B, and C of 20.11.49.16 NMAC. The department may require the owner or operator of a source to provide further information in addition to that already contained in the supplemental report or otherwise specified in 20.11.49.16 NMAC. The information in the supplemental report may be considered by the department at its sole discretion and is not intended to be enforceable in a legal proceeding by any party or to limit the enforcement authority of any party. 20.11.49.16 NMAC shall not be construed to preclude EPA or federal court jurisdiction under Section 113 of the federal act to assess civil penalties or other forms of relief for periods of excess emissions, to prevent EPA or the courts from considering the statutory factors for the assessment of civil penalties under Section 113 of the federal act, or to interfere with the rights of litigants to pursue enforcement consistent with their rights under the citizen suit provision of Section 304 of the federal act.

A. Supplemental report for an excess emission during *malfunction*: The owner or operator of a source subject to 20.11.49 NMAC may file a supplemental report for an excess emission during malfunction addressing the following criteria:

- (1) the excess emission was caused by a malfunction;
- (2) the excess emission:

(a) did not stem from any activity or event that could have been foreseen and avoided, or planned for; and

(b) could not have been avoided by better operation and maintenance practices;

(3) to the maximum extent practicable the air pollution control equipment or processes were maintained and operated in a manner consistent with good practice for minimizing emissions;

(4) repairs were made in an expeditious fashion when the operator knew or should have known that applicable emission limitations were being exceeded; off-shift labor and overtime must have been utilized, to the extent practicable, to ensure that such repairs were made as expeditiously as practicable;

(5) the amount and duration of the excess emission (including any bypass) were minimized to the maximum extent practicable during periods of such emissions;

(6) all possible steps were taken to minimize the impact of the excess emission on ambient air quality;

(7) all emission monitoring systems were kept in operation if at all possible;

(8) the owner or operator's actions in response to the excess emission were documented by properly signed, contemporaneous operating logs, or other relevant evidence;

(9) the excess emissions were not part of a recurring pattern indicative of inadequate design, operation, or maintenance; and

(10) the owner or operator complied with all notification requirements in 20.11.49.15 NMAC.

B. Supplemental report for an excess emission during *startup or shutdown*:

The owner or operator of a source subject to 20.11.49 NMAC may file a supplemental report for an excess emission during startup or shutdown, addressing the following criteria:

(1) the excess emission occurred during a startup or shutdown;

(2) the periods of excess emissions that occurred during startup or shutdown were short and infrequent and could not have been prevented through careful planning and design;

(3) the excess emissions were not part of a recurring pattern indicative of inadequate design, operation, or maintenance;

(4) if the excess emissions were caused by a bypass (an intentional diversion of control equipment), then the bypass was unavoidable to prevent loss of life, personal injury, or severe property damage;

(5) at all times, the source was operated in a manner consistent with good practices for minimizing emissions;

(6) the frequency and duration of operation in startup or shutdown mode was minimized to the maximum extent practicable;

(7) all possible steps were taken to minimize the impact of the excess emission on ambient air quality;

(8) all emissions monitoring systems were kept in operation if at all possible;

(9) the owner or operator's actions during the period of excess emissions were documented by properly signed, contemporaneous operating logs, or other relevant evidence; and

(10) the owner or operator complied with all notification requirements in 20.11.49.15 NMAC.

C. Supplemental report for an *emergency*: The owner or operator of a source subject to 20.11.49 NMAC may file a supplemental report for an excess emission during an emergency addressing the following criteria:

(1) an emergency occurred;

(2) the excess emission occurred during the emergency;

(3) the owner or operator has identified the cause of the emergency;

(4) the excess emission resulted from the emergency;

(5) the excess emission and resulting emergency could not have been prevented through careful planning and design;

(6) the excess emission and resulting emergency were not part of a recurring pattern indicative of inadequate design, operation, or maintenance;

(7) at the time the excess emission and emergency occurred, the source was being properly operated;

(8) during the period of the excess emission, the owner or operator took all reasonable steps to minimize levels of emissions that exceeded the applicable standard, regulation, or permit condition; and

(9) the owner or operator complied with all notification requirements in 20.11.49.15 NMAC, including a description of the emergency, any steps to mitigate emissions, and corrective actions taken.

D. Department's determination of adequacy of supplemental report: Nothing in 20.11.49 NMAC creates an affirmative defense or entitles a source to relief from penalties for any excess emission including, but not limited to, any exceedance of a limit which already takes into account startup and shutdown emissions, any NAAQS or PSD increment, or any federally promulgated limit or any requirement derived from such a limit, including 40 CFR Parts 60, 61, and 63. However, the department in its sole discretion may consider any relevant information, including information submitted in a supplemental report, in connection with a demand for corrective action or injunctive relief, or the assessment or negotiation of a penalty in an enforcement action. The department's determination of how much weight to give information in a supplemental report is based on its sole discretion.

[20.11.49.16 NMAC - N, 10/13/09; A, 10/15/16]

20.11.49.17 ROOT CAUSE AND CORRECTIVE ACTION ANALYSIS:

A. Upon receipt of a written demand by the department, the owner or operator of a source having an excess emission, shall prepare an analysis that uses analytical tools determined by the department to be appropriate. The analysis shall contain the following information:

(1) an analysis describing the root cause and all contributing causes of the excess emission; and

(2) an analysis of the corrective actions implemented or available to reduce the likelihood of a recurrence of the excess emission resulting from the causes identified under Paragraph (1) of Subsection A of 20.11.49.17 NMAC, including, as applicable:

(a) identification of implemented or available corrective action alternatives, such as changes in design, operation and maintenance;

(b) the estimated cost associated with each corrective action alternative;

(c) the probable effectiveness of each corrective action alternative;

(d) if no corrective action alternatives are available, a clear explanation providing an adequate justification for that conclusion; and

(e) if one or more corrective actions are identified, a schedule for implementation and progress reports.

B. The department shall make the demand for a root cause and corrective action analysis no later than 90 days after receipt of the final report required by Subsection A of 20.11.49.15 NMAC.

C. The department may require the analysis authorized by Subsection A of 20.11.49.17 NMAC after considering relevant factors. Examples of relevant factors include the significance of the excess emission, the nature or pattern of excess emissions, and the history of the source, as well as any other factors determined to be relevant by the department.

D. The completed analysis shall be submitted to the department no later than 60 days after the department's demand is received by the owner or operator of the source, pursuant to Subsection A of 20.11.49.17 NMAC. For good cause shown, the department may grant an extension to submit the analysis.

E. The owner or operator of a source complying with 20.11.49.17 NMAC may assert a claim for confidential information protection.

20.11.49.18 [RESERVED]

[20.11.49.18 NMAC - N, 10/13/09; Repealed, 10/15/16]

PART 50-59: [RESERVED]

PART 60: PERMITTING IN NONATTAINMENT AREAS

20.11.60.1 ISSUING AGENCY:

Albuquerque - Bernalillo County Air Quality Control Board. P.O. Box 1293, Albuquerque, NM 87103. Telephone: (505) 768-2601.

[20.11.60.1 NMAC - Rp, 20.11.60.1 NMAC, 1/23/06; A, 8/30/10]

20.11.60.2 SCOPE:

A. 20.11.60 NMAC establishes a pre-construction permit program for new major stationary sources and major modifications of existing major stationary sources located within a nonattainment area.

B. Exempt: 20.11.60 NMAC does not apply to sources within Bernalillo county, which are located on indian lands over which the Albuquerque-Bernalillo county air quality control board lacks jurisdiction.

[20.11.60.2 NMAC - Rp, 20.11.60.2 NMAC, 1/23/06; A, 8/30/10]

20.11.60.3 STATUTORY AUTHORITY:

20.11.60 NMAC is adopted pursuant to the authority provided in the New Mexico Air Quality Control Act, NMSA 1978 Sections 74-2-4 and 74-2-5; the Joint Air Quality Control Board Ordinance; Bernalillo County Ordinance No. 94-5, Sections 4 and 5; and the Joint Air Quality Control Board Ordinance, Revised Ordinances of Albuquerque 1994 Sections 9-5-1-3 and 9-5-1-4.

[20.11.60.3 NMAC - Rp, 20.11.60.3 NMAC, 1/23/06]

20.11.60.4 DURATION:

Permanent.

[20.11.60.4 NMAC - Rp, 20.11.60.4 NMAC, 1/23/06]

20.11.60.5 EFFECTIVE DATE:

January 23, 2006, unless a later date is cited at the end of a section.

[20.11.60.5 NMAC - Rp, 20.11.60.5 NMAC, 1/23/06]

20.11.60.6 OBJECTIVE:

To implement a pre-construction permit program for new or modified major stationary sources that plan to locate in an area where a federal ambient air quality standard is being exceeded.

[20.11.60.6 NMAC - Rp, 20.11.60.6 NMAC, 1/23/06; A, 8/30/10; A, 5/13/13]

20.11.60.7 DEFINITIONS:

In addition to the definitions in 20.11.60.7 NMAC, the definitions in 20.11.1 NMAC apply unless there is a conflict between definitions, in which case the definition in 20.11.60.7 NMAC shall govern.

A. "Actual emissions" means the actual rate of emissions of a regulated new source review pollutant from an emissions unit, as determined in accordance with Paragraphs (1)-(3) of Subsection A of 20.11.60.7 NMAC, except that this definition shall not apply for calculating whether a significant emissions increase has occurred, or for establishing a plantwide applicability limit under 20.11.60.27 NMAC. Instead, Subsections E and II of 20.11.60.7 NMAC shall apply for those purposes.

(1) In general, actual emissions as of a particular date shall equal the average rate, in tons per year, at which the unit actually emitted the pollutant during a consecutive 24-month period which precedes the particular date and which is

representative of normal source operation. The department shall allow the use of a different time period upon a determination that it is more representative of normal source operation. Actual emissions shall be calculated using the unit's actual operating hours, production rates, and types of materials processed, stored, or combusted during the selected time period.

(2) The department may presume that source-specific allowable emissions for the unit are equivalent to the actual emissions of the unit.

(3) For any emissions unit that has not begun normal operations on the particular date, actual emissions shall equal the potential to emit of the unit on that date.

B. "Administrator" means the administrator of the United States environmental protection agency (USEPA) or an authorized representative.

C. "Adverse impact on visibility" means visibility impairment which interferes with the management, protection, preservation, or enjoyment of the visitor's visual experience of the mandatory federal class I area. This determination must be made on a case-by-case basis taking into account the geographic extent, intensity, duration, frequency, and time of the visibility impairments and how these factors correlate with:

(1) times of visitor use of the mandatory federal class I area; and

(2) the frequency and timing of natural conditions that reduce visibility. This term does not include effects on integral vistas as defined in 40 CFR 51.301 *Definitions*.

D. "Allowable emissions" means the emissions rate of a stationary source calculated using the maximum rated capacity of the source, (unless the source is subject to federally enforceable limits which restrict the operating rate, or hours of operation, or both,) and the most stringent of the following:

(1) the applicable standard set forth in 40 CFR Part 60 or 61;

(2) any applicable state implementation plan emissions limitation including those with a future compliance date; or

(3) the emissions rate specified as a federally enforceable permit condition, including those with a future compliance date.

E. "Baseline actual emissions" means the rate of emissions, in tons per year, of a regulated new source review pollutant, as determined in accordance with Paragraphs (1)-(4) of Subsection E of 20.11.60.7 NMAC.

(1) For any existing electric utility steam generating unit, baseline actual emissions means the average rate, in tons per year, at which the unit actually emitted the pollutant during any consecutive 24-month period selected by the owner or operator

within the five year period immediately preceding when the owner or operator begins actual construction of the project. The department shall allow the use of a different time period upon a determination that it is more representative of normal source operation.

(a) The average rate shall include fugitive emissions to the extent quantifiable, and emissions associated with startups, shutdowns, and malfunctions.

(b) The average rate shall be adjusted downward to exclude any noncompliant emissions that occurred while the source was operating above any emission limitation that was legally enforceable during the consecutive 24-month period.

(c) For a regulated new source review pollutant, when a project involves multiple emissions units, only one consecutive 24-month period must be used to determine the baseline actual emissions for the emissions units being changed. A different consecutive 24-month period can be used for each regulated new source review pollutant.

(d) The average rate shall not be based on any consecutive 24-month period for which there is inadequate information for determining annual emissions, in tons per year, and for adjusting this amount if required by Subparagraph (b) of Paragraph (1) of Subsection E of 20.11.60.7 NMAC.

(2) For an existing emissions unit (other than an electric utility steam generating unit) baseline actual emissions means the average rate, in tons per year, at which the emissions unit actually emitted the pollutant during any consecutive 24-month period selected by the owner or operator within the 10 year period immediately preceding either the date the owner or operator begins actual construction of the project, or the date a complete permit application is received by the department for a permit required either under 20.11.60.7 NMAC or under a plan approved by the administrator, whichever is earlier, except that the 10 year period shall not include any period earlier than November 15, 1990.

(a) The average rate shall include fugitive emissions to the extent quantifiable, and emissions associated with startups, shutdowns, and malfunctions.

(b) The average rate shall be adjusted downward to exclude any noncompliant emissions that occurred while the source was operating above an emission limitation that was legally enforceable during the consecutive 24-month period.

(c) The average rate shall be adjusted downward to exclude any emissions that would have exceeded an emission limitation with which the major stationary source must currently comply, had such major stationary source been required to comply with such limitations during the consecutive 24-month period. However, if an emission limitation is part of a maximum achievable control technology standard that the administrator proposed or promulgated under 40 CFR Part 63, the baseline actual emissions need only be adjusted if the state has taken credit for such emissions

reductions in an attainment demonstration or maintenance plan consistent with the requirements of Paragraph (7) of Subsection B of 20.11.60.15 NMAC.

(d) For a regulated new source review pollutant, when a project involves multiple emissions units, only one consecutive 24-month period must be used to determine the baseline actual emissions for the emissions units being changed. A different consecutive 24-month period can be used for each regulated new source review pollutant.

(e) The average rate shall not be based on any consecutive 24-month period for which there is inadequate information for determining annual emissions, in tons per year, and for adjusting this amount if required by Subparagraphs (b) and (c) of Paragraph (2) of Subsection E of 20.11.60.7 NMAC.

(3) For a new emissions unit, the baseline actual emissions for purposes of determining the emissions increase that will result from the initial construction and operation of such unit shall equal zero; and thereafter, for all other purposes, shall equal the unit's potential to emit.

(4) For a plantwide applicability limit for a major stationary source, the baseline actual emissions shall be calculated for existing electric utility steam generating units in accordance with the procedures contained in Paragraph (1) of Subsection E of 20.11.60.7 NMAC, for other existing emissions units in accordance with the procedures contained in Paragraph (2) of Subsection E of 20.11.60.7 NMAC, and for a new emissions unit in accordance with the procedures contained in Paragraph (3) of Subsection E of 20.11.60.7 NMAC.

F. "Begin actual construction" means in general, initiation of physical on-site construction activities on an emissions unit which are of a permanent nature. Such activities include, but are not limited to, installation of building supports and foundations, laying of underground pipework, and construction of permanent storage structures. With respect to a change in method of operating this term refers to those on-site activities other than preparatory activities which mark the initiation of the change.

G. "Best available control technology (BACT)" means an emissions limitation (including a visible emissions standard) based on the maximum degree of reduction for each regulated new source review pollutant which would be emitted from any proposed major stationary source or major modification which the department, on a case-by-case basis, taking into account energy, environmental, and economic impacts and other costs, determines is achievable for such source or modification through application of production processes or available methods, systems, and techniques, including fuel cleaning, clean fuels, or treatment or innovative fuel combustion techniques for control of such pollutant. In no event shall application of best available control technology result in emissions of any pollutant which would exceed the emissions allowed by any applicable standard under 40 CFR Part 60 or 61. If the department determines that technological or economic limitations on the application of measurement methodology

to a particular emissions unit would make the imposition of an emissions standard infeasible, a design, equipment, work practice, operational standard, or combination thereof, may be prescribed instead to satisfy the requirement for the application of BACT. Such standard shall, to the degree possible, set forth the emissions reduction achievable by implementation of such design, equipment, work practice or operation, and shall provide for compliance by means which achieve equivalent results.

H. "Building, structure, facility or installation" means all of the pollutant-emitting activities which belong to the same industrial grouping, are located on one or more contiguous or adjacent properties, and are under the control of the same person (or persons under common control) except the activities of any vessel. Pollutant-emitting activities shall be considered as part of the same industrial grouping if they belong to the same "major group," that is, which have the same two-digit code, as described in the *standard industrial classification manual*, 1972, as amended by the 1977 supplement (U. S. government printing office stock numbers 4101-0065 and 003-005-00176-0, respectively).

I. "Commence" as applied to construction of a major stationary source or major modification means that the owner or operator has all necessary preconstruction approvals or permits and either has:

(1) begun, or caused to begin, a continuous program of actual on-site construction of the source, to be completed within a reasonable time; or

(2) entered into binding agreements or contractual obligations, which cannot be cancelled or modified without substantial loss to the owner or operator, to undertake a program of actual construction of the source to be completed within a reasonable time.

J. "Construction" means any physical change or change in the method of operation (including fabrication, erection, installation, demolition, or modification of an emissions unit) which would result in a change in actual emissions.

K. "Continuous emissions monitoring system (CEMS)" means all of the equipment that may be required to meet the data acquisition and availability requirements of 20.11.60 NMAC, to sample, condition (if applicable), analyze, and provide a record of emissions on a continuous basis.

L. "Continuous emissions rate monitoring system (CERMS)" means the total equipment required for the determination and recording of the pollutant mass emissions rate (in terms of mass per unit of time).

M. "Continuous parameter monitoring system (CPMS)" means all of the equipment necessary to meet the data acquisition and availability requirements of 20.11.60 NMAC, to monitor process and control device operational parameters (for example, control device secondary voltages and electric currents), and other

information (for example, gas flow rate, oxygen or carbon dioxide concentrations), and to record average operational parameter value(s) on a continuous basis.

N. "Electric utility steam generating unit" means any steam electric generating unit that is constructed for the purpose of supplying more than one-third of its potential electric output capacity and more than 25 megawatts electrical output to any utility power distribution system for sale. Any steam supplied to a steam distribution system for the purpose of providing steam to a steam-electric generator that would produce electrical energy for sale is also considered in determining the electrical energy output capacity of the affected facility.

O. "Emissions unit" means any part of a stationary source that emits or would have the potential to emit any regulated new source review pollutant and includes an electric steam generating unit as defined in Subsection N of 20.11.60.7 NMAC. For purposes of 20.11.60.7 NMAC, there are two types of emissions units as described in Paragraphs (1) and (2) of Subsection O of 20.11.60.7 NMAC.

(1) A new emissions unit is any emissions unit which is (or will be) newly constructed and which has existed for less than two years from the date such emissions unit first operated.

(2) An existing emissions unit is any emissions unit that does not meet the requirements in Paragraph (1) of Subsection O of 20.11.60.7 NMAC. A replacement unit, as defined in 20.11.60.7 NMAC, is an existing unit.

P. "Federal class I area" means any federal land that is classified or reclassified as "class I".

Q. "Federal land manager" means, with respect to any lands in the United States, the secretary of the department with authority over such lands.

R. "Federally enforceable" means all limitations and conditions which are enforceable by the administrator, including those requirements developed pursuant to 40 CFR Parts 60 and 61, requirements within any applicable state implementation plan, any permit requirements established pursuant to 40 CFR 52.21 or under regulations approved pursuant to 40 CFR Part 51, Subpart I including operating permits issued under an EPA-approved program that requires adherence to any permit issued under such program.

S. "Fugitive emissions" means those emissions which could not reasonably pass through a stack, chimney, vent, or other functionally equivalent opening.

T. "Lowest achievable emission rate (LAER)" means, for any source, the more stringent rate of emissions based on the following:

(1) the most stringent emissions limitation which is contained in the implementation plan of any state for such class or category of stationary source, unless the owner or operator of the proposed stationary source demonstrates that such limitations are not achievable; or

(2) the most stringent emissions limitation which is achieved in practice by such class or category of stationary source; this limitation, when applied to a modification, means the lowest achievable emissions rate for the new or modified emissions units within the stationary source; in no event shall the application of this term permit a proposed new or modified stationary source to emit any pollutant in excess of the amount allowable under an applicable new source performance standard.

U. "Major modification" means:

(1) Any physical change in or change in the method of operation of a major stationary source that would result in:

(a) a significant emissions increase of a regulated new source review pollutant; and

(b) a significant net emissions increase of that pollutant from the major stationary source.

(2) Any significant emissions increase from any emissions units or net emissions increase at a major stationary source that is significant for volatile organic compounds or oxides of nitrogen shall be considered significant for ozone.

(3) A physical change or change in the method of operation shall not include:

(a) routine maintenance, repair, and replacement;

(b) use of an alternative fuel or raw material by reason of an order under Section 2 (a) and (b) of the Energy Supply and Environmental Coordination Act of 1974, or any superseding legislation, or by reason of a natural gas curtailment plan pursuant to the Federal Power Act;

(c) use of an alternative fuel by reason of an order or rule under Section 125 of the federal Clean Air Act;

(d) use of an alternative fuel at a steam generating unit to the extent that the fuel is generated from municipal solid waste;

(e) use of an alternative fuel or raw material by a stationary source which;

(i) the source was capable of accommodating before December 21, 1976, unless such change would be prohibited under any federally enforceable permit

condition which was established after December 21, 1976 pursuant to 40 CFR 52.21 or under regulations approved pursuant to 40 CFR Subpart I or 40 CFR 51.166; or

(ii) the source is approved to use under any permit issued under 40 CFR 52.21 or under regulations approved pursuant to 40 CFR 51.166;

(f) an increase in the hours of operation or in the production rate, unless such change is prohibited under any federally enforceable permit condition which was established after December 21, 1976, pursuant to 40 CFR 52.21 or under regulations approved pursuant to 40 CFR 51.165 or 40 CFR 51.166;

(g) any change in ownership at a stationary source; or

(h) the installation, operation, cessation, or removal of a temporary clean coal technology demonstration project, provided that the project complies with:

(i) the state implementation plan for the state in which the project is located and

(ii) other requirements necessary to attain and maintain the national ambient air quality standards during the project and after it is terminated.

(4) This definition shall not apply with respect to a particular regulated new source review pollutant when the major stationary source is complying with the requirements under 20.11.60.27 NMAC for a plantwide applicability limit for that pollutant. Instead, the definition at Paragraph (8) of Subsection B of 20.11.60.27 NMAC shall apply.

(5) For the purpose of applying the requirements of 20.11.60.17 NMAC to modifications at major stationary sources of nitrogen oxides located in ozone nonattainment areas or in ozone transport regions, whether or not subject to Subpart 2, Part D, Title I of the act, any significant net emissions increase of nitrogen oxides is considered significant for ozone.

(6) Any physical change in, or change in the method of operation of, a major stationary source of volatile organic compounds that results in any increase in emissions of volatile organic compounds from any discrete operation, emissions unit, or other pollutant emitting activity at the source shall be considered a significant net emissions increase and a major modification for ozone, if the major stationary source is located in an extreme ozone nonattainment area that is subject to Subpart 2, Part D, Title I of the act.

V. "Major stationary source"

(1) Means:

(a) Any stationary source of air pollutants that emits, or has the potential to emit, 100 tons per year or more of any regulated new source review pollutant, except that lower emission thresholds shall apply in areas subject to Subpart 2, Subpart 3, or Subpart 4 of Part D, Title I of the act, according to Items (i)-(vi) of Subparagraph (a) of Paragraph (1) of Subsection V of 20.11.60.7 NMAC.

(i) 50 tons per year of volatile organic compounds in any serious ozone nonattainment area.

(ii) 50 tons per year of volatile organic compounds in an area within an ozone transport region, except for any severe or extreme ozone nonattainment area.

(iii) 25 tons per year of volatile organic compounds in any severe ozone nonattainment area.

(iv) 10 tons per year of volatile organic compounds in any extreme ozone nonattainment area.

(v) 50 tons per year of carbon monoxide in any serious nonattainment area for carbon monoxide, where stationary sources contribute significantly to carbon monoxide levels in the area (as determined under rules issued by the administrator).

(vi) 70 tons per year of PM₁₀ in any serious nonattainment area for PM₁₀.

(b) For the purposes of applying the requirements of 20.11.60.17 NMAC to stationary sources of nitrogen oxides located in an ozone nonattainment area or in an ozone transport region, any stationary source which emits, or has the potential to emit, 100 tons per year or more of nitrogen oxides emissions, except that the emission thresholds in Items (i)-(vi) of Subparagraph (b) of Paragraph (1) of Subsection V of 20.11.60.7 NMAC shall apply in areas subject to Subpart 2 of Part D, Title I of the act.

(i) 100 tons per year or more of nitrogen oxides in any ozone nonattainment area classified as marginal or moderate.

(ii) 100 tons per year or more of nitrogen oxides in any ozone nonattainment area classified as a transitional, submarginal, or incomplete or no data area, when such area is located in an ozone transport region.

(iii) 100 tons per year or more of nitrogen oxides in any area designated under Section 107(d) of the act as attainment or unclassifiable for ozone that is located in an ozone transport region.

(iv) 50 tons per year or more of nitrogen oxides in any serious nonattainment area for ozone.

(v) 25 tons per year or more of nitrogen oxides in any severe nonattainment area for ozone.

(vi) 10 tons per year or more of nitrogen oxides in any extreme nonattainment area for ozone; or

(c) any physical change that would occur at a stationary source not qualifying under Subparagraph (a) or (b) of Paragraph (1) of Subsection V of 20.11.60.7 NMAC as a major stationary source, if the change would constitute a major stationary source by itself.

(2) A major stationary source that is major for volatile organic compounds shall be considered major for ozone.

(3) The fugitive emissions of a stationary source shall not be included in determining for any of the purposes of Subsection V of 20.11.60.7 NMAC whether it is a major stationary source, unless the source belongs to one of the following categories of stationary sources:

(a) carbon black plants (furnace process);

(b) charcoal production plants;

(c) chemical process plants – not including ethanol production facilities that produce ethanol by natural fermentation included in NAICS codes 325193 or 312140;

(d) coal cleaning plants (with thermal dryers);

(e) coke oven batteries;

(f) fossil fuel-fired steam electric plants of more than 250 million Btu/hr heat input;

(g) fossil fuel boilers (or combination thereof) totaling more than 250 million Btu/hr heat input;

(h) fuel conversion plants;

(i) glass fiber processing plants;

(j) hydrofluoric acid plants;

(k) iron and steel mill plants;

(l) kraft pulp mills;

- (m) lime plants;
- (n) municipal incinerators capable of charging more than 250 tons of refuse per day;
- (o) nitric acid plants;
- (p) petroleum refineries;
- (q) petroleum storage and transfer units with a total storage capacity exceeding 300,000 barrels;
- (r) phosphate rock processing plants;
- (s) Portland cement plant;
- (t) primary lead smelters;
- (u) primary zinc smelters;
- (v) primary aluminum ore reduction plants;
- (w) primary copper smelters;
- (x) secondary metal production plants;
- (y) sintering plants;
- (z) sulfur recovery plants;
- (aa) sulfuric acid plants;
- (bb) taconite ore processing plants; or
- (cc) any other stationary source category which, as of August 7, 1980, is being regulated under Section 111 or 112 of the federal Clean Air Act.

W. "Mandatory federal class I area" means those federal lands that are international parks, national wilderness areas which exceed 5,000 acres in size, national memorial parks which exceed 5,000 acres in size, and national parks which exceed 6,000 acres in size, and which were in existence on August 7, 1977. These areas may not be redesignated.

X. "Natural conditions" includes naturally occurring phenomena that reduce visibility as measured in terms of visual range, contrast or coloration.

Y. "Necessary preconstruction approvals or permits" means those permits or approvals required under federal air quality control laws and regulations and those air quality control laws and regulations which are part of the applicable state implementation plan (SIP).

Z. "Net emissions increase"

(1) Means, with respect to any regulated new source review pollutant emitted by a major stationary source, the amount by which the sum of the following exceeds zero:

(a) the increase in emissions from a particular physical change or change in the method of operation at a stationary source as calculated pursuant to Subsection B of 20.11.60.12 NMAC; and

(b) any other increases and decreases in actual emissions at the major stationary source that are contemporaneous with the particular change and are otherwise creditable; baseline actual emissions for calculating increases and decreases under Subparagraph (b) of Paragraph (1) of Subsection Z of 20.11.60.7 NMAC, shall be determined as provided in Subsection E of 20.11.60.7 NMAC, except that Subparagraphs (c) of Paragraph (1) and (d) of Paragraph (2) of Subsection E of 20.11.60.7 NMAC shall not apply.

(2) An increase or decrease in actual emissions is contemporaneous with the increase from the particular change only if it occurs before the date that the increase from the particular change occurs.

(3) An increase or decrease in actual emissions is creditable only if:

(a) it occurs between:

(i) the date five years prior to the commencement of construction on the particular change; and

(ii) the date that the increase from the particular change occurs; and

(b) the department has not relied on it in issuing a permit for the source under regulations approved pursuant to 40 CFR 51.165, which permit is in effect when the increase in actual emissions from the particular change occurs.

(4) An increase in actual emissions is creditable only to the extent that the new level of actual emissions exceeds the old level.

(5) A decrease in actual emissions is creditable only to the extent that:

(a) the old level of actual emissions or the old level of allowable emissions whichever is lower, exceeds the new level of actual emissions;

(b) it is enforceable as a practical matter at and after the time that actual construction on the particular change begins;

(c) the department has not relied on it in issuing any permit under regulations approved pursuant to 40 CFR Part 51 Subpart I or the state has not relied on it in demonstrating attainment or reasonable further progress; and

(d) it has approximately the same qualitative significance for public health and welfare as that attributed to the increase from the particular change.

(6) An increase that results from a physical change at a source occurs when the emissions unit on which construction occurred becomes operational and begins to emit a particular pollutant. Any replacement unit that requires shakedown becomes operational only after a reasonable shakedown period, not to exceed 180 days.

(7) Paragraph (1) of Subsection A of 20.11.60.7 NMAC shall not apply for determining creditable increases and decreases or after a change.

AA. "Nonattainment area" means, for any air pollutant an area which is shown by monitored data or which is calculated by air quality modeling, or other methods determined by the administrator to be reliable, to exceed any national ambient air quality standard for such pollutant. Such term includes any area identified under Subparagraphs (A) through (C) of Section 107(d)(1) of the federal Clean Air Act.

BB. "Nonattainment major new source review (NSR) program" means a major source preconstruction permit program that has been approved by the administrator and incorporated into the New Mexico state implementation plan to implement the requirements of 40 CFR 51.165, or a program that implements 40 CFR Part 51, Appendix S, Sections I through VI. Any permit issued under such a program is a major new source review permit.

CC. "Part" means an air quality control regulation under Title 20, Chapter 11 of the New Mexico administrative code (NMAC), unless otherwise noted; as adopted or amended by the board.

DD. "Portable stationary source" means a source which can be relocated to another operating site with limited dismantling and reassembly.

EE. "Potential to emit" means the maximum capacity of a stationary source to emit a pollutant under its physical and operational design. Any physical or operational limitation on the capacity of the source to emit a pollutant, including air pollution control equipment and restrictions on hours of operation or on the type or amount of material combusted, stored, or processed, shall be treated as part of its design only if the

limitation or the effect it would have on emissions is federally enforceable. Secondary emissions do not count in determining the potential to emit of a stationary source.

FF. "Predictive emissions monitoring system (PEMS)" means all of the equipment necessary to monitor process and control device operational parameters (for example, control device secondary voltages and electric currents), and other information (for example, gas flow rate, oxygen or carbon dioxide concentrations), and calculate and record the mass emissions rate (for example, pounds per hour), on a continuous basis.

GG. "Prevention of significant deterioration (PSD) permit" means any permit that is issued under 20.11.61 NMAC.

HH. "Project" means a physical change in, or change in the method of operation of, an existing major stationary source.

II. "Projected actual emissions"

(1) Means, the maximum annual rate, in tons per year, at which an existing emissions unit is projected to emit a regulated new source review pollutant in any one of the five years (12-month period) following the date the unit resumes regular operation after the project, or in any one of the 10 years following that date, if the project involves increasing the emissions unit's design capacity or its potential to emit of that regulated new source review pollutant and full utilization of the unit would result in a significant emissions increase or a significant net emissions increase at the major stationary source.

(2) In determining the projected actual emissions under Paragraph (1) of Subsection II of 20.11.60.7 NMAC, before beginning actual construction, the owner or operator of the major stationary source:

(a) shall consider all relevant information, including but not limited to, historical operational data, the company's own representations, the company's expected business activity and the company's highest projections of business activity, the company's filings with the state or federal regulatory authorities, and compliance plans under the approved plan; and

(b) shall include fugitive emissions to the extent quantifiable, and emissions associated with startups, shutdowns, and malfunctions; and

(c) shall exclude, in calculating any increase in emissions that results from the particular project, that portion of the unit's emissions following the project that an existing unit could have accommodated during the consecutive 24-month period used to establish the baseline actual emissions under Subsection E of 20.11.60.7 NMAC and that are also unrelated to the particular project, including any increased utilization due to product demand growth; or,

(d) in lieu of using the method set out in Subparagraphs (a) through (c) of Paragraph (2) of Subsection II of 20.11.60.7 NMAC, may elect to use the emissions unit's potential to emit, in tons per year, as defined under Subsection EE of 20.11.60.7 NMAC.

JJ. "Regulated new source review pollutant", for purposes of 20.11.60 NMAC, means the following:

- (1) nitrogen oxides or any volatile organic compounds;
- (2) any pollutant for which a national ambient air quality standard has been promulgated; or
- (3) any pollutant that is a constituent or precursor of a general pollutant listed under Paragraphs (1) or (2) of Subsection JJ of 20.11.60.7 NMAC, provided that such constituent or precursor pollutant may only be regulated under new source review as part of regulation of the general pollutant; precursors identified by the administrator for purposes of NSR are the following:
 - (a) volatile organic compounds and nitrogen oxides are precursors to ozone in all ozone nonattainment areas;
 - (b) sulfur dioxide is a precursor to PM_{2.5} in all PM_{2.5} nonattainment areas;
 - (c) nitrogen oxides are presumed to be precursors to PM_{2.5} in all PM_{2.5} nonattainment areas, unless the state demonstrates to the administrator's satisfaction or EPA demonstrates that emissions of nitrogen oxides from sources in a specific area are not a significant contributor to that area's ambient PM_{2.5} concentrations;
 - (d) volatile organic compounds and ammonia are presumed not to be precursors to PM_{2.5} in any PM_{2.5} nonattainment area, unless the state demonstrates to the administrator's satisfaction or EPA demonstrates that emissions of volatile organic compounds or ammonia from sources in a specific area are a significant contributor to that area's ambient PM_{2.5} concentrations; or
- (4) PM_{2.5} emissions and PM₁₀ emissions shall include gaseous emissions from a source or activity which condense to form particulate matter at ambient temperatures; on or after January 1, 2011 (or any earlier date established in the upcoming rulemaking codifying test methods), such condensable particulate matter shall be accounted for in applicability determinations and in establishing emissions limitations for PM_{2.5} and PM₁₀ in nonattainment major NSR permits; compliance with emissions limitations for PM_{2.5} and PM₁₀ issued prior to this date shall not be based on condensable particulate matter unless required by the terms and conditions of the permit or the applicable implementation plan; applicability determinations made prior to this date without accounting for condensable particulate matter shall not be considered

in violation of this section unless the applicable implementation plan required condensable particulate matter to be included.

KK. "Replacement unit" means an emission unit for which all of the criteria listed in Paragraphs (1)-(4) of Subsection KK of 20.11.60.7 NMAC are met. No creditable emission reductions shall be generated from shutting down the existing emissions unit that is replaced.

(1) The emissions unit is a reconstructed unit within the meaning of 40 CFR 60.15(b)(1), or the emissions unit completely takes the place of an existing emissions unit.

(2) The emissions unit is identical to or functionally equivalent to the replaced emissions unit.

(3) The replacement (unit) does not alter the basic design parameter(s) of the process unit.

(4) The replaced emissions unit is permanently removed from the major stationary source, otherwise permanently disabled, or permanently barred from operation by a permit that is enforceable as a practical matter. If the replaced emissions unit is brought back into operation, it shall constitute a new emissions unit.

LL. "Secondary emissions" means emissions which would occur as a result of the construction or operation of a major stationary source or major modification, but do not come from the major stationary source or major modification itself. For the purpose of 20.11.60.7 NMAC, secondary emissions must be specific, well defined, quantifiable, and impact the same general area as the stationary source or modification which causes the secondary emissions. Secondary emissions include emissions from any offsite support facility which would not be constructed or increase its emissions except as a result of the construction or operation of the major stationary source or major modification. Secondary emissions do not include any emissions which come directly from a mobile source, such as emissions from the tailpipe of a motor vehicle, from a train, or from a vessel.

MM. "Significant" means, in reference to a net emissions increase or the potential of a source to emit any of the following pollutants, a rate of emissions that would equal or exceed any of the following rates:

- (1) Pollutant emission rates:
 - (a) carbon monoxide, 100 tons per year;
 - (b) nitrogen oxides, 40 tons per year;
 - (c) sulfur dioxide, 40 tons per year;

(d) PM₁₀ emissions, 15 tons per year;

(e) ozone, 40 tons per year of volatile organic compounds or nitrogen oxides;
or

(f) lead, 0.6 tons per year; or

(g) PM_{2.5}, 10 tons per year of direct PM_{2.5} emissions; 40 tons per year of sulfur dioxide emissions; 40 tons per year of nitrogen oxide emissions unless demonstrated not to be a PM_{2.5} precursor under Subsection JJ of 20.11.60.7 NMAC.

(2) Notwithstanding the significant emissions rate for ozone in Paragraph (1) of Subsection MM of 20.11.60.7 NMAC, significant means, in reference to an emissions increase or a net emissions increase, any increase in actual emissions of volatile organic compounds that would result from any physical change in, or change in the method of operation of, a major stationary source locating in a serious or severe ozone nonattainment area that is subject to Subpart 2, Part D, Title I of the act, if such emissions increase of volatile organic compounds exceeds 25 tons per year.

(3) For the purposes of applying the requirements of 20.11.60.17 NMAC to modifications at major stationary sources of nitrogen oxides located in an ozone nonattainment area or in an ozone transport region, the significant emission rates and other requirements for volatile organic compounds in Paragraphs (1), (2), and (5) of Subsection MM of 20.11.60.7 NMAC shall apply to nitrogen oxides emissions.

(4) Notwithstanding the significant emissions rate for carbon monoxide under Paragraph (1) of Subsection MM of 20.11.60.7 NMAC, significant means, in reference to an emissions increase or a net emissions increase, any increase in actual emissions of carbon monoxide that would result from any physical change in, or change in the method of operation of, a major stationary source in a serious nonattainment area for carbon monoxide if such increase equals or exceeds 50 tons per year, provided the administrator has determined that stationary sources contribute significantly to carbon monoxide levels in that area.

(5) Notwithstanding the significant emissions rates for ozone under Paragraphs (1) and (2) of Subsection MM of 20.11.60.7 NMAC, any increase in actual emissions of volatile organic compounds from any emissions unit at a major stationary source of volatile organic compounds located in an extreme ozone nonattainment area that is subject to Subpart 2, Part D, Title I of the act shall be considered a significant net emissions increase.

NN. "Significant emissions increase" means, for a regulated new source review pollutant, an increase in emissions that is significant for that pollutant.

OO. "Stationary source" means any building, structure, facility, or installation which emits or may emit any regulated new source review pollutant.

PP. "Temporary source" means a stationary source which changes its location or ceases to exist within one year from the date of initial start of operations.

QQ. "Visibility impairment" means any humanly perceptible change in visibility, that is, visual range, contrast, coloration, from that which would have existed under natural conditions.

20.11.60.8 VARIANCES:

[RESERVED]

[20.11.60.8 NMAC - Rp, 20.11.60.8 NMAC, 1/23/06]

20.11.60.9 SAVINGS CLAUSE:

Any amendment to 20.11.60 NMAC, which is filed, with the state records center shall not affect actions pending for violation of a city or county ordinance, or air quality control board regulation. Prosecution for a violation under prior regulation wording shall be governed and prosecuted under the statute, ordinance, part, or regulation section in effect at the time the violation was committed.

[20.11.60.9 NMAC - Rp, 20.11.60.9 NMAC, 1/23/06]

20.11.60.10 SEVERABILITY:

If any section, paragraph, sentence, clause, or word of 20.11.60 NMAC or any federal standards incorporated herein is for any reason held to be unconstitutional or otherwise invalid by any court, the decision shall not affect the validity of remaining provisions of 20.11.60 NMAC.

[20.11.60.10 NMAC - Rp, 20.11.60.10 NMAC, 1/23/06]

20.11.60.11 DOCUMENTS:

Documents incorporated and cited in 20.11.60 NMAC may be viewed at the Albuquerque environmental health department, 400 Marquette NW, Albuquerque, NM.

[20.11.60.11 NMAC - Rp, 20.11.60.11 NMAC, 1/23/06]

20.11.60.12 APPLICABILITY:

A. Any person constructing any new major stationary source or major modification shall obtain a permit from the department in accordance with the requirements of

20.11.60 NMAC prior to the start of construction or modification if either of the following conditions under Paragraph (1) or (2) of Subsection A of 20.11.60.12 NMAC apply.

(1) **Sources that would locate in a designated nonattainment area.** The proposed major stationary source or major modification would be located within a nonattainment area so designated pursuant to Section 107(d)(1)(A)(i) of the federal Clean Air Act and would emit a regulated new source review pollutant for which it is major and for which the area is designated nonattainment.

(2) **Sources locating in designated clean or unclassifiable areas which would cause or contribute to a violation of a NAAQS.**

(a) The proposed major stationary source or major modification would be located within an area designated as attainment or unclassifiable for any NAAQS pursuant to Section 107 of the federal Clean Air Act, and will emit a regulated new source review pollutant for which it is major and when it would cause or contribute to a violation of any NAAQS.

(b) A major source or major modification will be considered to cause or contribute to a violation of a NAAQS when such source or modification would, at a minimum, exceed the following significance levels at any locality that does not or would not meet the applicable national standard:

Significant ambient concentrations:

Pollutant	Averaging Time				
	Annual	24-hr	8-hr	3-hr	1-hr
Sulfur Dioxide	1.0 µg/m ³	5 µg/m ³	--	25 µg/m ³	--
PM _{2.5}	0.3 µg/m ³	1.2 µg/m ³	--	--	--
PM ₁₀	1.0 µg/m ³	5 µg/m ³	--	--	--
Nitrogen Dioxide	1.0 µg/m ³	--	--	--	--
Carbon Monoxide	--	--	0.5 mg/m ³	--	2 mg/m ³

(3) A proposed major source or major modification subject to Subsection A of 20.11.60.12 NMAC may reduce the impact of its emissions upon air quality by obtaining sufficient emission reductions to, at a minimum, compensate for its adverse ambient impact where the major source or major modification would otherwise cause or contribute to a violation of any national ambient air quality standard. In the absence of such emission reductions, the department shall deny the proposed construction.

(4) The requirements of Subsection A of 20.11.60.12 NMAC shall not apply to a major stationary source or major modification with respect to a particular pollutant if the owner or operator demonstrates that, as to that pollutant, the source or modification is located in an area designated as nonattainment pursuant to Section 107 of the act.

B. Applicability procedures.

(1) Except as otherwise provided in Subsection C of 20.11.60.12 NMAC, and consistent with the definition of major modification, a project is a major modification for a regulated new source review pollutant if it causes two types of emissions increases - a significant emissions increase, and a significant net emissions increase. The project is not a major modification if it does not cause a significant emissions increase. If the project causes a significant emissions increase, then the project is a major modification only if it also results in a significant net emissions increase.

(2) The procedure for calculating (before beginning actual construction) whether a significant emissions increase (i.e. the first step of the process) will occur depends upon the type of emissions units being modified, according to Paragraphs (3), (4) and (6) of Subsection B of 20.11.60.12 NMAC. The procedure for calculating (before beginning actual construction) whether a significant net emissions increase will occur at the major stationary source (i.e. the second step of the process) is contained in the definition of net emissions increase. Regardless of any such preconstruction projections, a major modification results if the project causes a significant emissions increase and a significant net emissions increase.

(3) **Actual-to-projected-actual applicability test for projects that involve existing emissions units.** A significant emissions increase of a regulated new source review pollutant is projected to occur if the sum of the difference between the projected actual emissions and the baseline actual emissions for each existing emissions unit, equals or exceeds the significant amount for that pollutant.

(4) **Actual-to-potential test for projects that only involve construction of a new emissions unit(s).** A significant emissions increase of a regulated new source review pollutant is projected to occur if the sum of the difference between the potential to emit from each new emissions unit following completion of the project and the baseline actual emissions of these units before the project equals or exceeds the significant amount for that pollutant.

(5) **[RESERVED]**

(6) **Hybrid test for projects that involve multiple types of emissions units.** A significant emissions increase of a regulated new source review pollutant is projected to occur if the sum of the emissions increases for each emissions unit, using the method specified in Paragraphs (3) and (4) of Subsection B of 20.11.60.12 NMAC as applicable with respect to each emissions unit, for each type of emissions unit equals

or exceeds the significant amount for that pollutant (as defined in Subsection MM of 20.11.60.7 NMAC).

C. For any major stationary source for a PAL for a regulated new source review pollutant, the major stationary source shall comply with requirements under 20.11.60.27 NMAC.

[20.11.60.12 NMAC - N, 1/23/06; A, 8/30/10; A, 5/13/13]

20.11.60.13 SOURCE OBLIGATION AND ENFORCEABLE PROCEDURES:

A. At such time that a particular source or modification becomes a major stationary source or major modification solely by virtue of a relaxation in any enforcement limitation which was established after August 7, 1980, on the capacity of the source or modification otherwise to emit a pollutant, such as a restriction on hours of operation, then the requirements of regulations approved pursuant to 40 CFR 51.165 shall apply to the source or modification as though construction had not yet commenced on the source or modification.

B. Approval to construct shall not relieve any owner or operator of the responsibility to comply fully with applicable provision of the plan and any other requirements under local, state or federal law, including provisions of the Air Quality Control Act, Sections 74-2-1 to 74-2-17, NMSA 1978, and any applicable regulations of the board.

C. Any owner or operator who commences construction or operates a major stationary source or major modification without, or not in accordance with, a permit issued under the requirements of 20.11.60 NMAC shall be subject to enforcement action.

D. Approval to construct shall become invalid if construction is not commenced within 18 months after receipt of such approval, if construction is discontinued for a period of 18 months or more, or if construction is not completed within a reasonable time. For a phased construction project, each phase must commence construction within 18 months of the projected and approved commencement date. The director may extend the 18-month period upon a satisfactory showing that an extension is justified.

E. For phased construction projects, the determination of the lowest achievable emission rate shall be reviewed and modified as appropriate at the latest reasonable time but no later than 18 months prior to commencement of construction of each independent phase of the project. At such time, the owner or operator of the applicable stationary source may be required to demonstrate the adequacy of any previous determination of lowest achievable emission rate.

F. If the owner or operator previously issued a permit under 20.11.60 NMAC applies for an extension as provided for under Subsection D of 20.11.60.13 NMAC, and the new proposed date of construction is greater than 18 months from the date the permit would

become invalid, the determination of lowest achievable emission rate shall be reviewed and modified as appropriate before such an extension is granted. At such time, the owner or operator may be required to demonstrate the adequacy of any previous determination of lowest achievable emission rate.

[20.11.60.13 NMAC - Rp, 20.11.60.12 NMAC, 1/23/06; A, 8/30/10; A, 5/13/13]

20.11.60.14 FUGITIVE EMISSIONS:

The provisions of 20.11.60 NMAC do not apply to a source or modification that would be a major stationary source or major modification only if fugitive emission to the extent quantifiable are considered in calculating the potential to emit of the stationary source or modification and the source does not belong to any of the following categories:

- A.** carbon black plants (furnace process);
- B.** charcoal production plants;
- C.** chemical process plants – not including ethanol production facilities that produce ethanol by natural fermentation included in NAICS codes 325193 or 312140;
- D.** coal cleaning plants (with thermal dryers);
- E.** coke oven batteries;
- F.** fossil fuel-fired steam electric plants of more than 250 million Btu/hr heat input;
- G.** fossil fuel boilers (or combination thereof) totaling more than 250 million Btu/hr heat input;
- H.** fuel conversion plants;
- I.** glass fiber processing plants;
- J.** hydrofluoric acid plants;
- K.** iron and steel mill plants;
- L.** kraft pulp mills;
- M.** lime plants;
- N.** municipal incinerators capable of charging more than 250 tons of refuse per day;
- O.** nitric acid plants;

P. petroleum refineries;

Q. petroleum storage and transfer units with a total storage capacity exceeding 300,000 barrels;

R. phosphate rock processing plants;

S. Portland cement plant;

T. primary lead smelters;

U. primary zinc smelters;

V. primary aluminum ore reduction plants;

W. primary copper smelters;

X. secondary metal production plants;

Y. sintering plants;

Z. sulfur recovery plants;

AA. sulfuric acid plants;

BB. taconite ore processing plants; or

CC. any other stationary source category which, as of August 7, 1980, is being regulated under Section 111 or 112 of the federal Clean Air Act.

[20.11.60.14 NMAC - Rp, 20.11.60.13, 1/23/06; 20.11.60.14 NMAC - N, 8/30/10]

20.11.60.15 BASELINE FOR DETERMINING CREDIT FOR EMISSION AND AIR QUALITY OFFSETS:

A. For sources and modifications subject to any preconstruction review program adopted pursuant to Subsection 40 CFR 51.165(a), the baseline for determining credit for emissions reductions is the emissions limit under the applicable state implementation plan (SIP) in effect at the time the application to construct is filed, except that the offset baseline shall be the actual emissions of the source from which offset credit is obtained where:

(1) the demonstration of reasonable further progress and attainment of ambient air quality standards is based upon the actual emissions of sources located within a designated nonattainment area for which the preconstruction review program was adopted; or

(2) the applicable SIP does not contain an emissions limitation for that source or source category.

B. Combustion of fuels.

(1) Where the emissions limit under the applicable SIP allows greater emissions than the potential to emit of the source, emissions offset credit will be allowed only for control below this potential.

(2) For an existing fuel combustion source, credit shall be based on the allowable emissions under the applicable SIP for the type of fuel being burned at the time the permit application to construct is filed. If the existing source commits to switch to a cleaner fuel at some future date, emissions offset credit based on the allowable (or actual) emissions for the fuels involved is not acceptable, unless the permit is conditioned to require the use of a specified alternative control measure, which would achieve the same degree of emission reduction should the source switch back to a dirtier fuel at some later date. The department should ensure that adequate long-term supplies of the new fuel are available before granting emissions offset credit for fuel switches.

(3) Emission reduction credit from shutdowns and curtailments.

(a) Emissions reductions achieved by shutting down an existing emission unit or curtailing production or operating hours may be generally credited for offsets if they meet the requirements in Items (i) and (ii) of Subparagraph (a) of Paragraph (3) of Subsection B of 20.11.60.15 NMAC.

(i) Such reductions are surplus, permanent, quantifiable, and federally enforceable.

(ii) The shutdown or curtailment occurred after the last day of the base year for the SIP planning process. For purposes of Item (ii) of Subparagraph (a) of Paragraph (3) of Subsection B of 20.11.60.15 NMAC, the department may choose to consider a prior shutdown or curtailment to have occurred after the last day of the base year if the projected emissions inventory used to develop the attainment demonstration explicitly includes the emissions from such previously shutdown or curtailed emission units. However, in no event may credit be given for shutdowns that occurred before August 7, 1977.

(b) Emissions reductions achieved by shutting down an existing emissions unit or curtailing production or operating hours and that do not meet the requirements in Item (ii) of Subparagraph (a) of Paragraph (3) of Subsection B of 20.11.60.15 NMAC may be generally credited only if:

(i) the shutdown or curtailment occurred on or after the date the construction permit application is filed; or

(ii) the applicant can establish that the proposed new emissions unit is a replacement for the shutdown or curtailed emissions unit, and the emissions reductions achieved by the shutdown or curtailment met the requirements of Item (i) of Subparagraph (a) of Paragraph (3) of Subsection B of 20.11.60.15 NMAC.

(4) No emissions credit shall be allowed for replacing one hydrocarbon compound with another of lesser reactivity, except for those compounds listed in Table 1 of EPA's *Recommended Policy on Control of Volatile Organic Compounds* (42 FR 35314, July 8, 1977) and any amendments thereto.

(5) All emission reductions claimed as offset credit shall be federally enforceable.

(6) Procedures relating to the permissible location of offsetting emissions shall be followed which are at least as stringent as those set out in 40 CFR Part 51 Appendix S Section IV.D.

(7) Credit for an emissions reduction can be claimed to the extent that the department has not relied on it in issuing any permit under regulations approved pursuant to 40 CFR Part 51 Subpart I or the department has not relied on it in demonstration attainment or reasonable further progress.

(8) **[RESERVED]**

(9) **[RESERVED]**

(10) The total tonnage of increased emissions, in tons per year, resulting from a major modification that must be offset in accordance with Section 173 of the federal Clean Air Act shall be determined by summing the difference between the allowable emissions after the modification and the actual emissions before the modification for each emissions unit.

C. All emission reductions claimed as offset credit shall occur prior to or concurrent with the start of operation of the proposed source. In addition, past reductions must have occurred later than the date upon which the area became nonattainment in order to be creditable.

D. The owner or operator desiring to utilize an emission reduction as an offset shall submit to the department the following information:

(1) a detailed description of the process to be controlled and the control technology to be used; and

(2) emission calculations showing the types and amounts of actual emissions to be reduced; and

- (3) the effective date of the reduction.

[20.11.60.15 NMAC - Rp, 20.11.60.14 NMAC, 1/23/06; 20.11.60.15 NMAC - N, 8/30/10; A, 5/13/13]

20.11.60.16 PROVISIONS FOR PROJECTED ACTUAL EMISSIONS:

Except as otherwise provided in Subsection F of 20.11.60.16 NMAC, the following specific provisions apply with respect to any regulated new source review pollutant emitted from projects at existing emissions units at a major stationary source (other than projects at a source with a PAL) in circumstances where there is a reasonable possibility, within the meaning of Subsection F of 20.11.60.16 NMAC, that a project that is not a part of a major modification may result in a significant emissions increase of such pollutant and the owner or operator elects to use the method specified in Subparagraphs (a), (b) and (c) of Paragraph (2) of Subsection II of 20.11.60.7 NMAC for calculating projected actual emissions. Deviations from these provisions will be approved only if the department specifically demonstrates that the submitted provisions are more stringent than or at least as stringent in all respects as the corresponding provisions in Subsections A through F of 20.11.60.16 NMAC.

A. Before beginning actual construction of the project, the owner or operator shall document and maintain a record of the following information:

- (1) a description of the project;
- (2) identification of the emissions unit(s) whose emissions of a regulated new source review pollutant could be affected by the project; and
- (3) a description of the applicability test used to determine that the project is not a major modification for any regulated new source review pollutant, including the baseline actual emissions, the projected actual emissions, the amount of emissions excluded under Subparagraph (c) of Paragraph (2) of Subsection II of 20.11.60.7 NMAC and an explanation for why such amount was excluded, and any netting calculations, if applicable.

B. If the emissions unit is an existing electric utility steam generating unit, before beginning actual construction, the owner or operator shall provide a copy of the information set out in Paragraph (1) of Subsection F of 20.11.60.12 NMAC to the department. Nothing in Paragraph (2) of Subsection F of 20.11.60.12 NMAC shall be construed to require the owner or operator of such a unit to obtain any determination from the department; however, necessary preconstruction approvals or permits must be obtained before beginning actual construction.

C. The owner or operator shall monitor the emissions of any regulated new source review pollutant that could increase as a result of the project and that is emitted by any emissions units identified in Subparagraph (a) of Paragraph (2) of Subsection A of

20.11.60.16 NMAC; and calculate and maintain a record of the annual emissions, in tons per year on a calendar year basis, for a period of five years following resumption of regular operations after the change, or for a period of 10 years following resumption of regular operations after the change if the project increases the design capacity or potential to emit of that regulated new source review pollutant at such emissions unit.

D. If the unit is an existing electric utility steam generating unit, the owner or operator shall submit a report to the department within 60 days after the end of each year during which records must be generated under Subsection C of 20.11.60.16 NMAC setting out the unit's annual emissions during the year that preceded submission of the report.

E. If the unit is an existing unit other than an electric utility steam generating unit, the owner or operator shall submit a report to the department if the annual emissions, in tons per year, from the project identified in Subsection A of 20.11.60.16 NMAC, exceed the baseline actual emissions (as documented and maintained pursuant to Paragraph (3) of Subsection A of 20.11.60.16 NMAC) by a significant amount for that regulated new source review pollutant, and if such emissions differ from the preconstruction projection (as documented and maintained pursuant to Paragraph (3) of Subsection A of 20.11.60.16 NMAC). Such report shall be submitted to the department within 60 days after the end of such year. The report shall contain the following:

- (1) the name, address and telephone number of the major stationary source;
- (2) the annual emissions as calculated pursuant to Subsection C of 20.11.60.16 NMAC; and
- (3) any other information that the owner or operator wishes to include in the report, (for example, an explanation as to why the emissions differ from the preconstruction projection).

F. A "reasonable possibility" under 20.11.60.16 NMAC occurs when the owner or operator calculates the project to result in either:

(1) a projected actual emissions increase of at least 50 percent of the amount that is a "significant emissions increase," as defined under Subsection NN of 20.11.60.7 NMAC (without reference to the amount that is a significant net emissions increase), for the regulated new source review pollutant; or

(2) a projected actual emissions increase that, added to the amount of emissions excluded under Subparagraph (c) of Paragraph (2) of Subsection II of 20.11.60.7 NMAC, sums to at least 50 percent of the amount that is a "significant emissions increase," as defined under Subsection NN of 20.11.60.7 NMAC (without reference to the amount that is a significant net emissions increase), for the regulated new source review pollutant; for a project for which a reasonable possibility occurs only within the meaning of Paragraph (2) of Subsection F of 20.11.60.16 NMAC, and not

also within the meaning of Paragraph (1) of Subsection F of 20.11.60.16 NMAC, then the provisions in Subsections B through E of 20.11.60.16 NMAC do not apply to the project.

G. Information requests. The owner or operator of the source shall make the information required to be documented and maintained pursuant to 20.11.60.16 NMAC available for review upon a request for inspection by the department or the general public pursuant to the requirements contained in 40 CFR 70.4(b)(3)(viii).

[20.11.60.16 NMAC - Rp, 20.11.60.15 NMAC, 1/23/06; 20.11.60.16 NMAC - N, 8/30/10]

20.11.60.17 ADDITIONAL PROVISIONS FOR EMISSIONS OF NITROGEN OXIDES IN OZONE TRANSPORT REGIONS AND NONATTAINMENT AREAS:

The requirements of 20.11.60 NMAC applicable to major stationary sources and major modifications of volatile organic compounds shall apply to nitrogen oxides emissions from major stationary sources and major modifications of nitrogen oxides in an ozone transport region or in any ozone nonattainment area, except in ozone nonattainment areas or in portions of an ozone transport region where the administrator has granted a NO_x waiver applying the standards set forth under Section 182(f) of the act and the waiver continues to apply.

[20.11.60.17 NMAC - Rp, 20.11.60.16 NMAC, 1/23/06; Repealed 8/30/10; 20.11.60.17 NMAC - N, 8/30/10]

20.11.60.18 EMISSIONS OFFSET RATIOS:

A. In meeting the emissions offset requirements of 20.11.60.15 NMAC, the ratio of total actual emissions reductions to the emissions increase shall be at least 1:1 unless an alternative ratio is provided for the applicable nonattainment area in Subsections B through D of 20.11.60.18 NMAC.

B. In meeting the emissions offset requirements of 20.11.60.15 NMAC for ozone nonattainment areas that are subject to Subpart 2, Part D, Title I of the act, the ratio of total actual emissions reductions of VOC to the emissions increase of VOC shall be as follows:

- (1) in any marginal nonattainment area for ozone—at least 1.1:1;
- (2) in any moderate nonattainment area for ozone—at least 1.15:1;
- (3) in any serious nonattainment area for ozone—at least 1.2:1;
- (4) in any severe nonattainment area for ozone—at least 1.3:1 (except that the ratio may be at least 1.2:1 if the approved plan also requires all existing major sources in such nonattainment area to use BACT for the control of VOC); and

(5) in any extreme nonattainment area for ozone—at least 1.5:1 (except that the ratio may be at least 1.2:1 if the approved plan also requires all existing major sources in such nonattainment area to use BACT for the control of VOC); and

C. Notwithstanding the requirements of Subsection B of 20.11.60.18 NMAC for meeting the requirements of 20.11.60.15 NMAC, the ratio of total actual emissions reductions of VOC to the emissions increase of VOC shall be at least 1.15:1 for all areas within an ozone transport region that is subject to Subpart 2, Part D, Title I of the act, except for serious, severe, and extreme ozone nonattainment areas that are subject to Subpart 2, Part D, Title I of the act.

D. In meeting the emissions offset requirements of 20.11.60.15 NMAC for ozone nonattainment areas that are subject to Subpart 1, Part D, Title I of the act (but are not subject to Subpart 2, Part D, Title I of the act, including 8-hour ozone nonattainment areas subject to 40 CFR 51.902(b)), the ratio of total actual emissions reductions of VOC to the emissions increase of VOC shall be at least 1:1.

[20.11.60.18 NMAC - Rp, 20.11.60.17 NMAC, 1/23/06; Repealed 8/30/10; 20.11.60.18 NMAC - N, 8/30/10]

20.11.60.19 PM₁₀ PRECURSORS:

The requirements of 20.11.60 NMAC applicable to major stationary sources and major modifications of PM₁₀ shall also apply to major stationary sources and major modifications of PM₁₀ precursors, except where the administrator determines that such sources do not contribute significantly to PM₁₀ levels that exceed the PM₁₀ ambient standards in the area.

[20.11.60.19 NMAC - Rp, 20.11.60.18 NMAC, 1/23/06; 20.11.60.19 NMAC - N, 8/30/10]

20.11.60.20 INTERPRECURSOR OFFSETTING.

In meeting the emissions offset requirements of 20.11.60.15 NMAC and Subsections A-D of 20.11.60.18 NMAC, the emissions offsets obtained shall be for the same regulated new source review pollutant unless interprecursor offsetting is permitted for a particular pollutant as specified in 20.11.60.20 NMAC. The offset requirements in 20.11.60.15 NMAC for direct PM_{2.5} emissions or emissions of precursors of PM_{2.5} may be satisfied by offsetting reductions of direct PM_{2.5} emissions or emissions of any PM_{2.5} precursor identified under Paragraph (3) of Subsection JJ of 20.11.60.7 NMAC if such offsets comply with the interprecursor trading hierarchy and ratio established in the approved plan for a particular nonattainment area.

[20.11.60.20 NMAC - Rp, 20.11.60.19 NMAC, 1/23/06; 20.11.60.20 NMAC - N, 8/30/10]

20.11.60.21 APPLICATION CONTENTS:

The owner or operator of a proposed major stationary source or major modification shall submit all information necessary to perform any analysis or make any determination required under 20.11.60 NMAC. The following items are required before the department may deem an application administratively complete. All applications shall include:

- A.** all information required by Subsection A of 20.11.41.13 NMAC; and
- B.** a detailed schedule for construction of the major stationary source or major modification; and
- C.** a detailed description of the planned system of continuous emission reduction to be implemented, emission estimates, and other information necessary to demonstrate that the lowest achievable emission rate or any other applicable emission limitation will be maintained.

[20.11.60.21 NMAC - Rp, 20.11.60.20 NMAC, 1/23/06; 20.11.60.21 NMAC - Rn, 20.11.60.14 NMAC, 8/30/10]

20.11.60.22 SOURCE REQUIREMENTS FOR SOURCES THAT WOULD LOCATE IN A DESIGNATED NONATTAINMENT AREA:

A. Conditions for approval. If the department finds that the major stationary source or major modification would be constructed in an area designated in 40 CFR 81.300 *et seq* as nonattainment for a pollutant for which the stationary source or modification is major, approval may be granted only if the following conditions are met:

(1) **Condition 1.** The major stationary source or major modification shall meet an emission limitation which specifies the lowest achievable emission rate (LAER) for such source.

(2) **Condition 2.** The applicant must certify that all existing major stationary sources owned or operated by the applicant (or any entity controlling, controlled by, or under common control with the applicant) in the same state as the proposed source are in compliance with, all applicable emission limitations and standards, under the federal Clean Air Act (or are in compliance with an expeditious schedule which is federally enforceable or contained in a court decree).

(3) **Condition 3.** Emission reductions (offsets) from existing sources in the area of the proposed source (whether or not under the same ownership) are required such that there will be reasonable progress toward attainment of the applicable NAAQS. Except as provided in 20.11.60.20 NMAC (addressing PM_{2.5} and its precursors). Only intrapollutant emission offsets will be acceptable (e.g., hydrocarbon increases may not be offset against SO₂ reductions).

(4) **Condition 4.** The emission offsets shall provide a positive net air quality benefit in the affected area (where the national ambient air quality standard for that pollutant is violated). Atmospheric simulation modeling is not necessary for volatile organic compounds and NO_x. Fulfillment of "condition 3" at Paragraph (3) of Subsection A of 20.11.60.22 NMAC and "location of offsetting emissions" requirements at Subsection B of 20.11.60.22 NMAC, will be considered adequate to meet this condition.

B. Location of offsetting emissions. The owner or operator of a new or modified major stationary source may comply with any offset requirement in effect under 20.11.60 NMAC for increased emissions of any air pollutant only by obtaining emissions reductions of such air pollutant from the same source or other sources in the same nonattainment area, except that the department may allow the owner or operator of a source to obtain such emissions reductions in another nonattainment area if the conditions in Paragraph (1) and (2) of Subsection B of 20.11.60.22 NMAC are met.

(1) The other area has an equal or higher nonattainment classification than the area in which the source is located.

(2) Emissions from such other area contribute to a violation of the national ambient air quality standard in the nonattainment area in which the source is located.

C. The owner or operator of the proposed major stationary source or major modification shall conduct an analysis of alternative sites, sizes, production processes, and environmental control techniques for such proposed source which demonstrates that benefits of the proposed source significantly outweigh the environmental and social costs imposed as a result of its location, construction, or modification.

D. The proposed major stationary source or major modification shall meet all applicable emission requirements in the New Mexico state implementation plan, any applicable new source performance standard in 40 CFR Part 60, and any national emission standard for hazardous air pollutants in 40 CFR Part 61 or 40 CFR Part 63.

E. Emission reductions:

(1) Emission reductions (offsets) at existing sources shall occur prior to or concurrent with the start of operation of the proposed major stationary source or major modification for each pollutant emitted which is subject to 20.11.60 NMAC. As a general rule, such offsets shall be at least 20 percent greater than the allowable emissions of the proposed new major stationary source or major modification, and shall assure that the total tonnage of increased emissions of the air pollutant from the new or modified source shall be offset by an equal or greater reduction in the actual emissions of such air pollutant from the same or other sources in the area. An offset less than 20 percent, but at least 10 percent (a 1.0:1.1 ratio), may be allowed if reasonable progress toward the attainment of the applicable NAAQS will be achieved. A higher level of offset reduction may be required in order to demonstrate that a net air quality benefit will occur.

(2) A new major stationary source or major modification which is subject to the requirements of Subsection D of 20.11.60.12 NMAC shall obtain sufficient emission reductions to, at a minimum, compensate for its adverse ambient impact where the major stationary source or major modification would otherwise cause or contribute to a violation of any national ambient air quality standard.

[20.11.60.22 NMAC - Rp, 20.11.60.21 & 20.11.60.22 NMAC, 1/23/06; Repealed, 8/30/10; 20.11.60.22 NMAC - Rn & A, 20.11.60.15 NMAC, 8/30/10]

20.11.60.23 ADDITIONAL REQUIREMENTS FOR SOURCES IMPACTING MANDATORY FEDERAL CLASS I AREAS:

A. The requirements of 20.11.60.23 NMAC apply only to proposed major stationary sources or major modifications that meet the criteria of Paragraph (1) of Subsection A of 20.11.60.12 NMAC and that also are major stationary sources or major modifications as defined in 20.11.61 NMAC. A major stationary source or major modification which meets the criteria of Paragraph (2) of Subsection A of 20.11.60.12 NMAC may be subject to requirements for federal class I areas in 20.11.61 NMAC, if applicable.

B. The department shall transmit to the administrator and any affected federal land manager a copy of each permit application and any information relevant to any proposed major stationary source or major modification which may have an impact on visibility in any mandatory federal class I area. Relevant information will include an analysis of the proposed source's anticipated impacts on visibility in the federal class I area. The application shall be transmitted within 30 days of receipt by the department and at least 60 days prior to any public hearing on the application. Additionally, the department shall notify any affected federal land manager within 30 days from the date the department receives a request for a pre-application meeting from a proposed source subject to 20.11.60 NMAC. The department shall consult with the affected federal land manager prior to making a determination of completeness for any such permit application. The department shall also provide the federal land manager and the administrator with a copy of the preliminary determination on the permit application and shall make available to them any materials used in making that determination.

C. The owner or operator of any proposed major stationary source or major modification which may have an impact on visibility in a mandatory federal class I area shall include in the permit application an analysis of the anticipated impacts on visibility in such areas.

D. The department may require monitoring of visibility in any mandatory federal class I area where the department determines an adverse impact on visibility may occur due to the operations of the proposed new source or modification. Such monitoring shall be conducted following procedures approved by the department and subject to the following conditions:

(1) visibility monitoring methods specified by the department shall be reasonably available and not require any research and development; and

(2) both preconstruction and post construction visibility monitoring may be required. In each case, the duration of such monitoring shall not exceed one year.

E. The department shall consider any analysis with respect to visibility impacts provided by the federal land manager if it is received within 30 days from the date a complete application is given to the federal land manager. In any case where the department disagrees with the federal land manager's analysis, the department shall either explain its decision to the federal land manager or give notice as to where the explanation can be obtained. In the case where the department disagrees with the federal land manager's analysis, the department will also explain its decision or give notice to the public by means of an advertisement in a newspaper of general circulation in the area in which the proposed source would be constructed as to where the decision can be obtained.

F. In making its determination as to whether or not to issue a permit, the department shall ensure that the source's emissions will be consistent with making reasonable progress toward the national visibility goal of preventing any future impairment of visibility in mandatory federal class I areas. The department may take into account the costs of compliance, the time necessary for compliance, the energy and non-air quality environmental impacts of compliance, and the useful life of the source.

[20.11.60.23 NMAC - N, 1/23/06; 20.11.60.23 NMAC - Rn & A, 20.11.60.16 NMAC, 8/30/10]

20.11.60.24 BANKING OF EMISSION REDUCTION:

A. Any stationary source which decreases actual emissions of a regulated new source review pollutant in excess of the requirements of 20.11.60 NMAC or any other applicable air quality regulation or permit emission limitation may preserve or bank such excess emission reductions for sale or future use.

B. The owner or operator desiring to preserve such reductions shall submit a written request prior to the actual emission reduction to the department which contains the following information:

(1) a detailed description of the process(es) to be controlled and the control technology to be used; and

(2) emission calculations showing the types and amounts of actual emissions to be reduced; and

(3) the effective date(s) of such reductions.

C. The department shall:

- (1) verify the amount of emission reduction claimed in the written request; and
- (2) approve or deny the request for banking of the emission reduction and notify the applicant in writing of the decision; and
- (3) keep appropriate records of any emission reduction accepted for banking; and
- (4) for the case where emission reductions are approved in excess of those required for obtaining a permit under 20.11.60 NMAC, the department shall make such reductions a condition of the permit; and
- (5) for the case where emission reductions are approved not in conjunction with granting a permit, the department shall preserve such reductions as a state implementation plan revision which must be approved by the board.

D. Use and sale of emission reductions.

- (1) The use of any preserved emission reduction is confined to meeting the emission offset requirements of 20.11.60 NMAC or 20.11.41 NMAC.
- (2) The provisions of 20.11.60 NMAC apply to the future use of any preserved emission reduction as if such reductions were obtained concurrently with the commencement of operations of the new or modified source.
- (3) Before the use or sale of any preserved emission reduction occurs, written notification must be given to the department. Such notice shall be in writing and shall identify the permit(s) and state implementation plan revision(s) in which such reductions are preserved. The department must verify the availability of the preserved reduction before any use or sale occurs.
- (4) The use of preserved emission reduction credits is subject to the criteria of 20.11.60 NMAC.

[20.11.60.24 NMAC - Rn & A, 20.11.60.19 NMAC, 8/30/10]

20.11.60.25 AIR QUALITY BENEFIT:

All demonstrations of the occurrence of a net air quality benefit shall meet the following criteria.

A. Emission offsets for volatile organic compounds or nitrogen oxides emissions impacting an ozone nonattainment area may be obtained from sources located in the broad vicinity of the proposed new source or modification, subject to approval by the

department. Atmospheric dispersion modeling will not be required to demonstrate the net air quality benefit that occurs due to reductions in volatile organic compound emissions.

B. An applicant which proposes emission offsets for sulfur dioxide, particulate matter, carbon monoxide, nitrogen oxides, or any other pollutant may be required by the department to submit atmospheric dispersion modeling to demonstrate a net air quality benefit will occur. For any case involving these pollutants where stack emissions and fugitive or ground level emissions are offsetting, atmospheric dispersion modeling shall be required to demonstrate a net air quality benefit will occur.

[20.11.60.25 NMAC - Rn, 20.11.60.20 NMAC, 8/30/10]

20.11.60.26 PUBLIC PARTICIPATION AND NOTIFICATION:

A. The department shall, within 30 days after its receipt of an application for a permit or significant permit revision subject to 20.11.60 NMAC, review such application and determine whether it is administratively complete. If the application is deemed:

(1) administratively complete, a letter to that effect shall be sent by certified mail to the applicant;

(2) administratively incomplete, a letter shall be sent by certified mail to the applicant stating what additional information or points of clarification are necessary to deem the application administratively complete; upon receipt of the additional information or clarification, the department shall promptly review such information and determine whether the application is administratively complete;

(3) administratively complete but no permit is required, a letter shall be sent by certified mail to the applicant informing the applicant of the determination.

B. The department shall:

(1) Make a preliminary determination whether construction should be approved, approved with conditions, or disapproved.

(2) Make available at the department, district and local office nearest to the proposed source a copy of all materials the applicant submitted, a copy of the preliminary determination, and a copy or summary of other materials, if any, considered in making the preliminary determination.

(3) Notify the public by advertisement in a newspaper of general circulation in the area in which the proposed major stationary source or major modification would be constructed, of the application, the preliminary determination, and of the opportunity for comment at a public hearing as well as written public comment. The public comment period shall be for 45 days from the date of such advertisement.

(4) Send a copy of the notice of public comment to the applicant, the administrator, and to officials and agencies having jurisdiction over the location where the proposed construction would occur as follows: any other state or local air pollution control agencies, the chief executives of the city and county where the source would be located, any regional comprehensive land use planning agency, and any state, federal land manager, or indian governing body whose lands may be affected by emissions from the source or modification.

(5) Provide opportunity for a public hearing for interested persons to appear and submit written or oral comments on the air quality impact of the source and other appropriate considerations. Public hearings shall be held in the geographic area likely to be impacted by the source.

(6) Consider all written comments submitted within a time specified in the notice of public comment and all comments received at any public hearing(s) in making a final decision on the approvability of the application. The department shall make all comments available for public inspection in the same locations where the department made available preconstruction information relating to the source.

(7) Within 90 days after the application is deemed administratively complete, unless the director grants an extension, not to exceed 90 days for good cause:

(a) make a final determination whether construction should be approved, approved with conditions, or disapproved, or whether no permit is required; and

(b) notify the applicant in writing of the final determination and make such notification available for public inspection at the same location where the department made available preconstruction information and public comments relating to the source.

[20.11.60.26 NMAC - Rn, 20.11.60.21 NMAC, 8/30/10]

20.11.60.27 ACTUALS PLANTWIDE APPLICABILITY LIMITS (PALS):

A. Applicability.

(1) The department may approve the use of an actuals PAL for any existing major stationary source (except as provided in Paragraph (2) of Subsection A of 20.11.60.27 NMAC) if the PAL meets the requirements of 20.11.60.27 NMAC. The term "PAL" shall mean "actuals PAL" throughout 20.11.60.27 NMAC.

(2) An actuals PAL for VOC or NO_x shall not be allowed for any major stationary source located in an extreme ozone nonattainment area.

(3) Any physical change in or change in the method of operation of a major stationary source that maintains its total source-wide emissions below the PAL level, meets the requirements of 20.11.60.27 NMAC, and complies with the PAL permit:

(a) is not a major modification for the PAL pollutant;

(b) does not have to be approved through the requirements of 20.11.60 NMAC; and

(c) is not subject to the provisions in Subsection A of 20.11.60.13 NMAC (restrictions on relaxing enforceable emission limitations that the major stationary source used to avoid applicability of the nonattainment major new source review program).

(4) Except as provided under Subparagraph (c) of Paragraph (3) of Subsection A of 20.11.60.27 NMAC, a major stationary source shall continue to comply with all applicable federal or state requirements, emission limitations, and work practice requirements that were established prior to the effective date of the PAL.

B. Definitions. When a term is not defined in Subsection B of 20.11.60.27 NMAC, it shall have the meaning given in 20.11.60.7 NMAC or in 20.11.1 NMAC.

(1) **Actuals PAL for a major stationary source** means a PAL based on the baseline actual emissions of all emissions units at the source that emit or have the potential to emit the PAL pollutant.

(2) **Allowable emissions** means "allowable emissions" as defined in Subsection D of 20.11.60.7 NMAC, except as this definition is modified according to Subparagraph (a) and (b) of Paragraph (2) of Subsection B of 20.11.60.27 NMAC.

(a) The allowable emissions for any emissions unit shall be calculated considering any emission limitations that are enforceable as a practical matter on the emissions unit's potential to emit.

(b) An emissions unit's potential to emit shall be determined using the definition in Subsection EE of 20.11.60.7 NMAC, except that the words "or enforceable as a practical matter" should be added after "federally enforceable".

(3) **Small emissions unit** means an emissions unit that emits or has the potential to emit the PAL pollutant in an amount less than the significant level for that PAL pollutant, as defined in Subsection MM of 20.11.60.7 NMAC or in the federal Clean Air Act, whichever is lower.

(4) **Major emissions unit** means:

(a) Any emissions unit that emits or has the potential to emit 100 tons per year or more of the PAL pollutant in an attainment area; or

(b) any emissions unit that emits or has the potential to emit the PAL pollutant in an amount that is equal to or greater than the major source threshold for the PAL

pollutant as defined by the federal Clean Air Act for nonattainment areas; for example, in accordance with the definition of major stationary source in Section 182 (c) of the federal Clean Air Act, an emissions unit would be a major emissions unit for VOC if the emissions unit is located in a serious ozone nonattainment area and it emits or has the potential to emit 50 or more tons of VOC per year.

(5) **Plantwide applicability limitation (PAL)** means an emission limitation expressed in tons per year, for a pollutant at a major stationary source that is enforceable as a practical matter and established source-wide in accordance with 20.11.60.27 NMAC.

(6) **PAL effective date** generally means the date of issuance of the PAL permit. However, the PAL effective date for an increased PAL is the date any emissions unit which is part of the PAL major modification becomes operational and begins to emit the PAL pollutant.

(7) **PAL effective period** means the period beginning with the PAL effective date and ending 10 years later.

(8) **PAL major modification** means, notwithstanding the definitions for major modification and net emissions increase in 20.11.60.7 NMAC, any physical change in or change in the method of operation of the PAL source that causes it to emit the PAL pollutant at a level equal to or greater than the PAL.

(9) **PAL permit** means the minor NSR permit, major NSR permit or operating permit issued by the department under the requirements of 20.11.41 NMAC, 20.11.60 NMAC, or 20.11.61 NMAC, or the title V permit issued by the department under the requirements of 20.11.42 that establishes a PAL for a major stationary source.

(10) **PAL pollutant** means the pollutant for which a PAL is established at a major stationary source.

(11) **Significant emissions unit** means an emissions unit that emits or has the potential to emit a PAL pollutant in an amount that is equal to or greater than the significant level (as defined in Subsection MM of 20.11.60.7 NMAC or in the federal Clean Air Act, whichever is lower) for that PAL pollutant, but less than the amount that would qualify the unit as a major emissions unit as defined in Paragraph (4) of Subsection B of 20.11.60.27 NMAC.

C. Permit application requirements. As part of a permit application requesting a PAL, the owner or operator of a major stationary source shall submit the following information to the department for approval.

(1) A list of all emissions units at the source designated as small, significant or major based on their potential to emit. In addition, the owner or operator of the source

shall indicate which, if any, federal or state applicable requirements, emission limitations or work practices apply to each unit.

(2) Calculations of the baseline actual emissions with supporting documentation. Baseline actual emissions are to include emissions associated not only with operation of the unit, but also emissions associated with startup, shutdown and malfunction.

(3) The calculation procedures that the major stationary source owner or operator proposes to use to convert the monitoring system data to monthly emissions and annual emissions based on a 12-month rolling total for each month as required by Paragraph (1) of Subsection M of 20.11.60.27 NMAC.

D. General requirements for establishing PALs.

(1) A PAL at a major stationary source may be established by the department, provided that at a minimum, the following requirements are met.

(a) The PAL shall impose an annual emission limitation in tons per year that is enforceable as a practical matter, for the entire major stationary source. For each month during the PAL effective period after the first 12 months of establishing a PAL, the major stationary source owner or operator shall show that the sum of the monthly emissions from each emissions unit under the PAL for the previous 12 consecutive months is less than the PAL (a 12-month average, rolled monthly). For each month during the first 11 months from the PAL effective date, the major stationary source owner or operator shall show that the sum of the preceding monthly emissions from the PAL effective date for each emissions unit under the PAL is less than the PAL.

(b) The PAL shall be established in a PAL permit that meets the public participation requirements in Subsection E of 20.11.60.27 NMAC.

(c) The PAL permit shall contain all the requirements of Subsection G of 20.11.60.27 NMAC.

(d) The PAL shall include fugitive emissions, to the extent quantifiable, from all emissions units that emit or have the potential to emit the PAL pollutant at the major stationary source.

(e) Each PAL shall regulate emissions of only one pollutant.

(f) Each PAL shall have a PAL effective period of 10 years.

(g) The owner or operator of the major stationary source with a PAL shall comply with the monitoring, recordkeeping, and reporting requirements provided in Subsection L through N of 20.11.60.27 NMAC for each emissions unit under the PAL through the PAL effective period.

(2) At no time (during or after the PAL effective period) are emissions reductions of a PAL pollutant, which occur during the PAL effective period, creditable as decreases for purposes of offsets under Subsection B of 20.11.60.15 NMAC unless the level of the PAL is reduced by the amount of such emissions reductions and such reductions would be creditable in the absence of the PAL.

E. Public participation requirement for PALs. PALs for existing major stationary sources shall be established, renewed, or increased through a procedure that is consistent with 40 CFR 51.160 and 161. This includes the requirement that the department provide the public with notice of the proposed approval of a PAL permit and at least a 30-day period for submittal of public comment. The department shall address all material comments before taking final action on the permit.

F. Setting the 10-year actuals PAL level.

(1) Except as provided in Paragraph (2) of Subsection F of 20.11.60.27 NMAC, the actuals PAL level for a major stationary source shall be established as the sum of the baseline actual emissions (as defined in 20.11.60.7 NMAC) of the PAL pollutant for each emissions unit at the source; plus an amount equal to the applicable significant level for the PAL pollutant under Subsection UU of 20.11.60.27 NMAC or under the federal Clean Air Act, whichever is lower. When establishing the actuals PAL level, for a PAL pollutant, only one consecutive 24-month period must be used to determine the baseline actual emissions for all existing emissions units. However, a different consecutive 24-month period may be used for each different PAL pollutant. Emissions associated with units that were permanently shutdown after this 24-month period must be subtracted from the PAL level. The department shall specify a reduced PAL level(s) (in tons/yr) in the PAL permit to become effective on the future compliance date(s) of any applicable federal or state regulatory requirement(s) that the department is aware of prior to issuance of the PAL permit. For instance, if the source owner or operator will be required to reduce emissions from industrial boilers in half from baseline emissions of 60 ppm NO_x to a new rule limit of 30 ppm, then the permit shall contain a future effective PAL level that is equal to the current PAL level reduced by half of the original baseline emissions of such unit(s).

(2) For newly constructed units (which do not include modifications to existing units) on which actual construction began after the 24-month period, in lieu of adding the baseline actual emissions as specified in Paragraph (1) of Subsection F of 20.11.60.27 NMAC, the emissions must be added to the PAL level in an amount equal to the potential to emit of the units.

G. Contents of the PAL permit. The PAL permit shall contain, at a minimum, all of the following information.

(1) The PAL pollutant and the applicable source-wide emission limitation in tons per year.

(2) The PAL permit effective date and the expiration date of the PAL (PAL effective period).

(3) Specification in the PAL permit that if a major stationary source owner or operator applies to renew a PAL in accordance with Subsection J of 20.11.60.27 NMAC before the end of the PAL effective period, then the PAL shall not expire at the end of the PAL effective period. It shall remain in effect until a revised PAL permit is issued by the department.

(4) A requirement that emission calculations for compliance purposes include emissions from startups, shutdowns and malfunctions.

(5) A requirement that, once the PAL expires, the major stationary source is subject to the requirements of Subsection I of 20.11.60.27 NMAC.

(6) The calculation procedures that the major stationary source owner or operator shall use to convert the monitoring system data to monthly emissions and annual emissions based on a 12-month rolling total for each month as required by Paragraph (1) of Subsection M of 20.11.60.27 NMAC.

(7) A requirement that the major stationary source owner or operator monitor all emissions units in accordance with the provisions under Subsection L of 20.11.60.27 NMAC.

(8) A requirement to retain the records required under Subsection M of 20.11.60.27 NMAC on site. Such records may be retained in an electronic format.

(9) A requirement to submit the reports required under Subsection N of 20.11.60.27 NMAC by the required deadlines.

(10) Any other requirements that the department deems necessary to implement and enforce the PAL.

H. PAL effective period and reopening of the PAL permit.

(1) **PAL effective period.** The permit shall specify a PAL effective period of 10 years.

(2) **Reopening of the PAL permit.**

(a) During the PAL effective period, the department shall reopen the PAL permit to:

(i) correct typographical/calculation errors made in setting the PAL or reflect a more accurate determination of emissions used to establish the PAL;

(ii) reduce the PAL if the owner or operator of the major stationary source creates creditable emissions reductions for use as offsets under 20.11.60.15 NMAC; or

(iii) revise the PAL to reflect an increase in the PAL as provided under Subsection K of 20.11.60.27 NMAC.

(b) The department may reopen the PAL permit to:

(i) reduce the PAL to reflect newly applicable federal requirements (for example, NSPS) with compliance dates after the PAL effective date;

(ii) to reduce the PAL consistent with any other requirement, that is enforceable as a practical matter, and that the department may impose on the major stationary source under 20.11.60 NMAC; or

(iii) to reduce the PAL if the department determines that a reduction is necessary to avoid causing or contributing to a NAAQS or PSD increment violation, or to an adverse impact on an air quality related value that has been identified for a federal class I area by a federal land manager and for which information is available to the general public.

(c) Except for the permit reopening in Subparagraph (a) of Paragraph (2) of Subsection H of 20.11.60.27 NMAC for the correction of typographical/calculation errors that do not increase the PAL level, all other reopenings shall be carried out in accordance with the public participation requirements of Subsection E of 20.11.60.27 NMAC.

I. Expiration of a PAL. Any PAL which is not renewed in accordance with the procedures in Subsection J of 20.11.60.27 NMAC shall expire at the end of the PAL effective period, and the following requirements shall apply.

(1) Each emissions unit (or each group of emissions units) that existed under the PAL shall comply with an allowable emission limitation under a revised permit established according to the following procedures.

(a) Within the time frame specified for PAL renewals in Paragraph (2) of Subsection J of 20.11.60.27 NMAC, the major stationary source shall submit a proposed allowable emission limitation for each emissions unit (or each group of emissions units, if such a distribution is more appropriate as decided by the department) by distributing the PAL allowable emissions for the major stationary source among each of the emissions units that existed under the PAL. If the PAL had not yet been adjusted for an applicable requirement that became effective during the PAL effective period, as required under Paragraph (5) of Subsection J of 20.11.60.27 NMAC, such distribution shall be made as if the PAL had been adjusted.

(b) The department shall decide whether and how the PAL allowable emissions will be distributed and issue a revised permit incorporating allowable limits for each emissions unit, or each group of emissions units, as the department determines is appropriate.

(2) Each emissions unit(s) shall comply with the allowable emission limitation on a 12-month rolling basis. The department may approve the use of monitoring systems (source testing, emission factors, etc.) other than CEMS, CERMS, PEMS or CPMS to demonstrate compliance with the allowable emission limitation.

(3) Until the department issues the revised permit incorporating allowable limits for each emissions unit, or each group of emissions units, as required under Subparagraph (a) of Paragraph (1) of Subsection I of 20.11.60.27 NMAC, the source shall continue to comply with a source-wide, multi-unit emissions cap equivalent to the level of the PAL emission limitation.

(4) Any physical change or change in the method of operation at the major stationary source will be subject to the nonattainment major new source review requirements if such change meets the definition of major modification in 20.11.60.7 NMAC.

(5) The major stationary source owner or operator shall continue to comply with any New Mexico or federal applicable requirements (BACT, RACT, NSPS, etc.) that may have applied either during the PAL effective period or prior to the PAL effective period except for those emission limitations that had been established pursuant to 20.11.60.12 NMAC, but were eliminated by the PAL in accordance with the provisions in Subparagraph (c) of Paragraph (3) of Subsection A of 20.11.60.27 NMAC.

J. Renewal of a PAL.

(1) The department shall follow the procedures specified in Subsection E of 20.11.60.27 NMAC in approving any request to renew a PAL for a major stationary source, and shall provide both the proposed PAL level and a written rationale for the proposed PAL level to the public for review and comment. During such public review, any person may propose a PAL level for the source for consideration by the department.

(2) **Application deadline.** A major stationary source owner or operator shall submit a timely application to the department to request renewal of a PAL. A timely application is one that is submitted at least six months prior to, but not earlier than 18 months from, the date of permit expiration. This deadline for application submittal is to ensure that the permit will not expire before the permit is renewed. If the owner or operator of a major stationary source submits a complete application to renew the PAL within this time period, then the PAL shall continue to be effective until the revised permit with the renewed PAL is issued.

(3) **Application requirements.** The application to renew a PAL permit shall contain the following information.

(a) The information required in Paragraphs (1) through (3) of Subsection C of 20.11.60.27 NMAC.

(b) A proposed PAL level.

(c) The sum of the potential to emit of all emissions units under the PAL, (with supporting documentation).

(d) Any other information the owner or operator wishes the department to consider in determining the appropriate level for renewing the PAL.

(4) **PAL adjustment.** In determining whether and how to adjust the PAL, the department shall consider the options outlined in Subparagraph (a) of Paragraph (4) of Subsection J of 20.11.60.27 NMAC. However, in no case may any such adjustment fail to comply with Subparagraph (b) of Paragraph (4) of Subsection J of 20.11.60.27 NMAC.

(a) If the emissions level calculated in accordance with Subsection F of 20.11.60.27 NMAC is equal to or greater than 80 percent of the PAL level, the department may renew the PAL at the same level without considering the factors set forth in Subparagraph (b) of Paragraph (4) of Subsection J of 20.11.60.27 NMAC; or

(b) the department may set the PAL at a level that it determines to be more representative of the source's baseline actual emissions, or that it determines to be appropriate considering air quality needs, advances in control technology, anticipated economic growth in the area, desire to reward or encourage the source's voluntary emissions reductions, or other factors as specifically identified by the department in its written rationale.

(c) Notwithstanding Paragraph (4) of Subsection J of 20.11.60.27 NMAC,

(i) if the potential to emit of the major stationary source is less than the PAL, the department shall adjust the PAL to a level no greater than the potential to emit of the source; and

(ii) the department shall not approve a renewed PAL level higher than the current PAL, unless the major stationary source has complied with the provisions of Subsection K of 20.11.60.27 NMAC, *Increasing a PAL during the PAL effective period.*

(5) If the compliance date for a New Mexico or federal requirement that applies to the PAL source occurs during the PAL effective period, and if the department has not already adjusted for such requirement, the PAL shall be adjusted at the time of PAL permit renewal or title V permit renewal, whichever occurs first.

K. Increasing a PAL during the PAL effective period.

(1) The department may increase a PAL emission limitation only if the major stationary source complies with the following provisions.

(a) The owner or operator of the major stationary source shall submit a complete application to request an increase in the PAL limit for a PAL major modification. Such application shall identify the emissions unit(s) contributing to the increase in emissions so as to cause the major stationary source's emissions to equal or exceed its PAL.

(b) As part of this application, the major stationary source owner or operator shall demonstrate that the sum of the baseline actual emissions of the small emissions units, plus the sum of the baseline actual emissions of the significant and major emissions units assuming application of BACT equivalent controls, plus the sum of the allowable emissions of the new or modified emissions unit(s) exceeds the PAL. The level of control that would result from BACT equivalent controls on each significant or major emissions unit shall be determined by conducting a new BACT analysis at the time the application is submitted, unless the emissions unit is currently required to comply with a BACT or LAER requirement that was established within the preceding 10 years. In such a case, the assumed control level for that emissions unit shall be equal to the level of BACT or LAER with which that emissions unit must currently comply.

(c) The owner or operator shall obtain a major new source review permit for all emissions unit(s) identified in Subparagraph (a) of Paragraph (1) of Subsection K of 20.11.60.27 NMAC, regardless of the magnitude of the emissions increase resulting from them (that is, no significant levels apply). These emissions unit(s) shall comply with any emissions requirements resulting from the nonattainment major NSR program process (for example, LAER), even though they have also become subject to the PAL or continue to be subject to the PAL.

(d) The PAL permit shall require that the increased PAL level shall be effective on the day any emissions unit that is part of the PAL major modification becomes operational and begins to emit the PAL pollutant.

(2) The department shall calculate the new PAL as the sum of the allowable emissions for each modified or new emissions unit, plus the sum of the baseline actual emissions of the significant and major emissions units (assuming application of BACT equivalent controls as determined in accordance with Subparagraph (b) of Paragraph (1) of Subsection K of 20.11.60.27 NMAC), plus the sum of the baseline actual emissions of the small emissions units.

(3) The PAL permit shall be revised to reflect the increased PAL level pursuant to the public notice requirements of Subsection E of 20.11.60.27 NMAC.

L. Monitoring requirements for PALs.

(1) **General Requirements.**

(a) Each PAL permit must contain enforceable requirements for the monitoring system that accurately determines plantwide emissions of the PAL pollutant in terms of mass per unit of time. Any monitoring system authorized for use in the PAL permit must be based on sound science and meet generally acceptable scientific procedures for data quality and manipulation. Additionally, the information generated by such system must meet minimum legal requirements for admissibility in a judicial proceeding to enforce the PAL permit.

(b) The PAL monitoring system must employ one or more of the four general monitoring approaches meeting the minimum requirements set forth in Subparagraphs (a) through (d) of Paragraph (2) of Subsection L of 20.11.60.27 NMAC and must be approved by the department.

(c) Notwithstanding Subparagraph (b) of Paragraph (1) of Subsection L of 20.11.60.27 NMAC, the owner or operator may also employ an alternative monitoring approach that meets Subparagraph (a) of Paragraph (1) of Subsection L of 20.11.60.27 NMAC if approved by the department.

(d) Failure to use a monitoring system that meets the requirements of 20.11.60.27 NMAC renders the PAL invalid.

(2) **Minimum performance requirements for approved monitoring approaches.** The following are acceptable general monitoring approaches when conducted in accordance with the minimum requirements in Paragraphs (3) through (9) of Subsection L of 20.11.60.27 NMAC:

- (a) mass balance calculations for activities using coatings or solvents;
- (b) CEMS;
- (c) CPMS or PEMS; and
- (d) emission factors.

(3) **Mass balance calculations.** An owner or operator using mass balance calculations to monitor PAL pollutant emissions from activities using coating or solvents shall meet the following requirements:

(a) provide a demonstrated means of validating the published content of the PAL pollutant that is contained in or created by all materials used in or at the emissions unit;

(b) assume that the emissions unit emits all of the PAL pollutant that is contained in or created by any raw material or fuel used in or at the emissions unit, if it cannot otherwise be accounted for in the process; and

(c) where the vendor of a material or fuel, which is used in or at the emissions unit, publishes a range of pollutant content from such material, the owner or operator must use the highest value of the range to calculate the PAL pollutant emissions unless the department determines there is site-specific data or a site-specific monitoring program to support another content within the range.

(4) **CEMS.** An owner or operator using CEMS to monitor PAL pollutant emissions shall meet the following requirements:

(a) CEMS must comply with applicable Performance Specifications found in 40 CFR part 60, appendix B; and

(b) CEMS must sample, analyze and record data at least every 15 minutes while the emissions unit is operating.

(5) **CPMS or PEMS.** An owner or operator using CPMS or PEMS to monitor PAL pollutant emissions shall meet the following requirements:

(a) the CPMS or the PEMS must be based on current site-specific data demonstrating a correlation between the monitored parameter(s) and the PAL pollutant emissions across the range of operation of the emissions unit; and

(b) each CPMS or PEMS must sample, analyze, and record data at least every 15 minutes, or at another less frequent interval approved by the department, while the emissions unit is operating.

(6) **Emission factors.** An owner or operator using emission factors to monitor PAL pollutant emissions shall meet the following requirements:

(a) all emission factors shall be adjusted, if appropriate, to account for the degree of uncertainty or limitations in the factors' development;

(b) the emissions unit shall operate within the designated range of use for the emission factor, if applicable; and

(c) if technically practicable, the owner or operator of a significant emissions unit that relies on an emission factor to calculate PAL pollutant emissions shall conduct validation testing to determine a site-specific emission factor within six months of PAL permit issuance, unless the department determines that testing is not required.

(7) A source owner or operator must record and report maximum potential emissions without considering enforceable emission limitations or operational

restrictions for an emissions unit during any period of time that there is no monitoring data, unless another method for determining emissions during such periods is specified in the PAL permit.

(8) Notwithstanding the requirements in Paragraphs (3) through (7) of Subsection L of 20.11.60.27 NMAC, where an owner or operator of an emissions unit cannot demonstrate a correlation between the monitored parameter(s) and the PAL pollutant emissions rate at all operating points of the emissions unit, the department shall, at the time of permit issuance:

(a) establish default value(s) for determining compliance with the PAL based on the highest potential emissions reasonably estimated at such operating point(s); or

(b) determine that operation of the emissions unit during operating conditions when there is no correlation between monitored parameter(s) and the PAL pollutant emissions is a violation of the PAL.

(9) **Revalidation.** All data used to establish the PAL pollutant must be revalidated through performance testing or other scientifically valid means approved by the department. Such testing must occur at least once every five years after issuance of the PAL.

M. Recordkeeping requirements.

(1) The PAL permit shall require an owner or operator to retain a copy of all records necessary to determine compliance with any requirement of 20.11.60.27 NMAC and of the PAL, including a determination of each emissions unit's 12-month rolling total emissions, for five years from the date of such record.

(2) The PAL permit shall require an owner or operator to retain a copy of the following records for the duration of the PAL effective period plus five years:

(a) a copy of the PAL permit application and any applications for revisions to the PAL; and

(b) each annual certification of compliance pursuant to title V and the data relied on in certifying the compliance.

N. Reporting and notification requirements. The owner or operator shall submit semi-annual monitoring reports and prompt deviation reports to the department in accordance with the requirements of 20.11.42 NMAC. The reports shall meet the following requirements.

(1) **Semi-Annual Report.** The semi-annual report shall be submitted to the department within 30 days of the end of each reporting period. This report shall contain the following information.

(a) The identification of owner and operator and the permit number.

(b) Total annual emissions (tons/year) based on a 12-month rolling total for each month in the reporting period recorded pursuant to Paragraph (1) of Subsection M of 20.11.60.27 NMAC.

(c) All data relied upon, including, but not limited to, any quality assurance or quality control data, in calculating the monthly and annual PAL pollutant emissions.

(d) A list of any emissions units modified or added to the major stationary source during the preceding six-month period.

(e) The number, duration, and cause of any deviations or monitoring malfunctions (other than the time associated with zero and span calibration checks), and any corrective action taken.

(f) A notification of a shutdown of any monitoring system, whether the shutdown was permanent or temporary, the reason for the shutdown, the anticipated date that the monitoring system will be fully operational or replaced with another monitoring system, and whether the emissions unit monitored by the monitoring system continued to operate, and the calculation of the emissions of the pollutant or the number determined by method included in the permit, as provided by Paragraph (7) of Subsection L of 20.11.60.27 NMAC.

(g) A signed statement by the responsible official (as defined by 20.11.42.7 NMAC) certifying the truth, accuracy, and completeness of the information provided in the report.

(2) **Deviation report.** The major stationary source owner or operator shall promptly submit reports of any deviations or exceedance of the PAL requirements, including periods where no monitoring is available. A report submitted pursuant to 40 CFR 70.6(a)(3)(iii)(B) shall satisfy this reporting requirement. The deviation reports shall be submitted within the time limits prescribed by the applicable program implementing 40 CFR 70.6(a)(3)(iii)(B). The reports shall contain the following information:

(a) the identification of owner and operator and the permit number;

(b) the PAL requirement that experienced the deviation or that was exceeded;

(c) emissions resulting from the deviation or the exceedance; and

(d) a signed statement by the responsible official (as defined by 20.11.42 NMAC) certifying the truth, accuracy, and completeness of the information provided in the report.

(3) **Revalidation results.** The owner or operator shall submit to the department the results of any revalidation test or method within three months after completion of such test or method.

O. Transition requirements.

(1) The department shall not issue a PAL that does not comply with the requirements of 20.11.60.27 NMAC after the administrator has approved regulations incorporating these requirements into the SIP.

(2) The department may supersede any PAL which was established prior to the date of approval of 20.11.60 NMAC by the administrator with a PAL that complies with the requirements of 20.11.60.27 NMAC.

[20.11.60.27 NMAC - Rn & A, 20.11.60.23 NMAC, 8/30/10]

PART 61: PREVENTION OF SIGNIFICANT DETERIORATION

20.11.61.1 ISSUING AGENCY:

Albuquerque - Bernalillo County Air Quality Control Board. P.O. Box 1293, Albuquerque, NM 87103. Telephone: (505) 768-2601.

[20.11.61.1 NMAC - Rp, 20.11.61.1 NMAC, 1/23/06; A, 8/30/10]

20.11.61.2 SCOPE:

Any person constructing any new major stationary source or major modification, as defined in 20.11.61 NMAC, that emits or will emit regulated new source review (NSR) pollutants in an attainment or unclassifiable area shall obtain a permit from the department in accordance with the requirements of 20.11.41 NMAC, *Authority-to-Construct*, and 20.11.61 NMAC prior to the construction or modification.

A. Exempt:

(1) sources within Bernalillo county which are located on Indian lands over which the Albuquerque-Bernalillo county air quality control board lacks jurisdiction;

(2) each regulated NSR pollutant emitted by a source or modification located in a nonattainment area for that pollutant;

(3) after a public hearing, consistent with the public notice and participation provisions of 20.11.41 NMAC, *Authority-to-Construct*, the board may exempt major stationary sources or major modifications if:

(a) the major stationary source would be a nonprofit health or nonprofit educational institution, or a major modification that would occur at such an institution; or

(b) the source or modification is a portable stationary source which has previously received a permit pursuant to 20.11.61 NMAC if:

(i) the owner or operator proposes to relocate the source, and emissions from the source at the new location would be temporary; and

(ii) the emissions from the source would not exceed its allowable emission rate; and

(iii) the emissions from the source would not impact any federal class I area nor any area where an applicable increment is known to be violated; and

(iv) reasonable notice is given to the department prior to the relocation identifying the proposed new location and the probable duration of operation at the new location; such notice shall be given to the department not less than 10 days in advance of the proposed relocation unless a different time duration is previously approved by the department;

(4) sources or modifications that would be major only if quantifiable fugitive emissions are considered in calculating the potential to emit, and the source does not belong to:

(a) any category in Table 1 of 20.11.61.26 NMAC; or

(b) any other stationary source category which as of August 7, 1980, is being regulated under Section 111 or 112 of the act.

B. Variances: The director may grant a variance to any person constructing a major stationary source or major modification from the federal class I maximum allowable increases consistent with the requirements listed in 40 CFR 52.21(p)(5).

[20.11.61.2 NMAC - Rp, 20.11.61.2 NMAC, 1/23/06; A, 8/30/10; A, 5/13/13]

20.11.61.3 STATUTORY AUTHORITY:

20.11.61 NMAC is adopted pursuant to the authority provided in the New Mexico Air Quality Control Act, NMSA 1978 Sections 74-2-4 and 74-2-5; the Joint Air Quality Control Board Ordinance; Bernalillo county Ordinance No. 94-5, Sections 4 and 5; and the Joint Air Quality Control Board Ordinance, Revised Ordinances of Albuquerque 1994 Sections 9-5-1-3 and 9-5-1-4.

[20.11.61.3 NMAC - Rp, 20.11.61.3 NMAC, 1/23/06]

20.11.61.4 DURATION:

Permanent.

[20.11.61.4 NMAC - Rp, 20.11.61.4 NMAC, 1/23/06]

20.11.61.5 EFFECTIVE DATE:

January 23, 2006, unless a later date is cited at the end of a section.

[20.11.61.5 NMAC - Rp, 20.11.61.5 NMAC, 1/23/06; A, 5/13/13]

20.11.61.6 OBJECTIVE:

To minimize air pollutant emissions from new major stationary sources or major modifications in areas classified as in attainment of the national ambient air quality standards (NAAQS) or determined to be unclassifiable pursuant to Section 107(d) of the act.

[20.11.61.6 NMAC - Rp, 20.11.61.6 NMAC, 1/23/06; A, 1/10/11; A, 5/13/13]

20.11.61.7 DEFINITIONS:

In addition to the definitions in 20.11.61 NMAC, the definitions in 20.11.1 NMAC, *General Provisions*, shall apply unless there is a conflict between definitions, in which case the definition in 20.11.61 NMAC shall govern.

A. "Act" means the federal Clean Air Act, as amended, 42 U. S. C. Sections 7401 et seq.

B. "Actual emissions" means the actual rate of emissions of a regulated NSR pollutant from an emissions unit, as determined in accordance with Paragraphs (2) through (4) of Subsection B of 20.11.61.7 NMAC.

(1) This definition shall not apply for calculating whether a significant emissions increase has occurred, or for establishing a PAL under 20.11.61.20 NMAC. Instead, Subsections I and VV of 20.11.61.7 NMAC shall apply for those purposes.

(2) In general, actual emissions as of a particular date shall equal the average rate, in tons per year, at which the unit actually emitted the pollutant during a consecutive 24-month period which precedes the particular date and which is representative of normal source operation. The department shall allow the use of a different time period upon a determination that it is more representative of normal source operation. Actual emissions shall be calculated using the unit's actual operating hours, production rates, and types of materials processed, stored, or combusted during the selected time period.

(3) The department may presume that source-specific allowable emissions for the unit are equivalent to the actual emissions of the unit.

(4) For any emissions unit that has not begun normal operations on the particular date, actual emissions shall equal the potential to emit of the unit on that date.

C. "Administrator" means the administrator of the U.S. environmental protection agency (EPA) or an authorized representative.

D. "Adverse impact on visibility" means visibility impairment which interferes with the management, protection, preservation, or enjoyment of the visitor's visual experience of the federal class I area. This determination must be made on a case-by-case basis taking into account the geographic extent, intensity, duration, frequency, and time of the visibility impairments and how these factors correlate with the following:

(1) times of visitor use of the federal class I area; and

(2) the frequency and timing of natural conditions that reduce visibility. This term does not include effects on integral vistas as defined in 40 CFR 51.301 *Definitions*.

E. "Air quality related values (AQRV)" means visibility and other scenic, cultural, physical, biological, ecological, or recreational resources which may be affected by a change in air quality resulting from the emissions of a proposed major stationary source or major modification that interferes with the management, protection, preservation, or enjoyment of the AQRV of a federal class I area.

F. "Allowable emissions" means the emissions rate of a stationary source calculated using the maximum rated capacity of the source (unless the source is subject to federally enforceable limits which restrict the operating rate, or hours of operation, or both) and the most stringent of the following:

(1) the applicable standards as set forth in 40 CFR Parts 60 and 61;

(2) the applicable state implementation plan emissions limitation, including those with a future compliance date; or

(3) the emissions rate specified as a federally enforceable permit condition, including those with a future compliance date.

G. "Associated emission sources" means secondary emissions and all reasonably foreseeable emissions of regulated pollutants from the growth of general residential, commercial, industrial, governmental emission sources and other mobile and non-mobile emission sources which are associated with or support the proposed new major stationary source or major modification. Other mobile and non-mobile emission sources shall include, but not be limited to, new highways and roads or improvements to existing highways and roads to increase capacity, new parking

facilities or improvements to existing parking facilities to increase capacity, service enhancements to ground and air public transportation to include the building of new public transportation facilities or improvements to existing public transportation facilities to increase capacity; and the building of new public or private educational facilities or improving existing public or private educational facilities to increase enrollment.

H. "Attainment area" means, for any air pollutant, an area which is shown by monitored data or which is calculated by air quality modeling not to exceed any NAAQS for such pollutant, and is so designated under Section 107(d)(1)(D) or (E) of the act.

I. "Baseline actual emissions" means the rate of emissions, in tons per year, of a regulated NSR pollutant, as determined in accordance with Paragraphs (1)-(4) of Subsection I of 20.11.61.7 NMAC.

(1) For any existing electric utility steam generating unit, baseline actual emissions means the average rate, in tons per year, at which the unit actually emitted the pollutant during any consecutive 24-month period selected by the owner or operator within the five year period immediately preceding when the owner or operator begins actual construction of the project. The department shall allow the use of a different time period upon a determination that it is more representative of normal source operation.

(a) The average rate shall include fugitive emissions to the extent quantifiable, and emissions associated with startups, shutdowns, and malfunctions.

(b) The average rate shall be adjusted downward to exclude any non-compliant emissions that occurred while the source was operating above an emission limitation that was legally enforceable during the consecutive 24-month period.

(c) For a regulated NSR pollutant, when a project involves multiple emissions units, only one consecutive 24-month period must be used to determine the baseline actual emissions for the emissions units being changed. A different consecutive 24-month period can be used for each regulated NSR pollutant.

(d) The average rate shall not be based on any consecutive 24-month period for which there is inadequate information for determining annual emissions, in tons per year, and for adjusting this amount if required by Subparagraph (b) of Paragraph (1) of Subsection I of 20.11.61.7 NMAC.

(2) For an existing emissions unit (other than an electric utility steam generating unit), baseline actual emissions means the average rate, in tons per year, at which the emissions unit actually emitted the pollutant during any consecutive 24-month period selected by the owner or operator within the 10 year period immediately preceding either the date the owner or operator begins actual construction of the project, or the date a complete permit application is received by the department for a permit required either under 20.11.61 NMAC or under a plan approved by the

administrator, whichever is earlier, except that the 10 year period shall not include any period earlier than November 15, 1990.

(a) The average rate shall include fugitive emissions to the extent quantifiable, and emissions associated with startups, shutdowns, and malfunctions.

(b) The average rate shall be adjusted downward to exclude any non-compliant emissions that occurred while the source was operating above an emission limitation that was legally enforceable during the consecutive 24-month period.

(c) The average rate shall be adjusted downward to exclude any emissions that would have exceeded an emission limitation with which the major stationary source must currently comply, had such major stationary source been required to comply with such limitations during the consecutive 24-month period. However, if an emission limitation is part of a maximum achievable control technology standard that the administrator proposed or promulgated under 40 CFR Part 63, the baseline actual emissions need only be adjusted if the state has taken credit for such emissions reductions in an attainment demonstration or maintenance plan consistent with the requirements of 40 CFR 51.165(a)(3)(ii)(G).

(d) For a regulated NSR pollutant, when a project involves multiple emissions units, only one consecutive 24-month period must be used to determine the baseline actual emissions for the emissions units being changed. A different consecutive 24-month period can be used for each regulated NSR pollutant.

(e) The average rate shall not be based on any consecutive 24-month period for which there is inadequate information for determining annual emissions, in tons per year, and for adjusting this amount if required by Subparagraphs (b) and (c) of Paragraph (2) of Subsection I of 20.11.61.7 NMAC.

(3) For a new emissions unit, the baseline actual emissions for purposes of determining the emissions increase that will result from the initial construction and operation of such unit shall equal zero; and thereafter, for all other purposes, shall equal the unit's potential to emit.

(4) For a PAL for a stationary source, the baseline actual emissions shall be calculated for existing electric utility steam generating units in accordance with the procedures contained in Paragraph (1) of Subsection I of 20.11.61.7 NMAC, for other existing emissions units in accordance with the procedures contained in Paragraph (2) of Subsection I of 20.11.61.7 NMAC, and for a new emissions unit in accordance with the procedures contained in Paragraph (3) of Subsection I of 20.11.61.7 NMAC.

J. "Baseline area"

(1) Means any intrastate area (and every part thereof) designated as attainment or unclassifiable under Section 107(d)(1)(A)(ii) or (iii) of the act in which the

major source or major modification establishing the minor source baseline date would construct or would have an air quality impact for the pollutant for which the baseline date is established, as follows: equal to or greater than one microgram per cubic meter ($1 \mu\text{g}/\text{m}^3$) (annual average) for SO_2 , NO_2 or PM_{10} ; or equal to or greater than $0.3 \mu\text{g}/\text{m}^3$ (annual average) for $\text{PM}_{2.5}$.

(2) Area redesignations under Section 107(d)(1)(A)(ii) or (iii) of the act cannot intersect or be smaller than the area of impact of any major stationary source or major modification which:

(a) establishes a minor source baseline date; or

(b) is subject to 40 CFR 52.21 or under regulations approved pursuant to 40 CFR 51.166, and would be constructed in the same state as the state proposing the redesignation.

(3) Any baseline area established originally for total suspended particulates (TSP) increments shall remain in effect and shall apply for purposes of determining the amount of available PM_{10} increments, except that such baseline area shall not remain in effect if the department rescinds the corresponding minor source baseline date in accordance with Paragraph (3) of Subsection MM of 20.11.61.7 NMAC.

K. "Baseline concentration" means that ambient concentration level that exists in the baseline area at the time of the applicable minor source baseline date.

(1) A baseline concentration is determined for each pollutant for which a minor source baseline date is established and shall include:

(a) the actual emissions representative of sources in existence on the applicable minor source baseline date, except as provided in Paragraph (2) of Subsection K of 20.11.61.7 NMAC;

(b) the allowable emissions of major stationary sources that commenced construction before the major source baseline date, but were not in operation by the applicable minor source baseline date.

(2) The following will not be included in the baseline concentration and will affect the applicable maximum allowable increase(s):

(a) actual emissions from any major stationary source on which construction commenced after the major source baseline date; and

(b) actual emissions increases and decreases at any stationary source occurring after the minor source baseline date.

L. "Begin actual construction" means, in general, the initiation of physical onsite construction activities on an emissions unit which are of a permanent nature. Such activities include, but are not limited to, installation of building supports and foundations, laying of underground pipework and construction of permanent storage structures. With respect to a change in method of operation, this term refers to those on-site activities, other than preparatory activities which mark the initiation of the change.

M. "Best available control technology (BACT)" means an emissions limitation (including a visible emission standard) based on the maximum degree of reduction for each regulated NSR pollutant which would be emitted from any proposed major stationary source or major modification, which the director on a case-by-case basis, taking into account energy, environmental, and economic impacts and other costs, determines is achievable for such source or modification through application of production processes or available methods, systems, and techniques, including fuel cleaning or treatment or innovative fuel combustion techniques for control of such pollutant. In no event shall application of best available control technology result in emissions of any pollutant which would exceed the emissions allowed by any applicable standard under 40 CFR Parts 60 and 61. If the director determines that technological or economic limitations on the application of measurement methodology to a particular emissions unit would make the imposition of an emissions standard infeasible, a design, equipment, work practice, operational standard, or combination thereof, may be prescribed instead to satisfy the requirement for the application of best available control technology. Such standard shall, to the degree possible, set forth the emissions reduction achievable by implementation of such design, equipment, work practice, or operation, and shall provide for compliance by means which achieve equivalent results.

N. "Building, structure, facility or installation" means all of the pollutant emitting activities which belong to the same industrial grouping, are located on one or more contiguous or adjacent properties, and are under the control of the same person (or persons under common control) except the activities of any vessel. Pollutant-emitting activities shall be considered as part of the same industrial grouping if they belong to the same "major group" (i.e., which have the same first two-digit code) as described in the standard industrial classification (SIC) manual, 1972, as amended by the 1977 supplement (U. S. government printing office stock numbers 4101-0066 and 003-005-00176-0, respectively) or any superseding SIC manual.

O. "Class I area" means any federal land that is classified or reclassified as "class I" as listed in 20.11.61.25 NMAC.

P. "Commence" as applied to construction of a major stationary source or major modification, means that the owner or operator has all necessary preconstruction approvals or permits and either has:

(1) begun, or caused to begin, a continuous program of actual on-site construction of the source, to be completed within a reasonable time; or

(2) entered into binding agreements or contractual obligations, which cannot be cancelled or modified without substantial loss to the owner or operator, to undertake a program of actual construction of the source to be completed within a reasonable time.

Q. "Complete" means, in reference to an application for a permit, that the department has determined the application contains all of the information necessary for processing the application. Designating an application complete for purposes of permit processing does not preclude the department from requesting or accepting any additional information.

R. "Construction" means any physical change or change in the method of operation (including fabrication, erection, installation, demolition, or modification of an emissions unit) that would result in a change in emissions.

S. "Continuous emissions monitoring system (CEMS)" means all of the equipment that may be required to meet the data acquisition and availability requirements of 20.11.61 NMAC, to sample, condition (if applicable), analyze, and provide a record of emissions on a continuous basis.

T. "Continuous emissions rate monitoring system (CERMS)" means the total equipment required for the determination and recording of the pollutant mass emissions rate (in terms of mass per unit of time).

U. "Continuous parameter monitoring system (CPMS)" means all of the equipment necessary to meet the data acquisition and availability requirements of 20.11.61 NMAC, to monitor process and control device operational parameters (for example, control device secondary voltages and electric currents) and other information (for example, gas flow rate, O₂ or CO₂ concentrations), and to record average operational parameter value(s) on a continuous basis.

V. "Department" means the city of Albuquerque, environmental health department or its successor agency.

W. "Director" means the director of the city of Albuquerque, environmental health department or the director of its successor agency.

X. "Electric utility steam generating unit" means any steam electric generating unit that is constructed for the purpose of supplying more than one-third of its potential electric output capacity and more than 25 megawatts electrical output to any utility power distribution system for sale. Any steam supplied to a steam distribution system for the purpose of providing steam to a steam-electric generator that would produce electrical energy for sale is also considered in determining the electrical energy output capacity of the affected facility.

Y. "Emissions unit" means any part of a stationary source that emits or would have the potential to emit any regulated NSR pollutant and includes an electric utility steam generating unit as defined in 20.11.61.7 NMAC. For purposes of 20.11.61 NMAC, there are two types of emissions units as follows:

(1) a new emissions unit is any emissions unit that is (or will be) newly constructed and that has existed for less than two years from the date such emissions unit first operated;

(2) an existing emissions unit is any emissions unit that does not meet the requirements in Paragraph (1) of Subsection Y of 20.11.61.7 NMAC. A replacement unit is an existing unit.

Z. "Federal land manager" means, with respect to any lands in the United States, a federal level cabinet secretary of a federal level department (e.g. interior department) with authority over such lands.

AA. "Federally enforceable" means all limitations and conditions which are enforceable by the administrator, including:

(1) those requirements developed pursuant to 40 CFR Parts 60 and 61;

(2) requirements within any applicable state implementation plan (SIP);

(3) any permit requirements established pursuant to 40 CFR 52.21; or

(4) under regulations approved pursuant to 40 CFR Part 51, Subpart I, including operating permits issued under an EPA-approved program that expressly requires adherence to any permit issued under such program.

BB. "Fugitive emissions" means those emissions which could not reasonably pass through a stack, chimney, vent, or other functionally equivalent opening.

CC. "Greenhouse gases" or "GHGs" means the air pollutant defined in § 86.1818–12(a) of Chapter I of Title 40 of the CFR, as the aggregate group of six greenhouse gases: carbon dioxide, nitrous oxide, methane, hydrofluorocarbons, perfluorocarbons, and sulfur hexafluoride.

DD. "High terrain" means any area having an elevation 900 feet or more above the base of a source's stack.

EE. "Indian governing body" means the governing body of any tribe, band, or group of Indians subject to the jurisdiction of the United States and recognized by the United States as possessing power of self-government.

FF. "Innovative control technology" means any system of air pollution control that has not been adequately demonstrated in practice, but would have a substantial likelihood of achieving greater continuous emissions reduction than any control system in current practice or achieving at least comparable reductions at lower cost in terms of energy, economics, or non-air quality environmental impacts.

GG. "Low terrain" means any area other than high terrain.

HH. "Lowest achievable emission rate (LAER)" means, for any source, the more stringent rate of emissions based on the following:

(1) the most stringent emissions limitation which is contained in the implementation plan of any state for such class or category of stationary source, unless the owner or operator of the proposed stationary source demonstrates that such limitations are not achievable; or

(2) the most stringent emissions limitation which is achieved in practice by such class or category of stationary source; this limitation, when applied to a modification, means the lowest achievable emissions rate for the new or modified emissions units within the stationary source; in no event shall the application of this term permit a proposed new or modified stationary source to emit any pollutant in excess of the amount allowable under an applicable new source standard of performance.

II. "Major modification"

(1) Means any physical change in or change in the method of operation of a major stationary source that would result in: a significant emissions increase of a regulated NSR pollutant; and a significant net emissions increase of that pollutant from the major stationary source.

(2) Any significant emissions increase from any emissions units or net emissions increase at a major stationary source that is significant for volatile organic compounds or oxides of nitrogen shall be considered significant for ozone.

(3) A physical change or change in the method of operation shall not include:

(a) routine maintenance, repair, and replacement;

(b) use of an alternative fuel or raw material by reason of an order under Section 2(a) and (b) of the Energy Supply and Environmental Coordination Act of 1974 (or any superseding legislation) or by reason of a natural gas curtailment plan pursuant to the Federal Power Act;

(c) use of an alternative fuel by reason of an order or rule under Section 125 of the act;

(d) use of an alternative fuel at a steam generating unit to the extent that the fuel is generated from municipal solid waste;

(e) use of an alternative fuel or raw material by a stationary source which:

(i) the source was capable of accommodating before January 6, 1975, unless such change would be prohibited under any federally enforceable permit condition which was established after January 6, 1975 pursuant to 40 CFR 52.21 or under regulations approved pursuant to 40 CFR Subpart I or 40 CFR 51.166; or

(ii) the source is approved to use under any permit issued under 40 CFR 52.21 or under regulations approved pursuant to 40 CFR 51.166;

(f) an increase in the hours of operation or in the production rate, unless such change would be prohibited under any federally enforceable permit condition which was established after January 6, 1975, pursuant to 40 CFR 52.21 or under regulations approved pursuant to 40 CFR Subpart I or 40 CFR 51.166;

(g) any change in ownership at a stationary source;

(h) the installation, operation, cessation, or removal of a temporary clean coal technology demonstration project, provided that the project complies with:

(i) the state implementation plan for the state in which the project is located; and

(ii) other requirements necessary to attain and maintain the NAAQS during the project and after it is terminated;

(i) the installation or operation of a permanent clean coal technology demonstration project that constitutes repowering, provided that the project does not result in an increase in the potential to emit of any regulated NSR pollutant emitted by the unit; this exemption shall apply on a pollutant-by-pollutant basis; or

(j) the reactivation of a very clean coal-fired electric utility steam generating unit.

(4) This definition shall not apply with respect to a particular regulated NSR pollutant when the major stationary source is complying with the requirements under 20.11.61.20 NMAC for a PAL for that pollutant. Instead, the definition at Paragraph (8) of Subsection B of 20.11.61.20 NMAC shall apply.

JJ. "Major source baseline date" means:

(1) in the case of PM₁₀ and sulfur dioxide, January 6, 1975;

- (2) in the case of nitrogen dioxide, February 8, 1988; and
- (3) in the case of PM_{2.5}, October 20, 2010.

KK. "Major stationary source"

- (1) means:

(a) any stationary source listed in Table 1 of 20.11.61.26 NMAC which emits, or has the potential to emit, 100 tons per year or more of any regulated NSR pollutant;

(b) notwithstanding the stationary source categories specified in Subparagraph (a) of Paragraph (1) of Subsection KK of 20.11.61.7 NMAC, any stationary source which emits, or has the potential to emit, 250 tons per year or more of any regulated NSR pollutant; or

(c) any physical change that would occur at a stationary source not otherwise qualifying under Subsection KK of 20.11.61.7 NMAC, as a major stationary source if the change would constitute a major stationary source by itself.

(2) A major source that is major for volatile organic compounds or oxides of nitrogen shall be considered major for ozone.

(3) The fugitive emissions of a stationary source shall not be included in determining whether it is a major stationary source, unless the source belongs to one of the stationary source categories found in Table 1 of 20.11.61.26 NMAC or any other stationary source category which, as of August 7, 1980, is being regulated under Section 111 or 112 of the act.

LL. "Mandatory federal class I area" means any area identified in 40 CFR Part 81, Subpart D.

MM. "Minor source baseline date" means the earliest date after the trigger date on which a major stationary source or major modification subject to 40 CFR 52.21, or to regulations approved pursuant to 40 CFR 51.166, submits a complete application under the relevant regulations.

- (1) The trigger dates are:

(a) August 7, 1977, for PM₁₀ and sulfur dioxide; and

(b) February 8, 1988 for nitrogen dioxide; and

(c) October 20, 2011, for PM_{2.5}.

(2) The baseline date is established for each pollutant for which increments or other equivalent measures have been established if:

(a) the area in which the proposed major stationary source or major modification would construct is designated as attainment or unclassifiable under Section 107(d)(1)(A)(ii) or (iii) of the federal act for the pollutant on the date of its complete application under 40 CFR 52.21 or under regulations approved pursuant to 40 CFR 51.166; and

(b) in the case of a major stationary source, the pollutant would be emitted in significant amounts, or in the case of a major modification, there would be a significant net emissions increase of the pollutant.

(3) Any minor source baseline date established originally for the TSP increments shall remain in effect and shall apply for purposes of determining the amount of available PM₁₀ increments, except that the department may rescind any such minor source baseline date where it can be shown, to the director's satisfaction that, either the emissions increase from the major stationary source, or the net emissions increase from the major modification, responsible for triggering that date did not result in a significant amount of PM₁₀ emissions.

NN. "**Natural conditions**" includes naturally occurring phenomena that reduce visibility as measured in terms of visual range, contrast or coloration.

OO. "**Necessary preconstruction approvals or permits**" mean those permits or approvals required under federal air quality control laws and regulations and those air quality control laws and regulations which are part of the New Mexico state implementation plan.

PP. "**Net emissions increase**"

(1) Means, that with respect to any regulated NSR pollutant emitted by a major stationary source, the amount by which the sum of the following exceeds zero:

(a) the increase in emissions from a particular physical change or change in the method of operation at a stationary source as calculated pursuant to Subsection D of 20.11.61.11 NMAC; and

(b) any other increases and decreases in actual emissions at the major stationary source that are contemporaneous with the particular change and are otherwise creditable; baseline actual emissions for calculating increases and decreases shall be determined as provided in Subsection I of 20.11.61.7 NMAC, except that Subparagraph (c) of Paragraph (1) and Subparagraph (d) of Paragraph (2) of Subsection I of 20.11.61.7 NMAC shall not apply.

(2) An increase or decrease in actual emissions is contemporaneous with the increase from the particular change only if it occurs between:

(a) the date five years prior to the commencement of construction on the particular change; and

(b) the date that the increase from the particular change occurs.

(3) An increase or decrease in actual emissions is creditable only if:

(a) it occurs between:

(i) the date five years prior to the commencement of construction on the particular change; and

(ii) the date that the increase from the particular change occurs; and

(b) the department has not relied on it in issuing a permit for the source under regulations approved pursuant to 40 CFR 51.166, which permit is in effect when the increase in actual emissions from the particular change occurs; and

(c) the increase or decrease in emissions did not occur at a *clean unit*, as defined in 40 CFR 51.166 (b)(3)(iii)(c) and Federal Register Vol. 76 No. 61, 3/30/11, p. 17554.

(d) As it pertains to an increase or decrease in fugitive emissions (to the extent quantifiable), it occurs at an emissions unit that is part of one of the source categories listed in Paragraph (3) of Subsection KK of 20.11.61.7 NMAC or it occurs at an emission unit that is located at a major stationary source that belongs to one of the listed source categories. Fugitive emission increases or decreases are not included for those emissions units located at a facility whose primary activity is not represented by one of the source categories listed in Paragraph (3) of Subsection KK of 20.11.61.7 NMAC and that are not, by themselves, part of a listed source category.

(4) An increase or decrease in actual emissions of sulfur dioxide, particulate matter, or oxides of nitrogen that occurs before the applicable minor source baseline date is creditable only if it is required to be considered in calculating the amount of maximum allowable increases remaining available.

(5) An increase in actual emissions is creditable only to the extent that the new level of actual emissions exceeds the old level.

(6) A decrease in actual emissions is creditable only to the extent that:

(a) the old level of actual emissions or the old level of allowable emissions, whichever is lower, exceeds the new level of actual emissions;

(b) it is enforceable as a practical matter at and after the time that actual construction on the particular change begins; and

(c) it has approximately the same qualitative significance for public health and welfare as that attributed to the increase from the particular change; and

(7) an increase that results from a physical change at a source occurs when the emissions unit on which construction occurred becomes operational and begins to emit a particular pollutant; any replacement unit that requires shakedown becomes operational only after a reasonable shakedown period, not to exceed 180 days.

(8) Paragraph (2) of Subsection B of 20.11.61.7 NMAC shall not apply for determining creditable increases and decreases.

QQ. "Nonattainment area" means an area which has been designated under Section 107 of the act as nonattainment for one or more of the NAAQS by EPA.

RR. "Portable stationary source" means a source which can be relocated to another operating site with limited dismantling and reassembly.

SS. "Potential to emit" means the maximum capacity of a stationary source to emit a pollutant under its physical and operational design. Any physical or operational limitation on the capacity of the source to emit a pollutant, including air pollutant control equipment and restrictions on hours of operation or on the type or amount of material combusted, stored, or processed, shall be treated as part of its design if the limitations or the effect the limitation would have on emissions is federally enforceable. Secondary emissions do not count in determining the potential to emit of a stationary source.

TT. "Predictive emissions monitoring system (PEMS)" means all of the equipment necessary to monitor process and control device operational parameters (for example, control device secondary voltages and electric currents) and other information (for example, gas flow rate, O₂ or CO₂ concentrations), and calculate and record the mass emissions rate (for example, lb/hr) on a continuous basis.

UU. "Project" means a physical change in, or change in method of operation of, an existing major stationary source.

VV. "Projected actual emissions"

(1) Means the maximum annual rate, in tons per year, at which an existing emissions unit is projected to emit a regulated NSR pollutant in any one of the five years (12-month period) following the date the unit resumes regular operation after the project, or in any one of the 10 years following that date, if the project involves increasing the emissions unit's design capacity or its potential to emit that regulated NSR pollutant, and full utilization of the unit would result in a significant emissions increase, or a significant net emissions increase at the major stationary source.

(2) In determining the projected actual emissions (before beginning actual construction), the owner or operator of the major stationary source:

(a) shall consider all relevant information, including but not limited to, historical operational data, the company's own representations, the company's expected business activity and the company's highest projections of business activity, the company's filings with the state or federal regulatory authorities, and compliance plans under an approved SIP; and

(b) shall include fugitive emissions to the extent quantifiable and emissions associated with startups, shutdowns, and malfunctions; and

(c) shall exclude, in calculating any increase in emissions that results from the particular project, that portion of the unit's emissions following the project that an existing unit could have accommodated during the consecutive 24-month period used to establish the baseline actual emissions under Subsection I of 20.11.61.7 NMAC and that are also unrelated to the particular project, including any increased utilization due to product demand growth; or

(3) in lieu of using the method set out in Subparagraphs (a)-(c) of Paragraph (2) of Subsection VV of 20.11.61.7 NMAC, may elect to use the emissions unit's potential to emit in tons per year.

WW. "Regulated new source review pollutant" or "regulated NSR pollutant" means the following:

(1) any pollutant for which a NAAQS has been promulgated; this includes, but is not limited to the following:

(a) PM_{2.5} emissions and PM₁₀ emissions shall include gaseous emissions from a source or activity which condense to form particulate matter at ambient temperatures; on or after January 1, 2011, such condensable particulate matter shall be accounted for in applicability determinations and in establishing emissions limitations for PM_{2.5} and PM₁₀ in PSD permits; compliance with emissions limitations for PM_{2.5} and PM₁₀ issued prior to this date shall not be based on condensable particulate matter unless required by the terms and conditions of the permit or the applicable implementation plan; applicability determinations made prior to this date without accounting for condensable particulate matter shall not be considered in violation of 40 CFR 51.166 unless the applicable implementation plan required condensable particulate matter to be included;

(b) any pollutant identified under Subparagraph (b) of Paragraph (1) of Subsection WW of 20.11.61.7 NMAC as a constituent or precursor to a pollutant for which a NAAQS has been promulgated; precursors identified by the administrator for purposes of NSR are the following:

(i) volatile organic compounds and nitrogen oxides are precursors to ozone in all attainment and unclassifiable areas;

(ii) sulfur dioxide is a precursor to PM_{2.5} in all attainment and unclassifiable areas;

(iii) nitrogen oxides are presumed to be precursors to PM_{2.5} in all attainment and unclassifiable areas, unless the state demonstrates to the administrator's satisfaction or EPA demonstrates that emissions of nitrogen oxides from sources in a specific area are not a significant contributor to that area's ambient PM_{2.5} concentrations;

(iv) volatile organic compounds are presumed not to be precursors to PM_{2.5} in any attainment or unclassifiable area, unless the state demonstrates to the administrator's satisfaction or EPA demonstrates that emissions of volatile organic compounds from sources in a specific area are a significant contributor to that area's ambient PM_{2.5} concentrations;

(2) any pollutant that is subject to any standard promulgated under Section 111 of the act;

(3) any class I or II substance subject to a standard promulgated under or established by Title VI of the act;

(4) any pollutant that otherwise is "subject to regulation" under the act as defined in Subsection CCC of 20.11.61.7 NMAC;

(5) notwithstanding Paragraphs (1) through (4) of Subsection WW of 20.11.61.7 NMAC, the term "regulated NSR pollutant" shall not include any or all hazardous air pollutants either listed in Section 112 of the act, or added to the list pursuant to Section 112(b)(2) of the act, and which have not been delisted pursuant to Section 112(b)(3) of the act, unless the listed hazardous air pollutant is also regulated as a constituent or precursor of a general pollutant listed under Section 108 of the act;

(6) particulate matter (PM) emissions, PM_{2.5} emissions, and PM₁₀ emissions shall include gaseous emissions from a source or activity which condense to form particulate matter at ambient temperatures; on or after January 1, 2011 (or any earlier date established in the upcoming rulemaking codifying test methods), such condensable particulate matter shall be accounted for in applicability determinations and in establishing emissions limitations for PM, PM_{2.5} and PM₁₀ in PSD permits; compliance with emissions limitations for PM, PM_{2.5} and PM₁₀ issued prior to this date shall not be based on condensable particulate matter unless required by the terms and conditions of the permit or the applicable implementation plan; applicability determinations made prior to this date without accounting for condensable particulate matter shall not be considered in violation of 20.11.61 NMAC unless the applicable implementation plan required condensable particulate matter to be included.

XX. "Replacement unit" means an emission unit for which all of the following criteria are met. No creditable emission reductions shall be generated from shutting down the existing emissions unit that is replaced.

(1) The emissions unit is a reconstructed unit within the meaning of 40 CFR 60.15(b)(1), or the emissions unit completely takes the place of an existing emissions unit.

(2) The emissions unit is identical to or functionally equivalent to the replaced emissions unit.

(3) The replacement unit does not change the basic design parameter(s) of the process unit.

(4) The replaced emissions unit is permanently removed from the major stationary source, otherwise permanently disabled, or permanently barred from operation by a permit that is enforceable as a practical matter. If the replaced emissions unit is brought back into operation, it shall constitute a new emissions unit.

YY. "Secondary emissions" means emissions which occur as a result of the construction or operation of a major stationary source or major modification, but do not come from the major stationary source or major modification itself. For the purpose of 40 CFR 51.166, secondary emissions must be specific, well defined, quantifiable, and impact the same general areas as the stationary source or modification which causes the secondary emissions. Secondary emissions include emissions from any offsite support facility which would not be constructed or increase its emissions except as a result of the construction or operation of the major stationary source or major modification. Secondary emissions do not include any emissions which come directly from a mobile source, such as emissions from the tailpipe of a motor vehicle, from a train, or from a vessel.

ZZ. "Significant" means:

(1) in reference to a net emissions increase or the potential of a source to emit any of the pollutants listed in Table 2 of 20.11.61.27 NMAC, a rate of emissions that would equal or exceed any of the corresponding emission rates listed in Table 2 of 20.11.61.27 NMAC;

(2) in reference to a net emissions increase or the potential of a source to emit a regulated NSR pollutant that Paragraph (1) of Subsection ZZ of 20.11.61.7 NMAC, does not list, any emissions rate; and

(3) notwithstanding Paragraph (1) of Subsection ZZ of 20.11.61.7 NMAC, any emissions rate or any net emissions increase associated with a major stationary source or major modification, which would construct within 10 kilometers of a class I area, and have an impact on such area equal to or greater than 1 $\mu\text{g}/\text{m}^3$ (24-hour average).

AAA. "Significant emissions increase" means, for a regulated NSR pollutant, an increase in emissions that is significant for that pollutant.

BBB. "Stationary source" means any building, structure, facility, or installation which emits, or may emit, any regulated NSR pollutant.

CCC. "Subject to regulation" means, for any air pollutant, that the pollutant is subject to either a provision in the Clean Air Act, or a nationally-applicable regulation codified by the administrator in Subchapter C of Chapter I of Title 40 of the CFR, that requires actual control of the quantity of emissions of that pollutant, and that such a control requirement has taken effect and is operative to control, limit or restrict the quantity of emissions of that pollutant released from the regulated activity. Except that:

(1) Greenhouse gases (GHGs) shall not be subject to regulation except as provided in Paragraphs (4) and (5) of Subsection CCC of 20.11.61.7 NMAC and shall not be subject to regulation if the stationary source maintains its total source-wide emissions below the GHG PAL level, meets the requirements in 20.11.61.20 NMAC, and complies with the PAL permit containing the GHG PAL.

(2) For purposes of Paragraphs (3) through (5) of Subsection CCC of 20.11.61.7 NMAC, the term "tpy CO₂ equivalent emissions (CO₂e)" shall represent an amount of GHGs emitted, and shall be computed as follows:

(a) multiplying the mass amount of emissions (tpy), for each of the six greenhouse gases in the pollutant GHGs, by the gas's associated global warming potential published at Table A-1 to subpart A of Part 98 of Chapter I of Title 40 of the CFR — *Global Warming Potentials*;

(b) sum the resultant value from Subparagraph (a) of Paragraph (2) of Subsection CCC of 20.11.61.7 NMAC for each gas to compute a tpy CO₂e.

(3) The term "emissions increase" as used in Paragraphs (4) and (5) of Subsection CCC of 20.11.61.7 NMAC, shall mean that both a significant emissions increase (as calculated using the procedures in Subsection D of 20.11.61.11 NMAC) and a significant net emissions increase (as defined in Subsection PP of 20.11.61.7 NMAC and Subsection ZZ of 20.11.61.7 NMAC) occur. For the pollutant GHGs, an emissions increase shall be based on tpy CO₂e, and shall be calculated assuming the pollutant GHGs is a regulated NSR pollutant, and "significant" is defined as 75,000 tpy CO₂e instead of applying the value in Table 2 of 20.11.61.27 NMAC.

(4) Beginning January 2, 2011, the pollutant GHGs is subject to regulation if:

(a) the stationary source is a new major stationary source for a regulated NSR pollutant that is not GHGs, and also will emit or will have the potential to emit 75,000 tpy CO₂e or more; or

(b) the stationary source is an existing major stationary source for a regulated NSR pollutant that is not GHGs, and also will have an emissions increase of a regulated NSR pollutant, and an emissions increase of 75,000 tpy CO₂e or more; and,

(5) beginning July 1, 2011, in addition to the provisions in Paragraph (4) of Subsection CCC of 20.11.61.7 NMAC, the pollutant GHGs shall also be subject to regulation:

(a) at a new stationary source that will emit or have the potential to emit 100,000 tpy CO₂e; or

(b) at an existing stationary source that emits or has the potential to emit 100,000 tpy CO₂e, when such stationary source undertakes a physical change or change in the method of operation that will result in an emissions increase of 75,000 tpy CO₂e or more.

DDD. "Temporary source" means a stationary source which changes its location or ceases to exist within two years from the date of initial start of operations.

EEE. "Visibility impairment" means any humanly perceptible change in visibility (visual range, contrast, coloration) from that which would have existed under natural conditions.

FFF. "Volatile organic compound (VOC)" means any compound of carbon, excluding carbon monoxide, carbon dioxide, carbonic acid, metallic carbides or carbonates, and ammonium carbonate, which participates in atmospheric photochemical reactions; this includes any such organic compound other than those which the administrator designates as having negligible photochemical reactivity under 40 CFR 51.100(s).

[20.11.61.7 NMAC - Rp, 20.11.61.7 NMAC, 1/23/06; A, 5/15/06; A, 8/30/10; A, 1/10/11; A, 5/13/13; A, 5/29/15]

20.11.61.8 SAVINGS CLAUSE:

Any amendment to 20.11.61 NMAC, *Prevention of Significant Deterioration* that is filed with the state records center and archives shall not affect actions pending for violation of a city or county ordinance or board regulation. Prosecution for a violation under prior regulation wording shall be governed and prosecuted under the statute, ordinance, part or section in effect at the time the violation was committed.

[20.11.61.8 NMAC - Rp, 20.11.61.9 NMAC, 1/23/06]

20.11.61.9 SEVERABILITY:

If any section, paragraph, sentence, clause, or word of 20.11.61 NMAC or any federal standards incorporated herein is for any reason held to be unconstitutional or otherwise invalid by any court, the decision shall not affect the validity of remaining provisions of 20.11.61 NMAC.

[20.11.61.9 NMAC - Rp, 20.11.61.10 NMAC, 1/23/06]

20.11.61.10 DOCUMENTS:

Documents incorporated and cited in 20.11.61 NMAC may be viewed at the Albuquerque environmental health department, One Civic Plaza NW, 3rd Floor, Suite 3023, Albuquerque, NM 87102.

[20.11.61.10 NMAC - Rp, 20.11.61.11 NMAC, 1/23/06; A, 5/13/13]

20.11.61.11 APPLICABILITY:

A. The requirements of 20.11.61 NMAC apply to the construction of any new major stationary source or any project at an existing major stationary source in an area designated as attainment or unclassifiable.

B. The requirements of 20.11.61.12 NMAC through 20.11.61.18 NMAC, 20.11.61.21 NMAC and 20.11.61.24 NMAC apply to the construction of any new major stationary source or the major modification of any existing major stationary source except as 20.11.61 NMAC otherwise provides.

C. No new major stationary source or major modification to which the requirements of Subsections A, B, C, and D of 20.11.61.12 NMAC, 20.11.61.13 NMAC through 20.11.61.18 NMAC, 20.11.61.21 NMAC and 20.11.61.24 NMAC apply shall begin actual construction without a permit that states that the major stationary source or major modification will meet those requirements.

D. Applicability procedures.

(1) Except as otherwise provided in Subsection E of 20.11.61.11 NMAC, and consistent with the definition of major modification, a project is a major modification for a regulated NSR pollutant if it causes a significant emissions increase and a significant net emissions increase. The project is not a major modification if it does not cause a significant emissions increase. If the project causes a significant emissions increase, then the project is a major modification only if it also results in a significant net emissions increase.

(2) The procedure for calculating (before beginning actual construction) whether a significant emissions increase (i.e., the first step of the process) will occur depends upon the type of emissions units being modified, according to Paragraphs (3) through (5) of Subsection D of 20.11.61.11 NMAC. The procedure for calculating

(before beginning actual construction) whether a significant net emissions increase will occur at the major stationary source (i.e., the second step of the process) is contained in the definition in Subsection PP of 20.11.61.7 NMAC. Regardless of any such preconstruction projections, a major modification results if the project causes a significant emissions increase and a significant net emissions increase.

(3) Actual-to-projected-actual applicability test for projects that only involve existing emissions units. A significant emissions increase of a regulated NSR pollutant is projected to occur if the sum of the difference between the projected actual emissions and the baseline actual emissions for each existing emissions unit equals or exceeds the significant amount for that pollutant.

(4) Actual-to-potential test for projects that only involve construction of a new emissions unit(s). A significant emissions increase of a regulated NSR pollutant is projected to occur if the sum of the difference between the potential to emit from each new emissions unit following completion of the project and the baseline actual emissions of these units before the project equals or exceeds the significant amount for that pollutant.

(5) Hybrid test for projects that involve multiple types of emissions units. A significant emissions increase of a regulated NSR pollutant is projected to occur if the sum of the emissions increases for each emissions unit, using the method specified in Paragraphs (3) and (4) of Subsection D of 20.11.61.11 NMAC as applicable with respect to each emissions unit, for each type of emissions unit equals or exceeds the significant amount for that pollutant.

E. For any major stationary source for a PAL for a regulated NSR pollutant, the major stationary source shall comply with requirements under 20.11.61.20 NMAC.

[20.11.61.11 NMAC - N, 1/23/06; A, 8/30/10; A, 1/10/11; A, 5/13/13; A, 5/29/15]

20.11.61.12 OBLIGATIONS OF OWNERS OR OPERATORS OF SOURCES:

A. Any owner or operator who begins actual construction or operates a source or modification without, or not in accordance with, a permit issued under the requirements of 20.11.61 NMAC shall be subject to enforcement action.

B. Approval to construct shall not relieve any person from the responsibility to comply fully with the provisions of the Air Quality Control Act, Sections 74-2-1 to 74-2-17, NMSA 1978; any applicable regulations of the board; and any other requirements under local, state, or federal law.

C. Approval to construct shall become invalid if construction is not commenced within 18 months after receipt of such approval, if construction is discontinued for a period of 18 months or more, or if construction is not completed within a reasonable time; the administrator may extend the 18-month period upon a satisfactory showing

that an extension is justified; this provision does not apply to the time period between construction of the approved phases of a phased construction project; each phase must commence construction within 18 months of the projected and approved commencement date.

D. At such time that a particular source or modification becomes a major stationary source or major modification solely by virtue of a relaxation in any enforceable limitation which was established after August 7, 1980, on the capacity of the source or modification otherwise to emit a pollutant, such as a restriction on hours of operation, then 20.11.61 NMAC shall apply to the source or modification as though construction had not yet commenced on the source or modification.

E. Except as otherwise provided in Paragraph (6) of Subsection E of 20.11.61.12 NMAC the following specific provisions apply with respect to any regulated NSR pollutant emitted from projects at existing emissions units at a major stationary source (other than projects at a source with a PAL) in circumstances where there is a reasonable possibility within the meaning of Paragraph (6) of Subsection E of 20.11.61.12 NMAC that a project that is not a part of a major modification may result in a significant emissions increase of such pollutant and the owner or operator elects to use the method specified in Paragraphs (1) through (3) of Subsection VV of 20.11.61.7 NMAC for calculating projected actual emissions.

(1) Before beginning actual construction of the project, the owner or operator shall document and maintain a record of the following information:

- (a)** a description of the project;
- (b)** identification of the emissions unit(s) whose emissions of a regulated NSR pollutant could be affected by the project; and
- (c)** a description of the applicability test used to determine that the project is not a major modification for any regulated NSR pollutant, including the baseline actual emissions, the projected actual emissions, the amount of emissions excluded under Paragraph (3) of Subsection VV of 20.11.61.7 NMAC and an explanation for why such amount was excluded, and any netting calculations, if applicable.

(2) If the emissions unit is an existing electric utility steam generating unit, before beginning actual construction, the owner or operator shall provide a copy of the information set out in Paragraph (1) of Subsection E of 20.11.61.12 NMAC to the department. Nothing in Paragraph (2) of Subsection E of 20.11.61.12 NMAC shall be construed to require the owner or operator of such a unit to obtain any determination from the department before beginning actual construction; however, necessary preconstruction approvals and/or permits must be obtained before beginning actual construction.

(3) The owner or operator shall monitor the emissions of any regulated NSR pollutant that could increase as a result of the project and that is emitted by any emissions unit identified in Subparagraph (b) of Paragraph (1) of Subsection E of 20.11.61.12 NMAC; and calculate and maintain a record of the annual emissions, in tons per year on a calendar year basis, for a period of five years following resumption of regular operations after the change, or for a period of 10 years following resumption of regular operations after the change if the project increases the design capacity or potential to emit of that regulated NSR pollutant at such emissions unit. For purposes of Paragraph (3) of Subsection E of 20.11.61.12 NMAC, fugitive emissions (to the extent quantifiable) shall be monitored if the emissions unit is part of one of the source categories listed in Table 1 of 20.11.61.26 NMAC or if the emissions unit is located at a major stationary source that belongs to one of the listed source categories.

(4) If the unit is an existing electric utility steam generating unit, the owner or operator shall submit a report to the department within 60 days after the end of each year during which records must be generated under Subparagraph (c) of Paragraph (1) of Subsection E of 20.11.61.12 NMAC setting out the unit's annual emissions during the calendar year that preceded submission of the report.

(5) If the unit is an existing unit other than an electric utility steam generating unit, the owner or operator shall submit a report to the department if the annual emissions, in tons per year, from the project identified in Paragraph (1) of Subsection E of 20.11.61.12 NMAC, exceed the baseline actual emissions (as documented and maintained pursuant to Subparagraph (c) of Paragraph (1) of Subsection E of 20.11.61.12 NMAC) by a significant amount for that regulated NSR pollutant, and if such emissions differ from the preconstruction projection as documented and maintained pursuant to Subparagraph (c) of Paragraph (1) of Subsection E of 20.11.61.12 NMAC. Such report shall be submitted to the department within 60 days after the end of such year. The report shall contain the following:

- (a)** the name, address and telephone number of the major stationary source;
- (b)** the annual emissions as calculated pursuant to Paragraph (3) of Subsection E of 20.11.61.12 NMAC; and
- (c)** any other information that the owner or operator wishes to include in the report (e.g., an explanation as to why the emissions differ from the preconstruction projection).

(6) A "reasonable possibility" under Subsection E of 20.11.61.12 NMAC occurs when the owner or operator calculates the project to result in either:

- (a)** a projected actual emissions increase of at least 50 percent of the amount that is a "significant emissions increase," as defined under Subsection AAA of 20.11.61.7 NMAC (without reference to the amount that is a significant net emissions increase), for the regulated NSR pollutant; or

(b) a projected actual emissions increase that, added to the amount of emissions excluded under Paragraph (3) of Subsection VV of 20.11.61.7 NMAC, sums to at least 50 percent of the amount that is a "significant emissions increase," as defined under Subsection AAA of 20.11.61.7 NMAC (without reference to the amount that is a significant net emissions increase), for the regulated NSR pollutant; for a project for which a reasonable possibility occurs only within the meaning of Subparagraph (b) of Paragraph (6) of Subsection E of 20.11.61.12 NMAC, and not also within the meaning of Subparagraph (a) of Paragraph (6) of Subsection E of 20.11.61.12 NMAC, then provisions of Paragraphs (2) through (5) of Subsection E of 20.11.61.12 NMAC do not apply to the project.

F. The owner or operator of the source shall make the information required to be documented and maintained pursuant to Subsection E of 20.11.61.12 NMAC available for review upon request for inspection by the department or the general public pursuant to the requirements contained in 40 CFR 70.4(b)(3)(viii).

[20.11.61.12 NMAC - Rp, 20.11.61.12 NMAC, 1/23/06; A, 8/30/10; A, 1/10/11; A, 5/13/13]

20.11.61.13 SOURCE INFORMATION:

The owner or operator of a proposed source or modification shall submit all information necessary to perform any analysis or make any determination required by 20.11.61 NMAC.

A. Information shall include, but is not limited to:

- (1)** a description of the nature, location, design capacity, and typical operating schedule of the source or modification, including specifications and drawings showing the design and plant layout; and
- (2)** a detailed schedule of construction of the source or modification; and
- (3)** a detailed description of the planned system of continuous emission reduction for the source or modification, emission estimates, and other information necessary to determine that best available control technology will be applied.

B. Upon request by the department, the owner or operator shall also provide information on:

- (1)** the air quality impact of the source or modification, including meteorological and topographic data necessary to estimate such impact; and
- (2)** the air quality impacts, and the nature and extent of any or all general commercial, residential, industrial, and other growth which has occurred since August 7, 1977 in the area the source or modification would affect.

[20.11.61.13 NMAC - Rp, 20.11.61.13 NMAC, 1/23/06]

20.11.61.14 CONTROL TECHNOLOGY REVIEW AND INNOVATIVE CONTROL TECHNOLOGY:

A. A new major stationary source shall apply best available control technology for each regulated NSR pollutant that it would have the potential to emit in amounts equal to or greater than the significance levels as listed in Table 2 of 20.11.61.27 NMAC. This requirement applies to each proposed emissions unit or operation that will emit such pollutant.

B. A major modification shall apply best available control technology for each regulated NSR pollutant at the source when a significant net emissions increase occurs. This requirement applies to each proposed emissions unit or operation where a net emissions increase in the pollutant would occur as a result of a physical change or change in the method of operation in the unit.

C. For phased construction projects, the determination of best available control technology shall be reviewed and modified as appropriate at the latest reasonable time but no later than 18 months prior to commencement of construction of each independent phase of the project. At such time, the owner or operator of the applicable stationary source may be required to demonstrate the adequacy of any previous determination of best available control technology for the source.

D. Innovative control technology. The department may approve a system of innovative control technology for the major stationary source or major modification if:

(1) the proposed control system would not cause or contribute to an unreasonable risk to public health, welfare, or safety in its operation or function; and

(2) the owner or operator agrees to achieve a level of continuous emissions reduction equivalent to that which would have been required under Subsection A of 20.11.61.14 NMAC by a date specified by the department. Such date shall not be later than four years from the time of startup or seven years from permit issuance; and

(3) the source or modification would meet the requirements equivalent to 20.11.61.14 NMAC and 20.11.61.15 NMAC based on the emissions rate that the stationary source employing the system of innovative control technology would be required to meet on the date specified by the department; and

(4) during the interim period of achieving the permitted emission level, the source or modification would not:

(a) cause or contribute to a violation of an applicable NAAQS; nor

(b) impact any federal class I area; nor

(c) impact any area where an applicable increment is known to be violated;
and

(5) all other applicable requirements including those for public participation have been met.

E. The department shall withdraw any approval to employ a system of innovative control technology if:

(1) the proposed system fails by the specified date to achieve the required continuous emissions reduction rate; or

(2) the proposed system fails before the specified date so as to contribute to an unreasonable risk to public health, welfare, or safety; or

(3) the department decides at any time that the proposed system is unlikely to achieve the required level of control or to protect the public health, welfare, or safety.

F. If a source or modification fails to meet the required level of continuous emission reduction within the specified time period or the approval is withdrawn in accordance with Subsection E of 20.11.61.14 NMAC, the department may allow the source or modification up to an additional three years to meet the requirement for the application of best available control technology through use of a demonstrated system of control.

G. If the owner or operator of a major stationary source or major modification previously issued a permit under 20.11.61 NMAC applies for an extension, and the new proposed date of construction is greater than 18 months from the date the permit would become invalid, the determination of best available control technology shall be reviewed and modified as appropriate before such an extension is granted. At such time, the owner or operator of the applicable stationary source may be required to demonstrate the adequacy of any previous determination of best available control technology for the source.

[20.11.61.14 NMAC - Rp, 20.11.61.14 NMAC, 1/23/06; A, 8/30/10; A, 5/13/13]

20.11.61.15 AMBIENT IMPACT REQUIREMENTS:

A. The requirements of 20.11.61.15 NMAC shall apply to each pollutant emitted by a new major stationary source or major modification in amounts equal to or greater than that in Table 2 of 20.11.61.27 NMAC. For particulate matter, the source will only be required to perform ambient impact analysis for PM₁₀ when the source has the potential to emit significant amounts of PM₁₀ as determined from Table 2 of 20.11.61.27 NMAC.

B. Source impact analysis.

(1) Required demonstration. The owner or operator of the proposed source or modification shall demonstrate that the allowable emission increases from the proposed source or modification, in conjunction with all other applicable emissions increases or reductions, (including secondary emissions), would not cause or contribute to air pollution in violation of:

(a) any NAAQS in any air quality control region; or

(b) any applicable maximum allowable increase (as shown in Table 4 of 20.11.61.29 NMAC) over the baseline concentrations in any area.

(2) Reserved

C. The owner or operator of the proposed major stationary source or major modification shall demonstrate that neither a violation of Subparagraph (a) or (b) of Paragraph (1) of Subsection B of 20.11.61.15 NMAC will occur.

[20.11.61.15 NMAC - Rp, 20.11.61.15 NMAC, 1/23/06; A, 8/30/10; A, 5/13/13]

20.11.61.16 ADDITIONAL IMPACT ANALYSES:

A. The owner or operator of the proposed major stationary source or major modification shall provide an analysis of the impairment to visibility, soils, and vegetation that would occur as a result of the source or modification and general commercial, residential, industrial, and other growth associated with the source or modification. The owner or operator need not provide an analysis of the impact on vegetation having no significant commercial or recreational value. The analysis can use data or information available from the department.

B. The owner or operator shall also provide an analysis of the air quality impact projected for the area as a result of general commercial, residential, industrial, and other growth associated with the source or modification.

C. The department may require monitoring of visibility in any federal class I area where the department determines that an adverse impact on visibility may occur due primarily to the operations of the proposed new source or modification. Such monitoring shall be conducted following procedures approved by the department and subject to the following:

(1) visibility monitoring methods specified by the department shall be reasonably available and not require any research and development; and

(2) the cost of visibility monitoring required by the department shall not exceed 50 percent of the cost of ambient monitoring required by 20.11.61 NMAC; if ambient monitoring is not required, the cost shall be estimated as if it were required for each pollutant to which 20.11.61 NMAC applies;

(3) both preconstruction and post construction visibility monitoring may be required; in each case, the duration of such monitoring shall not exceed one year.

[20.11.61.16 NMAC - Rp, 20.11.61.16 NMAC, 1/23/06; A, 8/30/10]

20.11.61.17 AMBIENT AIR QUALITY MODELING:

All estimates of ambient concentrations required by 20.11.61 NMAC shall be based on applicable air quality models, data bases, and other requirements as specified in Appendix W to 40 CFR Part 51, its revisions, or any superseding EPA document, and approved by the department. Where an air quality model specified in the Appendix W to 40 CFR Part 51, *Guideline on Air Quality Models*, is inappropriate, the model may be modified or another model substituted. Any substitution or modification of a model must be approved by the department. Notification shall be given by the department of such a substitution or modification and the opportunity for public comment provided for in fulfilling the public notice requirements in Subsection B of 20.11.61.21 NMAC. The department will seek EPA approval of such substitutions or modifications.

[20.11.61.17 NMAC - Rp, 20.11.61.17 NMAC, 1/23/06; A, 8/30/10]

20.11.61.18 AIR QUALITY ANALYSIS AND MONITORING REQUIREMENTS:

A. Preapplication analysis.

(1) Any application for a permit under regulations approved pursuant to 40 CFR 51.166 (e.g. 20.11.61 NMAC) shall contain an analysis of ambient air quality in the area that the major stationary source or major modification would affect for each of the following pollutants:

(a) for a major stationary source, each pollutant that it would have the potential to emit in a significant amount; or

(b) for a major modification, each pollutant for which it would result in a significant net emission increase.

(2) If no NAAQS for a pollutant exists, and there is an acceptable method for monitoring that pollutant, the analysis shall contain such air quality monitoring data as the department determines is necessary to assess ambient air quality for that pollutant in any area that the emissions of that pollutant would affect.

(3) For pollutants (other than nonmethane hydrocarbons) for which a standard does exist, the analysis shall contain continuous air quality monitoring data gathered for purposes of determining whether emissions of that pollutant would cause or contribute to a violation of the standard or any maximum allowable increase.

(4) The continuous air quality monitoring data that is required shall have been gathered over a period of one year and shall represent the one year period preceding receipt of the permit application. The department has the discretion to:

(a) determine that a complete and adequate analysis can be accomplished with monitoring data gathered over a period shorter than one year but not less than four months; or

(b) determine that existing air quality monitoring data is representative of air quality in the affected area and accept such data in lieu of additional monitoring by the applicant.

(5) Ozone monitoring shall be performed if monitoring data is required for volatile organic compounds or oxides of nitrogen. The owner or operator of a proposed major stationary source or major modification of volatile organic compounds who satisfies all conditions of 40 CFR Part 51 Appendix S, Section IV may provide post-approval monitoring data for ozone in lieu of providing preconstruction data as required under Subsection A of 20.11.61.18 NMAC.

B. Post-construction monitoring. The owner or operator of a major stationary source or major modification shall, after construction of the stationary source or modification, conduct such ambient monitoring as the department determines is necessary to determine the effect emissions from the stationary source or modification may have, or are having, on air quality in any area, including monitoring to validate attainment of ambient air quality standards and to assure that increments are not exceeded.

C. Operation of monitoring stations. The owner or operator of a major stationary source or major modification shall meet the requirements of 40 CFR 58, Appendix B during the operation of monitoring stations for purposes of satisfying the requirements of Subsections A through C of 20.11.61.18 NMAC.

D. Exceptions. The department has the discretion to exempt a proposed major stationary source or major modification from the requirements of Subsections A through C of 20.11.61.18 NMAC with respect to monitoring for a particular pollutant if:

(1) the emissions increase of the pollutant from a new stationary source or the net emissions increase of the pollutant from a modification would cause, in any area, air quality impacts less than the levels listed in Table 3 of 20.11.61.28 NMAC;

(2) the existing ambient concentrations of the pollutant in the area affected by the source or modification are less than the concentrations listed in Table 3 of 20.11.61.28 NMAC; or

(3) the pollutant is **not** listed in Table 3 of 20.11.61.28 NMAC.

[20.11.61.18 NMAC - Rp, 20.11.61.18 NMAC, 1/23/06; A, 8/30/10; A, 5/13/13]

20.11.61.19 TEMPORARY SOURCE EXEMPTIONS:

The requirements of Subsection B of 20.11.61.15 NMAC, 20.11.61.16 NMAC and 20.11.61.18 NMAC shall not apply to a major source or modification with respect to a particular pollutant, if the allowable emissions of that pollutant from the source, or the net emissions increase of that pollutant from the modification: would not impact any federal class I area or any areas where an applicable increment is known to be violated; and would be temporary.

[20.11.61.19 NMAC - Rp, 20.11.61.19 NMAC, 1/23/06; A, 8/30/10]

20.11.61.20 ACTUALS PLANTWIDE APPLICABILITY LIMITS (PALs):

A. Applicability.

(1) The department may approve the use of an actuals PAL, including for GHGs on either a mass basis or a CO₂e basis, for any existing major stationary source or any existing GHG-only source if the PAL meets the requirements of 20.11.61.20 NMAC. The term "PAL" shall mean "actuals PAL" throughout 20.11.61.20 NMAC.

(2) Any physical change in or change in the method of operation of a major stationary source or a GHG-only source that maintains its total source-wide emissions below the PAL level, meets the requirements of 20.11.61.20 NMAC, and complies with the PAL permit:

(a) is not a major modification for the PAL pollutant;

(b) does not have to be approved through the plan's major NSR program;

(c) is not subject to the provisions in Subsection D of 20.11.61.12 NMAC (restrictions on relaxing enforceable emission limitations that the major stationary source used to avoid applicability of the major NSR program); and

(d) does not make GHGs "subject to regulation" as defined by Subsection CCC of 20.11.61.7 NMAC.

(3) Except as provided under Subparagraph (c) of Paragraph (2) of Subsection A of 20.11.61.20 NMAC, a major stationary source or a GHG-only source shall continue to comply with all applicable federal or state requirements, emission limitations, and work practice requirements that were established prior to the effective date of the PAL.

B. Definitions applicable to 20.11.61.20 NMAC.

(1) **Actuals PAL for a major stationary source** means a PAL based on the *baseline actual emissions* (as defined in Subsection I of 20.11.61.7 NMAC) of all *emissions units* (as defined in Subsection Y of 20.11.61.7 NMAC) at the source, that emit or have the potential to emit the PAL pollutant. **For a GHG-only source, actuals PAL** means a PAL based on the *baseline actual emissions* (as defined in Paragraph (13) of Subsection B of 20.11.61.20 NMAC) of all *emissions units* (as defined in Paragraph (14) of Subsection B of 20.11.61.20 NMAC) at the source, that emit or have the potential to emit GHGs.

(2) **Allowable emissions** means "allowable emissions" as defined in Subsection F of 20.11.61.7 NMAC, except as this definition is modified in accordance with the following.

(a) The allowable emissions for any emissions unit shall be calculated considering any emission limitations that are enforceable as a practical matter on the emissions unit's potential to emit.

(b) An emissions unit's potential to emit shall be determined using the definition in Subsection SS of 20.11.61.7 NMAC, except that the words "or enforceable as a practical matter" should be added after "federally enforceable".

(3) **Small emissions unit** means an emissions unit that emits or has the potential to emit the PAL pollutant in an amount less than the significant level for that PAL pollutant, as defined in Subsection ZZ of 20.11.61.7 NMAC or in the act, whichever is lower. **For a GHG PAL issued on a CO₂ e basis, small emissions unit** means an emissions unit that emits or has the potential to emit less than the amount of GHGs on a CO₂ e basis defined as "significant" for the purposes of Paragraph (3) of Subsection CCC of 20.11.61.7 NMAC at the time the PAL permit is being issued.

(4) **Major emissions unit means:**

(a) Any emissions unit that emits or has the potential to emit 100 tons per year or more of the PAL pollutant in an attainment area; or

(b) any emissions unit that emits or has the potential to emit the PAL pollutant in an amount that is equal to or greater than the major source threshold for the PAL pollutant as defined by the act for nonattainment areas. For example, in accordance with the definition of major stationary source in Section 182(c) of the act, an emissions unit would be a major emissions unit for VOC if the emissions unit is located in a serious ozone nonattainment area and it emits or has the potential to emit 50 or more tons of VOC per year.

(c) For a GHG PAL issued on a CO₂ e basis, any emissions unit that emits or has the potential to emit equal to or greater than the amount of GHGs on a CO₂ e basis that would be sufficient for a new source to trigger permitting requirements under Subsection CCC of 20.11.61.7 NMAC at the time the PAL permit is being issued.

(5) **Plantwide applicability limitation (PAL)** means an emission limitation expressed on a mass basis in tons-per-year, or expressed in tpy CO₂ e for a CO₂ e-based GHG emission limitation, for a pollutant at a major stationary source or GHG-only source, that is enforceable as a practical matter and established source-wide in accordance with 20.11.61.20 NMAC.

(6) **PAL effective date** generally means the date of issuance of the PAL permit. However, the PAL effective date for an increased PAL is the date any emissions unit that is part of the PAL major modification becomes operational and begins to emit the PAL pollutant.

(7) **PAL effective period** means the period beginning with the PAL effective date and ending 10 years later.

(8) **PAL major modification** means, notwithstanding the definitions for *major modification*, *net emissions increase* and *subject to regulation* at Subsections II, PP and CCC of 20.11.61.7 NMAC respectively, any physical change in or change in the method of operation of the PAL source that causes it to emit the PAL pollutant at a level equal to or greater than the PAL.

(9) **PAL permit** means the major NSR permit, the minor NSR permit, or the state operating permit under a program that is approved into the SIP, or the title V permit issued by the department that establishes a PAL for a major stationary source or a GHG-only source.

(10) **PAL pollutant** means the pollutant for which a PAL is established at a major stationary source or a GHG-only source. For a GHG-only source, the only available PAL pollutant is GHGs.

(11) **Significant emissions unit** means an emissions unit that emits or has the potential to emit a PAL pollutant in an amount that is equal to or greater than the *significant level* (as defined in Subsection ZZ of 20.11.61.7 NMAC or in the act, whichever is lower) for that PAL pollutant, but less than the amount that would qualify the unit as a *major emissions unit* as defined in Paragraph (4) of Subsection B of 20.11.61.20 NMAC. For a GHG PAL issued on a CO₂ e basis, *significant emissions unit* means any emissions unit that emits or has the potential to emit GHGs on a CO₂ e basis in amounts equal to or greater than the amount that would qualify the unit as *small emissions unit* as defined in Paragraph (3) of Subsection B of 20.11.61.20 NMAC, but less than the amount that would qualify the unit as a *major emissions unit* as defined in Subparagraph (c) of Paragraph (4) of Subsection B of 20.11.61.20 NMAC.

(12) **GHG-only source** means any existing stationary source that emits or has the potential to emit GHGs in the amount equal to or greater than the amount of GHGs on a mass basis that would be sufficient for a new source to trigger permitting requirements for GHGs under Subsection KK of 20.11.61.7 NMAC and the amount of GHGs on a CO₂ e basis that would be sufficient for a new source to trigger permitting

requirements for GHGs under Subsection CCC of 20.11.61.7 NMAC at the time the PAL permit is being issued, but does not emit or have the potential to emit any other non-GHG regulated NSR pollutant at or above the applicable major source threshold. A GHG-only source may only obtain a PAL for GHG emissions under 20.11.61.20 NMAC.

(13) Baseline actual emissions for a GHG PAL means the average rate, in tpy CO₂ e or tpy GHG, as applicable, at which the emissions unit actually emitted GHGs during any consecutive 24-month period selected by the owner or operator within the 10-year period immediately preceding either the date the owner or operator begins actual construction of the project, or the date a complete permit application is received by the administrator for a permit required under 40 CFR 52.21 or by the department for a permit required by a plan, whichever is earlier. For any existing electric utility steam generating unit, *baseline actual emissions for a GHG PAL* means the average rate, in tpy CO₂ e or tpy GHG, as applicable, at which the emissions unit actually emitted the GHGs during any consecutive 24-month period selected by the owner or operator within the 5-year period immediately preceding either the date the owner or operator begins actual construction of the project, except that the administrator shall allow the use of a different time period upon a determination that it is more representative of normal source operation.

(a) The average rate shall include fugitive emissions to the extent quantifiable, and emissions associated with startups, shutdowns, and malfunctions.

(b) The average rate shall be adjusted downward to exclude any non-compliant emissions that occurred while the source was operating above an emission limitation that was legally enforceable during the consecutive 24-month period.

(c) The average rate shall be adjusted downward to exclude any emissions that would have exceeded an emission limitation with which the stationary source must currently comply, had such stationary source been required to comply with such limitations during the consecutive 24-month period.

(d) The average rate shall not be based on any consecutive 24-month period for which there is inadequate information for determining annual GHG emissions and for adjusting this amount if required by Subparagraphs (b) and (c) of Paragraph (13) of Subsection B of 20.11.61.20 NMAC.

(14) Emissions unit with respect to GHGs means any part of a stationary source that emits or has the potential to emit GHGs. For purposes of 40 CFR 52.21, there are two types of emissions units as described in the following:

(a) a new emissions unit is any emissions unit that is (or will be) newly constructed and that has existed for less than 2 years from the date such emissions unit first operated;

(b) an existing emissions unit is any emissions unit that does not meet the requirements in Subparagraph (a) of Paragraph (14) of Subsection B of 20.11.61.20 NMAC.

(15) **Minor source** means any stationary source that does not meet the definition of *major stationary source* in Subsection KK of 20.11.61.7 NMAC for any pollutant at the time the PAL is issued.

C. Permit application requirements. As part of a permit application requesting a PAL, the owner or operator of a major stationary source or a GHG-only source shall submit the following information to the department for approval.

(1) A list of all emissions units at the source designated as small, significant or major based on their potential to emit. In addition, the owner or operator of the source shall indicate which, if any, federal or state applicable requirements, emission limitations, or work practices apply to each unit.

(2) Calculations of the baseline actual emissions (with supporting documentation). Baseline actual emissions are to include emissions associated not only with operation of the unit, but also emissions associated with startup, shutdown, and malfunction.

(3) The calculation procedures that the major stationary source owner or operator proposes to use to convert the monitoring system data to monthly emissions and annual emissions based on a 12-month rolling total for each month as required by Subsection M of 20.11.61.20 NMAC.

(4) As part of a permit application requesting a GHG PAL, the owner or operator of a major stationary source or a GHG-only source shall submit a statement by the source owner or operator that clarifies whether the source is an existing *major source* as defined in Subparagraphs (a) and (b) of Paragraph (1) of Subsection KK of 20.11.61.7 NMAC or a *GHG-only source* as defined in Paragraph (12) of Subsection B of 20.11.61.20 NMAC.

D. General requirements for establishing PALs.

(1) The department may establish a PAL at a major stationary source or a GHG-only source, provided that at a minimum, the following requirements are met.

(a) The PAL shall impose an annual emission limitation expressed on a mass basis in tons per year, or expressed in tpy CO₂ e, that is enforceable as a practical matter, for the entire major stationary source or GHG-only source. For each month during the PAL effective period after the first 12 months of establishing a PAL, the major stationary source or GHG-only source owner or operator shall show that the sum of the monthly emissions from each emissions unit under the PAL for the previous 12 consecutive months is less than the PAL (a 12-month average, rolled monthly). For

each month during the first 11 months from the PAL effective date, the major stationary source or GHG-only source owner or operator shall show that the sum of the preceding monthly emissions from the PAL effective date for each emissions unit under the PAL is less than the PAL.

(b) The PAL shall be established in a PAL permit that meets the public participation requirements in Subsection E of 20.11.61.20 NMAC.

(c) The PAL permit shall contain all the requirements of Subsection G of 20.11.61.20 NMAC.

(d) The PAL shall include fugitive emissions, to the extent quantifiable, from all emissions units that emit or have the potential to emit the PAL pollutant at the major stationary source or GHG-only source.

(e) Each PAL shall regulate emissions of only one pollutant.

(f) Each PAL shall have a PAL effective period of 10 years.

(g) The owner or operator of the major stationary source or GHG-only source with a PAL shall comply with the monitoring, recordkeeping, and reporting requirements provided in Subsections L through N of 20.11.61.20 NMAC for each emissions unit under the PAL through the PAL effective period.

(2) At no time during or after the PAL effective period are emissions reductions of a PAL pollutant that occur during the PAL effective period creditable as decreases for purposes of offsets under 40 CFR 51.165(a)(3)(ii) unless the level of the PAL is reduced by the amount of such emissions reductions and such reductions would be creditable in the absence of the PAL.

E. Public participation requirements for PALs. PALs for existing major stationary sources or GHG-only sources shall be established, renewed, or increased, through a procedure that is consistent with 40 CFR 51.160 and 161. This includes the requirement that the department provide the public with notice of the proposed approval of a PAL permit and at least a 30-day period for submittal of public comment. The department must address all material comments before taking final action on the permit.

F. Setting the 10-year actuals PAL level.

(1) Except as provided in Paragraph (2) of Subsection F of 20.11.61.20 NMAC, the actuals PAL level for a major stationary source or a GHG-only source shall be established as the sum of the *baseline actual emissions* (as defined in Subsection I of 20.11.61.7 NMAC or, for GHGs Paragraph (13) of Subsection B of 20.11.61.20 NMAC) of the PAL pollutant for each emissions unit at the source; plus an amount equal to the applicable significant level for the PAL pollutant under Subsection ZZ of 20.11.61.7 NMAC or under the act, whichever is lower. When establishing the actuals

PAL level, for a PAL pollutant, only one consecutive 24-month period must be used to determine the baseline actual emissions for all existing emissions units. However, a different consecutive 24-month period may be used for each different PAL pollutant. Emissions associated with units that were permanently shutdown after this 24-month period must be subtracted from the PAL level. The department shall specify a reduced PAL level(s) (in tons/yr) in the PAL permit to become effective on the future compliance date(s) of any applicable federal or state regulatory requirement(s) that the department is aware of prior to issuance of the PAL permit. For instance, if the source owner or operator will be required to reduce emissions from industrial boilers in half from baseline emissions of 60 ppm NO_x to a new rule limit of 30 ppm, then the permit shall contain a future effective PAL level that is equal to the current PAL level reduced by half of the original baseline emissions of such unit(s).

(2) For newly constructed units (which do not include modifications to existing units) on which actual construction began after the 24-month period, in lieu of adding the baseline actual emissions as specified in Paragraph (1) of Subsection F of 20.11.61.20 NMAC, the emissions must be added to the PAL level in an amount equal to the potential to emit of the units.

(3) For CO₂ e based GHG PAL, the actuals PAL level shall be established as the sum of the GHGs *baseline actual emissions* (as defined in Paragraph (13) of Subsection B of 20.11.61.20 NMAC) of GHGs for each emissions unit at the source, plus an amount equal to the amount defined as "significant" on a CO₂ e basis for the purposes of Paragraph (3) of Subsection CCC of 20.11.61.7 NMAC at the time the PAL permit is being issued. When establishing the actuals PAL level for a CO₂ e-based PAL, only one consecutive 24-month period must be used to determine the baseline actual emissions for all existing emissions units. Emissions associated with units that were permanently shut down after this 24-month period must be subtracted from the PAL level. The department shall specify a reduced PAL level (in tpy CO₂ e) in the PAL permit to become effective on the future compliance date(s) of any applicable federal or state regulatory requirement(s) that the department is aware of prior to issuance of the PAL permit.

G. Contents of the PAL permit. The PAL permit shall contain, at a minimum, the following information.

(1) The PAL pollutant and the applicable source-wide emission limitation in tons per year or tpy CO₂ e.

(2) The PAL permit effective date and the expiration date of the PAL (PAL effective period).

(3) Specification in the PAL permit that if a major stationary source or a GHG-only source owner or operator applies to renew a PAL in accordance with Subsection J of 20.11.61.20 NMAC before the end of the PAL effective period, then the PAL shall not

expire at the end of the PAL effective period. It shall remain in effect until a revised PAL permit is issued by the department.

(4) A requirement that emission calculations for compliance purposes include emissions from startups, shutdowns and malfunctions.

(5) A requirement that, once the PAL expires, the major stationary source or GHG-only source is subject to the requirements of Subsection I of 20.11.61.20 NMAC.

(6) The calculation procedures that the major stationary source or GHG-only source owner or operator shall use to convert the monitoring system data to monthly emissions and annual emissions based on a 12-month rolling total for each month as required by Paragraph (1) of Subsection M of 20.11.61.20 NMAC.

(7) A requirement that the major stationary source or GHG-only source owner or operator monitor all emissions units in accordance with the provisions under Subsection L of 20.11.61.20 NMAC.

(8) A requirement to retain the records required under Subsection M of 20.11.61.20 NMAC on site. Such records may be retained in an electronic format.

(9) A requirement to submit the reports required under Subsection N of 20.11.61.20 NMAC by the required deadlines.

(10) Any other requirements that the department deems necessary to implement and enforce the PAL.

(11) A permit for a GHG PAL issued to a GHG-only source shall also include a statement denoting that GHG emissions at the source will not be subject to regulation under Subsection CCC of 20.11.61.7 NMAC as long as the source complies with the PAL.

H. PAL effective period and reopening of the PAL permit.

(1) **PAL effective period.** The PAL effective period shall be 10 years.

(2) **Reopening of the PAL permit.**

(a) During the PAL effective period, the department shall reopen the PAL permit to:

(i) correct typographical/calculation errors made in setting the PAL or reflect a more accurate determination of emissions used to establish the PAL;

(ii) reduce the PAL if the owner or operator of the major stationary source creates creditable emissions reductions for use as offsets under 40 CFR 51.165(a)(3)(ii); and

(iii) revise the PAL to reflect an increase in the PAL as provided under Subsection K of 20.11.61.20 NMAC.

(b) The department may reopen the PAL permit for the following:

(i) to reduce the PAL to reflect newly applicable federal requirements (for example, NSPS) with compliance dates after the PAL effective date;

(ii) to reduce the PAL consistent with any other requirement, that is enforceable as a practical matter, and that the department may impose on the major stationary source or GHG-only source under the plan; and

(iii) to reduce the PAL if the department determines that a reduction is necessary to avoid causing or contributing to a NAAQS or PSD increment violation, or to an adverse impact on an air quality related values (AQRV) that has been identified for a federal class I area by a federal land manager and for which information is available to the general public.

(c) Except for the permit reopening in Item (i) of Subparagraph (a) of Paragraph (2) of Subsection H of 20.11.61.20 NMAC for the correction of typographical/calculation errors that do not increase the PAL level, all reopenings shall be carried out in accordance with the public participation requirements of Subsection E of 20.11.61.20 NMAC.

I. Expiration of a PAL. Any PAL that is not renewed in accordance with the procedures in Subsection J of 20.11.61.20 NMAC shall expire at the end of the PAL effective period, and the requirements in Subsection I of 20.11.61.20 NMAC shall apply.

(1) Each emissions unit, or each group of emissions units, that existed under the PAL shall comply with an allowable emission limitation under a revised permit established according to the procedures in Paragraph (1) of Subsection I of 20.11.61.20 NMAC.

(a) Within the time frame specified for PAL renewals in Paragraph (2) of Subsection J of 20.11.61.20 NMAC, the major stationary source or GHG-only source shall submit a proposed allowable emission limitation for each emissions unit, (or each group of emissions units, if such a distribution is more appropriate as decided by the department), by distributing the PAL allowable emissions for the major stationary source or GHG-only source among each of the emissions units that existed under the PAL. If the PAL had not yet been adjusted for an applicable requirement that became effective during the PAL effective period, as required under Paragraph (5) of Subsection J of 20.11.61.20 NMAC, such distribution shall be made as if the PAL had been adjusted.

(b) The department shall decide whether and how the PAL allowable emissions will be distributed and issue a revised permit incorporating allowable limits for each emissions unit, or each group of emissions units, as the department determines is appropriate.

(2) Each emissions unit(s) shall comply with the allowable emission limitation on a 12-month rolling basis. The department may approve the use of monitoring systems (source testing, emission factors, etc.) other than CEMS, CERMS, PEMS or CPMS to demonstrate compliance with the allowable emission limitation.

(3) Until the department issues the revised permit incorporating allowable limits for each emissions unit, or each group of emissions units, as required under Subparagraph (b) of Paragraph (1) of Subsection I of 20.11.61.20 NMAC, the source shall continue to comply with a source-wide, multi-unit emissions cap equivalent to the level of the PAL emission limitation.

(4) Any physical change or change in the method of operation at the major stationary source or GHG-only source will be subject to major NSR requirements if such change meets the definition of major modification in Subsection II of 20.11.61.7 NMAC.

(5) The major stationary source owner or operator shall continue to comply with any state or federal applicable requirements (BACT, RACT, NSPS, etc.) that may have applied either during the PAL effective period or prior to the PAL effective period except for those emission limitations that had been established pursuant to Subsection D of 20.11.61.12 NMAC, but were eliminated by the PAL in accordance with the provisions in Subparagraph (c) of Paragraph (2) of Subsection A of 20.11.61.20 NMAC.

J. Renewal of a PAL.

(1) The department shall follow the procedures specified in Subsection E of 20.11.61.20 NMAC in approving any request to renew a PAL for a major stationary source or a GHG-only source, and shall provide both the proposed PAL level and a written rationale for the proposed PAL level to the public for review and comment. During such public review, any person may propose a PAL level for the source for consideration by the department.

(2) **Application deadline.** A major stationary source or GHG-only source owner or operator shall submit a timely application to the department to request renewal of a PAL. A timely application is one that is submitted at least six months prior to, but not earlier than 18 months from, the date of permit expiration. This deadline for application submittal is to ensure that the permit will not expire before the permit is renewed. If the owner or operator of a major stationary source or GHG-only source submits a complete application to renew the PAL within this time period, then the PAL shall continue to be effective until the revised permit with the renewed PAL is issued.

(3) Application requirements. The application to renew a PAL permit shall contain the following information.

(a) The information required in Subsection C of 20.11.61.20 NMAC.

(b) A proposed PAL level.

(c) The sum of the potential to emit of all emissions units under the PAL, with supporting documentation.

(d) Any other information the owner or operator wishes the department to consider in determining the appropriate level for renewing the PAL.

(4) PAL adjustment. In determining whether and how to adjust the PAL, the department shall consider the options outlined in Subparagraphs (a) and (b) of Paragraph (4) Subsection J of 20.11.61.20 NMAC. However, in no case may any such adjustment fail to comply with Subparagraph (c) of Paragraph 4 of Subsection J of 20.11.61.20 NMAC.

(a) If the emissions level calculated in accordance with Subsection F of 20.11.61.20 NMAC is equal to or greater than 80 percent of the PAL level, the department may renew the PAL at the same level without considering the factors set forth in Subparagraph (b) of Paragraph (4) of Subsection J of 20.11.61.20 NMAC; or

(b) the department may set the PAL at a level that it determines to be more representative of the source's baseline actual emissions, or that it determines to be appropriate considering air quality needs, advances in control technology, anticipated economic growth in the area, desire to reward or encourage the source's voluntary emissions reductions, or other factors as specifically identified by the department in its written rationale.

(c) Notwithstanding Subparagraphs (a) and (b) of Paragraph (4) of Subsection J of 20.11.61.20 NMAC:

(i) if the potential to emit of the major stationary source or GHG-only source is less than the PAL, the department shall adjust the PAL to a level no greater than the potential to emit of the source; and

(ii) the department shall not approve a renewed PAL level higher than the current PAL, unless the major stationary source or GHG-only source has complied with the provisions of Subsection K of 20.11.61.20 NMAC, *Increasing a PAL during the PAL effective period*.

(5) If the compliance date for a state or federal requirement that applies to the PAL source occurs during the PAL effective period, and if the department has not

already adjusted for such requirement, the PAL shall be adjusted at the time of PAL permit renewal or Title V permit renewal, whichever occurs first.

K. Increasing a PAL during the PAL effective period.

(1) The department may increase a PAL emission limitation only if the major stationary source or GHG-only source complies with the following provisions.

(a) The owner or operator of the major stationary source or GHG-only source shall submit a complete application to request an increase in the PAL limit for a PAL major modification. Such application shall identify the emissions unit(s) contributing to the increase in emissions so as to cause the major stationary or GHG-only source's emissions to equal or exceed its PAL.

(b) As part of this application, the major stationary source or GHG-only source owner or operator shall demonstrate that the sum of the baseline actual emissions of the small emissions units, plus the sum of the baseline actual emissions of the significant and major emissions units assuming application of BACT equivalent controls, plus the sum of the allowable emissions of the new or modified emissions unit(s), exceeds the PAL. The level of control that would result from BACT equivalent controls on each significant or major emissions unit shall be determined by conducting a new BACT analysis at the time the application is submitted, unless the emissions unit is currently required to comply with a BACT or LAER requirement that was established within the preceding 10 years. In such a case, the assumed control level for that emissions unit shall be equal to the level of BACT or LAER with which that emissions unit must currently comply.

(c) The owner or operator obtains a major NSR permit for all emissions unit(s) identified in Subparagraph (a) of Paragraph (1) of Subsection B of 20.11.61.20 NMAC, regardless of the magnitude of the emissions increase resulting from them, that is, no significant levels apply. These emissions unit(s) shall comply with any emissions requirements resulting from the major NSR process, for example, BACT, even though they have also become subject to the PAL or continue to be subject to the PAL.

(d) The PAL permit shall require that the increased PAL level shall be effective on the day any emissions unit that is part of the PAL major modification becomes operational and begins to emit the PAL pollutant.

(2) The department shall calculate the new PAL as the sum of the allowable emissions for each modified or new emissions unit, plus the sum of the baseline actual emissions of the significant and major emissions units (assuming application of BACT equivalent controls as determined in accordance with Subparagraph (b) of Paragraph (1) of Subsection K of 20.11.61.20 NMAC), plus the sum of the baseline actual emissions of the small emissions units.

(3) The PAL permit shall be revised to reflect the increased PAL level pursuant to the public notice requirements of Subsection E of 20.11.61.20 NMAC.

L. Monitoring requirements for PALs.

(1) General requirements.

(a) Each PAL permit must contain enforceable requirements for the monitoring system that accurately determines plantwide emissions of the PAL pollutant in terms of mass per unit of time *or CO₂ e per unit of time*. Any monitoring system authorized for use in the PAL permit must be based on sound science and meet generally acceptable scientific procedures for data quality and manipulation. Additionally, the information generated by such system must meet minimum legal requirements for admissibility in a judicial proceeding to enforce the PAL permit.

(b) The PAL monitoring system must employ one or more of the four general monitoring approaches meeting the minimum requirements set forth in Paragraph (2) of Subsection L of 20.11.61.20 NMAC and must be approved by the department.

(c) Notwithstanding Subparagraph (b) of Paragraph (1) of Subsection L of 20.11.61.20 NMAC, you may also employ an alternative monitoring approach that meets Subparagraph (a) of Paragraph (1) of Subsection L of 20.11.61.20 NMAC if approved by the department.

(d) Failure to use a monitoring system that meets the requirements of 20.11.61.20 NMAC renders the PAL invalid.

(2) Minimum performance requirements for approved monitoring approaches. The following are acceptable general monitoring approaches when conducted in accordance with the minimum requirements in Paragraphs (3) through (9) of Subsection L of 20.11.61.20 NMAC:

(a) mass balance calculations for activities using coatings or solvents;

(b) CEMS;

(c) CPMS or PEMS; and

(d) emission factors.

(3) Mass balance calculations. An owner or operator using mass balance calculations to monitor PAL pollutant emissions from activities using coating or solvents shall meet the following requirements:

(a) provide a demonstrated means of validating the published content of the PAL pollutant that is contained in or created by all materials used in or at the emissions unit;

(b) assume that the emissions unit emits all of the PAL pollutant that is contained in or created by any raw material or fuel used in or at the emissions unit, if it cannot otherwise be accounted for in the process; and

(c) where the vendor of a material or fuel, which is used in or at the emissions unit, publishes a range of pollutant content from such material, the owner or operator must use the highest value of the range to calculate the PAL pollutant emissions unless the department determines there is site-specific data or a site-specific monitoring program to support another content within the range.

(4) **CEMS.** An owner or operator using CEMS to monitor PAL pollutant emissions shall meet the following requirements:

(a) CEMS must comply with applicable performance specifications found in 40 CFR part 60, Appendix B; and

(b) CEMS must sample, analyze, and record data at least every 15 minutes while the emissions unit is operating.

(5) **CPMS or PEMS.** An owner or operator using CPMS or PEMS to monitor PAL pollutant emissions shall meet the following requirements:

(a) the CPMS or the PEMS must be based on current site-specific data demonstrating a correlation between the monitored parameter(s) and the PAL pollutant emissions across the range of operation of the emissions unit; and

(b) each CPMS or PEMS must sample, analyze, and record data at least every 15 minutes, or at another less frequent interval approved by the department, while the emissions unit is operating.

(6) **Emission factors.** An owner or operator using emission factors to monitor PAL pollutant emissions shall meet the following requirements:

(a) all emission factors shall be adjusted, if appropriate, to account for the degree of uncertainty or limitations in the factors' development;

(b) the emissions unit shall operate within the designated range of use for the emission factor, if applicable; and

(c) if technically practicable, the owner or operator of a significant emissions unit that relies on an emission factor to calculate PAL pollutant emissions shall conduct

validation testing to determine a site-specific emission factor within six months of PAL permit issuance, unless the department determines that testing is not required.

(7) A source owner or operator must record and report maximum potential emissions without considering enforceable emission limitations or operational restrictions for an emissions unit during any period of time that there is no monitoring data, unless another method for determining emissions during such periods is specified in the PAL permit.

(8) Notwithstanding the requirements in Paragraphs (3) through (7) of Subsection L of 20.11.61.20 NMAC, where an owner or operator of an emissions unit cannot demonstrate a correlation between the monitored parameter(s) and the PAL pollutant emissions rate at all operating points of the emissions unit, the department shall, at the time of permit issuance:

(a) establish default value(s) for determining compliance with the PAL based on the highest potential emissions reasonably estimated at such operating point(s); or

(b) determine that operation of the emissions unit during operating conditions when there is no correlation between monitored parameter(s) and the PAL pollutant emissions is a violation of the PAL.

(9) Revalidation. All data used to establish the PAL pollutant must be revalidated through performance testing or other scientifically valid means approved by the department. Such testing must occur at least once every five years after issuance of the PAL.

M. Recordkeeping requirements.

(1) The PAL permit shall require an owner or operator to retain a copy of all records necessary to determine compliance with any requirement of 20.11.61.20 NMAC and of the PAL, including a determination of each emissions unit's 12-month rolling total emissions, for five years from the date of such record.

(2) The PAL permit shall require an owner or operator to retain a copy of the following records, for the duration of the PAL effective period plus five years:

(a) a copy of the PAL permit application and any applications for revisions to the PAL; and

(b) each annual certification of compliance pursuant to 20.11.42 NMAC, *Operating Permits*, and the data relied on in certifying the compliance.

N. Reporting and notification requirements. The owner or operator shall submit semi-annual monitoring reports and prompt deviation reports to the department in

accordance with 20.11.42 NMAC, *Operating Permits*. The reports shall meet the following requirements.

(1) Semi-annual report. The semi-annual report shall be submitted to the department within 30 days of the end of each reporting period. This report shall contain the following information.

(a) The identification of owner and operator and the permit number.

(b) Total annual emissions (expressed on a mass-basis in tons/year, or expressed in tpy CO₂ e) based on a 12-month rolling total for each month in the reporting period recorded pursuant to Paragraph (1) of Subsection M of 20.11.61.20 NMAC.

(c) All data relied upon, including, but not limited to, any quality assurance or quality control data, in calculating the monthly and annual PAL pollutant emissions.

(d) A list of any emissions units modified or added to the major stationary source or GHG-only source during the preceding six-month period.

(e) The number, duration, and cause of any deviations or monitoring malfunctions (other than the time associated with zero and span calibration checks), and any corrective action taken.

(f) A notification of a shutdown of any monitoring system, whether the shutdown was permanent or temporary, the reason for the shutdown, the anticipated date that the monitoring system will be fully operational or replaced with another monitoring system, and whether the emissions unit monitored by the monitoring system continued to operate, and the calculation of the emissions of the pollutant or the number determined by method included in the permit, as provided by Paragraph (7) of Subsection L of 20.11.61.20 NMAC.

(g) A signed statement by the responsible official as defined by 20.11.42.7 NMAC certifying the truth, accuracy, and completeness of the information provided in the report.

(2) Deviation report. The major stationary source or GHG-only source owner or operator shall promptly submit reports of any deviations or exceedance of the PAL requirements, including periods where no monitoring is available. A report submitted pursuant to 40 CFR 70.6(a)(3)(iii)(B) shall satisfy this reporting requirement. The deviation reports shall be submitted within the time limits prescribed by the applicable program implementing 40 CFR 70.6(a)(3)(iii)(B). The reports shall contain the following information:

(a) the identification of owner and operator and the permit number;

(b) the PAL requirement that experienced the deviation or that was exceeded;

(c) emissions resulting from the deviation or the exceedance; and

(d) a signed statement by the responsible official as defined by 20.11.42.7 NMAC certifying the truth, accuracy, and completeness of the information provided in the report.

(3) Revalidation results. The owner or operator shall submit to the department the results of any revalidation test or method within three months after completion of such test or method.

O. Transition requirements.

(1) The department may not issue a PAL that does not comply with the requirements of Subsections A through O of 20.11.61.20 NMAC after March 3, 2003.

(2) The department may supersede any PAL which was established prior to March 3, 2003 with a PAL that complies with the requirements of Subsections A through O of 20.11.61.20 NMAC.

[20.11.61.20 NMAC - N, 1/23/06; A, 8/30/10; A, 1/10/11; A, 5/13/13]

20.11.61.21 PUBLIC PARTICIPATION AND NOTIFICATION:

A. The department shall, within 30 days after receipt of an application, review such application and determine whether it is administratively complete or there is any deficiency in the application or information submitted. To be deemed administratively complete, the application must meet the requirements of 20.11.61.13 NMAC in addition to the requirements of 20.11.41 NMAC. If the application is deemed:

(1) administratively complete, a letter to that effect shall be sent by certified mail to the applicant;

(2) administratively incomplete, a letter shall be sent by certified mail to the applicant stating what additional information or points of clarification are necessary to deem the application administratively complete; upon receipt of the additional information or clarification, the department shall promptly review such information and determine whether the application is administratively complete;

(3) administratively complete but no permit is required, a letter shall be sent by certified mail to the applicant informing the applicant of the determination.

B. For purposes of determining minor source baseline date pursuant to 40 CFR 51:

(1) an application is complete when it contains all the information necessary for processing the application; designating an application complete for purposes of 40 CFR 51 does not preclude the department from requesting or accepting any additional information; and

(2) in the event that additional information is submitted to remedy any deficiency in the application or information submitted, the date of receipt of the application shall be the date on which the department received all required information.

C. Within one year after receipt of a complete application, the department shall:

(1) Make a preliminary determination whether construction should be approved, approved with conditions, or disapproved.

(2) Make available at the department district and local office nearest to the proposed source a copy of all materials the applicant submitted, a copy of the preliminary determination, and a copy or summary of other materials, if any, considered in making the preliminary determination.

(3) Notify the public by advertisement in a newspaper of general circulation in the area in which the proposed source would be constructed:

(a) of the application;

(b) the preliminary determination;

(c) the degree of increment consumption that is expected from the source or modification; and

(d) of the opportunity for comment at a public hearing as well as written public comment; the public comment period shall be for 30 days from the date of such advertisement.

(4) Send a copy of the notice of public comment to:

(a) the applicant;

(b) the administrator; and

(c) officials and agencies having jurisdiction over the location where the proposed construction would occur as follows: any other state or local air pollution control agencies; the chief executives of the city and county where the source would be located; any comprehensive regional land use planning agency; and any state, federal land manager, or Indian governing body whose lands may be affected by emissions from the source or modification.

(5) Provide opportunity for a public hearing for interested persons to appear and submit written or oral comments on the air quality impact of the source, alternatives to it, the control technology required, and other appropriate considerations.

(6) Consider all written comments submitted within a time specified in the notice of public comment and all comments received at any public hearing(s) in making a final decision on the approvability of the application. The department shall make all comments available for public inspection in the same locations where the department made available preconstruction information relating to the proposed source or modification.

(7) Within 180 days after an application is deemed administratively complete, unless the director grants an extension not to exceed 90 days for good cause:

(a) make a final determination of whether construction should be approved, approved with conditions, or disapproved; and

(b) notify the applicant in writing of the final determination and make such notification available for public inspection at the same location where the department made available preconstruction information and public comments relating to the source.

[20.11.61.21 NMAC - N, 1/23/06; A, 8/30/10]

20.11.61.22 STACK HEIGHT CREDIT:

The department shall review all applications in accordance with the provisions of 20.11.43 NMAC, *Stack Heights Requirements*.

[20.11.61.22 NMAC - Rp, 20.11.61.19 NMAC, 1/23/06]

20.11.61.23 EXCLUSIONS FROM INCREMENT CONSUMPTION:

A. Following a public hearing, the director may exclude the following concentrations in determining compliance with a maximum allowable increase:

(1) concentrations attributable to the increase in emissions from stationary sources which have converted from the use of petroleum products, natural gas, or both by reason of an order in effect under Section 2 (a) and (b) of the Energy Supply and Environmental Coordination Act of 1974 (or any superseding legislation), over the emissions from such sources before the effective date of such an order;

(2) concentrations attributable to the increase in emissions from sources which have converted from using natural gas by reason of natural gas curtailment plan in effect pursuant to the Federal Power Act, over the emissions from such sources before the effective date of such plan;

(3) concentrations of particulate matter attributable to the increase in emissions from construction or other temporary emission-related activities of new or modified sources;

(4) the increase in concentrations attributable to new sources outside the United States over the concentrations attributable to existing sources which are included in the baseline concentration; and

(5) concentrations attributable to the temporary increase in emissions of sulfur dioxide, particulate matter, or nitrogen oxides from stationary sources which are affected by plan revisions approved by the administrator as meeting the criteria specified in Subsection D of 20.11.61.23 NMAC.

B. If the plan provides that the concentrations to which Paragraph (1) or (2) of Subsection A of 20.11.61.23 NMAC refers, shall be excluded, it shall also provide that no exclusion of such concentrations shall apply more than five years after the effective date of the order to which Paragraph (1) of Subsection A of 20.11.61.23 NMAC refers, or the plan to which Paragraph (2) of Subsection A of 20.11.61.23 NMAC refers, whichever is applicable. If both such order and plan are applicable, no such exclusion shall apply more than five years after the later of such effective dates.

C. [RESERVED]

D. For purposes of excluding concentrations pursuant to Paragraph (5) of Subsection A of 20.11.61.23 NMAC, the administrator may approve a plan revision that:

(1) specifies the time over which the temporary emissions increase of sulfur dioxide, particulate matter, or nitrogen oxides would occur such time is not to exceed 2 years in duration unless a longer time is approved by the administrator;

(2) specifies that the time period for excluding certain contributions in accordance with Paragraph (1) of Subsection D of 20.11.61.23 NMAC, is not renewable;

(3) allows no emissions increase from a stationary source which would:

(a) impact a class I area or an area where an applicable increment is known to be violated; or

(b) cause or contribute to the violation of a NAAQS;

(4) requires limitations to be in effect the end of the time period specified in accordance with Paragraph (1) of Subsection D of 20.11.61.23 NMAC, which would ensure that the emissions levels from stationary sources affected by the plan revision would not exceed those levels occurring from such sources before the plan revision was approved.

[20.11.61.23 NMAC - Rp, 20.11.61.21 NMAC, 1/23/06; A, 8/30/10; A, 5/13/13]

20.11.61.24 SOURCES IMPACTING FEDERAL CLASS I AREAS - ADDITIONAL REQUIREMENTS:

A. Notice to EPA. The department shall transmit to the administrator and the federal land manager a copy of each permit application relating to a major stationary source or major modification proposing to locate within 100 kilometers of any federal class I area. The complete permit application shall be transmitted within 30 days of receipt and 60 days prior to any public hearing on the application. The department shall include all relevant information in the permit application. Relevant information shall include an analysis of the proposed source's anticipated impacts on visibility in the federal class I area. The department shall consult with all affected federal land managers as to the completeness of the permit application and shall consider any analysis performed by the federal land manager concerning the impact of the proposed major stationary source or major modification on AQRV. This consideration shall include visibility, if such analysis is received within 30 days after the federal land manager receives a copy of the complete application. Additionally, the department shall notify any affected federal land manager within 30 days from the date the department receives a request for a pre-application meeting from a proposed source subject to 20.11.61 NMAC. Notice shall be provided to the administrator and federal land manager of every action related to the consideration of such permit. The department shall also provide the federal land manager and the administrator with a copy of the preliminary determination required under 20.11.61.21 NMAC and shall make available to them any materials used in making that determination. In any case where the department disagrees with the federal land manager's analysis of source impact on AQRV, the department shall, either explain its decision or give notice to the federal land manager as to where the explanation can be obtained. In the case where the department disagrees with the federal land manager's analysis, the department will also explain its decision or give notice to the public by advertisement in a newspaper of general circulation in the area in which the proposed source would be constructed, as to where the decision can be obtained.

B. The department shall transmit to air quality control agencies of neighboring states and Indian governing bodies a copy of each permit application having the potential to affect federal class I areas or increment consumption in areas under their jurisdiction. The department shall also provide the affected air quality control agencies and Indian governing bodies with a copy of the preliminary determination required under 20.11.61.21 NMAC and shall make available to them any materials used in making that determination. The department shall include a provision for a 60 day comment period for the federal land managers before any public hearing on a permit application is held.

C. Denial - impact on AQRV: The federal land manager of any such lands may demonstrate to the department that the emissions from a proposed source or modification would have an adverse impact on the AQRV (including visibility), of those lands, notwithstanding that the change in air quality resulting from emissions from such

proposed source or modification would not cause or contribute to concentrations which would exceed the maximum allowable increases for a federal class I area. If the department concurs with such demonstration, then the source shall not be issued a permit.

D. Class I waivers: The owner or operator of a proposed source or modification may demonstrate to the federal land manager that the emissions from such proposed source or modification would have no adverse impact on the AQRV of any such lands (including visibility), notwithstanding that the change in air quality resulting from emissions from such source or modification would cause or contribute to concentrations which would exceed the maximum allowable increases for a federal class I area. If the federal land manager concurs with such demonstration and so certifies to the department, the department may: *provided*, that the applicable requirements are otherwise met, issue the permit with such emission limitations as may be necessary to assure that emissions of sulfur dioxide, PM_{2.5}, PM₁₀ and oxides of nitrogen would not exceed the maximum allowable increases over minor source baseline concentrations for such pollutants, as shown in Table 5 of 20.11.61.30 NMAC.

E. For the case where the federal land manager does not perform an impact analysis with respect to visibility impairment in a federal class I area, the department may perform such an analysis. The department shall not issue the source a permit if the department determines that an adverse impact on visibility would occur. The adverse impact must be due, primarily, to the operation of the proposed source or modification.

F. Sulfur dioxide waiver by governor with FLM concurrence: The owner or operator of a proposed major stationary source or major modification, which cannot be approved under Subsection D of 20.11.61.24 NMAC, may demonstrate to the governor that the source or modification cannot be constructed by reason of any maximum allowable increase for sulfur dioxide for a period of 24 hours or less applicable to any class I area and, in the case of federal mandatory class I areas, that a waiver from this requirement would not adversely affect the AQRV of the area (including visibility). The governor, after consideration of the federal land manager's recommendation (if any) and subject to his concurrence, may, after notice and public hearing, grant a waiver from such maximum allowable increase. If the waiver is granted, the department shall issue a permit to the owner or operator of the source or modification. Any owner or operator of a source or modification who obtains a permit under 20.11.61 NMAC shall comply with sulfur dioxide emissions limitations. These limitations do not allow increases of ambient concentrations, above the baseline concentration, to exceed the levels found in Table 6 of 20.11.61.31 NMAC for periods of 24 hours or less for more than 18 days, not necessarily consecutive, in any annual period.

G. Sulfur dioxide waiver by governor with the president's concurrence. In any case where the governor recommends a waiver in which the federal land manager does not concur, the recommendations of the governor and the federal land manager shall be transmitted to the president through the office of the governor. The president may approve the governor's recommendation if he finds that the waiver is in the national

interest. If the waiver is approved, the department shall issue the permit. Any source or modification that obtains a permit under 20.11.61 NMAC shall comply with sulfur dioxide emissions limitations. These limitations do not allow increases in ambient concentrations, above the baseline concentration, to exceed the levels found in Table 6 of 20.11.61.31 NMAC for periods of 24 hours or less for more than 18 days, not necessarily consecutive, in any annual period.

[20.11.61.24 NMAC - Rp, 20.11.61.22 NMAC, 1/23/06; A, 8/30/10; A, 5/13/13]

20.11.61.25 RESTRICTIONS ON AREA CLASSIFICATIONS:

A. Mandatory federal class I areas:

(1) All of the following areas which were in existence on August 7, 1977, shall be class I areas and may not be redesignated:

- (a)** international parks (all of them);
- (b)** national wilderness areas which exceed 5,000 acres in size;
- (c)** national memorial parks which exceed 5,000 acres in size; and
- (d)** national parks which exceed 6,000 acres in size.

(2) Specifically for New Mexico, these areas are:

- (a)** Bandelier wilderness, administered by national park service (NPS);
- (b)** Bosque del Apache wilderness, administered by national fish and wildlife service (NFWS);
- (c)** Carlsbad caverns national park, administered by NPS;
- (d)** Gila wilderness, administered by national forest service (NFS);
- (e)** Pecos wilderness, administered by NFS;
- (f)** Salt Creek wilderness, administered by NFWS;
- (g)** San Pedro Parks wilderness, administered by NFS;
- (h)** Wheeler Peak wilderness, administered by NFS; and
- (i)** White Mountain wilderness, administered by NFS.

B. Areas which may be redesignated only as class I or class II:

(1) The following areas may be redesignated only as class I or II:

(a) an area which, as of August 7, 1977, exceeded 10,000 acres in size and was a national monument, national primitive area, national preserve, national recreational area, national wild and scenic river, national wildlife refuge; and

(b) a national park or national wilderness area established after August 7, 1977 which exceeds 10,000 acres in size.

(2) Specifically for New Mexico, these areas include (but are not necessarily limited to):

(a) Apache Kid wilderness, administered by national forest service (NFS);

(b) Bandelier national monument, administered by national park service (NPS);

(c) Bitter Lake national wildlife refuge, administered by national fish and wildlife service (NFWS);

(d) Blue Range wilderness, administered by NFS;

(e) Bosque del Apache national wildlife refuge, administered by NFWS;

(f) Capitan mountains wilderness, administered by NFS;

(g) Cebolla wilderness, administered by bureau of land management (BLM);

(h) Chama River Canyon wilderness, administered by NFS;

(i) Cruces Basin wilderness, administered by NFS;

(j) De-na-zin wilderness, administered by BLM;

(k) El Malpais national monument, administered by NPS;

(l) Latir Peak wilderness, administered by NFS;

(m) Manzano mountain wilderness, administered by NFS;

(n) San Andres national wildlife refuge, administered by NFWS;

(o) Sandia Mountain wilderness, administered by NFS;

(p) Sevilleta national wildlife refuge, administered by NFWS;

(q) West Malpais wilderness, administered by BLM;

(r) White Sands national monument, administered by NPS; and

(s) Withington Wilderness, administered by NFS.

20.11.61.26 TABLE 1 - PSD SOURCE CATEGORIES:

A. Carbon black plants (furnace process).

B. Charcoal production plants.

C. Chemical process plants (the term chemical processing plant shall not include ethanol production facilities that produce ethanol by natural fermentation included in NAICS Codes 325193 or 312140).

D. Coal cleaning plants (with thermal dryers).

E. Coke oven batteries.

F. Fossil fuel boilers (or combinations thereof) totaling more than 250 million BTU/hr heat input.

G. Fossil fuel-fired steam electric plants of more than 250 million BTU/hr heat input.

H. Fuel conversion plants.

I. Glass fiber processing plants.

J. Hydrofluoric acid plants.

K. Iron and steel mills.

L. Kraft pulp mills.

M. Lime plants.

N. Municipal incinerators capable of charging more than 250 tons of refuse per day.

O. Nitric acid plants.

P. Petroleum refineries.

Q. Petroleum storage and transfer units with a total storage capacity exceeding 300,000 barrels.

R. Phosphate rock processing plants.

S. Portland cement plants.

T. Primary aluminum ore reduction plants.

U. Primary copper smelters.

V. Primary lead smelters.

W. Primary zinc smelters.

X. Secondary metal production plants.

Y. Sintering plants.

Z. Sulfur recovery plants.

AA. Sulfuric acid plants.

BB. Taconite ore processing plants.

20.11.61.27 TABLE 2 - SIGNIFICANT EMISSION RATES:

POLLUTANT	EMISSION RATE (TONS/YR)
Carbon monoxide	100
Fluorides	3
Lead	0.6
Municipal waste combustor:	
Acid gases (measured as sulfur dioxide and hydrogen chloride)	40 (36 megagrams/year)
Metals (measured as particulate matter)	15 (14 megagrams/year)
Organics (measured as total tetra- through octa-chlorinated dibenzo-p-dioxins and dibenzofurans)	0.0000035 (0.0000032 megagrams/yr)
Municipal solid waste landfill emissions (measured as NMOC)	50 (45 megagrams/year)
Nitrogen oxides	40
Ozone	40 VOC or NOx
Particulate Matter:	
Particulate matter emissions	25

	PM ₁₀ emissions	15
	PM _{2.5} emissions	10 tpy of direct PM _{2.5} emissions; 40 tpy of sulfur dioxide emissions; 40 tpy of nitrogen oxide emissions unless demonstrated not to be a PM _{2.5} precursor under Subsection WW of 20.11.61.7 NMAC
Sulfur compounds		
	Hydrogen sulfide (H ₂ S)	10
	Reduced sulfur compounds (incl. H ₂ S)	10
	Sulfur dioxide	40
	Sulfuric acid mist	7
	Total reduced sulfur (incl. H ₂ S)	10
Any other regulated NSR pollutant that is not listed in this table		Any emission rate
Each regulated pollutant		Emission rate or net emissions increase associated with a major stationary source or major modification that causes an air quality impact of one microgram per cubic meter or greater (24-hr average) in any Class I Federal area located within 10 km of the source.

[20.11.61.27 NMAC - Rp, 20.11.61.24 NMAC, 1/23/06; A, 8/30/10; A, 1/10/11; A, 5/13/13]

20.11.61.28 TABLE 3 - SIGNIFICANT MONITORING CONCENTRATIONS:

POLLUTANT	AIR QUALITY CONCENTRATION	AVERAGING TIME
	micrograms per cubic meter (µg/m ³)	
Carbon monoxide	575	8 hours
Fluorides	0.25	24 hours
Lead	0.1	3 months
Nitrogen dioxide	14	Annual
Ozone	b	

Particulate matter (PM ₁₀)	10	24 hours
Sulfur compounds		
Hydrogen sulfide (H ₂ S)	0.20	1 hour
Reduced sulfur compounds (incl. H ₂ S)	10	1 hour
Sulfur dioxide	13	24 hours
Sulfuric acid mist	a	
Total reduced sulfur (incl. H ₂ S)	10	1 hour
<p>a - No acceptable monitoring techniques available at this time. Therefore, monitoring is not required until acceptable techniques are available.</p> <p>b - No <i>de minimis</i> air quality level is provided for ozone. However, any net emissions increase of 100 tons per year or more of volatile organic compounds or nitrogen oxides subject to PSD would be required to perform an ambient impact analysis, including the gathering of ambient air quality data.</p>

PART 62: ACID RAIN

20.11.62.1 ISSUING AGENCY:

Albuquerque/Bernalillo County Air Quality Control Board. P.O. Box 1293, Albuquerque, NM 87103. Telephone: (505) 768-2600.

[1/1/96; 20.11.62.1 NMAC – Rn, 20 NMAC 11.62.I.1, 10/1/02]

20.11.62.2 SCOPE:

A. This part is applicable to sources affected by the Federal Acid Rain Program. These requirements herein are to be implemented through the Acid Rain Portion of the operating permit.

B. Exempt: This Part does not apply to sources within Bernalillo County, which are located on Indian lands over which the Albuquerque/Bernalillo County Air Quality Control lacks jurisdiction.

[1/1/96; 20.11.62.2 NMAC – Rn, 20 NMAC 11.62.I.2, 10/1/02]

20.11.62.3 STATUTORY AUTHORITY:

This Part is adopted pursuant to the authority provided in the New Mexico Air Quality Control Act, NMSA 1978 Sections 74-2-4, 74-2-5.C; the Joint Air Quality Control Board Ordinance, Bernalillo County Ordinance 94-5 Section 4; and the Joint Air Quality Control Board Ordinance, Revised Ordinances of Albuquerque 1994 Section 9-5-1-4.

[1/1/96; 20.11.62.3 NMAC – Rn, 20 NMAC 11.62.I.3, 10/1/02]

20.11.62.4 DURATION:

Permanent.

[1/1/96; 20.11.62.4 NMAC – Rn, 20 NMAC 11.62.I.4, 10/1/02]

20.11.62.5 EFFECTIVE DATE:

January 1, 1996, unless a later date is cited at the end of a section.

[1/1/96; 20.11.62.5 NMAC – Rn, 20 NMAC 11.62.I.5 & A, 10/1/02]

20.11.62.6 OBJECTIVE:

The objective of this Part is to establish permitting required by 40 CFR Part 72, and to fulfill state requirements that accommodate the implementation of the Federal Acid Rain Program, which is designed to control acid deposition at the national level.

[1/1/96; 20.11.62.6 NMAC – Rn, 20 NMAC 11.62.I.6, 10/1/02]

20.11.62.7 DEFINITIONS:

The terms used in this Part shall have the meanings set forth in Title IV of the Clean Air Act, 42 U.S.C 7401, et seq. as amended by the Clean Air Act Amendments of 1990, 42 U.S.C. 7651, et seq. (November 15 1990). In addition to the definitions in 20.11.62.7 NMAC the definitions in 20.11.1 NMAC apply unless there is a conflict between definitions, in which case the definition in this Part shall govern.

A. "Acid Rain Compliance Option" means one of the methods of compliance used by an affected unit under the Acid Rain Program as described in a compliance

plan submitted and approved in accordance 20.11.62.15 NMAC or regulations implementing 40 CFR Part 76.

B. "Acid Rain Emissions Limitation" means:

(1) For the purposes of sulfur dioxide emissions:

(a) the tonnage equivalent of the basic Phase II allowance allocations authorized to be allocated to an affected unit for use in a calendar year,

(b) as adjusted:

(i) by allowances allocated by the EPA pursuant to Section 403, Section 405 (a)(2), (a)(3), (b)(2), (c)(4), (d)(3), and (h)(2), and Section 406 of the Act,

(ii) by allowances allocated by the EPA pursuant to 40 CFR Part 72 Subpart D, and thereafter

(iii) by allowance transfers to or from the compliance sub-account for that unit that were recorded or properly submitted for recordation by the allowance transfer deadline as provided in 40 CFR 73.35, after deductions and other adjustments are made pursuant to 40 CFR 73.34(c).

(2) For purposes of nitrogen oxides emissions, the applicable limitation established by regulations promulgated by the EPA pursuant to 40 CFR Part 76, as modified by an Acid Rain permit application submitted to the Department, and an Acid Rain permit issued by the Department, in accordance with regulations implementing 40 CFR Part 76.

C. "Acid Rain Emissions Reduction Requirement" means a requirement under the Acid Rain Program to reduce the emissions of sulfur dioxide or nitrogen oxides from a unit to a specified level or by a specified percentage.

D. "Acid Rain Permit or Permit" means the legally binding written document, or portion of such document, issued by the Department (following an opportunity for appeal pursuant to 40 CFR Part 78 or local ordinance ROA 1994 Section 9-5-1-7), including any permit revisions, specifying the Acid Rain Program requirements applicable to an affected source, to each affected unit at an affected source, and to the owners and operators and the designated representative of the affected source or the affected unit.

E. "Acid Rain Program" means the national sulfur dioxide and nitrogen oxides air pollution control and emissions reduction program established in accordance with Title IV of the Act, this Part, 40 CFR Parts 72, 73, 74, 75, 76, 77, and 78.

F. "Act" means the Clean Air Act, 42 U.S.C. 7401, et seq. as amended by Public Law No. 101-549 (November 15, 1990).

G. "Actual SO₂ Emissions rate" means the annual average sulfur dioxide emissions rate for the unit (expressed in lb/mmBtu), for the specified calendar year; provided that, if the unit is listed in the NADB, the "1985 actual SO₂ emissions rate " for the unit shall be the rate specified by the Administrator in the NADB under the data field "SO₂ RTE."

H. "Affected Source" means a source that includes one or more affected units.

I. "Affected Unit" means a unit that is subject to any Acid Rain emissions reduction requirement or Acid Rain emissions limitation.

J. "Affiliate" shall have the meaning set forth in Section 2(a)(11) of the Public Utility Holding Company Act of 1935, 15 U.S.C. 79b(a)(11), as of November 15, 1990.

K. "Allocate or Allocation" means the initial crediting of an allowance by the EPA to an ATS unit account or general account.

L. "Allowance" means an authorization by the EPA under the Acid Rain Program to emit up to one ton of sulfur dioxide during or after a specified calendar year.

M. "Allowance Deduction or Deduct When Referring to Allowances" means the permanent withdrawal of allowances by the EPA from an ATS compliance sub-account to account for the number of the tons of SO₂ emissions from an affected unit for the calendar year, for tonnage emissions estimates calculated for periods of missing data as provided in 40 CFR Part 75, or for any other allowance surrender obligations of the Acid Rain Program.

N. "Allowances Held or Hold Allowances" means the allowances recorded by the EPA, or submitted to the EPA for recordation in accordance with 40 CFR 73.50, in an ATS account.

O. "Allowances Tracking System or ATS" means the Acid Rain Program system by which the EPA allocates, records, deducts, and tracks allowances.

P. "Allowance Tracking System Account" means an account in the ATS established by the EPA for purposes of allocating, holding, transferring, and using allowances.

Q. "Allowance Transfer Deadline" means midnight of January 30 or, if January 30 is not a business day, midnight of the first business day thereafter and is the deadline by which allowances may be submitted for recordation in an affected unit's compliance sub-account for the purposes of meeting the unit's Acid Rain emissions limitation requirements for sulfur dioxide for the previous calendar year.

R. "Authorized Account Representative" means a responsible natural person who is authorized, in accordance with 40 CFR Part 73, to transfer and otherwise dispose of allowances held in an ATS general account; or, in the case of a unit account, the designated representative of the owners and operators of the affected unit.

S. "Basic Phase II Allowance Allocations" means:

(1) for calendar years 2000 through 2009 inclusive, allocations of allowances made by the EPA pursuant to Section 403 and Section 405 (b)(1), (3), and (4); (c)(1), (2), (3), and (5); (d)(1), (2), (4), and (5); (e); (f); (g)(1), (2), (3), (4), and (5); (h)(1); (i); and (j) of the Act,

(2) For each calendar year beginning in 2010, allocations of allowances made by the EPA pursuant to Section 403 and Section 405 (b)(1), (3), and (4); (c)(1), (2), (3), and (5); (d)(1), (2), (4), and (5); (e); (f); (g)(1), (2), (3), (4), and (5); (h)(1) and (3); (i); and (j) of the Act.

T. "Boiler" means an enclosed fossil or other fuel-fired combustion device used to produce heat and to transfer heat to recirculating water, steam, or any other medium.

U. "Certificate of Representation" means the completed and signed submission required by 40 CFR 72.20, for certifying the appointment of a designated representative for an affected source or a group of identified affected sources authorized to represent the owners and operators of such source(s) and of the affected units at such source(s) with regard to matters under the Acid Rain Program.

V. "Certifying Official" means:

(1) for a corporation, a president, secretary, treasurer, or vice-president of the corporation in charge of a principal business function, or any other person who performs similar policy or decision-making functions for the corporation,

(2) for partnership or sole proprietorship, a general partner or the proprietor, respectively, and

(3) for a local government entity or State, federal, or other public agency, either a principal executive officer or ranking elected official.

W. "Coal" means all solid fuels classified as anthracite, bituminous, sub-bituminous, or lignite by the American Society for Testing and Materials Designation ASTM D388-92 "Standard Classification of Coals by Rank."

X. "Coal Derived Fuel" means any fuel, whether in a solid, liquid, or gaseous state, produced by the mechanical, thermal, or chemical processing of coal (e.g., pulverized coal, coal refuse, liquefied or gasified coal, washed coal, chemically cleaned coal, coal-oil mixtures, and coke).

Y. "Coal-Fired" means the combustion of fuel consisting of coal or any coal-derived fuel (except a coal-derived gaseous fuel with a sulfur content no greater than natural gas), alone or in combination with any other fuel, where a unit is "coal-fired" if it uses coal or coal-derived fuel as its primary fuel (expressed in mmBtu); provided that, if the unit is listed in the NADB, the primary fuel is the fuel listed in the NADB under the data field "PRIMEFUEL".

Z. "Cogeneration Unit" means a unit that has equipment used to produce electric energy and forms of useful thermal energy (such as heat or steam) for industrial, commercial, heating or cooling purposes, through the sequential use of energy.

AA. "Commence Commercial Operation" means to have begun to generate electricity for sale, including the sale of test generation.

BB. "Commence Construction" means that an owner or operator has either undertaken a continuous program of construction or has entered into a contractual obligation to undertake and complete, within a reasonable time, a continuous program of construction.

CC. "Commence Operation" means to have begun any mechanical, chemical, or electronic process, including start-up of an emissions control technology or emissions monitor or of a unit's combustion chamber.

DD. "Common Stack" means the exhaust of emissions from two or more units through a single flue.

EE. "Compliance Certification" means a submission to the EPA or the Department that is required by this Part, by 40 CFR Part 72, 73, 74, 75, 76, 77, or 78 to report an affected source or an affected unit's compliance or non-compliance with a provision of the Acid Rain Program and that is signed and verified by the designated representative in accordance with 20.11.62.19 NMAC, 40 CFR Part 72 Subpart B, and the Acid Rain Program regulations generally.

FF. "Compliance Plan, For Purposes of the Acid Rain Program" means the document submitted for an affected source in accordance with Subsections A and B of 20.11.62.14NMAC specifying the method(s) (including one or more Acid Rain compliance options under R-402 or 40 CFR Part 76) by which each affected unit at the source will meet the applicable Acid Rain emissions limitation and Acid Rain emissions reduction requirements.

GG. "Compliance Sub-account" means the sub-account in an affected unit's Allowance Tracking System account, established pursuant to 40 CFR 73.31 (a) or (b), in which are held, from the date that allowances for the current calendar year are recorded under 40 CFR 73.34(a) until December 31, allowances available for use by the unit in the current calendar year and, after December 31 until the date that deductions are made under 40 CFR 73.35(b), allowances available for use by the unit in the preceding

calendar year, for the purpose of meeting the unit's Acid Rain emissions limitation for sulfur dioxide.

HH. "Compliance Use Date" means the first calendar year for which an allowance may be used for purposes of meeting a unit's Acid Rain emissions limitation for sulfur dioxide.

II. "Construction" means fabrication, erection, or installation of a unit or any portion of a unit.

JJ. "Designated Representative" means a responsible natural person authorized by the owners and operators of an affected source and of all affected units at the source, as evidenced by a certificate of representation submitted in accordance with subpart B of 40 CFR Part 72, to represent and legally bind each owner and operator, as a matter of federal law, in matters pertaining to the Acid Rain Program. Whenever the term "responsible official" is used in 40 CFR Part 70 or in any other regulations implementing Title V of the Act, it shall be deemed to refer to the "designated representative" with regard to all matters under the Acid Rain Program.

KK. "Diesel Fuel" means a low sulfur fuel oil of grades 1-D or 2-D, as defined by the American Society for Testing and Materials ASTM D975-91, "Standard Specification for Diesel Fuel Oils."

LL. "Direct Public Utility Ownership" means direct ownership of equipment and facilities by one or more corporations, the principal business of which is sale of electricity to the public at retail. Percentage ownership of such equipment and facilities shall be measured on the basis of book value.

MM. "Draft Acid Rain Permit or Draft Permit" means the version of the Acid Rain permit, or the Acid Rain portion of an operating permit, that the Department offers for public comment.

NN. "Emissions" means air pollutants exhausted from a unit or source into the atmosphere, as measured, recorded, and reported to the EPA by the designated representative and as determined by the EPA, in accordance with the emissions monitoring requirements of 40 CFR Part 75.

OO. "Excess Emissions" means:

(1) any tonnage of sulfur dioxide emitted by an affected unit during a calendar year that exceeds the Acid Rain emissions limitation for sulfur dioxide for the unit, and

(2) any tonnage of nitrogen oxide emitted by an affected unit during a calendar year that exceeds the annual tonnage equivalent of the Acid Rain emissions limitation for nitrogen oxides applicable to the affected unit taking into account the unit's heat input for the year.

PP. "Existing Unit" means a unit (including a unit subject to Section 111 of the Act) that commenced commercial operation before November 15, 1990 and that on or after November 15, 1990 served a generator with a nameplate capacity of greater than 25 MWe. "Existing unit" does not include simple combustion turbines or any unit that on or after November 15, 1990 served only generators with a nameplate capacity of 25 MWe or less. Any "existing unit" that is modified, reconstructed, or repowered after November 15, 1990 shall continue to be an "existing unit".

QQ. "Facility" means any institutional, commercial, or industrial structure, installation, plant, source, or building.

RR. "Fossil Fuel" means natural gas, petroleum, coal, or any form of solid, liquid, or gaseous fuel derived from such material.

SS. "Fossil Fuel-Fired" means the combustion of fossil fuel or any derivative of fossil fuel, alone or in combination with any other fuel, independent of the percentage of fossil fuel consumed in any calendar year.

TT. "Fuel Oil" means any petroleum-based fuel (including diesel fuel or petroleum derivatives such as oil tar) as defined by the American Society for Testing and Materials in ASTM D396-90a, "Standard Specification for Fuel Oils," and any recycled or blended petroleum products or petroleum by-products used as a fuel whether in a liquid, solid or gaseous state.

UU. "Gas-Fired" means the combustion of natural gas, or a coal-derived gaseous fuel with a sulfur content no greater than natural gas, for at least 90 percent of the average annual heat input during the previous three calendar years and for at least 85 percent of the annual heat input in each of those calendar years; and any fuel other than coal or any other coal-derived fuel for the remaining heat input, if any.

VV. "General Account" means an ATS account that is not a unit account.

WW. "Generator" means a device that produces electricity and was or would have been required to be reported as a generating unit pursuant to the United States Department of Energy Form 860 (1990 edition).

XX. "Generator Output Capacity" means the full-load continuous rating of a generator under specific conditions as designed by the manufacturer.

YY. "Heat Input" means the product (expressed in mmBtu/time) of the gross calorific value of the fuel (expressed in Btu/lb) and the fuel feed rate into the combustion device (expressed in mass of fuel/time) and does not include the heat derived from preheated combustion air, recirculated flue gases, or exhaust from other sources.

ZZ. "Independent Power Production Facility (IPP)" means a source that:

(1) is non-recourse project financed, as defined by the Secretary of Energy at 10 CFR Part 715,

(2) is used for the generation of electricity, eighty percent or more of which is sold at wholesale, and

(3) is a new unit required to hold allowances under Title IV of the Act,

(4) provided that direct public utility ownership of the equipment comprising the facility does not exceed 50 percent.

AAA. "Life-of-the-Unit, Firm Power Contractual Arrangement" means a unit participation power sales agreement under which a utility or industrial customer reserves, or is entitled to receive, a specified amount or percentage of nameplate capacity and associated energy generated by any specified generating unit and pays its proportional amount of such unit's total costs, pursuant to a contract:

(1) for the life of the unit,

(2) for a cumulative term of no less than 30 years, including contracts that permit an election for early termination, or

(3) for a period equal to or greater than 25 years or 70 percent of the economic useful life of the unit determined as of the time the unit was built, with option rights to purchase or release some portion of the nameplate capacity and associated energy generated by the unit at the end of the period.

BBB. "Nameplate Capacity" means the maximum electrical generating output (expressed in MWe) that a generator can sustain over a specified period of time when not restricted by seasonal or other deratings, as listed in the NADB under the data field "NAMECAP" if the generator is listed in the NADB or as measured in accordance with the United States Department of Energy standards if the generator is not listed in the NADB.

CCC. "National Allowance Data Base or NADB" means the database established by the Administrator under Section 402(4)(C) of the Act.

DDD. "Natural Gas" means a naturally occurring fluid mixture of hydrocarbons containing little or no sulfur (e.g., methane, ethane, or propane), produced in geological formations beneath the Earth's surface, and maintaining a gaseous state at standard atmospheric temperature and pressure conditions under ordinary conditions.

EEE. "New Unit" means a unit that commences commercial operation on or after November 15, 1990, including any such unit that serves a generator with a nameplate capacity of 25 MWe or less or that is a simple combustion turbine.

FFF. "Offset Plan" means a plan pursuant to 40 CFR Part 77 for offsetting excess emissions of sulfur dioxide that have occurred at an affected unit in any calendar year.

GGG. "Oil-Fired" means the combustion of: fuel oil for more than 10 percent of the average annual heat input during the previous three calendar years or for more than 15 percent of the annual heat input in any one of those calendar years; and any solid, liquid, or gaseous fuel, other than coal or any other coal-derived fuel (except a coal-derived gaseous fuel with a sulfur content no greater than natural gas), for the remaining heat input, if any.

HHH. "Operating Permit" means a permit issued under 40 CFR Part 70 and any other regulations implementing Title V of the Act.

III. "Owner" means any of the following persons:

(1) any holder of any portion of the legal or equitable title in an affected unit,
or

(2) any holder of a leasehold interest in an affected unit, or

(3) any purchaser of power from an affected unit under a life-of-the-unit, firm power contractual arrangement. However, unless expressly provided for in a leasehold agreement, owner shall not include a passive lessor, or a person who has an equitable interest through such lessor, whose rental payments are not based, either directly or indirectly, upon the revenues or income from the affected unit, or

(4) with respect to any ATS general account, any person identified in the submission required by 40 CFR 73.31(c) that is subject to the binding agreement for the authorized account representative to represent that person's ownership interest with respect to allowances.

JJJ. "Owner or Operator" means any person who is an owner or who operates, controls, or supervises an affected unit or affected source and shall include, but not be limited to, any holding company, utility system, or plant manager of an affected unit or affected source.

KKK. "Permit Revision" means a permit modification, fast track modification, administrative permit amendment, or automatic permit amendment, as provided in 20.11.62.18 NMAC.

LLL. "Phase II" means the Acid Rain Program period beginning January 1, 2000, and continuing into the future thereafter.

MMM. "Potential Electrical Output Capacity" means the MWe capacity rating for the units which shall be equal to 33 percent of the maximum design heat input

capacity of the steam generating unit, as calculated according to 40 CFR Part 72 appendix D.

NNN. "Power Distribution System" means the portion of an electricity grid owned or operated by a utility that is dedicated to delivering electric energy to customers.

OOO. "Power Purchase Commitment" means a commitment or obligation of a utility to purchase electric power from a facility pursuant to:

- (1) a power sales agreement,
- (2) a State regulatory authority order requiring a utility to:
 - (a) enter into a power sales agreement with the facility,
 - (b) purchase from the facility, or
 - (c) enter into arbitration concerning the facility for the purpose of establishing terms and conditions of the utility's purchase of power.
- (3) a letter of intent or similar instrument committing to purchase power (actual electrical output or generator output capacity) from the source at a previously offered or lower price and a power sales agreement applicable to the source is executed within the time frame established by the terms of the letter of intent but no later than November 15, 1992 or, where the letter of intent does not specify a time frame, a power sales agreement applicable to the source is executed on or before November 15, 1992, or
- (4) a utility competitive bid solicitation that has resulted in the selection of the qualifying facility of independent power production facility as the winning bidder.

PPP. "Power Sales Agreement" is a legally binding agreement between a QF, IPP, or firm associated with such facility and a regulated electric utility that establishes the terms and conditions for the sale of power from the facility to the utility.

QQQ. "Primary Fuel or Primary Fuel Supply" means the main fuel type (expressed in mmBtu) consumed by an affected unit for the applicable calendar year.

RRR. "Proposed Acid Rain Permit or Proposed Permit" means the version of an Acid Rain permit that the Department submits to the EPA after the public comment period, but prior to completion of the EPA permit review period under 40 CFR 70.8(c).

SSS. "Qualifying Facility (QF)" means a "qualifying small power production facility" within the meaning of Section 3(17)(C) of the Federal Power Act or a "qualifying cogeneration facility" within the meaning of Section 3(18)(B) of the Federal Power Act.

TTT. "Qualifying Power Purchase Commitment" means a power purchase commitment in effect as of November 15, 1990 without regard to changes to that commitment so long as:

(1) the identity of the electric output purchaser, the identity of the steam purchaser and the location of the facility, remain unchanged as of the date the facility commences commercial operation, and

(2) the terms and conditions of the power purchase commitment are not changed in such a way as to allow the costs of compliance with the Acid Rain Program to be shifted to the purchaser.

UUU. "Qualifying Repowering Technology" means:

(1) replacement of an existing coal-fired boiler with one of the following clean coal technologies: atmospheric or pressurized fluidized bed combustion, integrated gasification combined cycle, magneto-hydrodynamics, direct and indirect coal-fired turbines, integrated gasification fuel cells, or as determined by the EPA, in consultation with the Secretary of Energy, a derivative of one or more of these technologies, and any other technology capable of controlling multiple combustion emissions simultaneously with improved boiler or generation efficiency and with significantly greater waste reduction relative to the performance of technology in widespread commercial use as of November 15, 1990, or

(2) any oil or gas-fired unit that has been awarded clean coal technology demonstration funding as of January 1, 1991, by the Department of Energy.

VVV. "Receive or Receipt Of" means the date the EPA or the Department comes into possession of information or correspondence (whether sent in writing or by authorized electronic transmission), as indicated in an official correspondence log, or by a notation made on the information or correspondence, by the EPA or the Department in the regular course of business.

WWW. "Recordation, Record, or Recorded" means, with regard to allowances, the transfer of allowances by the EPA from one ATS account or sub-account to another.

XXX. "Schedule of Compliance" means an enforceable sequence of actions, measures, or operations designed to achieve or maintain compliance, or correct non-compliance, with an applicable requirement of the Acid Rain Program, including any applicable Acid Rain permit requirement.

YYY. "Secretary of Energy" means the Secretary of the United States Department of Energy or the Secretary's duly authorized representative.

ZZZ. "Simple Combustion Turbine" means a unit that is a rotary engine driven by a gas under pressure that is created by the combustion of any fuel. This term

includes combined cycle units without auxiliary firing. This term excludes combined cycle units with auxiliary firing, unless the unit did not use the auxiliary firing from 1985 through 1987 and does not use auxiliary firing at any time after November 15, 1990.

AAAA. "**Solid Waste Incinerator**" means a source as defined in Section 129(g)(1) of the Act.

BBBB. "**Source**" means any governmental, institutional, commercial, or industrial structure, installation, plant, building, or facility that emits or has the potential to emit any regulated air pollutant under the Act. For purposes of Section 502(c) of the Act, a "source", including a "source" with multiple units, shall be considered a single "facility."

CCCC. "**Stack**" means a structure that includes one or more flues and the housing for the flues.

DDDD. "**State**" means New Mexico and includes any non-federal authorities, including local agencies, interstate associations, and State-wide agencies with approved State operating permit programs. The term "State" shall have its conventional meaning where such meaning is clear from the context.

EEEE. "**State Operating Permit Program**" means an operating permit program that the EPA has approved as meeting the requirements of Titles IV and V of the Act and 40 CFR Parts 70 and 72.

FFFF. "**Submit or Serve**" means to send or transmit a document, information, or correspondence to the person specified in accordance with the applicable regulation:

- (1) in person,
- (2) by United States Postal Service certified mail with the official postmark or, if service is by the EPA or the Department, by any other mail service by the United States Postal Service, or
- (3) by other means with an equivalent time and date mark used in the regular course of business to indicate the date of dispatch or transmission and a record of prompt delivery. Compliance with any "submission", "service", or "mailing" deadline shall be determined by the date of dispatch, transmission, or mailing and not the date of receipt.

GGGG. "**Ton or Tonnage**" means any "short ton" (i.e., 2,000 pounds). For the purpose of determining compliance with the Acid Rain emissions limitations and reduction requirements, total tons for a year shall be calculated as the sum of all recorded hourly emissions (or the tonnage equivalent of the recorded hourly emissions rates) in accordance with 40 CFR Part 75, with any remaining fraction of a ton equal to or greater than 0.50 ton deemed to equal one ton and any fraction of a ton less than 0.50 ton deemed not to equal any ton.

HHHH. "Total Planned Net Output Capacity" means the planned generator output capacity, excluding that portion of the electrical power which is designed to be used at the power production facility, as specified under one or more qualifying power purchase commitments or contemporaneous documents as of November 15, 1990. "Total installed net output capacity" shall be the generator output capacity, excluding that portion of the electrical power actually used at the power production facility, as installed.

IIII. "Unit" means a fossil fuel-fired combustion device.

JJJJ. "Unit Account" means an ATS account, established by the EPA for an affected unit pursuant to 40 CFR 73.31 (a) or (b).

KKKK. "Utility" means any person that sells electricity.

LLLL. "Utility Competitive Bid Solicitation" is a public request from a regulated utility for offers to the utility for meeting future generating needs. A qualifying facility, independent power production facility may be regarded as having been "selected" in such solicitation if the utility has named the facility as a project with which the utility intends to negotiate a power sales agreement.

MMMM. "Utility Regulatory Authority" means an authority, board, commission, or other entity (limited to the local-, State-, or federal-level, whenever so specified) responsible for overseeing the business operations of utilities located within its jurisdiction, including, but not limited to, utility rates and charges to customers.

NNNN. "Utility Unit" means a unit owned or operated by a utility:

- (1) that serves a generator that produces electricity for sale, or
- (2) that during 1985, served a generator that produced electricity for sale,
- (3) notwithstanding paragraphs (1) and (2) of this definition, a unit that was in operation during 1985, but did not serve a generator that produced electricity for sale during 1985, and did not commence commercial operation on or after November 15, 1990 is not a utility unit for purposes of the Acid Rain Program.
- (4) notwithstanding paragraphs (1) and (2) of this definition, a unit that co-generates steam and electricity is not a utility unit for purposes of the Acid Rain Program, unless the unit is constructed for the purpose of supplying, or commences construction after November 15, 1990 and supplies, more than one-third of its potential electrical output capacity and more than 25 MWe output to any power distribution system for sale.

OOOO. "Measurements, Abbreviations, and Acronyms"

- (1) **ASTM** - American Society for Testing and Materials
- (2) **Btu** - British thermal unit.
- (3) **CFR** - Code of Federal Regulations
- (4) **DOE** - Department of Energy.
- (5) **mmBtu** - million Btu.
- (6) **Mwe** - megawatt electrical.
- (7) **SO₂** - sulfur dioxide.

20.11.62.8 VARIANCES:

[RESERVED]

[20.11.62.8 NMAC - N, 10/1/02]

20.11.62.9 SAVINGS CLAUSE:

Any amendment to 20.11.62 NMAC which is filed with the State Records Center shall not affect actions pending for violation of a City or County ordinance, or 20.11.62. NMAC. Prosecution for a violation under prior regulation wording shall be governed and prosecuted under the statute, ordinance, Part, or regulation section in effect at the time the violation was committed.

[1/1/96; 20.11.62.9 NMAC – Rn, 20 NMAC 11.62.I.9, 10/1/02]

20.11.62.10 SEVERABILITY:

If any section, paragraph, sentence, clause, or word of this Part or the federal standards incorporated herein is for any reason held to be unconstitutional or otherwise invalid by any court, the decision shall not affect the validity of remaining provisions of this Part.

[1/1/96; 20.11.62.10 NMAC – Rn, 20 NMAC 11.62.I.10, 10/1/02]

20.11.62.11 DOCUMENTS:

Documents incorporated and cited in this Part may be viewed at the Albuquerque Environmental Health Department, 400 Marquette NW, Albuquerque, NM.

[1/1/96; 20.11.62.11 NMAC – Rn, 20 NMAC 11.62.I.11 & A, 10/1/02]

20.11.62.12 ACID RAIN PROGRAM GENERAL PROVISIONS:

A. Applicability:

(1) Each of the following units shall be an affected unit, and any source that includes such a unit shall be an affected source, subject to the requirements of the Acid Rain Program.

(a) A unit listed in Table 1 of 40 CFR 73.10(a).

(b) An existing unit that is identified in Table 2 or 3 of 40 CFR 73.10 and any other existing utility unit, except a unit under Paragraph (2), of Subsection A of 20.11.62.12 NMAC.

(c) A utility unit, except a unit under Paragraph (2), of Subsection A of 20.11.62.12 NMAC, that:

(i) is a new unit,

(ii) did not serve a generator with a nameplate capacity greater than 25 MWe on November 15, 1990 but serves such a generator after November 15, 1990,

(iii) was a simple combustion turbine on November 15, 1990 but adds or uses auxiliary firing after November 15, 1990,

(iv) was an exempt cogeneration facility under Subparagraph (d), of Paragraph (2), of Subsection A of 20.11.62.12 NMAC but during any three calendar year period after November 15, 1990 sold, to a utility power distribution system, an annual average of more than one-third of its potential electrical out-put capacity and more than 219,000 MWe-hrs electric output, on a gross basis;

(v) was an exempt qualifying facility under Subparagraph (e), of Paragraph (2), of Subsection A of 20.11.62.12 NMAC but, at any time after the later of November 15, 1990 or the date the facility commences commercial operation, fails to meet the definition of qualifying facility,

(vi) was an exempt independent power production facility under Subparagraph (f), of Paragraph (2), of Subsection A of 20.11.62.12 NMAC but, at any time after the later of November 15, 1990 or the date the facility commences commercial operation, fails to meet the definition of independent power production facility, or

(vii) was an exempt solid waste incinerator under Subparagraph (g), of Paragraph (2), of Subsection A of 20.11.62.12 NMAC but during any three calendar year period after November 15, 1990 consumes 20 percent or more (on a Btu basis) fossil fuel.

(2) The following types of units are not affected units subject to the requirements of the Acid Rain Program:

(a) A simple combustion turbine that commenced operation before November 15, 1990.

(b) Any unit that commenced commercial operation before November 15, 1990 and that did not, as of November 15, 1990, and does not currently, serve a generator with a nameplate capacity of greater than 25 MWe.

(c) Any unit that, during 1985, did not serve a generator that produced electricity for sale and that did not, as of November 15, 1990, and does not currently, serve a generator that produces electricity for sale.

(d) A cogeneration facility which:

(i) for a unit that commenced construction on or prior to November 15, 1990, was constructed for the purpose of supplying equal to or less than one-third its potential electrical output capacity or equal to or less than 219,000 MWe-hrs actual electric output on an annual basis to any utility power distribution system for sale (on a gross basis). If the purpose of construction is not known, it will be presumed to be consistent with the actual operation from 1985 through 1987. However, if in any three calendar year period after November 15, 1990, such unit sells to a utility power distribution system an annual average of more than one-third of its potential electrical output capacity and more than 219,000 MWe-hrs actual electric output (on a gross basis), that unit shall be an affected unit, subject to the requirements of the Acid Rain Program, or

(ii) for units that commenced construction after November 15, 1990, supplies equal to or less than one-third its potential electrical output capacity or equal to or less than 219,000 MWe-hrs actual electric output on an annual basis to any utility power distribution system for sale (on a gross basis). However, if in any three calendar year period after November 15, 1990, such unit sells to a utility power distribution system an annual average of more than one-third of its potential electrical output capacity and more than 219,000 MWe-hrs actual electric output (on a gross basis), that unit shall be an affected unit, subject to the requirements of the Acid Rain Program.

(e) A qualifying facility that:

(i) has, as of November 15, 1990, one or more qualifying power purchase commitments to sell at least 15 percent of its total planned net output capacity; and

(ii) consists of one or more units designated by the owner or operator with total installed net output capacity not exceeding 130 percent of the total planned

net output capacity. If the emissions rates of the units are not the same, the EPA may exercise discretion to designate which units are exempt.

(f) An independent power production facility that:

(i) has, as of November 15, 1990, one or more qualifying power purchase commitments to sell at least 15 percent of its total planned net output capacity, and

(ii) consists of one or more units designated by the owner or operator with total installed net output capacity not exceeding 130 percent of its total planned net output capacity. If the emissions rates of the units are not the same, the EPA may exercise discretion to designate which units are exempt.

(g) A solid waste incinerator, if more than 80 percent (on a Btu basis) of the annual fuel consumed at such incinerator is other than fossil fuels. For a solid waste incinerator which began operation before January 1, 1985, the average annual fuel consumption of non-fossil fuels for calendar years 1985 through 1987 must be greater than 80 percent for such an incinerator to be exempt. For a solid waste incinerator, which began operation after January 1, 1985, the average annual fuel consumption of non-fossil fuels for the first three years of operation must be greater than 80 percent for such an incinerator to be exempt. If, during any three calendar year period after November 15, 1990, such incinerator consumes 20 percent or more (on a Btu basis) fossil fuel, such incinerator will be an affected source under the Acid Rain Program.

(h) A non-utility unit.

(3) A certifying official of any unit may petition the EPA for a determination of applicability under 40 CFR 72.6(c). The EPA's determination of applicability shall be binding upon the Department, unless the petition is found to have contained significant errors or omissions.

B. New Units Exemption:

(1) Applicability: This section applies to any new utility unit that serves one or more generators with total nameplate capacity of 25 MWe or less and burns only fuels with a sulfur content of 0.05 percent or less by weight, as determined in accordance with Subparagraph (a), of Paragraph (4), of Subsection B of 20.11.62.12 NMAC.

(2) Petition for Written Exemption: The designated representative, authorized in accordance with 40 CFR Part 72 Subpart B, of a source that includes a unit under Paragraph (1), of Subsection B of 20.11.62.12 NMAC may petition the Department for a written exemption, or to renew a written exemption, for the unit from certain requirements of the Acid Rain Program. The petition shall be submitted on a form approved by the Department, which includes the following elements:

(a) identification of the unit,

(b) the nameplate capacity of each generator served by the unit,

(c) a list of all fuels currently burned by the unit and their percentage sulfur content by weight, determined in accordance with Paragraph (1), of Subsection B of 20.11.62.12 NMAC.

(d) A list of all fuels that are expected to be burned by the unit and their sulfur content by weight.

(e) The special provisions in Paragraph (4), of Subsection B of 20.11.62.12 NMAC.

(3) Department's Action:

(a) The Department will issue, for any unit meeting the requirements Paragraphs (1) and (2), of Subsection B of 20.11.62.12 NMAC, a written exemption from the requirements of the Acid Rain Program except for the requirements specified in this Section, 40 CFR 72.2 through 72.7, and 40 CFR 72.10 through 72.13; provided that no unit shall be exempted unless the designated representative of the unit surrenders, and the EPA deducts from the unit's ATS account, allowances pursuant to 40 CFR 72.7(c)(1)(i) and (d)(1).

(b) The exemption shall take effect on January 1 of the year immediately following the date on which the written exemption is issued as a final agency action subject to judicial review, in accordance with Subparagraph (c), of Paragraph (3), of Subsection B of 20.11.62.12 NMAC; provided that the owners and operators, and, to the extent applicable, the designated representative, shall comply with the requirements of the Acid Rain Program concerning all years for which the unit was not exempted, even if such requirements arise, or must be complied with, after the exemption takes effect. The exemption shall not be a defense against any violation of such requirements of the Acid Rain Program whether the violation occurs before or after the exemption takes effect.

(c) In considering and issuing or denying a written exemption under Subparagraph (a), of Paragraph (3), of Subsection B of 20.11.62.12 NMAC, the Department will apply the permitting procedures in 20.11.62.17 NMAC by:

(i) treating the petition as an Acid Rain permit application under such provisions,

(ii) issuing or denying a draft written exemption that is treated as the issuance or denial of a draft permit under such provisions, and

(iii) issuing or denying a proposed written exemption that is treated as the issuance or denial of a proposed permit under such provisions; provided that no provision under 20.11.62.17 NMAC concerning the content, effective date, or term of an Acid Rain permit shall apply to the written exemption or proposed written exemption under this Section.

(d) A written exemption issued under this section shall have a term of 5 years from its effective date, except as provided in Subparagraph (c), of Paragraph (4), Subsection B of 20.11.62.12 NMAC.

(4) Special Provisions:

(a) The owners and operators of each unit exempted under this Section shall determine the sulfur content by weight of its fuel as follows:

(i) for petroleum or petroleum products that the unit burns starting on the first day on which the exemption takes effect until the exemption terminates, a sample of each delivery of such fuel shall be tested using ASTM methods ASTM D4057-88 and ASTM D129-91, ASTM D2622-92, or ASTM D4294-90.

(ii) for natural gas that the unit burns starting on the first day on which the exemption takes effect until the exemption terminates, the sulfur content shall be assumed to be 0.05 per cent or less by weight.

(iii) for gaseous fuel (other than natural gas) that the unit burns starting on the first day on which the exemption takes effect until the exemption terminates, a sample of each delivery of such fuel shall be tested using ASTM methods ASTM D1072-90 and ASTM D1265-92; provided that if the gaseous fuel is delivered by pipeline to the unit, a sample of the fuel shall be tested, at least once every quarter in which the unit operates during any year for which the exemption is in effect, using ASTM method ASTM D1072-90.

(b) The owners and operators of each unit exempted under this Section shall retain at the source that includes the unit, the records of the results of the tests performed under Items (i), and (iii), of Subparagraph (a), of Paragraph (4), of Subsection B of 20.11.62.12 NMAC, and a copy of the purchase agreements for the fuel under Subparagraph (a), of Paragraph (4), of Subsection B of 20.11.62.12 NMAC, stating the sulfur content of such fuel. Such records and documents shall be retained for 5 years from the date they are created.

(c) On the earlier of the date the written exemption expires, the date a unit exempted under this Section burns any fuel with a sulfur content in excess of 0.05 percent by weight (as determined in accordance with Subparagraph (a), of Paragraph (4), of Subsection B of 20.11.62.12 NMAC), or 24 months prior to the date the unit first serves one or more generators with total nameplate capacity in excess of 25 MWe, the

unit shall no longer be exempted under this Section and shall be subject to all requirements of the Acid Rain Program, except that:

(i) notwithstanding Paragraphs (2) and (3), of Subsection A of 20.11.62.14 NMAC, the designated representative of the source that includes the unit shall submit a complete Acid Rain permit application on the later of January 1, 1998 or the date the unit is no longer exempted under this Section,

(ii) for purposes of applying monitoring requirements under 40 CFR Part 75, the unit shall be treated as a new unit that commenced commercial operation on the date the unit no longer meets the requirements Paragraph (1), of Subsection B of 20.11.62.12 NMAC.

C. Retired Units Exemption:

(1) Applicability: This Subsection applies to any affected unit that is retired prior to the issuance (including renewal) of an Acid Rain permit for the unit as a final agency action.

(2) Petition For Written Exemption:

(a) The designated representative, authorized in accordance with 40 CFR Part 72 Subpart B, of a source that includes a unit under Paragraph (1), of Subsection C of 20.11.62.12 NMAC may petition the Department for a written exemption, or to renew a written exemption, for the unit from certain requirements of the Acid Rain Program.

(b) A petition under this section shall be submitted on or before:

(i) the deadline for submitting an Acid Rain permit application for Phase II, or

(ii) if the unit has a Phase II Acid Rain permit, the deadline for reapplying for such permit.

(c) The petition under this Section shall be submitted on a form approved by the Department which includes the following elements:

(i) identification of the unit,

(ii) the applicable deadline under Subparagraph (b), of Paragraph (2), Subsection C of 20.11.62.12 NMAC,

(iii) the actual or expected date of retirement of the unit,

(iv) the following statement: "I certify that this unit [`is' or `will be', as applicable] permanently retired on the date specified in this petition and will not emit any sulfur dioxide or nitrogen oxides after such date,"

(v) A description of any actions that have been or will be taken and provide the basis for the certification in Item (iv), of Subparagraph (c), of Paragraph (2), Subsection C of 20.11.62.12 NMAC, and

(vi) the special provisions in Paragraph (4), of Subsection C of 20.11.62.12 NMAC.

(3) Department's Action:

(a) The Department will issue, for any unit meeting the requirements of (1) and (2), of Subsection C of 20.11.62.12 NMAC, a written exemption from the requirements of this Part and 40 CFR Part 72 except for the requirements specified in this Section and 40 CFR 72.1 through 72.6, 40 CFR 72.8, and 40 CFR 72.10 through 72.13.

(b) The exemption shall take effect on January 1 of the year following the date on which the written exemption is issued as a final agency action subject to judicial review, in accordance with Subparagraph (c), of Paragraph (3), Subsection C of 20.11.62.12 NMAC; provided that the owners and operators, and, to the extent applicable, the designated representative, shall comply with the requirements of this Part and 40 CFR Part 72 concerning all years for which the unit was not exempted, even if such requirements arise or must be complied with after the exemption takes effect. The exemption shall not be a defense against any violation of such requirements of the Acid Rain Program whether the violation occurs before or after the exemption takes effect.

(c) In considering and issuing or denying a written exemption under Subparagraph (c), of Paragraph (3), of Subsection C of 20.11.62.12 NMAC, the Department will apply the procedures in 20.11.62.17 by:

(i) treating the petition as an Acid Rain permit application under such provisions,

(ii) issuing or denying a draft written exemption that is treated as the issuance or denial of a draft permit under such provisions, and

(iii) issuing or denying a proposed written exemption that is treated as a proposed permit under such provisions, provided that no provision under 20.11.62.17 NMAC concerning, the content, effective date, or term of an Acid Rain permit shall apply to the written exemption or proposed written exemption under this Section.

(d) A written exemption issued under this Subsection shall have a term of 5 years, except as provided in Subparagraph (c), of Paragraph (4), of Subsection C of 20.11.62.12 NMAC.

(4) Special Provisions:

(a) A unit exempted under this section shall not emit any sulfur dioxide and nitrogen dioxide starting on the date it is exempted.

(b) The owners and operators of a unit exempted under this section shall comply with monitoring requirements in accordance with 40 CFR Part 75 and will be allocated allowances in accordance with 40 CFR Part 73.

(c) A unit exempted under this Section shall not resume operation unless the designated representative of the source that includes the unit submits an Acid Rain permit application for the unit not less than 24 months prior to the later of January 1, 2000 or the date the unit is to resume operation. On the earlier of the date the written exemption expires or the date an Acid Rain permit application is submitted or is required to be submitted under this paragraph, the unit shall no longer be exempted under this Section and shall be subject to all requirements of this Part and 40 CFR Part 72.

D. Standard Requirements:

(1) Permit Requirements:

(a) The designated representative of each affected source and each affected unit at the source shall:

(i) submit a complete Acid Rain permit application under this part in accordance with the deadlines specified in Subsection A of 20.11.62.13 NMAC,

(ii) submit in a timely manner any supplemental information that the Department determines is necessary in order to review an Acid Rain permit application and issue or deny an Acid Rain permit.

(b) The owners and operators of each affected source and each affected unit at the source shall:

(i) operate the unit in compliance with a complete Acid Rain permit application or a superseding Acid Rain permit issued by the Department,

(ii) have an Acid Rain Permit.

(2) Monitoring Requirements:

(a) The owners and operators and, to the extent applicable, designated representative of each affected source and each affected unit at the source shall comply with the monitoring requirements as provided in 40 CFR Part 75 and 76.

(b) The emissions measurements recorded and reported in accordance with 40 CFR Part 75 and 76 shall be used to determine compliance by the unit with the Acid Rain emissions limitations and emissions reduction requirements for sulfur dioxide and nitrogen oxides under the Acid Rain Program.

(c) The requirements of 40 CFR Part 75 and 76 shall not affect the responsibility of the owners and operators to monitor emissions of other pollutants or other emissions characteristics at the unit under other applicable requirements of the Act and other provisions of the operating permit for the source.

(3) Sulfur Dioxide Requirements :

(a) The owners and operators of each source and each affected unit at the source shall:

(i) hold allowances, as of the allowance transfer deadline, in the unit's compliance sub-account (after deductions under 40 CFR 73.34(c)) not less than the total annual emissions of sulfur dioxide for the previous calendar year from the unit, and

(ii) comply with the applicable Acid Rain emissions limitation for sulfur dioxide.

(b) Each ton of sulfur dioxide emitted in excess of the Acid Rain emissions limitations for sulfur dioxide shall constitute a separate violation of the Act.

(c) An affected unit shall be subject to the requirements Subparagraph (a), of Paragraph (3), of Subsection D of 20.11.62.12 NMAC as follows:

(i) starting January 1, 2000, an affected unit under Subparagraph (b), of Paragraph (1), Subsection A of 20.11.62.12 NMAC,

(ii) starting on the later of January 1, 2000 or the deadline for monitor certification under 40 CFR Part 75, an affected unit under Subparagraph (c), Paragraph (1), Subsection A of 20.11.62.12 NMAC.

(d) Allowances shall be held in, deducted from, or transferred among ATS accounts in accordance with the Acid Rain Program.

(e) An allowance shall not be deducted, in order to comply with the requirements under Item (i), of Subparagraph (a), of Paragraph (3), Subsection D of 20.11.62.12 NMAC prior to the calendar year for which the allowance was allocated.

(f) An allowance allocated by the EPA under the Acid Rain Program is a limited authorization to emit sulfur dioxide in accordance with the Acid Rain Program. No provision of the Acid Rain Program, the Acid Rain permit application, the Acid Rain permit, or the written exemption under Subsections A B of 20.11.62.12 NMAC and no provision of law shall be construed to limit the authority of the United States to terminate or limit such authorization.

(g) An allowance allocated by the EPA under the Acid Rain Program does not constitute a property right.

(4) Nitrogen Oxides Requirements: The owners and operators of the source and each affected unit at the source shall comply with the applicable Acid Rain emissions limitation for nitrogen oxides.

(5) Excess Emissions Requirements:

(a) The designated representative of an affected unit that has excess emissions in any calendar year shall submit a proposed offset plan to the EPA, as required under 40 CFR Part 77, and submit a copy to the Department.

(b) The owners and operators of an affected unit that has excess emissions in any calendar year shall:

(i) pay to the EPA without demand the penalty required, and pay to the EPA upon demand the interest on that penalty, as required by 40 CFR Part 77, and

(ii) comply with the terms of an approved offset plan, as required by 40 CFR Part 77.

(6) Record keeping and Reporting Requirements:

(a) Unless otherwise provided, the owners and operators of the source and each affected unit at the source shall keep on site at the source each of the following documents for a period of 5 years from the date the document is created. This period may be extended for cause, at any time prior to the end of 5 years, in writing by the EPA or Department.

(i) The certificate of representation for the designated representative for the source and each affected unit at the source and all documents that demonstrate the truth of the statements in the certificate of representation, in accordance with 40 CFR 72.24; provided that the certificate and documents shall be retained on site at the source beyond such 5-year period until such documents are superseded because of the submission of a new certificate of representation changing the designated representative.

(ii) All emissions monitoring information, in accordance with 40 CFR Part 75.

(iii) Copies of all reports, compliance certifications, and other submissions and all records made or required under the Acid Rain Program.

(iv) Copies of all documents used to complete an Acid Rain permit application and any other submission under the Acid Rain Program or to demonstrate compliance with the requirements of the Acid Rain Program.

(b) The designated representative of an affected source and each affected unit at the source shall submit the reports and compliance certifications required under the Acid Rain Program, including those under 20.11.62.19 NMAC and 40 CFR Part 75.

(7) Liability:

(a) Any person who knowingly violates any requirement or prohibition of the Acid Rain Program, a complete Acid Rain permit application, an Acid Rain permit, or a written exemption under Subsections B or C, of 20.11.62.12 NMAC, including any requirement for the payment of any penalty owed to the United States, shall be subject to enforcement by the EPA pursuant to Section 113(c) of the Act and by the Department pursuant to ROA 1994 9-5-1-99(B)(1).

(b) Any person who knowingly makes a false, material statement in any record, submission, or report under the Acid Rain Program shall be subject to criminal enforcement by the EPA pursuant to Section 113(c) of the Act and 18 U.S.C. 1001 and by the Department pursuant to ROA 1994 9-5-1-99(B)(2).

(c) No permit revision shall excuse any violation of the requirements of the Acid Rain Program that occurs prior to the date that the revision takes effect.

(d) Each affected source and each affected unit shall meet the requirements of the Acid Rain Program.

(e) Any provision of the Acid Rain Program that applies to an affected source (including a provision applicable to the designated representative of an affected source) shall also apply to the owners and operators of such source and of the affected units at the source.

(f) Any provision of the Acid Rain Program that applies to an affected unit (including a provision applicable to the designated representative of an affected unit) shall also apply to the owners and operators of such unit. Except as provided under Subsection B of 20.11.62.15NMAC (Phase II Repowering Extension plans), 40 CFR Part 76, and except with regard to the requirements applicable to units with a common stack under 40 CFR Part 75 (including 40 CFR 75.16, 75.17, and 75.18), the owners and operators and the designated representative of one affected unit shall not be liable

for any violation by any other affected unit of which they are not owners or operators or the designated representative and that is located at a source of which they are not owners or operators or the designated representative.

(g) Each violation of a provision of this Part and 40 CFR parts 72, 73, 74, 75, 76, 77, and 78 by an affected source or affected unit, or by an owner or operator or designated representative of such source or unit, shall be a separate violation of the Act.

(8) Effect On Other Authorities: No provision of the Acid Rain Program, an Acid Rain permit application, an Acid Rain permit, or a written exemption under Subsections B or C, of 20.11.62.12 NMAC shall be construed as:

(a) except as expressly provided in Title IV of the Act, exempting or excluding the owners and operators and, to the extent applicable, the designated representative of an affected source or affected unit from compliance with any other provision of the Act, including the provisions of Title I of the Act relating to applicable National Ambient Air Quality Standards or State Implementation Plans,

(b) limiting the number of allowances a unit can hold; provided, that the number of allowances held by the unit shall not affect the source's obligation to comply with any other provisions of the Act,

(c) requiring a change of any kind in any State law regulating electric utility rates and charges, affecting any State law regarding such State regulation, or limiting such State regulation, including any prudence review requirements under such State law,

(d) modifying the Federal Power Act or affecting the authority of the Federal Energy Regulatory Commission under the Federal Power Act, or

(e) interfering with or impairing any program for competitive bidding for power supply in a State in which such program is established.

[1/1/96; 20.11.62.12 NMAC – Rn, 20 NMAC 11.62.I.12 & Repealed, 10/1/02; Rn, 20 NMAC 11.62.II.1, 10/1/02]

20.11.62.13 DESIGNATED REPRESENTATIVE:

A. Submissions:

(1) The designated representative shall submit a certificate of representation, and any superseding certificate of representation, to the EPA in accordance with 40 CFR Part 72 Subpart B and, concurrently, shall submit a copy to the Department. Whenever the term "designated representative" is used in this Part, the term shall be construed to include the alternate designated representative.

(2) Each submission under the Acid Rain Program shall be submitted, signed, and certified by the designated representative for all sources on behalf of which the submission is made.

(3) In each submission under the Acid Rain Program, the designated representative shall certify, by his or her signature the following statements, which shall be included verbatim in such submission:

(a) "I am authorized to make this submission on behalf of the owners and operators of the affected source or affected units for which the submission is made",

(b) "I certify under penalty of law that I have personally examined, and am familiar with, the statements and information submitted in this document and all its attachments. Based on my inquiry of those individuals with primary responsibility for obtaining the information, I certify that the statements and information are to the best of my knowledge and belief true, accurate, and complete. I am aware that there are significant penalties for submitting false statements and information or omitting required statements and information, including the possibility of fine or imprisonment".

(4) The Department will accept or act on a submission made on behalf of owners or operators of an affected source and an affected unit only if the submission has been made, signed, and certified in accordance with Paragraphs (2) and (3), of Subsection A of 20.11.62.13 NMAC.

(a) The designated representative of a source shall serve notice on each owner and operator of the source and of an affected unit at the source:

(i) by the date of submission, of any Acid Rain Program submissions by the designated representative,

(ii) within 10 business days of receipt of a determination, of any written determination by the EPA or the Department, and

(iii) provided that the submission or determination covers the source or the unit.

(b) The designated representative of a source shall provide each owner and operator of an affected unit at the source a copy of any submission or determination under II.2.1.E.1 [Subparagraph (e), Paragraph (1), Subsection B of 20.11.62.12 NMAC], unless the owner or operator expressly waives the right to receive such a copy.

B. Objections:

(1) Except as provided in 40 CFR 72.23, no objection or other communication submitted to the EPA or the Department concerning the authorization, or any submission, action or inaction, of the designated representative shall affect any

submission, action, or inaction of the designated representative, or the finality of any decision by the Department, under the Acid Rain Program. In the event of such communication, the Department is not required to stay any submission or the effect of any action or inaction under the Acid Rain Program.

(2) The Department will not adjudicate any private legal dispute concerning the authorization or any submission, action, or inaction of any designated representative, including private legal disputes concerning the proceeds of allowance transfers.

[1/1/96; 20.11.62.13 NMAC – Rn, 20 NMAC 11.62.II.2, 10/1/02]

20.11.62.14 ACID RAIN PERMIT APPLICATIONS:

A. Requirement to Apply:

(1) **Duty to Apply:** The designated representative of any source with an affected unit shall submit a complete Acid Rain permit application by the applicable deadline in Paragraphs (2) and (3), of Subsection A of 20.11.62.14 NMAC, and the owners and operators of such source and any affected unit at the source shall not operate the source or unit without a permit that states its Acid Rain Program requirements.

(2) Deadlines:

(a) For any source with an existing unit described under Subparagraph (b), of Paragraph (1), of Subsection A of 20.11.62.12 NMAC, the designated representative shall submit a complete Acid Rain permit application governing such unit to the Department on or before January 1, 1996.

(b) For any source with a new unit described under Item (i), of Subparagraph (c), of Paragraph (1), of Subsection A of 20.11.62.12 NMAC the designated representative shall submit a complete Acid Rain permit application governing such unit to the Department at least 24 months before the later of January 1, 2000 or the date on which the unit commences operation.

(c) For any source with a unit described under Item (ii), of Subparagraph (c), of Paragraph (1), of Subsection A of 20.11.62.12 NMAC, the designated representative shall submit a complete Acid Rain permit application governing such unit to the Department at least 24 months before the later of January 1, 2000 or the date on which the unit begins to serve a generator with a nameplate capacity greater than 25 MWe.

(d) For any source with a unit described under Item (iii), of Subparagraph (c), of Paragraph (1), of Subsection A of 20.11.62.12 NMAC, the designated representative shall submit a complete Acid Rain permit application governing such unit to the

Department at least 24 months before the later of January 1, 2000 or the date on which the auxiliary firing commences operation.

(e) For any source with a unit described under Item (iv), of Subparagraph (c), of Paragraph (1), of Subsection A of 20.11.62.12 NMAC, the designated representative shall submit a complete Acid Rain permit application governing such unit to the Department before the later of January 1, 1998 or March 1 of the year following the three calendar year period in which the unit sold to a utility power distribution system an annual average of more than one-third of its potential electrical output capacity and more than 219,000 MWe-hrs actual electric output (on a gross basis).

(f) For any source with a unit described under Item (iii), of Subparagraph (c), of Paragraph (1), of Subsection A of 20.11.62.12 NMAC, the designated representative shall submit a complete Acid Rain permit application governing such unit to the Department before the later of January 1, 1998 or March 1 of the year following the calendar year in which the facility fails to meet the definition of qualifying facility.

(g) For any source with a unit described under Item (vi), of Subparagraph (c), of Paragraph (1), of Subsection A of 20.11.62.12 NMAC, the designated representative shall submit a complete Acid Rain permit application governing such unit to the Department before the later of January 1, 1998 or March 1 of the year following the calendar year in which the facility fails to meet the definition of an independent power production facility.

(h) For any source with a unit described under Item (vii), of Subparagraph (c), of Paragraph (1), of Subsection A of 20.11.62.200 NMAC, the designated representative shall submit a complete Acid Rain permit application governing such unit to the Department before the later of January 1, 1998 or March 1 of the year following the three calendar year period in which the incinerator consumed 20 percent or more fossil fuel (on a Btu basis).

(3) Duty to Reapply: The designated representative shall submit a complete Acid Rain permit application for each source with an affected unit at least 6 months or such longer time as may be approved under 40 CFR part 70 prior to the expiration of an existing Acid Rain permit governing the unit.

(4) The original and three copies of all permit applications shall be submitted to the Department.

B. Information Requirements For Acid Rain Permit Applications: A complete Acid Rain permit application shall be submitted on a form approved by the Department, which includes the following elements:

(1) identification of the affected source for which the permit application is submitted,

- (2) identification of each affected unit at the source for which the permit application is submitted,
- (3) a complete compliance plan for each unit, in accordance with 20.11.62.15 NMAC,
- (4) the standard requirements under Subsection D of 20.11.62.12 NMAC, and
- (5) if the unit is a new unit, the date that the unit has commenced or will commence operation and the deadline for monitor certification.

C. Permit Application Shield and Binding Effect of permit Application:

(1) Once a designated representative submits a timely and complete Acid Rain permit application, the owners and operators of the affected source and the affected units covered by the permit application shall be deemed in compliance with the requirement to have an Acid Rain permit under Subparagraph (b), of Paragraph (1), of Subsection D of 20.11.62.12 NMAC and Paragraph (1), of Subsection A of 20.11.62.14 NMAC; provided that any delay in issuing an Acid Rain permit is not caused by the failure of the designated representative to submit in a complete and timely fashion supplemental information, as required by the Department, necessary to issue a permit.

(2) Prior to the earlier of the date on which an Acid Rain permit is issued as a final agency action subject to judicial review, an affected unit governed by and operated in accordance with the terms and requirements of a timely and complete Acid Rain permit application shall be deemed to be operating in compliance with the Acid Rain Program.

(3) A complete Acid Rain permit application shall be binding on the owners and operators and the designated representative of the affected source and the affected units covered by the permit application and shall be enforceable as an Acid Rain permit from the date of submission of the permit application until the issuance or denial of such permit as a final agency action subject to judicial review.

[1/1/96; 20.11.62.14 NMAC – Rn, 20 NMAC 11.62.II.3, 10/1/02]

20.11.62.15 ACID RAIN COMPLIANCE PLAN AND COMPLIANCE OPTIONS:

A. General:

(1) For each affected unit included in an Acid Rain permit application, a complete compliance plan shall include:

(a) for sulfur dioxide emissions, a certification that, as of the allowance transfer deadline, the designated representative will hold allowances in the unit's compliance sub-account (after deductions under 40 CFR 73.34(c)) not less than the

total annual emissions of sulfur dioxide from the unit. The compliance plan may also specify, in accordance with 20.11.62.15 NMAC, one or more of the Acid Rain compliance options,

(b) for nitrogen oxides emissions, a certification that the unit will comply with the applicable limitation established by 40 CFR Part 76 or shall specify one or more Acid Rain compliance options, in accordance with 40 CFR Part 76.

(2) The compliance plan may include a multi-unit compliance option under Subsection B of 20.11.62.15 NMAC or 40 CFR Part 76.

(a) A plan for a compliance option that includes units at more than one affected source shall be complete only if:

(i) such plan is signed and certified by the designated representative for each source with an affected unit governed by such plan, and

(ii) a complete permit application is submitted covering each unit governed by such plan.

(b) Department's approval of a plan under Subparagraph (a), of Paragraph (2), of Subsection A of 20.11.62.15 NMAC that includes units in more than one State shall be final only after every permitting authority with jurisdiction over any such unit has approved the plan with the same modifications or conditions, if any.

(3) Conditional Approval: In the compliance plan, the designated representative of an affected unit may propose, in accordance with 20.11.62.15 NMAC, any Acid Rain compliance option for conditional approval; provided that an Acid Rain compliance option under 40 CFR Part 76 may be conditionally proposed only to the extent provided in regulations implementing 40 CFR Part 76.

(a) To activate a conditionally-approved Acid Rain compliance option, the designated representative shall notify the Department in writing that the conditionally-approved compliance option will actually be pursued beginning January 1 of a specified year. Such notification shall be subject to the limitations on activation under Subsection B of 20.11.62.15 NMAC and regulations implementing 40 CFR Part 76. If the conditionally approved compliance option includes a plan described in Subparagraph (a), of Paragraph (2), of Subsection A of 20.11.62.15 NMAC the designated representative of each source governed by the plan shall sign and certify the notification.

(b) The notification under Subparagraph (a), of Paragraph (3), of Subsection A of 20.11.62.15 NMAC shall specify the first calendar year and the last calendar year for which the conditionally approved Acid Rain compliance option is to be activated. A conditionally approved compliance option shall be activated, if at all, before the date of any enforceable milestone applicable to the compliance option. The date of activation of

the compliance option shall not be a defense against failure to meet the requirements applicable to that compliance option during each calendar year for which the compliance option is activated.

(c) Upon submission of a notification meeting the requirements of Subparagraph (a) and (b), of Paragraph (3), of Subsection A of 20.11.62.15 NMAC , the conditionally-approved Acid Rain compliance option becomes binding on the owners and operators and the designated representative of any unit governed by the conditionally-approved compliance option.

(d) A notification meeting the requirements of Subparagraph (a) and (b), of Paragraph (3), of Subsection A of 20.11.62.15 NMAC will revise the unit's permit in accordance with Subsection D of 20.11.62.18 NMAC.

(4) Termination of Compliance Option:

(a) The designated representative for a unit may terminate an Acid Rain compliance option by notifying the Department in writing that an approved compliance option will be terminated beginning January 1 of a specified year. Such notification shall be subject to the limitations on termination under Subsection B of 20.11.62.15 NMAC and regulations implementing 40 CFR Part 76. If the compliance option includes a plan described in Subparagraph (a), of Paragraph (2), of Subsection A of 20.11.62.15 NMAC the designated representative for each source governed by the plan shall sign and certify the notification.

(b) The notification under Subparagraph (a), of Paragraph (4), of Subsection B of 20.11.62.15 NMAC shall specify the calendar year for which the termination will take effect.

(c) Upon submission of a notification meeting the requirements of Subparagraph (a), of Paragraph (4), of Subsection B of 20.11.62.15 NMAC the termination becomes binding on the owners and operators and the designated representative of any unit governed by the Acid Rain compliance option to be terminated.

(d) A notification meeting the requirements of Subparagraphs (a) and (b), of Paragraph (4), of Subsection B of 20.11.62.15 NMAC will revise the unit's permit in accordance Subsection D of 20.11.62.18 NMAC.

B. Repowering Extensions:

(1) Applicability:

(a) This Section shall apply to the designated representative of:

(i) any existing affected unit that is a coal-fired unit and has a 1985 actual SO₂ emissions rate equal to or greater than 1.2 lbs/mmBtu, or

(ii) any new unit that will be a replacement unit, as provided in Subparagraph (b), of Paragraph (2), Subsection B of 20.11.62.15 NMAC, for a unit meeting the requirements of Item (i), of Subparagraph (a), Paragraph (1), of Subsection B of 20.11.62.15 NMAC, or

(iii) any oil and/or gas-fired unit that has been awarded clean coal technology demonstration funding as of January 1, 1991 by the Secretary of Energy.

(b) A repowering extension does not exempt the owner or operator for any unit governed by the repowering plan from the requirement to comply with such unit's Acid Rain emissions limitations for sulfur dioxide.

(2) The designated representative of any unit meeting the requirements of Item (i), of Subparagraph (a), of Paragraph (2), of Subsection B of 20.11.62.15 NMAC; or may include in the unit's Acid Rain permit application a repowering extension plan that includes a demonstration that:

(a) the unit will be repowered with a qualifying repowering technology in order to comply with the emissions limitations for sulfur dioxide, or

(b) the unit will be replaced by a new utility unit that has the same designated representative and that is located at a different site using a qualified repowering technology and the existing unit will be permanently retired from service on or before the date on which the new utility unit commences commercial operation.

(3) In order to apply for a repowering extension, the designated representative of a unit under Subparagraph (a), of Paragraph (1), of Subsection B of 20.11.62.15 NMAC:

(a) Submit to the Department, by January 1, 1996, a complete repowering extension plan;

(b) Submit to the EPA before June 1, 1997, a complete petition for approval of repowering technology in accordance with 40 CFR 72.44(d) and submit a copy to the Department; and

(c) If the repowering extension plan is submitted for conditional approval, submit to the Department by December 31, 1997, a notification to activate the plan in accordance with Paragraph (3), of Subsection A of 20.11.62.15 NMAC.

(4) Contents of Repowering Extension Plan. A complete repowering extension plan shall include the following elements:

(a) Identification of the existing unit governed by the plan.

(b) The unit's federally-approved State Implementation Plan sulfur dioxide emissions limitation.

(c) The unit's 1995 actual SO₂ emissions rate, or best estimate of the actual emissions rate; provided that the actual emissions rate is submitted to the Department by January 30, 1996.

(d) A schedule for construction, installation, and commencement of operation of the repowering technology approved or submitted for approval under 40 CFR 72.44(d) with dates for the following milestones:

(i) completion of design engineering,

(ii) for a plan under Subparagraph (a), of Paragraph (2), of Subsection B of 20.11.62.15 NMAC, removal of the existing unit from operation to install the qualified repowering technology,

(iii) commencement of construction,

(iv) completion of construction,

(v) start-up testing,

(vi) for a plan under Subparagraph (a), of Paragraph (2), of Subsection B of 20.11.62.15 NMAC, shutdown of the existing unit, and

(vii) commencement of commercial operation of the repowering technology.

(e) For a plan under Subparagraph (a), of Paragraph (2), of Subsection B of 20.11.62.15 NMAC:

(i) identification of the new unit. A new unit shall not be included in more than one repowering extension plan,

(ii) certification that the new unit will replace the existing unit,

(iii) certification that the new unit has the same designated representative as the existing unit,

(iv) certification that the existing unit will be permanently retired from service on or before the date the new unit commences commercial operation.

(f) The special provisions of Paragraph (7), of Subsection B of 20.11.62.15 NMAC.

(5) Department's Action on Repowering Extension Plan.

(a) The Department will not approve a repowering extension plan until the EPA makes a conditional determination that the technology is a qualified repowering technology, unless the Department approves such plan subject to the conditional determination of the EPA.

(b) Permit Issuance:

(i) Upon a conditional determination by the EPA that the technology to be used in the repowering extension plan is a qualified repowering technology and a determination by the Department that such plan meets the requirements of this Section, the Department will issue the Acid Rain portion of the operating permit including: 1) The approved repowering extension plan, and 2) A schedule of compliance with enforceable milestones for construction, installation, and commencement of operation of the repowering technology and other requirements necessary to ensure that emission reduction requirements under this section will be met.

(ii) Except as otherwise provided in Paragraph (6), of Subsection B of 20.11.62.15 NMAC, the repowering extension shall be in effect starting January 1, 2000 and ending on the day before the date (specified in the Acid Rain permit) on which the existing unit will be removed from operation to install the qualifying repowering technology or will be permanently removed from service for replacement by a new unit with such technology; provided that the repowering extension shall end no later than December 31, 2003

(iii) The portion of the operating permit specifying the repowering extension and other requirements under Item (i) of Subparagraph (e), of Paragraph (5), of Subsection B of 20.11.62.15 NMAC shall be subject to the EPA's final determination, under 40 CFR 72.44(d)(4), that the technology to be used in the repowering extension plan is a qualifying repowering technology.

(c) Allowance Allocation. Allowances will be allocated in accordance with 40 CFR 72.44(f)(3) and (g).

(6) Failed Repowering Projects:

(a) If, at any time before the end of the repowering extension under Item (ii), of Subparagraph (e), of Paragraph (5), of Subsection B of 20.11.62.15 NMAC, the designated representative of a unit governed by an approved repowering extension plan submits the notification under Paragraph (4), Subsection B of 20.11.62.19 NMAC that the owners and operators have decided to terminate efforts to properly design, construct, and test the repowering technology specified in the plan before completion of

construction or start-up testing, the designated representative may submit to the Department a proposed permit modification demonstrating that such efforts were in good faith. If such demonstration is to the satisfaction of the EPA, the unit shall not be deemed in violation of the Act because of such a termination and the Department will revise the operating permit in accordance with this subparagraph. Regardless of whether notification under this subparagraph is given, the repowering extension will end beginning on the earlier of the date of such notification or the date by which the designated representative was required to give such notification under Paragraph (4), of Subsection B of 20.11.62.19 NMAC.

(b) The designated representative of a unit governed by an approved repowering extension plan may submit to the Department a proposed permit modification demonstrating that the repowering technology specified in the plan was properly constructed and tested on such unit but was unable to achieve the emissions reduction limitations specified in the plan and that it is economically or technologically infeasible to modify the technology to achieve such limits. In order to be properly constructed and tested, the repowering technology shall be constructed at least to the extent necessary for direct testing of the multiple combustion emissions (including sulfur dioxide and nitrogen oxides) from such unit while operating the technology at nameplate capacity. If such demonstration is to the satisfaction, of the EPA

(i) The unit shall not be deemed in violation of the Act because of such failure to achieve the emissions reduction limitations;

(ii) The Department will revise the Acid Rain portion of the operating permit in accordance with Items (iii) and (iv), of Subparagraph (b), of Paragraph (6), of Subsection B of 20.11.62.15 NMAC;

(iii) The existing unit may be retrofitted or repowered with another clean coal or other available control technology; and

(iv) The repowering extension will continue in effect until the earlier of the date the existing unit commences commercial operation with such control technology or December 31, 2003.

(7) Special Provisions:

(a) Emissions Limitations.

(i) **Sulfur Dioxide.** Allowances allocated during the repowering extension under Subparagraph (c), of Paragraph (5), of Subsection B of 20.11.62.15 NMAC, and Paragraph (6), of Subsection B of 20.11.62.15 NMAC to a unit governed by an approved repowering extension plan shall not be transferred to any ATS account other than the unit accounts of other units at the same source as that unit.

(ii) Nitrogen Oxides. Any existing unit governed by an approved repowering extension plan shall be subject to the Acid Rain emissions limitations for nitrogen oxides in accordance with 40 CFR Part 76 and regulations implementing 40 CFR Part 76 beginning on the date that the unit is removed from operation to install the repowering technology or is permanently removed from service.

(iii) No existing unit governed by an approved repowering extension plan shall be eligible for a waiver under Section 111(j) of the Act.

(iv) No new unit governed by an approved repowering extension plan shall receive an exemption from the requirements imposed under Section 111 of the Act.

(b) Reporting Requirements. Each unit governed by an approved repowering extension plan shall comply with the special reporting requirements of Subsection B of 20.11.62.19 NMAC.

(c) Liability:

(i) The owners and operators of a unit governed by an approved repowering plan shall be liable for any violation of the plan or this section at that or any other unit governed by the plan.

(ii) The units governed by the plan under Subparagraph (b), of Paragraph (2), of Subsection B of 20.11.62.15 NMAC shall continue to have a common designated representative until the existing unit is permanently retired under the plan.

(d) Terminations: Except as provided in Paragraph (6), of Subsection B of 20.11.62.15 NMAC, a repowering extension plan shall not be terminated after December 31, 1999.

[1/1/96; 20.11.62.15 NMAC – Rn, 20 NMAC 11.62.II.4, 10/1/02]

20.11.62.16 ACID RAIN PERMIT:

A. Contents:

(1) Each Acid Rain permit (including any draft or proposed Acid Rain permit) will contain the following elements:

(a) all elements required for a complete Acid Rain permit application under Subsection B of 20.11.62.14 NMAC, as approved or adjusted by the Department,

(b) the applicable Acid Rain emissions limitation for sulfur dioxide, and

(c) the applicable Acid Rain emissions limitation for nitrogen oxides.

(2) Each Acid Rain permit is deemed to incorporate the definitions of terms under 20.11.62.7 NMAC.

B. Permit Shield: Each affected unit operated in accordance with the Acid Rain permit that governs the unit and that was issued in compliance with Title IV of the Act, as provided in this Part, 40 CFR Parts 72, 73, 75, 76, 77, and 78, shall be deemed to be operating in compliance with the Acid Rain Program, except as provided in Subparagraph (f), of Paragraph (7), of Subsection D of 20.11.62.12 NMAC.

[1/1/96; 20.11.62.16 NMAC – Rn, 20 NMAC 11.62.II.5, 10/1/02]

20.11.62.17 ACID RAIN PERMIT ISSUANCE PROCEDURES:

A. General: The Department will issue or deny all Acid Rain permits in accordance with 20.11.42 NMAC, including the completeness determination, draft permit, administrative record, statement of basis, public notice and comment period, public hearing, proposed permit, permit issuance, permit revision, and appeal procedures as amended by Sections 205 and 206 of 20.11.62 NMAC.

B. Completeness: The Department will submit a written notice of application completeness to the EPA within 10 working days following a determination by the Department that the Acid Rain permit application is complete.

C. Statement of Basis:

(1) The statement of basis will briefly set forth significant factual, legal, and policy considerations on which the Department relied in issuing or denying the draft permit.

(2) The statement of basis will include the reasons, and supporting authority, for approval or disapproval of any compliance options requested in the permit application, including references to applicable statutory or regulatory provisions and to the administrative record.

(3) The Department will submit to the EPA a copy of the draft Acid Rain permit and the statement of basis and all other relevant portions of the operating permit that may affect the draft Acid Rain permit.

D. Issuance of Acid Rain Permits:

(1) Proposed permit: After the close of the public comment period, the Department will incorporate all necessary changes and issue or deny a proposed Acid Rain permit.

(2) The Department will submit the proposed Acid Rain permit or denial of a proposed Acid Rain permit to the EPA in accordance with 20.11.42 NMAC, the

provisions of which shall be treated as applying to the issuance or denial of a proposed Acid Rain permit.

(3) Following the EPA's review of the proposed Acid Rain permit or denial of a proposed Acid Rain permit, the Department or, under 20.11.42 NMAC (treated as applying to the issuance or denial of an Acid Rain permit), the EPA will incorporate any required changes and issue or deny the Acid Rain permit in accordance with 20.11.62.16 NMAC. No Acid Rain permit (including a draft or proposed permit) shall be issued unless the EPA has received a certificate of representation for the designated representative of the source in accordance with 40 CFR Part 72 Subpart B.

(4) Permit issuance deadline and effective date:

(a) On or before December 31, 1997, the Department will issue an Acid Rain permit to each affected source whose designated representative submitted a timely and complete Acid Rain permit application by January 1, 1996 in accordance with Subsection A of 20.11.62.13 NMAC and meets the requirements of 20.11.62.17 NMAC and 20.11.42 NMAC.

(b) Nitrogen Oxides: Not later than January 1, 1999, the Department will reopen the Acid Rain permit to add the Acid Rain Program nitrogen oxides requirements; provided that the designated representative of the affected source submitted a timely and complete Acid Rain permit application for nitrogen oxides in accordance with Subsection A of 20.11.62.13 NMAC. Such reopening shall not affect the term of the Acid Rain portion of an operating permit.

(c) Each Acid Rain permit issued in accordance with Subparagraph (a), of Paragraph (4), Subsection D of 20.11.62.17 NMAC shall take effect by the later of January 1, 2000, or, where the permit governs a unit under Subparagraph (c), of Paragraph (1), of Subsection A of 20.11.62.12 NMAC, the deadline for monitor certification under 40 CFR Part 75.

(d) Each Acid Rain permit shall have a term of 5 years commencing on its effective date.

(e) An Acid Rain permit shall be binding on any new owner or operator or designated representative of any source or unit governed by the permit.

(5) Each Acid Rain permit shall contain all applicable Acid Rain requirements, shall be a portion of the operating permit that is complete and segregable from all other air quality requirements, and shall not incorporate information contained in any other documents, other than documents that are readily available. Invalidation of the Acid Rain portion of an operating permit shall not affect the continuing validity of the rest of the operating permit, nor shall invalidation of any other portion of the operating permit affect the continuing validity of the Acid Rain portion of the permit.

E. Acid Rain Permit Appeal Procedures:

(1) Appeals of the Acid Rain portion of an operating permit issued by the Department that do not challenge or involve decisions or actions of the EPA under 40 CFR Part 72, 73, 74, 75, 76, 77 and 78 and regulations implementing 40 CFR Part 74 and 76 shall be conducted pursuant to ROA 1994 Section 9-5-1-7. Appeals of the Acid Rain portion of such a permit that challenge or involve such decisions or actions of the EPA shall follow the procedures under 40 CFR Part 78 and Section 307 of the Act. Such decisions or actions include, but are not limited to, allowance allocations, determinations concerning alternative monitoring systems, and determinations of whether a technology is a qualifying repowering technology.

(2) No administrative appeal or judicial appeal of the Acid Rain portion of an operating permit shall be allowed more than 30 days following respectively issuance of the Acid Rain portion that is subject to administrative appeal or issuance of the final agency action subject to judicial appeal.

(3) The EPA may intervene as a matter of right in any State administrative appeal of an Acid Rain permit or denial of an Acid Rain permit.

(4) No administrative appeal concerning an Acid Rain requirement shall result in a stay of the following requirements:

(a) the allowance allocations for any year during which the appeal proceeding is pending or is being conducted,

(b) any standard requirement under Subsection D of 20.11.62.12 NMAC,

(c) the emissions monitoring and reporting requirements applicable to the affected units at an affected source under 40 CFR Part 75,

(d) uncontested provisions of the decision on appeal, and

(e) the terms of a certificate of representation submitted by a designated representative under 40 CFR Part 72 Subpart B.

(5) The Department will serve written notice on the Administrator of any State administrative or judicial appeal concerning an Acid Rain provision of any operating permit or denial of an Acid Rain portion of any operating permit within 30 days of the filing of the appeal.

(6) The Department will serve written notice on the Administrator of any determination or order in a State administrative or judicial proceeding that interprets, modifies, voids, or otherwise relates to any portion of an Acid Rain permit. Following any such determination or order, the Administrator will have an opportunity to review

and veto the Acid Rain permit or revoke the permit for cause in accordance with 20.11.42 NMAC.

[1/1/96; 20.11.62.17 NMAC – Rn, 20 NMAC 11.62.II.6, 10/1/02]

20.11.62.18 PERMIT REVISIONS:

A. General:

(1) This Section shall govern revisions to any Acid Rain permit issued by the Department.

(2) A permit revision may be submitted for approval at any time. No permit revision shall affect the term of the Acid Rain permit to be revised. No permit revision shall excuse any violation of an Acid Rain Program requirement that occurred prior to the effective date of the revision.

(3) The terms of the Acid Rain permit shall apply while the permit revision is pending.

(4) Any determination or interpretation by State (including the Department or a State court) modifying or voiding any Acid Rain permit provision shall be subject to review by the EPA in accordance with 20.11.42 NMAC as applied to permit modifications, unless the determination or interpretation is an administrative amendment approved in accordance with Subsection D of 20,11,62.206 NMAC.

(5) The standard requirements of Subsection D of 20.11.62.12 NMAC shall not be modified or voided by a permit revision.

(6) Any permit revision involving incorporation of a compliance option that was not submitted for approval and comment during the permit issuance process, or involving a change in a compliance option that was previously submitted, shall meet the requirements for applying for such compliance option under Subsection B of 20.11.62.15 NMAC and 40 CFR Part 76 and regulations implementing 40 CFR Part 76.

(7) For permit revisions not described in Subsections B and C of 20.11.62.18 NMAC, the Department may, in its discretion, determine which of these sections is applicable.

B. Permit Modifications:

(1) Permit modifications shall follow the permit issuance requirements of 20.11.62.17 NMAC and 20.11.42 NMAC. For purposes of applying Paragraph (1), Subsection B of 20.11.62.18 NMAC, a permit modification shall be treated as an Acid Rain permit application, to the extent consistent with 20.11.62.18 NMAC.

(2) The following permit revisions are permit modifications:

(a) relaxation of an excess emission offset requirement after approval of the offset plan by the EPA,

(b) incorporation of a final nitrogen oxides alternative emission limitation following a demonstration period,

(c) determinations concerning failed repowering projects under Subparagraph (a), of Paragraph (6), of Subsection B of 20.11.62.15 NMAC and Subparagraph (c), of Paragraph (6), of Subsection B of 20.11.62.15 NMAC, and

(d) at the option of the designated representative submitting the permit revision, the permit revisions listed in Paragraph (2), of Subsection C of 20.11.62.18 NMAC.

C. Fast-Track Modifications:

(1) Fast-track modifications shall follow the following procedures:

(a) The designated representative shall serve a copy of the fast-track modification on the EPA, the Department, and any person entitled to a written notice under 20.11.42 NMAC. Within 5 business days of serving such copies, the designated representative shall also give public notice by publication in a newspaper of general circulation in the area where the source is located or in a State publication designed to give general public notice.

(b) The public shall have a period of 30 days, commencing on the date of publication of the notice, to comment on the fast-track modification. Comments shall be submitted in writing to the Department and to the designated representative.

(c) The designated representative shall submit the fast-track modification to the Department on or before commencement of the public comment period.

(d) Within 30 days of the close of the public comment period, the Department will consider the fast-track modification and the comments received and approve, in whole or in part or with changes or conditions as appropriate, or disapprove the modification. A fast-track modification shall be effective immediately upon issuance, in accordance with 20.11.42 NMAC as applied to significant modifications.

(2) The following permit revisions are, at the option of the designated representative submitting the permit revision, either fast-track modifications under this section or permit modifications under Subsection B of 20.11.62.18 NMAC:

(a) incorporation of a compliance option that the designated representative did not submit for approval and comment during the permit issuance process,

(b) addition of a nitrogen oxides averaging plan to a permit, and

(c) changes in a repowering plan, nitrogen oxides averaging plan, or nitrogen oxides compliance deadline extension.

D. Administrative Permit Amendment:

(1) Administrative amendments shall follow the procedures set forth in 20.11.42 NMAC. The Department will submit the revised portion of the permit to the EPA within 10 working days after the date of final action on the request for an administrative amendment.

(2) The following permit revisions are administrative amendments:

(a) activation of a compliance option conditionally approved by the Department; provided that all requirements for activation under Paragraph (3), of Subsection A of 20.11.62.15 NMAC and Subsection B of 20.11.62.15 NMAC are met,

(b) changes in the designated representative or alternative designated representative; provided that a new certificate of representation is submitted to the EPA in accordance with 40 CFR Part 72 Subpart B,

(c) correction of typographical errors,

(d) changes in names, addresses, or telephone or facsimile numbers,

(e) changes in the owners or operators; provided that a new certificate of representation is submitted within 30 days to the EPA in accordance with 40 CFR Part 72 Subpart B,

(f) Termination of a compliance option in the permit; provided that all requirements for termination under Paragraph (4), of Subsection A of 20.11.62.15 NMAC shall be met and this procedure shall not be used to terminate a repowering plan after December 31, 1999,

(g) changes in the date, specified in a new unit's Acid Rain permit, of commencement of operation or the deadline for monitor certification, provided that they are in accordance with Subsection D of 20.11.62.12 NMAC,

(h) the addition of or change in a nitrogen oxides alternative emissions limitation demonstration period, provided that the requirements of regulations implementing 40 CFR Part 76 are met, and

(i) incorporation of changes that the EPA has determined to be similar to those in Subparagraphs (a) through (h), of Paragraph (2), of Subsection D of 20.11.62.18 NMAC.

E. Automatic Permit Amendment: The following permit revisions shall be deemed to amend automatically, and become a part of the affected unit's Acid Rain permit by operation of law without any further review:

(1) upon recordation by the EPA under 40 CFR Part 73, all allowance allocations to, transfers to, and deductions from an affected unit's ATS account, and

(2) incorporation of an offset plan that has been approved by the EPA under 40 CFR Part 77.

F. Permit Reopenings:

(1) As provided in 20.11.42 NMAC, the Department will reopen an Acid Rain permit for cause, including whenever additional requirements become applicable to any affected unit governed by the permit.

(2) In reopening an Acid Rain permit for cause, the Department will issue a draft permit changing the provisions, or adding the requirements, for which the reopening was necessary. The draft permit shall be subject to the requirements of Sections 204 and 205 of 20.11.62 NMAC.

(3) Any reopening of an Acid Rain permit shall not affect the term of the permit.

[1/1/96; 20.11.62.18 NMAC – Rn, 20 NMAC 11.62.II.7, 10/1/02]

20.11.62.19 COMPLIANCE CERTIFICATION:

A. Annual Compliance Certification Report:

(1) **Applicability and Deadline:** For each calendar year in which a unit is subject to the Acid Rain emissions limitations, the designated representative of the source at which the unit is located shall submit to the EPA and to the Department, within 60 days after the end of the calendar year, an annual compliance certification report for the unit in compliance with 40 CFR 72.90.

(2) The submission of complete compliance certifications in accordance with Paragraph (1), of Subsection A of 20.11.62.19 NMAC and 40 CFR Part 75 shall be deemed to satisfy the requirement to submit compliance certifications under 20.11.42 NMAC with regard to the Acid Rain portion of the source's operating permit.

B. Units With Repowering Extension Plans:

(1) **Design and Engineering and Contract Requirements:** No later than January 1, 2000, the designated representative of a unit governed by an approved repowering plan shall submit to the EPA and the Department:

(a) Satisfactory documentation of a preliminary design and engineering effort.

(b) A binding letter agreement for the executed and binding contract (or for each in a series of executed and binding contracts) for the majority of the equipment to repower the unit using the technology conditionally approved by the Administrator under 40 CFR 72.44(d)(3).

(c) The letter agreement under Subparagraph (b), of Paragraph (1), of Subsection B of 20.11.62.19 NMAC shall be signed and dated by each party and specify

- (i) the parties to the contract,
- (ii) the date each party executed the contract,
- (iii) the unit to which the contract applies,
- (iv) a brief list identifying each provision of the contract,
- (v) any dates to which the parties agree, including construction completion date,
- (vi) the total dollar amount of the contract, and
- (vii) a statement that a copy of the contract is on site at the source and will be submitted upon written request of the EPA or the Department.

(2) Removal From Operation To Repower: The designated representative of a unit governed by an approved repowering plan shall notify the EPA and the Department in writing at least 60 days in advance of the date on which the existing unit is to be removed from operation so that the qualified repowering technology can be installed, or is to be replaced by another unit with the qualified repowering technology, in accordance with the plan.

(3) Commencement of Operation: Not later than 60 days after the units repowered under an approved repowering plan commences operation at full load, the designated representative of the unit shall submit a report to the EPA and the Department comparing the actual hourly emissions and percent removal of each pollutant controlled at the unit to the actual hourly emissions and percent removal at the existing unit under the plan prior to repowering, determined in accordance with 40 CFR Part 75.

(4) Decision to Terminate: If at any time before the end of the repowering extension and before completion of construction and start-up testing, the owners and operators decide to terminate good faith efforts to design, construct, and test the qualified repowering technology on the unit to be repowered under an approved

repowering plan, then the designated representative shall submit a notice to the EPA and the Department by the earlier of the end of the repowering extension or a date within 30 days of such decision, stating the date on which the decision was made.

[1/1/96; 20.11.62.19 NMAC – Rn, 20 NMAC 11.62.II.8, 10/1/02]

PART 63: NEW SOURCE PERFORMANCE STANDARDS FOR STATIONARY SOURCES

20.11.63.1 ISSUING AGENCY:

Albuquerque-Bernalillo County Air Quality Control Board, c/o Environmental Health Department, P.O. Box 1293, Albuquerque, New Mexico 87103. Telephone: (505) 768-2601.

[1/1/2000; 20.11.63.1 NMAC - Rn, 20 NMAC 11.63.1, 10/1/02; A, 1/1/05; A, 2/16/09]

20.11.63.2 SCOPE:

20.11.63 NMAC is applicable to all stationary sources of air pollutants located within Bernalillo county, which are subject to the requirements of 40 CFR Part 60, as amended in the *Federal Register* through November 15, 2024.

A. Exempt: 20.11.63 NMAC does not apply to sources within Bernalillo county that are located on Indian lands over which the Albuquerque-Bernalillo county air quality control board lacks jurisdiction.

B. Exclusions:

(1) 40 CFR 60, Subpart AAA, *Standards of Performance for New Residential Wood Heaters*.

(2) 40 CFR 60, Subpart QQQQ, *Standards of Performance for New Residential Hydronic Heaters and Forced Air Furnaces*.

C. Variances: The variance provisions of 20.11.7 NMAC, *Variance Procedure*, Revised Ordinances of Albuquerque 1994 Section 9-5-1-8, Bernalillo County Ordinances Section 30-37, and Section 74-2-8 NMSA 1978 shall not apply to 20.11.63 NMAC or the incorporated federal standards.

[1/1/2000; 20.11.63.2 NMAC - Rn, 20 NMAC 11.63.2, 10/1/2002; A, 1/1/2005; A, 1/1/2006; A, 1/15/2007; A, 2/16/2009; A, 12/12/2011; A, 2/10/2014; A, 5/13/2017; A, 1/14/2025]

20.11.63.3 STATUTORY AUTHORITY:

20.11.63 NMAC is adopted pursuant to the authority provided in the New Mexico Air Quality Act, Section 74-2-5 NMSA 1978; the Joint Air Quality Control Board Ordinance, Bernalillo County Ordinances Section 30-33; and the Joint Air Quality Control Board Ordinance, Revised Ordinances of Albuquerque 1994 Section 9-5-1-4.

[1/1/2000; 20.11.63.3 NMAC - Rn, 20 NMAC 11.63.3, 10/1/02; A, 1/1/05; A, 5/13/17]

20.11.63.4 DURATION:

Permanent.

[1/1/2000; 20.11.63.4 NMAC - Rn, 20 NMAC 11.63.4, 10/1/02]

20.11.63.5 EFFECTIVE DATE:

December 1, 1999, unless a later date is cited at the end of a section.

[1/1/2000; 20.11.63.5 NMAC - Rn, 20 NMAC 11.63.5 & A, 10/1/02]

20.11.63.6 OBJECTIVE:

To adopt specified federal New Source Performance Standards (NSPS) codified at 40 CFR Part 60 as part of 20.11.63 NMAC.

[1/1/2000; 20.11.63.6 NMAC - Rn, 20 NMAC 11.63.6, 10/1/02; A, 1/1/05]

20.11.63.7 DEFINITIONS:

[RESERVED]

20.11.63.8 SAVINGS CLAUSE:

Any amendment to 20.11.63 NMAC, *New Source Performance Standards for Stationary Sources* that is filed with the state records center and archives shall not affect actions pending for violation of a city or county ordinance or the version of 20.11.63 NMAC, *New Source Performance Standards For Stationary Sources*, in effect prior to amendment. Prosecution for a violation under prior regulation wording shall be governed and prosecuted under the ordinance, part, or regulation section in effect at the time the violation was committed.

[1/1/2000; 20.11.63.8 NMAC - Rn, 20 NMAC 11.63.8, 10/1/02; A, 1/1/05; A, 12/12/11]

20.11.63.9 SEVERABILITY:

If any section, subsection, sentence, phrase, clause, or wording of 20.11.63 NMAC or the federal standards incorporated herein is for any reason held to be unconstitutional

or otherwise invalid by any court, the decision shall not affect the validity of remaining portions of 20.11.63 NMAC.

[1/1/2000; 20.11.63.9 NMAC - Rn, 20 NMAC 11.63.9, 10/1/02; A, 1/1/05]

20.11.63.10 DOCUMENTS:

Documents incorporated and cited in 20.11.63 NMAC may be viewed at the Albuquerque environmental health department, 400 Marquette NW, Albuquerque, NM, 87102.

[1/1/2000; 20.11.63.10 NMAC - Rn, 20 NMAC 11.63.10, & A, 10/1/02; A, 1/1/05; A, 2/10/14]

20.11.63.11 INCORPORATION OF FEDERAL STANDARDS:

Except as otherwise provided in 20.11.63 NMAC, the New Source Performance Standards promulgated by the United States environmental protection agency, and codified at 40 CFR Part 60, including Subpart A, *General Provisions* thereto, as amended in the *Federal Register* through November 15, 2024, are hereby incorporated into 20.11.63 NMAC.

[1/1/2000; 20.11.63.11 NMAC - Rn, 20 NMAC 11.63.11, 10/1/2002; A, 1/1/2005; A, 1/15/2007; A, 2/16/2009; A, 12/12/2011; A, 2/10/2014; A, 5/13/2017; A, 1/14/2025]

20.11.63.12 MODIFICATIONS AND EXCEPTIONS:

For purposes of administering and enforcing 20.11.63 NMAC, the following modification or exception is made to the federal standards that are incorporated in 20.11.63 NMAC. When the director of Albuquerque environmental health department is exercising the authority delegated to the director by the United States environmental protection agency, the definition of "administrator" of the United States environmental protection agency that is included in 40 CFR 60.2, *Definitions*, shall be changed to "director" of the Albuquerque environmental health department.

[1/1/2000; 20.11.63.12 NMAC - Rn, 20 NMAC 11.63.12, 10/1/02; A, 1/1/05]

PART 64: EMISSION STANDARDS FOR HAZARDOUS AIR POLLUTANTS FOR STATIONARY SOURCES

20.11.64.1 ISSUING AGENCY:

Albuquerque-Bernalillo County Air Quality Control Board, c/o Environmental Health Department, P.O. Box 1293, Albuquerque, New Mexico 87103. Telephone: (505) 768-2601.

[1/1/2000; 20.11.64.1 NMAC - Rn, 20 NMAC 11.64.1, 10/1/02; A, 1/1/05; A, 2/16/09]

20.11.64.2 SCOPE:

20.11.64 NMAC is applicable to all stationary sources of air pollutants located within Bernalillo county, which are subject to any requirements of 40 CFR Part 61 or Part 63, as amended in the *Federal Register* through November 15, 2024.

A. Exempt: 20.11.64 NMAC does not apply to sources within Bernalillo county, that are located on Indian lands over which the Albuquerque-Bernalillo county air quality control board lacks jurisdiction.

B. Exclusions:

(1) 40 CFR 61, Subpart B, *National Emission Standards for Radon Emissions From Underground Uranium Mines*;

(2) 40 CFR 61, Subpart H, *National Emission Standards for Emissions of Radionuclides Other Than Radon From Department of Energy Facilities*;

(3) 40 CFR 61, Subpart I, *National Emission Standards for Radionuclide Emissions From Federal Facilities Other Than Nuclear Regulatory Commission Licensees and Not Covered by Subpart H*;

(4) 40 CFR 61, Subpart K, *National Emission Standards for Radionuclide Emissions From Elemental Phosphorus Plants*;

(5) 40 CFR 61, Subpart Q, *National Emission Standards for Radon Emissions From Department of Energy Facilities*;

(6) 40 CFR 61, Subpart R, *National Emission Standards for Radon Emissions From Phosphogypsum Stacks*;

(7) 40 CFR 61, Subpart T, *National Emission Standards for Radon Emissions From the Disposal of Uranium Mill Tailings*; and

(8) 40 CFR 61, Subpart W, *National Emission Standards for Radon Emissions From Operating Mill Tailings*.

C. Variances: The variance provisions of 20.11.7 NMAC, *Variance Procedure*, Revised Ordinances of Albuquerque 1994 Section 9-5-1-8, Bernalillo County Ordinances Section 30-37 and Section 74-2-8 NMSA 1978 shall not apply to 20.11.64 NMAC or the incorporated federal standards.

[1/1/2000; 20.11.64.2 NMAC - Rn, 20 NMAC 11.64.2, 10/1/2002; A, 1/1/2005; A, 1/15/2007; A, 2/16/2009; A, 12/12/2011; A, 2/10/2014; A, 5/13/2017; A, 1/14/2025]

20.11.64.3 STATUTORY AUTHORITY:

20.11.64 NMAC is adopted pursuant to the authority provided in the New Mexico Air Quality Act, Section 74-2-5 NMSA 1978; the Joint Air Quality Control Board Ordinance, Bernalillo County Ordinances Section 30-33; and the Joint Air Quality Control Board Ordinance, Revised Ordinances of Albuquerque 1994 Section 9-5-1-4.

[1/1/2000; 20.11.64.3 NMAC - Rn, 20 NMAC 11.64.3, 10/1/02; A, 1/1/05; A, 5/13/17]

20.11.64.4 DURATION:

Permanent.

[1/1/2000; 20.11.64.4 NMAC - Rn, 20 NMAC 11.64.4, 10/1/02]

20.11.64.5 EFFECTIVE DATE:

December 1, 1999, unless a later date is cited at the end of a section.

[1/1/2000; 20.11.64.5 NMAC - Rn, 20 NMAC 11.64.5 & A, 10/1/02]

20.11.64.6 OBJECTIVE:

To adopt specified federal National Emissions Standards for Hazardous Air Pollutants (NESHAP) and National Emissions Standards for Hazardous Air Pollutants for Source Categories codified at 40 CFR Parts 61 and 63 as part of 20.11.64 NMAC.

[1/1/2000; 20.11.64.6 NMAC - Rn, 20 NMAC 11.64.6, 10/1/02; A, 1/1/05]

20.11.64.7 DEFINITIONS:

[RESERVED]

20.11.64.8 SAVINGS CLAUSE:

Any amendment to 20.11.64 NMAC, *Emission Standards For Hazardous Air Pollutants For Stationary Sources* that is filed with the state records center and archives shall not affect actions pending for violation of a city or county ordinance or the version of 20.11.64 NMAC, *Emission Standards for Hazardous Air Pollutants for Stationary Sources*, in effect prior to amendment. Prosecution for a violation under prior regulation wording shall be governed and prosecuted under the ordinance, part, or regulation section in effect at the time the violation was committed.

[1/1/2000; 20.11.64.8 NMAC - Rn, 20 NMAC 11.64.8, 10/1/02; A, 1/1/05]

20.11.64.9 SEVERABILITY:

If any section, subsection, sentence, phrase, clause, or wording of 20.11.64 NMAC or the federal standards incorporated herein is for any reason held to be unconstitutional or otherwise invalid by any court, the decision shall not affect the validity of remaining portions of 20.11.64 NMAC.

[1/1/2000; 20.11.64.9 NMAC - Rn, 20 NMAC 11.64.9, 10/1/02; A, 1/1/05]

20.11.64.10 DOCUMENTS:

Documents incorporated and cited in 20.11.64 NMAC may be viewed at the Albuquerque environmental health department, 400 Marquette NW, Albuquerque, NM, 87102.

[1/1/2000; 20.11.64.10 NMAC - Rn, 20 NMAC 11.64.10, & A, 10/1/02; A, 1/1/05; A, 2/10/14]

20.11.64.11 INCORPORATION OF FEDERAL STANDARDS CODIFIED AT 40 CFR PART 61:

Except as otherwise provided, the National Emission Standards for Hazardous Air Pollutants, promulgated by the United States environmental protection agency, and codified at 40 CFR Part 61, including Subpart A, *General Provisions* thereto, as amended in the *Federal Register* through November 15, 2024, are hereby incorporated into 20.11.64 NMAC.

[1/1/2000; 20.11.64.11 NMAC - Rn, 20 NMAC 11.64.11, 10/1/2002; A, 1/1/2005; A, 1/15/2007; A, 2/16/2009; A, 12/12/2011; A, 2/10/2014; A, 5/13/2017; A, 1/14/2025]

20.11.64.12 INCORPORATION OF FEDERAL STANDARDS CODIFIED AT 40 CFR PART 63:

Except as otherwise provided, the National Emissions Standards for Hazardous Air Pollutants for Source Categories, promulgated by the United States environmental protection agency, and codified at 40 CFR Part 63, including Subpart A, *General Provisions* thereto, as amended in the *Federal Register* through November 15, 2024, are hereby incorporated into 20.11.64 NMAC.

[1/1/2000; 20.11.64.12 NMAC - Rn, 20 NMAC 11.64.12, 10/1/2002; A, 1/1/2005; A, 1/15/2007; A, 2/16/2009; A, 12/12/2011; A, 2/10/2014; A, 5/13/2017; A, 1/14/2025]

20.11.64.13 MAXIMUM ACHIEVABLE CONTROL TECHNOLOGY (MACT) DETERMINATIONS FOR CONSTRUCTED AND RECONSTRUCTED MAJOR SOURCES OF HAZARDOUS AIR POLLUTANTS:

Any owner or operator that constructs or reconstructs a major source of hazardous air pollutants shall be required to perform a MACT determination, approved by the

department, consistent with the provisions of 40 CFR 63, Sections 40 through 44. Any MACT emission limitations or requirements shall be incorporated into any permit issued pursuant to 20.11.41 NMAC, *Construction Permits* or 20.11.42 NMAC, *Operating Permits*.

[1/1/2000; 20.11.64.13 NMAC - Rn, 20 NMAC 11.64.13, 10/1/02; A, 1/1/05; A, 2/10/14]

20.11.64.14 MODIFICATIONS AND EXCEPTIONS:

The following modifications or exceptions are made to the incorporated federal standards:

A. For purposes of administering and enforcing 40 CFR 61, the following modification or exception is made to the federal standards that are incorporated in 40 CFR 61. When the director of the Albuquerque environmental health department is exercising the authority delegated to the director by the United States environmental protection agency, the definition of "administrator" of the United States environmental protection agency that is included in 40 CFR 61.02, *Definitions*, shall be changed to "director" of the Albuquerque environmental health department.

B. For purposes of administering and enforcing 40 CFR 63, the following modification or exception is made to the federal standards that are incorporated in 40 CFR 63. When the director of the Albuquerque environmental health department is exercising the authority delegated to the director by the United States environmental protection agency, the definition of "administrator" of the United States environmental protection agency that is included in 40 CFR 63.2, *Definitions*, shall be changed to "director" of the Albuquerque environmental health department.

C. Pursuant to 40 CFR 63.42(b), the effective date for the incorporation of 40 CFR 63, Sections 40 through 44, shall be June 29, 1998. If the department does not have a program to adequately implement the provisions of Section 112(g) of the Clean Air Act, all case-by-case MACT determinations made by the department shall be submitted in writing to the EPA regional administrator for concurrence. All applicable MACT emission limitations and requirements shall be incorporated into all permits issued by the department.

[1/1/2000; 20.11.64.14 NMAC - Rn, 20 NMAC 11.64.14, 10/1/02; A, 1/1/05; A, 2/10/14]

PART 65: VOLATILE ORGANIC COMPOUNDS

20.11.65.1 ISSUING AGENCY:

Albuquerque - Bernalillo County Air Quality Control Board. P.O. Box 1293, Albuquerque, New Mexico 87103. Telephone: (505) 768-2601.

[3/23/87. . .12/1/95; 20.11.65.1 NMAC - Rn, 20 NMAC 11.65.1.1, 10/1/02; A, 10/13/09]

20.11.65.2 SCOPE:

20.11.65 NMAC is applicable to any source located within Bernalillo county.

A. Exempt: 20.11.65 NMAC does not apply to sources within Bernalillo county which are located on Indian lands over which the Albuquerque - Bernalillo County Air Quality Control Board lacks jurisdiction.

B. NSPS Facilities: Facilities, processes and equipment that are subject to specific requirements or allowed exemption by the federal New Source Performance Standards per 40 CFR 60 shall be exempt from the requirements of 20.11.65 NMAC that would otherwise govern.

[3/23/87. . .12/1/95; 20.11.65.2 NMAC - Rn, 20 NMAC 11.65.I.2 & A, 10/1/02]

20.11.65.3 STATUTORY AUTHORITY:

20.11.65 NMAC is adopted pursuant to the authority provided in the New Mexico Air Quality Control Act, NMSA 1978 Section 74-2-4, 74-2-5.C; the Joint Air Quality Control Board Ordinance, Bernalillo County Ordinance 94-5 Section 4; and the Joint Air Quality Control Board Ordinance, Revised Ordinances of Albuquerque 1994 Section 9-5-1-4.

[3/23/87. . .12/1/95; 20.11.65.3 NMAC - Rn, 20 NMAC 11.65.I.3, 10/1/02; A, 10/13/09]

20.11.65.4 DURATION:

Permanent.

[12/1/95; 20.11.65.4 NMAC - Rn, 20 NMAC 11.65.I.4, 10/1/02]

20.11.65.5 EFFECTIVE DATE:

December 1, 1995, unless a later date is cited at the end of a section.

[12/1/95; 20.11.65.5 NMAC - Rn, 20 NMAC 11.65.I.5 & A, 10/1/02]

20.11.65.6 OBJECTIVE:

To prevent or reduce emission of hydrocarbon vapors from facilities and sources not otherwise regulated or exempted by 40 CFR Part 60; including volatile organic compounds and petroleum liquids, in order to prevent the formation of photochemical oxidants in the atmosphere.

[3/23/87. . .12/1/95; 20.11.65.6 NMAC - Rn, 20 NMAC 11.65.I.6, 10/1/02; A, 10/13/09]

20.11.65.7 DEFINITIONS:

In addition to the definitions in 20.11.65.7 NMAC the definitions in 20.11.1 NMAC apply unless there is a conflict between definitions, in which case the definition in 20.11.65 NMAC shall govern.

A. "Active life" means the time from initial startup until final shut down of the facility. This would also include periods of scheduled or unscheduled maintenance, flow adjustments or system failure, all of which are subject to the provisions of 20.11.49 NMAC.

B. "Alternative method" means any method of sampling and analyzing for an air pollutant which is not a reference or equivalent method but which has been demonstrated to the EPA administrator's or the director's satisfaction, in specific cases, to produce results adequate for the determination of compliance.

C. "Contaminated" means a condition resulting from seepage, drainage, or flow of gaseous or liquid substances from activities such as a leaking underground storage tank, usually detected by hydro-geologic investigations or underground storage tank excavation and removal.

D. "Cutback asphalt" means asphalt cement or other paving material, which has been diluted or blended with petroleum solvents such as kerosene, naphtha, diesel oil, gasoline, or similar petroleum distillate products.

E. "Decontamination facility" means a place where a portable or stationary treatment system is installed and operated to receive water, air, or other gaseous substances bearing VOC contaminants.

F. "Dispense" means to introduce organic liquids by temporary connection from a supply container, greater than 60 gallons capacity, into a receptor container, which is normally closed and sealed against spillage or evaporative loss.

G. "Equivalent approved by the director" means the authorization to substitute an alternative control process, which has been demonstrated to the satisfaction of the director to result in no greater emissions, than would occur with the control process otherwise required. The director may use federal EPA document AP-42 or any other reliable reference or manufacturers data in completing the evaluation of the proposed alternative.

H. "Equivalent method" means any method of sampling and analyzing for an air pollutant which is not a reference method but which has been demonstrated to the EPA administrator's or the director's satisfaction to have a consistent and quantitatively known relationship to the reference method, under specified conditions.

I. "Existing facilities" means those decontamination facilities, which were constructed and placed in operation prior to June 1, 1991.

J. "Gasoline" means a mixture of liquid hydrocarbons with Reid vapor pressure of 4.0 psi or greater which is suitable for use as a fuel in spark ignition internal combustion engines and includes oxygenated blends.

K. "Loading rack" means a gasoline loading facility, which was constructed prior to December 17, 1980, and it includes loading arms, pumps, meters, shutoff valves, relief valves, and other piping and valves necessary to fill tank trucks. Those constructed or refurbished after December 17, 1980, may be subject to 20.11.63 NMAC, *New Source Performance Standards*.

L. "Motor vehicle" means any wheeled conveyance propelled by an internal combustion engine and commonly operated on roadways and which has a fuel tank capacity exceeding 5.0 U.S. gallons (18.93 liters).

M. "New facilities" means those decontamination facilities, which are authorized by an authority-to-construct permit issued by the department and dated June 1, 1991 or later.

N. "Organic fluid" means any substance or mixture thereof, which is liquid at standard conditions and contains carbon compounds that act as volatile organic compounds.

O. "Oxygenate" means an oxygen-containing, ashless organic compound such as alcohol or ether, which may be used as a motor vehicle fuel or fuel supplement.

P. "Reference method" means any method of sampling and analyzing for an air pollutant as described in Appendix A to 40 CFR 60.

Q. "Regenerate" means to drive off or cause the release of adsorbed or absorbed VOC from the collection media of a pollution control device.

R. "Stationary container" shall mean any aggregation or combination of containers which is:

- (1) possessed by one person;
- (2) located so that any portion of such aggregation or combination of containers can be encompassed within a circle 300 feet in diameter; and
- (3) was constructed prior to June 11, 1973; those constructed after June 11, 1973, may be subject to 20.11.63 NMAC, *New Source Performance Standards*.

S. "Strip" means to subject contaminated liquid to direct contact with a gaseous medium so that contamination products are transferred from the liquid to the gas, such as in a packed column.

T. "Submerged fill pipe" means any fill pipe, the discharge opening of which is entirely submerged when the fluid level is six (6) inches above the bottom of the container.

U. "Transportable container" means a gasoline or other organic fluid-containing vessel and its ancillary plumbing fixtures with a capacity greater than 500 gallons which is mounted on a truck or trailer chassis licensed for bulk movement of organic fluids by way of public roadways.

V. "Underground storage tank" means any single vessel buried or installed below ground and used for holding gasoline at a facility having an annual total volume of use or sale in excess of 100,000 gallons of gasoline.

W. "Vapor pressure" means the true vapor pressure of the fluid mixture vapors as could reasonably be expected under the actual storage conditions. This would be the equilibrium.

X. "Ventilation" means to evaporate and flush VOC's from contaminated soil by increasing soil temperature or exposing it to air, steam or any other working gases.

Y. "Volatile organic compound" or "VOC" means any organic compound which participates in atmospheric photochemical reactions; or which is measured by a federal EPA reference method, an equivalent method, an alternative method, or which is determined by procedures specified under any subpart of 40 CFR 60 of the federal Code of Regulations.

[3/23/87. . .12/1/95; 20.11.65.7 NMAC - Rn, 20 NMAC 11.65.I.7, 10/1/02; A, 10/13/09]

20.11.65.9 SAVINGS CLAUSE:

Any amendment to 20.11.65 NMAC, which is filed, with the state records center shall not affect actions pending for violation of a city or county ordinance, Air Quality Control Board Regulation 11, or 20.11.65 NMAC. Prosecution for a violation under prior regulation wording shall be governed and prosecuted under the statute, ordinance, part, or regulation section in effect at the time the violation was committed.

[12/1/95; 20.11.65.9 NMAC - Rn, 20 NMAC 11.65.I.9, 10/1/02]

20.11.65.10 SEVERABILITY:

If any section, paragraph, sentence, clause, or word of 20.11.65 NMAC or any federal standards incorporated herein is for any reason held to be unconstitutional or otherwise invalid by any court, the decision shall not affect the validity of remaining provisions of 20.11.65 NMAC.

[12/1/95; 20.11.65.10 NMAC - Rn, 20 NMAC 11.65.I.10, 10/1/02]

20.11.65.11 DOCUMENTS:

Documents incorporated and cited in 20.11.65 NMAC may be viewed at the Albuquerque Environmental Health Department, 400 Marquette NW, Albuquerque, NM.

20.11.65.12 STORAGE OF GASOLINE IN STATIONARY CONTAINERS GREATER THAN 40,000 GALLONS CAPACITY:

No person shall load, store, or hold gasoline in any stationary container of more than 40,000 gallons capacity, unless such container is a pressure vessel capable of maintaining working pressures sufficient at all times to prevent gasoline vapor loss to the atmosphere, or designed and equipped with one of the following vapor loss control devices, properly installed, in good working order and in operation:

A. A floating roof; consisting of a pontoon-type or double-deck-type roof, resting on the surface of the fluid contents and equipped with a closure seal, or seals, to close the space between the roof edge and container wall. The control equipment provided for in this subsection shall not be used if the gasoline has a vapor pressure of 9.0 psia or greater under actual storage conditions. All container gauging and sampling devices shall be gas-tight except when gauging or sampling is taking place.

B. A vapor recovery system; consisting of a vapor gathering system capable of collecting the vapors and gases discharged and a vapor disposal system capable of processing such vapors and gases so as to emit no greater than 1.24 pounds of VOC's per 1000 gallons transferred with all container gauging and sampling devices gas-tight except when gauging or sampling is taking place.

C. Other equipment; which is an equivalent approved by the director.

[12/1/95; 20.11.65.12 NMAC - Rn, 20 NMAC 11.65.I.12 & Repealed, 10/1/02; Rn, 20 NMAC 11.65.II.1, 10/1/02]

20.11.65.13 LOADING OF GASOLINE FROM A LOADING RACK WITH A 30-DAY THROUGHPUT GREATER THAN 600,000 GALLONS:

No person shall load gasoline from a loading rack having a 30-day throughput greater than 600,000 gallons of gasoline into any tank truck, trailer, or railroad tank car unless

the loading rack is equipped with a vapor collection and disposal system or its equivalent approved by the director.

A. Loading shall be accomplished in such a manner that displaced vapor and air will be vented only to the vapor collection system. Measures shall be taken to prevent fluid drainage from the loading device when it is not in use or to accomplish complete drainage before the loading device is disconnected.

B. The vapor disposal portion of the vapor collection and disposal system shall consist of one of the following.

(1) A vapor recovery or disposal system which will recover or dispose of all the organic vapors and gases vented to it in such a manner that the emissions to the atmosphere do not exceed 1.24 pounds of VOC's per 1,000 gallons of organic fluids transferred by the equipment being controlled.

(2) A continuously operating smokeless flare or waste heat boiler operated at a continuous combustion efficiency sufficient to meet the following smoke opacity criteria. No person, in operating a smokeless flare for the purposes of 20.11.65 NMAC, shall cause, suffer, or allow visible emissions greater than 5% opacity.

(3) Other equipment which is equivalent approved by the director.

[12/1/95; 20.11.65.13 NMAC - Rn, 20 NMAC 11.65.II.2, 10/1/02]

20.11.65.14 TRANSPORT AND DELIVERY OF GASOLINE BY MOBILE TANK TRUCKS OR TRAILER:

No person shall unload gasoline from any gasoline transport truck or trailer to a user within the jurisdiction of the Albuquerque - Bernalillo county air quality control board without meeting the following requirements:

A. Delivery of gasoline into underground storage tanks:

(1) No person shall unload gasoline into any underground storage tank with a capacity of 3,000 gallons or more unless such tank is equipped with an approved vapor loss control system, including a submerged fill pipe, in which displaced vapors from the underground storage tank are either contained or are processed such that final emissions to the atmosphere do not exceed 1.15 pounds of VOC's per 1,000 gallons of gasoline loaded.

(2) No person shall unload gasoline into any underground storage tank with a capacity of greater than 500 gallons and less than 3,000 gallons unless such tank is equipped with a securely fastened submerged fill pipe or an approved vapor recovery system.

B. The transportable container of gasoline shall be sealed to prevent the loss of gasoline liquids or vapors or the entrance of ambient air into the container when transporting or unloading gasoline into any underground storage tank having a capacity greater than 3,000 gallons.

C. No person unloading gasoline from a transportable container into an underground storage tank of greater than 3,000 gallons capacity shall cause or allow the flow of gasoline through the product connecting hose until the return vapor recovery hose is attached and properly connected and sealed.

D. No person unloading gasoline from a transportable container into an underground storage tank greater than 3,000 gallons capacity shall cause or allow the continuation of product delivery if there is an apparent leakage of liquid gasoline from any point in the delivery system.

[12/1/95; 20.11.65.14 NMAC - Rn, 20 NMAC 11.65.II.3, 10/1/02]

20.11.65.15 GASOLINE HANDLING AND HOLDING AT RETAIL OR FLEET SERVICE STATIONS:

No person shall allow loading of gasoline into an underground storage tank with greater than 3,000 gallons capacity, unless it is equipped with an approved vapor loss control system, including a submerged fill pipe, in which the displaced vapors are either continuously contained or processed such that the emission of gasoline vapors to the atmosphere do not exceed 1.15 pounds of gasoline per 1,000 gallons loaded into said tank. Liquid gasoline dispensing from the underground storage tank as well as momentary opening of the system for gasoline gauging purposes shall not be considered as vapor loss in the requirement of this Section.

[12/1/95; 20.11.65.15 NMAC - Rn, 20 NMAC 11.65.II.4, 10/1/02]

20.11.65.16 ORGANIC FLUIDS EXEMPT FROM VAPOR LOSS CONTROL UNDER 20.11.65 NMAC:

The handling, transport, loading, storage, or dispensing of organic fluid such as diesel fuels numbers 2-D and 4-D as specified by ASTM D975-78, fuels oils number 2 through 6 as specified by ASTM D396-78, and jet aircraft and gas turbine fuel oils number 2-GT through 4-GT as specified by ASTM D2880-82 and D1655-85A shall be exempt from vapor loss controls of 20.11.65 NMAC.

[12/1/95; 20.11.65.16 NMAC - Rn, 20 NMAC 11.65.II.5, 10/1/02; A, 10/13/09]

20.11.65.17 INDUSTRIAL HANDLING, STORAGE, OR USE OF ORGANIC FLUIDS AND GASES NOT OTHERWISE ADDRESSED IN 20.11.65 NMAC:

No person shall operate an industrial processor material handling, transport, or delivery system which would have a potential emission rate greater than either 100 pounds of organic vapors in any single 24 hour day or 10 pounds per hour without operating with the following level of emission controls:

A. Organic fluids and gases with a vapor pressure greater than 15.0 psia; shall be continuously contained in pressurized containers and handling systems designed and capable of holding, process handling, and use of said organic fluids and gases such that no more than 2.2 pounds of organic vapors are emitted into the atmosphere for every 6,000 gallons loaded, transferred, or used in any process including making and braking the connections of product lines and operation of valves.

B. Organic fluids and gases with a vapor pressure less than 15.0 psia, but greater than 1.5 psia; shall not be loaded, transferred or used in any process in monthly quantities greater than 1,000 pounds unless there is a system of organic vapor emission control such that no more than 2.2 pounds of organic vapors will be emitted for every 1,000 gallons of use of such organic fluid or gas.

C. Organic fluids and gases with a vapor pressure less than 1.5 psia; under conditions of actual exposure to the atmosphere shall be exempt from the requirements of 20.11.65 NMAC.

[12/1/95; 20.11.65.17 NMAC - Rn, 20 NMAC 11.65.II.6, 10/1/02]

20.11.65.18 CUTBACK ASPHALT:

A. No person shall cause, allow, or permit the use of cutback asphalt in quantities greater than 100 pounds per application directly onto existing or new paved surfaces without first obtaining a permit for such use from the department.

B. The director of the department may only issue a permit to use cutback asphalt if it is determined, based on information supplied by the applicant, that less than 25 tons per year of VOC's will be emitted to the ambient air as a result of the activities approved under the permit.

C. Penetrate uses: for the purposes of this subsection, asphalt cement cut with naphtha for the purposes of getting surface penetration into existing driveway and parking lot surfaces shall be exempt from the requirements of Subsections A and B of 20.11.65.18 NMAC. However, this exemption does not apply between the dates of June 15 through September 15. During the period of June 15 through September 15 a permit for such operation shall be required and the department shall consider the annual 25-ton limitation to apply entirely within the three-month span of this requirement.

[12/1/95; 20.11.65.18 NMAC - Rn, 20 NMAC 11.65.II.7, 10/1/02]

20.11.65.19 CONTAMINATED SOILS AND GROUNDWATER TREATMENT:

A. Applicability:

(1) **Existing decontamination facilities;** shall comply with the provisions of this subsection no later than June 1, 1991.

(2) **New decontamination facilities;** which are authorized by an authority-to-construct permit issued by the department, shall comply with the provisions of this subsection immediately upon startup.

B. VOC emission controls required: No person shall strip or extract VOC's from contaminated soils or water or regenerate or reactivate a VOC collecting material used within a pollution control device such that emissions to the ambient air be in excess of Albuquerque - Bernalillo County Air Quality Control Board, Ambient Air Quality Standards.

C. VOC emission controls - exceptions: Site excavation to examine tanks and other underground conditions shall be exempt from this provision. Aeration of wastewater at sewage treatment facilities shall be exempt from this subsection.

D. Testing and reporting:

(1) Emission testing shall be performed by the operator of the stripper/extracting operation to insure pollution control device efficiency. Performance testing shall be performed and reported within 30 days from startup and quarterly thereafter throughout the active life of the project. This provision may be suspended, with the director's approval, upon receipt of the operator's petition demonstrating emissions have declined to negligible quantities. Testing shall quantify the emissions of VOC from each emission point of the pollution control device using EPA Method 25 - Determination of Total Gaseous Non-methane Organic Emissions as Carbon as published in 40 CFR 60 Appendix A, or an equivalent method approved by the director. In addition, testing shall quantify all hazardous air pollutants as listed in 40 CFR 61.01(a) and (b). This emissions testing shall be performed by EPA Method 18 - Measurement of Gaseous Organic Compound Emissions By Gas Chromatography as published in 40 CFR 60 Appendix A or equivalent. After the initial report, the emissions shall be tested no less frequently than annually to monitor any change in the emissions of hazardous air pollutants.

(2) All test reports shall be submitted to the department within 45 days of the test date.

[3/23/87; 20.11.65.19 NMAC - Rn, 20 NMAC 11.65.II.8, 10/1/02; A, 10/13/09]

PART 66: PROCESS EQUIPMENT

20.11.66.1 ISSUING AGENCY:

Albuquerque/ Bernalillo County Air Quality Control Board. P.O. Box 1293, Albuquerque, NM 87103. Telephone: (505) 768-2600.

[3/24/82. . .12/1/95; 20.11.66.1 NMAC - Rn, 20 NMAC 11.66.I.1, 10/1/02]

20.11.66.2 SCOPE:

A. This Part is applicable to owners or operators of any equipment capable of emitting pollution emissions into the atmosphere within Bernalillo County.

B. Exempt: This Part does not apply to sources within Bernalillo County, which are located on Indian lands over which the Albuquerque/Bernalillo County Air Quality Control Board lacks jurisdiction.

[12/1/95; 20.11.66.2 NMAC – Rn, 20 NMAC 11.66.I.2, 10/1/02]

20.11.66.3 STATUTORY AUTHORITY:

This Part is adopted pursuant to the authority provided in the New Mexico Air Quality Control Act, NMSA 1978 Sections 74-2-4, 74-2-5.C; the Joint Air Quality Control Board Ordinance, Bernalillo County Ordinance 94-5 Section 4; and the Joint Air Quality Control Board Ordinance, Revised Ordinances of Albuquerque 1994 Section 9-5-1-4.

20.11.66.9 SAVINGS CLAUSE:

Any amendment to 20.11.66 NMAC, which is filed, with the State Records Center shall not affect actions pending for violation of a City or County ordinance, Air Quality Control Board Regulation No. 9, or 20.11.66 NMAC. Prosecution for a violation under prior regulation wording shall be governed and prosecuted under the statute, ordinance, Part, or regulation section in effect at the time the violation was committed.

[12/1/95; 20.11.66.9 NMAC – Rn, 20 NMAC 11.66.I.9, 10/1/02]

20.11.66.10 SEVERABILITY:

If any section, paragraph, sentence, clause, or word of this Part or the federal standards incorporated herein is for any reason held to be unconstitutional or otherwise invalid by any court, the decision shall not affect the validity of remaining portions of this Part.

[12/1/95; 20.11.66.10 NMAC – Rn, 20 NMAC 11.66.I.10, 10/1/02]

20.11.66.11 DOCUMENTS:

Documents incorporated and cited in this Part may be viewed at the Albuquerque Environmental Health Department, 400 Marquette NW, Albuquerque, NM.

[12/1/95; 20.11.66.11 NMAC – Rn, 20 NMAC 11.66.I.11, & A, 10/1/02]

20.11.66.12 EMISSIONS OF PARTICULATER MATTER:

Except as otherwise provided in this section, no person shall cause or allow the emission of particulate matter to the atmosphere from process equipment in any one hour in total quantities in excess of the amount shown in Table 1.

A. To use the Table 1, select the process weight per hour (wt/hr). From the process wt/hr shown in Table 1, locate the corresponding value for the maximum number of pounds of contaminants, which may be discharged into the atmosphere in any one hour. As an example, if a process emits contaminants into the atmosphere totaling 1,500 pounds (lbs.), and the process takes 3 hours to complete, you must divide the

weight of all materials in the specific process by the number of hours. For example, 1,500 lbs. divided by 3 yields a process weight per hour of 500 lbs. From Table 1, the amount of emissions that can be discharged is 1.77 lbs in any one hour during the overall 3-hour process. Where the process weight per hour falls between figures in the left-hand column, the exact weight of permitted discharge shall be interpolated.

B. For purposes of this Part, the total process weight from all similar process units at a plant or premises shall be used for determining the maximum allowable emission of particulate matter that passes through a stack or stacks. The process weight rate shall be the equipment manufacturers or designers guaranteed maximum input, whichever is greater. Where the nature of any process or operation or the design of any equipment is such as to permit more than one interpretation of this definition, the interpretation that results in the minimum value for allowable emission shall apply.

[12/1/95; 20.11.66.12 NMAC – Rn, 20 NMAC 11.66.I.12 & Repealed, 10/1/02; Rn, 20 NMAC 11.66.II.1, 10/1/02]

20.11.66.13 CEMENT KILNS:

No person operating or utilizing cement kilns shall permit, cause, suffer or allow particulate matter emissions in excess of 230 mg/m³ of exhaust gas.

[12/1/95; 20.11.66.13 NMAC – Rn, 20 NMAC 11.66.II.2, 10/1/02]

20.11.66.14 GYPSUM COOKERS:

20.11.66.12 NMAC shall not apply to gypsum cookers or kettles constructed prior to the effective date of these regulations. No person shall cause or allow the emission of particulate matter into the atmosphere in any one hour from gypsum cookers or kettles constructed prior to the effective date of these regulations in total amounts which exceed 690 mg/m³ of exhaust gas.

[12/1/95; 20.11.66.14 NMAC – Rn, 20 NMAC 11.66.II.3, 10/1/02]

20.11.66.15 ASPHALTIC BATCH PLANTS:

20.11.66.12 NMAC shall not apply to an asphaltic batch plant. No person shall cause or allow the emission of particulate matter into the atmosphere in any one hour from any or all operations of an asphaltic batch plant in total quantities in excess of the amount shown in Table 2.

A. For a process weight between any two consecutive process weights in Table 2, the emission limitation shall be determined by interpolation. Where the plant has more than one emission point, the emission total is the sum of emissions from all emission points.

B. No plant shall operate without a fugitive dust control system and the system shall operate and be maintained so that particulate emission is limited to the stack outlet.

[12/1/95; 20.11.66.15 NMAC – Rn, 20 NMAC 11.66.II.4, 10/1/02]

20.11.66.16 MEASUREMENT:

For purposes of this Part, any measurement of emissions into the atmosphere may be made by comparing the weight of materials before and after processing or by measurements taken after particulate emissions have passed through air pollution control devices or apparatus, if any, or by other reasonably accurate methods or procedures.

[12/1/95; 20.11.66.16 NMAC – Rn, 20 NMAC 11.66.II.5, 10/1/02]

20.11.66.17 FUGITIVE DUST:

No person shall operate process equipment, which emits fugitive dust into the atmosphere unless reasonable effective precautions are taken to prevent fugitive dust from being emitted into the atmosphere.

[12/1/95; 20.11.66.17 NMAC – Rn, 20 NMAC 11.66.II.6, 10/1/02]

20.11.67.6 OBJECTIVE:

To prevent equipment covered by this Part from being constructed, placed, maintained, altered, used, or operated unless the equipment meets the applicable emission limitations established by 20.11.67 NMAC.

[12/1/95; 20.11.67.6 NMAC - Rn, 20 NMAC 11.67.I.6, 10/1/02]

20.11.67.7 DEFINITIONS:

In addition to the definitions in 20.11.67.7 NMAC, the definitions in 20.11.1 NMAC apply unless there is a conflict between definitions, in which case the definition in 20.11.67 NMAC shall govern.

A. "Btu" means British thermal unit.

B. "Commenced" means that an owner or operator has undertaken a continuous program of construction or that an owner or operator has entered into a binding agreement or contractual obligation to undertake and complete, within a reasonable time, a continuous program of construction.

C. "Construction" means fabrication, erection or installation of an affected facility.

D. "Existing Gas Burning Equipment" means gas-burning equipment, the construction or modification of which is commenced prior to the publication of notice of hearing of this Part as proposed.

E. "Existing Oil Burning Equipment" means oil burning equipment that was fully constructed and operational or under construction prior to August 17, 1971. Existing oil burning equipment also includes any gas burning equipment that is converted to burn oil for energy considerations if the gas burning equipment was fully constructed and operational on the effective date of Regulation 16.

F. "New Gas Burning Equipment" means gas-burning equipment, the construction or modification of which is commenced after the publication of notice of hearing of 20.11.67 NMAC as proposed.

G. "New Oil Burning Equipment" means oil-burning equipment, the construction of which is commenced after August 17, 1971.

H. "Visible Emissions" means particulate or gaseous matter, which can be detected by the human eye.

[3/24/82. . .12/1/95; 20.11.67.7 NMAC - Rn, 20 NMAC 11.67.I.7, 10/1/02]

20.11.67.8 VARIANCES:

[RESERVED]

[12/1/95; 20.11.67.8 NMAC - Rn, 20 NMAC 11.67.I.8, 10/1/02]

20.11.67.9 SAVINGS CLAUSE:

Any amendment to 20.11.67 NMAC which is filed with the State Records Center shall not affect actions pending for violation of a City or County ordinance, Air Quality Control Board Regulation No. 6 Orchard Heaters; Regulation No. 10 Kraft Mills; Regulation No. 12 Coal Burning Equipment - Nitrogen Dioxide; Regulation No. 13 Coal Burning Equipment - Sulfur Dioxide; Regulation No. 14 Coal Burning Equipment - Particulate Matter; Regulation No. 15 Oil Burning Equipment - Nitrogen Dioxide; Regulation No. 16 Oil Burning Equipment - Particulate Matter; Regulation No. 17 Oil Burning Equipment - Sulfur Dioxide; Regulation No. 18 Gas Burning Equipment - Nitrogen Dioxide; or Part 67. Prosecution for a violation under prior regulation wording shall be governed and prosecuted under the statute, ordinance, Part, or regulation section in effect at the time the violation was committed.

[12/1/95; 20.11.67.9 NMAC - Rn, 20 NMAC 11.67.I.9, 10/1/02]

20.11.67.10 SEVERABILITY:

If any section, paragraph, sentence, clause, or word of this Part or any federal standards incorporated herein is for any reason held to be unconstitutional or otherwise invalid by any court, the decision shall not affect the validity of remaining provisions of this Part.

[12/1/95; 20.11.67.10 NMAC - Rn, 20 NMAC 11.67.I.10, 10/1/02]

20.11.67.11 DOCUMENTS:

Documents incorporated and cited in this Part may be viewed at the Albuquerque Environmental Health Department, 400 Marquette NW, Albuquerque, NM.

[12/1/95; 20.11.67.11 NMAC - Rn, 20 NMAC 11.67.I.11 & A, 10/1/02]

20.11.67.12 ORCHARD HEATERS:

A. No person shall construct, place, maintain, alter, use or operate orchard heaters for frost protection or otherwise, unless they are so designed or equipped and are operated or regulated so as not to discharge into the atmosphere smoke as dark or darker in shade than that designated as Number 1 on the Ringlemann chart.

B. Sale of Heaters: Within Bernalillo County, no person shall give, sell, or offer to sell for use for frost protection any orchard heater which does not comply with the objective of this Part or which cannot be modified to comply with Subsection A of 20.11.67.12 NMAC.

C. Inspections: All persons subject to the provisions of 20.11.67.12 NMAC shall cooperate with agents of the Department in performing orchard heater inspection to obtain information relating to emissions, which may cause or contribute to air pollution.

[3/24/82. . .12/1/95; 20.11.67.12 NMAC - Rn, 20 NMAC 11.67.I.12 & Repealed, 10/1/02; Rn, 20 NMAC 11.67.II.1, 10/1/02]

20.11.67.13 KRAFT MILLS:

No person shall discharge into the atmosphere in any one hour from any and all operations of a kraft mill, total reduced sulfur in excess of 0.01 pounds.

[3/24/82; 20.11.67.13 NMAC - Rn, 20 NMAC 11.67.II.2, 10/1/02]

20.11.67.14 COAL BURNING EQUIPMENT - NITROGEN DIOXIDE:

No person owning or operating coal burning equipment having a power generating capacity in excess of 25 megawatts or a heat input of greater than 250 million BTUs per hour shall permit, cause, suffer or allow nitrogen dioxide emissions to the atmosphere in excess of 0.45 pounds per million BTUs of heat input.

[3/24/82. . .12/1/95; 20.11.67.14 NMAC - Rn, 20 NMAC 11.67.II.3, 10/1/02]

20.11.67.15 COAL BURNING EQUIPMENT - SULFUR DIOXIDE:

A. No person owning or operating coal burning equipment having a power generating capacity in excess of 25 megawatts or a heat input of greater than 250 million BTUs per hour shall permit, cause, suffer or allow sulfur dioxide emissions to the atmosphere in excess of 0.34 pounds per million BTUs of heat input.

B. Sampling of emissions of sulfur dioxide shall be performed in a manner, which prevents interference and prevents the contamination of the reactive elements of the sampling method. The sampling procedures need not be isokinetic but must yield representative gas samples.

[3/24/82; 20.11.67.15 NMAC - Rn, 20 NMAC 11.67. II.4, 10/1/02]

20.11.67.16 COAL BURNING EQUIPMENT - PARTICULATE MATTER:

A. No person owning or operating coal burning equipment shall permit, cause, suffer or allow:

(1) Particulate matter emission to the atmosphere in excess of 0.05 pounds per million BTUs of heat input, or

(2) Fine particulate matter emissions of less than two microns equivalent aerodynamic diameter and unit density to the atmosphere in excess of 0.02 pounds per million BTUs of heat input.

B. Fine particulate matter emissions governed by this section shall be collected and measured at stack conditions and in such a manner that no condensation of gaseous material is included with the sample.

[3/24/82. . .12/1/95; 20.11.67.16 NMAC - Rn, 20 NMAC 11.67. II.5, 10/1/02]

20.11.67.17 OIL BURNING EQUIPMENT - NITROGEN DIOXIDE:

No person owning or operating oil burning equipment having a heat input of greater than 1,000,000 million BTUs per year per unit shall permit, cause, suffer or allow nitrogen dioxide emissions to the atmosphere in excess of 0.3 pounds per million BTUs of heat input.

[3/24/82. . .12/1/95; 20.11.67.17 NMAC - Rn, 20 NMAC 11.67. II.6, 10/1/02]

20.11.67.18 OIL BURNING EQUIPMENT - PARTICULATE MATTER:

A. New: No person owning or operating new oil burning equipment having a rated heat capacity greater than 250 million BTUs per hour (higher heating value) per unit shall permit, cause, suffer, or allow particulate matter emissions to the atmosphere in excess of 0.03 pounds per million BTUs of heat input (higher heating value) or visible emissions in excess of an opacity of twenty percent (20%) except as provided Subsection C of 20.11.67.18 NMAC.

B. Existing: No person owning or operating existing oil burning equipment having a rated heat capacity greater than 250 million BTUs per hour (higher heating value) per

unit shall permit, cause, suffer or allow particulate matter emissions to the atmosphere in excess of 0.05 pounds per million BTUs of heat input (higher heating value).

C. Visible Emissions:

(1) Visible emissions resulting from lightoff of new flames, blowing tubes or flues, or changing fuels while operating shall not be deemed violations provided the visible emissions do not exceed twenty-seven percent (27%) opacity for a period or periods aggregating not more than 6 minutes in any 60-minute period for units governed by Subsection A of 20.11.67.18 NMAC.

(2) Particulate matter emissions governed by Subsections A and B of 20.11.67.18 NMAC, shall be determined by a method consistent with the method set for the by the federal Environmental Protection Agency at 40 CFR, Part 60, Appendix A, Method 1 through 5, or any other equivalent method receiving prior approval by the Department.

(3) Opacity of emissions from oil burning equipment subject to Subsection A of 20.11.67.18 NMAC shall be determined consistent with the method set forth by the federal Environmental Protection Agency at 40 CFR, Part 60, Appendix A, Method 9, or any other equivalent method receiving prior approval by the Department. The time period for taking opacity readings shall be for a minimum of six minutes.

[3/24/82. . .12/1/95; 20.11.67.18 NMAC - Rn, 20 NMAC 11.67. II.7, 10/1/02]

20.11.67.19 OIL BURNING EQUIPMENT - SULFUR DIOXIDE:

No person owning or operating oil burning equipment having a heat input of greater than 1,000,000 million BTUs per year per unit shall permit, cause, suffer or allow sulfur dioxide emissions to the atmosphere in excess of 0.34 pounds per million BTUs of heat input.

[3/24/82. . .12/1/95; 20.11.67.19 NMAC - Rn, 20 NMAC 11.67. II.8, 10/1/02]

20.11.67.20 GAS BURNING EQUIPMENT - NITROGEN DIOXIDE:

A. No person owning or operating new gas burning equipment having a heat input of greater than 1,000,000 million BTUs per year per unit shall permit, cause, suffer or allow nitrogen dioxide emissions to the atmosphere in excess of 0.2 pounds per million BTUs of heat input.

B. No person owning or operating existing gas burning equipment having a heat input of greater than 1,000,000 million BTUs per year per unit shall permit, cause, suffer or allow nitrogen dioxide emissions to the atmosphere in excess of 0.3 pounds per million BTUs of heat input.

[3/24/82. . .12/1/95; 20.11.67.20 NMAC - Rn, 20 NMAC 11.67.II.9, 10/1/02]

PART 68: INCINERATORS AND CREMATORIES

20.11.68.1 ISSUING AGENCY:

Albuquerque/ Bernalillo County Air Quality Control Board. P.O. Box 1293, Albuquerque, NM 87103. Telephone: (505) 768-2600.

6/14/71 . . . 12/1/95; 20.11.68.1 NMAC – Rn, 20 NMAC 11.68.I.1, 4/01/02]

20.11.68.2 SCOPE:

A. This Part is applicable to sources located in Bernalillo County.

B. Exempt: This Part does not apply to sources within Bernalillo County which are located on Indian lands over which the Albuquerque/Bernalillo County Air Quality Control Board lacks jurisdiction.

[12/1/95; 20.1.68.2 NMAC – Rn, 20 NMAC 11.68.I.2, 4/01/02]

20.11.68.3 STATUTORY AUTHORITY:

This Part is adopted pursuant to the authority provided in the New Mexico Air Quality Control Act, NMSA 1978 Sections 74-2-4, 74-2-5.C; the Joint Air Quality Control Board Ordinance, Bernalillo County Ordinance 94-5 Section 4; and the Joint Air Quality Control Board Ordinance, Revised Ordinances of Albuquerque 1994 Section 9-5-1-4.

[6/14/71 . . . 12/1/95; 20.11.68.3 NMAC – Rn, 20 NMAC 11.68.I.3, 4/01/02]

20.11.68.4 DURATION:

Permanent.

[12/1/95; 20.11.68.4 NMAC – Rn, 20 NMAC 11.68.I.4, 4/01/02]

20.11.68.5 EFFECTIVE DATE:

December 1, 1995.

[12/1/95; 20.11.68.5 NMAC – Rn, NMAC 20 11.68.I.5, 4/01/02]

20.11.68.6 OBJECTIVE:

The objective of this Part is to minimize emissions from and in most cases eliminate the use of a particular class of equipment which the Board has found produces unsightly and noxious byproducts of combustion.

[3/16/94, 12/1/95; 20.11.68.6 NMAC – Rn, 20 NMAC 11.68.I.6, 4/01/02]

20.11.68.7 DEFINITIONS:

[RESERVED]

20.11.68.8 VARIANCES:

[RESERVED]

20.11.68.9 SAVINGS CLAUSE:

Any amendment to 20.11.68 NMAC which is filed with the State Records Center shall not affect actions pending for violation of a City or County ordinance, Board Regulation No. 4, or 20.11.68 NMAC. Prosecution for a violation under prior regulation wording shall be governed and prosecuted under the statute, ordinance, Part or regulation section in effect at the time the violation was committed.

[12/1/95; 20.11.68.9 NMAC – Rn, 20 NMAC 11.68.I.9, 4/01/02]

20.11.68.10 SEVERABILITY:

If any section, paragraph, sentence, clause, or word of this Part or any federal standards incorporated herein is for any reason held to be unconstitutional or otherwise invalid by any court, the decision shall not affect the validity of remaining provisions of this Part.

[12/1/95; 20.11.68.10 NMAC – Rn, 20 NMAC 11.68.I.10, 4/01/02]

20.11.68.11 DOCUMENTS:

Documents incorporated and cited in this Part may be viewed at the Albuquerque Environmental Health Department, One Civic Plaza NW, 3rd Floor, Room 3023, Albuquerque, NM 87102.

[12/1/95; 20.11.68.11 NMAC – Rn, 20 NMAC 11.68.I.11, 4/01/02]

20.11.68.12 AMENDMENT AND SUPERSESSION OF PRIOR REGULATIONS:

This Part amends and supersedes Albuquerque/Bernalillo County Air Quality Control Board Regulation No. 04 - Incinerators and Crematories, filed on March 16, 1994. All references to this regulation shall be understood as a reference to this Part.

[12/1/95; 20.11.68.12 NMAC – Rn, 20 NMAC 11.68.I.12, 4/01/02]

20.11.68.13-20.11.68.199 [RESERVED]

20.11.68.200 APPLICABLE REQUIREMENTS:

A. Residential Use: The construction, use or operation of an incinerator on property devoted to residential uses is prohibited.

B. Construction/Operation: The construction, use or operation of an incinerator, even if an "affected facility" pursuant to 40 CFR 60, Subpart Ea as amended, on any property is prohibited, except for certain crematories as allowed by this Part.

C. Crematories: Crematories may be used solely for cremating human or animal remains, parts and tissues thereof, and other items normally associated with the cremation process. No person may release or discharge into the atmosphere from any crematory particulate matter in excess of 0.08 grains per standard cubic foot of dry exhaust gas corrected to 12 percent of carbon dioxide (CO₂) at standard conditions. In measuring the combustion contaminants from crematories, the carbon dioxide (CO₂) produced by combustion of any liquid or gaseous fuel shall be excluded from the correction to 12% of carbon dioxide (CO₂). In no instance shall the emissions of a crematory exceed federal requirements.

[3/24/82, 6/16/92; 20.11.68.200 NMAC – Rn, 20 NMAC 11.68.II.1, 2, 3, & A, 4/01/02]

PART 69: PATHOLOGICAL WASTE DESTRUCTORS

20.11.69.1 ISSUING AGENCY:

Albuquerque - Bernalillo County Air Quality Control Board. P.O. Box 1293, Albuquerque, NM 87103. Telephone: (505) 768-2601.

[5/13/92. . .12/1/95; 20.11.69.1 NMAC - Rn, 20 NMAC 11.69.I.1, 10/1/02; A, 10/13/09]

20.11.69.2 SCOPE:

A. The requirements of 20.11.69 NMAC apply to the owner or operator of any pathological waste destructor (PWD).

B. **EXEMPT:** 20.11.69 NMAC does not apply to sources within Bernalillo county which are located on Indian lands over which the Albuquerque - Bernalillo County Air Quality Control lacks jurisdiction.

[5/13/92; 20.11.69.2 NMAC - Rn, 20 NMAC 11.69.I.2, 10/1/02]

20.11.69.3 STATUTORY AUTHORITY:

20.11.69 NMAC is adopted pursuant to the authority provided in the New Mexico Air Quality Control Act, NMSA 1978 Sections 74-2-4, 74-2-5.C; the Joint Air Quality Control Board Ordinance, Bernalillo County Ordinance 94-5 Section 4; and the Joint Air Quality Control Board Ordinance, Revised Ordinances of Albuquerque 1994 Section 9-5-1-4.

[5/13/92, 12/1/95; 20.11.69.3 NMAC - Rn, 20 NMAC 11.69.I.3, 10/1/02]

20.11.69.4 DURATION:

Permanent.

[12/1/95; 20.11.69.4 NMAC - Rn, 20 NMAC 11.69.I.4, 10/1/02]

20.11.69.5 EFFECTIVE DATE:

December 1, 1995, unless a later date is cited at the end of a section.

[12/1/95; 20.11.69.5 NMAC - Rn, 20 NMAC 11.69.I.5 & A, 10/1/02]

20.11.69.6 OBJECTIVE:

To assure that the citizens of Bernalillo county are not needlessly exposed to infectious or toxic substances in the air, which pathological waste destructors, might otherwise emit.

[5/13/92; 20.11.69.6 NMAC - Rn, 20 NMAC 11.69.I.6, 10/1/02; A, 10/13/09]

20.11.69.7 DEFINITIONS:

In addition to the definitions in 20.11.69.7 NMAC the definitions in 20.11.1 NMAC apply unless there is a conflict between definitions, in which case the definition in 20.11.69 NMAC shall govern.

A. "Charging capacity" means the pathological waste destructor manufacturers or designers rated capacity expressed in terms of pounds per hour (lb/hr).

B. "Charging rate" means the actual rate at which the subject unit is burning waste at a given point in time expressed in terms of pounds per hour (lb/hr).

C. "Chemotherapeutic waste" means all wastes resulting from the production or use of anti-neoplastic agents used for the purpose of stopping or reversing the growth of malignant cells. Chemotherapeutic wastes shall not include any waste containing anti-neoplastic agents that are listed as hazardous waste.

D. "Continuous emission monitor" means the total equipment required to sample and analyze emissions or process parameters on a continuous basis.

E. "DSCF" means dry standard cubic foot with standard conditions being a temperature of 68 degrees F and a pressure of 29.92 inches Hg.

F. "DSCM" means dry standard cubic meter with standard conditions being a temperature of 68 degrees F and a pressure of 29.92 inches Hg.

G. "gr" means grains.

H. "Hazardous waste" means hazardous waste as defined in 40 CFR Part 261.3 as amended.

I. "Infectious waste" means a limited class of substances that carry a significant risk of transmitting disease, including but not limited to:

(1) microbiology laboratory wastes, including cultures and stocks of infectious agents from clinical research and industrial laboratories, and disposable culture dishes and devices used to transfer, inoculate and mix cultures;

(2) pathological wastes, including human or animal tissues, organs and body parts, removed during surgery, autopsy or biopsy;

(3) disposable equipment, instruments, utensils, and other disposable materials which require special precautions because of contamination by highly contagious diseases;

(4) blood and blood products, including waste blood, blood serum, plasma and blood products;

(5) contaminated sharps, including contaminated hypodermic needles, syringes, scalpel blades, Pasteur pipettes and broken glass; and

(6) contaminated animal carcasses, body parts and bedding, especially those intentionally exposed to pathogens in research, in the production of biologicals or the "in vivo" testing pharmaceutical.

J. "mg" means milligrams.

K. "ng" means nanogram.

L. "Opacity" means the degree to which emissions reduce the transmission of light and obscure the view of an object in the background.

M. "Operation" means the acts of ash removal, preheating of combustion unit, waste loading, combustion, burn down and cool down.

N. "Pathological waste" means infectious wastes, chemotherapeutic wastes; wastes generated in health care facilities, medical laboratories and veterinary clinics that require special handling. Chemotherapeutic waste means all wastes resulting from the production or use of anti-neoplastic agents used to stop or reverse the growth of malignant cells excluding those listed as hazardous wastes. Specifically excluded from this definition are human or animal remains consisting of cadavers, carcasses, tissues, organs and/or body parts covered under 20.11.68 NMAC, Incinerators and crematories.

O. "Pathological waste destructors" means any equipment, which is used to dispose of pathological waste by combustion.

P. "PCDD/PCDF" means total tetra-through octa-chlorinated dibenzo-para-dioxins and dibenzo furans.

Q. "Shutdown" means the cessation of all waste charging operations.

R. "Startup" means the setting into operation of any air pollution control equipment, process equipment or process for any purpose except routine phasing in of equipment.

S. "Total charging capacity" means the aggregate of all charging capacities of all pathological waste destructors located at a facility.

T. "Unit" means a combustion device otherwise called a pathological waste destructor.

[5/13/92. . .12/1/95; 20.11.69.7 NMAC - Rn, 20 NMAC 11.69.I.7, 10/1/02]

20.11.69.8 VARIANCES:

[RESERVED]

[12/1/95; 20.11.69.8 NMAC - Rn, 20 NMAC 11.69.8, 10/1/02]

20.11.69.9 SAVINGS CLAUSE:

Any amendment to 20.11.69 NMAC, which is filed, with the State Records Center shall not affect actions pending for violation of a city or county ordinance, Air Quality Control Board Regulation 39, or 20.11.69 NMAC. Prosecution for a violation under prior regulation wording shall be governed and prosecuted under the statute, ordinance, Part, or regulation section in effect at the time the violation was committed.

[12/1/95; 20.11.69.9 NMAC - Rn, 20 NMAC 11.69.I.9, 10/1/02]

20.11.69.10 SEVERABILITY:

If any section, paragraph, sentence, clause, or word of 20.11.69 NMAC or any federal standards incorporated herein is for any reason held to be unconstitutional or otherwise invalid by any court, the decision shall not affect the validity of remaining provisions of 20.11.69 NMAC.

[12/1/95; 20.11.69.10 NMAC - Rn, 20 NMAC 11.69.I.10, 10/1/02; A, 10/13/09]

20.11.69.11 DOCUMENTS:

Documents incorporated and cited in 20.11.69 NMAC may be viewed at the Albuquerque Environmental Health Department, 400 Marquette NW, Albuquerque, NM.

[12/1/95; 20.11.69.11 NMAC - Rn, 20 NMAC 11.69.I.11 & A, 10/1/02]

20.11.69.12 CONDITIONS:

A. A PWD may only be used to destroy pathological waste that has been generated at the site where the unit is located.

B. No one shall burn material marked with radiation symbols or material having a radioactivity level greater than background, in a unit subject to 20.11.69 NMAC.

C. Hazardous waste may not be burned in a unit subject to 20.11.69 NMAC.

D. No PWD shall be used to incinerate non-pathological waste.

[5/13/92; 12/1/95; 20.11.69.12 NMAC - Rn, 20 NMAC 11.69.I.12 & Repealed; 10/1/02; Rn, 20 NMAC 11.69.II.1, 10/1/02]

20.11.69.13 EMISSION LIMITS:

No owner or operator shall cause or allow exceedence of the following emission limits: (Particulate matter emissions are measured at 12 percent CO₂. All other emissions are measured at 7 percent O₂. Opacity shall never exceed 10 percent).

(1) **For PWDs with a charging capacity of less than 200 lb/hr:**

- (a) Particulate matter 0.08 gr/dscf
- (b) Hydrogen chloride 4 lb/hr or 99 percent control, whichever is more stringent
- (c) Carbon monoxide 60 mg/dscm
- (d) PCDD/PCDF 500 ng/dscm

(2) **For PWDs with a charging capacity of 200 lb/hr to 999 lb/hr** (For all metals except mercury, a cadmium surrogate emission limit of 50 µg/kg of waste burned may be used):

- (a) Particulate matter 0.03 gr/dscf
- (b) Hydrogen chloride 40 mg/dscm
- (c) Carbon monoxide 60 mg/dscm
- (d) PCDD/PCDF 5 ng/dscm
- (e) Oxides of nitrogen 235 mg/dscm
- (f) Sulfur dioxide 80 mg/dscm
- (g) Arsenic 99 percent removal
- (h) Beryllium 99 percent removal
- (i) Cadmium 99 percent removal
- (j) Chromium 99 percent removal
- (k) Lead 99 percent removal
- (l) Mercury 90 percent removal

(3) **For PWDs with a charging capacity of greater than 100 lb/hr** (For all metals except mercury, a cadmium surrogate emission limit of 50 µg/kg of waste burned may be used):

- (a) Particulate matter 0.015 gr/dscf
- (b) Hydrogen chloride 40 mg/dscm
- (c) Carbon monoxide 60 mg/dscm
- (d) PCDD/PCDF 5 ng/dscm
- (e) Oxides of nitrogen 235 mg/dscm
- (f) Sulfur dioxide 80 mg/dscm
- (g) Arsenic 99 percent removal

(h) Beryllium 99 percent removal

(i) Cadmium 99 percent removal

(j) Lead 99 percent removal

(k) Mercury 90 percent removal

[5/13/92; 20.11.69.13 NMAC - Rn, 20 NMAC 11.69.II.2, 10/1/02]

20.11.69.14 COMPLIANCE:

A. Compliance with the carbon monoxide (CO) emission limitation, for units required to have continuous CO monitoring, shall be determined by continuous emission monitor measurements calculated in 4-hour block averages. For units not equipped with continuous CO monitoring equipment, compliance shall be determined by manual tests as specified in 20.11.69.21 NMAC.

B. Compliance with particulate matter, sulfur dioxide, nitrogen dioxide, hydrogen chloride, PCDD/PCDF, and metals emission limitations shall be determined by manual tests as specified in 20.11.69.21 NMAC. For metals, the removal percentage is calculated as the percent difference between the measured concentrations at the inlet and outlet of the air pollution control system.

C. As surrogate for compliance with metals removal efficiency requirements, the owner or operator may comply with an emission limitation for cadmium (Cd) of 50 micrograms per kilogram of waste burned. The emission limit for cadmium cannot be used as surrogate for mercury.

D. Compliance with the opacity limit in Subsection A of 20.11.69.12 NMAC shall be determined by continuous emission monitor measurements and 40 CFR Part 60, Appendix A, Method 9 as amended, calculated in the form of 6-minute averages.

E. The owner or operator of a PWD with a total charging capacity of 400 pounds per hour or less may obtain a written exemption from the Albuquerque - Bernalillo county AQCB from the applicable emission limits set forth in 20.11.69.13 NMAC and may obtain a written exemption from the Albuquerque - Bernalillo county AQCB from emission monitoring requirements as stated in Paragraph (3), of Subsection A of 20.11.69.18 NMAC provided that:

(1) the owner or operator complies with the emission limits set forth in 20.11.69.12 NMAC for PWDs with a total charging capacity of less than 200 pounds per hour; and

(2) the owner or operator obtains a written exemption from the Albuquerque - Bernalillo county AQCB that contains a condition limiting the operation of such PWD to

six hours in any one day. The violation of such an exemption condition shall be a violation of 20.11.69 NMAC.

[5/13/92; 20.11.69.14 NMAC - Rn, 20 NMAC 11.69.II.3, 10/1/02]

20.11.69.15 DESIGN REQUIREMENTS:

A. All units shall be equipped with a secondary combustion chamber, which provides turbulent mixing of the secondary air with the combustion gases. The secondary combustion chamber shall provide one second of residence time, measured from the point of maximum temperature considering design-specific furnace parameters including chamber volume, volumetric airflow rate, and excess air rate.

B. Primary combustion chamber temperature must be maintained at not less than 1400 degrees F.

C. Secondary combustion chamber temperature must be maintained at not less than 1800 degrees F.

D. Auxiliary burners must be designed to provide the required combustion chamber temperatures described in Subsections B and C of 20.11.69.17 NMAC without utilization of the heat content of the waste. The auxiliary burner fuel and the combustion air shall be controlled automatically to maintain the required temperatures.

E. The charging system of any unit must be designed to prevent disruption of the combustion process. Batch charged units must be equipped with a lockout mechanism to prevent charging after start-up. Units with automatic charging systems shall be equipped with a sealed feeding device to prevent combustion upsets during charging. The loading system shall be designed to prevent overcharging.

F. For batch charged units, waste shall be not ignited until the secondary chamber exit temperature is at 1800 degrees for at least fifteen minutes. Interlocks must prevent opening the charging door after ignition, until the burn-down and cool-down periods are complete.

G. For continuously charged units, an interlock system must automatically stop waste feeding if:

(1) the unit's secondary chamber temperature drops below 1800 degrees F for any 15-minute period; or

(2) the carbon monoxide emissions, corrected to 7 percent O₂ on a dry basis are equal to or greater than 50 ppm by volume, for any 15-minute period.

[5/13/92; 20.11.69.15 NMAC - Rn, 20 NMAC 11.69.II.4, 10/1/02]

20.11.69.16 STACK HEIGHT REQUIREMENTS:

A. Exhaust stack height for all PWDs shall be determined as the greater of:

(1) $H_g = H + 1.5L$; where H_g =required stack height measured from the ground-level elevation at the base of the stack; H =Height of nearby structure(s) measured from the ground-level elevation at the base of the stack, and L =Lesser dimension, height or projected width, of nearby structure(s). Provided that the department may require the use of a field study or dispersion model to verify adequate stack height for the source; or

(2) The height demonstrated by a dispersion model or a field study approved by the department, which ensures that the emissions from the stack do not result in excessive concentration of any air pollutant as a result of atmospheric downwash, wakes, or eddy effects created by the source itself, nearby structures or nearby terrain features.

(3) The definitions in 40 CFR Sections 51.100(Z),(ff), and (hh)-(kk) (1987) as amended are hereby incorporated in 20.11.69 NMAC.

[5/13/92; 20.11.69.16. NMAC - Rn, 20 NMAC 11.69.II.5, 10/1/02]

20.11.69.17 OPERATING REQUIREMENTS:

A. The owner or operator of a PWD shall not manually charge the primary combustion chamber through doors open to the atmosphere while the unit is operating. Charging of waste for units other than batch units shall be by mechanical means, which prevents upsets in the burn cycle.

B. Each unit shall operate so that during shutdown the unit continues to meet applicable emission limitations and the secondary combustion chamber temperature is maintained at 1800 degrees F or above until the waste is completely burned.

C. Units utilizing control devices to attain emission limits must be designed such that the flue gas temperature at the outlet of the final control device does not exceed 300 degrees F unless a demonstration is made that an equivalent collection (removal) of heavy metals and toxic organics can be achieved at a higher temperature or through the use of alternate technologies.

[5/13/92; 20.11.69.17 NMAC - Rn, 20 NMAC 11.69.II.6, 10/1/02]

20.11.69.18 EMISSION MONITORING:

A. Continuous emission monitors (CEM)s shall be installed, calibrated, maintained, and operated, and shall continuously record data for the following:

(1) For PWDs with a total charging rate of 1000 pounds per hour or greater:

(a) carbon monoxide (CO);

(b) oxygen (O₂);

(c) opacity.

(2) If an opacity monitor cannot be applied satisfactorily, alternate apparatus may be employed, on a case by case basis, with the written approval of the department, to demonstrate acceptable operation of the particulate removal device.

(3) For PWDs with a total charging capacity of less than 1000 pounds per hour:

(a) oxygen (O₂);

(b) carbon monoxide (CO).

B. The owner or operator of any unit shall install, calibrate, maintain and operate equipment to continuously record the temperature of gases leaving the primary and secondary combustion chambers and the outlet of the final air pollution control device, if present. Such equipment shall have an accuracy of plus or minus 0.75 percent of the temperature being measured expressed in degrees Celsius or plus or minus 2.5 degrees C, whichever represents greater accuracy. Sensors shall be located so that flames from the burners do not impinge on the sensors.

C. At least ninety days prior to initial startup, the owner or operator shall submit a report the department which describes, for each monitor, the location, specifications, calibration procedures, operation, maintenance, data evaluation, and reporting. Monitoring equipment shall not be installed prior to department approval of the report.

D. The continuous emission monitors for oxygen (O₂) and carbon monoxide (CO) shall complete a minimum of one operation cycle for each successive 15-minute period. One-hour averages shall be calculated from four (4) or more data points equally spaced over each one-hour period.

E. The continuous opacity monitor shall complete a minimum of one operational cycle for each successive ten-second period. Six-minute averages shall be calculated from thirty-six or more data points equally spaced over each six-minute period.

F. Data recorded during periods of continuous emission monitor breakdown; repairs, calibration checks, and zero and span adjustments shall not be included in calculated data averages.

G. Emission data capture rate for each continuous emission monitor must be a minimum of 75 percent of all operational hours for each twenty-four hour period beginning at midnight. Failure to meet this data capture requirement shall cause the pathological waste destructor to be shutdown as required by 20.11.69.19 NMAC.

H. The owner or operator shall ensure that each continuous emission monitor meets the requirements of 40 CFR Part 60, Appendix F Quality Assurance Procedures as amended and shall submit to the department, all reports specified in this Part. The required reports shall be submitted quarterly.

[5/13/92; 20.11.69.18 NMAC - Rn, 20 NMAC 11.69.II.7, 10/1/02]

20.11.69.19 CONTINUOUS EMISSION MONITOR MALFUNCTION:

Whenever any required continuous emission monitor cannot meet the data capture requirement of Subsection G of 20.11.69.18 NMAC, and the owner or operator does not obtain the required data from an alternate monitor or test method, the PWD shall cease operation until it can comply with Subsection G of 20.11.69.18 NMAC.

[5/13/92; 20.11.69.19 NMAC - Rn, 20 NMAC 11.69.II.8, 10/1/02]

20.11.69.20 CEM:

PERFORMANCE EVALUATION:

A. During or within thirty days of the emission tests required by 20.11.69.21 NMAC, the owner or operator shall conduct a performance evaluation of each continuous emissions monitor in accordance with the procedures of 40 CFR Part 60, Appendix B - Performance Specification as amended.

B. The performance evaluation required by Subsection A of 20.11.69.20 NMAC shall be repeated on an annual basis or after any major equipment malfunction which requires component replacement, or at additional times when the department has reason to believe the monitor performance is inadequate.

C. The owner or operator shall provide at least thirty days prior notice to the department before conducting any performance evaluation.

D. A written report of each performance evaluation shall be furnished to the department within thirty days from the end of the test period.

[5/13/92; 20.11.69.20 NMAC - Rn, 20 NMAC 11.69.II.9, 10/1/02]

20.11.69.21 EMISSION TESTING:

A. Within sixty days of first achieving the maximum charging rate, but not more than one hundred eighty days from the date of initial startup, the first annual performance test shall be conducted.

B. The owner or operator of any PWD that has a charging capacity of less than 200 pounds per hour shall conduct an annual performance test to demonstrate compliance with the emission standards for particulate matter (PM), carbon monoxide (CO) and hydrogen chloride (HCl).

(1) The initial performance test for units subject to Subsection B of 20.11.69.20 NMAC shall include PCDD/PCDF and the following metals:

- (a) arsenic and compounds (expressed as arsenic)
- (b) beryllium and compounds (expressed as beryllium)
- (c) cadmium and compounds (expressed as cadmium)
- (d) chromium and compounds (expressed as chromium)
- (e) lead and compounds (expressed as lead)
- (f) mercury and compounds (expressed as mercury)

(2) The required performance test for PCDD/PCDF and metals shall be conducted once, provided that PCDD/PCDF and metals emission test results indicate compliance with the standard set forth in Subsection A of 20.11.69.13 NMAC.

C. The owner or operator of any PWD with a charging capacity of 200 pounds per hour or greater shall conduct a performance test to demonstrate compliance with the standards for particulate matter (PM), carbon monoxide (CO), hydrogen chloride (HCl), sulfur dioxide (SO₂), nitrogen dioxide (NO₂), total tetra-through octa-chlorinated dibenzo-para-dioxins and dibenzo furans (PCDD/PCDF);

(1) and the following metals:

- (a) arsenic and compounds (expressed as arsenic)
- (b) beryllium and compounds (expressed as beryllium)
- (c) cadmium and compounds (expressed as cadmium)
- (d) chromium and compounds (expressed as chromium)
- (e) lead and compounds (expressed as lead)

(f) mercury and compounds (expressed as mercury)

(2) Source tests shall be conducted annually for the above specified pollutants.

(3) The owner or operator may apply to the department for a waiver of annual testing for a specific pollutant where performance testing has consistently shown emission rates for that pollutant which are less than those required in 20.11.69 NMAC, but in no case shall any required test be conducted less than once in every three years.

D. All performance testing shall be conducted at the design charging capacity using waste that is representative of normal operation while being operated by the facility operator.

E. The department may require additional testing if there is a reasonable basis to believe the facility is not in compliance with any provision of 20.11.69 NMAC or any applicable permit condition.

F. The department or its representative may conduct unscheduled emission tests at any time during operating hours of the facility.

[5/13/92; 12/1/95; 20.11.69.21 NMAC - Rn, 20 NMAC 11.69.II.10, 10/1/02]

20.11.69.22 TEST PROCEDURES:

A. Notice of the test date and a copy of the test protocol shall be submitted to the department at least thirty days prior to the actual test date.

B. A representative of the department shall be given the opportunity to be present during all emissions test required by 20.11.69 NMAC.

C. A written copy of all test results shall be furnished to the department within sixty days from the test date.

D. Emission tests shall be conducted utilizing the following methods:

(1) for total particulate matter 40 CFR Part 60, Appendix A, Methods 1 - 5 as amended;

(2) for PCDD/PCDF 40 CFR Part 60, Appendix A, Method 23 as amended;

(3) for cadmium chromium, and lead 40 CFR Part 60, Appendix A., Methods 1 - 4 and 12 as amended;

(4) for arsenic 40 CFR Part 61, Appendix B, Method 108 as amended;

- (5) for beryllium 40 CFR Part 61, Appendix B, Method 104 as amended;
- (6) for mercury 40 CFR Part 61, Appendix B., Method 101A as amended;
- (7) for opacity 40 CFR Part 60, Appendix A, Method 9 as amended;
- (8) for hydrogen chloride 40 CFR Part 60, Appendix A, Method 26 as amended;
- (9) for carbon monoxide 40 CFR Part 60, Appendix A, Method 10 as amended;
- (10) for sulfur dioxide 40 CFR Part 60, Appendix A, Method 6 as amended; and
- (11) for nitrogen oxide 40 CFR Part 60, Appendix A, Method 7 as amended.

E. The owner or operator may use test methods other than those in Subsection D of 20.11.69.22 NMAC if the department has approved the alternate test method prior to the test date. The department shall rule on proposed alternate test method acceptability within thirty days of receipt of the proposal.

[5/13/92; 12/1/95; 20.11.69.22 NMAC - Rn, 20 NMAC 11.69.II.11, 10/1/02; A, 10/13/09]

20.11.69.23 QUARTERLY REPORT:

The owner or operator shall submit a report containing the following information to the department within thirty days from the end of each calendar quarter:

- A.** The average hourly charging rate to each unit.
- B.** The thirty-minute average temperatures of the primary chamber, the secondary chamber, and the outlet from the final air pollution control device.
- C.** The hourly and four-hour average concentrations of carbon monoxide (CO) in mg/dscm, corrected to 7 percent O₂ as measured by continuous emission monitors.
- D.** The hourly average percent oxygen (O₂) and six-minute average opacity as measured by continuous emission monitors.
- E.** The percent data capture for each twenty-four hour period for each continuous emission monitor.
- F.** The identification of all periods of startup, shutdown, and excess emissions.
- G.** The reason for any excess emissions and the corrective action taken.

[5/13/92; 20.11.69.23 NMAC - Rn, 20 NMAC 11.69.II.12, 10/1/02]

20.11.69.24 RECORDS:

A. The owner or operator shall maintain records for a period of three years from the date created, for all parameters required in 20.11.69 NMAC and shall make them available upon request for inspection and copying by the department.

B. All information submitted to the department in quarterly reports or emission test reports, or any other information created or obtained by the department regarding the PWD shall be available during business hours at the department's offices for public inspection and copying. Table 1 of 20.11.69 NMAC summarizes reporting requirements and their respective due dates.

[5/13/92; 20.11.69.24 NMAC - Rn, 20 NMAC 11.69.II.13, 10/1/02]

20.11.69.25 UPSET CONDITION:

A. The provisions of 20.11.49 NMAC shall not apply to any PWD.

B. Whenever the temperature requirements of Sections 15 or 17 of 20.11.69 NMAC or any emission limit in 20.11.69.13 NMAC for which compliance is based on continuous emissions monitoring, is exceeded, the operator shall take the following actions:

- (1) cut off waste charging to the combustion unit;
- (2) notify the department verbally of the exceedence within four hours of its occurrence or prior to twelve noon of the next business day should the exceedence occur during non-business hours;
- (3) note in the operating record the time and date of the exceedence, when shutdown began, and when shutdown was complete;
- (4) identify and correct the cause of the upset condition before resuming operation of the unit; and
- (5) note in the operating record the corrective action taken and the time and date of startup.

[5/13/92; 20.11.69.25 NMAC - Rn, 20 NMAC 11.69.II.14, 10/1/02; A, 10/13/09]

20.11.69.26 HANDLING, STORAGE, AND TRANSPORTATION OF ASH:

A. All handling and storage of fly ash and bottom ash shall be conducted in a closed system, which prevents ash from becoming airborne.

B. Transporters of pathological waste destructor ash (PWD ash):

(1) shall not accept or transport PWD ash unless it has been treated or is securely covered to prevent release of fugitive dust; and

(2) shall line or seal vehicles to prevent any leakage of liquids.

C. There shall be no visible emissions (0 percent opacity) resulting from handling, storage, or transportation of PWD ash. Compliance with this requirement shall be determined by visual observation as specified in 40 CFR Part 60, Appendix A, Method 9 as amended.

[5/13/92; 20.11.69.26 NMAC - Rn, 20 NMAC 11.69.II.15, 10/1/02; A, 10/13/09]

20.11.69.27 OPERATOR CERTIFICATION:

A. A certified operator shall be present at the facility whenever waste is being burned. The facility employed, unit operator will control the operation of the pathological waste destructor during performance testing.

B. All unit operators of their immediate supervisor on-site must have completed the certification training, as required and specified in the Training and Certification Procedures Document developed by the department pursuant to 20.11.69 NMAC and approved by the board.

[5/13/92; 20.11.69.27 NMAC - Rn, 20 NMAC 11.69.II.16, 10/1/02]

20.11.69.28 COMPLIANCE SCHEDULE FOR EXISTING PATHOLOGICAL WASTE DESTRUCTORS:

A. PWDs in existence before the effective date of 20.11.69 NMAC must achieve full compliance with this regulation within ten (10) days of the effective date of 20.11.69 NMAC. Each owner or operator of an existing PWD who intends to permanently cease operating the unit shall remove the unit from the facility within thirty days of the effective date of 20.11.69 NMAC. The department shall be notified of the intent to cease operating within the ten (10) day period specified above. Each owner or operator of an existing PWD shall either demonstrate compliance with the requirements of 20.11.69 NMAC or seek an assurance of discontinuance from the department within the ten (10) day period specified above.

B. Assurances of discontinuance shall contain the following:

(1) owner or operator's name and address;

(2) date of submittal;

- (3) description of facility;
- (4) description of the property upon which the facility is located;
- (5) the following increments of progress:

(a) a date or dates by which contracts for each major phase of construction or installation of emission control systems, or process modification, or orders for their component parts, will be awarded;

(b) a date or dates of initiation of each major phase of on-site construction or installation of emission control equipment or process modification;

(c) a date or dates by which each major phase of on-site construction or installation of emission control equipment or process modification is to be completed; and

(d) a date or dates by which final compliance is to be achieved (no later than Nov 30, 1992 for < (less-than) 200pounds/hr units; or April 1, 1993 for single chamber units and \geq (greater-than-or-equal-to) 200pounds/hr units);

(6) a detailed description of the methods or devices to be used to achieve compliance.

[5/13/92; 20.11.69.28 NMAC - Rn, 20 NMAC 11.69.II.17, 10/1/02; A, 10/13/09]

20.11.69.29 TRAINING AND CERTIFICATION PROCEDURES DOCUMENT - PATHOLOGICAL WASTE DESTRUCTORS:

A. A certified pathological waste destructor (PWD) operator shall be present at the facility in which a PWD is located whenever waste is being burned. The facility-employed operator will control the operation of the PWD during performance testing.

B. All PWD operators or their immediate supervisor on-site must have completed the following certification training: Operator training shall include a program of study approved by the department. The owner or operator shall submit a proposed program of study to include the following:

- (1) proper waste handling;
- (2) identification of waste types acceptable for combustion;
- (3) PWD design and waste combustion theory;
- (4) proper PWD startup, operation, shutdown, and maintenance procedures; (these procedures must follow the PWD manufacturer's recommendations);

(5) work safety procedures, including infectious disease control procedures for the facility;

(6) applicable air pollution, solid waste, and wastewater management regulations;

(7) air pollution control equipment operation and maintenance; and

(8) a minimum of two (2) turn cycles of hands-on PWD operation under the supervision of another certified operator or the PWD manufacturer's representative.

C. Operator certification training shall include an annual review lasting at least eight hours. The required review may contain but shall not be limited to reviews of operation and maintenance procedures, topic specific conferences, manufacturer's updates, and regulatory updates. The content of the annual review shall be approved the department.

D. Every operator shall have visible proof of certification posted or filed the work area at the facility.

[5/13/92. .5/13/95; 12/1/95; 20.11.69.29 NMAC - Rn, 20 NMAC 11.69.II.18, 10/1/02]

20.11.69.30 PATHOLOGICAL WASTE DESTRUCTOR SUMMARY OF REPORTING REQUIREMENTS:

TABLE 1

Report/Description	Reference	Date due to Department
Notice of CEM performance evaluation.	Subsection C of 20.11.69.20 NMAC	At least 30 days prior to performance evaluation.
CEM performance evaluation.	Subsection D of 20.11.69.20 NMAC	Within 30 days from the end of the test period.
Notice of emission testing and test protocols.	Subsection A of 20.11.69.22 NMAC	At least 30 days prior to the actual test date.

Copy of emission test results.	Subsection C of 20.11.69.23 NMAC	Within 60 days from the test date.
Quarterly report of CEM and temperature monitoring results.	20.11.69.23 NMAC	Within 30 days of the end of each calendar quarter.
Notice of intent to cease unit operations.	Subsection A of 20.11.69.28 NMAC	Within 10 days of the effective date of this Part.
Compliance schedule/Assurance of Discontinuance	Subsection A of 20.11.69.28 NMAC	Within 10 days of the effective date of this Part.

[5/13/95; 20.11.69.30 NMAC - Rn, 20 NMAC 11.69.Table 1, 10/1/02]

PART 70: [RESERVED]

PART 71: MUNICIPAL SOLID WASTE LANDFILLS

20.11.71.1 ISSUING AGENCY:

Albuquerque-Bernalillo County Air Quality Control Board.

[20.11.71.1 NMAC - N, 1/1/06]

20.11.71.2 SCOPE:

A. Applicability: 20.11.71 NMAC is applicable to the city of Albuquerque and Bernalillo county.

(1) Existing municipal solid waste landfills: Except as provided in 20.11.71.14 NMAC, each owner or operator of an existing (active or closed) municipal solid waste landfill is subject to all provisions specified in 40 CFR Part 60, Subpart Cf,

Emission Guidelines and Compliance Times for Municipal Solid Waste Landfills, as promulgated by the US EPA on August 29, 2016. Physical or operational changes made to an existing municipal solid waste landfill solely to comply with an emission guideline are not considered a modification or reconstruction and do not subject an existing municipal solid waste landfill to the requirements of 40 CFR Part 60 Subpart XXX.

(2) New municipal solid waste landfills: In addition to being subject to 20.11.71.13 NMAC new municipal solid waste landfills are subject to 40 CFR Part 60, Subpart XXX, *Standards of Performance for Municipal Solid Waste Landfills* as incorporated by reference in 20.11.63 NMAC, *New Source Performance Standards for Stationary Sources*.

B. Exempt: 20.11.71 NMAC does not apply to sources within Bernalillo county, that are located on Indian lands over which the Albuquerque-Bernalillo county air quality control board lacks jurisdiction.

[20.11.71.2 NMAC - N, 1/1/06; A, 5/13/17]

20.11.71.3 STATUTORY AUTHORITY:

20.11.71 NMAC is adopted pursuant to the authority provided in the New Mexico Air Quality Control Act, Section 74-2-5 NMSA 1978; the Joint Air Quality Control Board Ordinance, Bernalillo County Ordinances Section 30-33; the Joint Air Quality Control Board Ordinance, Revised Ordinances of Albuquerque 1994 Section 9-5-1-4.

[20.11.71.3 NMAC - N, 1/1/06; A, 5/13/17]

20.11.71.4 DURATION:

Permanent.

[20.11.71.4 NMAC - N, 1/1/06]

20.11.71.5 EFFECTIVE DATE:

January 1, 2006, unless a later date is cited at the end of a section.

[20.11.71.5 NMAC - N, 1/1/06]

20.11.71.6 OBJECTIVE:

To establish requirements for municipal solid waste landfills (MSWLs) in order to control emissions of methane and non-methane organic compounds (NMOC); to create a legally enforceable mechanism to require owners and operators of existing MSWLs to comply with the provisions of 40 CFR Part 60, Subpart Cf.

[20.11.71.6 NMAC - N, 1/1/06; A, 5/13/17]

20.11.71.7 DEFINITIONS:

All definitions found in 40 CFR Part 60, Subpart A apply. All definitions found in 40 CFR Part 60, Subpart XXX apply to new municipal solid waste landfills and all definitions found in 40 CFR Part 60, Subpart Cf apply to existing MSWLs. In addition to the definitions in 20.11.71.7 NMAC, the definitions in 20.11.1 NMAC *General Provisions* apply unless there is a conflict between definitions, in which case the definition in 20.11.71 NMAC shall govern. As used in this part:

A. "Active municipal solid waste landfill" or "active MSWL" means an MSWL in which solid waste is being placed or an MSWL that is planned to accept waste in the future.

B. "Closed municipal solid waste landfill" or "closed MSWL" means an MSWL in which solid waste is no longer being placed, and in which no additional solid wastes will be placed without first filing a notification of modification as prescribed in 40 CFR 60.7(a)(4). Once a notification of modification has been filed and additional solid waste is placed in the MSWL, the MSWL is no longer closed.

C. "Existing municipal solid waste landfill" or "existing MSWL" means an active or closed MSWL meeting the following conditions:

(1) has commenced construction, modification, or reconstruction on or *before* July 17, 2014; and;

(2) has accepted household waste at any time *since* November 8, 1987, or has additional design capacity available for future waste deposition.

D. "New municipal solid waste landfill" or "new MSWL" means an MSWL that commenced construction, reconstruction, or modification after July 17, 2014.

[20.11.71.7 NMAC - N, 1/1/06; A, 5/13/17]

20.11.71.8 VARIANCES:

The variance provisions of 20.11.7 NMAC, Variance Procedure, Revised Ordinances of Albuquerque 1994 Section 9-5-1-8, Bernalillo County Ordinances Section 30-37 and Section 74-2-8 NMSA 1978 shall **not** apply to 20.11.71 NMAC or the incorporated federal standards.

[20.11.71.8 NMAC - N, 1/1/06; A, 5/13/17]

20.11.71.9 SAVINGS CLAUSE:

Any amendment to 20.11.71 NMAC that is filed with the state records center shall not affect actions pending for violation of a city or county ordinance, the air quality regulations for Albuquerque and Bernalillo county or a permit issued by the department. Prosecution for a violation under a prior statute, ordinance, regulation or permit shall be governed and prosecuted under the statute, ordinance or regulation in effect at the time the violation was committed.

[20.11.71.9 NMAC - N, 1/1/06]

20.11.71.10 SEVERABILITY:

If any section, paragraph, sentence, clause or word of 20.11.71 NMAC or any federal standards incorporated herein is for any reason held to be unconstitutional or otherwise invalid by any court, the decision shall not affect the validity of remaining provisions of 20.11.71 NMAC.

[20.11.71.10 NMAC - N, 1/1/06]

20.11.71.11 DOCUMENTS:

Documents incorporated and cited in 20.11.71 NMAC may be viewed at the Albuquerque environmental health department, one civic plaza, suite 3023, 400 Marquette NW, Albuquerque, NM 87102.

[20.11.71.11 NMAC - N, 1/1/06]

20.11.71.12 [RESERVED]

[20.11.71.12 NMAC - N, 1/1/06]

20.11.71.13 PERMITTING REQUIREMENTS:

A. Operating permits: New and existing MSW landfills with design capacities greater than or equal to 2.5 million megagrams or 2.5 million cubic meters are subject to the permitting requirements of 20.11.42 NMAC *Operating Permits*. New and existing MSW landfills with design capacities less than 2.5 million megagrams or 2.5 million cubic meters are not subject to permitting requirements under 20.11.42 NMAC *Operating Permits* unless they are a major source as defined in 20.11.42 NMAC *Operating Permits*.

B. Construction Permits: Emissions of NMOC from MSW landfills subject to 20.11.71 NMAC shall not be included in applicability determinations that would otherwise be required by 20.11.41 NMAC *Construction Permits* and shall not be subject to the permit requirements of 20.11.41 NMAC.

[20.11.71.13 NMAC - N, 1/1/06; A, 5/13/17]

20.11.71.14 REQUIREMENTS FOR EXISTING MUNICIPAL SOLID WASTE LANDFILLS:

A. Except as provided below, requirements for existing (active and closed) MSWLs will be in accordance with 40 CFR Part 60 Subpart Cf.

(1) Existing active and closed MSWLs will continue to comply with 40CFR Subpart Cc or WWW, as applicable, until the effective date of final EPA approval, as published in the federal register, of a state plan for Albuquerque – Bernalillo County implementing 40 CFR Part 60 Subpart Cf. Upon such EPA approval, existing (active and closed) MSWLs will comply with 40 CFR Part 60 Subpart Cf.

(2) Each owner or operator of an existing (active or closed) MSWL must comply with all provisions in 40 CFR Part 60 Subpart Cf notwithstanding any language therein characterizing provisions of 40 CFR Part 60 Subpart Cf as "guidelines."

B. All reports required in 40 CFR Part 60, Subpart Cf shall be submitted to the department according to the schedules outlined in that subpart and to the administrator of the EPA as required by that subpart. Additional notifications regarding progress toward meeting the final compliance schedule for control system installation and startup shall be submitted to the department as follows:

(1) Contracts for construction of collection and control systems shall be awarded or orders for purchase of components shall be completed no later than six months following submission of the final control plan as required by 40 CFR 60.38f(d);

(2) On-site construction or installation of the collection and control system shall be initiated no later than nine months following submission of the final control plan;

(3) On-site construction or installation of the collection and control system shall be completed no later than 29 months following the submission of an annual NMOC emission rate report showing NMOC emissions equal to or exceeding the emissions threshold in 40 CFR Part 60, Subpart Cf; and

(4) Initial performance testing shall occur no later than 150 days following the final compliance date in 40 CFR Part 60, Subpart Cf.

C. Exceptions: Unless otherwise specified in the applicable federal subpart, on a case by case basis and consistent with 40 CFR Part 60.24(f), an existing active or closed MSWL may apply for a less stringent emission standard or longer compliance schedule than those otherwise required by this part, provided that the owner or operator demonstrates to the department:

(1) Unreasonable cost of control, including, but not limited to, MSWL age, location, or basic design;

(2) Physical impossibility or impracticability of installing necessary control equipment; or

(3) Other environmental factors specific to the MSWL that make application of a less stringent standard or final compliance time significantly more reasonable.

[20.11.71.14 NMAC - N, 1/1/06; A, 5/13/17]

PART 72: HEALTH, ENVIRONMENT AND EQUITY IMPACTS

20.11.72.1 ISSUING AGENCY:

Albuquerque-Bernalillo County Air Quality Control Board, P.O. Box 1293, Albuquerque, NM 87103. Telephone: (505) 768-1972.

[20.11.72.1 NMAC – N, 1/1/2025]

20.11.72.2 SCOPE:

A. Applicability: Any person who intends to construct a new stationary source or modify an existing stationary source that is subject to permitting under 20.11.41 NMAC, 20.11.60 NMAC or 20.11.61 NMAC.

B. Exemptions: 20.11.72 NMAC does not apply to:

- (1) technical permit revisions under Subsection B of 20.11.41.28 NMAC;
- (2) administrative permit revisions under Subsection A of 20.11.41.28 NMAC;
- (3) emergency permits applications under Subsection A of 20.11.41.24 NMAC;
- (4) relocations for portable sources under Paragraph (2) of Subsection F of 20.11.41 NMAC;
- (5) any source exempt from 20.11.41 NMAC, 20.11.60 NMAC, 20.11.61 NMAC; and
- (6) sources within Bernalillo county that are located on Indian lands over which the Albuquerque-Bernalillo county air quality control board lacks jurisdiction.

[20.11.72.2 NMAC – N, 1/1/2025]

20.11.72.3 STATUTORY AUTHORITY:

20.11.72 NMAC is adopted pursuant to the authority provided in Title VI, Sections 74-2-4 and 74-2-5 NMSA 1978; Bern. Co. Ord. Ch. 30, Art. II, Sec. 32.

[20.11.72.3 NMAC – N, 1/1/2025]

20.11.72.4 DURATION:

Permanent.

[20.11.72.4 NMAC – N, 1/1/2025]

20.11.72.5 EFFECTIVE DATE:

January 1, 2025, except where a later date is cited at the end of a section.

[20.11.72.5 NMAC – N, 1/1/2025]

20.11.72.6 OBJECTIVE:

To establish additional permitting requirements for new or modified stationary sources of air pollution that are located, or proposed to be located, in or within a one-mile radius of an overburdened area in order to prevent disproportionate health impacts or environmental effects from air emissions on the overburdened area, to protect all residents from certain hazardous air pollutants, and to encourage meaningful public participation in the permitting process.

[20.11.72.6 NMAC – N, 1/1/2025]

20.11.72.7 DEFINITIONS:

In addition to the definitions in 20.11.72 NMAC, the definitions in 20.11.1 NMAC apply unless there is a conflict between definitions, in which case the definition in 20.11.72 NMAC shall govern.

A. "Best available control technology" or "BACT" means the same in 20.11.72 NMAC as it is defined in Subsection M of 20.11.61.7 NMAC.

B. "Environmental factors" shall include particulate matter 2.5 microns or less (annual average PM 2.5 levels in air), ozone (average of the annual top ten daily maximum 8-hour ozone concentrations in air), diesel particulate matter (diesel particulate matter level in air), annual toxic releases (in pounds), and traffic proximity and volume (count of vehicles (average annual daily traffic) at major roads within 500 meters, divided by the distance in meters).

C. "Health indicators" shall include asthma prevalence among adults 18 years of age and older, asthma prevalence among children 17 years of age and younger, chronic obstructive pulmonary disease (COPD) prevalence among adults 18 years of

age and older, cardiovascular disease prevalence among adults 18 years of age and older, age-adjusted cancer incidence per 100,000 population, persons with disabilities, and life expectancy.

D. "Overburdened area" means the twenty percent of census block groups in Bernalillo County that experience the highest cumulative environmental and public health stressors (using the most recent version of the Environmental Protection Agency's Environmental Justice (EJ) Screen and New Mexico Department of Health's New Mexico Indicator Based Information System (NMIBIS) as on-line resources), considering at least the following: environmental factors, health indicators, and social determinants of health indicators as defined in this regulation.

E. "Social determinants of health indicators" shall include percent of population age 25 years and older who do not have a high school diploma or equivalent, percent of households with a total household income below two hundred percent of the federal poverty level, percent of population over the age of five that speak a language other than English at home and who speak English less than "very well", and percent of population that is non-white, and also those who list their ethnicity as Hispanic or Latino.

[20.11.72.7 NMAC – N, 1/1/2025]

20.11.72.8 OVERBURDENED AREA REQUIREMENTS:

A. The city of Albuquerque environmental health department (department) shall, in consultation with the public and using the latest and best available science and data on health and the environment, develop a GIS map, along with map layers displaying environmental factors, health indicators, and social determinants of health indicators, representing overburdened areas in Bernalillo county.

B. The department shall publish and provide public notice of the overburdened areas map developed per Subsection A of 20.11.72.8 NMAC by January 1, 2025 and, for purposes of 20.11.72 NMAC, the map shall go into effect on July 1, 2025. The department may make minor adjustments to correct errors and for other significant concerns based on public input per Subsections A & B of 20.11.72.9 NMAC in the six months before the overburdened area map goes into effect.

C. The department shall require every new or modified stationary source subject to permitting under 20.11.41 NMAC, 20.11.60 NMAC, or 20.11.61 NMAC that is located, or proposed to be located, in or within a one-mile radius of an overburdened area, as indicated by the overburdened areas map in effect as of the permit application date, to apply BACT even if the new or modified stationary source is not a major stationary source.

D. The department shall require BACT for new or modified stationary sources throughout Bernalillo County that emit any one, or combination of, the following 15 hazardous air pollutants (HAPs): acetaldehyde, acrolein, benzene, 1,3-butadiene,

carbon tetrachloride, ethyl benzene, ethylene oxide, formaldehyde, hydrochloric acid, methyl bromide, methylene chloride, naphthalene, toluene, vinyl chloride, and xylenes.

E. The department shall, in consultation with the public and using the latest and best available science on health and the environment, update its overburdened areas map when a change in circumstances warrant or at a minimum of every five years using data from the following on-line sources: U.S. Census bureau's American community survey (ACS) 5-Year Data, U.S. Environmental protection agency's environmental justice (EJ) screen, and New Mexico department of health's New Mexico indicator based information system (NMIBIS), and provide notice to potentially regulated entities at least six months before an updated overburdened areas map goes into effect.

[20.11.72.8 NMAC – N, 1/1/2025]

20.11.72.9 PUBLIC NOTICE BY DEPARTMENT – PUBLIC PARTICIPATION:

In addition to the requirements for public notice by department – public participation set forth under 20.11.72.9 NMAC, the public notice by department – public participation requirements in 20.11.41.14 NMAC apply unless there is a conflict between requirements, in which case the more expansive notice requirements shall govern.

A. The department shall provide notice by regular mail or electronic mail to all individuals, neighborhood associations, and other organizations, and to those persons having stated a desire to receive notices of all applications filed pursuant to 20.11.41 NMAC, 20.11.60 NMAC or 20.11.61 NMAC as identified on a list maintained by the department, who reside in or represent persons residing in an overburdened area that is within a one-mile radius of a located, or proposed to be located, new or modified stationary source.

B. Public participation shall be encouraged and at least include opportunities for written, live, and on-line public comment and engagement.

[20.11.72.9 NMAC – N, 1/1/2025]

PART 73-79: [RESERVED]

PART 80: ADJUDICATORY PROCEDURES - ADMINISTRATIVE ENFORCEMENT HEARINGS BY DIRECTOR

20.11.80.1 ISSUING AGENCY:

Albuquerque-Bernalillo County Air Quality Control Board, c/o Environmental Health Department, P.O. Box 1293, Albuquerque, New Mexico 87103. Telephone: (505) 768-2601.

[20.11.80.1 NMAC - N, 8/15/11]

20.11.80.2 SCOPE:

A. Except as otherwise specifically provided by statute or by another applicable board regulation, 20.11.80 NMAC governs:

(1) administrative appeals of administrative compliance orders as defined in Subsection D of 20.11.80.7 NMAC; and

(2) all other adjudicatory enforcement proceedings conducted by or on behalf of the department director if a board regulation establishes that 20.11.80 NMAC governs the proceeding.

B. 20.11.80 NMAC does not govern adjudicatory proceedings of the board regarding:

(1) petitions for variance and related stays, which are governed by 20.11.7 NMAC, *Variance Procedure*, as authorized by Section 74-2-8 NMSA 1978;

(2) petitions for a hearing on the merits before the board made by a permit applicant, permittee or person who participated in a permitting action before the department and who believes that the petitioner is adversely affected by the permitting action, which are governed 20.11.81 NMAC, *Adjudicatory Procedures - Air Quality Control Board*, as authorized by Section 74-2-7 NMSA 1978; and

(3) adoption, amendment and repeal of board regulations, which are governed by 20.11.82 NMAC, *Rulemaking Procedures - Air Quality Control Board*, as authorized by Section 74-2-6 NMSA 1978.

C. Exempt: 20.11.80 NMAC does not apply to sources within Bernalillo county that are located on Indian lands over which the board lacks jurisdiction, or to administrative enforcement actions that involve air care inspection stations, fleet air care stations, air care inspectors or the decentralized or centralized motor vehicle inspection program, which are governed by 20.11.100 NMAC and 20.11.101 NMAC respectively.

[20.11.80.2 NMAC - N, 8/15/11]

20.11.80.3 STATUTORY AUTHORITY:

20.11.80 NMAC is adopted pursuant to the authority of the Air Quality Control Act, Chapter 74, Article 2 NMSA 1978, specifically Sections 74-2-5, 74-2-5.1 and 74-2-12 NMSA 1978.

[20.11.80.3 NMAC - N, 8/15/11]

20.11.80.4 DURATION:

Permanent.

[20.11.80.4 NMAC - N, 8/15/11]

20.11.80.5 EFFECTIVE DATE:

August 15, 2011, unless a later date is cited at the end of a section.

[20.11.80.5 NMAC - N, 8/15/11]

20.11.80.6 OBJECTIVE:

To govern the adjudicatory proceedings of the department and the director regarding administrative enforcement, provide due process for all parties and give an orderly structure to the proceedings.

[20.11.80.6 NMAC - N, 8/15/11]

20.11.80.7 DEFINITIONS:

In addition to the definitions in 20.11.80 NMAC, the definitions in 20.11.1 NMAC apply unless there is a conflict between definitions, in which case the definitions in 20.11.80 NMAC shall govern.

A. "Act" means the Air Quality Control Act, Chapter 74, Article 2 NMSA 1978 and its subsequent amendments and successor provisions.

B. "Air program" means the board program within the municipal limits of Albuquerque and within the boundaries of Bernalillo county with a staff that is authorized to administer and enforce air quality pursuant to the Air Quality Control Act, Chapter 74, Article 2 NMSA 1978.

C. "Board" means the Albuquerque-Bernalillo county air quality control board or its successor board under the act.

D. "Compliance order" means a written administrative compliance order, compliance determination or other administrative order or document that is issued by the manager of the air program or by the department, and which may include any combination of an allegation of violation, demand for penalty payment, or suspension or revocation of all or part of a permit as authorized by the Air Quality Control Act, Section 74-2-12 NMSA 1978.

E. "Complainant" means the manager of the air program, also known as the air program manager, or other person designated by the director of the department to perform the functions of an air program manager.

F. "Days" means consecutive days except as otherwise specified.

G. "Department" means the city of Albuquerque environmental health department or the successor local agency as defined and authorized by the act.

H. "Director" means the administrative head of the department, the director's designee or a person who assumes the role of the director for purposes of 20.11.80 NMAC in the event of the director's disqualification or withdrawal.

I. "Division" means the air quality division of the department or the division's successor organizational unit.

J. "Hearing clerk" means the department employee designated by the director to provide staff support to the hearing officer and the director regarding the proceedings, issue subpoenas, and maintain the official record of the proceeding.

K. "Hearing officer" means the person appointed by the director to conduct a proceeding pursuant to 20.11.80 NMAC.

L. "Party" means the respondent, the air program and any person who is allowed by the hearing officer or director to intervene in the hearing pursuant to Rule 1-024 NMRA of the New Mexico rules of civil procedure for the district courts.

M. "Record proper" or "record" means all documents filed by or with the hearing clerk during the proceeding authorized by 20.11.80 NMAC and includes:

(1) the verbatim record of the hearing in the form of a transcript, tapes or other digital recording, as applicable, and all exhibits offered into evidence at the hearing, whether or not admitted;

(2) the hearing officer's findings of fact and conclusions regarding all material issues of law and discretion and the reasons therefor, the recommended decision and the proposed final order, as required by Subsection C of 20.11.80.16 NMAC; and

(3) the director's final order and reasons, as required by Subsection D of 20.11.80.16 NMAC.

N. "Regulations" means the rules promulgated by the board pursuant to the act.

O. "Request for hearing" means a written request to the department director for review of a compliance order pursuant to Subsection A of 20.11.80.13 NMAC.

P. "Respondent" means the person to whom the air program manager has issued a compliance order.

[20.11.80.7 NMAC - N, 8/15/11]

20.11.80.8 VARIANCES:

The variance procedures established in 20.11.7 NMAC shall not apply to 20.11.80 NMAC.

[20.11.80.8 NMAC - N, 8/15/11]

20.11.80.9 SAVINGS CLAUSE:

The filing of 20.11.80 NMAC, *Adjudicatory Procedures - Administrative Enforcement Hearings by Director*, and the filing of an amendment to 20.11.80 NMAC with the state records center and archives shall not affect an action pending for violation of the act, a city or county ordinance, a board regulation or a permit and shall not affect a compliance order that has been filed pursuant to 20.11.80 NMAC. Prosecution for violation of a prior statute, ordinance, regulation, part or permit shall be governed and prosecuted under the statute, ordinance, regulation, part or permit wording in effect at the time the violation was committed.

[20.11.80.9 NMAC - N, 8/15/11]

20.11.80.10 SEVERABILITY:

If for any reason any section, subsection, sentence, phrase, clause or wording of 20.11.80 NMAC is held to be unconstitutional or otherwise invalid by any court or the United States environmental protection agency, the decision shall not affect the validity of remaining portions of 20.11.80 NMAC.

[20.11.80.10 NMAC - N, 8/15/11]

20.11.80.11 DOCUMENTS:

Documents incorporated and cited in 20.11.80 NMAC may be viewed at the Albuquerque environmental health department, Suite 3023, One Civic Plaza, 400 Marquette NW, Albuquerque, New Mexico.

[20.11.80.11 NMAC - N, 8/15/11]

20.11.80.12 GENERAL PROVISIONS:

A. Applicability of rules of civil procedure and rules of evidence: In the absence of a specific provision in 20.11.80 NMAC governing an action, the hearing officer may look to the New Mexico Rules of Civil Procedure, NMRA 1-001 et seq., and the New Mexico Rules of Evidence, NMRA 11-101 et seq., for guidance. No provision of the rules of civil procedure shall be construed to extend or otherwise modify the authority and jurisdiction of the director.

B. Liberal construction: 20.11.80 NMAC shall be liberally construed to carry out its purpose.

C. Director and hearing officer - powers and duties - disqualification and withdrawal:

(1) **Director:** The director shall exercise all powers and duties authorized and required by the act and 20.11.80 NMAC that are not otherwise delegated by 20.11.80 NMAC to the hearing officer or the hearing clerk. The director or hearing officer may specify procedures in addition to, or that vary from, the procedures provided in 20.11.80 NMAC in order to expedite the efficient resolution of the action or to avoid obvious injustice.

(2) **Hearing officer:** The director shall appoint a hearing officer or hearing officers to perform the functions described in Subparagraph (b) of Paragraph (2) of Subsection C of 20.11.80.12 NMAC.

(a) **Qualifications and disqualifications:** A hearing officer may be an independent contractor, a hearing officer at the city of Albuquerque office of administrative hearings or similar successor city organizational unit, an employee of the department who is not air program staff, or an employee of a different city department. A hearing officer shall not be:

(i) an employee of or staff for the air program;

(ii) an employee of or staff for the department unless employed by the department as a hearing officer;

(iii) a person who has a personal bias or prejudice concerning a party, has personal knowledge of disputed facts concerning the proceeding, is related to a party within the third degree of relationship or has a financial interest in the proceeding;

(iv) a person who has performed prosecutorial or investigative functions in connection with the matter at issue in the proceeding; or

(v) an officer, director or trustee of a party to the proceeding.

(b) **Hearing officer functions:** The hearing officer shall exercise all powers and duties required or delegated by the director pursuant to the act and 20.11.80 NMAC. The hearing officer shall conduct a fair and impartial proceeding, assure that the facts are fully elicited and avoid delay. The hearing officer shall have authority to take all measures necessary to maintain order and the efficient, fair and impartial adjudication of issues arising in proceedings governed by 20.11.80 NMAC, including, but not limited to:

(i) conducting hearings authorized by 20.11.80 NMAC;

(ii) ruling upon motions, procedural requests and offers of proof, and issuing all necessary orders;

(iii) administering oaths and affirmations, examining witnesses and admitting or excluding evidence;

(iv) requiring parties to attend conferences for the settlement or simplification of issues, or for expediting proceedings;

(v) imposing sanctions, subject to review and approval by the director, on parties who cause undue delay or fail to cooperate in the proceeding; and

(vi) filing with the hearing clerk all original documents received by the hearing officer.

(3) Director and hearing officer; disqualification or withdrawal:

(a) The director may not perform functions authorized by 20.11.80 NMAC regarding any matter in which the director:

(i) has a personal bias or prejudice concerning a party, has personal knowledge of disputed facts concerning the proceeding, is related to a party within the third degree of relationship or has a financial interest in the proceeding;

(ii) has performed prosecutorial or investigative functions in connection with the matter at issue in the proceeding; or

(iii) is an officer, director or trustee of a party to the proceeding.

(b) The director shall not be disqualified solely because the director has been briefed on the matter before a compliance order is issued.

(c) A party may request the withdrawal or disqualification of the director or the hearing officer by filing a motion that includes a reason for disqualification listed in either Subparagraph (a) of Paragraph (3) of Subsection C of 20.11.80.12 NMAC or Subparagraph (a) of Paragraph (2) of Subsection C of 20.11.80.12 NMAC, as applicable. The motion shall be filed within 10 days after the later of the date the compliance order has been docketed or the hearing officer has been designated, or, if a new director or new hearing officer is appointed, within 10 days after the new director takes office or the new hearing officer is appointed, as applicable.

(d) A motion seeking withdrawal or disqualification of the director or the hearing officer shall be ruled upon by the director. If the director withdraws or is disqualified, the duties of the director shall be assumed by an associate director, deputy director or other person who would not be subject to disqualification and does not directly oversee the air program.

D. Recording of hearings: All hearings on the merits shall be recorded by a court reporter unless otherwise directed by the director or hearing officer. The recording made by the court reporter will be the sole official recording of the hearing. The hearing clerk shall make the transcription part of the record proper, which is a public record except as otherwise provided by law.

E. Computation and extension of time:

(1) **Computation of time:** In computing any period of time prescribed or allowed by 20.11.80 NMAC, except as otherwise specifically provided, the day of the event from which the designated period begins to run shall not be included. The last day of the computed period shall be included, unless it is a Saturday, Sunday or legal city of Albuquerque holiday, in which event, the time shall be extended until 5:00 p.m. on the next day that is not a Saturday, Sunday or legal city of Albuquerque holiday. Whenever a party must act within a prescribed period after service upon that party and service is by mail, three days shall be added to the prescribed period. The three-day extension does not apply to a deadline established by the act.

(2) **Extensions of time:** When a motion is filed, the hearing officer or director, as appropriate for the stage of the proceeding at the time the motion is filed, may grant an extension of time for filing a document or may grant continuance of a hearing. No extension shall be granted regarding a deadline established by the act.

F. Ex parte contact. Between the time a compliance order has been issued and the time the director issues a final order or the request for hearing has been withdrawn, no person shall have ex parte contact with the director or the hearing officer regarding the merits of a pending compliance order or motion filed pursuant to 20.11.80 NMAC. The ex parte restriction established in the immediately-preceding sentence does not apply to the director, the hearing officer or the hearing clerk.

G. Document - filing, service, form and examination:

(1) **Filing of documents:**

(a) except as otherwise provided, the original of all documents served in the proceeding shall be filed with the hearing clerk; and

(b) the party that files a document shall serve a copy of the document on all other parties. All documents shall be filed at least 15 days before the hearing at which the hearing officer or director will consider the matter unless otherwise ordered by the hearing officer. A certificate of service like the certificate of service shown in Subsection J of 20.11.80.12 NMAC shall accompany each filed document.

(2) **Service of Documents:** Except as otherwise provided or ordered by the hearing officer, all documents shall be served personally, mailed by express or first class mail, or, if the person being served has agreed in writing, sent by facsimile or by

electronic transmission. Service by mail is complete when the document is mailed. Service by facsimile or electronic transmission is accomplished when transmission of the document is complete. If the person being served is represented by an attorney, service shall be made on the attorney. Delivery receipts shall be kept as proofs of service and shall be produced immediately upon the request of the hearing officer, the director or another party.

(3) **Form of documents:**

(a) If feasible, all documents in paper form shall be prepared on 8 1/2 inch x 11 inch white paper, printed double-sided. Where appropriate, the first page of every document shall include the caption or heading required by Subsection J of 20.11.80.12 NMAC. The contents, except quotations and footnotes, shall be double spaced.

(b) The original of each document, except exhibits, shall be signed by the party or the party's attorney or other representative, and shall include the address, e-mail address if any, and telephone number of the person who signed. The signature constitutes a certification that the signer has read the document; that, to the best of the signer's knowledge, information and belief, there are good grounds to support the document; and that, except for motions for extension of time, the document is not interposed or submitted for purposes of delay.

(c) A notice of service that is required by 20.11.80 NMAC shall be deemed adequate if made to the most recent address provided by the person upon whom service is made.

H. Filing and service of documents issued by director or hearing officer: Every document issued by the director and the hearing officer shall be filed with the hearing clerk. The hearing clerk shall promptly serve copies of the document upon all parties.

I. Examination of documents filed: Pursuant to the New Mexico Inspection of Public Records Act at Chapter 14, Article 2 NMSA 1978 and all applicable city of Albuquerque ordinances and administrative instructions, during normal business hours and subject to the provisions of law restricting public disclosure of confidential information, any person may inspect and copy any document filed in any proceeding pursuant to 20.11.80 NMAC. The documents shall be made available by the hearing clerk, as authorized.

[20.11.80.12 NMAC - N, 8/15/11]

20.11.80.13 PREHEARING PROCEDURES:

A. Initiation of process:

(1) **Filing a request for hearing:** As required by the act at Subsection C of Section 74-2-12 NMSA 1978, no later than 30 days after a compliance order is served on a respondent, the respondent shall submit a written request for a hearing to the director. If a timely request for hearing is not submitted, the compliance order shall be final. The process governed by 20.11.80 NMAC shall be initiated by the respondent filing a timely request for hearing and serving the request on the department director, the air program manager or his or her designee and every other party.

(2) **Request for hearing:** The request for hearing shall include an answer to the compliance order. The answer shall:

(a) in separately-numbered paragraphs that sequentially reference the numbered paragraphs in the compliance order, clearly and directly admit or deny each of the factual assertions contained in the compliance order; however, if the respondent has no knowledge of a particular factual assertion and so states, the assertion may be denied on the basis of a lack of knowledge; every allegation in the compliance order that is not specifically denied shall be deemed admitted by the respondent;

(b) indicate every affirmative defense upon which the respondent intends to rely; every affirmative defense that is not asserted in the request for hearing shall be deemed waived, except a defense asserting lack of subject matter jurisdiction;

(c) be signed under oath or affirmation that the information contained in the answer is to the best of the signer's knowledge and belief true and correct; and

(d) have a copy of the compliance order attached.

B. Notice of docketing; notice of hearing officer assignment:

(1) **Notice:** As soon as practical after the hearing clerk receives a request for hearing, the hearing clerk shall issue a notice of docketing that includes the caption or heading required by Subsection J of 20.11.80.12 NMAC, the docket number of the

case, the date upon which the request for hearing was received by the hearing clerk and the name of the hearing officer if one has been designated. If a hearing officer has not been designated, the hearing clerk shall notify the parties of the name and address of the hearing officer as soon as one is assigned. The hearing clerk shall include a copy of 20.11.80 NMAC with the notice of docketing that is sent to the respondent.

(2) **Untimeliness:** The hearing clerk shall docket every request for hearing that is delivered to the hearing clerk without regard to whether it appears to be timely. Any party may move to dismiss an untimely request for hearing.

C. Scheduling the hearing:

(1) In consultation with the hearing officer, but no later than 30 days before the date of the hearing, the hearing clerk shall issue and serve upon the parties a notice of hearing setting forth the date, time and location of the hearing.

(2) After consideration of prejudice to the parties, the hearing officer shall not grant a request to postpone a hearing unless all parties consent or the hearing officer determines good cause has been shown.

(3) Location of the hearing; attendance by the public: The hearing shall be held in a public facility within Bernalillo county with seating available for members of the public, who can attend and listen, but who shall not testify unless identified as a witness by a party as required by Subsection B of 20.11.80.14 NMAC.

D. Motions:

(1) **General:** Except for motions made orally during a hearing, all motions shall be in writing, specify the grounds for the motion, state the relief sought and state whether the motion is opposed or unopposed. Each motion that is not made orally during a hearing shall be filed no fewer than 30 days before the hearing at which the hearing officer or director will consider the matter unless a different deadline is established by the hearing officer; shall be accompanied by an affidavit, certificate or other evidence relied upon; and shall be served as required by Paragraph (2) of Subsection G of 20.11.80.12 NMAC.

(2) **Unopposed motions:** An unopposed motion shall state that concurrence of all other parties was obtained. The moving party shall submit a proposed order approved by all parties for the hearing officer's review with the motion.

(3) **Opposed motions:** Every opposed motion shall state either that concurrence was sought and denied or why concurrence was not sought. A memorandum brief in support of an opposed motion may be filed with the motion. The moving party shall submit a proposed order for the hearing officer's review with the motion.

(4) **Response to motions:** Unless a different deadline is established by the hearing officer, every party upon whom an opposed motion is served shall have 15 days after service of the motion to file a response. A non-moving party who fails to file a timely response shall be deemed to have waived any objection to the granting of the motion.

(5) **Reply to response:** Unless a different deadline is established by the hearing officer, the moving party may submit a reply to a response within 10 days after service of the response, but is not required to submit a reply.

(6) **Decision regarding motions:** All motions shall be decided by the hearing officer without a hearing, unless the hearing officer decides to hold a hearing or unless a party requests a hearing and the hearing officer consents to a motion hearing.

(7) **Procedural motions:** The hearing officer may rule upon a procedural motion before the expiration of the time for response. A response regarding the procedural motion received after the decision is made shall be treated as a request for reconsideration of the ruling.

(8) The hearing officer may refer a motion to the director with the hearing officer's recommendation if the motion would result in a final determination of the merits or an essential element of the compliance order.

[20.11.80.13 NMAC - N, 8/15/11]

20.11.80.14 DISCOVERY:

Formal discovery is not a right in an administrative enforcement procedure and, therefore, is discouraged. If a party wishes to conduct discovery in addition to the methods of discovery provided in 20.11.80.14 NMAC, additional discovery shall only be allowed by order of the hearing officer.

A. Scope of discovery:

(1) **Criteria:** Discovery of information that is not privileged or exempt may be permitted if:

(a) the discovery will not unreasonably delay the proceeding;

(b) the information to be obtained is not unreasonably cumulative or duplicative, or not otherwise reasonably obtainable elsewhere;

(c) the discovery is not unreasonably burdensome; and

(d) there is a substantial reason to believe that the information sought will be admissible at the hearing or will be likely to lead to the discovery of admissible evidence.

(2) **Request:** Unless otherwise directed by the hearing officer, a party requesting discovery shall:

(a) serve the discovery request directly upon the party from whom discovery is sought; and

(b) file a notice with the hearing clerk; the notice shall include the caption or heading required by Subsection J of 20.11.80.12 NMAC and state the date of service of the discovery request, the type of discovery sought and the party from whom discovery is sought.

(3) **Response to discovery request:** A party responding to a discovery request shall:

(a) serve the response, including any objections, upon the party making the discovery request; and

(b) file a notice with the hearing clerk; the notice shall include the caption or heading required by Subsection J of 20.11.80.12 NMAC and state the date of service of the response, the type of discovery request being responded to and the party upon whom the response was served.

(4) **Continuing obligation to supplement responses:** Every party from whom discovery is sought has a continuing obligation, subject to any objections interposed that are not overruled by the hearing officer, to supplement responses with relevant information obtained after service of the initial response and any previous supplemental responses. Unless otherwise ordered by the hearing officer, supplemental responses shall be served as soon as practical, but no later than five days after the information became available. If the information becomes available fewer than five days before the hearing or during the hearing, the information shall be brought to the attention of the hearing officer for direction and ruling on use of the information.

(5) **Privilege:** A list of privileged or exempt documents, identified by titles, author, date and privilege or protection claimed, shall be provided in response to discovery.

(6) **Protective order:** Upon motion and for good cause show, the hearing officer may protect the discovery from disclosure. If the motion is granted, the moving party shall not present the protected discovery at the hearing.

(7) **Motion to compel; sanctions:** A party may move for an order compelling discovery if the party from whom discovery was requested has failed to respond in an

adequate or timely manner. The hearing officer may order the response and may impose such sanctions as may be appropriate, including the following:

(a) refusal to allow the testimony of a witness not identified as required by Subsection B of 20.11.80.14 NMAC;

(b) denial of admission of a document that has not been provided as required by Subsection B of 20.11.80.14 NMAC or has not been produced for inspection and copying as required by Subsection C of 20.11.80.14 NMAC;

(c) drawing adverse inferences against the non-responsive party; and

(d) in an extreme case, dismissal or default judgment against the non-responsive party.

B. Witness information; exhibits: Unless otherwise ordered by the hearing officer, within 15 days after receipt of the notice of hearing on the merits or within no fewer than 45 days before the hearing on the merits, whichever is closer to the hearing date, each party shall provide to every other party:

(1) regarding each person who is expected to be called as an expert witness:

(a) the name and address of the person expected to be called as an expert witness;

(b) a complete statement of all opinions the expert witness will express and the basis and reasons for the opinions;

(c) the data or other information considered by the expert witness in forming the opinions of the expert witness;

(d) an estimate of the length of the direct testimony of the expert witness;

(e) a list of exhibits, if any, to be offered into evidence at the hearing on the merits through testimony of the expert witness, and, regarding each exhibit, the name of each expert witness who is expected to testify regarding the exhibit; and

(f) a copy of each exhibit to be offered into evidence at the hearing on the merits through the testimony of the expert witness;

(2) regarding each person who is expected to be called by a party, but not as an expert witness:

(a) the name and address of the witness;

(b) a description of the general subject matter of the anticipated testimony of the witness;

(c) an estimate of the length of the direct testimony of the witness;

(d) a list of exhibits, if any, to be offered into evidence at the hearing on the merits through testimony of the witness; and

(e) a copy of each exhibit to be offered into evidence at the hearing on the merits through testimony of the witness; and

C. Production of documents:

(1) **Definition:** As used in Subsection C of 20.11.80.14 NMAC, "document" includes the following: any designated documents or electronically stored information, including writings, drawings, graphs, charts, photographs, sound recordings, images and any other data or data compilations, that are stored in any medium from which information can be obtained either directly or, if necessary, after translation, including translation by a responding party, into a reasonably usable form.

(2) **Request:** If the criteria in Paragraph (1) of Subsection A of 20.11.80.14 NMAC are met, any party may inspect and make copies of any designated documents in the possession or control of a party after serving a written request on the party. The request shall set forth the items to be inspected either by individual item or by category and describe each item and category with reasonable particularity. The party who has received the request for production shall specify a reasonable time, place and manner for inspecting and copying. Reasonable time means no more than 20 days after service of the request unless a different deadline is established by the hearing officer.

D. Subpoenas:

(1) A party that wishes to have a subpoena issued shall obtain a subpoena form from the hearing clerk. The subpoena form shall be completed by the requesting party and shall:

(a) include the caption or heading and the information required by Subsection J of 20.11.80.12 NMAC; and

(b) command each person to whom it is directed to attend and give testimony or to produce and permit inspection, copying, testing or sampling of designated documents, electronically stored information or other tangible things in the possession, custody or control of that person, or to permit inspection of premises, at a time and place specified in the subpoena.

(2) All subpoenas shall be issued by hearing clerk, who shall sign and date the subpoena.

(3) Pursuant to the authority that has been delegated by the director to the hearing clerk, the hearing clerk shall issue a subpoena, signed but otherwise in blank, to the party requesting the subpoena. The hearing clerk shall not issue a subpoena if the hearing officer issues a protective order as provided by Paragraph (6) of Subsection A of 20.11.80.14 NMAC.

(4) The requesting party shall complete the subpoena form before serving the subpoena. The subpoena shall be served as required by Paragraph (2) of Subsection G of 20.11.80.12 NMAC.

(5) The party that served the subpoena shall file an original proof of service with the record and shall serve a copy on all other parties.

(6) Duties in responding to subpoena.

(a) A person responding to a subpoena to produce documents shall produce them as they are kept in the usual course of business and shall organize and label them to correspond with the categories in the demand.

(b) If a subpoena does not specify the form or forms for producing electronically stored information, a person responding to a subpoena must produce the information in a form or forms in which the person ordinarily maintains it or in a form or forms that are reasonably usable.

(c) A person responding to a subpoena is not required to produce the same electronically stored information in more than one form.

(d) A person responding to a subpoena is not required to provide discovery of electronically stored information from sources that the person identifies as not reasonably accessible because of undue burden or cost. On motion to compel discovery or to quash, the person from whom discovery is sought must show that the information sought is not reasonably accessible because of undue burden or cost. The hearing officer may order discovery from such sources if the requesting party shows good cause, after taking into consideration the provisions of Paragraph (1) of Subsection A of 20.11.80.14 NMAC regarding scope of discovery and the requirements of Subsection B of 20.11.80.14 NMAC regarding witness information and exhibits.

(e) A party receiving documents under subpoena shall make them available for copying by other parties.

E. Request for admissions: If the criteria in Paragraph (1) of Subsection A of 20.11.80.14 NMAC are met, no fewer than 30 days before the hearing on the merits, any party may serve upon any other party a written request for the admission of any statement or opinion of fact or the application of law to fact, including the genuineness of any document, unless otherwise ordered by the hearing officer. If the request includes a request for admission of the genuineness of a document, the document shall

be attached to the request unless it has been or is otherwise furnished or made available for inspection and copying. Each statement in the request for admissions shall be deemed admitted unless, within 20 days after service of the request for admission, or a longer or shorter period as the hearing officer may establish, the party to whom the request is directed serves upon the requesting party a sworn written response specifically denying the matter.

[20.11.80.14 NMAC - N, 8/15/11]

20.11.80.15 HEARING PROCEDURES:

A. Evidence:

(1) **General:** The hearing officer shall admit all evidence, unless the hearing officer determines that the evidence is irrelevant, immaterial, unduly repetitious or otherwise unreliable or of little probative value. Evidence relating to settlement that could be excluded in the courts under Rule 11-408 NMRA is not admissible.

(2) **Examination of witnesses:** Witnesses shall be examined orally, under oath or affirmation, except as otherwise provided in 20.11.80 NMAC, and may be examined by the hearing officer. In addition to the hearing officer, only parties shall have the right to cross-examine a witness. The hearing officer may limit cross-examination that is unduly repetitious, harassing or beyond the scope of the direct testimony of the witness.

(3) **Exhibits:** All exhibits in evidence shall be marked with a designation identifying the party by whom the exhibit is offered and shall be numbered serially in the sequence in which the exhibits are expected to be offered. Large charts and diagrams, models and other bulky exhibits are discouraged. Exhibits should be limited to 8 ½ x 11 inches or be capable of being folded to that size, unless otherwise necessary for adequate presentation of evidence.

(4) **Official notice:** Official notice may be taken of any matter that may be judicially noticed in the New Mexico courts.

B. Objections and offers of proof:

(1) **Objection:** An objection concerning the conduct of the hearing may be stated orally or in writing during the hearing. The party raising the objection must supply a short statement of the grounds for the objection. The ruling by the hearing officer regarding an objection and the reasons given by the hearing officer for the ruling shall be part of the record.

(2) **Offer of proof:** Whenever evidence is excluded from the record, the party offering the evidence may make an offer of proof, which shall be included in the record. The offer of proof for excluded oral testimony shall consist of a brief statement

describing the nature of the evidence excluded and what the evidence would have proved. The offer of proof for excluded documents or exhibits shall consist of the insertion in the record of the documents or exhibits excluded. If the director decides the ruling of the hearing officer that excluded the evidence was both erroneous and prejudicial, the hearing may be reopened to allow the taking of the excluded evidence.

C. Burden of persuasion:

(1) **Compliance order:** The complainant has the burden of going forward with the evidence and proving by a preponderance of the evidence that the facts relied upon to show the violation occurred and that the proposed civil penalty is appropriate. After the complainant has established a prima facie case, the respondent shall have the burden of going forward with adverse evidence or a defense to the allegations.

(2) **Preponderance of evidence:** Each matter of controversy shall be determined by the hearing officer upon a preponderance of the evidence.

[20.11.80.15 NMAC - N, 8/15/11]

20.11.80.16 POST-HEARING PROCEDURES:

A. Filing the transcript: Unless otherwise ordered by the director or hearing officer, the hearing shall be transcribed verbatim. The hearing clerk shall promptly notify all parties of the availability of the transcript. Any person who wants a copy of the transcript may order a copy from the reporter.

B. Proposed findings and conclusions: Within 30 days after the transcript is filed, or by the deadline established by the hearing officer, any party may submit to the hearing officer proposed findings of fact and conclusions of law or discretion and a closing argument. All such submissions shall be in writing, filed, served on all parties and contain adequate references to the record and authorities relied upon. No new evidence shall be presented unless specifically allowed by the hearing officer.

C. Recommended decision:

(1) **Content:** Unless otherwise ordered by the director, the hearing officer shall issue a recommended decision within 30 days after the deadline established by Subsection B of 20.11.80.16 NMAC for filing proposed findings and conclusions has passed. The recommended decision shall contain:

(a) the hearing officer's findings of fact and conclusions regarding all material issues of law or discretion and the reasons for the findings and conclusions;

(b) if applicable, a review of the penalty to determine if the division acted within its discretion in setting the amount or nature of the penalty; if the hearing officer decides to recommend a civil penalty that is different in amount or nature from the

penalty in the compliance order, the hearing officer shall set forth the hearing officer's recommended decision regarding the penalty and the reason for the change; and

(c) a proposed final order.

(2) **Comment on recommended decision:** Within 15 days after service of the recommended decision, any party may file comments regarding the recommended decision and may include argument for, against or for modification of the recommended decision.

(3) **Oral argument before the director:** Upon the request of a party or on the director's own initiative, the director may allow oral argument regarding the recommended decision. If oral argument is allowed, the director shall specify the time and place for the oral argument, after giving due consideration to the convenience of the parties and the need to expeditiously resolve the proceeding.

D. Final order of director: As soon as practical, but no later than 30 days after the later of the deadline for filing comments on the recommended decision of the hearing officer or the conclusion of oral argument if oral argument is allowed, the director shall issue a written final order in the matter.

(1) **Decision:** The director may adopt, modify or set aside the hearing officer's recommended decision, and shall set forth the reasons for the action taken.

(2) **Penalty:** The director may change the amount and nature of the civil penalty, if any, that the hearing officer recommends assessing and shall set forth the reasons for the change.

E. Payment of civil penalty: Within 60 days after the respondent receives the final order, the respondent shall pay the full amount of any monetary civil penalty that is assessed in the final order unless otherwise ordered by the director. Payment shall be made by delivering to the division a cashier's check or certified check in the amount of the penalty assessed in the final order, payable to the general fund as specified in the final order. The respondent shall attach a copy of the final order to the penalty payment.

F. Judicial review: Judicial review of the director's final order shall be by appeal to the court of appeals of the state of New Mexico as provided by the act Subsection A of Section 74-2-9 NMSA 1978.

G. Preparation of record proper: The preparation of the record proper for an appeal to the court of appeals of the state of New Mexico or for any other reason shall be the responsibility of the hearing clerk. Appellant shall make satisfactory arrangements with the hearing clerk, including arrangements regarding copying or transcript costs, before the hearing clerk begins to prepare the record proper.

20.11.80.17 ALTERNATE RESOLUTION:

A. Summary procedures:

(1) **Use of summary procedures:** Under the following limited circumstances, the director may dispose of a request for hearing after an expedited hearing as a result of:

(a) a motion by a party to dismiss the request for hearing because of jurisdictional defects, such as filing an untimely request for hearing; or

(b) a request by a party to decide the merits of the request for hearing on legal arguments presented in writing and oral argument.

(2) **Expedited hearing:** If the hearing officer determines that a request for an expedited hearing has a likelihood of success and could fairly expedite the resolution of the proceeding, then notice for a hearing shall be given in the manner set forth in Paragraph (1) of Subsection C of 20.11.80.13 NMAC. Following the expedited hearing, the hearing officer shall submit a recommended decision to the director. The director shall either follow Subsection D of 20.11.80.16 NMAC and issue a final order or remand the matter to the hearing officer with directions to proceed with a full hearing as otherwise required by 20.11.80 NMAC.

B. Settlement:

(1) **Policy:** The director encourages settlement of a proceeding at any time if the settlement is consistent with the provisions and objectives of the act and the regulations. Settlement conferences shall not affect any party's obligation to respond in a timely manner to any matter governed by 20.11.80 NMAC, including the respondent's obligation to file a timely request for hearing under Subsection A of 20.11.80.13 NMAC.

(2) **Stipulated final order:** The director may approve a stipulated final order signed by all the parties. The stipulated final order shall include all the terms and conditions agreed to by the parties and shall state that, for the purpose of this proceeding, the parties admit the jurisdictional allegations of the compliance order and consent to the relief specified, including the assessment of the civil penalty, if any is included in the stipulated final order. If the director disapproves the stipulated final order, the matter shall proceed as if there had been no stipulated final order or settlement.

(3) **Withdrawal:** The respondent may withdraw the request for hearing at any time before the director issues a final order. A notice of withdrawal shall be filed with the hearing clerk and served on all parties. Any party may file written objections to the notice of withdrawal within 10 days after receipt. If an objection is filed, the director shall rule on the notice of withdrawal.

[20.11.80.17 NMAC - N, 8/15/11]

PART 81: ADJUDICATORY PROCEDURES -- AIR QUALITY CONTROL BOARD

20.11.81.1 ISSUING AGENCY:

Albuquerque-Bernalillo County Air Quality Control Board, c/o Environmental Health Department, P.O. Box 1293, Albuquerque, New Mexico 87103. Telephone: (505) 768-2600.

[20.11.81.1 NMAC - N, 12/16/06]

20.11.81.2 SCOPE:

A. 20.11.81 NMAC governs the following adjudicatory proceedings of the board, which are proceedings in which the board makes final, binding determinations that directly affect legal rights:

(1) petitions for hearings on the merits before the board made by permit applicants, permittees or other persons who participated in a permitting action before the department and who are adversely affected by the permitting action, as provided by the New Mexico Air Quality Control Act, Subsection H of Section 74-2-7 NMSA 1978; and

(2) any other adjudicatory proceeding subject to the jurisdiction of the board if the applicable board regulation establishes that 20.11.81 NMAC applies to the proceeding.

B. 20.11.81 NMAC does not govern the adjudicatory proceedings of the board regarding:

(1) administrative enforcement actions initiated pursuant to Air Quality Control Act 74-2-12 NMSA 1978, entitled "Enforcement; compliance orders; field citations", and any administrative enforcement action that is governed by the administrative enforcement provisions of another regulation adopted by the board;

(2) petitions for variance and related stays, which are governed by 20.11.7 NMAC, Variance Procedure; and

(3) adoption of, amendment to, and repeal of board regulations as authorized by 74-2-6 NMSA 1978, which are governed by rulemaking provisions of another regulation adopted by the board.

C. Exempt: 20.11.81 NMAC does not apply to sources within Bernalillo county that are located on Indian lands over which the board lacks jurisdiction.

[20.11.81.2 NMAC - N, 12/16/06]

20.11.81.3 STATUTORY AUTHORITY:

20.11.81 NMAC is adopted pursuant to the authority of the Air Quality Control Act, Chapter 74, Article 2 NMSA 1978, Sections 74-2-5 and 74-2-7.

[20.11.81.3 NMAC - N, 12/16/06]

20.11.81.4 DURATION:

Permanent.

[20.11.81.4 NMAC - N, 12/16/06]

20.11.81.5 EFFECTIVE DATE:

December 16, 2006, unless a later date is cited at the end of a section.

[20.11.81.5 NMAC - N, 12/16/06]

20.11.81.6 OBJECTIVE:

The objective of 20.11.81 NMAC is to establish procedures that govern the adjudicatory proceedings of the board that are described in Subsection A of 20.11.81.2 NMAC.

[20.11.81.6 NMAC - N, 12/16/06]

20.11.81.7 DEFINITIONS:

In addition to the definitions in 20.11.81 NMAC, the definitions in 20.11.1 NMAC apply unless there is a conflict between definitions, in which case the definition in 20.11.81 NMAC shall govern.

A. "30-day hearing procedure" means that the regulation that authorizes or requires the board to hold a hearing on the merits pursuant to 20.11.81 NMAC also requires the board to hold the hearing on the merits within 30 days of the timely filing of the petition for hearing.

B. "60-day hearing procedure" means that the regulation that authorizes or requires the board to hold a hearing on the merits pursuant to 20.11.81 NMAC also requires the board to hold the hearing on the merits within 60 days of the timely filing of the petition for hearing.

C. "Act" means the Air Quality Control Act, Chapter 74, Article 2 NMSA 1978, and its subsequent amendments and successor provisions.

D. "Applicant" means a person who has applied for or has been issued an air quality permit by the department, unless a different procedure is required by another board regulation.

E. "Board" means the Albuquerque-Bernalillo county air quality control board or its successor agency under the act.

F. "Days" means consecutive days except as otherwise specifically provided.

G. "Department" means the city of Albuquerque environmental health department, or the department's successor agency.

H. "Docket" means, when used as a noun, the list compiled by the hearing clerk, and includes all documents filed by or with the hearing clerk from the beginning to the end of the procedure authorized by 20.11.81 NMAC, but does not include the administrative record or the law of the case and, when used as a verb, also means the act of assigning an individual number to a newly-opened case or filing a document in and listing the document on the docket.

I. "Document" means any pleading, motion, response, memorandum, decision, order or other written material or tangible item that is filed or brought to or before the board for its consideration in a proceeding pursuant to 20.11.81 NMAC, but does not include the cover letter that accompanies a document transmitted for filing.

J. "Ex parte contact" means oral or other communication with a board member or a board hearing officer regarding the merits of an expected or pending petition or related proceeding if:

(1) the communication is made by a person who is not a board member, hearing clerk or hearing officer;

(2) the person communicating knows or has reason to know a petition will be or has been filed pursuant to 20.11.81 NMAC;

(3) the communication is made without all other parties being present or receiving the same communication received by the board member or board hearing officer; and

(4) the communication is intended to affect, or reasonably may be expected to affect the board member's or the hearing officer's opinion regarding the merits of the expected or pending petition or related proceeding.

K. "Hearing clerk" means the department employee designated by the director to provide staff support to the board, and is the person designated by the board to maintain the official record of the proceeding.

L. "Hearing officer" means the person who is appointed or otherwise authorized by the board to conduct a proceeding pursuant to 20.11.81 NMAC.

M. "Interested participant" means any person, other than a party, who files an entry of appearance in accordance with Paragraphs (1) and (2) of Subsection I of 20.11.81.14 NMAC.

N. "Party" means the petitioner, the applicant if the applicant is not the petitioner, the department, and any other person granted intervenor status by the hearing officer or board following a motion.

O. "Petition" means a petition filed pursuant to Subsection H of 74-2-7 NMSA 1978 and 20.11.81 NMAC.

P. "Petitioner" means a person who files a timely petition pursuant to Subsection H of NMSA 74-2-7 and 20.11.81 NMAC.

Q. "Record proper" or "record" means all documents filed by or with the hearing clerk during the proceeding authorized by 20.11.81 NMAC, and includes:

- (1) the administrative record of the permitting action filed by the department;
- (2) the verbatim record of the hearing (transcript or tapes, as applicable) and all exhibits offered into evidence at the hearing, whether or not admitted; and
- (3) minutes or a summary of minutes, or the decision or order resulting from a hearing or board meeting at which the board deliberated or acted on any procedural or substantive issue in the proceeding.

R. "Regulations" means the rules promulgated by the board, as authorized by the act.

S. "Service" means delivering to a person that 20.11.81 NMAC requires to be served a copy of a document, exhibit or pleading by personally delivering it to that person, mailing it to that person, or, if that person agrees, by sending it by facsimile or electronic transmission to that person. If a person is represented by an attorney, service shall be made on the attorney. Service by mail is complete upon mailing the document unless service is made by mail to a party who must act within a prescribed period after being served, in which case three days shall be added to prescribed period. Service by facsimile or electronic transmission is accomplished when the transmission of the document is completed or upon acknowledgement by the recipient.

T. "Technical evidence" means scientific, engineering, economic or other specialized testimony, but does not include legal argument, general comments, or statements of policy or position concerning matters at issue in the hearing.

[20.11.81.7 NMAC - N, 12/16/06]

20.11.81.8 VARIANCES:

The variance procedures provided by 20.11.7 NMAC shall not apply to 20.11.81 NMAC. No variance from the requirements of 20.11.81 NMAC shall be granted, unless the board is authorized by Subsection K of 20.11.2.18 NMAC, Fees, to grant a waiver from payment of the Board hearing fee.

[20.11.81.8 NMAC - N, 12/16/06]

20.11.81.9 SAVINGS CLAUSE:

The filing of 20.11.81 NMAC, Adjudicatory Procedures-Air Quality Control Board, and the filing of any amendment to 20.11.81 NMAC with the state records center and archives shall not affect any action pending for violation of a city or county ordinance, a board regulation, or a permit, and shall not affect a petition filed pursuant to 20.11.81 NMAC. Prosecution for violation of a prior statute, ordinance, part or permit shall be governed and prosecuted under the statute, ordinance, part or permit wording in effect at the time the violation was committed.

[20.11.81.9 NMAC - N, 12/16/06]

20.11.81.10 SEVERABILITY:

20.11.81 NMAC shall be liberally construed to carry out its purposes. If for any reason any section, subsection, sentence, phrase, clause or wording of 20.11.81 NMAC is held to be unconstitutional or otherwise invalid by any court or the United States environmental protection agency, the decision shall not affect the validity of remaining portions of 20.11.81 NMAC.

[20.11.81.10 NMAC - N, 12/16/06]

20.11.81.11 DOCUMENTS:

Documents incorporated and cited in 20.11.81 NMAC may be viewed at the Albuquerque environmental health department, Suite 3020, One Civic Plaza, 400 Marquette NW, Albuquerque, New Mexico.

[20.11.81.11 NMAC - N, 12/16/06]

20.11.81.12 GENERAL PROVISIONS:

A. Applicability of rules of civil procedure and rules of evidence: In the absence of a specific provision in 20.11.81 NMAC governing an action, the board and the board's hearing officer may look to the New Mexico Rules of Civil Procedure, NMRA

1-001 et seq., and the New Mexico Rules of Evidence, NMRA 11-101 et seq., for guidance. No provision of the rules of civil procedure shall be construed to extend or otherwise modify the authority and jurisdiction of the board.

B. Board and hearing officer powers and duties-qualification, disqualification, recusal, withdrawal:

(1) Board: The board shall exercise all powers and duties authorized and required by the act, 20.11.81 NMAC and any other board regulation if the powers and duties are not otherwise delegated by 20.11.81 NMAC to a board staff member, a hearing officer or the hearing clerk. The board or a hearing officer appointed or authorized by the board may specify procedures in addition to, or that vary from the procedures provided in 20.11.81 NMAC in order to expedite the efficient resolution of the action or to avoid obvious injustice, if the procedures do not conflict with the act or the regulations, or prejudice the rights of any party.

(2) Hearing officer: The board may appoint a hearing officer or authorize the hearing clerk to secure one or more hearing officers to perform the functions described in Paragraph (2) of Subsection B of 20.11.81.12 NMAC. From the date a proceeding is initiated pursuant to 20.11.81 NMAC, the chair or acting chair of the board shall serve as hearing officer until another hearing officer is appointed or authorized by the board and is secured by the hearing clerk. The appointment of a hearing officer shall not prevent any board member from attending or participating in any proceeding.

(a) Qualifications: A hearing officer may be an independent contractor, board counsel or a member of the board and shall not be:

(i) an employee of the department, unless employed by the department as a hearing officer; or

(ii) a person who is disqualified as a result of a condition described in Subparagraph (a) of Paragraph (3) of Subsection B of 20.11.81.12 NMAC.

(b) Functions: The hearing officer shall exercise all powers and duties required by or delegated under the act and 20.11.81 NMAC. The hearing officer shall conduct a fair and impartial proceeding, assure that the facts are fully elicited, and avoid delay. The hearing officer shall have authority to take all measures necessary for the maintenance of order and for the efficient, fair and impartial adjudication of issues arising in proceedings governed by 20.11.81 NMAC, including, but not limited to:

(i) conducting hearings pursuant to 20.11.81 NMAC;

(ii) ruling upon motions and procedural requests that do not seek final resolution of the proceeding, and issuing all necessary orders;

(iii) issuing subpoenas, as authorized by law, for the attendance and testimony of witnesses and the production of documentary evidence;

(iv) administering oaths and affirmations, examining witnesses, and admitting or excluding evidence;

(v) requiring parties to attend conferences for the settlement or simplification of issues, or the expedition of proceedings;

(vi) imposing sanctions, subject to review and approval by the board, on parties and interested participants who cause undue delay and fail to cooperate with the board; and

(vii) filing with the hearing clerk all original documents received or generated by the hearing officer.

(c) Notice of hearing officer assignment: If a hearing officer other than a board member is assigned as a hearing officer, the hearing clerk shall notify the parties of the name and address of the hearing officer. At the same time, the hearing clerk also shall forward to the hearing officer copies of all documents related to the petition that have been filed to date.

(3) Board member and hearing officer disqualification-recusal-withdrawal:

(a) A board member or a hearing officer shall not perform any function authorized by 20.11.81 NMAC regarding any matter in which a board member or a hearing officer:

(i) has a personal bias or prejudice concerning a party or the outcome of a proceeding;

(ii) has personal knowledge of disputed facts concerning the proceeding;

(iii) is related to a party within the third degree of relationship;

(iv) is an officer, director or trustee of a party or interested participant in the proceeding;

(v) has a financial interest in the proceeding or facility that is the subject of the proceeding or has any other conflict of interest; or

(vi) has performed prosecutorial or investigative functions in connection with a permitting action at issue in the proceeding.

(b) In making its decision regarding whether a board member or hearing officer should be disqualified or recuse himself or herself, the board and hearing officer may rely on applicable legal authority

(c) Disqualification, recusal and withdrawal:

(i) Any party, for a cause included in Subparagraph (a) of Paragraph (3) of Subsection B of 20.11.81.12 NMAC, may file a motion requesting the disqualification of a board member at any time before the final order is filed, or requesting the disqualification of a hearing officer at any time prior to the completion of the evidentiary hearing.

(ii) If a motion is filed pursuant to Paragraph (3) of Subsection B of 20.11.81.12 NMAC, and the motion asks that a board member be disqualified, then, within five days after the hearing officer and the challenged board member receive the motion, the challenged board member may respond to the motion in writing. Within 10 days after the hearing officer and the challenged board member receive the motion regarding the challenged board member, the hearing officer shall file a recommended decision. The board shall vote on the motion. However, the vote of the board shall not include the vote of the challenged board member. If the vote of the majority of a quorum of the board, not including the vote of the challenged board member, determines that the challenged board member is disqualified, the disqualified board member will not participate in the proceeding thereafter.

(iii) If a motion is filed pursuant to Paragraph (3) of Subsection B of 20.11.81.12 NMAC, and the motion asks that a hearing officer be disqualified, then, within 10 days after the hearing officer receives the motion, the hearing officer may respond to the motion in writing. The board shall vote on the motion. If the vote of the majority vote of a quorum of the board members determines that the challenged hearing officer is disqualified, the disqualified hearing officer will not participate in the proceeding thereafter, and the board may appoint, or authorize the hearing clerk to secure a replacement hearing officer.

(iv) A board member may recuse himself or herself from a hearing, and a hearing officer may withdraw as hearing officer, by filing written notice with the hearing clerk or by making a statement on the record at a hearing or meeting of the board. In making a decision regarding whether to recuse or withdraw, a board member or a hearing officer may rely on applicable legal authority.

C. Recording of hearings: All hearings on the merits shall be recorded by a court reporter unless otherwise directed by the board. If a hearing will be tape recorded but a party prefers to have the hearing recorded by a court reporter in another manner, then, before the hearing, the party requesting the alternate method of reporting shall pay the court reporter for the services or make satisfactory payment arrangements with the court reporter. If a hearing is recorded by a court reporter, the recording of the court reporter approved by the board or the hearing officer, or arranged by the hearing clerk

will be the sole official recording of the hearing. If a transcription is made by the court reporter, then the person who requested the transcription shall pay the court reporter. Payment for the transcription shall include payment for delivery of the original transcription to the hearing clerk. The hearing clerk shall make the transcription part of the record proper, which is a public record except as otherwise provided by law.

D. Participation by conference, telephone or other similar device: A member of the board may participate in a meeting of the board by means of a conference telephone or other similar communications equipment when a medical or emergency situation exists that makes it extremely difficult or impossible for the member to attend the meeting in person, provided that each member participating by conference telephone or other device can be identified when speaking, all participants are able to hear each other at the same time, and members of the public attending the meeting are able to hear any member of the board who speaks at the meeting. A request to be present and vote by telephone or other similar device must be made by the member to the chair or acting chair of the board by the member. A board member who wishes to participate in a meeting in this manner must receive permission from the chair or acting chair of the board sufficiently in advance of the meeting so the hearing clerk can arrange for an adequate telephone hookup. The chair or acting chair shall determine whether a qualifying medical or emergency situation exists. A board member's participation by such means shall constitute presence in person at the meeting. This provision may be used only to allow a member to constitute a quorum for the purposes of choosing a hearing officer for a hearing or hearings; scheduling or rescheduling a meeting or hearing; and voting on those limited issues.

E. Ex parte contact: At no time before a petition is expected to be filed pursuant to 20.11.81 NMAC, and at no time between the filing of a petition and the final decision of the board or withdrawal of the petition or related permit action shall any person other than the hearing officer or hearing clerk have ex parte contact with a board member or the hearing officer regarding the merits of the expected or pending petition or related proceeding. This prohibition does not apply to a hearing officer's consideration of, and decision regarding a motion filed pursuant to 20.11.81 NMAC.

F. Computation and extension of time:

(1) Computation of time: In computing any period of time prescribed or allowed by 20.11.81 NMAC, except as otherwise specifically provided, the day of the event from which the designated period begins to run shall not be included. The last day of the computed period shall be included, unless it is a Saturday, Sunday, or legal city of Albuquerque or Bernalillo county holiday, in which event, the time shall be extended until the end of the next day which is not a Saturday, Sunday, or legal city of Albuquerque or Bernalillo county holiday. Whenever a party must act within a prescribed period after service upon that party, and service is by mail, three days shall be added to the prescribed period. The three-day extension does not apply to a deadline established by the act. Whenever a party must act within a prescribed period

after service upon that party, and service is by facsimile or electronic transmission, no days shall be added to the prescribed period.

(2) Extension of time: Upon timely motion of a party to the proceeding, for good cause shown, and after consideration of prejudice to other parties, the hearing officer or the board, as appropriate for the stage of the proceeding at the time, may grant an extension of time for filing any document. No extension shall be granted regarding a deadline established by the act or an applicable regulation, except the petitioner may waive the deadline for holding the hearing by the deadline established by the act or an applicable regulation.

G. Documents; filing, service, form and examination:

(1) Filing of documents: Except as otherwise provided, a party filing a document shall file the original and nine copies with the hearing clerk and shall serve a copy thereof upon the hearing officer, the board's legal counsel, and all other parties. If the hearing officer is also a board member, the party shall serve the document upon the board chair. All documents shall be filed at least five days (for a 30-day hearing procedure) or seven days (for a 60-day hearing procedure) before the hearing at which the hearing officer or the board will consider the matter. A certificate of service with the following heading or "caption", completed appropriately, shall accompany each filed document.

STATE OF NEW MEXICO

ALBUQUERQUE-BERNALILLO COUNTY

AIR QUALITY CONTROL BOARD

IN THE MATTER OF THE PETITION FOR

A HEARING ON THE MERITS REGARDING

AIR QUALITY PERMIT NO. ____

[Name of Petitioner:] _____, Petitioner

(2) Service of documents: Except as otherwise provided, all documents may be served personally, by facsimile or by express or first class mail. Delivery receipts shall be kept as proofs of service, and shall be produced immediately upon the request of the hearing officer, the board or an opposing party.

(3) Form of documents: Unless otherwise provided by order of the hearing officer or the board, all documents, except exhibits, shall be prepared on 8 1/2 x 11-inch white paper, printed double-sided if feasible, and, where appropriate, the first page of

every document shall contain the caption or heading required by Paragraph (1) of Subsection G of 20.11.81.12 NMAC.

(4) Documents issued by board or hearing officer: All documents issued by the board or hearing officer shall be filed with the hearing clerk. The hearing clerk shall promptly serve copies of the documents upon all parties and interested participants.

(5) Examination of documents filed-cost:

(a) Examination allowed: Subject to the provisions of law restricting the public disclosure of confidential or other exempt or protected information, during normal business hours any person may inspect and copy any document filed in any proceeding filed pursuant to 20.11.81 NMAC. Inspection shall be allowed consistent with the requirements of the Inspection of Public Records Act, NMSA 1978, Sections 14-2-1 through 14-2-12, and may be limited as provided by the Air Quality Control Act, NMSA 1978, Sections 74-2-1 through 74-2-17. The hearing clerk shall make the appropriate documents available for inspection and copying.

(b) Cost of duplication: The cost of duplicating documents or tapes filed in any proceeding shall be borne by the person seeking the copies. If the requested documents are available in an electronic format, the department will provide a copy by electronic transmission without charge, or the documents will be copied onto a CD, DVD, or other electronic media, if provided by the requester, without charge.

H. Motions:

(1) General: All motions, except those made orally during a hearing, shall be in writing, specify the grounds for the motion, and state the relief sought. Each written motion shall be accompanied by an affidavit, certificate or other evidence relied upon, and shall be filed and served as required by Paragraphs (1) and (2) of Subsection G of 20.11.81.12 NMAC.

(2) Unopposed motions: An unopposed motion shall state that the concurrence or agreement of all other parties was obtained. The party that filed the motion shall submit to the hearing officer for review a proposed order that has been approved by all parties.

(3) Opposed motions: Any opposed motion shall state either that concurrence or agreement of all other parties was sought and denied, or why concurrence was not sought. A memorandum brief in support of an opposed motion may be filed with the motion.

(4) Response to motions: Any party upon whom an opposed motion is served shall have 10 days (for a 30-day hearing procedure) or 15 days (for a 60-day hearing procedure) after service of the motion to file a response. Any other party who

fails to file a timely response shall be deemed to have waived any objection to the granting of the motion.

(5) Reply to response: The moving party may submit, but is not required to submit a reply to any response within five days (for a 30-day hearing procedure), or 10 days (for a 60-day hearing procedure) after service of the response.

(6) Decision regarding motions: All motions may be decided by the hearing officer, in the hearing officer's sole discretion, without a hearing. Within five days (for a 30-day hearing procedure) or 10 days (for a 60-day hearing procedure) after being served with a copy of the motion, a party upon whom service has been made may file a written request asking that a hearing be held. However, the hearing officer shall refer all motions that would effectively dispose of the petition to the board for a decision.

(7) The hearing officer may refer any motion to the board for decision. A procedural motion may be ruled upon before the expiration of the time for response. Any response regarding the procedural motion received after the decision is made shall be treated as a request for reconsideration of the ruling.

[20.11.81.12 NMAC - N, 12/16/06]

20.11.81.13 [RESERVED]

20.11.81.14 PREHEARING PROCEDURES:

A. Initiation of petition hearing; filing and content of petition: A petition for a hearing on the merits shall be initiated by filing a petition as required by Paragraph (1) of Subsection G of 20.11.81.12 NMAC. The petitioner shall:

(1) sign the petition under oath or affirmation and attest to the truth of the information contained therein; and

(2) file the original and nine copies of the petition with the board and serve a copy of the petition on the department.

B. Petition requirements and contents-fee:

(1) Filing fee. At the time the petition is filed, the petitioner shall pay the board hearing fee required by 20.11.2 NMAC.

(2) Timing and contents: A petition shall:

(a) be filed with the board within 30 consecutive days from the date notice is given of the permitting action taken by the department, and regarding which the petition objects;

(b) state the petitioner's name, address, telephone number, and if available, facsimile number, cellular telephone number and other contact information;

(c) either state in what manner the petitioner participated in the permitting action that was pending before the department and how the petitioner is adversely affected by the permitting action taken by the department, or cite a board regulation other than 20.11.81 NMAC that authorizes the petitioner to request a hearing on the merits pursuant to 20.11.81 NMAC, and state how, under the other regulation, the petitioner qualifies for a hearing on the merits conducted pursuant to 20.11.81 NMAC;

(d) if a permitting action is being challenged, identify the specific permitting action appealed from, specify the portions of the permitting action to which petitioner objects, and state the factual and legal basis of petitioner's objections to the permitting action taken by the department;

(e) state the remedy petitioner is seeking, the legal basis for the remedy, and how granting the remedy is within the air quality jurisdiction of the board; and

(f) attach a copy of the permitting action or other action regarding which petitioner is filing a petition.

C. Hearing delay and waiver: A petitioner may waive petitioner's right to have the hearing begin by the deadline established by the act or applicable regulation in order to negotiate with the department or for other good reason as determined by either the hearing officer or the board, as appropriate for the stage of the proceeding. The petitioner's waiver must be filed seven days (whether for a 30-day hearing procedure or for a 60-day hearing procedure) before expiration of the deadline for beginning the hearing. The waiver will stay all deadlines established in 20.11.81 NMAC for up to an additional 30 days (whether for a 30-day hearing procedure or for a 60-day hearing procedure), as determined by the hearing officer or the board, as appropriate for the stage of the proceeding. The stay of deadlines may be extended for an additional period for good reason as determined by the hearing officer or the board, as appropriate for the stage of the proceeding.

D. Response of department: Within 15 days (for a 30-day hearing procedure) or 30 days (for a 60-day hearing procedure) after receipt of a petition filed pursuant to 20.11.81 NMAC, if a permitting action is being challenged, the department shall perform the following actions.

(1) The department shall file with the hearing clerk the administrative record of the permitting action that is the subject of the petition. Before the department files the administrative record, the parties may stipulate in writing to the portions of the record that the department will file with the board. The department shall serve only the index of the record on the other parties.

(2) The department shall deliver to the hearing clerk a list of all persons who, within the preceding 12 months, have expressed in writing to the department an interest in the facility or the permitting action that is the subject of the petition or who participated in a public information meeting or hearing on the permitting action and who have provided a legible written name and current mailing address at the public information meeting or hearing.

(3) The department shall file an answer to the petition, responding to each objection in the petition.

E. Notice of docketing:

(1) **Docketing Notice:** As soon as practicable after receipt of a petition, the hearing clerk shall issue and serve upon the parties and each board member a notice of docketing, which shall include the caption required by Paragraph (1) of Subsection G of 20.11.81.12 NMAC, the docket number of the case, and the date the petition was received by the hearing clerk. A copy of 20.11.81 NMAC shall be included with the notice of docketing sent to the petitioner.

(2) **Untimeliness:** The hearing clerk shall docket every petition, without regard to whether it appears to be timely. However, the board or any party may move to dismiss an untimely petition.

F. Scheduling the hearing on the merits:

(1) **Hearing date:** The hearing officer shall schedule the hearing on the merits to begin no later than the deadline required by the act or applicable regulation, unless a waiver is filed by the petitioner and a stay of deadlines is granted pursuant to Subsection C of 20.11.81.14 NMAC. The waiver must be filed with the board, and served as required by 20.11.81 NMAC before the expiration of the deadline for beginning the hearing on the merits.

(2) **Scheduling order:** Unless the deadline for beginning the hearing on the merits has been waived and a stay of deadlines is granted, no later than 20 days (for a 30-day hearing procedure) or 30 days (for a 60-day hearing procedure) before the hearing begins, the hearing officer shall issue a scheduling order setting the date, time and location of the hearing. The scheduling order may include other procedural matters. Jointly or singly, and before the hearing officer issues the scheduling order, the parties may submit to the hearing officer, at least five days (for a 30-day hearing procedure) or 10 days (for 60-day hearing procedure) before the deadline for issuing the scheduling order, a request regarding the date and location of the hearing and other procedural matters, such as the assignment of a non-board-member hearing officer. At a board meeting, the hearing officer may consult with the board regarding procedural matters.

G. Public notice of hearing:

(1) Publication: Upon direction from the board or hearing officer, the hearing clerk shall prepare a notice of hearing setting forth the date, time and location of the hearing, a brief description of the petition, and information on the requirements for entry of appearance and for submitting a statement of intent to present evidence, and

(a) no later than 10 days (for a 30-day hearing procedure) or 15 days (for a 60-day hearing procedure) before the hearing date, send a copy of the notice of hearing, with a request for publication, to at least one newspaper of general circulation that is distributed at least weekly in Bernalillo county;

(b) no later than 10 days (for a 30-day hearing procedure) or 15 days (for a 60-day hearing procedure) before the hearing date, mail a copy of the notice of hearing to each party, to each interested participant who has filed an entry of appearance, and to each person who within the previous 12 months has expressed in writing to the department or the board an interest in the facility or permitting action that is the subject of the petition; and

(c) immediately upon receipt of an entry of appearance that is received after the initial mailing, mail a copy of the notice of hearing to each additional interested participant.

(2) Certification: After the notice of hearing has been distributed as required by Subsection G of 20.11.81.14 NMAC, the hearing clerk shall file with the record proper an affidavit certifying how and when notice was given and shall attach to the affidavit a copy of the notice of hearing and affidavits of publication.

H. Statement of intent to present technical evidence:

(1) Requirement to file: No later than 10 days (for a 30-day hearing procedure) or 15 days (for 60-day hearing procedure) days before the hearing, any person who wishes to present technical evidence at the hearing shall file with the hearing clerk and serve on all parties a statement of intent to present technical evidence.

(2) The statement of intent to present technical evidence shall include:

(a) the name of the person filing the statement;

(b) a statement clarifying whether the person filing the statement supports or opposes the petition at issue;

(c) the name of each witness;

(d) an estimate of the length of the direct testimony of each witness;

(e) a summary or outline of the anticipated direct testimony of each witness;

(f) a list of exhibits, if any, to be offered into evidence at the hearing on the merits; and

(g) a copy of each exhibit to be offered into evidence at the hearing on the merits.

I. Participation by persons other than parties:

(1) **Interested participants; entry of appearance:** No later than seven days (for a 30-day hearing procedure) or 10 days (for a 60-day hearing procedure) before the beginning of the hearing on the merits, any person who wishes to be treated as an interested participant and to cross-examine witnesses at the hearing shall file an entry of appearance with the hearing clerk and serve the entry of appearance upon all parties. For purposes of Paragraph (1) of Subsection I of 20.11.81.14 NMAC, a statement of intent to present technical evidence filed pursuant to Subsection H of 20.11.81.14 NMAC shall be considered an entry of appearance if the person has not previously filed a separate entry of appearance. The entry of appearance shall identify the person wishing to be treated as an interested participant, provide the address of the person wishing to be treated as an interested participant, and list each individual who may appear on behalf of that person.

(2) **Participation by the general public; General non-technical statement:** Any person who has not timely filed either an entry of appearance as an interested participant pursuant to Subsection I of 20.11.81.14 NMAC or a statement of intent to present technical evidence pursuant to Subsection H of 20.11.81.14 NMAC, may present a general non-technical statement by meeting the following conditions.

(a) Any member of the general public may testify at the hearing. No prior notification is required to present general non-technical statements in support of or in opposition to the petition. A member of the general public also may offer exhibits related to his testimony, as long as the exhibit is non-technical in nature and does not unduly repeat other testimony.

(b) A member of the general public who wishes to submit a written statement for the record, in lieu of providing oral testimony at the hearing, shall file the written statement with the hearing clerk before the hearing begins. If a member of the general public who testified or submitted a written statement wants to receive written notice of the decision of the board, then, at the hearing at which the member of the general public testified or submitted the written statement, the member of the general public must provide the hearing clerk with a legible written name and current mailing address.

J. Pre-hearing discovery: Discovery shall be guided by the provisions of the New Mexico rules of civil procedure in effect at the time of the hearing. Formal discovery is not a right, and, therefore, is discouraged and shall only be allowed by order of the hearing officer if the following conditions exist.

(1) Grounds for discovery: Formal discovery shall only be authorized if the hearing officer determines:

(a) the type of discovery sought will not unreasonably delay the proceeding and is not unreasonably burdensome or unreasonably expensive; and

(b) the information to be obtained is relevant and is not otherwise reasonably obtainable, or may be lost, or may become unavailable.

(2) Order for discovery: Upon motion for discovery by a party and determination by the hearing officer that the motion should be granted, the hearing officer shall issue an order for the taking of discovery. The order shall include all terms and conditions imposed by the hearing officer.

[20.11.81.14 NMAC - N, 12/16/06]

20.11.81.15 [RESERVED]

20.11.81.16 HEARING PROCEDURES:

A. Hearing on the merits:

(1) Location of the hearing on the merits: Unless otherwise ordered by the board or hearing officer, the hearing on the merits normally shall be held in the Vincent E. Griego Chambers, on the lower level of the Albuquerque-Bernalillo County Government Center located at One Civic Plaza, near the intersection of Fourth Street and Marquette Avenue NW, in Albuquerque, New Mexico, or in another adequate city of Albuquerque, county of Bernalillo, or other publicly-owned location.

(2) Postponement of hearing: No request for postponement of a hearing shall be granted unless the hearing officer or the board determines either that all parties consent or that good cause has been proved.

B. Conduct of hearing on the merits:

(1) The hearing officer shall conduct the hearing on the merits in a manner that provides a reasonable opportunity for all parties and interested persons to be heard without making the hearing unreasonably lengthy or cumbersome or burdening the record with unnecessary repetition.

(2) The hearing officer shall establish the order of testimony, except that the petitioner shall present its case first. The hearing officer may allow brief opening and closing statements.

C. Burden of persuasion: In a hearing on the merits, the petitioner has the burden of proof, the burden of going forward with the evidence and the burden of proving by a

preponderance of the evidence the facts relied upon by the petitioner to justify the relief sought in the petition. Following the establishment of a prima facie case by the petitioner, any person opposed to the relief sought in the petition has the burden of going forward with any adverse evidence and showing why the relief should not be granted.

D. Evidence:

(1) General: The hearing officer shall admit any relevant evidence, unless the hearing officer determines that the evidence is unduly repetitious, otherwise unreliable or of little probative value.

(2) Examination of witnesses: Witnesses shall be examined orally, under oath or affirmation, and may be examined by the hearing officer and members of the board. At the hearing on the merits, the board members, hearing officer, parties and interested participants shall have the right to cross-examine a witness. The hearing officer may limit cross-examination that is unduly repetitious, harassing or beyond the scope of the direct testimony of the witness.

(3) Exhibits: All exhibits offered in evidence shall be marked with a designation identifying the person offering the exhibit, and shall be individually numbered serially. Large charts and diagrams, models and other bulky exhibits are discouraged. Exhibits should be limited to 8 1/2 X 11 inches, or be capable of being folded to that size, unless otherwise necessary for adequate presentation of evidence. Any person offering an exhibit shall provide at least an original and 15 copies for the board, the other parties and persons attending the hearing.

(4) Official notice: The hearing officer may take official notice of any matter that may be judicially noticed in the New Mexico courts. In the hearing, parties shall be given adequate opportunity to show that such facts have been erroneously noticed.

E. Objections and offers of proof:

(1) Objection: Any objection concerning the conduct of the hearing on the merits may be stated during the hearing, either orally or in writing. The party raising the objection must make a short statement of the grounds for the objection. The ruling by the hearing officer on any objection and the reasons given for the ruling shall be part of the record.

(2) Offer of proof: Whenever the hearing officer excludes evidence from the record, the party offering the evidence may make an offer of proof, which shall be included in the record. The offer of proof for excluded oral testimony shall consist of a brief statement describing the nature of the evidence excluded and what such evidence would have proven. The offer of proof for excluded documents or exhibits shall consist of the insertion in the record of the documents or exhibits excluded.

[20.11.81.16 NMAC - N, 12/16/06]

20.11.81.17 [RESERVED]

20.11.81.18 POST-HEARING PROCEDURES:

A. Filing the transcript: Unless the board orders the hearing to be tape recorded, or recorded by other means, the hearing shall be transcribed verbatim by a court reporter. Any person, other than the board, who wants a copy of a transcript from the court reporter, shall pay the court reporter for the transcript copy. Any person, other than the board, who wants a copy of hearing tapes must arrange with the hearing clerk to have the tapes copied and shall pay for the copy of the tapes before the hearing clerk delivers the copy of the tapes to the person requesting the copy.

B. Proposed findings of fact and conclusions of law: The hearing officer may allow the record to remain open for a reasonable period of time after the conclusion of the hearing on the merits in order to allow any party or interested participant to submit proposed findings of fact and conclusions of law and a closing argument, but the hearing officer shall not allow the record to remain open solely because closing arguments will be made before the board. At the conclusion of the evidentiary hearing held by the hearing officer, the hearing officer shall state whether the parties may submit findings, conclusions and closing arguments and the deadlines for submission. All such submissions shall be in writing, shall be served upon all parties, and shall contain adequate references to the record and authorities relied upon. After the conclusion of the evidentiary hearing before the hearing officer, no new evidence shall be presented unless specifically allowed by the hearing officer for good cause.

C. Recommended decision: If the board directs, the hearing officer shall issue a recommended decision within a period established by the board. The recommended decision shall contain the hearing officer's findings of fact, conclusions regarding all material issues of law or discretion, reasons for the recommended decision, and a proposed final order. Upon receipt of the hearing officer's recommended decision, the hearing clerk shall forward a copy to all parties and to the board. At the board's or the hearing officer's discretion, any party or interested participant may file comments regarding the hearing officer's recommended decision.

D. Deliberation and decision:

(1) Deliberation: At the end of the hearing on the merits or at a board meeting, the board shall reach a final decision on each adjudicatory matter.

(a) If allowed by the Open Meetings Act, Chapter 10, Article 15 NMSA 1978, the board may deliberate in closed session. However, any final action must occur in an open meeting.

(b) If a quorum of the board attended the hearing and the hearing notice indicated that the board may act at the conclusion of the hearing, the board may immediately deliberate and act on the matter.

(c) If the board does not reach a decision at the hearing on the merits or at a board meeting held promptly after the hearing, then, after the hearing clerk receives the transcript, the hearing clerk shall promptly provide a copy of the transcript and exhibits to the hearing officer and to board members who did not attend the hearing and who are qualified to vote on the decision. If requested, the hearing clerk shall provide a copy of the transcript to other board members and board counsel. The hearing clerk shall notify all parties and interested participants of the availability of the transcript.

(2) Final order of the board: After the board has reached a decision regarding the petition, the board shall direct a board member, the hearing officer, the board's counsel or a party to prepare a final order.

(a) The board may approve the final order at the conclusion of the hearing on the merits if a quorum of the board members is present and a majority of the board members present votes in favor of the final order; at a meeting of the board; or, after a decision of the board, by signature of the final order by the board chair.

(b) The final order shall contain findings of fact, conclusions of law, an order based on the findings and conclusions, and a statement regarding the availability of appeal, as authorized by 74-2-9 NMSA 1978. If a recommended decision was prepared, the board may adopt, modify or set aside the recommended decision and state the board's reasons for adopting, modifying or setting aside the recommended decision.

(c) The hearing clerk shall promptly send copies of the final order to each party and interested participant, and to all other persons who have made written requests for notification of the action taken.

E. Judicial review: Judicial review of the final order shall be as provided by law. The filing of an appeal pursuant to 74-2-9 NMSA 1978 does not stay the final order, unless otherwise ordered by the board or a court, as appropriate, depending on which entity has jurisdiction at the time the stay is requested.

F. Preparation of record proper: The preparation of the record proper for an appeal or for any other reason shall be the responsibility of the hearing clerk. The appellant shall make satisfactory arrangements with the hearing clerk, including paying for copying, including transcript costs, before the hearing clerk prepares the record proper.

[20.11.81.18 NMAC - N, 12/16/06]

20.11.81.19 [RESERVED]

20.11.81.20 ALTERNATE RESOLUTION:

A. Summary procedures:

(1) Use of summary procedures: The board may dispose of a petition after an expedited public hearing if a party makes a written request that the board decide the merits of the petition solely on legal arguments presented in written briefs and oral arguments.

(2) Expedited hearing: If the hearing officer determines that the request has a likelihood of success and could fairly expedite the resolution of the proceeding, the hearing officer may allow the parties and interested participants to brief the issue and present oral arguments at an expedited public hearing, and then present the issue to the board for a decision. If an expedited hearing is conducted, the hearing officer shall:

(a) assure that public notice is given in accordance with Subsection G of 20.11.81.14 NMAC, and include in the public notice instructions for persons other than parties who wish to participate in the oral argument to submit a statement of intent equivalent to the statement provided in Paragraph (2) of Subsection H of 20.11.81.14 NMAC; and

(b) allow the public to attend the expedited hearing but may limit presentations at the hearing to oral arguments by parties and interested participants regarding the specific issue before the board.

(3) Decision: After an expedited hearing, the board may either decide the matter and issue a final order, or, if the board decides not to dispose of the matter, the board shall proceed with a full hearing as provided by 20.11.81.16 NMAC.

B. Withdrawal:

(1) Notice of withdrawal: At any time before a final decision is made by the board, the petitioner may withdraw the petition or the department may withdraw the permitting action that is the subject of the proceeding. Withdrawal may be accomplished by filing a notice of withdrawal with the board and serving a copy of the notice on all other parties and interested participants. Within five days (for a 30-day hearing procedure) or 10 days (for a 60-day hearing procedure) after receipt of the notice of withdrawal, a party or interested participant may file a written objection to the notice of withdrawal. If an objection is filed, the hearing officer or the board, depending on the stage of the hearing, shall rule on the notice of withdrawal.

(2) Effect of withdrawal: The result of a notice of withdrawal that is not opposed or has been approved by the board is that:

(a) when a petitioner withdraws a petition for a hearing on the merits, the permitting action becomes final; and

(b) when the department withdraws a permitting action, the petition is vacated and the agency must issue a new permitting action within 60 days unless either the board approves a different deadline or the applicant withdraws its application. When a new permitting action occurs, a new right to file a petition for hearing on the merits is available pursuant to 20.11.81 NMAC.

C. Settlement: The board encourages the settlement of a proceeding at any time if the settlement is consistent with the provisions and objectives of the act and the regulations. The parties may ask the board to stay a proceeding authorized by 20.11.81 NMAC while settlement negotiations are being held. The board may approve a settlement that modifies a permitting action only after evidence supporting such modification is presented at a public hearing. The department, however, may withdraw a disputed permitting action and take another permitting action, which will give rise to a new right to file a petition for hearing on the merits pursuant to 20.11.81 NMAC.

[20.11.81.20 NMAC - N, 12/16/06]

PART 82: RULEMAKING PROCEDURES — AIR QUALITY CONTROL BOARD

20.11.82.1 ISSUING AGENCY:

Albuquerque-Bernalillo County Air Quality Control Board, c/o Environmental Health Department. P.O. Box 1293, Albuquerque, New Mexico 87103. Telephone: (505) 768-2601.

[20.11.82.1 NMAC - N, 8/11/08]

20.11.82.2 SCOPE:

20.11.82 NMAC governs the procedures in all rulemaking hearings before the board, except to the extent that 20.11.82 NMAC is inconsistent with specific procedures in governing law. In cases in which 20.11.82 NMAC is inconsistent with any rulemaking procedures specified in governing law, the procedures in governing law shall apply, rather than the procedures in 20.11.82 NMAC. A rulemaking hearing includes a hearing regarding a proposal to adopt, amend or repeal a board rule, regulation or standard.

[20.11.82.2 NMAC - N, 8/11/08]

20.11.82.3 STATUTORY AUTHORITY:

20.11.82 NMAC is adopted pursuant to the authority provided in the New Mexico Air Quality Control Act, NMSA 1978 Sections 74-2-4, 74-2-5; the Joint Air Quality Control Board Ordinance, Bernalillo County Ordinance No. 94-5, Sections 4 and 5; and the Joint Air Quality Control Board Ordinance, Revised Ordinances of Albuquerque 1994, Sections 9-5-1-4 and 9-5-1-5.

[20.11.82.3 NMAC - N, 8/11/08]

20.11.82.4 DURATION:

Permanent.

[20.11.82.4 NMAC - N, 8/11/08]

20.11.82.5 EFFECTIVE DATE:

August 11, 2008, unless a later date is cited at the end of a section.

[20.11.82.5 NMAC - N, 8/11/08]

20.11.82.6 OBJECTIVE:

The purposes of 20.11.82 NMAC are to:

- A.** standardize the procedures used in rulemaking proceedings before the board;
- B.** encourage participation in the hearings conducted by the board for the promulgation of regulations;
- C.** make possible the effective presentation of the evidence and points of view of parties and members of the general public; and
- D.** assure that board hearings are conducted in a fair and equitable manner.

[20.11.82.6 NMAC - N, 8/11/08]

20.11.82.7 DEFINITIONS:

As used in 20.11.82 NMAC:

- A. "Act"** means the Air Quality Control Act, Chapter 74, Article 2 NMSA 1978, and its later amendments and successor provisions.
- B. "Board"** means the Albuquerque-Bernalillo county air quality control board or its successor board pursuant to the act.
- C. "Days"** means consecutive days except as otherwise specifically provided.
- D. "Department"** means the city of Albuquerque environmental health department or its successor agency.

E. "Document" means a pleading or exhibit and any other document including electronically stored information, writings, drawings, graphs, charts, photographs, sound recordings, images and any other data or data compilations that are stored in any medium from which information can be obtained either directly or, if necessary, after translation, into a reasonably usable form.

F. "Environmental justice" means the fair treatment of all residents (in the city of Albuquerque and Bernalillo county), including communities of color and low income communities, and their meaningful involvement in the development, implementation and enforcement of environmental laws, regulations and policies regardless of race, color, ethnicity, religion, income or education level.

G. "Exhibit" means any document or tangible item submitted for inclusion in the record proper.

H. Reserved

I. "General public" means any person attending a rulemaking hearing who has not filed a notice of intent to present technical testimony (NOI) or filed an entry of appearance pursuant to 20.11.82.20 NMAC or 20.11.82.21 NMAC.

J. "Governing law" means the statute, including any applicable case law, which authorizes and governs the decision regarding the proposed regulatory change.

K. "Hearing clerk" means the department employee designated by the director to provide staff support to the board, and is the person designated by the board to maintain the official record of the proceeding.

L. "Hearing officer" means the person who is designated by the board to conduct a hearing pursuant to 20.11.82 NMAC.

M. Reserved

N. "NOI" means a notice of intent to present technical testimony which is described in 20.11.82.20 NMAC.

O. "Non-technical testimony" means testimony that is not scientific, engineering, economic or other specialized testimony. A person who provides only non-technical testimony or a non-technical exhibit is not required to file an NOI or entry of appearance pursuant to 20.11.82.20 NMAC or 20.11.82.21 NMAC.

P. "Participant" means any person who participates in a rulemaking proceeding before the board.

Q. "Party" means:

- (1) the petitioner;
- (2) any person who filed an NOI pursuant to 20.11.82.20 NMAC; or
- (3) any person who filed an entry of appearance pursuant to 20.11.82.21 NMAC.

R. "Person" means an individual or any entity, including federal, state and local governmental entities, however organized.

S. "Petitioner" means the person who petitioned the board for the regulatory change that is the subject of the hearing.

T. "Record proper" or "record" means all documents related to the hearing, including documents received or generated by the board before the beginning, or after the conclusion of the hearing, including, but not limited to:

- (1) the petition for hearing and any response thereto;
- (2) the minutes (or an appropriate extract of the minutes) of the meeting at which the petition for hearing was considered, and of any meeting thereafter at which the proposed regulatory change was discussed;
- (3) the notice of hearing;
- (4) proof of publication;
- (5) NOI(s);
- (6) statements for the public record;
- (7) the hearing officer's report, if any;
- (8) post-hearing submissions, if allowed;
- (9) the stenographic transcription or audio recording of the hearing and the stenographic transcription or audio recording or appropriate extract of the audio recording of the meeting at which the board deliberated on the adoption of the proposed regulatory change; and
- (10) the board's decision and the reasons therefor.

U. "Regulation" means a rule, regulation or standard promulgated by the board that affects one or more persons, in addition to the board and the department, except for any order or decision issued in connection with the disposition of any case involving a particular matter as applied to a specific set of facts.

V. "Regulatory change" means the adoption, amendment or repeal of a regulation.

W. "Service" means delivering a copy of a document, including a pleading or exhibit, to a party as required by Subsection C of 20.11.82.16 NMAC.

X. "Technical testimony" means scientific, engineering, economic or other specialized testimony, but does not include legal argument, general comments, or statements of policy or position concerning matters at issue in the hearing.

Y. "Transcript of proceedings" means the verbatim record, audio recording or stenographic transcription of the proceedings, testimony and argument in the matter, together with all exhibits offered at the hearing, whether or not admitted into evidence, and includes the record of any motion hearings or pre-hearing conferences.

[20.11.82.7 NMAC - N, 8/11/08; A, 10/15/12]

20.11.82.8 VARIANCES:

The variance procedures provided by 20.11.7 NMAC shall not apply to 20.11.82 NMAC.

[20.11.82.8 NMAC - N, 8/11/08]

20.11.82.9 SEVERABILITY:

If for any reason any section, subsection, sentence, phrase, clause, wording or application of 20.11.82 NMAC is held to be unconstitutional or otherwise invalid by any court or the United States environmental protection agency, the decision shall not affect the validity or application of remaining portions of 20.11.82 NMAC.

[20.11.82.9 NMAC - N, 8/11/08]

20.11.82.10 DOCUMENTS:

Documents incorporated and cited in 20.11.82 NMAC may be viewed at the Albuquerque environmental health department, 400 Marquette NW, Suite 3023, Albuquerque, NM 87102.

[20.11.82.10 NMAC - N, 8/11/08; A, 10/15/12]

20.11.82.11 POWERS AND DUTIES OF BOARD AND HEARING OFFICER:

A. Board: The board shall exercise all powers and duties authorized by 20.11.82 NMAC and not otherwise delegated to the hearing officer or the hearing clerk. The board shall designate a hearing officer for each hearing. The board may direct the hearing officer to file a report of the hearing as provided by 20.11.82.31 NMAC.

B. Hearing officer: The hearing officer shall exercise all powers and duties delegated or otherwise authorized by 20.11.82 NMAC. The hearing officer may be a member of the board. The hearing officer shall conduct a fair and impartial proceeding, assure that the facts are fully elicited and avoid delay. The hearing officer shall have authority to take all measures necessary for the maintenance of order and for the efficient, fair and impartial consideration of issues arising in proceedings governed by 20.11.82 NMAC, including:

- (1) conducting hearings pursuant to 20.11.82 NMAC;
- (2) taking, admitting or excluding evidence, examining witnesses and allowing post-hearing submissions;
- (3) making orders as may be necessary to preserve decorum and to protect the orderly hearing process;
- (4) if requested by the board, preparing a report of the hearing, with recommendations for board action;
- (5) requesting parties to file original documents with the hearing clerk;
- (6) establishing the deadlines for filing documents with the hearing clerk;
- (7) requesting the prevailing party to submit a proposed statement of reasons in support of the board's decision; and
- (8) filing with the hearing clerk all original documents issued by the hearing officer.

C. Notice of hearing officer assignment: If a hearing officer other than a board member is assigned as a hearing officer, the hearing clerk shall notify the parties of the name and address of the hearing officer. At the same time, the hearing clerk also shall forward to the hearing officer copies of all documents related to the petition that have been filed to date.

[20.11.82.11 NMAC - N, 8/11/08; A, 10/15/12]

20.11.82.12 LIBERAL CONSTRUCTION:

20.11.82 NMAC shall be liberally construed to carry out its objectives.

[20.11.82.12 NMAC - N, 8/11/08]

20.11.82.13 GENERAL PROVISIONS - COMPUTATION OF TIME:

A. Computation of time: In computing any period of time prescribed or allowed by 20.11.82 NMAC, except as otherwise specifically provided, the day of the event from which the designated period begins to run shall not be included. The last day of the computed period shall be included, unless it is a Saturday, Sunday, or legal city of Albuquerque holiday, in which event the time shall be extended until the end of the next day that is not a Saturday, Sunday or legal city of Albuquerque holiday. Whenever a party must act within a prescribed period after service upon a party, and service is by mail, three days shall be added to the prescribed period. The three-day extension does not apply to any deadline imposed by the act.

B. Extension of time: For good cause shown, and after consideration of prejudice to other parties, the board or hearing officer may grant an extension of time for filing any document upon timely motion of a party to the proceeding.

[20.11.82.13 NMAC - N, 8/11/08]

20.11.82.14 GENERAL PROVISIONS - RECUSAL:

A. No board member shall participate in any action in which that member's impartiality or fairness may reasonably be questioned. The member shall recuse oneself in any such action by giving notice to the board and the general public by announcing the recusal on the record. In making a decision to recuse oneself, the board member may rely upon any relevant authority.

B. A board member or a hearing officer shall not perform any function authorized by 20.11.82 NMAC regarding any matter in which a board member or a hearing officer:

- (1) has a personal bias or prejudice concerning a party;
- (2) is related to a party within the third degree of relationship;
- (3) is an officer, director or trustee of a party or interested participant in the proceeding; or
- (4) has a financial interest in the proceeding or has any other conflict of interest.

[20.11.82.14 NMAC - N, 8/11/08; A, 10/15/12]

20.11.82.15 GENERAL PROVISIONS - EX PARTE COMMUNICATION:

At no time after a proceeding is initiated by filing a petition pursuant to 20.11.82.18 NMAC and before the conclusion of a proceeding initiated pursuant to 20.11.82 NMAC shall any person have ex parte contact with a board member or the hearing officer regarding the merits of a petition or motion filed pursuant to 20.11.82 NMAC.

[20.11.82.15 NMAC - N, 8/11/08; A, 10/15/12]

20.11.82.16 DOCUMENT REQUIREMENTS - FILING AND SERVICE OF DOCUMENTS:

A. The filing of any document as required by 20.11.82 NMAC shall be accomplished by delivering the document to the hearing clerk.

B. Any person filing any document shall:

- (1) provide the hearing clerk with the original and 15 copies of the document;
- (2) deliver a copy to the board attorney;
- (3) serve a copy on all other parties; and

(4) file with the hearing clerk at least 15 days before any hearing or meeting at which the board will consider the document; if the document is a motion seeking an order from the hearing officer in a rulemaking hearing, the motion shall also be served at the same time on the hearing officer and the board attorney; motions and responses shall be filed only by parties to a hearing and shall comply with 20.11.82.16 NMAC and 20.11.82.25 NMAC;

- (5) if the document is a motion for a stay, 20.11.82.35 NMAC shall apply.

C. Whenever 20.11.82 NMAC requires service of a document, service on all other parties shall be made by delivering a copy to the person to be served by hand delivery, mail or, if that person has agreed in writing, by sending it by facsimile or by electronic transmission to that person. An agreement to be served by facsimile or electronic transmission may be evidenced by placing the person's facsimile number or email address on a document filed pursuant to 20.11.82 NMAC. Service shall also be made upon the board's attorney. If a person is represented by an attorney, service of the document shall be made on the attorney. Service by mail is complete upon mailing the document unless service is made by mail to a party who must act within a prescribed period after being served, in which case three days shall be added to the prescribed period. The three-day extension does not apply to any deadline imposed by the act. Service by facsimile or electronic transmission is accomplished when the transmission of the document is completed. The person who received the facsimile or electronic transmission shall promptly provide written confirmation of receipt if requested by the hearing officer, the board or a party.

D. The petitioner and any person who has filed a timely NOI pursuant to 20.11.82.20 NMAC may inspect all documents that have been filed in a proceeding in which that person is involved as a participant. The inspection shall be permitted as provided by the Inspection of Public Records Act, NMSA 1978, Sections 14-2-1 through 14-2-12. Whenever any document is filed in a proceeding subject to 20.11.82 NMAC,

the hearing clerk shall notify by email the petitioner and all persons who have filed a timely NOI. A person who does not provide an email address shall instead be notified by mail.

E. The hearing clerk shall provide copies of all documents to each board member at least five days before a hearing or meeting at which the board will consider the documents. The hearing officer may make an exception to this requirement.

F. 20.11.82.20 NMAC and 20.11.82.28 NMAC also provide requirements regarding hearing exhibits.

[20.11.82.16 NMAC - N, 8/11/08; A, 10/15/12]

20.11.82.17 EXAMINATION OF DOCUMENTS FILED:

A. Examination allowed: Any person may inspect and request a copy of any document filed in any rulemaking proceeding before the board, during normal business hours, subject to the provisions of law restricting the public disclosure of confidential information. The documents shall be made available by the hearing clerk as required by the Inspection of Public Records Act, NMSA 1978, Sections 14-2-1 through 14-2-12, and may be viewed at the Albuquerque environmental health department, 400 Marquette NW, Suite 3023, Albuquerque, NM 87102.

B. Cost of duplication: The cost of duplicating documents shall be borne by the person seeking copies of the documents.

[20.11.82.17 NMAC - N, 8/11/08; A, 10/15/12]

20.11.82.18 PREHEARING PROCEDURES - PETITION FOR REGULATORY CHANGE:

A. Any person may file a petition with the board to adopt, amend or repeal any regulation within the jurisdiction of the board.

B. The petition shall be in writing and shall include the name of the regulation and a statement of the reasons for the proposed regulatory change. The petition shall cite the relevant statutes that authorize the board to adopt the proposed regulatory change, and shall estimate the time that will be needed to conduct the rulemaking hearing, if at all possible. A copy of the entire rule, including any proposed regulatory change, indicating any language proposed to be added or deleted, shall be attached to the petition. The entire rule and its proposed changes shall be submitted to the board in legislative-edit format, with strike-outs and underlines as appropriate, and shall include individual line numbers. The hearing clerk shall return to the petitioner any document that does not meet the requirements of 20.11.82.18 NMAC, along with a copy of 20.11.82 NMAC and a check-list of required items. The petitioner will be asked to resubmit the petition as required by 20.11.82.18 NMAC.

C. At a public meeting occurring no later than 60 days after receipt of the petition, the board shall determine whether or not to hold a public hearing on the proposed regulatory change. Any person may respond to the petition either in writing before the public meeting or in person at the public meeting.

D. If the board decides by a vote of a majority of board members present to hold a public hearing on the petition, the board may issue orders specifying procedures for conduct of the hearing, in addition to the requirements established in 20.11.82 NMAC, as may be necessary and appropriate to fully inform the board of the matters at issue in the hearing or control the conduct of the hearing. The orders may include requirements for giving additional public notice, holding pre-hearing conferences, filing direct testimony in writing before the hearing, or limiting testimony or cross-examination.

[20.11.82.18 NMAC - N, 8/11/08; A, 10/15/12]

20.11.82.19 NOTICE OF HEARINGS:

A. Unless otherwise allowed by governing law and specified by the board, the board, through the hearing clerk, shall give public notice of the hearing at least 30 days before the hearing unless the board requires a longer public notice period. Public notice shall include at a minimum:

- (1) a single publication in the newspaper with the largest general circulation in Bernalillo county;
- (2) publication in the New Mexico Register;
- (3) if technically feasible at the time, publication by electronic media; and
- (4) other means of providing notice as the board may direct or are required by law.

B. The board shall make reasonable efforts to give notice to persons who have made a written request to the board for advance notice of regulatory change hearings. Requests for notice shall be addressed to the hearing clerk, shall designate the areas of board activity that are of interest, and provide a legible address to which notice can be sent.

C. Public notice of the hearing shall state:

- (1) the subject, including a description of the proposed regulatory change, date, time and place of the hearing;
- (2) the statutes, regulations and procedural rules governing the conduct of the hearing;

(3) the manner in which persons may present their views or evidence to the board;

(4) the location where persons may obtain copies of the proposed regulatory change; and

(5) if applicable, that the board may make a decision on the proposed regulatory change at the conclusion of the hearing or at a separate board meeting.

[20.11.82.19 NMAC - N, 8/11/08; A, 10/15/12]

20.11.82.20 TECHNICAL TESTIMONY; NOTICE OF INTENT (NOI):

A. No later than 15 days before the hearing, any person, including the petitioner, who intends to present technical testimony at the hearing shall file an NOI. The NOI shall:

(1) identify the person for whom the witness or witnesses will testify;

(2) identify each technical witness the person intends to present and state the qualifications of that witness, including a description of their educational and work background;

(3) include a copy of the direct testimony of each technical witness and state the anticipated duration of the testimony of that witness;

(4) include the text of any recommended modifications to the proposed regulatory change;

(5) list and attach an original and 15 copies of all exhibits anticipated to be offered by that person at the hearing, including any proposed statement of reasons for adoption of rules; and

(6) be served on the petitioner, if the document is an NOI filed by any person other than the petitioner.

B. The person filing an NOI shall serve the notice pursuant to 20.11.82.16 NMAC.

C. The hearing officer may enforce the provisions of 20.11.82.20 NMAC by taking whatever action the hearing officer deems appropriate, including exclusion of the technical testimony of any witness for whom an NOI was not timely filed. If the testimony is admitted, the hearing officer may keep the record open after the hearing to allow responses to the testimony.

[20.11.82.20 NMAC - N, 8/11/08; A, 10/15/12]

20.11.82.21 ENTRY OF APPEARANCE:

Any person who is or may be affected by the proposed regulatory change may file an entry of appearance and shall be a party. The entry of appearance shall be filed no later than 15 days before the date of the hearing on the petition. In the event of multiple entries of appearance by those affiliated with one interest group, the hearing officer may consolidate the entries, or divide the service list to avoid a waste of public resources.

[20.11.82.21 NMAC - N, 8/11/08; A, 10/15/12]

20.11.82.22 NON-TECHNICAL TESTIMONY; PARTICIPATION BY GENERAL PUBLIC:

A. Any member of the general public may provide non-technical testimony at the hearing. Notification before the hearing is not required in order to present non-technical testimony at the hearing. A person providing non-technical testimony may also offer non-technical exhibits in connection with the testimony provided, if the exhibit is not an undue repetition of previous non-technical testimony. Members of the general public are requested to deliver an original and 15 copies of each non-technical exhibit offered, to the hearing clerk, either before or at the hearing.

B. A member of the general public who wishes to submit a non-technical written statement for the record instead of providing oral testimony at the hearing shall file the written statement before the hearing or submit it at the hearing, and is requested to provide an original and 15 copies of the statement to the hearing clerk.

C. A member of the general public who wishes to provide technical testimony or offer technical exhibits shall comply with requirements of 20.11.82.20 NMAC.

[20.11.82.22 NMAC - N, 8/11/08; A, 10/15/12]

20.11.82.23 LOCATION OF HEARING:

Unless otherwise provided by governing law, the board shall hold rulemaking hearings and meetings in public facilities within Bernalillo county with public seating available.

[20.11.82.23 NMAC - N, 8/11/08]

20.11.82.24 PARTICIPATION AT A BOARD MEETING BY CONFERENCE TELEPHONE OR OTHER SIMILAR DEVICE:

A member of the board may participate in a meeting of the board by means of a conference telephone or other similar communications equipment when a medical or emergency situation exists that makes it extremely difficult or impossible for the member to attend the meeting in person, provided that each member participating by conference telephone or other device can be identified when speaking, all participants are able to

hear each other at the same time, and members of the public attending the meeting are able to hear any member of the board who speaks at the meeting. A request to be present and vote by telephone or other similar device shall be made by the member to the chair or acting chair of the board. A board member who wishes to participate in a meeting in this manner must receive permission from the chair or acting chair of the board sufficiently in advance of the meeting so the hearing clerk can make adequate arrangements. The chair or acting chair shall determine whether a qualifying medical or emergency situation exists. The chair or acting chair who approves the request shall direct the hearing clerk to make arrangements. A board member's participation by such means shall constitute presence in person at the meeting. This provision shall not be used to allow a member to constitute a quorum of the board, and may only be used for the purposes of:

A. choosing a hearing officer;

B. authorizing the hearing clerk to secure a hearing officer for a hearing or hearings;

C. scheduling or rescheduling a meeting or hearing; and

D. voting on the limited issues listed in Subsections A, B and C of 20.11.82.24 NMAC.

[20.11.82.24 NMAC - N, 8/11/08; A, 10/15/12]

20.11.82.25 MOTIONS:

A. General: All motions, except those made orally during a hearing, shall be in writing, specify the grounds for the motion, and state the relief sought. Each written motion shall be accompanied by an affidavit, certificate or other evidence relied upon, and shall be filed and served as required by 20.11.82.16 NMAC.

B. Unopposed motions: All unopposed motions shall state that the concurrence or agreement of all other parties was obtained. The party that filed the motion shall submit to the hearing officer for review a proposed order that has been approved by all parties.

C. Opposed motions: All opposed motions shall state either that concurrence or agreement of all other parties was sought and denied, or why concurrence was not sought. A memorandum brief in support of an opposed motion may be filed with the motion.

D. Response to motions: a party upon whom an opposed motion is served shall have 15 days after service of the motion to file a response. Any other party who fails to file a timely response shall be deemed to have waived any objection to the granting of the motion.

E. Reply to response: The moving party may submit, but is not required to submit a reply to any response within 10 days after service of the response.

F. Decision regarding motions: Motions may be decided by the hearing officer, in the hearing officer's sole discretion, without a hearing. Within five days after being served with a copy of the motion, a party upon whom service has been made may file a written request asking that a hearing be held. A procedural motion may be ruled upon before the expiration of the time for response. Any response regarding a procedural motion received after the decision is made shall be treated as a request for reconsideration of the ruling. However, the hearing officer shall refer all motions that would effectively dispose of the petition to the board for a decision.

[20.11.82.25 NMAC - N, 8/11/08; 20.11.82.25 NMAC - N, 10/15/12]

20.11.82.26 HEARING PROCEDURES - CONDUCT OF HEARINGS:

A. The rules of civil procedure and the rules of evidence shall not apply.

B. The hearing officer shall conduct the hearing in a manner that provides a reasonable opportunity for all persons to be heard without making the hearing unreasonably lengthy or cumbersome, or burdening the record with unnecessary repetition. The hearing shall proceed as follows.

(1) The hearing shall begin with a statement from the hearing officer. The statement shall identify the nature and subject matter of the hearing and explain the procedures to be followed.

(2) The hearing officer may allow a brief opening statement by any party who wishes to make one.

(3) Unless otherwise ordered, the petitioner shall present its case first.

(4) The hearing officer shall establish an order for the testimony of other participants. The order may be based upon NOI(s), sign-in sheets and the availability of witnesses who cannot be present for the entire hearing.

(5) If the hearing continues for more than one day, the hearing officer shall provide an opportunity each day for testimony from members of the general public. Members of the general public who wish to present testimony should indicate their intent to testify on a sign-in sheet.

(6) The hearing officer may allow a brief closing argument by any party who wishes to make one.

(7) At the close of the hearing, the hearing officer shall determine whether to keep the record open for written submittals in accordance 20.11.82.30 NMAC. If the

record is kept open, the hearing officer shall determine and announce the subject or subjects regarding which submittals will be allowed and the deadline for filing the submittals.

(8) Any board action to adopt, amend or repeal a board regulation requires the concurrence of four board members.

[20.11.82.26 NMAC - N, 8/11/08; 20.11.82.26 NMAC - Rn & A, 20.11.82.25 NMAC, 10/15/12]

20.11.82.27 TESTIMONY AND CROSS-EXAMINATION:

A. All testimony shall be taken under oath or affirmation, which may be accomplished as a group or individually.

B. The hearing officer shall admit all relevant evidence, unless the hearing officer determines that the evidence is incompetent or unduly repetitious. The hearing officer shall require all oral testimony be limited to the position of the witness in favor of, or against the proposed rule.

C. Any person who testifies at the hearing is subject to cross-examination on the subject matter of that person's direct testimony and matters affecting that person's credibility. Any person attending the hearing is entitled to conduct cross-examination as may be required for a full and true disclosure of matters at issue in the hearing. The hearing officer may limit cross-examination to avoid harassment, intimidation, needless expenditure of time or undue repetition.

[20.11.82.27 NMAC - N, 8/11/08; 20.11.82.27 NMAC - Rn & A, 20.11.82.26 NMAC, 10/15/12]

20.11.82.28 TECHNICAL EXHIBITS:

A. The deadlines for filing technical exhibits are established by 20.11.82.20 NMAC.

B. Any party offering a technical exhibit shall provide the hearing clerk with an original and 15 copies for the board, the hearing officer, the board attorney, and persons attending the hearing.

C. All exhibits offered at the hearing shall be marked with a designation identifying the person offering the exhibit and shall be numbered sequentially. If a person offers multiple exhibits, the person shall identify each exhibit with an index tab or by other appropriate means.

D. Large charts and diagrams, models and other bulky exhibits are discouraged. If visual aids are used, legible copies shall be submitted for inclusion in the record.

[20.11.82.28 NMAC - N, 8/11/08; 20.11.82.28 NMAC - Rn & A, 20.11.82.27 NMAC, 10/15/12]

20.11.82.29 TRANSCRIPT OF PROCEEDINGS:

The hearing clerk shall arrange for a court reporter to make a verbatim transcription of the hearing unless the board requires another method of recording. The petitioner shall pay the cost of the court reporter and the original transcription. The petitioner shall also pay the cost of a copy of a transcription for each board member, the hearing officer and the board attorney if required by the hearing officer or the board.

[20.11.82.29 NMAC - N, 8/11/08; 20.11.82.29 NMAC - Rn, 20.11.82.28 NMAC, 10/15/12]

20.11.82.30 POST-HEARING SUBMISSIONS:

The hearing officer may allow the record to remain open for a reasonable period of time following the conclusion of the hearing for written submission of additional evidence, comments and arguments, and proposed statements of reasons. The hearing officer's determination regarding post-hearing submissions shall be announced at the conclusion of the hearing. In considering whether the record will remain open, the hearing officer shall consider the reasons why the material was not presented during the hearing, the significance of the material to be submitted and the necessity for a prompt decision.

[20.11.82.30 NMAC - N, 8/11/08; 20.11.82.30 NMAC - Rn & A, 20.11.82.29 NMAC, 10/15/12]

20.11.82.31 HEARING OFFICER'S REPORT:

If the board directs, the hearing officer shall file a report of the hearing. The report shall identify the issues addressed at the hearing, identify the parties' final proposals and the evidence supporting those proposals, including discussion or recommendations as requested by the board, and shall be filed with the hearing clerk within the time specified by the board. The hearing clerk shall promptly notify each party that the hearing officer's report has been filed and shall provide each party with a copy of the report and notice of any deadline set for comments on the report.

[20.11.82.31 NMAC - N, 8/11/08; 20.11.82.31 NMAC - Rn & A, 20.11.82.30 NMAC, 10/15/12]

20.11.82.32 DELIBERATION AND DECISION:

A. As provided in the act at NMSA 74-2-5.E, in making its regulations, the board shall give weight it deems appropriate to all facts and circumstances, including:

(1) character and degree of injury to or interference with health, welfare, visibility and property;

(2) the public interest, including the social and economic value of the sources and subjects of air contaminants, with due consideration for environmental justice principles; and

(3) technical practicability and economic reasonableness of reducing or eliminating air contaminants from the sources involved and previous experience with equipment and methods available to control the air contaminants involved.

B. If a quorum of the board attended the hearing, and if the hearing notice indicated that a decision might be made at the conclusion of the hearing or meeting, the board may immediately deliberate and make a decision on the proposed regulatory change at the end of the hearing or at a board meeting after the hearing.

C. If the board does not reach a decision at the conclusion of the hearing or meeting, then, following receipt of the transcript, the hearing clerk shall promptly furnish a copy of the transcript to each board member who did not attend the hearing and, if necessary, to other board members, the board attorney and the hearing officer. Exhibits that were provided to persons at the time of the hearing need not be supplied again.

D. The board shall reach its decision on the proposed regulatory change within 60 days after the later of the close of the record or the date the hearing officer's report is filed, if a quorum of the board is available.

E. During the course of its deliberations, if the board determines that additional testimony or documentary evidence is necessary for a proper decision on the proposed regulatory change, then, consistent with the requirements of due process, the board may reopen the hearing for necessary additional evidence only. The board or hearing officer may require additional notice as appropriate.

F. The board shall issue its decision on the proposed regulatory change in a suitable format, which shall include its reasons for the action taken.

G. The board's written decision is the official version of the board's action and the reasons for that action. Other written or oral statements by board members are not a part of the board's official decision or reasons.

[20.11.82.32 NMAC - N, 8/11/08; 20.11.82.32 NMAC - Rn & A, 20.11.82.31 NMAC, 10/15/12]

20.11.82.33 NOTICE OF BOARD ACTION:

The hearing clerk shall provide notice of the board's action to each of the parties who have provided a legible address and to all other persons who have made a written

request to the board for notification of the action taken, and have provided a legible address.

[20.11.82.33 NMAC - N, 8/11/08; 20.11.82.33 NMAC - Rn & A, 20.11.82.32 NMAC, 10/15/12]

20.11.82.34 APPEAL OF BOARD REGULATIONS:

A. Appeal of any regulatory change by the board shall be taken in accordance with NMSA 74-2-9.

B. The appellant shall serve a copy of the notice of appeal on the board and on each party.

C. The appellant shall be responsible for preparation of a sufficient number of copies of the record proper at the expense of appellant.

D. Unless otherwise provided by NMSA 74-2-9, the filing of an appeal shall not act as a stay of the regulatory change being appealed.

[20.11.82.34 NMAC - N, 8/11/08; 20.11.82.34 NMAC - Rn & A, 20.11.82.33 NMAC, 10/15/12]

20.11.82.35 STAY OF BOARD REGULATIONS:

A. Any person who is or may be affected by a regulatory change adopted by the board may file a motion with the board seeking a stay of that rule or regulatory change. The motion shall include the reason for, and the legal authority supporting the granting of a stay. The movant shall serve the motion for a stay as provided by 20.11.82.16 NMAC. The movant shall file the motion at least 15 days before the next regularly scheduled board meeting. At the beginning of the next regularly scheduled board meeting, the board shall appoint a hearing officer. The hearing officer shall preside at the motion hearing, which shall occur before the meeting at which the board makes a final decision regarding the motion.

B. Unless otherwise provided by governing law, the board may grant a stay pending appeal of any regulatory change promulgated by the board. The board may only grant a stay if good cause is shown after a motion is filed and a hearing is held.

C. In determining whether good cause exists for granting a stay, the board shall consider:

- (1) the likelihood that the movant will prevail on the merits of the appeal;
- (2) whether the moving party will suffer irreparable harm if a stay is not granted;

- (3) whether substantial harm will result to another participant; and
- (4) whether harm to the public interest will result.

D. If no action is taken within 60 days after filing of the motion, the board shall be deemed to have denied the motion for stay.

20.11.90.13 SOURCE SURVEILLANCE:

A. The owner or operator of any stationary source of an air contaminant shall, upon notification by the director, maintain records of the nature and amounts of emissions, to which an air quality control emission regulation applies, from the source and any other information as may be deemed necessary by the director to determine whether the source is in compliance with applicable regulations.

B. The information recorded as specified in Subsection A of 20.11.90.13 NMAC shall be summarized and reported to the director, on forms furnished by the director, and shall be submitted within 45 days after the end of the reporting period. Reporting periods are November 1 through April 30 and May 1 through October 31 or such other periods as the director may deem necessary. Information reported to the director shall be signed by the person responsible for its accuracy.

C. Emission data obtained by the director shall be correlated with applicable emission limitations and other control measures and be made available to the public during normal business hours.

D. The owner or operator of a stationary source shall, to determine compliance with these regulations or to meet the source sampling requirements of a compliance schedule, conduct performance tests or allow the director to conduct performance tests as specified in Subsection F of 20.11.90.13 NMAC.

E. The director shall establish a periodic visual surveillance system to detect and investigate apparent violations of visible emission limitations and such complaints relating to apparent violations of the regulations as may occur.

F. Performance tests:

(1) As required by the director, the owner or operator of a stationary source shall conduct performance tests and furnish the director with a written report of the results.

(2) Performance tests shall be conducted and the results reported in accordance with the test method, as set forth in either 40 CFR Part 60.8, or an approved alternate test method. The director shall have 10 days prior notice before such testing is performed.

(3) The owner or operator shall permit the director to conduct performance tests at any reasonable time and shall operate the stationary source for such testing purposes as the director shall specify.

(4) Each performance test shall consist of three repetitions of the applicable test procedure. For the purpose of determining compliance with an applicable standard of performance, the average results of all repetitions shall apply.

(5) The director shall determine that the performance test method has been properly performed before accepting the results submitted by the owner or operator of the source.

[3/21/77. . .3/24/82; 20.11.90.13 NMAC - Rn, 20 NMAC 11.90.II.2, 10/1/02; A, 10/13/09]

20.11.90.14 ADMINISTRATION AND ENFORCEMENT:

A. Upon request of the director, the person responsible for the emission of air contaminants for which limits are established by the rules codified under Title 20, *Environmental Protection*, Chapter 11, *Albuquerque - Bernalillo County Air Quality Control Board*, of the New Mexico Administrative Code, shall provide such facilities, utilities, and openings exclusive of instrument and sensing devices, as may be necessary for the proper determination of the nature, extent, quantity and degree of such air contaminants. Such facilities may be either temporary or permanent at the discretion of the person responsible for their provisions; and shall be suitable for determination consistent with emission limits established in these rules.

B. As an additional means of enforcing the rules codified under Title 20, *Environmental Protection*, Chapter 11, *Albuquerque - Bernalillo County Air Quality Control Board*, of the New Mexico Administrative Code, the director may accept a written assurance of discontinuance of any act or practice deemed in violation of these rules or any rule adopted pursuant thereto from any person engaging in, or who has engaged in, such act or practice, signed and acknowledged by the director and during which such discontinuance is to be accomplished.

[3/21/77. . .3/24/82; 20.11.90.14 NMAC - Rn, 20 NMAC 11.90.II.3, 10/1/02; A, 10/13/09]

PART 91-99: [RESERVED]

PART 100: MOTOR VEHICLE INSPECTION - DECENTRALIZED

20.11.100.1 ISSUING AGENCY:

Albuquerque-Bernalillo County Air Quality Control Board, c/o Environmental Health Department, P.O. Box 1293, Albuquerque, NM 87103. Telephone: (505) 768-2600.

[10/19/82. . .12/1/95; 20.11.100.1 NMAC - Rn, 20 NMAC 11.100.I.1, 10/1/02; A, 9/1/04]

20.11.100.2 SCOPE:

A. Applicability (vehicles to be inspected):

(1) Motor vehicles. All motor vehicles, as defined in 20.11.100.7 NMAC, shall be inspected for compliance with the requirements of 20.11.100 NMAC unless otherwise exempted. A vehicle shall not be registered or re-registered until the vehicle has passed the applicable on-board diagnostics (OBDII) inspection, exhaust emissions inspection, tampering inspection, pressurized gas cap test and visible emissions inspection prescribed by 20.11.100.17 NMAC or the program has issued a time extension for repairs of the vehicle, unavailability for testing, or reciprocity for a test from another state.

(2) Commuter vehicles: All motor vehicles that are more than four years old and are driven into, operated, or are otherwise present in Bernalillo county for 60 or more days per year but are registered in another county or state shall comply with 20.11.100 NMAC.

(3) Federal installations: Vehicles that are operated on federal installations located in Bernalillo county, shall comply with 20.11.100 NMAC, whether or not the vehicles are registered in New Mexico or Bernalillo county. The inspection requirement applies to all employee owned or leased vehicles as well as agency operated vehicles. The inspection requirements for federal installations are mandated by 40 CFR Part 51.356(a)(4).

(4) Fleet vehicles: Fleet vehicles that are registered outside of Bernalillo county but are primarily operated in Bernalillo county shall comply with 20.11.100 NMAC. The inspection requirements for fleet vehicles are mandated by 40 CFR Part 51.356(a)(2).

(5) Municipalities and counties: If the program enters into a joint powers agreement with a municipality or county to extend the enforcement of 20.11.100 NMAC, all vehicles registered in that municipality or county shall comply with 20.11.100 NMAC.

B. Exempt vehicles:

(1) all new motor vehicles for four years following initial registration from the date of the manufacturer's certificate of origin (MCO);

(2) vehicles that are fueled by a mixture of gasoline and oil for purposes of lubrication;

(3) motor vehicles that are used for legally sanctioned competition and not operated on public streets and highways;

(4) implements of husbandry, or road machinery not regularly operated on public streets and highways;

(5) other vehicles that are not regularly operated on public streets and highways after providing satisfactory proof to the program manager;

(6) vehicles leased by a leasing company whose place of business is Bernalillo county to a person who resides outside of Bernalillo county; however, an exemption shall not be granted if the person resides in an area, that has an EPA-required vehicle inspection program;

(7) vehicles that are 35 years old or older;

(8) vehicles sold between licensed dealers;

(9) vehicles with a GVW of 10,001 lbs or more; and

(10) dedicated electric vehicles;

(11) existing electric hybrid vehicles which were exempted from 20.11.100 NMAC as of the effective date of 20.11.100.2 NMAC, until such time that a change of ownership of the vehicle occurs.

[5/20/88. . .12/1/95; 20.11.100.2 NMAC - Rn, 20 NMAC 11.100.I.2, 10/1/02; A, 5/1/04; A, 9/1/04; A, 1/1/12]

20.11.100.3 STATUTORY AUTHORITY:

20.11.100 NMAC is adopted pursuant to the, authority provided in the New Mexico Air Quality Control Act, NMSA 1978 Sections 74-2-4, 74-2-5.C; the Joint Air Quality Control Board Ordinance, Bernalillo County Ordinance 94-5 Sections 3 and 4; the Joint Air Quality Control Board Ordinance, Revised Ordinances of Albuquerque 1994 Sections 9-5-1-3 and 9-5-1-4; and the City of Albuquerque and Bernalillo County Motor Vehicle Emissions Control Ordinances. It is adopted in order to comply with the Federal Clean Air Act Amendments of 1990 and 40 CFR Part 51, Subpart S, *Inspection/Maintenance Program Requirements*.

[10/19/82. . .12/1/95; 20.11.100.3 NMAC - Rn, 20 NMAC 11.100.I.3, 10/1/02; A, 9/1/04; A, 1/1/12]

20.11.100.4 DURATION:

Permanent, unless the violation described in 20.11.101 NMAC occurs.

[12/1/95; 20.11.100.4 NMAC - Rn, 20 NMAC 11.100.I.4, 10/1/02; A, 5/1/04]

20.11.100.5 EFFECTIVE DATE:

December 1, 1995, unless a later date is cited at the end of a section. If no EPA-confirmed violation (two exceedances) of the federal ambient carbon monoxide standards has occurred within Bernalillo county, the vehicle inspection frequency shall be biennial.

[8/25/92. . .12/1/95; 20.11.100.5 NMAC - Rn, 20 NMAC 11.100.I.5, & A, 10/1/02; A, 9/1/04; A, 1/1/12; A, 9/10/2016]

20.11.100.6 OBJECTIVE:

To provide for the control and regulation of carbon monoxide (CO), hydrocarbon (HC), ozone precursors and particulate emissions above certain levels from motor vehicles, and for anti-tampering inspections.

[10/19/82. . .12/1/95; 20.11.100.6 NMAC - Rn, 20 NMAC 11.100.I.6, 10/1/02; A, 5/1/04; A, 9/1/04; A, 1/1/12]

20.11.100.7 DEFINITIONS:

In addition to the definitions in 20.11.100.7 NMAC the definitions in 20.11.1 NMAC apply unless there is a conflict between definitions, in which case the definition in 20.11.100 NMAC shall govern.

A. "Air care inspection station" means a private business authorized by a certificate in accordance with 20.11.100.21 NMAC to inspect motor vehicles and issue certificates of inspection. It also means stations established by the city of Albuquerque and Bernalillo county, or other governmental entities, for testing government owned or leased motor vehicles.

B. "Air care inspector" means an individual authorized by a certificate issued by the program to perform inspections of motor vehicles and who has met the requirements of 20.11.100.26 NMAC.

C. "Air care station" means an *air care* inspection station, or a fleet *air care* station.

D. "Audit" means an assessment by VPMD, either as a physical on-site visit or an off-site review of data collected electronically, designed to determine whether *air care* inspectors and *air care* stations are correctly performing all tests and other functions required by the VPMD program. Physical on-site audits shall be of two types: overt and covert.

E. "Biennial" means every other year.

F. "Chassis" means the complete motor vehicle, including standard factory equipment, but excluding the body and cab.

G. "City" means the city of Albuquerque, a New Mexico municipal corporation.

H. "Clean piping" means the illegal act of an *air care* station or *air care* inspector that results in a fraudulent "pass" for a vehicle's tailpipe emissions test by entering into

the emissions analyzer unique information identifying the vehicle being tested, but then performing the tailpipe test on a different vehicle, which bypasses actual testing of the first vehicle.

I. "Clean scanning" means the illegal act of an *air care* station or *air care* inspector that results in a fraudulent "pass" for a vehicle's emissions test by entering into the emissions analyzer unique information identifying the vehicle being tested, but then performing the emissions test on a different vehicle, which bypasses actual testing of the first vehicle.

J. "County" means the county of Bernalillo, a political subdivision of the state of New Mexico.

K. "Covert audit" means a quality assurance site visit by an anonymous agent delegated by VPMD to drive a vehicle into the selected station and asked to have the vehicle tested. The vehicle may be set up by VPMD in a tampered or failed condition. Covert audits are required by EPA to ensure that air care stations and air care inspectors are performing the emissions test correctly.

L. "Covert surveillance" means a quality assurance audit by observation done from an off-site location near the *air care* station, often using binoculars to monitor the actions of an *air care* inspector performing emissions testing.

M. "Dealer" means any person who sells or solicits or advertises the sale of new or used motor vehicles subject to registration in the state of New Mexico and as further defined in the Motor Vehicle Code Chapter 66, NMSA 1978.

N. "Distributor" means any person who distributes or sells new or used motor vehicles to dealers and who is not a manufacturer.

O. "Division" or "VPMD" means the vehicle pollution management division of the city environmental health department, which provides the staff for the Albuquerque-Bernalillo county vehicle pollution management program.

P. "Driver" means every person who drives or is in actual physical control of a motor vehicle upon a highway or upon property used for inspections.

Q. "Emissions analyzer" means a device for measuring the concentration of certain exhaust gases emitted by a motor vehicle.

R. "Emissions inspection system" or "EIS" means the equipment and software for conducting the official emissions inspection.

S. "Essential parts" means all integral and body parts of a vehicle of a type required to be registered under the Motor Vehicle Code, the removal, alteration or

substitution of which would tend to conceal the identity of the vehicle or substantially alter its appearance, model type or mode of operation.

T. "Exhaust emissions" means CO, HC and all other substances emitted through a motor vehicle's exhaust system, after passing downstream of the engine block exhaust ports and exhaust emissions control devices, if any.

U. "Exhaust emissions control device" means equipment designed by the manufacturer of the vehicle and installed on a motor vehicle for the purpose of reducing pollutants emitted from the vehicle, or a system or engine modification designed by the manufacturer of the motor vehicle that causes a reduction of pollutants emitted from the vehicle, or equipment designed by the vehicle manufacturer to prevent damage to or tampering with other exhaust emissions control devices.

V. "Fast idle condition or unloaded 2,500 rpm" means an exhaust emissions inspection conducted with the engine of the vehicle running under an accelerated condition as required by 40 CFR Part 51, Subpart S, *Inspection/Maintenance Program Requirements*.

W. "Field audit gas" means a gas mixture with known concentrations of CO₂, CO, and HC that is used by the program to check the accuracy of exhaust gas analyzers used by authorized inspection stations.

X. "Fleet" means a group of vehicles under the common ownership or control of a commercial or governmental entity.

Y. "Fleet air care station" means any person, business, government entity, firm, partnership or corporation that provides for the construction, equipping, maintaining, staffing, managing and operation of authorized inspection station for the sole purpose of inspecting its private fleet of motor vehicles subject to 20.11.100 NMAC, and not offering inspection services to its employees or the general public.

Z. "Fuel" means any material that is burned by the engine of a vehicle in order to propel the vehicle.

AA. "Gas cap test" means the determination of the ability of the gas cap(s) to retain pressure.

BB. "Gross vehicle weight" means the weight of a vehicle without load, plus the weight of any load thereon.

CC. "Government vehicle" means a motor vehicle exempt from the payment of a registration fee and owned or leased by any federal, state, local, or other governmental entity.

DD. "Headquarters" means the main office of the vehicle pollution management program.

EE. "Highway" means every way or place generally open to the use of the public as a matter of right for the purpose of vehicular travel, even though it may be temporarily closed or restricted for the purpose of construction, maintenance, repair or reconstruction.

FF. "Idle mode test" means an unloaded exhaust emissions test conducted only at the idle condition.

GG. "Inspection or re-inspection or test" means the mandatory vehicular anti-tampering and emissions inspection conducted both visually and with equipment or chemical sensing devices as required by 20.11.100 NMAC.

HH. "Low emissions tune-up" means adjustments and repairs that can reduce motor vehicle emissions including, but not limited to, the following procedures:

(1) checking and setting to manufacturer's specifications, the idle mixture, idle speed, ignition timing and dwell;

(2) checking for proper connection of vacuum lines, electrical wires, and for proper operation of pollution control devices;

(3) checking and replacement of air breathing filters and positive crankcase ventilation valve as necessary;

(4) replacement of spark plugs, points, and wires; and

(5) for all motor vehicles equipped with computer controlled closed-loop feedback exhaust emissions control devices and systems, inspecting the operation of the emissions control system according to the motor vehicle manufacturer's specified procedures, including hose routing and on-board diagnostics, new vehicle warranty and repair or replacement as necessary.

II. "Manufacturer" means every person engaged in the business of constructing or assembling vehicles of a type required to be registered under the laws of the state of New Mexico.

JJ. "Manufacturer's certificate of origin" or "MCO" means a certification, on a form supplied by or approved by the MVD, signed by the manufacturer, stating that the new vehicle described therein has been transferred to the New Mexico dealer or distributor named therein or to a dealer duly licensed or recognized as a dealer or distributor in another state, territory or possession of the United States, and that the transfer is the first transfer of the vehicle in ordinary trade and commerce. Every MCO contains a space for proper reassignment to a New Mexico dealer or to a dealer duly

licensed or recognized as a dealer or distributor in another state, territory or possession of the United States. The certificate also contains a description of the vehicle, the number of cylinders, type of body, engine number and the serial number or other standard identification number provided by the manufacturer of the vehicle, if the information exists.

KK. "Model year" means the year of manufacture of the vehicle based on the annual production period of the vehicle as designated by the manufacturer and indicated on the title and registration of the vehicle. If the manufacturer does not designate a production period for the vehicle, then the model year means the calendar year of manufacture.

LL. "Motor vehicle" means any vehicle that:

- (1) is propelled by a spark ignition, internal combustion engine;
- (2) has four or more wheels in contact with the ground;
- (3) is subject to registration with the MVD to an owner of record who is domiciled within Bernalillo county, or is a government vehicle which is assigned to a governmental unit within Bernalillo county;
- (4) has a GVW greater than 1,000 and less than 10,001 pounds;
- (5) is for use upon public roads and highways;
- (6) is a 1975 model year or newer; and
- (7) is a vehicle not otherwise exempted by 20.11.100 NMAC.

MM. "New motor vehicle" is a vehicle that has undergone a transfer of ownership and is being registered for the first time to any person, but does not include the sale to another licensed motor vehicle dealer for the purpose of resale as a new vehicle.

NN. "Operator" means driver, as defined in 20.11.100 NMAC.

OO. "Overt audit" means an on-site quality assurance assessment of the performance of an *air care* station or an *air care* inspector, conducted by VPMD personnel. An overt audit may also be an assessment of an *air care* station's emissions analyzer to ensure that the equipment is maintained appropriately and operating correctly.

PP. "Owner" means a person who holds the legal title of the motor vehicle or, if the vehicle is the subject of an agreement for conditional sale or lease with the right of purchase upon performance of the conditions stated in the agreement and with an

immediate right of possession vested in the conditional vendee or lessee, or in the event a mortgagor of a vehicle is entitled to possession, then "owner" means the conditional vendee, lessee or mortgagor.

QQ. "**Pass fail criteria**" means the standards established by 20.11.100 NMAC that specify the maximum allowable motor vehicle exhaust emissions under appropriate specified operating conditions.

RR. "**Person**" means any individual, partnership, firm, public or private corporation, association, trust, estate, political subdivision or agency, or any other legal entity or legal representative, agent or assign.

SS. "**Pretesting**" means the determination by an *air care* station or inspector, of the "pass" or "fail" status of a vehicle and providing the information to the vehicle owner prior to performing the required complete emissions test.

TT. "**Program**" or "**VPMD program**" means the Albuquerque - Bernalillo county vehicle pollution management program.

UU. "**Program manager**" means a classified city employee selected in accordance with provisions of the joint powers agreement between the city and the county to perform for the joint air quality control board the duties required to enforce and administer the provisions of 20.11.100 NMAC, or the program manager's designee.

VV. "**Reconstructed vehicle**" means a vehicle that was assembled or constructed largely from of essential parts, new or used, derived from other vehicles or makes of vehicles of various names, models and types or that, if originally otherwise constructed, was materially altered by the removal of essential parts, new or used, derived from other vehicles or makes of vehicles.

WW. "**Registration and re-registration**" means both original registration and renewal of motor vehicle registration as provided in the New Mexico Motor Vehicle Code, Chapter 66 NMSA 1978.

XX. "**Standard gases**" means NIST certified emissions samples of gases maintained as primary standards for determining the composition of working gases, field audit gases, or the accuracy of analyzers.

YY. "**Truck**" means every motor vehicle designed, used or maintained primarily for the transportation of property. In addition, all vehicles with a GVW greater than 6,000 pounds shall be considered a truck.

ZZ. "**Vehicle information database**" or "**VID**" means a database consisting of data collected from each official inspection as specified in the EIS.

AAA. "VIR" means vehicle inspection report, a program-certified document (VIR) signed by a certified *air care* inspector or other program authorized official stating that the vehicle described therein is either in compliance (pass), not in compliance (fail), or has an approved time extension in order to achieve compliance through additional repairs or adjustments (time-limit extension).

BBB. "Visible emissions" means any fume, smoke, particulate matter, vapor or gas, or combination thereof, excluding water vapor or steam.

CCC. [RESERVED]

DDD. [RESERVED]

EEE. "Working gases" means program-approved span gases maintained by an authorized *air care* inspection station to perform periodic calibration of approved exhaust gas analyzers.

FFF. **Abbreviations and symbols**

- (1) **A/F** means air/fuel.
- (2) **ASE** means the national institute for automotive service excellence.
- (3) **CO** means carbon monoxide.
- (4) **CO₂** means carbon dioxide.
- (5) **DTC** means diagnostic trouble code.
- (6) **EHD** means the environmental health department.
- (7) **EIS** means the emissions inspection system.
- (8) **EPA** means the environmental protection agency.
- (9) **GVW** means gross vehicle weight.
- (10) **HC** means hydrocarbon.
- (11) **HP** means horsepower.
- (12) **LNG** means liquefied natural gas.
- (13) **LPG** means liquefied petroleum gas.
- (14) **MPH** means miles per hour.

(15) **MCO** means manufacturer's certificate of origin.

(16) **MVD** means the motor vehicle division of the New Mexico taxation and revenue department.

(17) **NDIR** means non-dispersive infrared.

(18) **NIST** means national institute of standards and technology.

(19) **OBDII** means a vehicle's on-board diagnostics second generation.

(20) **%** means percent.

(21) **PCV** means positive crankcase ventilation.

(22) **ppm** means parts per million by volume.

(23) **VID** means the vehicle information database.

(24) **VIN** means vehicle identification number.

[10/12/82. . .5/20/88, 11/13/91, 8/25/92, 9/23/94, 12/1/95; 20.11.100.7 NMAC - Rn, 20 NMAC 11.100.I.7, 10/1/02; A, 5/1/04; A, 9/1/04; A, 1/1/12; A, 9/10/2016]

20.11.100.9 SAVINGS CLAUSE:

Any amendment of 20.11.100 NMAC that is filed with the state records center shall not affect actions pending for violation of a city or county ordinance, or 20.11.100 NMAC. Prosecution for a prior violation shall be governed and prosecuted under the statute, ordinance, regulation, or part in effect at the time the violation was committed.

[9/23/94. . .12/1/95; 20.11.100.9 NMAC - Rn, 20 NMAC 11.100.I.9, 10/1/02; A, 1/1/12]

20.11.100.10 SEVERABILITY:

If any section, paragraph, sentence, clause or word of 20.11.100 NMAC or any federal standards incorporated herein is for any reason held to be unconstitutional or otherwise invalid by any court, the decision shall not affect the validity of remaining provisions of 20.11.100 NMAC.

[9/23/94. . .12/1/95; 20.11.100.10 NMAC - Rn, 20 NMAC 11.100.I.10, 10/1/02; A, 1/1/12]

20.11.100.11 DOCUMENTS:

Documents incorporated and cited in 20.11.100 NMAC may be viewed at the vehicle pollution management program headquarters, 1500 Broadway NE, Albuquerque, NM 87102.

[12/1/95; 20.11.100.11 NMAC - Rn, 20 NMAC 11.100.I.11, 10/1/02; A, 1/1/12]

20.11.100.12 VEHICLE POLLUTION MANAGEMENT DIVISION:

A. The vehicle pollution management division or its successor agency is part of the city of Albuquerque environmental health department.

B. The division manager shall establish and maintain a VPMD headquarters, which will include an emissions inspection facility equipped with certified emissions testing equipment and employing at least two ASE certified technicians.

C. The facility shall be operated by the city to provide services to the public and to facilitate program responsibilities and administer the provisions of 20.11.100 NMAC.

[5/20/88. . .11/13/91, 8/25/92, 9/23/94, 12/1/95, 8/1/97; 20.11.100.12 NMAC - Rn, 20 NMAC 11.100.I.12 & Repealed, 10/1/02; Rn, 20 NMAC 11.100.II.1, 10/1/02; A, 5/1/04; 20.11.100.12 NMAC - N, 1/1/12]

20.11.100.13 RESPONSIBILITIES OF VEHICLE POLLUTION MANAGEMENT DIVISION:

VPMD shall be responsible for administering a program that ensures that federal motor vehicle emissions standards are met. In order to be successful in meeting federal goals and criteria for a motor vehicle emissions testing program, VPMD is authorized to take any actions commonly known to be necessary for a motor vehicle emissions testing program, now and in the future, including, at a minimum:

A. developing and approving specifications for gas analyzers in a manner consistent with improvements in the industry;

B. maintaining databases including the VID, certified *air care* inspectors' information and history, and extensions/exemptions from official inspections;

C. providing training and certification processes for *air care* station and *air care* inspectors;

D. performing quality assurance audits as required by 20.11.100.30 NMAC, assessing the level of compliance of each *air care* station or *air care* inspector by using onsite audits and by monitoring the information provided by the VID;

E. enforcing the certification and recertification requirements of *air care* inspectors;

F. taking enforcement actions as appropriate and providing for penalty assessment;

G. investigating and maintaining records regarding complaints against certified *air care* stations and certified *air care* inspectors;

H. providing for non-binding mediation of disputes arising from inspection activities by certified *air care* stations or certified *air care* inspectors, including if necessary, a verification test at no cost to the person requesting the test; and

I. evaluating and issuing compliance time extensions for vehicles unable to pass the inspection test criteria as provided by 20.11.100 NMAC.

[5/20/88. . .9/23/94, 12/1/95, 20.11.100.13 NMAC - Rn, 20 NMAC 11.100.II.2, 10/1/02; A, 5/1/04; 20.11.100.13 NMAC - N, 1/1/12]

20.11.100.14 SCHEDULING OF INSPECTIONS:

A. Inspection and registration: Every motor vehicle, as defined in 20.11.100.7 NMAC, shall be inspected biennially unless it is determined to emit quantities of CO or HC between 75% and 100% of its maximum allowable standard listed in Table I of Subsection A of 20.11.100.17 NMAC, in which case it shall be issued a provisional pass certificate good only for a one year registration and shall be required to be inspected again the following year prior to registration. The MVD shall distribute notices or other appropriate information to owners of vehicles applying for re-registration in accordance with the written agreement between the MVD and the program manager. Vehicles shall also be inspected when sold and when titles are transferred. A person who believes he has a vehicle for which he has been erroneously notified of inspection may petition the program manager to correct the error.

B. Vehicles unavailable for inspection: Motor vehicles that are unavailable for inspection may be granted an extension of inspection if authorized by the program manager. Persons seeking an extension may petition the program manager by submitting a signed affidavit justifying the special need and by providing other necessary documentation as required by the program manager.

C. Federal, state and local government vehicles:

(1) Each motor vehicle operated in Bernalillo county that is owned or leased by the United States government, the state of New Mexico or any local government entity shall be inspected biennially.

(2) Scheduling vehicles for inspection pursuant to an agreement with the program manager shall be the responsibility of the governmental authority that owns or leases the vehicles. The schedules shall only be approved if the program manager determines that they are consistent with the scope and goals of 20.11.100 NMAC.

(3) Persons who are responsible for government fleet vehicles or motor pools shall update the vehicle inventory annually each January and forward the resulting inspection plan with fleet inventory to the program manager in a format approved by the program manager.

(4) Failure to forward the inspection plan and fleet inventory to VPMD by March 31st of each year is a violation of 20.11.100 NMAC and of the Air Quality Control Act 74-2-1 NMSA 1978.

(5) The program manager may assess a civil penalty not to exceed fifteen thousand dollars (\$15,000) for each day during any portion of which a violation occurs, pursuant to 74-2-12.1 NMSA 1978.

D. Private fleets issued permanent fleet plates:

(1) Each motor vehicle operated in Bernalillo county that is owned or leased by a private or non-governmental entity that has been issued a permanent fleet license plate shall be inspected biennially.

(2) Scheduling vehicles for inspection pursuant to an agreement with the program manager shall be the responsibility of the entity that owns or leases the vehicles. The schedules shall only be approved if the program manager determines that they are consistent with the scope and goals of 20.11.100 NMAC.

(3) Persons who are responsible for fleet vehicles or motor pools shall update the vehicle inventory annually each January and forward the resulting inspection plan with fleet inventory to the program manager in a format approved by the program manager.

(4) Failure to forward the inspection plan and fleet inventory to VPMD by March 31st of each year is a violation of 20.11.100 NMAC and of the Air Quality Control Act 74-2-1 NMSA 1978.

(5) The program manager may assess a civil penalty not to exceed fifteen thousand dollars (\$15,000) for each day during any portion of which a violation occurs, pursuant to 74-2-12.1 NMSA 1978.

[10/19/82. . .5/20/88, 9/23/94, 12/1/95, 8/1/97, 20.11.100.14 NMAC - Rn, 20 NMAC 11.100.II.3, 10/1/02; A, 5/1/04; 20.11.100.14 NMAC - N, 1/1/12]

20.11.100.15 VEHICLE INSPECTION PROCEDURES:

A. [RESERVED]

B. Vehicle tests:

(1) To determine if a motor vehicle is in compliance with 20.11.100 NMAC, all inspections shall be performed in strict accordance with 20.11.100 NMAC. Each vehicle shall be inspected at an *air care* station by an *air care* inspector. All items shall be tested to completion with reports of outcomes provided to the motor vehicle owner.

(a) Vehicles with an engine other than the engine originally installed by the manufacturer or an identical replacement of the engine shall be subject to the inspection procedures and standards for the chassis type, GVW and model year of the vehicle.

(b) Assembled vehicles or kit cars shall meet the standards and emissions control equipment that are required for the year of the vehicle engine. If the vehicle is assembled with a pre-1975 engine, testing is not required, but the vehicle owner shall petition the program manager for an exemption from emissions inspections.

(2) **Exhaust gas emissions measurements:** No emissions inspection required by 20.11.100 NMAC shall be performed unless the instrument used for measuring exhaust gases from the motor vehicle is an approved emissions analyzer.

(a) Vehicle operating condition:

(i) Prior to this portion of the inspection, the entire vehicle shall be in normal operating condition as specified by the emissions tune-up label originally installed on the vehicle. Motor vehicles equipped for simple selection of alternate fuel supplies (switching between gasoline and any compressed or liquefied gaseous fuel) shall be inspected using the fuel in use when presented for inspection.

(ii) Non-OBDII compatible vehicles (usually 1995 model year or older) subject to 20.11.100 NMAC shall be required to take and pass a preconditioned two-speed idle test as specified in Appendix B to Subpart S of 40 CFR Part 51. The test procedure shall include a first and second-chance test at both idle and at the unloaded 2,500 RPM test. If the vehicle passes both emissions tests, it shall be deemed in compliance with minimum emissions standards unless the vehicle fails the tampering inspection, pressurized gas cap test or visible emissions inspection required by 20.11.100 NMAC.

(iii) All 1996 and newer model year motor vehicles subject to 20.11.100 NMAC shall be required to take and pass an on-board diagnostic test, pressurized gas cap test and visible emissions inspection as specified in 40 CFR Part 51, Subpart S, *Inspection/Maintenance Program Requirements*. Certain 1996 and newer model year motor vehicles that are not OBDII compatible may be tested using the two-speed idle test as determined by the program manager.

(iv) No test shall commence if there are apparent leaks in the motor vehicle's exhaust system that will cause the exhaust analyzer to invalidate the test.

(b) Exhaust emissions inspection: The exhaust emissions inspection shall proceed as specified in 40 CFR Part 51 Appendix B to Subpart S.

(c) Selection of appropriate pass/fail emissions inspection criteria: The appropriate pass/fail criteria will be selected automatically by the approved emissions analyzer.

(3) Visual examination for tampering: The certified *air care* inspector shall determine specifically what emissions control devices should be in place and operable for each vehicle inspected. Specific design and equipment elements necessary in anti-tampering determinations shall only include catalytic converter(s).

(4) Visible emissions requirements: In addition to exhaust and tampering requirements of 20.11.100 NMAC, all vehicles are subject to and must pass inspection for visible emissions (smoke). Non-diesel vehicles may not emit any visible emissions (except steam) during the test as specified in Subsection C of 20.11.100.17 NMAC.

[11/13/91. .8/25/92, 9/23/94, 12/1/95; 20.11.100.15 NMAC - Rn, 20 NMAC 11.100.II.4, 10/1/02; A, 5/1/04; 20.11.100.15 NMAC - Rn & A, 20.11.100.12 NMAC, 1/1/12]

20.11.100.16 ACTIONS PROHIBITED DURING VEHICLE INSPECTION:

A. Each certified *air care* station or certified *air care* inspector shall inspect each vehicle in its as-presented condition, regardless of whether the *air care* inspector knows or believes that the vehicle will not pass.

B. Each certified *air care* station or certified *air care* inspector shall inspect each vehicle according to 20.11.100 NMAC and is prohibited from taking any of the following actions:

(1) engaging in conduct that constitutes fraud, deceit, or gross negligence;

(2) negligently providing incorrect or misleading information to the public regarding the requirements of 20.11.100 NMAC;

(3) failing or refusing to give a motorist the customer copy of the emissions test;

(4) failing to follow the inspection procedures specified by the vehicle manufacturer or required by 20.11.100 NMAC;

(5) making false promises likely to influence, persuade or induce a motorist to authorize the repair, service or maintenance of a motor vehicle;

- (6) entering false data into an emissions analyzer;
- (7) performing or allowing a repair that is represented to the motorist as being required to remedy the cause of an inspection failure or obtain a certificate of inspection when the repair is not required;
- (8) adjusting or modifying a vehicle in a manner that would cause the vehicle to fail an inspection;
- (9) charging for and performing an inspection that is represented to the motorist as being required when it is not required;
- (10) failing to maintain the confidentiality of an inspector's access code for the emissions analyzer;
- (11) failing to advise VPMD of any change in information provided in the inspector's or station's application for certification or for renewal of certification;
- (12) failing to report to VPMD any illegal certification or other violation of 20.11.100 NMAC; or
- (13) performing any type of clean scanning, clean piping or pretesting.

C. Performing any act or actions prohibited by Subsection B of 20.11.100.18 NMAC is a violation of 20.11.100 NMAC and may result in an enforcement action by VPMD.

D. It is the responsibility of each *air care* station owner or operator to ensure that all *air care* inspectors in his employment does not engage in prohibited act or actions in preparation for or during a vehicle inspection. VPMD may take an enforcement action against the *air care* station owner or operator employing *air care* inspectors who engage in prohibited act or actions.

[10/19/82. . .12/1/95; 20.11.100.16 NMAC - Rn, 20 NMAC 11.100.II.5, 10/1/02; A, 5/1/04; 20.11.100.16 NMAC - N, 1/1/12]

20.11.100.17 VEHICLE INSPECTION CRITERIA:

Failure to pass any one of the applicable criteria specified below in Subsections A, B, C, D and E of 20.11.100.17 NMAC, entitled *exhaust emissions*, *anti-tampering*, *visible emissions*, *gas cap*, and *on-board diagnostics* respectively, shall constitute noncompliance with 20.11.100 NMAC and a fail VIR shall be issued.

A. Exhaust emissions: Every motor vehicle that is determined to emit quantities (rates) of CO and HC greater than those listed in Table I appropriate to model year and weight classification listed shall be *failed*. Every motor vehicle with emissions rates

equal to or lower than the applicable amounts shall be *passed* under subsection A of 20.11.100.17 NMAC.

TABLE I

Maximum Allowable Exhaust Emissions

Vehicle Model Year	Gross Vehicle Weight Rating (pounds)	Group Code	Unloaded			
			Idle Mode		2,500 RPM Test	
			HC PPM	CO %	HC PPM	CO %
1975 - 1978	0 to 6,000	C/T	500	5.0	500	5.0
1979 - 1980	0 to 6,000	C/T	400	4.0	400	4.0
1981 - 1985	0 to 6,000	C/T	220	1.2	220	1.2
1986 - 1990	0 to 6,000	C/T	200	1.2	200	1.2
1991 - 1995	0 to 6,000	C/T	180	1.2	180	1.2
1975 - 1978	6,001 to 8,000	LT	600	6.0	600	6.0
1979 - 1980	6,001 to 8,000	LT	600	4.5	600	4.5
1981 - 1982	6,001 to 8,500	LT	400	2.7	400	3.0

Vehicle Model Year	Gross Vehicle Weight Rating (pounds)	Group Code	Unloaded			
			Idle Mode		2,500 RPM Test	
			HC PPM	CO %	HC PPM	CO %
1983 - 1988	6,001 to 8,500	LT	300	1.2	300	3.0
1989 - 1995	6,001 to 8,500	LT	220	1.2	220	1.2
1975 - 1980	8,001 to 10,000	MT	650	6.5	650	6.5
1981 - 1990	8,501 to 10,000	MT	400	4.0	400	3.0
1991 - 1995	8,501 to 10,000	MT	220	2.0	220	2.0

B. Anti-tampering:

(1) All motor vehicles subject to 20.11.100 NMAC shall be inspected for the presence of a catalytic converter(s) that is properly connected.

(2) Any vehicle with required features or components removed or rendered inoperative shall be *failed*. If no tampering with required components or systems is evident, this portion of the inspection shall be *passed*.

(3) Vehicles that have had the original engine removed and replaced with a newer or inherently cleaner technology engine (including the emissions control devices required in association with that engine) may be eligible for a waiver of compliance with portions of Subsection B of 20.11.100.17 NMAC. The program manager shall determine

if a vehicle has been retrofitted with an engine that is not adaptable to the emissions control requirements for the vehicle chassis model year. When the program manager makes the determination, the program manager may waive the requirements for replacement of emissions control equipment. There shall be no waiver for the installation of a catalytic converter unless the program manager determines installation would create a safety hazard.

C. Visible emissions (smoke): All motor vehicles subject to inspection must pass an inspection for visible emissions. The *air care* inspector shall watch the tailpipe during the idle portion of the emissions test and during the high-speed portion of the emissions test (using a mirror if necessary). If the inspector observes **any** smoke (not steam) during any part of the inspection, the visible portion of the emissions test shall be a *fail*.

D. Gas cap (pressurized): All 1975-2005 model year vehicles subject to inspection must pass a pressurized gas cap test to check the integrity of the gas cap seal designed to minimize fuel vapor loss or hydrocarbon emissions. Any vehicle with a gas cap that does not hold pressure consistent with the design standard for the vehicle shall be *failed*.

E. On-board diagnostics (OBDII): All 1996 and newer gasoline motor vehicles must pass an on-board diagnostics test specified by 40 CFR Part 51, Subpart S, *Inspection/Maintenance Program Requirements*. Any vehicle with an illuminated malfunction indicator lamp (MIL) or a set diagnostic trouble code (DTC) shall be *failed*. Any 1996 and newer model year vehicles that have been determined by the program manager to be OBDII incompatible shall be tested using the two-speed idle test with maximum allowable exhaust standards of 100 ppm hydrocarbons and 1.0 % carbon monoxide.

[5/20/88. . .11/13/91, 8/25/92, 9/23/94, 12/1/95; 20.11.100.17 NMAC - Rn, 20 NMAC 11.100.II.6, 10/1/02; A, 5/1/04; 20.11.100.17 NMAC - Rn & A, 20.11.100.14 NMAC, 1/1/12; A, 9/10/2016]

20.11.100.18 VEHICLE INSPECTION REPORT:

A. Vehicle inspection reports (VIRs) shall only be purchased at program headquarters. Unused VIRs shall not be exchanged, sold or given by any person to any other person. All unused VIRs shall be turned in to the headquarters for credit or a refund, as the program manager determines is appropriate.

B. A pass VIR shall be issued to each motorist whose vehicle has undergone inspection and passed all criteria regarding on-board diagnostics, exhaust emissions, anti-tampering, pressurized gas cap and visible emissions as applicable. A fail VIR shall be issued to each motorist whose vehicle has undergone inspection and failed on-board diagnostics or any of the criteria regarding exhaust emissions, anti-tampering, pressurized gas cap and visible emissions as applicable. Vehicles that have failed any portion of an inspection and have been subsequently repaired and adjusted and passed

a reinspection shall be issued a pass VIR. Pass VIRs shall be presented to the MVD upon re-registration of the vehicle.

C. VIRs may not be defaced by stamping information on, or affixing stickers to, the front or back of the VIR except in the delineated area designated by the VPMD program manager. Any *air care* inspector or *air care* station found to be defacing VIRs may be subject to an enforcement action pursuant to 20.11.100.36 NMAC and penalties pursuant to 20.11.100.33 NMAC.

[5/20/88. . .11/13/91, 9/23/94, 12/1/95, 8/1/97; 20.11.100.18 NMAC - Rn, 20 NMAC 11.100.II.7, 10/1/02; A, 5/1/04; 20.11.100.18 NMAC - Rn & A, 20.11.100.15 NMAC, 1/1/12]

20.11.100.19 REPAIRS, ADJUSTMENTS, AND RE-INSPECTIONS:

Every motor vehicle that fails an inspection required by 20.11.100 NMAC shall be repaired as necessary to pass re-inspection. If replacement of parts is required, the parts shall only be new aftermarket parts approved by the program manager or new original equipment, manufacturer's parts or assemblies.

A. Repairs required by Subsection A of 20.11.100.19 NMAC, shall include but are not limited to, the following as applicable to the type of failure.

(1) Exhaust emissions: adjust idle speed, fuel/air ratio and ignition timing to manufacturer's specifications including replacement of spark plugs, spark plug wires, air filters and PCV specified by the manufacturer.

(2) Anti-tampering: replace the missing or disabled components with replacement parts acceptable to the program manager.

(3) Visible emissions: Repair engine or replace inoperative emissions control devices as required to eliminate visible emissions.

(4) Gas cap: Replace gas cap with a new approved aftermarket or original equipment cap.

(5) On-board diagnostics: Repair malfunction(s) indicated by diagnostic trouble code(s), clear diagnostic trouble code(s) and drive vehicle through drive cycle required to reset readiness monitors in order to ensure repair effectiveness and elimination of diagnostic trouble codes.

B. Any person may repair, adjust or replace parts as necessary to prepare a vehicle to pass re-inspection, but not after an inspection has commenced.

C. Re-inspections may be obtained at any *air care* station. One free retest, within 90 calendar days of a failed test, may be obtained at the program headquarters, if requested.

[11/13/91. . .9/23/94, 12/1/95; 20.11.100.19 NMAC - Rn, 20 NMAC 11.100.II.8, 10/1/02; 20.11.100.19 NMAC - Rn & A, 20.11.100.16 NMAC, 1/1/12]

20.11.100.20 COMPLIANCE TIME EXTENSION:

A. Time extension for repairs. Vehicles that are unable to pass re-inspection may be eligible to obtain a time extension if the following conditions are met:

(1) the owner shall provide evidence satisfactory to the program manager or his designee, that at least \$300.00 has been spent on the vehicle at a licensed repair facility for emissions-related repairs; or

(2) the owner shall provide evidence satisfactory to the program manager or his designee that at least \$300.00 of repair work is required to bring the vehicle up to an engine performance level capable of passing an emissions inspection; and

(a) in order to receive a time extension based on a estimate of repairs, the owner must prove to the program manager or his designee that the owner is financially incapable of paying for the repairs; and

(b) the repair work estimate shall be from a licensed repair facility.

B. Application for time extension. An owner who meets the criteria may apply for a time extension by petitioning the program manager or his designee at the VPMD headquarters, providing receipts for all parts and repair work performed, or providing the required estimate, and listing the following information in order to be eligible for consideration:

(1) vehicle VIN number;

(2) model year and manufacturer;

(3) owner's name and street address;

(4) valid driver's license number and any other information or documentation that the program manager deems necessary; and

(5) if applicable, identification of the business and address where the re-inspection, tune-up or determination was made, including documentation acceptable to the program manager or his designee that critical parts are unavailable.

C. Time extension limitations:

(1) A time extension shall be granted only one time in the life of a vehicle and shall be for a period of up to 12 consecutive months.

(2) If a vehicle that has been granted a time extension is repaired within the first 90 days of the extension, the extension may be cancelled and not counted as the one-per-life-of-the-vehicle time extension.

(3) Time extensions shall be limited to 90 days for motor vehicles that exceed any of their maximum allowable exhaust standards as specified in Table I at Subsection A of 20.11.100.17 NMAC by more than twice the level allowed.

D. Free inspection for timely repair. Any failing vehicle repaired within 90 days of its failed test is eligible for a free retest of that vehicle at the vehicle pollution management division headquarters.

E. Inspection due following extension: Any person who owns a motor vehicle for which a time extension has been issued pursuant to 20.11.100.20 NMAC shall have that vehicle inspected within the time frame specified in the extension granted for that vehicle.

F. Expiration upon sale: If a motor vehicle is granted a time extension under 20.11.100.20 NMAC and is sold within the time extension period, the sale shall terminate the extension. The holder of the original time extension shall inform each potential buyer that the vehicle does not comply with the emissions requirements of 20.11.100 NMAC. The seller shall also inform each potential buyer that the time extension is void upon the sale and the vehicle cannot be registered unless the vehicle passes an emissions inspection.

G. Appeals: Any person aggrieved by the decision of the program manager or designee regarding a compliance time extension may appeal by petitioning the program manager in writing for reconsideration of the decision. The petition shall provide the basis for reconsideration of the decision made regarding the time extension. The program manager, at his discretion, may review the petition and record and affirm or deny the decision on the request for the time extension, or the program manager may arrange for a hearing on the record at the city of Albuquerque office of administrative hearings, to be held no later than 15 working days after receipt of the request for reconsideration. The petitioner shall submit a \$50.00 fee to the office of administrative hearings, which shall set the time and place for the hearing. The hearing officer shall present written findings of fact and a recommendation of action to the program manager, who shall make the final decision and forward the findings and decision promptly to the petitioner. The final decision of the program manager may be appealed to the Albuquerque - Bernalillo county air quality control board in accordance with 20.11.81 NMAC.

[5/20/88. . .11/13/91, 8/25/92, 9/23/94, 12/1/95; 20.11.100.20 NMAC - Rn, 20 NMAC 11.100.II.9, 10/1/02; A, 5/1/04; 20.11.100.20 NMAC - Rn & A, 20.11.100.17 NMAC, 1/1/12]

20.11.100.21 CERTIFICATION REQUIREMENTS FOR *AIR CARE* STATIONS:

A. No person shall solicit, advertise or imply that a facility is an *air care* station certified by the program manager to conduct inspections pursuant to 20.11.100 NMAC without having a current program-issued certificate on display on the premises. Any *air care* inspection station that has its certification permanently or temporarily withdrawn or canceled by the board or the program manager shall immediately remove all inspection related signs and cease to represent the facility as a certified *air care* station.

B. No *air care* station owner or operator shall allow a person to conduct any part of an inspection pursuant to 20.11.100 NMAC unless the person is an *air care* inspector certified by the program manager and has a current program-issued certificate on display on the premises.

C. Any person may apply for certification to operate an *air care* station.

D. Before constructing, installing or renovating a facility or building intended for use as an *air care* station, the owner or operator shall submit an application and receive pre-approval to operate the facility as an *air care* station. The applicant shall also provide information on traffic flow and how it will be managed to prevent unsafe conditions. The applicant shall also indicate how and where the customer may view the vehicle inspection from start to finish.

E. The program manager may issue a station certificate to a person who applies and demonstrates to the program manager's satisfaction the following minimum conditions shall be in effect and equipment shall be present at the applicant's proposed *air care* station:

(1) at least one certified *air care* inspector whose certification is current and listed with the program manager shall be present and shall conduct all the inspections of motor vehicles; no inspection shall be performed in whole or in part by any person who is not a certified *air care* inspector;

(2) at least one approved emissions analyzer owned or leased by the station shall be in place and operating within the equipment specification limits;

(3) in order to qualify for certification, the facility shall also be equipped and supplied as follows:

(a) sufficient hand tools and automotive diagnostic equipment for proper performance of the inspections;

(b) program approved span gas and compatible equipment for performing gas span checks;

(c) suitable non-reactive tail pipe extenders or probe adapters for inspecting vehicles with screened or baffled exhaust systems;

(d) the approved emissions analyzer manufacturer's maintenance and calibration manual; and

(e) gas cap checking adaptors;

(4) the *air care* station shall provide the vehicle owner or driver with access to the test area so that observation of the entire official inspection process is possible; access may be limited, but in no way shall prevent full observation of the entire official inspection process from start to finish; and

(5) certified *air care* station owners or operators shall be responsible for the general management of their facility(ies) and for the supervision of their *air care* inspectors in accordance with 20.11.100 NMAC.

F. "Emissions-inspection-only" stations may be authorized by the program manager. Emissions-inspection-only stations shall indicate on a sign authorized by the program and placed in a readily visible location that no emissions-related adjustments or repair services are available. Repair-related requirements of Subsection B of 20.11.100.23 NMAC do not apply to "inspection-only" stations.

[5/20/88. . .11/13/91, 9/23/94, 12/1/95; 20.11.100.21 NMAC - Rn, 20 NMAC 11.100.II.10, 10/1/02; 20.11.100.21 NMAC - Rn & A, 20.11.100.18 NMAC, 1/1/12]

20.11.100.22 BASIS FOR DENIAL OF *AIR CARE* STATION CERTIFICATION:

The program manager may deny certification to a facility that does not:

A. comply with all applicable federal, state and local laws and regulations;

B. provide for an entrance and a dedicated inspection area inside the facility that is large enough to accept all vehicles with a GVW of 8500 lbs or less presented for inspection;

C. provide for adequate traffic flow; or

D. provide adequate viewing access by the vehicle owner or driver or for surveillance by program auditors.

[5/20/88. . .8/25/92, 9/23/94; 20.11.100.22 NMAC - Rn, 20 NMAC 11.100.II.11, 10/1/02; A, 5/1/04; 20.11.100.22 NMAC - N, 1/1/12]

20.11.100.23 PERFORMANCE OF CERTIFIED *AIR CARE* STATIONS:

- A.** A certified *air care* station shall obtain and pay for routine and unscheduled maintenance and replacement parts for the approved exhaust gas analyzer.
- B.** A certified *air care* station shall accept and perform emissions inspections on all vehicles presented for inspection and shall have adequate reference manuals and basic emissions information. Emissions inspections shall not be performed on vehicles if the emissions inspection would pose a threat to any person's safety. A motor vehicle shall not be accepted for repair unless the station has adequate information regarding idle speed, idle mixture, timing, dwell, fast idle speed specifications, high altitude specifications and information describing emissions control systems, diagnostic and repair procedures, if normally available in the trade.
- C.** The times that a certified *air care* inspector will be available to conduct inspections shall be posted if inspection times do not include all hours the station is open for business.
- D.** Each certified *air care* station shall post a sign in a conspicuous location, on the exterior of the station, indicating testing hours and the fee charged for each inspection. The sign shall meet the uniform format and style requirements established by the program manager.
- E.** A certified *air care* station shall not refuse any vehicle for inspection based upon the race, color, religion, sex, national origin or ancestry, age or physical handicap or disability of the motorist, nor may the station refuse any vehicle for inspection because of the make, model or year of the vehicle.
- F.** Each certified *air care* station shall provide vehicle owners or drivers access to the inspection area so that the owner or driver can observe the official inspection. Access may be limited but in no way shall prevent full observation.
- G.** A certified *air care* station shall perform initial emissions inspection on vehicles without repair or adjustment prior to the inspection. This requirement shall not apply to a vehicle if an owner or driver specifically asks for repairs or adjustments prior to an emissions inspection, without prior suggestion or recommendation by the inspector or station owner or operator, and a work order is completed and authorized by the vehicle owner or driver.
- H.** Each certified *air care* station shall employ a sufficient number of *air care* inspectors so the station can adequately staff regular testing hours, as set by the *air care* station and approved by the program manager.
- I.** Each *air care* station shall ensure that emissions inspections are performed on every vehicle, upon presentation, unless a vehicle test poses a threat to a person's safety. An *air care* station that is not designated as an "inspection only" station may

elect to conduct testing "by appointment only," as approved by the program manager, but shall indicate this on the station sign in lieu of posting the testing hours.

J. A person who owns or operates a certified *air care* station that changes the business name, ownership, official inspection personnel, or approved exhaust gas analyzers, or ceases to operate as an *air care* station, shall notify the program manager in writing within 10 days of the change. A certified *air care* station may have its certification revoked for failure to provide required notice. Relocation of an *air care* station, without prior review and written approval of the program manager as required, shall automatically terminate and invalidate a current station certificate.

[5/20/88. . .11/13/91, 9/23/94, 12/1/95, 8/1/97; 20.11.100.23 NMAC - Rn, 20 NMAC 11.100.II.12, 10/1/02; A, 5/1/04; 20.11.100.23 NMAC - N, 1/1/12]

20.11.100.24 FLEET AIR CARE STATIONS:

A. No individual or business shall represent itself as a certified fleet *air care* station without being in possession of a duly authorized and currently valid certificate issued by the program manager.

B. Any person may apply for authorization for an *air care* station authorized by the program to perform inspections under 20.11.100 NMAC for the purposes of fleet inspection of a company or corporate business, or governmental fleet. Fleet *air care* stations shall not offer or provide the inspections to the company's employees or the general public. Fleet *air care* stations shall be equipped and operated and shall be subject to the same quality assurance requirements as a certified *air care* station. The signage requirements of Subsections C and D of 20.11.100.23 NMAC do not apply to a fleet *air care* station. The fee for certifying a fleet *air care* station shall be the same as for a certified *air care* station.

C. Notwithstanding Subsections A and B of 20.11.100.24 NMAC, any person with a fleet may contract with any certified *air care* station to provide inspections required to satisfy 20.11.100 NMAC.

[5/20/88. . .8/25/92, 9/23/94, 12/1/95, 20.11.100.24 NMAC - Rn, 20 NMAC 11.100.II.13, 10/1/02; 20.11.100.24 NMAC - Rn & A, 20.11.100.19 NMAC, 1/1/12]

20.11.100.25 [RESERVED]

[5/20/88. . .11/13/91, 8/25/92, 9/23/94, 12/1/95; 20.11.100.25 NMAC - Rn, 20 NMAC 11.100.II.14, 10/1/02; A, 5/1/04; Repealed, 1/1/12]

20.11.100.26 CERTIFICATION OF AIR CARE INSPECTORS:

A. No person shall represent himself as a certified *air care* inspector without being in possession of a duly authorized and currently valid certificate issued by the program manager.

B. Certificates issued under Subsection B of 20.11.100.26 NMAC shall be valid for 12 months unless the program manager requires re-certification earlier as provided in 20.11.100.27 NMAC.

(1) Certification requirements for *air care* inspectors:

(a) A person seeking certification shall file an application with the program manager on forms provided by the program. The issuance of certificates shall be administered by the program. Before an applicant may be granted a certificate, the applicant shall demonstrate general knowledge, skill and competence requirements under the program and in accordance with training and testing requirements set forth by the program manager.

(b) The knowledge, skill and competence that an applicant must demonstrate shall include, but is not limited to, the following:

(i) general operation and purpose of emissions control systems for all types of motor vehicles;

(ii) how HC and CO relate to timing and air/fuel ratio control;

(iii) rules and regulations pertaining to inspection and the inspection procedures established in the 20.11.100 NMAC;

(iv) general understanding of the benefits to vehicle owners provided in the *Defect Warranty Provisions* of Section 207(a) and the *Performance Warranty Provisions* of Section 207(b) of the Federal Clean Air Act as it applies to the inspection;

(v) ability to recognize by visual inspection the emissions control equipment for 1975 and newer vehicles, distinguishing between those requiring and those not requiring inspection;

(vi) operation and proper use, care, maintenance and gas span checking of the approved exhaust gas analyzers;

(vii) proper use, filing and storage of inspection forms, VIRs and supplemental documents;

(viii) ability to perform an actual emissions inspection from start to finish;
and

(ix) other information as the program manager requires.

(c) The program may issue a certificate to the applicant when the program manager determines that the applicant has successfully completed the certification requirements of 20.11.100 NMAC.

(d) Persons certified under Subsection B of 20.11.100.26 NMAC shall inform the program manager within 10 days of any change in legal name, employment status or current mailing address. Each certified inspector will be assigned a personal identification number that will be checked for correlation in data audits of the program. Failure to keep the program manager informed may result in revocation of certification.

(2) Performance of certified *air care* inspectors: Certified *air care* inspectors shall:

(a) at no time allow another person to use his certificate or personal code to enter into an approved exhaust gas analyzer, nor shall he delegate his authority to another person to perform any official inspection or any part of an inspection under his name or personal identity code;

(b) accept all vehicles for emissions inspection and perform the emissions inspections in an expedient manner in order to avoid unnecessary public inconvenience; however, an *air care* inspector shall not accept a vehicle for inspection if the inspection would pose a threat to any person's safety;

(c) refrain from deviation from 20.11.100 NMAC and official procedures established for this program;

(d) at no time during the emissions inspections sequence attempt or allow adjustments to be performed on the vehicle being inspected until the final VIR is complete; and

(e) sign all VIRs at the time of inspection.

[5/20/88. . .11/13/91, 8/25/92, 9/23/94, 12/1/95, 20.11.100.26 NMAC - Rn, 20 NMAC 11.100.II.15, 10/1/02; A, 5/1/04; A, 9/1/04; 20.11.100.26 NMAC - Rn & A, 20.11.100.21 NMAC, 1/1/12]

20.11.100.27 RECERTIFICATION REQUIREMENTS FOR CERTIFIED *AIR CARE* INSPECTORS:

A. The program manager will reissue certification to any *air care* inspector who demonstrates updated competency as evidenced under the then-current requirements administered by the program. Re-certification shall be required upon expiration of a current annual certificate or sooner if either of the following situations exist.

(1) If the program manager determines a need to update the general qualifications of *air care* inspectors prior to the annual re-certification period, holders of the certificates may be required to re-qualify.

(2) As a result of auditing or investigating consumer complaints, a certified inspector may be required to re-certify if the program manager determines that competency or other problems must be corrected in order to protect the public.

B. Certified air care inspectors shall re-certify during the month the current certification is scheduled to expire.

C. Each *air care* inspector is responsible for applying for recertification in a timely manner. The date of certification expiration is provided on the inspector certification certificate, which shall be displayed in the *air care* station, and the gas analyzer provides notice of certification expiration starting at least 30 days prior to the certificate expiration date. VPMD will not give special consideration regarding the time and availability of a recertification class to an *air care* inspector whose certification has lapsed unless good cause exists, as determined by the program manager.

D. VPMD will review the VID records of each *air care* inspector at the time of the recertification request to determine if there is a pattern of violations or fraud during inspections performed during the previous three years.

E. If a former air care inspector requests recertification, but has allowed a lapse in recertification that is greater than 90 days in length, the program manager may require the former inspector to take the week-long certification training class rather than the recertification training class.

[5/20/88. . .12/1/95; 20.11.100.27 NMAC - Rn, 20 NMAC 11.100.II.16, 10/1/02; 20.11.100.27 NMAC - N, 1/1/12]

20.11.100.28 DENIAL OR SUSPENSION OF RECERTIFICATION FOR *AIR CARE* INSPECTOR:

A. The VPMD program manager may suspend an existing certification or deny recertification for the following reasons:

(1) the VPMD program manager has determined, as a result of a review of the VID or VPMD inspection files, that an *air care* inspector has committed violations resulting in an accumulation of 16 points or more;

(2) the *air care* inspector has failed to attend the recertification training; or

(3) the *air care* inspector has failed the recertification test.

B. Whenever a certification has been suspended and the certification expires during the suspension period, the *air care* inspector may not obtain a new certification until the term of the suspension has expired.

[5/20/88; 20.11.100.28 NMAC - Rn, 20 NMAC 11.100.II.17, 10/1/02; 20.11.100.28 NMAC - N, 1/1/12]

20.11.100.29 ADMINISTRATIVE FEES FOR CERTIFICATIONS AND RECERTIFICATIONS:

A. Any person seeking certification, or annual recertification thereof, in order to participate in the program as an *air care* station or *air care* inspector shall pay to the city the required fee as established below, before a certification shall be issued or renewed by the program.

Certifications	Amount
Certified <i>Air Care</i> Station	\$200.00
Certified <i>Air Care</i> Inspector	\$35.00

B. Every *air care* station or *air care* inspector who has had a certification suspended shall pay the following fees before the *air care* station or *air care* inspector certification will be reinstated.

Reinstatement	Amount
<i>Air Care</i> Station Certification	\$200.00
<i>Air Care</i> Inspector Certification	\$35.00

C. Any *air care* inspector who requests to be certified on more than one motor vehicle emissions analyzer shall pay a \$35.00 fee for each analyzer.

[9/23/94. . .12/1/95, R 8/1/97; 20.11.100.29 NMAC - Rn, 20 NMAC 11.100.II.18, 10/1/02; 20.11.100.29 NMAC - N, 1/1/12]

20.11.100.30 VPMD QUALITY ASSURANCE AUDITS OF AIR CARE STATIONS AND AIR CARE INSPECTORS:

VPMD's quality assurance audits and data analysis are designed to: discover, correct and prevent fraud, waste and abuse; determine whether emissions testing procedures are being correctly performed; assess whether emissions analyzers are measuring accurately; and find any existing problems that could impede program performance.

A. The program shall conduct announced and unannounced overt quality assurance audits of each certified *air care* station as ordered by the program manager. The duties of the VPMD auditor shall include but not be limited to the following:

(1) verify that the equipment, reference materials and staffing agree with the information on file with the program manager and are sufficiently maintained to meet the intent of the VPMD program;

(2) check the accuracy of data entry and production of the final inspection reports furnished to motorists;

(3) perform a complete quality assurance survey on the analyzer, the calibration gas system, and automatic zero-span performance in relation to the specifications and requirements of 20.11.100 NMAC;

(4) the field audit gases for standardizing approved analyzers used for inspections shall conform to the provisions specified in 40 CFR, Part 86, Subpart B, Section 86.114-94, *Analytical Gases*, for automotive exhaust emissions testing; those gases shall be of "precision" quality, certified to be within + (plus-or-minus) 1% of the labeled concentration, and certified by the NIST; and

(5) examine the service contract for the analyzer to assure proper lockout controls, data record capture and response in case of trouble.

B. The program shall perform covert quality assurance audits without offering official credentials or identification by submitting motor vehicles for inspection in order to examine the station operation under actual conditions. Covert audit vehicles may be offered at random times in a condition resulting from intentional maladjustment, or with emissions control components intentionally removed or rendered inoperative by VPMD. The results of covert audits by the program will provide data for assessing the performance of certified *air care* stations and certified *air care* inspectors and their adherence to the requirements of 20.11.100 NMAC.

C. VPMD shall perform covert quality assurance audits of the *air care* stations and *air care* inspectors by observing their activities unannounced from a remote off-site area.

D. VPMD shall perform data analysis of information contained in the VID to audit the performance of *air care* stations and *air care* inspectors. The criteria for the data analysis will be selected by VPMD in response to VPMD investigations, complaints, certification renewals or other triggers, or may occur at random times on randomly-selected stations and inspectors.

[20.11.100.30 NMAC - Rn & A, 20.11.100.24 NMAC, 1/1/12]

20.11.100.31 ENFORCEMENT AGAINST AIR CARE STATIONS AND INSPECTORS:

A. If a VPMD program manager or a compliance auditor finds a condition or practice that violates any requirement of 20.11.100 NMAC, VPMD may take any enforcement action or combination of actions it finds necessary, including, but not limited to: a written

warning, a notice of violation, a letter denying recertification, a notice of intent to suspend or revoke an active certification, or immediate lockout of the gas analyzer.

B. Violations for which the program manager or VPMD personnel may take action under 20.11.100.31 NMAC include:

(1) any act or omission by an *air care* station or an *air care* inspector that causes the station or inspector to be in violation of any applicable requirement of 20.11.100 NMAC;

(2) an *air care* station or inspector taking or performing any action prohibited under 20.11.100.16 NMAC as determined by any type of investigation by VPMD, such as an overt or covert audit, or VID analysis; and

(3) any other act or omission by a station or inspector that results in a situation that does not comply with 20.11.100 NMAC.

C. An enforcement action may be issued to an *air care* station or *air care* inspector by first class mail, hand delivery by VPMD personnel or electronically through the EIS.

D. The program manager may issue a notice of violation to the *air care* station for acts or omissions by an *air care* inspector at the *air care* station regardless of whether VPMD has issued a notice of violation to the *air care* inspector who committed the violation.

E. A notice of violation or warning issued pursuant to 20.11.100 NMAC, shall be in writing on an approved VPMD form and shall specify whether the notice of violation is issued to the inspector or the station. The notice shall include notification of the penalty points assessed for the violation and the total penalty points the *air care* station or inspector has accumulated during the preceding 12-month period.

[20.11.100.31 NMAC - N, 1/1/12]

20.11.100.32 CATEGORIES OF VIOLATIONS:

The program manager, supervisor or VPMD auditor shall review each notice of violation for consistency with 20.11.100 NMAC and determine the character and category of the violation for the purpose of assessing penalty points, monetary penalties or taking other enforcement action.

A. Intentional violations. An intentional violation is a violation that is the result of actions that are reckless, deliberate or purposeful or that occur when the person who committed the act or omission knew or should have known the conduct was a violation of 20.11.100 NMAC.

B. Serious violations. Serious violations are actions that occur as a result of inspector error, which includes an omission, and are likely to result in inaccurate test results.

C. Minor violations are common errors that can be prevented by diligence and care.

[20.11.100.32 NMAC - N, 1/1/12]

20.11.100.33 PENALTY ASSESSMENT:

A. Penalty points may be assessed against the *air care* inspector, *air care* station or both. Penalty points are tracked for each *air care* station and each *air care* inspector throughout a rolling 12 month period.

B. Violations committed during an inspection shall be assessed against the air care inspector.

C. Program violations, such as allowing or requiring an inspector to perform an improper test or allowing a non-certified individual to perform part or all of a test; improper filing and storage of program documents, or improperly posted signs, shall be assessed against the station.

D. Air care stations may be held responsible for their inspectors' actions if evidence establishes that the inspector violations occurred due to lack of diligence or supervision by the *air care* station owner or operator.

E. Intentional violations.

(1) Each intentional violation may result in the issuance of up to 16 points for each occurrence.

(2) 16 points shall result in a suspension or revocation of certification, as appropriate, for the *air care* inspector and the *air care* station at which the violations occurred.

(3) When an intentional violation results in a false pass, the *air care* station or inspector may be assessed a monetary penalty equal to 2.5 times the estimated cost of repair of the vehicle, according to the industry flat rate book.

(4) When the intentional violation results in a false fail, the *air care* station or inspector may be assessed a monetary penalty of up to \$1,000.

F. Serious violations.

(1) Each serious violation shall be assessed four points for each occurrence.

(2) A serious violation shall require the station to refund the test fee and provide a free retest to the vehicle owner or designee.

(3) A serious violation may also result in a mandatory conference at the VPMD headquarters to discuss the violation and how to assure that there will be no future repetition of the problem. The results of the conference shall be documented and may include a commitment by the station or inspector or both to complete additional training. The program manager or designee may agree to vacate points if commitments are completed successfully and in a timely manner. Mandatory conferences shall be scheduled and held at the VPMD headquarters.

G. Minor violations: Each minor violation shall be assessed two points. Minor violations shall result in formal written notices of violation.

[20.11.100.33 NMAC - N, 1/1/12]

20.11.100.34 HISTORY OF VIOLATIONS:

A. If the program manager determines that an air care station or air care inspector has a history of violations, the level of enforcement or penalty assessment may be increased for any future violations. The program manager shall not be limited to considering the immediately-preceding 12-month period to determine whether a history of violations exists.

B. When violations continue to occur at an *air care* station or by an *air care* inspector following previous enforcement actions, the program manager may issue a more severe enforcement action, including but not limited to: issuing a notice of violation instead of a written warning for a minor violation, or issuing an intent to revoke or suspend a certification for a non-minor violation that is the latest violation in a history of violations.

C. When violations continue to occur at an *air care* station or by an *air care* inspector following previous enforcement actions, the program manager may assess more severe penalties or a greater number of penalty points as a result of an *air care* station or *air care* inspector committing additional errors or violations.

D. Significant accumulation of penalty points shall result in an enforcement action described in 20.11.100.35 NMAC.

[20.11.100.34 NMAC - N, 1/1/12]

20.11.100.35 ENFORCEMENT ACTION, DENIAL, SUSPENSION OR REVOCATION OF CERTIFICATIONS:

A. The program manager is authorized, after reasonable investigation and showing of a violation of any provision of 20.11.100 NMAC, to take enforcement actions

including monetary penalties and denial, suspension or revocation of certification to operate under the program as a certified *air care* station or certified *air care* inspector. In deciding on an appropriate action, the program manager may consider: past violations on file against the charged party, previous actions that may have been taken by the program against the charged party, settlement or consent agreements that document past violations, and judicial decisions if related to the requirements of 20.11.100 NMAC.

B. Notwithstanding the provisions of Subsection C of 20.11.100.35 NMAC, the program manager may immediately suspend or revoke the certification of a certified *air care* station or certified *air care* inspector if the program manager determines that continued operation as an *air care* station or *air care* inspector would jeopardize the public health, safety and welfare; violate 20.11.100 NMAC or compromise the program.

C. Before taking any action to suspend or revoke a certification, the program manager shall inform the inspector or station owner of the charges. Any party so informed may request a hearing on the merits before the program manager. The request shall be made in writing to the program manager within 15 consecutive days after receiving the notice of intent to suspend or revoke the certification.

D. Upon receipt of a written request for a hearing on the merits, the program manager shall set a date, time and place for the hearing no more than 60 consecutive days from the date of receipt of the request. No fewer than 15 consecutive days before the hearing, the program manager shall inform the charged party of the date, time and place of the hearing. The program manager may appoint a hearing officer. At the hearing, the charged party may demonstrate why a monetary penalty should not be imposed and the certification should not be suspended or revoked. The hearing officer shall provide findings of fact, conclusions of law and a written recommendation to the program manager based on the evidence presented at the hearing.

E. After the hearing on the merits, based on the findings of the initial investigation and the recommendation of the hearing officer, the program manager shall take appropriate action including but not limited to any one or a combination of the following: monetary penalty, suspension or revocation of the certification or dismissal of the charges. The program manager may impose monetary penalties as authorized by the City of Albuquerque and Bernalillo County Joint Air Quality Control Board Ordinances, the City of Albuquerque and Bernalillo County Motor Vehicle Emissions Control Ordinances and the New Mexico Air Quality Control Act. The program manager may consider past violations on file against the charged party, previous actions that may have been taken by the program against the charged party, settlement or consent agreements that document past violations and judicial decisions if related to the requirements of 20.11.100 NMAC.

F. After a hearing specified by 20.11.100.35 NMAC, any party whose application for certification is denied or certificate is suspended or revoked may appeal the decision of the program manager to the board. To perfect the appeal to the board, the appellant shall deliver a written request to the headquarters within 15 consecutive days after

receipt of the program manager's decision. At the next regular meeting of the board, the program manager shall inform the board that an appeal has been filed. The board may make its determination based on the record or may require a hearing de novo. If the board decides on a hearing de novo, the petitioner shall pay a fee of \$125.00 pursuant to Subsection C of 20.11.2.22 NMAC by the deadline established by the board. A hearing de novo shall be held in accordance with 20.11.81 NMAC. The board may uphold, overturn or amend the program manager's decision. If the board decides to conduct a hearing de novo, the board may appoint a hearing officer, and the board shall set a date, time and place for the hearing and shall hold the hearing within 90 consecutive days of the headquarters' receipt of the written request. No fewer than 15 consecutive days before the hearing, the board shall inform the appellant of the date, time and place of the hearing. The decision of the board shall be final.

[20.11.100.35 NMAC - Rn & A, 20.11.100.26 NMAC, 1/1/12]

20.11.100.36 ADDITIONAL ENFORCEMENT AUTHORITY:

A. Mandatory inspections: Any person who owns a motor vehicle subject to 20.11.100 NMAC and fails to demonstrate compliance with 20.11.100 NMAC shall be issued a failing VIR and shall be refused re-registration by the MVD pursuant to the Motor Vehicle Code, 66-3-7.1 NMSA (1978).

B. Procedural provisions: Any person who violates the requirements of 20.11.100 NMAC shall be guilty of a misdemeanor pursuant to either the City of Albuquerque Joint Air Quality Control Board Ordinance 9-15-1-99(B)(1) R.O.1994 or the Bernalillo County Joint Air Quality Control Board Ordinance No. 94-5. Any person who violates a requirement of 20.11.100 NMAC shall also be subject to all other enforcement actions authorized by the Air Quality Control Act, 74-2-1 et. seq., NMSA 1978 and other remedies available at law or equity.

C. Referral for further investigation or legal remedy. In addition to suspension or revocation of certification and monetary penalties, cases that involve an intentional violation may be referred to the attorney general, district attorney or city attorney, as appropriate, for further investigation of fraudulent acts or other acts contrary to law.

[20.11.100.36 NMAC - Rn & A, 20.11.100.27 NMAC, 1/1/12]

PART 101: MOTOR VEHICLE INSPECTION - CENTRALIZED

20.11.101.1 ISSUING AGENCY:

Albuquerque/Bernalillo County Air Quality Control Board. P.O. Box 1293, Albuquerque, NM 87103. Telephone: (505) 768-2600.

[11/16/93. . .12/1/95; 20.11.101 NMAC - Rn, 20 NMAC 11.101.I.1, 10/1/02]

20.11.101.2 SCOPE:

All motor vehicles, as defined in 20.11.101.7 NMAC, shall be inspected biennially for compliance with the requirements of 20.11.101 NMAC, unless otherwise exempted. A vehicle shall not be registered or re-registered until such a vehicle has passed the emissions inspection and tampering inspection prescribed in 20.11.101.14 NMAC or has been issued a time extension for repairs by the VPMD.

A. Federal Installations: Vehicles, which are operated on federal installations located within Bernalillo County, shall comply with 20.11.101 NMAC regardless of whether the vehicles are registered in New Mexico or Bernalillo County. The inspection requirement applies to all employee owned or leased vehicles as well as agency operated vehicles.

B. Fleet Vehicles: Fleet vehicles, which are registered outside Bernalillo County but are primarily operated in Bernalillo County, shall comply with 20.11.101 NMAC.

C. Municipalities and Counties: If the Program enters into a joint powers agreement with another municipality or county to extend the enforcement of 20.11.101 NMAC, all vehicles registered in that municipality or county must comply with 20.11.101 NMAC.

[11/16/93. . .12/1/95; 20.11.101.2 NMAC - Rn, 20 NMAC 11.101.I.2, 10/1/02]

20.11.101.3 STATUTORY AUTHORITY:

20.11.101 NMAC is adopted pursuant to the authority provided in the New Mexico Air Quality Act, NMSA 1978 Sections 74-2-4, 74-2-5.C: and the Joint Air Quality Board Ordinance, Bernalillo County Ordinance 94-5 Section 4, Revised Ordinances of Albuquerque ROA 1994 Section 9-5-1-4.

[11/16/93. . .12/1/95; 20.11.101.3 NMAC - Rn, 20 NMAC 11.101.I.3, 10/1/02]

20.11.101.4 DURATION:

Permanent.

[12/1/95; 20.11.101.4 NMAC - Rn, 20 NMAC 11.101.I.4 10/1/02]

20.11.101.5 EFFECTIVE DATE:

Shall become effective upon the date EPA issues notice requiring the Program to operate a centralized vehicle emissions inspection and maintenance program, in which case the centralized program established in 20.11.101 NMAC will be implemented.

[8/31/94. . .12/1/95; 20.11.101.5 NMAC - Rn, 20 NMAC 11.101.I.5 & A, 10/1/02]

20.11.101.6 OBJECTIVE:

The objective of 20.11.101 NMAC is to provide for the control and regulation of CO and HC emissions above certain levels from motor vehicles, and anti-tampering.

[11/16/93. . .12/1/95; 20.11.101.6 NMAC - Rn, 20 NMAC 11.101.I.6, 10/1/02]

20.11.101.7 DEFINITIONS:

In addition to the definitions in 20.11.101.7 NMAC the definitions in 20.11.1 NMAC apply unless there is a conflict between definitions, in which case the definition in 20.11.101 NMAC shall govern.

A. "Air Care Inspection Facility" means a business operated by an Independent Contractor authorized by contract in accordance with 20.11.101.18 NMAC to inspect motor vehicles and issue certificates of inspection. Repairs shall not be performed at an AIR CARE Inspection Facility.

B. "Air Care Inspector" means an individual authorized by a certificate issued by the Program to perform inspections of motor vehicles and who has met the requirements of 20.11.101.21 NMAC.

C. "Air Care Technician" means an individual certified in accordance with 20.11.101.18 NMAC to repair and adjust motor vehicles, which are subject to inspection pursuant to 20.11.101 NMAC.

D. "Biennial" means every other year.

E. "Chassis" means the complete motor vehicle, including standard factory equipment, exclusive of the body and cab.

F. "City" means the City of Albuquerque, a New Mexico municipal corporation.

G. "Conditioning Mode" means either a fast idle test condition or loaded test condition.

H. "County" means the County of Bernalillo, a political subdivision of the state of New Mexico.

I. "Dealer" means any person who sells or solicits or advertises the sale of new or used motor vehicles subject to registration in the State of New Mexico and as further defined in the Motor Vehicle Code Section 66-1-4.4.D, NMSA 1978.

J. "Distributor" means any person who distributes or sells new or used motor vehicles to dealers and who is not a manufacturer.

K. "Division or VPMD" means the Vehicle Pollution Management Division of the City Environmental Health Department, which provides the staff for the Albuquerque/Bernalillo County Vehicle Pollution Management Program.

L. "Driver" means every person who drives or is in actual physical control of a motor vehicle upon a highway or upon property used for inspections.

M. "Essential Parts" means all integral and body parts of a vehicle of a type required to be registered under the Motor Vehicle Code, the removal, alteration or substitution of which would tend to conceal the identity of the vehicle or substantially alter its appearance, model type or mode of operation.

N. "Exhaust Emissions" means carbon monoxide, hydrocarbon and all other substances emitted through a motor vehicle's exhaust system, after passing downstream of the engine block exhaust ports and exhaust emissions control devices, if any.

O. "Exhaust Emissions Control Device" means equipment designed by the manufacturer of the vehicle and installed on a motor vehicle for the purpose of reducing pollutants emitted from the vehicle, or a system or engine modification designed by the manufacturer of the motor vehicle which causes a reduction of pollutants emitted from the vehicle, or equipment designed by the vehicle manufacturer to prevent damage to or tampering with other exhaust emission control devices.

P. "Field Audit Gas" means a gas mixture with known concentrations of CO₂, CO, and HC that is used by the Program to check the accuracy of exhaust gas analyzers used by authorized inspection facilities.

Q. "Fast Idle Test Condition" means an exhaust emission inspection conducted with the engine of vehicle running under an accelerated condition to an extent prescribed by the Program Manager.

R. "Fleet Air Care Station" means any person, business, government entity, firm, partnership or corporation which provides for the construction, equipping, maintaining, staffing, managing and operation of authorized inspection station for the sole purpose of inspecting its private fleet of motor vehicles subject to 20.11.101 NMAC, and not offering inspection services to its employees or the general public. The fleet must include 10 or more vehicles, which are capable of being centrally fueled.

S. "Fuel" means any material that is burned by the engine of a vehicle in order to propel the vehicle.

T. "Gross Vehicle Weight" means the weight of a vehicle without load, plus the weight of any load thereon.

U. "Government Vehicle" means a motor vehicle exempt from the payment of a registration fee and owned or leased by any federal, state, local, or other governmental entity.

V. "Headquarters" means the main office of the Vehicle Pollution Management Program.

W. "Highway" means every way or place generally open to the use of the public as a matter of right for the purpose of vehicular travel, even though it may be temporarily closed or restricted for the purpose of construction, maintenance, repair or reconstruction.

X. "Idle Mode Test" means an unloaded exhaust emissions test conducted only at the idle condition, as described in the VPMP Procedures Manual.

Y. "Independent Contractor" means any person, partnership, corporation, or business entity with whom the Program Manager enters into a contract providing for construction, equipment, maintenance, personnel, management and operation of official AIR CARE inspection facilities.

Z. "Inspection, Re-inspection or Test" means the mandatory vehicular anti-tampering and emissions inspection conducted both visually and with equipment required by 20.11.101 NMAC.

AA. "Loaded Mode Test" means an exhaust emissions test conducted at cruise conditions as specified by 20.11.101 NMAC and in compliance with 40 CFR Part 51 Appendix B Subpart S.

BB. "Low Emissions Tune-Up" means adjustments and repairs, which can reduce motor vehicle emissions including but not limited to the following procedures:

(1) checking and setting to manufacturer's specifications, the idle mixture, idle speed, ignition timing and dwell, and

(2) checking for proper connection of vacuum lines, electrical wires, and for proper operation of pollution control devices, and

(3) checking and replacement of air breathing filters and positive crankcase ventilation valve as necessary, and

(4) replacement of spark plugs, points, wires, as necessary, and

(5) for all motor vehicles equipped with computer controlled closed-loop feedback exhaust emission control devices and systems, inspecting the operation of the emission control system according to the motor vehicle manufacturer's specified

procedures, including hose routing and on-board diagnostics, new vehicle warranty, and repair or replacement as necessary.

CC. "Manufacturer" means every person engaged in the business of constructing or assembling vehicles of a type required to be registered under the laws of the State of New Mexico.

DD. "Manufacturer's Certificate of Origin or MCO" means a certification, on a form supplied by or approved by the MVD, signed by the manufacturer, stating that the new vehicle described therein has been transferred to the New Mexico dealer or distributor named therein or to a dealer duly licensed or recognized as such in another state, territory or possession of the United States and that such transfer is the first transfer of such vehicle in ordinary trade and commerce. Every such certificate contains a space for proper reassignment to a New Mexico dealer or to a dealer duly licensed or recognized as such in another state, territory or possession of the United States. The certificate also contains a description of the vehicle, the number of cylinders, type of body, engine number and the serial number or other standard identification number provided by the manufacturer of the vehicle, where such exists.

EE. "Model Year" means the year of manufacture of the vehicle based on the annual production period of the vehicle as designated by the manufacturer and indicated on the title and registration of the vehicle. If the manufacturer does not designate a production period for the vehicle, then the model year means the calendar year of manufacture.

FF. "Motor Vehicle" means any vehicle which:

- (1) is propelled by a spark ignition, internal combustion engine, and
- (2) has four or more wheels in contact with the ground, and
- (3) is subject to registration with the New Mexico Motor Vehicle Division to an owner of record who is domiciled within Bernalillo County, or is a government vehicle which is assigned to a governmental unit within Bernalillo County, and
- (4) has a GVW greater than 1,000 and less than 26,000 pounds, and
- (5) is for use upon public roads and highways, and
- (6) is a 1975 model year or newer, and
- (7) is a vehicle not otherwise exempted by 20.11.101 NMAC.

GG. "New Motor Vehicle" is a vehicle, which has undergone a transfer of ownership and is being registered for the first time to any person except in the sale to another licensed motor vehicle dealer for the purpose of resale as a new vehicle.

HH. "Operator" means driver, as defined in 20.11.101 NMAC.

II. "Owner" means a person who holds the legal title of the motor vehicle or, in the event a vehicle is the subject of an agreement for conditional sale or lease thereof with the right of purchase upon performance of the conditions stated in the agreement and with an immediate right of possession vested in the conditional vendee or lessee, or in the event a mortgagor of a vehicle is entitled to possession, then such conditional vendee or lessee or mortgagor.

JJ. "Pass Fail Criteria" means those standards set by 20.11.101 NMAC which specify the maximum allowable motor vehicle exhaust emissions under appropriate specified operating conditions.

KK. "Person" means any individual, partnership, firm, public or private corporation, association, trust, estate, political subdivision or agency, or any other legal entity or legal representative, agent, or assign.

LL. "Program or VPM Program" means the Albuquerque/Bernalillo County Vehicle Pollution Management Program.

MM. "Program Manager" means the classified City employee selected in accordance with the provisions of the Joint Powers Agreement between the City and the County to perform for the Joint Air Quality Control Board those duties required to enforce and administer the provisions of 20.11.101 NMAC or the Program Manager's designee.

NN. "Reconstructed Vehicle" means any vehicle which shall have been assembled or constructed largely by means of essential parts, new or used, derived from other vehicles or makes of vehicles of various names, models and types or which, if originally otherwise constructed, shall have been materially altered by the removal of essential parts, new or used, obtained from other vehicles.

OO. "Registration and Re-registration" means both original registration and renewal of registration of motor vehicles as provided in the New Mexico Motor Vehicle Code, Chapter 66 NMSA 1978.

PP. "Shall be Inspected" means the vehicle shall be subjected to testing and inspection as applicable to model year and weight classification and shall satisfy the criteria of 20.11.101 NMAC as evidenced by the issuance of a certificate of inspection.

QQ. "Standard Gases" means NIST certified emissions samples of gases maintained as primary standards for determining the composition of working gases, field audit gases, or the accuracy of analyzers.

RR. **"Truck"** means every motor vehicle designed, used or maintained primarily for the transportation of property. In addition, all vans and all other vehicles with a GVW greater than 6000 pounds shall be considered a truck.

SS. **"VEGAS"** means a Program-certified, garage-type; computer controlled system, which meets or exceeds the specifications adopted by the Program and is capable of testing vehicles under idle mode and loaded mode conditions.

TT."**VIR****"** means Vehicle Inspection Report, a Program-certified document signed by a certified AIR CARE inspector or other Program authorized official stating that the vehicle described therein is either in compliance (pass), not in compliance (fail), or has an approved time extension in order to achieve compliance through additional repairs or adjustments (time-limit extension).

UU. **"Visible Emissions"** means any fume, smoke, particulate matter, vapor or gas, or combination thereof, except water vapor or steam.

VV. **"VPMP Procedures Manual or Procedures Manual"** means a compilation of procedures developed by the Program Manager pursuant to 20.11.101.12 NMAC.

WW. **"Wholesale"** means the act of any person selling or offering for sale vehicles of a type subject to registration in New Mexico to a vehicle dealer licensed under the Motor Vehicle Code, Chapter 66 NMSA 1978, or who is franchised by a manufacturer, distributor or vehicle dealer to sell or promote the sale of vehicles dealt in by such manufacturer, distributor or vehicle dealer and does not include the act of selling a vehicle at retail as a dealer subject to the dealer-licensing provisions of the Motor Vehicle Code.

XX. **"Working Gases"** means Program-approved span gases maintained by an authorized AIR CARE inspection facility or fleet AIR CARE station to perform periodic calibration of approved exhaust gas analyzers.

YY. **Abbreviations and Symbols:**

- (1) **A/F:** means air/fuel.
- (2) **ASE:** means the National Institute for Automotive Service Excellence.
- (3) **CO:** means carbon monoxide.
- (4) **CO₂:** means carbon dioxide.
- (5) **EPA:** means the Environmental Protection Agency.
- (6) **GVW:** means gross vehicle weight.

- (7) **HC:** means hydrocarbon.
- (8) **HP:** means horsepower.
- (9) **LNG:** means liquefied natural gas.
- (10) **LPG:** means liquefied petroleum gas.
- (11) **MPH:** means miles per hour.
- (12) **MCO:** means manufacturer's certificate of origin.
- (13) **MVD:** means the Motor Vehicle Division of the New Mexico Taxation and Revenue Department.
- (14) **NDIR:** means non-dispersive infrared.
- (15) **%:** means percent.
- (16) **PCV:** means positive crankcase ventilation
- (17) **ppm:** means parts per million by volume.
- (18) **VIN:** means vehicle identification number.
- (19) **40 CFR PART 51:** means the EPA Regulations for Inspection/Maintenance Programs published November 5, 1992 mandated by the Federal Clean Air Act Amendment of 1990.

[11/16/93, 12/1/95; 20.11.101.7 NMAC - Rn, 20 NMAC 11.101.I.7, 10/1/02]

20.11.101.8 VARIANCES:

[RESERVED]

[12/1/95; 20.11.101.8 NMAC - Rn, 20 NMAC 11.101.I.8, 10/1/02]

20.11.101.9 SAVINGS CLAUSE:

Any amendment of 20.11.101 NMAC, which is filed, with the State Records Center shall not affect actions pending for violation of a City or County ordinance, Board Regulation 40, the Procedures Manual, or 20.11.101 NMAC. Prosecution for a violation under prior regulation wording shall be governed and prosecuted under the statute, ordinance, Part, the Procedures Manual or regulation in effect at the time the violations were committed.

[8/31/94. . .12/1/95; 20.11.101.9 NMAC - Rn, 20 NMAC 11.101.I.9, 10/1/02]

20.11.101.10 SEVERABILITY:

If any section, paragraph, clause, or word of this Part is for any reason held to be unconstitutional or otherwise invalid by any court, the decision shall not affect the validity of the remaining provisions of 20.11.101 NMAC or the Procedures Manual.

[8/31/94. . .12/1/95; 20.11.101.10 NMAC - Rn, 20 NMAC 11.101.I.10, 10/1/02]

20.11.101.11 DOCUMENTS:

Documents incorporated and cited in this Part may be viewed at the Vehicle Pollution Management Program Headquarters, 1500 Broadway NE, Albuquerque, NM 87102.

[12/1/95; 20.11.101.11 NMAC - Rn, 20 NMAC 11.101.I.11, 10/1/02]

20.11.101.12 INSPECTION PROCEDURES:

A. VPMP Procedures Manual:

(1) The Program Manager shall develop an official document, titled VPMP Procedures Manual, outlining in sufficient detail the procedures necessary for a certified AIR CARE inspection facility, a certified fleet AIR CARE station, a certified AIR CARE inspector and a certified AIR CARE technician to comply with all applicable requirements of this Part. Upon approval by the Board, the Program Manager shall publish the official VPMP Procedures Manual and, within ten days of publication, provide general notice of its availability.

(2) The procedures, details and specifications contained in the VPMP Procedures Manual shall be a part of and incorporated into 20.11.101 NMAC and shall be binding upon each AIR CARE inspection facility, fleet AIR CARE station, AIR CARE inspector and AIR CARE technician.

(3) The Procedures Manual shall be amended as needed and required, and kept updated by the Program Manager. Notice of amendments to the Procedures Manual shall be provided by the Program Manager, with copies made available to the users. It is the responsibility of each AIR CARE inspection facility and fleet AIR CARE station to obtain and incorporate all amendments made available by the Program Manager. Each AIR CARE inspection facility or fleet AIR CARE station shall maintain at least one current copy of the VPMP Procedures Manual at the facility or station.

(4) If a provision of the Procedures Manual conflicts with a provision of this Part, the provision of this Part will prevail.

B. Vehicle Tests:

(1) To determine if a motor vehicle is in compliance with this Part all inspections shall be performed in strict accordance with 20.11.101 NMAC and the VPMP Procedures Manual. Each vehicle shall be inspected at an AIR CARE inspection facility or fleet AIR CARE station by an AIR CARE inspector. All items shall be inspected to completion with reports of outcomes provided to the motor vehicle owner.

(2) Vehicles with an engine other than the engine originally installed by the manufacturer or an identical replacement of such an engine shall be subject to the inspection procedures and standards for the chassis type, GVW, and model year of the vehicle.

(3) Assembled vehicles or kit cars shall meet the standards and emission control equipment requirements for the year of the engine in the vehicle. If the vehicle is assembled with a pre-1975 engine, testing is not required. The vehicle owner must apply for an exemption from the Program Headquarters.

(4) Vehicles that have been switched from an engine of one fuel type to another fuel type that is subject to the program shall be subject to the test procedures and standards for the current fuel type, and the requirements of Paragraph (2), of Subsection B of 20.11.101.12 NMAC.

(5) Vehicles which are switched to a fuel type for which there is no certified configuration shall be tested according to the most stringent emission standards established for that vehicle type and model year.

C. Exhaust Gas Emissions Measurements: Emissions inspections required by this Part [20.11.101 NMAC] shall be performed in accordance with procedures described in 40 CFR part 51. All vehicles subject to inspection shall be required to pass the idle mode test. In addition, all 1981 and newer vehicles must pass the loaded mode test.

(1) Prior to this portion of the inspection, the entire vehicle shall be in normal operating condition as specified by the emissions tune-up label originally installed on the vehicle or as specified in the VPMP Procedures Manual. Motor vehicles equipped for simple selection of alternate fuel supplies, switching between gasoline and any compressed or liquefied gaseous fuel, shall be inspected using the fuel in use when presented for inspection.

(2) A Motor vehicle manufactured during or before the 1980 model year shall be required to take and pass only the idle mode test as outlined in the 40 CFR Part 51 and the VPMP Procedures Manual. The conditioning mode shall be administered only after a vehicle has failed the idle mode test. Upon completion of the conditioning mode, a vehicle that has failed the idle mode test condition may be retested at idle. If the vehicle passes the second chance test, it shall be deemed in compliance with minimum emissions standards unless the vehicle fails the tampering or visible emissions inspection required by 20.11.101 NMAC.

(3) A motor vehicle manufactured during or after the 1981 model year shall be required to take and pass the idle mode test and the loaded test condition as outlined in 40 CFR Part 51 and the VPMP Procedures Manual, except that a constant four-wheel drive vehicle is required to take and pass an unloaded 2500 rpm test and the idle mode test. If the vehicle passes, it is deemed in compliance with emissions standards unless the vehicle fails the tampering or visible emissions inspection required by 20.11.101 NMAC.

(4) No inspection shall commence if there are apparent leaks in the motor vehicle's exhaust system that will cause the exhaust analyzer to invalidate the inspection.

(5) Pattern failure notices issued by EPA shall be maintained by the AIR CARE facility, fleet AIR CARE station, and AIR CARE inspector in an up-to-date file for reference to unusual pretest conditioning requirements.

(6) Vehicles presented to an AIR CARE inspection facility for inspection shall not be pre-tested by having a manual diagnostic emissions analysis or visual examination for tampering performed prior to the beginning of the inspection.

(6) Selection of appropriate pass/fail emissions inspection criteria shall be done by an approved VEGAS.

D. Visual Examination for Tampering: All vehicles are subject to and must pass a tampering inspection. The certified AIR CARE inspector shall determine specifically what emissions control devices should be in place and operable for each vehicle inspected. This shall be done by consulting the emissions control information sticker under the hood and checking a reference manual or applications guide which states how the vehicle was equipped as manufactured and/or certified for sale or use within the United States. Specific design and equipment elements necessary in anti-tampering determinations shall only include catalytic converter, air injection reaction system, O₂ sensor.

E. Visible Emission Requirements: In addition to exhaust and tampering requirements of 20.11.101 NMAC, all vehicles are subject to and must pass an inspection for visible emissions (smoke). Non-diesel vehicles may not emit any continuous visible emissions for a period greater than two consecutive seconds.

[11/16/93. . .12/1/95; 20.11.101.12 NMAC - Rn, 20 NMAC 11.101.I.12 & Repealed, 10/1/02; Rn, 20 NMAC 11.101.II.1, 10/1/02]

20.11.101.13 SCHEDULING OF INSPECTIONS:

A. Every motor vehicle, as defined in 20.11.101.7 NMAC, shall be inspected biennially when the owner is so notified or otherwise informed by MVD. The MVD will distribute notices or other appropriate information to owners of vehicles applying for re-

registration in accordance with the written agreement made between the MVD and the Program Manager. Vehicles shall also be inspected upon sale and when titles are transferred. Any person who believes he/she has a vehicle for which he/she has been erroneously notified of inspection may petition the Program Manager to correct such error.

B. Vehicles Unavailable for Inspection:

(1) Motor vehicles which are unavailable for inspection, and primarily operated in an area that does not have an I/M Program, may be granted an extension of inspection, if authorized by the Program Manager. Persons seeking an extension may petition the Program Manager by submitting a signed affidavit justifying the special need and by providing other necessary documentation as required by the Program Manager.

(2) Motor vehicles which are registered in Bernalillo County but are primarily operated in another I/M Program shall be tested, either in the area of primary operation or in Bernalillo county. If tested in another I/M Program area, the Program Manager will issue a compliance certificate upon presentation of a passing I/M test from the other program.

C. Federal, State and Local Government Vehicles:

(1) Each motor vehicle operated in Bernalillo County which is owned or leased by the United States Government, the State of New Mexico or any New Mexico political subdivision shall be inspected biennially.

(2) The responsible government authority shall perform emissions inspections according to a schedule approved by the Program Manager. A schedule shall only be approved if the Program Manager determines that it is consistent with the scope and goals of 20.11.101 NMAC.

(3) Persons who are responsible for government fleet vehicles or motor pools shall periodically, but not less than annually, update the vehicle inventory and forward the resulting inspection plan with inventory to the Program Manager.

[11/16/93. . .12/1/95; 20.11.101.13 NMAC - Rn, 20 NMAC 11.101.II.2, 10/1/02]

20.11.101.14 INSPECTION CRITERIA FOR AIR CARE INSPECITON FACILITIES:

Failure to pass any one of the applicable criteria specified below as, Exhaust Emissions; Anti-Tampering; or Visible Emissions (smoke), referred to respectively as Subsections A, B, C, of 20.11.101.14 NMAC, shall constitute noncompliance with 20.11.101 NMAC, and a fail VIR shall be issued.

A. Exhaust Emissions: Inspection procedure for all vehicles other than diesel-powered vehicles shall be consistent with the requirements specified in 40 CFR Part 51 Subpart S Appendix B.

(1) A non-diesel motor vehicle manufactured on or before the 1980 model year shall be required to take and pass only the idle mode test condition. A non-diesel motor vehicle manufactured in or after the 1981 model year shall be required to take and pass both the loaded test condition (except as specified in Paragraph (2), of Subsection A of 20.11.101.14 NMAC for full time four wheel drive) and the idle mode test condition.

(a) Loaded mode condition: Vehicles tested under the loaded mode shall have the drive wheels placed on a dynamometer and the vehicle shall be operated as prescribed in Table I, in drive for automatic transmissions and 2nd or higher gear for manual transmissions. Exhaust reading for HC and CO shall be recorded after readings have stabilized or at the end of 30 seconds, whichever comes first. After exhaust emissions have been recorded, engine speed shall be returned to idle for the idle mode test.

(b) Idle mode test condition: The idle mode test shall be performed with:

(i) the vehicle in drive for pre 1981 model year vehicles with automatic transmissions, or

(ii) in neutral both for, vehicles with manual transmissions and for post 1980 model year vehicles with automatic transmissions. Exhaust emissions shall be recorded for HC and CO concentrations after readings have stabilized or at the end of 30 seconds, whichever occurs first. A CO₂ reading less than 6% will be deemed as proof of exhaust sample dilution, and the vehicle shall be rejected from further emissions inspections until the vehicle is repaired. The vehicle owner will be provided with an INVALID VIR.

(2) 1981 and newer constant four wheel drive vehicles shall be inspected and required to pass an unloaded 2500 rpm \pm 300 rpm test ("set RPM") and an idle mode test. The appropriate maximum allowables listed in Table II shall apply to both test conditions. Vehicle transmissions shall be placed in neutral. During the unloaded 2500-rpm test exhaust emissions for HC and CO shall be recorded after the engine reaches set rpm and readings have stabilized. A sampling algorithm shall allow for sampling system delay. If the recorded readings are below the appropriate maximum allowable (PASS), the unloaded 2500-rpm test shall terminate and the engine speed shall be returned to idle for an idle mode test. If the recorded readings at 2500 rpm are above the appropriate maximum allowables (FAIL), real time sampling shall continue until the vehicle either passes or ninety (90) seconds have elapsed, whichever occurs first. After final exhaust emissions reading have been recorded, engine speed shall be returned to idle for an idle mode test. The idle mode test shall be performed as described in Subparagraph (b), of Paragraph (1), of Subsection A of 20.11.101.14 NMAC.

(3) Conditioning mode: If a non-diesel vehicle manufactured in or before the 1980 model year fails the idle mode test, and if requested by the vehicle operator, the vehicle shall be conditioned according to one of the following conditioning modes and retested at idle:

(a) Fast idle condition: For constant four wheel driven vehicles, the engine shall be conditioned by increasing the engine speed to 2500 RPM (+/-300) for a period of 30 seconds with the transmission in neutral. Exhaust emissions for HC and CO shall be recorded after the readings have stabilized or at the end of 30 seconds, whichever comes first. After the exhaust emissions at high idle have been recorded, the engine speed shall be returned to idle for an idle mode test.

(b) Loaded mode test condition: For vehicles other than constant four wheel drive vehicles, the conditioning mode shall be conducted according to Subparagraph (a), of Paragraph (1), of Subsection A of 20.11.101.14 NMAC.

TABLE I

DYNAMOMETER LOADING TABLE

PASSENGER VEHICLES AND TRUCKS

Gross Vehicle Weight Rating (Pounds)	Engine Size	Speed (MPH)	Load (HP)
8500 or less	4 cyl or less	22 - 25	2.8 - 4.1
8500 or less	5 or 6 cyl	29 - 32	6.4 - 8.4
8500 or less	8 cyl or more	32 - 35	8.4 - 10.8
8501 or more	all	37 - 40	12.7 - 15.8

(4) Any motor vehicle which is determined to emit quantities (rates) of carbon monoxide and hydrocarbons greater than those listed in Table II appropriate to model year and weight classification listed shall be FAILED and those with emission rates equal to or lower than the applicable amounts shall be PASSED under this subsection.

TABLE II

MAXIMUM ALLOWABLE EMISSIONS STANDARDS

Vehicle Model Year	Gross Vehicle Rating (Pounds)	Group Code	IDLE MODE		LOADED MODE OR UNLOADED 2500 RPM TEST	
			HC PPM	CO %	HC PPM	CO%
1975-1976	0 to 6000	C/T	700	6.0	--	--
1977-1978	0 to 6000	C/T	600	5.0	--	--
1979-1980	0 to 6000	C/T	500	4.0	--	--
1981-newer	0 to 6000	C/T	220	1.2	220	1.2
1975-1978	6001 to 8000	LT	900	6.0	--	--
1979-1980	6001 to 8000	LT	750	4.5	--	--
1981-1982	6001-8000	LT	650	2.7	400	3.0
1983-newer	6001-8000	LT	400	1.2	300	3.0
1975-1980	8001-10,000	MT	950	6.5	--	--
1981-1983	8001-10,000	MT	800	5.4	450	3.5
1984-newer	8001-10,000	MT	630	4.0	400	3.0
1975-1980	10,001 to 25,999	HT	950	6.5	--	--
1981-1986	10,001 to 25,999	HT	800	5.5	500	3.5
1986-newer	10,001 to 25,999	HT	440	2.0	400	3.0

Note: These criteria will be reviewed by the Board annually pursuant to the State Implementation Plan for Albuquerque/Bernalillo County. Adjustments will be promulgated as appropriate.

B. Anti-tampering:

(1) Motor vehicles subject to this Part shall be inspected for the presence and proper connections of original design features and components designed to reduce CO and HC exhaust emissions. The features and components are as follows:

- (a) Catalytic converter;
- (b) Oxygen sensor;
- (c) Air pump or air aspiration system as applicable.

(2) Any vehicle with such features or components removed or rendered inoperative shall be FAILED under this subsection. If no tampering is evident with these components or systems, this portion of the inspection shall be PASSED.

C. Visible Emissions (Smoke): All non-diesel vehicles subject to inspection must pass an inspection for visible emissions. The inspection for visible emissions shall be conducted after the anti-tampering inspection and prior to the exhaust measurement inspection.

(1) The vehicle must be placed in neutral gear with the parking brake secured and all accessories off.

(2) The engine speed shall be raised to approximately 2000 RPM and held constant for 10 seconds.

(3) If visible emissions are emitted for a period of two consecutive seconds, the vehicle shall FAIL this portion of the inspection.

[11/16/93. . .12/1/95; 20.11.101.14 NMAC - Rn, 20 NMAC 11.101.II.3, 10/1/02]

20.11.101.15 VEHICLE INSPECTION REPORT:

A. Vehicle Inspection Reports (VIRs) shall only be purchased at Program Headquarters. Unused VIRs shall not be exchanged, sold or given by any person, AIR CARE inspection facility, fleet AIR CARE station, or any other entity. All unused VIRs which a person, AIR CARE inspection facility, fleet AIR CARE station, or any other entity does not intend to use shall be turned in to the Headquarters for credit or a refund, as the Program Manager determines is appropriate.

B. A pass VIR shall be issued to each motorist whose vehicle has undergone inspection and passed all criteria relative to exhaust emissions, anti-tampering, and visible emissions as applicable. A fail VIR shall be issued to each motorist whose vehicle has undergone inspection and failed any of the criteria relative to exhaust emissions, anti-tampering, and visible emissions as applicable. Vehicles, which have failed any portion of an inspection and have been subsequently repaired and adjusted

and passed a re-inspection, shall be issued a pass VIR. Pass VIRs shall be presented to the MVD upon re-registration of the vehicle.

C. Within 60 calendar days after each paid emissions inspection, one free re-inspection may be obtained at any AIR CARE inspection facility upon presentation of the failed VIR.

[11/16/93; 20.11.101.15 NMAC - Rn, 20 NMAC 11.101.II.4, 10/1/02]

20.11.101.16 REPAIRS, ADJUSTMENTS AND RE-INSPECTIONS:

A. Each motor vehicle that fails an inspection required by 20.11.101 NMAC shall be repaired as necessary to pass re-inspection. Where replacement of a catalytic converter or oxygen sensor is required, such parts shall only be new aftermarket parts approved by the Program Manager or new original equipment, manufacturer's parts or manufacturer's assemblies. Repairs required by this subsection may include but are not limited to, the following as applicable to the type of failure:

(1) Exhaust Emissions: adjust idle speed, fuel/air ratio and ignition timing to manufacturer's specifications including replacement of spark plugs, spark plug wires, air filters and PCV specified by the manufacturer.

(2) Anti-tampering: replace the missing or disabled components with new replacement parts.

(3) Visible Emissions: repair engine or replace inoperative emission control devices as required to eliminate visible emissions. Repairs may include replacement of valves, rings, pistons, PCV, or EGR systems.

B. Any person may repair, adjust or replace parts as necessary to prepare a vehicle to pass re-inspection, but in order to qualify for a time extension as specified in 20.11.101.17 NMAC, a Certified AIR CARE Technician must perform the repair.

C. Within 60 calendar days after each paid emissions inspection, one free re-inspection may be obtained at any AIR CARE inspection facility upon presentation of the failed VIR.

[11/16/93; 20.11.101.16 NMAC - Rn, 20 NMAC 11.101.II.5, 10/1/02]

20.11.101.17 REPAIR TIME EXTENSION:

A. Normal Difficulty: Vehicles, which are unable to pass re-inspection, are eligible to obtain a time extension, not to exceed two years, providing the following conditions are met:

(1) Exhaust Emissions: In order for a motor vehicle to be eligible for a time extension, the owner must:

(a) Provide evidence, satisfactory to the Program Manager, that a low emissions tune-up has been performed by a Certified AIR CARE Technician, to the extent possible considering engine condition; and repair and replace nonfunctional emissions control devices.

(b) Provide evidence that any emissions control devices needed to bring the vehicle into compliance are not available.

(c) Petition the Program Manager at the Program Headquarters, provide receipts for all repair work performed, and list at least the following information in order to be eligible for consideration:

(i) vehicle VIN number,

(ii) model year and manufacturer,

(iii) owner's name and street address,

(iv) valid driver's license number or any other information or documentation that the Program Manager may deem necessary; and

(v) identification of where the re-inspection, tune-up and/or determination was made, including evidence that critical parts are unavailable if so claimed.

(2) Anti-tampering: In order for a motor vehicle to be eligible for a time extension, the vehicle must pass all criteria relative to exhaust emissions for its model year and weight. If the vehicle cannot pass the exhaust emissions, in order for a motor vehicle to be eligible for a time extension, the owner must:

(a) Provide evidence that a low emissions tune-up has been performed by a Certified AIR CARE Technician to the extent possible considering engine condition; repair and replace nonfunctional emissions control devices.

(b) Provide evidence that any emissions control devices needed to bring the vehicle into compliance are not available.

(c) Petition the Program Manager at the Headquarters, provide receipts for all repair work performed, and list at least the following information in order to be eligible for consideration:

(i) vehicle VIN number,

- (ii) model year and manufacturer,
- (iii) owner's name and street address,
- (iv) valid driver's license number or any other information or documentation that the Program Manager may deem necessary, and
- (v) identification of where the re-inspection, tune-up, and/or determination was made, including evidence that critical parts are unavailable if so claimed.

(d) Upon receipt of the petition the Program Manager may grant a time extension based upon the validity and applicability of the information provided.

(e) Time extensions for anti-tampering can be issued to the same owner for two registration cycles but are void and cannot be renewed upon sale of the vehicle. The total extensions granted shall not exceed 24 months. The holder of an original time extension must inform each potential purchaser that the vehicle has a time extension and the vehicle does not comply with the emission requirements of 20.11.101 NMAC. The seller also must inform each potential purchaser that the extension is void upon the sale of the vehicle and the vehicle cannot be registered unless the vehicle passes an emission inspection.

(f) In addition to the time extensions described above, the Program Manager has the discretion to issue time extensions for extraordinary circumstances, if consistent with the purposes of 20.11.101 NMAC, and shall report such extensions at the next Program report to the Board.

B. Inspection Due Following Extension: Any person who owns a vehicle for which a time extension has been issued shall have the vehicle inspected and passed within the time frame specified by the extension for that vehicle.

C. Appeals: Any person aggrieved by the decision of the Program Manager or the Program Manager's designee regarding a compliance time extension may appeal by petitioning the Director of the EHD. To perfect the appeal, the person aggrieved must deliver the completed form to the Headquarters within fifteen (15) consecutive days after receipt of the Program Manager's decision. Following receipt of the appeal, the Director of the EHD shall hold an administrative hearing, within fourteen (14) calendar days of receipt of the request, and report the Director's decision to the Program within 48 hours of the determination. By the end of the next working day or sooner, if reasonably possible, the Program shall report the decision of the Director of the EHD to the petitioner. The Director of the EHD will present written findings of fact and conclusions of law to the Program within 45 days, and the Program shall forward the findings and conclusions promptly to the petitioner.

20.11.101.18 CERTIFICATION REQUIREMENTS FOR AIR CARE INSPECTION FACILITIES:

No individual or business shall represent itself as a certified AIR CARE inspection facility without being in possession of a duly authorized and currently valid certificate issued by the Program Manager. Violations of the requirements of 20.11.101.18 NMAC shall be a violation of this Part.

A. The Program shall enter into an emissions inspection contract with one or more independent contractors following the review of proposals (RFP), to provide for the construction, equipping, operation and maintenance of official test-only AIR CARE inspection facilities, in such numbers and locations as may be required by 40 CFR Part 51 to provide vehicle owners reasonably convenient access to inspection facilities for the purposes of obtaining compliance with 20.11.101 NMAC.

B. In consultation with the Mayor's Office, City legal staff, City Finance and Management Department, the City Council, and the County Commission, the Program Manager shall establish request for proposals (RFP) specifications and contract terms for a contract with the independent contractor(s) and negotiate any terms of a contract with the independent contractor(s).

C. The Program Manager is prohibited from entering into an emissions inspection agreement with any independent contractor who:

(1) Is engaged in the business of manufacturing or selling vehicles.

(2) Does not have the capability, resources or technical and management skill to adequately construct, equip, maintain and operate a sufficient number of official AIR CARE inspection facilities to meet the demand for inspection of every vehicle which is required to be submitted for inspection subject to 20.11.101 NMAC.

D. All independent contractors and persons employed by or contracted with the independent contractor to perform the terms of the emissions inspection contract shall be employees or agents of the independent contractor and not of the City, County, the VPMP or the Board. No employee, agent, or contractor of any independent contractor shall wear a badge, insignia, patch, emblem, or device, which would tend to indicate that such person is an employee of the City, County, or State.

E. No person shall solicit, advertise or imply that a facility is an AIR CARE inspection facility certified by the Program Manager to conduct inspections pursuant to this Part without having a current contract with the City, County, and Program.

F. No AIR CARE inspection facility owner or operator shall allow a person to conduct any part of an inspection pursuant to 20.11.101 NMAC unless that person is an AIR CARE inspector certified by the Program Manager and has a current Program-issued certificate on display on the premises.

G. Certified AIR CARE inspection facility owners/operators shall be responsible for the general management of their facility(ies) and for the supervision of their AIR CARE inspectors and technicians in accordance with this Part, the VPMP Procedures Manual and other procedures and policies of the Program.

H. Performance of Certified AIR CARE Inspection Facilities.

(1) Each certified AIR CARE inspection facility shall obtain and pay for routine and unscheduled maintenance and for replacement of parts for its approved exhaust gas analyzer systems.

(2) Each certified AIR CARE inspection facility shall provide vehicle owners or drivers access to the inspection area so that the owner or driver can observe the official inspection. Such access can be limited, but in no way shall prevent full observation.

(3) Each certified AIR CARE inspection facility shall post, on the exterior of the facility, a sign in a conspicuous location indicating the fee charged for inspections and the approximate current waiting time for vehicle owners wanting their vehicle inspected. The sign shall meet the requirements established by the Program Manager and specified by the independent contractor's contract with the Program.

(4) A certified AIR CARE facility may not refuse any vehicle for inspection based upon the race, color, religion, sex, national origin or ancestry, age or physical handicap or disability of the motorist, nor may the facility refuse any vehicle for inspection because of the make, model, or year of the vehicle.

[11/16/93. . .12/1/95; 20.11.101.18 NMAC - Rn, 20 NMAC 11.101.II.7, 10/1/02]

20.11.101.19 FLEET AIR CARE INSPECTION STATIONS:

A. No individual or business shall represent itself as a certified fleet AIR CARE station without being in possession of a duly authorized and currently valid certificate issued by the Program Manager. Violations of the requirements of 20.11.101.19 NMAC shall be a violation of this Part.

B. Any government entity, corporation, or other business entity may apply for authorization to become a fleet AIR CARE station authorized by the Program to perform inspections under this regulation. The fleet stations shall not offer inspections to the company's employees or the general public. Fleet AIR CARE stations shall be equipped and operated as required by this section, and any applicable provisions in the Procedures Manual. The sign requirements of 20.11.101.18 NMAC shall not apply to a fleet AIR CARE station.

C. Vehicles which fail to pass any one of the applicable criteria required in the following paragraphs: Paragraph (2), Exhaust Emissions; Paragraph (3), Anti-Tampering; or Paragraph (4), Visible Emissions (smoke); of Subsection C of

20.11.101.19 NMAC, shall be in noncompliance with this regulation, and a fail VIR shall be issued.

(1) Approved Equipment for Testing Fleet Vehicles: The Program Manager shall develop specifications and approve BAR 90 equipment which is capable of testing vehicles during idle test modes (with second chance capabilities), and during an unloaded 2500 RPM test. The specifications shall be described in a separate document and shall meet the minimum requirements set forth by 40 CFR Part 51. All fleet AIR CARE stations shall be equipped with approved BAR 90 analyzers.

(2) Fleet Vehicle Exhaust Emissions: Exhaust emissions inspection procedures for all fleet vehicles, other than diesel-powered vehicles, at fleet AIR CARE stations are as follows: A non-diesel motor vehicle manufactured on or before the 1980 model year shall be required to take and pass only the idle mode test condition. A non-diesel motor vehicle manufactured in or after the 1981 model year shall be required to take and pass both the unloaded 2500 RPM test condition and the idle mode test condition.

(a) Idle mode test condition: The idle mode test shall be performed with:

(i) the vehicle in drive for pre 1981 model year vehicles with automatic transmissions, or

(ii) in neutral both for vehicles with manual transmissions and for post 1980 model year vehicles with automatic transmissions. Exhaust emissions shall be recorded for HC and CO concentrations after readings have stabilized or at the end of 30 seconds, whichever occurs first. A CO₂ reading less than 6% will be deemed as proof of exhaust sample dilution, and the vehicle shall be rejected from further emissions inspections until the vehicle is repaired.

(b) 1981 and newer vehicles shall be inspected and required to pass an unloaded 2500 rpm \pm 300 rpm test and an idle mode test. The appropriate maximum allowables are listed on Table II, under 20.11.101.14 NMAC, and shall apply to both test conditions. For the 2500 RPM test the engine of all vehicles shall be conditioned by increasing the engine speed to 2500 RPM (+/-300) for a period of 30 seconds with the transmission in neutral. Exhaust emissions for HC and CO shall be recorded after the readings have stabilized or at the end of 30 seconds, whichever comes first. If during these 30 seconds the recorded readings are below the appropriate maximum allowable (PASS), the unloaded 2500-rpm test shall terminate and the engine speed shall be returned to idle for an idle mode test. If the recorded readings at 2500 rpm are above the appropriate maximum allowables (FAIL), real time sampling shall continue until the vehicle either passes or ninety (90) seconds have elapsed, whichever occurs first. After final exhaust emissions reading have been recorded, engine speed shall be returned to idle for an idle mode test. The idle mode test shall be performed as described in Subparagraph (a), of Paragraph (2), of Subsection C of 20.11.101.19 NMAC. During both tests a sampling algorithm shall allow for sampling system delay.

(3) Anti-tampering:

(a) Fleet motor vehicles subject to this regulation shall be inspected for the presence and proper connections of original design features and components designed to reduce CO and HC exhaust emissions. The features and components are as follows:

- (i) catalytic converter,
- (ii) oxygen sensor,
- (iii) air pump or air aspiration system as applicable.

(b) Any vehicle with such features or components removed or rendered inoperative shall be FAILED under this subsection. If no tampering is evident with these components or systems, this portion of the inspection shall be PASSED.

(4) Visible Emissions (Smoke): All non diesel vehicles subject to inspection shall pass an inspection for visible emissions. The inspection for visible emissions shall be conducted after the anti-tampering inspection and prior to the exhaust measurement inspection.

(a) The vehicle must be placed in neutral gear with the parking brake secured and all accessories off.

(b) The engine speed shall be raised to approximately 2000 RPM and held constant for 10 seconds.

(c) If visible emissions are emitted for a period of two consecutive seconds the vehicle shall FAIL this portion of the inspection.

(5) Additional Requirements for Fleet Air Care Stations:

(a) Each fleet AIR CARE station shall obtain and pay for routine and unscheduled maintenance and for replacement parts for its approved exhaust gas analyzer systems.

(b) No person shall solicit, advertise or imply that a business is a fleet AIR CARE station certified by the Program Manager to conduct inspections pursuant to this regulation without having a current Program issued certificate on display on the premises.

(c) No fleet AIR CARE station owner or operator shall allow a person to conduct any part of an inspection pursuant to this Part unless that person is an AIR CARE inspector certified by the Program Manager and has a current Program issued certificate on display on the premises.

(d) Certified fleet AIR CARE stations owners or operators shall be responsible for the general management of their station and for the supervision of their AIR CARE inspectors and technicians in accordance with this regulation, the VPMP Procedures Manual, and other procedures and policies of the Program.

(e) Each certified fleet AIR CARE station shall obtain and pay for routine and unscheduled maintenance and for replacement of parts for its approved exhaust gas analyzer systems.

[11/16/93. . .12/1/95; 20.11.101.19 NMAC - Rn, 20 NMAC 11.101.II.8, 10/1/02]

20.11.101.20 VEHICLE POLLUTION MANAGEMENT PROGRAM HEADQUARTERS:

The Program Manager shall establish and maintain a VPMP headquarters, which shall be an emissions inspection facility, equipped with at least two lanes with Program certified emissions equipment capable of duplicating the idle mode and loaded mode test conducted at the AIR CARE inspection facilities. It shall be staffed with at least two technicians who are ASE certified. The facility shall be operated by the City to provide services to the public and as necessary to facilitate Program responsibilities and administer the provisions of 20.11.101 NMAC. The Headquarters shall have, but not be limited to, the following responsibilities:

A. Provide for non-binding mediation of disputes between vehicle owners and certified AIR CARE inspection facilities, certified AIR CARE inspectors, or certified AIR CARE technicians. If required by the Program Manager, the facility will provide verification at no cost to the person requesting the inspection.

B. Evaluate and issue compliance time extensions for vehicles unable to pass the emissions inspections as provided under the terms of 20.11.101 NMAC.

C. Investigate and maintain records regarding complaints against certified AIR CARE inspection facilities, certified AIR CARE technicians and certified AIR CARE inspectors, and forward such findings to the Board.

D. Implement and oversee a repair effectiveness program which will keep track of emission-related repairs at repair facilities throughout the Program area. Information collected regarding the repair effectiveness of repair facilities shall be tabulated and made available to consumers.

E. Perform quality assurance audits as required by 20.11.101.24 NMAC.

[11/16/93. . .12/1/95; 20.11.101.20 NMAC - Rn, 20 NMAC 11.101.II.9, 10/1/02]

20.11.101.21 CERTIFICATION OF AIR CARE INSPECTORS:

No person shall represent him or herself as a certified AIR CARE inspector without being in possession of a duly authorized and currently valid certificate issued by the Program Manager. Certificates issued under this subsection shall be valid for 12 months unless the Program Manager requires re-certification at some shorter time as provided below in Subsection C of 20.1.101.209 NMAC.

A. Qualification Requirements for Air Care Inspectors:

(1) A person desiring to be certified shall file an application with the Program Manager on forms provided by the Program. All certificates shall be issued by the Program. Before an applicant is granted a certificate, the applicant must demonstrate the general knowledge, skill and competence required by the Program and shall meet the training and testing requirements established by the Program Manager.

(2) Knowledge, skill, and competence that an applicant must demonstrate shall include, but not be limited to, the following:

(a) general operation and purpose of emissions control systems for all types of motor vehicles,

(b) how HC and CO relate to timing and air/fuel ratio control,

(c) rules and regulations pertaining to inspection and the inspection procedures set forth in the Procedures Manual and 20.11.101 NMAC,

(d) general understanding of the benefits to vehicle owners provided in the Defect Warranty Provisions of Section 207(a) and the Performance Warranty Provisions of Section 207(b) of the Federal Clean Air Act as it applies to the inspection,

(e) ability to recognize by visual inspection the emissions control equipment for 1975 and newer vehicles, distinguishing between those required and those not required during inspection,

(f) proper use, filing, and storage of inspection forms, certificates of inspection and supplemental documents, and

(g) ability to perform an actual vehicle emissions test from start to finish,

(h) other information as the Program Manager requires.

(3) The Program may issue a certificate to the applicant when the Program Manager determines that the applicant has successfully completed the certification requirements of this Part.

(4) Individuals certified under this subsection shall inform the Program Manager within ten days of any change in legal name, employment status, or current

mailing address. Failure to keep the Program Manager informed may be cause for revocation of certification. Each certified AIR CARE Inspector would be assigned a personal identification number, which will be used by the Program to correlate information in data audits.

B. Performance of Certified Air Care Inspectors: Every certified AIR CARE inspector shall follow the official procedures of the VPMP Procedures Manual and uphold the rules and regulations set forth by the Board and the Program Manager and shall do the following:

(1) at no time allow another person to use his or her certificate or personal code to perform an official AIR CARE inspection nor delegate his or her authority to another person to perform any portion of an official inspection under his or her name or personal code,

(2) accept all vehicles for emission inspection and perform inspections in an expedient manner so as to avoid unnecessary public inconvenience. However and AIR CARE inspector will not accept a vehicle for inspection if the inspection would pose a threat to any person's safety,

(3) comply with the requirements of 20.11.101 NMAC and all the regulations and official procedures established for the Program,

(4) at no time during the emissions inspections sequence attempt or allow adjustments to be performed on the vehicle being inspected until the final VIR is complete, and

(5) sign all certificates of inspection at the time of inspection.

C. Re-qualification Requirements for Certified Air Care Inspectors:

(1) The Program Manager will reissue certification to any AIR CARE inspector who demonstrates updated competency as evidenced under the then-current requirements administered by the Program. Such re-qualification shall be required upon expiration of a current annual certificate or sooner as provided below.

(a) If the Board determines a need to update the general qualifications of AIR CARE inspectors prior to the annual re-certification period, holders of such certificates may be required to re-qualify.

(b) As a result of auditing or investigating consumer complaints, a certified inspector may be required to re-qualify if the Program Manager determines that competency and related problems must be corrected in order to protect the public.

(2) Certified AIR CARE inspectors must re-qualify during the month of expiration of the then-current certification. The Program shall mail written notification to

the facility or station address of record of each active certified inspector whose certificate is about to expire. The notice shall inform the inspector of the necessity for re-qualification and the nature of the skills, systems, or any updated procedures or retraining deemed necessary for performance of emissions inspections. The notice shall state the deadline for re-certification.

[11/16/93; 20.11.101.21 NMAC - Rn, 20 NMAC 11.101.II.10, 10/1/02]

20.11.101.22 CERTIFICATION OF AIR CARE TECHNICIANS:

No person shall represent him or herself as a certified AIR CARE technician without being in possession of a duly authorized and currently valid certificate issued by the Program Manager. Certificates issued under this subsection shall be valid for 12 months unless the Program Manager subsequently requires re-certification sooner for a reason provided below in Subsection B of 20.11.101.22 NMAC.

A. Qualification Requirements for Air Care Technicians:

(1) A person desiring to be certified shall file an application with the Program Manager on forms provided by the Program. All certificates shall be issued by the Program. Before an applicant is granted a certificate, the applicant must demonstrate the general knowledge, skill and competence required by the Program and shall meet the training and testing requirements established by the Program Manager.

(2) The competency test required by this section shall include, but not be limited to, knowledge of the following:

(a) how to use a Program-approved emissions systems reference guide,

(b) basic understanding of possible causes and effects of timing and air/fuel ratio on emissions,

(c) how to perform, when applicable, high altitude adjustments as required by manufacturer's specifications,

(d) program requirements applicable to vehicles for which special time extensions may be needed,

(e) how to use on board diagnostics, latest shop diagnostic tools and instruments available to automotive emissions technicians,

(f) the provisions of the Emissions Control Systems Performance Warranty provided as required by Section 207(b) of the Federal Clean Air Act as it applies to the inspection,

(g) the emissions control equipment for 1975 and newer vehicles that are essential to satisfy 20.11.101.12 NMAC, and the ability to recognize equipment which is not necessary to repair or adjust in order to pass a vehicle emissions inspection, so the motorist's costs can be kept at a minimum,

(h) the regulations and procedures under which the Program operates.

(3) Individuals certified under this subsection shall inform the Program Manager within ten days of any change in legal name, employment status, or current mailing address. Failure to keep the Program Manager informed may be cause for revocation of certification. Each certified technician would be assigned a personal identification number, which will be used by the Program to correlate information in data audits.

(4) The Program Manager may waive those portions of the test described above in a, b, c, e, and g of Paragraph (2) of Subsection A of 20.11.101.22 NMAC upon the applicant's submittal and the Program's acceptance of current certification in engine repair and engine performance from the ASE, or other nationally recognized automotive certification authority acceptable to the Program Manager, or a showing of equivalent education and experience in emission control, testing and engine repair.

B. Re-qualification Requirements for Certified Air Care Technicians:

(1) The Program Manager will reissue certification to an AIR CARE technician who demonstrates updated competency as evidenced under the then-current requirements administered by the Program. Such re-qualification shall be required at the expiration of a current annual certificate or sooner as provided below.

(a) If the Board determines a need to update the qualifications of AIR CARE technicians prior to the annual re-certification period, holders of such certificates may be required to re-qualify.

(b) As a result of auditing or investigating consumer complaints, a certified AIR CARE technician may be required to re-qualify if the Program Manager determines that competency and related problems must be corrected in order to protect the public.

(2) Certified AIR CARE technicians must re-qualify within thirty (30) days prior to the date of expiration of the then-current certification. The Program shall mail written notification to the facility or station address of record to each active technician whose certificate is about to expire. The notice shall inform the technician of the necessity for re-qualification and the nature of the skills, systems or any updated procedures or retraining deemed necessary for performance of emissions repairs, which will comply with 20.11.101 NMAC. The notice shall state the deadline for re-certification.

[11/16/93. . .12/1/95; 20.11.101.22 NMAC - Rn, 20 NMAC 11.101.II.11, 10/1/02]

20.11.101.23 EXEMPTED SPECIAL VEHICLES CLASSIFICATIONS:

The following vehicles are exempted from emission inspections:

- A.** Motor vehicles with a GVW less than 1,000 pounds or greater than 26,000 pounds.
- B.** All new motor vehicles only during the initial registration period first following the date of the MCO.
- C.** Vehicles, which are fueled by a mixture of gasoline and oil for purposes of lubrication.
- D.** 1974 or older model year vehicles.
- E.** Diesel and electric powered vehicles.
- F.** Vehicles sold between licensed motor vehicle dealers.
- G.** Vehicles leased to a person residing outside of the County by a leasing company whose place of business is Bernalillo County. This exemption applies only to those vehicles operated in an area with no I/M Program.
- H.** Vehicles that are used for legally sanctioned competition and not operated on public streets and highways.
- I.** Implements of husbandry, or road machinery not regularly operated on public streets and highways.
- J.** Other vehicles, which are not regularly operated on public streets and highways after adequate proof, satisfactory to the Program Manager, is submitted to the Program.

[11/16/93; 20.11.101.23 NMAC - Rn, 20 NMAC 11.101.II.12, 10/1/02]

20.11.101.24 QUALITY CONTROL OF AIR CARE INSPECTION FACILITIES:

A. The Program shall conduct announced and unannounced quality assurance audits of each certified AIR CARE inspection facility as ordered by the Program Manager. The duties of the auditor shall include but not be limited to the following:

- (1) verifying that the equipment, reference materials and staffing are consistent with the information on file with the Program Manager,
- (2) checking the accuracy of data entry and production of the final inspection reports furnished to motorists,

(3) performing a complete quality assurance survey on the VEGAS as required by 40 CFR Part 51 appendix A,

(4) confirming that the field audit gases for standardizing approved analyzers used for inspections conform to the provisions outlined in 40 CFR, Part 86, Subpart B114 for automotive exhaust emissions inspections. Those gases shall be of "precision" quality, certified to be within $\pm 1\%$ of the labeled concentration, and certified by the NIST.

B. The Program may perform audits without offering official credentials or identification by submitting any motor vehicle for inspection in order to examine the station operation under actual conditions. Such inspection vehicles may be offered at random times in a condition involving intentional maladjustment, or with emissions control components intentionally removed or rendered inoperative. The results of such audits by the Program will provide data for assessing the performance of the certified AIR CARE inspection facility and its adherence to the requirements of 20.11.101 NMAC and the VPMP Procedures Manual.

[11/16/93; 20.11.101.24 NMAC - Rn, 20 NMAC 11.101.II.13, 10/1/02]

20.11.101.25 SPECIFICATIONS FOR APPROVED VEGAS:

A. Performance and Design Specifications for Emissions Inspection

Equipment: The Program Manager shall establish the specifications for VEGAS, which shall be used exclusively by the AIR CARE facilities authorized by the Program to perform emission inspections. The VEGAS shall have the capability to perform emission inspections on vehicles under idle mode and loaded test conditions as required by this regulation and the VPMD Procedures Manual for AIR CARE inspection facilities and shall meet the calibration, adjustments, and quality control requirements of 40 CFR Part 51 Subpart S Appendix A. In addition, the Program Manager will establish specifications and approve equipment to be used for inspection of vehicles at fleet AIR CARE stations. Both of these specifications shall be described in separate documents and shall meet the minimum requirements set forth by 40 CFR Part 51. These specifications will be made available by the Program upon request.

B. Changes and Equipment Updates: No changes in design or performance characteristics of component specifications which may affect emission inspection equipment performance will be allowed without the Program Manager's written approval. It will be the emission inspection equipment manufacturer's responsibility to confirm that such changes have no detrimental effect on the equipment performance. All approved emission inspection equipment shall be updated as needed and as specified in the specifications document.

[11/16/93; 20.11.101.25 NMAC - Rn, 20 NMAC 11.101.II.14, 10/1/02]

20.11.101.26 DISCIPLINARY ACTION, DENIAL, SUSPENSION, OR REVOCATION OF CERTIFICATIONS:

A. The Program Manager is authorized, after reasonable investigation and showing of a violation of any provisions of 20.11.101 NMAC, to take disciplinary actions including monetary penalties, and/or denial, suspension, or revocation of certification to operate under the Program as a certified fleet AIR CARE station, certified AIR CARE inspector or certified AIR CARE technician. In deciding on an appropriate action, the Program Manager may consider past violations on file against the charged party as well as previous actions, which have been taken by the Program against the charged party.

B. Notwithstanding the provisions of Subsection C of 20.11.101.26 NMAC, the Program Manager may immediately suspend the certification of a certified fleet AIR CARE station, certified AIR CARE inspector or certified AIR CARE technician if the Program Manager determines that continued operation as an fleet AIR CARE station, AIR CARE inspector or an AIR CARE technician would jeopardize the public health, safety and welfare; violate the VPMP Procedures Manual, or 20.11.101 NMAC; or compromise the Program. In the case of immediate suspension or revocation, a hearing shall be held within fourteen calendar days of receipt of a written request for a hearing by the station, inspector, or technician.

C. Prior to taking any action to suspend or revoke a certification, the Program Manager shall inform the inspector, technician, or fleet station manager of the charges. Any party so informed may request a hearing on the merits before the Program Manager. Such request must be made in writing to the Program Manager within fifteen (15) consecutive days of receipt of the notice of intent to suspend or revoke the certification.

D. Upon receipt of a written request for a hearing on the merits, the Program Manager shall set a date, time and place for the hearing no more than sixty days from the date of receipt of the request. No fewer than fifteen consecutive days before the hearing, the Program Manager shall inform the charged party of the date, time and place of the hearing. The Program Manager may appoint a hearing officer. At the hearing, the charged party may demonstrate why a monetary penalty should not be imposed and/or the certification should not be suspended or revoked.

E. At the hearing on the merits, the Program Manager may take appropriate action including monetary penalties and/or suspension or revocation of the certification or dismissal of the charges based on the findings of the initial investigation and the evidence presented at the hearing. The Program Manager may issue monetary penalties, which are authorized by the City of Albuquerque and Bernalillo County Joint Air Quality Control Board Ordinances; the City of Albuquerque and Bernalillo County Motor Vehicle Control Ordinances, or the Air Quality Control Act. The Program Manager may consider past violations on file against the charged party as well as previous actions, which may have been taken by the Program, or the judicial system against the charged party which are related to the requirements of 20.11.101 NMAC, the Procedures Manual, or other Program guidelines and requirements.

F. Any party whose application for certification is denied, suspended, or revoked may appeal the decision of the Program Manager to the Board. To perfect the appeal to the Board, the appellant must deliver a written request to the Headquarters within fifteen consecutive days after receipt of the Program Manager's decision. The Board may make its determination based on the record or may require a hearing de novo. The Board may uphold, overturn or amend the Program Manager's decision. If the Board decides to conduct a hearing de novo, the Board may appoint a hearing officer, and the Board shall set a date, time and place for the hearing and shall hold the hearing within ninety (90) days of the Board's receipt of the written request. No fewer than fifteen consecutive days before the hearing, the Board shall inform the appellant of the date, time and place of the hearing. The decision of the Board shall be final.

G. Enforcement provisions regarding AIR CARE Inspection Facilities shall be incorporated and made part of the contract between the Program and Contractor. Penalties for violation of this Part may include monetary fines, suspensions or termination of the contract.

[11/16/93. . .12/1/95; 20.11.101.26 NMAC - Rn, 20 NMAC 11.101.II.15, 10/1/02]

20.11.101.27 ENFORCEMENT:

A. Mandatory Inspections: Any person who owns a motor vehicle subject to 20.11.101 NMAC and fails to demonstrate compliance with 20.11.101 NMAC shall be issued a failing VIR and shall be refused re-registration by MVD pursuant to the Motor Vehicle Code, 66-3-7.1 NMSA (1988).

B. Procedural Provisions: Any person who violates a requirement of 20.11.101 NMAC shall be guilty of a petty misdemeanor pursuant to either the City Joint Air Quality Control Board Ordinance 9-5-1-99(B) ROA 1994 or the County Joint Air Quality Control Board Ordinance No. 95-5 Section 17. Each day a violation is committed or permitted to continue shall constitute a separate offense and shall be punishable as such. Any person who violates a requirement of 20.11.101 NMAC also shall be subject both to all other enforcement actions authorized by the Air Quality Control Act, 74-2-1 et seq., NMSA 1978, and all other remedies available under law or equity.

[11/16/93. . .12/1/95; 20.11.101.27 NMAC - Rn, 20 NMAC 11.101.II.16, 10/1/02]

20.11.101.28 ADMINISTRATIVE FEES FOR CERTIFICATIONS:

Any person seeking a certification, or annual renewal thereof, to participate in the Program as an fleet AIR CARE station, AIR CARE inspector, or AIR CARE technician shall remit to the City the fee indicated below before a certification shall be issued by the Program.

A. Certified fleet AIR CARE station certification fee = \$200.00

B. Certified AIR CARE inspector certification fee = \$35.00;

C. Certified AIR CARE technician certification fee = \$35.00.

[11/16/93. . .12/1/95; 20.11.101.28 NMAC - Rn, 20 NMAC 11.101.II.17, 10/1/02]

PART 102: OXYGENATED FUELS

20.11.102.1 ISSUING AGENCY:

Albuquerque-Bernalillo County Air Quality Control Board, c/o Environmental Health Department, P.O. Box 1293, Albuquerque, NM 87103. Telephone: (505) 768-2600.

20.11.102.4 DURATION:

Permanent.

[12/1/95; 20.11.102.4 NMAC - Rn, 20 NMAC 11.102.I.4, 10/1/02]

20.11.102.5 EFFECTIVE DATE:

December 1, 1995, unless a later date is cited at the end of a section.

[12/1/95; 20.11.102.5 NMAC - Rn, 20 NMAC 11.102.I.5 & A, 10/1/02]

20.11.102.6 OBJECTIVE:

To provide for the use of oxygenated fuels in Bernalillo county to reduce tail pipe emissions from gasoline powered motor vehicles and to establish a contingency measure in the event that monitored carbon monoxide levels in Bernalillo county exceed 85 percent of the federal ambient carbon monoxide standards.

[6/15/95. . .12/1/95; 20.11.102.6 NMAC - Rn, 20 NMAC 11.102.I.6, 10/1/02; A, 9/1/04]

20.11.102.7 DEFINITIONS:

In addition to the definitions in 20.11.102.7 NMAC the definitions in 20.11.1 NMAC apply unless there is a conflict between definitions, in which case the definition in 20.11.102.7 NMAC shall govern.

A. "Department" means the Albuquerque environmental health department or its successor agency.

B. "Ethanol" means a colorless volatile flammable alcohol with the molecular composition of $\text{CH}_3\text{CH}_2\text{OH}$.

C. "Facility" or "facilities" means a place or places of business which sells or supplies for wholesale or retail purposes gasoline motor fuel, including fuel-transporting businesses.

D. "Gasoline motor fuels" means any flammable liquid used primarily as fuel for the propulsion of motor vehicles, but does not include diesel engine fuel, kerosene, liquefied petroleum gas, natural gas and products specially prepared and sold for use in the turbo-prop or jet-type engines.

E. "Manager" means the manager of the vehicle pollution management division (VPMD).

F. "MTBE" means methyl tertiary butyl ether.

G. "Methanol" means a light volatile flammable poisonous liquid alcohol CH_3OH formed by the destructive distillation of wood or manufactured from natural gas or coal, and used in combination with heavier co-solvent alcohols as an octane enhancer for addition to gasoline.

H. "Motor vehicle" means any vehicle propelled by a spark ignited internal combustion engine which is designed primarily for travel on public highways and which is generally and commonly used to transport persons and property over the public highways.

I. "Oxygen content by weight" means a measurement of the percentage of oxygen in an oxygenated fuel.

J. "Oxygenate" means any oxygen-containing ashless, organic compound which may be used as a fuel or as a gasoline blending component and which was approved as a blending agent under the provisions of a waiver issued by the U.S. environmental protection agency pursuant to the Clean Air Act, Section 211 (f) (4).

K. "Oxygenated fuel" means a motor vehicle fuel blend, whether leaded or unleaded, consisting primarily of gasoline and a substantial amount of one or more oxygenates, generally an alcohol or ether.

L. "Vehicle pollution management division (VPMD)" means the division within the department responsible for the administration of 20.11.102 NMAC.

M. "Winter pollution season" means the annual period beginning the first day of November and ending at the conclusion of the last day of February of the immediately following year.

20.11.102.9 SAVINGS CLAUSE:

Any amendment of 20.11.102 NMAC that is filed with the state records center shall not affect actions pending for violation of a city or county ordinance, or prior versions of 20.11.102 NMAC. Prosecution for a prior violation shall be governed and prosecuted under the statute, ordinance, regulation, part or permit in effect at the time the violation was committed.

[11/10/93. . .12/1/95; 20.11.102.9 NMAC - Rn, 20 NMAC 11.102.I.9, 10/1/02; A, 9/1/04; A 12/11/05]

20.11.102.10 SEVERABILITY:

If any section, subsection, sentence, phrase, clause, or word of 20.11.102 NMAC or any federal standards incorporated herein is for any reason held to be unconstitutional or otherwise invalid by any court, the decision shall not affect the validity of the remaining provisions of 20.11.102 NMAC.

[11/10/93. . .12/1/95; 20.11.102.10 NMAC - Rn, 20 NMAC 11.102.I.10, 10/1/02; A 12/11/05]

20.11.102.11 DOCUMENTS:

Documents incorporated and cited in 20.11.102 NMAC may be viewed at the Albuquerque environmental health department, 400 Marquette NW, Albuquerque, NM, 87102.

[12/1/95; 20.11.102.11 NMAC - Rn, 20 NMAC 11.102.I.11 & A, 10/1/02; A, 9/1/04; A 12/11/05]

20.11.102.12 OXYGENATED FUELS:

During the winter pollution season, oxygenated fuels shall be used in all gasoline powered motor vehicles as a wintertime air pollution control strategy for reduction of carbon monoxide emissions in Bernalillo county.

A. Annual program duration and minimum oxygen content:

(1) During the winter pollution season, no person shall supply or sell any gasoline motor fuel intended as a final product for fueling of motor vehicles within Bernalillo county, or sell at retail, or sell to a private or government fleet for consumption; or introduce such fuels into a motor vehicle in Bernalillo county unless the fuel contains a minimum 2.7 percent oxygen content by weight, except as required pursuant to 20.11.102.14 NMAC.

(2) The department shall establish the blending tolerance for oxygenated fuels.

(3) The board, after considering EPA guidelines and other applicable information, reports, data, and testimony, may make a determination by July of each year whether the oxygenate levels should be modified or remain the same.

(4) Oxygenates approved for use in this program shall be blended per unit volume of gasoline motor fuel, and blended up to 10 percent by volume for ethanol, or at the volume for any other gasoline motor fuel additive which has been issued a waiver by the EPA pursuant to the Clean Air Act, Section 211 (f) (4).

(5) No gasoline motor fuel blended with methanol and intended as a final product for fueling of motor vehicles shall be sold at retail or to a private or government fleet within Bernalillo county.

B. Inventory: Any supplier who provides gasoline or oxygenate blends in bulk in Bernalillo county must register with VPMD and provide the names, addresses and telephone numbers of all jobbers, fleet fueling facilities and retail outlets supplied. The inventory shall be submitted to VPMD by November 30, 2005 and by October 31 each year thereafter.

C. Recordkeeping: During the winter pollution season, any supplier providing gasoline in Bernalillo county must document whether each batch is oxygenated, the oxygen content by weight and the oxygenate type and percent by volume. This documentation must accompany each shipment and be kept on file by the retailer or fleet facility for the duration of the winter pollution season.

D. Labeling and notice to the public:

(1) All oxygenated motor fuel sold shall be clearly labeled at each dispensing pump identifying the type of oxygenate, with labels provided by the department.

(2) All retail gasoline facilities shall keep readily available all pamphlets, brochures, fact sheets, and other written information provided to them by the department for information and dissemination to the public.

E. Sampling: A minimum of 20 percent of all retail stations and 10 percent of all fleet fueling facilities will be sampled. The department, upon presentation of proper identification, shall be allowed to enter a facility during reasonable times. The department may collect those samples deemed appropriate after paying for or offering to pay for the samples at any facility. Samples will be collected through the filler of the underground gasoline storage tanks as outlined in 40 CFR Part 80, Appendix D. If a sample cannot be taken directly from the underground tank, the sample may be taken from the gas pump nozzle and labeled accordingly.

F. Analysis: The department shall make a good faith effort to analyze the samples as soon as possible. Samples shall be analyzed in the field or at the VPMD laboratory on the same day the samples are collected, circumstances permitting. Samples will be analyzed for ethanol, MTBE, or other oxygenates. Any sample results contested by a distributor or station will be sent by the department to the New Mexico Department of Agriculture (NMDA) petroleum standards bureau for analysis. Sample analysis shall be conducted in accordance with the American society for testing and materials (ASTM) standards or equivalent. Analysis shall comply with ASTM D-5845, ASTM D-4815, or equivalent standard.

G. Enforcement:

(1) Samples containing at least 2.5 percent oxygen by weight shall be considered in compliance. Samples containing at least 2.0 percent but less than 2.5 percent oxygen by weight will result in a notice of warning and must be corrected at the time of the next fuel delivery. Samples containing at least 1.5 percent but less than 2.0 percent oxygen by weight will result in notice of violation (NOV) and must be corrected within 24 hours. The NOV will cite the reason(s) for non-compliance and will include the sample date and the results of the analysis in percent oxygen by weight. Samples containing less than 1.5 percent oxygen by weight or repeat violations for samples below 2.5 percent oxygen by weight shall result in an immediate "*stop sale*" order which will remain in effect until the violation is corrected as determined by the department. Any

fuel dispensed in violation of a "stop sale" order will result in the director of the department issuing a compliance order and imposing a penalty of not less than \$500 and not more than \$15,000 per day as authorized by the New Mexico Air Quality Act, NMSA 1978,74-2-12.B.

(2) The department may enter into an agreement, as appropriate, with any agency of the state or other local government entity to assist in the monitoring, compliance, and enforcement of 20.11.102 NMAC.

H. Suspension of program due to oxygenate shortage: Should extreme and unusual circumstances occur in the marketplace preventing the blending of oxygenates at the levels required by 20.11.102 NMAC, the manager may take the necessary steps as a temporary emergency measure to relax or suspend 20.11.102 NMAC. The manager shall inform the members of the board of such action taken within seven days of this occurrence. At its next regular meeting, or at a special meeting if so called, the board shall review the manager's action.

I. Program review: By the regular meeting of the board in July of each program year, the department shall provide a report to the board reviewing the results of the program, which shall include an analysis of costs and benefits to the consumer, investigations of complaints, compliance and quality assurance activities, and other findings and recommendations.

20.11.102.14 CONTINGENCY MEASURE:

If monitored carbon monoxide levels in Bernalillo county exceed 85 percent of the federal ambient carbon monoxide standards, then the minimum oxygen content by weight of 2.7 percent required in Paragraph (1), of Subsection A of 20.11.102.12 NMAC, will be increased to 3.0 percent beginning November 1 of the immediately following winter pollution season and continuing through the last day of the immediately following February and resuming every winter pollution season (November through February) thereafter.

PART 103: MOTOR VEHICLE VISIBLE EMISSIONS

20.11.103.1 ISSUING AGENCY:

Albuquerque/ Bernalillo County Air Quality Control Board. P.O. Box 1293, Albuquerque, NM 87103. Telephone: (505) 768-2600.

[11/28/89. . .12/1/95; 20.11.103.1 NMAC – Rn, 20 NMAC 11.103.I.1, 10/1/02]

20.11.103.2 SCOPE:

This Part is applicable to all motor vehicles, as defined in this Part, shall comply with the requirements of this Part, unless otherwise exempted.

[11/28/89. . .12/1/95; 20.11.103.2 NMAC – Rn, 20 NMAC 11.103.I.2, 10/1/02]

20.11.103.3 STATUTORY AUTHORITY:

This Part is adopted pursuant to the authority provided in the New Mexico Air Quality Control Act, NMSA 1978 Sections 74-2-4, 74-2-5.C; the Joint Air Quality Control Board Ordinance, Bernalillo County Ordinance 94-5 Section 4; and the Joint Air Quality Control Board Ordinance, Revised Ordinances of Albuquerque 1994 Section 9-5-1-4.

[12/1/95; 20.11.103.3 NMAC – Rn, 20 NMAC 11.103.I.3, 10/1/02]

20.11.103.4 DURATION:

Permanent.

[12/1/95; 20.11.103.4 NMAC – Rn, 20 NMAC 11.103.I.4, 10/1/02]

20.11.103.5 EFFECTIVE DATE:

December 1, 1995, unless a later date is cited at the end of a section.

[12/1/95; 20.11.103.5 NMAC – Rn, 20 NMAC 11.103.I.5 & A, 10/1/02]

20.11.103.6 OBJECTIVE:

This Part is intended to provide for the control and regulation of visible air contaminant emissions from motor vehicles into the ambient air.

[11/28/89. . .12/1/95; 20.11.103.6 NMAC – Rn, 20 NMAC 11.103.I.6, 10/1/02]

20.11.103.7 DEFINITIONS:

In addition to the definitions in 20.11.103.7 NMAC the definitions in 20.11.1 NMAC apply unless there is a conflict between definitions, in which case the definition in this Part shall govern.

A. "Motor Vehicle" means any vehicle, including motorcycles, powered by gasoline or diesel fuel and which has been intended, designed and manufactured primarily for use in carrying passengers or cargo on public roads and highways.

B. "Non Highway Motor Vehicle" means any vehicle, including motorcycles, powered by gasoline or diesel fuel and which has been intended, designed and manufactured primarily for operation off public roads, streets, and highways.

C. "Opacity" means the degree to which an air contaminant emission obscures the view of an observer, expressed in percentage of obscuration or in the degree (percent) to which transmittance of light is reduced by an air contaminant emission.

D. "Owner" means any individual, partnership, firm, public or private corporation, association, trust, estate, political subdivision, or agency or any other legal entity or legal representative, agent, or assign which owns a vehicle. If the operator of the motor vehicle is not the owner, the owner shall have primary responsibility for compliance.

E. "Metro Court" means the courts and those employees of the State of New Mexico Metropolitan Court.

F. "Visible Air Contaminant Emission" means any fume, smoke, particulate matter, vapor or gas, or combination thereof, except water vapor or steam condensate.

[11/28/89. . .12/1/95; 20.11.103.7 NMAC – Rn, 20 NMAC 11.103.I.7, 10/1/02]

20.11.103.8 VARIANCES:

[RESERVED]

[12/1/95; 20.11.103.8 NMAC - Rn, 20 NMAC 11.103.8, 10/1/02]

20.11.103.9 SAVINGS CLAUSE:

Any amendment to 20.11.103 NMAC, which is filed, with the State Records Center shall not affect actions pending for violation of a City or County ordinance, Air Quality Control Board Regulation 36, or 20.11.103 NMAC. Prosecution for a violation under prior regulation wording shall be governed and prosecuted under the statute, ordinance, Part, or regulation section in effect at the time the violation was committed.

[12/1/95; 20.11.103.9 NMAC – Rn, 20 NMAC 11.103.I.9, 10/1/02]

20.11.103.10 SEVERABILITY:

If any section, paragraph, sentence, clause, or word of this Part or any federal standards incorporated herein is for any reason held to be unconstitutional or otherwise invalid by any court, the decision shall not affect the validity of remaining provisions of this Part.

[12/1/95; 20.11.103.10 NMAC – Rn, 20 NMAC 11.103.I.10, 10/1/02]

20.11.103.11 DOCUMENTS:

Documents incorporated and cited in this Part may be viewed at the Albuquerque Environmental Health Department, 400 Marquette NW, Albuquerque, NM.

[12/1/95; 20.11.103.11 NMAC – Rn, 20 NMAC 11.103.I.11 & A, 10/1/02]

20.11.103.12 VISIBLE EMISSION REQUIREMENTS:

A. No owner shall cause to be emitted from any gasoline powered highway or non-highway motor vehicle any continuous visible air contaminant emission while the vehicle is in operation for a period greater than two consecutive seconds.

B. No owner shall cause to be emitted from any diesel powered highway motor vehicle, 10,000 pounds gross vehicle weight rating or less, visible air contaminant emission while the vehicle is in operation for a period greater than five consecutive seconds, which is a shade or density of more than 25% opacity.

C. No owner shall cause to be emitted from any diesel powered highway motor vehicle, greater than 10,000 pounds gross vehicle weight rating, continuous visible air contaminant emission while the vehicle is in operation for a period greater than five consecutive seconds, which is a shade or density of more than 30 % opacity.

D. No owner shall cause to be emitted from any diesel powered non-highway motor vehicle continuous visible air contaminant emission while the vehicle is in operation for a period greater than ten consecutive seconds, which is a shade or density of more than 40 % opacity.

E. Diesel powered highway and non-highway motor vehicles exceeding these requirements shall be exempt for a period of ten minutes, if the excessive visible air contaminant emissions are a direct result of cold engine start-up and provided that the motor vehicle is in a stationary position.

[12/1/95; 20.11.103.12 NMAC – Rn, 20 NMAC 11.103.I.12 & Repealed, 10/1/02; Rn, 20 NMAC 11.103.II.1, 10/1/02]

20.11.103.13 ENFORCEMENT PROCEDURES:

A. Complaints may be filed with the Department by any person who observes a motor vehicle emitting visible air contaminant emissions in excess of that allowed by this Part. A signed written complaint will authorize the Department to request the owner to have his/her vehicle tested at Department facilities at no charge. If an owner fails the Opacity Test or does not present his/her motor vehicle for testing, in accordance with procedures set up by the Department, the Department may take appropriate enforcement action against the owner.

B. The Department shall enter into an agreement with the Metro Court to provide a free test for owners of motor vehicles, which have been issued a citation by a law enforcement officer for excessive visible air contaminant emissions. The owner will have sixty days to bring any failing motor vehicle into compliance and present it to the Department for testing. The Department may issue a clearance certificate to the Metro Court after testing a vehicle, which has shown compliance with the visible emission requirements of 20.11.103.12 NMAC.

C. The Department shall develop procedures to audit private and government fleets stationed in Bernalillo County for compliance with visible air contaminant emissions in accordance with this Part.

[12/1/95; 20.11.103.13 NMAC – Rn, 20 NMAC 11.103.II.2, 10/1/02]

20.11.103.14 PROGRAM REVIEW:

The Department will provide a periodic report to the Board reviewing the results of the program including findings and recommendations.

[11/28/89; 20.11.103.14 NMAC – Rn, 20 NMAC 11.103.II.3, 10/1/02]

PART 104: NEW MOTOR VEHICLE EMISSION STANDARDS

20.11.104.1 ISSUING AGENCY:

Albuquerque-Bernalillo County Air Quality Control Board, P.O. Box 1293, Albuquerque, New Mexico 87103. Telephone: (505) 768-1972.

[20.11.104.1 NMAC - Rp, 20.11.104.1 NMAC, 12/31/2023]

20.11.104.2 SCOPE:

All manufacturers, dealers, rental car agencies, the United States, state and local governments, or other persons who deliver for sale, offer for sale, sell, import, deliver, purchase, rent, lease, acquire, receive, or register model year 2027 and subsequent model year passenger cars, light-duty trucks, medium-duty passenger vehicles, medium-duty vehicles or motor vehicle engines, heavy-duty vehicles, heavy-duty

engines or motor vehicle engines. All regulated entities subject to compliance with 20.11.104.120 NMAC (Large Entity Reporting Requirement).

[20.11.104.2 NMAC - Rp, 20.11.104.2 NMAC, 12/31/2023]

20.11.104.3 STATUTORY AUTHORITY:

The Air Quality Control Act, Sections 74-2-1 to -17 NMSA 1978; the Joint Air Quality Control Board Ordinance, Revised Ordinances of Albuquerque 1994, Sections 9-5-1-3, 9-5-1-4, 9-5-1-5 and 9-5-1-6; and Bernalillo County Code, Article II, Sections 30-32, 30-33, 30-34 and 30-35.

[20.11.104.3 NMAC - Rp, 20.11.104.3 NMAC, 12/31/2023]

20.11.104.4 DURATION:

Permanent.

[20.11.104.4 NMAC - Rp, 20.11.104.4 NMAC, 12/31/2023]

20.11.104.5 EFFECTIVE DATE:

December 31, 2023, except where a later date is cited at the end of a section.

[20.11.104.5 NMAC - Rp, 20.11.104.5 NMAC, 12/31/2023]

20.11.104.6 OBJECTIVE:

To adopt and implement the California vehicle emission standards and requirements statewide pursuant to Section 177 of the federal Clean Air Act.

[20.11.104.6 NMAC - Rp, 20.11.104.6 NMAC, 12/31/2023]

20.11.104.7 DEFINITIONS:

The definitions in the Air Quality Control Act, Section 74-2-2 NMSA 1978 shall apply in 20.11.104 NMAC. If a term is defined in Section 74-2-2 NMSA 1978 and 20.11.104 NMAC, the definition in 20.11.104 NMAC shall apply. The definitions in 20.11.1.7 NMAC, the Revised Ordinances of Albuquerque 1994, Section 9-5-1-2, and the Bernalillo County Code, Article II, Section 30-31 shall not apply in 20.11.104 NMAC. When a term in a provision of the California code of regulations (CCR), Title 13, Title 17, or the California health and safety code (CHSC) incorporated by reference is given a different meaning than the term defined for general purposes in 20.11.104 NMAC, the specific CCR or CHSC section's meaning and application of the term shall control, except that all references in the incorporated sections of the CCR and CHSC shall have a different meaning unique to New Mexico whenever appropriate depending on context

and the entity's authority, as follows: "California" shall, whenever appropriate, mean "New Mexico", or "Bernalillo County" and the "City of Albuquerque", depending on the context; the "California Air Resources Board," "CARB," "state board," or "board" shall mean the "environmental improvement board" or the "environment department", or the "air quality control board" or the "environmental health department", depending on the context; and "Executive Officer" shall mean the "secretary" or the "director", depending on the context; provided, however, the terms in the CCR and CHSC definitions incorporated by reference in 20.11.104.7 NMAC (Definitions) shall not be changed. For registration of a motor vehicle, when a term defined herein is also defined in the Motor Vehicle Code, Articles 1 through 8 of Chapter 66 NMSA 1978, and is given a different meaning than the term defined for general purposes in 20.11.104 NMAC, the Motor Vehicle Code meaning, and application of the term shall control.

A. "Air quality control board" means the Albuquerque-Bernalillo county air quality control board, which is a local board, as such term is defined in Subsection K of Section 74-2-2 NMSA 1978.

B. "California Air Resources Board" or "CARB" means the same in 20.11.104 NMAC as it is defined in CHSC, Section 39003.

C. "Certification" means the same in 20.11.104 NMAC as it is defined in CHSC, Section 39018.

D. "Dealer" means the same in 20.11.104 NMAC as it is defined in Subsection B of Section 57-16-3 NMSA 1978.

E. "Emission standards" means the same in 20.11.104 NMAC as it is defined in CHSC, Section 39027, which New Mexico is authorized to adopt pursuant to 42 U.S.C. § 7507.

F. "Emergency vehicle" means the same in 20.11.104 NMAC as it is defined in CCR, Title 13, Section 1961.3(f)(10).

G. "Environment department" means the New Mexico environment department.

H. "Environmental health department" means the environmental health department, which is a local agency as such term is defined in Subsection I of Section 74-2-2 NMSA 1978.

I. "Environmental improvement board" means the same in 20.11.104 NMAC as it is defined in Subsection A of Section 74-1-3 NMSA 1978.

J. "Fleet" means the same in 20.11.104 NMAC as it is defined in CCR, Title 13, Section 2012(d).

K. "Fleet owner" means the same in 20.11.104 NMAC as it is defined in CCR, Title 13, Section 2012(d).

L. "Greenhouse gas" means the same in 20.11.104 NMAC as it is defined in CCR, Title 13, Section 1961.3(18).

M. "Heavy-duty engine" means the same in 20.11.104 NMAC as it is defined in CCR, Title 13, Section 1900(b)(5) or CCR, Title 17, Section 95662, as applicable.

N. "Heavy-duty vehicle" means the same in 20.11.104 NMAC as it is defined in CCR, Title 13, Section 1900(b)(6) or CCR, Title 17, Section 95662, as applicable.

O. "Light-duty truck" means the same in 20.11.104 NMAC as it is defined in CCR, Title 13, Section 1900(b)(11).

P. "Manufacturer" means the same in 20.11.104 NMAC as it is defined in Subsection J of Section 57-16-3 NMSA 1978.

Q. "Medium-duty" means the same in 20.11.104 NMAC as it is defined in CHSC, Section 39037.5.

R. "Medium-duty passenger vehicle" means the same in 20.11.104 NMAC as it is defined in CCR, Title 13, Section 1900(b)(12).

S. "Medium-duty vehicle" means the same in 20.11.104 NMAC as it is defined in CCR, Title 13, Section 1900(b)(13) or CCR, Title 17, Section 95662, as applicable.

T. "Methane" means the chemical compound containing one atom of carbon and four atoms of hydrogen.

U. "Model year" means the same in 20.11.104 NMAC as it is defined in CHSC, Section 39038.

V. "Motor vehicle" means the same in 20.11.104 NMAC as it is defined in CHSC, Section 39039.

W. "Motor vehicle engine" means the same in 20.11.104 NMAC as it is defined in CHSC, Section 39042.5.

X. "Non-methane organic gas" means the same in 20.11.104 NMAC as it is defined in CCR, Title 13, Section 1961.2.

Y. "Particulate matter" means the same in 20.11.104 NMAC as it is defined in CCR, Title 13, Section 1961.2.

Z. "Passenger car" means the same in 20.11.104 NMAC as it is defined in CCR, Title 13, Section 1900(b)(17).

AA. "Passenger vehicle" means the same in 20.11.104 NMAC as it is defined in CHSC, Section 39046.

BB. "Plug-in hybrid electric vehicle" or "PHEV" means the same in 20.11.104 NMAC as it is defined in CCR, Title 13, Section 1962.4 and CCR, Title 13, Section 1963, as applicable.

CC. "Recall" means the same in 20.11.104 NMAC as it is defined in CCR, Title 13, Section 1900(b)(19).

DD. "Register" means to register a motor vehicle with the New Mexico motor vehicle division.

EE. "Sale" or "sell" means the transfer of equitable or legal title to a motor vehicle or motor vehicle engine to the ultimate purchaser.\

FF. "Truck" means the same in 20.11.104 NMAC as it is defined in CHSC, Section 39054.

GG. "Ultimate purchaser" means the same in 20.11.104 NMAC as it is defined in CHSC, Section 39055.5.

HH. "Vehicle" means the same in 20.11.104 NMAC as it is defined in CHSC, Section 39059.

II. "Zero-emission vehicle" or "ZEV" means the same in 20.11.104 NMAC as it is incorporated in CCR, Title 13, Sections 1962.2(a) and 1962.4(b).

JJ. "ZEV value" means a unit, expressed numerically, demonstrating delivery of qualified zero-emission vehicles or other vehicle allowances for the annual ZEV requirement.

[20.11.104.7 NMAC -Rp, 20.11.104.7 NMAC, 12/31/2023]

20.11.104.8 DOCUMENTS:

[20.11.104.100 NMAC - Repealed, 12/31/2023]

20.11.104.101 GENERAL REQUIREMENTS:

A. Except as otherwise required, 20.11.104 NMAC shall apply to new motor vehicles, including passenger cars, light-duty trucks, medium-duty passenger vehicles, and medium-duty vehicles, where "new" means model years 2027 through 2032 with

7,500 miles or fewer on the odometer, and for dealers the mileage at the time of sale as determined by the odometer statement when the dealer acquired the motor vehicle; and medium-duty passenger vehicles, medium-duty vehicles, heavy-duty vehicles, and heavy-duty engines, where "new" means model years 2027 and subsequent with 7,500 miles or fewer on the odometer, and for dealers the mileage at the time of sale as determined by the odometer statement when the dealer acquired the motor vehicle.

B. A manufacturer, dealer, rental car agency, the United States, state or local government, or other person shall not deliver for sale, offer for sale, sell, import, deliver, purchase, rent, lease, acquire, receive, or register passenger cars, light-duty trucks, medium-duty passenger vehicles, medium-duty vehicles, heavy-duty vehicles, heavy-duty engines, or motor vehicle engines unless such motor vehicle or motor vehicle engine is certified to the California vehicle emission standards, as incorporated by reference pursuant to 20.11.104 NMAC.

C. Each manufacturer shall comply with the motor vehicle emission standards, zero-emission motor vehicle requirements, reporting, warranty, labeling, recall campaign, and other applicable requirements contained in 20.11.104 NMAC.

D. Each manufacturer, dealer, rental car agency, the United States, state and local government, and other person shall comply with the environment department's and environmental health department's inspection and information requests issued pursuant to 20.2.91.115 NMAC (Inspections and Information Requests) and 20.11.104.115 NMAC (Inspections and Information Requests), respectively.

E. Each person registering a motor vehicle in New Mexico shall comply with the registration requirements in 20.11.104 NMAC.

F. The requirements in 20.11.104 NMAC shall not be applicable if exempt, as provided in 20.11.104.103 NMAC (Exemptions).

G. The requirements in 20.11.104 NMAC shall be in compliance with Motor Vehicle Dealers Franchising Act, Sections 57-16-1 to -16 NMSA 1978.

H. Except as provided in 20.11.104.120 NMAC (Large Entity Reporting Requirement), all regulated entities shall submit information specified in CCR, Title 13, Sections 2012.1 and 2012.2 to the secretary.

I. In 20.11.104 NMAC, New Mexico is inclusive of the city of Albuquerque and Bernalillo county, which allows for compliance on a statewide basis.

[20.11.104.101 NMAC - Rp, 20.11.104.101 NMAC, 12/31/2023]

20.11.104.102 INCORPORATION BY REFERENCE:

A. Sections of the CCR and the CHSC incorporated by reference herein include the regulations as they existed on the effective date in 20.11.104.5 NMAC (Effective Date); incorporated sections of the CCR and the CHSC do not incorporate a later adoption or amendment of the regulation.

B. Each manufacturer of a passenger car, light-duty truck, medium-duty passenger vehicle, medium-duty vehicle, heavy-duty vehicle, heavy-duty engine, or motor vehicle engine shall comply with each applicable standard in Title 13 and Title 17 of the CCR as incorporated by reference herein, as applicable.

C. The CCR sections from Title 13 and Title 17 unless otherwise noted incorporated by reference include:

(1) Title 13, Section 1900: Definitions. As amended, 11/30/2022.

(2) Title 13, Section 1956.8: Exhaust Emission Standards and Test Procedures - 1985 and Subsequent Model Heavy-Duty Engines and Vehicles, 2021 and Subsequent Zero-Emission Powertrains, and 2022 and Subsequent Model Heavy-Duty Hybrid Powertrains (medium-duty vehicle greenhouse gas emission standards at 1956.8(h) only). As amended, 11/30/2022.

(3) Title 13, Section 1961.2: Exhaust Emission Standards and Test Procedures - 2015 through 2025 Model Year Passenger Cars, and Light-Duty Trucks, and 2015 through 2028 Model Year Medium-Duty Vehicles. As amended, 11/30/2022.

(4) Title 13, Section 1961.3: Greenhouse Gas Exhaust Emission Standards and Test Procedures - 2017 and Subsequent Model Passenger Cars, Light-Duty Trucks, and Medium-Duty Passenger Vehicles. As amended, 11/30/2022.

(5) Title 13, Section 1961.4: Exhaust Emission Standards and Test Procedures — 2026 and Subsequent Model Year Passenger Cars, Light-Duty Trucks, and Medium-Duty Vehicles, as amended 11/30/2022, except that subsection 1961.4(g)(1) is not adopted by reference.

(6) Title 13, Section 1962.2: Zero-Emission Vehicle Standards for 2018 through 2025 Model Year Passenger Cars, Light-Duty Trucks, and Medium-Duty Vehicles. As amended, 11/30/2022.

(7) Title 13, Section 1962.3: Electric Vehicle Charging Requirements. As amended, 11/30/2022.

(8) Title 13, Section 1962.4: Zero-Emission Vehicle Requirements for 2026 and Subsequent Model Year Passenger Cars and Light-Duty Trucks, as amended 11/30/2022, except that subsection 1962.4(c)(1)(B) model years "2033", "2034", and "2035 and subsequent" with corresponding percentage requirements and subsection 1962.4(e)(2)(A)(3) are not adopted by reference.

(9) Title 13, Section 1962.5: Data Standardization Requirements for 2026 and Subsequent Model Year Light-Duty Zero Emission Vehicles and Plug-in Hybrid Electric Vehicles. As amended 11/30/2022.

(10) Title 13, Section 1962.6: Battery Labeling Requirements. As amended 11/30/2022.

(11) Title 13, Section 1962.7: In-Use Compliance, Corrective Action and Recall Protocols for 2026 and Subsequent Model Year Zero-Emission and Plug-in Hybrid Electric Passenger Cars and Light-Duty Trucks. As amended, 11/30/2022.

(12) Title 13, Section 1962.8: Warranty Requirements for Zero-Emission and Batteries in Plug-in Hybrid Electric 2026 and Subsequent Model Year Passenger Cars and Light-Duty Trucks. As amended 11/30/2022.

(13) Title 13, Section 1963: Advanced Clean Trucks Purpose, Applicability, Definitions, and General Requirements. As amended, 3/15/2021.

(14) Title 13, Section 1963.1: Advanced Clean Trucks Deficits. As amended, 3/15/2021.

(15) Title 13, Section 1963.2: Advanced Clean Trucks Credit Generation, Banking, and Trading. As amended, 3/15/2021.

(16) Title 13, Section 1963.3: Advanced Clean Trucks Compliance Determination. As amended, 3/15/2021.

(17) Title 13, Section 1963.4: Advanced Clean Trucks Reporting and Recordkeeping. As amended, 3/15/2021.

(18) Title 13, Section 1963.5(a)(1)-(3): Advanced Clean Trucks Enforcement. As amended, 3/15/2021.

(19) Title 13, Section 1964: Special Test Procedures for Certification and Compliance – New Modifier Certified Motor Vehicles. As amended, 3/15/2021.

(20) Title 13, Section 1965: Emission Control, Smog Index, and Environmental Performance Labels - 1979 and Subsequent Model-Year Motor Vehicles. As amended, 11/30/2022.

(21) Title 13, Section 1968.2: Malfunction and Diagnostic System Requirements - 2004 and Subsequent Model-Year Passenger Cars, Light-Duty Trucks, and Medium-Duty Vehicles and Engines. As amended, 11/30/2022.

(22) Title 13, Section 1969: Motor Vehicle Service Information - 1994 and Subsequent Model Passenger Cars, Light-Duty Trucks, and Medium-Duty Engines and

Vehicles, and 2007 and Subsequent Model Heavy-Duty Engines. As amended, 11/30/2022.

(23) Title 13, Section 1971.1: On-Board Diagnostic System Requirements -- 2010 and Subsequent Model-Year Heavy-Duty Engines. As amended, 3/15/2021.

(24) Title 13, Section 1976: Standards and Test Procedures for Motor Vehicle Fuel Evaporative Emissions. As amended, 11/30/2022.

(25) Title 13, Section 1978: Standards and Test Procedures for Vehicle Refueling Emissions. As amended, 11/30/2022.

(26) Title 13, Section 2012: Advanced Clean Trucks, Large Entity Reporting Requirement. As amended, 3/15/2021.

(27) Title 13, Section 2012.1: General Entity Information Reporting. As amended, 3/15/2021.

(28) Title 13, Section 2012.2: Vehicle Usage by Facility Reporting. As amended, 3/15/2021.

(29) Title 13, Section 2035: Purpose, Applicability, and Definitions. As amended, 10/1/2019.

(30) Title 13, Section 2036: Defects Warranty Requirements for 1979 Through 1989 Model Passenger Cars, Light-Duty Trucks, and Medium-Duty Vehicles; 1979 and Subsequent Model Motorcycles and Heavy-Duty Vehicles; and Motor Vehicle Engines Used in Such Vehicles; and 2020 and Subsequent Model Year Trailers. As amended, 12/22/2021.

(31) Title 13, Section 2037: Defects Warranty Requirements for 1990 and Subsequent Model Passenger Cars, Light-Duty Trucks, Medium-Duty Vehicles, and Motor Vehicle Engines Used in Such Vehicles. As amended, 11/30/2022.

(32) Title 13, Section 2038: Performance Warranty Requirements for 1990 and Subsequent Model Passenger Cars, Light-Duty Trucks, and Medium-Duty Vehicles, and Motor Vehicle Engines Used in Such Vehicles. As amended, 11/30/2022.

(33) Title 13, Section 2039: Emission Control System Warranty Statement. As amended, 12/26/1990.

(34) Title 13, Section 2040: Vehicle Owner Obligations. As amended, 10/1/2019.

(35) Title 13, Section 2041: Mediation; Finding of Warrantable Condition. As amended, 12/26/1990.

- (36) Title 13, Section 2046: Defective Catalyst. As amended, 2/15/1979.
- (37) Title 13, Section 2047: Certification Procedures for User Modifier-certified Motor Vehicles. As amended, 1/8/1988.
- (38) Title 13, Section 2062: Assembly-line Test Procedures - 1998 and Subsequent Model Years. As amended, 8/7/2012.
- (39) Title 13, Section 2109: New Vehicle Recall Provisions. As amended, 12/30/1983.
- (40) Title 13, Section 2111: Applicability. As amended, 12/22/2021.
- (41) Title 13, Section 2112: Definitions. As amended, 11/30/2022.
- (42) Title 13, Section 2113: Initiation and Approval of Voluntary and Influenced Emission-Related Recalls. As amended, 12/22/2021.
- (43) Title 13, Section 2114: Voluntary and Influenced Recall Plans. As amended, 12/22/2021.
- (44) Title 13, Section 2115: Eligibility for Repair. As amended, 12/22/2021.
- (45) Title 13, Section 2116: Repair Label. As amended, 12/22/2021.
- (46) Title 13, Section 2117: Proof of Correction Certificate. As amended, 12/22/2021.
- (47) Title 13, Section 2118: Notification. As amended, 12/22/2021.
- (48) Title 13, Section 2119: Recordkeeping and Reporting Requirements. As amended, 12/22/2021.
- (49) Title 13, Section 2120: Other Requirements Not Waived. As amended, 1/26/1995.
- (50) Title 13, Section 2121: Penalties. As amended, 12/22/2021.
- (51) Title 13, Section 2122: General Provisions. As amended, 12/8/2010.
- (52) Title 13, Section 2123: Initiation and Notification of Ordered Emission-Related Recalls. As amended, 12/22/2021.
- (53) Title 13, Section 2124: Availability of Public Hearing. As amended, 1/26/1995.

- (54) Title 13, Section 2125: Ordered Recall Plan. As amended, 12/22/2021.
- (55) Title 13, Section 2126: Approval and Implementation of Recall Plan. As amended, 12/22/2021.
- (56) Title 13, Section 2127: Notification of Owners. As amended, 12/22/2021.
- (57) Title 13, Section 2128: Repair Label. As amended, 12/22/2021.
- (58) Title 13, Section 2129: Proof of Correction Certificate. As amended, 12/22/2021.
- (59) Title 13, Section 2130: Capture Rates and Alternative Measures. As amended, 12/22/2021.
- (60) Title 13, Section 2131: Preliminary Tests. As amended, 12/22/2021.
- (61) Title 13, Section 2132: Communication with Repair Personnel. As amended, 1/26/1995.
- (62) Title 13, Section 2133: Recordkeeping and Reporting Requirements. As amended, 12/22/2021.
- (63) Title 13, Section 2135: Extension of Time. As amended, 1/26/1995.
- (64) Title 13, Section 2137: Vehicle, Engine, and Trailer Selection. As amended, 11/30/2022.
- (65) Title 13, Section 2139: Testing. As amended, 12/22/2021.
- (66) Title 13, Section 2140: Notification and Use of Test Results. As amended, 11/30/2022.
- (67) Title 13, Section 2141: General Provisions. As amended, 12/22/2021.
- (68) Title 13, Section 2142: Alternative Procedures. As amended, 12/22/2021.
- (69) Title 13, Section 2143: Failure Levels Triggering Recall and Corrective Action. As amended, 12/22/2021.
- (70) Title 13, Section 2144: Emission Warranty Information Report. As amended, 12/22/2021.
- (71) Title 13, Section 2145: Field Information Report. As amended, 12/22/2021.

(72) Title 13, Section 2146: Emissions Information Report. As amended, 12/22/2021.

(73) Title 13, Section 2147: Demonstration of Compliance with Emission Standards. As amended, 11/30/2022.

(74) Title 13, Section 2148: Evaluation of Need for Recall. As amended, 12/22/2021.

(75) Title 13, Section 2149: Notification and Subsequent Action. As amended, 12/22/2021.

(76) Title 13, Section 2166: General Provisions. As amended, 12/22/2021.

(77) Title 13, Section 2166.1: Definitions As amended, 12/22/2021.

(78) Title 13, Section 2167: Required Recall and Corrective Action for Failures of Exhaust After- Treatment Devices, on-Board Computers or Systems, Urea Dosers, Hydrocarbon Injectors, Exhaust Gas Recirculation Valves, Exhaust Gas Recirculation Coolers, Turbochargers, Fuel Injectors. As amended, 12/22/2021.

(79) Title 13, Section 2168: Required Corrective Action and Recall for Emission-Related Component Failures. As amended, 12/22/2021.

(80) Title 13, Section 2169: Required Recall or Corrective Action Plan. As amended, 12/22/2021.

(81) Title 13, Section 2169.1: Approval and Implementation of Corrective Action Plan. As amended, 12/22/2021.

(82) Title 13, Section 2169.2: Notification of Owners. As amended, 12/22/2021.

(83) Title 13, Section 2169.3: Repair Label. As amended, 12/22/2021.

(84) Title 13, Section 2169.4: Proof of Correction Certificate. As amended, 12/22/2021.

(85) Title 13, Section 2169.5: Preliminary Tests. As amended, 12/22/2021.

(86) Title 13, Section 2169.6: Communication with Repair Personnel. As amended, 12/22/2021.

(87) Title 13, Section 2169.7: Recordkeeping and Reporting Requirements. As amended, 12/22/2021.

(88) Title 13, Section 2169.8: Extension of Time. As amended, 12/22/2021.

(89) Title 13, Section 2170: Penalties. As amended, 12/22/2021.

(90) Title 13, Section 2235: Requirements. As amended, 10/1/2019.

(91) Title 13, Section 2423: Exhaust Emission Standards and Test. As amended, 12/22/2021.

(92) Title 13, Section 2485: Airborne Toxic Control Measure to Limit Diesel-Fueled Commercial Motor Vehicle Idling. As amended, 12/22/2021.

(93) Title 17, Section 95660: Purpose. As amended, 11/30/2022.

(94) Title 17, Section 95661: Applicability. As amended, 12/5/2014.

(95) Title 17, Section 95662: Definitions. As amended, 12/22/2021.

(96) Title 17, Section 95663: Greenhouse Gas Exhaust Emission Standards and Testing Procedures for New 2014 and Subsequent Model Heavy-Duty Vehicles. As amended, 12/22/2021.

[20.11.104.102 NMAC - Rp, 20.11.104.102 NMAC, 12/31/2023]

20.11.104.103 EXEMPTIONS:

The following motor vehicles shall not be subject to 20.11.104 NMAC.

A. Military tactical vehicles, which shall mean the same in this section as in CCR, Title 13, Section 1905.

B. Motor vehicles sold for registration in a state that is not New Mexico.

C. Motor vehicles that have greater than 7,500 miles on the odometer.

D. Motor vehicles available for rent to a final destination outside of New Mexico.

E. Motor vehicles transferred from one person to another person due to: death, inheritance, devise or bequest; divorce, dissolution, annulment or legal separation; merger or consolidation; bankruptcy; court judgment or decree; or possessory lien, seizure or foreclosure.

F. Emergency vehicles.

G. A motor vehicle acquired by a resident of New Mexico to replace a motor vehicle registered to such resident that was stolen, damaged, or failed beyond reasonable repair while out of state, provided that such replacement motor vehicle is acquired out of

state when the previously owned motor vehicle was stolen, damaged, or failed beyond reasonable repair.

H. A motor vehicle with a right-hand drive configuration that is not available in a California-certified model, purchased by a rural route postal carrier and used primarily for work.

I. Motor vehicles purchased by a nonresident before establishing residency in New Mexico, regardless of the mileage on the odometer.

J. Motor vehicles purchased by a resident of New Mexico while assigned to active government service outside New Mexico.

K. Custom and assembled motor vehicles that:

(1) are maintained for occasional transportation, exhibitions, club activities, parades, tours, testing of operation, repair, maintenance, and similar uses; and

(2) are not used for general daily transportation.

L. A vehicle sold for the purpose of being wrecked or dismantled.

M. Motor vehicles used exclusively in the conduct of agricultural operations, like implements of husbandry not including a vehicle whose existing design is primarily for the transportation of persons or property on a highway, or road machinery not regularly operated on public streets and highways.

N. A vehicle defined as an "excluded bus" pursuant to CCR, Title 13, Section 1963(c)(11).

[20.11.104.103 NMAC - Rp, 20.11.104.103 NMAC, 12/31/2023]

20.11.104.104 FLEET AVERAGE NON-METHANE ORGANIC GAS PLUS OXIDES OF NITROGEN EXHAUST EMISSION STANDARDS, REPORTING AND COMPLIANCE:

A. Beginning model year 2027 and subsequent years, this 20.11.104.104 NMAC (Fleet Average Non-methane Organic Gas Plus Oxides of Nitrogen Exhaust Emission Standards, Reporting and Compliance) applies to manufacturers that deliver for sale, offer for sale, sell, import, deliver, purchase, rent, lease, acquire, receive, or register passenger cars, light-duty trucks, and medium-duty vehicles pursuant to the requirements of CCR, Title 13, Section 1961.4.

B. Each manufacturer subject to 20.11.104.104 NMAC (Fleet Average Non-methane Organic Gas Plus Oxides of Nitrogen Exhaust Emission Standards, Reporting and Compliance) shall comply with fleet average non-methane organic gas plus oxides

of nitrogen exhaust emission standards for passenger cars, light-duty trucks, and medium-duty vehicles, and other requirements set forth in CCR, Title 13, Section 1961.4. Compliance shall be based on the motor vehicles subject to 20.11.104.104 NMAC (Fleet Average Non-methane Organic Gas Plus Oxides of Nitrogen Exhaust Emission Standards, Reporting and Compliance) and 20.2.91.104 NMAC (Fleet Average Non-methane Organic Gas Plus Oxides of Nitrogen Exhaust Emission Standards, Reporting and Compliance) that each manufacturer delivers for sale, offers for sale, sells, imports, delivers, or leases in New Mexico, and shall be determined on a statewide basis.

C. Each manufacturer subject to Subsection B of 20.11.104.104 NMAC (Fleet Average Non-methane Organic Gas Plus Oxides of Nitrogen Exhaust Emission Standards, Reporting and Compliance) shall accrue fleet average non-methane organic gas plus oxides of nitrogen exhaust emission standard credits and debits and may use credits in accordance with CCR, Title 13, Section 1961.4. Each manufacturer shall accrue and use debits and credits based on the number of motor vehicles subject to Subsection B of 20.11.104.104 NMAC (Fleet Average Non-methane Organic Gas Plus Oxides of Nitrogen Exhaust Emission Standards, Reporting and Compliance) and Subsection B of 20.2.91.104 NMAC (Fleet Average Non-methane Organic Gas Plus Oxides of Nitrogen Exhaust Emission Standards, Reporting and Compliance). Accounting for the use of debits and credits shall be on a statewide basis.

D. Each manufacturer subject to Subsection B of 20.11.104.104 NMAC (Fleet Average Non-methane Organic Gas Plus Oxides of Nitrogen Exhaust Emission Standards, Reporting and Compliance) shall submit a report by May 1 of each year to the environment department that includes the statewide fleet average non-methane organic gas plus oxides of nitrogen exhaust emission data for the model year just ended. The report shall be in accordance with the procedures in CCR, Title 13, Section 1961.4 and be in the same format used to report such information to CARB. If a manufacturer elects to report the information required pursuant to Subsection B of 20.11.104.104 NMAC (Fleet Average Non-methane Organic Gas Plus Oxides of Nitrogen Exhaust Emission Standards, Reporting and Compliance) and Subsection B of 20.2.91.104 NMAC (Fleet Average Non-methane Organic Gas Plus Oxides of Nitrogen Exhaust Emission Standards, Reporting and Compliance) using the pooling provisions set forth in CCR, Title 13, Section 1961.4, the manufacturer shall report to the environment department the information for the entire pool as well as for the portion specific to New Mexico.

[20.11.104.104 NMAC - Rp, 20.11.104.104 NMAC, 12/31/2023]

20.11.104.105 PARTICULATE MATTER EXHAUST EMISSION STANDARDS, REPORTING AND COMPLIANCE:

Beginning model year 2027 and subsequent years, each manufacturer subject to 20.11.104.105 NMAC (Particulate Matter Exhaust Emission Standards, Reporting and Compliance) shall comply with particulate exhaust emission standards for passenger

cars, light-duty trucks, medium-duty passenger vehicles, and medium-duty vehicles, and other requirements set forth in CCR, Title 13, Section 1961.4. Compliance shall be based on the motor vehicles subject to 20.11.104.105 NMAC (Particulate Matter Exhaust Emission Standards, Reporting and Compliance) and 20.2.91.105 NMAC (Particulate Matter Exhaust Emission Standards, Reporting and Compliance) that each manufacturer delivers for sale, offers for sale, sells, imports, delivers, or leases in New Mexico, and shall be determined on a statewide basis.

[20.11.104.105 NMAC - Rp, 20.11.104.105 NMAC, 12/31/2023]

20.11.104.106 FLEET AVERAGE GREENHOUSE GAS EXHAUST EMISSION STANDARDS, REPORTING AND COMPLIANCE:

A. Beginning model year 2027 and subsequent years, this 20.11.104.106 NMAC (Fleet Average Greenhouse Gas Exhaust Emission Standards, Reporting and Compliance) applies to manufacturers that deliver for sale, offer for sale, sell, import, deliver, purchase, rent, lease, acquire, receive, or register passenger cars, light-duty trucks, and medium-duty vehicles pursuant to the requirements of CCR, Title 13, Section 1961.3.

B. Each manufacturer subject to 20.11.104.106 NMAC (Fleet Average Greenhouse Gas Exhaust Emission Standards, Reporting and Compliance) shall comply with fleet average greenhouse gas exhaust emission standards for passenger cars, light-duty trucks, and medium-duty passenger vehicles, and other requirements set forth in CCR, Title 13, Section 1961.3. Compliance shall be based on the motor vehicles subject to 20.11.104.106 NMAC (Fleet Average Greenhouse Gas Exhaust Emission Standards, Reporting and Compliance) and 20.2.91.106 NMAC (Fleet Average Greenhouse Gas Exhaust Emission Standards, Reporting and Compliance) that each manufacturer delivers for sale, offers for sale, sells, imports, delivers, or leases in New Mexico, and shall be determined on a statewide basis.

C. Each manufacturer subject to Subsection B of 20.11.104.106 NMAC (Fleet Average Greenhouse Gas Exhaust Emission Standards, Reporting and Compliance) shall accrue fleet average greenhouse gas exhaust emission standard credits and debits and may use credits in accordance with CCR, Title 13, Section 1961.3. Each manufacturer shall accrue and use debits and credits based on the number of motor vehicles subject to Subsection B of 20.11.104.106 NMAC (Fleet Average Greenhouse Gas Exhaust Emission Standards, Reporting and Compliance) and Subsection B of 20.2.91.106 NMAC (Fleet Average Greenhouse Gas Exhaust Emission Standards, Reporting and Compliance). Accounting for the use of debits and credits shall be on a statewide basis.

D. Each manufacturer subject to Subsection B of 20.11.104.106 NMAC (Fleet Average Greenhouse Gas Exhaust Emission Standards, Reporting and Compliance) shall submit a report by May 1 of each year to the environment department that includes the statewide fleet average greenhouse gas exhaust emission standard data for the

model year just ended. The report shall include the number of motor vehicles in each test group, delineated by model type certified pursuant to CCR, Title 13, Section 1961.3, be in accordance with the procedures in CCR, Title 13, Section 1961.3, and be in the same format used to report such information to CARB. If a manufacturer reports the information required pursuant to Subsection B of 20.11.104.106 NMAC (Fleet Average Greenhouse Gas Exhaust Emission Standards, Reporting and Compliance) and Subsection B of 20.2.91.106 NMAC (Fleet Average Greenhouse Gas Exhaust Emission Standards, Reporting and Compliance) using option number 2 for the "Calculation of fleet average carbon dioxide value" set forth in CCR, Title 13, Section 1961.3(a)(5)(D), the manufacturer shall report the information for the entire pool as well as for the portion specific to New Mexico.

[20.11.104.106 NMAC - Rp, 20.11.104.106 NMAC, 12/31/2023]

20.11.104.107 FLEET AVERAGE EXHAUST EMISSION STANDARDS REMEDATION REPORT:

A. If the environment department determines that a report submitted by a manufacturer pursuant to 20.11.104.104 NMAC (Fleet Average Non-methane Organic Gas Plus Oxides of Nitrogen Exhaust Emission Standards, Reporting and Compliance) or 20.11.104.106 NMAC (Fleet Average Greenhouse Gas Exhaust Emission Standards, Reporting and Compliance) demonstrates that the manufacturer is not in compliance with the fleet average non-methane organic gas plus oxides of nitrogen exhaust emission standards or the fleet average greenhouse gas exhaust emission standards, respectively, the manufacturer shall be required to submit a fleet average remediation report to the environment department.

B. A fleet average remediation report shall be submitted to the environment department within 60 calendar days after notice from the environment department.

C. The fleet average remediation report shall, at a minimum:

- (1) describe how the manufacturer intends to equalize any accrued debits;
- (2) identify all motor vehicle models and the percentage of each model delivered for sale, offered for sale, sold, imported, delivered, or leased in New Mexico with their corresponding certification standards for New Mexico and California in relation to total sales in each respective state; and
- (3) describe how the manufacturer intends to achieve compliance with the fleet average non-methane organic gas plus oxides of nitrogen exhaust emission standards or the fleet average greenhouse gas exhaust emission standards, as applicable, in future model years.

[20.11.104.107 NMAC - Rp, 20.11.104.107 NMAC, 12/31/2023]

20.11.104.108 LIGHT- AND MEDIUM-DUTY ZERO-EMISSION VEHICLE REQUIREMENTS, REPORTING AND COMPLIANCE:

A. Effective model years 2027 through 2032, this 20.11.104.108 NMAC (Light- and Medium-Duty Zero-emission Vehicle Requirements, Reporting and Compliance) applies to manufacturers that deliver for sale, offer for sale, sell, import, deliver or lease passenger cars, light-duty trucks, and medium-duty vehicles pursuant to the requirements of CCR, Title 13, Section 1962.4.

B. Each manufacturer subject to 20.11.104.108 NMAC (Light- and Medium-Duty Zero-emission Vehicle Requirements, Reporting and Compliance) shall comply with the annual ZEV requirement set forth in CCR, Title 13, Section 1962.4 using New Mexico specific vehicle production volume calculated in accordance with CCR, Title 13, Section 1962.4. Manufacturer's compliance with the annual ZEV requirement in New Mexico shall be based on the motor vehicles subject to 20.11.104.108 NMAC (Light- and Medium-Duty Zero-emission Vehicle Requirements, Reporting and Compliance) and 20.2.91.108 NMAC (Light- and Medium-Duty Zero-emission Vehicle Requirements, Reporting and Compliance) that each manufacturer delivers for sale, offers for sale, sells, imports, delivers, or leases in New Mexico, and shall be determined on a statewide basis.

C. Each manufacturer subject to 2.11.104.108 NMAC (Light- and Medium-Duty Zero-emission Vehicle Requirements, Reporting and Compliance) shall submit to the environment department all reports in accordance with CCR, Title 13, Section 1962.4 for motor vehicles delivered for sale, offered for sale, sold, imported, delivered, or leased in New Mexico during the previous model year. The reports shall be on a statewide basis and formatted as determined by the environment department.

D. Manufacturers subject to 20.11.104.108 NMAC (Light- and Medium-Duty Zero-emission Vehicle Requirements, Reporting and Compliance) may fulfill a portion of their compliance requirement with any of the additional vehicle values and allowances in accordance with CCR, Title 13, Section 1962.4, including:

(1) PHEVs produced and delivered for sale in New Mexico in accordance with CCR, Title 13, Section 1962.4;

(2) New ZEVs and PHEVs provided for use in qualified community-based clean mobility programs in New Mexico, which means a program determined by the environment department to qualify as a community-based clean mobility program pursuant to guidance issued by the environment department; a manufacturer cannot earn vehicle values pursuant to the requirements of CCR, Title 13, Section 1962.4 until the environment department determines a program qualifies as a community-based clean mobility program;

(3) ZEVs and PHEVs initially leased in New Mexico and sold at the end of lease to a New Mexico dealer participating in a financial assistance program, which

means a vehicle purchase incentive program where approved dealers accept a point-of-sale incentive for used ZEVs and PHEVs for lower-income consumers; qualifying programs in New Mexico will be approved by the environment department and posted on the environment department website;

(4) New ZEVs and PHEVs delivered for sale in New Mexico below the manufacturer's suggested retail price threshold in accordance with CCR, Title 13, Section 1962.4; and

(5) Early compliance vehicle values for model years 2025 and 2026 earned in accordance with CCR, Title 13, Section 1962.4.

E. Manufacturers subject to 20.11.104.108 NMAC (Light- and Medium-Duty Zero-emission Vehicle Requirements, Reporting and Compliance) may fulfill any deficit portion of their total annual ZEV requirement with additional allowances in accordance with CCR, Title 13, Section 1962.4 and 20.11.104.109 (Voluntary Early Action Credits and Onetime Values), including: with converted ZEV values and PHEV values earned pursuant to 20.11.104.109 NMAC (Voluntary Early Action Credits and Onetime Values); and with ZEV values and PHEV values transferred from other states ("Pooled Values") pursuant to CCR, Title 13, Section 1962.4.

F. In New Mexico, manufacturers shall make up any deficits incurred for a model year by submitting a commensurate amount of ZEV values to the secretary within three years to fulfill any remaining deficit of their annual ZEV requirement in a given model year in accordance with CCR, Title 13, Section 1962.4.

[20.11.104.108 NMAC - Rp, 20.11.104.108 NMAC, 12/31/2023]

20.11.104.109 VOLUNTARY EARLY ACTION CREDITS AND ONETIME VALUES:

A. Beginning July 1, 2022, for model years 2023 through 2025, this 20.11.104.109 NMAC (Voluntary Early Action Credits and Onetime Values) applies to manufacturers that deliver for sale, offer for sale, sell, import, deliver or lease passenger cars, light-duty trucks, and medium-duty vehicles pursuant to the requirements of CCR, Title 13, Section 1962.2.

B. A manufacturer may earn early action credits for motor vehicles delivered for sale, offered for sale, sold, imported, delivered, or leased in New Mexico as set forth in CCR, Title 13, Section 1962.2. To earn early action credits, a manufacturer shall report all prior model year qualifying motor vehicles from this Subsection B of 20.11.104.109 NMAC (Voluntary Early Action Credits and Onetime Values) and Subsection B of 20.2.91.109 NMAC (Voluntary Early Action Credits and Onetime Values) to the environment department before May 1 following each applicable year. Early action credits shall be calculated on a statewide basis and at the conclusion of the reporting for model year 2025 converted to ZEV values and PHEV values. The department shall

verify, record, track, and report early action credits calculated on a statewide basis. At the conclusion of the reporting for model year 2025, the department shall follow CARB's procedures to convert early action credits to ZEV values and PHEV values as set forth in CCR, Title 13, Section 1962.4(g)(2)(A).

C. For model 2025, a manufacturer may earn either early action credits as set forth 20.11.104.109 NMAC (Voluntary Early Action Credits and Onetime Values) and 20.2.91.109 NMAC (Voluntary Early Action Credits and Onetime Values) or early compliance vehicle values as set forth in 20.11.104.108 NMAC (Light- and Medium-Duty Zero-emission Vehicle Requirements, Reporting and Compliance), both which are calculated on a statewide basis. A manufacturer shall make this election in its report for model year 2025.

D. In addition to earning early action credits, a manufacturer may earn onetime ZEV values and PHEV values equal to their converted early action credits, calculated on a statewide basis. To earn the onetime ZEV and PHEV values, a manufacturer shall submit a request to the environment department by May 1, 2026.

E. Notwithstanding the provisions set forth in CCR, Title 13, Subsections 1962.4(g)(2)(B) and (C), ZEV values and PHEV values issued pursuant to 20.11.104.109 NMAC (Voluntary Early Action Credits and Onetime Values) may be used, and shall only be used by a manufacturer subject to 20.11.104.108 NMAC (Light- and Medium-Duty Zero-Emission Vehicle Requirements, Reporting and Compliance) or traded to a manufacturer subject to 20.11.104.108 NMAC (Light- and Medium-Duty Zero-Emission Vehicle Requirements, Reporting and Compliance) to fulfill a deficit portion of their annual ZEV requirement in New Mexico for model years 2027 through 2029.

F. ZEV values and PHEV values issued pursuant to 20.11.104.109 NMAC (Voluntary Early Action Credits and Onetime Values) may only be used for compliance with the annual ZEV requirements in New Mexico.

G. Motor vehicle early action credits or onetime values shall not constitute or convey a property right.

[20.11.104.109 NMAC - Rp, 20.11.104.109 NMAC, 12/31/2023]

20.11.104.110 ADDITIONAL REPORTING:

A. Beginning model year 2027 and subsequent years, each manufacturer subject to 20.11.104 NMAC shall submit to the environment department or environmental health department, within 30 calendar days of a request from the environment department or the environmental health department:

- (1) A copy of the applicable CARB executive order.

(2) Any documentation the respective department determines necessary for the effective administration and enforcement of 20.11.104 NMAC, including without limitation certification materials submitted to CARB and documentation regarding the sale of each motor vehicle subject to 20.11.104 NMAC.

(3) Any emission warranty information reports prepared in accordance with CCR, Title 13.

B. If these records are available electronically, the manufacturer shall submit the records in an electronic format approved by the respective department.

[20.11.104.110 NMAC -Rp, 20.11.104.110 NMAC, 12/31/2023]

20.11.104.111 WARRANTIES:

A. Beginning model year 2027 and subsequent years, each manufacturer of a motor vehicle subject to 20.11.104 NMAC shall warrant to the ultimate purchaser and each subsequent purchaser that the motor vehicle shall comply over its period of warranty coverage with all applicable requirements of CCR, Title 13, Sections 1962.4, 2035 through 2038, 2040, and 2046. Subsection C of 20.11.104.103 NMAC (Exemptions) shall not apply to this section.

B. Except as otherwise provided in Subsection B of 20.11.104.111 NMAC (Warranties), each manufacturer subject to 20.11.104 NMAC shall include with each motor vehicle or motor vehicle engine, the emission control systems warranty statement that complies with the requirements of CCR, Title 13, Section 2039, except:

(1) A manufacturer shall modify the emission control systems warranty statement as necessary to inform motor vehicle owners of the applicability of the warranty in New Mexico.

(2) For the purpose of the documents required pursuant to CCR, Title 13, Section 2039(c), a manufacturer is only required to submit such documents upon request of the environment department.

C. Upon the environment department's or the environmental health department's request, a manufacturer of a motor vehicle subject to 20.11.104 NMAC shall submit to the respective department within 30 calendar days of the request any emission warranty information report submitted to CARB, as required in CCR, Title 13, Section 2144.

[20.11.104.111 NMAC - Rp, 20.11.104.111 NMAC, 12/31/2023]

20.11.104.112 LABELS:

Beginning model year 2027 and subsequent years, a manufacturer, dealer, rental car agency, the United States, state or local government, or other persons shall deliver for

sale, offer for sale, sell, import, deliver, purchase, rent, lease, acquire, receive, or register passenger cars, light-duty trucks, medium-duty passenger vehicles, medium-duty vehicles, heavy-duty vehicles, heavy-duty engines, or motor vehicle engines in New Mexico with emission control labels and environmental performance labels affixed in accordance with CCR, Title 13, Section 1965.

[20.11.104.112 NMAC - Rp, 20.11.104.112 NMAC, 12/31/2023]

20.11.104.113 RECALL CAMPAIGNS:

A. Beginning model year 2027 and subsequent years, each manufacturer of a motor vehicle subject to 20.11.104 NMAC shall be subject to all recall campaign requirements of CCR, Title 13, including Sections 1962.4, 2035 through 2038, 2040, and 2046.

B. Any order issued or enforcement action taken by CARB to correct noncompliance that results in a recall campaign of a motor vehicle pursuant to CCR, Title 13, including Sections 1962.7, and 2111 through 2135 shall be prima facie evidence concerning noncompliance for a motor vehicle registered in New Mexico. If the manufacturer demonstrates to the environment department's satisfaction that the order or action is not applicable to a motor vehicle registered in New Mexico, the environment department or environmental health department shall not pursue a recall campaign of that motor vehicle.

C. If a manufacturer initiates a voluntary or influenced emission-related recall campaign pursuant to CCR, Title 13, including Sections 1962.7, and 2113 through 2121, the recall campaign shall include all affected motor vehicles registered in New Mexico.

D. For a motor vehicle subject to an order or action under Subsection B of 20.11.104.113 NMAC (Recall Campaigns) and Subsection B of 20.2.91.113 (Recall Campaigns), each manufacturer shall send to each owner of an affected motor vehicle registered in New Mexico a notice that complies with the requirements in CCR, Title 13, including Sections 1962.7, 2118 and 2127, as applicable, including a telephone number for owners to obtain answers to questions regarding the recall.

[20.11.104.113 NMAC - Rp, 20.11.104.113 NMAC, 12/31/2023]

20.11.104.114 REGISTRATION AND FEES:

A. Effective January 1, 2026, for each manufacturer delivering for sale, offering for sale, selling, importing, delivering, or leasing passenger cars, light-duty trucks, medium-duty passenger vehicles, medium-duty vehicles, heavy-duty vehicles, heavy-duty engines or motor vehicle engines subject to 20.2.91 NMAC shall obtain a registration from the environment department. The environment department shall issue a registration for a period of 10 years subject to an annual registration fee as set forth in Section C of 20.1.91.114 NMAC (Registration and Fees) and 20.1.104.114 NMAC

(Registration and Fees). It shall be a violation of 20.2.91 NMAC for a manufacturer subject to 20.2.91 NMAC to not obtain a registration in accordance with Subsection A of 20.2.91.114 NMAC (Registration and Fees).

B. Effective January 1, 2026, each manufacturer subject to 20.2.91.114 NMAC (Registration and Fees) and 20.2.104.114 NMAC (Registration and Fees) shall report to the environment department the type and number of passenger cars, light-duty trucks, medium-duty passenger vehicles, medium-duty vehicles, and heavy-duty vehicles, heavy-duty engines or motor vehicle engines subject to 20.2.91 NMAC delivered for sale, offered for sale, sold, imported, delivered, or leased in New Mexico during the previous model year. The manufacturer shall submit the report to the department by May 1 of each year. Failure to timely submit the report shall be a violation of Subsection B of 20.2.91.114 NMAC (Registration and Fees) and cause for the department to revoke the manufacturer's registration.

C. The environment department shall assess an annual registration fee for the period beginning July 1 and ending June 30 of the subsequent year.

(1) The environment department shall assess annual registration fees by apportioning the total registration fee among all registrants according to each manufacturer's reported market share for the previous model year, calculated on a statewide basis.

(2) Within 45 calendar days after the report required by 20.2.91.114 NMAC (Registration and Fees) is due, the department shall notify each registrant of the registration fee required for the next registration period. Within 30 calendar days of the department's notice of the required registration fee, each registrant shall remit the specified amount payable to the New Mexico environment department.

(3) The total registration fee is \$300,000 and shall increase annually by the consumer price index through model year 2032. Beginning model year 2033, the total registration fee is \$100,000 and shall increase annually by the consumer price index.

(4) Failure to timely pay the annual registration fee shall be a violation of Subsection C of 20.2.91.114 NMAC (Registration and Fees) and cause for the department to revoke the manufacturer's registration.

D. Manufacturers seeking to earn early action credits and onetime values under 20.2.91.109 NMAC (Voluntary Early Action Credits and Onetime Values) shall pay a \$20,000 registration fee that is separate and apart from the annual registration fee required by Section C of 20.2.91.114 NMAC (Registration and Fees) by May 1 following each applicable model year.

[20.11.104.114 NMAC - Rp, 20.11.104.114 NMAC, 12/31/2023]

20.11.104.115 INSPECTIONS AND INFORMATION REQUESTS:

A. The environment department or environmental health department may inspect motor vehicles, and may inspect and copy relevant, non-financial records, including records documenting motor vehicle origin, certification, delivery, or sales, and any record of emission-related part repairs performed under warranty.

B. The environment department or environmental health department may require a manufacturer, dealer, rental car agency, the United States, state or local government, or other person to submit or may inspect and copy itself, relevant, non-financial records related to a motor vehicle subject or potentially subject to 20.11.104 NMAC, except that Subsection B of 20.11.104.115 NMAC (Inspections and Information Requests) shall not be construed to require the creation of a new record.

[20.11.104.115 NMAC - Rp, 20.11.104.115 NMAC, 12/31/2023]

20.11.104.116 RECORDKEEPING:

All manufacturers, dealers, rental car agencies, the United States, state and local governments, or other persons shall retain records pertaining to compliance under 20.11.104 NMAC.

[20.11.104.116 NMAC - Rp, 20.11.104.116 NMAC, 12/31/2023]

20.11.104.117 PROHIBITED:

Failure to comply with the emission standards, recordkeeping, reporting, or other requirements of 20.11.104 NMAC within the timeframes specified shall constitute a violation of 20.11.104 NMAC subject to enforcement action under Section 74-2-12 NMSA 1978.

[20.11.104.117 NMAC - Rp, 20.11.104.117 NMAC, 12/31/2023]

20.11.104.118 EXHAUST EMISSION STANDARDS FOR HEAVY-DUTY ENGINES:

A. Beginning model year 2027 and subsequent years, this 20.11.104.118 NMAC (Exhaust Emission Standards for Heavy-Duty Engines) applies to manufacturers that deliver for sale, offer for sale, sell, import, deliver, purchase, rent, lease, acquire or receive heavy-duty vehicles, heavy-duty engines or other motor vehicle engines pursuant to the requirements of CCR, Title 13, Sections 1900, 1956.8, 1961.2, 1965, 1968.2, 1971.1, 2035, 2036, 2166, 2166.1, 2167 through 2170, 2111 through 2119, 2121, 2123, 2125 through 2131, 2133, 2137, 2139 through 2149, 2423 and 2485.

B. Each manufacturer subject to 20.11.104.118 NMAC (Exhaust Emission Standards for Heavy-Duty Engines) shall comply with the heavy-duty engine emissions standards and other requirements set forth in CCR, Title 13, Sections 1900, 1956.8, 1961.2, 1965, 1968.2, 1971.1, 2035, 2036, 2166, 2166.1, 2167 through 2170, 2111

through 2119, 2121, 2123, 2125 through 2131, 2133, 2137, 2139 through 2149, 2423 and 2485. Compliance shall be based on the motor vehicles subject to 20.2.91.118 NMAC (Exhaust Emission Standards for Heavy-Duty Engines) and 20.11.104.118 NMAC (Exhaust Emission Standards for Heavy-Duty Engines) that each manufacturer delivers for sale, offers for sale, sells, imports, delivers, purchases, rents, leases, acquires or receives in New Mexico, and shall be determined on a statewide basis.

[20.11.104.118 NMAC - Rp, 20.11.104.118 NMAC, 12/31/2023]

20.11.104.119 MEDIUM- AND HEAVY-DUTY ZERO-EMISSION VEHICLE REQUIREMENT, REPORTING, AND COMPLIANCE:

A. Beginning model year 2027 and subsequent years, this 20.11.104.119 NMAC (Medium- and Heavy-duty Zero-emission Vehicle Requirement, Reporting, and Compliance) applies to manufacturers that deliver for sale, offer for sale, sell, import, deliver, purchase, rent, lease, acquire or receive medium-duty vehicles, heavy-duty vehicles, heavy-duty engines or other motor vehicle engines pursuant to the requirements of CCR, Title 13, Sections 1963, 1963.1, 1963.2, 1963.4, and 1963.5.

B. Each manufacturer subject to 20.11.104.119 NMAC (Medium- and Heavy-duty Zero-emission Vehicle Requirement, Reporting, and Compliance) shall deliver for sale, offer for sale, sell, import, deliver, purchase, rent, lease, acquire or receive medium-duty vehicles, heavy-duty vehicles, heavy-duty engines or other motor vehicle engines certified as ZEVs to New Mexico in accordance with CCR, Title 13, Sections 1963, 1963.1, 1963.2, 1963.4 and 1963.5.

C. Each manufacturer subject to 20.11.104.119 NMAC (Medium- and Heavy-duty Zero-emission Vehicle Requirement, Reporting, and Compliance) shall comply with the ZEV sales percentage schedule set forth in CCR, Title 13, Section 1963.1 using New Mexico specific ZEV sales calculated in accordance with CCR, Title 13, Section 1963.1. Manufacturer's compliance with the ZEV sales percentage shall be based on medium-duty vehicles, heavy-duty vehicles, heavy-duty engines or other motor vehicle engines subject to 20.11.104.119 NMAC (Medium- and Heavy-Duty Zero-emission Vehicles Requirement, Reporting, and Compliance) and 20.2.91.119 NMAC (Medium- and Heavy-Duty Zero-emission Vehicles Requirement, Reporting, and Compliance) that each manufacturer delivers for sale, offers for sale, sells, imports, delivers, purchases, rents, leases, acquires or receives in New Mexico, and shall be determined on a statewide basis.

D. Before May 1 of each year, each manufacturer subject to 20.11.104.119 NMAC (Medium- and Heavy-duty Zero-emission Vehicle Requirement, Reporting, and Compliance) shall submit to the department a report detailing ZEV sales percentage performance by identifying qualifying medium-duty vehicles, heavy-duty vehicles, heavy-duty engines or other motor vehicle engines transferred to or from any manufacturer or, offered for sale, sold, imported, delivered, purchased, rented, leased, acquired or received in New Mexico during the previous model year in accordance with

CCR, Title 13, Sections 1963.1. The report shall include the resulting surplus or deficit in meeting the ZEV sales percentage for the model year after applying any ZEV deficits or credits according to CCR Title 13, Section 1963.1. ZEV sales percentage performance shall be on a statewide basis. The report shall be prepared in the same format used to report ZEV sales percentage performance compliance to CARB.

E. Each manufacturer subject to 20.11.104.119 NMAC (Medium- and Heavy-duty Zero-emission Vehicle Requirement, Reporting, and Compliance) may generate, bank and trade ZEV credits for qualifying medium-duty vehicles, heavy-duty vehicles, heavy-duty engines or other motor vehicle engines delivered for sale, offered for sale, sold, imported, delivered, purchased, rented, leased, acquired or received in New Mexico in accordance with 20.11.104.119 NMAC (Medium- and Heavy-duty Zero-emission Vehicle Requirement, Reporting, and Compliance) and CCR, Title 13, Sections 1963, 1963.1 and 1963.2.

F. Beginning with the model year 2025, any manufacturer that produces on-road vehicles over 8,500 pounds gross vehicle weight rating for sale in New Mexico may generate, bank and trade ZEV credits for vehicles certified as ZEVs in accordance with CCR, Title 13, Sections 1963, 1963.1, 1963.2, 1963.4 and 1963.5 for such vehicles pursuant to CCR, Title 13, Section 1963.2.

[20.11.104.119 NMAC - Rp, 20.11.104.119 NMAC, 12/31/2023]

20.11.104.120 LARGE ENTITY REPORTING REQUIREMENT:

A. Beginning model year 2027 and subsequent years, this 20.11.104.120 NMAC (Large Entity Reporting Requirement) applies to entities in accordance with CCR, Title 13, Sections 2012, 2012.1, and 2012.2.

B. Each entity subject to this 20.11.104.120 NMAC (Large Entity Reporting Requirement) shall comply with the large entity reporting requirement in accordance with such sections provided however that every occurrence of "California" shall be replaced with "New Mexico", "Executive Officer" shall be replaced with "Secretary", "Public Utilities Commission" shall be replaced with "Public Regulation Commission", and all other replacements clarifying that CCR, Title 13, Sections 2012, 2012.1, and 2012.2 are requirements in New Mexico in accordance with this section. For purposes of compliance with 20.11.104.120 (Large Entity Reporting Requirement) only, all exemptions under CCR, Title 13, Section 2012(c) apply, and do not apply to another other section of 20.11.104 NMAC.

C. Each entity subject to this 20.11.104.120 NMAC (Large Entity Reporting Requirement) shall report complete information to the secretary by May 1, 2025, through the environment department's Advanced Clean Trucks webpage. Vehicle data shall be reported as the fleet was comprised on a date of the fleet owner's choosing any time after December 31, 2023. The reporting entity shall maintain the records of their information required by CCR, Title 13, Sections 2012.1 and 2012.2 for five years

following the report date. To the extent reports submitted contain confidential data, entities may choose to designate that information as confidential.

[20.11.104.120 NMAC - Rp, 20.11.104.120 NMAC, 12/31/2023]

CHAPTER 12: SANITARY PROJECTS

PART 1: GENERAL PROVISIONS [RESERVED]

PART 2: BOARD OF DIRECTOR TRAINING REQUIREMENTS

20.12.2.1 ISSUING AGENCY:

New Mexico Environment Department.

[20.12.2.1 NMAC - N, 4/15/2008]

20.12.2.2 SCOPE:

This part governs the training required of members of the board of directors of mutual domestic associations pursuant to the Sanitary Projects Act, Sections 3-29-1 through 3-29-20 NMSA 1978.

[20.12.2.2 NMAC - N, 4/15/2008]

20.12.2.3 STATUTORY AUTHORITY:

20.12.2 NMAC is adopted pursuant to the Sanitary Projects Act, Sections 3-29-6 and 3-29-9 NMSA 1978.

[20.12.2.3 NMAC - N, 4/15/2008]

20.12.2.4 DURATION:

Permanent.

[20.12.2.4 NMAC - N, 4/15/2008]

20.12.2.5 EFFECTIVE DATE:

April 15, 2008, unless a later date is cited at the end of a section.

[20.12.2.5 NMAC - N, 4/15/2008]

20.12.2.6 OBJECTIVE:

The purposes of this part are:

A. to standardize the requirement for training and provide minimum criteria for training of members of the board of directors of mutual domestic associations pursuant to the act;

B. to encourage board members to seek additional training to better understand their roles and responsibilities pursuant to the act; and

C. to encourage technical assistance providers to develop training courses and provide guidelines for the content of those courses.

[20.12.2.6 NMAC - N, 4/15/2008]

20.12.2.7 DEFINITIONS:

A. "**Act**" means the Sanitary Projects Act, Sections 3-29-1 through 3-29-20 NMSA 1978.

B. "**Board of directors**" or "**board members**" means the directors elected by the mutual domestic association in accordance with its certificate of association and bylaws and responsible for the administration, operation, and maintenance of the association.

C. "**Department**" means the New Mexico environment department.

D. "**Mutual domestic association**" means an association organized under the provisions of the act.

E. "**Secretary**" means the secretary of the New Mexico environment department, the secretary's designee, or any person who properly assumes the role of the secretary in the event of the secretary's recusal or disqualification.

F. "**Technical service provider**" means any individual, business, learning institution, or entity to include the department that provides assistance in the form of department approved training to any mutual domestic association.

[20.12.2.7 NMAC - N, 4/15/2008]

20.12.2.8 POWERS AND DUTIES OF DEPARTMENT AND SECRETARY:

A. The department shall exercise all powers and duties prescribed under this part.

B. The secretary shall have the authority to take all measures necessary to review and approve specific training course content developed by the department or a technical service provider and act on behalf of the department.

[20.12.2.8 NMAC - N, 4/15/2008]

20.12.2.9 INITIAL AND CONTINUING TRAINING TOPICS:

A. The following topics are the minimum required subject areas for initial training of mutual domestic board of director members:

- (1) responsibilities of governing bodies (certificate of association, bylaws, election procedures and Governmental Conduct Act);
- (2) Sanitary Projects Act;
- (3) Safe Drinking Water Act and drinking water regulations;
- (4) Utility Operator Certification regulations;
- (5) Open Meetings Act;
- (6) Inspection of Public Records Act;
- (7) Audit Act and Requirements for Contracting and Conducting Audits of Agencies;
- (8) State Procurement Code;
- (9) office of the state engineer reports and requirements; and
- (10) basic accounting, budgeting, and rate setting.

B. The department shall maintain a list of approved courses for continuing training.

[20.12.2.9 NMAC - N, 4/15/2008]

20.12.2.10 APPLICATION OF TRAINING REQUIREMENTS:

A. Board members shall complete a minimum of twelve hours of initial training:

- (1) within two years of election or appointment to a board of directors and shall complete a minimum of six hours of training within the first year; and
- (2) within two years of re-election, or appointment to a board of directors after interruption in service on a board greater than four years and shall complete a minimum of six hours completed the first year.

B. To maintain certification after completion of the initial training, board members must complete a total number of credits equivalent to two hours of continuing training

during each year of their elected or appointed term. Any board member may carry up to six hours of excess credits earned over to the next compliance year(s) within the board member's term of office. Excess credits may not be carried over to a board member's subsequent term of office.

[20.12.2.10 NMAC - N, 4/15/2008]

20.12.2.11 TRACKING AND RECORDATION OF INITIAL AND CONTINUING TRAINING:

A. Mutual domestic associations shall track and record the required and continuing training received by members of their board of directors, including the following information:

- (1) course title and content shall be recorded for each board member;
- (2) total course hours shall be recorded for each board member; and
- (3) date, location and provider of the training shall be recorded for each board member.

B. Mutual domestic associations shall submit to the department a certificate of compliance with the requirement for board training as part of the member accountability report required by the act demonstrating compliance of each board member with the requirements for the initial and continuing training.

C. At the conclusion of any training, a certificate of completion shall be issued to the board member by the technical service provider or entity providing the training that documents the date and location of training, course title and description, total hours of training for each topic, name of the trainer or trainers.

D. Technical service providers will submit to the department a summary of each training event including the date(s) and location(s) of training, course title and description, total hours of training for each topic, name of the trainer or trainers, and a list of attendees that successfully completed the training and the water system they represent. The information reported to the department shall be in an electronic format as directed by the department.

[20.12.2.11 NMAC - N, 4/15/2008]

20.12.2.12 APPROVAL OF COURSE CONTENT:

A. The department shall approve in writing all training courses and associated credit hours intended to comply with this part.

B. Technical service providers shall submit proposed training to the secretary for approval at least 30 days in advance of any proposed class. Proposals will include a description of course content and time allotted to each topic, and total course credit hours.

C. Each initial course shall consist of all or some of the topics listed in Subsection A of 20.12.2.9 NMAC above.

D. Each continuing training course shall be approved by the department.

[20.12.2.12 NMAC - N, 4/15/2008]

20.12.2.13 EFFECTIVE COMPLIANCE DATE:

A. This part shall become effective 12 months after promulgated.

B. Training approved by the department and attended by mutual domestic board members in the 12 months prior to the promulgation of this part shall be credited to board members toward compliance with the requirements of this part.

[20.12.2.13 NMAC - N, 4/15/2008]
