(b) levels of petroleum hydrocarbon vapors are less than or equal to five whole instrument units above ambient levels in any structure in the vicinity of the release site when measured as required in Subparagraphs (a) and (b) of Paragraph (1) of this Subsection.

(4) When operation of a vapor mitigation system is discontinued, owners and operators shall monitor the vapor levels in the structure weekly for the first month and monthly thereafter until one calendar year has passed, or as otherwise approved by the department. If during this period the levels exceed those set forth in Subparagraphs (a)

and (b) of Paragraph (3) of this subsection, owners and operators shall notify the department and take the necessary corrective action, as directed by the department.

G. Owners and operators shall remove any exposed petroleum products related to the release and mitigate any related immediate fire and safety hazards as soon as possible, but in no case no later than 72 hours after the confirmation or other identification of the release.

[20.5.119.1902 NMAC - N, 07/24/2018]

20.5.119.1903 MINIMUM SITE ASSESSMENT, 72-HOUR AND 14-DAY REPORTS:

A. Owners and operators shall make an oral report to the department summarizing the abatement procedures undertaken and the results of action taken under 20.5.119.1901 and 20.5.119.1902 NMAC within 72 hours of the discovery or confirmation of a release pursuant to 20.5.118 NMAC.

B. Owners and operators shall submit a paper and electronic copy of a written report to the department within 14 days of the discovery or confirmation of a release pursuant to 20.5.118 NMAC, in addition to the written notice required under 20.5.118 NMAC. This report shall summarize all the work performed pursuant to 20.5.119.1901 and 20.5.119.1902 NMAC and shall include the following information, as appropriate:

(1) a map based on a United States geologic survey topographic map showing locations of actual and potential receptors, including, but not limited to, private and public water supplies identified pursuant to 20.5.119.1902 NMAC; owners and operators shall draw two concentric circles, at 1,000 feet and at one mile radii from the center of the release, and shall also show on the map all surface water courses within a one mile radius of the site;

(2) information about any water supplies known or suspected to have been contaminated by the release;

(3) most likely direction of groundwater flow;

(4) a site plan map showing locations of utilities, surface structures and storage tank systems;

(5) information about underground utilities gathered in accordance with Subsection E of 20.5.119.1902 NMAC;

(6) soil borings, logs, and details of construction of all wells, if available;

(7) description of any actions taken to abate adverse effects;

- (8) data from vapor monitoring performed in the vicinity of the site;
- (9) description of any actions taken to abate potentially explosive or harmful vapors and any plans for further action;
- (10) description of fire and safety hazards resulting from the release and actions taken to abate such hazards;
- (11) description of current and past ownership of the property, storage tank systems, the substance stored in the system, age of tank and history of any tank removals;
- (12) present land use, within 1,000 feet of the site; and
- (13) records of tightness tests, repairs to the storage tank system, release detection and monitoring results.

[20.5.119.1903 NMAC - N, 07/24/2018]

20.5.119.1904 NOTICE, SPLIT SAMPLES AND SAMPLING PROCEDURES:

A. Except for the 72-hour vapor check, owners and operators shall notify the department at least four days prior to the collection of any samples which are required pursuant to this part and upon which laboratory analyses are to be performed to allow the department an opportunity to be present at the collection of samples or to split samples.

B. Owners and operators shall notify the department at least four days prior to the decommissioning, destruction or abandonment of any wells.

C. Owners and operators shall collect, store and transport all samples necessary to comply with the requirements of this part in a manner consistent with the nature of the known or suspected contaminants and in conformance with applicable federal, state and local laws and regulations.

[20.5.119.1904 NMAC - N, 07/24/2018]

20.5.119.1905 INTERIM REMOVAL OF NON-AQUEOUS PHASE LIQUID:

A. Owners and operators shall assess the potential for remediation of non-aqueous phase liquid (NAPL) where there is a thickness of greater than one-eighth inch of NAPL on surface water, in any excavation pit, or in any well. Owners and operators shall submit the assessment to the department in accordance with a timeline approved by the department or the timeline set forth in Subsection E of 20.5.119.1900 NMAC.

B. The department may approve interim removal of NAPL when such action is determined to be practical and necessary to protect public health, safety and welfare or the environment. In this event, owners and operators shall remove NAPL in accordance with a timeline approved by the department or the timeline set forth in Subsection E of 20.5.119.1900 NMAC.

C. Owners and operators shall remove NAPL in a manner that minimizes the spread of contamination into uncontaminated media.

D. Owners and operators shall store and dispose of NAPL in accordance with all flammable and combustible liquids codes approved by the state fire marshal or other local authority, state hazardous waste regulations (20.4.1 NMAC), and any other applicable laws or regulations.

E. Owners and operators shall report recovery and disposal of NAPL to the department.

[20.5.119.1905 NMAC - N, 07/24/2018]

20.5.119.1906 INTERIM REMOVAL OF CONTAMINATED SOIL:

A. Owners and operators shall remediate contaminated soil in accordance with 20.5.119.1912, 20.5.119.1914, and 20.5.119.1922 NMAC, unless approved by the department to remove and treat contaminated soil in accordance with this section.

(1) The department may approve interim removal of contaminated soil when such action is determined to be practical and necessary to protect public health, safety and welfare or the environment.

(2) Under this section, owners and operators shall excavate, treat and dispose of contaminated soil using methods approved by the department, in compliance with local laws and regulations, and under a timeline approved by the department or the timeline set forth in Subsection E of 20.5.119.1900 NMAC.

(3) The department shall approve the vertical and horizontal extent of soil to be excavated.

B. When treating or temporarily storing soil on site, owners and operators shall:

(1) for treatment on site, spread soil in a six-inch layer over an impervious liner or other surface approved by the department to prevent infiltration to groundwater and place the layer of soil on level ground and berm to prevent runoff from contaminating other soil or surface water;

(2) for temporary storage, place the soil in a secure, bermed area on an impervious liner or surface or in a secured and properly labeled container, as approved by the department; and

(3) handle soil in a manner that does not contaminate groundwater, surface water or other uncontaminated soil or does not create or cause a public nuisance or threat to human health, safety and welfare or the environment.

C. When contaminated soil is taken off site, owners and operators shall provide the department with the following information within 14 days of removal of the soil from the site:

(1) written documentation of the type and concentration of contaminants, volume and weight of soil, method of treatment, date transported, and location of the site of disposal or treatment;

(2) a signed, written statement by the owner of the treatment or disposal site describing the location of the site and expressly accepting the contaminated soil; and

(3) if contaminated soil is taken to a permitted solid waste facility, a manifest signed by the generator, transporter and the owner or operator of the solid waste facility.

D. Remediation shall be considered complete when the requirements in 20.5.119.1929 NMAC are met.

E. In accordance with a timeline approved by the department or the timeline set forth in Subsection E of 20.5.119.1900 NMAC, owners and operators shall submit to the department a report describing the removal and treatment of contaminated soil.

(1) The report shall describe the soil removal action and its effectiveness, including volumes and weight removed.

(2) Owners and operators shall submit the report within 30 days of the soil removal action.

[20.5.119.1906 NMAC - N, 07/24/2018]

20.5.119.1907 MINIMUM SITE ASSESSMENT, PRELIMINARY AND OTHER REQUIRED INVESTIGATIONS:

A. A preliminary investigation is not required when owners and operators can demonstrate that the contamination has not reached groundwater and one of the following two conditions apply:

1) the release is remediated in accordance with this part within 72 hours of discovery or confirmation; or

(2) the release is permanently contained within the UST excavation area or the AST containment system.

B. If the contamination extends beyond the boundaries of the property where the release originated, owners and operators shall conduct a secondary investigation in accordance with 20.5.119.1910 NMAC.

C. When the horizontal and vertical extent and magnitude of contamination from the release have been characterized, and it has been demonstrated that contamination has not reached groundwater, owners and operators, if required by the department, shall perform a soil-only contamination assessment and related corrective action in accordance with 20.5.119.1912 NMAC.

D. When a potential or actual threat from vapor intrusion is identified, owners and operators, if required by the department, shall perform a petroleum vapor intrusion assessment and related corrective action in accordance with 20.5.119.1913 NMAC.

[20.5.119.1907 NMAC - N, 07/24/2018]

20.5.119.1908 MINIMUM SITE ASSESSMENT, PRELIMINARY INVESTIGATION REQUIREMENTS:

Owners and operators shall conduct a preliminary investigation in accordance with this subsection and under a timeline approved by the department or the timeline set forth in Subsection E of 20.5.119.1900 NMAC. The preliminary investigation shall determine the following, unless otherwise approved by the department.

A. If not previously identified and reported under 20.5.119.1903 NMAC, the preliminary investigation shall determine the source of contamination, the regulated substance released or suspected of being released at the site, the media of concern, current and potential receptors, current and anticipated use of property, complete and incomplete exposure pathways, and routes of exposure.

B. The preliminary investigation shall also determine the horizontal and vertical extent and magnitude of soil contamination.

(1) Owners and operators shall conduct a soil boring survey by advancing a continuously cored soil boring at each area of release where soil contamination is most likely to be encountered unless otherwise directed by the department. The initial incident report and a soil vapor survey may be used in locating these areas. Owners and operators shall advance at least one of the borings into the groundwater saturated zone or, with approval from the department, to a depth at which measured levels of contaminants in soil are no longer detectable by laboratory analysis, and hydrocarbon

vapor concentrations, as determined with a field instrument, are less than 100 whole instrument units.

(2) Owners and operators shall advance at least four additional soil borings to characterize the release within property boundaries. Borings shall be completed to the depth at which contaminants in soil are no longer detectable by laboratory analysis, and hydrocarbon vapor concentrations, as determined with a field instrument, are less than 100 whole instruments units. If the soil borings indicate that contaminated soil extends beyond the boundary of the property on which the storage tank system is located, owners and operators shall advance soil borings sufficient to characterize the extent and magnitude of contamination within site boundaries.

(3) Owners and operators shall assess at five-foot intervals, field estimates of concentrations of petroleum hydrocarbons in the soil borings and select and prepare samples for laboratory analysis.

(4) Owners and operators shall gather field data for soil classification, determining and recording color, grain size, texture, description of lithification, plasticity and clay content.

(5) The preliminary investigation shall include determinations of derived values for soil bulk density (g/cc), soil moisture content (percent by mass), and effective porosity, and fraction organic carbon content (percent by mass) using samples taken from an uncontaminated area of the vadose zone.

(6) Owners and operators shall delimit the horizontal and vertical extent of contaminant saturated soil as defined in 20.5.101.7 NMAC.

C. Owners and operators shall determine whether groundwater or surface water has been contaminated above applicable standards or whether a potential for groundwater or surface water contamination is present by performing the following:

(1) install at least three groundwater monitoring wells at locations where the results of the soil boring survey conducted pursuant to this section indicate that groundwater may be contaminated; owners and operators shall:

(a) locate monitoring wells so that groundwater gradient can be determined;

(b) install at least one monitoring well on site in the area of highest contamination as determined by the soil borings installed in conformance with the initial incident report and other relevant information;

(c) install one of the monitoring wells in the estimated down-gradient direction from the area of highest contamination;

(d) construct wells in accordance with all applicable federal, state and local laws and regulations; and

(e) survey the wells using a New Mexico licensed professional surveyor, in decimal degrees of latitude and longitude in accordance with NAD 83;

(2) calculate the direction and gradient of groundwater flow;

(3) inspect all monitoring wells for the presence of NAPL using a method approved by the department; if NAPL is present in any well, measure the apparent thickness, delimit its horizontal extent, and initiate recovery procedures in accordance with 20.5.119.1905 NMAC; and

(4) sample each monitoring well that does not contain NAPL and analyze the sample for contaminants of concern to determine whether:

(a) immediate mitigation procedures are warranted; and

(b) other hazardous conditions exist as a result of the release if not previously identified in accordance with 20.5.119.1902 NMAC by:

(i) identifying the location and depth of underground utilities and other subsurface structures on or adjacent to the site not identified earlier in accordance with Subsection E of 20.5.119.1902 NMAC;

(ii) checking for the presence of vapors in accordance with 20.5.119.1902 and 20.5.119.1907 NMAC; and

D. Owners and operators shall identify all other hazards and potential threats to public health, safety and welfare and the environment which may exist as a result of the release to determine if:

(1) immediate mitigation procedures are warranted; and

(2) other hazardous conditions exist as a result of the release if not previously identified in accordance with 20.5.119.1903 NMAC by:

(a) identifying the location and depth of underground utilities and other subsurface structures on or adjacent to the site not identified earlier in accordance with Subsection E of 20.5.119.1902 NMAC;

(b) checking for the presence of vapors in accordance with 20.5.119.1902 and 20.5.119.1907 NMAC.

[20.5.119.1908 NMAC - N, 07/24/2018]

20.5.119.1909 MINIMUM SITE ASSESSMENT, PRELIMINARY INVESTIGATION REPORT:

A. Owners and operators shall submit paper and electronic copies of a written report of the preliminary investigation and other requirements of the minimum site assessment as defined in 20.5.101.7 NMAC in accordance with a timeline approved by the department or the timeline set forth in Subsection E of 20.5.119.1900 NMAC. The report shall include the information gathered under 20.5.119.1901, 20.5.119.1902, 20.5.119.1903 and 20.5.119.1907 NMAC and shall conform to the requirements of this section and 20.5.119.1908 NMAC.

B. Owners and operators shall attach a statement signed by an authorized representative of the qualified firm preparing the report for the owner or operator attesting to the veracity of the information submitted in the report and attached documents.

C. The minimum site assessment report shall, at a minimum, include all pertinent data collected during the minimum site assessment investigation, interpretation of that data using cross sections, contoured maps that depict the magnitude and extent of all contaminated media, identification of any threatened receptors, recommendations for additional work and justification for the recommended work.

D. The department shall review the report and notify owners and operators of any inadequacies in the report as soon as feasible. Owners and operators shall, in accordance with a timeline approved by the department, correct the report and resubmit it to the department for review and written approval. If the revised report does not conform to the minimum site assessment, preliminary investigation requirements in this section and 20.5.119.1908 NMAC, the department shall reject the report and the owner and operator shall be determined not to have conducted a minimum site assessment for the purposes of Subparagraph (c) of Paragraph (1) of Subsection B of Section 74-6B-8 NMSA 1978. The department's failure to review or to comment on this report shall not relieve the owner and operator of their responsibilities under this part or the law.

E. Owners and operators shall comply with the requirements of any local government which has designated a wellhead/source water protection area that includes the area of the release.

F. Owners and operators shall provide notice that includes the contaminants identified, as well as the horizontal and vertical extent of those contaminants, to all owners of property located within the extent of contamination.

[20.5.119.1909 NMAC - N, 07/24/2018]

20.5.119.1910 SECONDARY INVESTIGATION:

A. Owners and operators shall perform a secondary investigation in accordance with a timeline approved by the department or the timeline set forth in Subsection E of 20.5.119.1900 NMAC when the department makes at least one of the following determinations about the site:

- (1) the extent and magnitude of contamination in all media has not been delimited by the preliminary investigation; or
- (2) the release threatens public health, safety and welfare or the environment.

B. The secondary investigation shall determine the following:

- (1) the horizontal and vertical extent and magnitude of soil contamination both on and off site;
- (2) the horizontal extent and magnitude of dissolved phase groundwater contamination both on and off site;
- (3) the vertical extent and magnitude of dissolved phase groundwater contamination, when site conditions warrant;
- (4) characteristics, aerial extent, estimated volume and apparent thickness of NAPL in wells;
- (5) the elevation of groundwater and surface water and the gradient, rate and direction of groundwater and surface water flow;
- (6) the rate and direction of contaminant migration;
- (7) the hydrologic properties of the contaminated portion of the aquifer including hydraulic conductivity, transmissivity and storativity; the department may require field verification of estimates made from literature;
- (8) whether the aquifer is perched;
- (9) whether the aquifer is confined or unconfined; and
- (10) any other technical information requested by the department which is reasonably necessary to meet the requirements of this part.

[20.5.119.1910 NMAC - N, 07/24/2018]

20.5.119.1911 SECONDARY INVESTIGATION REPORT:

A. Owners and operators shall submit paper and electronic copies of a written report of the secondary investigation to the department in accordance with a timeline

approved by the department or the timeline set forth in Subsection E of 20.5.119.1900 NMAC. The report shall include all information gathered under 20.5.119.1910 NMAC and shall conform to the requirements of this part.

B. Owners and operators shall attach a statement signed by an authorized representative of the qualified firm preparing the report for the owner or operator attesting to the veracity of the information submitted in the report and attached documents.

C. The secondary investigation report shall, at a minimum, include all pertinent data collected during the secondary investigation, interpretation of that data using cross sections, contoured maps that depict the magnitude and extent of all contaminated media, identification of any threatened receptors, recommendations for additional work and justification for the recommended work.

D. The department shall review the report and notify owners and operators of any inadequacies in the report within 30 days of receipt. Owners and operators shall, in accordance with a timeline approved by the department, correct the report and resubmit it to the department for review and written approval. If the revised report does not meet the requirements of 20.5.119.1910 NMAC, the owner and operator will be in violation of this part until the inadequacies are corrected. The department's failure to review or to comment on the secondary investigation report shall not relieve the owner and operator of their responsibilities under this part or the law.

E. Owners and operators shall provide notice that includes the contaminants identified, as well as horizontal and vertical extent of those contaminants, to all owners of property located within the extent of contamination who were not previously notified in accordance with 20.5.119.1909 NMAC.

[20.5.119.1911 NMAC - N, 07/24/2018]

20.5.119.1912 SOIL-ONLY CONTAMINATION ASSESSMENT:

The soil-only contamination assessment is intended to determine whether soil contamination poses a threat to human health or the environment including groundwater or may pose a threat in the future such that corrective action is required. Owners and operators shall comply with this section as required by the department. Owners and operators shall obtain written approval from the department before initiating the evaluation.

A. After the horizontal and vertical extent and magnitude of the soil contamination from the release has been fully characterized and where groundwater has not been impacted, the department may require owners and operators to demonstrate the extent to which a release may pose a threat to human health and the environment.

B. Owners and operators shall use the department approved risk assessment guidance for site investigations and remediation; or equivalent assessment tool as required and approved by the department to comply with the requirements of this section.

C. When representative concentrations of any contaminant of concern equal or exceed any soil screening levels (SSLs) as discussed in Subsection B of 20.5.119.1912 NMAC for any exposure pathway, owners and operators shall perform a site-specific risk assessment if directed by the department.

D. Soil-only contamination assessment reports shall be submitted in accordance with 20.5.119.1933 NMAC and shall be maintained in accordance with 20.5.119.1932 NMAC.

[20.5.119.1912 NMAC - N, 07/24/2018]

20.5.119.1913 PETROLEUM VAPOR INTRUSION ASSESSMENT:

A vapor intrusion assessment is intended to determine if vapor intrusion poses a threat to human health and the environment specifically within an overlying building or structure such that corrective action is required. Owners and operators shall comply with this section as required by the department if vapor intrusion poses or may pose a threat to human health or the environment. Owners and operators shall obtain written approval from the department before initiating the evaluation.

A. After the horizontal and vertical extent and magnitude of the soil contamination from the release has been fully characterized, and a threat or potential threat from petroleum vapors intrusion has been identified, owners and operators shall be required to perform a petroleum vapor intrusion assessment.

B. Owners and operators shall use the environmental protection agency (EPA) technical guide for addressing petroleum vapor intrusion at leaking underground storage tank sites or an equivalent assessment tool as approved by the department to comply with the requirements of this section:

C. If petroleum vapor intrusion has been demonstrated to be present, then the owner and operator shall perform vapor mitigation and corrective action if directed by the department.

D. Petroleum vapor intrusion assessment reports shall be submitted in accordance with 20.5.119.1933 NMAC and shall be maintained in accordance with 20.5.119.1932 NMAC.

[20.5.119.1913 NMAC - N, 07/24/2018]

20.5.119.1914 CORRECTIVE ACTION REQUIREMENTS FOR TOTAL PETROLEUM HYDROCARBONS (TPH):

In addition to comparing representative soil concentrations for all contaminants of concern to risk-based screening levels (RBSLs) and site-specific target levels (SSTLs) and concentrations in groundwater and surface water to applicable WQCC and EIB standards, in accordance with, 20.5.119.1912 NMAC, owners and operators shall mitigate, remediate, or remove TPH contamination in soil and groundwater, when directed by the department based upon a determination by the department that the TPH contamination adversely affects public health, safety and welfare or the environment.

[20.5.119.1914 NMAC - N, 07/24/2018]

20.5.119.1915 MONITORED NATURAL ATTENUATION:

A. If approved by the department, owners and operators shall submit a plan for monitored natural attenuation to the department if any of the following conditions have been identified at the site:

(1) concentrations of contaminants of concern exceed site-specific target levels (SSTLs) in soil or WQCC or EIB standards in groundwater or surface water; or

(2) other conditions exist as a result of the release which threaten public health, safety and welfare or the environment, as determined by the department.

B. Owners and operators shall submit the monitored natural attenuation plan in accordance with this section and 20.5.119.1920 NMAC and in accordance with a timeline approved by the department or the timeline set forth in Subsection E of 20.5.119.1900 NMAC.

C. The intent of the monitored natural attenuation plan is to provide a written description of the methodology proposed and demonstrate how the plan will achieve target concentrations in a manner that is practicable, cost effective, and protective of public health, safety and welfare and the environment. The content of the monitored natural attenuation plan, at a minimum and as appropriate, shall include:

(1) a site plan drawn to scale of no less than one inch equals 40 feet, showing all existing buildings, structures, paved areas, utilities, buried utility trenches, former and existing petroleum storage tanks and ancillary equipment, other sources of contamination, extent and magnitude of contamination, and existing and proposed monitoring wells;

(2) cross sections showing the source contaminant mass in relation to the groundwater contamination;

(3) a topographic map of appropriate scale showing the site in relation to existing and reasonably foreseeable future receptors;

(4) concentration contour maps depicting the extent and magnitude of the contaminants of concern and the designated monitoring wells in relation to the site;

(5) a schematic drawing depicting the construction details including lithology and screen intervals for the designated monitoring wells;

(6) the justification for selecting the designated monitoring wells;

(7) the recommended approach to monitoring including an implementation and monitoring schedule, the analytical methods, and the justification for the recommendation;

(8) an estimation of the time necessary for achieving target concentrations, and a demonstration through calculations or other appropriate means which supports this schedule;

(9) a contingency plan in case of a change in site conditions that threatens public health, safety and welfare or the environment;

(10) public notice in conformance with the following requirements:

(a) owners and operators shall publish a legal notice of the submission or planned submission of the monitored natural attenuation plan at least twice in a paper of general circulation in the county in which soil or water has been contaminated by the release; the first notice shall appear within one week of, but not later than, the day of submission of the monitored natural attenuation plan to the department; the second publication of this notice shall occur no later than seven days after the date the monitored natural attenuation plan is submitted to the department, and owners and operators shall submit two certified affidavits of publication from the newspaper to the department within 21 days after the date the monitored natural attenuation plan is submitted;

(b) the notice shall contain the information specified in this section including the following:

(i) a statement that a monitored natural attenuation plan has been submitted to the department proposing actions to monitor natural attenuation of a release of petroleum products;

(ii) the name and physical address of the site at which the release occurred and the names and physical addresses of properties where any part of contaminant plume is located, using adequate identification of the properties, including street addresses if applicable;

(iii) a statement that a copy of the monitored natural attenuation plan and all data and modeling related to the monitored natural attenuation plan, if applicable, can be viewed at the department's main office and at the department's field office for the area in which the release occurred; and

(iv) a statement that public comments on the plan must be delivered within 21 days of the publication of the second notice, to the owner or operator's assigned project manager at the petroleum storage tank bureau, New Mexico environment department, or a district office if approved by the department, and to the secretary of the environment department;

(c) within seven days of the date a monitored natural attenuation plan is submitted to the department, owners and operators shall also mail by certified mail a copy of the legal notice to adjacent property owners; and

(d) owners and operators shall post a notice of the submission of the monitored natural attenuation plan at the release site within seven days of the submission of the monitored natural attenuation plan; the notice shall contain the information specified in this subsection and shall be at least eight and one-half inches by 11 inches in size and prominently displayed in a location where it is likely to be seen by members of the public for a continuous period until the monitored natural attenuation plan is approved and implemented; public comments must be received by the department within 21 days of the date of the second publication of the public notice; and

(11) other requirements as directed by the department.

[20.5.119.1915 NMAC - N, 07/24/2018]

[The address of the department's petroleum storage tank bureau, remediation section is: 2905 Rodeo Park Drive East, Building 1, Santa Fe, New Mexico 87505.]

20.5.119.1916 REVIEW AND APPROVAL OF MONITORED NATURAL ATTENUATION PLAN:

A. After the public comment period has ended, the department shall review the plan and shall either approve the plan or notify the owner and operator in writing of the deficiencies of the plan. If the secretary determines that a decision on the monitored natural attenuation plan must be postponed due to significant comments from the public, the department shall notify the owner and operator within 30 days of such a postponement, and may extend its review period for a period not to exceed 60 days unless otherwise provided in Subsection E of this section. All deadlines calculated from the end of the review period will be adjusted to reflect any extension.

B. The department may approve a monitored natural attenuation plan and impose reasonable conditions.

C. If the department determines that the monitored natural attenuation plan is inadequate, owners and operators shall modify the plan to correct the deficiencies specified by the department and re-submit it within the time period specified by the department.

D. The department may provide notice of the submission of the monitored natural attenuation plan to persons other than the owner and operator and provide for public participation in the review process as the department deems appropriate or when there is significant public interest. In the event that an informal public meeting, public hearing or other form of public participation is conducted, the department may postpone its decision on the monitored natural attenuation plan until after a public hearing or meeting is held and a determination is made. Any public hearing or meeting that is held due to significant public interest shall be held within 60 days of determining that there is significant public interest.

[20.5.119.1916 NMAC - N, 07/24/2018]

20.5.119.1917 MONITORED NATURAL ATTENUATION PLAN IMPLEMENTATION:

A. Owners and operators shall implement the monitored natural attenuation plan after department approval in accordance with a timeline approved by the department or the timeline set forth in Subsection E of 20.5.119.1900 NMAC.

B. Owners and operators shall monitor the contamination until the department determines that the natural attenuation is complete pursuant to this part, or unless otherwise approved by the department.

[20.5.119.1917 NMAC - N, 07/24/2018]

20.5.119.1918 REPORTS ON THE MONITORED NATURAL ATTENUATION:

A. Owners and operators shall submit paper and electronic copies of written reports to the department on the progress of the monitored natural attenuation. Owners and operators shall submit the reports annually unless a different reporting period is approved by the department and shall document all work performed during the preceding interval and shall include at a minimum the following information, as appropriate:

(1) a site plan drawn to scale of no less than one inch equals 40 feet, showing all existing buildings, structures, paved areas, utilities, buried utility trenches, former and existing petroleum storage tanks and ancillary equipment, other sources of contamination, extent and magnitude of contamination, and existing and proposed monitoring wells;

- (2) a topographic map of appropriate scale showing the site in relation to existing and reasonably foreseeable future receptors;
- (3) concentration contour maps depicting the extent and magnitude of the contaminants of concern and the designated monitoring wells in relation to the site;
- (4) tabulation of the current and historical results of all water quality analyses and water elevation data;
- (5) graphs of appropriate scale of the current and historical water quality analyses and water elevation data versus time;
- (6) data evaluation and interpretation, and recommendations; and
- (7) other information required by the department.

B. Owners and operators shall submit the report within 30 days of the end of the reporting period or as otherwise approved by the department.

[20.5.119.1918 NMAC - N, 07/24/2018]

20.5.119.1919 EVALUATION OF MONITORED NATURAL ATTENUATION PLAN:

A. Owners and operators shall evaluate the effectiveness of the monitored natural attenuation plan at the end of each year of monitoring and submit the evaluation to the department for review unless otherwise approved by the department.

B. When the department determines that the plan is not effectively mitigating contamination according to the identified risks to public health, safety and welfare or the environment, owners and operators shall propose an alternative approach or change in the existing monitored natural attenuation plan within 30 days of the department's determination of ineffectiveness. Within 30 days of the department's approval, owners and operators shall implement the approved changes.

C. After implementation of any modification, owners and operators shall repeat annually the evaluation process described in this section.

[20.5.119.1919 NMAC - N, 07/24/2018]

20.5.119.1920 MODIFICATION OF MONITORED NATURAL ATTENUATION PLAN:

A. Owners and operators may petition the department to approve a modification of the monitored natural attenuation plan for good cause.

B. The department may approve a modification of the monitored natural attenuation plan only if such modification provides adequate protection of public health, safety and welfare and the environment and the owner or operator complies with the public notice requirements of 20.5.119.1915 NMAC.

[20.5.119.1920 NMAC - N, 07/24/2018]

20.5.119.1921 COMPLETION OF MONITORED NATURAL ATTENUATION:

A. Natural attenuation shall be considered complete when all of the following criteria are met:

(1) no layer of NAPL greater than one-eighth inch in thickness is present on the water table or in any of the wells;

(2) the EIB standard of 0.1 mg/L for methyl tertiary butyl ether (MTBE) has been met in groundwater and surface water;

(3) all applicable site-specific target levels or risk-based screening levels in soil and WQCC and EIB standards in groundwater have been achieved:

(a) the applicable standards shall be achieved concurrently at all compliance wells as approved by the department;

(b) for verification that soil has reached target concentrations, owners and operators shall install at least four soil borings, at least three of which are distributed throughout the previously most contaminated portion of the vadose zone, unless otherwise approved by the department;

(4) corrective action requirements for total petroleum hydrocarbons determined in accordance with 20.5.119.1914 NMAC have been met; and

(5) any other conditions which threatened public health, safety and welfare or the environment have been abated.

B. If any of the conditions of Paragraphs (1) through (5) of Subsection A of this section are not met, the department may require owners and operators to perform additional remediation.

C. Termination of monitored natural attenuation in accordance with this section does not relieve the owner and operator of any other liability or responsibility they may have under this part or any other federal, state or local law or regulation.

D. Following department approval, and with 30 days' notice unless otherwise approved by the department, owners and operators shall properly abandon wells that

are no longer needed for monitoring, in accordance with federal, state and local laws and regulations.

[20.5.119.1921 NMAC - N, 07/24/2018]

20.5.119.1922 CONCEPTUAL REMEDIATION PLAN:

A. If approved by the department, owners and operators shall submit a conceptual remediation plan to the department if any of the following conditions have been identified at the site:

(1) a thickness of greater than one-eighth inch of NAPL is present on the surface of the water, including in any excavation pit, or in any well;

(2) contaminant saturated soil is present;

(3) concentrations of contaminants of concern exceed site-specific target levels (SSTLs) in soil or WQCC or EIB standards in groundwater or surface water;

(4) total petroleum hydrocarbons in soil meet the criteria outlined 20.5.119.1914 NMAC; or

(5) other conditions exist as a result of the release which threaten public health, safety and welfare or the environment, as determined by the department.

B. All remediation plans shall include but are not limited to methods to mitigate, remove or otherwise remediate the contaminant source areas.

C. Owners and operators shall submit the conceptual remediation plan in accordance with this section and a timeline approved by the department or the timeline set forth in Subsection E of 20.5.119.1900 NMAC.

(1) The conceptual remediation plan shall provide a written description of all of the methodologies proposed and discuss how the plan will achieve target concentrations and other goals of remedial action in a manner that is practicable, cost effective, and protective of public health, safety and welfare and the environment. Owners and operators shall obtain department approval for the conceptual remediation plan before developing the final remediation plan.

(2) The conceptual remediation plan, at a minimum and as appropriate, shall include:

(a) a concise description of site conditions, including hydrogeology, contaminant characteristics and plume dynamics;

(b) the recommended approach to remediation and justification for the recommendation;

(c) a clear description of the goals of remediation and the target concentrations to be met in each medium;

(d) a narrative description of the proposed methodologies including a preliminary cost comparison and time lines for achieving goals of remediation;

(e) a cost estimate of implementation including installation, operation and maintenance, and monitoring;

(f) a schematic diagram of the proposed remediation system or treatment area and a narrative description of its operation;

(g) a plan view, to scale, of the site showing locations of the proposed equipment or excavation boundaries in relation to the site's physical features and contaminant plumes;

(h) a description of how the approach will achieve target concentrations and other goals of remediation; and

(i) a description of additional data required to support the conceptual remediation plan and design of the final plan and how it will be collected.

[20.5.119.1922 NMAC - N, 07/24/2018]

20.5.119.1923 FINAL REMEDIATION PLAN:

A. Following department approval of the conceptual remediation plan, owners and operators shall develop a final remediation plan in accordance with this section and shall submit three copies of the final remediation plan to the department in accordance with a timeline approved by the department or the timeline set forth in Subsection E of 20.5.119.1900 NMAC.

B. The design and engineering of any final remediation plan that includes mechanical or electrical equipment, engineered fill, pinning, shoring or slope stability analysis shall be the responsibility of a professional engineer as defined in 20.5.101.7 NMAC. A professional engineer shall sign and seal all plans and drawings required pursuant to this section, unless otherwise approved by the department.

C. In order to eliminate the potential to emit regulated substances to the environment, all engineered remediation systems shall be designed, constructed and operated such that malfunction or failure of any integral component results in automatic shutdown of the entire system. Integral components include but are not limited to

pumps, blowers, oil-water separators, oxidizer systems, air strippers, filtration systems and computers.

D. All final remediation plans shall, at a minimum, include all of the following:

- (1)** goals of remediation and target concentrations to be achieved in each medium;
- (2)** a site plan drawn to scale of no less than one inch equals 40 feet, showing all existing buildings, structures, paved areas, utilities, buried utility trenches, former and existing storage tanks, other sources of contamination, extent and magnitude of contamination, and existing and proposed monitoring wells;
- (3)** a hydrogeologic cross section showing contaminant mass in relation to the remediation system and a topographic map of appropriate scale showing the site in relation to existing and reasonably foreseeable future receptors;
- (4)** an implementation schedule;
- (5)** engineered plans and specifications in accordance with Subsection E of this section;
- (6)** a schedule for remediation of the source areas for protection of receptors and for achieving target concentrations, and a demonstration through calculations or other appropriate means which supports this schedule;
- (7)** a design and schedule for a system optimization that meets the requirements of 20.5.119.1928 NMAC;
- (8)** a contingency plan in case of a change in site conditions that threatens public health, safety and welfare or the environment;
- (9)** copies of all permits, permit applications, and property access agreements required to initiate remediation, including, if necessary, permits required by the state engineer, permits for discharge to groundwater or a waste water treatment plant, permits for air emissions or a surface water national pollution discharge elimination system (NPDES) permit;
- (10)** public notice in conformance with the following requirements:
 - (a)** owners and operators shall publish a legal notice of the submission or planned submission of the final remediation plan at least twice in a paper of general circulation in the county in which soil or water has been contaminated by the release; the first notice shall appear within one week of, but not later than, the day of submission of the final remediation plan to the department; the second publication of this notice shall occur no later than seven days after the date the remediation plan is submitted to

the department, and owners and operators shall submit two certified affidavits of publication from the newspaper to the department within 21 days after the date the final remediation plan is submitted;

(b) the notice shall contain the information specified in this section including the following:

(i) a statement that a remediation plan has been submitted to the department proposing actions to remediate a release of petroleum products;

(ii) the name and physical address of the site at which the release occurred and the names and physical addresses of properties where any part of the remediation system will be located, using adequate identification of the properties, including street addresses if applicable;

(iii) a statement that a copy of the remediation plan and all data and modeling related to the remediation plan, if applicable, can be viewed at the department's main office and at the department's field office for the area in which the release occurred; and

(iv) a statement that public comments on the plan must be delivered, within 21 days of the publication of the second notice, to the owner or operator's assigned project manager at the petroleum storage tank bureau, New Mexico environment department, or a district office if approved by the department, and to the secretary of the environment department;

(c) within seven days of the date a remediation plan is submitted to the department, owners and operators shall also mail by certified mail a copy of the legal notice to adjacent property owners; and

(d) owners and operators shall post a notice of the submission of the remediation plan at the release site within seven days of the submission of the remediation plan; the notice shall contain the information specified in this subsection and shall be at least eight and on-half inches by 11 inches in size and prominently displayed in a location where it is likely to be seen by members of the public for a continuous period until the remediation plan is approved and implemented; public comments must be received by the department within 21 days of the date of the second publication of the public notice;

(11) for sites where contaminated media are being removed, a description of the ultimate disposal site of contaminated media, location of excavation and trenching, and method of limiting access by pedestrian and vehicular traffic; and

(12) other requirements as directed by the department.

E. In addition to the requirements of Subsection D of this section, all final remediation plans shall include:

(1) for engineered systems:

(a) unless otherwise approved by the department, a complete and definitive engineering design for a mechanical, electrical, or constructed system, including drawings, plans, diagrams and specifications which are signed and sealed by a professional engineer;

(b) process and instrumentation diagrams;

(c) mechanical arrangement plans and elevations, drawn to scale, showing proposed wells, manifolds, piping details, instrumentation and sampling ports;

(d) details of vapor or fluid extraction or injection wells, as appropriate, including screen length and placement in relation to ground surface, normal and low water table elevations and geologic strata, screen slot size, depths and specifications of the filter pack and seal, and drilling method;

(e) equipment and parts list and specifications including a spare parts list, performance requirements, maintenance requirements and schedule;

(f) electric power requirements including a one-line diagram and schematics;

(g) operation and maintenance commitments and schedules for all facets of the remediation system; and

(h) all other plans, diagrams and specifications that are necessary to properly construct and operate the remediation system in accordance with the remediation plan including but not limited to requirements for:

(i) trenching and protection from traffic;

(ii) concrete repair and replacement;

(iii) restoration of property; and

(iv) location and protection of underground utilities;

(2) for excavation and disposal plans:

(a) plan view of proposed excavation relative to contaminant plume;

(b) cross-sections of proposed excavation depicting overburden, contaminated material to be removed and backfill;

- (c) volume calculations and slope stability analysis;
- (d) description of excavation and backfill procedure to be performed in conformance with OSHA and ASTM standards and regulations;
- (e) traffic control plan;
- (f) description of post-excavation confirmation sampling;
- (g) proposed final grade plan;
- (h) post-excavation grade survey; and
- (i) all other plans, diagrams and specifications that are necessary including but not limited to requirements for:
 - (i) trenching and protection from traffic;
 - (ii) concrete repair and replacement;
 - (iii) restoration of property; and
 - (iv) location and protection of underground utilities.

[20.5.119.1923 NMAC - N, 07/24/2018]

[The address of the petroleum storage tank bureau, remediation section is: 2905 Rodeo Park Drive East, Building 1, Santa Fe, New Mexico 87505.]

20.5.119.1924 REVIEW AND APPROVAL OF FINAL REMEDIATION PLAN:

A. Within 30 days of receipt of the final remediation plan and after the public comment period has ended, the department shall review the plan and shall either approve the plan or notify the owner and operator in writing of the deficiencies of the plan. If the secretary determines that a decision on the remediation plan must be postponed due to significant comments from the public, the department must notify the owner and operator within 30 days of such a postponement, and may extend its review period for a period not to exceed 60 days unless otherwise provided in Subsection D of this section. All deadlines calculated from the end of the review period will be adjusted to reflect any extension.

B. The department may approve a final remediation plan and impose reasonable conditions.

C. If the department determines that the final remediation plan is inadequate, owners and operators shall modify the plan to correct the deficiencies specified by the department and re-submit it within the time period specified by the department.

D. The department may provide notice of the submission of the remediation plan to persons other than the owner and operator and provide for public participation in the review process as the department deems appropriate or when there is significant public interest. In the event that an informal public meeting, public hearing or other form of public participation is conducted, the department may postpone its decision on the final remediation plan until after a public hearing or meeting is held and a determination is made. Any public hearing or meeting that is held due to significant public interest shall be held within 60 days of determining that there is significant public interest.

[20.5.119.1924 NMAC - N, 07/24/2018]

20.5.119.1925 IMPLEMENTATION OF FINAL REMEDIATION PLAN:

A. Owners and operators shall implement the final remediation plan after department approval in accordance with a timeline approved by the department or the timeline set forth in Subsection E of 20.5.119.1900 NMAC. Owners and operators shall employ a professional engineer to ensure conformance with the final remediation plan including excavation and installation, commissioning and operation of the system.

B. When the remediation plan includes mechanical or electrical equipment, engineered fill, pinning, shoring or slope stability analysis:

(1) a professional engineer shall supervise conformance with the final remediation plan including installation, commissioning and operation of the system;

(2) owners and operators shall operate the remediation system continuously until the remediation is terminated pursuant to this part unless otherwise approved by the department; and

(3) owners and operators shall report to the department all interruptions of the operation of the remediation system greater than 72 hours.

C. Owners and operators shall obtain written approval from the department prior to implementing any change to the department-approved engineering design.

D. Following implementation of the final remediation plan, owners and operators shall submit an "as-built" report signed and sealed by the project professional engineer including:

(1) any deviations from the drawings and specifications included in the final remediation plan;

(2) a tabulation of pertinent data including but not limited to flow rates, pressures, temperatures, and contaminant concentrations and groundwater elevations at start-up, and boring logs and well completion diagrams; and

(3) information and documentation of purchased major remediation equipment including, but not limited to serial number, model and manufacturer, description, warranty information, operating manuals, maintenance requirements and purchase price.

[20.5.119.1925 NMAC - N, 07/24/2018]

20.5.119.1926 QUARTERLY REPORTS ON THE REMEDIATION:

A. Owners and operators shall submit paper and electronic copies of written reports to the department on the operation of the remediation system. Owners and operators shall submit the reports quarterly unless a different reporting period is approved by the department, shall document all work performed during the preceding interval, and shall include the following information, as appropriate:

(1) tabulation of the current and historical results of all water quality analyses and water elevation data;

(2) evaluation of the performance and efficiency of each aspect of the remediation:

(a) the evaluation and all adjustments to system operation shall be performed, as appropriate, under the direct, responsible, supervisory control of an authorized representative of the qualified firm and a professional engineer; and

(b) owners and operators shall submit evidence that the performance of the remediation system meets the operating standards outlined in the final remediation plan;

(3) verification based on calculations that the schedule is being met for source removal, protection of actual and potential receptors, achievement of target concentrations, quarterly and cumulative contaminant mass reduction totals to date in pounds and gallons of contaminants;

(4) records of system operation, including but not limited to, periods of shut-down and equipment malfunctions; the maintenance procedures performed on the remediation system during the preceding quarter, including the names of the individuals performing the maintenance; and an operation and maintenance schedule for the next quarter;

(5) NAPL recovery, both cumulative and quarterly, and details of its disposal;

- (6) effluent vapor concentrations over time;
- (7) evaluation and recommendations for improving the performance of the system to achieve the goals of remediation; and
- (8) other information required by the department.

B. Owners and operators shall submit the report within 30 days of the end of the reporting period or as otherwise approved by the department.

[20.5.119.1926 NMAC - N, 07/24/2018]

20.5.119.1927 ANNUAL EVALUATION OF REMEDIATION:

A. Owners and operators shall evaluate the effectiveness of the approach to remediation at the end of each year of operation and submit the evaluation to the department for review.

B. When the department determines that the approach to remediation is not effectively remediating contamination according to the identified risks to public health, safety and welfare and the environment, owners and operators shall propose an alternative approach or change in the existing remediation plan within 30 days of the department's determination of ineffectiveness. Within 30 days of the department's approval, owners and operators shall implement the approved changes.

C. After implementation of any modification, owners and operators shall repeat annually the evaluation process described in this section until monitoring to verify completion of remediation in accordance with 20.5.119.1929 NMAC commences.

[20.5.119.1927 NMAC - N, 07/24/2018]

20.5.119.1928 MODIFICATION OF FINAL REMEDIATION PLAN:

A. Owners and operators may petition the department to approve a modification of the final remediation plan for good cause.

B. The department may modify a final remediation plan only if it complies with applicable regulations, provides adequate protection of public health, safety and welfare and the environment, and the owner and operator comply with the public notice requirements of 20.5.119.1923 NMAC.

[20.5.119.1928 NMAC - N, 07/24/2018]

20.5.119.1929 COMPLETION OF REMEDIATION:

A. The department shall consider remediation complete when all of the following criteria are met:

(1) no layer of NAPL greater than one-eighth inch in thickness is present on the water table or in any of the wells;

(2) the EIB standard of 0.1 mg/L for methyl tertiary butyl ether (MTBE) has been met in groundwater and surface water;

(3) all applicable site-specific target levels or risk-based screening levels in soil and WQCC and EIB standards in groundwater have been achieved;

(a) all electrical and mechanical components of the remediation system shall remain shut down during the monitoring period described in this subsection;

(b) the department shall approve the designation of certain monitoring wells as compliance wells; the applicable standards shall be achieved concurrently at all compliance wells for at least eight consecutive quarters unless otherwise as approved by the department; and

(c) for verification of remediation of soil to target concentrations, owners and operators shall install at least four soil borings, at least three of which are distributed throughout the previously most contaminated portion of the vadose zone, as approved by the department;

(4) corrective action requirements for total petroleum hydrocarbons determined in accordance with 20.5.119.1914 NMAC have been met; and

(5) any other conditions which threatened public health, safety and welfare or the environment have been abated or remediated.

B. If any of the conditions of Paragraphs (1) through (5) of Subsection A of this section are not met, the department may require owners and operators to perform additional remediation.

C. Notwithstanding the conditions in Subsection A of this section, owners and operators may continue to operate the mechanical and electrical components of the remediation system when it is effectively reducing contaminant concentrations, as determined and approved by the department.

D. Termination of remediation in accordance with this section does not relieve the owner and operator of any other liability or responsibility they may have under this part or any other federal, state or local law or regulation.

E. Following department approval, owners and operators shall decommission the electrical and mechanical components of the remediation system and properly abandon

wells that are no longer needed for remediation or monitoring, in accordance with federal, state and local laws and regulations.

[20.5.119.1929 NMAC - N, 07/24/2018]

20.5.119.1930 NO FURTHER ACTION DETERMINATION:

A. A no further action determination is a technical determination issued by the department that documents that the owner or operator of a site has met all applicable WQCC and EIB remediation standards and that no contaminant will present a significant risk of harm to public health, safety and welfare and the environment.

B. Any owner or operator may request that the department evaluate a site for a no further action determination by submitting a written request to the department. The request shall include the following, if requested by the department:

(1) description of the site including a historical overview and generalized description of businesses, structures, vegetation, other prominent features, and location of the site;

(2) surveyed plat of the site, site map with legal description, or both;

(3) completed current environmental conditions table listing all areas of environmental concern on the site subject to remediation; the table shall include the following information about each area of environmental concern:

(a) remedial action taken, date, regulatory agency;

(b) residual contaminants of concern;

(c) clean-up status; and

(d) clean-up standards for contaminants of concern;

(4) chronology of events for each area investigated or remediated; and

(5) other relevant documents, as requested by the department.

C. Owners and operators shall receive approval of a request for a no further action determination for the release when all of the following conditions are met:

(1) groundwater and surface water contamination related to the release is less than or equal to WQCC and EIB standards, and where there had been groundwater contamination related to the release, the applicable standards have been achieved concurrently at all compliance wells for at least eight consecutive quarters unless otherwise approved by the department;

(2) soil contamination is less than or equal to applicable RBSLs or SSTLs, unless otherwise approved by the department under Subparagraph (c) of Paragraph (3) of Subsection A of 20.5.119.1929 NMAC; and

(3) any other conditions which did threaten public health, safety and welfare or the environment have been adequately mitigated.

D. Owners and operators shall receive approval of a request for no further action determination for the release when subsurface water does not meet the definition of "subsurface water" in 20.6.2.7 NMAC or is unprotected pursuant to Subsection A of 20.6.2.3101 NMAC, if NAPL and contaminant saturated soil have been adequately remediated in accordance with this part and any other conditions which threatened public health, safety and welfare or the environment have been adequately mitigated.

E. Upon completion of an assessment by the department that a site qualifies for a no further action determination, the department shall issue a no further action determination letter.

F. Any of the following may result in a reversal of a no further action determination:

(1) new information becomes available or circumstances arise indicating that an unacceptable risk to public health, safety and welfare or the environment exists; or

(2) a change in use or reasonable foreseeable future use of land or resources, including a change from less sensitive land use to more sensitive land use, such as from commercial or industrial to residential, and including the drilling of water supply wells in the vicinity of remaining contamination.

[20.5.119.1930 NMAC - N, 07/24/2018]

20.5.119.1931 REQUEST FOR EXTENSION OF TIME:

A. For good cause shown, the department may extend the time for complying with any deadline set forth in this part. The request shall specify the reason for the request, all actions taken to comply with the deadline and the period of time for which the extension is requested.

B. The department shall not grant an extension for more than 30 days at a time unless the department determines additional time is warranted. The department may place conditions on the extension.

C. Lack of diligence or failure of owners and operators to comply with these regulations shall be grounds for denying a request for an extension of time.

[20.5.119.1931 NMAC - N, 07/24/2018]

20.5.119.1932 RECORDKEEPING AND RETENTION:

A. Owners and operators of petroleum storage tanks where a release has occurred shall retain records documenting compliance with all applicable requirements of 20.5.119 NMAC. If the owner and operator of a petroleum storage tank are separate persons, only one person is required to maintain the records required by this section however both parties are liable in the event of non-compliance.

B. Records to be maintained shall include, but not be limited to:

- (1) 72-hour report;
- (2) 14-day report;
- (3) NAPL Assessment report;
- (4) interim removal of contaminated soil report;
- (5) minimum site assessment, preliminary investigation report;
- (6) secondary investigation report;
- (7) soil-only contamination assessment report;
- (8) petroleum vapor intrusion assessment report;
- (9) final remediation plan;
- (10) groundwater monitoring reports;
- (11) operation and maintenance reports.

C. Records shall be maintained for a minimum period of 10 years following a no further action determination as set forth in 20.5.119.1930 NMAC.

[20.5.119.1932 NMAC - N, 07/24/2018]

20.5.119.1933 REPORTING:

A. Owners and operators shall provide to the department all reports as required in 20.5.119 NMAC in accordance with the timeline or deadlines set forth as stated in 20.5.119.1900 NMAC.

B. Owners and operators shall ensure all reports, plans and requests required in 20.5.119 NMAC contain at a minimum, in addition to the requirements set forth in 20.5.119.1902, 20.5.119.1903, 20.5.119.1905, 20.5.119.1906, 20.5.119.1909,

20.5.119.1911, 20.5.119.1912, 20.5.119.1913, 20.5.119.1915, 20.5.119.1918, 20.5.119.1922, 20.5.119.1923, 20.5.119.1926, 20.5.119.1927, 20.5.119.1930 and 20.5.119.1931 NMAC:

- (1) release name and address;
- (2) facility identification and release identification numbers;
- (3) workplan and deliverable identification numbers as applicable;
- (4) owner and operator name and address, and
- (5) date report was completed.

[20.5.119.1933 NMAC - N, 07/24/2018]

PART 120: CORRECTIVE ACTION FOR UST SYSTEMS CONTAINING OTHER REGULATED SUBSTANCES

20.5.120.1 ISSUING AGENCY:

New Mexico Environmental Improvement Board.

[20.5.120.1 NMAC - N, 07/24/2018]

20.5.120.2 SCOPE:

This part applies to owners and operators of hazardous substance UST systems as defined in 20.5.101 NMAC. If the owner and operator of an UST system are separate persons, only one person is required to comply with the requirements of this part, including any notice and reporting requirements; however, both parties are liable in the event of noncompliance.

[20.5.120.2 NMAC - N, 07/24/2018]

20.5.120.3 STATUTORY AUTHORITY:

This part is promulgated pursuant to the provisions of the Hazardous Waste Act, Sections 74-4-1 through 74-4-14 NMSA 1978; the Ground Water Protection Act, Sections 74-6B-1 through 74-6B-14 NMSA 1978; the Water Quality Act, Sections 74-6-1 through 74-6-17 NMSA 1978; and the general provisions of the Environmental Improvement Act, Sections 74-1-1 through 74-1-17 NMSA 1978.

[20.5.120.3 NMAC - N, 07/24/2018]

20.5.120.4 DURATION:

Permanent.

[20.5.120.4 NMAC - N, 07/24/2018]

20.5.120.5 EFFECTIVE DATE:

July 24, 2018, unless a later date is indicated in the bracketed history note at the end of a section.

[20.5.120.5 NMAC - N, 07/24/2018]

20.5.120.6 OBJECTIVE:

The purpose of this part is to provide for corrective action at sites contaminated by releases from hazardous substance UST systems and to protect the public health, safety and welfare and the environment of the state.

[20.5.120.6 NMAC - N, 07/24/2018]

20.5.120.7 DEFINITIONS:

The definitions in 20.5.101 NMAC apply to this part.

[20.5.120.7 NMAC - N, 07/24/2018]

20.5.120.8-20.5.120.1999 [RESERVED]

20.5.120.2000 GENERAL:

A. Owners and operators of hazardous substance UST systems shall take corrective action to address all releases, including such action as collection and analysis of relevant site-specific data, soil remediation, groundwater and surface water remediation and any other appropriate actions pursuant to this part, in a manner protective of public health, safety and welfare and the environment.

B. Upon confirmation of a release pursuant to 20.5.118.1802 NMAC or identification and reporting of a release in any other manner, owners and operators of hazardous substance UST systems shall comply with the requirements of this part if the release:

(1) is of unknown volume or is greater in volume than the reportable quantity under 40 C.F.R. Part 302; or

(2) is of any size and the owner or operator is directed by the department to comply with this part.

C. Owners and operators shall maintain and provide to the department all reports required in 20.5.120.2029 and 20.5.120.2030 NMAC.

D. Owners and operators shall mail or deliver and provide paper and electronic copies of all written notices and reports required under this part to be submitted to the department to the owner or operator’s assigned project manager from the petroleum storage tank bureau, New Mexico environment department.

E. Owners and operators shall comply with any site-specific timeline or deadline that is approved in writing by the department at the time of workplan approval. If no applicable site-specific timeline has been approved, the following timeline shall apply to all corrective action requirements under this part. The time deadlines set forth in this part are computed from the date of reporting of a release or of reporting of the confirmation of a suspected release pursuant to 20.5.118.1800 NMAC unless another event is specified in these rules.

Default Corrective Action Timeline

Deadline, in days from report:	Action or deliverable due date, as defined above:
0	report discovery or confirmation of a release
3	72-hour report
14	14-day report
60	submit NAPL assessment
60	initiate interim removal of contaminated soil
60	preliminary investigation report
120	secondary investigation report
When monitored natural attenuation is used:	
510	monitored natural attenuation (MNA) plan
570	implementation of MNA
935	first annual MNA monitoring report
935	annual evaluation of MNA report
When other remediation is used:	
510	conceptual remediation plan
540	final remediation plan
600	implementation of remediation
690	first quarterly monitoring report
965	annual evaluation of remediation system report

F. All owners and operators are responsible for compliance with all provisions of this part. An owner or operator may designate a representative to facilitate compliance

with this part. The designation of such a representative shall not affect the department's right to seek compliance at any time from the owner or the operator or both. The designation of a representative is intended to facilitate compliance with this part and shall not relieve the owner and operator of their legal liabilities or responsibilities under this part.

G. Except for 20.5.120.2001, 20.5.120.2002 and 20.5.120.2003 NMAC, owners and operators shall submit to the department written workplans for all corrective action under this part. Owners and operators may submit workplans in stages to reflect the sequence or types of corrective action described in 20.5.120 NMAC at the site, but the owners and operators shall submit all workplans to and obtain approval by the department in writing for technical adequacy before the corrective action is commenced.

H. Unless otherwise approved, a qualified firm as specified in 20.5.122 NMAC shall perform all corrective action and, when required by the rules in Title 20, Chapter 5 NMAC, a professional engineer as defined in 20.5.101.7 NMAC.

(1) All contractors and their subcontractors shall have appropriate licenses and certifications and be in compliance with applicable local, state and federal laws and regulations, including but not limited to the rules in Title 16, Chapter 39 NMAC governing engineers, 14.6.3 NMAC governing contractors and, 29 CFR part 1910 governing worker health and safety.

(2) Owners and operators shall identify all prime contractors and all subcontractors in all workplans submitted to the department.

I. Where site conditions are amenable, owners and operators may use accelerated site characterization techniques if pre-approved by the department.

J. All monitoring wells shall be permitted in conformance with all applicable federal, state and local laws, regulations and ordinances in effect at the time of installation.

K. Owners and operators shall clearly mark and secure monitoring wells and major remediation equipment to prevent unauthorized access, tampering. Owners and operators shall close or abandon all wells in accordance with the requirements of applicable federal, state and local laws and regulations in effect at the time the workplan was approved.

L. If a release constitutes a hazardous substance incident under the provisions of the Hazardous Waste Act relating to hazardous substance incidents, those provisions may apply in addition to this part.

M. The department shall notify owners and operators taking corrective action and contractors of state-lead sites in writing when it has determined that a deliverable completed under an approved workplan is satisfactory. The written notice shall also inform the owner, operator or contractor that any application for payment from the fund

of costs associated with the approved deliverable must be received by the department within 90 days of the date the owner, operator or contractor received written notice of approval and that the department shall not grant extensions of the deadline except for good cause as shown pursuant to 20.5.123.2318 NMAC.

[20.5.120.2000 NMAC - N, 07/24/2018]

[The address of the department's Petroleum Storage Tank Bureau, Remedial Action Program, is: 2905 Rodeo Park Drive East, Building 1, Santa Fe, New Mexico 87505.]

20.5.120.2001 MINIMUM SITE ASSESSMENT, INITIAL RESPONSE:

A. Upon discovery or confirmation of a release, owners and operators of the UST system shall immediately prevent any further release from the UST system by whatever means necessary, including removing product from the UST system or any part of the UST system that is known to leak or is suspected of leaking. If necessary, owners and operators shall remove the UST system from service in accordance with 20.5.115 NMAC.

B. Owners and operators shall inform the department in accordance with 20.5.118.1800 NMAC of any release and action taken to mitigate immediate damage from the release.

[20.5.120.2001 NMAC - N, 07/24/2018]

20.5.120.2002 MINIMUM SITE ASSESSMENT, INITIAL ABATEMENT:

A. Owners and operators shall undertake the initial abatement and site investigation actions specified in this section within 72 hours of discovery or confirmation of a release pursuant to 20.5.118 NMAC, using the default timeline as set forth in Subsection E of 20.5.120.2000 NMAC or as otherwise approved by the department.

B. Owners and operators shall identify the location and details of construction of all private water supply wells, using readily accessible public records, within a 1,000-foot radius, and all public water supply wells within a one mile radius of the UST system, and shall determine if the identified wells lie within a designated wellhead protection area. Owners and operators shall take appropriate measures to protect these water supplies from contamination.

C. Owners and operators shall contain or remediate releases which present an imminent threat of contamination to or are within 500 feet of a surface water course as soon as practicable to prevent contamination of surface water. If the surface water course is a drinking water supply, within 24 hours owners and operators shall notify the owners or operators of all drinking water supplies likely to be affected by the release.

D. If the release has contaminated a water supply, owners and operators shall immediately provide a temporary replacement drinking water supply, as well as adequate warnings or other mechanisms to prevent persons from drinking or otherwise contacting water contaminated by the release. Within seven days of discovery or confirmation of a release pursuant to 20.5.118 NMAC that has contaminated a water supply, owners and operators shall provide a replacement water supply which is of adequate quality and quantity for drinking, bathing, cooking and washing. Owners and operators shall maintain the replacement water supply until an alternate water supply sufficient for all domestic purposes is available.

E. Owners and operators shall identify the depth, location, composition and construction of all underground utilities including water lines, sewer lines, communication cables, electric lines, and natural gas lines within the area of the release to assess the susceptibility of these utilities to permeation by contaminants or deterioration caused by contaminants. Owners and operators shall notify the utility owner that the release has occurred and obtain permission to perform a site check of the utilities or other subsurface structures most likely to be contaminated by the release to determine whether NAPL or vapors are present.

F. Owners and operators shall complete an investigation to determine whether potentially explosive or harmful vapors are present in any building, utility corridor, basement, or other surface or subsurface structure on or adjacent to the release site.

(1) The investigation shall include testing for vapors using the following:

(a) a combustible gas indicator or equivalent instrument calibrated according to the manufacturer's instructions to test for potentially explosive levels of vapors; and

(b) a photoionization detector, flame ionization detector or another method approved by the department calibrated according to the manufacturer's instructions to test for potentially harmful vapors.

(2) In the event owners and operators discover potentially explosive levels of vapors greater than 10 percent of the lower explosive limit (LEL) or potentially harmful vapors reading greater than five whole units above ambient concentrations in any structure in the vicinity of the release site, owners and operators shall take immediate action to mitigate the vapor hazard. Within seven days of the discovery of the vapors, owners and operators shall install and place into operation a vapor mitigation system capable of reducing vapors to safe levels within the shortest reasonable time. The vapor mitigation system shall be designed by and constructed under the direct, responsible, supervisory control of a professional engineer, when required by the department.

(a) Once a vapor mitigation system has been installed, owners and operators shall monitor and report in writing to the department the levels of vapors in the affected structures weekly for the first month and monthly thereafter unless a different monitoring

schedule is approved in writing by the department. This monitoring shall be performed in accordance with Subparagraphs (a) and (b) of Paragraph (1) of this subsection.

(b) After the vapor mitigation system has been in operation for three months, owners and operators shall have 30 days to submit to the department a written summary report containing the monitoring results. The department may direct owners and operators to modify the vapor mitigation system as necessary to reduce vapors to safe levels. Owners and operators shall submit monitoring results to the department at three-month intervals until operation of the vapor mitigation system is discontinued in accordance with this section.

(3) Owners and operators shall continue to operate the vapor mitigation system until the results of three consecutive monthly monitoring events indicate the following:

(a) levels of vapors are less than ten percent LEL; and

(b) levels of vapors are less than or equal to five whole instrument units above ambient levels in any structure in the vicinity of the release site when measured as required in Subparagraphs (a) and (b) of Paragraph (1) of this subsection.

(4) When operation of a vapor mitigation system is discontinued, owners and operators shall monitor the vapor levels in the structure weekly for the first month and monthly thereafter until one calendar year has passed, or as otherwise approved by the department. If during this period the levels exceed those set forth in Subparagraphs (a) and (b) of Paragraph (3) of this subsection, owners and operators shall notify the department and take the necessary corrective action, as directed by the department.

G. Owners and operators shall remove any exposed hazardous substances related to the release and mitigate any related immediate fire and safety hazards as soon as possible, but in no case no later than 72 hours after the confirmation or other identification of the release.

[20.5.120.2002 NMAC - N, 07/24/2018]

20.5.120.2003 MINIMUM SITE ASSESSMENT, 72-HOUR AND 14-DAY REPORTS:

A. Owners and operators shall make an oral report summarizing the abatement procedures undertaken and the results of action taken under 20.5.120.2001 and 20.5.120.2002 NMAC within 72 hours of the discovery or confirmation of a release pursuant to 20.5.118 NMAC.

B. Owners and operators shall submit a paper and electronic copy of a written report to the department within 14 days of the discovery or confirmation of a release pursuant to 20.5.118 NMAC in addition to the written notice required under 20.5.118

NMAC. This report shall summarize all the work performed pursuant to 20.5.120.2001 and 20.5.120.2002 NMAC and shall include the following information, as appropriate:

(1) a map based on a United States geologic survey topographic map showing locations of actual and potential receptors, including, but not limited to, private and public water supplies identified pursuant to Subsection B of 20.5.120.2002 NMAC; owners and operators shall draw two concentric circles, at 1,000 feet and at one mile radii from the center of the release, and shall also show on the map all surface water courses within a one mile radius of the site;

(2) information about any water supplies known or suspected to have been contaminated by the release;

(3) most likely direction of groundwater flow;

(4) a site plan map showing locations of utilities, surface structures and storage tank systems;

(5) information about underground utilities gathered in accordance with Subsection E of 20.5.120.2002 NMAC;

(6) soil borings, logs, and details of construction of all wells, if available;

(7) description of any actions taken to abate adverse effects;

(8) data from vapor monitoring performed in the vicinity of the site;

(9) description of any actions taken to abate potentially explosive or harmful vapors and any plans for further action;

(10) description of fire and safety hazards resulting from the release and actions taken to abate such hazards;

(11) description of current and past ownership of the property, UST systems, the substance stored in the system, age of tank and history of any tank removals;

(12) present land use, within 1,000 feet of the site; and

(13) records of tightness tests, repairs to the UST system, release detection and monitoring results.

[20.5.120.2003 NMAC - N, 07/24/2018]

20.5.120.2004 NOTICE, SPLIT SAMPLES AND SAMPLING PROCEDURES:

A. Except for the 72-hour vapor check, owners and operators shall notify the department at least four days prior to the collection of any samples which are required pursuant to this part and upon which laboratory analyses are to be performed to allow the department an opportunity to be present at the collection of samples or to split samples.

B. Owners and operators shall notify the department at least four days prior to the decommissioning, destruction or abandonment of any wells.

C. Owners and operators shall collect, store and transport all samples necessary to comply with the requirements of this part in a manner consistent with the nature of the known or suspected and in conformance with applicable federal, state and local laws and regulations.

[20.5.120.2004 NMAC - N, 07/24/2018]

20.5.120.2005 INTERIM REMOVAL OF NON-AQUEOUS PHASE LIQUID:

A. Owners and operators shall assess the potential for remediation of non-aqueous phase liquid (NAPL) where there is a thickness of greater than one-eighth inch of NAPL in surface water, in any excavation pit, or in any well. Owners and operators shall submit the assessment to the department in accordance with a timeline approved by the department or the timeline set forth in Subsection E of 20.5.120.2000 NMAC.

B. The department may approve interim removal of NAPL when such action is determined to be practical and necessary to protect public health, safety and welfare or the environment. In this event, owners and operators shall remove NAPL in accordance with a timeline approved by the department or the timeline set forth in Subsection E of 20.5.120.2000 NMAC.

C. Owners and operators shall remove NAPL in a manner that minimizes the spread of contamination into uncontaminated media.

D. Owners and operators shall store and dispose of NAPL in accordance with all flammable and combustible liquids codes approved by the state fire marshal or other local authority, state hazardous waste regulations 20.4.1 NMAC, and any other applicable laws or regulations.

E. Owners and operators shall report recovery and disposal of NAPL to the department.

[20.5.120.2005 NMAC - N, 07/24/2018]

20.5.120.2006 INTERIM REMOVAL OF CONTAMINATED SOIL:

A. Owners and operators shall remediate contaminated soil in accordance with 20.5.120.2018 and 20.5.120.2026 NMAC, unless approved by the department to remove and treat contaminated soil in accordance with this section.

(1) The department may approve interim removal of contaminated soil when such action is determined to be practical and necessary to protect public health, safety and welfare or the environment.

(2) Under this section, owners and operators shall excavate, treat and dispose of contaminated soil using methods approved by the department, in compliance with local laws and regulations, and under a timeline approved by the department or the timeline in Subsection E of 20.5.120.2000 NMAC.

(3) The department shall approve the vertical and horizontal extent of soil to be excavated.

B. When treating or temporarily storing soil on site, owners and operators shall:

(1) for treatment on site, spread soil in a six-inch layer over an impervious liner or other surface approved by the department to prevent infiltration to groundwater and place the layer of soil on level ground and berm to prevent runoff from contaminating other soil or surface water;

(2) for temporary storage, place the soil in a secure, bermed area on an impervious liner or surface or in a secured and properly labeled container, as approved by the department; and

(3) handle soil in a manner that does not contaminate groundwater, surface water or other uncontaminated soil or does not create or cause a public nuisance or threat to human health, safety and welfare or the environment.

C. When contaminated soil is taken off site, owners and operators shall provide the department with the following information within 14 days of removal of the soil from the site:

(1) written documentation of the type and concentration of contaminants, volume and weight of soil, method of treatment, date transported, and location of the site of disposal or treatment;

(2) a signed, written statement by the owner of the treatment or disposal site describing the location of the site and expressly accepting the contaminated soil; and

(3) if contaminated soil is taken to a permitted solid or hazardous waste facility, a manifest signed by the generator, transporter and the owner or operator of the solid waste facility.

D. Remediation shall be considered complete when the requirements in 20.5.120.2026 NMAC are met.

E. In accordance with a timeline approved by the department or the timeline set forth in Subsection E of 20.5.120.2000 NMAC, owners and operators shall submit to the department a report describing the removal and treatment of contaminated soil.

(1) The report shall describe the soil removal action and its effectiveness, including volumes and weight removed.

(2) Owners and operators shall submit the report within 30 days of the soil removal action.

[20.5.120.2006 NMAC - N, 07/24/2018]

20.5.120.2007 MINIMUM SITE ASSESSMENT, PRELIMINARY AND OTHER REQUIRED INVESTIGATIONS:

A. A preliminary investigation is not required when owners and operators can demonstrate that the contamination has not reached groundwater and one of the following two conditions apply:

(1) the release is remediated in accordance with this part within 72 hours of discovery or confirmation; or

(2) the release is permanently contained within the excavation area.

B. If the contamination extends beyond the boundaries of the property where the release originated, owners and operators shall conduct a secondary investigation in accordance with 20.5.120.2010 NMAC.

[20.5.120.2007 NMAC - N, 07/24/2018]

20.5.120.2008 MINIMUM SITE ASSESSMENT, PRELIMINARY INVESTIGATION - REQUIREMENTS:

Owners and operators shall conduct a preliminary investigation in accordance with this Subsection and under a timeline approved by the department or the timeline set forth in Subsection E of 20.5.120.2000 NMAC. The preliminary investigation shall determine the following, unless otherwise approved by the department.

A. If not previously identified and reported under 20.5.120.2003 NMAC, the preliminary investigation shall determine the regulated substance released or suspected of being released at the site, the media of concern, current and potential receptors, current and anticipated use of property, complete and incomplete exposure pathways, and routes of exposure.

B. The preliminary investigation shall also determine the horizontal and vertical extent and magnitude of soil contamination.

(1) Owners and operators shall conduct a soil boring survey by advancing a continuously cored soil boring at each area of release where soil contamination is most likely to be encountered unless otherwise directed by the department. The initial incident report and a soil vapor survey may be used in locating these areas. Owners and operators shall advance at least one of the borings into the groundwater saturated zone or, with approval from the department, to a depth at which measured levels of contaminants in soil are no longer detectable by laboratory analysis, and vapor concentrations, as determined with a field instrument, are less than 100 whole instrument units.

(2) Owners and operators shall advance at least four additional soil borings to characterize the release within property boundaries. Borings shall be completed to the depth at which contaminants in soil are no longer detectable by laboratory analysis, and vapor concentrations, as determined with a field instrument, are less than 100 whole instruments units. If the soil borings indicate that contaminated soil extends beyond the boundary of the property on which the storage tank system is located, owners and operators shall advance soil borings sufficient to characterize the extent and magnitude of contamination within site boundaries.

(3) The preliminary investigation shall assess, at five-foot intervals, field estimates of concentrations of contaminants of concern in the soil borings and select and prepare samples for laboratory analysis.

(4) Owners and operators shall gather field data for soil classification, determining and recording color, grain size, texture, description of lithification, plasticity and clay content.

(5) The preliminary investigation shall include derived values for soil bulk density (g/cc), soil moisture content (percent by mass), and effective porosity, and fraction organic carbon content (percent by mass) using samples taken from an uncontaminated area of the vadose zone.

(6) The preliminary investigation shall delimit the horizontal and vertical extent of contaminant saturated soil as defined in 20.5.101.7 NMAC.

C. The preliminary investigation shall determine whether groundwater or surface water has been contaminated above applicable standards or whether a potential for groundwater or surface water contamination is present by performing the following:

(1) install at least three groundwater monitoring wells at locations where the results of the soil boring survey conducted pursuant to this section indicate that groundwater may be contaminated; owners and operators shall:

(a) locate monitoring wells so that groundwater gradient can be determined;

(b) install at least one monitoring well on site in the area of highest contamination as determined by the soil borings installed in conformance with the initial incident report and other relevant information;

(c) install one of the monitoring wells in the estimated down-gradient direction from the area of highest contamination;

(d) construct wells in accordance with all applicable federal, state and local laws and regulations; and

(e) survey the wells using a New Mexico licensed professional surveyor, in decimal degrees of latitude and longitude in accordance with NAD 83;

(2) calculate the direction and gradient of groundwater flow;

(3) inspect all monitoring wells for the presence of NAPL using a method approved by the department; if NAPL is present in any well, measure the apparent thickness, delimit its horizontal extent, and initiate recovery procedures in accordance with 20.5.120.2005 NMAC; and

(4) sample each monitoring well that does not contain NAPL and analyze the sample for contaminants of concern to determine whether:

(a) immediate mitigation procedures are warranted; and

(b) other hazardous conditions exist as a result of the release if not previously identified in accordance with 20.5.120.2002 NMAC by:

(i) identifying the location and depth of underground utilities and other subsurface structures on or adjacent to the site not identified earlier in accordance with Subsection E of 20.5.120.2002 NMAC;

(ii) checking for the presence of vapors in accordance with 20.5.120.2002 and 20.5.120.2008 NMAC; and

D. Owners and operators shall identify all other hazards and potential threats to public health, safety and welfare and the environment which may exist as a result of the release to determine if:

(1) immediate mitigation procedures are warranted; and

(2) other hazardous conditions exist as a result of the release if not previously identified in accordance with 20.5.120.2003 NMAC by;

(a) identifying the location and depth of underground utilities and other subsurface structures on or adjacent to the site not identified earlier in accordance with Subsection E of 20.5.120.2002 NMAC.

(b) checking for the presence of vapors in accordance with 20.5.120.2002 and 20.5.120.2008 NMAC.

[20.5.120.2008 NMAC - N, 07/24/2018]

20.5.120.2009 MINIMUM SITE ASSESSMENT, PRELIMINARY INVESTIGATION REPORT:

A. Owners and operators shall submit paper and electronic copies of a written report of the preliminary investigation and other requirements of the minimum site assessment as defined in 20.5.101.7 NMAC in accordance with a timeline approved by the department or the timeline set forth in Subsection E of 20.5.120.2000 NMAC. The report shall include the information gathered under 20.5.120.2001, 20.5.120.2002, 20.5.120.2003 and 20.5.120.2007 NMAC and shall conform to the requirements of this section and 20.5.120.2008 NMAC.

B. Owners and operators shall attach a statement signed by an authorized representative of the qualified firm preparing the report for the owner or operator attesting to the veracity of the information submitted in the report and attached documents.

C. The minimum site assessment report shall at a minimum, include all pertinent data collected during the minimum site assessment investigation, interpretation of that data using cross sections, contoured maps that depict the magnitude and extent of all contaminated media, identification of any threatened receptors, recommendations for additional work and justification for the recommended work.

D. The department shall review the report and notify owners and operators of any inadequacies in the report within 30 days of receipt. Owners and operators shall, in accordance with a timeline approved by the department, correct the report and resubmit it to the department for review and written approval. If the revised report does not conform to the minimum site assessment, preliminary investigation requirements in this section and 20.5.120.2008 NMAC, the department shall reject the report and owners and operators shall be determined not to have conducted a minimum site assessment for the purposes of Subparagraph (c) of Paragraph (1) of Subsection B of Section 74-6B-8 NMSA 1978. The department's failure to review or to comment on this report shall not relieve owners and operators of their responsibilities under this part or otherwise under the law.

E. Owners and operators shall comply with the requirements of any local government which has designated a wellhead/source water protection area that includes the area of the release.

F. Owners and operators shall provide notice that includes the contaminants identified, as well as the horizontal and vertical extent of those contaminants, to all owners of property located within the extent of contamination.

[20.5.120.2009 NMAC - N, 07/24/2018]

20.5.120.2010 SECONDARY INVESTIGATION:

A. Owners and operators shall perform a secondary investigation in accordance with a timeline approved by the department or the timeline set forth in Subsection E of 20.5.120.2000 NMAC when the department makes at least one of the following determinations about the site:

- (1) the extent and magnitude of contamination in all media has not been delimited by the preliminary investigation; or
- (2) the release threatens public health, safety and welfare or the environment.

B. The secondary investigation shall determine the following:

- (1) the horizontal and vertical extent and magnitude of soil contamination both on and off site;
- (2) the horizontal extent and magnitude of dissolved phase groundwater contamination both on and off site;
- (3) the vertical extent and magnitude of dissolved phase groundwater contamination, when site conditions warrant;
- (4) characteristics, aerial extent, estimated volume and apparent thickness of NAPL in wells;
- (5) the elevation of groundwater and surface water and the gradient, rate and direction of groundwater and surface water flow;
- (6) the rate and direction of contaminant migration;
- (7) the hydrologic properties of the contaminated portion of the aquifer including hydraulic conductivity, transmissivity and storativity; the department may require field verification of estimates made from literature;
- (8) whether the aquifer is perched;
- (9) whether the aquifer is confined or unconfined; and

(10) any other technical information requested by the department which is reasonably necessary to meet the requirements of this part.

[20.5.120.2010 NMAC - N, 07/24/2018]

20.5.120.2011 SECONDARY INVESTIGATION REPORT:

A. Owners and operators shall submit paper and electronic copies of a written report of the secondary investigation to the department in accordance with a timeline approved by the department or the timeline in Subsection E of 20.5.120.2000 NMAC. The report shall include all information gathered under 20.5.120.2010 NMAC and shall conform to the requirements of this part.

B. Owners and operators shall attach a statement signed by an authorized representative of the qualified firm preparing the report for the owner or operator attesting to the veracity of the information submitted in the report and attached documents.

C. The secondary investigation report shall, at a minimum, include all pertinent data collected during the secondary investigation, interpretation of that data using cross sections, contoured maps that depict the magnitude and extent of all contaminated media, identification of any threatened receptors, recommendations for additional work and justification for the recommended work.

D. The department shall review the report and notify owners and operators of any inadequacies in the report within 30 days of receipt. Owners and operators shall, in accordance with a timeline approved by the department, correct the report and resubmit it to the department for review and written approval. If the revised report does not meet the requirements of 20.5.120.2010 NMAC, the owner and operator will be in violation of this part until the inadequacies are corrected. The department's failure to review or to comment on the secondary investigation report shall not relieve owners and operators of their responsibilities under this part or otherwise under the law.

E. Owners and operators shall provide notice that includes the contaminants identified, as well as horizontal and vertical extent of those contaminants, to all owners of property located within the extent of contamination who were not previously notified in accordance with 20.5.120.2009 NMAC.

[20.5.120.2011 NMAC - N, 07/24/2018]

20.5.120.2012 MONITORED NATURAL ATTENUATION:

A. If approved by the department, owners and operators shall submit a plan for remediation by monitored natural attenuation to the department if any of the following conditions have been identified at the site:

(1) concentrations of contaminants of concern exceed target concentrations in soil or WQCC or EIB standards in groundwater or surface water; and

(2) other conditions exist as a result of the release which threaten public health, safety and welfare or the environment, as determined by the department.

B. Owners and operators shall submit the monitored natural attenuation plan in accordance with this section and 20.5.120.2013 NMAC and in accordance with a timeline approved by the department or the timeline set forth in Subsection E of 20.5.120.2000 NMAC.

C. The intent of the monitored natural attenuation plan is to provide a written description of the methodology proposed and demonstrate how the plan will achieve target concentrations in a manner that is practicable, cost effective, and protective of public health, safety and welfare and the environment. The content of the monitored natural attenuation plan, at a minimum and as appropriate, shall include:

(1) a site plan drawn to scale of no less than one inch equals 40 feet, showing all existing buildings, structures, paved areas, utilities, buried utility trenches, former and existing storage tanks and ancillary equipment, other sources of contamination, extent and magnitude of contamination, and existing and proposed monitoring wells;

(2) cross sections showing the source contaminant mass in relation to the groundwater contamination;

(3) a topographic map of appropriate scale showing the site in relation to existing and reasonably foreseeable future receptors;

(4) concentration contour maps depicting the extent and magnitude of the contaminants of concern and the designated monitoring wells in relation to the site;

(5) a schematic drawing depicting the construction details including lithology and screen intervals for the designated monitoring wells;

(6) justification for selecting the designated monitoring wells;

(7) recommended approach to monitoring including an implementation and monitoring schedule, the analytical methods, and the justification for the recommendation;

(8) an estimation of the time necessary for achieving target concentrations, and a demonstration through calculations or other appropriate means which supports this schedule;

(9) a contingency plan in case of a change in site conditions that threatens public health, safety and welfare or the environment;

(10) public notice in conformance with the following requirements:

(a) owners and operators shall publish a legal notice of the submission or planned submission of the monitored natural attenuation plan at least twice in a paper of general circulation in the county in which soil or water has been contaminated by the release; the first notice shall appear within one week of, but not later than, the day of submission of the monitored natural attenuation plan to the department; the second publication of this notice shall occur no later than seven days after the date the monitored natural attenuation plan is submitted to the department, and owners and operators shall submit two certified affidavits of publication from the newspaper to the department within 21 days after the date the monitored natural attenuation plan is submitted;

(b) the notice shall contain the information specified in this section including the following:

(i) a statement that a monitored natural attenuation plan has been submitted to the department proposing actions to monitor natural attenuation of a release of hazardous substances;

(ii) the name and physical address of the site at which the release occurred and the names and physical addresses of properties where any part of contaminant plume is located, using adequate identification of the properties, including street addresses if applicable;

(iii) a statement that a copy of the monitored natural attenuation plan and all data and modeling related to the monitored natural attenuation plan, if applicable, can be viewed at the department's main office and at the department's field office for the area in which the release occurred; and

(iv) a statement that public comments on the plan must be delivered within 21 days of the publication of the second notice, to the owner or operator's assigned project manager at the petroleum storage tank bureau, New Mexico environment department, or a district office if approved by the department, and to the secretary of the environment department;

(c) within seven days of the date a monitored natural attenuation plan is submitted to the department, owners and operators shall also mail by certified mail a copy of the legal notice to adjacent property owners;

(d) owners and operators shall post a notice of the submission of the monitored natural attenuation plan at the release site within seven days of the submission of the monitored natural attenuation plan; the notice shall contain the information specified in this Subsection and shall be at least eight and on-half inches by 11 inches in size and prominently displayed in a location where it is likely to be seen by members of the public for a continuous period until the monitored natural attenuation

plan is approved and implemented; public comments must be received by the department within 21 days of the date of the second publication of the public notice; and

(11) other requirements as directed by the department.

[20.5.120.2012 NMAC - N, 07/24/2018]

[The address of the department's Petroleum Storage Tank Bureau, Remediation Section is: 2905 Rodeo Park Drive East, Building 1, Santa Fe, New Mexico 87505.]

20.5.120.2013 REVIEW AND APPROVAL OF MONITORED NATURAL ATTENUATION PLAN:

A. After the public comment period has ended, the department shall review the plan and shall approve the plan or notify the owner and operator in writing of the deficiencies of the plan. If the secretary determines that a decision on the monitored natural attenuation plan must be postponed due to significant comments from the public, the department must notify owners and operators of such a postponement, and may extend its review period for a period not to exceed 60 days unless otherwise provided in Subsection D of this section. All deadlines calculated from the end of the review period will be adjusted to reflect any extension.

B. The department may approve a monitored natural attenuation plan and impose reasonable conditions.

C. If the department determines that the monitored natural attenuation plan is inadequate, owners and operators shall modify the plan to correct the deficiencies specified by the department and re-submit it within the time period specified by the department.

D. The department may provide notice of the submission of the monitored natural attenuation plan to persons other than the owner and operator and provide for public participation in the review process as the department deems appropriate or when there is significant public interest. In the event an informal public meeting, public hearing or other form of public participation is conducted, the department may postpone its decision on the monitored natural attenuation plan until after a public hearing or meeting is held and a determination is made. Any public hearing or meeting that is held due to significant public interest shall be held within 60 days of determining there is significant public interest.

[20.5.120.2013 NMAC - N, 07/24/2018]

20.5.120.2014 MONITORED NATURAL ATTENUATION PLAN IMPLEMENTATION:

A. Owners and operators shall implement the monitored natural attenuation plan after department approval in accordance with a timeline approved by the department or the timeline set forth in Subsection E of 20.5.120.2000 NMAC.

B. Owners and operators shall monitor the contamination until the department determines that the natural attenuation is complete pursuant to this part, or unless otherwise approved by the department.

[20.5.120.2014 NMAC - N, 07/24/2018]

20.5.120.2015 REPORTS ON THE MONITORED NATURAL ATTENUATION:

A. Owners and operators shall submit paper and electronic copies of written reports to the department on the progress of the monitored natural attenuation. Owners and operators shall submit the reports annually unless a different reporting period is approved by the department and shall document all work performed during the preceding interval and shall include at a minimum the following information, as appropriate:

(1) a site plan drawn to scale of no less than one inch equals 40 feet, showing all existing buildings, structures, paved areas, utilities, buried utility trenches, former and existing storage tanks and ancillary equipment, other sources of contamination, extent and magnitude of contamination, and existing and proposed monitoring wells;

(2) a topographic map of appropriate scale showing the site in relation to existing and reasonably foreseeable future receptors;

(3) concentration contour maps depicting the extent and magnitude of the contaminants of concern and the designated monitoring wells in relation to the site;

(4) tabulation of the current and historical results of all water quality analyses and water elevation data;

(5) graphs of appropriate scale of the current and historical water quality analyses and water elevation data versus time;

(6) data evaluation and interpretation, and recommendations; and

(7) other information required by the department.

B. Owners and operators shall submit the report within 30 days of the end of the reporting period or as otherwise approved by the department.

[20.5.120.2015 NMAC - N, 07/24/2018]

20.5.120.2016 EVALUATION OF MONITORED NATURAL ATTENUATION PLAN:

A. Owners and operators shall evaluate the effectiveness of the monitored natural attenuation plan at the end of each year of monitoring and submit the evaluation to the department for review unless otherwise approved by the department.

B. When the department determines that the plan is not effectively mitigating contamination according to the identified risks to public health, safety and welfare or the environment, the owner or operator shall propose a change in the existing monitored natural attenuation plan within 30 days of the department's determination of ineffectiveness, or propose an alternative approach to remediation under 20.5.120.2019 NMAC. Within 30 days of the department's approval, the owner or operator shall implement the approved changes.

C. After implementation of any modification, owners and operators shall repeat annually the evaluation process described in this section.

[20.5.120.2016 NMAC - N, 07/24/2018]

20.5.120.2017 MODIFICATION OF MONITORED NATURAL ATTENUATION PLAN:

A. Owners and operators may petition the department to approve a modification of the monitored natural attenuation plan for good cause.

B. The department may approve a modification of the monitored natural attenuation plan only if such modification provides adequate protection of public health, safety and welfare and the environment and the owner or operator complies with the public notice requirements of 20.5.120.2012 NMAC.

[20.5.120.2017 NMAC - N, 07/24/2018]

20.5.120.2018 COMPLETION OF MONITORED NATURAL ATTENUATION:

A. Natural attenuation shall be considered complete when all of the following criteria are met:

(1) no layer of NAPL greater than one-eighth inch in thickness is present on the water table or in any of the wells;

(2) all applicable standards for soil and in groundwater and surface water have been achieved; the applicable standards shall be achieved concurrently at all compliance wells as approved by the department; and

(3) any other conditions which threatened public health, safety and welfare or the environment have been abated.

B. If any of the conditions of Paragraphs (1) through (3) of Subsection A of this section are not met, the department may require the owner or operator to perform additional remediation.

C. Termination of monitored natural attenuation in accordance with this section does not relieve the owner and operator of any other liability or responsibility they may have under this part or any other federal, state or local law or regulation.

D. Following department approval, and with 30 days' notice unless otherwise approved by the department, owners and operators shall properly abandon wells that are no longer needed for monitoring, in accordance with federal, state and local laws and regulations.

[20.5.120.2018 NMAC - N, 07/24/2018]

20.5.120.2019 CONCEPTUAL REMEDIATION PLAN:

A. If approved by the department, owners and operators shall submit a conceptual remediation plan to the department if any of the following conditions have been identified at the site:

(1) a thickness of greater than one-eighth inch of NAPL is present in the water, including in any excavation pit, or in any well;

(2) contaminant saturated soil is present;

(3) concentrations of contaminants of concern exceed target concentrations in soil or WQCC or EIB standards in groundwater or surface water; or

(4) other conditions exist as a result of the release which threaten public health, safety and welfare or the environment, as determined by the department.

B. All remediation plans shall include but are not limited to methods to mitigate, remove or otherwise remediate the contaminant source areas.

C. Owners and operators shall submit the conceptual remediation plan in accordance with this section and with a timeline approved by the department or the timeline set forth in Subsection E of 20.5.120.2000 NMAC.

(1) The conceptual remediation plan shall provide a written description of all of the methodologies proposed and discuss how the plan will achieve target concentrations and other goals of remedial action in a manner that is practicable, cost effective, and protective of public health, safety and welfare and the environment.

Owners and operators shall obtain department approval for the conceptual remediation plan before developing the final remediation plan.

(2) The conceptual remediation plan, at a minimum and as appropriate, shall include:

(a) a concise description of site conditions, including hydrogeology, contaminant characteristics and plume dynamics;

(b) the recommended approach to remediation and justification for the recommendation;

(c) a clear description of the goals of remediation and the target concentrations to be met in each medium;

(d) a narrative description of the proposed methodologies including a preliminary cost comparison and time lines for achieving goals of remediation;

(e) a cost estimate of implementation including installation, operation and maintenance, and monitoring;

(f) a schematic diagram of the proposed remediation system or treatment area and a narrative description of its operation;

(g) a plan view, to scale, of the site showing locations of the proposed equipment or excavation boundaries in relation to the site's physical features and contaminant plumes;

(h) a description of how the approach will achieve target concentrations and other goals of remediation; and

(i) a description of additional data required to support the conceptual remediation plan and design of the final plan and how it will be collected.

[20.5.120.2019 NMAC - N, 07/24/2018]

20.5.120.2020 FINAL REMEDIATION PLAN:

A. Following department approval of the conceptual remediation plan, owners and operators shall develop a final remediation plan in accordance with this section and shall submit three copies of the final remediation plan to the department in accordance with a timeline approved by the department or the timeline set forth in Subsection E of 20.5.120.2000 NMAC.

B. The design and engineering of any final remediation plan that includes mechanical or electrical equipment, engineered fill, pinning, shoring or slope stability

analysis shall be the responsibility of a professional engineer as defined in 20.5.101.7 NMAC. A professional engineer shall sign and seal all plans and drawings required pursuant to this section, unless otherwise approved by the department.

C. In order to eliminate the potential to emit regulated substances to the environment, all engineered remediation systems shall be designed, constructed and operated such that malfunction or failure of any integral component results in automatic shutdown of the entire system. Integral components include but are not limited to pumps, blowers, oil-water separators, oxidizer systems, air strippers, filtration systems and computers.

D. All final remediation plans shall, at a minimum, include all of the following:

(1) goals of remediation and target concentrations to be achieved in each medium;

(2) a site plan drawn to scale of no less than one inch equals 40 feet, showing all existing buildings, structures, paved areas, utilities, buried utility trenches, former and existing USTs, other sources of contamination, extent and magnitude of contamination, and existing and proposed monitoring wells;

(3) a hydrogeologic cross section showing contaminant mass in relation to the remediation system and a topographic map of appropriate scale showing the site in relation to existing and reasonably foreseeable future receptors;

(4) an implementation schedule;

(5) engineered plans and specifications in accordance with Subsection E of this section;

(6) a schedule for remediation of the source areas, for protection of receptors, and for achieving target concentrations, and a demonstration through calculations or other appropriate means which supports this schedule;

(7) a design and schedule for system optimization that meets the requirements of 20.5.120.2024 NMAC;

(8) a contingency plan in case of a change in site conditions that threatens public health, safety and welfare or the environment;

(9) copies of all permits, permit applications, and property access agreements required to initiate remediation, including, if necessary, permits required by the state engineer, permits for discharge to groundwater or a waste water treatment plant, permits for air emissions or a surface water national pollution discharge elimination system (NPDES) permit;

(10) public notice in conformance with the following requirements:

(a) the owner or operator shall publish a legal notice of the submission or planned submission of the final remediation plan at least twice in a paper of general circulation in the county in which soil or water has been contaminated by the release; the first notice shall appear within one week of, but not later than, the day of submission of the final remediation plan to the department; the second publication of this notice shall occur no later than seven days after the date the remediation plan is submitted to the department, and owners and operators shall submit two certified affidavits of publication from the newspaper to the department within 21 days after the date the final remediation plan is submitted;

(b) the notice shall contain the information specified in this section including the following:

(i) a statement that a remediation plan has been submitted to the department proposing actions to remediate a release of hazardous substances;

(ii) the name and physical address of the site at which the release occurred and the names and physical addresses of properties where any part of the remediation system will be located, using adequate identification of the properties, including street addresses if applicable;

(iii) a statement that a copy of the remediation plan and all data and modeling related to the remediation plan, if applicable, can be viewed at the department's main office and at the department's field office for the area in which the release occurred; and

(iv) a statement that public comments on the plan must be delivered, within 21 days of the publication of the second notice, to the owner or operator's assigned project manager at the petroleum storage tank bureau, New Mexico environment department, or a district office if approved by the department, and to the secretary of the environment department;

(c) within seven days of the date a remediation plan is submitted to the department, owners and operators shall also mail by certified mail a copy of the legal notice to adjacent property owners;

(d) owners and operators shall post a notice of the submission of the remediation plan at the release site within seven days of the submission of the remediation plan; the notice shall contain the information specified in this Subsection and shall be at least eight and one-half inches by 11 inches in size and prominently displayed in a location where it is likely to be seen by members of the public for a continuous period until the remediation plan is approved and implemented; public comments must be received by the department within 21 days of the date of the second publication of the public notice;

(11) for sites where contaminated media are being removed, a description of the ultimate disposal site of contaminated media, location of excavation and trenching, and method of limiting access by pedestrian and vehicular traffic; and

(12) other requirements as directed by the department.

E. In addition to the requirements of Subsection D of this section, all final remediation plans shall include:

(1) for engineered systems:

(a) unless otherwise approved by the department, a complete and definitive engineering design for a mechanical, electrical, or constructed system, including drawings, plans, diagrams and specifications which are signed and sealed by a professional engineer;

(b) process and instrumentation diagrams;

(c) mechanical arrangement plans and elevations, drawn to scale, showing proposed wells, manifolds, piping details, instrumentation and sampling ports;

(d) details of vapor or fluid extraction or injection wells, as appropriate, including screen length and placement in relation to ground surface, normal and low water table elevations and geologic strata, screen slot size, depths and specifications of the filter pack and seal, and drilling method;

(e) equipment and parts list and specifications including a spare parts list, performance requirements, maintenance requirements and schedule;

(f) electric power requirements including a one-line diagram and schematics;

(g) operation and maintenance commitments and schedules for all facets of the remediation system; and

(h) all other plans, diagrams and specifications that are necessary to properly construct and operate the remediation system in accordance with the remediation plan including but not limited to requirements for:

(i) trenching and protection from traffic;

(ii) concrete repair and replacement;

(iii) restoration of property; and

(iv) location and protection of underground utilities.

(2) for excavation and disposal plans:

- (a)** plan view of proposed excavation relative to contaminant plume;
- (b)** cross-sections of proposed excavation depicting overburden, contaminated material to be removed and backfill;
- (c)** volume calculations and slope stability analysis;
- (d)** description of excavation and backfill procedure to be performed in conformance with OSHA and ASTM standards and regulations;
- (e)** traffic control plan;
- (f)** description of post-excavation confirmation sampling;
- (g)** proposed final grade plan;
- (h)** post-excavation grade survey; and
- (i)** all other plans, diagrams and specifications that are necessary including but not limited to requirements for:
 - (i)** trenching and protection from traffic;
 - (ii)** concrete repair and replacement;
 - (iii)** restoration of property; and
 - (iv)** location and protection of underground utilities.

[20.5.120.2020 NMAC - N, 07/24/2018]

[The address of the department's Petroleum Storage Tank Bureau, Remediation Section is: 2905 Rodeo Park Drive East, Building 1, Santa Fe, New Mexico 87505.]

20.5.120.2021 REVIEW AND APPROVAL OF FINAL REMEDIATION PLAN:

A. Within 30 days of receipt of the final remediation plan and after the public comment period has ended, the department shall review the plan and shall either approve the plan or notify the owner and operator in writing of the deficiencies of the plan. If the secretary determines that a decision on the remediation plan must be postponed due to significant comments from the public, the department must notify the owner and operator of such a postponement within 30 days, and may extend its review period for a period not to exceed 60 days unless otherwise provided in Subsection D of

this section. All deadlines calculated from the end of the review period will be adjusted to reflect any extension.

B. The department may approve a final remediation plan and impose reasonable conditions.

C. If the department determines that the final remediation plan is inadequate, the owner or operator shall modify the plan to correct the deficiencies specified by the department and re-submit it within the time period specified by the department.

D. The department may provide notice of the submission of the remediation plan to persons other than the owner and operator and provide for public participation in the review process as the department deems appropriate or when there is significant public interest. In the event an informal public meeting, public hearing or other form of public participation is conducted, the department may postpone its decision on the final remediation plan until after a public hearing or meeting is held. Any public hearing or meeting that is held due to significant public interest shall be held within 60 days of determining that there is significant public interest.

[20.5.120.2021 NMAC - N, 07/24/2018]

20.5.120.2022 IMPLEMENTATION OF FINAL REMEDIATION PLAN:

A. Owners and operators shall implement the final remediation plan after department approval in accordance with a timeline approved by the department or the timeline set forth in Subsection E of 20.5.120.2000 NMAC. Owners and operators shall employ a professional engineer to ensure conformance with the final remediation plan, including excavation, installation, commissioning and operation of the system.

B. When the remediation plan includes mechanical or electrical equipment, engineered fill, pinning, shoring or slope stability analysis:

(1) a professional engineer shall supervise conformance with the final remediation plan including installation, commissioning and operation of the system;

(2) owners and operators shall operate the remediation system continuously until the remediation is terminated pursuant to this part, unless otherwise approved by the department; and

(3) owners and operators shall report to the department all interruptions of the operation of the remediation system greater than 72 hours.

C. Owners and operators shall obtain written approval from the department prior to implementing any change to the department-approved engineering design.

D. Following implementation of the final remediation plan, the owner or operator shall submit an "as-built" report signed and sealed by the project professional engineer including:

(1) any deviations from the drawings and specifications included in the final remediation plan;

(2) a tabulation of pertinent data including but not limited to flow rates, pressures, temperatures, contaminant concentrations and groundwater elevations at start-up, and boring logs and well completion diagrams; and

(3) information and documentation purchased major remediation equipment including, but not limited to, serial number, model and manufacturer, description, warranty information, operating manuals, maintenance requirements and purchase price.

[20.5.120.2022 NMAC - N, 07/24/2018]

20.5.120.2023 QUARTERLY REPORTS ON THE REMEDIATION:

A. Owners and operators shall submit written reports to the department on the operation of the remediation system. Owners and operators shall submit the reports quarterly unless a different reporting period is approved by the department, shall document all work performed during the preceding interval, and shall include the following information, as appropriate:

(1) tabulation of the current and historical results of all water quality analyses and water elevation data;

(2) evaluation of the performance and efficiency of each aspect of the remediation:

(a) the evaluation and all adjustments to system operation shall be performed, as appropriate, under the direct, responsible, supervisory control of an authorized representative of the qualified and a professional engineer; and

(b) owners and operators shall submit evidence that the performance of the remediation system meets the operating standards outlined in the final remediation plan;

(3) verification based on calculations that the schedule is being met for source removal, protection of actual and potential receptors, achievement of target concentrations, quarterly and cumulative contaminant mass reduction totals to date in pounds and gallons of contaminants;

(4) records of system operation, including but not limited to, periods of shut-down and equipment malfunctions; the maintenance procedures performed on the remediation system during the preceding quarter, including the names of the individuals performing the maintenance; and an operation and maintenance schedule for the next quarter;

(5) NAPL recovery, both cumulative and quarterly, and details of its disposal;

(6) effluent vapor concentrations over time;

(7) evaluation and recommendations for improving the performance of the system to achieve the goals of remediation; and

(8) other information required by the department.

B. Owners and operators shall submit the report within 30 days of the end of the reporting period or as otherwise approved by the department.

[20.5.120.2023 NMAC - N, 07/24/2018]

20.5.120.2024 ANNUAL EVALUATION OF REMEDIATION:

A. Owners and operators shall evaluate the effectiveness of the approach to remediation at the end of each year of operation and submit the evaluation to the department for review.

B. When the department determines that the approach to remediation is not effectively remediating contamination according to the identified risks to public health, safety and welfare or the environment, owners and operators shall propose an alternative approach or change in the existing remediation plan within 30 days of the department's determination of ineffectiveness. Within 30 days of the department's approval, owners and operators shall implement the approved changes.

C. After implementation of any modification, owners and operators shall repeat annually the evaluation process described in this section until monitoring to verify completion of remediation in accordance with 20.5.120.2026 NMAC commences.

[20.5.120.2024 NMAC - N, 07/24/2018]

20.5.120.2025 MODIFICATION OF FINAL REMEDIATION PLAN:

A. Owners and operators may petition the department to approve a modification of the final remediation plan for good cause.

B. The department may modify a final remediation plan only if it complies with applicable regulations, provides adequate protection of public health, safety and welfare

and the environment, and the owners and operators comply with the public notice requirements of 20.5.120.2020 NMAC.

[20.5.120.2025 NMAC - N, 07/24/2018]

20.5.120.2026 COMPLETION OF REMEDIATION:

A. The department shall consider remediation complete when all of the following criteria are met:

(1) no layer of NAPL greater than one-eighth inch in thickness is present on the water table or in any of the wells;

(2) all applicable standards for soil, groundwater and surface water have been achieved;

(a) all electrical and mechanical components of the remediation system shall remain shut down during the monitoring period described in this subsection;

(b) the department shall approve the designation of certain monitoring wells as compliance wells; the applicable standards shall be achieved concurrently at all compliance wells for at least eight consecutive quarters unless otherwise as approved by the department; and

(c) for verification of remediation of soil to target concentrations, owners and operators shall install at least four soil borings, at least three of which are distributed throughout the previously most contaminated portion of the vadose zone, as approved by the department; and

(3) any other conditions which threatened public health, safety and welfare or the environment have been remediated.

B. If any of the conditions of Paragraphs (1) through (3) of Subsection A of this section are not met, the department may require the owner or operator to perform additional remediation.

C. Notwithstanding the conditions in Subsection A of this section, owners and operators may continue to operate the mechanical and electrical components of the remediation system when it is effectively reducing contaminant concentrations, as determined and approved by the department.

D. Termination of remediation in accordance with this section does not relieve owners and operators of any other liability or responsibility they may have under this part or any other federal, state or local law or regulation.

E. Following department approval, owners and operators shall decommission the electrical and mechanical components of the remediation system and properly abandon wells that are no longer needed for remediation or monitoring, in accordance with federal, state and local laws and regulations.

[20.5.120.2026 NMAC - N, 07/24/2018]

20.5.120.2027 NO FURTHER ACTION DETERMINATION:

A. A no further action determination is a technical determination issued by the department that documents that the owner or operator of a site has met all applicable remediation standards and that no contaminant will present a significant risk of harm to public health, safety and welfare and the environment.

B. Any owner or operator may request that the department evaluate a site for a no further action determination by submitting a written request to the department. The request shall include the following, if requested by the department:

(1) description of the site including a historical overview and generalized description of businesses, structures, vegetation, other prominent features, and location of the site;

(2) surveyed plat of the site, site map with legal description, or both;

(3) completed current environmental conditions table listing all areas of environmental concern on the site subject to remediation; the table shall include the following information about each area of environmental concern:

(a) remedial action taken, date, regulatory agency;

(b) residual contaminants of concern;

(c) clean-up status; and

(d) clean-up standards for contaminants of concern;

(4) chronology of events for each area investigated or remediated; and

(5) other relevant documents, as requested by the department.

C. Owners and operators shall receive approval of a determination for no further action status for the release when all of the following conditions are met:

(1) groundwater and surface water contamination related to the release is less than or equal to WQCC and EIB standards, and where there had been groundwater contamination related to the release, the applicable standards have been

achieved concurrently at all compliance wells for at least eight consecutive quarters unless otherwise approved by the department;

(2) soil contamination is less than or equal to applicable standards; and

(3) any other conditions which did threaten public health, safety and welfare or the environment have been adequately mitigated.

D. Owners and operators shall receive approval of a request for no further action determination for the release when subsurface water does not meet the definition of "subsurface water" in 20.6.2.7 NMAC or is unprotected pursuant to Subsection A of 20.6.2.3101 NMAC, if NAPL and contaminant saturated soil have been adequately remediated in accordance with this part and any other conditions which threatened public health, safety and welfare or the environment have been adequately mitigated.

E. Upon completion of an assessment by the department that a site qualifies for a no further action determination, the department shall issue a no further action determination letter.

F. Any of the following may result in a reversal of a no further action determination:

(1) new information becomes available or circumstances arise indicating that an unacceptable risk to public health, safety and welfare or the environment exists; or

(2) change in use or reasonable foreseeable future use of land or resources, including a change from less sensitive land use to more sensitive land use, such as from commercial or industrial to residential, and including the drilling of water supply wells in the vicinity of remaining contamination.

[20.5.120.2027 NMAC - N, 07/24/2018]

20.5.120.2028 REQUEST FOR EXTENSION OF TIME:

A. For good cause shown, the department may extend the time for complying with any deadline set forth in this part. The request for an extension of time shall specify the reason for the request, the actions taken to comply with the deadline and the period of time for which the extension is requested.

B. The department shall not grant an extension for more than 30 days at a time unless the department determines additional time is warranted. The department may place conditions on the extension.

C. Lack of diligence or failure of owners and operators to comply with this part shall be grounds for denying a request for an extension of time.

[20.5.120.2028 NMAC - N, 07/24/2018]

20.5.120.2029 RECORDKEEPING AND RETENTION:

A. Owners and operators of a hazardous waste UST system where a release has occurred shall retain records documenting compliance with all applicable requirements of 20.5.120 NMAC. If the owner and operator are separate persons, only one person is required to maintain the records required by the section, however both parties are liable in the event of non-compliance.

B. Records to be maintained shall include, but not be limited to:

- (1) 72-hour report;
- (2) 14-day report;
- (3) NAPL Assessment report;
- (4) interim removal of contaminated soil report;
- (5) minimum site assessment, preliminary investigation report;
- (6) secondary investigation report;
- (7) final remediation plan;
- (8) groundwater monitoring reports;
- (9) operation and Maintenance reports.

C. Records shall be maintained for a minimum period of 10 years following a no further action determination as set forth in 20.5.120.2027 NMAC.

[20.5.120.2029 NMAC - N, 07/24/2018]

20.5.120.2030 REPORTING:

A. Owners and operators shall provide to the department all reports as required in 20.5.120 NMAC in accordance with the timeline or deadlines as set forth in Subsection E of 20.5.120.2000 NMAC.

B. Owners and operators shall ensure all reports, plans and requests required in 20.5.120 NMAC contain at a minimum, in addition to the requirements set forth in 20.5.120.2002, 20.5.120.2003, 20.5.120.2005, 20.5.120.2006, 20.5.120.2009, 20.5.120.2011, 20.5.120.2012, 20.5.120.2015, 20.5.120.2019, 20.5.120.2020, 20.5.120.2023, 20.5.120.2024, 20.5.120.2029 and 20.5.120.2030 NMAC.

- (1) release name and address;

- (2) facility identification and release identification numbers;
- (3) workplan and deliverable identification numbers as applicable;
- (4) owner and operator name and address, and
- (5) date report was completed.

[20.5.120.2030 NMAC - N, 07/24/2018]

PART 121: CORRECTIVE ACTION FUND USE AND EXPENDITURES

20.5.121.1 ISSUING AGENCY:

New Mexico Environmental Improvement Board.

[20.5.121.1 NMAC - N, 07/24/2018]

20.5.121.2 SCOPE:

This part applies to owners and operators of storage tanks as provided in 20.5.101 NMAC and to the use of the corrective action fund. If the owner and the operator of a storage tank are separate persons, only one person is required to comply with the requirements of this part; however, both parties are liable in the event of noncompliance.

[20.5.121.2 NMAC - N, 07/24/2018]

20.5.121.3 STATUTORY AUTHORITY:

This part is promulgated pursuant to the provisions of the Ground Water Protection Act, sections 74-6B-1 through 74-6B-14 NMSA 1978, and the general provisions of the Environmental Improvement Act, sections 74-1-1 through 74-1-16 NMSA 1978.

[20.5.121.3 NMAC - N, 07/24/2018]

20.5.121.4 DURATION:

Permanent.

[20.5.121.4 NMAC - N, 07/24/2018]

20.5.121.5 EFFECTIVE DATE:

July 24, 2018, unless a later date is indicated in the bracketed history note at the end of a section.

[20.5.121.5 NMAC - N, 07/24/2018]

20.5.121.6 OBJECTIVE:

The purposes of this part are (1) to establish priorities for the use of the corrective action fund at sites contaminated by releases of regulated substances from storage tanks and (2) to specify procedures for administering the fund in conjunction with the procedures set forth in 20.5.123 NMAC, adopted by the New Mexico environment department.

[20.5.121.6 NMAC - N, 07/24/2018]

20.5.121.7 DEFINITIONS:

The definitions in 20.5.101 NMAC and the Ground Water Protection Act apply to this part. In the case of conflict, the definitions in the Ground Water Protection Act shall apply to this part.

[20.5.121.7 NMAC - N, 07/24/2018]

20.5.121.8-20.5.121.2099 [RESERVED]

20.5.121.2100 PERMISSIBLE FUND EXPENDITURES:

The department shall make expenditures from the fund that are necessary to take emergency corrective action, to investigate releases and undertake other corrective action in accordance with the priorities established in this part, to make payments to or on behalf of owners and operators as provided in 20.5.123 NMAC, to pay for the department's reasonable costs of administering the fund, to pay for the department's costs associated with the recovery of expenditures from the fund pursuant to section 74-6B-8 NMSA 1978, including related legal costs, and to pay the state's share of federal leaking underground storage tank trust fund cleanup costs as required by the federal Resource Conservation and Recovery Act. The department shall keep records of the expenditures made from the fund and shall make those records available to the interim legislative finance committee upon request.

[20.5.121.2100 NMAC - N, 07/24/2018]

20.5.121.2101 CORRECTIVE ACTION BY OWNERS AND OPERATORS:

Owners and operators shall take corrective action in accordance with 20.5.118 NMAC and 20.5.119 or 20.5.120 NMAC, and the department shall make payments to or on behalf of owners and operators in accordance with section 74-6B-13 NMSA 1978 and the provisions of 20.5.123 NMAC. The department shall designate a site where the owner or operator takes corrective action and applies to the fund for payment of corrective action costs as a responsible party-lead site.

[20.5.121.2101 NMAC - N, 07/24/2018]

20.5.121.2102 CORRECTIVE ACTION BY THE DEPARTMENT - INFORMATION REQUIRED:

A. When the department determines that the owners and operators are unknown, unable or unwilling to take corrective action as described in 20.5.121.2101 NMAC, or when the department determines that a single entity is necessary to lead the corrective action, the department may designate the site as a state-lead site and take corrective action using the fund.

B. To make a determination that the owner and operator are unknown, the department shall, as appropriate:

- (1) investigate site specifics;
- (2) ascertain the current status and past history of the tanks at the site and determine the compliance status of the tanks; and
- (3) review and document search results of all additional reasonably available records.

C. To make a determination that the owner and operator are unable to take corrective action, the department shall, as appropriate:

- (1) investigate site specifics;
- (2) ascertain the current status and past history of the tanks at the site and determine the compliance status of the tanks;
- (3) request and review the owner's and operator's documentation of mental or physical inability, including but not limited to physician statements and court orders;
- (4) request and review the owner's and operator's financial records for the past two years, including but not limited to federal tax returns, and evaluate the owner's and operator's ability to pay, based on anticipated costs of remediation; and
- (5) review and document search results of all additional reasonably available records.

D. To make a determination that the owner and operator are unwilling to take corrective action, the department shall, as appropriate:

- (1) investigate site specifics;

(2) ascertain the liable owner and operator and identify any other owner and operator that may be liable;

(3) review and document search results of all additional reasonably available records; and

(4) send a notice of violation, return receipt requested, to the appropriate owner and operator.

E. To make a determination that a single entity is necessary to lead the corrective action, or in the case of danger to human health and the environment, the department shall, as appropriate:

(1) investigate site specifics;

(2) ascertain the current status and past history of the tanks at the site and determine the compliance status of the tanks; and

(3) review and document search results of all additional reasonably available records.

[20.5.121.2102 NMAC - N, 07/24/2018]

20.5.121.2103 CORRECTIVE ACTION BY THE DEPARTMENT - OWNER AND OPERATOR NOTIFICATION:

A. Upon a determination that a site be designated a state-lead site, the department shall send a notice to the owner and operator, if known, with the division director's signature notifying the owner and operator that the site is being designated a state-lead site and that the department may initiate an action for recovery of its costs of corrective action from the owner and operator pursuant to Subsection C of this section.

B. When the department takes corrective action at sites as described in 20.5.121.2102 NMAC, it shall do so in accordance with the provisions of 20.5.121.2104 NMAC.

C. The department may recover the costs of corrective action taken under 20.5.121.2102 NMAC from the owner or operator, unless the owner or operator demonstrates compliance as required by section 74-6B-8 NMSA 1978 and the provisions of 20.5.123 NMAC.

D. Owners and operators at sites where the department has taken corrective action under this section shall assume responsibility for and control of the corrective action when required or permitted by the department. Any request by the owner and operator to change the designation of a site from a state-lead site to a responsible party-lead site shall be in writing, shall state the reasons why corrective action by the department is no

longer necessary, and shall include appropriate documentation to support the request. The department may request additional documentation from the owner and operator, shall respond to the request in writing and shall state the reasons for its decision.

[20.5.121.2103 NMAC - N, 07/24/2018]

20.5.121.2104 SITE PRIORITIZATION:

A. The department shall assign a rank to all sites contaminated by releases from storage tanks using the leaking storage tank (LST) ranking system, as defined in 20.5.101.7 NMAC, and shall classify sites as being first, second or third priority sites. A site's priority shall be based on a minimum site assessment, as defined in 20.5.101.7 NMAC, or other available information that documents an effect or potential effect of the release on public health, safety and welfare or the environment. The department may re-rank and reclassify as warranted, based on facts affecting public health, safety and welfare and the environment.

(1) A first priority site is a site where the release of a regulated substance from a storage tank system has created an actual or imminent hazard to public health, safety and welfare or the environment such that the following corrective action is required:

(a) water supply protection or replacement pursuant to Subsection C or D of 20.5.119.1902 and 20.5.120.2002 NMAC;

(b) mitigation of toxic or explosive or potentially toxic or explosive vapors pursuant to Subsection F of 20.5.119.1902 and 20.5.120.2002 NMAC; or

(c) other corrective action as required to protect public health, safety and welfare or the environment from hazards caused by the release pursuant to Subsection G of 20.5.119.1902 and 20.5.120.2002 NMAC.

(2) A second priority site is a site where the release of a regulated substance from a storage tank system has created a source of environmental contamination such that the following corrective action is required:

(a) containment and removal of non-aqueous phase liquid pursuant to 20.5.119.1905 and 20.5.120.2005 NMAC; or

(b) treatment of contaminant saturated soils pursuant to 20.5.119.1906 and 20.5.120.2006 NMAC.

(3) A third priority site is a site which is not first or second priority, containing contaminants that were released from the storage tank system and where corrective action is required by 20.5.119 or 20.5.120 NMAC.

B. When the department approves corrective action other than minimum site assessments, it shall approve corrective action at sites in order of rank and shall approve priority one sites first, priority two sites after priority one sites, and priority three sites after priority one and priority two sites, except that the department may approve emergency corrective action at any time.

[20.5.121.2104 NMAC - N, 07/24/2018]

20.5.121.2105 ORDER OF PAYMENTS IN CASE OF INSUFFICIENT FUNDS:

A. If, after the department has determined that the owner or operator is in substantial compliance, the department determines that the fund budget or the fund balance is insufficient to cover the amount requested for payment, the department shall promptly notify the owner or operator. Payment for eligible costs shall occur when sufficient amounts are available in the fund budget or the fund, subject to the provisions of this section.

B. If the fund budget or the fund balance is insufficient to pay all applications for payment under 20.5.123.2318 NMAC but the fund remains an approved financial responsibility mechanism under 20.5.117.1711 NMAC, the department shall pay applications for payment for approved corrective action in order of priority as established in accordance with this part from the funds available, so long as funds are available.

C. Applications for sites of equal score based on the priorities established in this part shall be paid in order of date of receipt of complete applications for payment. For applications for sites of equal score with the same date of receipt, the earliest date on which a corrective action was taken as evidenced by the date of the earliest invoice included in the application shall determine the order of payment.

D. When the fund budget or the fund balance is insufficient to pay all applications for payment under 20.5.123.2318 NMAC and the fund is no longer an approved financial responsibility mechanism, the department shall make payments according to priority rank as established in this part and in the following percentages, so long as funds are available:

(1) one hundred percent of all reasonable and necessary eligible costs incurred to complete a minimum site assessment in excess of the deductible;

(2) one hundred percent of all reasonable and necessary eligible costs incurred to conduct a secondary investigation in accordance with 20.5.119.1910 or 20.5.120.2010 NMAC;

(3) in the case of reasonable and necessary costs incurred to complete corrective action other than the minimum site assessment and secondary investigation, according to the following formulae:

(a) for owners or operators of two or fewer facilities used for retail gasoline sales and whose facilities have less than 40,000 gallons combined total of product dispensed monthly, averaged over the last two years of operation: first priority LST ranked sites: one hundred percent; second priority LST ranked sites: ninety-five percent; third priority LST ranked sites: ninety percent; or

(b) for sites owned or operated by other owners or operators: one hundred percent for first priority LST ranked sites. The percentage of payment for second and third priority LST ranked sites shall be based on the ending quarterly unobligated balance of the fund proportional to the amount of each application for payment received in that quarter for these sites. The quarters end on June 30, September 30, December 31 and March 31. The percentage of payment equals the unobligated fund balance on the last day of the quarter divided by the dollar amount of reasonable and necessary eligible costs of applications for payment received in the quarter, not to exceed one hundred percent. For purposes of this subparagraph, "unobligated balance" or "unobligated fund balance" means corrective action fund equity less all known or anticipated liabilities against the fund; and

(4) payment for remaining eligible costs shall be made pursuant to Subsection E of this section.

E. When the fund is reestablished as an approved financial responsibility mechanism, payment shall be made for the balance of the eligible costs previously submitted but not paid under provisions of this section. These payments shall be made in the order in which sites were ranked by the department, in accordance with this part, as funds become available.

F. The department's determinations under this section concerning the availability of funds shall be final and not subject to appeal.

[20.5.121.2105 NMAC - N, 07/24/2018]

20.5.121.2106 RESERVED MONEY:

A. The department shall establish a reserve of one-million dollars (\$1,000,000) in the fund for the costs of taking emergency corrective action. The department may make expenditures from this reserve during the fiscal year and replenish the reserve at the beginning of the next fiscal year.

B. Money that is reserved pursuant to Subsection A of this section may be expended by the department only for corrective action necessary when an emergency threat to public health, safety and welfare or the environment is determined by the department to exist.

[20.5.121.2106 NMAC - N, 07/24/2018]

PART 122: QUALIFICATION OF PERSONS PERFORMING CORRECTIVE ACTION

20.5.122.1 ISSUING AGENCY:

New Mexico Environmental Improvement Board.

[20.5.122.1 NMAC - N, 07/24/2018]

20.5.122.2 SCOPE:

This part applies to all persons performing corrective action on behalf of storage tank owners, operators or the state under 20.5 NMAC.

[20.5.122.2 NMAC - N, 07/24/2018]

20.5.122.3 STATUTORY AUTHORITY:

This part is promulgated pursuant to the provisions of the Ground Water Protection Act, Sections 74-6B-1 through 74-6B-14 NMSA 1978; the Hazardous Waste Act, Sections 74-4-1 through 74-4-14 NMSA 1978; and the general provisions of the Environmental Improvement Act, Sections 74-1-1 through 74-1-17 NMSA 1978.

[20.5.122.3 NMAC - N, 07/24/2018]

20.5.122.4 DURATION:

Permanent.

[20.5.122.4 NMAC - N, 07/24/2018]

20.5.122.5 EFFECTIVE DATE:

July 24, 2018, unless a later date is indicated in the bracketed history note at the end of a section.

[20.5.122.5 NMAC - N, 07/24/2018]

20.5.122.6 OBJECTIVE:

The objective of this part is to establish rules for the qualification of firms for and disqualification of firms from conducting corrective action on sites where releases from storage tanks have caused contamination.

[20.5.122.6 NMAC - N, 07/24/2018]

20.5.122.7 DEFINITIONS:

A. The definitions in 20.5.101 NMAC and the Ground Water Protection Act apply to this part. In the case of conflict, the definitions in the Ground Water Protection Act control.

B. For purposes of this part, the term "firm" shall be synonymous with the term "person," as defined in 20.5.101 NMAC.

C. For purposes of this part, the term "proposal" means an offer to complete work submitted in response to given specifications issued for a responsible party-lead site or for a state-lead site.

[20.5.122.7 NMAC - N, 07/24/2018]

20.5.122.8-20.5.122.2199 [RESERVED]

20.5.122.2200 PAYMENTS:

Payments from the corrective action fund may be made only for corrective action conducted by firms qualified by the department to perform such work pursuant to this part.

[20.5.122.2200 NMAC - N, 07/24/2018]

20.5.122.2201 QUALIFICATION OF FIRMS:

A. Except as provided in Subsections C and D of this section, firms shall be evaluated for qualification by the department to conduct corrective action for each workplan submitted. Except as provided in Subsection B of this section, firms shall be qualified upon approval of the following:

(1) the subject workplan;

(2) a current statement of qualifications of the firm's authorized representative, the individual with direct, responsible, supervisory control of the approved workplan unless previously submitted under the current active phase of corrective action; and

(3) if the involvement of a professional engineer is required for the work to be undertaken under the workplan, a current statement of qualifications of the professional engineer that complies with 20.5.122.2203 NMAC.

B. In addition to the requirements of Subsection A of this section, if the department reasonably believes that a firm already qualified to perform corrective action under an approved workplan is not timely paying its subcontractors, suppliers, laboratories, and

other entities included in any invoice connected with an approved workplan, the firm shall not be qualified unless it provides proof to satisfy the department that within the preceding two years it has paid those entities according to the firm's contractual agreements.

C. When initial response or initial abatement is required at a site, firms may be qualified prior to commencement of work by submitting for verbal approval a statement of qualifications for the authorized representative and, if a professional engineer is required by 20.5.119 NMAC or 20.5.120 NMAC, for the professional engineer. Written statements of qualifications shall be submitted to the department with the report on initial abatement required by Subsection B of 20.5.119.1903 or 20.5.120.2002 NMAC.

D. When remediation is required at a site, selection of a remediation proposal in accordance with the competitive selection process described in 20.5.123.2306 NMAC and 20.5.123.2308 NMAC qualifies the successful firm to conduct corrective action within the scope of work defined by the proposal, except as provided in 20.5.122.2204 NMAC. A firm may be tentatively qualified prior to submitting a proposal under 20.5.123.2306 NMAC or 20.5.123.2308 NMAC by submitting for verbal approval a statement of qualifications for the authorized representative and, if a professional engineer is required by 20.5.119 NMAC or 20.5.120 NMAC, for the professional engineer.

E. Statements of qualifications shall include:

- (1) the authorized representative's name and status as sole proprietor, officer, partner, employee or subcontractor of the firm;
- (2) education relevant to the nature of the work to be performed;
- (3) experience relevant to the nature of the work to be performed; and
- (4) licenses and certifications required for the work to be performed.

F. While the required education and experience for the authorized representative may vary with the work to be performed, the following shall be considered minimums: a baccalaureate degree in science or engineering and at least two years of applicable experience in the investigation and remediation of unsaturated and saturated zone contamination, or five years supervised experience in investigation or remediation of unsaturated and saturated zone contamination.

G. Firms performing corrective action must maintain their qualification at all stages of work in order for the costs of that work to be eligible for payment.

H. This part is in addition to and not in lieu of any other licensing and registration requirements of the Construction Industries Licensing Act, Sections 60-13-1 through 60-13-59 NMSA 1978.

I. This part does not relieve contractors or owners or operators of their obligations and liabilities under applicable local, state, and federal laws and regulations.

[20.5.122.2201 NMAC - N, 07/24/2018]

20.5.122.2202 DISQUALIFICATION OF FIRMS:

A. The department may disqualify a qualified firm if the department determines that the firm has:

- (1) knowingly misrepresented a material fact in its request to become qualified or in any subsequent report or communication with the department;
- (2) failed to comply with any of the requirements of 20.5.119 NMAC, 20.5.120 NMAC, 20.5.122 NMAC or 20.5.123 NMAC;
- (3) failed to complete to the department's satisfaction the work described in one or more approved workplans; or
- (4) when required to do so by 20.5.122.2201 NMAC, failed to prove to the department's satisfaction that it has timely paid its subcontractors, suppliers, laboratories and other entities.

B. A firm that has been disqualified under this section may become eligible to perform corrective action upon satisfactory proof that the firm has remedied, to the department's satisfaction, the problem that lead to disqualification. For purposes of Paragraph (4) of Subsection A of this section, a firm that has timely paid its subcontractors, suppliers, laboratories and other entities for at least six months, and which meets all applicable requirements of 20.5.122.2201 NMAC, shall become eligible to perform corrective action.

[20.5.122.2202 NMAC - N, 07/24/2018]

20.5.122.2203 REQUIREMENTS FOR PROFESSIONAL ENGINEERS:

If the involvement of a professional engineer is required for the corrective action being conducted, the firm's qualification requirements shall include licensure by the New Mexico state board of licensure for professional engineers and surveyors in the discipline of engineering appropriate to the corrective action. This requirement may be met by demonstrating that the firm has on staff or available by contract a professional engineer licensed in the appropriate discipline.

[20.5.122.2203 NMAC - N, 07/24/2018]

20.5.122.2204 ADVERSE DETERMINATIONS ON REQUESTS TO QUALIFY FIRMS:

A. In reviewing a firm's qualifications to perform corrective action, the department shall consider the nature of the work to be performed under the submitted workplan. Except as provided in Subsections B and C of this section, the department's determination on a request to qualify a firm for a workplan involving remediation shall be consistent with the department's selection of the firm's proposal for remediation under 20.5.123 NMAC, if applicable.

B. Failure of a qualified firm to complete work described in one or more approved workplans to the satisfaction of the department may be taken into consideration when the firm's qualifications are reviewed by the department for purposes of future workplans.

C. The failure of a qualified firm to complete work described in an approved workplan to the satisfaction of the department may result in a determination by the department that further work by the firm is not eligible for payment or that a new remediation proposal or workplan, or both, is required.

D. Nothing in this part is intended to affect the rights or obligations of the department or its contractors in any suspension or debarment proceedings undertaken by the department under the Procurement Code, Sections 13-1-28 through 13-1-199 NMSA 1978. Suspension or debarment under the Procurement Code will be considered, however, in the department's determination on a firm's qualifications under this part.

[20.5.122.2204 NMAC - N, 07/24/2018]

20.5.122.2205 APPEALING ADVERSE DETERMINATIONS:

A firm that has been denied qualification or that has been disqualified under this part may obtain review of the decision by using the procedures set forth in 20.5.125 NMAC.

[20.5.122.2205 NMAC - N, 07/24/2018]

PART 123: CORRECTIVE ACTION FUND ADMINISTRATION

20.5.123.1 ISSUING AGENCY:

New Mexico Environment Department.

[20.5.123.1 NMAC – Rp. 20.5.123.1 NMAC, 12/27/2018]

20.5.123.2 SCOPE:

This part applies to owners and operators of storage tanks as provided in 20.5 NMAC and as provided in 20.5.101 NMAC to contractors, offerors, and designated representatives, and to all payments made by the department to or on behalf of storage

tank owners and operators under the Ground Water Protection Act, Sections 74-6B-1 through 74-6B-14 NMSA 1978. If the owner and operator are separate persons, only one person is required to comply with the requirements of this part, including any notice and reporting requirements; however, both parties are liable in the event of noncompliance.

[20.5.123.2 NMAC – Rp. 20.5.123.2 NMAC, 12/27/2018]

20.5.123.3 STATUTORY AUTHORITY:

20.5.123 NMAC is adopted by the Secretary of Environment pursuant to the provisions of the Department of Environment Act, Sections 9-7A-1 through 9-7A-15 NMSA 1978 and the Ground Water Protection Act, Sections 74-6B-1 through 74-6B-14 NMSA 1978.

[20.5.123.3 NMAC – Rp. 20.5.123.3 NMAC, 12/27/2018]

20.5.123.4 DURATION:

Permanent.

[20.5.123.4 NMAC – Rp. 20.5.123.4 NMAC, 12/27/2018]

20.5.123.5 EFFECTIVE DATE:

December 27, 2018, unless a later date is indicated in the rule history note at the end of a section.

[20.5.123.5 NMAC – Rp. 20.5.123.5 NMAC, 12/27/2018]

20.5.123.6 OBJECTIVE:

The purpose of 20.5.123 NMAC is to establish the procedures for administering and making payments from the corrective action fund ("fund") created by the Ground Water Protection Act ("act"), Sections 74-6B-1 through 74-6B-14 NMSA 1978, including procedures for:

A. payment of the costs of a minimum site assessment in excess of ten thousand dollars (\$10,000), or in excess of lesser amounts as permitted by the act;

B. payment of the costs of corrective action other than the minimum site assessment;

C. determinations of compliance with the act;

D. determinations of eligibility of costs for payment;

E. competitive bidding for corrective action work; and

F. disposition of remediation equipment acquired through the fund.

[20.5.123.6 NMAC – Rp. 20.5.123.6 NMAC, 12/27/2018]

20.5.123.7 DEFINITIONS:

A. Terms used in this part shall have the meanings given to them in the Ground Water Protection Act and 20.5.101 NMAC except as provided in Subsection B of this section.

B. As used in 20.5.123 NMAC:

(1) "cost-effectiveness" means completing tasks in a manner that is economical in terms of goods or services received for the money spent;

(2) "major remediation equipment" means any transportable unit or system which has been acquired specifically for remediation using the corrective action fund and which the department inventories pursuant to Section 12-6-10 NMSA 1978;

(3) "pay for performance" means payment of a previously approved amount based on completion or achievement of previously determined criteria including, but not limited to, a given task or set of tasks, specified reductions in contaminant levels, or achievement of other measurable milestones, as approved by the department;

(4) "payment" means payment from the fund to a person that the owner or operator has assigned the right of reimbursement, or reimbursement from the fund to an owner or operator for the costs of corrective action;

(5) "phase of corrective action" means any one of the following activities, required by 20.5.119 or 20.5.120 NMAC:

(a) minimum site assessment ("MSA"), as defined in 20.5.101.7 NMAC;

(b) phase 1, which includes secondary investigation and report, soil-only contamination assessment, and petroleum vapor intrusion assessment;

(c) phase 2, which includes interim removal of non-aqueous phase liquid or contaminated soil;

(d) phase 3, which includes development of a conceptual and final remediation plan or a monitored natural attenuation plan;

(e) phase 4, which includes implementation of the remediation plan; or

(f) phase 5, which includes operating, monitoring, maintaining and reporting under the implemented remediation plan or monitoring and reporting under the approved monitored natural attenuation plan;

(6) "proposal" means an offer to complete work submitted in response to given specifications issued for a responsible party-lead site, or for a state-lead site;

(7) "resident business" means:

(a) a business enterprise which is authorized to do and is doing business under the laws of New Mexico and maintains its principal place of business in New Mexico, or has staffed an office and has paid applicable New Mexico taxes for two years prior to the awarding of the proposal and has five or more employees who are residents of New Mexico, or is an affiliate of a business which meets either of these two requirements; as used in this paragraph, "affiliate" means an entity that directly or indirectly through one or more intermediaries controls, is controlled by, or is under common control with the qualifying business through ownership of voting securities representing a majority of the total voting power of the entity; or

(b) a business enterprise, including a sole proprietorship, partnership or corporation, that offers for sale or lease or other form of exchange, goods, commodities or services that are substantially manufactured, produced or assembled in New York state, or, in the case of construction services, has its principal place of business in New York state;

(8) "responsible party" means any owner or operator of a storage tank system from which a release has occurred;

(9) "responsible party-lead site" means a site where the owner or operator takes corrective action and applies to the fund for payment of corrective action costs, as distinct from a site where the state takes corrective action;

(10) "specifications" means a detailed written statement of particulars prescribing corrective action to be taken, conditions to be met, materials to be used, or standards of workmanship to which something is to be built, installed, or operated, which is provided to prospective contractors on responsible party-lead sites and state-lead sites;

(11) "state-lead site" means a site where the department takes corrective action using the fund because the owner and operator are unknown, unable or unwilling to take corrective action as described in 20.5.121.2102 NMAC or because the department determines that a single entity is necessary to lead the corrective action;

(12) "technical merit" means those characteristics of a proposal including but not limited to strategies, expertise, methods, materials and procedures meeting the specifications included in a request for proposals.

20.5.123.8-20.5.123.2299 [RESERVED]

20.5.123.2300 CONSTRUCTION:

This part shall be liberally construed to effectuate the purposes of the Ground Water Protection Act and shall be construed, to the extent possible, so as not to conflict with the Hazardous Waste Act, Sections 74-4-1 through 74-4-14 NMSA 1978, or 20.5.101 through 20.5.125 NMAC.

[20.5.123.2300 NMAC – Rp. 20.5.123.2300 NMAC, 12/27/2018]

20.5.123.2301 SEVERABILITY:

If any section or application of this part (20.5.123 NMAC) is held invalid, the remainder of this part (20.5.123 NMAC) or its application to other persons or situations shall not be affected.

[20.5.123.2301 NMAC – Rp. 20.5.123.2301 NMAC, 12/27/2018]

20.5.123.2302 EFFECT ON OTHER REGULATIONS:

This part does not relieve any owner or operator of the obligation to comply with any federal or state laws or regulations, including 20.5 NMAC.

[20.5.123.2302 NMAC – Rp. 20.5.123.2302, 12/27/2018]

20.5.123.2303 COMPLIANCE DETERMINATIONS:

A. The department shall make compliance determinations in the following circumstances:

(1) Corrective action by owner or operator. Pursuant to Section 74-6B-13 NMSA 1978, in order to be eligible for payment of corrective action costs other than those costs associated with a minimum site assessment, the owner or operator shall be in compliance with the requirements of Subsection B of Section 74-6B-8 NMSA 1978, as outlined in 20.5.123.2304 NMAC, during the owner or operator's term of ownership or operation for all storage tanks owned or operated at the site where the corrective action was or is being taken. Compliance for underground storage tanks ("USTs") shall be determined for the period from March 7, 1990 to the date the department determines that corrective action is complete. Compliance for above-ground storage tanks ("ASTs") shall be determined for the period from July 1, 2001 to the date the department determines that corrective action is complete.

(2) Corrective action by the department. Before bringing an action in district court against an owner or operator to recover expenditures from the fund incurred by the department to take corrective action at a site, the department shall determine, in accordance with 20.5.123.2304 NMAC, whether the owner or operator has complied with the requirements of Subsection B of Section 74-6B-8 NMSA 1978, during their term of ownership or operation for all storage tanks owned or operated at the site. Compliance for USTs shall be determined for the period from March 7, 1990 to the date the department determines that corrective action is complete. Compliance for ASTs shall be determined for the period from July 1, 2001 to the date the department determines that corrective action is complete.

B. The owner or operator shall request a compliance determination before submitting the initial request for payment of the costs of corrective action, other than the costs of an MSA. Once the department has completed an initial compliance determination at the owner or operator's request, the department may initiate and make separate compliance determinations at one or more phases of corrective action, other than an MSA, for which payment is requested. If the department determines that a tank owner or operator is not in compliance with 20.5.123.2304 NMAC, the tank owner or operator will be ineligible for payment of corrective action costs, other than an MSA.

C. No compliance determination is necessary when, pursuant to Section 74-6B-13 NMSA 1978, an owner or operator applies to the department for payment of MSA costs exceeding the deductible. However, prior to payment, the department shall determine that the work performed meets the definition of an MSA provided in 20.5.101.7 NMAC.

[20.5.123.2303 NMAC – Rp. 20.5.123.2303 NMAC, 12/27/2018]

20.5.123.2304 DETERMINATION OF COMPLIANCE UNDER SECTION 74-6B-8 NMSA 1978:

A. For sites where all USTs were removed or properly abandoned prior to March 7, 1990, and for sites where all ASTs were removed or properly abandoned prior to July 1, 2001, the determination of compliance required by Subsections B and C of 20.5.123.2303 NMAC shall include findings as to whether the owner or operator has:

(1) paid all storage tank fees required by Section 74-4-4.4 NMSA 1978, and, for all USTs removed or properly abandoned prior to March 7, 1990, and for all ASTs removed or properly abandoned prior to July 1, 2001, a two hundred (\$200) fee for each site;

(2) conducted a minimum site assessment as defined in 20.5.101.7 NMAC;
and

(3) cooperated in good faith with the department and granted access to the department for investigation, cleanup, and monitoring.

B. For sites where USTs were not removed or properly abandoned prior to March 7, 1990, or where ASTs were not removed or properly abandoned prior to July 1, 2001, the determination of compliance required by Subsections B and C of 20.5.123.2303 NMAC shall include findings as to whether the owner or operator has:

(1) paid all storage tank fees required by Sections 74-4-4.4 and 74-6B-9 NMSA 1978;

(2) conducted a minimum site assessment as defined in 20.5.101.7 NMAC and, if contamination is found, taken action to prevent continuing contamination;

(3) cooperated in good faith with the department and granted access to the department for investigation, cleanup, and monitoring; and

(4) substantially complied with all requirements and provisions of regulations adopted by the environment improvement board pursuant to Subsection C of Section 74-4-4 NMSA 1978 for storage tanks at the site for which payment is sought (including installation, upgrade, operation and maintenance of storage tanks in accordance with 20.5.106 NMAC, 20.5.107 NMAC, 20.5.109 NMAC, and 20.5.110 NMAC; release detection in accordance with 20.5.108 NMAC and 20.5.111 NMAC; for any storage tanks which have been abandoned or closed at the site, proper closure in accordance with 20.5.115 NMAC; reporting, investigating, confirming and remediating the release in accordance with 20.5.118 NMAC, 20.5.119 NMAC and 20.5.120 NMAC; proof of financial responsibility in accordance with 20.5.117 NMAC; and record keeping in accordance with the record keeping provisions of 20.5.101 through 20.5.103 NMAC, 20.5.106 through 20.5.115 NMAC, 20.5.117 through 20.5.120 NMAC, 20.5.124 NMAC and 20.5.125 NMAC).

C. In determining whether the owner or operator has substantially complied with the regulations referenced in Paragraph (4) of Subsection B of this section, the department may consider, among other things, the severity of the non-compliance, the period of non-compliance, the actions taken by the owner or operator to come into compliance, and the timeliness of the owner or operator's actions in coming into compliance.

[20.5.123.2304 NMAC – Rp. 20.5.123.2304 NMAC, 12/27/2018]

20.5.123.2305 PROCEDURES FOR DETERMINING COMPLIANCE:

A. When the owner or operator submits a written request for a compliance determination to the department, the request shall provide the following information for all storage tanks located at the site where the owner or operator is performing corrective action:

(1) the applicant's name, address, telephone number, and email address;

(2) a description of the applicant's interest in the site (for example, landowner, tank owner, lending institution, operator);

(3) the name, address, email address, and telephone number of the tank facility at the release site;

(4) the facility ID, owner ID, and release ID numbers for the tank facility at the release site;

(5) information on all systems that exist or that have existed at the release site during the owner or operator's term of ownership or operation, including:

(a) tank type (UST or AST), tank number, installation dates, tank capacity, product contained and removal date, if applicable;

(b) information on installation, upgrade, operation and maintenance standards, including type of tank construction, piping system, corrosion protection, spill and overflow protection, release detection for tanks and piping, operation and maintenance plans, compatibility, and secondary containment, if applicable;

(c) type of regulated substance(s) in each tank; and

(d) date(s) of permanent closure, if applicable;

(6) proof of financial responsibility that includes:

(a) name and address of the facility that is the subject of the compliance determination;

(b) type of financial responsibility;

(c) name of insurance provider, policy number, and period of coverage; and

(d) information about insurance coverage, including: type or types of coverage for corrective action or third-party liability, amount of coverage per occurrence, and amount of annual aggregate coverage for sudden accidental releases, non-sudden accidental releases, and accidental releases;

(7) corrective action information for each release that includes:

(a) date(s) the release was reported to the department;

(b) methods of preventing further release; and

(c) completion of the MSA report;

(8) certification on oath or affirmation of the truthfulness of all matters and facts contained in the request.

B. When the department initiates a compliance determination pursuant to Subsection B of 20.5.123.2303 NMAC:

(1) the department shall, in writing, notify the owner or operator of the reason(s) for the compliance determination and explain that if the department determines that the owner or operator is not in compliance with 20.5.123.2304 NMAC, the owner or operator will be ineligible for payment of corrective action costs other than for an MSA; and

(2) the owner or operator shall submit in writing all information requested by the department by a date specified by the department; the department may request any of the information required for an MSA pursuant to subsection A of this section and shall establish a deadline for submission of this information that is reasonable under the circumstances.

C. The department shall review all written submissions in the order received and shall, within 30 days of receipt, notify the owner or operator in writing of any inadequacies in the submittal. The owner or operator may then correct any inadequacies and resubmit the application. Submissions shall be determined "complete" by the department when the submissions are adequately documented or inadequacies identified by the department have been corrected.

D. The owner or operator has the burden of establishing each point of fact relevant to such a determination. For such purpose, the submissions shall state specific facts which demonstrate compliance with Subsection B of 20.5.123.2304 NMAC.

E. The department shall make a compliance determination within 45 days following the department's determination that a submission is complete and shall promptly notify the owner or operator of its determination. For good cause, the director may permit additional time in which to make a compliance determination. If the department finds an owner or operator to be out of compliance, the department shall also notify the owner or operator in writing of the manner in which the owner or operator has failed to comply with 20.5.123.2304 NMAC and inform the owner or operator that he or she is ineligible for payment of corrective action costs, other than the costs of an MSA.

[20.5.123.2305 NMAC – Rp. 20.5.123.2305 NMAC, 12/27/2018]

[The department provides a form that may be used to request a compliance determination. The form is available on the petroleum storage tank bureau's pages on the department website or by contacting the petroleum storage tank bureau at 505-476-4397 or 2905 Rodeo Park Drive East, Building 1, Santa Fe, New Mexico 87505.]

20.5.123.2306 COMPETITIVE CONTRACTOR SELECTION FOR REMEDIATION AT RESPONSIBLE PARTY-LEAD SITES:

A. Payments made from the fund shall be made in accordance with 20.5.123.2309 NMAC and only for work performed by contractors that were selected using a competitive procedure based upon technical merit and cost-effectiveness, as defined in this part except as provided in Subsections C and D of this section. The solicitation and evaluation of proposals are required prior to workplan approval.

B. At a minimum, the department and the owner or operator shall obtain proposals and select contractors competitively for remediation activities under 20.5.119.1922 through 20.5.119.1928 NMAC and under 20.5.120.2019 through 20.5.120.2025 NMAC, including conceptual and final remediation plans, design, construction, installation, operation and maintenance, and monitoring.

C. Competitive contractor selection is not required for the following activities:

(1) initial abatement or emergency response under 20.5.119.1902 NMAC or 20.5.120.2002 NMAC;

(2) 72 hour and 14 day reports under 20.5.119.1903 NMAC or 20.5.120.2003 NMAC;

(3) interim removal of non-aqueous phase liquid ("NAPL"), directed or approved by the department under 20.5.119.1905 or 12.5.120.2005 NMAC;

(4) interim removal of contaminated soil, directed or approved by the department under 20.5.119.1906 NMAC or 12.5.120.2006 NMAC;

(5) investigation activities under 20.5.118.1801 NMAC and 20.5.119.1907 through 20.5.119.1913 NMAC or 20.5.120.2007 through 20.5.120.2011 NMAC;

(6) development of and monitoring and reporting under a monitored natural attenuation plan under 20.5.119.1915 through 20.5.119.1921 NMAC or 20.5.120.2012 through 20.5.120.2018 NMAC;

(7) work at sites for which the owner or operator is not seeking payment, including but not limited to federal facilities and sites determined to be out of compliance pursuant to 20.5.123.2304 NMAC; or

(8) work at sites under contract as described in subsection D of this section.

D. Work at sites with releases from USTs where the owner or operator and a contractor entered into a contract approved by the department and initiated remediation prior to October 1, 1995, shall be exempt from competitive contractor selection requirements. Work at sites with releases from ASTs at which the owner or operator

and a contractor entered into a contract for and initiated remediation prior to June 14, 2002, shall be exempt from competitive contractor selection requirements. The owner or operator shall obtain a contractor for any subsequent site through the competitive contractor selection process in accordance with the requirements of 20.5.123.2306 through 20.5.123.2307 NMAC.

[20.5.123.2306 NMAC – Rp. 20.5.123.2306 NMAC, 12/27/2018]

20.5.123.2307 PROCEDURES AND REQUIREMENTS FOR SELECTION OF REMEDIATION CONTRACTORS AT RESPONSIBLE PARTY-LEAD SITES:

A. Within 15 days of written notification from the department that remediation is required, the owner or operator shall provide to the department either a written list with a minimum of five names of consultants from which the department and the owner or operator shall solicit proposals for remediation or a written request that the department solicit proposals for remediation on its website. The department and the owner or operator shall follow the procedures outlined in subsections B through E of this section where site evaluation, remediation selection and justification, and design may be required. The department and the owner or operator shall follow the procedures outlined in subsection F for bids at sites where limited remediation is such that no additional infrastructure is needed, plans and specifications that require a professional engineer signature and stamp are not required, the cost is less than \$80,000 (not including NM gross receipt tax), and the proposed activities can be accomplished within two years. Limited remediation includes but is not limited to the injection of contaminant-reducing agents and the use of portable units for soil vapor extraction ("SVE"). The department shall follow the procedures outlined in subsection G for proposals at sites where the owner or operator is the state of New Mexico or a subdivision thereof.

B. Specifications.

(1) The department and the owner or operator shall develop specifications for remediation, which shall state which sections of 20.5.119 NMAC or 20.5.120 NMAC the work is intended to fulfill.

(2) The department and the owner or operator may require that specifications including primary responsibility for operation or maintenance of remediation systems with electrical or mechanical components contain the requirement that winning proposals shall include pay-for-performance criteria as defined in this part.

(3) Proposals shall meet all requirements outlined in the specifications.

(4) Costs for all tasks outlined in the specifications shall be submitted by short-listed firms only and shall be submitted under separate, sealed cover from the technical portion of the proposal.

C. Solicitation of proposals.

(1) If the owner or operator provides a list of contractors, the department shall mail the specifications to those contractors. However, if the owner or operator, within 15 days of receiving written notification from the department that remediation is required, fails to provide the department with the names of five contractors, fails to respond to the department's notice that remediation is required, or chooses to allow the department to solicit proposals on behalf of the owner or operator, the department may solicit proposals from and make specifications available to any interested contractor using the department's webpage.

(2) Any questions concerning the solicitation, including any requests for clarification of the specifications, shall be submitted in writing to the department and the owner or operator, within two weeks prior to the deadline for submission of proposals. Any response from the department and the owner or operator shall be provided promptly to all contractors through a posting on the department's webpage.

(3) Each proposal shall contain a notarized affidavit signed by the contractor certifying under oath that the contractor has participated and will continue to participate in the competitive contractor selection process as described in this section and Section 74-6B-7C NMSA 1978 without misrepresentation and without collusion with other contractors during the entire solicitation, evaluation and selection process.

D. Evaluation of proposals and contractor selection.

(1) Once the department and the owner or operator have received a proposal, they shall not discuss the solicitation or any proposal received in response to the solicitation with anyone other than department staff or the owner or operator.

(2) If fewer than three responsive proposals are obtained by the deadline in the solicitation, the department shall consult with the owner or operator and solicit additional proposals pursuant to subsection A of this section or paragraph (1) of subsection C of this section.

(3) If fewer than three responsive proposals are obtained after two attempts, the department and the owner or operator may select a proposal following the procedures in this section, provided the technical merit is acceptable for the proposed work.

(4) The department shall, and the owner or operator may, evaluate proposals based on technical merit as defined in this part. The technical merit score shall be based on an understanding of site-specific conditions and the appropriateness of proposed remediation technology.

(a) A team approved by the department shall evaluate the proposals in a timely manner. The owner or operator or their representative is encouraged to participate as a part of the evaluation team. Each team member shall independently

evaluate each proposal for technical merit. After discussion, the team shall determine the preliminary technical merit score for each proposal.

(b) The team shall prepare a short list of proposals for further consideration. The short list shall consist of the names of the firms that have submitted proposals with the highest preliminary technical merit scores.

(c) The team shall present the short list of firms to a department task force for a discussion of proposals to ensure consistency among team evaluation and scoring. The department task force shall consist of senior department technical staff. After discussion with the department task force, the team shall assign the technical merit scores.

(5) The department and the owner or operator may request all firms selected for the short list to conduct an oral presentation outlining their proposals for the department task force, the team and the owner or operator. The owner or operator's attendance during the oral presentations is encouraged, but not required. During the oral presentations, members of the department task force, the team and the owner or operator may ask questions. Only the team shall assign the scores to each proposal on the short list.

(a) Any firm that is requested by the department and the owner or operator to conduct an oral presentation and chooses not to do so, shall be eliminated from the short list.

(b) All short-listed firms shall submit a sealed cost proposal to the department and the owner or operator no later than two days prior to the oral presentations. The team shall open and review the sealed cost information submitted for each proposal on the short list.

(c) Prior to or during the oral presentations, contractors on the short list may withdraw the original cost submission and substitute a best and final offer for the cost portion of the proposal.

(6) Following the oral presentations, the team may adjust the technical merit score, based on demonstrated general expertise, site-specific knowledge and application, or information clarified or provided.

(7) At any point in the evaluation process, when, in the team's opinion, a proposal does not substantially meet the technical merit or cost effectiveness standards set forth in the solicitation, the team may reject the proposal.

(8) The team shall assign a final score for each proposal on the short list, which shall be the cost effectiveness score plus the technical merit score.

(a) The technical merit score, with a maximum of 700 points, shall be assigned pursuant to the procedure described in this subsection.

(b) The cost effectiveness score is the technical weight factor times the cost weight factor times 300, where the technical weight factor is the proposal's technical merit score divided by the highest technical merit score of proposals on the short list; the cost weight factor is the lowest cost of proposals on the short list divided by the proposal's cost; 300 is the maximum cost effectiveness score.

(9) The department shall notify the owner or operator and all submitting firms of the highest scoring proposal. The owner or operator shall enter into a contract with the selected firm not less than 10 days or more than 30 days after the notification. If, for any reason, the selected firm cannot complete the project, the department and the owner or operator shall either select the firm with the second highest scoring proposal, provided the technical merit is acceptable for the proposed work, or repeat the contractor selection process in accordance with this section. In order for the work to qualify for payment from the fund, the owner or operator shall use the firm selected in accordance with this part.

(10) After the department has notified the owner or operator of the highest scoring proposal, the department and the owner or operator shall make available to the contractors and the public all proposals submitted and the evaluation team's scores.

(11) An owner or operator aggrieved by the department's selection may request administrative review pursuant to 20.5.123.2320 NMAC within 15 days of the post mark on the notification.

(12) An offeror aggrieved by the department's selection may request administrative review pursuant to 20.5.123.2320 NMAC within 10 days of the post mark date on the notification.

(13) For purposes of owner and operator participation in the process set forth in this subsection, the owner or operator may appoint a representative who is not affiliated with any individual who submitted a proposal. Any owner or operator representative may not later work for the contractor, the owner, or the operator on any work generated by the proposal.

E. When proposals are received from nonresident businesses and resident businesses, and the proposal with the highest evaluation is from a nonresident business, the contract shall be awarded to the resident business whose technical merit is comparable and whose cost is nearest to the cost of the high-scoring nonresident business proposal if the cost of the resident proposal is made lower than the cost of the nonresident business when multiplied by a factor of 0.95.

F. The department and the owner or operator shall follow the procedures outlined in this section at sites where limited remediation is such that no additional infrastructure is

needed, plans and specifications that require a professional engineer signature and stamp are not required, the cost is less than \$80,000 (not including NM gross receipt tax), and the proposed activities can be accomplished within two years.

(1) Specifications.

(a) The department and the owner or operator shall develop specifications for limited remediation, which shall state which sections of 20.5.119 NMAC or 20.5.120 NMAC the work is intended to fulfill.

(b) Bids shall meet all requirements and include costs for all tasks outlined in the specifications.

(2) Request for bids.

(a) The owner or operator shall provide to the department either a written list with a minimum of three names of consultants from which the department shall request bids for the limited remediation or a written request that the department request bids on its website.

(b) Any questions concerning the request for bids, including any requests for clarification of the specifications, shall be submitted in writing to the department and the owner or operator within one week prior to the deadline for submission of bids. Any response from the department and the owner or operator shall be provided promptly to all contractors identified by the owner or operator or by posting the responses on the department's webpage consistent with the method that the bids were requested.

(3) Bid content and specifications. The request for bids shall include but not be limited to:

(a) the scope of work including a list of tasks,

(b) a request for costs associated with each task and a total project cost;

(c) a request for a description of the technical approach; and

(d) the schedule for implementing the limited remedial strategy.

(4) Evaluation of the bids and contractor selection.

(a) Once the department and the owner or operator have received a bid, they shall not discuss the request for bids or any responses to the request for bids received with anyone other than department staff and the owner or operator.

(b) Only one responsive bid is required for evaluation, provided the technical merit is acceptable for the proposed work.

(c) The department shall, and the owner or operator may, evaluate the bids based on technical responsiveness to the limited remediation strategy and cost. The responsive bids shall be evaluated by a team approved by the department, and owner or operator if requested. The team shall make a recommendation to a department task force for approval.

(d) The department shall notify the owner or operator and all submitting firms of the selected bid. The owner or operator shall enter into a contract with the selected firm not less than 10 days or more than 30 days after the notification.

(e) After the department has notified the owner or operator of the selected bid, the department and the owner or operator shall make available to the contractors and the public all bids submitted and the evaluation team's scores.

(f) An owner or operator aggrieved by the department's selection may request administrative review pursuant to 20.5.123.2320 NMAC within 15 days of the post mark on the notification.

(g) An offeror aggrieved by the department's selection may request administrative review pursuant to 20.5.123.2320 NMAC within 10 days of the post mark date on the notification.

(h) For purposes of owner and operator participation in the process set forth in this subsection, the owner or operator may appoint a representative who is not affiliated with any individual who submitted a bid. Any owner or operator representative may not later work for the contractor, the owner, or the operator on any work generated by the bid.

G. For responsible party-lead sites where the owner or operator is the state of New Mexico or any subdivision thereof, including but not limited to municipalities, counties, school districts, or other political subdivisions and their agencies, the department shall accept the use of the state procurement code, provided the department is involved in the development of the specifications and the evaluation of the submitted proposals.

[20.5.123.2307 NMAC – Rp. 20.5.123.2307 NMAC, 12/27/2018]

20.5.123.2308 PROCEDURES AND REQUIREMENTS FOR SELECTION OF REMEDIATION CONTRACTORS AT STATE-LEAD SITES:

When selecting remediation contractors for state-lead sites, the department shall comply with the Procurement Code, Sections 13-1-21 through 13-1-199 NMSA 1978, 1.4.1 NMAC and the request for proposals procurement guide, which is incorporated by reference.

[20.5.123.2308 NMAC – Rp. 20.5.123.2308 NMAC, 12/27/2018]

20.5.123.2309 WORKPLAN APPROVAL, CHANGE ORDERS FOR CORRECTIVE ACTION AND APPROVAL OF DELIVERABLES:

A. Except as provided in Subsection C of 20.5.123.2310 NMAC, a written workplan and budget to complete any phase of corrective action shall be approved in writing by the department prior to any corrective action work being done in order for that work to be eligible for payment under this part.

B. For responsible party-lead sites, the owner or operator shall submit the corrective action workplan and cost in a fixed-fee format unless the department determines that a time-and-materials format is appropriate. Any fixed-fee approvals which require reallocation of approved amounts from one deliverable to another deliverable shall be approved in advance by the department in writing. If the department approves a time-and-materials format, any increase in approved amounts for specific tasks, categories or subcategories or any reallocation of an amount from one task to another task, one category to another category or within categories shall be approved in advance by the department in writing.

C. If required by Paragraph (2) of Subsection B of 20.5.123.2307 NMAC, a workplan including the operation and maintenance of a remediation system that includes mechanical or electrical installations shall list the performance criteria required for payment and amount of payment.

D. If a workplan is rejected after two attempts to receive approval by the department, the department may select the contractor who received the second highest evaluation, repeat the contractor selection process in accordance with subsection B of 20.5.123.2307 NMAC, or, in the case of activities which do not require competitive contractor selection under Subsection D of 20.5.123.2306 NMAC, require the owner or operator to submit a workplan from a different contractor.

E. Changes to the technical approach or increases in costs beyond the approved workplan shall not be eligible for payment unless approved in writing by the department prior to implementation.

F. The department may increase or reduce payments for work based on pay-for-performance criteria because of *force majeure* or unforeseen changes in site conditions.

G. After receiving a deliverable, the department shall assess whether the deliverable is satisfactory. If the department finds that the deliverable is satisfactory, it shall issue a written notice of approval to the owner, operator or contractor. The notice of approval shall explain that any application for payment of costs associated with the approved deliverable must be received by the department within 90 days of the date the owner, operator or contractor received the certification of approval and that no extensions of this deadline shall be granted except extensions for good cause pursuant to 20.5.123.2318 NMAC. If the department finds the deliverable to be unsatisfactory, it shall, within 30 days of receiving a deliverable, provide to the owner, operator or

contractor a written notice of exception explaining the defect in the deliverable and any steps the owner, operator or contractor may take to remedy the defect.

[20.5.123.2309 NMAC – Rp. 20.5.123.2309 NMAC, 12/27/2018]

20.5.123.2310 CORRECTIVE ACTION ELIGIBLE AND INELIGIBLE COSTS AND EXPENDITURES FOR STATE-LEAD AND RESPONSIBLE PARTY-LEAD SITES:

A. Payments shall be made only for corrective action conducted by firms qualified under 20.5.122 NMAC or in accordance with Subsection H of 20.5.119.1900 NMAC.

B. No expenditures from the fund shall be paid to or on behalf of owners or operators for corrective action, other than the minimum site assessment or any sampling done for purposes of Paragraph (3) of Subsection A of 20.5.119.1921 or 20.5.119.1929 NMAC or Paragraph (2) of Subsection A of 20.5.120.2018 or 20.5.120.2026 NMAC, where the corrective action was conducted by firms or entities that are subsidiaries, parents or otherwise affiliate firms or entities of the owner or operator.

C. Payments shall be made for only those deliverables that the department has approved as satisfactory in writing, as required by 20.5.123.2309 NMAC.

D. For USTs, payment shall not be made for corrective action performed on or after September 22, 1992, if the owner or operator does not obtain department approval of workplans and costs prior to work being performed or costs incurred, exclusive of initial response or initial abatement measures performed in accordance with 20.5.119.1901 or 20.5.119.1902 NMAC or 20.5.120.2001 or 20.5.120.2002 NMAC. For ASTs, payment shall not be made for corrective action performed on or after June 14, 2002, if the owner or operator does not obtain department approval of workplans and costs prior to work being performed or costs incurred, exclusive of initial response or initial abatement measures performed in accordance with 20.5.119.1901 or 20.5.119.1902 NMAC.

E. Costs eligible for payment from the fund are all costs, except those excluded by Subsections H and I of this section, that are reasonable and necessary to confirm releases in accordance with 20.5.118 NMAC, to complete the minimum site assessment in excess of the deductible, and to complete corrective action beyond the minimum site assessment, in accordance with 20.5.119 NMAC or 20.5.120 NMAC, the department's fee schedule, and any workplan required by 20.5.123.2309 NMAC and approved by the department.

F. Before making payments, the department shall determine that the owner or operator has reimbursed the department for all federal leaking underground storage tank (LUST) trust funds expended for contractual services at the site.

G. Unpaid invoices are eligible for payment on an assignment basis from the applicant to the party who rendered the invoiced services or goods, or the party who made payment. Invoices resulting from assignments as described in this subsection are not contractual between the department and the party who rendered the service or the party who made payment. Payments of such invoices are made pursuant to provisions of Section 74-6B-13 NMSA 1978, including being subject to the availability of funds in the corrective action fund.

H. For USTs, costs ineligible for payment include, but are not limited to, the following:

- (1) costs incurred prior to March 7, 1990;
- (2) costs incurred on or after September 22, 1992, that exceed those in the department fee schedule in effect at the time the work was performed;
- (3) costs paid or reimbursed by insurance companies or any other third party as described in 20.5.123.2319 NMAC;
- (4) unpaid invoices, unless allowed under Subsection F of this section;
- (5) costs of removing, repairing, retrofitting or replacing any USTs;
- (6) costs of destroying, repairing, relocating or constructing any utility line unless required for cost-effective remediation or in response to a threat to public health, safety or welfare, or the environment, as determined by the department;
- (7) costs of destroying any structure unless required for cost-effective remediation or in response to a threat to public health, safety or welfare, or the environment, as determined by the department;
- (8) costs of repairing or replacing any remediation equipment or groundwater monitoring wells negligently or intentionally damaged or destroyed by the owner or operator;
- (9) insurance premiums, the loss of interest on funds used to pay for a minimum site assessment, or loss of business;
- (10) attorneys' fees or other legal costs;
- (11) costs of monitoring a contractor and the owner's, operator's and designated representative's participation in the contractor selection process;
- (12) costs associated with real estate transactions;

(13) rush charges for laboratory or other services, unless required by the department;

(14) payment made to property owners for property access to install or place monitoring wells or other investigation-related or remediation-related equipment;

(15) economic losses and liability to third parties;

(16) any markup on costs, to include subcontractor costs;

(17) costs associated with corrective action that fails to conform with the preapproved workplan or with the requirements of 20.5.119 NMAC or 20.5.120 NMAC;

(18) costs associated with releases from ASTs with capacities 55,000 gallons and greater that are part of airport hydrant fuel distribution systems, USTs with field constructed tanks, or hybrid storage tank systems;

(19) costs associated with releases from piping attached to an AST with a capacity of 55,000 gallons or greater;

(20) costs associated with releases from piping attached to a hybrid storage tank system; and

(21) costs associated with releases from piping attached to unregulated storage tank systems.

I. For ASTs, costs ineligible for payment include but are not limited to the following:

(1) costs incurred prior to July 1, 2001;

(2) costs incurred that exceed those in the department fee schedule in effect at the time the work was performed;

(3) costs paid or reimbursed by insurance companies or any other third party described in 20.5.123.2319 NMAC;

(4) unpaid invoices, unless allowed under subsection F of this section;

(5) costs of removing, repairing, retrofitting or replacing any ASTs;

(6) costs of destroying, repairing, relocating or constructing any utility line unless required for cost-effective remediation or in response to a threat to public health, safety or welfare, or the environment, as determined by the department;

- (7) costs of destroying any structure unless required for cost-effective remediation or in response to a threat to public health, safety or welfare, or the environment, as determined by the department;
- (8) costs of repairing or replacing any remediation equipment or groundwater monitoring wells negligently or intentionally damaged or destroyed by the owner or operator;
- (9) insurance premiums, the loss of interest on funds used to pay for a minimum site assessment, or loss of business;
- (10) attorneys' fees or other legal costs;
- (11) costs of monitoring a contractor and the owner's, operator's and designated representative's participation in the contractor selection process;
- (12) costs associated with real estate transactions;
- (13) rush charges for laboratory or other services, unless required by the department;
- (14) payment made to property owners for property access to install or place monitoring wells or other investigation-related or remediation-related equipment;
- (15) economic losses and liability to third parties;
- (16) any markup on costs, to include subcontractor costs;
- (17) costs associated with corrective action that fails to conform with the preapproved workplan or with the requirements of 20.5.119 NMAC or 20.5.120 NMAC;
- (18) costs associated with releases from ASTs with capacities 55,000 gallons and greater that are part of airport hydrant fuel distribution systems, USTs with field constructed tanks, or hybrid storage tank systems;
- (19) costs associated with releases from piping attached to an AST with a capacity of 55,000 gallons or greater;
- (20) costs associated with releases from piping attached to a hybrid storage tank system; and
- (21) costs associated with releases from piping attached to unregulated storage tank systems.

[20.5.123.2310 NMAC – Rp. 20.5.123.2310 NMAC, 12/27/2018]

20.5.123.2311 DESIGNATED REPRESENTATIVES:

A. Subject to approval by the department, an owner or operator may designate a representative to facilitate compliance with 20.5.118 NMAC, 20.5.119 NMAC, 20.5.120 NMAC, 20.5.121 NMAC, 20.5.122 NMAC, and 20.5.123 NMAC. Designation of a representative shall include assignment to the designated representative of any rights the owner or operator may have to payment from the corrective action fund.

B. In the event an owner or operator is incapable of both directing required corrective action and assigning rights to a designated representative, a person may request in writing to be designated as a representative by the department and to be assigned any rights the owner or operator may have had to payment from the corrective action fund.

C. Anyone requesting to designate or be designated as a representative pursuant to this section shall submit a written request to the department that includes the:

- (1) owner ID number;
- (2) facility ID number;
- (3) release ID;
- (4) reason for the requested designation (for example: sale of property or change of ownership, out-of-state move, operator illness, age, or death); and
- (5) proposed representative's name, mailing address, email address, and telephone number.

D. When determining whether to approve or designate a person as a representative pursuant to subsection A or B of this section, the department shall consider: the reason or reasons a designated representative may be necessary; the nature of the proposed representative's relationship to the owner or operator, if any; the proposed representative's interest in the facility or real property where corrective action is being or shall be performed; and the proposed representative's ability to direct corrective action activities. The department shall approve or deny the request for designation of a representative in writing, which explains the department's decision, to the requesting party and the owner or operator.

E. Requests for payment from the fund resulting from assignments described in subsection A or B of this section are not contractual between the department and the designated representative. Payments of such requests are made pursuant to the provisions of Section 74-6B-13 NMSA 1978, and are subject to the availability of funds in the corrective action fund.

F. Designation of a representative does not waive owner or operator responsibility or liability. Regardless of appointment of a designated representative, or assignment to the designated representative of rights to the corrective action fund, owners and operators remain responsible for compliance with the provisions of this chapter. The designation of a representative shall not affect the department's right to seek compliance at any time from the owner or operator or both. The designation of a representative is intended to facilitate compliance with corrective action requirements only and shall not relieve the owner and operator of their legal responsibilities or liabilities under this chapter.

[20.5.123.2311 NMAC – Rp. 20.5.123.2311 NMAC, 12/27/2018]

20.5.123.2312 MEANS TEST TO DETERMINE DEDUCTIBLE:

A. An owner or operator otherwise responsible for paying the first ten thousand dollars (\$10,000) of minimum site assessment costs under Section 74-6B-13 NMSA 1978 may request that the first ten thousand dollars (\$10,000) be paid from the Fund (a "zero deductible") if the owner or operator proves to the department an inability to pay the deductible.

B. An owner or operator otherwise responsible for a ten thousand dollar (\$10,000) deductible is allowed a five thousand dollar (\$5,000) deductible if the owner or operator proves to the department an inability to pay the full deductible.

C. The owner or operator shall submit an application for a zero or reduced deductible before or with submission of the MSA workplan, pursuant to 20.5.119 NMAC or 20.5.120 NMAC. The application shall include the following:

(1) a letter explaining why the owner or operator is unable to afford to pay all or a portion of the initial ten thousand dollar (\$10,000) cost of an MSA;

(2) copies of the owner's or operator's federal tax returns for the immediately preceding two years; and

(3) any additional financial documentation (for example, copies of bankruptcy filings or medical bills) that will assist the department in determining the owner or operator's inability to pay.

D. The department shall determine inability or reduced ability to pay by using one of the environmental protection agency's published computer analysis programs, and by considering the owner's or operator's ability to maintain basic business operations if required to pay the full or reduced deductible, including consideration of the overall financial condition of the owner or operator and demonstrable constraints on the ability of the owner or operator to raise revenues.

E. Notwithstanding the provisions of subsections A and B of this section, an owner or operator otherwise responsible for paying a deductible shall be allowed a zero deductible if the owner or operator has proven to the department that the owner or operator is a municipality or county.

[20.5.123.2312 NMAC – Rp. 20.5.123.2312 NMAC, 12/27/2018]

20.5.123.2313 OWNERSHIP AND DISPOSITION OF MAJOR REMEDIATION EQUIPMENT:

A. The department shall be the owner of all major remediation equipment paid for by the fund, unless the equipment is leased as a more cost-effective approach, and shall be responsible for disposition of all major remediation equipment. No owner or operator shall dispose of any major remediation equipment without the written permission of the department. Disposition by the department shall be in accordance with all applicable laws and regulations, and by any of the following means:

(1) relocation to another fund remediation site, as provided in subsections C through E of this section;

(2) interim rental to a non-fund remediation site, subject to subsection F of this section;

(3) sale or salvage, subject to subsection G of this section; or

(4) when options in paragraphs (1) through (3) of this subsection are not available, any other form of disposal consistent with federal and state law.

B. Any major remediation equipment shall be installed, maintained and disposed of in accordance with subsections A through G of this section.

C. An owner or operator requiring the use of major remediation equipment for corrective action paid for with fund money shall use equipment on the department's reuse list, if available, and provided such equipment can be refurbished to the manufacturer's operating specifications for a cost not to exceed one-half of the replacement cost of the equipment.

D. For all major remediation equipment, new or used, the owner or operator shall enter into a written installation and maintenance agreement with a company qualified to install and maintain the equipment, and shall furnish a copy of the agreement, executed by the company, to the department. Installation and maintenance shall be performed by factory-authorized personnel or a contractor specified by the manufacturer, or as otherwise approved by the department. Complete and proper installation shall be verified by both the manufacturer or its designated representative, and the installation personnel or company. Installation and maintenance contract costs shall be stated

together with the purchase price of the equipment quoted to the department in proposals, workplans and applications for payment from the fund.

E. For all new major remediation equipment and for all used major remediation equipment under warranty when acquired, the owner or operator shall also furnish a copy of the manufacturer's warranty to the department.

F. If major remediation equipment is rented to a non-fund remediation site, a reasonable rental fee shall be paid into the fund. The department shall determine the reasonable rental fee based on the lowest price quote from three equipment renters.

G. Major remediation equipment shall be depreciated over its useful life and have a salvage value, method and schedule as approved by the department. If the equipment is sold or salvaged, the proceeds from the sale or salvage value shall be paid into the fund. Gain or loss shall be calculated based on the net book value or salvage value in accordance with generally accepted accounting principles.

H. The department shall remove all major remediation equipment from a site within 90 days after issuing a "no further action" letter for that site.

[20.5.123.2313 NMAC – Rp. 20.5.123.2313 NMAC, 12/27/2018]

20.5.123.2314 FUND APPLICATION, PAYMENT AND SUBROGATION:

A. Nothing in 20.5.123 NMAC establishes or creates any liability or responsibility on the part of the department or the state to pay corrective action costs from any source other than the fund, nor shall the department or the state have any liability or responsibility to make any payments of corrective action costs if the balance in the fund is insufficient to cover those costs.

B. Payment shall be made only for work that has been performed in accordance with 20.5.118 NMAC, 20.5.119 NMAC or 20.5.120 NMAC and 20.5.123 NMAC, subject to the provisions of 20.5.121.2105 NMAC.

[20.5.123.2314 NMAC – Rp. 20.5.123.2314 NMAC, 12/27/2018]

20.5.123.2315 OBTAINING FACILITY AND OWNER ID NUMBERS FOR PURPOSES OF CORRECTIVE ACTION:

A. An owner or operator who is exempt from registration and tank fee requirements pursuant to 20.5.101.7 NMAC (because the owner had a UST taken out of operation on or before January 1, 1974, had a UST taken out of operation after January 1, 1974 and removed from the ground prior to November 8, 1984, or had an AST taken out of operation on or before July 1, 2001) remains responsible for all corrective action requirements otherwise imposed on all owners and operators.

B. To access the fund, an owner or operator shall apply for and receive from the department a facility ID number and owner ID number upon submitting the following information:

(1) the owner's or operator's name, mailing address, email address, and telephone number; and

(2) the physical address of the UST, AST or site that requires corrective action but that is exempt from registration and tank fee requirements pursuant to 20.5.101.7 NMAC.

[20.5.123.2315 NMAC – Rp. 20.5.123.2315 NMAC, 12/27/2018]

20.5.123.2316 CONTENTS OF APPLICATION FOR PAYMENT AT RESPONSIBLE PARTY-LEAD SITES:

A. When a deliverable is completed and the department has determined in writing that the work for which payment is sought is satisfactory, the owner or operator shall submit one original and one copy of the application for payment to the department. The application shall include:

(1) information about the applicant, including: the owner's or operator's name, mailing address, email address, telephone number, owner ID number and the name of an individual to contact regarding the claim;

(2) the name of the owner at the time of the release;

(3) the name of the operator at the time of the release;

(4) the name of the responsible party at the time of the release;

(5) information about the facility, including: the name, address, release ID, and facility ID number for which payment is sought; the phase of corrective action being claimed; the type of tank (UST or AST); the workplan approval date and workplan identification number; the amount approved for the deliverable and the amount of the claim; the invoice number; the deliverable identification; and the exact name and date of the deliverable;

(6) references to all work products or deliverables for which payment is sought;

(7) the date or dates of the department's compliance determination or determinations under 20.5.123.2303 NMAC;

(8) information about the payee if the owner or operator has assigned payment to another person, including: name, mailing address, telephone number, email address, and the nature of the payee's interest in the site;

(9) a copy of any claim or claims the owner or operator has filed against any third party who caused or contributed to the release;

(10) copies of invoices showing the work performed for the minimum site assessment or other required corrective action for which payment is sought;

(11) a copy of the letter from the department determining the owner's or operator's eligibility for a zero or reduced deductible, if applicable, as determined in accordance with 20.5.123.2312 NMAC;

(12) a statement that requirements to use a qualified firm in accordance with 20.5.122 NMAC have been met;

(13) a signed and notarized statement of an officer or agent of the qualified firm performing the corrective action:

(a) consenting to an audit of time sheets, payroll and bank records, tax records, purchase orders, manifests and bills of lading, internal expense records and any other documents required to verify the costs claimed in the application; and

(b) agreeing to return to the department, upon demand, any and all amounts paid from the fund if the department determines that the owner or operator misrepresented or omitted any relevant facts;

(14) copies of the workplan approval letter and any subsequent amendments to the workplan covering work for which payment is requested;

(15) a copy of any and all notices from the department approving as satisfactory the deliverable for which payment is requested;

(16) information about the contractor, including: the contractor's name, address and telephone number; and the name of the contractor's project manager for the site; and

(17) if payment has been assigned by the owner or operator to a contractor, proof that the contractor has paid all subcontractor invoices.

B. When work is performed on a fixed fee basis, the owner or operator shall also submit the following as part of the application:

(1) a description of the deliverable and the date delivered;

(2) verification that any performance criteria required for payment were achieved; and

(3) any other requirements of the workplan approval.

C. When work is performed on a time-and-materials basis, the owner or operator shall also submit the following as part of the application:

(1) detailed billings of labor and equipment for each task performed; contractor staff shall be identified by name and hourly rate; equipment shall be identified as owned or rented, with the hourly or daily rate; laboratory and subcontractor charges shall be clearly explained;

(2) timesheets, invoices, or statements with staff name, labor category, and description and date of work performed;

(3) copies of receipts for all equipment and supplies;

(4) travel and expense logs;

(5) if work is billed on an hourly basis, timesheets, invoices or statements which include the hourly rate and number of hours billed to the nearest one-quarter hour; and

(6) any other requirements of the workplan approval.

D. Upon the department's request, the owner or operator shall submit copies of all subcontractor invoices and an accounting of the amount paid and any remaining balance on each invoice.

E. In the first application for payment of corrective action costs for each workplan, the owner or operator shall submit one original and one copy of:

(1) an original, signed oath or affirmation in accordance with Sections 14-13-1 and 14-13-2 NMSA 1978:

(a) certifying that the owner or operator has read the approved workplan and understands that the corrective action described in the workplan shall be completed at the identified facility;

(b) certifying that all matters and facts contained in that application, and in any subsequent applications for payment for the same workplan, are and will be truthful and that all invoices reflect actual costs paid or otherwise incurred;

(c) consenting to an audit of financial records pertaining to the current and any future claims for the same workplan; and

(d) agreeing to return to the department, upon demand, any and all amounts paid from the fund if the department determines that the owner or operator misrepresented or omitted any relevant facts in this or any future application for payment for the same workplan;

(2) a signed, dated, and notarized disclosure statement indicating the site name and number where the release occurred; the type of tank (UST or AST); the facility ID number; the name, address, and telephone number of the entity that performed the work for which payment is claimed; the full name of all owners and operators of the tank for which payment is claimed; the name of each individual and business entity that owns or controls the entity that performed the work for which payment is claimed; and the name of every business concern that is a partner or subsidiary of the entity that performed the work for which payment is claimed;

(3) a completed internal revenue service W-9 form (request for taxpayer identification number and certification form);

(4) information about insurance coverage, including: whether the owner or operator has insurance for releases of regulated substances at the site of the release for which a claim is being made; the name, address, and telephone number of the insurance company; the name, address, and telephone number of a contact person within the insurance company; the amount of coverage; whether the applicant has filed an insurance claim for this release, and if so, the amount sought; and the amount the insurance company has paid; and

(5) copies of any insurance policies in effect on the date of the report or at the time of the release that may insure the owner or operator against all or part of the costs of corrective action.

F. After the first application for payment of corrective action costs for each workplan, an owner or operator who has properly submitted the documents required by subsection E of this section and received a payment need not submit these documents with future applications for payment unless any information provided in the first application has changed or the department has modified the scope of the work or the budget of the workplan.

G. The owner or operator shall not submit costs of any portion of a minimum site assessment in the same application for payment of costs of other required corrective action.

H. Documents submitted as part of an application for payment of corrective action costs shall not contain alterations, corrections, or erasures.

[20.5.123.2316 NMAC – Rp. 20.5.123.2316 NMAC, 12/27/2018]

[The department provides forms that may be used to comply with this section. The forms are available on the petroleum storage tank bureau's pages on the department website or by contacting the petroleum storage tank bureau at 505-476-4397 or 2905 Rodeo Park Drive East, Building 1, Santa Fe, New Mexico 87505.]

20.5.123.2317 CONTENTS OF APPLICATION FOR PAYMENT AT STATE-LEAD SITES:

When a deliverable is completed and the department has determined in writing that the work for which payment is sought is satisfactory, the contractor shall submit one original and one copy of the application for payment to the department. All applications shall include:

- A. the payee's name, mailing address, email address and telephone number;
- B. the contractor's name, mailing address, email address and telephone number;
- C. information about the workplan, including: the date the workplan was approved, the workplan identification number, the deliverable identification numbers and the date or dates each deliverable was delivered;
- D. information about the facility, including: the name, physical address, release ID, and facility ID number of the facility for which payment is sought; the phase of corrective action being claimed; the contract number; and the expiration date of the contract;
- E. the invoice number or numbers and the amount of each invoice for which payment is sought;
- F. copies of each invoice for which payment is sought; and
- G. copies of the workplan approval letter and any subsequent amendments to the workplan.

[20.5.123.2317 NMAC – Rp. 20.5.123.2317 NMAC, 12/27/2018]

[The department provides a form on the petroleum storage tank bureau's pages on the department website that may be used to comply with this section. The form may also be obtained by contacting the bureau at 505-476-4397 or 2905 Rodeo Park Drive East, Building 1, Santa Fe, New Mexico 87505.]

20.5.123.2318 APPLICATION AND PAYMENT PROCESS:

- A. All applications for payment shall be received by the department within 90 days of the date upon which the owner, operator or contractor received a notice of approval of the deliverable from the department, pursuant to 20.5.123.2309 NMAC. The department shall not grant extensions of the deadline for applications for payment

except for good cause shown, in which case the department shall grant a 30-day extension. For purposes of this section, "good cause" means unavoidable circumstances beyond the owner's, operator's, or contractor's control. All requests for an extension shall describe the reason or reasons an extension is necessary and shall be submitted to the department in writing within the 90-day period for submitting an application for payment.

B. Applications for payment shall be sent to the New Mexico environment department, petroleum storage tank bureau, reimbursement section.

C. The department shall review all applications for payment in the order received and shall, within 60 days of receipt, either:

(1) pay the owner, operator or contractor for all eligible costs or as required by 20.5.121.2105 NMAC; or

(2) reject the application and notify the owner, operator or contractor in writing of the inadequacies in the application that caused the rejection.

D. The department may reject an application for payment:

(1) of the cost of any deliverable if:

(a) the application is received after the deadlines imposed by this section;

(b) the application does not contain all of the information or documents required by 20.5.123.2316 or 20.5.123.2317 NMAC (including but not limited to, all required disclosures, affirmations, timesheets, receipts, logs, and invoices);

(c) the application itself or the attached documents are incomplete, inaccurate or unclear;

(d) the application contains information that is intentionally misleading or false;

(e) the application seeks payment for work that was not pre-approved by the department;

(f) the application seeks payment for work that was not approved by the department as satisfactory; or

(g) the application seeks payment of costs that exceed the amount approved in the workplan; and

(2) of the cost of any deliverable other than an MSA if:

- (a) the department has not made a compliance determination; or
- (b) tank fees are past due.

E. The owner, operator or contractor may correct any inadequacies in the application and resubmit one completed original application and one copy within 30 days of the date of the notice of inadequacies.

F. Upon receiving a resubmitted application, the department shall follow the procedures in subsections C, D and H of this section for reviewing and accepting or rejecting applications for payment.

G. The owner, operator or contractor may submit a total of three applications (an initial application and two resubmitted applications) for any deliverable. After the owner, operator or contractor submits a total of three inadequate applications, the department may decline to review additional applications for the same deliverable.

H. Payment for eligible costs shall occur no later than 60 days, or in accordance with 20.5.121.2105 NMAC, after the department determines the application is complete and approves the technical adequacy of the application. The department shall mail the check for payment to the person designated as payee in the application.

I. Payment under this section shall not foreclose the department's right to recover excessive or illegal payments.

[20.5.123.2318 NMAC – Rp. 20.5.123.2318 NMAC, 12/27/2018]

[The address of the department's petroleum storage tank bureau, reimbursement section, is: 2905 Rodeo Park Drive East, Building 1, Santa Fe, New Mexico 87505.]

20.5.123.2319 SUBROGATION:

A. The department has a right of subrogation to any insurance policies in existence at the time of the release to the extent of any rights the owner or operator of a site may have had under that policy, pursuant to Subsection D of Section 74-6B-8 NMSA 1978. The department's subrogation rights are limited to the extent of the department's expenditures from the corrective action fund or other sources. The owner or operator shall include in the first application for payment a copy of any insurance policies which were in effect on the date of the report, as well as any policies which were in existence at the time the release may have occurred and which may insure the owner or operator against all or part of the costs of taking corrective action. The owner or operator shall also report to the department any claims filed against any policy identified in accordance with this section or Subsection G of 20.5.123.2310 NMAC.

B. The department has a right of subrogation against any third party who caused or also contributed to the release, pursuant to Subsection D of Section 74-6B-8 NMSA

1978. This right of subrogation shall apply regardless of any applications for payment the owner or operator may have made or intends to make for payment from the fund. The owner or operator shall report to the department the identity of any third party against whom a claim is filed and provide a copy of any claim filed against that party.

[20.5.123.2319 NMAC – Rp. 20.5.123.2319 NMAC, 12/27/2018]

20.5.123.2320 ADMINISTRATIVE REVIEW:

A. With the exception of compliance determinations under 20.5.123.2303 through 20.5.123.2305 NMAC, an owner, operator or contractor aggrieved by a decision made by the department under 20.5 NMAC may obtain review of the decision using the procedures and subject to the limitations set forth in 20.5.125 NMAC.

B. An offeror aggrieved by a selection decision made by the department and the owner or operator pursuant to 20.5.123.2306 through 20.5.123.2307 NMAC may obtain review of the decision from the secretary by submitting a written request for hearing.

(1) Timelines. The request must be made in writing to the secretary by the offeror within 10 days after the department has notified the owner or operator and all submitting firms of the highest scoring proposal. If an appeal is received within the 10-day time limit, the secretary shall hold a hearing within 15 days after receipt of the request, unless the parties agree to an alternate timeframe. The secretary shall notify the person who requested the hearing of the date, time and place of the hearing by certified mail.

(2) Burden of proof. In the appeal hearing, the burden of proof is on the person who requested the hearing.

(3) Procedures.

(a) Appeal hearings shall be held at a place designated by the secretary, unless other mutually agreed upon arrangements are made. The secretary may designate a person to conduct the hearing and make a final decision or make recommendations for a final decision. The secretary's hearing notice shall indicate who will conduct the hearing and make the final decision.

(b) The department shall make an audio recording of the hearing. If either party wants the hearing transcribed, that party shall bear the costs of transcription.

(c) In appeal hearings, the rules governing civil procedure and evidence in district court shall not apply. Hearings shall be conducted so that all relevant views, arguments, and testimony are amply and fairly presented without undue repetition. The secretary shall allow department staff and the hearing requestor to call and examine witnesses, to submit written and oral evidence and arguments, to introduce exhibits, and to cross-examine persons who testify. All testimony shall be taken under oath. At

the end of the hearing, the secretary shall decide and announce if the hearing record will remain open, for how long, and for what reason(s) it will be left open.

(4) Secretary's decision. Based upon the evidence presented at the hearing, the secretary or designee shall sustain, modify, or reverse the action of the department. The secretary or designee's decision shall be by written final order within five business days following the close of the hearing record. The order shall include the reason(s) on which the decision is based, and shall be sent by certified mail to the hearing requestor and any other affected person who requests notice.

(5) Stay of action. The filing of an administrative appeal shall stay execution of the contract by the owner or operator until the secretary or designee issues a final order on the appeal.

(6) Judicial review. Judicial review of the secretary or designee's final order shall be as provided by law. The filing of a judicial appeal shall not stay the execution of the contract, corrective action, compliance with the regulations, or any other action required by the secretary.

C. An individual denied designation by the department as a representative pursuant to 20.5.123.2311 NMAC may obtain review of the department's decision using the procedures and subject to the limitations set forth in 20.5.125 NMAC.

D. Compliance determinations shall be appealed as provided in 20.5.123.2321 and 20.5.123.2322 NMAC.

[20.5.123.2320 NMAC – Rp. 20.5.123.2320 NMAC, 12/27/2018]

20.5.123.2321 REVIEW OF DETERMINATIONS OF COMPLIANCE:

A. Any owner or operator aggrieved by a decision made by the department regarding determinations of compliance in accordance with 20.5.123.2303 through 20.5.123.2305 NMAC may appeal the decision by submitting a request for reconsideration of the decision to the director. Any owner or operator aggrieved by a decision made under these regulations by the director may appeal the decision by submitting a request for reconsideration to the director. The reconsideration will be based on written submittals. Any such request for reconsideration shall be in writing and shall specify the grounds upon which the petitioner objects to the decision. The request shall be accompanied by any and all written material and argument which the owner or operator wishes the director to consider upon reconsideration. The request for reconsideration shall be postmarked within 15 days of the date of the determination.

B. Department staff shall respond to the request for reconsideration within 15 days of receipt of the complete submittal of the owner or operator's request for reconsideration. The response of the department staff shall be sent to both the director and the owner or operator and shall be accompanied by any and all written materials

and argument in support of the position of the staff on the issues raised by the owner or operator.

C. For good cause shown, the director may permit either party additional time in which to submit the supporting written materials or argument pursuant to subsections A and B of this section. Any request for additional time and all evidence for good cause shall be submitted in writing prior to the end of the 15-day period described in subsection A of this section. The department shall act on the request for additional time within a reasonable period of time.

D. The director's action on the request for reconsideration shall be based on the written materials and argument submitted pursuant to this section unless the director, in the director's discretion, schedules a conference on the request for reconsideration.

E. The director's action on the request for reconsideration shall be by written decision and shall state the reason therefor. The director shall send a copy of the decision to the owner or operator and furnish a copy to department staff promptly after the decision is rendered.

F. The owner or operator may appeal the decision of the director made under subsection E of this section by requesting a hearing in accordance with 20.5.123.2322 NMAC.

[20.5.123.2321 NMAC – Rp. 20.5.123.2321 NMAC, 12/27/2018]

20.5.123.2322 REQUEST FOR HEARING ON DETERMINATIONS OF COMPLIANCE:

A. An owner or operator may obtain review by the secretary of a decision by the director made pursuant to subsection E of 20.5.123.2321 NMAC by filing a written request for a hearing as provided in the environment department adjudicatory procedures, 20.1.5 NMAC, within 30 days after the date the owner or operator receives the director's decision pursuant to Subsection E of 20.5.123.2321 NMAC. The procedures set forth in the environment department adjudicatory procedures, 20.1.5 NMAC, shall govern the proceeding.

B. The complainant shall attach to the request for hearing a copy of the determination for which review is sought.

C. With the request for hearing, the complainant shall file a reply to the determination. The reply shall address each of the findings in the determination, including any facts which support the complainant's position that the complainant has complied with the requirements of subsection B of Section 74-6B-8 NMSA 1978.

D. The secretary shall schedule the hearing for no later than 90 days after service of the notice of docketing.

[20.5.123.2322 NMAC – Rp. 20.5.123.2322 NMAC, 12/27/2018]

20.5.123.2323 EFFECT OF APPEAL ON PAYMENT, ENFORCEMENT:

A request for hearing or other administrative review shall not delay payment for any phase of corrective action, other than that which is being contested. A request for hearing shall not affect the secretary's authority to issue compliance orders or otherwise seek enforcement of 20.5 NMAC under the provisions of the Hazardous Waste Act or relieve an owner or operator of any responsibility under 20.5 NMAC.

[20.5.123.2323 NMAC – Rp. 20.5.123.2323 NMAC, 12/27/2018]

20.5.123.2324 CONTRACTOR FEE SCHEDULE:

A. Hourly billing rates listed in subsection C below shall conform to the Professional Services categories defined in subsection B of this section. Payment will be based on task(s) performed. Professional services not explicitly listed in this fee schedule may not be billed without prior negotiation and pre-approval by the department. The department may require justification.

B. The professional services categories are defined as follows:

(1) Principal scientist – Administrative or professional head of organization. Directs professional staff. Charges a very limited number of hours per site, as in review of project documents.

(2) Senior scientist – Senior technical leader. Develops technical and budgetary approach to work orders. Duties include aquifer characterization, review of technical reports and remedial action plans. Supervises work activities of lower level professional staff. Coordinates and communicates with agency personnel and client regarding contracts, general direction and problems at work site. Generally, performs limited field work. Performs design and investigation work in technically complex situations often requiring innovative applications.

(3) Project scientist/engineer-manager – Identifies problems and develops investigative and remedial solutions to work site situations. Consults with higher-level professional staff. Prepares workplans, cost estimates and reports. Performs modeling. Analyzes and interprets field data. Supervises lower level technical personnel during on-site drilling, sampling, or remediation activities. Frequently communicates with agency personnel and client.

(4) Staff scientist/engineer – Implements field work for on-site investigation and remediation activities including site characterization, drilling supervision, and monitoring well installation and sampling activities. Assists in modeling, hydrogeologic data analysis, and report preparation. Consults with higher level professional staff.

(5) Field technician – Supervises installation, maintenance, and repair of investigative and remediation machinery and equipment. Conducts sampling and monitoring. Maintains machinery and equipment. Assists with field supervision of subcontractors.

(6) Draftsperson – Technically familiar with basic engineering principles and construction methodologies. Works independently; work product reviewed by Professional Engineer. Proficient with computer aided design drafting.

(7) Administrator – Tracks workplan costs, prepares and processes invoices, administers leasing and ordering of equipment, and performs general administrative work for report and workplan preparation.

(8) Secretary – Performs word processing and spreadsheet entry. Assists technical and senior personnel with report production, correspondence preparation and data entry.

(9) Clerk – Performs general office work, typing, filing, and document reproduction.

C. Professional Service Rates:

Professional services	Hourly rate
Principal scientist	\$175.00
Senior scientist	\$145.00
Project scientist/engineer-manager	\$115.00
Staff scientist/engineer	\$95.00
Field technician	\$85.00
Draftsperson	\$85.00
Administrator	\$80.00
Secretary	\$50.00
Clerk	\$45.00

D. Field Equipment Costs:

Field equipment	Cost per day
Carbon monoxide, sulphur dioxide oxide and oxygen meters	\$50.00
Water quality meter	\$50.00
Dissolved oxygen meter (water)	\$37.50
Electroconductivity meter	\$47.50
Explosimeter	\$42.50
Fluid field detector	\$30.00
Interface probe	\$65.00
Organic vapor meter	\$70.00
Photoionization detector	\$70.00
Flame ionization detector	\$75.00

pH Meter	\$22.50
Other. Costs shall be pre-approved by the department. The department may require justification.	

E. Per diem and mileage will be paid in accordance with 2.42.2 NMAC, Regulations Governing the Per Diem and Mileage Act. The department shall only approve mileage reimbursement for travel within New Mexico.

F. Earth-moving equipment. Costs shall be pre-approved by the department. The department may require justification:

- (1) backhoe, light duty (12 feet-19 feet);
- (2) backhoe, medium duty (14 feet-19 feet);
- (3) trackhoe, light duty;
- (4) trackhoe, medium duty;
- (5) trackhoe, heavy duty; and
- (6) Other. Costs shall be pre-approved by the department. The department may require justification.

G. Well Supplies. Costs shall be pre-approved by the department. The department may require justification:

- (1) two-inch blank;
- (2) four-inch blank;
- (3) two- inch screen PVC 10 feet;
- (4) four-inch screen PVC 10 feet;
- (5) filter pack, per 100 pounds;
- (6) bentonite pellets, per 50 pounds;
- (7) bentonite chips, per 50 pounds;
- (8) bentonite gel, per 100 pounds;
- (9) grout, per 50 pounds.;
- (10) eight-inch manhole;

(11) 12-inch manhole; and

(12) Other. Costs shall be pre-approved by the department. The department may require justification.

H. Drilling. Costs shall be pre-approved by the department. The department may require justification:

(1) mobilization/demobilization;

(2) hollow stem auger;

(3) air rotary;

(4) Sonic drilling;

(5) other drilling methods;

(6) plug and abandon; and

(7) Other. Costs shall be pre-approved by the department. The department may require justification.

I. Lab services. Costs shall be pre-approved by the department. The department may require justification:

(1) EPA methods.

(a) 8310;

(b) 601/8010, 602/8020;

(c) Modified 8015;

(d) 418.1;

(e) 610/8100;

(f) 624/8240;

(g) 625/8270;

(h) 8260; and

(i) RCRA 8 metals.

- (2) benzene, toluene, ethyl benzene, and xylenes; methyl tertiary-butyl ether;
- (3) pH;
- (4) total organic carbon;
- (5) Geotechnical soil analyses:
 - (a) sieve analysis;
 - (b) soil moisture;
 - (c) density;
 - (d) porosity;
 - (e) fraction organic carbon; and

(6) Other. Costs shall be pre-approved by the department. The department may require justification.

J. The contractor shall provide justification or documentation upon request of the department for proposed costs subject to this part.

K. Subcontractor costs shall be billed at cost. The department may require three bids for subcontracted services.

[20.5.123.2324 NMAC – Rp. 20.5.123.2324 NMAC, 12/27/2018]

PART 124: LENDER LIABILITY

20.5.124.1 ISSUING AGENCY:

New Mexico Environmental Improvement Board.

[20.5.124.1 NMAC - N, 07/24/2018]

20.5.124.2 SCOPE:

This part applies to all storage tank systems in this state except as provided in Subsections B and D of 20.5.101.2 NMAC. This part also applies to owners and operators of AST systems with capacities of 55,000 gallons or more associated with airport hydrant fuel distribution systems and owners and operators of AST systems with capacities of 55,000 gallons or more associated with UST systems with field-constructed tanks as these terms are defined in 20.5.101 NMAC.

[20.5.124.2 NMAC - N, 07/24/2018]

20.5.124.3 STATUTORY AUTHORITY:

This part is promulgated pursuant to the provisions of the Hazardous Waste Act, Sections 74-4-1 through 74-1-14 NMSA 1978, and the general provisions of the Environmental Improvement Act, Sections 74-1-1 through 74-1-15 NMSA 1978.

[20.5.124.3 NMAC - N, 07/24/2018]

20.5.124.4 DURATION:

Permanent.

[20.5.124.1 NMAC - N, 07/24/2018]

20.5.124.5 EFFECTIVE DATE:

July 24, 2018, unless later date is indicated in the bracketed note at the end of a section.

[20.5.124.1 NMAC - N, 07/24/2018]

20.5.124.6 OBJECTIVE:

This part is adopted to limit the regulatory obligations of lending institutions and other persons who hold a security interest in a storage tank system, or in real estate containing a storage tank, or that acquire a title or deed to a storage tank or a facility or property on which a storage tank is located.

[20.5.124.1 NMAC - N, 07/24/2018]

20.5.124.7 DEFINITIONS:

The definitions in 20.5.101 NMAC apply to this part. In addition, when used in this part, the following terms shall have the meanings given below:

A. "Storage tank technical standards," as used in this part, refers to the requirements of 20.5.102, 20.5.104, 20.5.106 through 20.5.111 NMAC, 20.5.114 and 20.5.115 NMAC, and 20.5.118.1800 NMAC through Subsection A of 20.5.118.1801 NMAC.

B. Petroleum production, refining, and marketing.

(1) "Petroleum production" means the production of crude oil or other forms of petroleum (as defined in 20.5.101.7 NMAC) as well as the production of petroleum products from purchased materials.

(2) "Petroleum refining" means the cracking, distillation, separation, conversion, upgrading, and finishing of refined petroleum or petroleum products.

(3) "Petroleum marketing" means the distribution, transfer, or sale of petroleum or petroleum products for wholesale or retail purposes.

C. "Indicia of ownership" means evidence of a secured interest, evidence of an interest in a security interest, or evidence of an interest in real or personal property securing a loan or other obligation, including any legal or equitable title or deed to real or personal property acquired through or incident to foreclosure. Evidence of such interests include, but are not limited to, mortgages, deeds of trust, liens, surety bonds and guarantees of obligations, title held pursuant to a lease financing transaction in which the lessor does not select initially the leased property (hereinafter "lease financing transaction"), and legal or equitable title obtained pursuant to foreclosure. Evidence of such interests also includes assignments, pledges, or other rights to or other forms of encumbrance against property that are held primarily to protect a security interest. A person is not required to hold title or a security interest in order to maintain indicia of ownership.

D. A "holder" is a person who maintains indicia of ownership primarily to protect a security interest in a petroleum storage tank or storage tank system or facility or property on which a petroleum storage tank or storage tank system is located. A holder includes the initial holder (such as a loan originator); any subsequent holder (such as a successor-in-interest or subsequent purchaser of the security interest on the secondary market); a guarantor of an obligation, surety, or any other person who holds ownership indicia primarily to protect a security interest; or a receiver or other person who acts on behalf or for the benefit of a holder.

E. A "borrower," "debtor," or "obligor" is a person whose petroleum storage tank or storage tank system or facility or property on which the petroleum storage tank or storage tank system is located is encumbered by a security interest. These terms may be used interchangeably.

F. "Primarily to protect a security interest" means that the holder's indicia of ownership are held primarily for the purpose of securing payment or performance of an obligation.

(1) "Security interest" means an interest in a petroleum storage tank or storage tank system or in the facility or property on which a petroleum storage tank or storage tank system is located, created or established for the purpose of securing a loan or other obligation. Security interests include but are not limited to mortgages, deeds of trusts, liens, and title pursuant to lease financing transactions. Security

interests may also arise from transactions such as sale and leasebacks, conditional sales, installment sales, trust receipt transactions, certain assignments, factoring agreements, accounts receivable financing arrangements, and consignments, if the transaction creates or establishes an interest in a storage tank or storage tank system or in the facility or property on which the storage tank or storage tank system is located, for the purpose of securing a loan or other obligation.

(2) "Primarily to protect a security interest," as used in this part, does not include indicia of ownership held primarily for investment purposes, nor ownership indicia held primarily for purposes other than as protection for a security interest. A holder may have other, secondary reasons for maintaining indicia of ownership, but the primary reason why any ownership indicia are held must be as protection for a security interest.

G. "Operation" means, for purposes of this part, the use, storage, filling, or dispensing of petroleum contained in a storage tank or storage tank system.

H. "Participating in the management of a storage tank or storage tank system" means that the holder is engaging in decision-making control of, or activities related to, operation of the storage tank or storage tank system, as defined herein. Participation in management does not include the mere capacity or ability to influence or the unexercised right to control storage tank or storage tank system operations.

I. "Foreclosure" means that legal, marketable or equitable title or deed has been issued, approved, and recorded, and that the holder has obtained access to the storage tank, storage tank system, storage tank facility, and property on which the storage tank or storage tank system is located, provided that the holder acted diligently to acquire marketable title or deed and to gain access to the storage tank, storage tank system, storage tank facility, and property on which the storage tank or storage tank system is located.

J. "Loan work out" means those actions by which a holder, at any time prior to foreclosure, seeks to prevent, cure, or mitigate a default by the borrower or obligor; or to preserve, or prevent the diminution of, the value of the security. Work out activities include, but are not limited to, restructuring or renegotiating the terms of the security interest; requiring payment of additional rent or interest; exercising forbearance; requiring or exercising rights pursuant to an assignment of accounts or other amounts owing to an obligor; requiring or exercising rights pursuant to an escrow agreement pertaining to amounts owing to an obligor; providing specific or general financial or other advice, suggestions, counseling, or guidance; and exercising any right or remedy the holder is entitled to by law or under any warranties, covenants, conditions, representations, or promises from the borrower.

K. "Written, bona fide, firm offer" means a legally enforceable, commercially reasonable, cash offer solely for the foreclosed storage tank or storage tank system or facility or property on which the storage tank or storage tank system is located, including

all material terms of the transaction, from a ready, willing, and able purchaser who demonstrates to the holder's satisfaction the ability to perform.

[20.5.124.7 NMAC - N, 07/24/2018]

20.5.124.8-20.5.124.2399 [RESERVED]

20.5.124.2400 ACTIONS THAT ARE PARTICIPATION IN MANAGEMENT:

A. Participation in the management of a storage tank or storage tank system means, for purposes of this part, actual participation by the holder in the management or control of decision-making related to the operation of a storage tank or storage tank system. A holder is participating in the management of the storage tank or storage tank system only if the holder either:

(1) Exercises decision-making control over the operational (as opposed to financial or administrative) aspects of the storage tank or storage tank system, such that the holder has undertaken responsibility for all or substantially all of the management of the storage tank or storage tank system; or

(2) Exercises control at a level comparable to that of a manager of the borrower's enterprise, such that the holder has assumed or manifested responsibility for the overall management of the enterprise encompassing the day-to-day decision-making of the enterprise with respect to all, or substantially all, of the operational (as opposed to financial or administrative) aspects of the enterprise.

B. Operational aspects of the enterprise relate to the use, storage, filling, or dispensing of petroleum contained in a storage tank or storage tank system, and include functions such as that of a facility or plant manager, operations manager, chief operating officer, or chief executive officer.

C. Financial or administrative aspects include functions such as that of a credit manager, accounts payable/receivable manager, personnel manager, controller, chief financial officer, or similar functions.

D. Operational aspects of the enterprise do not include the financial or administrative aspects of the enterprise, or actions associated with environmental compliance, or actions undertaken voluntarily to protect the environment in accordance with applicable requirements in 20.5 NMAC.

[20.5.124.2400 NMAC - N, 07/24/2018]

20.5.124.2401 ACTIONS THAT ARE NOT PARTICIPATION IN MANAGEMENT PRE-FORECLOSURE:

A. Actions at the inception of the loan or other transaction.

(1) No act or omission prior to the time that indicia of ownership are held primarily to protect a security interest constitutes evidence of participation in management within the meaning of this subpart.

(2) A prospective holder who undertakes or requires an environmental investigation (which could include a site assessment, inspection, and/or audit) of the storage tank or storage tank system or facility or property on which the storage tank or storage tank system is located (in which indicia of ownership are to be held), or requires a prospective borrower to clean up contamination from the storage tank or storage tank system or to comply or come into compliance (whether prior or subsequent to the time that indicia of ownership are held primarily to protect a security interest) with any applicable law or regulation, is not by such action considered to be participating in the management of the storage tank or storage tank system or facility or property on which the storage tank or storage tank system is located.

B. Loan policing and work out.

(1) Actions that are consistent with holding ownership indicia primarily to protect a security interest do not constitute participation in management for purposes of this part.

(2) The authority for the holder to take such actions may, but need not, be contained in contractual or other documents specifying requirements for financial, environmental, and other warranties, covenants, conditions, representations or promises from the borrower.

(3) Loan policing and work out activities cover and include all such activities up to foreclosure, exclusive of any activities that constitute participation in management.

(4) Policing activities.

(a) Policing the security interest or loan. A holder who engages in policing activities prior to foreclosure will remain within the exemption provided that the holder does not together with other actions participate in the management of the storage tank or storage tank system as provided in Subsection A of this section. Such policing actions include, but are not limited to, the following activities:

(i) requiring the borrower to clean up contamination from the storage tank or storage tank system during the term of the security interest;

(ii) requiring the borrower to comply or come into compliance with applicable federal, state, and local environmental and other laws, rules, and regulations during the term of the security interest;

(iii) securing or exercising authority to monitor or inspect the storage tank or storage tank system or facility or property on which the storage tank or storage

tank system is located (including on-site inspections) in which indicia of ownership are maintained, or the borrower's business or financial condition during the term of the security interest; or

(iv) taking other actions to adequately police the loan or security interest (such as requiring a borrower to comply with any warranties, covenants, conditions, representations, or promises from the borrower).

(b) Environmental policing activities. Policing activities also include undertaking by the holder of storage tank environmental compliance actions and voluntary environmental actions taken in compliance with 20.5 NMAC, provided that the holder does not otherwise participate in the management or daily operation of the storage tank or storage tank system as provided in Subsection A of this section, 20.5.124.2404 and 20.5.124.2405 NMAC. A holder who undertakes these actions shall do so in compliance with the applicable requirements in 20.5 NMAC. A holder may directly oversee these environmental compliance actions and voluntary environmental actions, and directly hire contractors to perform the work, and is not by such action considered to be participating in the management of the storage tank or storage tank system. Such allowable actions include, but are not limited to:

- (i) release detection and release reporting;
- (ii) release response and corrective action;
- (iii) temporary or permanent closure of a storage tank or storage tank system;
- (iv) storage tank upgrading or replacement; and
- (v) maintenance of corrosion protection.

(5) Loan work out. A holder who engages in loan work out activities prior to foreclosure will remain within the exemption provided that the holder does not together with other actions participate in the management of the storage tank or storage tank system as provided in Subsection A of this section.

[20.5.124.2401 NMAC - N, 07/24/2018]

20.5.124.2402 FORECLOSURE ON A STORAGE TANK OR STORAGE TANK SYSTEM OR FACILITY OR PROPERTY ON WHICH A STORAGE TANK OR STORAGE TANK SYSTEM IS LOCATED, AND PARTICIPATION IN MANAGEMENT ACTIVITIES POST-FORECLOSURE:

A. Foreclosure.

(1) Indicia of ownership that are held primarily to protect a security interest include legal or equitable title or deed to real or personal property acquired through or incident to foreclosure. The indicia of ownership held after foreclosure continue to be maintained primarily as protection for a security interest provided that the holder undertakes to sell, re-lease a storage tank or storage tank system or facility or property on which the storage tank or storage tank system is located, held pursuant to a lease financing transaction (whether by a new lease financing transaction or substitution of the lessee), or otherwise divest itself of the storage tank or storage tank system or facility or property on which the storage tank or storage tank system is located, in a reasonably expeditious manner, using whatever commercially reasonable means are relevant or appropriate with respect to the storage tank or storage tank system or facility or property on which the storage tank or storage tank system is located, taking all facts and circumstances into consideration, and provided that the holder does not participate in management (as defined in 20.5.124.7 NMAC) prior to or after foreclosure.

(2) For purposes of establishing that a holder is seeking to sell, re-lease pursuant to a lease financing transaction (whether by a new lease financing transaction or substitution of the lessee), or divest in a reasonably expeditious manner a storage tank or storage tank system or facility or property on which the storage or storage tank system is located, the holder may use whatever commercially reasonable means as are relevant or appropriate with respect to the storage tank or storage tank system or facility or property on which the storage tank or storage tank system is located, or may employ the means specified in Subsection B of this section.

(3) A holder that outbids, rejects, or fails to act upon a written bona fide, firm offer of fair consideration for the storage tank or storage tank system or facility or property on which the storage tank or storage tank system is located, as provided in Subsection B of this section, is not considered to hold indicia of ownership primarily to protect a security interest.

B. Holding foreclosed property for disposition and liquidation.

(1) A holder may conduct the following activities without voiding the security interest exemption, subject to the requirements of this part:

(a) A holder, who does not participate in management prior to or after foreclosure, may sell, re-lease, pursuant to a lease financing transaction (whether by a new lease financing transaction or substitution of the lessee), a storage tank or storage tank system or facility or property on which the storage tank or storage tank system is located, liquidate, wind up operations, and take measures, prior to sale or other disposition, to preserve, protect, or prepare the secured storage tank or storage tank system or facility or property on which the storage tank or storage tank system is located.

(b) A holder may arrange for an existing or new operator to continue or initiate operation of the storage tank or storage tank system.

(2) A holder establishes that the ownership indicia maintained after foreclosure continue to be held primarily to protect a security interest by, within 12 months following foreclosure, listing the storage tank or storage tank system or the facility or property on which the storage tank or storage tank system is located, with a broker, dealer, or agent who deals with the type of property in question, or by advertising the storage tank or storage tank system or facility or property on which the storage tank or storage tank system is located, as being for sale or disposition on at least a monthly basis in either a real estate publication or a trade or other publication suitable for the storage tank or storage tank system or facility or property on which the storage tank or storage tank system is located, or a newspaper of general circulation (defined as one with a circulation over 10,000, or one suitable under any applicable federal, state, or local rules of court for publication required by court order or rules of civil procedure) covering the location of the storage tank or storage tank system or facility or property on which the storage tank or storage tank system is located.

(a) For purposes of this provision, the 12-month period begins to run from the date that the marketable title or deed has been issued, approved and recorded, and the holder has obtained access to the storage tank, storage tank system, storage tank facility and property on which the storage tank or storage tank system is located provided that the holder acted diligently to acquire marketable title or deed and to obtain access to the storage tank, storage tank system, storage tank facility and property on which the storage tank or storage tank system is located.

(b) If the holder fails to act diligently to acquire marketable title or deed or to gain access to the storage tank or storage tank system, the 12-month period begins to run from the date on which the holder first acquires either title to or possession of the secured storage tank or storage tank system, or facility or property on which the storage tank or storage tank system is located.

(3) A holder that outbids, rejects, or fails to act upon an offer of fair consideration for the storage tank or storage tank system or the facility or property on which the storage tank or storage tank system is located, establishes by such outbidding, rejection, or failure to act, that the ownership indicia in the secured storage tank or storage tank system or facility or property on which the storage tank or storage tank system is located are not held primarily to protect the security interest, unless the holder is required, in order to avoid liability under federal or state law, to make a higher bid, to obtain a higher offer, or to seek or obtain an offer in a different manner.

(a) Fair consideration, in the case of a holder maintaining indicia of ownership primarily to protect a senior security interest in the storage tank or storage tank system or facility or property on which the storage tank or storage tank system is located, is the value of the security interest as defined in this section.

(i) The value of the security interest includes all debt and costs incurred by the security interest holder, and is calculated as an amount equal to or in excess of the sum of the outstanding principal (or comparable amount in the case of a

lease that constitutes a security interest) owed to the holder immediately preceding the acquisition of full title (or possession in the case of a lease financing transaction) pursuant to foreclosure, plus any unpaid interest, rent, or penalties (whether arising before or after foreclosure).

(ii) The value of the security interest also includes all reasonable and necessary costs, fees, or other charges incurred by the holder incident to work out, foreclosure, retention, preserving, protecting, and preparing, prior to sale, the storage tank or storage tank system or facility or property on which the storage tank or storage tank system is located, re-lease, pursuant to a lease financing transaction (whether by a new lease financing transaction or substitution of the lessee), of a storage tank or storage tank system or facility or property on which the storage tank or storage tank system is located, or other disposition.

(iii) The value of the security interest also includes environmental investigation costs (which could include a site assessment, inspection, and/or audit of the storage tank or storage tank system or facility or property on which the storage tank or storage tank system is located), and corrective action costs incurred under 20.5.118, 20.5.119, or 20.5.120 NMAC or any other costs incurred as a result of reasonable efforts to comply with any other applicable federal, state or local law or regulation; less any amounts received by the holder in connection with any partial disposition of the property and any amounts paid by the borrower (if not already applied to the borrower's obligations) subsequent to the acquisition of full title (or possession in the case of a lease financing transaction) pursuant to foreclosure.

(iv) In the case of a holder maintaining indicia of ownership primarily to protect a junior security interest, fair consideration is the value of all outstanding higher priority security interests plus the value of the security interest held by the junior holder, each calculated as set forth in this paragraph.

(b) Outbids, rejects, or fails to act upon an offer of fair consideration means that the holder outbids, rejects, or fails to act upon within 90 days of receipt, a written, bona fide, firm offer of fair consideration for the storage tank or storage tank system or facility or property on which the storage tank or storage tank system is located received at any time after six months following foreclosure, as defined in 20.5.124.7 NMAC.

(i) For purposes of this provision, the six-month period begins to run from the date that marketable title or deed has been issued, approved and recorded to the holder, and the holder has obtained access to the storage tank, storage tank system, storage tank facility and property on which the storage tank or storage tank system is located, provided that the holder was acting diligently to acquire marketable title or deed and to obtain access to the storage tank or storage tank system, storage tank facility and property on which the storage tank or storage tank system is located.

(ii) If the holder fails to act diligently to acquire marketable title or deed or to gain access to the storage tank or storage tank system, the six-month period

begins to run from the date on which the holder first acquires either title to or possession of the secured storage tank or storage tank system, or facility or property on which the storage tank or storage tank system is located.

C. Actions that are not participation in management post-foreclosure.

(1) A holder is not considered to be participating in the management of a storage tank or storage tank system or facility or property on which the storage tank or storage tank system is located when undertaking actions under 20.5 NMAC, provided that the holder does not otherwise participate in the management or daily operation of the storage tank or storage tank system as provided in Subsection A of this section and in 20.5.124.2400 NMAC. Such allowable actions include, but are not limited to, release detection and release reporting, release response and corrective action, temporary or permanent closure of a storage tank system, storage tank upgrading or replacement, and maintenance of corrosion protection.

(2) A holder who undertakes these actions shall do so in compliance with the applicable requirements in 20.5 NMAC.

(3) A holder may directly oversee these environmental compliance actions and voluntary environmental actions, and directly hire contractors to perform the work, and is not by such action considered to be participating in the management of the storage tank or storage tank system.

[20.5.124.2402 NMAC - N, 07/24/2018]

20.5.124.2403 OWNERSHIP OF A STORAGE TANK OR STORAGE TANK SYSTEM OR FACILITY OR PROPERTY ON WHICH A STORAGE TANK OR STORAGE TANK SYSTEM IS LOCATED:

A holder is not an "owner" of a petroleum storage tank or storage tank system or facility or property on which a petroleum storage tank or storage tank system is located for purposes of compliance with the storage tank technical standards as defined in 20.5.124.7 NMAC; the corrective action requirements under 20.5.118 NMAC, 20.5.119 NMAC, and 20.5.120 NMAC; and the financial responsibility requirements under 20.5.117 NMAC, provided the person:

A. does not participate in the management of the storage tank or storage tank system as defined in 20.5.124.2400 NMAC, 20.5.124.2401 NMAC, and 20.5.124.2402 NMAC; and

B. does not engage in petroleum production, refining, and marketing, as defined in 20.5.124.7 NMAC.

[20.5.124.2403 NMAC - N, 07/24/2018]

20.5.124.2404 OPERATING A STORAGE TANK OR STORAGE TANK SYSTEM PRIOR TO FORECLOSURE:

A holder, prior to foreclosure, as defined in 20.5.124.7 NMAC, is not an "operator" of a petroleum storage tank or storage tank system for purposes of compliance with the storage tank technical standards as defined in 20.5.124.7 NMAC; the corrective action requirements under 20.5.118 NMAC, 20.5.119 NMAC, and 20.5.120 NMAC; and the financial responsibility requirements under 20.5.117 NMAC, provided that the holder is not in control of or does not have responsibility for the daily operation of the storage tank or storage tank system.

[20.5.124.2404 NMAC - N, 07/24/2018]

20.5.124.2405 OPERATING A STORAGE TANK OR STORAGE TANK SYSTEM AFTER FORECLOSURE:

The following provisions apply to a holder who, through foreclosure, as defined in 20.5.124.7 NMAC, acquires a petroleum storage tank or storage tank system or facility or property on which a petroleum storage tank or storage tank system is located.

A. A holder is not an "operator" of a petroleum storage tank or storage tank system for purposes of compliance with 20.5 NMAC if there is an operator, other than the holder, who is in control of or has responsibility for the daily operation of the storage tank or storage tank system, and who can be held responsible for compliance with applicable requirements of 20.5 NMAC.

B. If another operator does not exist, as provided for under Subsection A of this section, a holder is not an "operator" of the storage tank or storage tank system, for purposes of compliance with the storage tank technical standards as defined in 20.5.124.7 NMAC; the corrective action requirements under 20.5.118 NMAC, 20.5.119 NMAC, and 20.5.120 NMAC; and the storage tank financial responsibility requirements under 20.5.117 NMAC, provided that the holder:

(1) empties all of its known storage tanks and storage tank systems within 60-calendar days after foreclosure or another reasonable time period specified by the department, so that, in the case of both USTs and ASTs, no more than two and one-half centimeters (one inch) of residue, or three-tenths percent by weight of the total capacity of the storage tank system, remains in the system; leaves vent lines open and functioning; caps and secures all other lines, pumps, manways, and ancillary equipment; and, for ASTs, disconnects and caps all associated piping from the AST; and

(2) empties those storage tanks and storage tank systems that are discovered after foreclosure within 60-calendar days after discovery or another reasonable time period specified by the department, so that, in the case of both ASTs and USTs, no more than two and one-half centimeters (one inch) of residue, or three-tenths percent

by weight of the total capacity of the storage tank system, remains in the system; leaves vent lines open and functioning; and caps and secures all other lines, pumps, manways, and ancillary equipment; and, for ASTs, disconnects and caps all associated piping from the AST.

C. For purposes of this subsection, the 12-month period begins to run from the date on which the storage tank system is emptied and secured under Subsection B of this section. If another operator does not exist, as provided for under Subsections A and B of this section, in addition to satisfying the conditions under Subsection B of this section, the holder shall either:

(1) permanently close the storage tank or storage tank system in accordance with 20.5.115 NMAC, except 20.5.115.1501 NMAC and Subsection B of 20.5.115.1504 NMAC; however, the holder is required to notify the department of a release or a suspected release in accordance with 20.5.118 NMAC; or

(2) temporarily close the storage tank or storage tank system in accordance with the following:

(a) continue operation and maintenance of corrosion protection in accordance with 20.5.107.705 NMAC;

(b) report suspected releases to the department in accordance with 20.5.118 NMAC; and

(c) conduct a site assessment in accordance with Subsection A of 20.5.115.1504 NMAC if the storage tank system is temporarily closed for more than 12 months and the storage tank system does not meet either the performance standards in 20.5.106 NMAC for new underground storage tank systems or, for AST systems, the upgrading requirements in 20.5.109 NMAC, except that the spill and overfill equipment requirements do not have to be met.

D. The storage tank system can remain in temporary closure until a subsequent purchaser has acquired marketable title to the storage tank or storage tank system or facility or property on which the storage tank or storage tank system is located. Once a subsequent purchaser acquires marketable title to the storage tank or storage tank system or facility or property on which the storage tank or storage tank system is located, the purchaser shall decide whether to operate or close the storage tank or storage tank system in accordance with applicable requirements in 20.5 NMAC.

[20.5.124.2405 NMAC - N, 07/24/2018]

PART 125: ADMINISTRATIVE REVIEW

20.5.125.1 ISSUING AGENCY:

New Mexico Environmental Improvement Board.

[20.5.125.1 NMAC - N, 07/24/2018]

20.5.125.2 SCOPE:

This part applies to aggrieved parties as defined in this part.

[20.5.125.2 NMAC - N, 07/24/2018]

20.5.125.3 STATUTORY AUTHORITY:

This part is promulgated pursuant to the provisions of the Hazardous Waste Act, Sections 74-4-1 through 74-4-14 NMSA 1978; the Ground Water Protection Act, Sections 74-6B-1 through 74-6B-14 NMSA 1978; and the general provisions of the Environmental Improvement Act, Sections 74-1-1 through 74-1-17 NMSA 1978.

[20.5.125.3 NMAC - N, 07/24/2018]

20.5.125.4 DURATION:

Permanent.

[20.5.125.4 NMAC - N, 07/24/2018]

20.5.125.5 EFFECTIVE DATE:

July 24, 2018, unless a later date is indicated in the bracketed history note at the end of a section.

[20.5.125.5 NMAC - N, 07/24/2018]

20.5.125.6 OBJECTIVE:

The purpose of this part is to provide aggrieved parties a means of seeking expedited review or reconsideration of decisions made by the department under 20.5 NMAC in regulating storage tank systems in order to protect the public health, safety and welfare and the environment of the state.

[20.5.125.6 NMAC - N, 07/24/2018]

20.5.125.7 DEFINITIONS:

- A. The definitions in 20.5.101 NMAC apply to this part.
- B. As used in this part, the term "aggrieved party" means:

(1) an owner, operator, person designated as a representative under 20.5.123.2311 NMAC or product deliverer aggrieved by a decision by the department pursuant to 20.5 NMAC;

(2) a contractor aggrieved by a decision by the department under 20.5.123 NMAC;

(3) a person that has been denied designation as a representative under 20.5.123.2311 NMAC; or

(4) a person that has been denied qualification or disqualified under 20.5.122 NMAC.

[20.5.125.7 NMAC - N, 07/24/2018]

20.5.125.8-20.5.125.2499 [RESERVED]

20.5.125.2500 INITIATION OF ADMINISTRATIVE REVIEW:

A. Except for appeals as provided for in 20.5.123 NMAC for compliance determinations, any aggrieved party may obtain review of the decision by either:

(1) submitting to the department a written request for informal review pursuant to 20.5.125.2501 NMAC; or

(2) submitting to the secretary or the secretary's designee a written request for review on written submittals pursuant to 20.5.125.2502 NMAC.

B. Any request for administrative review initiated pursuant to Subsection A of this section must be postmarked within 15 days of the date of the decision.

C. An aggrieved party may request review on written submittals under 20.5.125.2502 NMAC without first requesting informal review under 20.5.125.2501 NMAC. If, however, an aggrieved party first requests informal review under 20.5.125.2501 NMAC, the aggrieved party thereafter may request review on written submittals under 20.5.125.2502 NMAC of the determination made by the department pursuant to Subsection D of 20.5.125.2501 NMAC, provided that the request for review on written submittals under 20.5.125.2502 NMAC is postmarked within 15 days of the date of the determination made by the department pursuant to Subsection D of 20.5.125.2501 NMAC.

D. Review under this part does not stay the decision being reviewed, unless otherwise ordered by the secretary or secretary's designee, nor does it apply to or affect the secretary's authority to issue compliance orders or otherwise seek enforcement of these regulations, 20.5 NMAC, under the provisions of the Hazardous Waste Act or the Ground Water Protection Act.

[20.5.125.2500 NMAC - N, 07/24/2018]

20.5.125.2501 INFORMAL REVIEW:

A. A request for informal review by an aggrieved party shall be in writing and shall specify the grounds upon which the aggrieved party objects to the decision. Every request for informal review shall be submitted to the department by the deadline set out in Subsection B of 20.5.125.2500 NMAC.

B. The department shall afford prompt opportunity for an informal conference at which the aggrieved party may present the aggrieved party's views on the issues raised in the request for review and offer any supporting documentation or testimony. The department shall notify the aggrieved party of the time, date and place of the informal conference.

C. If the decision to be reviewed was based on an inspection or field test performed or witnessed by an employee of the department, the member of department staff conducting the review must be someone other than the employee who conducted or witnessed the inspection or test.

D. After considering all written and oral views presented, the department shall affirm, modify or reverse the original decision and shall furnish the aggrieved party with a written notification of its determination.

[20.5.125.2501 NMAC - N, 07/24/2018]

**20.5.125.2502 REVIEW BY THE SECRETARY OR THE SECRETARY'S
DESIGNEE ON WRITTEN SUBMITTALS:**

A. Every request for review by the secretary or the secretary's designee on written submittals shall be in writing and shall specify the grounds upon which the aggrieved party objects to the decision. The request shall be accompanied by any and all written materials and argument which the aggrieved party wishes the secretary or the secretary's designee to consider upon review. The request and all written materials and argument shall be submitted to the secretary or the secretary's designee by the deadline set out in Subsections B and C of 20.5.125.2500 NMAC.

B. Within 15 days after the filing of the aggrieved party's request for review and submittal of all the aggrieved party's supporting material, department staff shall provide to the secretary or the secretary's designee any and all written materials and argument in support of the position of department staff on the issues raised by the aggrieved party.

C. For good cause shown, the secretary or the secretary's designee may permit either party (that is, either department staff or the aggrieved party) additional time in which to submit the supporting written materials and argument allowed by Subsections

A and B of this section. Any extension of time to submit written submittals shall not include the authority to extend the time to file a request for review under this part.

D. The action of the secretary or the secretary's designee on the request for review shall be based on the written materials and argument submitted pursuant to this section unless the secretary or the secretary's designee schedules a hearing on the request for review as set forth below.

E. The secretary or the secretary's designee may exercise discretion in determining if there is significant public interest for a public hearing and, if so, may provide notice of the time and place of the hearing to the aggrieved party, and may provide notice to interested persons other than the aggrieved party and provide for public participation in the review process described in this section, as the secretary or the secretary's designee deems appropriate.

F. If the secretary chooses to hold a hearing as described in Subsection E of this section, the secretary shall hold the hearing within 60 days after receiving the written materials and argument described in Subsection A or after receiving the request for a hearing, whichever occurs last. In the event the department holds a hearing, the cost of the court reporter and transcript shall be paid by the party that requested the hearing. The hearing shall be conducted in accordance with 20.1.5 NMAC.

G. The action of the secretary or the secretary's designee on the request for review shall be by written order and shall state the decision and the reason therefore. The secretary or the secretary's designee shall send a copy of the order to the aggrieved party and furnish a copy to department staff promptly after the order is entered. This written order shall be the department's final action on the request for review. Any judicial review of this final order shall be as provided by applicable law.

[20.5.125.2502 NMAC - N, 07/24/2018]

CHAPTER 6: WATER QUALITY

PART 1: GENERAL PROVISIONS [RESERVED]

PART 2: GROUND AND SURFACE WATER PROTECTION

20.6.2.1 ISSUING AGENCY:

Water Quality Control Commission

[12-1-95; 20.6.2.1 NMAC - Rn, 20 NMAC 6.2.I.1000, 1-15-01]

20.6.2.2 SCOPE:

All persons subject to the Water Quality Act, NMSA 1978, Sections 74-6-1 et seq.

[12-1-95; 20.6.2.2 NMAC - Rn, 20 NMAC 6.2.I.1001, 1-15-01]

20.6.2.3 STATUTORY AUTHORITY:

Standards and Regulations are adopted by the commission under the authority of the Water Quality Act, NMSA 1978, Sections 74-6-1 through 74-6-17.

[2-18-77, 9-20-82, 12-1-95; 20.6.2.3 NMAC - Rn, 20 NMAC 6.2.I.1002, 1-15-01]

20.6.2.4 DURATION:

Permanent.

[12-1-95; 20.6.2.4 NMAC - Rn, 20 NMAC 6.2.I.1003, 1-15-01]

20.6.2.5 EFFECTIVE DATE:

December 1, 1995 unless a later date is cited at the end of a section.

[12-1-95, 11-15-96; 20.6.2.5 NMAC - Rn, 20 NMAC 6.2.I.1004, 1-15-01; A, 1-15-01]

20.6.2.6 OBJECTIVE:

The objective of this Part is to implement the Water Quality Act, NMSA 1978, Sections 74-6-1 et seq.

[12-1-95; 20.6.2.6 NMAC - Rn, 20 NMAC 6.2.I.1005, 1-15-01]

20.6.2.7 DEFINITIONS:

The following terms, as used in this part shall have the following meanings; terms defined in the Water Quality Act, but not defined in this part, will have the meaning given in the act.

A. Definitions that begin with the letter "A."

(1) "abandoned well" means a well whose use has been permanently discontinued or which is in a state of disrepair such that it cannot be rehabilitated for its intended purpose or other purposes including monitoring and observation;

(2) "abate" or "abatement" means the investigation, containment, removal or other mitigation of water pollution;

(3) "abatement plan" means a description of any operational, monitoring, contingency and closure requirements and conditions for the prevention, investigation

and abatement of water pollution, and includes Stage 1, Stage 2, or Stage 1 and 2 of the abatement plan, as approved by the secretary;

(4) **"adjacent properties"** means properties that are contiguous to the discharge site or property that would be contiguous to the discharge site but for being separated by a public or private right of way, including roads and highways.

B. Definitions that begin with the letter "B."

(1) **"background"** means, for purposes of ground water abatement plans only and for no other purposes in this part or any other regulations including but not limited to surface water standards, the amount of ground water contaminants naturally occurring from undisturbed geologic sources or water contaminants which the responsible person establishes are occurring from a source other than the responsible person's facility; this definition shall not prevent the secretary from requiring abatement of commingled plumes of pollution, shall not prevent responsible persons from seeking contribution or other legal or equitable relief from other persons, and shall not preclude the secretary from exercising enforcement authority under any applicable statute, regulation or common law;

C. Definitions that begin with the letter "C."

(1) **"casing"** means pipe or tubing of appropriate material, diameter and weight used to support the sides of a well hole and thus prevent the walls from caving, to prevent loss of drilling mud into porous ground, or to prevent fluid from entering or leaving the well other than to or from the injection zone;

(2) **"cementing"** means the operation whereby a cementing slurry is pumped into a drilled hole and/or forced behind the casing;

(3) **"cesspool"** means a **"drywell"** that receives untreated domestic liquid waste containing human excreta, and which sometimes has an open bottom and/or perforated sides; a large capacity cesspool means a cesspool that receives liquid waste greater than that regulated by 20.7.3 NMAC;

(4) **"collapse"** means the structural failure of overlying materials caused by removal of underlying materials;

(5) **"commission"** means:

- (a) the New Mexico water quality control commission or
- (b) the department, when used in connection with any administrative and enforcement activity;

(6) **"confining zone"** means a geological formation, group of formations, or part of a formation that is capable of limiting fluid movement from an injection zone;

(7) **"conventional mining"** means the production of minerals from an open pit or underground excavation; underground excavations include mine shafts, workings and air vents, but does not include excavations primarily caused by in situ extraction activities;

D. Definitions that begin with the letter "D."

(1) **"daily composite sample"** means a sample collected over any twenty-four hour period at intervals not to exceed one hour and obtained by combining equal volumes of the effluent collected, or means a sample collected in accordance with federal permit conditions where a permit has been issued under the national pollutant discharge elimination system or for those facilities which include a waste stabilization pond in the treatment process where the retention time is greater than twenty (20) days, means a sample obtained by compositing equal volumes of at least two grab samples collected within a period of not more than twenty-four (24) hours;

(2) **"department", "agency", or "division"** means the New Mexico environment department or a constituent agency designated by the commission;

(3) **"discharge permit"** means a discharge plan approved by the department;

(4) **"discharge permit modification"** means a change to the requirements of a discharge permit that result from a change in the location of the discharge, a significant increase in the quantity of the discharge, a significant change in the quality of the discharge; or as required by the secretary;

(5) **"discharge permit renewal"** means the re-issuance of a discharge permit for the same, previously permitted discharge;

(6) **"discharge plan"** means a description of any operational, monitoring, contingency, and closure requirements and conditions for any discharge of effluent or leachate which may move directly or indirectly into ground water;

(7) **"discharge site"** means the entire site where the discharge and associated activities will take place;

(8) **"disposal"** means to abandon, deposit, inter or otherwise discard a fluid as a final action after its use has been achieved;

(9) **"domestic liquid waste"** means human excreta and water-carried waste from typical residential plumbing fixtures and activities, including but not limited to waste from toilets, sinks, bath fixtures, clothes or dishwashing machines and floor drains;

(10) **"domestic liquid waste treatment unit"** means a watertight unit designed, constructed and installed to stabilize only domestic liquid waste and to retain solids contained in such domestic liquid waste, including but not limited to aerobic treatment units and septic tanks;

(11) **"drywell"** means a well, other than an improved sinkhole or subsurface fluid distribution system, completed above the water table so that its bottom and sides are typically dry except when receiving fluids;

E. Definitions that begin with the letter "E."

"experimental technology" means a technology which has not been proven feasible under the conditions in which it is being tested;

F. Definitions that begin with the letter "F."

"fluid" means material or substance which flows or moves whether in a semisolid, liquid, sludge, gas, or any other form or state;

G. Definitions that begin with the letter "G."

"ground water" means interstitial water which occurs in saturated earth material and which is capable of entering a well in sufficient amounts to be utilized as a water supply;

H. Definitions that begin with the letter "H."

"hazard to public health" exists when water which is used or is reasonably expected to be used in the future as a human drinking water supply exceeds at the time and place of such use, one or more of the standards of Subsection A of 20.6.2.3103 NMAC, or the naturally occurring concentrations, whichever is higher in determining whether a discharge would cause a hazard to public health to exist, the secretary shall investigate and consider the purification and dilution reasonably expected to occur from the time and place of discharge to the time and place of withdrawal for use as human drinking water;

I. Definitions that begin with the letter "I."

(1) **"improved sinkhole"** means a naturally occurring karst depression or other natural crevice found in volcanic terrain and other geologic settings which have been modified by man for the purpose of directing and emplacing fluids into the subsurface;

(2) **"injection"** means the subsurface emplacement of fluids through a well;

(3) **"injection zone"** means a geological formation, group of formations, or part of a formation receiving fluids through a well;

J Definitions that begin with the letter "J." [RESERVED]

K. Definitions that begin with the letter "K." [RESERVED]

L. Definitions that begin with the letter "L." [RESERVED]

M. Definitions that begin with the letter "M."

"motor vehicle waste disposal well" means a well which receives or has received fluids from vehicular repair or maintenance activities;

N. Definitions that begin with the letter "N."

"non-aqueous phase liquid" means an interstitial body of liquid oil, petroleum product, petrochemical, or organic solvent, including an emulsion containing such material;

O. Definitions that begin with the letter "O."

(1) **"operational area"** means a geographic area defined in a project discharge permit where a group of wells or well fields in close proximity comprise a single class III well operation;

(2) **"owner of record"** means an owner of property according to the property records of the tax assessor in the county in which the discharge site is located at the time the application was deemed administratively complete;

P. Definitions that begin with the letter "P."

(1) **"packer"** means a device lowered into a well to produce a fluid-tight seal within the casing;

(2) **"person"** means an individual or any other entity including partnerships, corporation, associations, responsible business or association agents or officers, the state or a political subdivision of the state or any agency, department or instrumentality of the United States and any of its officers, agents or employees;

(3) **"petitioner"** means a person seeking a variance from a regulation of the commission pursuant to Section 74-6-4(H) NMSA 1978;

(4) **"plugging"** means the act or process of stopping the flow of water, oil or gas into or out of a geological formation, group of formations or part of a formation through a borehole or well penetrating these geologic units;

(5) **"project discharge permit"** means a discharge permit which describes the operation of similar class III wells or well fields within one or more individual operational areas;

Q. Definitions that begin with the letter "Q." **[RESERVED]**

R. Definitions that begin with the letter "R."

(1) **"refuse"** includes food, swill, carrion, slops and all substances from the preparation, cooking and consumption of food and from the handling, storage and sale of food products, the carcasses of animals, junked parts of automobiles and other machinery, paper, paper cartons, tree branches, yard trimmings, discarded furniture, cans, oil, ashes, bottles, and all unwholesome material;

(2) **"responsible person"** means a person who is required to submit an abatement plan or who submits an abatement plan pursuant to this part;

S. Definitions that begin with the letter "S."

(1) **"secretary"** or **"director"** means the secretary of the New Mexico department of environment or the director of a constituent agency designated by the commission;

(2) **"sewer system"** means pipelines, conduits, pumping stations, force mains, or other structures, devices, appurtenances or facilities used for collecting or conducting wastes to an ultimate point for treatment or disposal;

(3) **"sewerage system"** means a system for disposing of wastes, either by surface or underground methods, and includes sewer systems, treatment works, disposal wells and other systems;

(4) **"significant modification of Stage 2 of the abatement plan"** means a change in the abatement technology used excluding design and operational parameters, or re-location of 25 percent or more of the compliance sampling stations, for any single medium, as designated pursuant to Paragraph (4) of Subsection E of 20.6.2.4106 NMAC;

(5) **"subsurface fluid distribution system"** means an assemblage of perforated pipes, drain tiles, or other mechanisms intended to distribute fluids below the surface of the ground;

(6) **"subsurface water"** means ground water and water in the vadose zone that may become ground water or surface water in the reasonably foreseeable future or may be utilized by vegetation;

T. Definitions that begin with the letter "T."

(1) "TDS" means total dissolved solids as determined by the "calculation method" (sum of constituents), by the "residue on evaporation method at 180 degrees" of the "*U.S. geological survey techniques of water resource investigations*," or by conductivity, as the secretary may determine;

(2) "toxic pollutant" means any water contaminant or combination of the water contaminants in the list below

(a) acrolein (CAS 107-02-8)

(b) acrylonitrile (CAS 107-13-1)

(c) benzene and alkylbenzenes

(i) benzene (CAS 71-43-2)

(ii) toluene (methylbenzene) (CAS 108-88-3)

(iii) ethylbenzene (CAS 100-41-4)

(iv) xylenes (dimethyl benzene isomers): o-xylene (CAS 95-47-6); m-xylene (CAS 108-38-3); and p-xylene (CAS 106-42-3)

(v) styrene (ethenylbenzene) (CAS 100-42-5)

(d) chlorinated benzenes

(i) monochlorobenzene (CAS 108-90-7)

(ii) 1,2-dichlorobenzene (ortho-dichlorobenzene) (CAS 95-50-1)

(iii) 1,4-dichlorobenzene (para-dichlorobenzene) (CAS 106-46-7)

(iv) 1,2,4-trichlorobenzene (CAS 120-82-1)

(v) 1,2,4,5-tetrachlorobenzene (CAS 95-94-3)

(vi) pentachlorobenzene (CAS 608-93-5)

(vii) hexachlorobenzene (CAS 118-74-1)

(e) chlorinated phenols

(i) 2,4-dichlorophenol (CAS 120-83-2)

(ii) 2,4,5-trichlorophenol (CAS 95-95-4)

(vi) tetrachloroethene (perchloroethylene, PCE) (CAS 127-18-4)

(l) halogenated methanes

(i) bromodichloromethane (CAS 75-27-4)

(ii) bromomethane (CAS 74-83-9)

(iii) chloromethane (CAS 74-87-3)

(iv) dichlorodifluoromethane (fluorocarbon-12) (CAS 75-71-8)

(v) dichloromethane (methylene chloride) (CAS 75-09-2)

(vi) tribromomethane (bromoform) (CAS 75-25-2)

(vii) trichloromethane (chloroform) (CAS 67-66-3)

(viii) tetrachloromethane (carbon tetrachloride) (CAS 56-23-5)

(ix) trichlorofluoromethane (fluorocarbon-11) (CAS 75-69-4)

(m) hexachlorobutadiene (CAS 87-68-3)

(n) isophorone (CAS 78-59-1)

(o) methyl tertiary-butyl-ether (MTBE) (CAS 1634-04-4)

(p) nitroaromatics and high explosives (HE)

(i) nitrobenzene (CAS 98-95-3)

(ii) 2,4-dinitrotoluene (2,4-DNT) (CAS 121-14-2)

(iii) 2,6-dinitrotoluene (2,6-DNT) (CAS 606-20-2)

(iv) octrahydro-1,3,5,7-tetranitro-1,3,5,7-tetrazocine (HMX) (CAS 2691-

41-0)

(v) hexahydro-1,3,5-trinitro-1,3,5-triazine (RDX) (CAS 121-82-4)

(vi) 2,4,6-trinitrotoluene (TNT) (CAS 118-96-7)

(vii) 2,4-dinitro-o-cresol (CAS 534-52-1)

(viii) dinitrophenols (CAS 51-28-5)

(q) nitrosamines

- (i)** N-nitrosodiethylamine (CAS 55-18-5)
- (ii)** N-nitrosodimethylamine (CAS 62-75-9)
- (iii)** N-nitrosodibutylamine (CAS 924-16-3)
- (iv)** N-nitrosodiphenylamine (CAS 86-30-6)
- (v)** N-nitrosopyrrolidine (CAS 930-55-2)

(r) perchlorate (CAS 14797-73-0)

(s) perfluorinated-chemicals (PFCs)

- (i)** perfluorohexane sulfonic acid (PHxS) (CAS 355-46-4)
- (ii)** perfluorooctane sulfonate (PFOS) (CAS 1763-23-1)
- (iii)** perfluorooctanoic acid (PFOA) (CAS 335-67-1)

(t) pesticides

- (i)** Aldrin (CAS 309-00-2)
- (ii)** atrazine (CAS 1912-24-9)
- (iii)** chlordane (CAS 57-74-9)
- (iv)** DDT (CAS 50-29-3)
- (v)** dieldrin (CAS 60-57-1)
- (vi)** endosulfan (CAS 115-29-7)
- (vii)** endrin (CAS 72-20-8)
- (viii)** heptachlor (CAS 76-44-8)
- (ix)** hexachlorocyclohexane (HCH, lindane): alpha-HCH (CAS 319-84-6); beta-HCH (CAS 319-85-7); gamma-HCH (CAS 58-89-9); and, technical-HCH (CAS 608-73-1)
- (x)** hexachlorocyclopentadiene (CAS 77-47-4)

(xi) prometon (CAS 1610-18-0)

(xii) toxaphene (CAS 8001-35-2)

(u) phenol (CAS 108-95-2)

(v) phthalate esters

(i) dibutyl phthalate (CAS 84-74-2)

(ii) di-2-ethylhexyl phthalate (DEHP) (CAS 117-81-7)

(iii) diethyl phthalate (DEP) (CAS 84-66-2)

(iv) dimethyl phthalate (DMP) (CAS 131-11-3)

(w) polycyclic compounds

(i) benzidine (CAS 92-87-5)

(ii) dichlorobenzidine (CAS 91-94-1)

(iii) diphenylhydrazine (CAS 122-66-7)

(iv) polychlorinated biphenyls (PCBs) (CAS 1336-36-3)

(x) polynuclear aromatic hydrocarbons (PAHs)

(i) anthracene (CAS 120-12-7)

(ii) benzo(a)pyrene (CAS 50-32-8)

(iii) 3,4-benzofluoranthene (CAS 205-99-2)

(iv) benzo(k)fluoranthene (CAS 207-08-9)

(v) fluoranthene (CAS 206-44-0)

(vi) fluorene (CAS 86-73-7)

(vii) naphthalene (CAS 91-20-3)

(viii) 1-methylnaphthalene (CAS 90-12-0)

(ix) 2-methylnaphthalene (CAS 91-57-6)

(x) phenanthrene (CAS 85-01-8)

(xi) pyrene (CAS 129-00-0)

(y) thiolane 1,1 dioxide (sulfolane) (CAS 126-33-0)

U. Definitions that begin with the letter "U." **[RESERVED]**

V. Definitions that begin with the letter "V."

(1) "**vadose zone**" means earth material below the land surface and above ground water, or in between bodies of ground water

W. Definitions that begin with the letter "W."

(1) "**wastes**" means sewage, industrial wastes, or any other liquid, gaseous or solid substance which will pollute any waters of the state;

(2) "**water**" means all water including water situated wholly or partly within or bordering upon the state, whether surface or subsurface, public or private, except private waters that do not combine with other surface or subsurface water;

(3) "**water contaminant**" means any substance that could alter if discharged or spilled the physical, chemical, biological or radiological qualities of water; "water contaminant" does not mean source, special nuclear or by-product material as defined by the Atomic Energy Act of 1954;

(4) "**watercourse**" means any river, creek, arroyo, canyon, draw, or wash, or any other channel having definite banks and beds with visible evidence of the occasional flow of water;

(5) "**water pollution**" means introducing or permitting the introduction into water, either directly or indirectly, of one or more water contaminants in such quantity and of such duration as may with reasonable probability injure human health, animal or plant life or property, or to unreasonably interfere with the public welfare or the use of property;

(6) "**well**" means: (1) A bored, drilled, or driven shaft; (2) A dug hole whose depth is greater than the largest surface dimension; (3) An improved sinkhole; or (4) A subsurface fluid distribution system;

(7) "**well stimulation**" means a process used to clean the well, enlarge channels, and increase pore space in the interval to be injected, thus making it possible for fluids to move more readily into the injection zone; well stimulation includes, but is not limited to, (1) surging, (2) jetting, (3) blasting, (4) acidizing, (5) hydraulic fracturing.

20.6.2.9 DOCUMENTS:

Documents referenced in the part may be viewed at the New Mexico environment department, ground water quality bureau, Harold Runnels building, 1190 St. Francis Drive, Santa Fe, New Mexico 87503.

[12-1-95; 20.6.2.9 NMAC - Rn, 20 NMAC 6.2.I.1006, 1-15-01; A, 12-1-01]

20.6.2.10 LIMITATIONS:

These regulations do not apply to the following:

A. Any activity or condition subject to the authority of the environmental improvement board pursuant to the Hazardous Waste Act, NMSA 1978, Sections 74-4-1 to -14, the Ground Water Protection Act, NMSA 1978, Sections 74-6B-1 to -14, or the Solid Waste Act, NMSA 1978, Sections 74-9-1 to -25, except to abate water pollution or to control the disposal or use of septage and sludge; or

B. Any activity or condition subject to the authority of the oil conservation commission pursuant to the provisions of the Oil and Gas Act, NMSA 1978, Section 70-2-12 and other laws conferring power on the oil conservation commission and the oil conservation division of the energy, minerals and natural resources department to prevent or abate water pollution.

[N, 12-21-18]

[12-1-95; 20.6.2.10 - 20.6.2.1199 NMAC - Rn, 20 NMAC 6.2.I.1008-1100, 1102-1199, 1-15-01]

20.6.2.1200 PROCEDURES:

[12-1-95; 20.6.2.1200 NMAC - Rn, 20 NMAC 6.2.I.1200, 1-15-01]

20.6.2.1201 NOTICE OF INTENT TO DISCHARGE:

A. Except for the notices specified in paragraphs (1) and (2) of this subsection, any person intending to make a new water contaminant discharge or to alter the character or location of an existing water contaminant discharge, unless the discharge is being made or will be made into a community sewer system or subject to the Liquid Waste Disposal Regulations adopted by the New Mexico environmental improvement board, shall file a notice with the ground water quality bureau of the department for discharges that may affect ground water, and/ or the surface water quality bureau of the department for discharges that may affect surface water.

(1) Notices regarding discharges from facilities for the production, refinement, pipeline transmission of oil and gas or products thereof, the oil field service industry as related to oil and gas production activities, oil field brine production wells, and carbon dioxide facilities shall be filed with the oil conservation division of the energy, minerals and natural resources department,

(2) Notices regarding discharges related to geothermal resources, as defined in Section 71-9-3 of the Geothermal Resources Development Act, NMSA 1978, Sections 71-9-1 to -11 (2016) shall be filed with the energy conservation and management division of the energy, minerals and natural resources department.

B. Except for the notices specified in paragraphs (1) and (2) of this subsection any person intending to inject fluids into a well, including a subsurface distribution system, unless the injection is being made subject to the Liquid Waste Disposal Regulations adopted by the New Mexico environmental improvement board, shall file a notice with the ground water quality bureau of the department.

(1) Notices regarding injections to wells associated with oil and gas facilities as described in Paragraph (1) of Subsection A of 20.6.2.1201 NMAC shall be filed with the oil conservation division.

(2) Notices regarding injections to wells associated with exploration, development or production of geothermal resources, as described in Paragraph (2) of Subsection A of 20.6.2.1201 NMAC, shall be filed with the energy conservation and management division of the energy, minerals and natural resources department pursuant to the Geothermal Resources Development Act, NMSA 1978, Sections 71-9-1 to -11 (2016).

C. Notices shall state:

- (1) the name of the person making the discharge;
 - (2) the address of the person making the discharge;
 - (3) the location of the discharge;
 - (4) an estimate of the concentration of water contaminants in the discharge;
- and
- (5) the quantity of the discharge.

D. Based on information provided in the notice of intent, the department will notify the person proposing the discharge as to which of the following apply:

- (1) a discharge permit is required;
- (2) a discharge permit is not required;
- (3) the proposed injection well will be added to the department's underground injection well inventory;
- (4) the proposed injection activity or injection well is prohibited pursuant to 20.6.2.5004 NMAC.

[1-4-68, 9-5-69, 9-3-72, 2-17-74, 2-20-81, 12-1-95; 20.6.2.1201 NMAC - Rn, 20 NMAC 6.2.I.1201, 1-15-01; A, 12-1-01; A, 12-21-18]

20.6.2.1202 FILING OF PLANS AND SPECIFICATIONS--SEWERAGE SYSTEMS:

A. Any person proposing to construct a sewerage system or proposing to modify any sewerage system in a manner that will change substantially the quantity or quality of the discharge from the system shall file plans and specifications of the construction or modification with ground water quality bureau of the department for discharges that may affect ground water, and/or the surface water quality bureau of the department for discharges that may affect surface water. Modifications having a minor effect on the character of the discharge from sewerage systems shall be reported as of January 1 and June 30 of each year to the ground water quality bureau of the department for discharges that may affect ground water, or the surface water quality bureau of the department for discharges that may affect surface water.

B. Plans, specifications and reports required by this section, if related to facilities for the production, refinement and pipeline transmission of oil and gas, or products thereof, shall be filed instead with the oil conservation division.

C. Plans and specifications required to be filed under this section must be filed prior to the commencement of construction.

[1-4-68, 9-3-72, 2-20-81, 12-1-95; 20.6.2.1202 NMAC - Rn, 20 NMAC 6.2.I.1202, 1-15-01; A, 12-1-01]

20.6.2.1203 NOTIFICATION OF DISCHARGE-REMOVAL:

A. With respect to any discharge from any facility of oil or other water contaminant, in such quantity as may with reasonable probability injure or be detrimental to human health, animal or plant life, or property, or unreasonably interfere with the public welfare or the use of property, the following notifications and corrective actions are required:

(1) As soon as possible after learning of such a discharge, but in no event more than twenty-four (24) hours thereafter, any person in charge of the facility shall orally notify the chief of the ground water quality bureau of the department, or the appropriate counterpart in any constituent agency delegated responsibility for enforcement of these rules as to any facility subject to such delegation. To the best of that person's knowledge, the following items of information shall be provided:

(a) the name, address, and telephone number of the person or persons in charge of the facility, as well as of the owner and/or operator of the facility;

(b) the name and address of the facility;

(c) the date, time, location, and duration of the discharge;

(d) the source and cause of discharge;

(e) a description of the discharge, including its chemical composition;

(f) the estimated volume of the discharge; and

(g) any actions taken to mitigate immediate damage from the discharge.

(2) When in doubt as to which agency to notify, the person in charge of the facility shall notify the chief of the ground water quality bureau of the department. If that department does not have authority pursuant to commission delegation, the department shall notify the appropriate constituent agency.

(3) Within one week after the discharger has learned of the discharge, the facility owner and/or operator shall send written notification to the same department official, verifying the prior oral notification as to each of the foregoing items and providing any appropriate additions or corrections to the information contained in the prior oral notification.

(4) The oral and written notification and reporting requirements contained in this Subsection A are not intended to be duplicative of discharge notification and reporting requirements promulgated by the oil conservation commission (OCC) or by the oil conservation division (OCD); therefore, any facility which is subject to OCC or OCD discharge notification and reporting requirements need not additionally comply with the notification and reporting requirements herein.

(5) As soon as possible after learning of such a discharge, the owner/operator of the facility shall take such corrective actions as are necessary or appropriate to contain and remove or mitigate the damage caused by the discharge.

(6) If it is possible to do so without unduly delaying needed corrective actions, the facility owner/operator shall endeavor to contact and consult with the chief of the ground water quality bureau of the department or appropriate counterpart in a delegated agency, in an effort to determine the department's views as to what further corrective actions may be necessary or appropriate to the discharge in question. In any event, no later than fifteen (15) days after the discharger learns of the discharge, the facility owner/operator shall send to said Bureau Chief a written report describing any corrective actions taken and/or to be taken relative to the discharge. Upon a written request and for good cause shown, the bureau chief may extend the time limit beyond fifteen (15) days.

(7) The bureau chief shall approve or disapprove in writing the foregoing corrective action report within thirty (30) days of its receipt by the department. In the event that the report is not satisfactory to the department, the bureau chief shall specify in writing to the facility owner/operator any shortcomings in the report or in the corrective actions already taken or proposed to be taken relative to the discharge, and shall give the facility owner/operator a reasonable and clearly specified time within which to submit a modified corrective action report. The bureau chief shall approve or disapprove in writing the modified corrective action report within fifteen (15) days of its receipt by the department.

(8) In the event that the modified corrective action report also is unsatisfactory to the department, the facility owner/operator has five (5) days from the notification by the bureau chief that it is unsatisfactory to appeal to the department secretary. The department secretary shall approve or disapprove the modified corrective action report within five (5) days of receipt of the appeal from the bureau chief's decision. In the absence of either corrective action consistent with the approved corrective action report or with the decision of the secretary concerning the shortcomings of the modified corrective action report, the department may take whatever enforcement or legal action it deems necessary or appropriate.

(9) If the secretary determines that the discharge causes or may with reasonable probability cause water pollution in excess of the standards and requirements of Section 20.6.2.4103 NMAC, and the water pollution will not be abated within one hundred and eighty (180) days after notice is required to be given pursuant to

Paragraph (1) of Subsection A of Section 20.6.2.1203 NMAC, the secretary may notify the facility owner/operator that he is a responsible person and that an abatement plan may be required pursuant to Section 20.6.2.4104 and Subsection A of Section 20.6.2.4106 NMAC.

B. Exempt from the requirements of this section are continuous or periodic discharges which are made:

(1) in conformance with regulations of the commission and rules, regulations or orders of other state or federal agencies; or

(2) in violation of regulations of the commission, but pursuant to an assurance of discontinuance or schedule of compliance approved by the commission or one of its duly authorized constituent agencies.

C. As used in this section and in Sections 20.6.2.4100 through 20.6.2.4115 NMAC, but not in other sections of this part:

(1) "discharge" means spilling, leaking, pumping, pouring, emitting, emptying, or dumping into water or in a location and manner where there is a reasonable probability that the discharged substance will reach surface or subsurface water;

(2) "facility" means any structure, installation, operation, storage tank, transmission line, motor vehicle, rolling stock, or activity of any kind, whether stationary or mobile;

(3) "oil" means oil of any kind or in any form including petroleum, fuel oil, sludge, oil refuse and oil mixed with wastes;

(4) "operator" means the person or persons responsible for the overall operations of a facility; and

(5) "owner" means the person or persons who own a facility, or part of a facility.

D. Notification of discharge received pursuant to this part or information obtained by the exploitation of such notification shall not be used against any such person in any criminal case, except for perjury or for giving a false statement.

E. Any person who has any information relating to any discharge from any facility of oil or other water contaminant, in such quantity as may with reasonable probability injure or be detrimental to human health, animal or plant life, or property, or unreasonably interfere with the public welfare or the use of property, is urged to notify the chief of the ground water quality bureau of the department. Upon such notification, the secretary may require an owner/operator or a responsible person to perform

corrective actions pursuant to Paragraphs (5) and (9) of Subsection A of Section 20.6.2.1203 NMAC.

[2-17-74, 2-20-81, 12-24-87, 12-1-95; 20.6.2.1203 NMAC - Rn, 20 NMAC 6.2.1.1203, 1-15-01; A, 12-1-01; A, 12-21-18]

20.6.2.1204-20.6.2.1209 [RESERVED]

[12-1-95; 20.6.2.1204 - 20.6.2.1209 NMAC - Rn, 20 NMAC 6.2.1.1204-1209, 1-15-01]

20.6.2.1210 VARIANCE PETITIONS:

A. Any person seeking a variance pursuant to Section 74-6-4(H) NMSA 1978, shall do so by filing a written petition with the commission. The petitioner may submit with his petition any relevant documents or material which the petitioner believes would support his petition. Petitions shall:

- (1) state the petitioner's name and address;
- (2) state the date of the petition;
- (3) describe the facility or activity for which the variance is sought;
- (4) state the address or description of the property upon which the facility is located;
- (5) describe the water body or watercourse affected by the discharge for which the variance is sought and provide information on uses of water that may be affected;
- (6) identify the regulation of the commission from which the variance is sought;
- (7) state in detail the extent to which the petitioner wishes to vary from the regulation;
- (8) state why the petitioner believes that compliance with the regulation will impose an unreasonable burden upon his activity; and
- (9) state in detail how any water pollution above standards will be abated; and
- (10) state the period of time for which the variance is desired including all reasons, data, reports and any other information demonstrating that such time period is justified and reasonable.

B. The variance petition shall be reviewed in accordance with the adjudicatory procedures of 20 NMAC 1.3.

C. The commission may grant the requested variance, in whole or in part, may grant the variance subject to conditions, or may deny the variance. If the variance is granted in whole or in part, or subject to conditions, the commission shall specify the length of time that the variance shall be in place.

D. For variances associated with a discharge permit or abatement plan, the existence and nature of the variance shall be disclosed in all public notices applicable to the discharge permit or abatement plan.

E. For variances granted for a period in excess of five years, the petitioner shall provide to the department for review a variance compliance report at five year intervals to demonstrate that the conditions of the variance are being met, including notification of any changed circumstances or newly-discovered facts that are material to the variance. At such time as the department determines the report is administratively complete, the department shall post the report on its website, and mail or e-mail notice of its availability to those persons on a general and facility-specific list maintained by the department who have requested notice of discharge permit applications, and any person who participated in the variance process. If such conditions are not being met, or there is evidence indicating changed circumstances or newly-discovered facts or conditions that were unknown at the time the variance was initially granted, any person, including the department, may request a hearing before the commission to revoke, modify, or otherwise reconsider the variance within 90 days of the issuance of the notice of availability of the report.

F. An order of the commission is final and bars the petitioner from petitioning for the same variance without special permission from the commission. The commission may consider, among other things, the development of new information and techniques to be sufficient justification for a second petition. If the petitioner, or his authorized representative, fails to appear at the public hearing on the variance petition, the commission shall proceed with the hearing on the basis of the petition. A variance may not be extended or renewed unless a new petition is filed and processed in accordance with the procedures established by this section.

20.6.2.1220 PENALTIES ENFORCEMENT, COMPLIANCE ORDERS, PENALTIES, ASSURANCE OF DISCONTINUANCE.:

Failure to comply with the Water Quality Act, or any regulation or standard promulgated pursuant to the Water Quality Act is a prohibited act. If the secretary determines that a person has violated or is violating a requirement of the Water Quality Act or any regulation promulgated thereunder or is exceeding any water quality standard or ground water standard contained in commission regulations, or is not complying with a condition or provision of an approved or modified abatement plan, discharge plan, or permit issued pursuant to the Water Quality Act, the secretary may issue a compliance order, assess a penalty, commence a civil action in district court, or accept an assurance of discontinuance in accordance with NMSA 1978, Section 74-6-10 of the Water Quality Act.

20.6.2.2001 PROCEDURES FOR CERTIFICATION OF FEDERAL NATIONAL POLLUTANT DISCHARGE ELIMINATION SYSTEM (NPDES) PERMITS:

A. This section applies to the state certification of draft national pollutant discharge elimination system (NPDES) permits under Section 401 of the federal Clean Water Act. The purpose of such certification is to reasonably ensure that the permitted activities will be conducted in a manner that will comply with applicable water quality standards, including the antidegradation policy, and the statewide water quality management plan.

B. After review of a draft permit, the department will either: (1) certify that the discharge will comply with the applicable provisions of Sections 208(e), 301, 302, 303, 306 and 307 of the federal Clean Water Act and with appropriate requirements of state law; (2) certify that the discharge will comply with the applicable provisions of Sections 208(e), 301, 302, 303, 306 and 307 of the Clean Water Act and with appropriate requirements of state law upon inclusion of specified conditions in the permit and include the justification for the conditions; or (3) deny certification and include reasons for the denial. If the department does not act on the certification within the time prescribed by the federal permitting agency for such action, the authority to do so shall be waived.

C. Pursuant to federal regulations at 40 CFR 124.10(c), the U.S. environmental protection agency provides notice of draft NPDES permits to the applicant (except for general permits); various local, state, federal, tribal and pueblo government agencies; and other interested parties, and it allows at least 30 days of public comment. To the extent practicable, the department will provide public notice that the department is

reviewing a draft NPDES permit for the purpose of preparing a state certification or denial pursuant to Section 401 of the federal Clean Water Act jointly with the notice provided by the U.S. environmental protection agency. The department will also post notice on its website.

D. When joint notice is impractical, the department shall provide notice that the department is reviewing a draft NPDES permit for purpose of preparing a state certification or denial pursuant to Section 401 of the federal Clean Water Act as follows:

(1) for general permits by:

(a) posting notice on the department's website;

(b) publishing notice in at least one newspaper of general circulation;

(c) mailing or e-mailing notice to those persons on the general mailing list maintained by the department who have requested such notice; and

(d) mailing or e-mailing notice to any affected local, state, federal, tribal, or pueblo government agency, as identified by the department; or

(2) for individual permits by:

(a) posting notice on the department's website;

(b) publishing notice in a newspaper of general circulation in the location of the discharge;

(c) mailing notice to the applicant;

(d) mailing or e-mailing notice to those persons on the general and facility-specific mailing list maintained by the department who have requested such notice; and

(e) mailing notice to any affected local, state, federal, tribal, or pueblo government agency, as identified by the department.

E. Public notices may describe more than one permit or permit action. The notice provided under Subsections C and D of 20.6.2.2001 NMAC shall include:

(1) for general permits:

(a) a statement that the department will accept written comments on the draft permit during the comment period including the address where comments may be submitted;

(b) a brief description of the activities that produce the discharge; and

(c) a description of the geographic area to be covered by the permit; or

(2) for individual permits:

(a) a statement that the department will accept written comments on the draft permit during the comment period including the address where comments may be submitted;

(b) the name and address of the permittee or permit applicant and, if different, of the facility or activity regulated by the permit;

(c) a brief description of the activities that produce the discharge; and

(d) a general description of the location of the discharge and the name of the receiving water.

F. Following the public notice provided under Subsections C or D of 20.6.2.2001 NMAC, there shall be a period of at least 30 days during which interested persons may submit written comments to the department. The 30-day comment period shall begin on the date of the public notice provided under Subsections C or D of 20.6.2.2001 NMAC. The department shall consider all pertinent comments.

G. Following the public comment period provided under Subsection F of 20.6.2.2001 NMAC, the department shall issue a final permit certification including any conditions that the department places on the certification, or issue a statement of denial including the reasons for the denial. The final certification will generally be issued within 45 days from the date a request to grant, deny or waive certification is received by the department, unless the department in consultation with the U.S. environmental protection agency regional administrator finds that unusual circumstances require a longer time. The department shall send a copy of the final permit certification or denial to the U.S. environmental protection agency, the applicant (except for general permits), and those members of the public who submitted comments to the department.

(1) The permit certification shall be in writing and shall include:

(a) the name of the applicant (except for general permits) and the NPDES permit number;

(b) a statement that the department has examined the application or other relevant information and bases its certification upon an evaluation of the information contained in such application or other information which is relevant to water quality considerations;

(c) a statement that there is a reasonable assurance that the activity will be conducted in a manner which will not violate applicable water quality standards;

(d) a statement of any conditions which the department deems necessary or desirable with respect to the discharge of the activity;

(e) identification of any condition more stringent than that in the draft permit required to assure compliance with the applicable provisions of Sections 208(e), 301, 302, 303, 306 and 307 of the Clean Water Act and with appropriate requirements of state law citing the Clean Water Act or state law upon which the condition is based;

(f) a statement of the extent to which each condition of the draft permit can be made less stringent without violating the requirements of state law, including water quality standards; and

(g) such other information as the department may determine to be appropriate.

(2) With justification, including any of the reasons listed in the New Mexico Water Quality Act, NMSA 1978, Section 74-6-5(E), the department may deny permit certification. Denial of permit certification shall be in writing and shall include:

(a) the name of the applicant (except for general permits) and the NPDES permit number;

(b) a statement that the department has examined the application or other relevant information and bases its denial upon an evaluation of the information contained in such application or other information which is relevant to water quality considerations;

(c) a statement of denial including the reasons for the denial; and

(d) such other information as the department may determine to be appropriate.

H. Any person who is adversely affected by the certification or denial of a specific permit may appeal such certification or denial by filing a petition for review with the secretary within 30 days after the department issues the final permit certification or statement of denial. Such petition shall be in writing and shall include a concise statement of the reasons for the appeal and the relief requested. The secretary may hold a hearing on the appeal. In any such appeal hearing, the procedures of 20.1.4 NMAC shall not apply. The department shall give notice of the appeal hearing at least 30 days prior to the hearing. The notice shall state the date, time, and location of the appeal hearing and shall include the pertinent information listed in Subparagraphs (b), (c), and (d) of Paragraph (2) of Subsection E of 20.6.2.2001 NMAC. The secretary shall appoint a hearing officer to preside over the appeal hearing. Any person may present oral or written statements, data, technical information, legal arguments, or other information on the permit certification or denial during the appeal hearing. Any person may present oral or written statements, data, technical information, legal arguments, or

other information in rebuttal of that presented by another person. Reasonable time limits may be placed on oral statements, and the submission of written statements may be required. The hearing officer may question persons presenting oral testimony. Cross examination of persons presenting oral statements shall not otherwise be allowed. Within 30 days after the completion of the hearing, or such other time as the secretary may order given the complexities of the case, the hearing officer shall submit recommendations to the secretary. The secretary shall issue a final decision on the appeal within 30 days after receiving the recommendation, or such other time as the secretary may order given the complexities of the case.

I. Pursuant to the New Mexico Water Quality Act, NMSA 1978, Section 74-6-5(O), any person who is adversely affected by the secretary's final decision may file with the commission a petition for review of that decision based on the administrative record.

[20.6.2.2001 NMAC - N, 5-18-11]

20.6.2.2002 PROCEDURES FOR CERTIFICATION OF FEDERAL PERMITS FOR DISCHARGE OF DREDGED OR FILL MATERIAL:

A. This section applies to the state certification of draft permits or permit applications for the discharge of dredged or fill material under Section 401 of the federal Clean Water Act. The purpose of such certification is to reasonably ensure that the permitted activities will be conducted in a manner that will comply with applicable water quality standards, including the antidegradation policy, and the statewide water quality management plan.

B. After review of a draft permit or permit application, the department will either: (1) certify that the discharge will comply with the applicable provisions of Sections 301, 302, 303, 306 and 307 of the federal Clean Water Act and with appropriate requirements of state law; (2) certify that the discharge will comply with the applicable provisions of Sections 301, 302, 303, 306 and 307 of the Clean Water Act and with appropriate requirements of state law upon inclusion of specified conditions in the permit and include the justification for the conditions; or (3) deny certification and include reasons for the denial. If the department does not act on the certification within the time prescribed by the federal permitting agency for such action, the authority to do so shall be waived.

C. Pursuant to federal regulations at 33 CFR 325.3 and 33 CFR 330.5, the U.S. army corps of engineers provides notice of draft dredged or fill permits and permit applications to the applicant (except for general or nationwide permits); various local, state, federal, tribal and pueblo government agencies; and other interested parties, and it allows at least 15 days of public comment. To the extent practicable, the department will provide public notice that the department is reviewing a draft permit or permit application for the purpose of preparing a state certification or denial pursuant to Section 401 of the federal Clean Water Act jointly with the notice provided by the U.S. army corps of engineers. The department will also post notice on its website.

D. When joint notice is impractical, the department shall provide notice that the department is reviewing a draft dredged or fill permit or permit application for purpose of preparing a state certification or denial pursuant to Section 401 of the federal Clean Water Act as follows:

(1) for general permits by:

(a) posting notice on the department's website;

(b) publishing notice in at least one newspaper of general circulation;

(c) mailing or e-mailing notice to those persons on the general mailing list maintained by the department who have requested such notice; and

(d) mailing or e-mailing notice to any affected local, state, federal, tribal, or pueblo government agency, as identified by the department; or

(2) for individual permit applications by:

(a) posting notice on the department's website;

(b) publishing notice in a newspaper of general circulation in the location of the discharge;

(c) mailing notice to the applicant;

(d) mailing or e-mailing notice to those persons on the general and facility-specific mailing list maintained by the department who have requested such notice; and

(e) mailing notice to any affected local, state, federal, tribal, or pueblo government agency, as identified by the department.

E. Public notices may describe more than one permit or permit action. The notice provided under Subsections C and D of 20.6.2.2002 NMAC shall include:

(1) for general permits:

(a) a statement that the department will accept written comments on the draft permit during the comment period including the address where comments may be submitted;

(b) a brief description of the activities that produce the discharge; and

(c) a description of the geographic area to be covered by the permit; or

(2) for individual permit applications:

(a) a statement that the department will accept written comments on the permit application during the comment period including the address where comments may be submitted;

(b) the name and address of the permittee or permit applicant and, if different, of the facility or activity regulated by the permit;

(c) a brief description of the activities that produce the discharge; and

(d) a general description of the location of the discharge and the name of the receiving water.

F. Following the public notice provided under Subsections C or D of 20.6.2.2002 NMAC, there shall be a period of at least 30 days during which interested persons may submit written comments to the department. The 30-day comment period shall begin on the date of the public notice provided under Subsections C or D of 20.6.2.2002 NMAC. The department shall consider all pertinent comments.

G. The public notice provisions in Subsection C and D of Section 20.6.2.2002 NMAC and the public comment provisions in Subsection F of Section 20.6.2.2002 NMAC shall not apply to permits issued using emergency procedures under 33 CFR 325.2(e)(4). However, even in emergency situations, reasonable efforts shall be made to receive comments from interested state and local agencies and the affected public.

H. Following the public comment period provided under Subsection F of 20.6.2.2002 NMAC, the department shall issue a final permit certification including any conditions that the department places on the certification, or issue a statement of denial including the reasons for the denial. The final certification will generally be issued within 60 days from the date a request to grant, deny or waive certification is received by the department, unless the department in consultation with the U.S. army corps of engineers district engineer finds that unusual circumstances require a longer time. The department shall send a copy of the final permit certification or denial to the army corps of engineers, the applicant (except for general or nationwide permits), and those members of the public who submitted comments to the department.

(1) The permit certification or denial shall be in writing and shall include:

(a) the name of the applicant (except for general permits) and the permit number;

(b) a statement that the department has examined the application or other relevant information and bases its certification upon an evaluation of the information contained in such application or other information which is relevant to water quality considerations;

(c) a statement that there is a reasonable assurance that the activity will be conducted in a manner which will not violate applicable water quality standards;

(d) a statement of any conditions which the department deems necessary or desirable with respect to the discharge of the activity; and

(e) such other information as the department may determine to be appropriate.

(2) With justification, including any of the reasons listed in the New Mexico Water Quality Act, NMSA 1978, Section 74-6-5(E), the department may deny permit certification. Denial of permit certification shall be in writing and shall include:

(a) the name of the applicant (except for general permits) and the permit number;

(b) a statement that the department has examined the application or other relevant information and bases its denial upon an evaluation of the information contained in such application or other information which is relevant to water quality considerations;

(c) a statement of denial including the reasons for the denial; and

(d) such other information as the department may determine to be appropriate.

I. Any person who is adversely affected by the certification or denial of a specific permit may appeal such certification or denial by filing a petition for review with the secretary within 30 days after the department issues the final permit certification or statement of denial. Such petition shall be in writing and shall include a concise statement of the reasons for the appeal and the relief requested. The secretary may hold a hearing on the appeal. In any such appeal hearing, the procedures of 20.1.4 NMAC shall not apply. The department shall give notice of the appeal hearing at least 30 days prior to the hearing. The notice shall state the date, time, and location of the appeal hearing and shall include the pertinent information listed in Subparagraphs (b), (c), and (d) of Paragraph (2) of Subsection E of 20.6.2.2002 NMAC. The secretary shall appoint a hearing officer to preside over the appeal hearing. Any person may present oral or written statements, data, technical information, legal arguments, or other information on the permit certification or denial during the appeal hearing. Any person may present oral or written statements, data, technical information, legal arguments, or other information in rebuttal of that presented by another person. Reasonable time limits may be placed on oral statements, and the submission of written statements may be required. The hearing officer may question persons presenting oral testimony. Cross examination of persons presenting oral statements shall not otherwise be allowed. Within 30 days after the completion of the hearing, or such other time as the secretary may order given the complexities of the case, the hearing officer shall submit

recommendations to the secretary. The secretary shall issue a final decision on the appeal within 30 days after receiving the recommendation, or such other time as the secretary may order given the complexities of the case.

J. Pursuant to the New Mexico Water Quality Act, NMSA 1978, Section 74-6-5(O), any person who is adversely affected by the secretary's final decision may file with the commission a petition for review of that decision based on the administrative record.

[20.6.2.2002 NMAC - N, 5-18-11]

20.6.2.2003 PROCEDURES FOR CERTIFICATION OF OTHER FEDERAL PERMITS:

A. This section applies to the state certification of draft federal permits, permit applications or licenses under Section 401 of the federal Clean Water Act, except for NPDES permits or permits for the discharge of dredged or fill material. For example, this section applies to certification of permits or licenses issued by the federal energy regulatory commission (FERC) and to permits or licenses issued under the Rivers and Harbors Act of 1899. The purpose of such certification is to reasonably ensure that the permitted activities will be conducted in a manner that will comply with applicable water quality standards, including the antidegradation policy, and the statewide water quality management plan.

B. After review of a draft permit, permit application or license, the department will either: (1) certify that the activity will comply with the applicable provisions of Sections 301, 302, 303, 306 and 307 of the federal Clean Water Act and with appropriate requirements of state law; (2) certify that the activity will comply with the applicable provisions of Sections 301, 302, 303, 306 and 307 of the Clean Water Act and with appropriate requirements of state law upon inclusion of specified conditions in the permit and include the justification for the conditions; or (3) deny certification and include reasons for the denial. If the department does not act on the certification within the time prescribed by the federal permitting agency for such action, the authority to do so shall be waived.

C. To the extent practicable, the department will provide public notice that the department is reviewing a draft federal permit, permit application or license for the purpose of preparing a state certification or denial jointly with the notice provided by the federal permitting or licensing agency. The department will also post notice on its website.

D. When joint notice is impractical, the department shall provide notice that the department is reviewing a draft federal permit, permit application or license for purpose of preparing a state certification or denial pursuant to Section 401 of the federal Clean Water Act as follows:

(1) for general permits or licenses by:

- (a)** posting notice on the department's website;
- (b)** publishing notice in at least one newspaper of general circulation;
- (c)** mailing or e-mailing notice to those persons on the general mailing list maintained by the department who have requested such notice; and
- (d)** mailing or e-mailing notice to any affected local, state, federal, tribal, or pueblo government agency, as identified by the department; or

(2) for individual permits or licenses by:

- (a)** posting notice on the department's website;
- (b)** publishing notice in a newspaper of general circulation in the location of the permitted or licensed activity;
- (c)** mailing notice to the applicant;
- (d)** mailing or e-mailing notice to those persons on the general and facility-specific mailing list maintained by the department who have requested such notice; and
- (e)** mailing notice to any affected local, state, federal, tribal, or pueblo government agency, as identified by the department.

E. Public notices may describe more than one license, permit or permit action. The notice provided under Subsections C and D of 20.6.2.2003 NMAC shall include:

(1) for general permits or licenses:

- (a)** a statement that the department will accept written comments on the permit or license during the comment period including the address where comments may be submitted; and
- (b)** a brief description of the permitted or licensed activities; and
- (c)** a description of the geographic area to be covered by the permit; or

(2) for individual permits or licenses:

- (a)** a statement that the department will accept written comments on the permit or license during the comment period including the address where comments may be submitted;
- (b)** the name and address of the licensee, permittee or permit or license applicant and, if different, of the facility or activity regulated by the permit or license;

(c) a brief description of the permitted or licensed activities; and

(d) a general description of the location of the permitted or licensed activities and the name of the receiving water.

F. Following the public notice provided under Subsections C or D of 20.6.2.2003 NMAC, there shall be a period of at least 30 days during which interested persons may submit written comments to the department. The 30-day comment period shall begin on the date of the public notice provided under Subsections C or D of 20.6.2.2003 NMAC. The department shall consider all pertinent comments.

G. Following the public comment period provided under Subsection F of 20.6.2.2003 NMAC, the department shall issue a final certification including any conditions that the department places on the certification, or issue a statement of denial including the reasons for the denial. The final certification will generally be issued within 60 days from the date a request to grant or deny certification is received by the department, unless the department in consultation with the federal permitting or licensing agency finds that unusual circumstances require a longer time. The department shall send a copy of the final certification or denial to the federal permitting or licensing agency, the applicant (except for general permits), and those members of the public who submitted comments to the department.

(1) The certification or denial shall be in writing and shall include:

(a) the name of the applicant (except for general permits) and the permit or license number;

(b) a statement that the department has examined the application or other relevant information and bases its certification upon an evaluation of the information contained in such application or other information which is relevant to water quality considerations;

(c) a statement that there is a reasonable assurance that the activity will be conducted in a manner which will not violate applicable water quality standards;

(d) a statement of any conditions which the department deems necessary or desirable with respect to the discharge of the activity;

(e) identification of any condition more stringent than that in the draft permit or license required to assure compliance with the applicable provisions of Sections 301, 302, 303, 306 and 307 of the Clean Water Act and with appropriate requirements of state law citing the Clean Water Act or state law upon which the condition is based;

(f) a statement of the extent to which each condition of the draft permit or license can be made less stringent without violating the requirements of state law, including water quality standards; and

(g) Such other information as the department may determine to be appropriate.

(2) With justification, including any of the reasons listed in the New Mexico Water Quality Act, NMSA 1978, Section 74-6-5(E), the department may deny certification. Denial of certification shall be in writing and shall include:

(a) the name of the applicant (except for general permits) and the permit or license number;

(b) a statement that the department has examined the application or other relevant information and bases its denial upon an evaluation of the information contained in such application or other information which is relevant to water quality considerations;

(c) a statement of denial including the reasons for the denial; and

(d) such other information as the department may determine to be appropriate.

H. Any person who is adversely affected by the certification or denial of a specific permit or license may appeal such certification or denial by filing a petition for review with the secretary within 30 days after the department issues the final certification or statement of denial. Such petition shall be in writing and shall include a concise statement of the reasons for the appeal and the relief requested. The secretary may hold a hearing on the appeal. In any such appeal hearing, the procedures of 20.1.4 NMAC shall not apply. The department shall give notice of the appeal hearing at least 30 days prior to the hearing. The notice shall state the date, time, and location of the appeal hearing and shall include the pertinent information listed in Subparagraphs (b), (c), and (d) of Paragraph (2) of Subsection E of 20.6.2.2003 NMAC. The secretary shall appoint a hearing officer to preside over the appeal hearing. Any person may present oral or written statements, data, technical information, legal arguments, or other information on the certification or denial during the appeal hearing. Any person may present oral or written statements, data, technical information, legal arguments, or other information in rebuttal of that presented by another person. Reasonable time limits may be placed on oral statements, and the submission of written statements may be required. The hearing officer may question persons presenting oral testimony. Cross examination of persons presenting oral statements shall not otherwise be allowed. Within 30 days after the completion of the hearing, or such other time as the secretary may order given the complexities of the case, the hearing officer shall submit recommendations to the secretary. The secretary shall issue a final decision on the appeal within 30 days after receiving the recommendation, or such other time as the secretary may order given the complexities of the case.

I. Pursuant to the New Mexico Water Quality Act, NMSA 1978, Section 74-6-5(O), any person who is adversely affected by the secretary's final decision may file with the commission a petition for review of that decision based on the administrative record.

[20.6.2.2003 NMAC - N, 5-18-11]

20.6.2.2004-20.6.2.2099 [RESERVED]

[12-1-95; 20.6.2.2001 - 20.6.2.2099 NMAC - Rn, 20 NMAC 6.2.I.1221-2099, 1-15-01; A, 5-18-11]

20.6.2.2100 APPLICABILITY:

The requirements of Section 20.6.2.2101 and 20.6.2.2102 NMAC shall not apply to any discharge which is subject to a permit under the National Pollutant Discharge Elimination System of P. L. 92-500; provided that any discharger who is given written notice of National Pollutant Discharge Elimination System permit violation from the Administrator of the Environmental Protection Agency and who has not corrected the violation within thirty days of receipt of said notice shall be subject to Section 20.6.2.2101 and 20.6.2.2102 NMAC until in compliance with the National Pollution Discharge Elimination System permit conditions; provided further that nothing in this Part shall be construed as a deterrent to action under Section 74-6-11 NMSA, 1978.

[8-13-76; 20.6.2.2100 NMAC - Rn, 20 NMAC 6.2.II.2100, 1-15-01]

20.6.2.2101 GENERAL REQUIREMENTS:

A. Except as otherwise provided in Sections 20.6.2.2000 through 20.6.2.2201 NMAC, no person shall cause or allow effluent to discharge to a watercourse if the effluent as indicated by:

- (1) any two consecutive daily composite samples;
- (2) more than one daily composite sample in any thirty-day period (in which less than ten (10) daily composite samples are examined);
- (3) more than ten percent (10%) of the daily composite samples in any thirty-day period (in which ten (10) or more daily composite samples are examined); or
- (4) a grab sample collected during flow from an intermittent or infrequent discharge

does not conform to the following:

- (a) Bio-chemical Oxygen Demand (BOD) Less than 30 mg/l

(b) Chemical Oxygen Demand (COD)	Less than 125 mg/l
(c) Settleable Solids	Less than 0.5 mg/l
(d) Fecal Coliform Bacteria	Less than 500 organisms per 100 ml
(e) pH	Between 6.6 and 8.6

B. Upon application, the secretary may eliminate the pH requirement for any effluent source that the secretary determines does not unreasonably degrade the water into which the effluent is discharged.

C. Subsection A of this Section does not apply to the weight of constituents in the water diverted.

D. Samples shall be examined in accordance with the most current edition of Standard Methods for the Examination of Water and Wastewater published by the American Public Health Association or the most current edition of Methods for Chemical Analysis of Water and Wastes published by the Environmental Protection Agency, where applicable.

[4-20-68, 3-14-71, 10-8-71, 8-13-76, 2-20-81, 12-1-95; 20.6.2.2101 NMAC - Rn, 20 NMAC 6.2.II.2101, 1-15-01]

20.6.2.2102 RIO GRANDE BASIN--COMMUNITY SEWERAGE SYSTEMS:

A. No person shall cause or allow effluent from a community sewerage system to discharge to a watercourse in the Rio Grande Basin between the headwaters of Elephant Butte Reservoir and Angostura Diversion Dam as described in Subsection E of this Section if the effluent, as indicated by:

- (1) any two consecutive daily composite samples;
- (2) more than one daily composite sample in any thirty-day period (in which less than ten (10) daily composite samples are examined);
- (3) more than ten percent (10%) of the daily composite samples in any thirty-day period (in which ten (10) or more daily composite samples are examined); or
- (4) a grab sample collected during flow from an intermittent or infrequent discharge

does not conform to the following:

- (a) Bio-chemical Oxygen Demand (BOD) Less than 30 mg/l

(b) Chemical Oxygen Demand (COD)	Less than 80 mg/l
(c) Settleable Solids	Less than 0.1 mg/l
(d) Fecal Coliform Bacteria	Less than 500 organisms per 100 ml
(e) pH	Between 6.6 and 8.6

B. Upon application, the secretary may eliminate the pH requirement for any effluent source that the secretary determines does not unreasonably degrade the water into which the effluent is discharged.

C. Subsection A of this Section does not apply to the weight of constituents in the water diverted.

D. Samples shall be examined in accordance with the most current edition of Standard Methods for the Analysis of Water and Wastewater published by the American Public Health Association or the most current edition of Methods for Chemical Analysis of Water and Wastes published by the Environmental Protection Agency, where applicable.

E. The following is a description of the Rio Grande Basin from the headwaters of Elephant Butte Reservoir to Angostura Diversion Dam as used in this Section. Begin at San Marcial USGS gauging station, which is the headwaters of Elephant Butte Reservoir Irrigation Project, thence northwest to U.S. Highway 60, nine miles + west of Magdalena; thence west along the northeast edge of the San Agustin Plains closed basin; thence north along the east side of the north plains closed basin to the Continental Divide; thence northly along the Continental Divide to the community of Regina on State Highway 96; thence southeasterly along the crest of the San Pedro Mountains to Cerro Toledo Peak; thence southwesterly along the Sierra de Los Valles ridge and the Borrego Mesa to Bodega Butte; thence southerly to Angostura Diversion Dam which is the upper reach of the Rio Grande in this basin; thence southeast to the crest and the crest of the Manzano Mountains and the Los Pinos Mountains; thence southerly along the divide that contributes to the Rio Grande to San Marcial gauging station to the point and place of beginning; excluding all waters upstream of Jemez Pueblo which flow into the Jemez River drainage and the Bluewater Lake. Counties included in the basin are:

- (1) north portion of Socorro County;
- (2) northeast corner of Catron County;
- (3) east portion of Valencia County;
- (4) west portion of Bernalillo County;

- (5) east portion of McKinley County; and
- (6) most of Sandoval County.

20.6.2.3000 PERMITTING AND GROUND WATER STANDARDS:

[12-1-95; 20.6.2.3000 NMAC - Rn, 20 NMAC 6.2.III, 1-15-01]

20.6.2.3001-20.6.2.3100 [RESERVED]

[12-1-95; 20.6.2.3001 - 20.6.2.3100 NMAC - Rn, 20 NMAC 6.2.II.2202-3100, 1-15-01]

20.6.2.3101 PURPOSE:

A. The purpose of Sections 20.6.2.3000 through 20.6.2.3114 NMAC controlling discharges onto or below the surface of the ground is to protect all ground water of the state of New Mexico which has an existing concentration of 10,000 mg/l or less TDS, for present and potential future use as domestic and agricultural water supply, and to protect those segments of surface waters which are gaining because of ground water inflow, for uses designated in the New Mexico Water Quality Standards. Sections 20.6.2.3000 through 20.6.2.3114 NMAC are written so that in general:

(1) if the existing concentration of any water contaminant in ground water is in conformance with the standard of 20.6.2.3103 NMAC, degradation of the ground water up to the limit of the standard will be allowed; and

(2) if the existing concentration of any water contaminant in ground water exceeds the standard of Section 20.6.2.3103 NMAC, no degradation of the ground water beyond the existing concentration will be allowed.

B. Ground water standards are numbers that represent the pH range and maximum concentrations of water contaminants in the ground water which still allow for the present and future use of ground water resources.

C. The standards are not intended as maximum ranges and concentrations for use, and nothing herein contained shall be construed as limiting the use of waters containing higher ranges and concentrations.

[2-18-77; 20.6.2.3101 NMAC - Rn, 20 NMAC 6.2.III.3101, 1-15-01]

20.6.2.3102 [RESERVED]

[12-1-95; 20.6.2.3102 NMAC - Rn, 20 NMAC 6.2.III.3102, 1-15-01]

20.6.2.3103 STANDARDS FOR GROUND WATER OF 10,000 mg/l TDS CONCENTRATION OR LESS:

The following standards are the allowable pH range and the maximum allowable concentration in ground water for the contaminants specified unless the existing condition exceeds the standard or unless otherwise provided in Subsection E of Section 20.6.2.3109 NMAC. Regardless of whether there is one contaminant or more than one contaminant present in ground water, when an existing pH or concentration of any water contaminant exceeds the standard specified in Subsection A, B, or C of this section, the existing pH or concentration shall be the allowable limit, provided that the discharge at such concentrations will not result in concentrations at any place of withdrawal for present or reasonably foreseeable future use in excess of the standards of this section. These standards shall apply to the dissolved portion of the contaminants specified with a definition of dissolved being that given in the publication "*methods for chemical analysis of water and waste of the U.S. environmental protection agency*," with the exception that standards for mercury, organic compounds and non-aqueous phase liquids shall apply to the total nonfiltered concentrations of the contaminants. If the secretary determines that there is a reasonable probability of facilitated contaminant transport by colloids or organic macromolecules, or that proper filtration procedures are not being followed, the discharger may be required to test for both filtered and nonfiltered portions of inorganic contaminants to develop appropriate protocol for monitoring contaminants that have the potential to migrate through the aquifer.

4)	(10)	Methyl tertiary-butyl ether (MTBE) (CAS 1634-04-)	0.1 mg/l

C. Standards for Irrigation Use - Ground water shall meet the standards of Subsection A, B, and C of this section unless otherwise provided.

mg/l	(1)	Aluminum (Al) (CAS 7429-90-5)	5.0
mg/l	(2)	Boron (B) (CAS 7440-42-8)	0.75
mg/l	(3)	Cobalt (Co) (CAS 7440-48-4)	0.05
mg/l	(4)	Molybdenum (Mo) (CAS 7439-98-7)	1.0
mg/l	(5)	Nickel (Ni) (CAS 7440-02-0)	0.2

D. For purposes of application of the amended numeric standards for arsenic, cadmium, lead, combined radium-226 & radium-228; benzene, PCBs, carbon tetrachloride, EDC, PCE, TCE, ethylbenzene, methylene chloride, EDB, 1,1,2-trichloroethane and benzo-a-pyrene, to past and current water discharges (as of July 1, 2017), the new standards will not become effective until July 1, 2020. With regard to sites for which the secretary has approved an abatement completion report as of the effective date of this rule pursuant to 20.6.2.4112 NMAC, the amended numeric

standards for arsenic, cadmium, lead, combined radium-226 & radium-228; benzene, PCBs, carbon tetrachloride, EDC, PCE, TCE, ethylbenzene, methylene chloride, EDB, 1,1,2-trichloroethane and benzo-a-pyrene shall not apply unless the secretary notifies the responsible person that the site is a source of these contaminants in ground water that pose a hazard to public health.

[2-18-77, 1-29-82, 11-17-83, 3-3-86, 12-1-95; 20.6.2.3103 NMAC - Rn, 20 NMAC 6.2.III.3103, 1-15-01; A, 9-26-04; A, 12-21-18]

[Note: For purposes of application of the amended numeric uranium standard to past and current water discharges (as of 9-26-04), the new standard will not become effective until June 1, 2007.]

20.6.2.3104 DISCHARGE PERMIT REQUIRED:

Unless otherwise provided by this Part, no person shall cause or allow effluent or leachate to discharge so that it may move directly or indirectly into ground water unless he is discharging pursuant to a discharge permit issued by the secretary. When a permit has been issued, discharges must be consistent with the terms and conditions of the permit. In the event of a transfer of the ownership, control, or possession of a facility for which a discharge permit is in effect, the transferee shall have authority to discharge under such permit, provided that the transferee has complied with Section 20.6.2.3111 NMAC, regarding transfers.

[2-18-77, 12-24-87, 12-1-95; Rn & A, 20.6.2.3104 NMAC - 20 NMAC 6.2.III.3104, 1-15-01; A, 12-1-01]

20.6.2.3105 EXEMPTIONS FROM DISCHARGE PERMIT REQUIREMENT:

Sections 20.6.2.3104 and 20.6.2.3106 NMAC do not apply to the following:

A. Effluent or leachate which conforms to all the standards in Subsections A, B, and C of Section 20.6.2.3103 NMAC and has a total nitrogen concentration of 10 mg/l or less. To determine conformance, samples may be taken by the agency before the effluent or leachate is discharged so that it may move directly or indirectly into ground water; provided that if the discharge is by seepage through non-natural or altered natural materials, the agency may take samples of the solution before or after seepage. If for any reason the agency does not have access to obtain the appropriate samples, this exemption shall not apply;

B. Effluent which is regulated pursuant to 20.7.3 NMAC, "Liquid Waste Disposal and Treatment" regulations;

C. Water used for irrigated agriculture, for watering of lawns, trees, gardens or shrubs, or for irrigation for a period not to exceed five years for the revegetation of any disturbed land area, unless that water is received directly from any sewerage system;

D. Discharges resulting from the transport or storage of water diverted, provided that the water diverted has not had added to it after the point of diversion any effluent received from a sewerage system, that the source of the water diverted was not mine workings, and that the secretary has not determined that a hazard to public health may result;

E. Effluent which is discharged to a watercourse which is naturally perennial; discharges to dry arroyos and ephemeral streams are not exempt from the discharge permit requirement, except as otherwise provided in this section;

F. Those constituents which are subject to effective and enforceable effluent limitations in a National Pollutant Discharge Elimination System (NPDES) permit, where discharge onto or below the surface of the ground so that water contaminants may move directly or indirectly into ground water occurs downstream from the outfall where NPDES effluent limitations are imposed, unless the secretary determines that a hazard to public health may result. For purposes of this subsection, monitoring requirements alone do not constitute effluent limitations;

G. Discharges resulting from flood control systems;

H. Leachate which results from the direct natural infiltration of precipitation through disturbed materials, unless the secretary determines that a hazard to public health may result;

I. Leachate which results entirely from the direct natural infiltration of precipitation through undisturbed materials;

J. Natural ground water seeping or flowing into conventional mine workings which re-enters the ground by natural gravity flow prior to pumping or transporting out of the mine and without being used in any mining process; this exemption does not apply to solution mining;

K. Effluent or leachate discharges resulting from activities regulated by permit issued by the mining and minerals division of the energy, minerals and natural resources department pursuant to the Surface Mining Act, NMSA 1978, Sections 69-25A-1 to 36, provided that this exemption shall not be construed as limiting the application of appropriate ground water protection requirements by the mining and minerals division and the New Mexico Coal Surface Mining Commission; or

L. Discharges resulting from activities regulated by the energy conservation and management division of the energy, minerals and natural resources department under the authority of the Geothermal Resources Development Act, NMSA 1978, Sections 71-9-1 to -11 (2016).

[2-18-77, 6-26-80, 7-2-81, 12-24-87, 12-1-95; 20.6.2.3105 NMAC - Rn, 20 NMAC 6.2.III.3105, 1-15-01; A, 12-1-01; A, 8-1-14; A, 12-21-18]

20.6.2.3106 APPLICATION FOR DISCHARGE PERMITS, RENEWALS, AND MODIFICATIONS:

A. Any person who, before or on June 18, 1977, is discharging any of the water contaminants listed in 20.6.2.3103 NMAC or any toxic pollutant so that they may move directly or indirectly into ground water shall, within 120 days of receipt of written notice from the secretary that a discharge permit is required, or such longer time as the secretary shall for good cause allow, submit a discharge plan to the secretary for approval; such person may discharge without a discharge permit until 240 days after written notification by the secretary that a discharge permit is required or such longer time as the secretary shall for good cause allow.

B. Any person who intends to begin, after June 18, 1977, discharging any of the water contaminants listed in 20.6.2.3103 NMAC or any toxic pollutant so that they may move directly or indirectly into ground water shall notify the secretary giving the information enumerated in Subsection B of 20.6.2.1201 NMAC; the secretary shall, within 60 days, notify such person if a discharge permit is required; upon submission of a discharge plan, the secretary shall review the discharge plan pursuant to 20.6.2.3108 and 20.6.2.3109 NMAC. For good cause shown the secretary may allow such person to discharge without a discharge permit for a period not to exceed 120 days.

C. Any person who intends to modify the discharge of any of the water contaminants listed in 20.6.2.3103 NMAC or any toxic pollutant in a manner that is a discharge permit modification as defined in this part shall submit a discharge plan for modification that contains the information required in Subsection D of 20.6.2.3106 NMAC; upon submission of a discharge plan for modification, the secretary shall review the discharge plan for modification pursuant to 20.6.2.3108 and 20.6.2.3109 NMAC.

D. A proposed discharge plan shall set forth in detail the methods or techniques the discharger proposes to use or processes expected to naturally occur which will ensure compliance with this part. At least the following information shall be included in the plan:

- (1)** quantity, quality and flow characteristics of the discharge;
- (2)** location of the discharge and of any bodies of water, watercourses and ground water discharge sites within one mile of the outside perimeter of the discharge site, and existing or proposed wells to be used for monitoring;
- (3)** depth to and TDS concentration of the ground water most likely to be affected by the discharge;
- (4)** flooding potential of the site;
- (5)** location and design of site(s) and method(s) to be available for sampling, and for measurement or calculation of flow;

(6) depth to and lithological description of rock at base of alluvium below the discharge site if such information is available;

(7) any additional information that may be necessary to demonstrate that the discharge permit will not result in concentrations in excess of the standards of 20.6.2.3103 NMAC at any place of withdrawal of water for present or reasonably foreseeable future use; detailed information on site geologic and hydrologic conditions may be required for a technical evaluation of the applicant's proposed discharge plan; and

(8) additional detailed information required for a technical evaluation of underground injection control wells as provided in 20.6.2.5000 through 20.6.2.5399 NMAC.

E. An applicant for a discharge permit shall pay fees as specified in 20.6.2.3114 and 20.6.2.5302 NMAC.

F. An applicant for a permit to dispose of or use septage or sludge, or within a source category designated by the commission, may be required by the secretary to file a disclosure statement as specified in 74-6-5.1 of the Water Quality Act.

G. If the holder of a discharge permit submits an application for discharge permit renewal at least 120 days before the discharge permit expires, and the discharger is not in violation of the discharge permit on the date of its expiration, then the existing discharge permit for the same activity shall not expire until the application for renewal has been approved or disapproved. A discharge permit continued under this provision remains fully effective and enforceable. An application for discharge permit renewal must include and adequately address all of the information necessary for evaluation of a new discharge permit. Previously submitted materials may be included by reference provided they are current, readily available to the secretary and sufficiently identified to be retrieved.

[2-18-77, 6-26-80, 7-2-81, 9-20-82, 8-17-91, 12-1-95; 20.6.2.3106 NMAC - Rn, 20 NMAC 6.2.III.3106, 1-15-01; A, 12-1-01; A, 9-15-02; A, 8-31-15; A, 12-21-18]

20.6.2.3107 MONITORING, REPORTING, AND OTHER REQUIREMENTS:

A. Each discharge plan shall provide for the following as the secretary may require:

- (1) the installation, use, and maintenance of effluent monitoring devices;
- (2) the installation, use, and maintenance of monitoring devices for the ground water most likely to be affected by the discharge;
- (3) monitoring in the vadose zone;

- (4) continuation of monitoring after cessation of operations;
- (5) periodic submission to the secretary of results obtained pursuant to any monitoring requirements in the discharge permit and the methods used to obtain these results;
- (6) periodic reporting to the secretary of any other information that may be required as set forth in the discharge permit;
- (7) the discharger to retain for a period of at least five years any monitoring data required in the discharge permit;
- (8) a system of monitoring and reporting to verify that the permit is achieving the expected results;
- (9) procedures for detecting failure of the discharge system;
- (10) contingency plans to cope with failure of the discharge permit or system;
- (11) a closure plan to prevent the exceedance of standards of 20.6.2.3103 NMAC in ground water after the cessation of operation which includes: a description of closure measures, maintenance and monitoring plans, post-closure maintenance and monitoring plans, financial assurance, and other measures necessary to prevent or abate such contamination; the obligation to implement the closure plan as well as the requirements of the closure plan, if any is required, survives the termination or expiration of the permit; a closure plan for any underground injection control well must also incorporate the applicable requirements of 20.6.2.5005, 20.6.2.5209, and 20.6.2.5361 NMAC.

B. Sampling and analytical techniques shall conform with the following references unless otherwise specified by the secretary:

- (1) standard methods for the examination of water and wastewater, latest edition, American public health association; or
- (2) methods for chemical analysis of water and waste, and other publications of the analytical quality laboratory, EPA; or
- (3) techniques of water resource investigations of the U.S. geological survey;
or
- (4) annual book of ASTM standards; Part 31; water, latest edition, American society for testing and materials; or
- (5) federal register, latest methods published for monitoring pursuant to Resource Conservation and Recovery Act regulations; or

(6) national handbook of recommended methods for water-data acquisition, latest edition, prepared cooperatively by agencies of the United States government under the sponsorship of the U.S. geological survey.

C. The discharger shall notify the secretary of any facility expansion, production increase or process modification that would result in any significant modification in the discharge of water contaminants.

D. Any discharger of effluent or leachate shall allow any authorized representative of the secretary to:

(1) inspect and copy records required by a discharge permit;

(2) inspect any treatment works, monitoring and analytical equipment;

(3) sample any effluent before or after discharge;

(4) use monitoring systems and wells installed pursuant to a discharge permit requirement in order to collect samples from ground water or the vadose zone.

E. Each discharge permit for an underground injection control well shall incorporate the applicable requirements of 20.6.2.5000 through 20.6.2.5399 NMAC.

[2-18-77, 9-20-82, 11-17-83, 12-1-95; 20.6.2.3107 NMAC - Rn, 20 NMAC 6.2.III.3107, 1-15-01; A, 12-1-01; A, 8-31-15; A, 12-21-18]

20.6.2.3108 PUBLIC NOTICE AND PARTICIPATION:

A. Within 15 days of receipt of an application for a discharge permit, modification or renewal, the department shall review the application for administrative completeness. To be deemed administratively complete, an application shall provide all of the information required by Paragraphs (1) through (5) of Subsection F of 20.6.2.3108 NMAC and shall indicate, for department approval, the proposed locations and newspaper for providing notice required by Paragraphs (1) and (4) of Subsection B or Paragraph (2) of Subsection C of 20.6.2.3108 NMAC. The department shall notify the applicant in writing when the application is deemed administratively complete. If the department determines that the application is not administratively complete, the department shall notify the applicant of the deficiencies in writing within 30 days of receipt of the application and state what additional information is necessary.

B. Within 30 days of the department deeming an application for discharge permit or discharge permit modification administratively complete, the applicant shall provide notice, in accordance with the requirements of Subsection F of 20.6.2.3108 NMAC, to the general public in the locale of the proposed discharge in a form provided by the department by each of the methods listed below:

(1) for each 640 contiguous acres or less of a discharge site, prominently posting a synopsis of the public notice at least 2 feet by 3 feet in size, in English and in Spanish, at a place conspicuous to the public, approved by the department, at or near the proposed facility for 30 days; one additional notice, in a form approved by and may be provided by the department, shall be posted at a place located off the discharge site, at a place conspicuous to the public and approved by the department; the department may require a second posting location for more than 640 contiguous acres or when the discharge site is not located on contiguous properties;

(2) providing written notice of the discharge by mail or electronic mail, to owners of record of all properties within a 1/3 mile distance from the boundary of the property where the discharge site is located; if there are no properties other than properties owned by the discharger within a 1/3 mile distance from the boundary of property where the discharge site is located, the applicant shall provide notice to owners of record of the next nearest adjacent properties not owned by the discharger;

(3) providing notice by certified mail, return receipt requested, to the owner of the discharge site if the applicant is not the owner; and

(4) publishing a synopsis of the notice in English and in Spanish, in a display ad at least three inches by four inches not in the classified or legal advertisements section, in a newspaper of general circulation in the location of the proposed discharge.

C. Within 30 days of the department deeming an application for discharge permit renewal administratively complete, the applicant shall provide notice, in accordance with the requirements of Subsection F of 20.6.2.3108 NMAC, to the general public in the locale of the proposed discharge in a form provided by the department by each of the methods listed below:

(1) providing notice by certified mail to the owner of the discharge site if the applicant is not the owner; and

(2) publishing a synopsis of the notice, in English and in Spanish, in a display ad at least two inches by three inches, not in the classified or legal advertisements section, in a newspaper of general circulation in the location of the discharge.

D. Within 15 days of completion of the public notice requirements in Subsections B or C of 20.6.2.3108 NMAC, the applicant shall submit to the department proof of notice, including an affidavit of mailing(s) and the list of property owner(s), proof of publication, and an affidavit of posting, as appropriate.

E. Within 30 days of determining an application for a discharge permit, modification or renewal is administratively complete, the department shall post a notice on its website and shall mail notice to any affected local, state, federal, tribal or pueblo governmental agency, political subdivisions, ditch associations and land grants, as identified by the department. The department shall also mail or e-mail notice to those

persons on a general and facility-specific list maintained by the department who have requested notice of discharge permit applications. The notice shall include the information listed in Subsection F of 20.6.2.3108 NMAC.

F. The notice provided under Subsection B, C and E of 20.6.2.3108 NMAC shall include:

- (1) the name and address of the proposed discharger;
- (2) the location of the discharge, including a street address, if available, and sufficient information to locate the facility with respect to surrounding landmarks;
- (3) a brief description of the activities that produce the discharge described in the application;
- (4) a brief description of the expected quality and volume of the discharge;
- (5) the depth to and total dissolved solids concentration of the ground water most likely to be affected by the discharge;
- (6) the address and phone number within the department by which interested persons may obtain information, submit comments, and request to be placed on a facility-specific mailing list for future notices; and
- (7) a statement that the department will accept comments and statements of interest regarding the application and will create a facility-specific mailing list for persons who wish to receive future notices.

G. All persons who submit comments or statements of interest to the department or previously participated in a public hearing and who provide a mail or e-mail address shall be placed on a facility-specific mailing list and the department shall send those persons the public notice issued pursuant to Subsection J of 20.6.2.3108 NMAC, and notice of any public meeting or hearing scheduled on the application. All persons who contact the department to inquire about a specific facility shall be informed of the opportunity to be placed on the facility-specific mailing list.

H. Within 60 days after the department makes its administrative completeness determination and all required technical information is available, the department shall make available a draft permit or a notice of intent to deny an application for a discharge permit, modification or renewal. The draft permit shall include all proposed effluent limitations or other conditions on proposed discharge, and all proposed monitoring, recordkeeping, and reporting requirements. A draft permit for a permit modification shall only include those permit conditions proposed to be modified.

I. The department shall prepare a fact sheet for every draft permit for a discharge at a federal facility, except for discharges comprised solely of domestic liquid

waste, and for other draft permits as determined by the Secretary. The fact sheet shall include:

- (1) the information in Paragraphs 1 - 4 of Subsection F of 20.6.2.3108 NMAC;
- (2) the information in Subsection J of 20.6.2.3108 NMAC; and
- (3) a brief summary of the basis for the draft permit conditions, including references to applicable statutory or regulatory provisions and appropriate supporting references to the administrative record.

J. The department shall mail by certified mail a copy of the draft permit and fact sheet or notice of intent to deny to the applicant and shall provide notice of the draft permit or the notice of intent to deny by:

- (1) posting on the department's website;
- (2) publishing notice in a newspaper of general circulation in this state and a newspaper of general circulation in the location of the facility;
- (3) mailing or e-mailing to those persons on a facility-specific mailing list;
- (4) mailing to any affected local, state, or federal governmental agency, ditch associations and land grants, as identified by the department; and
- (5) mailing to the governor, chairperson, or president of each Indian tribe, pueblo or nation within the state of New Mexico, as identified by the department.

K. The public notice issued under Subsection H shall include the information in Subsection F of 20.6.2.3108 NMAC and the following information:

- (1) a brief description of the procedures to be followed by the secretary in making a final determination;
- (2) a statement of the comment period and description of the procedures for a person to request a hearing on the application; and
- (3) the address, telephone number, and email address at which interested persons may obtain a copy of the draft permit and fact sheet or the notice of intent to deny.

L. In the event that the draft permit or notice of intent to deny is available for review within 30 days of deeming the application administratively complete, the department may combine the public notice procedures of Subsections E and H of 20.6.2.3108 NMAC.

M. Following the public notice of the draft permit or notice of intent to deny, and prior to a final decision by the secretary, there shall be a period of at least 30 days during which written comments may be submitted to the department and/or a public hearing may be requested in writing. The 30-day comment period shall begin on the date of publication of notice in the newspaper. All comments will be considered by the department. Requests for a hearing shall be in writing and shall set forth the reasons why a hearing should be held. A public hearing shall be held if the secretary determines there is substantial public interest. The department shall notify the applicant and any person requesting a hearing of the decision whether to hold a hearing and the reasons therefore in writing.

N. If a hearing is held, pursuant to Subsection M of 20.6.2.3108 NMAC, notice of the hearing shall be given by the department at least 30 days prior to the hearing in accordance with Subsection H of 20.6.2.3108 NMAC. The notice shall include the information identified in Subsection F of 20.6.2.3108 NMAC in addition to the time and place of the hearing and a brief description of the hearing procedures. The hearing shall be held pursuant to 20.6.2.3110 NMAC.

[2-18-77, 12-24-87, 12-1-95, 11-15-96; 20.6.2.3108 NMAC - Rn, 20 NMAC 6.2.III.3108, 1-15-01; A, 12-1-01; A, 9-15-02; A, 7-16-06; A, 12-21-18]

20.6.2.3109 SECRETARY APPROVAL, DISAPPROVAL, MODIFICATION OR TERMINATION OF DISCHARGE PERMITS, AND REQUIREMENT FOR ABATEMENT PLANS:

A. The department shall evaluate the application for a discharge permit, modification or renewal based on information contained in the department's administrative record. The department may request from the discharger, either before or after the issuance of any public notice, additional information necessary for the evaluation of the application. The administrative record shall consist of the application, any additional information required by the department, any information submitted by the discharger or the general public, other information considered by the department, the proposed approval or disapproval of an application for a discharge permit, modification or renewal prepared pursuant to Subsection H of 20.6.2.3108 NMAC, and, if a public hearing is held, all of the documents filed with the hearing clerk, all exhibits offered into evidence at the hearing, the written transcript or tape recording of the hearing, any hearing officer report, and any post hearing submissions.

B. The secretary shall, within 30 days after the administrative record is complete and all required information is available, approve, approve with conditions or disapprove the proposed discharge permit, modification or renewal based on the administrative record. The Secretary shall issue a response to comments which shall specify which provisions, if any, in the draft permit were changed and the reasons for the change, and shall briefly describe and respond to all significant comments on the draft permit raised during the public comment period or at any hearing. The secretary shall notify the applicant or permittee by certified mail of the action taken and the reasons for such

action and shall include a copy of the response to comments. Notice shall also be given by mail or email to persons who participated in the permitting action.

C. Provided that the other requirements of this part are met and the proposed discharge plan, modification or renewal demonstrates that neither a hazard to public health nor undue risk to property will result, the secretary shall approve the proposed discharge plan, modification or renewal if the following requirements are met:

(1) ground water that has a TDS concentration of 10,000 mg/l or less will not be affected by the discharge; or

(2) the person proposing to discharge demonstrates that approval of the proposed discharge plan, modification or renewal will not result in either concentrations in excess of the standards of 20.6.2.3103 NMAC at any place of withdrawal of water for present or reasonably foreseeable future use, except for contaminants in the water diverted as provided in Subsection E of 20.6.2.3109 NMAC; or

(3) the proposed discharge plan conforms to either Subparagraph (a) or (b) below and Subparagraph (c) below:

(a) municipal, other domestic discharges, and discharges from sewerage systems handling only animal wastes: the effluent is entirely domestic, is entirely from a sewerage system handling only animal wastes or is from a municipality and conforms to the following:

(i) the discharge is from an impoundment or a leach field existing on February 18, 1977 which receives less than 10,000 gallons per day and the secretary has not found that the discharge may cause a hazard to public health; or

(ii) the discharger has demonstrated that the total nitrogen in effluent that enters the subsurface from a leach field or surface impoundment will not exceed 200 pounds per acre per year and that the effluent will meet the standards of 20.6.2.3103 NMAC except for nitrates and except for contaminants in the water diverted as provided in Subsection E of 20.6.2.3109 NMAC; or

(iii) the total nitrogen in effluent that is applied to a crop which is harvested shall not exceed by more than 25 percent the maximum amount of nitrogen reasonably expected to be taken up by the crop and the effluent shall meet the standards of 20.6.2.3103 NMAC except for nitrates and except for contaminants in the water diverted as provided in Subsection E of 20.6.2.3109 NMAC;

(b) discharges from industrial, mining or manufacturing operations:

(i) the discharger has demonstrated that the amount of effluent that enters the subsurface from a surface impoundment will not exceed 0.5 acre-feet per acre per year; or

(ii) the discharger has demonstrated that the total nitrogen in effluent that enters the subsurface from a leach field or surface impoundment shall not exceed 200 pounds per acre per year and the effluent shall meet the standards of 20.6.2.3103 NMAC except for nitrate and contaminants in the water diverted as provided in Subsection E of 20.6.2.3109 NMAC; or

(iii) the total nitrogen in effluent that is applied to a crop that is harvested shall not exceed by more than 25 percent the maximum amount of nitrogen reasonably expected to be taken up by the crop and the effluent shall meet the standards of 20.6.2.3103 NMAC except for nitrate and contaminants in the water diverted as provided in Subsection D of 20.6.2.3109 NMAC;

(c) all discharges:

(i) the monitoring system proposed in the discharge plan includes adequate provision for sampling of effluent and adequate flow monitoring so that the amount being discharged onto or below the surface of the ground can be determined;

(ii) the monitoring data is reported to the secretary at a frequency determined by the secretary.

D. The secretary shall allow the following unless he determines that a hazard to public health may result:

(1) the weight of water contaminants in water diverted from any source may be discharged provided that the discharge is to the aquifer from which the water was diverted or to an aquifer containing a greater concentration of the contaminants than contained in the water diverted; and provided further that contaminants added as a result of the means of diversion shall not be considered to be part of the weight of water contaminants in the water diverted;

(2) the water contaminants leached from undisturbed natural materials may be discharged provided that:

(a) the contaminants were not leached as a product or incidentally pursuant to a solution mining operation; and

(b) the contaminants were not leached as a result of direct discharge into the vadose zone from municipal or industrial facilities used for the storage, disposal, or treatment of effluent;

(3) the water contaminants leached from undisturbed natural materials as a result of discharge into ground water from lakes used as a source of cooling water.

E. If data submitted pursuant to any monitoring requirements specified in the discharge permit or other information available to the secretary indicates that this part is

being or may be violated or that the standards of 20.6.2.3103 NMAC are being or will be exceeded in ground water at any place of withdrawal for present or reasonably foreseeable future use, or that the water quality standards for interstate and intrastate streams in New Mexico are being or may be violated in surface water, due to the discharge, except as provided in Subsection D of 20.6.2.3109 NMAC.

(1) The secretary may require a discharge permit modification within the shortest reasonable time so as to achieve compliance with this part and to provide that any exceeding of standards in ground water at any place of withdrawal for present or reasonably foreseeable future use, or in surface water, due to the discharge except as provided in Subsection E of 20.6.2.3109 NMAC will be abated or prevented. If the secretary requires a discharge permit modification to abate water pollution:

(a) the abatement shall be consistent with the requirements and provisions of 20.6.2.4101, 20.6.2.4103, Subsections C and E of 20.6.2.4106, 20.6.2.4107, 20.6.2.4108 and 20.6.2.4112 NMAC; and

(b) the discharger may request of the secretary approval to carry out the abatement under 20.6.2.4000 through 20.6.2.4115 NMAC, in lieu of modifying the discharge permit; the discharger shall make the request in writing and shall include the reasons for the request.

(2) The secretary may terminate a discharge permit when a discharger fails to modify the permit in accordance with Paragraph (1) of Subsection E of 20.6.2.3109 NMAC.

(3) The secretary may require modification, or may terminate a discharge permit for a Class I well, a Class III well or other type of well specified in Subsection A of 20.6.2.5101 NMAC, pursuant to the requirements of Subsection I of 20.6.2.5101 NMAC.

(4) If a discharge permit is terminated, the secretary shall notify the permittee by certified mail of the action taken and the reasons for that action. Notice of the termination shall also be given by mail or electronic mail to persons who participated in the permitting action and to those persons on the facility-specific list maintained by the department.

F. If a discharge permit expires or is terminated for any reason and the standards of 20.6.2.3103 NMAC are being or will be exceeded in ground water, or that the water quality standards for interstate and intrastate streams in New Mexico are being or may be violated, the secretary may require the discharger to submit an abatement plan pursuant to 20.6.2.4104 and Subsection A of 20.6.2.4106 NMAC.

G. At the request of the discharger, a discharge permit may be modified in accordance with 20.6.2.3000 through 20.6.2.3114 NMAC.

H. The secretary shall not approve a proposed discharge plan, modification, or renewal for:

- (1)** any discharge for which the discharger has not provided a site and method for flow measurement and sampling;
- (2)** any discharge that will cause any stream standard to be violated;
- (3)** the discharge of any water contaminant which may result in a hazard to public health; or
- (4)** a period longer than five years, except that for new discharges, the term of the discharge permit approval shall commence on the date the discharge begins, but in no event shall the term of the approval exceed seven years from the date the permit was issued; for those permits expiring more than five years from the date of issuance, the discharger shall give prior written notification to the department of the date the discharge is to commence; the term of the permit shall not exceed five years from that date.

[2-18-77, 6-26-80, 9-20-82, 7-2-81, 3-3-86, 12-1-95, 11-15-96; 20.6.2.3109 NMAC - Rn, 20 NMAC 6.2.III.3109, 1-15-01; A, 12-1-01; A, 9-15-02; A, 7-16-06; A, 8-31-15; A, 12-21-18]

20.6.2.3110 PUBLIC HEARING PARTICIPATION:

A. The secretary may appoint an impartial hearing officer to preside over the hearing. The hearing officer may be a department employee other than an employee of the bureau evaluating the application.

B. The hearing shall be at a place in the area affected by the facility for which the discharge permit proposal, modification or renewal is sought.

C. Any person who wishes to present technical evidence at the hearing shall, no later than ten (10) days prior to the hearing, file with the department, and if filed by a person who is not the applicant, serve on the applicant, a statement of intent to present evidence. A person who does not file a statement of intent to present evidence may present a general non-technical statement in support of or in opposition to the proposed discharge plan, modification or renewal. The statement of intent to present technical evidence shall include:

- (1)** the name of the person filing the statement;
- (2)** indication of whether the person filing the statement supports or opposes the proposed discharge plan proposal, modification or renewal;
- (3)** the name of each witness;

- (4) an estimate of the length of the direct testimony of each witness;
- (5) a list of exhibits, if any, to be offered into evidence at the hearing; and
- (6) a summary or outline of the anticipated direct testimony of each witness.

D. At the hearing, the New Mexico Rules of Civil Procedure, SCRA 1986, 1-001 to 1-102 and the New Mexico Rules of Evidence, SCRA 1986, 11-101 to 11-1102 shall not apply. At the discretion of the hearing officer, the rules may be used as guidance. Any reference to the Rules of Civil Procedure and the Rules of Evidence shall not be construed to extend or otherwise modify the authority and jurisdiction of the department under the Act.

E. The hearing officer shall conduct a fair and impartial proceeding, assure that the facts are fully elicited, and avoid delay. The hearing officer shall have authority to take all measures necessary for the maintenance of order and for the efficient, fair and impartial adjudication of issues arising in the proceedings.

F. At the hearing, all persons shall be given a reasonable chance to submit data, views or arguments orally or in writing and to examine witnesses testifying at the hearing.

G. Unless otherwise allowed by the hearing officer, testimony shall be presented in the following order:

- (1) testimony by and examination of the applicant or permittee proving the facts relied upon to justify the proposed discharge plan, renewal or modification and meeting the requirements of the regulations;

- (2) testimony by and examination of technical witnesses supporting or opposing approval, approval subject to conditions, or disapproval of the proposed discharge plan, renewal or modification, in any reasonable order;

- (3) testimony by the general public; and

- (4) rebuttal testimony, if appropriate.

H. The secretary may provide translation service at a public hearing conducted in a locale where the Department can reasonably expect to receive testimony from non-English speaking people.

I. If determined useful by the hearing officer, within thirty (30) days after conclusion of the hearing, or within such time as may be fixed by the hearing officer, the hearing officer may allow proposed findings of fact and conclusions of law and closing argument. All such submissions, if allowed, shall be in writing, shall be served upon the applicant or permittee, the department and all persons who request copies in advance

in writing, and shall contain adequate references to the record and authorities relied on. No new evidence shall be presented unless specifically allowed by the hearing officer.

J. The department shall make an audio recording of the hearing. If the applicant or permittee, or a participant requests a written transcript or certified copy of the audio recording, the requestor shall pay the cost of the transcription or audio copying.

K. The hearing officer shall issue a report within thirty (30) days after the close of the hearing record. The report may include findings of fact, conclusions regarding all material issues of law or discretion, as well as reasons therefore. The report shall be served on the applicant or permittee, the department, and all persons who request copies in advance in writing. The report will be available for public inspection at the department's office in Santa Fe and at the field office closest to the point of the proposed discharge.

L. The secretary shall issue a decision in the matter no later than thirty (30) days of receipt of the hearing report. The decision shall be served and made available for inspection pursuant to Subsection K of this section.

M. Any person who testifies at the hearing or submits a written statement for the record will be considered a participant for purposes of Subsection 20.6.2.3113 NMAC and NMSA 1978, Section 74-6-5.N.

[2-18-77, 12-1-95, 11-15-96; 20.6.2.3110 NMAC - Rn, 20 NMAC 6.2.III.3110, 1-15-01; A, 12-1-01]

20.6.2.3111 TRANSFER OF DISCHARGE PERMIT:

No purported transfer of any discharge permit shall be effective to create, alter or extinguish any right or responsibility of any person subject to this Part, unless the following transfer requirements are met:

A. Prior to any transfer of ownership, control, or possession (whether by lease, conveyance or otherwise) of a facility with a discharge permit, the transferor shall notify the transferee in writing of the existence of the discharge permit, and shall deliver or send by certified mail to the department a copy of such written notification, together with a certification or other proof that such notification has in fact been received by the transferee.

B. Upon receipt of such notification, the transferee shall have the duty to inquire into all of the provisions and requirements contained in such discharge permit, and the transferee shall be charged with notice of all such provisions and requirements as they appear of record in the department's file or files concerning such discharge permit.

C. Until both ownership and possession of the facility have been transferred to the transferee, the transferor shall continue to be responsible for any discharge from the facility.

D. Upon assuming either ownership or possession of the facility, the transferee shall have the same rights and responsibilities under the discharge permit as were applicable to the transferor.

E. Nothing in this section or in this part shall be construed to relieve any person of responsibility or liability for any act or omission which occurred while that person owned, controlled or was in possession of the facility.

[2-18-77, 12-24-87, 12-1-95, 11-15-96; 20.6.2.3111 NMAC - Rn, 20 NMAC 6.2.III.3111, 1-15-01; A, 12-1-01]

20.6.2.3112 APPEALS OF SECRETARY'S DECISIONS:

A. If the secretary approves, approves subject to conditions, or disapproves a proposed discharge plan, renewal or modification, or modifies or terminates a discharge permit, appeal therefrom shall be in accordance with the provisions of Sections 74-6-5(N), (O) and (P), NMSA 1978. The filing of an appeal does not act as a stay of any provision of the Act, the regulations, or any permit issued pursuant to the Act, unless otherwise ordered by the secretary or the commission.

B. If the secretary determines that a discharger is not exempt from obtaining a discharge permit, or that the material to be discharged contains any toxic pollutant listed in 20.6.2.7 NMAC, which is not included in the numerical standards of Paragraph (1) of Subsection A of 20.6.2.3103 NMAC, then the discharger may appeal such determination by filing with the commission's secretary a notice of appeal to the commission within thirty days after receiving the secretary's written determination, and the appeal therefrom and any action of the commission thereon shall be in accordance with the provisions of Sections 74-6-5(O), (P), (Q), (R) and (S) NMSA 1978.

C. Proceedings before the commission shall be conducted in accordance with the commission's adjudicatory procedures, 20 NMAC 1.3.

[2-18-77, 7-2-81, 12-1-95, 11-15-96; 20.6.2.3112 NMAC - Rn, 20 NMAC 6.2.III.3112, 1-15-01; A, 12-1-01; A, 7-16-06; A, 12-21-18]

20.6.2.3113 APPEALS OF COMMISSION DECISIONS:

An applicant, permittee or a person who participated in a permitting action and who is adversely affected by such action may appeal the decision of the commission in accordance with the provisions of Section 74-6-7(A), NMSA 1978.

[2-18-77, 12-1-95, 11-15-96; 20.6.2.3113 NMAC - Rn, 20 NMAC 6.2.III.3113, 1-15-01; A, 12-1-01]

20.6.2.3114 FEES:

A. FEE AMOUNT AND SCHEDULE OF PAYMENT - Every facility submitting a discharge permit application for approval or renewal shall pay the permit fees specified in Table 1 of this section and shall pay a filing fee as specified in Table 2 of this section to the Water Quality Management Fund. Every facility submitting a request for temporary permission to discharge pursuant to Subsection B of Section 20.6.2.3106 NMAC, or financial assurance pursuant to Paragraph 11 of Subsection A of Section 20.6.2.3107 NMAC shall pay the fees specified in Table 2 of this section to the Water Quality Management Fund.

B. Facilities applying for discharge permits which are subsequently withdrawn or denied shall pay one-half of the permit fee at the time of denial or withdrawal.

C. Every facility submitting an application for discharge permit modification will be assessed a filing fee plus one-half of the permit fee. Applications for both renewal and modification will pay the filing fee plus the permit fee.

D. If the secretary requires a discharge permit modification as a component of an enforcement action, the facility shall pay the applicable discharge permit modification fee. If the secretary requires a discharge permit modification outside the context of an enforcement action, the facility shall not be assessed a fee.

E. The secretary may waive or reduce fees for discharge permit modifications or renewals which require little or no cost for investigation or issuance.

F. Facilities shall pay the filing fee at the time of discharge permit application. The filing fee is nonrefundable. The required permit fees may be paid in a single payment at the time of discharge permit approval or in equal installments over the term of the discharge permit. Installment payments shall be remitted yearly, with the first installment due on the date of discharge permit approval. Subsequent installment payments shall be remitted yearly thereafter. The discharge permit or discharge permit application review of any facility shall be suspended or terminated if the facility fails to submit an installment payment by its due date.

G. Every three years beginning in 2004, the department shall review the fees specified in Table 1 and 2 of this section and shall provide a report to the commission. The department shall revise the fees as necessary in accordance with Section 74-6-5(J), NMSA 1978.

20.6.2.3114 TABLE 1 (gpd=gallons per day)	Permit Fee
Agriculture <10,000 gpd	\$ 1,150

Agriculture 10,000 to 49,999 gpd	\$ 2,300
Agriculture 50,000 to 99,999 gpd	\$ 3,450
Agriculture 100,000 gpd or greater	\$ 4,600

20.6.2.4000 PREVENTION AND ABATEMENT OF WATER POLLUTION:

[12-1-95; 20.6.2.4000 NMAC - Rn, 20 NMAC 6.2.IV, 1-15-01]

20.6.2.4001-20.6.2.4100 [RESERVED]

[12-1-95; 20.6.2.4001 - 20.6.2.4100 NMAC - Rn, 20 NMAC 6.2.III.3115-4100, 1-15-01]

20.6.2.4101 PURPOSE:

A. The purposes of Sections 20.6.2.4000 through 20.6.2.4115 NMAC are to:

(1) Abate pollution of subsurface water so that all ground water of the State of New Mexico which has a background concentration of 10,000 mg/L or less TDS, is

either remediated or protected for use as domestic and agricultural water supply, and to remediate or protect those segments of surface waters which are gaining because of subsurface water inflow, for uses designated in the Water Quality Standards for Interstate and Intrastate Streams in New Mexico (20.6.4 NMAC); and

(2) Abate surface water pollution so that all surface waters of the State of New Mexico are remediated or protected for designated or attainable uses as defined in the Water Quality Standards for Interstate and Intrastate Streams in New Mexico (20.6.4 NMAC).

B. If the background concentration of any water contaminant exceeds the standard or requirement of Subsections A, B, and C of Section 20.6.2.4103 NMAC, pollution shall be abated by the responsible person to the background concentration.

C. The standards and requirements set forth in Section 20.6.2.4103 NMAC are not intended as maximum ranges and concentrations for use, and nothing herein contained shall be construed as limiting the use of waters containing higher ranges and concentrations.

[12-1-95; 20.6.2.4101 NMAC - Rn, 20 NMAC 6.2.IV.4101, 1-15-01; A, 12-21-18]

20.6.2.4102 [RESERVED]

[12-1-95; 20.6.2.4102 NMAC - Rn, 20 NMAC 6.2.IV.4102, 1-15-01]

20.6.2.4103 ABATEMENT STANDARDS AND REQUIREMENTS:

A. The vadose zone shall be abated as follows:

(1) water contaminants in the vadose zone shall not be capable of contaminating ground water or surface water, in excess of the standards in Subsections B and C below, through leaching, percolation or as the water table elevation fluctuates; and

(2) any constituent listed in 20.6.2.3103 NMAC or any toxic pollutant in the vadose zone shall be abated so that it is not capable of endangering human health due to inhalation of vapors that may accumulate in structures, utility infrastructure, or construction excavations.

B. Ground water pollution at any place of withdrawal for present or reasonably foreseeable future use, where the TDS concentration is 10,000 mg/L or less, shall be abated to meet the standards of Subsections A, B, and C of Section 20.6.2.3103 NMAC.

C. Surface water pollution shall be abated to conform to the Water Quality Standards for Interstate and Intrastate Streams in New Mexico (20.6.4 NMAC).

D. Subsurface water and surface water abatement shall not be considered complete until a minimum of eight (8) consecutive sampling events collected from all compliance sampling stations approved by the secretary, with a minimum of ninety (90) days between sampling events spanning a time period no greater than four (4) years, meet the abatement standards of Subsections A, B, and C of this section. Abatement of water contaminants measured in solid-matrix samples of the vadose zone shall be considered complete after one-time sampling from compliance stations approved by the secretary.

E. Alternative Abatement Standards: If the person abating water pollution pursuant to an approved abatement plan, or pursuant to the exemptions of 20.6.2.4105 NMAC, is unable to fully meet an abatement standard set forth in Subsections A and C of this section, the person may file a petition with the commission seeking approval of an alternative abatement standard.

(1) A petition for an alternative abatement standard shall demonstrate at least one of the following criteria:

(a) compliance with the standard set forth in Subsections A and B of this section would not be feasible by the maximum use of commercially accepted abatement technology;

(b) compliance with the standard set forth in Subsections A and B of this section would not be feasible by the maximum use of technology within the economic capability of the person;

(c) there is no reasonable relationship between the economic and social costs and benefits of attainment of the standard set forth in Subsections A and B of this section; or

(d) compliance with the standard set forth in Subsections A and B of this section is technically infeasible following the maximum use of commercially accepted abatement technology, as demonstrated by a statistically valid extrapolation of the decrease in concentration of any water contaminant over a twenty (20) year period, such that projected future reductions during that time would be less than 20 percent of the concentration at the time technical infeasibility is proposed. Technical infeasibility proposals that involved the use of experimental abatement technology shall be considered at the discretion of the commission. A statistically valid decrease cannot be demonstrated by fewer than eight (8) consecutive sampling events. Sampling events demonstrating a statistically valid decrease shall be collected with a minimum of ninety (90) days between sampling events and shall not span a time period greater than four (4) years.

(2) A petition for alternative abatement standards shall specify, in addition to the information required by Subsection A of 20.6.2.1210 NMAC the following:

(a) the water contaminant for which the alternative abatement standard is proposed;

(b) the alternative abatement standard proposed;

(c) the three-dimensional body of water pollution for which approval is sought;

(d) a summary of all actions taken to abate water pollution to standards; and

(e) other information as deemed necessary, which may include a transport, fate and risk assessment in accordance with accepted methods.

(3) The commission may approve an alternative abatement standard if the petitioner demonstrates that:

(a) at least one of the criteria set forth in Paragraph 1 of Subsection E of this Section has been met;

(b) the proposed alternative abatement standard is technically achievable and cost benefit justifiable; and

(c) compliance with the proposed alternative abatement standard will not create a present or future hazard to public health or undue damage to property.

(4) An alternative abatement standard shall only be granted after a public hearing, as required by NMSA 1978, Section 74-6-4(H) of the water Quality Act.

(5) The commission shall review petitions for alternative abatement standards in accordance with the procedures for review of variance petitions provided in the commission's adjudicatory procedures, 20.1.3 NMAC.

F. For a site where abatement activities include post-completion monitoring, maintenance of engineering controls, remediation systems, affirmation of non-residential use, or port-closure care, institutional controls such as well drilling restrictions under 19.27.5 NMAC, deed restrictions, easements or other legal restrictions binding on successors in interest to the site may be required by the secretary.

[12-1-95, 11-15-96; 20.6.2.4103 NMAC - Rn, 20 NMAC 6.2.IV.4103, 1-15-01; A, 12-21-18]

20.6.2.4104 ABATEMENT PLAN REQUIRED:

A. Unless otherwise provided by this Part, all responsible persons who are abating, or who are required to abate, water pollution in excess of the standards and requirements set forth in Section 20.6.2.4103 NMAC of this Part shall do so pursuant to

an abatement plan approved by the secretary. When an abatement plan has been approved, all actions leading to and including abatement shall be consistent with the terms and conditions of the abatement plan.

B. In the event of a transfer of the ownership, control or possession of a facility for which an abatement plan is required or approved, where the transferor is a responsible person, the transferee also shall be considered a responsible person for the duration of the abatement plan, and may jointly share the responsibility to conduct the actions required by this Part with other responsible persons. The transferor shall notify the transferee in writing, at least thirty (30) days prior to the transfer, that an abatement plan has been required or approved for the facility, and shall deliver or send by certified mail to the secretary a copy of such notification together with a certificate or other proof that such notification has in fact been received by the transferee. The transferor and transferee may agree to a designated responsible person who shall assume the responsibility to conduct the actions required by this Part. The responsible persons shall notify the secretary in writing if a designated responsible person is agreed upon. If the secretary determines that the designated responsible person has failed to conduct the actions required by this Part, the secretary shall notify all responsible persons of this failure in writing and allow them thirty (30) days, or longer for good cause shown, to conduct the required actions before issuing a compliance order pursuant to Section 20.6.2.1220 NMAC.

C. The secretary may require the responsible person(s) to submit a financial assurance plan which covers the estimated costs to conduct the actions required by the abatement plan. Such a financial assurance plan shall be consistent with any financial assurance requirements adopted by the commission.

D. The Secretary may require an oversight funding agreement with the responsible person for abatement plans which compensates the department for reasonable costs associated with the oversight of activities.

[12-1-95; 20.6.2.4104 NMAC - Rn, 20 NMAC 6.2.IV.4104, 1-15-01; A, 12-21-18]

20.6.2.4105 EXEMPTIONS FROM ABATEMENT PLAN REQUIREMENTS:

A. Except as provided in Subsection B of this Section, Sections 20.6.2.4104 and 20.6.2.4106 NMAC do not apply to a person who is abating water pollution:

(1) from a storage tank, under the authority of the Petroleum Storage Tank Regulations (20.5 NMAC) adopted by the New Mexico Environmental Improvement Board, or in accordance with the New Mexico Ground Water Protection Act;

(2) under the authority of the U.S. Environmental Protection Agency pursuant to either the federal Comprehensive Environmental Response, Compensation and Liability Act, and amendments, or the Resource Conservation and Recovery Act;

(3) under the authority of the secretary pursuant to the Hazardous Waste Management Regulations (20.4.1 NMAC) adopted by the New Mexico Environmental Improvement Board;

(4) under the authority of the U.S. Nuclear Regulatory Commission or the U.S. Department of Energy pursuant to the Atomic Energy Act;

(5) from a solid waste landfill, under the authority of the secretary pursuant to the Solid Waste Management Regulations (20.9.1 NMAC) adopted by the N.M. Environmental Improvement Board;

(6) under the authority of a ground water discharge plan approved by the secretary, provided that such abatement is consistent with the requirements and provisions of Sections 20.6.2.4101, 20.6.2.4103, Subsections C and E of Section 20.6.2.4106, Sections 20.6.2.4107 and 20.6.2.4112 NMAC;

(7) under the authority of a Letter of Understanding, Settlement Agreement or Administrative Order on Consent signed by the secretary prior to December 1, 1995, provided that abatement is being performed in full compliance with the terms of the Letter of Understanding, Settlement Agreement or Administrative Order on Consent; and

(8) on an emergency basis, or while abatement plan approval is pending, or in a manner that will result in compliance with the standards and requirements set forth in Section 20.6.2.4103 NMAC within one hundred and eighty (180) days after notice is required to be given pursuant to Paragraph (1) of Subsection A of Section 20.6.2.1203 NMAC, provided that the delegated agency does not object to the abatement action pursuant to Paragraphs (6) and (7) of Subsection A of Section 20.6.2.1203 NMAC.

B. If the secretary determines that abatement of water pollution subject to Subsection A of this section will not meet the standards of Subsections A, B, and C of Section 20.6.2.4103 NMAC, or that additional action is necessary to protect health, welfare, environment or property, the secretary may notify a responsible person, by certified mail, to submit an abatement plan pursuant to Section 20.6.2.4104 and Subsection A of Section 20.6.2.4106 NMAC. The notification shall state the reasons for the secretary's determination. In any appeal of the secretary's determination under this Section, the secretary shall have the burden of proof.

C. Sections 20.6.2.4104 and 20.6.2.4106 NMAC do not apply to the following activities:

(1) Discharges subject to an effective and enforceable National Pollutant Discharge Elimination System (NPDES) permit;

(2) Land application of ground water contaminated with nitrogen originating from human or animal waste and not otherwise exceeding the standards of Subsection

A of Section 20.6.2.3103 NMAC, provided that it is done in compliance with a discharge plan approved by the secretary;

(3) Abatement of water pollution resulting from the withdrawal and decontamination or blending of polluted water for use as a public or private drinking-water supply, by any person other than a responsible person, unless the secretary determines that a hazard to public health may result; and

(4) Reasonable operation and maintenance of irrigation and flood control facilities.

[12-1-95; 20.6.2.4105 NMAC - Rn, 20 NMAC 6.2.IV.4105, 1-15-01; A, 10-15-03; A, 12-21-18]

20.6.2.4106 ABATEMENT PLAN PROPOSAL:

A. Except as provided for in Section 20.6.2.4105 NMAC, a responsible person shall, within sixty (60) days of receipt of written notice from the secretary that an abatement plan is required, submit an abatement plan proposal to the secretary for approval. For good cause shown, the secretary may allow for a total of one hundred and twenty (120) days to prepare and submit the abatement plan proposal.

B. Voluntary Abatement:

(1) Any person wishing to abate water pollution in excess of the standards and requirements set forth in Section 20.6.2.4103 NMAC may submit a Stage 1 abatement plan proposal to the secretary for approval. Following approval by the secretary of a final site investigation report prepared pursuant to Stage 1 of an abatement plan, any person may submit a Stage 2 abatement plan proposal to the secretary for approval.

(2) Following approval of a Stage 1 or Stage 2 abatement plan proposal under Paragraph (1) of Subsection B of this Section, the person submitting the approved plan shall be a responsible person under Sections 20.6.2.4000 through 20.6.2.4115 NMAC for the purpose of performing the approved Stage 1 or Stage 2 abatement plan. Nothing in this Section shall preclude the secretary from applying Paragraph (9) of Subsection A of Section 20.6.2.1203 NMAC to a responsible person if applicable.

C. **Stage 1 Abatement Plan:** The purpose of Stage 1 of the abatement plan shall be to design and conduct a site investigation that will adequately define site conditions, and provide the data necessary to select and design an effective abatement option. Stage 1 of the abatement plan may include, but not necessarily be limited to, the following information depending on the media affected, and as reasonably needed to select and implement an expeditious abatement option:

(1) Descriptions of the site, including a site map, and of site history including the nature of the discharge that caused the water pollution, and a summary of previous investigations;

(2) Site investigation workplan to define:

(a) site geology and hydrogeology, the vertical and horizontal extent and magnitude of vadose-zone and ground water contamination, subsurface hydraulic parameters including hydraulic conductivity, transmissivity, storativity, and rate and direction of contaminant migration, inventory of water wells inside and within one (1) mile from the perimeter of the three-dimensional body where the standards set forth in Subsection B of Section 20.6.2.4103 NMAC are exceeded, and location and number of such wells actually or potentially affected by the pollution; and

(b) surface water hydrology, seasonal stream flow characteristics, ground water/surface water relationships, the vertical and horizontal extent and magnitude of contamination and impacts to surface water and stream sediments. The magnitude of contamination and impacts on surface water may be, in part, defined by conducting a biological assessment of fish, benthic macroinvertebrates and other wildlife populations. Seasonal variations should be accounted for when conducting these assessments.

(3) Monitoring program, including sampling stations and frequencies, for the duration of the abatement plan that may be modified, after approval by the secretary, as additional sampling stations are created;

(4) Quality assurance plan, consistent with the sampling and analytical techniques listed in Subsection B of Section 20.6.2.3107 NMAC and with Section 20.6.4.10 NMAC of the Water Quality Standards for Interstate and Intrastate Streams in New Mexico (20.6.4 NMAC), for all work to be conducted pursuant to the abatement plan;

(5) Site health and safety plan for all work to be performed pursuant to the abatement plan;

(6) A schedule for all Stage 1 abatement plan activities, including the submission of summary quarterly progress reports, and the submission, for approval by the secretary, of a detailed final site investigation report; and

(7) Any additional information that may reasonably be required to design and perform an adequate site investigation.

D. Stage 2 Abatement Plan: Any responsible person shall submit a Stage 2 abatement plan proposal to the secretary for approval within sixty (60) days after approval by the secretary of the final site investigation report prepared pursuant to Stage 1 of the abatement plan. The secretary may grant approval for an extension of time to submit a State 2 abatement plan for good cause shown.

E. The purpose of Stage 2 of the abatement plan shall be to select and design, if necessary, an abatement option that, when implemented, will result in attainment of the abatement standards and requirements set forth in Section 20.6.2.4103 NMAC, including post-closure maintenance activities. Stage 2 of the abatement plan should include, at a minimum, the following information:

- (1) Brief description of the current situation at the site;
- (2) Development and assessment of abatement options;
- (3) Description, justification and design, if necessary, of preferred abatement option;
- (4) Modification, if necessary, of the monitoring program approved pursuant to Stage 1 of the abatement plan, including the designation of pre and post abatement-completion sampling stations and sampling frequencies to be used to demonstrate compliance with the standards and requirements set forth in Section 20.6.2.4103 NMAC;
- (5) Site maintenance activities, if needed, proposed to be performed after termination of abatement activities;
- (6) A schedule for the duration of abatement activities, including the submission of summary quarterly progress reports;
- (7) A public notification proposal designed to satisfy the requirements of Subsections B and C of Sections 20.6.2.4108 and 20.6.2.4108 NMAC; and
- (8) Any additional information that may be reasonably required to select, describe, justify and design an effective abatement option.

[12-1-95; 20.6.2.4106 NMAC - Rn, 20 NMAC 6.2.IV.4106, 1-15-01; A, 12-21-18]

20.6.2.4107 OTHER REQUIREMENTS:

A. Any responsible person shall allow any authorized representative of the secretary to:

- (1) upon presentation of proper credentials, enter the facility at reasonable times;
- (2) inspect and copy records required by an abatement plan;
- (3) inspect any treatment works, monitoring and analytical equipment;

(4) sample any wastes, ground water, surface water, stream sediment, plants, animals, or vadose-zone material including vadose-zone vapor;

(5) use monitoring systems and wells under such responsible person's control in order to collect samples of any media listed in Paragraph (4) of Subsection A of this section; and

(6) gain access to off-site property not owned or controlled by such responsible person, but accessible to such responsible person through a third-party access agreement, provided that it is allowed by the agreement.

B. Any responsible person shall provide the secretary, or a representative of the secretary, with at least four (4) working days advance notice of any sampling to be performed pursuant to an abatement plan, or any well plugging, abandonment or destruction at any facility where an abatement plan has been required.

C. Any responsible person wishing to plug, abandon or destroy a monitoring or water supply well within the perimeter of the 3-dimensional body where the standards set forth in Subsection B of Section 20.6.2.4103 NMAC are exceeded, at any facility where an abatement plan has been required, shall propose such action by certified mail to the secretary for approval, unless such approval is required from the State Engineer. The proposed action shall be designed to prevent water pollution that could result from water contaminants migrating through the well or borehole. The proposed action shall not take place without written approval from the secretary, unless written approval or disapproval is not received by the responsible person within thirty (30) days of the date of receipt of the proposal.

[12-1-95; 20.6.2.4107 NMAC - Rn, 20 NMAC 6.2.IV.4107, 1-15-01]

20.6.2.4108 PUBLIC NOTICE AND PARTICIPATION:

A. Within thirty (30) days of filing of a Stage 1 abatement plan proposal, the secretary shall issue a news release summarizing:

(1) the source, extent, magnitude and significance of water pollution, as known at that time;

(2) the proposed Stage 1 abatement plan investigation; and

(3) the name and telephone number of an agency contact who can provide additional information.

B. Any person proposing a Stage 2 abatement plan, a significant modification to a Stage 2 abatement plan, or an alternative abatement standard shall provide notice of the proposal to the following persons:

(1) the public, who shall be notified through publication of a notice in newspapers of general circulation in this state and in the county where the abatement will occur or where the water body that would be affected by a proposed alternative abatement standard is located, and, in areas with large percentages of non-English speaking people, through the mailing of the public notice in English to a bilingual radio station serving the area where the abatement will occur with a request that it be aired as a public service announcement in the predominant non-English language of the area;

(2) those persons, as identified by the secretary, who have requested notification, who shall be notified by mail or email;

(3) the New Mexico Trustee for Natural Resources, and any other local, state or federal governmental agency affected, as identified by the secretary, which shall be notified by certified mail;

(4) owners and residents of surface property located inside, and within one (1) mile from, the perimeter of the geographic area where the standards and requirements set forth in Section 20.6.2.4103 NMAC are exceeded who shall be notified by a means approved by the secretary; and

(5) the Governor or President of each Indian Tribe, Pueblo or Nation within the state of New Mexico, as identified by the secretary, who shall be notified by mail or email.

C. The public notice proposal for a Stage 2 abatement plan proposal or significant modification of a Stage 2 abatement plan shall be submitted to the secretary for approval with a proposed Stage 2 abatement plan, or significant modification of a Stage 2 abatement plan, and shall include:

(1) name and address of the responsible person;

(2) location of the proposed abatement;

(3) brief description of the nature of the water pollution and of the proposed abatement action;

(4) brief description of the procedures followed by the secretary in making a final determination;

(5) statement on the comment period;

(6) statement that a copy of the abatement plan can be viewed by the public at the department's main office or at the department field office for the area in which the discharge occurred;

(7) statement that written comments on the abatement plan, and requests for a public meeting or hearing that include the reasons why a meeting or hearing should be held, will be accepted for consideration if sent to the secretary within sixty (60) days after the date of public notice; and

(8) address and phone number at which interested persons may obtain further information.

D. The public notice proposal for a proposed alternative abatement standard shall be submitted to the secretary for approval thirty (30) days prior to the filing of a petition for alternative abatement standards, and shall include:

(1) name and address of the responsible person;

(2) location of the proposed alternative abatement standards;

(3) brief description of the nature of the water pollution and of the proposed alternative abatement standards;

(4) brief description of the procedures followed by the commission in making a final determination on a petition for alternate abatement standards;

(5) statement that a copy of the petition for alternate abatement standards petition can be viewed by the public at the department's main office or at the department field office for the area in which the affected water body is occurring;

(6) statement on how the public can request to be placed on a facility-specific mailing list for notification of any hearing conducted on the petition for alternate abatement standards pursuant to 20.1.3 NMAC; and

(7) address and phone number at which interested persons may obtain further information.

E. Within thirty (30) days of the secretary's approval of a Stage 2 abatement plan public notice proposal, any responsible person shall provide to the secretary proof of public notice to the persons listed in Subsection B of 20.6.2.4108 NMAC.

F. For a proposed Stage 2 abatement plan or significant modification of a Stage 2 abatement plan, a public meeting or hearing may be held if the secretary determines there is significant public interest. Notice of the time and place of the meeting or hearing shall be given at least thirty (30) days prior to the meeting or hearing pursuant to Subsections A and B above. The secretary may appoint a meeting facilitator or hearing officer. The secretary may require the responsible person to prepare for approval by the secretary a fact sheet, to be distributed at the public meeting or hearing and afterwards upon request, written in English and Spanish, describing site history, the nature and extent of water pollution, and the proposed abatement. The record of the meeting or hearing, requested under this Section, consists of a tape recorded or transcribed session, provided that the cost of a court

recorder shall be paid by the person requesting the transcript. If requested by the secretary, the responsible person will provide a translator approved by the secretary at a public meeting or hearing conducted in a locale where testimony from non-English speaking people can reasonably be expected. At the meeting or hearing, all interested persons shall be given a reasonable chance to submit data, views or arguments orally or in writing, and to ask questions of the secretary or the secretary's designee and of the responsible person, or their authorized representatives.

G. An alternative abatement standard shall only be granted after a public hearing before the commission, as required by NMSA 1978, Section 74-6-4(H) of the Water Quality Act. The commission shall review petitions for alternative abatement standards in accordance with the procedures for review of variance petitions provided in the commission's adjudicatory procedures, 20.1.3 NMAC.

[12-1-95; 20.6.2.4108 NMAC - Rn, 20 NMAC 6.2.IV.4108, 1-15-01; A, 12-21-18]

20.6.2.4109 SECRETARY APPROVAL OR NOTICE OF DEFICIENCY OF SUBMITTALS:

A. The secretary shall, within sixty (60) days of receiving a Stage 1 abatement plan proposal, a site investigation report, or an abatement completion report, approve the document, or notify the responsible person of the document's deficiency, based upon the information available.

B. The secretary shall, within thirty (30) days of receiving a fact sheet, or Stage 2 abatement plan public notice proposal, approve or notify the responsible person of the document's deficiency, based upon the information available.

C. If no public meeting or hearing is held pursuant to Subsection E of Section 20.6.2.4108 NMAC, then the secretary shall, within 120 days of receiving a Stage 2 abatement plan proposal, approve the plan, or notify the responsible person of the plan's deficiency, based upon the information available.

D. If a public meeting or hearing is held pursuant to Subsection E of Section 20.6.2.4108, then the secretary shall, within sixty (60) days of receipt of all required information, approve Stage 2 of the abatement plan proposal, or notify the responsible person of the plan's deficiency, based upon the information contained in the plan and information submitted at the meeting or hearing.

E. If the secretary notifies a responsible person of any deficiencies in a site investigation report, or in a Stage 1 or Stage 2 abatement plan proposal, the responsible person shall submit a modified document to cure the deficiencies specified by the secretary within thirty (30) days of receipt of the notice of deficiency. The responsible person shall be in violation of Sections 20.6.2.4000 through 20.6.2.4115 NMAC if he fails to submit a modified document within the required time, or if the

modified document does not make a good faith effort to cure the deficiencies specified by the secretary.

F. Provided that the other requirements of this Part are met and provided further that Stage 2 of the abatement plan, if implemented, will result in the standards and requirements set forth in Section 20.6.2.4103 NMAC being met within a schedule that is reasonable given the particular circumstances of the site, the secretary shall approve the plan.

[12-1-95; 20.6.2.4109 NMAC - Rn, 20 NMAC 6.2.IV.4109, 1-15-01; A, 12-21-18]

20.6.2.4110 INVESTIGATION AND ABATEMENT:

Any responsible person who receives approval for Stage 1 and/or Stage 2 of an abatement plan shall conduct all investigation, abatement, monitoring and reporting activity in full compliance with Sections 20.6.2.4000 through 20.6.2.4115 NMAC and according to the terms and schedules contained in the approved abatement plans.

[12-1-95; 20.6.2.4110 NMAC - Rn, 20 NMAC 6.2.IV.4110, 1-15-01]

20.6.2.4111 ABATEMENT PLAN MODIFICATION:

A. Any approved abatement plan may be modified, at the written request of the responsible person, in accordance with Sections 20.6.2.4000 through 20.6.2.4115 NMAC, and with written approval of the secretary.

B. If data submitted pursuant to any monitoring requirements specified in the approved abatement plan or other information available to the secretary indicates that the abatement action is ineffective, or is creating unreasonable injury to or interference with health, welfare, environment or property, the secretary may require a responsible person to modify an abatement plan within the shortest reasonable time so as to effectively abate water pollution which exceeds the standards and requirements set forth in Section 20.6.2.4103 NMAC, and to abate and prevent unreasonable injury to or interference with health, welfare, environment or property.

[12-1-95; 20.6.2.4111 NMAC - Rn, 20 NMAC 6.2.IV.4111, 1-15-01]

20.6.2.4112 COMPLETION AND TERMINATION:

A. Abatement shall be considered complete when the standards and requirements set forth in Section 20.6.2.4103 NMAC are met. At that time, the responsible person shall submit an abatement completion report, documenting compliance with the standards and requirements set forth in Section 20.6.2.4103 NMAC, to the secretary for approval. The abatement completion report also shall propose any changes to long term monitoring and site maintenance activities, if needed, to be performed after termination of the abatement plan.

B. Provided that the other requirements of this Part are met and provided further that the standards and requirements set forth in Section 20.6.2.4103 NMAC have been met, the secretary shall approve the abatement completion report. When the secretary approves the abatement completion report, he shall also notify the responsible person in writing that the abatement plan is terminated.

[12-1-95; 20.6.2.4112 NMAC - Rn, 20 NMAC 6.2.IV.4112, 1-15-01]

20.6.2.4113 DISPUTE RESOLUTION:

In the event of any technical dispute regarding the requirements of Paragraph (9) of Subsection A and Subsection E of Section 20.6.2.1203, Sections 20.6.2.4103, 20.6.2.4105, 20.6.2.4106, 20.6.2.4111 or 20.6.2.4112 NMAC, including notices of deficiency, the responsible person may notify the secretary by certified mail that a dispute has arisen, and desires to invoke the dispute resolution provisions of this Section, provided that such notification must be made within thirty (30) days after receipt by the responsible person of the decision of the secretary that causes the dispute. Upon such notification, all deadlines affected by the technical dispute shall be extended for a thirty (30) day negotiation period, or for a maximum of sixty (60) days if approved by the secretary for good cause shown. During this negotiation period, the secretary or his/her designee and the responsible person shall meet at least once. Such meeting(s) may be facilitated by a mutually agreed upon third party, but the third party shall assume no power or authority granted or delegated to the secretary by the Water Quality Act or by the commission. If the dispute remains unresolved after the negotiation period, the decision of secretary shall be final.

[12-1-95; 20.6.2.4113 NMAC - Rn, 20 NMAC 6.2.IV.4113, 1-15-01]

20.6.2.4114 APPEALS FROM SECRETARY'S DECISIONS:

A. If the secretary determines that an abatement plan is required pursuant to Paragraph (9) of Subsection A of 20.6.2.1203, Subsection F of 20.6.2.3109, or Subsection B of 20.6.2.4105 NMAC, approves or provides notice of deficiency of a proposed abatement plan, or abatement completion report, or modifies or terminates an approved abatement plan, he shall provide written notice of such action by certified mail to the responsible person and any person who participated in the action.

B. Any person who participated in the action before the secretary and who is adversely affected by the action listed in Subsection A of 20.6.2.4114 NMAC may file a petition requesting a review before the commission.

C. The petition shall be made in writing to the commission and shall be filed with the commission's secretary within thirty (30) days after receiving notice of the secretary's action. The petition shall specify the portions of the action to which the petitioner objects, certify that a copy of the petition has been mailed or hand-delivered to the secretary, and to the applicant or permittee if the petitioner is not the applicant or

permittee, and attach a copy of the action for which review is sought. Unless a timely petition for hearing is made, the secretary's action is final.

D. The proceedings before the commission shall be conducted as provided in the commission's adjudicatory procedures, 20 NMAC 1.3.

E. The cost of the court reporter for the hearing shall be paid by the petitioner.

F. The appeal provisions do not relieve the owner, operator or responsible person of their obligations to comply with any federal or state laws or regulations.

[12-1-95, 11-15-96; 20.6.2.4114 NMAC - Rn, 20 NMAC 6.2.IV.4114, 1-15-01; A, 7-16-06; A, 12-21-18]

20.6.2.4115 COURT REVIEW OF COMMISSION DECISIONS:

Court review of commission decisions shall be as provided by law.

[12-1-95; 20.6.2.4115 NMAC - Rn, 20 NMAC 6.2.IV.4115, 1-15-01]

20.6.2.4116-20.6.2.4999 [RESERVED]

[12-1-95; 20.6.2.4116 - 20.6.2.4999 NMAC - Rn, 20 NMAC 6.2.IV.4116-5100, 1-15-01]

20.6.2.5000 UNDERGROUND INJECTION CONTROL:

[12-1-95; 20.6.2.5000 NMAC - Rn, 20 NMAC 6.2.V, 1-15-01]

20.6.2.5001 PURPOSE:

The purpose of 20.6.2.5000 through 20.6.2.5399 NMAC controlling discharges from underground injection control wells is to protect all ground water of the state of New Mexico which has an existing concentration of 10,000 mg/l or less TDS, for present and potential future use as domestic and agricultural water supply, and to protect those segments of surface waters which are gaining because of ground water inflow for uses designated in the New Mexico water quality standards. 20.6.2.5000 through 20.6.2.5399 NMAC include notification requirements, and requirements for discharges directly into the subsurface through underground injection control wells.

[20.6.2.5001 NMAC - N, 12-1-01; A, 8-31-15]

20.6.2.5002 UNDERGROUND INJECTION CONTROL WELL CLASSIFICATIONS:

A. Underground injection control wells include the following.

(1) Any dug hole or well that is deeper than its largest surface dimension, where the principal function of the hole is emplacement of fluids.

(2) Any septic tank or cesspool used by generators of hazardous waste, or by owners or operators of hazardous waste management facilities, to dispose of fluids containing hazardous waste.

(3) Any subsurface distribution system, cesspool or other well which is used for the injection of wastes.

B. Underground injection control wells are classified as follows:

(1) Class I wells inject fluids beneath the lowermost formation that contains 10,000 milligrams per liter or less TDS. Class I hazardous or radioactive waste injection wells inject fluids containing any hazardous or radioactive waste as defined in 74-4-3 and 74-4A-4 NMSA 1978 or 20.4.1.200 NMAC (incorporating 40 C.F.R. Section 261.3), including any combination of these wastes. Class I non-hazardous waste injection wells inject non-hazardous and non-radioactive fluids, and they inject naturally-occurring radioactive material (NORM) as provided by 20.3.1.1407 NMAC.

(2) Class II wells inject fluids associated with oil and gas recovery;

(3) Class III wells inject fluids for extraction of minerals or other natural resources, including sulfur, uranium, metals, salts or potash by in situ extraction. This classification includes only in situ production from ore bodies that have not been conventionally mined. Solution mining of conventional mines such as stopes leaching is included in Class V.

(4) Class IV wells inject fluids containing any radioactive or hazardous waste as defined in 74-4-3 and 74-4A-4 NMSA 1978, including any combination of these wastes, above or into a formation that contains 10,000 mg/l or less TDS.

(5) Class V wells inject a variety of fluids and are those wells not included in Class I, II, III or IV. Types of Class V wells include, but are not limited to, the following:

(a) domestic liquid waste injection wells:

(i) domestic liquid waste disposal wells used to inject liquid waste volumes greater than that regulated by 20.7.3 NMAC through subsurface fluid distribution systems or vertical wells;

(ii) septic system wells used to emplace liquid waste volumes greater than that regulated by 20.7.3 NMAC into the subsurface, which are comprised of a septic tank and subsurface fluid distribution system;

(iii) large capacity cesspools used to inject liquid waste volumes greater than that regulated by 20.7.3 NMAC, including drywells that sometimes have an open bottom or perforated sides;

(b) industrial waste injection wells:

(i) air conditioning return flow wells used to return to the supply aquifer the water used for heating or cooling;

(ii) dry wells used for the injection of wastes into a subsurface formation;

(iii) injection wells associated with the recovery of geothermal energy for heating, aquaculture and production of electrical power;

(iv) stormwater drainage wells used to inject storm runoff from the surface into the subsurface;

(v) motor vehicle waste disposal wells that receive or have received fluids from vehicular repair or maintenance activities;

(vi) car wash waste disposal wells used to inject fluids from motor vehicle washing activities;

(c) mining injection wells:

(i) stopes leaching wells used for solution mining of conventional mines;

(ii) brine injection wells used to inject spent brine into the same formation from which it was withdrawn after extraction of halogens or their salts;

(iii) backfill wells used to inject a mixture of water and sand, mill tailings or other solids into mined out portions of subsurface mines whether water injected is a radioactive waste or not;

(iv) injection wells used for in situ recovery of lignite, coal, tar sands, and oil shale;

(d) ground water management injection wells:

(i) ground water remediation injection wells used to inject contaminated ground water that has been treated to ground water quality standards;

(ii) in situ ground water remediation wells used to inject a fluid that facilitates vadose zone or ground water remediation.

(iii) recharge wells used to replenish the water in an aquifer, including use to reclaim or improve the quality of existing ground water;

(iv) barrier wells used to inject fluids into ground water to prevent the intrusion of saline or contaminated water into ground water of better quality;

(v) subsidence control wells (not used for purposes of oil or natural gas production) used to inject fluids into a non-oil or gas producing zone to reduce or eliminate subsidence associated with the overdraft of fresh water;

(vi) wells used in experimental technologies;

(e) agricultural injection wells - drainage wells used to inject fluids into ground water to prevent the intrusion of saline or contaminated water into ground water of better quality.

[20.6.2.5002 NMAC - N, 12-1-01; A, 8-1-14; A, 8-31-15; A, 12-21-18]

20.6.2.5003 NOTIFICATION AND GENERAL OPERATION REQUIREMENTS FOR ALL UNDERGROUND INJECTION CONTROL WELLS:

All operators of underground injection control wells, except those wells regulated under the Oil and Gas Act, the Geothermal Resources Development Act, and the Surface Mining Act, shall:

A. for existing underground injection control wells, submit to the secretary the information enumerated in Subsection C of 20.6.2.1201 NMAC of this part; provided, however, that if the information in Subsection C of 20.6.2.1201 NMAC has been previously submitted to the secretary and acknowledged by him, the information need not be resubmitted; and

B. operate and continue to operate in conformance with 20.6.2.1 through 20.6.2.5399 NMAC;

C. for new underground injection control wells, submit to the secretary the information enumerated in Subsection C of 20.6.2.1201 NMAC of this part at least 120 days prior to well construction.

[9-20-82, 12-1-95; 20.6.2.5300 NMAC - Rn, 20 NMAC 6.2.V.5300, 1-15-01; 20.6.2.5003 NMAC - Rn, 20.6.2.5300 NMAC, 12-1-01; A, 12-1-01; A, 9-15-02; A, 8-31-15; A, 12-21-18]

20.6.2.5004 PROHIBITED UNDERGROUND INJECTION CONTROL ACTIVITIES AND WELLS:

A. No person shall perform the following underground injection activities nor operate the following underground injection control wells.

(1) The injection of fluids into a motor vehicle waste disposal well is prohibited. Motor vehicle waste disposal wells are prohibited. Any person operating a new motor vehicle waste disposal well (for which construction began after April 5, 2000) must close the well immediately. Any person operating an existing motor vehicle waste disposal well must cease injection immediately and must close the well by December 31, 2002, except as provided in this subsection.

(2) The injection of fluids into a large capacity cesspool is prohibited. Large capacity cesspools are prohibited. Any person operating a new large capacity cesspool (for which construction began after April 5, 2000) must close the cesspool immediately. Any person operating an existing large capacity cesspool must cease injection immediately and must close the cesspool by December 31, 2002.

(3) The injection of any hazardous or radioactive waste into a well is prohibited, except as provided in 20.6.2.5300 through 20.6.2.5399 NMAC or this subsection.

(a) Class I radioactive waste injection wells are prohibited, except naturally-occurring radioactive material (NORM) regulated under 20.3.1.1407 NMAC is allowed as a Class I non-hazardous waste injection well pursuant to Paragraph (1) of Subsection B of 20.6.2.5002 NMAC.

(b) Class IV wells are prohibited, except for wells re-injecting treated ground water into the same formation from which it was drawn as part of a removal or remedial action if the injection has prior approval from the environmental protection agency (EPA) or the department under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) or the Resource Conservation and Recovery Act (RCRA).

(4) Barrier wells, drainage wells, recharge wells, return flow wells, and motor vehicle waste disposal wells are prohibited, except when the discharger can demonstrate that the discharge will not adversely affect the health of persons, and

(a) the injection fluid does not contain a constituent or exhibit a physical parameter (which could include pH, redox condition or temperature) which may cause an exceedance at any place of present or reasonable foreseeable future use of any primary state drinking water maximum contaminant level as specified in the water supply regulations, "Drinking Water" (20.7.10 NMAC), adopted by the environmental improvement board under the Environmental Improvement Act or the standard of 20.6.2.3103 NMAC, whichever is more stringent;

(b) the discharger can demonstrate that the injection will result in an overall or net improvement in water quality as determined by the secretary.

B. Closure of prohibited underground injection control wells shall be in accordance with 20.6.2.5005 and 20.6.2.5209 NMAC.

[20.6.2.5004 NMAC - N, 12-1-01; A, 8-31-15; A, 12-21-18]

20.6.2.5005 PRE-CLOSURE NOTIFICATION AND CLOSURE REQUIREMENTS:

A. Any person proposing to close a Class I, III, IV or V underground injection control well must submit pre-closure notification to the department at least 30 days prior to closure. Pre-closure notification must include the following information:

- (1) Name of facility.
- (2) Address of facility.
- (3) Name of Owner/Operator.
- (4) Address of Owner/Operator.
- (5) Contact Person.
- (6) Phone Number.
- (7) Type of Well(s).
- (8) Number of Well(s).
- (9) Well Construction (e.g. drywell, improved sinkhole, septic tank, leachfield, cesspool, other...).
- (10) Type of Discharge.
- (11) Average Flow (gallons per day).
- (12) Year of Well Construction.
- (13) Proposed Well Closure Activities (e.g. sample fluids/sediment, appropriate disposal of remaining fluids/sediments, remove well and any contaminated soil, clean out well, install permanent plug, conversion to other type well, ground water and vadose zone investigation, other).
- (14) Proposed Date of Well Closure.
- (15) Name of Preparer.
- (16) Date.

(17) Well plugging plan as submitted to the Office of the State Engineer pursuant to 19.27.4 NMAC.

B. Proposed well closure activities must be approved by the department prior to implementation.

[20.6.2.5005 NMAC - N, 12-1-01; A; 12-21-18]

20.6.2.5006 DISCHARGE PERMIT REQUIREMENTS FOR CLASS V INJECTION WELLS:

Class V injection wells must meet the requirements of Sections 20.6.2.3000 through 20.6.2.3999 NMAC and Sections 20.6.2.5000 through 20.6.2.5006 NMAC. Class V injection wells or surface impoundments constructed as recharge basins used to replenish the water in an aquifer, including use to reclaim or improve the quality of existing water must additionally provide documentation of compliance with 19.25.8 NMAC (Underground Storage and Recovery) and shall not be subject to the exemptions of 20.6.2.3105 NMAC.

[20.6.2.5006 NMAC - N, 12-1-01; A, 12-21-18]

20.6.2.5007-20.6.2.5100 [RESERVED]

[12-1-95; 20.6.2.5001 - 20.6.2.5100 NMAC - Rn, 20 NMAC 6.2.IV.4116-5100, 1-15-01; 20.6.2.5007 -20.6.2.5100 NMAC - Rn 20.6.2.5001 - 20.6.2.5100 NMAC, 12-1-01]

20.6.2.5101 DISCHARGE PERMIT AND OTHER REQUIREMENTS FOR CLASS I WELLS AND CLASS III WELLS:

A. Class I wells and Class III wells must meet the requirements of 20.6.2.5000 through 20.6.2.5399 NMAC in addition to other applicable requirements of the commission regulations. The secretary may also require that some Class IV and Class V wells comply with the requirements for Class I wells in 20.6.2.5000 through 20.6.2.5399 NMAC if the secretary determines that the additional requirements are necessary to prevent the movement of water contaminants from a specified injection zone into ground water having 10,000 mg/l or less TDS. No Class I well or Class III well may be approved which allows for movement of fluids into ground water having 10,000 mg/l or less TDS except for fluid movement approved pursuant to 20.6.2.5103 NMAC, or pursuant to a temporary designation as provided in Paragraph (2) of Subsection C of 20.6.2.5101 NMAC.

B. Operation of a Class I well or Class III well must be pursuant to a discharge permit meeting the requirements of 20.6.2.3000 through 20.6.2.3999 NMAC and 20.6.2.5000 through 20.6.2.5399 NMAC.

C. Discharge permits for Class I wells, or Class III wells affecting ground water of 10,000 mg/l or less TDS submitted for secretary approval shall:

(1) receive an aquifer designation if required in 20.6.2.5103 NMAC prior to discharge permit issuance; or

(2) for Class III wells only, address the methods or techniques to be used to restore ground water so that upon final termination of operations including restoration efforts, ground water at any place of withdrawal for present or reasonably foreseeable future use will not contain either concentrations in excess of the standards of 20.6.2.3103 NMAC or any toxic pollutant; issuance of a discharge permit or project discharge permit for Class III wells that provides for restoration of ground water in accordance with the requirements of this subsection shall substitute for the aquifer designation provisions of 20.6.2.5103 NMAC; the approval shall constitute a temporary aquifer designation for a mineral bearing or producing aquifer, or portion thereof, to allow injection as provided for in the discharge permit; such temporary designation shall expire upon final termination of operations including restoration efforts.

D. The exemptions from the discharge permit requirement listed in 20.6.2.3105 NMAC do not apply to underground injection control wells except as provided below:

(1) wells regulated by the energy conservation management division of the energy, minerals and natural resources department under the "Geothermal Resources Development Act";

(2) wells regulated by the mining and minerals division of the energy, minerals and natural resources department under the "Surface Mining Act";

(3) wells for the disposal of effluent from systems which are regulated under the "Liquid Waste Disposal and Treatment" regulations (20.7.3 NMAC) adopted by the environmental improvement board under the "Environmental Improvement Act".

E. Project permits for Class III wells.

(1) The secretary may consider a project discharge permit for Class III wells, if the wells are:

(a) within the same well field, facility site or similar unit;

(b) within the same aquifer and ore deposit;

(c) of similar construction;

(d) of the same purpose; and

(e) operated by a single owner or operator.

(2) A project discharge permit does not allow the discharger to commence injection in any individual operational area until the secretary approves an application for injection in that operational area (operational area approval).

(3) A project discharge permit shall:

(a) specify the approximate locations and number of wells for which operational area approvals are or will be sought with approximate time frames for operation and restoration (if restoration is required) of each area; and

(b) provide the information required under the following sections of this part, except for such additional site-specific information as needed to evaluate applications for individual operational area approvals: Subsection C of 20.6.2.3106, 20.6.2.3107, 20.6.2.5204 through 20.6.2.5209, and Subsection B of 20.6.2.5210 NMAC.

(4) Applications for individual operational area approval shall include the following:

(a) site-specific information demonstrating that the requirements of this part are met; and

(b) information required under 20.6.2.5202 through 20.6.2.5210 NMAC and not previously provided pursuant to Subparagraph (b) of Paragraph (3) of Subsection E of this section.

(5) Applications for project discharge permits and for operational area approval shall be processed in accordance with the same procedures provided for discharge permits under 20.6.2.3000 through 20.6.2.3114 NMAC, allowing for public notice on the project discharge permit and on each application for operational area approval pursuant to 20.6.2.3108 NMAC with opportunity for public hearing prior to approval or disapproval.

(6) The discharger shall comply with additional requirements that may be imposed by the secretary pursuant to this part on wells in each new operational area.

F. If the holder of a discharge permit for a Class I well, or Class III well submits an application for discharge permit renewal at least 120 days before discharge permit expiration, and the discharger is in compliance with his discharge permit on the date of its expiration, then the existing discharge permit for the same activity shall not expire until the application for renewal has been approved or disapproved. An application for discharge permit renewal must include and adequately address all of the information necessary for evaluation of a new discharge permit. Previously submitted materials may be included by reference provided they are current, readily available to the secretary and sufficiently identified to be retrieved.

G. Discharge permit signatory requirements: No discharge permit for a Class I well or Class III well may be issued unless:

(1) the application for a discharge permit has been signed as follows:

(a) for a corporation: by a principal executive officer of at least the level of vice-president, or a representative who performs similar policy-making functions for the corporation who has authority to sign for the corporation; or

(b) for a partnership or sole proprietorship: by a general partner or the proprietor, respectively; or

(c) for a municipality, state, federal, or other public agency: by either a principal executive officer who has authority to sign for the agency, or a ranking elected official; and

(2) all reports required by Class I hazardous waste injection well permits and other information requested by the director pursuant to a Class I hazardous waste injection well permit shall be signed by a person described in Paragraph (1) of this subsection, or by a duly authorized representative of that person; a person is a duly authorized representative only if:

(a) the authorization is made in writing by a person described in Paragraph (1) of this subsection;

(b) the authorization specifies either an individual or a position having responsibility for the overall operation of the regulated facility or activity, such as the position of plant manager, operator of a well or a well field, superintendent, or position of equivalent responsibility; (a duly authorized representative may thus be either a named individual or any individual occupying a named position); and

(c) the written authorization is submitted to the director.

(3) *Changes to authorization.* If an authorization under Paragraph (2) of this subsection is no longer accurate because a different individual or position has responsibility for the overall operation of the facility, a new authorization satisfying the requirements of Paragraph (2) of this subsection must be submitted to the director prior to or together with any reports, information, or applications to be signed by an authorized representative.

(4) The signature on an application, report or other information requested by the director must be directly preceded by the following certification: "I certify under penalty of law that I have personally examined and am familiar with the information submitted in this document and all attachments and that, based on my inquiry of those individuals immediately responsible for obtaining the information, I believe that the information is true, accurate, and complete. I am aware that there are significant

penalties for submitting false information including the possibility of fine and imprisonment."

H. Transfer of Class I non-hazardous waste injection well and Class III well discharge permits.

(1) The transfer provisions of 20.6.2.3111 NMAC do not apply to a discharge permit for a Class I non-hazardous waste injection well or Class III well.

(2) A Class I non-hazardous waste injection well or Class III well discharge permit may be transferred if:

(a) the secretary receives written notice 30 days prior to the transfer date; and

(b) the secretary does not object prior to the proposed transfer date; the secretary may require modification of the discharge permit as a condition of transfer, and may require demonstration of adequate financial responsibility.

(3) The written notice required by Subparagraph (a) of Paragraph (2) of Subsection H above shall:

(a) have been signed by the discharger and the succeeding discharger, including an acknowledgement that the succeeding discharger shall be responsible for compliance with the discharge permit upon taking possession of the facility; and

(b) set a specific date for transfer of discharge permit responsibility, coverage and liability; and

(c) include information relating to the succeeding discharger's financial responsibility required by Paragraph (17) of Subsection B of 20.6.2.5210 NMAC.

I. Modification or termination of a discharge permit for a Class I well or Class III well: If data submitted pursuant to any monitoring requirements specified in the discharge permit or other information available to the secretary indicate that this part are being or may be violated, the secretary may require modification or, if it is determined by the secretary that the modification may not be adequate, may terminate a discharge permit for a Class I well, or Class III well or well field, that was approved pursuant to the requirements of this under 20.6.2.5000 through 20.6.2.5399 NMAC for the following causes:

(1) noncompliance by the discharger with any condition of the discharge permit; or

(2) the discharger's failure in the discharge permit application or during the discharge permit review process to disclose fully all relevant facts, or the discharger's misrepresentation of any relevant facts at any time; or

(3) a determination that the permitted activity may cause a hazard to public health or undue risk to property and can only be regulated to acceptable levels by discharge permit modification or termination.

[9-20-82, 12-1-95, 11-15-96; 20.6.2.5101 NMAC - Rn, 20 NMAC 6.2.V.5101, 1-15-01; A, 12-1-01; A, 9-15-02; A, 8-1-14; A, 8-31-15; A, 12-21-18]

20.6.2.5102 PRE-CONSTRUCTION REQUIREMENTS FOR CLASS I WELLS AND CLASS III WELLS:

A. Discharge permit requirement for Class I wells.

(1) Prior to construction of a Class I well or conversion of an existing well to a Class I well, an approved discharge permit is required that incorporates the requirements of 20.6.2.5000 through 20.6.2.5399 NMAC, except Subsection C of 20.6.2.5210 NMAC. As a condition of discharge permit issuance, the operation of the Class I well under the discharge permit will not be authorized until the secretary has:

(a) reviewed the information submitted for his consideration pursuant to Subsection C of 20.6.2.5210 NMAC; and

(b) determined that the information submitted demonstrates that the operation will be in compliance with this part and the discharge permit.

(2) If conditions encountered during construction represent a substantial change which could adversely impact ground water quality from those anticipated in the discharge permit, the secretary shall require a discharge permit modification or may terminate the discharge permit pursuant to Subsection I of 20.6.2.5101 NMAC, and the secretary shall publish public notice and allow for comments and hearing in accordance with 20.6.2.3108 NMAC.

B. Notification requirement for Class III wells.

(1) The discharger shall notify the secretary in writing prior to the commencement of drilling or construction of wells which are expected to be used for in situ extraction, unless the discharger has previously received a discharge permit or project discharge permit for the Class III well operation.

(a) Any person proposing to drill or construct a new Class III well or well field, or convert an existing well to a Class III well, shall file plans, specifications and pertinent documents regarding such construction or conversion, with the ground water quality bureau of the environment department.

(b) Plans, specifications, and pertinent documents required by this section, if pertaining to carbon dioxide facilities, or facilities for the exploration, production,

refinement or pipeline transmission of oil and natural gas, shall be filed instead with the oil conservation division of the energy, minerals and natural resources department.

(c) Plans, specifications and pertinent documents required to be filed under this section must be filed 90 days prior to the planned commencement of construction or conversion.

(d) The following plans, specifications and pertinent documents shall be provided with the notification:

(i) information required in Subsection C of 20.6.2.3106 NMAC;

(ii) a map showing the Class III wells which are to be constructed; the map must also show, in so far as is known or is reasonably available from the public records, the number, name, and location of all producing wells, injection wells, abandoned wells, dry holes, surface bodies of water, springs, mines (surface and subsurface), quarries, water wells and other pertinent surface features, including residences and roads, that are within the expected area of review (20.6.2.5202 NMAC) of the Class III well or well field perimeter;

(iii) maps and cross-sections indicating the general vertical and lateral limits of all ground water having 10,000 mg/l or less TDS within one mile of the site, the position of such ground water within this area relative to the injection formation, and the direction of water movement, where known, in each zone of ground water which may be affected by the proposed injection operation;

(iv) maps and cross-sections detailing the geology and geologic structure of the local area, including faults, if known or suspected;

(v) the proposed formation testing program to obtain an analysis or description, whichever the secretary requires, of the chemical, physical, and radiological characteristics of, and other information on, the receiving formation;

(vi) the proposed stimulation program;

(vii) the proposed injection procedure;

(viii) schematic or other appropriate drawings of the surface and subsurface construction details of the well;

(ix) proposed construction procedures, including a cementing and casing program, logging procedures, deviation checks, and a drilling, testing, and coring program;

(x) information, as described in Paragraph (17) of Subsection B of 20.6.2.5210 NMAC, showing the ability of the discharger to undertake measures necessary to prevent ground water contamination; and

(xi) a plugging and abandonment plan showing that the requirements of Subsections B, C and D of 20.6.2.5209 NMAC will be met.

(2) Prior to construction, the discharger shall have received written notice from the secretary that the information submitted under item 10 of Subparagraph (d) of Paragraph (1) of Subsection B of 20.6.2.5102 NMAC is acceptable. Within 30 days of submission of the above information the secretary shall notify the discharger that the information submitted is acceptable or unacceptable.

(3) Prior to construction, the secretary shall review said plans, specifications and pertinent documents and shall comment upon their adequacy of design for the intended purpose and their compliance with pertinent sections of this part. Review of plans, specifications and pertinent documents shall be based on the criteria contained in 20.6.2.5205, Subsection E of 20.6.2.5209, and Subparagraph (d) of Paragraph (1) of Subsection B of 20.6.2.5102 NMAC.

(4) Within 30 days of receipt, the secretary shall issue public notice, consistent with Subsection B of 20.6.2.3108 NMAC, that notification was submitted pursuant to Subsection B of 20.6.2.5102 NMAC. The secretary shall allow a period of at least 30 days during which comments may be submitted. The public notice shall include:

- (a)** name and address of the proposed discharger;
- (b)** location of the discharge;
- (c)** brief description of the proposed activities;
- (d)** statement of the public comment period; and
- (e)** address and telephone number at which interested persons may obtain further information.

(5) The secretary shall comment in writing upon the plans and specifications within 60 days of their receipt by the secretary.

(6) Within 30 days after completion, the discharger shall submit written notice to the secretary that the construction or conversion was completed in accordance with submitted plans and specifications, or shall submit as-built plans detailing changes from the originally submitted plans and specifications.

(7) In the event a discharge permit application is not submitted or approved, all wells which may cause ground water contamination shall be plugged and abandoned by the applicant pursuant to the plugging and abandonment plan submitted in the notification; these measures shall be consistent with any comments made by the secretary in his review. If the wells are not to be permanently abandoned and the discharger demonstrates that plugging at this time is unnecessary to prevent ground water contamination, plugging pursuant to the notification is not required. Financial responsibility established pursuant to 20.6.2.5000 through 20.6.2.5299 NMAC will remain in effect until the discharger permanently abandons and plugs the wells in accordance with the plugging and abandonment plan.

[9-20-82, 12-24-87, 12-1-95; 20.6.2.5102 NMAC - Rn, 20 NMAC 6.2.V.5102, 1-15-01; A, 12-1-01; A, 8-31-15; A, 12-21-18]

20.6.2.5103 DESIGNATED AQUIFERS FOR CLASS I WELLS AND CLASS III WELLS:

A. Any person may file a written petition with the secretary seeking commission consideration of certain aquifers or portions of aquifers as "designated aquifers". The purpose of aquifer designation is:

(1) for Class I wells, to allow as a result of injection, the addition of water contaminants into ground water, which before initiation of injection has a concentration between 5,000 and 10,000 mg/l TDS; or

(2) for Class III wells, to allow as a result of injection, the addition of water contaminants into ground water, which before initiation of injection has a concentration between 5,000 and 10,000 mg/l TDS, and not provide for restoration or complete restoration of that ground water pursuant to Paragraph (2) of Subsection C of 20.6.2.5101 NMAC.

B. The applicant shall identify (by narrative description, illustrations, maps or other means) and describe such aquifers, in geologic and geometric terms (such as vertical and lateral limits and gradient) which are clear and definite.

C. An aquifer or portion of an aquifer may be considered for aquifer designation under Subsection A of this section, if the applicant demonstrates that the following criteria are met:

(1) it is not currently used as a domestic or agricultural water supply; and

(2) there is no reasonable relationship between the economic and social costs of failure to designate and benefits to be obtained from its use as a domestic or agricultural water supply because:

(a) it is situated at a depth or location which makes recovery of water for drinking or agricultural purposes economically or technologically impractical at present and in the reasonably foreseeable future; or

(b) it is already so contaminated that it would be economically or technologically impractical to render that water fit for human consumption or agricultural use at present and in the reasonably foreseeable future.

D. The petition shall state the extent to which injection would add water contaminants to ground water and why the proposed aquifer designation should be approved. For Class III wells, the applicant shall state whether and to what extent restoration will be carried out.

E. The secretary shall either transmit the petition to the commission within 60 recommending that a public hearing be held, or refuse to transmit the petition and notify the applicant in writing citing reasons for such refusal.

F. If the secretary transmits the petition to the commission, the commission shall review the petition and determine to either grant or deny a public hearing on the petition. If the commission grants a public hearing, it shall issue a public notice, including the following information:

- (1)** name and address of the applicant;
- (2)** location, depth, TDS, areal extent, general description and common name or other identification of the aquifer for which designation is sought;
- (3)** nature of injection and extent to which the injection will add water contaminants to ground water; and
- (4)** address and telephone number at which interested persons may obtain further information.

G. If the secretary refuses to transmit the petition to the commission, then the applicant may appeal the secretary's disapproval of the proposed aquifer designation to the commission within 30 days, and address the issue of whether the proposed aquifer designation meets the criteria of Subsections A, B, C, and D of this section.

H. If the commission grants a public hearing, the hearing shall be held in accordance with the provisions of Section 74-6-6 NMSA 1978.

I. If the commission does not grant a public hearing on the petition, the aquifer designation shall not be approved.

J. After public hearing and consideration of all facts and circumstances included in Section 74-6-4(D) NMSA 1978, the commission may authorize the secretary to approve

a proposed designated aquifer if the commission determines that the criteria of Subsections A, B, C, and D of this section are met.

K. Approval of a designated aquifer petition does not alleviate the applicant from complying with other sections of 20.6.2.5000 through 20.6.2.5399 NMAC, or of the responsibility for protection, pursuant to this part, of other nondesignated aquifers containing ground water having 10,000 mg/l or less TDS.

L. Persons other than the petitioner may add water contaminants as a result of injection into an aquifer designated for injection, provided the person receives a discharge permit pursuant to the requirements of 20.6.2.5000 through 20.6.2.5399 NMAC. Persons, other than the original petitioner or his designee, requesting addition of water contaminants as a result of injection into aquifers previously designated only for injection with partial restoration shall file a petition with the commission pursuant to the requirements of Subsections A, B, C, and D of this section.

[9-20-82, 12-1-95; 20.6.2.5103 NMAC - Rn, 20 NMAC 6.2.V.5103, 1-15-01; A, 12-1-01; A, 8-31-15]

20.6.2.5104 WAIVER OF REQUIREMENT BY SECRETARY FOR CLASS I WELLS AND CLASS III WELLS:

A. Where a Class I well or a Class III well or well field, does not penetrate, or inject into or above, and which will not affect, ground water having 10,000 mg/l of less TDS, the secretary may:

(1) issue a discharge permit for a well or well field with less stringent requirements for area of review, construction, mechanical integrity, operation, monitoring, and reporting than required by 20.6.2.5000 through 20.6.2.5399 NMAC; or

(2) for Class III wells only, issue a discharge permit pursuant to the requirements of 20.6.2.3000 through 20.6.2.3114 NMAC.

B. Authorization of a reduction in requirements under Subsection A of this section shall be granted only if injection will not result in an increased risk of movement of fluids into ground water having 10,000 mg/l or less TDS, except for fluid movement approved pursuant to 20.6.2.5103 NMAC.

[9-20-82, 12-1-95; 20.6.2.5104 NMAC - Rn & A, 20 NMAC 6.2.V.5104, 1-15-01; A, 12-1-01; A, 8-31-15]

20.6.2.5105-20.6.2.5199 [RESERVED]

[12-1-95; 20.6.2.5105 - 20.6.2.5199 NMAC - Rn, 20 NMAC 6.2.V.5105-5199, 1-15-01]

20.6.2.5200 TECHNICAL CRITERIA AND PERFORMANCE STANDARDS FOR CLASS I WELLS AND CLASS III WELLS:

[12-1-95; 20.6.2.5200 NMAC - Rn, 20 NMAC 6.2.V.5200, 1-15-01; A, 12-1-01; A, 8-31-15]

20.6.2.5201 PURPOSE:

20.6.2.5200 through 20.6.2.5210 NMAC provide the technical criteria and performance standards for Class I wells and Class III wells. (20.6.2.5300 through 20.6.2.5399 NMAC provide certain additional technical and performance standards for Class I hazardous waste injection wells.)

[9-20-82; 20.6.2.5201 NMAC - Rn, 20 NMAC 6.2.V.5201, 1-15-01; A, 12-1-01; A, 8-31-15; A, 12-21-18]

20.6.2.5202 AREA OF REVIEW:

A. The area of review is the area surrounding a Class I non-hazardous waste injection well or Class III well or the area within and surrounding a well field that is to be examined to identify possible fluid conduits, including the location of all known wells and fractures which may penetrate the injection zone.

B. The area of review for each Class I non-hazardous waste injection well, or each Class III well or well field shall be an area which extends:

(1) two and one half (2 1/2) miles from the well, or well field; or

(2) one-quarter (1/4) mile from a well or well field where the area of review is calculated to be zero pursuant to Paragraph (3) of Subsection B below, or where the well field production at all times exceeds injection to produce a net withdrawal; or

(3) a suitable distance, not less than one-quarter (1/4) mile, proposed by the discharger and approved by the secretary, based upon a mathematical calculation to determine the area of review; computations to determine the area of review may be based upon the parameters listed below and should be calculated for an injection time period equal to the expected life of the Class I non-hazardous waste injection well, or Class III well or well field; the following modified Theis equation illustrates one form which the mathematical model may take to compute the area of review; the discharger must demonstrate that any equation or simulation used to compute the area of review applies to the hydrogeologic conditions in the area of review.

Where:

$$4BKH (H_w - H_{bo}) \times S_p G_b$$

r = Radius of the area of review for a Class I non-hazardous waste injection well or Class III well (length)

K = Hydraulic conductivity of the injection zone (length/time)

H = Thickness of the injection zone (length)

t = Time of injection (time)

S = Storage coefficient (dimensionless)

Q = Injection rate (volume/time)

H_{bo} = Observed original hydrostatic head of injection zone (length) measured from the base of the lowest aquifer containing ground water of 10,000 mg/l or less TDS

H_w = Hydrostatic head of underground source of drinking water (length) measured from the base of the lowest aquifer containing ground water of 10,000 mg/l or less TDS

$S_p G_b$ = Specific gravity of fluid in the injection zone (dimensionless)

B = 3.142 (dimensionless)

(4) The above equation is based on the following assumptions:

(a) the injection zone is homogenous and isotropic;

(b) the injection zone has infinite areal extent;

(c) the Class I non-hazardous waste injection well or Class III well penetrates the entire thickness of the injection zone;

(d) the well diameter is infinitesimal compared to "r" when injection time is longer than a few minutes; and

(e) the emplacement of fluid into the injection zone creates an instantaneous increase in pressure.

C. The secretary shall require submittal by the discharger of information regarding the area of review including the information to be considered by the secretary in Subsection B of Section 20.6.2.5210 NMAC.

[9-20-82, 12-1-95; 20.6.2.5202 NMAC - Rn, 20 NMAC 6.2.V.5202, 1-15-01; A, 12-1-01; A, 12-21-18]

20.6.2.5203 CORRECTIVE ACTION FOR CLASS I NON-HAZARDOUS WASTE INJECTION WELLS AND CLASS III WELLS:

A. Persons applying for approval of a Class I non-hazardous waste injection well, or a Class III well or well field shall identify the location of all known wells, drill holes, shafts, stopes and other conduits within the area of review which may penetrate the injection zone, in so far as is known or is reasonably available from the public records. For such wells or other conduits which are improperly sealed, completed, or abandoned, or otherwise provide a pathway for the migration of contaminants, the discharger shall address in the proposed discharge plan such steps or modifications (corrective action) as are necessary to prevent movement of fluids into ground water having 10,000 mg/l or less TDS except for fluid movement approved pursuant to Section 20.6.2.5103 NMAC.

B. Prior to operation, or continued operation of a well for which corrective action is required pursuant to Subsections A or D of Section 20.6.2.5203 NMAC, the discharger must demonstrate that:

(1) all required corrective action has been taken; or

(2) injection pressure is to be limited so that pressure in the injection zone does not cause fluid movement through any well or other conduit within the area of review into ground water having 10,000 mg/l or less TDS except for fluid movement approved pursuant to Section 20.6.2.5103 NMAC; this pressure limitation may be removed after all required corrective action has been taken.

C. In determining the adequacy of corrective action proposed in the discharge permit application, the following factors will be considered by the secretary:

(1) chemical nature and volume of the injected fluid;

(2) chemical nature of native fluids and by-products of injection;

(3) geology and hydrology;

(4) history of the injection and production operation;

(5) completion and plugging records;

(6) abandonment procedures in effect at the time a well, drill hole, or shaft was abandoned; and

(7) hydraulic connections with waters having 10,000 mg/l or less TDS

D. In the event that, after approval for a Class I non-hazardous waste injection well or Class III well has been granted, additional information is submitted or it is discovered

that a well or other conduit within the applicable area of review might allow movement of fluids into ground water having 10,000 mg/l or less TDS except for fluid movement approved pursuant to Section 20.6.2.5103 NMAC, the secretary may require action in accordance with Subsection I of Section 20.6.2.5101 and Subsection B Section 20.6.2.5203 NMAC.

[9-20-82, 12-1-95; 20.6.2.5203 NMAC - Rn, 20 NMAC 6.2.V.5203, 1-15-01; A, 12-1-01]

20.6.2.5204 MECHANICAL INTEGRITY FOR CLASS I WELLS AND CLASS III WELLS:

A. A Class I well or Class III well has mechanical integrity if there is no detectable leak in the casing, tubing or packer which the secretary considers to be significant at maximum operating temperature and pressure; and no detectable conduit for fluid movement out of the injection zone through the well bore or vertical channels adjacent to the well bore which the secretary considers to be significant.

B. Prior to well injection and at least once every five years or more frequently as the secretary may require for good cause during the life of the well, the discharger must demonstrate that a Class I well or Class III well has mechanical integrity. The demonstration shall be made through use of the following tests:

(1) for evaluation of leaks:

(a) monitoring of annulus pressure (after an initial pressure test with liquid or gas before operation commences); or

(b) pressure test with liquid or gas;

(2) for determination of conduits for fluid movement:

(a) the results of a temperature or noise log; or

(b) where the nature of the casing used for Class III wells precludes use of these logs, cementing records and an appropriate monitoring program as the secretary may require which will demonstrate the presence of adequate cement to prevent such movement;

(3) other appropriate tests as the secretary may require.

C. The secretary may consider the use by the discharger of equivalent alternative test methods to determine mechanical integrity. The discharger shall submit information on the proposed test and all technical data supporting its use. The secretary may approve the request if it will reliably demonstrate the mechanical integrity of wells for which its use is proposed. For Class III wells this demonstration may be made by submission of adequate monitoring data after the initial mechanical integrity tests.

D. In conducting and evaluating the tests enumerated in this section or others to be allowed by the secretary, the discharger and the secretary shall apply methods and standards generally accepted in the affected industry. When the discharger reports the results of mechanical integrity tests to the secretary, he shall include a description of the test(s), the method(s) used, and the test results. In making an evaluation, the secretary's review shall include monitoring and other test data submitted since the previous evaluation.

[9-20-82, 12-1-95; 20.6.2.5204 NMAC - Rn, 20 NMAC 6.2.V.5204, 1-15-01; A, 12-1-01; A, 8-31-15]

20.6.2.5205 CONSTRUCTION REQUIREMENTS FOR CLASS I NON-HAZARDOUS WASTE INJECTION WELLS AND CLASS III WELLS:

A. General Construction Requirements Applicable to Class I non-hazardous waste injection wells and Class III wells.

(1) Construction of all Class I non-hazardous waste injection wells and all new Class III wells shall include casing and cementing. Prior to well injection, the discharger shall demonstrate that the construction and operation of:

(a) Class I non-hazardous waste injection wells will not cause or allow movement of fluids into ground water having 10,000 mg/l or less TDS except for fluid movement approved pursuant to Section 20.6.2.5103 NMAC;

(b) Class III wells will not cause or allow movement of fluids out of the injection zone into ground water having 10,000 mg/l or less TDS except for fluid movement approved pursuant to Section 20.6.2.5103 NMAC.

(2) The construction of each newly drilled well shall be designed for the proposed life expectancy of the well.

(3) In determining if the discharger has met the construction requirements of this section and has demonstrated adequate construction, the secretary shall consider the following factors:

(a) depth to the injection zone;

(b) injection pressure, external pressure, annular pressure, axial loading, and other stresses that may cause well failure;

(c) hole size;

(d) size and grade of all casing strings, including wall thickness, diameter, nominal weight, length, joint specification, and construction material;

(e) type and grade of cement;

(f) rate, temperature, and volume of injected fluid;

(g) chemical and physical characteristics of the injected fluid, including corrosiveness, density, and temperature;

(h) chemical and physical characteristics of the formation fluids including pressure and temperature;

(i) chemical and physical characteristics of the receiving formation and confining zones including lithology and stratigraphy, and fracture pressure; and

(j) depth, thickness and chemical characteristics of penetrated formations which may contain ground water.

(4) To demonstrate adequate construction, appropriate logs and other tests shall be conducted during the drilling and construction of new Class I non-hazardous waste injection wells or Class III wells or during work-over of existing wells in preparation for reactivation or for change to injection use. A descriptive report interpreting the results of such logs and tests shall be prepared by a knowledgeable log analyst and submitted to the secretary for review prior to well injection. The logs and tests appropriate to each type of injection well shall be based on the intended function, depth, construction and other characteristics of the well, availability of similar data in the area of the drilling site and the need for additional information that may arise from time to time as the construction of the well progresses.

(a) The discharger shall demonstrate through use of sufficiently frequent deviation checks, or another equivalent method, that a Class I non-hazardous waste injection well or Class III well drilled using a pilot hole then enlarged by reaming or another method, does not allow a vertical avenue for fluid migration in the form of diverging holes created during drilling.

(b) The secretary may require use by the discharger of the following logs to assist in characterizing the formations penetrated and to demonstrate the integrity of the confining zones and the lack of vertical avenues for fluid migration:

(i) for casing intended to protect ground water having 10,000 mg/l or less TDS: resistivity, spontaneous potential, and caliper logs before the casing is installed; and a cement bond, or temperature log after the casing is set and cemented.

(ii) for intermediate and long strings of casing intended to facilitate injection: resistivity, spontaneous potential, porosity, and gamma ray logs before the casing is installed; and fracture finder or spectral logs; and a cement bond or temperature log after the casing is set and cemented.

(5) In addition to the requirements of Section 20.6.2.5102 NMAC, the discharger shall provide notice prior to commencement of drilling, cementing and casing, well logging, mechanical integrity tests, and any well work-over to allow opportunity for on-site inspection by the secretary or his representative.

B. Additional construction requirements for Class I non-hazardous waste injection wells.

(1) All Class I non-hazardous waste injection wells shall be sited in such a manner that they inject into a formation which is beneath the lowermost formation containing, within one quarter mile of the well bore, ground water having 10,000 mg/l TDS or less except as approved pursuant to Section 20.6.2.5103 NMAC.

(2) All Class I non-hazardous waste injection wells shall be cased and cemented by circulating cement to the surface.

(3) All Class I non-hazardous waste injection wells, except those municipal wells injecting noncorrosive wastes, shall inject fluids through tubing with a packer set in the annulus immediately above the injection zone, or tubing with an approved fluid seal as an alternative. The tubing, packer, and fluid seal shall be designed for the expected length of service.

(a) The use of other alternatives to a packer may be allowed with the written approval of the secretary. To obtain approval, the operator shall submit a written request to the secretary which shall set forth the proposed alternative and all technical data supporting its use. The secretary may approve the request if the alternative method will reliably provide a comparable level of protection to ground water. The secretary may approve an alternative method solely for an individual well or for general use.

(b) In determining the adequacy of the specifications proposed by the discharger for tubing and packer, or a packer alternative, the secretary shall consider the following factors:

- (i)** depth of setting;
- (ii)** characteristics of injection fluid (chemical nature or characteristics, corrosiveness, and density);
- (iii)** injection pressure;
- (iv)** annular pressure;
- (v)** rate, temperature and volume of injected fluid; and
- (vi)** size of casing.

C. Additional construction requirements for Class III wells.

(1) Where injection is into a formation containing ground water having 10,000 mg/l or less TDS, monitoring wells shall be completed into the injection zone and into the first formation above the injection zone containing ground water having 10,000 mg/l or less TDS which could be affected by the extraction operation. If ground water having 10,000 mg/l or less TDS below the injection zone could be affected by the extraction operation, monitoring of such ground water may be required. These wells shall be of sufficient number, located and constructed so as to detect any excursion of injection fluids, process byproducts, or formation fluids outside the extraction area or injection zone. The requirement for monitoring wells in aquifers designated pursuant to Section 20.6.2.5103 NMAC may be waived by the secretary, provided that the absence of monitoring wells does not result in an increased risk of movement of fluids into protected ground waters having 10,000 mg/l or less TDS.

(2) Where injection is into a formation which does not contain ground water having 10,000 mg/l or less TDS, no monitoring wells are necessary in the injection zone. However, monitoring wells may be necessary in adjoining zones with ground water having 10,000 mg/l or less TDS that could be affected by the extraction operation.

(3) In an area that the secretary determines is subject to subsidence or collapse, the required monitoring wells may be required to be located outside the physical influence of that area.

(4) In determining the adequacy of monitoring well location, number, construction and frequency of monitoring proposed by the discharger, the secretary shall consider the following factors:

- (a)** the local geology and hydrology;
- (b)** the operating pressures and whether a negative pressure gradient to the monitor well is being maintained;
- (c)** the nature and volume of injected fluid, formation water, and process by-products; and
- (d)** the number and spacing of Class III wells in the well field.

[9-20-82, 12-1-95; 20.6.2.5205 NMAC - Rn, 20 NMAC 6.2.V.5205, 1-15-01; A, 12-1-01]

20.6.2.5206 OPERATING REQUIREMENTS FOR CLASS I NON-HAZARDOUS WASTE INJECTION WELLS AND CLASS III WELLS:

A. General operating requirements applicable to Class I non-hazardous waste injection wells and Class III wells.

(1) The maximum injection pressure at the wellhead shall not initiate new fractures or propagate existing fractures in the confining zone, or cause the movement of injection or formation fluids into ground water having 10,000 mg/l or less TDS except for fluid movement approved pursuant to Section 20.6.2.5103 NMAC.

(2) Injection between the outermost casing and the well bore is prohibited in a zone other than the authorized injection zone.

B. Additional operating requirements for Class I non-hazardous waste injection wells.

(1) Except during well stimulation, the maximum injection pressure shall not initiate new fractures or propagate existing fractures in the injection zone.

(2) Unless an alternative to a packer has been approved under Subparagraph (c) of Paragraph (3) of Subsection B of Section 20.6.2.5205 NMAC, the annulus between the tubing and the long string of casing shall be filled with a fluid approved by the secretary and a pressure, also approved by the secretary shall be maintained on the annulus.

C. Additional operating requirements for Class III wells: Initiation of new fractures or propagation of existing fractures in the injection zone will not be approved by the secretary as part of a discharge permit unless it is done during well stimulation and the discharger demonstrates:

(1) that such fracturing will not cause movement of fluids out of the injection zone into ground water having 10,000 mg/l or less TDS except for fluid movement approved pursuant to Section 20.6.2.5103 NMAC; and

(2) that the provisions of Subsection D of Section 20.6.2.3109 and Subsection C of Section 20.6.2.5101 NMAC for protection of ground water are met.

[9-20-82, 12-1-95; 20.6.2.5206 NMAC - Rn, 20 NMAC 6.2.V.5206, 1-15-01; A, 12-1-01; A, 12-21-18]

20.6.2.5207 MONITORING REQUIREMENTS FOR CLASS I NON-HAZARDOUS WASTE INJECTION WELLS AND CLASS III WELLS:

A. The discharger shall demonstrate mechanical integrity for each Class I non-hazardous waste injection well or Class III well at least once every five years during the life of the well pursuant to Section 20.6.2.5204 NMAC.

B. Additional monitoring requirements for Class I non-hazardous waste injection wells.

(1) The discharger shall provide analysis of the injected fluids at least quarterly or, if necessary, more frequently to yield data representative of their characteristics.

(2) Continuous monitoring devices shall be used to provide a record of injection pressure, flow rate, flow volume, and pressure on the annulus between the tubing and the long string of casing.

(3) The discharger shall provide wells within the area of review as required by the discharge permit to be used by the discharger to monitor pressure in, and possible fluid movement into, ground water having 10,000 mg/l or less TDS except for such ground waters designated pursuant to Section 20.6.2.5103 NMAC. This Section does not require monitoring wells for Class I non-hazardous waste injection wells unless monitoring wells are necessary due to possible flow paths within the area of review.

C. Additional monitoring requirements for Class III wells.

(1) The discharger shall provide an analysis or description, whichever the secretary requires, of the injected fluids at least quarterly or, if necessary, more frequently to yield representative data.

(2) The discharger shall perform:

(a) appropriate monitoring of injected and produced fluid volumes by whichever of the following methods the secretary requires:

(i) recording injection pressure and either flow rate or volume every two weeks; or

(ii) metering and daily recording of fluid volumes;

(b) monitoring every two weeks, or more frequently as the secretary determines, of the monitor wells, required in Subsection C of Section 20.6.2.5205 NMAC for:

(i) water chemistry parameters used to detect any migration from the injection zone;

(ii) fluid levels adjacent to the injection zone; and

(c) other necessary monitoring as the secretary for good cause may require to detect movement of fluids from the injection zone into ground water having 10,000 mg/l or less TDS except for fluid movement approved pursuant to Section 20.6.2.5103 NMAC.

(3) With the approval of the secretary, all Class III wells may be monitored on a well field basis by manifold monitoring rather than on an individual well basis. Manifold monitoring to determine the quality, pressure, and flow rate of the injected fluid may be approved in cases of facilities consisting of more than one Class III well, operating with a common manifold, provided that the discharger demonstrates that manifold monitoring is comparable to individual well monitoring.

[9-20-82, 12-1-95; 20.6.2.5207 NMAC - Rn, 20 NMAC 6.2.V.5207, 1-15-01; A, 12-1-01]

20.6.2.5208 REPORTING REQUIREMENTS FOR CLASS I NON-HAZARDOUS WASTE INJECTION WELLS AND CLASS III WELLS:

A. Reporting requirements for Class I non-hazardous waste injection wells.

(1) If a Class I non-hazardous waste injection well is found to be discharging or is suspected of discharging fluids into a zone or zones other than the permitted or authorized injection zone, the discharger shall within 24 hours notify the secretary of the circumstances and action taken. The discharger shall provide subsequent written reports as required by the secretary.

(2) The discharger shall provide reports quarterly to the secretary on:

(a) the physical, chemical and other relevant characteristics of injection fluids;

(b) monthly average, maximum and minimum values for injection pressure, flow rate and volume, and annular pressure; and

(c) the results of monitoring prescribed under Subsection B of Section 20.6.2.5207 NMAC.

(3) The discharger shall report, no later than the first quarterly report after completion, the results of:

(a) periodic tests of mechanical integrity as required in Sections 20.6.2.5204 and 20.6.2.5207 NMAC;

(b) any other test of the Class I non-hazardous waste injection well conducted by the discharger if required by the secretary;

(c) any well work-over; and

(d) any changes within the area of review which might impact subsurface conditions.

B. Reporting requirements for Class III wells.

(1) The discharger shall notify the secretary within 48 hours of the detection or suspected detection of a leachate excursion, and provide subsequent reports as required by the secretary.

(2) The discharger shall provide to the secretary:

(a) reports on required monitoring quarterly, or more frequently as required by the secretary; and

(b) results of mechanical integrity testing as required in Sections 20.6.2.5204 and 20.6.2.5207 NMAC and any other periodic tests required by the secretary; these results are to be reported no later than the first regular report after the completion of the test.

(3) Where manifold monitoring is permitted, monitoring results may be reported on a well field basis, rather than individual well basis.

C. Report signatory requirements.

(1) All reports submitted pursuant to this section shall be signed and certified as provided in Subsection G of Section 20.6.2.5101 NMAC, or by a duly authorized representative.

(2) For a person to be a duly authorized representative, authorization must:

(a) be made in writing by a signatory described in Paragraph (1) of Subsection G of Section 20.6.2.5101 NMAC;

(b) specify either an individual or a position having responsibility for the overall operation of that regulated facility or activity, such as the position of plant manager, operator of a well or well field, superintendent, or position of equivalent responsibility; and

(c) have been submitted to the secretary.

[9-20-82, 12-1-95; 20.6.2.5208 NMAC - Rn, 20 NMAC 6.2.V.5208, 1-15-01; A, 12-1-01]

20.6.2.5209 PLUGGING AND ABANDONMENT FOR CLASS I WELLS AND CLASS III WELLS:

A. The discharger shall submit as part of the discharge permit application, a plan for plugging and abandonment of a Class I well or a Class III well that meets the requirements of Subsection D of 20.6.2.3109, Subsection C of 20.6.2.5101, and 20.6.2.5005 NMAC for protection of ground water. If requested, a revised or updated abandonment plan shall be submitted for approval prior to closure. The obligation to

implement the plugging and abandonment plan as well as the requirements of the plan survives the termination or expiration of the permit.

B. Prior to abandonment of a well used in a Class I well or Class III well operation, the well shall be plugged in a manner which will not allow the movement of fluids through the well bore out of the injection zone or between other zones of ground water. Cement plugs shall be used unless a comparable method has been approved by the secretary for the plugging of Class III wells at that site.

C. Prior to placement of the plugs, the well to be abandoned shall be in a state of static equilibrium with the mud weight equalized top to bottom, either by circulating the mud in the well at least once or by a comparable method approved by the secretary.

D. Placement of the plugs shall be accomplished by one of the following:

- (1) the balance method; or
- (2) the dump bailer method; or
- (3) the two-plug method; or
- (4) an equivalent method with the approval of the secretary.

E. The following shall be considered by the secretary in determining the adequacy of a plugging and abandonment plan:

- (1) the type and number of plugs to be used;
- (2) the placement of each plug, including the elevation of the top and bottom;
- (3) the type, grade and quantity of cementing slurry to be used;
- (4) the method of placement of the plugs;
- (5) the procedure to be used to plug and abandon the well; and
- (6) such other factors that may affect the adequacy of the plan.

F. The discharger shall retain all records concerning the nature and composition of injected fluids until five years after completion of any plugging and abandonment procedures.

[9-20-82, 12-1-95; 20.6.2.5209 NMAC - Rn, 20 NMAC 6.2.V.5209, 1-15-01; A, 12-1-01; A, 8-31-15; A, 12-21-18]

20.6.2.5210 INFORMATION TO BE CONSIDERED BY THE SECRETARY FOR CLASS I WELLS AND CLASS III WELLS:

A. This section sets forth the information to be considered by the secretary in authorizing construction and use of a Class I well or Class III well or well field. Certain maps, cross-sections, tabulations of all wells within the area of review, and other data may be included in the discharge permit application submittal by reference provided they are current, readily available to the secretary and sufficiently identified to be retrieved.

B. Prior to the issuance of a discharge permit or project discharge permit allowing construction of a new Class I well, operation of an existing Class I well, or operation of a new or existing Class III well or well field, or conversion of any well to injection use, the secretary shall consider the following:

- (1)** information required in Subsection C of 20.6.2.3106 NMAC;
- (2)** a map showing the Class I well, or Class III well or well fields, for which approval is sought and the applicable area of review; within the area of review, the map must show, in so far as is known or is reasonably available from the public records, the number, name, and location of all producing wells, injection wells, abandoned wells, dry holes, surface bodies of water, springs, mines (surface and subsurface), quarries, water wells and other pertinent surface features, including residences and roads;
- (3)** a tabulation of data on all wells within the area of review which may penetrate into the proposed injection zone; such data shall include, as available, a description of each well's type, the distance and direction to the injection well or well field, construction, date drilled, location, depth, record of plugging or completion, and any additional information the secretary may require;
- (4)** for wells within the area of review which penetrate the injection zone, but are not properly completed or plugged, the corrective action proposed to be taken under 20.6.2.5203 NMAC;
- (5)** maps and cross-sections indicating the general vertical and lateral limits of all ground water having 10,000 mg/l or less TDS within the area of review, the position of such ground water within the area of review relative to the injection formation, and the direction of water movement, where known, in each zone of ground water which may be affected by the proposed injection operation;
- (6)** maps and cross-sections detailing the geology and geologic structure of the local area, including faults, if known or suspected;
- (7)** generalized maps and cross-sections illustrating the regional geologic setting;

- (8)** proposed operating data, including:
- (a)** average and maximum daily flow rate and volume of the fluid to be injected;
 - (b)** average and maximum injection pressure;
 - (c)** source of injection fluids and an analysis or description, whichever the secretary requires, of their chemical, physical, radiological and biological characteristics;
- (9)** results of the formation testing program to obtain an analysis or description, whichever the secretary requires, of the chemical, physical, and radiological characteristics of, and other information on, the receiving formation, provided that the secretary may issue a conditional approval of a discharge permit if he finds that further formation testing is necessary for final approval;
- (10)** expected pressure changes, native fluid displacement, and direction of movement of the injected fluid;
- (11)** proposed stimulation program;
- (12)** proposed or actual injection procedure;
- (13)** schematic or other appropriate drawings of the surface and subsurface construction details of the well;
- (14)** construction procedures, including a cementing and casing program, logging procedures, deviation checks, and a drilling, testing, and coring program;
- (15)** contingency plans to cope with all shut-ins or well failures so as to prevent movement of fluids into ground water having 10,000 mg/l or less TDS except for fluid movement approved pursuant to 20.6.2.5103 NMAC;
- (16)** plans, including maps, for meeting the monitoring requirements of 20.6.2.5207 NMAC; and
- (17)** the ability of the discharger to undertake measures necessary to prevent contamination of ground water having 10,000 mg/l or less TDS after the cessation of operation, including the proper closing, plugging and abandonment of a well, ground water restoration if applicable, and any post-operational monitoring as may be needed; methods by which the discharger shall demonstrate the ability to undertake these measures shall include submission of a surety bond or other adequate assurances, such as financial statements or other materials acceptable to the secretary, such as: (1) a surety bond; (2) a trust fund with a New Mexico bank in the name of the state of New Mexico, with the state as beneficiary; (3) a non-renewable letter of credit made out to the state of New Mexico; (4) liability insurance specifically covering the contingencies

listed in this paragraph; or (5) a performance bond, generally in conjunction with another type of financial assurance; such bond or materials shall be approved and executed prior to discharge permit issuance and shall become effective upon commencement of construction; if an adequate bond is posted by the discharger to a federal or another state agency, and this bond covers all of the measures referred to above, the secretary shall consider this bond as satisfying the bonding requirements of 20.6.2.5000 through 20.6.2.5299 NMAC wholly or in part, depending upon the extent to which such bond is adequate to ensure that the discharger will fully perform the measures required hereinabove.

C. Prior to the secretary's approval that allows the operation of a new or existing Class I well or Class III well or well field, the secretary shall consider the following:

- (1) update of pertinent information required under Subsection B of 20.6.2.5210 NMAC;
- (2) all available logging and testing program data on the well;
- (3) the demonstration of mechanical integrity pursuant to 20.6.2.5204 NMAC;
- (4) the anticipated maximum pressure and flow rate at which the permittee will operate;
- (5) the results of the formation testing program;
- (6) the physical, chemical, and biological interactions between the injected fluids and fluids in the injection zone, and minerals in both the injection zone and the confining zone; and
- (7) the status of corrective action on defective wells in the area of review.

[9-20-82, 12-24-87, 12-1-95; 20.6.2.5210 NMAC - Rn, 20 NMAC 6.2.V.5210, 1-15-01; A, 12-1-01; A, 8-31-15]

20.6.2.5211-20.6.2.5299 [RESERVED]

[12-1-95; 20.6.2.5211 - 20.6.2.5299 NMAC - Rn, 20 NMAC 6.2.V.5211-5299, 1-15-01]

20.6.2.5300 REQUIREMENTS FOR CLASS I HAZARDOUS WASTE INJECTION WELLS:

A. Except as otherwise provided for in 20.6.2.5300 through 20.6.2.5399 NMAC, Class I hazardous waste wells are subject to the minimum permit requirements for all Class I wells in 20.6.2.5000 through 20.6.2.5299 NMAC, in addition to the requirements of 20.6.2.5300 through 20.6.2.5399 NMAC. To the extent any requirement in 20.6.2.5300 through 20.6.2.5399 NMAC conflicts with a requirement of 20.6.2.5000

through 20.6.2.5299 NMAC, Class I hazardous waste injection wells must comply with 20.6.2.5300 through 20.6.2.5399 NMAC.

B. Class I hazardous waste injection wells are only authorized for use by petroleum refineries for the waste generated by the refinery ("generator").

C. The New Mexico energy, minerals and natural resources department, oil conservation division will administer and oversee all permitting of Class I hazardous waste wells pursuant to 20.6.2.5300 through 20.6.2.5399 NMAC.

[20.6.2.5300 NMAC - N, 8-31-15]

20.6.2.5301 DEFINITIONS:

As used in 20.6.2.5300 through 20.6.2.5399 NMAC:

A. "cone of influence" means that area around the well within which increased injection zone pressures caused by injection into the hazardous waste injection well would be sufficient to drive fluids into groundwater of the state of New Mexico;

B. "director" means the director of the New Mexico energy, minerals and natural resources department, oil conservation division or his/her designee;

C. "existing well" means a Class I hazardous waste injection well which has become a Class I hazardous waste injection well as a result of a change in the definition of the injected waste which would render the waste hazardous under 20.4.1.200 NMAC (incorporating 40 C.F.R. Section 261.3);

D. "ground water of the state of New Mexico" means, consistent with 20.6.2.5001 NMAC, an aquifer that contains ground water having a TDS concentration of 10,000 mg/l or less;

E. "injection interval" means that part of the injection zone in which the well is screened, or in which the waste is otherwise directly emplaced;

F. "new well" means any Class I hazardous waste injection well which is not an existing well;

G. "transmissive fault or fracture" is a fault or fracture that has sufficient permeability and vertical extent to allow fluids to move between formations.

[20.6.2.5301 NMAC - N, 8-31-15]

20.6.2.5302 FEES FOR CLASS I HAZARDOUS WASTE INJECTION WELLS:

For the purposes of Class I hazardous waste wells, this section shall apply to the exclusion of 20.6.2.3114 NMAC.

A. *Filing Fee.* Every facility submitting a discharge permit application for approval of a Class I hazardous waste injection well shall pay a filing fee of \$100 to the water quality management fund at the time the permit application is submitted. The filing fee is nonrefundable.

B. *Permit fee.*

(1) Every facility submitting a discharge permit application for approval of a Class I hazardous waste injection well shall pay a permit fee of \$30,000 to the water quality management fund. The permit fee may be paid in a single payment at the time of permit approval or in equal installments over the term of the permit. Installment payments shall be remitted yearly, with the first installment due on the date of permit approval. Subsequent installments shall be remitted yearly thereafter. The permit or permit application review of any facility shall be suspended or terminated if the facility fails to submit an installment payment by its due date.

(2) Facilities applying for permits which are subsequently withdrawn or denied shall pay one-half of the permit fee at the time of denial or withdrawal.

C. *Annual administration fee.* Every facility that receives a Class I hazardous waste injection well permit shall pay an annual administrative fee of \$20,000 to the water quality management fund. The initial administrative fee shall be remitted one year after commencement of disposal operations pursuant to the permit. Subsequent administrative fees shall be remitted annually thereafter.

D. *Renewal fee.*

(1) Every facility submitting a discharge permit application for renewal of a Class I hazardous waste injection well shall pay a renewal fee of \$10,000 to the water quality management fund. The renewal fee may be paid in a single payment at the time of permit renewal or in equal installments over the term of the permit. Installment payments shall be remitted yearly, with the first installment due on the date of permit renewal. Subsequent installments shall be remitted yearly thereafter. The permit or permit renewal review of any facility shall be suspended or terminated if the facility fails to submit an installment payment by its due date.

(2) The director may waive or reduce fees for discharge permit renewals which require little or no cost for investigation or issuance.

E. *Modification fees.*

(1) Every facility submitting an application for a discharge permit modification of a Class I hazardous waste injection well will be assessed a filing fee plus a modification fee of \$10,000 to the water quality management fund.

(2) Every facility submitting an application for other changes to a Class I hazardous waste injection well discharge permit will be assessed a filing fee plus a minor modification fee of \$1,000 to the water quality management fund.

(3) Applications for both renewal and modification shall pay a filing fee plus renewal fee.

(4) If the director requires a discharge permit change as a component of an enforcement action, the facility shall pay the applicable modification fee. If the director requires a discharge permit change outside the context of an enforcement action, the facility shall not be assessed a fee.

(5) The director may waive or reduce fees for discharge permit changes which require little or no cost for investigation or issuance.

F. Financial assurance fees.

(1) Facilities with approved Class I hazardous waste injection well permits shall pay the financial assurance fees specified in Table 2 of 20.6.2.3114 NMAC.

(2) Facilities relying on the corporate guarantee for financial assurance shall pay an additional fee of \$5,000 to the water quality management fund.

[20.6.2.5302 NMAC - N, 8-31-15]

20.6.2.5303 CONVERSION OF EXISTING INJECTION WELLS:

An existing Class I non-hazardous waste injection well may be converted to a Class I hazardous waste injection well provided the well meets the modeling, design, compatibility, and other requirements set forth in 20.6.2.5300 through 20.6.2.5399 NMAC and the permittee receives a Class I hazardous waste permit pursuant to those sections.

[20.6.2.5303 NMAC - N, 8-31-15]

20.6.2.5304-20.6.2.5309 [RESERVED]

20.6.2.5310 REQUIREMENTS FOR WELLS INJECTING HAZARDOUS WASTE REQUIRED TO BE ACCOMPANIED BY A MANIFEST:

A. Applicability. The regulations in this section apply to all generators of hazardous waste, and to the owners or operators of all hazardous waste management facilities,

using any class of well to inject hazardous wastes accompanied by a manifest. (See also Subparagraph (b) of Paragraph (3) of Subsection A of 20.6.2.5004 NMAC.)

B. Authorization. The owner or operator of any well that is used to inject hazardous waste required to be accompanied by a manifest or delivery document shall apply for authorization to inject as specified in 20.6.2.5102 NMAC within six months after the approval or promulgation of the state UIC program.

C. Requirements. In addition to complying with the applicable requirements of this part, the owner or operator of each facility meeting the requirements of Subsection B of this section, shall comply with the following.

(1) Notification. The owner or operator shall comply with the notification requirements of 42 U.S.C. Section 6930.

(2) Identification number. The owner or operator shall comply with the requirements of 20.4.1.500 NMAC (incorporating 40 CFR Section 264.11).

(3) Manifest system. The owner or operator shall comply with the applicable recordkeeping and reporting requirements for manifested wastes in 20.4.1.500 NMAC (incorporating 40 CFR Section 264.71).

(4) Manifest discrepancies. The owner or operator shall comply with 20.4.1.500 NMAC (incorporating 40 CFR Section 264.72).

(5) Operating record. The owner or operator shall comply with 20.4.1.500 NMAC (incorporating 40 CFR Sections 264.73(a), (b)(1), and (b)(2)).

(6) Annual report. The owner or operator shall comply with 20.4.1.500 NMAC (incorporating 40 CFR Section 264.75).

(7) Unmanifested waste report. The owner or operator shall comply with 20.4.1.500 NMAC (incorporating 40 CFR Section 264.75).

(8) Personnel training. The owner or operator shall comply with the applicable personnel training requirements of 20.4.1.500 NMAC (incorporating 40 CFR Section 264.16).

(9) Certification of closure. When abandonment is completed, the owner or operator must submit to the director certification by the owner or operator and certification by an independent registered professional engineer that the facility has been closed in accordance with the specifications in 20.6.2.5209 NMAC.

[20.6.2.5310 NMAC - N, 8-31-15]

20.6.2.5311-20.6.2.5319 [RESERVED]

20.6.2.5320 ADOPTION OF 40 CFR PART 144, SUBPART F (FINANCIAL RESPONSIBILITY):

CLASS I HAZARDOUS WASTE INJECTION WELLS): Except as otherwise provided, the regulations of the United States environmental protection agency set forth in 40 CFR Part 144, Subpart F are hereby incorporated by reference.

[20.6.2.5320 NMAC - N, 8-31-15]

20.6.2.5321 MODIFICATIONS, EXCEPTIONS, AND OMISSIONS:

Except as otherwise provided, the following modifications, exceptions, and omissions are made to the incorporated federal regulations.

A. The following term defined in 40 CFR Section 144.61 has the meaning set forth herein, in lieu of the meaning set forth in 40 CFR Section 144.61: "plugging and abandonment plan" means the plan for plugging and abandonment prepared in accordance with the requirements of 20.6.2.5341 NMAC.

B. The following terms not defined in 40 CFR Part 144, Subsection F have the meanings set forth herein when the terms are used in this part:

(1) "administrator," "regional administrator" and other similar variations means the director of the New Mexico energy, minerals and natural resources department, oil conservation division or his/her designee;

(2) "United States environmental protection agency" or "EPA" means New Mexico energy, minerals and natural resources department, oil conservation division or OCD, except when used in 40 CFR Section 144.70(f).

C. The following provisions of 40 CFR Part 144, Subpart F are modified in 20.6.2.5321 NMAC:

(1) cross references to 40 CFR Part 144 shall be replaced by cross references to 20.6.2.5300 through 20.6.2.5399 NMAC;

(2) the cross reference to Sections 144.28 and 144.51 in Section 144.62(a) shall be replaced by a cross reference to 20.6.2.5341 NMAC;

(3) the cross references to 40 CFR Parts 264, Subpart H and 265, Subpart H shall be modified to include cross references to 40 CFR Parts 264, Subpart H and 265, Subpart H and 20.4.1.500 and 20.4.1.600 NMAC;

(4) references to EPA identification numbers in financial assurance documents shall be replaced by references to API well numbers (US well numbers);

(5) the first sentence of 40 CFR Section 144.63(f)(1) shall be replaced with the following sentence: "An owner or operator may satisfy the requirements of this section by obtaining a guarantee from a corporate parent that meets the requirements of 40 CFR Section 144.63(f)(10), including the guarantor meeting the requirements for the owner or operator under the financial test specified in this paragraph.";

(6) trust agreements prepared in accordance with 40 CFR Section 144.70(a) must state that they will be administered, construed, and enforced according to the laws of New Mexico;

(7) surety companies issuing bonds prepared in accordance with 40 CFR Section 144, Subpart F must be registered with the New Mexico office of superintendent of insurance;

D. The following provisions of 40 CFR Part 144, Subpart F are omitted from 20.6.2.5320 NMAC:

(1) Section 144.65;

(2) Section 144.66;

(3) the third sentence in 40 CFR Section 144.63(h).

[20.6.2.5321 NMAC - N, 8-31-15]

20.6.2.5322-20.6.2.5340 [RESERVED]

20.6.2.5341 CONDITIONS APPLICABLE TO ALL PERMITS:

The following conditions apply to all Class I hazardous permits. All conditions applicable to all permits shall be incorporated into the permits either expressly or by reference. If incorporated by reference, a specific citation to these regulations must be given in the permit.

A. *Duty to comply.* The permittee must comply with all conditions of this permit. Any permit noncompliance constitutes a violation of the New Mexico Water Quality Act and is grounds for enforcement action; for permit termination, revocation and reissuance, or modification; or for denial of a permit renewal application; except that the permittee need not comply with the provisions of this permit to the extent and for the duration such noncompliance is authorized in a variance issued under 20.6.2.1210 NMAC.

B. *Duty to reapply.* If the permittee wishes to continue an activity regulated by this permit after the expiration date of this permit, the permittee must apply for and obtain a permit renewal pursuant to Subsection F of 20.6.2.3106 NMAC.

C. *Need to halt or reduce activity not a defense.* It shall not be a defense for a permittee in an enforcement action that it would have been necessary to halt or reduce the permitted activity in order to maintain compliance with the conditions of this permit.

D. *Duty to mitigate.* The permittee shall take all reasonable steps to minimize or correct any adverse impact on the environment resulting from noncompliance with this permit.

E. *Proper operation and maintenance.* The permittee shall at all times properly operate and maintain all facilities and systems of treatment and control (and related appurtenances) which are installed or used by the permittee to achieve compliance with the conditions of this permit. Proper operation and maintenance includes effective performance, adequate funding, adequate operator staffing and training, and adequate laboratory and process controls, including appropriate quality assurance procedures. This provision requires the operation of back-up or auxiliary facilities or similar systems only when necessary to achieve compliance with the conditions of the permit.

F. *Permit actions.* This permit may be modified, revoked and reissued, or terminated for cause. The filing of a request by the permittee for a permit modification, revocation and reissuance, or termination, or a notification of planned changes or anticipated noncompliance, does not stay any permit condition.

G. *Property rights.* This permit does not convey any property rights of any sort, or any exclusive privilege.

H. *Duty to provide information.* The permittee shall furnish to the director, within a time specified, any information which the director may request to determine whether cause exists for modifying, revoking and reissuing, or terminating this permit, or to determine compliance with this permit. The permittee shall also furnish to the director, upon request, copies of records required to be kept by this permit.

I. *Duty to provide notice.* Public notice, when required, shall be provided as set forth in 20.6.2.3108 NMAC except that the following notice shall be provided in lieu of the notice required by Paragraph (2) of Subsection B of 20.6.2.3108 NMAC: a written notice must be sent by certified mail, return receipt requested, to all surface and mineral owners of record within a ½ mile radius of the proposed well or wells.

J. *Inspection and entry.* The permittee shall allow the director, or an authorized representative, upon the presentation of credentials and other documents as may be required by law, to:

(1) enter upon the permittee's premises where a regulated facility or activity is located or conducted, or where records must be kept under the conditions of this permit;

(2) have access to and copy, at reasonable times, any records that must be kept under the conditions of this permit;

(3) inspect at reasonable times any facilities, equipment (including monitoring and control equipment), practices, or operations regulated or required under this permit; and

(4) sample or monitor at reasonable times, for the purposes of assuring permit compliance or as otherwise authorized by the 20.6.2.5300 through 20.6.2.5399 NMAC, any substances or parameters at any location.

K. *Monitoring and records.*

(1) Samples and measurements taken for the purpose of monitoring shall be representative of the monitored activity.

(2) The permittee shall retain records of all monitoring information, including the following:

(a) calibration and maintenance records and all original strip chart recordings for continuous monitoring instrumentation, copies of all reports required by this permit, and records of all data used to complete the application for this permit, for a period of at least three years from the date of the sample, measurement, report, or application; this period may be extended by request of the director at any time; and

(b) the nature and composition of all injected fluids until three years after the completion of any plugging and abandonment procedures specified under 20.6.2.5351 through 20.6.2.5363 NMAC; the director may require the owner or operator to deliver the records to the director at the conclusion of the retention period.

(3) Records of monitoring information shall include:

(a) the date, exact place, and time of sampling or measurements;

(b) the individual(s) who performed the sampling or measurements;

(c) the date(s) analyses were performed;

(d) the individual(s) who performed the analyses;

(e) the analytical techniques or methods used; and

(f) the results of such analyses.

L. *Signatory requirement.* All applications, reports, or information submitted to the director shall be signed and certified. (See Subsection G of 20.6.2.5101 NMAC.)

M. *Reporting requirements.*

(1) *Planned changes.* The permittee shall give notice to the director as soon as possible of any planned physical alterations or additions to the permitted facility.

(2) *Anticipated noncompliance.* The permittee shall give advance notice to the director of any planned changes in the permitted facility or activity which may result in noncompliance with permit requirements.

(3) *Monitoring reports.* Monitoring results shall be reported at the intervals specified elsewhere in this permit.

(4) *Compliance schedules.* Reports of compliance or noncompliance with, or any progress reports on, interim and final requirements contained in any compliance schedule of this permit shall be submitted no later than 30 days following each schedule date.

(5) *Twenty-four hour reporting.* The permittee shall report any noncompliance which may endanger health or the environment, including:

(a) any monitoring or other information which indicates that any contaminant may cause an endangerment to ground water of the state of New Mexico; or

(b) any noncompliance with a permit condition or malfunction of the injection system which may cause fluid migration into or between ground water of the state of New Mexico; any information shall be provided orally within 24 hours from the time the permittee becomes aware of the circumstances; a written submission shall also be provided within five days of the time the permittee becomes aware of the circumstances; the written submission shall contain a description of the noncompliance and its cause; the area affected by the noncompliance, including any ground water of the state of New Mexico; the period of noncompliance, including exact dates and times, and if the noncompliance has not been corrected, the anticipated time it is expected to continue; the date and time the permittee became aware of the noncompliance; and steps taken or planned to reduce, remediate, eliminate, and prevent reoccurrence of the noncompliance.

(6) *Other noncompliance.* The permittee shall report all instances of noncompliance not reported under Paragraphs (3), (4), and (5) of Subsection M of this section, at the time monitoring reports are submitted. The reports shall contain the information listed in Paragraph (5) of Subsection M of this section.

(7) *Other information.* Where the permittee becomes aware that it failed to submit any relevant facts in a permit application, or submitted incorrect information in a permit application or in any report to the director, it shall promptly submit such facts or information.

N. *Requirements prior to commencing injection.* A new injection well may not commence injection until construction is complete; and

(1) the permittee has submitted notice of completion of construction to the director; and

(2) the director has inspected or otherwise reviewed the new injection well and finds it is in compliance with the conditions of the permit; or the permittee has not received notice from the director of his or her intent to inspect or otherwise review the new injection well within 13 days of the date of the notice in Paragraph (1) of Subsection N of this section, in which case prior inspection or review is waived and the permittee may commence injection; the director shall include in his notice a reasonable time period in which he shall inspect the well.

O. The permittee shall notify the director at such times as the permit requires before conversion or abandonment of the well.

P. The permittee shall meet the requirements of 20.6.2.5209 NMAC.

Q. *Plugging and abandonment report.* Within 60 days after plugging a well or at the time of the next quarterly report (whichever is less) the owner or operator shall submit a report to the director. If the quarterly report is due less than 15 days before completion of plugging, then the report shall be submitted within 60 days. The report shall be certified as accurate by the person who performed the plugging operation. Such report shall consist of either:

(1) a statement that the well was plugged in accordance with the plan previously submitted to the director; or

(2) where actual plugging differed from the plan previously submitted, and updated version of the plan on the form supplied by the director, specifying the differences.

R. *Duty to establish and maintain mechanical integrity.*

(1) The permittee shall meet the requirements of 20.6.2.5204 NMAC.

(2) When the director determines that a Class I hazardous well lacks mechanical integrity pursuant to 20.6.2.5204 NMAC, the director shall give written notice of the director's determination to the owner or operator. Unless the director requires immediate cessation, the owner or operator shall cease injection into the well within 48 hours of receipt of the director's determination. The director may allow plugging of the well pursuant to the requirements of 20.6.2.5209 NMAC or require the permittee to perform such additional construction, operation, monitoring, reporting and corrective action as is necessary to prevent the movement of fluid into or between ground water of the state of New Mexico caused by the lack of mechanical integrity. The owner or operator may resume injection upon written notification from the director that the owner or operator has demonstrated mechanical integrity pursuant to 20.6.2.5204 and 20.6.2.5358 NMAC.

(3) The director may allow the owner or operator of a well which lacks mechanical integrity pursuant to Subsection A of 20.6.2.5204 NMAC to continue or resume injection, if the owner or operator has made a satisfactory demonstration that there is no movement of fluid into or between groundwater of the state of New Mexico.

S. *Transfer of a permit.* The operator shall not transfer a permit without the director's prior written approval. A request for transfer of a permit shall identify officers, directors and owners of 25% or greater in the transferee. Unless the director otherwise orders, public notice or hearing are not required for the transfer request's approval. If the director denies the transfer request, it shall notify the operator and the proposed transferee of the denial by certified mail, return receipt requested, and either the operator or the proposed transferee may request a hearing with 10 days after receipt of the notice. Until the director approves the transfer and the required financial assurance is in place, the director shall not release the transferor's financial assurance.

[20.6.2.5341 NMAC - N, 8-31-15]

20.6.2.5342 ESTABLISHING PERMIT CONDITIONS:

A. In addition to conditions required in 20.6.2.5341 NMAC, the director shall establish conditions, as required on a case-by-case basis under Subsection I of 20.6.2.3109 NMAC, Subsection A of 20.6.2.5343 NMAC, and 20.6.2.5344 NMAC. Permits for owners or operators of hazardous waste injection wells shall also include conditions meeting the requirements of 20.6.2.5310 NMAC, Paragraphs (1) and (2) of Subsection A of this section, and 20.6.2.5351 through 20.6.2.5363 NMAC.

(1) *Financial responsibility.*

(a) The permittee, including the transferor of a permit, is required to demonstrate and maintain financial responsibility and resources to close, plug, and abandon the underground injection operation in a manner prescribed by the director until:

(i) the well has been plugged and abandoned in accordance with an approved plugging and abandonment plan pursuant to Subsection P of 20.6.2.5341 NMAC, and 20.6.2.5209 NMAC, and submitted a plugging and abandonment report pursuant to Subsection Q of 20.6.2.5341 NMAC; or

(ii) the well has been converted in compliance with the requirements of Subsection O of 20.6.2.5341 NMAC; or

(iii) the transferor of a permit has received notice from the director that the transfer has been approved and that the transferee's required financial assurance is in place.

(b) The owner or operator of a well injecting hazardous waste must comply with the financial responsibility requirements of 20.6.2.5320 NMAC.

(2) *Additional conditions.* The director shall impose on a case-by-case basis such additional conditions as are necessary to prevent the migration of fluids into ground water of the state of New Mexico.

B. Applicable requirements.

(1) In addition to conditions required in all permits the director shall establish conditions in permits as required on a case-by-case basis, to provide for and assure compliance with all applicable requirements of this part.

(2) An applicable requirement is a state statutory or regulatory requirement which takes effect prior to final administrative disposition of the permit. An applicable requirement is also any requirement which takes effect prior to the modification or revocation and reissuance of a permit.

(3) New or renewed permits, and to the extent allowed under 20.6.2.3109 NMAC modified or terminated permits, shall incorporate each of the applicable requirements referenced in 20.6.2.5342 NMAC.

C. Incorporation. All permit conditions shall be incorporated either expressly or by reference. If incorporated by reference, a specific citation to the applicable regulations or requirements must be given in the permit.

[20.6.2.5342 NMAC - N, 8-31-15]

20.6.2.5343 SCHEDULE OF COMPLIANCE:

A. General. The permit may, when appropriate, specify a schedule of compliance leading to compliance with this part.

(1) *Time for compliance.* Any schedules of compliance shall require compliance as soon as possible, and in no case later than three years after the effective date of the permit.

(2) *Interim dates.* Except as provided in Subparagraph (b) of Paragraph (1) of Subsection B of this section, if a permit establishes a schedule of compliance which exceeds one year from the date of permit issuance, the schedule shall set forth interim requirements and the dates for their achievement.

(a) The time between interim dates shall not exceed one year.

(b) If the time necessary for completion of any interim requirement is more than one year and is not readily divisible into stages for completion, the permit shall

specify interim dates for the submission of reports of progress toward completion of the interim requirements and indicate a projected completion date.

(3) Reporting. The permit shall be written to require that if Paragraph (1) of Subsection A of this section is applicable, progress reports be submitted no later than 30 days following each interim date and the final date of compliance.

B. Alternative schedules of compliance. A permit applicant or permittee may cease conducting regulated activities (by plugging and abandonment) rather than continue to operate and meet permit requirements as follows.

(1) If the permittee decides to cease conducting regulated activities at a given time within the term of a permit which has already been issued:

(a) the permit may be modified to contain a new or additional schedule leading to timely cessation of activities; or

(b) the permittee shall cease conducting permitted activities before noncompliance with any interim or final compliance schedule requirement already specified in the permit.

(2) If the decision to cease conducting regulated activities is made before issuance of a permit whose term will include the termination date, the permit shall contain a schedule leading to termination which will ensure timely compliance with applicable requirements.

(3) If the permittee is undecided whether to cease conducting regulated activities, the director may issue or modify a permit to contain two schedules as follows:

(a) both schedules shall contain an identical interim deadline requiring a final decision on whether to cease conducting regulated activities no later than a date which ensures sufficient time to comply with applicable requirements in a timely manner if the decision is to continue conducting regulated activities;

(b) one schedule shall lead to timely compliance with applicable requirements;

(c) the second schedule shall lead to cessation of regulated activities by a date which will ensure timely compliance with applicable requirements;

(d) each permit containing two schedules shall include a requirement that after the permittee has made a final decision under Subparagraph (a) of Paragraph (3) of Subsection B of this section it shall follow the schedule leading to compliance if the decision is to continue conducting regulated activities, and follow the schedule leading to termination if the decision is to cease conducting regulated activities.

(4) The applicant's or permittee's decision to cease conducting regulated activities shall be evidenced by a firm public commitment satisfactory to the director, such as a resolution of the board of directors of a corporation.

[20.6.2.5343 NMAC - N, 8-31-15]

20.6.2.5344 REQUIREMENTS FOR RECORDING AND REPORTING OF MONITORING RESULTS:

All permits shall specify:

A. requirements concerning the proper use, maintenance, and installation, when appropriate, of monitoring equipment or methods (including biological monitoring methods when appropriate);

B. required monitoring including type, intervals, and frequency sufficient to yield data which are representative of the monitored activity including when appropriate, continuous monitoring;

C. applicable reporting requirements based upon the impact of the regulated activity and as specified in 20.6.2.5359 NMAC; reporting shall be no less frequent than specified in the above regulations.

[20.6.2.5344 NMAC - N, 8-31-15]

20.6.2.5345-20.6.2.5350 [RESERVED]

20.6.2.5351 APPLICABILITY:

20.6.2.5351 through 20.6.2.5363 NMAC establish criteria and standards for underground injection control programs to regulate Class I hazardous waste injection wells. Unless otherwise noted, these sections supplement the requirements of 20.6.2.5000 through 20.6.2.5299 NMAC and apply instead of any inconsistent requirements for Class I non-hazardous waste injection wells.

[20.6.2.5351 NMAC - N, 8-31-15]

20.6.2.5352 MINIMUM CRITERIA FOR SITING:

A. All Class I hazardous waste injection wells shall be sited such that they inject into a formation that is beneath the lowermost formation containing within one quarter mile of the well bore groundwater of the state of New Mexico.

B. The siting of Class I hazardous waste injection wells shall be limited to areas that are geologically suitable. The director shall determine geologic suitability based upon:

(1) an analysis of the structural and stratigraphic geology, the hydrogeology, and the seismicity of the region;

(2) an analysis of the local geology and hydrogeology of the well site, including, at a minimum, detailed information regarding stratigraphy, structure and rock properties, aquifer hydrodynamics and mineral resources; and

(3) a determination that the geology of the area can be described confidently and that limits of waste fate and transport can be accurately predicted through the use of models.

C. Class I hazardous waste injection wells shall be sited such that:

(1) the injection zone has sufficient permeability, porosity, thickness and areal extent to prevent migration of fluids into ground water of the state of New Mexico; and

(2) the confining zone:

(a) is laterally continuous and free of transecting, transmissive faults or fractures over an area sufficient to prevent the movement of fluids into ground water of the state of New Mexico; and

(b) contains at least one formation of sufficient thickness and with lithologic and stress characteristics capable of preventing vertical propagation of fractures.

D. The owner or operator shall demonstrate to the satisfaction of the director that:

(1) the confining zone is separated from the base of the lowermost ground water of the state of New Mexico by at least one sequence of permeable and less permeable strata that will provide an added layer of protection for ground water of the state of New Mexico in the event of fluid movement in an unlocated borehole or transmissive fault; or

(2) within the area of review, the piezometric surface of the fluid in the injection zone is less than the piezometric surface of the lowermost groundwater of the state of New Mexico, considering density effects, injection pressures and any significant pumping in the overlying ground water of the state of New Mexico; or

(3) there is no ground water of the state of New Mexico present.

(4) The director may approve a site which does not meet the requirements in Paragraphs (1), (2), or (3) of Subsections D of this section if the owner or operator can demonstrate to the director that because of the geology, nature of the waste, or other considerations, abandoned boreholes or other conduits would not cause endangerment of ground water of the state of New Mexico.

[20.6.2.5352 NMAC - N, 8-31-15]

20.6.2.5353 AREA OF REVIEW:

For the purposes of Class I hazardous waste wells, this section shall apply to the exclusion of 20.6.2.5202 NMAC. The area of review for Class I hazardous waste injection wells shall be a two-mile radius around the well bore. The director may specify a larger area of review based on the calculated cone of influence of the well.

[20.6.2.5353 NMAC - N, 8-31-15]

20.6.2.5354 CORRECTIVE ACTION FOR WELLS IN THE AREA OF REVIEW:

For the purposes of Class I hazardous waste wells, this section shall apply to the exclusion of 20.6.2.5203 NMAC.

A. The owner or operator of a Class I hazardous waste well shall as part of the permit application submit a plan to the director outlining the protocol used to:

(1) identify all wells penetrating the confining zone or injection zone within the area of review; and

(2) determine whether wells are adequately completed or plugged.

B. The owner or operator of a Class I hazardous waste well shall identify the location of all wells within the area of review that penetrate the injection zone or the confining zone and shall submit as required in Subsection A of 20.6.2.5360 NMAC:

(1) a tabulation of all wells within the area of review that penetrate the injection zone or the confining zone; and

(2) a description of each well or type of well and any records of its plugging or completion.

C. For wells that the director determines are improperly plugged, completed, or abandoned, or for which plugging or completion information is unavailable, the applicant shall also submit a plan consisting of such steps or modification as are necessary to prevent movement of fluids into or between groundwater of the state of New Mexico. Where the plan is adequate, the director shall incorporate it into the permit as a condition. Where the director's review of an application indicates that the permittee's plan is inadequate (based at a minimum on the factors in Subsection E of this section), the director shall:

(1) require the applicant to revise the plan;

(2) prescribe a plan for corrective action as a condition of the permit; or

(3) deny the application.

D. Requirements.

(1) Existing injection wells. Any permit issued for an existing Class I hazardous waste injection well requiring corrective action other than pressure limitations shall include a compliance schedule requiring any corrective action accepted or prescribed under Subsection C of this section. Any such compliance schedule shall provide for compliance no later than two years following issuance of the permit and shall require observance of appropriate pressure limitations under Paragraph (3) of Subsection D until all other corrective action measures have been implemented.

(2) New injection wells. No owner or operator of a new Class I hazardous waste injection well may begin injection until all corrective actions required under this section have been taken.

(3) The director may require pressure limitations in lieu of plugging. If pressure limitations are used in lieu of plugging, the director shall require as a permit condition that injection pressure be so limited that pressure in the injection zone at the site of any improperly completed or abandoned well within the area of review would not be sufficient to drive fluids into or between groundwater of the state of New Mexico. This pressure limitation shall satisfy the corrective action requirement. Alternatively, such injection pressure limitation may be made part of a compliance schedule and may be required to be maintained until all other required corrective actions have been implemented.

E. In determining the adequacy of corrective action proposed by the applicant under Subsection C of this section and in determining the additional steps needed to prevent fluid movement into and between groundwater of the state of New Mexico, the following criteria and factors shall be considered by the director:

- (1)** nature and volume of injected fluid;
- (2)** nature of native fluids or byproducts of injection;
- (3)** geology;
- (4)** hydrology;
- (5)** history of the injection operation;
- (6)** completion and plugging records;
- (7)** closure procedures in effect at the time the well was closed;
- (8)** hydraulic connections with groundwater of the state of New Mexico;

(9) reliability of the procedures used to identify abandoned wells; and

(10) any other factors which might affect the movement of fluids into or between ground water of the state of New Mexico.

[20.6.2.5354 NMAC - N, 8-31-15]

20.6.2.5355 CONSTRUCTION REQUIREMENTS:

A. General. All existing and new Class I hazardous waste injection wells shall be constructed and completed to:

(1) prevent the movement of fluids into or between ground water of the state of New Mexico or into any unauthorized zones;

(2) permit the use of appropriate testing devices and workover tools; and

(3) permit continuous monitoring of injection tubing and long string casing as required pursuant to Subsection F of 20.6.2.5357 NMAC.

B. Compatibility. All well materials must be compatible with fluids with which the materials may be expected to come into contact. A well shall be deemed to have compatibility as long as the materials used in the construction of the well meet or exceed standards developed for such materials by the American petroleum institute, ASTM, or comparable standards acceptable to the director.

C. Casing and cementing of new wells.

(1) Casing and cement used in the construction of each newly drilled well shall be designed for the life expectancy of the well, including the post-closure care period. The casing and cementing program shall be designed to prevent the movement of fluids into or between ground water of the state of New Mexico, and to prevent potential leaks of fluids from the well. In determining and specifying casing and cementing requirements, the director shall consider the following information as required by 20.6.2.5360 NMAC:

(a) depth to the injection zone;

(b) injection pressure, external pressure, internal pressure and axial loading;

(c) hole size;

(d) size and grade of all casing strings (wall thickness, diameter, nominal weight, length, joint specification and construction material);

(e) corrosiveness of injected fluid, formation fluids and temperature;

(f) lithology of injection and confining zones;

(g) type or grade of cement; and

(h) quantity and chemical composition of the injected fluid.

(2) One surface casing string shall, at a minimum, extend into the confining bed below the lowest formation that contains ground water of the state of New Mexico and be cemented by circulating cement from the base of the casing to the surface, using a minimum of 120% of the calculated annual volume. The director may require more than 120% when the geology or other circumstances warrant it.

(3) At least one long string casing, using a sufficient number of centralizers, shall extend to the injection zone and shall be cemented by circulating cement to the surface in one or more stages:

(a) of sufficient quantity and quality to withstand the maximum operating pressure; and

(b) in a quantity no less than 120% of the calculated volume necessary to fill the annular space; the director may require more than 120% when the geology or other circumstances warrant it.

(4) Circulation of cement may be accomplished by staging. The director may approve an alternative method of cementing in cases where the cement cannot be recirculated to the surface, provided the owner or operator can demonstrate by using logs that the cement is continuous and does not allow fluid movement behind the well bore.

(5) Casings, including any casing connections, must be rated to have sufficient structural strength to withstand, for the design life of the well:

(a) the maximum burst and collapse pressures which may be experienced during the construction, operation and closure of the well; and

(b) the maximum tensile stress which may be experienced at any point along the length of the casing during the construction, operation, and closure of the well.

(6) At a minimum, cement and cement additives must be of sufficient quality and quantity to maintain integrity over the design life of the well.

D. Tubing and packer.

(1) All Class I hazardous waste injection wells shall inject fluids through tubing with a packer set at a point specified by the director.

(2) In determining and specifying requirements for tubing and packer, the following factors shall be considered:

- (a)** depth of setting;
- (b)** characteristics of injection fluid (chemical content, corrosiveness, temperature and density);
- (c)** injection pressure;
- (d)** annular pressure;
- (e)** rate (intermittent or continuous), temperature and volume of injected fluid;
- (f)** size of casing; and
- (g)** tubing tensile, burst, and collapse strengths.

(3) The director may approve the use of a fluid seal if he determines that the following conditions are met:

- (a)** the operator demonstrates that the seal will provide a level of protection comparable to a packer;
- (b)** the operator demonstrates that the staff is, and will remain, adequately trained to operate and maintain the well and to identify and interpret variations in parameters of concern;
- (c)** the permit contains specific limitations on variations in annular pressure and loss of annular fluid;
- (d)** the design and construction of the well allows continuous monitoring of the annular pressure and mass balance of annular fluid; and
- (e)** a secondary system is used to monitor the interface between the annulus fluid and the injection fluid and the permit contains requirements for testing the system every three months and recording the results.

[20.6.2.5355 NMAC - N, 8-31-15]

20.6.2.5356 LOGGING, SAMPLING, AND TESTING PRIOR TO NEW WELL OPERATION:

A. During the drilling and construction of a new Class I hazardous waste injection well, appropriate logs and tests shall be run to determine or verify the depth, thickness, porosity, permeability, and rock type of, and the salinity of any entrained fluids in, all

relevant geologic units to assure conformance with performance standards in 20.6.2.5355 NMAC, and to establish accurate baseline data against which future measurements may be compared. A descriptive report interpreting results of such logs and tests shall be prepared by a knowledgeable log analyst and submitted to the director. At a minimum, such logs and tests shall include:

(1) deviation checks during drilling on all holes constructed by drilling pilot holes which are enlarged by reaming or another method; such checks shall be at sufficiently frequent intervals to determine the location of the borehole and to assure that vertical avenues for fluid movement in the form of diverging holes are not created during drilling; and

(2) such other logs and tests as may be needed after taking into account the availability of similar data in the area of the drilling site, the construction plan, and the need for additional information that may arise from time to time as the construction of the well progresses; at a minimum, the following logs shall be required in the following situations:

(a) upon installation of the surface casing:

(i) resistivity, spontaneous potential, and caliper logs before the casing is installed; and

(ii) a cement bond and variable density log, and a temperature log after the casing is set and cemented;

(b) upon installation of the long string casing:

(i) resistivity, spontaneous potential, porosity, caliper, gamma ray, and fracture finder logs before the casing is installed; and

(ii) a cement bond and variable density log, and a temperature log after the casing is set and cemented;

(c) the director may allow the use of an alternative to the above logs when an alternative will provide equivalent or better information; and

(3) a mechanical integrity test consisting of:

(a) a pressure test with liquid or gas;

(b) a radioactive tracer survey;

(c) a temperature or noise log;

(d) a casing inspection log, if required by the director; and

(e) any other test required by the director.

B. Whole cores or sidewall cores of the confining and injection zones and formation fluid samples from the injection zone shall be taken. The director may accept cores from nearby wells if the owner or operator can demonstrate that core retrieval is not possible and that such cores are representative of conditions at the well. The director may require the owner or operator to core other formations in the borehole.

C. The fluid temperature, pH, conductivity, pressure and the static fluid level of the injection zone must be recorded.

D. At a minimum, the following information concerning the injection and confining zones shall be determined or calculated for Class I hazardous waste injection wells:

- (1) fracture pressure;
- (2) other physical and chemical characteristics of the injection and confining zones; and
- (3) physical and chemical characteristics of the formation fluids in the injection zone.

E. Upon completion, but prior to operation, the owner or operator shall conduct the following tests to verify hydrogeologic characteristics of the injection zone:

- (1) a pump test; or
- (2) injectivity tests.

F. The director shall have the opportunity to witness all logging and testing required by 20.6.2.5351 through 20.6.2.5363 NMAC. The owner or operator shall submit a schedule of such activities to the director 30 days prior to conducting the first test.

[20.6.2.5356 NMAC - N, 8-31-15]

20.6.2.5357 OPERATING REQUIREMENTS:

A. Except during stimulation, the owner or operator shall assure that injection pressure at the wellhead does not exceed a maximum which shall be calculated so as to assure that the pressure in the injection zone during injection does not initiate new fractures or propagate existing fractures in the injection zone. The owner or operator shall assure that the injection pressure does not initiate fractures or propagate existing fractures in the confining zone, nor cause the movement of injection or formation fluids into ground water of the state of New Mexico.

B. Injection between the outermost casing protecting ground water of the state of New Mexico and the well bore is prohibited.

C. The owner or operator shall maintain an annulus pressure that exceeds the operating injection pressure, unless the director determines that such a requirement might harm the integrity of the well. The fluid in the annulus shall be noncorrosive, or shall contain a corrosion inhibitor.

D. The owner or operator shall maintain mechanical integrity of the injection well at all times.

E. Permit requirements for owners or operators of hazardous waste wells which inject wastes which have the potential to react with the injection formation to generate gases shall include:

- (1) conditions limiting the temperature, pH or acidity of the injected waste; and
- (2) procedures necessary to assure that pressure imbalances which might cause a backflow or blowout do not occur.

F. The owner or operator shall install and use continuous recording devices to monitor: the injection pressure; the flow rate, volume, and temperature of injected fluids; and the pressure on the annulus between the tubing and the long string casing, and shall install and use:

- (1) automatic alarm and automatic shut-off systems, designed to sound and shut-in the well when pressures and flow rates or other parameters approved by the director exceed a range or gradient specified in the permit; or
- (2) automatic alarms, designed to sound when the pressures and flow rates or other parameters approved by the director exceed a rate or gradient specified in the permit, in cases where the owner or operator certifies that a trained operator will be on-site at all times when the well is operating.

G. If an automatic alarm or shutdown is triggered, the owner or operator shall immediately investigate and identify as expeditiously as possible the cause of the alarm or shutoff. If, upon such investigation, the well appears to be lacking mechanical integrity, or if monitoring required under Subsection F of this section otherwise indicates that the well may be lacking mechanical integrity, the owner or operator shall:

- (1) cease injection of waste fluids unless authorized by the director to continue or resume injection;
 - (2) take all necessary steps to determine the presence or absence of a leak;
- and

(3) notify the director within 24 hours after the alarm or shutdown.

H. If a loss of mechanical integrity is discovered pursuant to Subsection G of this section or during periodic mechanical integrity testing, the owner or operator shall:

(1) immediately cease injection of waste fluids;

(2) take all steps reasonably necessary to determine whether there may have been a release of hazardous wastes or hazardous waste constituents into any unauthorized zone;

(3) notify the director within 24 hours after loss of mechanical integrity is discovered;

(4) notify the director when injection can be expected to resume; and

(5) restore and demonstrate mechanical integrity to the satisfaction of the director prior to resuming injection of waste fluids.

I. Whenever the owner or operator obtains evidence that there may have been a release of injected wastes into an unauthorized zone:

(1) the owner or operator shall immediately cease injection of waste fluids, and:

(a) notify the director within 24 hours of obtaining such evidence;

(b) take all necessary steps to identify and characterize the extent of any release;

(c) comply with any remediation plan specified by the director;

(d) implement any remediation plan approved by the director; and

(e) where such release is into ground water of the state of New Mexico currently serving as a water supply, place a notice in a newspaper of general circulation.

(2) The director may allow the operator to resume injection prior to completing cleanup action if the owner or operator demonstrates that the injection operation will not endanger groundwater of the state of New Mexico.

J. The owner or operator shall notify the director and obtain his approval prior to conducting any well workover.

[20.6.2.5357 NMAC - N, 8-31-15]

20.6.2.5358 TESTING AND MONITORING REQUIREMENTS:

Testing and monitoring requirements shall at a minimum include.

A. Monitoring of the injected wastes.

(1) The owner or operator shall develop and follow an approved written waste analysis plan that describes the procedures to be carried out to obtain a detailed chemical and physical analysis of a representative sample of the waste, including the quality assurance procedures used. At a minimum, the plan shall specify:

(a) the parameters for which the waste will be analyzed and the rationale for the selection of these parameters;

(b) the test methods that will be used to test for these parameters; and

(c) the sampling method that will be used to obtain a representative sample of the waste to be analyzed.

(2) The owner or operator shall repeat the analysis of the injected wastes as described in the waste analysis plan at frequencies specified in the waste analysis plan and when process or operating changes occur that may significantly alter the characteristics of the waste stream.

(3) The owner or operator shall conduct continuous or periodic monitoring of selected parameters as required by the director.

(4) The owner or operator shall assure that the plan remains accurate and the analyses remain representative.

B. Hydrogeologic compatibility determination. The owner or operator shall submit information demonstrating to the satisfaction of the director that the waste stream and its anticipated reaction products will not alter the permeability, thickness or other relevant characteristics of the confining or injection zones such that they would no longer meet the requirements specified in 20.6.2.5352 NMAC.

C. Compatibility of well materials.

(1) The owner or operator shall demonstrate that the waste stream will be compatible with the well materials with which the waste is expected to come into contact, and submit to the director a description of the methodology used to make that determination. Compatibility for purposes of this requirement is established if contact with injected fluids will not cause the well materials to fail to satisfy any design requirement imposed under Subsection B of 20.6.2.5355 NMAC.

(2) The director shall require continuous corrosion monitoring of the construction materials used in the well for wells injecting corrosive waste, and may require such monitoring for other waste, by:

(a) placing coupons of the well construction materials in contact with the waste stream; or

(b) routing the waste stream through a loop constructed with the material used in the well; or

(c) using an alternative method approved by the director.

(3) If a corrosion monitoring program is required:

(a) the test shall use materials identical to those used in the construction of the well, and such materials must be continuously exposed to the operating pressures and temperatures (measured at the well head) and flow rates of the injection operation; and

(b) the owner or operator shall monitor the materials for loss of mass, thickness, cracking, pitting and other signs of corrosion on a quarterly basis to ensure that the well components meet the minimum standards for material strength and performance set forth in Subsection B of 20.6.2.5355 NMAC.

D. Periodic mechanical integrity testing. In fulfilling the requirements of 20.6.2.5204 NMAC, the owner or operator of a Class I hazardous waste injection well shall conduct the mechanical integrity testing as follows:

(1) the long string casing, injection tube, and annular seal shall be tested by means of an approved pressure test with a liquid or gas annually and whenever there has been a well workover;

(2) the bottom-hole cement shall be tested by means of an approved radioactive tracer survey annually;

(3) an approved temperature, noise, or other approved log shall be run at least once every five years to test for movement of fluid along the borehole; the director may require such tests whenever the well is worked over;

(4) casing inspection logs shall be run whenever the owner or operator conducts a workover in which the injection string is pulled, unless the director waives this requirement due to well construction or other factors which limit the test's reliability, or based upon the satisfactory results of a casing inspection log run within the previous five years; the director may require that a casing inspection log be run every five years, if he has reason to believe that the integrity of the long string casing of the well may be adversely affected by naturally-occurring or man-made events;

(5) any other test approved by the director in accordance with the procedures in 40 CFR Section 146.8(d) may also be used.

E. Ambient monitoring.

(1) Based on a site-specific assessment of the potential for fluid movement from the well or injection zone, and on the potential value of monitoring wells to detect such movement, the director shall require the owner or operator to develop a monitoring program. At a minimum, the director shall require monitoring of the pressure buildup in the injection zone annually, including at a minimum, a shut down of the well for a time sufficient to conduct a valid observation of the pressure fall-off curve.

(2) When prescribing a monitoring system the director may also require:

(a) continuous monitoring for pressure changes in the first aquifer overlying the confining zone; when such a well is installed, the owner or operator shall, on a quarterly basis, sample the aquifer and analyze for constituents specified by the director;

(b) the use of indirect, geophysical techniques to determine the position of the waste front, the water quality in a formation designated by the director, or to provide other site specific data;

(c) periodic monitoring of the ground water quality in the first aquifer overlying the injection zone;

(d) periodic monitoring of the ground water quality in the lowermost ground water of the state of New Mexico; and

(e) any additional monitoring necessary to determine whether fluids are moving into or between ground water of the state of New Mexico.

F. The director may require seismicity monitoring when he has reason to believe that the injection activity may have the capacity to cause seismic disturbances.

[20.6.2.5358 NMAC - N, 8-31-15]

20.6.2.5359 REPORTING REQUIREMENTS:

Reporting requirements shall, at a minimum, include:

A. quarterly reports to the director containing:

(1) the maximum injection pressure;

(2) a description of any event that exceeds operating parameters for annulus pressure or injection pressure as specified in the permit;

- (3) a description of any event which triggers an alarm or shutdown device required pursuant to Subsection F of 20.6.2.5357 NMAC and the response taken;
 - (4) the total volume of fluid injected;
 - (5) any change in the annular fluid volume;
 - (6) the physical, chemical and other relevant characteristics of injected fluids;
- and
- (7) the results of monitoring prescribed under 20.6.2.5358 NMAC;

B. reporting, within 30 days or with the next quarterly report whichever comes later, the results of:

- (1) periodic tests of mechanical integrity;
- (2) any other test of the injection well conducted by the permittee if required by the director; and
- (3) any well workover.

[20.6.2.5359 NMAC - N, 8-31-15]

20.6.2.5360 INFORMATION TO BE EVALUATED BY THE DIRECTOR:

This section sets forth the information which must be evaluated by the director in authorizing Class I hazardous waste injection wells. For a new Class I hazardous waste injection well, the owner or operator shall submit all the information listed below as part of the permit application. For an existing or converted Class I hazardous waste injection well, the owner or operator shall submit all information listed below as part of the permit application except for those items of information which are current, accurate, and available in the existing permit file. For both existing and new Class I hazardous waste injection wells, certain maps, cross-sections, tabulations of wells within the area of review and other data may be included in the application by reference provided they are current and readily available to the director (for example, in the permitting agency's files) and sufficiently identifiable to be retrieved.

A. Prior to the issuance of a permit for an existing Class I hazardous waste injection well to operate or the construction or conversion of a new Class I hazardous waste injection well, the director shall review the following to assure that the requirements of 20.6.2.5000 through 20.6.2.5399 NMAC are met:

- (1) information required in 20.6.2.5102 NMAC;

(2) a map showing the injection well for which a permit is sought and the applicable area of review; within the area of review, the map must show the number or name and location of all producing wells, injection wells, abandoned wells, dry holes, surface bodies of water, springs, mines (surface and subsurface), quarries, water wells and other pertinent surface features, including residences and roads; the map should also show faults, if known or suspected;

(3) a tabulation of all wells within the area of review which penetrate the proposed injection zone or confining zone; such data shall include a description of each well's type, construction, date drilled, location, depth, record of plugging or completion and any additional information the director may require;

(4) the protocol followed to identify, locate and ascertain the condition of abandoned wells within the area of review which penetrate the injection or the confining zones;

(5) maps and cross-sections indicating the general vertical and lateral limits of all ground water of the state of New Mexico within the area of review, their position relative to the injection formation and the direction of water movement, where known, in each groundwater of the state of New Mexico which may be affected by the proposed injection;

(6) maps and cross-sections detailing the geologic structure of the local area;

(7) maps and cross-sections illustrating the regional geologic setting;

(8) proposed operating data:

(a) average and maximum daily rate and volume of the fluid to be injected;
and

(b) average and maximum injection pressure;

(9) proposed formation testing program to obtain an analysis of the chemical, physical and radiological characteristics of and other information on the injection formation and the confining zone;

(10) proposed stimulation program;

(11) proposed injection procedure;

(12) schematic or other appropriate drawings of the surface and subsurface construction details of the well;

(13) contingency plans to cope with all shut-ins or well failures so as to prevent migration of fluids into any ground water of the state of New Mexico;

(14) plans (including maps) for meeting monitoring requirements of 20.6.2.5358 NMAC;

(15) for wells within the area of review which penetrate the injection zone or the confining zone but are not properly completed or plugged, the corrective action to be taken under 20.6.2.5354 NMAC;

(16) construction procedures including a cementing and casing program, well materials specifications and their life expectancy, logging procedures, deviation checks, and a drilling, testing and coring program; and

(17) a demonstration pursuant to 20.6.2.5320 NMAC, that the applicant has the resources necessary to close, plug or abandon the well and for post-closure care.

B. Prior to the director's granting approval for the operation of a Class I hazardous waste injection well, the owner or operator shall submit and the director shall review the following information, which shall be included in the completion report:

- (1)** all available logging and testing program data on the well;
- (2)** a demonstration of mechanical integrity pursuant to 20.6.2.5358 NMAC;
- (3)** the anticipated maximum pressure and flow rate at which the permittee will operate;
- (4)** the results of the injection zone and confining zone testing program as required in Paragraph (9) of Subsection A of 20.6.2.5360 NMAC;
- (5)** the actual injection procedure;
- (6)** the compatibility of injected waste with fluids in the injection zone and minerals in both the injection zone and the confining zone and with the materials used to construct the well;
- (7)** the calculated area of review based on data obtained during logging and testing of the well and the formation, and where necessary revisions to the information submitted under Paragraphs (2) and (3) of Subsection A of 20.6.2.5360 NMAC;
- (8)** the status of corrective action on wells identified in Paragraph (15) of Subsection A of 20.6.2.5360 NMAC; and
- (9)** evidence that the permittee has obtained an exemption under 40 C.F.R. Part 148, Subpart C for the hazardous wastes permitted for disposal through underground injection.

C. Prior to granting approval for the plugging and abandonment (*i.e.*, closure) of a Class I hazardous waste injection well, the director shall review the information required in Paragraph (4) of Subsection A of 20.6.2.5361 NMAC and Subsection A of 20.6.2.5362 NMAC.

D. Any permit issued for a Class I hazardous waste injection well for disposal on the premises where the waste is generated shall contain a certification by the owner or operator that:

(1) the generator of the hazardous waste has a program to reduce the volume or quantity and toxicity of such waste to the degree determined by the generator to be economically practicable; and

(2) injection of the waste is that practicable method of disposal currently available to the generator which minimizes the present and future threat to human health and the environment.

[20.6.2.5360 NMAC - N, 8-31-15]

20.6.2.5361 CLOSURE:

A. Closure plan. The owner or operator of a Class I hazardous waste injection well shall prepare, maintain, and comply with a plan for closure of the well that meets the requirements of Subsection D of this section and is acceptable to the director. The obligation to implement the closure plan survives the termination of a permit or the cessation of injection activities. The requirement to maintain and implement an approved plan is directly enforceable regardless of whether the requirement is a condition of the permit.

(1) The owner or operator shall submit the plan as a part of the permit application and, upon approval by the director, such plan shall be a condition of any permit issued.

(2) The owner or operator shall submit any proposed significant revision to the method of closure reflected in the plan for approval by the director no later than the date on which notice of closure is required to be submitted to the director under Subsection B of this section.

(3) The plan shall assure financial responsibility as required in Paragraph (1) of Subsection A of 20.6.2.5342 NMAC.

(4) The plan shall include the following information:

(a) the type and number of plugs to be used;

(b) the placement of each plug including the elevation of the top and bottom of each plug;

(c) the type and grade and quantity of material to be used in plugging;

(d) the method of placement of the plugs;

(e) any proposed test or measure to be made;

(f) the amount, size, and location (by depth) of casing and any other materials to be left in the well;

(g) the method and location where casing is to be parted, if applicable;

(h) the procedure to be used to meet the requirements of Paragraph (5) of Subsection D of this section;

(i) the estimated cost of closure; and

(j) any proposed test or measure to be made.

(5) The director may modify a closure plan following the procedures of 20.6.2.3109 NMAC.

(6) An owner or operator of a Class I hazardous waste injection well who ceases injection temporarily, may keep the well open provided he:

(a) has received authorization from the director; and

(b) has described actions or procedures, satisfactory to the director, that the owner or operator will take to ensure that the well will not endanger ground water of the state of New Mexico during the period of temporary disuse; these actions and procedures shall include compliance with the technical requirements applicable to active injection wells unless waived by the director.

(7) The owner or operator of a well that has ceased operations for more than two years shall notify the director 30 days prior to resuming operation of the well.

B. Notice of intent to close. The owner or operator shall notify the director at least 60 days before closure of a well. At the discretion of the director, a shorter notice period may be allowed.

C. Closure report. Within 60 days after closure or at the time of the next quarterly report (whichever is less) the owner or operator shall submit a closure report to the director. If the quarterly report is due less than 15 days after completion of closure, then the report shall be submitted within 60 days after closure. The report shall be certified

as accurate by the owner or operator and by the person who performed the closure operation (if other than the owner or operator). Such report shall consist of either:

- (1) a statement that the well was closed in accordance with the closure plan previously submitted and approved by the director; or
- (2) where actual closure differed from the plan previously submitted, a written statement specifying the differences between the previous plan and the actual closure.

D. Standards for well closure.

(1) Prior to closing the well, the owner or operator shall observe and record the pressure decay for a time specified by the director. The director shall analyze the pressure decay and the transient pressure observations conducted pursuant to Paragraph (1) of Subsection E of 20.6.2.5358 NMAC and determine whether the injection activity has conformed with predicted values.

(2) Prior to well closure, appropriate mechanical integrity testing shall be conducted to ensure the integrity of that portion of the long string casing and cement that will be left in the ground after closure. Testing methods may include:

- (a) pressure tests with liquid or gas;
- (b) radioactive tracer surveys;
- (c) noise, temperature, pipe evaluation, or cement bond logs; and
- (d) any other test required by the director.

(3) Prior to well closure, the well shall be flushed with a buffer fluid.

(4) Upon closure, a Class I hazardous waste well shall be plugged with cement in a manner that will not allow the movement of fluids into or between groundwater of the state of New Mexico.

(5) Placement of the cement plugs shall be accomplished by one of the following:

- (a) the balance method;
- (b) the dump bailer method;
- (c) the two-plug method; or

(d) an alternate method, approved by the director, that will reliably provide a comparable level of protection.

(6) Each plug used shall be appropriately tagged and tested for seal and stability before closure is completed.

(7) The well to be closed shall be in a state of static equilibrium with the mud weight equalized top to bottom, either by circulating the mud in the well at least once or by a comparable method prescribed by the director, prior to the placement of the cement plug(s).

[20.6.2.5361 NMAC - N, 8-31-15]

20.6.2.5362 POST-CLOSURE CARE:

A. The owner or operator of a Class I hazardous waste well shall prepare, maintain, and comply with a plan for post-closure care that meets the requirements of Subsection B of this section and is acceptable to the director. The obligation to implement the post-closure plan survives the termination of a permit or the cessation of injection activities. The requirement to maintain an approved plan is directly enforceable regardless of whether the requirement is a condition of the permit.

(1) The owner or operator shall submit the plan as a part of the permit application and, upon approval by the director, such plan shall be a condition of any permit issued.

(2) The owner or operator shall submit any proposed significant revision to the plan as appropriate over the life of the well, but no later than the date of the closure report required under Subsection C of 20.6.2.5361 NMAC.

(3) The plan shall assure financial responsibility as required in 20.6.2.5363 NMAC.

(4) The plan shall include the following information:

(a) the pressure in the injection zone before injection began;

(b) the anticipated pressure in the injection zone at the time of closure;

(c) the predicted time until pressure in the injection zone decays to the point that the well's cone of influence no longer intersects the base of the lowermost ground water of the state of New Mexico;

(d) predicted position of the waste front at closure;

(e) the status of any cleanups required under 20.6.2.5354 NMAC; and

(f) the estimated cost of proposed post-closure care.

(5) At the request of the owner or operator, or on his own initiative, the director may modify the post-closure plan after submission of the closure report following the procedures in 20.6.2.3109 NMAC.

B. The owner or operator shall:

(1) continue and complete any cleanup action required under 20.6.2.5354 NMAC, if applicable;

(2) continue to conduct any ground water monitoring required under the permit until pressure in the injection zone decays to the point that the well's cone of influence no longer intersects the base of the lowermost ground water of the state of New Mexico; the director may extend the period of post-closure monitoring if he determines that the well may endanger ground water of the state of New Mexico;

(3) submit a survey plat to the local zoning authority designated by the director; the plat shall indicate the location of the well relative to permanently surveyed benchmarks; a copy of the plat shall be submitted to the director;

(4) provide appropriate notification and information to such state and local authorities as have cognizance over drilling activities to enable such state and local authorities to impose appropriate conditions on subsequent drilling activities that may penetrate the well's confining or injection zone;

(5) retain, for a period of three years following well closure, records reflecting the nature, composition and volume of all injected fluids; the director shall require the owner or operator to deliver the records to the director at the conclusion of the retention period, and the records shall thereafter be retained at a location designated by the director for that purpose.

C. Each owner of a Class I hazardous waste injection well, and the owner of the surface or subsurface property on or in which a Class I hazardous waste injection well is located, must record a notation on the deed to the facility property or on some other instrument which is normally examined during title search that will in perpetuity provide any potential purchaser of the property the following information:

(1) the fact that land has been used to manage hazardous waste;

(2) the name of the state agency or local authority with which the plat was filed, as well as the address of the director;

(3) the type and volume of waste injected, the injection interval or intervals into which it was injected, and the period over which injection occurred.

[20.6.2.5362 NMAC - N, 8-31-15]

20.6.2.5363 FINANCIAL RESPONSIBILITY FOR POST-CLOSURE CARE:

The owner or operator shall demonstrate and maintain financial responsibility for post-closure by using a trust fund, surety bond, letter of credit, financial test, insurance or corporate guarantee that meets the specifications for the mechanisms and instruments revised as appropriate to cover closure and post-closure care in 20.6.2.5320 NMAC. The amount of the funds available shall be no less than the amount identified in Subparagraph (f) of Paragraph (4) of Subsection A of 20.6.2.5362 NMAC. The obligation to maintain financial responsibility for post-closure care survives the termination of a permit or the cessation of injection. The requirement to maintain financial responsibility is enforceable regardless of whether the requirement is a condition of the permit.

[20.6.2.5363 NMAC - N, 8-31-15]

20.6.2.5364-20.6.2.5399 [RESERVED]

PART 3: VOLUNTARY REMEDIATION

20.6.3.1 ISSUING AGENCY:

New Mexico Environment Department.

[7/15/99; 20.6.3.1 NMAC - Rn, 20 NMAC 6.3.I.101, Recompiled 11/27/01]

20.6.3.2 SCOPE:

This Part provides for the expeditious, voluntary cleanup of contaminated properties in New Mexico in a manner that is protective of human health and the environment, and the promotion of their redevelopment and productive use.

[7/15/99; 20.6.3.2 NMAC - Rn, 20 NMAC 6.3.I.102, Recompiled 11/27/01]

20.6.3.3 STATUTORY AUTHORITY:

These regulations are promulgated pursuant to the provisions of the Voluntary Remediation Act, NMSA 1978, Sections 74-4G-1 et seq.

[7/15/99; 20.6.3.3 NMAC - Rn, 20 NMAC 6.3.I.103, Recompiled 11/27/01]

20.6.3.4 DURATION:

Permanent.

[7/15/99; 20.6.3.4 NMAC - Rn, 20 NMAC 6.3.I.104, Recompiled 11/27/01]

20.6.3.5 EFFECTIVE DATE:

These regulations are effective as of July 15, 1999 unless a later date is cited at the end of a Section or Paragraph.

[7/15/99; 20.6.3.5 NMAC - Rn, 20 NMAC 6.3.I.105, Recompiled 11/27/01]

20.6.3.6 OBJECTIVE:

The objective of Part 3 of Chapter 6 is:

A. to implement the Voluntary Remediation Act, NMSA 1978, Sections 74-4G-1 et seq.;

B. to provide incentives for the voluntary assessment and remediation of contaminated property, with state oversight; and

C. to remove future liability of lenders and landowners.

[7/15/99; 20.6.3.6 NMAC - Rn, 20 NMAC.6.3.I.106, Recompiled 11/27/01]

20.6.3.7 DEFINITIONS:

The words and phrases used in this Part have the same meaning as in The Voluntary Remediation Act, NMSA 1978, Sections 74-4G-1 et seq. As used in this Part:

A. "Act" means the Voluntary Remediation Act, NMSA 1978, Sections 74-4G-1 et seq.

B. "background" means, for purposes of the voluntary remediation program only and for no other purposes in this Part and any other regulations, including but not limited to surface water standards, the amount of contaminants naturally occurring from undisturbed geologic sources or contaminants which the participant establishes are occurring solely from a source other than the participant's facility. This definition does not apply to any other program area in the department, nor shall this definition be interpreted as applicable to any other program area, and this definition shall not prevent the secretary from requiring remediation of commingled plumes of pollution, shall not prevent participants from seeking contribution or other legal or equitable relief from other persons, and shall not preclude the secretary from exercising enforcement authority under any applicable statute, regulation or common law.

C. "facility" means any structure, installation, operation, storage tank, transmission line, motor vehicle, rolling stock, or activity of any kind, whether stationary or mobile;

D. "notice of violation" means a notice that alleges one or more violations of law and describes actions that should or must be taken to avoid an enforcement action;

E. "owner" means the person or persons who own a facility, or part of a facility;

F. "operator" means the person or persons responsible for the overall operations of a facility;

G. "secretary" means the Secretary of the New Mexico Environment Department or his or her designee;

[7/15/99; 20.6.3.7 NMAC - Rn, 20 NMAC.6.3.I.107, Recompiled 11/27/01]

20.6.3.8 COMPLIANCE WITH OTHER LAW:

Compliance with this Part does not relieve a person from the obligation to comply with other applicable federal, state and local law.

[7/15/99; 20.6.3.8 NMAC - Rn, 20 NMAC 6.3.I.108, Recompiled 11/27/01]

20.6.3.9 VOLUNTARY REMEDIATION ACTIVITIES:

Voluntary remediation activities may include, but are not limited to:

A. research to establish the history of ownership, release(s), contaminant use, storage, and management, and environmental permits and compliance;

B. research and subsurface investigations, including intrusive and non-intrusive techniques, to assess the site's hydrogeologic characteristics;

C. the collection and analysis of soil, sediment, surface water, ground water, soil gas, atmospheric, indoor air, and/or biological samples;

D. assessment of the nature and extent, migration pathways, and environmental fate and transport of contaminants;

E. performance of a human health and ecological risk assessment;

F. installation of waste or product recovery and water treatment systems;

G. installation of soil vapor extraction or other vadose zone remediation systems;

H. removal and on- or off-site treatment, recycling, or reuse of contaminated media;

I. removal of the contents of, or removal of, drums, barrels, tanks, or other bulk containers which contain or may contain contaminants;

J. capping or covering of contaminated media;

K. other measures to mitigate human health and ecological receptors' potential exposures and risks;

L. post-remediation verification sampling and/or monitoring; and

M. any other remediation action consistent with the purpose of achieving the performance standard of Subpart I, Section 110 of this Part.

[7/15/99; 20.6.3.9 NMAC - Rn, 20 NMAC 6.3.I.109, Recompiled 11/27/01]

20.6.3.10 PERFORMANCE STANDARD AND ASSOCIATED REQUIREMENTS:

A. Activities performed pursuant to the Act shall be designed to collect, develop, and evaluate sufficient information to support proposed conclusions regarding:

(1) the source, nature and extent, migration pathways, and environmental fate and transport of contaminants in all environmental media present at the site (i.e., soil, ground water, surface water, sediment, and/or air);

(2) the risk of harm posed by the site to human health, safety, and the environment;

(3) the need to conduct remedial actions at the site to safeguard against such risks; and

(4) the remedial action selection and design, if appropriate.

B. If applicable standards are prescribed by law or regulation, voluntary remediation activities shall achieve applicable standards. Where applicable standards are not prescribed by law or regulation, voluntary remediation activities shall be performed in order to achieve a final site condition such that no contaminant will present a significant risk of harm to human health, safety, or the environment during any foreseeable period of time. Such level of cleanup shall be attained by reducing the risk from exposure to individual carcinogens or suspected carcinogens to an individual lifetime cancer risk of less than one cancer incident in 100,000 exposed persons (1×10^{-5}); and by reducing the risk from exposure to individual noncarcinogenic contaminants to a hazard quotient of less than 1. In order to achieve this performance standard, the applicant may evaluate the risk of harm posed by the site to human health, safety, or the environment by employing one of three general methods:

(1) Method 1: Comparison of site concentrations to site-specific background concentrations; or

(2) Method 2: Comparison of site concentrations to applicable water quality standards and soil guidelines approved by the Department, including but not limited to:

(a) risk-based soil remediation guidelines developed by the department;

(b) standards for water, as listed in the most recent version of the New Mexico Water Quality Control Commission (WQCC) Regulations, 20 NMAC 6.1 [20.6.1 NMAC] and 20 NMAC 6.2 [20.6.2 NMAC], or other more stringent applicable standards, as appropriate; and

(c) other applicable standards. Where more than one applicable standard exists, the most stringent applicable standard will be applied; or

(3) Method 3: Performance of a detailed, site-specific human health and, if applicable, environmental risk assessment. Such a Method 3 evaluation will be required to employ a cumulative exposure approach. In no case shall a Method 3 evaluation propose voluntary remediation activities that are not designed to meet all applicable standards.

C. Any risk assessment conducted under this Section shall be based on reasonable and conservative assumptions about exposures and pathways, shall take into consideration exposure of sensitive subgroups to contaminants and the possibility of future changes in land use, and shall incorporate an adequate margin of safety.

D. The selection of voluntary remediation activities that will achieve a permanent solution shall be required, unless the participant demonstrates and the secretary concurs that implementation of voluntary remediation activities to achieve a permanent solution would be infeasible or impracticable.

E. An environmental risk assessment shall be required only when ecological receptors are present at or in the near vicinity of a site. Such an environmental risk assessment shall be a Method 3 site-specific assessment, and may be combined with a Method 1, 2, or 3 evaluation of human health risks.

F. The department may approve voluntary remediation activities that do not achieve residential health-based levels in all environmental media of concern only if the participant provides an affirmation of future non-residential land use, or an easement or other legal document binding on successors in interest to the site, in a form satisfactory to the department.

G. The department, in its discretion, may require an easement or other legal document binding on successors in interest to the site where voluntary remediation activities include post-completion monitoring, maintenance of engineering controls, remediation systems, or post-closure care.

[7/15/99; 20.6.3.10 - Rn, 20 NMAC 6.3.1.110, Recompiled 11/27/01]

20.6.3.11-20.6.3.199

[RESERVED]

20.6.3.200 APPLICATION FOR DETERMINATION OF ELIGIBILITY, AND FEE:

A. Eligibility:

- (1) To be eligible for a voluntary remediation agreement an applicant must:
 - (a) own the site;
 - (b) operate a facility located on the site;
 - (c) be a prospective owner of the site; or
 - (d) be a prospective operator of a facility at the site.
- (2) Multiple applicants may apply for a voluntary remediation agreement; however, a primary applicant who will serve as the department's point of contact must be designated.
- (3) The secretary shall reject an application for a voluntary remediation agreement if the secretary determines that one or more of the grounds for rejection specified in 74-4G-5(D), N.M.S.A., exist.
- (4) The secretary may reject an application for a voluntary remediation agreement if:
 - (a) the applicant has, within ten (10) years immediately preceding the date of the application, knowingly misrepresented a material fact in an application for a permit or plan submitted pursuant to federal or local environmental law or environmental law of a state other than New Mexico;
 - (b) a predecessor, successor, assign, parent, subsidiary, affiliate, officer, director, partner, managing agent or employee of the applicant has within ten (10) years immediately preceding the date of submission of the application engaged in conduct described in N.M.S.A. 74-4G-5(D)(7)(a)-(c) or Paragraph 1 of this subsection, or had an environmental permit revoked or suspended as described in N.M.S.A. 74-4G-5(D)(7)(d);
 - (c) a permit that addresses a contaminant described in the application was required for the site or facility under any state or federal law but the site or facility did not obtain the required permit; or
 - (d) a notice of violation that addresses a contaminant at the site or facility described in the application has been issued by any federal, state or local agency, and action has not been taken to remedy the alleged violations to the issuing agency's satisfaction.

(5) If the department determines that an application is incomplete or inaccurate, the secretary shall deny the application or notify the applicant in writing of the alleged incompleteness or inaccuracy and require the applicant to remedy the incompleteness or inaccuracies. If the secretary requires the applicant to remedy the incompleteness or inaccuracies, and the applicant does not remedy the alleged incompleteness or inaccuracies within thirty (30) days of receipt of written notice of such requirement, the secretary shall deny the application.

(6) Applicants having sites where remedial actions were completed under another state or federal program, or without any state or federal oversight, may be allowed to enter into a voluntary remediation agreement, at the discretion of the secretary. However, all other application requirements and eligibility criteria described in this Section must be met in order for such an application to be considered. In cases where an applicant has completed remedial action prior to the effective date of these regulations under another state or federal program and received agency approval, the applicant may be required to complete additional work in order to obtain a certificate of completion as described in Subpart V of this Part [20.6.3.500 NMAC] if:

(a) the remediation did not address all contaminants or contaminated media within the site;

(b) regulatory requirements have changed since the date of completion of remediation; or

(c) the performance standard described in Subpart I, Section 110 of this Part [20.6.3.10 NMAC] is not met.

(7) The secretary shall, on a first come, first-served basis or within thirty (30) calendar days of receipt of a complete application, conditionally determine whether the applicant is eligible to participate in a voluntary remediation agreement pursuant to the provisions of Subpart III of this Part [20.6.3.300 NMAC]. The secretary shall notify the applicant in writing as to its decision, and the reasons for an applicant's ineligibility, if applicable. The final eligibility determination will be made by the secretary no later than fifteen (15) calendar days after the close of the public comment period, or if a public meeting is held, within fifteen (15) calendar days of the public meeting, as described in Subpart III, Section 305 of this Part [Subsection E of 20.6.3.300 NMAC].

B. Application Process: An applicant may request to enter into a voluntary remediation agreement with the department by completing the "application for determination of eligibility" form provided by the department. The application shall include:

(1) general information disclosing:

(a) the name of the applicant;

(b) the site, its location, and past and current ownership, operator and use history;

(c) information for the ten (10) years preceding the date of submission of the application on past, present, and pending regulatory permits in New Mexico, and on administrative and judicial enforcement actions, permit revocations and suspensions, and approved remediation plans in New Mexico and other states; and

(d) other general information requested by the department.

(2) the following written "Declaration of Ability and Intent" signed by the applicant: "I attest under the pains and penalties of perjury that:

(a) I am the applicant [or title of office held, general partner, or similar responsible representative of applicant], and I am fully authorized to make this attestation on behalf of and to legally bind, the applicant;

(b) I have personally examined and am familiar with the requirements of the Voluntary Remediation Act, NMSA 1978 Sections 74-4G-1, et seq. and Voluntary Remediation Regulations, 20 NMAC 6.3 [20.6.3 NMAC];

(c) Based upon my inquiry of the person(s) employed or engaged to perform work pursuant to this application, and my/those person's(s') or entity's (ies') understanding as to the estimated costs of the proposed voluntary remediation actions, that the applicant has the technical, financial, and legal ability and intent to proceed with the proposed voluntary remediation actions in accordance with the Voluntary Remediation Act and 20 NMAC 6.3 [20.6.3 NMAC], and other applicable requirements; and

(d) The applicant will notify the department upon becoming aware of an inability to proceed with the proposed voluntary remediation actions because such actions are beyond the applicant's technical, financial, or legal ability to perform them."

(3) A Phase I environmental assessment of the site which generally conforms with the American Society for Testing and Materials (ASTM) Standard Practice E 1527, as amended, if available, or its equivalent, which at minimum includes:

(a) the legal description of the site, including a site map;

(b) the description of the physical, hydrological, and geological characteristics of the site, including the location of nearest water supply wells and surface water bodies;

(c) information of which the applicant is aware concerning the source(s), nature and extent of all contaminants or releases at the site and immediately contiguous to the site; and

(d) relevant information of which the applicant is aware concerning the potential for human or other exposure to contamination originating at the site, including but not limited to current land use, depth to groundwater, location of utilities, and potential human health and ecological receptors.

(4) a preliminary work plan describing the proposed voluntary remediation activities as they are currently envisioned as being submitted in a final voluntary remediation work plan, as described in Subpart IV of this part [20.6.3.400 NMAC].

(5) written consent by the property owner, if different from the applicant, supporting the proposed voluntary remediation activities, including any restrictions on property use.

C. Application Fee: An applicant shall pay at the time of submitting the application, a non-refundable application fee of \$1,000 per application that will pay for the department's costs of processing the application.

[7/15/99; 20.6.3.200, - Rn, 20 NMAC 6.3.II.200 to 203, Recompiled 11/27/01]

20.6.3.201-20.6.3.299 [RESERVED]

20.6.3.300 VOLUNTARY REMEDIATION AGREEMENT:

A. Agreement Provisions:

(1) After the secretary determines that an applicant is eligible, the secretary may enter into a voluntary remediation agreement with the applicant. Such an agreement shall be made final after receipt and incorporation of public comments, as described in Section 304 of this Subpart [Subsection D of 20.6.3.300 NMAC].

(2) The voluntary remediation agreement shall be set forth on a standard form developed by the department, and shall include:

(a) A provision for the Department's oversight, including:

- (i) access to the site;
- (ii) on-site collection of samples and inspection and copying of site and facility records;
- (iii) compensation for oversight costs in accordance with the fee structure specified in Section 310 of this Part [Subsection J of 20.6.3.300 NMAC];

(b) a reference to applicable statutes, regulations, standards, and guidance that must be complied with;

(c) a provision requiring the site to be remediated to applicable standards such that the performance standard described in Subpart I, Section 110 of this Part [20.6.3.10 NMAC] will be achieved;

(d) a preliminary work plan, describing the proposed voluntary remediation activities as they are currently envisioned as being submitted in a final voluntary remediation work plan, as described in Subpart IV of this Part [20.6.3.400 NMAC];

(e) identification of items to be submitted for department review and approval, including a work plan, quarterly status reports or status reports to be submitted at a different frequency, as determined by the department, and a final completion report that provides all information necessary to verify that all work contemplated by the voluntary remediation agreement has been completed, and that the applicable standards have been met;

(f) a provision requiring the applicant to obtain all applicable permits for the site and any required access agreements; and

(g) a schedule for completing significant proposed tasks, report submittals, and department review.

(3) The secretary shall not initiate an enforcement action, including an administrative or judicial action, against a participant for the contamination or release thereof, or for the activity that results in the contamination or release thereof, if the contamination is the subject of an agreement pursuant to these regulations. However, this Section shall not be a bar to any enforcement action if the agreement is not finalized, if the agreement is terminated or rescinded, or if the participant does not successfully initiate or implement the agreement within a reasonable time under the schedules set forth in the voluntary remediation agreement and approved work plans.

(4) The agreement shall become final and effective upon being signed by both the secretary and the applicant. The effective date of the agreement shall be the later date of signature by either the secretary or the applicant.

B. Public Notice and Comment:

(1) Before the voluntary remediation agreement becomes finalized, the applicant must:

(a) make the proposed voluntary remediation agreement available for public inspection at a location in reasonable proximity to the site, within ten (10) calendar days of the receipt of the conditional eligibility determination from the department;

(b) notify the following entities and advise them of the proposed voluntary remediation agreement, the location where the proposed agreement can be reviewed, and the opportunity to submit comments to the department;

(i) any local, state, federal, tribal or pueblo governmental agency potentially affected by the proposed voluntary remediation agreement, including at a minimum, the mayor and director of the board of health, or their equivalent, of the municipality in which the site is located;

(ii) those parties that have requested notification;

(iii) the general public by posting a notice at the site on a form provided by the department, and by publishing a notice in a newspaper of general circulation in the state and a newspaper published in the area where the site is located, such notice to be published in the legal advertisements section of the newspaper and at one other place in the newspaper chosen to give the general public the most effective notice, and if the department determines it is appropriate, shall be published in both English and Spanish;

(c) Include in the public notice:

(i) the name of the applicant;

(ii) the location of the site;

(iii) a brief description of the proposed remediation activities described in the preliminary voluntary remediation work plan;

(iv) the address to which comments may be submitted and the deadline for submitting comments;

(v) the address and telephone number at which persons may obtain further information; and

(d) submit to the department a copy of the public notice as well as an affidavit of publication and a signed statement affirming that the applicant has complied with the provisions of this Subsection [Paragraph].

(2) The secretary shall provide a comment period of at least thirty (30) calendar days following publication of the newspaper notice.

(3) During the comment period, interested parties may submit written comments to the department concerning the proposed voluntary remediation agreement activities.

(4) During the comment period, any interested person may submit a request for public meeting. The request shall be in writing to the department and shall set forth the reasons why the meeting should be held. A public meeting will be held at the applicant's expense if the secretary determines that there is significant public interest.

(5) If a public meeting is to be held, the applicant shall, at its expense, at least ten (10) calendar days before the meeting, mail a notice of the time and place of the meeting to all persons who have submitted written comments or a request for public meeting, and publish the notice in a newspaper of general circulation in the state and a newspaper published in the area where the site is located, in the legal advertisements section of the newspaper and at one other place in the newspaper chosen to give the general public the most effective notice. If the department determines it is appropriate, the notice shall be published in both English and Spanish.

C. Public Meeting:

(1) The department may appoint a meeting facilitator.

(2) The applicant and the department may prepare a fact sheet to be distributed at the public meeting, written in English and Spanish or other language as deemed appropriate, describing site history and the planned voluntary remediation activities.

(3) The record of the public meeting will consist of a tape recording. Tape copying and other transcript costs shall be paid by the person requesting the copy or transcript.

(4) Persons requiring assistance in the form of auxiliary aid or translation will have such assistance provided at the expense of the applicant.

(5) At the meeting, all interested persons shall be given a reasonable chance to submit data, views, or arguments orally or in writing, and to ask questions of the department and of the applicant, or its authorized representatives.

D. Consideration of Public Comments:

(1) In deciding whether to enter into a voluntary remediation agreement, and whether to approve the terms of such an agreement, the secretary shall consider public comments.

(2) If the secretary deems it appropriate, public comments will be incorporated into the final voluntary remediation agreement.

E. Approval of Voluntary Remediation Agreement: The secretary shall, within thirty (30) calendar days of the secretary's final determination that the applicant is eligible, approve, approve with modifications, or disapprove the proposed voluntary remediation agreement. The secretary shall mail notice of this determination to the applicant and all persons who presented written comments or presented oral comments at the public hearing.

F. Execution of Voluntary Remediation Agreement: If the secretary approves the voluntary remediation agreement as proposed, the secretary and applicant shall execute the agreement and the agreement shall become effective. If the secretary approves the voluntary remediation agreement with modifications and the modifications are acceptable to the applicant, the secretary and applicant shall execute the agreement and the agreement shall become effective.

G. Additional Public Participation: If members of the public request to participate in the voluntary remediation activities, then a mailing list of interested parties will be developed. These interested parties will be kept informed of the availability of key project submittals as they are received by the department. Such submittals will be made available by the department for public review and comment upon request.

H. Termination:

(1) If an agreement is not reached between an applicant and the secretary on or before the thirtieth (30th) calendar day after the secretary determines an applicant to be eligible pursuant to the provisions of Subparts II and III of this Part [20.6.3.200 and 20.6.3.300 NMAC], the applicant or the secretary may withdraw from the negotiations.

(2) The participant may terminate a voluntary remediation agreement with sixty (60) calendar days' written notice via certified mail, return receipt requested, to the department.

(3) The secretary may terminate a voluntary remediation agreement on a finding that the participant is not in compliance with the voluntary remediation agreement. Notice of termination will be made to the participant via certified mail, return receipt requested, and facts supporting the secretary's rationale for termination shall be set forth in the notification.

(4) The department's costs incurred or obligated before the date the notice of termination is received are recoverable by the department under the agreement if the agreement is terminated.

I. Dispute Resolution: In the event of any dispute regarding the requirements of the voluntary remediation agreement, oversight costs charged by the department to the participant, these regulations, or the Act, the participant may notify the secretary by certified mail that a dispute has arisen and the participant desires to invoke the dispute resolution provisions of this Section. Such notification must be made within fifteen (15) calendar days after the participant receives the decision of the secretary that causes the dispute, or the applicant waives its right to dispute the decision. Upon such notification, all deadlines affected by the dispute shall be extended for a thirty (30) calendar day negotiation period, or for a maximum of sixty (60) calendar days if approved by the secretary for good cause shown. During this negotiation period, the secretary and the participant shall meet at least once. Such meeting(s) may be facilitated by a mutually agreed upon third party, but the third party shall assume no power or authority granted

or delegated to the secretary by the Act. If the dispute remains unresolved after the negotiation period, the secretary shall issue a binding final decision, including a written statement of the reason for the decision.

J. Oversight Fee Structure: In accordance with the terms and schedule specified in the voluntary remediation agreement, the participant will compensate the department for all reasonable costs associated with the oversight of the voluntary remediation activities based upon a standard hourly rate to be calculated by the department on an annual basis. Oversight costs shall include direct and indirect costs of overhead, salaries, benefits, equipment and utility use fees, and legal, management, and support costs associated with the preparation of the voluntary remediation agreement, review of the participant's work plans and reports, and oversight of and performance of field activities (including but not limited to travel, sampling, and chemical analysis of samples), participation in dispute resolution activities, as well as long-term oversight performed by the department after its issue of a conditional certificate of completion, as described in Subpart V of this Part [20.6.3.500 NMAC]. Oversight will be invoiced based on actual hours of staff oversight, at the rate calculated per a formula established by the department. Travel and per diem costs will be invoiced at state-designated rates. Sampling and analysis costs will be invoiced at actual cost plus indirect overhead rate. The effective hourly rate for the first twelve (12) months following the effective date of these regulations shall be based on the department's best estimate of total operating costs, and total available technical staff hours. The hourly rate for subsequent periods will be calculated and subsequently updated on November 1 of each year, following a thirty (30) calendar day public comment period. [7/15/99], 20.6.3.300 NMAC - Rn, 20 NMAC 6.3.III.300 to 310, Recompiled 11/27/01]

20.6.3.311-20.6.3.399 [RESERVED]

20.6.3.400 VOLUNTARY REMEDIATION WORK PLAN:

A. Applicability: Unless the participant demonstrates that further investigation and/or cleanup are not required in order to comply with the performance standard described in Subpart I, Section 110 of this Part [20.6.3.10 NMAC], after a voluntary remediation agreement becomes effective, the participant shall submit to the department a proposed final voluntary remediation work plan for the site remediation.

B. Content: The final voluntary remediation work plan shall provide a detailed description of voluntary remediation activities to be undertaken to achieve the performance standard described in Subpart I, Section 110 of this part [20.6.3.10 NMAC]. At a minimum, the final voluntary remediation work plan shall include:

(1) a summary of site and contaminant use, storage, disposal, and release history, and the site investigation work performed to date;

(2) A detailed description, including plans and sketches, of any additional investigation to be conducted to determine the type, nature and extent of contaminants

at the site, including but not limited to: location and type of sample, sample collection techniques, monitoring techniques, sample analytical methods, and quality assurance/quality control methods;

(3) contaminants and media (including but not limited to air, surface water, groundwater, soil, and facility structures) to be addressed by the remediation;

(4) a statement of work to accomplish remediation of the site, and the method to reach the performance standard described in Subpart I, Section 110 of this Part [20.6.3.10 NMAC];

(5) a monitoring plan to be implemented during the duration of remediation activities, if applicable;

(6) confirmatory sampling and analytical methods to verify that remediation of the site has met the performance standard described in Subpart I, Section 110 of this Part [20.6.3.10 NMAC];

(7) post completion monitoring and maintenance to ensure that the closure conditions, including any engineering controls or affirmation of future non-residential land use upon which the final remedy is dependent, are maintained after completion, if applicable;

(8) an implementation schedule for all identified investigation and remediation tasks;

(9) a site-specific health and safety plan that complies with all applicable standards and guidelines;

(10) a plan describing the proposed management of investigation and remediation derived wastes, if applicable;

(11) copies of, or a schedule for obtaining, all necessary and applicable permits and access agreements required to accomplish remediation of the site; and

(12) any other pertinent information requested by the department which is reasonably necessary to meet the requirements of these regulations.

C. Schedule: The participant shall submit to the department a proposed final voluntary remediation work plan according to the schedule in the voluntary remediation agreement, but in no event shall the participant submit the work plan, or, if the work plan is to be prepared in phases, the work plan for the first phase, later than sixty (60) calendar days following the effective date of the voluntary remediation agreement.

D. Work Plan Modification: Any approved voluntary remediation work plan may be modified at the request of the participant and/or the department, with both parties'

approval. Following receipt of the modification request, the secretary shall determine whether or not the proposed modification is significant. If the secretary determines that the proposed modification is significant, the applicant shall make the proposed modification available for public inspection at a location in reasonable proximity to the site within ten (10) calendar days of the secretary's determination, and the applicant and department shall comply with Sections 302.A.2, 302.A.3, 302.A.4 [Subparagraphs (b), (c) and (d), Paragraph (1), Subsection (B) of 20.6.3.300 NMAC], 302.B., 302.C, 302.D. and 302.E. of this Part [Paragraphs (2), (3) (4) and (5), Subsection (B) of 20.6.3.300 NMAC] with respect to the proposed modification. If a public meeting is held on the proposed modification, Section 303 of this Part [Subsection (C) of 20.6.3.300 NMAC] shall apply to the meeting. If the secretary determines that the proposed modification is not significant, the applicant shall at its expense mail to all persons on the mailing list of interested persons maintained pursuant to Section 307 of this Part [Subsection (G) of 20.6.3.300 NMAC] notice of the proposed modification. The proposed modification will be made available by the department for public review and comment upon request. In all cases, the secretary shall consider public comments in determining whether to approve the proposed modification.

E. Review Process: Following submittal of a proposed final voluntary remediation work plan or work plan modification, the secretary shall review and approve, approve with conditions, or disapprove the work plan or work plan modification within forty-five (45) calendar days of receipt. If the secretary disapproves the work plan or work plan modification, the participant may be granted an opportunity to submit a revised version, as determined by the secretary.

[7/15/99; 20.6.3.400 NMAC - Rn, 20 NMAC 6.3.IV 400 to 405, Recompiled 11/27/01]

20.6.3.401-20.6.3.499 [RESERVED]

20.6.3.500 CERTIFICATE OF COMPLETION:

A. Applicability:

(1) If the participant files with the department a signed Affidavit of Completion of Voluntary Remediation, and the secretary determines that a participant has successfully complied with the voluntary remediation agreement and the site conditions meet the applicable standards, the secretary shall issue the participant a certificate of completion.

(2) For voluntary remediation activities completed on a portion of a site, the certificate of completion shall pertain only to that specific portion of the site, and shall include a legal description of that area.

(3) If the remediation requires post-completion monitoring, maintenance of engineering controls, remediation systems, post-closure care, or an affirmation of future non-residential land use, and the participant is satisfactorily implementing these

requirements, the secretary may issue a conditional certificate of completion. To keep a conditional certificate of completion valid, the participant must satisfactorily continue to implement and maintain the necessary monitoring, engineering controls, remediation systems, post-closure care, and affirmation of future non-residential land use upon which the final remedy is dependent.

B. Process:

(1) The participant shall demonstrate to the secretary that site conditions meet the applicable standards by submitting a voluntary remediation completion report to the department. The report shall include, as appropriate:

(a) a summary of remediation activities conducted at the site;

(b) sampling methods and results of verification sampling or monitoring that indicates that remediation is complete;

(c) the method used to evaluate potential risks posed by site-related contaminants that successfully demonstrates that the performance standard has been met, as described in Subpart I, Section 110 of this Part [20.6.3.10 NMAC];

(d) a description of all monitoring, affirmation of future non-residential land use, or engineering controls upon which the final remedy is dependent;

(e) copies of all manifests, waste disposal records, or other documentation documenting the final disposition of all remediation-derived waste; and

(f) any other pertinent information requested by the department that is reasonably necessary to meet the requirements of these regulations.

(2) The report shall be submitted to the department with a signed Affidavit of Completion of Voluntary Remediation from the participant and legal description of the affected property that indicates that remediation is complete, in accordance with the voluntary remediation agreement and applicable regulations and guidance.

(3) No certificate of completion shall be issued to a participant who has not paid invoiced oversight costs in full to the department.

(4) The department shall review and determine the sufficiency of a completion report within forty-five (45) days of receipt. If the secretary approves the completion report, the secretary will issue a certificate of completion or a conditional certificate of completion, as appropriate. If the secretary does not approve the completion report, the secretary shall either issue a finding that the participant is not in compliance with the voluntary remediation agreement and terminate the agreement, or advise the participant in writing of data gaps in the report. The participant shall correct any identified data

gaps and resubmit the completion report within thirty (30) calendar days of receipt of notice of the data gaps.

(5) If a conditional certificate of completion has been issued, the department shall conduct audits to ensure that all engineering controls, remediation systems, post-closure care, or affirmation of future non-residential land use upon which the final remedy is dependent are being maintained appropriately. These audits shall be performed at least every other year for the first ten (10) years following the issuance of the conditional certificate of completion, and every five (5) years thereafter. If during the course of such an audit, the department finds that any of the monitoring requirements, engineering controls, remediation systems, post-closure care, or affirmation of future non-residential land use are not being properly maintained such that the performance standard described in Subpart I, Section 110 of this Part [20.6.3.10 NMAC] is no longer being met, the department may revoke the conditional certificate of completion and initiate an enforcement action.

[7/15/99; 20.6.3.500 NMAC - Rn, 20 NMAC 6.3.V.500 to 502, Recompiled 11/27/01]

20.6.3.501-20.6.3.599 [RESERVED]

20.6.3.600 COVENANT NOT TO SUE:

A. **Applicability:** After the secretary issues a certificate of completion or a conditional certificate of completion for a site, the secretary shall provide a covenant not to sue to a purchaser or prospective purchaser of the site that did not contribute to the site contamination, for any direct liability, including future liability for claims based upon the contamination covered by the agreement and over which the department has authority. Except as may be provided under federal law or as may be agreed to by a federal government entity, the covenant not to sue shall not release or otherwise apply to claims by the federal government for claims based on federal law. Except as may be agreed to by another department or agency of the state, the covenant not to sue shall not release or otherwise apply to claims of any other office, department or agency of the State. Except as may be agreed to by a third party, the covenant not to sue shall not release or otherwise affect a person's liability to third parties.

B. **Reservation of Rights:** The department expressly reserves the right to take any action, including any enforcement action, to address any contamination not covered by the voluntary remediation agreement, including any release of a contaminant that occurs after issuance of the certificate of completion, or any release of a contaminant not covered by the voluntary remediation agreement. The secretary's covenant not to sue under this part shall not apply to any such release.

C. **Transferability:** The secretary's covenant not to sue under this part shall be transferable with title to the site, unless the title is transferred to a party who has contributed to the site contamination, or is an officer, director, parent, subsidiary, affiliate, partner, managing agent, or employee thereof.

[7/15/99; 20.6.3.600 NMAC - Rn, 20 NMAC 6.3.VI.600 to 603, Recompiled 11/27/01]

20.6.3.601-20.6.3.699 [RESERVED]

20.6.3.700 RESCISSION:

The Secretary may rescind a certificate of completion, conditional certificate of completion, or a covenant not to sue if the Department determines that:

A. based on reasonable evidence, contamination addressed in the agreement still poses, following remediation, an unreasonable threat to human health or the environment, or that the performance standard described in Subpart I, Section 110 of this Part [20.6.3.10 NMAC] has not been met;

B. the voluntary remediation agreement was performed in a manner that fails to comply substantially with the terms and conditions of the agreement or voluntary remediation work plan;

C. any monitoring requirements, engineering controls, remediation systems, post-closure care, or affirmation of future non-residential land use upon which the final remedy is dependent are not being implemented satisfactorily;

D. the voluntary remediation agreement is a result of fraud; or

E. contamination was present at the site at the time the voluntary remediation agreement was signed or the voluntary remediation work plan was approved, but the department was not properly informed of the type, extent, or magnitude of the contaminants.

[7/15/99; 20.6.3.700 NMAC - Rn, 20 NMAC 6.3.VII.700 and 701, Recompiled 11/27/01]

20.6.3.701-20.6.3.799 [RESERVED]

PART 4: STANDARDS FOR INTERSTATE AND INTRASTATE SURFACE WATERS

20.6.4.1 ISSUING AGENCY:

Water Quality Control commission.

[20.6.4.1 NMAC - Rp 20 NMAC 6.1.1001, 10/12/2000]

20.6.4.2 SCOPE:

Except as otherwise provided by statute or regulation of the water quality control commission, this part governs all surface waters of the state of New Mexico, which are

subject to the New Mexico Water Quality Act, Sections 74-6-1 through 74-6-17 NMSA 1978.

[20.6.4.2 NMAC - Rp 20 NMAC 6.1.1002, 10/12/2000; A, 5/23/2005]

20.6.4.3 STATUTORY AUTHORITY:

This part is adopted by the water quality control commission pursuant to Subsection C of Section 74-6-4 NMSA 1978.

[20.6.4.3 NMAC - Rp 20 NMAC 6.1.1003, 10/12/2000]

20.6.4.4 DURATION:

Permanent.

[20.6.4.4 NMAC - Rp 20 NMAC 6.1.1004, 10/12/2000]

20.6.4.5 EFFECTIVE DATE:

October 12, 2000, unless a later date is indicated in the history note at the end of a section.

[20.6.4.5 NMAC - Rp 20 NMAC 6.1.1005, 10/12/2000]

20.6.4.6 OBJECTIVE:

A. The purpose of this part is to establish water quality standards that consist of the designated use or uses of surface waters of the state, the water quality criteria necessary to protect the use or uses and an antidegradation policy.

B. The state of New Mexico is required under the New Mexico Water Quality Act (Subsection C of Section 74-6-4 NMSA 1978) and the federal Clean Water Act, as amended (33 U.S.C. Section 1251 et seq.) to adopt water quality standards that protect the public health or welfare, enhance the quality of water and are consistent with and serve the purposes of the New Mexico Water Quality Act and the federal Clean Water Act. It is the objective of the federal Clean Water Act to restore and maintain the chemical, physical and biological integrity of the nation's waters, including those in New Mexico. This part is consistent with Section 101(a)(2) of the federal Clean Water Act, which declares that it is the national goal that wherever attainable, an interim goal of water quality that provides for the protection and propagation of fish, shellfish and wildlife and provides for recreation in and on the water be achieved by July 1, 1983. Agricultural, municipal, domestic and industrial water supply are other essential uses of New Mexico's surface water; however, water contaminants resulting from these activities will not be permitted to lower the quality of surface waters of the state below

that required for protection and propagation of fish, shellfish and wildlife and recreation in and on the water, where practicable.

C. Pursuant to Subsection A of Section 74-6-12 NMSA 1978, this part does not grant to the water quality control commission or to any other entity the power to take away or modify property rights in water.

D. These surface water quality standards serve to respond to the inherent threats of climate change and provide resiliency for the continued protection and enhancement of water quality.

[20.6.4.6 NMAC - Rp 20 NMAC 6.1.1006, 10/12/2000; A, 5/23/2005; A, 4/23/2022]

20.6.4.7 DEFINITIONS:

Terms defined in the New Mexico Water Quality Act, but not defined in this part will have the meaning given in the Water Quality Act.

A. Terms beginning with numerals or the letter "A," and abbreviations for units.

(1) "4Q3" means the critical low flow as determined by the minimum average flow over four consecutive days that occurs with a frequency of once in three years.

(2) "4T3 temperature" means the temperature not to be exceeded for four or more consecutive hours in a 24-hour period on more than three consecutive days.

(3) "6T3 temperature" means the temperature not to be exceeded for six or more consecutive hours in a 24-hour period on more than three consecutive days.

(4) Abbreviations used to indicate units are defined as follows:

(a) "cfu/100 mL" means colony-forming units per 100 milliliters; the results for E. coli may be reported as either colony forming units (CFU) or the most probable number (MPN), depending on the analytical method used;

(b) "cfs" means cubic feet per second;

(c) "µg/L" means micrograms per liter, equivalent to parts per billion when the specific gravity of the solution equals 1.0;

(d) "µS/cm" means microsiemens per centimeter; one µS/cm is equal to one µmho/cm;

(e) "mg/kg" means milligrams per kilogram, equivalent to parts per million;

(f) "mg/L" means milligrams per liter, equivalent to parts per million when the specific gravity of the solution equals 1.0;

(g) "MPN/100 mL" means most probable number per 100 milliliters; the results for *E. coli* may be reported as either CFU or MPN, depending on the analytical method used;

(h) "NTU" means nephelometric turbidity unit;

(i) "pCi/L" means picocuries per liter;

(j) "pH" means the measure of the acidity or alkalinity and is expressed in standard units (su).

(5) "Acute toxicity" means toxicity involving a stimulus severe enough to induce a response in 96 hours of exposure or less. Acute toxicity is not always measured in terms of lethality, but may include other toxic effects that occur within a short time period.

(6) "Adjusted gross alpha" means the total radioactivity due to alpha particle emission as inferred from measurements on a dry sample, including radium-226, but excluding radon-222 and uranium. Also excluded are source, special nuclear and by-product material as defined by the Atomic Energy Act of 1954.

(7) "Aquatic life" means any plant or animal life that uses surface water as primary habitat for at least a portion of its life cycle, but does not include avian or mammalian species.

(8) "Attainable Use" means a use that is achievable by the imposition of effluent limits required under sections 301(b) and 306 of the federal Clean Water Act and implementation of cost-effective and reasonable best management practices for nonpoint source control. An attainable use may or may not have criteria as stringent as the criteria for the designated use.

B. Terms beginning with the letter "B".

(1) "Best management practices" or "BMPs":

(a) for national pollutant discharge elimination system (NPDES) permitting purposes means schedules of activities, prohibitions of practices, maintenance procedures and other management practices to prevent or reduce the pollution of "waters of the United States;" BMPs also include treatment requirements, operating procedures and practices to control plant site runoff, spillage or leaks, sludge or waste disposal or drainage from raw material storage; or

(b) for nonpoint source pollution control purposes means methods, measures or practices selected by an agency to meet its nonpoint source control needs; BMPs include but are not limited to structural and nonstructural controls and operation and maintenance procedures; BMPs can be applied before, during and after pollution-producing activities to reduce or eliminate the introduction of pollutants into receiving waters; BMPs for nonpoint source pollution control purposes shall not be mandatory except as required by state or federal law.

(2) "Bioaccumulation" refers to the uptake and retention of a substance by an organism from its surrounding medium and food.

(3) "Bioaccumulation factor" is the ratio of a substance's concentration in tissue versus its concentration in ambient water, in situations where the organism and the food chain are exposed.

(4) "Biomonitoring" means the use of living organisms to test the suitability of effluents for discharge into receiving waters or to test the quality of surface waters of the state.

C. Terms beginning with the letter "C".

(1) "CAS number" means an assigned number by chemical abstract service (CAS) to identify a substance. CAS numbers index information published in chemical abstracts by the American chemical society.

(2) "Chronic toxicity" means toxicity involving a stimulus that lingers or continues for a relatively long period relative to the life span of an organism. Chronic effects include, but are not limited to, lethality, growth impairment, behavioral modifications, disease and reduced reproduction.

(3) "Classified water of the state" means a surface water of the state, or reach of a surface water of the state, for which the commission has adopted a segment description and has designated a use or uses and applicable water quality criteria in 20.6.4.101 through 20.6.4.899 NMAC.

(4) "Climate change" refers to any significant change in the measures of climate lasting for an extended period of time, typically decades or longer, and includes major changes in temperature, precipitation, wind patterns or other weather-related effects.

(5) "Closed basin" is a basin where topography prevents the surface outflow of water and water escapes by evapotranspiration or percolation.

(6) "Coldwater" in reference to an aquatic life use means a surface water of the state where the water temperature and other characteristics are suitable for the support or propagation or both of coldwater aquatic life.

(7) "Coolwater" in reference to an aquatic life use means the water temperature and other characteristics are suitable for the support or propagation of aquatic life whose physiological tolerances are intermediate between and may overlap those of warm and coldwater aquatic life.

(8) "Commission" means the New Mexico water quality control commission.

(9) "Criteria" are elements of state water quality standards, expressed as constituent concentrations, levels or narrative statements, representing a quality of water that supports a use. When criteria are met, water quality will protect the designated use.

D. Terms beginning with the letter "D".

(1) "DDT and derivatives" means 4,4'-DDT (CAS number 50293), 4,4'-DDE (CAS number 72559) and 4,4'-DDD (CAS number 72548).

(2) "Department" means the New Mexico environment department.

(3) "Designated use" means a use specified in 20.6.4.97 through 20.6.4.899 NMAC for a surface water of the state whether or not it is being attained.

(4) "Dissolved" refers to the fraction of a constituent of a water sample that passes through a 0.45-micrometer pore-size filter. The "dissolved" fraction is also termed "filterable residue."

(5) "Domestic water supply" means a surface water of the state that could be used for drinking or culinary purposes after disinfection.

E. Terms beginning with the letter "E".

(1) "E. coli" means the bacteria Escherichia coli.

(2) "Emerging contaminants" refer to water contaminants that may cause significant ecological or human health effects at low concentrations. Emerging contaminants are generally chemical compounds recognized as having deleterious effects at environmental concentrations whose negative impacts have not been fully quantified and may not have regulatory numeric criteria.

(3) "Ephemeral" when used to describe a surface water of the state means the water body contains water briefly only in direct response to precipitation; its bed is always above the water table of the adjacent region.

(4) "Existing use" means a use actually attained in a surface water of the state on or after November 28, 1975, whether or not it is a designated use.

F. Terms beginning with the letter "F".

(1) "Fish culture" means production of coldwater or warmwater fishes in a hatchery or rearing station.

(2) "Fish early life stages" means the egg and larval stages of development of fish ending when the fish has its full complement of fin rays and loses larval characteristics.

G. Terms beginning with the letter "G". [RESERVED]

H. Terms beginning with the letter "H".

(1) "Hardness" means the measure of dissolved calcium and magnesium salts in water expressed in units of dissolved calcium carbonate (CaCO₃) concentration unless otherwise noted.

(2) "Harmonic mean flow" is the number of daily flow measurements divided by the sum of the reciprocals of the flows; that is, it is the reciprocal of the arithmetic mean of reciprocal daily flow measurements consistent with the equations in Paragraph (1) of Subsection B of 20.6.4.11 NMAC.

(3) "High quality coldwater" in reference to an aquatic life use means a perennial surface water of the state in a minimally disturbed condition with considerable aesthetic value and superior coldwater aquatic life habitat. A surface water of the state to be so categorized must have water quality, stream bed characteristics and other attributes of habitat sufficient to protect and maintain a propagating coldwater aquatic life population.

(4) "Human health-organism only" means the health of humans who ingest fish or other aquatic organisms from waters that contain pollutants.

I. Terms beginning with the letter "I".

(1) "Industrial water supply" means the use or storage of water by a facility for process operations unless the water is supplied by a public water system. Industrial water supply does not include irrigation or other agricultural uses.

(2) "Intermittent" when used to describe a surface water of the state means the water body contains water for extended periods only at certain times of the year, such as when it receives seasonal flow from springs or melting snow.

(3) "Interstate waters" means all surface waters of the state that cross or form a part of the border between states.

(4) "Intrastate waters" means all surface waters of the state that are not interstate waters.

(5) "Irrigation" means application of water to land areas to supply the water needs of beneficial plants.

(6) "Irrigation storage" means storage of water to supply the needs of beneficial plants.

J. Terms beginning with the letter "J". [RESERVED]

K. Terms beginning with the letter "K". [RESERVED]

L. Terms beginning with the letter "L".

(1) "LC-50" means the concentration of a substance that is lethal to fifty percent of the test organisms within a defined time period. The length of the time period, which may vary from 24 hours to one week or more, depends on the test method selected to yield the information desired.

(2) "Limited aquatic life" as a designated use, means the surface water is capable of supporting only a limited community of aquatic life. This subcategory includes surface waters that support aquatic species selectively adapted to take advantage of naturally occurring rapid environmental changes, low-flow, high turbidity, fluctuating temperature, low dissolved oxygen content or unique chemical characteristics.

(3) "Livestock watering" means the use of a surface water of the state as a supply of water for consumption by livestock.

M. Terms beginning with the letter "M".

(1) "Marginal coldwater" in reference to an aquatic life use means that natural habitat conditions severely limit maintenance of a coldwater aquatic life population during at least some portion of the year or historical data indicate that the temperature of the surface water of the state may exceed that which could continually support aquatic life adapted to coldwater .

(2) "Marginal warmwater" in reference to an aquatic life use means natural intermittent or low flow or other natural habitat conditions severely limit the ability of the surface water of the state to sustain a natural aquatic life population on a continuous annual basis; or historical data indicate that natural water temperature routinely exceeds 32.2°C (90°F).

(3) "Maximum temperature" means the instantaneous temperature not to be exceeded at any time.

(4) "Minimum quantification level" means the minimum quantification level for a constituent determined by official published documents of the United States environmental protection agency.

N. Terms beginning with the letter "N".

(1) "Natural background" means that portion of a pollutant load in a surface water resulting only from non-anthropogenic sources. Natural background does not include impacts resulting from historic or existing human activities.

(2) "Natural causes" means those causal agents that would affect water quality and the effect is not caused by human activity but is due to naturally occurring conditions.

(3) "Nonpoint source" means any source of pollutants not regulated as a point source that degrades the quality or adversely affects the biological, chemical or physical integrity of surface waters of the state.

O. Terms beginning with the letter "O".

(1) "Organoleptic" means the capability to produce a detectable sensory stimulus such as odor or taste.

(2) "Oversight agency" means a state or federal agency, such as the United States department of agriculture forest service, that is responsible for land use or water quality management decisions affecting nonpoint source discharges where an outstanding national resource water is located.

P. Terms beginning with the letter "P".

(1) "Playa" means a shallow closed basin lake typically found in the high plains and deserts.

(2) "Perennial" when used to describe a surface water of the state means the water body typically contains water throughout the year and rarely experiences dry periods.

(3) "Persistent toxic pollutants" means pollutants, generally organic, that are resistant to environmental degradation through chemical, biological and photolytic processes and can bioaccumulate in organisms, causing adverse impacts on human health and aquatic life.

(4) "Point source" means any discernible, confined and discrete conveyance from which pollutants are or may be discharged into a surface water of the state, but does not include return flows from irrigated agriculture.

(5) "Practicable" means that which may be done, practiced or accomplished; that which is performable, feasible, possible.

(6) "Primary contact" means any recreational or other water use in which there is prolonged and intimate human contact with the water, such as swimming and water skiing, involving considerable risk of ingesting water in quantities sufficient to pose a significant health hazard. Primary contact also means any use of surface waters of the state for cultural, religious or ceremonial purposes in which there is intimate human contact with the water, including but not limited to ingestion or immersion, that could pose a significant health hazard.

(7) "Public water supply" means the use or storage of water to supply a public water system as defined by New Mexico's Drinking Water Regulations, 20.7.10 NMAC. Water provided by a public water system may need to undergo treatment to achieve drinking water quality.

Q. Terms beginning with the letter "Q". [RESERVED]

R. Terms beginning with the letter "R". [RESERVED]

S. Terms beginning with the letter "S".

(1) "Secondary contact" means any recreational or other water use in which human contact with the water may occur and in which the probability of ingesting appreciable quantities of water is minimal, such as fishing, wading, commercial and recreational boating and any limited seasonal contact.

(2) "Segment" means a classified water of the state described in 20.6.4.101 through 20.6.4.899 NMAC. The water within a segment should have the same uses, similar hydrologic characteristics or flow regimes, and natural physical, chemical and biological characteristics and exhibit similar reactions to external stresses, such as the discharge of pollutants.

(3) "Specific conductance" is a measure of the ability of a water solution to conduct an electrical current.

(4) "State" means the state of New Mexico.

(5) "Surface water(s) of the state"

(a) means all surface waters situated wholly or partly within or bordering upon the state, including the following:

(i) lakes;

(ii) rivers;

- (iii) streams (including intermittent and ephemeral streams);
- (iv) mudflats;
- (v) sandflats;
- (vi) wetlands;
- (vii) sloughs;
- (viii) prairie potholes;
- (ix) wet meadows;
- (x) playa lakes;
- (xi) reservoirs; and
- (xii) natural ponds.

(b) also means all tributaries of such waters, including adjacent wetlands, any manmade bodies of water that were originally created in surface waters of the state or resulted in the impoundment of surface waters of the state, and any "waters of the United States" as defined under the Clean Water Act that are not included in the preceding description.

(c) does not include private waters that do not combine with other surface or subsurface water or any water under tribal regulatory jurisdiction pursuant to Section 518 of the Clean Water Act. Waste treatment systems, including treatment ponds or lagoons designed and actively used to meet requirements of the Clean Water Act (other than cooling ponds as defined in 40 CFR Part 423.11(m) that also meet the criteria of this definition), are not surface waters of the state, unless they were originally created in surface waters of the state or resulted in the impoundment of surface waters of the state.

T. Terms beginning with the letter "T".

(1) "TDS" means total dissolved solids, also termed "total filterable residue."

(2) "Toxic pollutant" means those pollutants, or combination of pollutants, including disease-causing agents, that after discharge and upon exposure, ingestion, inhalation or assimilation into any organism, either directly from the environment or indirectly by ingestion through food chains, will cause death, shortened life spans, disease, adverse behavioral changes, reproductive or physiological impairment or physical deformations in such organisms or their offspring.

(3) "Tributary" means a perennial, intermittent or ephemeral waterbody that flows into a larger waterbody, and includes a tributary of a tributary.

(4) "Turbidity" is an expression of the optical property in water that causes incident light to be scattered or absorbed rather than transmitted in straight lines.

U. Terms beginning with the letter "U". [RESERVED]

(1) "Unclassified waters of the state" means those surface waters of the state not identified in 20.6.4.101 through 20.6.4.899 NMAC.

(2) "Use attainability analysis" means a scientific study conducted for the purpose of assessing the factors affecting the attainment of a use.

V. Terms beginning with the letter "V". [RESERVED]

W. Terms beginning with the letter "W".

(1) "Warmwater" with reference to an aquatic life use means that water temperature and other characteristics are suitable for the support or propagation or both of warmwater aquatic life.

(2) "Water contaminant" means any substance that could alter if discharged or spilled the physical, chemical, biological or radiological qualities of water. "Water contaminant" does not mean source, special nuclear or by-product material as defined by the Atomic Energy Act of 1954, but may include all other radioactive materials, including but not limited to radium and accelerator-produced isotopes.

(3) "Water pollutant" means a water contaminant in such quantity and of such duration as may with reasonable probability injure human health, animal or plant life or property, or to unreasonably interfere with the public welfare or the use of property.

(4) "Wetlands" means those areas that are inundated or saturated by surface or ground water at a frequency and duration sufficient to support, and under normal circumstances do support, a prevalence of vegetation typically adapted for life in saturated soil conditions in New Mexico. Wetlands that are constructed outside of a surface water of the state for the purpose of providing wastewater treatment and that do not impound a surface water of the state are not included in this definition.

(5) "Wildlife habitat" means a surface water of the state used by plants and animals not considered as pathogens, vectors for pathogens or intermediate hosts for pathogens for humans or domesticated livestock and plants.

X. Terms beginning with the letters "X" through "Z". [RESERVED]

[20.6.4.7 NMAC - Rp 20 NMAC 6.1.1007, 10/12/2000; A, 7/19/2001; A, 5/23/2005; A, 7/17/2005; A, 8/1/2007; A, 12/1/2010; A, 1/14/2011; A, 3/2/2017; A, 4/23/2022]

20.6.4.8 ANTIDegradation Policy and Implementation Plan:

A. Antidegradation Policy: This antidegradation policy applies to all surface waters of the state.

(1) Existing uses, as defined in Paragraph (4) of Subsection E of 20.6.4.7 NMAC, and the level of water quality necessary to protect the existing uses shall be maintained and protected in all surface waters of the state.

(2) Where the quality of a surface water of the state exceeds levels necessary to support the propagation of fish, shellfish, and wildlife, and recreation in and on the water, that quality shall be maintained and protected unless the commission finds, after full satisfaction of the intergovernmental coordination and public participation provisions of the state's continuing planning process, that allowing lower water quality is necessary to accommodate important economic and social development in the area in which the water is located. In allowing such degradation or lower water quality, the state shall assure water quality adequate to protect existing uses fully. Further, the state shall assure that there shall be achieved the highest statutory and regulatory requirements for all new and existing point sources and all cost-effective and reasonable BMPs for nonpoint source control. Additionally, the state shall encourage the use of watershed planning as a further means to protect surface waters of the state.

(3) No degradation shall be allowed in waters designated by the commission as outstanding national resource waters (ONRWs), except as provided in Subparagraphs (a) through (e) of this paragraph and in Paragraph (4) of this Subsection A.

(a) After providing a minimum 30-day public review and comment period, the commission determines that allowing temporary and short-term degradation of water quality is necessary to accommodate public health or safety activities in the area in which the ONRW is located. Examples of public health or safety activities include but are not limited to replacement or repair of a water or sewer pipeline or a roadway bridge. In making its decision, the commission shall consider whether the activity will interfere with activities implemented to restore or maintain the chemical, physical or biological integrity of the water. In approving the activity, the commission shall require that:

(i) the degradation shall be limited to the shortest possible time and shall not exceed six months;

(ii) the degradation shall be minimized and controlled by best management practices or in accordance with permit requirements as appropriate; all

practical means of minimizing the duration, magnitude, frequency and cumulative effects of such degradation shall be utilized;

(iii) the degradation shall not result in water quality lower than necessary to protect any existing use in the ONRW; and

(iv) the degradation shall not alter the essential character or special use that makes the water an ONRW.

(b) Prior to the commission making a determination, the department or appropriate oversight agency shall provide a written recommendation to the commission. If the commission approves the activity, the department or appropriate oversight agency shall oversee implementation of the activity.

(c) Where an emergency response action that may result in temporary and short-term degradation to an ONRW is necessary to mitigate an immediate threat to public health or safety, the emergency response action may proceed prior to providing notification required by Subparagraph (a) of this paragraph in accordance with the following:

(i) only actions that mitigate an immediate threat to public health or safety may be undertaken pursuant to this provision; non-emergency portions of the action shall comply with the requirements of Subparagraph (a) of this paragraph;

(ii) the discharger shall make best efforts to comply with requirements (i) through (iv) of Subparagraph (a) of this paragraph;

(iii) the discharger shall notify the department of the emergency response action in writing within seven days of initiation of the action;

(iv) within 30 days of initiation of the emergency response action, the discharger shall provide a summary of the action taken, including all actions taken to comply with requirements (i) through (iv) of Subparagraph (a) of this paragraph.

(d) Preexisting land-use activities, including grazing, allowed by federal or state law prior to designation as an ONRW, and controlled by best management practices (BMPs), shall be allowed to continue so long as there are no new or increased discharges resulting from the activity after designation of the ONRW.

(e) Acequia operation, maintenance, and repairs are not subject to new requirements because of ONRW designation. However, the use of BMPs to minimize or eliminate the introduction of pollutants into receiving waters is strongly encouraged.

(4) This antidegradation policy does not prohibit activities that may result in degradation in surface waters of the state when such activities will result in restoration or maintenance of the chemical, physical or biological integrity of the water.

(a) For ONRWs, the department or appropriate oversight agency shall review on a case-by-case basis discharges that may result in degradation from restoration or maintenance activities, and may approve such activities in accordance with the following:

- (i) the degradation shall be limited to the shortest possible time;
- (ii) the degradation shall be minimized and controlled by best management practices or in accordance with permit requirements as appropriate, and all practical means of minimizing the duration, magnitude, frequency and cumulative effects of such degradation shall be utilized;
- (iii) the degradation shall not result in water quality lower than necessary to protect any existing use of the surface water; and
- (iv) the degradation shall not alter the essential character or special use that makes the water an ONRW.

(b) For surface waters of the state other than ONRWs, the department shall review on a case-by-case basis discharges that may result in degradation from restoration or maintenance activities, and may approve such activities in accordance with the following:

- (i) the degradation shall be limited to the shortest possible time;
- (ii) the degradation shall be minimized and controlled by best management practices or in accordance with permit requirements as appropriate, and all practical means of minimizing the duration, magnitude, frequency and cumulative effects of such degradation shall be utilized; and
- (iii) the degradation shall not result in water quality lower than necessary to protect any existing use of the surface water.

(5) In those cases where potential water quality impairment associated with a thermal discharge is involved, this antidegradation policy and implementing method shall be consistent with Section 316 of the federal Clean Water Act.

(6) In implementing this section, the commission through the appropriate regional offices of the United States environmental protection agency will keep the administrator advised and provided with such information concerning the surface waters of the state as he or she will need to discharge his or her responsibilities under the federal Clean Water Act.

B. Implementation Plan: The department, acting under authority delegated by the commission, implements the water quality standards, including the antidegradation policy, by describing specific methods and procedures in the continuing planning

process and by establishing and maintaining controls on the discharge of pollutants to surface waters of the state. The steps summarized in the following paragraphs, which may not all be applicable in every water pollution control action, list the implementation activities of the department. These implementation activities are supplemented by detailed antidegradation review procedures developed under the state's continuing planning process. The department:

(1) obtains information pertinent to the impact of the effluent on the receiving water and advises the prospective discharger of requirements for obtaining a permit to discharge;

(2) reviews the adequacy of existing data and conducts a water quality survey of the receiving water in accordance with an annually reviewed, ranked priority list of surface waters of the state requiring total maximum daily loads pursuant to Section 303(d) of the federal Clean Water Act;

(3) assesses the probable impact of the effluent on the receiving water relative to its attainable or designated uses and numeric and narrative criteria;

(4) requires the highest and best degree of wastewater treatment practicable and commensurate with protecting and maintaining the designated uses and existing water quality of surface waters of the state;

(5) develops water quality based effluent limitations and comments on technology based effluent limitations, as appropriate, for inclusion in any federal permit issued to a discharger pursuant to Section 402 of the federal Clean Water Act;

(6) requires that these effluent limitations be included in any such permit as a condition for state certification pursuant to Section 401 of the federal Clean Water Act;

(7) coordinates its water pollution control activities with other constituent agencies of the commission, and with local, state and federal agencies, as appropriate;

(8) develops and pursues inspection and enforcement programs to ensure that dischargers comply with state regulations and standards, and complements EPA's enforcement of federal permits;

(9) ensures that the provisions for public participation required by the New Mexico Water Quality Act and the federal Clean Water Act are followed;

(10) provides continuing technical training for wastewater treatment facility operators through the utility operators training and certification programs;

(11) provides funds to assist the construction of publicly owned wastewater treatment facilities through the wastewater construction program authorized by Section

601 of the federal Clean Water Act, and through funds appropriated by the New Mexico legislature;

(12) conducts water quality surveillance of the surface waters of the state to assess the effectiveness of water pollution controls, determines whether water quality standards are being attained, and proposes amendments to improve water quality standards;

(13) encourages, in conjunction with other state agencies, implementation of the best management practices set forth in the New Mexico statewide water quality management plan and the nonpoint source management program, such implementation shall not be mandatory except as provided by federal or state law;

(14) evaluates the effectiveness of BMPs selected to prevent, reduce or abate sources of water pollutants;

(15) develops procedures for assessing use attainment as required by 20.6.4.15 NMAC and establishing site-specific standards; and

(16) develops list of surface waters of the state not attaining designated uses, pursuant to Sections 305(b) and 303(d) of the federal Clean Water Act.

[20.6.4.8 NMAC - Rp 20 NMAC 6.1.1101, 10/12/2000; A, 5/23/2005; A, 8/1/2007; A, 1/14/2011; A, 4/23/2022]

20.6.4.9 OUTSTANDING NATIONAL RESOURCE WATERS:

A. Procedures for nominating an ONRW: Any person may nominate a surface water of the state for designation as an ONRW by filing a petition with the commission pursuant to 20.1.6 NMAC, Rulemaking Procedures - Water Quality Control Commission. A petition to designate a surface water of the state as an ONRW shall include:

(1) a map of the surface water of the state, including the location and proposed upstream and downstream boundaries;

(2) a written statement and evidence based on scientific principles in support of the nomination, including specific reference to one or more of the applicable ONRW criteria listed in Subsection B of this section;

(3) water quality data including chemical, physical or biological parameters, if available, to establish a baseline condition for the proposed ONRW;

(4) a discussion of activities that might contribute to the reduction of water quality in the proposed ONRW;

(5) any additional evidence to substantiate such a designation, including a discussion of the economic impact of the designation on the local and regional economy within the state of New Mexico and the benefit to the state; and

(6) affidavit of publication of notice of the petition in a newspaper of general circulation in the affected counties and in a newspaper of general statewide circulation.

B. Criteria for ONRWs: A surface water of the state, or a portion of a surface water of the state, may be designated as an ONRW where the commission determines that the designation is beneficial to the state of New Mexico, and:

(1) the water is a significant attribute of a state special trout water, national or state park, national or state monument, national or state wildlife refuge or designated wilderness area, or is part of a designated wild river under the federal Wild and Scenic Rivers Act; or

(2) the water has exceptional recreational or ecological significance; or

(3) the existing water quality is equal to or better than the numeric criteria for protection of aquatic life and contact uses and the human health-organism only criteria, and the water has not been significantly modified by human activities in a manner that substantially detracts from its value as a natural resource.

C. Pursuant to a petition filed under Subsection A of this section, the commission may classify a surface water of the state or a portion of a surface water of the state as an ONRW if the criteria set out in Subsection B of this section are met.

D. Waters classified as ONRWs: The following waters are classified as ONRWs:

(1) Rio Santa Barbara, including the west, middle and east forks from their headwaters downstream to the boundary of the Pecos Wilderness; and

(2) the waters within the United States forest service Valle Vidal special management unit including:

(a) Rio Costilla, including Comanche, La Cueva, Fernandez, Chuckwagon, Little Costilla, Powderhouse, Holman, Gold, Grassy, LaBelle and Vidal creeks, from their headwaters downstream to the boundary of the United States forest service Valle Vidal special management unit;

(b) Middle Ponil creek, including the waters of Greenwood Canyon, from their headwaters downstream to the boundary of the Elliott S. Barker wildlife management area;

(c) Shuree lakes;

(d) North Ponil creek, including McCrystal and Seally Canyon creeks, from their headwaters downstream to the boundary of the United States forest service Valle Vidal special management unit; and

(e) Leandro creek from its headwaters downstream to the boundary of the United States forest service Valle Vidal special management unit.

(3) the named perennial surface waters of the state, identified in Subparagraph (a) below, located within United States department of agriculture forest service wilderness. Wilderness are those lands designated by the United States congress as wilderness pursuant to the Wilderness Act. Wilderness areas included in this designation are the Aldo Leopold wilderness, Apache Kid wilderness, Blue Range wilderness, Chama River Canyon wilderness, Cruces Basin wilderness, Dome wilderness, Gila wilderness, Latir Peak wilderness, Pecos wilderness, San Pedro Parks wilderness, Wheeler Peak wilderness, and White Mountain wilderness.

(a) The following waters are designated in the Rio Grande basin:

(i) in the Aldo Leopold wilderness: Byers Run, Circle Seven creek, Flower canyon, Holden Prong, Indian canyon, Las Animas creek, Mud Spring canyon, North Fork Palomas creek, North Seco creek, Pretty canyon, Sids Prong, South Animas canyon, Victorio Park canyon, Water canyon;

(ii) in the Apache Kid wilderness Indian creek and Smith canyon;

(iii) in the Chama River Canyon wilderness: Chavez canyon, Ojitos canyon, Rio Chama;

(iv) in the Cruces Basin wilderness: Beaver creek, Cruces creek, Diablo creek, Escondido creek, Lobo creek, Osha creek;

(v) in the Dome wilderness: Capulin creek, Medio creek, Sanchez canyon/creek;

(vi) in the Latir Peak wilderness: Bull creek, Bull Creek lake, Heart lake, Lagunitas Fork, Lake Fork creek, Rito del Medio, Rito Primero, West Latir creek;

(vii) in the Pecos wilderness: Agua Sarca, Hidden lake, Horseshoe lake (Alamitos), Jose Vigil lake, Nambe lake, Nat lake IV, No Fish lake, North Fork Rio Quemado, Rinconada, Rio Capulin, Rio de las Trampas (Trampas creek), Rio de Truchas, Rio Frijoles, Rio Medio, Rio Molino, Rio Nambe, Rio San Leonardo, Rito con Agua, Rito Gallina, Rito Jaroso, Rito Quemado, San Leonardo lake, Santa Fe lake, Santa Fe river, Serpent lake, South Fork Rio Quemado, Trampas lake (East), Trampas lake (West);

(viii) in the San Pedro Parks wilderness: Agua Sarca, Cañon Madera, Cave creek, Cecilia Canyon creek, Clear creek (North SPP), Clear creek (South SPP), Corralitos creek, Dove creek, Jose Miguel creek, La Jara creek, Oso creek, Rio Capulin, Rio de las Vacas, Rio Gallina, Rio Puerco de Chama, Rito Anastacio East, Rito Anastacio West, Rito de las Palomas, Rito de las Perchas, Rito de los Pinos, Rito de los Utes, Rito Leche, Rito Redondo, Rito Resumidero, San Gregorio lake;

(ix) in the Wheeler Peak wilderness: Black Copper canyon, East Fork Red river, Elk lake, Horseshoe lake, Lost lake, Sawmill creek, South Fork lake, South Fork Rio Hondo, Williams lake.

(b) The following waters are designated in the Pecos River basin:

(i) in the Pecos wilderness: Albright creek, Bear creek, Beatty creek, Beaver creek, Carpenter creek, Cascade canyon, Cave creek, El Porvenir creek, Hollinger creek, Holy Ghost creek, Horsethief creek, Jack's creek, Jarosa canyon/creek, Johnson lake, Lake Katherine, Lost Bear lake, Noisy brook, Panchuela creek, Pecos Baldy lake, Pecos river, Rio Mora, Rio Valdez, Rito Azul, Rito de los Chimayosos, Rito de los Esteros, Rito del Oso, Rito del Padre, Rito las Trampas, Rito Maestas, Rito Oscuro, Rito Perro, Rito Sebadilloses, South Fork Bear creek, South Fork Rito Azul, Spirit lake, Stewart lake, Truchas lake (North), Truchas lake (South), Winsor creek;

(ii) in the White Mountain wilderness: Argentina creek, Aspen creek, Bonito creek, Little Bonito creek, Mills canyon/creek, Rodamaker creek, South Fork Rio Bonito, Turkey canyon/creek.

(c) The following waters are designated in the Gila River basin:

(i) in the Aldo Leopold wilderness: Aspen canyon, Black Canyon creek, Bonner canyon, Burnt canyon, Diamond creek, Falls canyon, Fisherman canyon, Running Water canyon, South Diamond creek;

(ii) in the Gila wilderness: Apache creek, Black Canyon creek, Brush canyon, Canyon creek, Chicken Coop canyon, Clear creek, Cooper canyon, Cow creek, Cub creek, Diamond creek, East Fork Gila river, Gila river, Gilita creek, Indian creek, Iron creek, Langstroth canyon, Lilley canyon, Little creek, Little Turkey creek, Lookout canyon, McKenna creek, Middle Fork Gila river, Miller Spring canyon, Mogollon creek, Panther canyon, Prior creek, Rain creek, Raw Meat creek, Rocky canyon, Sacaton creek, Sapillo creek, Sheep Corral canyon, Skeleton canyon, Squaw creek, Sycamore canyon, Trail canyon, Trail creek, Trout creek, Turkey creek, Turkey Feather creek, Turnbo canyon, West Fork Gila river, West Fork Mogollon creek, White creek, Willow creek, Woodrow canyon.

(d) The following waters are designated in the Canadian River basin: in the Pecos wilderness Daily creek, Johns canyon, Middle Fork Lake of Rio de la Casa,

Middle Fork Rio de la Casa, North Fork Lake of Rio de la Casa, Rito de Gascon, Rito San Jose, Sapello river, South Fork Rio de la Casa, Sparks creek (Manuelitas creek).

(e) The following waters are designated in the San Francisco River basin:

(i) in the Blue Range wilderness: Pueblo creek;

(ii) in the Gila wilderness: Big Dry creek, Lipsey canyon, Little Dry creek, Little Whitewater creek, South Fork Whitewater creek, Spider creek, Spruce creek, Whitewater creek.

(f) The following waters are designated in the Mimbres Closed basin: in the Aldo Leopold wilderness Corral canyon, Mimbres river, North Fork Mimbres river, South Fork Mimbres river.

(g) The following waters are designated in the Tularosa Closed basin: in the White Mountain wilderness Indian creek, Nogal Arroyo, Three Rivers.

(h) The wetlands designated are identified on the *Maps and List of Wetlands Within United States Forest Service Wilderness Areas Designated as Outstanding National Resource Waters* published at the New Mexico state library and available on the department's website.

(4) The following waters are designated in the headwaters Pecos river watershed:

(a) The Pecos river from Dalton Canyon creek to the Pecos wilderness boundary;

(b) In the Dry Gulch-Pecos river subwatershed, Dalton Canyon creek from the Pecos river upstream to the headwaters, Wild Horse creek from Dalton Canyon creek upstream to the headwaters, Macho Canyon creek from the Pecos river upstream to the headwaters and Sawyer creek from the Pecos river upstream to the headwaters;

(c) In the Indian creek-Pecos river subwatershed, Indian creek from the Pecos river upstream to the headwaters, Holy Ghost creek from the Pecos river upstream to the Pecos wilderness boundary, Doctor creek from Holy Ghost creek upstream to the headwaters, Davis creek from the Pecos river upstream to the headwaters and Willow creek from the Pecos river upstream to the headwaters;

(d) In the Rio Mora subwatershed, Rio Mora from the Pecos river upstream to the Pecos wilderness boundary and Bear creek from the Rio Mora upstream to the Pecos wilderness boundary;

(e) In the Rio Mora-Pecos river subwatershed, Carpenter creek from the Pecos river upstream to the Pecos wilderness boundary, Winsor creek from the Pecos

river upstream to the Pecos wilderness boundary and Jack's creek from the Pecos river upstream to the Pecos wilderness boundary; and

(f) In the Panchuela creek subwatershed, Panchuela creek from the Pecos river upstream to the Pecos wilderness boundary;

(g) Unnamed tributaries to waters in Subparagraphs (a) through (f), Paragraph (4) of this Subsection (D) as identified in the *Maps and Lists for Unnamed Tributaries to Perennial Waters and Wetlands in the Headwaters Pecos River Watershed*, published at the New Mexico state library and available on the department's website;

(h) Unnamed wetlands adjacent to waters in Subparagraphs (a) through (f), Paragraph (4) of this Subsection (D) as identified in the *Maps and Lists for Unnamed Tributaries to Perennial Waters and Wetlands in the Headwaters Pecos River Watershed*, published at the New Mexico state library and available on the department's website.

(5) the Rio Grande from directly above the Rio Pueblo de Taos to the New Mexico-Colorado state border.

(6) The Rio Hondo from the Carson National Forest boundary to its headwaters; and Lake Fork creek from the Rio Hondo to its headwaters.

(7) The East Fork Jemez river from San Antonio creek to its headwaters; San Antonio creek from the East Fork Jemez river to its headwaters; and Redondo creek from Sulphur creek to its headwaters.

(8) The following waters located within a national or state park, national or state monument, or national or state wildlife refuge:

(a) in the Valles Caldera national preserve: La Jara creek, Sulphur creek, San Luis creek, Jaramillo creek, and Rito de los Indios;

(b) in the Bandelier national monument: Rito de los Frijoles, Lummis canyon, Alamo canyon, Capulin creek, and Medio creek;

(c) in the Cimarron canyon state park: Cimarron river;

(d) in the Pecos national historical park: Pecos river;

(e) in the Rio Grande del Norte national monument: Rio San Antonio.

(9) The following waters located within a designated wilderness area: in the Columbine – Hondo wilderness areas: Columbine creek, Deer creek, Placer fork, Willow fork, Goose creek, Bear creek, Long canyon, Gavilan canyon, Italianos creek, Yerba

creek, Manzanita creek, Gallina creek, Lobo creek, San Cristobal creek, and Lama canyon.

(10) The following wild rivers as designated by the federal Wild and Scenic Rivers Act:

(a) Rio Chama from the US forest service boundary to confluence with the Rio Nutrias;

(b) Red River from the confluence with the Rio Grande to four miles upstream.

(11) The following state special trout waters not already included in Paragraphs 8 through 10 of this Subsection:

(a) in the Edward Sargent wildlife management area: Rio Chamita, Nabor creek, Sixto creek, and Rio Chama;

(b) Rio Chama from Heron Reservoir outlet to Cottonwood flats;

(c) Rio de los Pinos from United States forest service road 87A to private land 2.5 miles upstream, Tanques creek, Canada Tio Grande;

(d) Cabresto creek from United States forest service boundary to headwaters, Frijoles creek, Palociento creek, and West Fork Luna creek;

(e) Rio Cebolla from Seven Springs day use area to its headwaters, Rio Gaudalupe from the confluence with Deer creek upstream to confluence with Stable creek;

(f) Capulin creek from the Dome wilderness boundary to headwaters.

[20.6.4.9 NMAC - Rn, Subsections B, C and D of 20.6.4.8 NMAC, 5/23/2005; A, 5/23/2005; A, 7/17/2005; A, 2/16/2006; A, 12/1/2010; A, 1/14/2011; A, 4/23/2022; A, 9/24/2022; A, 3/15/2025]

20.6.4.10 REVIEW OF STANDARDS; NEED FOR ADDITIONAL STUDIES:

A. Section 303(c)(1) of the federal Clean Water Act requires that the state hold public hearings at least once every three years for the purpose of reviewing water quality standards and proposing, as appropriate, necessary revisions to water quality standards.

B. In accordance with 40 CFR 131.10(i), when an existing use, as defined under 20.6.4.7 NMAC, is higher quality water than prescribed by the designated use and

supporting evidence demonstrates the presence of that use, the designated use shall be amended accordingly to have criteria no less stringent than the existing use.

C. It is recognized that, in some cases, numeric criteria for a particular designated use may not adequately reflect the local conditions or the aquatic communities adapted to those localized conditions. In these cases, a water quality criterion may be modified to reflect the natural condition of a specific waterbody. The modification of the criterion does not change the designated use; the modification only changes the criterion for that specific waterbody. When justified by sufficient data and information, a numeric water quality criterion may be adopted or modified in accordance with Subsection F of 20.6.4.10 and Subsection G of 20.6.4.10 NMAC, to protect the attainable uses of the waterbody.

D. The removal or amendment of a designated use to a designated use with less stringent criteria can only be done through a use attainability analysis in accordance with 20.6.4.15 NMAC.

E. It is also recognized that contributions of water contaminants by diffuse nonpoint sources of water pollution may make attainment of certain criteria difficult. Revision of these criteria may be necessary as new information is obtained on nonpoint sources and other problems unique to semi-arid regions.

F. Site-specific criteria.

(1) The commission may adopt site-specific numeric criteria applicable to all or part of a surface water of the state based on relevant site-specific conditions such as:

(a) actual species at a site are more or less sensitive than those used in the national criteria data set;

(b) physical or chemical characteristics at a site such as pH or hardness alter the biological availability and/or toxicity of the chemical;

(c) physical, biological or chemical factors alter the bioaccumulation potential of a chemical;

(d) the concentration resulting from natural background exceeds numeric criteria for aquatic life, wildlife habitat or other uses if consistent with Subsection G of 20.6.4.10 NMAC; or

(e) other factors or combination of factors that upon review of the commission may warrant modification of the default criteria, subject to EPA review and approval.

(2) Site-specific criteria must fully protect the designated use to which they apply. In the case of human health-organism only criteria, site-specific criteria must fully protect human health when organisms are consumed from waters containing pollutants.

(3) Any person may petition the commission to adopt site-specific criteria. A petition for the adoption of site-specific criteria shall:

- (a) identify the specific waters to which the site-specific criteria would apply;
- (b) explain the rationale for proposing the site-specific criteria;
- (c) describe the methods used to notify and solicit input from potential stakeholders and from the general public in the affected area, and present and respond to the public input received;
- (d) present and justify the derivation of the proposed criteria.

(4) A derivation of site-specific criteria shall rely on a scientifically defensible method, such as one of the following:

(a) the recalculation procedure, the water-effect ratio for metals procedure or the resident species procedure as described in the water quality standards handbook (EPA-823-B-94-005a, 2nd edition, August 1994);

(b) the streamlined water-effect ratio procedure for discharges of copper (EPA-822-R-01-005, March 2001);

(c) the biotic ligand model as described in aquatic life ambient freshwater quality criteria - copper (EPA-822-R-07-001, February 2007);

(d) the methodology for deriving ambient water quality criteria for the protection of human health (EPA-822-B-00-004, October 2000) and associated technical support documents; or

(e) a determination of the natural background of the water body as described in Subsection G of 20.6.4.10 NMAC.

G. Site-specific criteria based on natural background. The commission may adopt site-specific criteria equal to the concentration resulting from natural background where that concentration protects the designated use. The concentration resulting from natural background supports the level of aquatic life and wildlife habitat expected to occur naturally at the site absent any interference by humans. Domestic water supply, primary or secondary contact, or human health-organism only criteria shall not be modified based on natural background. A determination of natural background shall:

- (1) consider natural spatial and seasonal to interannual variability as appropriate;
- (2) document the presence of natural sources of the pollutant;

(3) document the absence of human sources of the pollutant or quantify the human contribution; and

(4) rely on analytical, statistical or modeling methodologies to quantify the natural background.

H. Temporary standards.

(1) Any person may petition the commission to adopt a temporary standard applicable to all or part of a surface water of the state as provided for in this section and applicable sections in 40 CFR Part 131, Water Quality Standards; specifically, Section 131.14. The commission may adopt a proposed temporary standard if the petitioner demonstrates that:

(a) attainment of the associated designated use may not be feasible in the short term due to one or more of the factors listed in 40 CFR 131.10(g), or due to the implementation of actions necessary to facilitate restoration such as through dam removal or other significant wetland or water body reconfiguration activities as demonstrated by the petition and supporting work plan requirements in Paragraphs (4) and (5) of Subsection H of 20.6.4.10 NMAC;

(b) the proposed temporary standard represents the highest degree of protection feasible in the short term, limits the degradation of water quality to the minimum necessary to achieve the original standard by the expiration date of the temporary standard, and adoption will not cause the further impairment or loss of an existing use;

(c) for point sources, existing or proposed discharge control technologies will comply with applicable technology-based limitations and feasible technological controls and other management alternatives, such as a pollution prevention program; and

(d) for restoration activities, nonpoint source or other control technologies shall limit downstream impacts, and if applicable, existing or proposed discharge control technologies shall be in place consistent with Subparagraph (c) of Paragraph (1) of Subsection H of 20.6.4.10 NMAC.

(2) A temporary standard shall apply to specific designated use(s), pollutant(s), or permittee(s), and to specific water body segment(s). The adoption of a temporary standard does not exempt dischargers from complying with all other applicable water quality standards or control technologies.

(3) Designated use attainment as reported in the federal Clean Water Act, Section 305(b)/303(d) Integrated Report shall be based on the original standard and not on a temporary standard.

(4) A petition for a temporary standard shall:

(a) identify the currently applicable standard(s), the proposed temporary standard for the specific pollutant(s), the permittee(s), and the specific surface water body segment(s) of the state to which the temporary standard would apply;

(b) include the basis for any factor(s) specific to the applicability of the temporary standard (for example critical flow under Subsection B of 20.6.4.11 NMAC);

(c) demonstrate that the proposed temporary standard meets the requirements in this subsection;

(d) present a work plan with timetable of proposed actions for achieving compliance with the original standard in accordance with Paragraph (5) of Subsection H of 20.6.4.10 NMAC;

(e) include any other information necessary to support the petition.

(5) As a condition of a petition for a temporary standard, in addition to meeting the requirements in this Subsection, the petitioner shall prepare a work plan in accordance with Paragraph (4) of Subsection H of 20.6.4.10 NMAC and submit the work plan to the department for review and comment. The work plan shall identify the factor(s) listed in 40 CFR 131.10(g) or Subparagraph (a) of Paragraph (1) of Subsection H of 20.6.4.10 NMAC affecting attainment of the standard that will be analyzed and the timeline for proposed actions to be taken to achieve the uses attainable over the term of the temporary standard, including baseline water quality, and any investigations, projects, facility modifications, monitoring, or other measures necessary to achieve compliance with the original standard. The work plan shall include provisions for review of progress in accordance with Paragraph (8) of Subsection H of 20.6.4.10 NMAC, public notice and consultation with appropriate state, tribal, local and federal agencies.

(6) The commission may condition the approval of a temporary standard by requiring additional monitoring, relevant analyses, the completion of specified projects, submittal of information, or any other actions.

(7) Temporary standards may be implemented only after a public hearing before the commission, commission approval and adoption pursuant to Subsection H of 20.6.4.10 NMAC for all state purposes, and the federal Clean Water Act Section 303 (c) approval for any federal action.

(8) All temporary standards are subject to a required review during each succeeding review of water quality standards conducted in accordance with Subsection A of 20.6.4.10 NMAC. The petitioner shall provide a written report to the commission documenting the progress of proposed actions, pursuant to a reporting schedule stipulated in the approved temporary standard. The purpose of the review is to determine progress consistent with the original conditions of the petition for the duration of the temporary standard. If the petitioner cannot demonstrate that sufficient progress

has been made the commission may revoke approval of the temporary standard or provide additional conditions to the approval of the temporary standard.

(9) The commission may consider a petition to extend a temporary standard. The effective period of a temporary standard shall be extended only if demonstrated to the commission that the factors precluding attainment of the underlying standard still apply, that the petitioner is meeting the conditions required for approval of the temporary standard, and that reasonable progress towards meeting the underlying standard is being achieved.

(10) A temporary standard shall expire no later than the date specified in the approval of the temporary standard. Upon expiration of a temporary standard, the original standard becomes applicable.

(11) Temporary standards shall be identified in 20.6.4.97-899 NMAC as appropriate for the surface water affected.

(12) "Temporary standard" means a time-limited designated use and criterion for a specific pollutant(s) or water quality parameter(s) that reflect the highest attainable condition during the term of the temporary standard.

[20.6.4.10 NMAC - Rp 20 NMAC 6.1.1102, 10/12/2000; Rn, 20.6.4.9 NMAC, 5/23/2005; A, 5/23/2005; A, 12/1/2010; A, 3/2/2017; A, 4/23/2022]

20.6.4.11 APPLICABILITY OF WATER QUALITY STANDARDS:

A. [RESERVED]

B. Critical low flow: The critical low flow of a stream at a particular site shall be used in developing point source discharge permit requirements to meet numeric criteria set in 20.6.4.97 through 20.6.4.900 NMAC and Subsection F of 20.6.4.13 NMAC.

(1) For human health-organism only criteria, the critical low flow is the harmonic mean flow. For ephemeral waters the calculation shall be based upon the nonzero flow intervals and modified by including a factor to adjust for the proportion of intervals with zero flow. The equations are as follows:

$$\text{Harmonic Mean} = \frac{n}{\sum 1/Q}$$

where n = number of flow values
and Q = flow value

Modified Harmonic Mean =

where Q_i = nonzero flow
 Nt = total number of flow values
and N_0 = number of zero flow values

(2) For all other narrative and numeric criteria, the critical low flow is the minimum average four consecutive day flow that occurs with a frequency of once in three years (4Q3). The critical low flow may be determined on an annual, a seasonal or a monthly basis, as appropriate, after due consideration of site-specific conditions.

C. Guaranteed minimum flow: The commission may allow the use of a contractually guaranteed minimum streamflow in lieu of a critical low flow determined under Subsection B of this section on a case-by-case basis and upon consultation with the interstate stream commission. Should drought, litigation or any other reason interrupt or interfere with minimum flows under a guaranteed minimum flow contract for a period of at least 30 consecutive days, such permission, at the sole discretion of the commission, may then be revoked. Any minimum flow specified under such revoked permission shall be superseded by a critical low flow determined under Subsection B of this section. A public notice of the request for a guaranteed minimum flow shall be published in a newspaper of general circulation by the department at least 30 days prior to scheduled action by the commission. These water quality standards do not grant to the commission or any other entity the power to create, take away or modify property rights in water.

D. Mixing zones: A limited mixing zone, contiguous to a point source wastewater discharge, may be allowed in any stream receiving such a discharge. Mixing zones serve as regions of initial dilution that allow the application of a dilution factor in calculations of effluent limitations. Effluent limitations shall be developed that will protect the most sensitive existing, designated or attainable use of the receiving water.

E. Mixing zone limitations: Wastewater mixing zones, in which the numeric criteria set under Subsection F of 20.6.4.13 NMAC, 20.6.4.97 through 20.6.4.899 NMAC or 20.6.4.900 NMAC may be exceeded, shall be subject to the following limitations:

(1) Mixing zones are not allowed for discharges to lakes, reservoirs, or playas; these effluents shall meet all applicable criteria set under Subsection F of 20.6.4.13 NMAC, 20.6.4.97 through 20.6.4.899 NMAC and 20.6.4.900 NMAC at the point of discharge.

(2) The acute aquatic life criteria, as set out in Subsection I, Subsection J, and Subsection K of 20.6.4.900 NMAC, shall be attained at the point of discharge for any discharge to a surface water of the state with a designated aquatic life use.

(3) The general criteria set out in Subsections A, B, C, D, E, G, H and J of 20.6.4.13 NMAC, and the provision set out in Subsection D of 20.6.4.14 NMAC are applicable within mixing zones.

(4) The areal extent and concentration isopleths of a particular mixing zone will depend on site-specific conditions including, but not limited to, wastewater flow, receiving water critical low flow, outfall design, channel characteristics and climatic conditions and, if needed, shall be determined on a case-by-case basis. When the

physical boundaries or other characteristics of a particular mixing zone must be known, the methods presented in Section 4.4.5, "Ambient-induced mixing," in "Technical support document for water quality-based toxics control" (March 1991, EPA/505/2-90-001) shall be used.

(5) All applicable water quality criteria set under Subsection F of 20.6.4.13 NMAC, 20.6.4.97 through 20.6.4.899 NMAC and 20.6.4.900 NMAC shall be attained at the boundaries of mixing zones. A continuous zone of passage through or around the mixing zone shall be maintained in which the water quality meets all applicable criteria and allows the migration of aquatic life presently common in surface waters of the state with no effect on their populations.

F. Multiple uses: When a surface water of the state has more than a single designated use, the applicable numeric criteria shall be the most stringent of those established for such water.

G. Human health-organism only criteria in Subsection J of 20.6.4.900 NMAC apply to those waters with a designated, existing or attainable aquatic life use. When limited aquatic life is a designated use, the human health-organism only criteria apply only if adopted on a segment-specific basis. The human health-organism only criteria for persistent toxic pollutants, as identified in Subsection J of 20.6.4.900 NMAC, also apply to all tributaries of waters with a designated, existing or attainable aquatic life use.

H. Unclassified waters of the state: An unclassified surface water of the state is presumed to support the uses specified in Section 101(a)(2) of the federal Clean Water Act. As such, it is subject to 20.6.4.98 NMAC if nonperennial or subject to 20.6.4.99 NMAC if perennial. The commission may include an ephemeral unclassified surface water of the state under 20.6.4.97 NMAC only if a use attainability analysis demonstrates pursuant to 20.6.4.15 NMAC that attainment of Section 101(a)(2) uses is not feasible.

I. Exceptions: Numeric criteria for temperature, dissolved solids, dissolved oxygen, sediment or turbidity adopted under the Water Quality Act do not apply when changes in temperature, dissolved solids, dissolved oxygen, sediment or turbidity in a surface water of the state are attributable to:

(1) natural causes (discharges from municipal separate storm sewers are not covered by this exception.); or

(2) the reasonable operation of irrigation and flood control facilities that are not subject to federal or state water pollution control permitting; major reconstruction of storage dams or diversion dams except for emergency actions necessary to protect health and safety of the public are not covered by this exception.

[20.6.4.11 NMAC - Rp 20 NMAC 6.1.1103, 10/12/2000; A, 10/11/2002; Rn, 20.6.4.10 NMAC, 5/23/2005; A, 5/23/2005; A, 12/1/2010; A, 4/23/2022]

20.6.4.12 COMPLIANCE WITH WATER QUALITY STANDARDS:

The following provisions apply to determining compliance for enforcement purposes; they do not apply for purposes of determining attainment of uses. The department has developed assessment protocols for the purpose of determining attainment of uses that are available for review from the department's surface water quality bureau.

A. Compliance with acute water quality criteria shall be determined from the analytical results of a single grab sample. Acute criteria shall not be exceeded.

B. Compliance with chronic water quality criteria shall be determined from the arithmetic mean of the analytical results of samples collected using applicable protocols. Chronic criteria shall not be exceeded more than once every three years.

C. Compliance with water quality standards for total ammonia shall be determined by performing the biomonitoring procedures set out in Subsections D and E of 20.6.4.14 NMAC, or by attainment of applicable ammonia criteria set out in Subsections K, L and M of 20.6.4.900 NMAC.

D. Compliance with the human health-organism only criteria shall be determined from the analytical results of representative grab samples, as defined in the water quality management plan. Human health-organism only criteria shall not be exceeded.

E. The commission may establish a numeric water quality criterion at a concentration that is below the minimum quantification level. In such cases, the water quality standard is enforceable at the minimum quantification level.

F. For compliance with hardness-dependent numeric criteria, hardness (as mg CaCO₃/L) shall be determined from a sample taken at the same time that the sample for the contaminant is taken.

G. Compliance schedules: The commission may allow the inclusion of a schedule of compliance in a NPDES permit issued to an existing facility on a case-by-case basis. Such schedule of compliance will be for the purpose of providing a permittee with adequate time to make treatment facility modifications necessary to comply with water quality based permit limitations determined to be necessary to implement new or revised water quality standards or wasteload allocation. Compliance schedules may be included in NPDES permits at the time of permit renewal or modification and shall be written to require compliance at the earliest practicable time. Compliance schedules shall also specify milestone dates so as to measure progress towards final project completion (e.g., design completion, construction start, construction completion, date of compliance).

H. It is a policy of the commission to allow a temporary standard approved and adopted pursuant to Subsection H of 20.6.4.10 NMAC to be included in the applicable federal Clean Water Act permit as enforceable limits and conditions. The temporary

standard and any schedule of actions may be included at the earliest practicable time, and shall specify milestone dates so as to measure progress towards meeting the original standard.

[20.6.4.12 NMAC - Rp 20 NMAC 6.1.1104, 10/12/2000; A, 10/11/2002; Rn, 20.6.4.11 NMAC, 5/23/2005; A, 5/23/2005; A, 12/1/2010; A, 3/2/2017; A, 4/23/2022]

20.6.4.13 GENERAL CRITERIA:

General criteria are established to sustain and protect existing or attainable uses of surface waters of the state. These general criteria apply to all surface waters of the state at all times, unless a specified criterion is provided elsewhere in this part. Surface waters of the state shall be free of any water contaminant in such quantity and of such duration as may with reasonable probability injure human health, animal or plant life or property, or unreasonably interfere with the public welfare or the use of property.

A. Bottom deposits and suspended or settleable solids:

(1) Surface waters of the state shall be free of water contaminants including fine sediment particles (less than two millimeters in diameter), precipitates or organic or inorganic solids from other than natural causes that have settled to form layers on or fill the interstices of the natural or dominant substrate in quantities that damage or impair the normal growth, function or reproduction of aquatic life or significantly alter the physical or chemical properties of the bottom.

(2) Suspended or settleable solids from other than natural causes shall not be present in surface waters of the state in quantities that damage or impair the normal growth, function or reproduction of aquatic life or adversely affect other designated uses.

B. Floating solids, oil and grease: Surface waters of the state shall be free of oils, scum, grease and other floating materials resulting from other than natural causes that would cause the formation of a visible sheen or visible deposits on the bottom or shoreline, or would damage or impair the normal growth, function or reproduction of human, animal, plant or aquatic life.

C. Color: Color-producing materials resulting from other than natural causes shall not create an aesthetically undesirable condition nor shall color impair the use of the water by desirable aquatic life presently common in surface waters of the state.

D. Organoleptic quality:

(1) Flavor of fish: Water contaminants from other than natural causes shall be limited to concentrations that will not impart unpalatable flavor to fish.

(2) Odor and taste of water: Water contaminants from other than natural causes shall be limited to concentrations that will not result in offensive odor or taste arising in a surface water of the state or otherwise interfere with the reasonable use of the water.

E. Plant nutrients: Plant nutrients from other than natural causes shall not be present in concentrations that will produce undesirable aquatic life or result in a dominance of nuisance species in surface waters of the state.

F. Toxic pollutants:

(1) Except as provided in 20.6.4.16 NMAC, surface waters of the state shall be free of toxic pollutants from other than natural causes in amounts, duration, concentrations, or combinations that affect the propagation of fish or that are toxic to humans, livestock or other animals, fish or other aquatic organisms, wildlife using aquatic environments for habitation or aquatic organisms for food, or that will or can reasonably be expected to bioaccumulate in tissues of fish, shellfish and other aquatic organisms to levels that will impair the health of aquatic organisms or wildlife or result in unacceptable tastes, odors or health risks to human consumers of aquatic organisms.

(2) Pursuant to this section, the human health-organism only criteria shall be as set out in 20.6.4.900 NMAC. When a human health-organism only criterion is not listed in 20.6.4.900 NMAC, the following provisions shall be applied in accordance with 20.6.4.11, 20.6.4.12 and 20.6.4.14 NMAC.

(a) The human health-organism only criterion shall be the recommended human health criterion for "consumption of organisms only" published by the U.S. environmental protection agency pursuant to Section 304(a) of the federal Clean Water Act. In determining such criterion for a cancer-causing toxic pollutant, a cancer risk of 10⁻⁵ (one cancer per 100,000 exposed persons) shall be used.

(b) When a numeric criterion for the protection of human health for the consumption of organism only has not been published by the U.S. environmental protection agency, a quantifiable criterion may be derived from data available in the U.S. environmental protection agency's Integrated Risk Information System (IRIS) using the appropriate formula specified in *Methodology for Deriving Ambient Water Quality Criteria for The Protection Of Human Health (2000)*, EPA-822-B-00-004.

(3) Pursuant to this section, the chronic aquatic life criteria shall be as set out in 20.6.4.900 NMAC. When a chronic aquatic life criterion is not listed in 20.6.4.900 NMAC, the following provisions shall be applied in sequential order in accordance with 20.6.4.11, 20.6.4.12 and 20.6.4.14 NMAC.

(a) The chronic aquatic life criterion shall be the "freshwater criterion continuous concentration" published by the U.S. environmental protection agency pursuant to Section 304(a) of the federal Clean Water Act;

(b) If the U.S. environmental protection agency has not published a chronic aquatic life criterion, a geometric mean LC-50 value shall be calculated for the particular species, genus or group that is representative of the form of life to be preserved, using the results of toxicological studies published in scientific journals.

(i) The chronic aquatic life criterion for a toxic pollutant that does not bioaccumulate shall be ten percent of the calculated geometric mean LC-50 value; and

(ii) The chronic aquatic life criterion for a toxic pollutant that does bioaccumulate shall be: the calculated geometric mean LC-50 adjusted by a bioaccumulation factor for the particular species, genus or group representative of the form of life to be preserved, but when such bioaccumulation factor has not been published, the criterion shall be one percent of the calculated geometric mean LC-50 value.

(4) Pursuant to this section, the acute aquatic life criteria shall be as set out in 20.6.4.900 NMAC. When an acute aquatic life criterion is not listed in 20.6.4.900 NMAC, the acute aquatic life criterion shall be the "freshwater criterion maximum concentration" published by the U.S. environmental protection agency pursuant to Section 304(a) of the federal Clean Water Act.

(5) Within 90 days of the issuance of a final NPDES permit containing a numeric criterion selected or calculated pursuant to Paragraph (2), Paragraph (3) or Paragraph (4) of Subsection F of this section, the department shall petition the commission to adopt such criterion into these standards.

G. Radioactivity: The radioactivity of surface waters of the state shall be maintained at the lowest practical level and shall in no case exceed the criteria set forth in the New Mexico Radiation Protection Regulations, 20.3.1 and 20.3.4 NMAC.

H. Pathogens: Surface waters of the state shall be free of pathogens from other than natural causes in sufficient quantity to impair public health or the designated, existing or attainable uses of a surface water of the state.

I. Temperature: Maximum temperatures for surface waters of the state have been specified in 20.6.4.97 through 20.6.4.900 NMAC. However, the introduction of heat by other than natural causes shall not increase the temperature, as measured from above the point of introduction, by more than 2.7°C (5°F) in a stream, or more than 1.7°C (3°F) in a lake or reservoir. In no case will the introduction of heat be permitted when the maximum temperature specified for the reach would thereby be exceeded. These temperature criteria shall not apply to impoundments constructed offstream for the purpose of heat disposal. High water temperatures caused by unusually high ambient air temperatures are not violations of these criteria.

J. Turbidity: Turbidity attributable to other than natural causes shall not reduce light transmission to the point that the normal growth, function or reproduction of aquatic life

is impaired or that will cause substantial visible contrast with the natural appearance of the water. Activities or discharges shall not cause turbidity to increase more than 10 NTU over background turbidity when the background turbidity, measured at a point immediately upstream of the activity, is 50 NTU or less, nor to increase more than twenty percent when the background turbidity is more than 50 NTU. However, limited-duration turbidity increases caused by dredging, construction or other similar activities may be allowed provided all practicable turbidity control techniques have been applied and all appropriate permits, certifications and approvals have been obtained.

K. Total dissolved solids (TDS): TDS attributable to other than natural causes shall not damage or impair the normal growth, function or reproduction of animal, plant or aquatic life. TDS shall be measured by either the "calculation method" (sum of constituents) or the filterable residue method. Approved test procedures for these determinations are set forth in 20.6.4.14 NMAC.

L. Dissolved gases: Surface waters of the state shall be free of nitrogen and other dissolved gases at levels above one hundred ten percent saturation when this supersaturation is attributable to municipal, industrial or other discharges.

M. Biological integrity: Surface waters of the state shall support and maintain a balanced and integrated community of aquatic organisms with species composition, diversity and functional organization comparable to those of natural or minimally impacted water bodies of a similar type and region.

[20.6.4.13 NMAC - Rp 20 NMAC 6.1.1105, 10/12/2000; A, 10/11/2002; Rn, 20.6.4.12 NMAC, 5/23/2005; A, 5/23/2005; A, 12/1/2010; A, 4/23/2022]

20.6.4.14 SAMPLING AND ANALYSIS:

A. Sampling and analytical techniques shall conform with methods described in the following references unless otherwise specified by the commission pursuant to a petition to amend these standards:

(1) *"Guidelines Establishing Test Procedures For The Analysis Of Pollutants Under The Clean Water Act,"* 40 CFR Part 136 or any test procedure approved or accepted by EPA using procedures provided in 40 CFR Parts 136.3(d), 136.4, and 136.5;

(2) *Standard Methods For The Examination Of Water And Wastewater,* latest edition, American public health association;

(3) *Methods For Chemical Analysis Of Water And Waste,* and other methods published by EPA office of research and development or office of water;

(4) *Techniques Of Water Resource Investigations Of The U.S. Geological Survey,*

(5) *Annual Book Of ASTM Standards*: volumes 11.01 and 11.02, water (I) and (II), latest edition, ASTM international;

(6) *Federal Register*, latest methods published for monitoring pursuant to Resource Conservation and Recovery Act regulations;

(7) *National Handbook Of Recommended Methods For Water-Data Acquisition*, latest edition, prepared cooperatively by agencies of the United States government under the sponsorship of the U.S. geological survey; or

(8) *Federal Register*, latest methods published for monitoring pursuant to the Safe Drinking Water Act regulations.

B. Bacteriological Surveys: The monthly geometric mean shall be used in assessing attainment of criteria when a minimum of five samples is collected in a 30-day period.

C. Sampling Procedures:

(1) Streams: Stream monitoring stations below discharges shall be located a sufficient distance downstream to ensure adequate vertical and lateral mixing.

(2) Lakes: Sampling stations in lakes shall be located at least 250 feet from a discharge.

(3) Lakes: Except for the restriction specified in Paragraph (2) of this subsection, lake sampling stations shall be located at any site where the attainment of a water quality criterion is to be assessed. Water quality measurements taken at intervals in the entire water column at a sampling station shall be averaged for the epilimnion, or in the absence of an epilimnion, for the upper one-third of the water column of the lake to determine attainment of criteria, except that attainment of criteria for toxic pollutants shall be assessed during periods of complete vertical mixing, e.g., during spring or fall turnover, or by taking depth-integrated composite samples of the water column.

D. Acute toxicity of effluent to aquatic life shall be determined using the procedures specified in U.S. environmental protection agency "*Methods for Measuring The Acute Toxicity of Effluents and Receiving Waters To Freshwater and Marine Organisms*" (5th Ed., 2002, EPA 821-R-02-012), or latest edition thereof if adopted by EPA at 40 CFR Part 136, which is incorporated herein by reference. Acute toxicities of substances shall be determined using at least two species tested in whole effluent and a series of effluent dilutions. Acute toxicity due to discharges shall not occur within the wastewater mixing zone in any surface water of the state with an existing or designated aquatic life use.

E. Chronic toxicity of effluent or ambient surface waters of the state to aquatic life shall be determined using the procedures specified in U.S. environmental protection agency "*Short-Term Methods For Estimating The Chronic Toxicity Of Effluents And*

Receiving Waters To Freshwater Organisms" (4th Ed., 2002, EPA 821-R-02-013), or latest edition thereof if adopted by EPA at 40 CFR Part 136, which is incorporated herein by reference. Chronic toxicities of substances shall be determined using at least two species tested in ambient surface water or whole effluent and a series of effluent dilutions. Chronic toxicity due to discharges shall not occur at the critical low flow, or any flow greater than the critical low flow, in any surface water of the state with an existing or designated aquatic life use more than once every three years.

F. Emerging Contaminants Monitoring: The department may require monitoring, analysis and reporting of emerging contaminants as a condition of a federal permit under Section 401 of the federal Clean Water Act.

[20.6.4.14 NMAC - Rp 20 NMAC 6.1.1106, 10/12/2000; Rn, 20.6.4.13 NMAC, 5/23/2005 & A, 5/23/2005; A, 12/1/2010; A 4/23/2022]

20.6.4.15 USE ATTAINABILITY ANALYSIS:

A. Regulatory requirements for a use attainability analysis. Whenever a use attainability analysis is conducted, it shall be subject to the requirements and limitations set forth in 40 CFR Part 131, Water Quality Standards; specifically, Subsections 131.3(g), 131.10(g), 131.10(h) and 131.10(j) shall be applicable. In accordance with 40 CFR 131.10(i), and 20.6.4.10 NMAC, the amendment of a designated use, based on an existing use with more stringent criteria, does not require a use attainability analysis.

(1) The commission may remove a designated use, that is not an existing use, specified in Section 101(a)(2) of the federal Clean Water Act or adopt subcategories of a use in Section 101(a)(2) of the federal Clean Water Act requiring less stringent criteria only if a use attainability analysis demonstrates that attaining the use is not feasible because of a factor listed in 40 CFR 131.10(g). Uses in Section 101(a)(2) of the federal Clean Water Act, which refer to the protection and propagation of fish, shellfish and wildlife and recreation in and on the water, are also specified in Subsection B of 20.6.4.6 NMAC.

(2) A designated use cannot be removed if it is an existing use unless a use requiring more stringent criteria is designated.

B. Methods for developing a use attainability analysis. A use attainability analysis shall assess the physical, chemical, biological, economic or other factors affecting the attainment of a use. The analysis shall rely on scientifically defensible methods such as the methods described in the following documents:

(1) *Technical Support Manual: Waterbody Surveys And Assessments For Conducting Use Attainability Analyses*, volume I (November 1983) and volume III (November 1984) or latest editions, United States environmental protection agency, office of water, regulations and standards, Washington, D.C., for the evaluation of aquatic life or wildlife uses;

(2) the department's *Hydrology Protocol*, latest edition, approved by the commission, for identifying ephemeral, intermittent, and perennial waters; or

(3) *Interim Economic Guidance For Water Quality Standards - Workbook*, March 1995, United States environmental protection agency, office of water, Washington, D.C. for evaluating economic impacts.

C. Determining the highest attainable use. If the use attainability analysis determines that the designated use is not attainable based on one of the factors in 40 CFR 131.10(g), the use attainability analysis shall demonstrate the support for removing the designated use and then determine the highest attainable use, as defined in 40 CFR 131.3(m), for the protection and propagation of fish, shellfish and wildlife and recreation in and on the water based on methods described in Subsection B of this section.

D. Process to amend a designated use through a use attainability analysis.

(1) The process for developing a use attainability analysis and petitioning the commission for removing a designated use and establishing the highest attainable use shall be done in accordance with the State's current *Water Quality Management Plan/Continuing Planning Process*.

(2) If the findings of a use attainability analysis, conducted by the department, in accordance with the department's Hydrology Protocol (latest edition) demonstrates that federal Clean Water Act Section 101(a)(2) uses, that are not existing uses, are not feasible in an ephemeral water body due to the factor in 40 CFR 131.10(g)(2), the department may consider proceeding with the expedited use attainability analysis process in accordance with the State's current Water Quality Management Plan/Continuing Planning Process. The following elements must be met for the expedited use attainability analysis process to be authorized and implemented:

(a) The department is the primary investigator of the use attainability analysis;

(b) The use attainability analysis determined, through the application of the *Hydrology Protocol*, that the water being investigated is ephemeral and has no effluent discharges of sufficient volume that could compensate for the low-flow;

(c) The use attainability analysis determined that the criteria associated with the existing uses of the water being investigated are not more stringent than those in 20.6.4.97 NMAC;

(d) The designated uses in 20.6.4.97 NMAC have been determined to be the highest attainable uses for the water being analyzed;

(e) The department posted the use attainability analysis on its water quality standards website and notified its interested parties list of a 30-day public comment period;

(f) The department reviewed and responded to any comments received during the 30-day public comment period; and

(g) The department submitted the use attainability analysis and response to comments to region 6 EPA for technical approval.

If EPA approves the revision under section 303(c) of the Clean Water Act, the water shall be subject to 20.6.4.97 NMAC for federal Clean Water Act purposes. The use attainability analysis, the technical support document, and the applicability of 20.6.4.97 NMAC to the water shall be posted on the department's water quality standards website. The department shall periodically petition the commission to list ephemeral waters under Subsection C of 20.6.4.97 NMAC and to incorporate changes to classified segments as appropriate.

E. Use attainability analysis conducted by an entity other than the department. Any person may submit notice to the department stating their intent to conduct a use attainability analysis.

(1) The proponent shall provide such notice along with a work plan supporting the development of a use attainability analysis to the department and region 6 EPA for review and comment.

(2) Upon approval of the work plan by the department, the proponent shall conduct the use attainability analysis in accordance with the applicable portions of Subsections A through D of this Section and implement public noticing in accordance with the approved work plan.

(3) Work plan elements. The work plan shall identify, at a minimum:

(a) the waterbody of concern and the reasoning for conducting a use attainability analysis;

(b) the source and validity of data to be used to demonstrate whether the current designated use is not attainable;

(c) the factors in 40 CFR 131.10(g) affecting the attainment of that use;

(d) a description of the data being proposed to be used to demonstrate the highest attainable use;

(e) the provisions for consultation with appropriate state and federal agencies;

(f) a description of how stakeholders and potentially affected tribes will be identified and engaged;

(g) a description of the public notice mechanisms to be employed; and

(h) the expected timelines outlining the administrative actions to be taken for a rulemaking petition, pending the outcome of the use attainability analysis.

(4) Upon completion of the use attainability analysis, the proponent shall submit the data, findings and conclusions to the department, and provide public notice of the use attainability analysis in accordance with the approved work plan.

(5) Pending the conclusions of the use attainability analysis and as described in the approved work plan, the department or the proponent may petition the commission to modify the designated use. The cost of such use attainability analysis shall be the responsibility of the proponent. Subsequent costs associated with the administrative rulemaking process shall be the responsibility of the petitioner.

[20.6.4.15 NMAC - Rp 20 NMAC 6.1.1107, 10/12/2000; Rn, 20.6.4.14 NMAC, 5/23/2005; A, 5/23/2005; A, 7/17/2005; A, 12/1/2010; A, 4/23/2022]

20.6.4.16 PLANNED USE OF A PISCICIDE:

The use of a piscicide registered under the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA), 7 U.S.C. Section 136 *et seq.*, and under the New Mexico Pesticide Control Act (NMPCA), Section 76-4-1 *et seq.* NMSA 1978 (1973) in a surface water of the state, shall not be a violation of Subsection F of 20.6.4.13 NMAC when such use is covered by a federal national pollutant discharge elimination system (NPDES) permit or has been approved by the commission under procedures provided in this section. The use of a piscicide which is covered by a NPDES permit shall require no further review by the commission and the person whose application is covered by the NPDES permit shall meet the additional notification and monitoring requirements outlined in Subsection G of 20.6.4.16 NMAC. The commission may approve the reasonable use of a piscicide under this section if the proposed use is not covered by a NPDES permit to further a Clean Water Act objective to restore and maintain the physical or biological integrity of surface waters of the state, including restoration of native species.

A. Any person seeking commission approval of the use of a piscicide not covered by a NPDES permit shall file a written petition concurrently with the commission and the surface water bureau of the department. The petition shall contain, at a minimum, the following information:

- (1) petitioner's name and address;
- (2) identity of the piscicide and the period of time (not to exceed five years) or number of applications for which approval is requested;
- (3) documentation of registration under FIFRA and NMPCA and certification that the petitioner intends to use the piscicide according to the label directions, for its intended function;

(4) target and potential non-target species in the treated waters and adjacent riparian area, including threatened or endangered species;

(5) potential environmental consequences to the treated waters and the adjacent riparian area, and protocols for limiting such impacts;

(6) surface water of the state proposed for treatment;

(7) results of pre-treatment survey;

(8) evaluation of available alternatives and justification for selecting piscicide use;

(9) documentation of notice requesting public comment on the proposed use within a 30-day period, including information as described in Paragraphs (1), (2) and (6) of Subsection A of 20.6.4.16 NMAC, provided to:

(a) local political subdivisions;

(b) local water planning entities;

(c) local conservancy and irrigation districts; and

(d) local media outlets, except that the petitioner shall only be required to publish notice in a newspaper of circulation in the locality affected by the proposed use.

(10) copies of public comments received in response to the publication of notice and the petitioner's responses to public comments received;

(11) post-treatment assessment monitoring protocol; and

(12) any other information required by the commission.

B. Within 30 days of receipt of the petition, the department shall review the petition and file a recommendation with the commission to grant, grant with conditions or deny the petition. The recommendation shall include reasons, and a copy shall be sent to the petitioner by certified mail.

C. The commission shall review the petition, the public comments received under Paragraphs (9) and (10) of Subsection A of 20.6.4.16 NMAC, the petitioner's responses to public comments and the department's technical recommendations for the petition. A public hearing shall be held if the commission determines there is substantial public interest. The commission shall notify the petitioner and those commenting on the petition of the decision whether to hold a hearing and the reasons therefore in writing.

D. If the commission determines there is substantial public interest a public hearing shall be held within 90 days of receipt of the department's recommendation in the locality affected by the proposed use in accordance with 20.1.3 NMAC, Adjudicatory Procedures - Water Quality Control Commission. Notice of the hearing shall be given in writing by the petitioner to individuals listed under Subsection A of 20.6.4.16 NMAC as well as to individuals who provided public comment under that subsection at least 30 days prior to the hearing.

E. In a hearing provided for in this section or, if no hearing is held, in a commission meeting, the registration of a piscicide under FIFRA and NMPCA shall provide a rebuttable presumption that the determinations of the EPA Administrator in registering the piscicide, as outlined in 7 U.S.C. Section 136a(c)(5), are valid. For purposes of this Section the rebuttable presumptions regarding the piscicide include:

- (1) Its composition is such as to warrant the proposed claims for it;
- (2) Its labeling and other material submitted for registration comply with the requirements of FIFRA and NMPCA;
- (3) It will perform its intended function without unreasonable adverse effects on the environment; and
- (4) When used in accordance with all FIFRA label requirements it will not generally cause unreasonable adverse effects on the environment.
- (5) "Unreasonable adverse effects on the environment" has the meaning provided in FIFRA, 7 U.S.C. Section 136(bb): "any unreasonable risk to man or the environment, taking into account the economic, social, and environmental costs and benefits of the use of any pesticide."

F. After a public hearing, or commission meeting if no hearing is held, the commission may grant the petition in whole or in part, may grant the petition subject to conditions, or may deny the petition. In granting any petition in whole or part or subject to conditions, the commission shall require the petitioner to implement post-treatment assessment monitoring and provide notice to the public in the immediate and near downstream vicinity of the application prior to and during the application.

G. Any person whose application is covered by a NPDES permit shall provide written notice to local entities as described in Subsection A of 20.6.4.16 NMAC and implement post-treatment assessment monitoring within the application area as described in Subsection F of 20.6.4.16 NMAC.

[20.6.4.16 NMAC - Rn, Paragraph (6) of Subsection F of 20.6.4.12 NMAC, 5/23/2005; A, 5/23/2005; A, 3/2/2017]

20.6.4.17-20.6.4.49 [RESERVED]

20.6.4.50 BASINWIDE PROVISIONS:

Special provisions arising from interstate compacts, international treaties or court decrees or that otherwise apply to a basin are contained in 20.6.4.51 through 20.6.4.59 NMAC.

[20.6.4.50 NMAC - N, 5/23/2005]

20.6.4.51 [RESERVED]

20.6.4.52 PECOS RIVER BASIN:

In order to protect existing and designated uses, it is a goal of the state of New Mexico to prevent increases in TDS in the Pecos river above the following benchmark values, which are expressed as flow-weighted, annual average concentrations, at three USGS gaging stations: at Santa Rosa 500 mg/L; near Artesia 2,700 mg/L; and near Malaga 3,600 mg/L. The benchmark values serve to guide state action. They are adopted pursuant to the New Mexico Water Quality Act, not the Clean Water Act.

[20.6.4.52 NMAC - N, 12/1/2010]

20.6.4.53 [RESERVED]

20.6.4.54 COLORADO RIVER BASIN:

For the tributaries of the Colorado river system, the state of New Mexico will cooperate with the Colorado river basin states and the federal government to support and implement the salinity policy and program outlined in the most current "review, water quality standards for salinity, colorado river system" or equivalent report by the Colorado river salinity control forum.

A. Numeric criteria expressed as the flow-weighted annual average concentration for salinity are established at three points in the Colorado river basin as follows: below Hoover dam, 723 mg/L; below Parker dam, 747 mg/L; and at Imperial dam, 879 mg/L.

B. As a part of the program, objectives for New Mexico shall include the elimination of discharges of water containing solids in solution as a result of the use of water to control or convey fly ash from coal-fired electric generators, wherever practicable.

[20.6.4.54 NMAC - Rn, Paragraphs (1) through (3) of Subsection K of 20.6.4.12 NMAC, 5/23/2005; A, 5/23/2005]

20.6.4.55-20.6.4.96 [RESERVED]

20.6.4.97 EPHEMERAL WATERS:

Ephemeral surface waters of the state as identified below and additional ephemeral waters as identified on the department's water quality standards website pursuant to Paragraph (2) of Subsection D of 20.6.4.15 NMAC are subject to the designated uses and criteria as specified in this section. Ephemeral waters classified in 20.6.4.101-899 NMAC are subject to the designated uses and criteria as specified in those sections.

A. Designated uses: livestock watering, wildlife habitat, limited aquatic life and secondary contact.

B. Criteria: the use-specific criteria in 20.6.4.900 NMAC are applicable to the designated uses.

C. Waters:

(1) the following waters are designated in the Rio Grande basin:

(a) Cunningham gulch from Santa Fe county road 55 upstream 1.4 miles to a point upstream of the Lac minerals mine, identified as Ortiz mine on U.S. geological survey topographic maps;

(b) an unnamed tributary from Arroyo Hondo upstream 0.4 miles to the Village of Oshara water reclamation facility outfall;

(c) an unnamed tributary from San Pedro creek upstream 0.8 miles to the PAA-KO community sewer outfall;

(d) Inditos draw from the crossing of an unnamed road along a power line one-quarter mile west of McKinley county road 19 upstream to New Mexico highway 509;

(e) an unnamed tributary from the diversion channel connecting Blue canyon and Socorro canyon upstream 0.6 miles to the New Mexico firefighters academy treatment facility outfall;

(f) an unnamed tributary from the Albuquerque metropolitan arroyo flood control authority (AMAFCA) Rio Grande south channel upstream of the crossing of New Mexico highway 47 upstream to I-25;

(g) the south fork of Cañon del Piojo from Cañon del Piojo upstream 1.2 miles to an unnamed tributary;

(h) an unnamed tributary from the south fork of Cañon del Piojo upstream 1 mile to the Resurrection mine outfall;

(i) Arroyo del Puerto from San Mateo creek upstream 6.8 miles to the Ambrosia Lake mine entrance road;

(j) an unnamed tributary from San Mateo creek upstream 1.5 miles to the Roca Honda mine facility outfall;

(k) San Isidro arroyo, including unnamed tributaries to San Isidro arroyo, from Arroyo Chico upstream to its headwaters;

(l) Arroyo Tinaja, including unnamed tributaries to Arroyo Tinaja, from San Isidro arroyo upstream to 2 miles northeast of the Cibola national forest boundary;

(m) Mulatto canyon from Arroyo Tinaja upstream to 1 mile northeast of the Cibola national forest boundary; and

(n) Doctor arroyo, including unnamed tributaries to Doctor arroyo, from San Isidro arroyo upstream to its headwaters, and excluding Doctor Spring and Doctor arroyo from the spring to its confluence with the unnamed tributary approximately one-half mile downstream of the spring.

(2) the following waters are designated in the Pecos river basin:

(a) an unnamed tributary from Hart canyon upstream 1 mile to South Union road;

(b) Aqua Chiquita from Rio Peñasco upstream to McEwan canyon; and

(c) Grindstone canyon upstream of Grindstone reservoir.

(3) the following waters are designated in the Canadian river basin:

(a) Bracket canyon upstream of the Vermejo river;

(b) an unnamed tributary from Bracket canyon upstream 2 miles to the Ancho mine; and

(c) Gachupin canyon from the Vermejo river upstream 2.9 miles to an unnamed west tributary near the Ancho mine outfall.

(4) in the San Juan river basin an unnamed tributary of Kim-me-ni-oli wash upstream of the mine outfall.

(5) the following waters are designated in the Little Colorado river basin:

(a) Defiance draw from County Road 1 to upstream of West Defiance Road;
and

(b) an unnamed tributary of Defiance draw from McKinley county road 1 upstream to New Mexico highway 264.

(6) the following waters are designated in the closed basins:

(a) in the Tularosa river closed basin San Andres canyon downstream of South San Andres canyon; and

(b) in the Mimbres river closed basin San Vicente arroyo from the Mimbres river upstream to Maudes canyon.

[20.6.4.97 NMAC - N, 5/23/2005; A, 12/1/2010; A, 3/2/2017; A, 12/17/2019; A, 4/23/2022]

20.6.4.98 INTERMITTENT WATERS:

All non-perennial surface waters of the state, except those ephemeral waters included under section 20.6.4.97 NMAC or classified in 20.6.4.101-899 NMAC.

A. Designated uses: livestock watering, wildlife habitat, marginal warmwater aquatic life and primary contact.

B. Criteria: the use-specific criteria in 20.6.4.900 NMAC are applicable to the designated uses, except that the following site-specific criteria apply: the monthly geometric mean of E. coli bacteria 206 cfu/100 mL or less, single sample 940 cfu/100 mL or less.

[20.6.4.98 NMAC - N, 5/23/2005; A, 12/1/2010; A, 3/2/2017]

20.6.4.99 PERENNIAL WATERS:

All perennial surface waters of the state except those classified in 20.6.4.101-899 NMAC.

A. Designated uses: Warmwater aquatic life, livestock watering, wildlife habitat and primary contact.

B. Criteria: The use-specific criteria in 20.6.4.900 NMAC are applicable to the designated uses, except that the following site-specific criteria apply: the monthly geometric mean of E. coli bacteria 206 cfu/100 mL or less, single sample 940 cfu/100 mL or less.

[20.6.4.99 NMAC - N, 5/23/2005; A, 12/1/2010; A, 3/2/2017]

20.6.4.100 [RESERVED]

20.6.4.101 RIO GRANDE BASIN:

The main stem of the Rio Grande from the international boundary with Mexico upstream to one mile downstream of Percha dam.

A. Designated uses: irrigation, marginal warmwater aquatic life, livestock watering, wildlife habitat and primary contact.

B. Criteria:

(1) The use-specific numeric criteria set forth in 20.6.4.900 NMAC are applicable to the designated uses except that the following segment-specific criterion applies: temperature 34°C (93.2°F) or less.

(2) At mean monthly flows above 350 cfs, the monthly average concentration for: TDS 2,000 mg/L or less, sulfate 500 mg/L or less and chloride 400 mg/L or less.

C. Remarks: sustained flow in the Rio Grande below Caballo reservoir is dependent on release from Caballo reservoir during the irrigation season; at other times of the year, there may be little or no flow.

[20.6.4.101 NMAC - Rp 20 NMAC 6.1.2101, 10/12/2010; A, 12/15/2001; A, 5/23/2005; A, 12/1/2010; A, 3/2/2017]

20.6.4.102 RIO GRANDE BASIN:

The main stem of the Rio Grande from one mile downstream of Percha dam upstream to Caballo dam.

A. Designated uses: irrigation, livestock watering, wildlife habitat, primary contact and warmwater aquatic life.

B. Criteria: the use-specific numeric criteria set forth in 20.6.4.900 NMAC are applicable to the designated uses, except that the following segment-specific criteria apply: the monthly geometric mean of E. coli bacteria 126 cfu/100 mL or less, single sample 235 cfu/100 mL or less.

C. Remarks: sustained flow in the Rio Grande downstream of Caballo reservoir is dependent on release from Caballo reservoir during the irrigation season; at other times of the year, there may be little or no flow.

[20.6.4.102 NMAC - Rp 20 NMAC 6.1.2102, 10/12/2010; A, 5/23/2005; A, 12/1/2010; A, 3/2/2017]

20.6.4.103 RIO GRANDE BASIN:

Perennial reaches of tributaries to the Rio Grande in Sierra and Socorro counties not specifically identified under other sections of 20.6.4 NMAC, excluding waters on tribal lands.

A. Designated uses: irrigation, livestock watering, wildlife habitat, marginal coldwater aquatic life, secondary contact and warmwater aquatic life.

B. Criteria: the use-specific numeric criteria set forth in 20.6.4.900 NMAC are applicable to the designated uses.

[20.6.4.103 NMAC - Rp 20 NMAC 6.1.2103, 10/12/2000; A, 5/23/2005; A, 12/1/2010; A, 4/23/2022]

[NOTE: This segment was divided effective 4/23/2022. The standards for the main stem of the Rio Grande from the headwaters of Caballo reservoir upstream to Elephant Butte dam, perennial reaches of Palomas creek, perennial reaches of Rio Salado, perennial reaches of Percha creek, perennial reaches of Alamosa creek, Las Animas creek, and perennial reaches of Abo arroyo are under 20.6.4.112 NMAC.]

20.6.4.104 RIO GRANDE BASIN:

Caballo and Elephant Butte reservoir.

A. Designated uses: irrigation storage, livestock watering, wildlife habitat, primary contact and warmwater aquatic life.

B. Criteria: the use-specific numeric criteria set forth in 20.6.4.900 NMAC are applicable to the designated uses, except that the following segment-specific criteria apply: the monthly geometric mean of E. coli bacteria 126 cfu/100 mL or less, single sample 235 cfu/100 mL or less.

[20.6.4.104 NMAC - Rp 20 NMAC 6.1.2104, 10/12/2000; A, 5/23/2005; A, 12/1/2010]

20.6.4.105 RIO GRANDE BASIN:

The main stem of the Rio Grande from the headwaters of Elephant Butte reservoir upstream to Alameda bridge (Corrales bridge), excluding waters on Isleta pueblo.

A. Designated uses: irrigation, marginal warmwater aquatic life, livestock watering, public water supply, wildlife habitat and primary contact.

B. Criteria:

(1) The use-specific numeric criteria set forth in 20.6.4.900 NMAC are applicable to the designated uses.

(2) At mean monthly flows above 100 cfs, the monthly average concentration for: TDS 1,500 mg/L or less, sulfate 500 mg/L or less and chloride 250 mg/L or less.

[20.6.4.105 NMAC - Rp 20 NMAC 6.1.2105, 10/12/2000; A, 5/23/2005; A, 12/1/2010]

20.6.4.106 RIO GRANDE BASIN:

The main stem of the Rio Grande from Alameda bridge (Corrales bridge) upstream to the Angostura diversion works, excluding waters on Santa Ana pueblo, and intermittent water in the Jemez river below the Jemez pueblo boundary, excluding waters on Santa Ana and Zia pueblos, that enters the main stem of the Rio Grande. Portions of the Rio Grande in this segment are under the joint jurisdiction of the state and Sandia pueblo.

A. Designated uses: irrigation, marginal warmwater aquatic life, livestock watering, wildlife habitat and primary contact; and public water supply on the Rio Grande.

B. Criteria:

(1) The use-specific numeric criteria set forth in 20.6.4.900 NMAC are applicable to the designated uses.

(2) At mean monthly flows above 100 cfs, the monthly average concentration for: TDS 1,500 mg/L or less, sulfate 500 mg/L or less and chloride 250 mg/L or less.

[20.6.4.106 NMAC - Rp 20 NMAC 6.1.2105.1, 10/12/2000; A, 5/23/2005; A, 12/1/2010]

20.6.4.107 RIO GRANDE BASIN:

The Jemez river from the Jemez pueblo boundary upstream to Soda dam near the town of Jemez Springs and perennial reaches of Vallecito creek.

A. Designated uses: coldwater aquatic life, primary contact, irrigation, livestock watering and wildlife habitat; and public water supply on Vallecito creek.

B. Criteria: The use-specific numeric criteria set forth in 20.6.4.900 NMAC are applicable to the designated uses, except that the following segment-specific criterion applies: temperature 25°C (77°F).

[20.6.4.107 NMAC - Rp 20 NMAC 6.1.2105.5, 10/12/2000; A, 5/23/2005; A, 12/1/2010]

20.6.4.108 RIO GRANDE BASIN:

Perennial reaches of the Jemez river upstream of Soda dam near the town of Jemez Springs and perennial reaches of tributaries to the Jemez river except those not specifically identified under other sections of 20.6.4 NMAC , and

perennial reaches of the Guadalupe river and perennial reaches of tributaries to the Guadalupe river, and Calaveras canyon.

A. Designated uses: domestic water supply, fish culture, high quality coldwater aquatic life, irrigation, livestock watering, wildlife habitat and primary contact.

B. Criteria: the use-specific numeric criteria set forth in 20.6.4.900 NMAC are applicable to the designated uses, except that the following segment-specific criteria apply: specific conductance 400 $\mu\text{S}/\text{cm}$ or less (800 $\mu\text{S}/\text{cm}$ or less on Sulphur creek); the monthly geometric mean of *E. coli* bacteria 126 cfu/100 mL or less, single sample 235 cfu/100 mL or less; and pH within the range of 2.0 to 8.8 on Sulphur creek.

[20.6.4.108 NMAC - Rp 20 NMAC 6.1.2106, 10/12/2000; A, 5/23/2005; A, 12/1/2010; A, 7/10/2012; A, 4/23/2022]

[**NOTE:** The segment covered by this section was divided effective 5/23/2005. The standards for the additional segment are under 20.6.4.124 NMAC. The standards for San Gregorio lake are in 20.6.4.134 NMAC, effective 7/10/2012]

20.6.4.109 RIO GRANDE BASIN:

Perennial reaches of Bluewater creek excluding Bluewater lake and waters on tribal lands, Rio Moquino upstream of Laguna pueblo, Seboyeta creek, Rio Pagate upstream of Laguna pueblo, the Rio Puerco upstream of the northern boundary of Cuba, and all other perennial reaches of tributaries to the Rio Puerco, including the Rio San Jose in Cibola county from the USGS gaging station at Correo upstream to Horace springs excluding waters on tribal lands.

A. Designated uses: coldwater aquatic life, domestic water supply, fish culture, irrigation, livestock watering, wildlife habitat and primary contact; and public water supply on La Jara creek.

B. Criteria: the use-specific numeric criteria set forth in 20.6.4.900 NMAC are applicable to the designated uses, except that the following segment-specific criteria apply: phosphorus (unfiltered sample) 0.1 mg/L or less; the monthly geometric mean of *E. coli* bacteria 126 cfu/100 mL or less, single sample 235 cfu/100 mL or less.

[20.6.4.109 NMAC - Rp 20 NMAC 6.1.2107, 10/12/2000; A, 5/23/2005; A, 12/1/2010; A, 7/10/2012]

[**NOTE:** The standards for Bluewater lake are in 20.6.4.135 NMAC, effective 7/10/2012]

20.6.4.110 RIO GRANDE BASIN:

The main stem of the Rio Grande from Angostura diversion works upstream to Cochiti dam, excluding the reaches on San Felipe, Kewa and Cochiti pueblos.

A. Designated uses: irrigation, livestock watering, wildlife habitat, primary contact, coldwater aquatic life and warmwater aquatic life.

B. Criteria: the use-specific numeric criteria set forth in 20.6.4.900 NMAC are applicable to the designated uses, except that the following segment-specific criteria apply: pH within the range of 6.6 to 9.0 and temperature 25°C (77°F) or less.

[20.6.4.110 NMAC - Rp 20 NMAC 6.1.2108, 10/12/2010; A, 5/23/2005; A, 12/1/2010; A, 3/2/2017]

20.6.4.111 RIO GRANDE BASIN:

Perennial reaches of Las Huertas creek from the San Felipe pueblo boundary to the headwaters.

A. Designated uses: high quality coldwater aquatic life, irrigation, livestock watering, wildlife habitat and primary contact.

B. Criteria: the use-specific numeric criteria set forth in 20.6.4.900 NMAC are applicable to the designated uses, except that the following segment-specific criterion applies: temperature 25°C (77°F) or less.

[20.6.4.111 NMAC - Rp 20 NMAC 6.1.2108.5, 10/12/2000; A, 7/25/2001; A, 5/23/2005; A-12/1/2010]

[**NOTE:** The segment covered by this section was divided effective 5/23/2005. The standards for the additional segment are under 20.6.4.125 NMAC.]

20.6.4.112 RIO GRANDE BASIN:

The main stem of the Rio Grande from the headwaters of Caballo reservoir upstream to Elephant Butte dam, perennial reaches of Palomas creek, perennial reaches of Rio Salado, perennial reaches of Percha creek, perennial reaches of Alamosa creek, Las Animas creek, and perennial reaches of Abo arroyo.

A. Designated uses: irrigation, livestock watering, wildlife habitat, marginal coldwater aquatic life, primary contact and warmwater aquatic life.

B. Criteria: the use-specific numeric criteria set forth in 20.6.4.900 NMAC are applicable to the designated uses.

C. Remarks: flow in this reach of the Rio Grande main stem is dependent upon release from Elephant Butte dam.

[20.6.4.112 NMAC - Rp 20 NMAC 6.1.2109, 10/12/2000; A, 5/23/2005; Repealed, 12/1/2010; A, 4/23/2022]

20.6.4.113 RIO GRANDE BASIN:

The Santa Fe river and perennial reaches of its tributaries from the Cochiti pueblo boundary upstream to the outfall of the Santa Fe wastewater treatment facility.

A. Designated uses: irrigation, livestock watering, wildlife habitat, primary contact and coolwater aquatic life.

B. Criteria: The use-specific criteria in 20.6.4.900 NMAC are applicable to the designated uses, except that the following segment-specific criterion applies: temperature 30°C (86°F) or less.

[20.6.4.113 NMAC - Rp 20 NMAC 6.1.2110, 10/12/2000; A, 10/11/2002; A, 5/23/2005; A, 12/1/2010; A, 2/14/2013]

20.6.4.114 RIO GRANDE BASIN:

The main stem of the Rio Grande from the Cochiti pueblo boundary upstream to Rio Pueblo de Taos excluding waters on San Ildefonso, Santa Clara and Ohkay Owingeh pueblos, Embudo creek from its mouth on the Rio Grande upstream to the Picuris Pueblo boundary, the Santa Cruz river from the Santa Clara pueblo boundary upstream to the Santa Cruz dam, the Rio Tesuque except waters on the Tesuque and Pojoaque pueblos, and the Pojoaque river from the San Ildefonso pueblo boundary upstream to the Pojoaque pueblo boundary. Some Rio Grande waters in this segment are under the joint jurisdiction of the state and San Ildefonso pueblo.

A. Designated uses: irrigation, livestock watering, wildlife habitat, marginal coldwater aquatic life, primary contact and warmwater aquatic life; and public water supply on the main stem Rio Grande.

B. Criteria:

(1) The use-specific numeric criteria set forth in 20.6.4.900 NMAC are applicable to the designated uses, except that the following segment-specific criteria apply: 6T3 temperature 22°C (71.6°F) and maximum temperature 25°C (78.8°F). In addition, the following criteria based on a 12-month rolling average are applicable to the public water supply use for monitoring and public disclosure purposes only:

Radionuclide	pCi/L
Americium-241	1.9
Cesium-137	6.4
Plutonium-238	1.5
Plutonium-239/240	1.5
Strontium-90	3.5
Tritium	4,000

(2) At mean monthly flows above 100 cfs, the monthly average concentration for: TDS 500 mg/L or less, sulfate 150 mg/L or less and chloride 25 mg/L or less.

[20.6.4.114 NMAC - Rp 20 NMAC 6.1.2111, 10/12/2000; A, 5/23/2005; A, 12/1/2010]

20.6.4.115 RIO GRANDE BASIN:

The perennial reaches of Rio Vallecitos, perennial reaches of tributaries to Rio Vallecitos except Hopewell lake, and perennial reaches of Rio del Oso and perennial reaches of El Rito creek above the town of El Rito.

A. Designated uses: domestic water supply, irrigation, high quality coldwater aquatic life, livestock watering, wildlife habitat and primary contact; public water supply on the Rio Vallecitos and El Rito creek.

B. Criteria: the use-specific numeric criteria set forth in 20.6.4.900 NMAC are applicable to the designated uses, except that the following segment-specific criteria apply: specific conductance 300 μ S/cm or less; the monthly geometric mean of E. coli bacteria 126 cfu/100 mL or less, single sample 235 cfu/100 mL or less.

[20.6.4.115 NMAC - Rp 20 NMAC 6.1.2112, 10/12/2000; A, 5/23/2005; A, 12/1/2010; A, 7/10/2012; A, 4/23/2022]

[NOTE: The standards for Hopewell lake are in 20.6.4.134 NMAC, effective 7/10/2012]

20.6.4.116 RIO GRANDE BASIN:

The Rio Chama from its mouth on the Rio Grande upstream to Abiquiu reservoir, perennial reaches of the Rio Tusas, perennial reaches of the Rio Ojo Caliente, perennial reaches of Abiquiu creek and perennial reaches of El Rito creek downstream of the town of El Rito.

A. Designated uses: irrigation, livestock watering, wildlife habitat, coldwater aquatic life, warmwater aquatic life and primary contact.

B. Criteria: the use-specific numeric criteria set forth in 20.6.4.900 NMAC are applicable to the designated uses, except that the following segment-specific criterion applies: temperature 31°C (87.8°F) or less.

[20.6.4.116 NMAC - Rp 20 NMAC 6.1.2113, 10/12/2010; A, 5/23/2005; A, 12/1/2010; A, 3/2/2017; A, 4/23/2022]

20.6.4.117 RIO GRANDE BASIN:

Abiquiu reservoir.

A. Designated uses: irrigation storage, livestock watering, wildlife habitat, primary contact, coldwater aquatic life and warmwater aquatic life.

B. Criteria: the use-specific numeric criteria set forth in 20.6.4.900 NMAC are applicable to the designated uses, except that the following segment-specific criterion applies: temperature 25°C (77°F) or less.

[20.6.4.117 NMAC - Rp 20 NMAC 6.1.2114, 10/12/2000; A, 5/23/2005; A, 12/1/2010]

20.6.4.118 RIO GRANDE BASIN:

The Rio Chama from the headwaters of Abiquiu reservoir upstream to El Vado reservoir and perennial reaches of the Rio Gallina and Rio Puerco de Chama north of state highway 96. Some Rio Chama waters in this segment are under the joint jurisdiction of the state and the Jicarilla Apache tribe.

A. Designated uses: irrigation, livestock watering, wildlife habitat, coldwater aquatic life, warmwater aquatic life and primary contact.

B. Criteria: the use-specific numeric criteria set forth in 20.6.4.900 NMAC are applicable to the designated uses, except that the following segment-specific criterion applies: temperature 26°C (78.8°F) or less.

[20.6.4.118 NMAC - Rp 20 NMAC 6.1.2115, 10/12/2000; A, 5/23/2005; A, 12/1/2010]

20.6.4.119 RIO GRANDE BASIN:

All perennial reaches of tributaries to the Rio Chama above Abiquiu dam, except Canjilon lakes a, c, e and f and the Rio Gallina and Rio Puerco de Chama north of state highway 96 and excluding waters on Jicarilla Apache reservation, and the main stem of the Rio Chama from the headwaters of El Vado reservoir upstream to the New Mexico-Colorado line. Some Cañones creek and Rio Chama waters in this segment are under the joint jurisdiction of the state and the Jicarilla Apache tribe.

A. Designated uses: domestic water supply, fish culture, high quality coldwater aquatic life, irrigation, livestock watering, wildlife habitat and primary contact; and public water supply on the Rio Brazos and Rio Chama.

B. Criteria: the use-specific numeric criteria set forth in 20.6.4.900 NMAC are applicable to the designated uses, except that the following segment-specific criteria apply: specific conductance 500 µS/cm or less (1,000 µS or less for Coyote creek); the monthly geometric mean of *E. coli* bacteria 126 cfu/100 mL or less, single sample 235 cfu/100 mL or less.

[20.6.4.119 NMAC - Rp 20 NMAC 6.1.2116, 10/12/2000; A, 5/23/2005; A, 12/1/2010; A, 7/10/2012]

[**NOTE:** The standards for Canjilon lakes a, c, e and f are in 20.6.4.134 NMAC, effective 7/10/2012]

20.6.4.120 RIO GRANDE BASIN:

El Vado and Heron reservoirs.

A. Designated uses: irrigation storage, livestock watering, wildlife habitat, public water supply, primary contact and coldwater aquatic life.

B. Criteria: the use-specific numeric criteria set forth in 20.6.4.900 NMAC are applicable to the designated uses, except that the following segment-specific criteria apply: the monthly geometric mean of *E. coli* bacteria 126 cfu/100 mL or less, single sample 235 cfu/100 mL or less.

[20.6.4.120 NMAC - Rp 20 NMAC 6.1.2117, 10/12/2000; A. 5/23/2005; A, 12/1/2010]

20.6.4.121 RIO GRANDE BASIN:

Perennial tributaries to the Rio Grande in Bandelier national monument and their headwaters in Sandoval county and all perennial reaches of tributaries to the Rio Grande in Santa Fe county unless included in other segments and excluding waters on tribal lands.

A. Designated uses: domestic water supply, high quality coldwater aquatic life, irrigation, livestock watering, wildlife habitat and primary contact; and public water supply on Little Tesuque creek, the Rio en Medio, and the Santa Fe river.

B. Criteria: the use-specific numeric criteria set forth in 20.6.4.900 NMAC are applicable to the designated uses, except that the following segment-specific criteria apply: specific conductance 300 μ S/cm or less; the monthly geometric mean of *E. coli* bacteria 126 cfu/100 mL or less, single sample 235 cfu/100 mL or less.

[20.6.4.121 NMAC - Rp 20 NMAC 6.1.2118, 10/12/2000; A. 5/23/2005; A, 12/1/2010; A, 2/14/2013]

[**NOTE:** The segment covered by this section was divided effective 5/23/2005. The standards for the additional segments are under 20.6.4.126, 20.6.4.127 and 20.6.4.128 NMAC.]

20.6.4.122 RIO GRANDE BASIN:

The main stem of the Rio Grande from Rio Pueblo de Taos upstream to the New Mexico-Colorado line, the Red river from its mouth on the Rio Grande upstream to the mouth of Placer creek, and the Rio Pueblo de Taos from its mouth on the Rio Grande upstream to the mouth of the Rio Grande del Rancho. Some Rio Grande and Rio Pueblo de Taos waters in this segment are under the joint jurisdiction of the state and Taos pueblo.

A. Designated uses: coldwater aquatic life, fish culture, irrigation, livestock watering, wildlife habitat and primary contact.

B. Criteria: the use-specific numeric criteria set forth in 20.6.4.900 NMAC are applicable to the designated uses, except that the following segment-specific criteria apply: the monthly geometric mean of E. coli bacteria 126 cfu/100 mL or less, single sample 235 cfu/100 mL or less.

[20.6.4.122 NMAC - Rp 20 NMAC 6.1.2119, 10/12/2000; A, 5/23/2005; A, 12/1/2010]

20.6.4.123 RIO GRANDE BASIN:

Perennial reaches of the Red river upstream of the mouth of Placer creek, all perennial reaches of tributaries to the Red river, and all other perennial reaches of tributaries to the Rio Grande in Taos and Rio Arriba counties unless included in other segments and excluding waters on Santa Clara, Ohkay Owingeh, Picuris and Taos pueblos.

A. Designated uses: domestic water supply, high quality coldwater aquatic life, irrigation, livestock watering, wildlife habitat and primary contact; and public water supply on the Rio Pueblo and Rio Fernando de Taos.

B. Criteria: the use-specific numeric criteria set forth in 20.6.4.900 NMAC are applicable to the designated uses, except that the following segment-specific criteria apply: specific conductance 400 μ S/cm or less (500 μ S/cm or less for the Rio Fernando de Taos); the monthly geometric mean of E. coli bacteria 126 cfu/100 mL or less, single sample 235 cfu/100 mL or less; and phosphorus (unfiltered sample) less than 0.1 mg/L for the Red river.

[20.6.4.123 NMAC - Rp 20 NMAC 6.1.2120, 10/12/2000; A, 5/23/2005; A, 12/1/2010]

[NOTE: The segment covered by this section was divided effective 5/23/2005. The standards for the additional segment are under 20.6.4.129 NMAC.]

20.6.4.124 RIO GRANDE BASIN:

Perennial reaches of Sulphur creek from its confluence with Redondo creek upstream to its headwaters.

A. Designated uses: limited aquatic life, wildlife habitat, livestock watering and secondary contact.

B. Criteria: the use-specific criteria set forth in 20.6.4.900 NMAC are applicable to the designated uses, except that the following segment-specific criteria apply: pH within the range of 2.0 to 9.0, maximum temperature 30°C (86°F), and the chronic aquatic life criteria of Subsections I and J of 20.6.4.900 NMAC.

[20.6.4.124 NMAC - N, 5/23/2005; A, 12/1/2010; A, 3/2/2017]

20.6.4.125 RIO GRANDE BASIN:

Perennial reaches of San Pedro creek from the San Felipe pueblo boundary to the headwaters.

A. Designated uses: coldwater aquatic life, irrigation, livestock watering, wildlife habitat and primary contact.

B. Criteria: the use-specific numeric criteria set forth in 20.6.4.900 NMAC are applicable to the designated uses, except that the following segment-specific criterion applies: temperature 25°C (77°F) or less.

[20.6.4.125 NMAC - N, 5/23/2005; A, 12/1/2010]

20.6.4.126 RIO GRANDE BASIN:

Perennial waters within lands managed by the U.S. department of energy (DOE) within Los Alamos National Laboratory (LANL), including but not limited to: Cañon de Valle from LANL stream gage E256 upstream to Burning Ground spring, Sandia canyon from Sigma canyon upstream to LANL NPDES outfall 001, Pajarito canyon from 0.5 miles below Arroyo de La Delfe upstream to Homestead spring, Arroyo de la Delfe from Pajarito canyon to Kieling spring, Starmers gulch and Starmers spring and Water canyon from Area-A canyon upstream to State Route 501.

A. Designated uses: coldwater aquatic life, livestock watering, wildlife habitat and secondary contact.

B. Criteria: the use-specific numeric criteria set forth in 20.6.4.900 NMAC are applicable to the designated uses.

[20.6.4.126 NMAC - N, 5/23/2005; A, 12/1/2010; A, 4/23/2022]

20.6.4.127 RIO GRANDE BASIN:

Perennial portions of Los Alamos canyon upstream from Los Alamos reservoir and Los Alamos reservoir.

A. Designated uses: coldwater aquatic life, livestock watering, wildlife habitat, irrigation and primary contact.

B. Criteria: the use-specific numeric criteria set forth in 20.6.4.900 NMAC are applicable to the designated uses.

[20.6.4.127 NMAC - N, 5/23/2005; A, 12/1/2010]

20.6.4.128 RIO GRANDE BASIN:

Ephemeral and intermittent waters within lands managed by U.S. department of energy (DOE) within LANL, including but not limited to: Mortandad canyon, Cañada del Buey, Ancho canyon, Chaquehui canyon, Indio canyon, Fence canyon, Potrillo canyon, and portions of Cañon de Valle, Los Alamos canyon, Sandia canyon, Pajarito canyon and Water canyon not identified in 20.6.4.126 NMAC or 20.6.4.140 NMAC. (Surface waters within lands scheduled for transfer from DOE to tribal, state or local authorities are specifically excluded.)

A. Designated uses: livestock watering, wildlife habitat, limited aquatic life and secondary contact.

B. Criteria: the use-specific criteria in 20.6.4.900 NMAC are applicable to the designated uses, except that the following segment-specific criteria apply: the acute total ammonia criteria set forth in Subsection L of 20.6.4.900 NMAC (Oncorhynchus spp. absent).

[20.6.4.128 NMAC - N, 5/23/2005; A, 12/1/2010; A, 4/23/2022]

[NOTE: This section was divided effective 4/23/2022. The standards for some intermittent waters within LANL are in 20.6.4.140 NMAC.]

20.6.4.129 RIO GRANDE BASIN:

Perennial reaches of the Rio Hondo.

A. Designated uses: domestic water supply, high quality coldwater aquatic life, irrigation, livestock watering, wildlife habitat and primary contact.

B. Criteria: the use-specific numeric criteria set forth in 20.6.4.900 NMAC are applicable to the designated uses, except that the following segment-specific criteria apply: specific conductance 400 μ S/cm or less and phosphorus (unfiltered sample) less than 0.1 mg/L.

[20.6.4.129 NMAC - N, 5/23/2005; A, 12/1/2010]

20.6.4.130 RIO GRANDE BASIN:

The Rio Puerco from the Rio Grande upstream to Arroyo Chijuilla, excluding the reaches on Isleta, Laguna and Cañoncito Navajo pueblos. Some waters in this segment are under the joint jurisdiction of the state and Isleta, Laguna or Cañoncito Navajo pueblos.

A. Designated uses: irrigation, warmwater aquatic life, livestock watering, wildlife habitat and primary contact.

B. Criteria:

(1) The use-specific numeric criteria set forth in 20.6.4.900 NMAC are applicable to the designated uses.

(2) At mean monthly flows above 100 cfs, the monthly average concentration for: TDS 1,500 mg/L or less, sulfate 500 mg/L or less and chloride 250 mg/L or less.

[20.6.4.130 NMAC - N, 12/1/2010]

20.6.4.131 RIO GRANDE BASIN:

The Rio Puerco from the confluence of Arroyo Chijuilla upstream to the northern boundary of Cuba.

A. Designated uses: warmwater aquatic life, irrigation, livestock watering, wildlife habitat and primary contact.

B. Criteria: the use-specific numeric criteria set forth in 20.6.4.900 NMAC are applicable to the designated uses.

[20.6.4.131 NMAC - N, 12/1/2010]

20.6.4.132 RIO GRANDE BASIN:

Rio Grande (Klauer) spring.

A. Designated uses: domestic water supply, wildlife habitat, livestock watering, coldwater aquatic life use and primary contact.

B. Criteria: the use-specific numeric criteria set forth in 20.6.4.900 NMAC are applicable to the designated uses.

[20.6.4.132 NMAC - N, 12/1/2010]

20.6.4.133 RIO GRANDE BASIN:

Bull Creek lake, Cow lake, Elk lake, Goose lake, Heart lake, Hidden lake (Lake Hazel), Horseshoe lake, Horseshoe (Alamitos) lake, Jose Vigil lake, Lost lake, Middle Fork lake, Nambe lake, Nat II lake, Nat IV lake, No Fish lake, Pioneer lake, San Leonardo lake, Santa Fe lake, Serpent lake, South Fork lake, Trampas lakes (east and west) and Williams lake.

A. Designated uses: high quality coldwater aquatic life, irrigation, domestic water supply, primary contact, livestock watering and wildlife habitat.

B. Criteria: The use-specific numeric criteria set forth in 20.6.4.900 NMAC are applicable to the designated uses, except that the following segment-specific criteria apply: specific conductance 300 $\mu\text{S}/\text{cm}$ or less; the monthly geometric mean of *E. coli* bacteria 126 cfu/100 mL or less, single sample 235 cfu/100 mL or less.

[20.6.4.133 NMAC - N, 7/10/2012]

20.6.4.134 RIO GRANDE BASIN:

Cabresto lake, Canjilon lakes a, c, e and f, Fawn lakes (east and west), Hopewell lake and San Gregorio lake.

A. Designated uses: high quality coldwater aquatic life, irrigation, domestic water supply, primary contact, livestock watering and wildlife habitat.

B. Criteria: The use-specific numeric criteria set forth in 20.6.4.900 NMAC are applicable to the designated uses, except that the following segment-specific criteria apply: specific conductance 300 $\mu\text{S}/\text{cm}$ or less; the monthly geometric mean of *E. coli* bacteria 126 cfu/100 mL or less, single sample 235 cfu/100 mL or less.

[20.6.4.134 NMAC - N, 7/10/2012]

20.6.4.135 RIO GRANDE BASIN:

Bluewater lake.

A. Designated uses: coldwater aquatic life, irrigation, domestic water supply, primary contact, livestock watering and wildlife habitat.

B. Criteria: The use-specific numeric criteria set forth in 20.6.4.900 NMAC are applicable to the designated uses except that the following segment-specific criteria apply: phosphorus (unfiltered sample) 0.1 mg/L or less; the monthly geometric mean of *E. coli* bacteria 126 cfu/100 mL or less, single sample 235 cfu/100 mL or less.

[20.6.4.135 NMAC - N, 7/10/2012]

20.6.4.136 RIO GRANDE BASIN:

The Santa Fe river from the outfall of the Santa Fe wastewater treatment facility to Guadalupe street.

A. Designated uses: limited aquatic life, wildlife habitat, primary contact, livestock watering, and irrigation.

B. Criteria: the use-specific numeric criteria set forth in 20.6.4.900 NMAC are applicable to the designated uses.

[20.6.4.136 NMAC - N, 2/14/2013]

20.6.4.137 RIO GRANDE BASIN:

The Santa Fe river from Guadalupe street to Nichols reservoir.

A. Designated uses: coolwater aquatic life, wildlife habitat, primary contact, livestock watering, and irrigation.

B. Criteria: the use-specific numeric criteria set forth in 20.6.4.900 NMAC are applicable to the designated uses.

[20.6.4.137 NMAC - N, 2/14/2013]

20.6.4.138 RIO GRANDE BASIN:

Nichols and McClure reservoirs.

A. Designated uses: high quality coldwater aquatic life, wildlife habitat, primary contact, public water supply and irrigation.

B. Criteria: the use-specific numeric criteria set forth in 20.6.4.900 NMAC are applicable to the designated uses, except that the following segment-specific criteria apply: specific conductance 300 $\mu\text{S}/\text{cm}$ or less; the monthly geometric mean of *E. coli* bacteria 126 cfu/100 mL or less, single sample 235 cfu/100 mL or less.

[20.6.4.138 NMAC - N, 2/14/2013]

20.6.4.139 RIO GRANDE BASIN:

Perennial reaches of Galisteo creek and perennial reaches of its tributaries from Kewa pueblo upstream to 2.2 miles upstream of Lamy.

A. Designated uses: coolwater aquatic life, primary contact, irrigation, livestock watering, domestic water supply and wildlife habitat; and public water supply on Cerrillos reservoir.

B. Criteria: the use-specific numeric criteria set forth in 20.6.4.900 NMAC are applicable to the designated uses, except that the following segment-specific criteria apply: the monthly geometric mean of E. coli bacteria 126 cfu/100 mL or less, single sample 235 cfu/100 mL or less.

[20.6.4.139 NMAC - N, 2/14/2013]

20.6.4.140 RIO GRANDE BASIN:

Effluent canyon from Mortandad canyon to its headwaters, intermittent portions of S-Site canyon from monitoring well MSC 16-06293 to Martin spring, and intermittent portions of Twomile canyon from its confluence with Pajarito canyon to Upper Twomile canyon. (Surface waters within lands scheduled for transfer from DOE to tribal, state or local authorities are specifically excluded.)

A. Designated uses: livestock watering, wildlife habitat, marginal warmwater aquatic life and secondary contact.

B. Criteria: the use-specific numeric criteria set forth in 20.6.4.900 NMAC are applicable to the designated uses.

[20.6.4.140 NMAC - N, 4/23/2022]

20.6.4.141-20.6.4.200 [RESERVED]

20.6.4.201 PECOS RIVER BASIN:

The main stem of the Pecos river from the New Mexico-Texas line upstream to the mouth of the Black river (near Loving).

A. Designated uses: irrigation, livestock watering, wildlife habitat, primary contact and warmwater aquatic life.

B. Criteria:

(1) The use-specific numeric criteria set forth in 20.6.4.900 NMAC are applicable to the designated uses, except that the following segment-specific criterion applies: dissolved boron for irrigation use 2,000 µg/L or less.

(2) At all flows above 50 cfs: TDS 20,000 mg/L or less, sulfate 3,000 mg/L or less and chloride 10,000 mg/L or less.

[20.6.4.201 NMAC - Rp 20 NMAC 6.1.2201, 10/12/2000; A, 5/23/2005; A, 12/1/2010]

20.6.4.202 PECOS RIVER BASIN:

The main stem of the Pecos river from the mouth of the Black river upstream to lower Tansil dam, including perennial reaches of the Black river, the Delaware river and Blue spring.

A. Designated uses: industrial water supply, irrigation, livestock watering, wildlife habitat, primary contact and warmwater aquatic life.

B. Criteria:

(1) The use-specific numeric criteria set forth in 20.6.4.900 NMAC are applicable to the designated uses, except that the following segment-specific criterion applies: temperature 34°C (93.2°F) or less.

(2) At all flows above 50 cfs: TDS 8,500 mg/L or less, sulfate 2,500 mg/L or less and chloride 3,500 mg/L or less.

C. Remarks: diversion for irrigation frequently limits summer flow in this reach of the main stem Pecos river to that contributed by springs along the watercourse.

[20.6.4.202 NMAC - Rp 20 NMAC 6.1.2202, 10/12/2000; A, 5/23/2005; A, 12/1/2010]

[NOTE: The segment covered by this section was divided effective 5/23/2005. The standards for Lower Tansil Lake and Lake Carlsbad are under 20.6.4.218 NMAC.]

20.6.4.203 PECOS RIVER BASIN:

The main stem of the Pecos river from the headwaters of Lake Carlsbad upstream to Avalon dam.

A. Designated uses: industrial water supply, livestock watering, wildlife habitat, primary contact and warmwater aquatic life.

B. Criteria: the use-specific numeric criteria set forth in 20.6.4.900 NMAC are applicable to the designated uses, except that the following segment-specific criteria apply: temperature 34°C (93.2°F) or less; the monthly geometric mean of E. coli bacteria 126 cfu/100 mL or less, single sample 235 cfu/100 mL or less.

[20.6.4.203 NMAC - Rp 20 NMAC 6.1.2203, 10/12/2000; A, 5/23/2005; A, 12/1/2010]

[NOTE: The segment covered by this section was divided effective 5/23/2005. The standards for Lower Tansil Lake and Lake Carlsbad are under 20.6.4.218 and for Avalon Reservoir are under 20.6.4.219 NMAC.]

20.6.4.204 PECOS RIVER BASIN:

The main stem of the Pecos river from the headwaters of Avalon reservoir upstream to Brantley dam.

A. Designated uses: irrigation, livestock watering, wildlife habitat, primary contact and warmwater aquatic life.

B. Criteria: the use-specific numeric criteria set forth in 20.6.4.900 NMAC are applicable to the designated uses.

[20.6.4.204 NMAC - Rp 20 NMAC 6.1.2204, 10/12/2000; A, 5/23/2005; A, 12/1/2010; A, 4/23/2022]

[**NOTE:** The segment covered by this section was divided effective 5/23/2005. The standards for Avalon Reservoir are under 20.6.4.219 NMAC.]

20.6.4.205 PECOS RIVER BASIN: BRANTLEY RESERVOIR.

A. Designated uses: irrigation storage, livestock watering, wildlife habitat, primary contact and warmwater aquatic life.

B. Criteria: the use-specific numeric criteria set forth in 20.6.4.900 NMAC are applicable to the designated uses.

[20.6.4.205 NMAC - Rp 20 NMAC 6.1.2205, 10/12/2000; A, 5/23/2005; A, 12/1/2010]

20.6.4.206 PECOS RIVER BASIN:

Perennial reaches of the Rio Felix and perennial reaches of tributaries to the Rio Hondo downstream of Bonney canyon, excluding North Spring river.

A. Designated uses: irrigation, livestock watering, wildlife habitat, secondary contact and warmwater aquatic life.

B. Criteria:

(1) The use-specific numeric criteria set forth in 20.6.4.900 NMAC are applicable to the designated uses.

(2) At all flows above 50 cfs: TDS 14,000 mg/L or less, sulfate 3,000 mg/L or less and chloride 6,000 mg/L or less.

[20.6.4.206 NMAC - Rp 20 NMAC 6.1.2206, 10/12/2010; A, 5/23/2005; A, 12/1/2010; A, 3/2/2017; A, 4/23/2022]

[**NOTE:** This segment was divided effective 4/23/2022. The standards for the main stem of the Pecos river from the headwaters of Brantley reservoir upstream to Salt creek (near Acme), perennial reaches of the Rio Peñasco downstream from state highway 24 near Dunken, and perennial reaches of the Rio Hondo are under 20.6.4.231 NMAC.]

20.6.4.207 PECOS RIVER BASIN:

The main stem of the Pecos river from Salt creek (near Acme) upstream to Sumner dam.

A. Designated uses: irrigation, marginal warmwater aquatic life, livestock watering, wildlife habitat and primary contact.

B. Criteria:

(1) The use-specific numeric criteria set forth in 20.6.4.900 NMAC are applicable to the designated uses.

(2) At all flows above 50 cfs: TDS 8,000 mg/L or less, sulfate 2,500 mg/L or less and chloride 4,000 mg/L or less.

[20.6.4.207 NMAC - Rp 20 NMAC 6.1.2207, 10/12/2000; A, 5/23/2005; A, 12/1/2010; A, 4/23/2022]

20.6.4.208 PECOS RIVER BASIN:

Perennial reaches of the Rio Peñasco above state highway 24 near Dunken, perennial reaches of tributaries to the Rio Peñasco above state highway 24 near Dunken, perennial reaches of Cox canyon, perennial reaches of the Rio Bonito downstream from state highway 48 (near Angus), the Rio Ruidoso downstream of the U.S. highway 70 bridge near Seeping Springs lakes, perennial reaches of the Rio Hondo upstream from Bonney canyon and perennial reaches of Agua Chiquita.

A. Designated uses: fish culture, irrigation, livestock watering, wildlife habitat, coldwater aquatic life and primary contact.

B. Criteria: the use-specific numeric criteria set forth in 20.6.4.900 NMAC are applicable to the designated uses, except that the following segment-specific criteria apply: temperature 30°C (86°F) or less, and phosphorus (unfiltered sample) less than 0.1 mg/L.

[20.6.4.208 NMAC - Rp 20 NMAC 6.1.2208, 10/12/2000; A, 5/23/2005; A, 12/1/2010; A, 4/23/2022]

20.6.4.209 PECOS RIVER BASIN:

Perennial reaches of Eagle creek upstream of Alto dam to the Mescalero Apache boundary, perennial reaches of the Rio Bonito upstream of state highway 48 (near Angus) excluding Bonito lake, perennial reaches of tributaries to the Rio Bonito upstream of state highway 48 (near Angus), perennial reaches of the Rio Ruidoso upstream of the U.S. highway 70 bridge near Seeping Springs lakes above and below the Mescalero Apache boundary and perennial reaches of tributaries to the Rio Ruidoso upstream of the U.S. highway 70 bridge near Seeping Springs lakes above and below the Mescalero Apache boundary.

A. Designated uses: domestic water supply, high quality coldwater aquatic life, irrigation, livestock watering, wildlife habitat, public water supply and primary contact.

B. Criteria: the use-specific numeric criteria set forth in 20.6.4.900 NMAC are applicable to the designated uses, except that the following segment-specific criteria apply: specific conductance 600 $\mu\text{S}/\text{cm}$ or less in Eagle creek, 1,100 $\mu\text{S}/\text{cm}$ or less in Bonito creek and 1,500 $\mu\text{S}/\text{cm}$ or less in the Rio Ruidoso; phosphorus (unfiltered sample) less than 0.1 mg/L; the monthly geometric mean of E. coli bacteria 126 cfu/100 mL or less, single sample 235 cfu/100 mL or less.

[20.6.4.209 NMAC - Rp 20 NMAC 6.1.2209, 10/12/2000; A, 5/23/2005; A, 12/1/2010; A, 7/10/2012; A, 4/23/2022]

[NOTE: The standards for Bonito lake are in 20.6.4.223 NMAC, effective 7/10/2012]

20.6.4.210 PECOS RIVER BASIN:

Sumner reservoir.

A. Designated uses: irrigation storage, livestock watering, wildlife habitat, primary contact and warmwater aquatic life.

B. Criteria: the use-specific numeric criteria set forth in 20.6.4.900 NMAC are applicable to the designated uses, except that the following segment-specific criteria apply: the monthly geometric mean of E. coli bacteria 126 cfu/100 mL or less, single sample 235 cfu/100 mL or less.

[20.6.4.210 NMAC - Rp 20 NMAC 6.1.2210, 10/12/2000; A, 5/23/2005; A, 12/1/2010]

20.6.4.211 PECOS RIVER BASIN:

The main stem of the Pecos river from the headwaters of Sumner reservoir upstream to Tecolote creek excluding Santa Rosa reservoir.

A. Designated uses: fish culture, irrigation, marginal warmwater aquatic life, livestock watering, wildlife habitat and primary contact.

B. Criteria:

(1) The use-specific numeric criteria set forth in 20.6.4.900 NMAC are applicable to the designated uses.

(2) At all flows above 50 cfs: TDS 3,000 mg/L or less, sulfate 2,000 mg/L or less and chloride 400 mg/L or less.

[20.6.4.211 NMAC - Rp 20 NMAC 6.1.2211, 10/12/2000; A, 5/23/2005; A, 12/1/2010; A, 7/10/2012]

[NOTE: The standards for Santa Rosa reservoir are in 20.6.4.225 NMAC, effective 7/10/2012]

20.6.4.212 PECOS RIVER BASIN:

Perennial tributaries to the main stem of the Pecos river from the headwaters of Sumner reservoir upstream to Santa Rosa dam.

A. Designated uses: irrigation, coldwater aquatic life, livestock watering, wildlife habitat and primary contact.

B. Criteria: the use-specific numeric criteria set forth in 20.6.4.900 NMAC are applicable to the designated uses, except that the following segment-specific criterion applies: temperature 25°C (77°F) or less.

[20.6.4.212 NMAC - Rp 20 NMAC 6.1.2211.1, 10/12/2000; A, 5/23/2005; A, 12/1/2010]

20.6.4.213 PECOS RIVER BASIN:

McAllister lake.

A. Designated uses: coldwater aquatic life, secondary contact, livestock watering and wildlife habitat.

B. Criteria: the use-specific numeric criteria set forth in 20.6.4.900 NMAC are applicable to the designated uses, except that the following segment-specific criterion applies: temperature 25°C (77°F) or less.

[20.6.4.213 NMAC - Rp 20 NMAC 6.1.2211.3, 10/12/2000; A, 5/23/2005; A, 12/1/2010]

20.6.4.214 PECOS RIVER BASIN:

Storrie lake.

A. Designated uses: coldwater aquatic life, warmwater aquatic life, primary contact, livestock watering, wildlife habitat, public water supply and irrigation storage.

B. Criteria: the use-specific numeric criteria set forth in 20.6.4.900 NMAC are applicable to the designated uses, except that the following segment-specific criteria apply: the monthly geometric mean of E. coli bacteria 126 cfu/100 mL or less, single sample 235 cfu/100 mL or less.

[20.6.4.214 NMAC - Rp 20 NMAC 6.1.2211.5, 10/12/2000; A, 5/23/2005; A, 12/1/2010]

20.6.4.215 PECOS RIVER BASIN:

Perennial reaches of the Gallinas river upstream of the diversion for the Las Vegas municipal reservoir, perennial reaches of tributaries to the Gallinas river upstream of the diversion for the Las Vegas municipal reservoir, perennial reaches of Tecolote creek upstream of Blue creek and all perennial reaches of tributaries to Tecolote creek upstream of Blue creek.

A. Designated uses: domestic water supply, high quality coldwater aquatic life, irrigation, livestock watering, wildlife habitat, industrial water supply and primary contact; and public water supply on the Gallinas river.

B. Criteria: the use-specific numeric criteria set forth in 20.6.4.900 NMAC are applicable to the designated uses, except that the following segment-specific criteria apply: specific conductance 300 $\mu\text{S}/\text{cm}$ or less (450 $\mu\text{S}/\text{cm}$ or less in Wright Canyon creek); the monthly geometric mean of E. coli bacteria 126 cfu/100 mL or less, single sample 235 cfu/100 mL or less.

[20.6.4.215 NMAC - Rp 20 NMAC 6.1.2212, 10/12/2000; A, 5/23/2005; A, 12/1/2010; A, 2/13/2018; A, 4/23/2022]

[**NOTE:** This segment was divided effective 2/13/2018. The standards for Tecolote creek from I-25 to Blue creek are under 20.6.4.230 NMAC.]

20.6.4.216 PECOS RIVER BASIN:

The main stem of the Pecos river from Tecolote creek upstream to Cañon de Manzanita.

A. Designated uses: irrigation, livestock watering, wildlife habitat, marginal coldwater aquatic life and primary contact.

B. Criteria:

(1) The use-specific numeric criteria set forth in 20.6.4.900 NMAC are applicable to the designated uses, except that the following segment-specific criterion applies: temperature 30°C (86°F) or less.

(2) At all flows above 10 cfs: TDS 250 mg/L or less, sulfate 25 mg/L or less and chloride 5 mg/L or less.

[20.6.4.216 NMAC - Rp 20 NMAC 6.1.2213, 10/12/2000; A, 5/23/2005; A, 12/1/2010]

20.6.4.217 PECOS RIVER BASIN:

Perennial reaches of Cow creek and all perennial reaches of its tributaries and the main stem of the Pecos river from Cañon de Manzanita upstream to its headwaters, including perennial reaches of all tributaries thereto except lakes identified in 20.6.4.222 NMAC.

A. Designated uses: domestic water supply, fish culture, high quality coldwater aquatic life, irrigation, livestock watering, wildlife habitat and primary contact; and public water supply on the main stem of the Pecos river.

B. Criteria: the use-specific numeric criteria set forth in 20.6.4.900 NMAC are applicable to the designated uses, except that the following segment-specific criteria apply: specific conductance 300 μ S/cm or less; the monthly geometric mean of *E. coli* bacteria 126 cfu/100 mL or less, single sample 235 cfu/100 mL or less.

[20.6.4.217 NMAC - Rp 20 NMAC 6.1.2214, 10/12/2000; A, 5/23/2005; A, 12/1/2010; A, 7/10/2012]

[**NOTE:** The segment covered by this section was divided effective 5/23/2005. The standards for the additional segments are under 20.6.4.220 and 20.6.4.221 NMAC.]

20.6.4.218 PECOS RIVER BASIN:

Lower Tansil lake and Lake Carlsbad.

A. Designated uses: industrial water supply, livestock watering, wildlife habitat, primary contact and warmwater aquatic life.

B. Criteria: the use-specific numeric criteria set forth in 20.6.4.900 NMAC are applicable to the designated uses, except that the following segment-specific criterion applies: temperature 34°C (93.2°F) or less.

[20.6.4.218 NMAC - N, 5/23/2005; A, 12/1/2010]

20.6.4.219 PECOS RIVER BASIN:

Avalon reservoir.

A. Designated uses: irrigation storage, livestock watering, wildlife habitat, secondary contact and warmwater aquatic life.

B. Criteria: the use-specific numeric criteria set forth in 20.6.4.900 NMAC are applicable to the designated uses.

[20.6.4.219 NMAC - N, 5/23/2005; A, 12/1/2010]

20.6.4.220 PECOS RIVER BASIN:

Perennial reaches of the Gallinas river and perennial reaches of tributaries to the Gallinas river from its mouth upstream to the diversion for the Las Vegas municipal reservoir, except Pecos Arroyo.

A. Designated uses: irrigation, livestock watering, wildlife habitat, marginal coldwater aquatic life and primary contact.

B. Criteria: the use-specific numeric criteria set forth in 20.6.4.900 NMAC are applicable to the designated uses, except that the following segment-specific criterion applies: temperature 30°C (86°F) or less.

[20.6.4.220 NMAC - N, 5/23/2005; A, 12/1/2010; A, 4/23/2022]

20.6.4.221 PECOS RIVER BASIN:

Pecos Arroyo.

A. Designated uses: livestock watering, wildlife habitat, warmwater aquatic life and primary contact.

B. Criteria: the use-specific numeric criteria set forth in 20.6.4.900 NMAC are applicable to the designated uses, except that the following segment-specific criteria apply: the monthly geometric mean of *E. coli* bacteria 206 cfu/100 mL, single sample 940 cfu/100 mL.

[20.6.4.221 NMAC - N, 5/23/2005; A, 12/1/2010]

20.6.4.222 PECOS RIVER BASIN:

Johnson lake, Katherine lake, Lost Bear lake, Pecos Baldy lake, Spirit lake, Stewart lake and Truchas lakes (north and south).

A. Designated uses: high quality coldwater aquatic life, irrigation, domestic water supply, primary contact, livestock watering and wildlife habitat.

B. Criteria: The use-specific numeric criteria set forth in 20.6.4.900 NMAC are applicable to the designated uses, except that the following segment-specific criteria apply: specific conductance 300 μ S/cm or less; the monthly geometric mean of *E. coli* bacteria 126 cfu/100 mL or less, single sample 235 cfu/100 mL or less.

[20.6.4.222 NMAC - N, 7/10/2012]

20.6.4.223 PECOS RIVER BASIN:

Bonito lake.

A. Designated uses: high quality coldwater aquatic life, irrigation, domestic water supply, primary contact, livestock watering, wildlife habitat and public water supply.

B. Criteria: The use-specific numeric criteria set forth in 20.6.4.900 NMAC are applicable to the designated uses except that the following segment-specific criteria apply: specific conductance 1100 μ S/cm or less; phosphorus (unfiltered sample) less than 0.1 mg/L; the monthly geometric mean of *E. coli* bacteria 126 cfu/100 mL or less, single sample 235 cfu/100 mL or less.

[20.6.4.223 NMAC - N, 7/10/2012]

20.6.4.224 PECOS RIVER BASIN:

Monastery lake.

A. Designated uses: coolwater aquatic life, primary contact, livestock watering and wildlife habitat.

B. Criteria: The use-specific numeric criteria set forth in 20.6.4.900 NMAC are applicable to the designated uses, except that the following segment-specific criteria apply: the monthly geometric mean of *E. coli* bacteria 206 cfu/100 mL or less, single sample 940 cfu/100 mL or less.

[20.6.4.224 NMAC - N, 7/10/2012]

20.6.4.225 PECOS RIVER BASIN:

Santa Rosa reservoir.

A. Designated uses: coolwater aquatic life, irrigation, primary contact, livestock watering and wildlife habitat.

B. Criteria: The use-specific numeric criteria set forth in 20.6.4.900 NMAC are applicable to the designated uses.

[20.6.4.225 NMAC - N, 7/10/2012]

20.6.4.226 PECOS RIVER BASIN:

Perch lake.

A. Designated uses: coolwater aquatic life, primary contact, livestock watering and wildlife habitat.

B. Criteria: The use-specific numeric criteria set forth in 20.6.4.900 NMAC are applicable to the designated uses except that the following segment-specific criteria apply: the monthly geometric mean of *E. coli* bacteria 126 cfu/100 mL or less, single sample 235 cfu/100 mL or less.

[20.6.4.226 NMAC - N, 7/10/2012]

20.6.4.227 PECOS RIVER BASIN:

Lea lake.

A. Designated uses: warmwater aquatic life, primary contact and wildlife habitat.

B. Criteria: The use-specific numeric criteria set forth in 20.6.4.900 NMAC are applicable to the designated uses except that the following segment-specific criteria apply: the monthly geometric mean of *E. coli* bacteria 126 cfu/100 mL or less, single sample 235 cfu/100 mL or less.

[20.6.4.227 NMAC - N, 7/10/2012]

20.6.4.228 PECOS RIVER BASIN:

Cottonwood lake and Devil's Inkwell.

A. Designated uses: coolwater aquatic life, primary contact and wildlife habitat.

B. Criteria: The use-specific numeric criteria set forth in 20.6.4.900 NMAC are applicable to the designated uses, except that the following segment-specific criteria apply: the monthly geometric mean of *E. coli* bacteria 206 cfu/100 mL or less, single sample 940 cfu/100 mL or less.

[20.6.4.228 NMAC - N, 7/10/2012]

20.6.4.229 PECOS RIVER BASIN:

Mirror lake.

A. Designated uses: warmwater aquatic life, primary contact and wildlife habitat.

B. Criteria: The use-specific numeric criteria set forth in 20.6.4.900 NMAC are applicable to the designated uses, except that the following segment-specific criteria apply: the monthly geometric mean of *E. coli* bacteria 206 cfu/100 mL or less, single sample 940 cfu/100 mL or less.

[20.6.4.229 NMAC - N, 7/10/2012]

20.6.4.230 PECOS RIVER BASIN:

Perennial reaches of Tecolote creek from I-25 to Blue creek.

A. Designated uses: domestic water supply, coolwater aquatic life, irrigation, livestock watering, wildlife habitat, and primary contact.

B. Criteria: the use-specific numeric criteria set forth in 20.6.4.900 NMAC are applicable to the designated uses, except that the following segment-specific criteria apply: the monthly geometric mean of *E. coli* bacteria 126 cfu/100 mL or less, single sample 235 cfu/100 mL or less.

[20.6.4.230 NMAC - N, 2/13/2018]

20.6.4.231 PECOS RIVER BASIN:

The main stem of the Pecos river from the headwaters of Brantley reservoir upstream to Salt creek (near Acme), perennial reaches of the Rio Peñasco downstream from state highway 24 near Dunken, perennial reaches of North Spring river and perennial reaches of the Rio Hondo downstream of Bonney canyon.

A. Designated uses: irrigation, livestock watering, wildlife habitat, primary contact and warmwater aquatic life.

B. Criteria:

(1) The use-specific numeric criteria set forth in 20.6.4.900 NMAC are applicable to the designated uses.

(2) At all flows above 50 cfs: TDS 14,000 mg/L or less, sulfate 3,000 mg/L or less and chloride 6,000 mg/L or less.

[20.6.4.231 NMAC - N, 4/23/2022]

20.6.4.232-20.6.4.300 [RESERVED]

20.6.4.301 CANADIAN RIVER BASIN:

The main stem of the Canadian river from the New Mexico-Texas line upstream to Ute dam, and any flow that enters the main stem from Revuelto creek.

A. Designated uses: irrigation, marginal warmwater aquatic life, livestock watering, wildlife habitat and primary contact.

B. Criteria:

(1) The use-specific numeric criteria set forth in 20.6.4.900 NMAC are applicable to the designated uses.

(2) TDS 6,500 mg/L or less at flows above 25 cfs.

[20.6.4.301 NMAC - Rp 20 NMAC 6.1.2301, 10/12/2000; A, 5/23/2005; A, 12/1/2010]

20.6.4.302 CANADIAN RIVER BASIN:

Ute reservoir.

A. Designated uses: livestock watering, wildlife habitat, public water supply, industrial water supply, primary contact and warmwater aquatic life.

B. Criteria: the use-specific numeric criteria set forth in 20.6.4.900 NMAC are applicable to the designated uses, except that the following segment-specific criteria apply: the monthly geometric mean of E. coli bacteria 126 cfu/100 mL or less, single sample 235 cfu/100 mL or less.

[20.6.4.302 NMAC - Rp 20 NMAC 6.1.2302, 10/12/2000; A, 5/23/2005; A, 12/1/2010]

20.6.4.303 CANADIAN RIVER BASIN:

The main stem of the Canadian river from the headwaters of Ute reservoir upstream to Conchas dam, the perennial reaches of Pajarito and Ute creeks and their perennial tributaries.

A. Designated uses: irrigation, marginal warmwater aquatic life, livestock watering, wildlife habitat and primary contact.

B. Criteria: the use-specific numeric criteria set forth in 20.6.4.900 NMAC are applicable to the designated uses.

[20.6.4.303 NMAC - Rp 20 NMAC 6.1.2303, 10/12/2000; A, 5/23/2005; A, 12/1/2010]

20.6.4.304 CANADIAN RIVER BASIN:

Conchas reservoir.

A. Designated uses: irrigation storage, livestock watering, wildlife habitat, public water supply, primary contact and warmwater aquatic life.

B. Criteria: the use-specific numeric criteria set forth in 20.6.4.900 NMAC are applicable to the designated uses, except that the following segment-specific criteria apply: the monthly geometric mean of E. coli bacteria 126 cfu/100 mL or less, single sample 235 cfu/100 mL or less.

[20.6.4.304 NMAC - Rp 20 NMAC 6.1.2304, 10/12/2000; A, 5/23/2005; A, 12/1/2010]

20.6.4.305 CANADIAN RIVER BASIN:

The main stem of the Canadian river from the headwaters of Conchas reservoir upstream to the New Mexico-Colorado line, perennial reaches of the Conchas river, the Mora river downstream from the USGS gaging station near Shoemaker, the Vermejo river downstream from Rail canyon and perennial reaches of Raton, Chicorica (except Lake Maloya and Lake Alice) and Uña de Gato creeks.

A. Designated uses: irrigation, marginal warmwater aquatic life, livestock watering, wildlife habitat and primary contact.

B. Criteria:

(1) The use-specific numeric criteria set forth in 20.6.4.900 NMAC are applicable to the designated uses.

(2) TDS 3,500 mg/L or less at flows above 10 cfs.

[20.6.4.305 NMAC - Rp 20 NMAC 6.1.2305, 10/12/2000; A, 5/23/2005; A, 12/1/2010; A, 3/2/2017]

[**NOTE:** This segment was divided effective 12/1/2010. The standards for Lake Alice and Lake Maloya are under 20.6.4.311 and 20.6.4.312 NMAC, respectively.]

20.6.4.306 CANADIAN RIVER BASIN:

The Cimarron river downstream from state highway 21 in Cimarron to the Canadian river and all perennial reaches of tributaries to the Cimarron river downstream from state highway 21 in Cimarron.

A. Designated uses: irrigation, warmwater aquatic life, livestock watering, wildlife habitat and primary contact; and public water supply on Cimarroncito creek.

B. Criteria:

(1) The use-specific numeric criteria set forth in 20.6.4.900 NMAC are applicable to the designated uses.

(2) TDS 3,500 mg/L or less at flows above 10 cfs.

[20.6.4.306 NMAC - Rp 20 NMAC 6.1.2305.1, 10/12/2000; A, 7/19/2001; A, 5/23/2005; A, 12/1/2010]

20.6.4.307 CANADIAN RIVER BASIN:

Perennial reaches of the Mora river from the USGS gaging station near Shoemaker upstream to the state highway 434 bridge in Mora, all perennial reaches of tributaries to the Mora river downstream from the USGS gaging station at La Cueva in San Miguel and Mora counties except lakes identified in 20.6.4.313 NMAC, perennial reaches of Ocate creek downstream of Ocate, perennial reaches of tributaries to Ocate creek downstream of Ocate, and perennial reaches of Rayado creek downstream of Miami lake diversion in Colfax county.

A. Designated uses: marginal coldwater aquatic life, warmwater aquatic life, primary contact, irrigation, livestock watering and wildlife habitat.

B. Criteria: the use-specific numeric criteria set forth in 20.6.4.900 NMAC are applicable to the designated uses.

[20.6.4.307 NMAC - Rp 20 NMAC 6.1.2305.3, 10/12/2000; A, 5/23/2005; A, 12/1/2010; A, 7/10/2012; A, 4/23/2022]

20.6.4.308 CANADIAN RIVER BASIN:

Charette lakes.

A. Designated uses: coldwater aquatic life, warmwater aquatic life, secondary contact, livestock watering and wildlife habitat.

B. Criteria: the use-specific numeric criteria set forth in 20.6.4.900 NMAC are applicable to the designated uses.

[20.6.4.308 NMAC - Rp 20 NMAC 6.1.2305.5, 10/12/2000; A, 5/23/2005; A, 12/1/2010]

20.6.4.309 CANADIAN RIVER BASIN:

The Mora river and perennial reaches of its tributaries upstream from the state highway 434 bridge in Mora except lakes identified in 20.6.4.313 NMAC, all perennial reaches of tributaries to the Mora river upstream from the USGS gaging station at La Cueva, perennial reaches of Coyote creek, perennial reaches of tributaries to Coyote creek, the Cimarron river above state highway 21 in

Cimarron, perennial reaches of tributaries to the Cimarron river above state highway 21 in Cimarron except Eagle Nest lake, all perennial reaches of tributaries to the Cimarron river north and northwest of highway 64 except north and south Shuree ponds, perennial reaches of Rayado creek above Miami lake diversion, perennial reaches of tributaries to Rayado creek above Miami lake diversion, Ocate creek and perennial reaches of its tributaries upstream of Ocate, perennial reaches of the Vermejo river upstream from Rail canyon and all other perennial reaches of tributaries to the Canadian river northwest and north of U.S. highway 64 in Colfax county unless included in other segments.

A. Designated uses: domestic water supply, irrigation, high quality coldwater aquatic life, livestock watering, wildlife habitat, and primary contact; and public water supply on the Cimarron river upstream from Cimarron, on perennial reaches of Rayado creek and on perennial reaches of tributaries to Rayado creek.

B. Criteria: the use-specific numeric criteria set forth in 20.6.4.900 NMAC are applicable to the designated uses, except that the following segment-specific criteria apply: specific conductance 500 μ S/cm or less; the monthly geometric mean of E. coli bacteria 126 cfu/100 mL or less, single sample 235 cfu/100 mL or less.

[20.6.4.309 NMAC - Rp 20 NMAC 6.1.2306, 10/12/2000; A, 7/19/2001; A, 5/23/2005; A, 12/1/2010; A, 7/10/2012; A, 4/23/2022]

[NOTE: The segment covered by this section was divided effective 5/23/2005. The standards for the additional segment are under 20.6.4.310 NMAC. The standards for Shuree ponds are in 20.6.4.314 NMAC and the standards for Eagle Nest lake are in 20.6.4.315 NMAC, effective 7/10/2012]

20.6.4.310 CANADIAN RIVER BASIN:

Perennial reaches of Corruppa creek.

A. Designated uses: livestock watering, wildlife habitat, irrigation, primary contact and coldwater aquatic life.

B. Criteria:

(1) The use-specific numeric criteria set forth in 20.6.4.900 NMAC are applicable to the designated uses, except that the following segment-specific criteria apply: temperature 25°C (77°F) or less; the monthly geometric mean of E. coli bacteria 126 cfu/100 mL or less, single sample 235 cfu/100 mL or less.

(2) TDS 1,200 mg/L or less, sulfate 600 mg/L or less, chloride 40 mg/L or less.

[20.6.4.310 NMAC - N, 5/23/2005; A, 12/1/2010]

20.6.4.311 CANADIAN RIVER BASIN:

Lake Alice.

A. Designated uses: marginal coldwater aquatic life, irrigation, livestock watering, wildlife habitat, primary contact and public water supply.

B. Criteria: the use-specific numeric criteria set forth in 20.6.4.900 NMAC are applicable to the designated uses.

[20.6.4.311 NMAC - N, 12/1/2010; A, 4/23/2022]

20.6.4.312 CANADIAN RIVER BASIN:

Lake Maloya.

A. Designated uses: coldwater aquatic life, irrigation, livestock watering, wildlife habitat, primary contact and public water supply.

B. Criteria: the use-specific numeric criteria set forth in 20.6.4.900 NMAC are applicable to the designated uses.

[20.6.4.312 NMAC - N, 12/1/2010; A, 4/23/2022]

20.6.4.313 CANADIAN RIVER BASIN:

Encantada lake, Maestas lake, Middle Fork lake of Rio de la Casa, North Fork lake of Rio de la Casa and Pacheco lake.

A. Designated uses: high quality coldwater aquatic life, irrigation, domestic water supply, primary contact, livestock watering and wildlife habitat.

B. Criteria: The use-specific numeric criteria set forth in 20.6.4.900 NMAC are applicable to the designated uses, except that the following segment-specific criteria apply: specific conductance 300 μ S/cm or less; the monthly geometric mean of *E. coli* bacteria 126 cfu/100 mL or less, single sample 235 cfu/100 mL or less.

[20.6.4.313 NMAC - N, 7/10/2012]

20.6.4.314 CANADIAN RIVER BASIN:

Shuree ponds (north and south).

A. Designated uses: high quality coldwater aquatic life, irrigation, domestic water supply, primary contact, livestock watering and wildlife habitat.

B. Criteria: The use-specific numeric criteria set forth in 20.6.4.900 NMAC are applicable to the designated uses except that the following segment-specific criteria apply: specific conductance 500 μ S/cm or less; the monthly geometric mean of *E. coli* bacteria 126 cfu/100 mL or less, single sample 235 cfu/100 mL or less.

[20.6.4.314 NMAC - N, 7/10/2012]

20.6.4.315 CANADIAN RIVER BASIN:

Eagle Nest lake.

A. Designated uses: high quality coldwater aquatic life, irrigation, domestic water supply, primary contact, livestock watering, wildlife habitat and public water supply.

B. Criteria: The use-specific numeric criteria set forth in 20.6.4.900 NMAC are applicable to the designated uses except that the following segment-specific criteria apply: specific conductance 500 μ S/cm or less; the monthly geometric mean of *E. coli* bacteria 126 cfu/100 mL or less, single sample 235 cfu/100 mL or less.

[20.6.4.315 NMAC - N, 7/10/2012]

20.6.4.316 CANADIAN RIVER BASIN:

Clayton lake.

A. Designated uses: coolwater aquatic life, primary contact, livestock watering and wildlife habitat.

B. Criteria: The use-specific numeric criteria set forth in 20.6.4.900 NMAC are applicable to the designated uses, except that the following segment-specific criteria apply: the monthly geometric mean of *E. coli* bacteria 206 cfu/100 mL or less, single sample 940 cfu/100 mL or less.

[20.6.4.316 NMAC - N, 7/10/2012]

20.6.4.317 CANADIAN RIVER BASIN:

Springer lake.

A. Designated uses: coolwater aquatic life, irrigation, primary contact, livestock watering, wildlife habitat, and public water supply.

B. Criteria: The use-specific numeric criteria set forth in 20.6.4.900 NMAC are applicable to the designated uses.

[20.6.4.317 NMAC - N, 07-10-2012; A, 3/2/2017]

20.6.4.318 CANADIAN RIVER BASIN:

Doggett creek.

A. Designated uses: Warm water aquatic life, livestock watering, wildlife habitat and primary contact.

B. Criteria: The use-specific criteria in 20.6.4.900 NMAC are applicable to the designated uses, except that the following site-specific criteria apply: the monthly geometric mean of E. coli bacteria 206 cfu/100 mL or less, single sample 940 cfu/100 mL or less.

C. Discharger-specific temporary standard:

- (1) Discharger: City of Raton wastewater treatment plant
- (2) NPDES permit number: NM0020273, Outfall 001
- (3) Receiving waterbody: Doggett creek, 20.6.4.318 NMAC
- (4) Discharge latitude/longitude: 36° 52' 13.91" N / 104° 25' 39.18" W
- (5) Pollutant(s): nutrients; total nitrogen and total phosphorus
- (6) Factor of issuance: substantial and widespread economic and social impacts (40 CFR 131.10(g)(6))
- (7) Highest attainable condition: interim effluent condition of 8.0 mg/L total nitrogen and 1.6 mg/L total phosphorus as 30-day averages. The highest attainable condition shall be either the highest attainable condition identified at the time of the adoption, or any higher attainable condition later identified during any reevaluation, whichever is more stringent (40 CFR 131.14(b)(1)(iii)).
- (8) Effective date of temporary standard: This temporary standard becomes effective for Clean Water Act purposes on the date of EPA approval.
- (9) Expiration date of temporary standard: no later than 20 years from the effective date.
- (10) Reevaluation period: at each succeeding review of water quality standards and at least once every five years from the effective date of the temporary standard (Paragraph (8) of Subsection H of 20.6.4.10[F (8)] NMAC, 40 CFR 131.14(b)(1)(v)). If the discharger cannot demonstrate that sufficient progress has been made the commission may revoke approval of the temporary standard or provide additional conditions to the approval of the temporary standard. If the reevaluation is not completed at the frequency specified or the Department does not submit the

reevaluation to EPA within 30 days of completion, the underlying designated use and criterion will be the applicable water quality standard for Clean Water Act purposes until the Department completes and submits the reevaluation to EPA. Public input on the reevaluation will be invited during NPDES permit renewals or triennial reviews, as applicable, in accordance with the State's most current approved water quality management plan and continuing planning process.

(11) Timeline for proposed actions. Tasks and target completion dates are listed in the most recent, WQCC-approved version of the New Mexico Environment Department, Surface Water Quality Bureau's "Nutrient Temporary Standards for City of Raton Wastewater Treatment Plant, NPDES No. NM0020273 to Doggett Creek."

[20.6.4.318 NMAC - N, 05/22/2020; A, 4/23/2022]

20.6.4.319-20.6.4.400 [RESERVED]

20.6.4.401 SAN JUAN RIVER BASIN:

The main stem of the San Juan river from the Navajo Nation boundary at the Hogback upstream to its confluence with the Animas river. Some waters in this segment are under the joint jurisdiction of the state and the Navajo Nation.

A. Designated uses: public water supply, industrial water supply, irrigation, livestock watering, wildlife habitat, primary contact, marginal coldwater aquatic life and warmwater aquatic life.

B. Criteria: the use-specific numeric criteria set forth in 20.6.4.900 NMAC are applicable to the designated uses, except that the following segment-specific criterion applies: temperature 32.2°C (90°F) or less.

[20.6.4.401 NMAC - Rp 20 NMAC 6.1.2401, 10/12/2000; A, 5/23/2005; A, 12/1/2010]

[NOTE: The segment covered by this section was divided effective 5/23/2005. The standards for the additional segment are under 20.6.4.408 NMAC.]

20.6.4.402 SAN JUAN RIVER BASIN:

La Plata river from its confluence with the San Juan river upstream to the New Mexico-Colorado line.

A. Designated uses: irrigation, marginal warmwater aquatic life, marginal coldwater aquatic life, livestock watering, wildlife habitat and primary contact.

B. Criteria: the use-specific numeric criteria set forth in 20.6.4.900 NMAC are applicable to the designated uses, except that the following segment-specific criterion applies: temperature 32.2°C (90°F) or less.

20.6.4.407 SAN JUAN RIVER BASIN:

Perennial reaches of the Navajo river from the Jicarilla Apache reservation boundary to the Colorado border and perennial reaches of Los Pinos river in New Mexico.

A. Designated uses: coldwater aquatic life, irrigation, livestock watering, public water supply, wildlife habitat and primary contact.

B. Criteria: the use-specific numeric criteria set forth in 20.6.4.900 NMAC are applicable to the designated uses, except that the following segment-specific criteria apply: phosphorus (unfiltered sample) 0.1 mg/L or less; the monthly geometric mean of E. coli bacteria 126 cfu/100 mL or less, single sample 235 cfu/100 mL or less.

[20.6.4.407 NMAC - Rp 20 NMAC 6.1.2407, 10/12/2000; A, 5/23/2005; A, 12/1/2010]

20.6.4.408 SAN JUAN RIVER BASIN:

The main stem of the San Juan river from its confluence with the Animas river upstream to its confluence with Cañon Largo.

A. Designated uses: public water supply, industrial water supply, irrigation, livestock watering, wildlife habitat, primary contact, marginal coldwater aquatic life and warmwater aquatic life.

B. Criteria: the use-specific numeric criteria set forth in 20.6.4.900 NMAC are applicable to the designated uses, except that the following segment-specific criterion applies: temperature 32.2°C (90°F) or less.

[20.6.4.408 NMAC - N, 5/23/2005; A, 12/1/2010; A, 4/23/2022]

20.6.4.409 SAN JUAN RIVER BASIN:

Lake Farmington.

A. Designated uses: public water supply, wildlife habitat, livestock watering, primary contact, coldwater aquatic life and warmwater aquatic life.

B. Criteria: the use-specific numeric criteria set forth in 20.6.4.900 NMAC are applicable to the designated uses, except that the following segment-specific criterion applies: temperature 25°C (77°F) or less.

[20.6.4.409 NMAC - N, 12/1/2010]

20.6.4.410 SAN JUAN RIVER BASIN:

Jackson lake.

A. Designated uses: coolwater aquatic life, irrigation, primary contact, livestock watering and wildlife habitat.

B. Criteria: The use-specific numeric criteria set forth in 20.6.4.900 NMAC are applicable to the designated uses, except that the following segment-specific criteria apply: the monthly geometric mean of *E. coli* bacteria 206 cfu/100 mL or less, single sample 940 cfu/100 mL or less.

[20.6.4.410 NMAC - N, 7/10/2012]

20.6.4.411-20.6.4.450 [RESERVED]

20.6.4.451 LITTLE COLORADO RIVER BASIN:

The Rio Nutria upstream of the Zuni pueblo boundary, Tampico draw, Agua Remora, Tampico springs.

A. Designated uses: coolwater aquatic life, livestock watering, wildlife habitat and primary contact.

B. Criteria: the use-specific numeric criteria set forth in 20.6.4.900 NMAC are applicable to the designated uses.

[20.6.4.451 NMAC - N, 12/1/2010]

20.6.4.452 LITTLE COLORADO RIVER BASIN:

Ramah lake.

A. Designated uses: coldwater aquatic life, warmwater aquatic life, irrigation, livestock watering, wildlife habitat and primary contact.

B. Criteria: the use-specific numeric criteria set forth in 20.6.4.900 NMAC are applicable to the designated uses, except that the following segment-specific criterion applies: temperature 25°C (77°F) or less.

[20.6.4.452 NMAC - N, 12/1/2010]

20.6.4.453 LITTLE COLORADO RIVER BASIN:

Quemado lake.

A. Designated uses: coolwater aquatic life, primary contact, livestock watering and wildlife habitat.

B. Criteria: The use-specific numeric criteria set forth in 20.6.4.900 NMAC are applicable to the designated uses.

[20.6.4.453 NMAC - N, 7/10/2012]

20.6.4.454-20.6.4.500 [RESERVED]

20.6.4.501 GILA RIVER BASIN:

The main stem of the Gila river from the New Mexico-Arizona line upstream to Redrock canyon and perennial reaches of streams in Hidalgo county.

A. Designated uses: irrigation, marginal warmwater aquatic life, livestock watering, wildlife habitat and primary contact.

B. Criteria: the use-specific numeric criteria set forth in 20.6.4.900 NMAC are applicable to the designated uses.

[20.6.4.501 NMAC - Rp 20 NMAC 6.1.2501, 10/12/2000; A, 5/23/2005; A, 12/1/2010]

20.6.4.502 GILA RIVER BASIN:

The main stem of the Gila river from Redrock canyon upstream to the confluence of the West Fork Gila river and East Fork Gila river and perennial reaches of tributaries to the Gila river downstream of Mogollon creek.

A. Designated uses: industrial water supply, irrigation, livestock watering, wildlife habitat, marginal coldwater aquatic life, primary contact and warmwater aquatic life.

B. Criteria: the use-specific numeric criteria set forth in 20.6.4.900 NMAC are applicable to the designated uses, except that the following segment-specific criterion applies: 28°C (82.4°F) or less.

[20.6.4.502 NMAC - Rp 20 NMAC 6.1.2502, 10/12/2010; A, 5/23/2005; A, 12/1/2010; A, 3/2/2017]

20.6.4.503 GILA RIVER BASIN:

All perennial tributaries to the Gila river upstream of and including Mogollon creek.

A. Designated uses: domestic water supply, high quality coldwater aquatic life, irrigation, livestock watering, wildlife habitat and primary contact.

B. Criteria: the use-specific numeric criteria set forth in 20.6.4.900 NMAC are applicable to the designated uses, except that the following segment-specific criteria apply: specific conductance of 400 µS/cm or less for all perennial tributaries except West Fork Gila and tributaries thereto, specific conductance of 300 µS/cm or less; 32.2°C (90°F) or less in the east fork of the Gila river and Sapillo creek downstream of Lake Roberts; the monthly geometric mean of E. coli bacteria 126 cfu/100 mL or less, single sample 235 cfu/100 mL or less.

[20.6.4.503 NMAC - Rp 20 NMAC 6.1.2503, 10/12/2010; A, 5/23/2005; A, 12/1/2010; A, 3/2/2017]

20.6.4.504 GILA RIVER BASIN:

Wall lake, Lake Roberts and Snow lake.

A. Designated uses: coldwater aquatic life, irrigation, livestock watering, wildlife habitat and primary contact.

B. Criteria: the use-specific numeric criteria set forth in 20.6.4.900 NMAC are applicable to the designated uses, except that the following segment-specific criterion applies: specific conductance 300 µS/cm or less.

[20.6.4.504 NMAC - Rp 20 NMAC 6.1.2504, 10/12/2000; A, 5/23/2005; A, 12/1/2010]

[**NOTE:** The segment covered by this section was divided effective 5/23/2005. The standards for the additional segment are under 20.6.4.806 NMAC.]

20.6.4.505 GILA RIVER BASIN:

Bill Evans lake.

A. Designated uses: coolwater aquatic life, primary contact, livestock watering and wildlife habitat.

B. Criteria: The use-specific numeric criteria set forth in 20.6.4.900 NMAC are applicable to the designated uses.

[20.6.4.505 NMAC - N, 7/10/2012]

20.6.4.506-20.6.4.600 [RESERVED]

20.6.4.601 SAN FRANCISCO RIVER BASIN:

The main stem of the San Francisco river from the New Mexico-Arizona line upstream to state highway 12 at Reserve and perennial reaches of Mule creek.

A. Designated uses: irrigation, marginal warmwater and marginal coldwater aquatic life, livestock watering, wildlife habitat and primary contact.

B. Criteria: the use-specific numeric criteria set forth in 20.6.4.900 NMAC are applicable to the designated uses.

[20.6.4.601 NMAC - Rp 20 NMAC 6.1.2601, 10/12/2000; A, 5/23/2005; A, 12/1/2010]

20.6.4.602 SAN FRANCISCO RIVER BASIN:

The main stem of the San Francisco river from state highway 12 at Reserve upstream to the New Mexico-Arizona line.

A. Designated uses: coldwater aquatic life, irrigation, livestock watering, wildlife habitat and primary contact.

B. Criteria: the use-specific numeric criteria set forth in 20.6.4.900 NMAC are applicable to the designated uses, except that the following segment-specific criterion applies: temperature 25°C (77°F) or less.

[20.6.4.602 NMAC - Rp 20 NMAC 6.1.2602, 10/12/2000; A, 5/23/2005; A, 12/1/2010]

20.6.4.603 SAN FRANCISCO RIVER BASIN:

All perennial reaches of tributaries to the San Francisco river above the confluence of Whitewater creek and including Whitewater creek.

A. Designated uses: domestic water supply, fish culture, high quality coldwater aquatic life, irrigation, livestock watering, wildlife habitat and primary contact.

B. Criteria: the use-specific numeric criteria set forth in 20.6.4.900 NMAC are applicable to the designated uses, except that the following segment-specific criteria apply: specific conductance 400 μ S/cm or less; the monthly geometric mean of E. coli bacteria 126 cfu/100 mL or less, single sample 235 cfu/100 mL or less; and temperature 25°C (77°F) or less in Tularosa creek.

[20.6.4.603 NMAC - Rp 20 NMAC 6.1.2603, 10/12/2000; A, 5/23/2005; A, 12/1/2010]

20.6.4.604-20.6.4.700 [RESERVED]

20.6.4.701 DRY CIMARRON RIVER:

Perennial portions of the Dry Cimarron river above Oak creek and perennial reaches of Oak creek.

A. Designated uses: coldwater aquatic life, irrigation, livestock watering, wildlife habitat and primary contact.

B. Criteria:

(1) The use-specific numeric criteria set forth in 20.6.4.900 NMAC are applicable to the designated uses, except that the following segment-specific criteria apply: temperature 25°C (77°F) or less, the monthly geometric mean of E. coli bacteria 126 cfu/100 mL or less, single sample 235 cfu/100 mL or less.

(2) TDS 1,200 mg/L or less, sulfate 600 mg/L or less and chloride 40 mg/L or less.

[20.6.4.701 NMAC - Rp 20 NMAC 6.1.2701, 10/12/2000; A, 5/23/2005 A, 12/1/2010]

20.6.4.702 DRY CIMARRON RIVER:

Perennial portions of the Dry Cimarron river below Oak creek, and perennial portions of Long canyon and Carrizozo creeks.

A. Designated uses: coolwater aquatic life, irrigation, livestock watering, wildlife habitat and primary contact.

B. Criteria:

(1) The use-specific numeric criteria set forth in 20.6.4.900 NMAC are applicable to the designated uses, except that the following segment-specific criteria

apply: the monthly geometric mean of *E. coli* bacteria 126 cfu/100 mL or less, single sample 235 cfu/100 mL or less.

(2) TDS 1,200 mg/L or less, sulfate 600 mg/L or less and chloride 40 mg/L or less.

[20.6.4.702 NMAC - N, 5/23/2005; A, 12/1/2010; A, 7/10/2012]

20.6.4.703-20.6.4.800 [RESERVED]

20.6.4.801 CLOSED BASINS:

Rio Tularosa upstream of the old U.S. highway 70 bridge crossing east of Tularosa and all perennial tributaries to the Tularosa basin except Three Rivers and Dog Canyon creek, and excluding waters on the Mescalero tribal lands.

A. Designated uses: coldwater aquatic life, irrigation, livestock watering, wildlife habitat, public water supply and primary contact.

B. Criteria: the use-specific numeric criteria set forth in 20.6.4.900 NMAC are applicable to the designated uses, except that the following segment-specific criteria apply: the monthly geometric mean of *E. coli* bacteria 126 cfu/100 mL or less, single sample 235 cfu/100 mL or less.

[20.6.4.801 NMAC - Rp 20 NMAC 6.1.2801, 10/12/2000; A, 5/23/2005; A, 12/1/2010; A, 2/13/2018]

[**NOTE:** This segment was divided effective 2/13/2018. The standards for Dog Canyon creek are under 20.6.4.810 NMAC.]

20.6.4.802 CLOSED BASINS:

Perennial reaches of Three Rivers.

A. Designated uses: irrigation, domestic water supply, high quality coldwater aquatic life, primary contact, livestock watering and wildlife habitat.

B. Criteria: the use-specific numeric criteria set forth in 20.6.4.900 NMAC are applicable to the designated uses, except that the following segment-specific criteria apply: specific conductance 500 $\mu\text{S}/\text{cm}$ or less; the monthly geometric mean of *E. coli* bacteria 126 cfu/100 mL or less, single sample 235 cfu/100 mL or less.

[20.6.4.802 NMAC - Rp 20 NMAC 6.1.2802, 10/12/2000; A, 5/23/2005; A, 12/1/2010]

20.6.4.803 CLOSED BASINS:

Perennial reaches of the Mimbres river downstream of the confluence with Allie canyon and all perennial reaches of tributaries thereto.

A. Designated uses: Coolwater aquatic life, irrigation, livestock watering, wildlife habitat and primary contact.

B. Criteria: The use-specific numeric criteria set forth in 20.6.4.900 NMAC are applicable to the designated uses, except that the following segment-specific criteria apply: the monthly geometric mean of E. coli bacteria 126 cfu/100 mL or less, single sample 235 cfu/100 mL or less and temperature of 30°C (86°F) or less.

[20.6.4.803 NMAC - Rp 20 NMAC 6.1.2803, 10/12/2010; A, 5/23/2005; A, 12/1/2010; A, 3/2/2017]

20.6.4.804 CLOSED BASINS:

Perennial reaches of the Mimbres river upstream of the confluence with Allie canyon to Cooney canyon, and all perennial reaches of East Fork Mimbres (McKnight canyon) downstream of the fish barrier, and all perennial reaches thereto.

A. Designated uses: Irrigation, domestic water supply, coldwater aquatic life, livestock watering, wildlife habitat and primary contact.

B. Criteria: The use-specific numeric criteria set forth in 20.6.4.900 NMAC are applicable to the designated uses, except that the following segment-specific criteria apply: the monthly geometric mean of E. coli bacteria 126 cfu/100 mL or less, single sample 235 cfu/100 mL or less.

[20.6.4.804 NMAC - Rp 20 NMAC 6.1.2804, 10/12/2010; A, 5/23/2005; A, 12/1/2010; A, 02-28-2018; A, 3/2/2017]

[NOTE: The segment covered by this section was divided effective 3/2/2017. The standards for the additional segment are covered under 20.6.4.807 NMAC.]

20.6.4.805 CLOSED BASINS:

Perennial reaches of the Sacramento river (Sacramento-Salt Flat closed basin) and all perennial tributaries thereto.

A. Designated uses: domestic water supply, livestock watering, wildlife habitat, marginal coldwater aquatic life and primary contact.

B. Criteria: the use-specific numeric criteria set forth in 20.6.4.900 NMAC are applicable to the designated uses.

[20.6.4.805 NMAC - Rp 20 NMAC 6.1.2805, 10/12/2000; A, 5/23/2005; A, 12/1/2010]

20.6.4.806 CLOSED BASINS:

Bear canyon reservoir.

A. Designated uses: coldwater aquatic life, irrigation, livestock watering, wildlife habitat and primary contact.

B. Criteria: the use-specific numeric criteria set forth in 20.6.4.900 NMAC are applicable to the designated uses, except that the following segment-specific criterion applies: specific conductance 300 μ S/cm or less.

[20.6.4.806 NMAC - N, 5/23/2005; A, 12/1/2010]

20.6.4.807 CLOSED BASINS:

Perennial reaches of the Mimbres river upstream of Cooney canyon and all perennial reaches thereto, including perennial reaches of East Fork Mimbres river (McKnight canyon) upstream of the fish barrier.

A. Designated uses: Irrigation, domestic water supply, high quality coldwater aquatic life, livestock watering, wildlife habitat and primary contact.

B. Criteria: The use-specific numeric criteria set forth in 20.6.4.900 NMAC are applicable to the designated uses, except that the following segment-specific criteria apply: specific conductance 300 μ S/cm or less; the monthly geometric mean of E. coli bacteria 126 cfu/100 mL or less, single sample 235 cfu/100 mL or less.

[20.6.4.807 NMAC - N, 3/2/2017]

20.6.4.808 CLOSED BASINS:

Perennial and intermittent watercourses within Smelter Tailing Soils Investigation Unit lands at the Chino mines company, excluding those ephemeral waters listed in 20.6.4.809 NMAC and including, but not limited to, the mainstem of Lampbright draw, beginning at the confluence of Lampbright Draw with Rustler canyon, all tributaries that originate west of Lampbright draw to the intersection of Lampbright draw with U.S. 180, and all tributaries of Whitewater creek that originate east of Whitewater creek from the confluence of Whitewater creek with Bayard canyon downstream to the intersection of Whitewater creek with U.S. 180.

A. Designated uses: Warmwater aquatic life, livestock watering, wildlife habitat and primary contact.

B. Criteria: The use-specific numeric criteria set forth in 20.6.4.900 NMAC are applicable to the designated uses, except that the following segment-specific criteria apply: the acute and chronic aquatic life criteria for copper set forth in Subsection I of 20.6.4.900 NMAC shall be determined by multiplying that criteria by the water effect ratio ("WER") adjustment expressed by the following equation:

$$\text{WER} = [10^{0.588 + (0.703 \times \log \text{DOC}) + (0.395 \times \log \text{Alkalinity})}] \times (100 - \text{Hardness})^{0.94221931}$$

For purposes of this section, dissolved organic carbon (DOC) is expressed in units of milligrams carbon per liter or mg C/L; alkalinity is expressed in units of mg/L as CaCO₃, and hardness is expressed in units of mg/L as CaCO₃. In waters that contain alkalinity concentrations greater than 250 mg/L, a value of 250 mg/L shall be used in the equation. In waters that contain DOC concentrations greater than 16 mg C/L, a value of 16 mg C/L shall be used in the equation. In waters that contain hardness concentrations greater than 400 mg/L, a value of 400 mg/L shall be used in the equation. The alkalinity, hardness and DOC concentrations used to calculate the WER value are those measured in the subject water sample.

[20.6.4.808 NMAC - N, 3/2/2017]

20.6.4.809 CLOSED BASINS:

Ephemeral watercourses within smelter tailing soils investigation unit lands at the Chino mines company, limited to Chino mines property subwatershed drainage A and tributaries thereof, Chino mines property subwatershed drainage B and tributaries thereof (excluding the northwest tributary containing Ash spring and the Chiricahua leopard frog critical habitat transect); Chino mines property subwatershed drainage C and tributaries thereof (excluding reaches containing Bolton spring, the Chiricahua leopard frog critical habitat transect and all reaches in subwatershed C that are upstream of the Chiricahua leopard frog critical habitat); subwatershed drainage D and tributaries thereof (drainages D-1, D-2 and D-3, excluding the southeast tributary in drainage D1 that contains Brown spring) and subwatershed drainage E and all tributaries thereof (drainages E-1, E-2 and E-3).

A. Designated uses: Limited aquatic life, livestock watering, wildlife habitat and secondary contact.

B. Criteria: The use-specific numeric criteria set forth in 20.6.4.900 NMAC are applicable to the designated uses, except that the following segment-specific criteria apply: the acute aquatic life criteria for copper set forth in Subsection I of 20.6.4.900 NMAC shall be determined by multiplying that criteria by the water effect ratio ("WER") adjustment expressed by the following equation:

$$\text{WER} = [10^{0.588 + (0.703 \times \log \text{DOC}) + (0.395 \times \log \text{Alkalinity})}] \times (100 - \text{Hardness})^{0.94221931}$$

For purposes of this section, dissolved organic carbon (DOC) is expressed in units of milligrams carbon per liter or mg C/L; alkalinity is expressed in units of mg/L as CaCO₃, and hardness is expressed in units of mg/L as CaCO₃. In waters that contain alkalinity concentrations greater than 250 mg/L, a value of 250 mg/L shall be used in the equation. In waters that contain DOC concentrations greater than 16 mg C/L, a value of 16 mg C/L shall be used in the equation. In waters that contain hardness concentrations greater than 400 mg/L, a value of 400 mg/L shall be used in the equation. The alkalinity, hardness and DOC concentrations used to calculate the WER value are those measured in the subject water sample.

[20.6.4.809 NMAC - N, 3/2/2017]

20.6.4.810 CLOSED BASINS:

Perennial reaches of Dog Canyon creek.

A. Designated uses: coolwater aquatic life, irrigation, livestock watering, wildlife habitat, public water supply, and primary contact.

B. Criteria: the use-specific numeric criteria set forth in 20.6.4.900 NMAC are applicable to the designated uses, except that the following segment-specific criteria apply: the monthly geometric mean of E. coli bacteria 126 cfu/100 mL or less, single sample 235 cfu/100 mL or less.

[20.6.4.810 NMAC - N, 2/13/2018]

20.6.4.811-20.6.4.899 [RESERVED]

20.6.4.900 CRITERIA APPLICABLE TO EXISTING, DESIGNATED OR ATTAINABLE USES UNLESS OTHERWISE SPECIFIED IN 20.6.4.97 THROUGH 20.6.4.899 NMAC:

A. Fish culture and water supply: Fish culture, public water supply and industrial water supply are designated uses in particular classified waters of the state where these uses are actually being realized. However, no numeric criteria apply uniquely to these uses. Water quality adequate for these uses is ensured by the general criteria and numeric criteria for bacterial quality, pH and temperature.

B. Domestic water supply: Surface waters of the state designated for use as domestic water supplies shall not contain substances in concentrations that create a lifetime cancer risk of more than one cancer per 100,000 exposed persons. Those criteria listed under domestic water supply in Subsection J of this section apply to this use.

C. Irrigation and irrigation storage: the following numeric criteria and those criteria listed under irrigation in Subsection J of this section apply to this use:

- | | | |
|-----|---|------------|
| (1) | dissolved selenium | 0.13 mg/L |
| (2) | dissolved selenium in presence of >500 mg/L SO ₄ | 0.25 mg/L. |

D. Primary contact: The monthly geometric mean of *E. coli* bacteria of 126 cfu/100 mL or MPN/100 ml, a single sample of *E. coli* bacteria of 410 cfu/100 mL or MPN/100 mL, a single sample of total microcystins of 8 µg/L with no more than three exceedances within a 12-month period and a single sample of cylindrospermopsin of 15 µg/L with no more than three exceedances within a 12-month period, and pH within the range of 6.6 to 9.0 apply to this use. The results for *E. coli* may be reported as either colony forming units (CFU) or the most probable number (MPN) depending on the analytical method used.

E. Secondary contact: The monthly geometric mean of *E. coli* bacteria of 548 cfu/100 mL or MPN/100 mL and single sample of 2507 cfu/100 mL or MPN/100 mL apply to this use. The results for *E. coli* may be reported as either colony forming units (CFU) or the most probable number (MPN), depending on the analytical method used.

F. Livestock watering: the criteria listed in Subsection J of this section for livestock watering apply to this use.

G. Wildlife habitat: Wildlife habitat shall be free from any substances at concentrations that are toxic to or will adversely affect plants and animals that use these environments for feeding, drinking, habitat or propagation; can bioaccumulate; or might impair the community of animals in a watershed or the ecological integrity of surface waters of the state. The numeric criteria listed in Subsection J for wildlife habitat apply to this use.

H. Aquatic life: Surface waters of the state with a designated, existing or attainable use of aquatic life shall be free from any substances at concentrations that can impair the community of plants and animals in or the ecological integrity of surface waters of the state. Except as provided in Paragraph (7) of this subsection, the acute and chronic aquatic life criteria set out in Subsections I, J, K and L of this section and the human health-organism only criteria set out in Subsection J of this section are applicable to all aquatic life use subcategories. In addition, the specific criteria for aquatic life subcategories in the following paragraphs apply to waters classified under the respective designations.

(1) **High quality coldwater:** dissolved oxygen 6.0 mg/L or more, 4T3 temperature 20°C (68°F), maximum temperature 23°C (73°F), pH within the range of 6.6 to 8.8 and specific conductance a segment-specific limit between 300 µS/cm and 1,500 µS/cm depending on the natural background in the particular surface water of the state (the intent of this criterion is to prevent excessive increases in dissolved solids which would result in changes in community structure). Where a single segment-specific

temperature criterion is indicated in 20.6.4.101-899 NMAC, it is the maximum temperature and no 4T3 temperature applies.

(2) Coldwater: dissolved oxygen 6.0 mg/L or more, 6T3 temperature 20°C (68°F), maximum temperature 24°C (75°F) and pH within the range of 6.6 to 8.8. Where a single segment-specific temperature criterion is indicated in 20.6.4.101-899 NMAC, it is the maximum temperature and no 6T3 temperature applies.

(3) Marginal coldwater: dissolved oxygen 6 mg/L or more, 6T3 temperature 25°C (77°F), maximum temperature 29°C (84°F) and pH within the range from 6.6 to 9.0. Where a single segment-specific temperature criterion is indicated in 20.6.4.101-899 NMAC, it is the maximum temperature and no 6T3 temperature applies.

(4) Coolwater: dissolved oxygen 5.0 mg/L or more, maximum temperature 29°C (84°F) and pH within the range of 6.6 to 9.0.

(5) Warmwater: dissolved oxygen 5 mg/L or more, maximum temperature 32.2°C (90°F) and pH within the range of 6.6 to 9.0. Where a segment-specific temperature criterion is indicated in 20.6.4.101-899 NMAC, it is the maximum temperature.

(6) Marginal warmwater: dissolved oxygen 5 mg/L or more, pH within the range of 6.6 to 9.0 and temperatures that may routinely exceed 32.2°C (90°F). Where a segment-specific temperature criterion is indicated in 20.6.4.101-899 NMAC, it is the maximum temperature.

(7) Limited aquatic life: The acute aquatic life criteria of Subsections I and J of this section apply to this subcategory. Chronic aquatic life criteria do not apply unless adopted on a segment-specific basis. Human health-organism only criteria apply only for persistent toxic pollutants unless adopted on a segment-specific basis.

I. Hardness-dependent acute and chronic aquatic life criteria for metals are calculated using the following equations, excluding aquatic life criteria for copper (Cu) for the Pajarito plateau surface waters in the Rio Grande basin as described in Paragraph (4) of Subsection I of 20.6.4.900 NMAC. The criteria are expressed as a function of hardness (as mg CaCO₃/L). With the exception of aluminum, the equations are valid only for hardness concentrations of 0-400 mg/L. For hardness concentrations above 400 mg/L, the criteria for 400 mg/L apply. For aluminum the equations are valid only for hardness concentrations of 0-220 mg/L. For hardness concentrations above 220 mg/L, the aluminum criteria for 220 mg/L apply. Calculated criteria must adhere to the treatment of significant figures and rounding identified in *Standard Methods For The Examination Of Water And Wastewater*, latest edition, American public health association.

(1) Acute aquatic life criteria for metals: The equation to calculate acute criteria in µg/L is $\exp(mA[\ln(\text{hardness})] + bA)(CF)$. Except for aluminum, the criteria are

based on analysis of dissolved metal. For aluminum, the criteria are based on analysis of total recoverable aluminum in a sample that has a pH between 6.5 and 9.0 and is filtered to minimize mineral phases as specified by the department. The equation parameters are as follows:

Metal	m_A	b_A	Conversion factor (CF)
Aluminum (Al)	1.3695	1.8308	
Cadmium (Cd)	0.9789	-3.866	1.136672-[(ln hardness)(0.041838)]
Chromium (Cr) III	0.8190	3.7256	0.316
Copper (Cu)	0.9422	-1.700	0.960
Lead (Pb)	1.273	-1.460	1.46203-[(ln hardness)(0.145712)]
Manganese (Mn)	0.3331	6.4676	
Nickel (Ni)	0.8460	2.255	0.998
Silver (Ag)	1.72	-6.59	0.85
Zinc (Zn)	0.9094	0.9095	0.978

(2) Chronic aquatic life criteria for metals: The equation to calculate chronic criteria in µg/L is $\exp(mC[\ln(\text{hardness})] + bC)(CF)$. Except for aluminum, the criteria are based on analysis of dissolved metal. For aluminum, the criteria are based on analysis of total recoverable aluminum in a sample that has a pH between 6.5 and 9.0 and is filtered to minimize mineral phases as specified by the department. The equation parameters are as follows:

Metal	m_C	b_C	Conversion factor (CF)
Aluminum (Al)	1.3695	0.9161	
Cadmium (Cd)	0.7977	-3.909	1.101672-[(ln hardness)(0.041838)]
Chromium (Cr) III	0.8190	0.6848	0.860
Copper (Cu)	0.8545	-1.702	0.960
Lead (Pb)	1.273	-4.705	1.46203-[(ln hardness)(0.145712)]
Manganese (Mn)	0.3331	5.8743	
Nickel (Ni)	0.8460	0.0584	0.997
Zinc (Zn)	0.9094	0.6235	0.986

(3) Selected values of calculated acute and chronic criteria (µg/L).

Hardness as CaCO ₃ , dissolved (mg/L)		Al	Cd	Cr III	Cu	Pb	Mn	Ni	Ag	Zn

(4) Copper criteria for Pajarito plateau surface waters: Pajarito plateau surface waters extend from Guaje canyon in the north to the Rito de los Frijoles watershed in the south, from their headwaters to their confluence with the Rio Grande and all tributaries and streams thereto. The equations used to calculate copper criteria, for purposes of this Part, use dissolved organic carbon (DOC) in units of milligrams carbon per liter (mg C/L); and hardness in units of mg/L as CaCO₃. In waters that contain DOC concentrations greater than 29.7 mg/L, a value of 29.7 mg/L shall be used in the following equations. In waters that contain hardness concentrations greater than 207 mg/L, a value of 207 mg/L shall be used in the following equations.

(a) Acute aquatic life criteria: The equation to calculate acute criteria in µg/L is $\exp(-22.914+1.017 \times \ln(\text{DOC})+0.045 \times \ln(\text{hardness})+5.176 \times \text{pH}-0.261 \times \text{pH}^2)$.

(b) Chronic aquatic life criteria: The equation to calculate chronic criteria in µg/L is $\exp(-23.391+1.017 \times \ln(\text{DOC})+0.045 \times \ln(\text{hardness})+5.176 \times \text{pH}-0.261 \times \text{pH}^2)$.

J. Use-specific numeric criteria.

(1) Table of numeric criteria: The following table sets forth the numeric criteria applicable to existing, designated and attainable uses. For metals, criteria represent the total sample fraction unless otherwise specified in the table. Additional criteria that are not compatible with this table are found in Subsections A through I and K through M of 20.6.4.900 NMAC.

Pollutant	CAS Number	DWS	Irr/Irr storage	LW	WH	Aquatic Life			Type
						Acute	Chronic	HH-OO	
Aluminum, dissolved	7429-90-5		5,000			750 i	87 i

(2) Notes applicable to the table of numeric criteria in Paragraph (1) of this subsection.

(a) Where the letter "a" is indicated in a cell, the criterion is based on receiving water characteristics and can be referenced in Subsection I of 20.6.4.900 NMAC.

(b) Where the letter "b" is indicated in a cell, the criterion can be referenced in Subsection C of 20.6.4.900 NMAC.

(c) Criteria are in µg/L unless otherwise indicated.

(d) Abbreviations are as follows: CAS - chemical abstracts service (see definition for "CAS number" in 20.6.4.7 NMAC); DWS - domestic water supply; Irr/Irr storage- irrigation and irrigation storage; LW - livestock watering; WH - wildlife habitat; HH-OO - human health-organism only; C – criteria based on cancer-causing endpoint; P - persistent toxic pollutant.

(e) The criteria are based on analysis of an unfiltered sample unless otherwise indicated. The acute and chronic aquatic life criteria for aluminum are based on analysis of total recoverable aluminum in a sample that is filtered to minimize mineral phases as specified by the department.

(f) The criteria listed under human health-organism only (HH-OO) are intended to protect human health when aquatic organisms are consumed from waters containing pollutants. These criteria do not protect the aquatic life itself; rather, they protect the health of humans who ingest fish or other aquatic organisms.

(g) The dioxin criteria apply to the sum of the dioxin toxicity equivalents expressed as 2,3,7,8-TCDD dioxin.

(h) The criteria for polychlorinated biphenyls (PCBs) apply to the sum of all congeners, to the sum of all homologs or to the sum of all aroclors.

(i) The acute and chronic aquatic life criteria for dissolved aluminum only apply when the concurrent pH is less than 6.5 or greater than 9.0 S.U. If the concurrent pH is between 6.5 and 9.0 S.U. then the hardness-dependent total recoverable aluminum criteria in Paragraphs (1) and (2) of Subsection I of 20.6.4.900 NMAC apply.

K. The criteria for total ammonia consider sensitive freshwater mussel species in the family Unionidae, freshwater non-pulmonate snails, and *Oncorhynchus* spp. (a genus of fish in the family Salmonidae), hence further protecting the aquatic community. The total ammonia criteria magnitude is measured as Total Ammonia Nitrogen (TAN) mg/L. TAN is the sum of and TAN mg/L magnitude is derived as a function of pH and temperature (EPA 2013).

L. The acute aquatic life criteria for TAN (mg/L) was derived by the EPA (2013) as the one-hour average concentration of TAN mg/L that shall not be exceeded more than once every three years on average. The EPA acute criterion magnitude was derived using the following equation:

$\text{Acute TAN Criterion Magnitude for 1-hour average} = \text{MIN}$
<p>T (temperature C) and pH are defined as the paired values associated with the TAN sample.</p>

(1) Temperature and pH-dependent values of the acute TAN criterion magnitude -when *Oncorhynchus* spp. absent.

M. The chronic aquatic life criteria for TAN (mg/L) was derived by the EPA (2013) as a thirty-day rolling average concentration of TAN mg/L that shall not be exceeded more than once every three years on average. In addition, the highest four-day average within the 30-day averaging period should not be more than 2.5 times the CCC (e.g., 2.5 x 1.9 mg TAN/L at pH 7 and 20°C, or 4.8 mg TAN/L) more than once in three years on average. The EPA chronic criterion magnitude was derived using the following equation:

Chronic TAN Criterion Magnitude for 30-day average=
T (temperature °C) and pH are defined as the paired values associated with the TAN sample.

Temperature and pH-Dependent Values of the Chronic TAN Criterion Magnitude.

PART 5: [RESERVED]

PART 6: GROUND WATER PROTECTION - SUPPLEMENTAL PERMITTING REQUIREMENTS FOR DAIRY FACILITIES

20.6.6.1 ISSUING AGENCY:

Water Quality Control Commission.

[20.6.6.1 NMAC - N, 01/31/2011]

20.6.6.2 SCOPE:

All persons subject to the Water Quality Act, NMSA 1978, Sections 74-6-1 et seq and specifically to dairy facilities and their operations.

[20.6.6.2 NMAC - N, 01/31/2011]

20.6.6.3 STATUTORY AUTHORITY:

Standards and regulations are adopted by the commission under the authority of the Water Quality Act, NMSA 1978, Sections 74-6-1 through 74-6-17.

[20.6.6.3 NMAC - N, 01/31/2011]

20.6.6.4 DURATION:

Permanent.

[20.6.6.4 NMAC - N, 01/31/2011]

20.6.6.5 EFFECTIVE DATE:

01/31/2011, unless a later date is cited at the end of a section.

[20.6.6.5 NMAC - N, 01/31/2011]

20.6.6.6 OBJECTIVE:

The purpose of 20.6.6 NMAC is to supplement the general permitting requirements of 20.6.2.3000 through 20.6.2.3114 NMAC to control discharges specific to dairy facilities and their operations.

[20.6.6.6 NMAC - N, 01/31/2011]

20.6.6.7 DEFINITIONS:

A. Terms defined in the Water Quality Act and 20.6.2.7 NMAC shall have the meanings as given in such.

B. As used in 20.6.6 NMAC, but not in other sections of 20.6.2 NMAC, a term defined in this part shall have the following meaning.

(1) "Adjacent" means lying near, but lacking actual contact along a boundary or at a point.

(2) "Applicant" means the person applying for a new, renewed or modified discharge permit.

(3) "Construction quality assurance" or "CQA" means a planned system of activities necessary to ensure that standards and procedures are adhered to and that construction and installation meet design criteria, plans and specifications. A CQA includes inspections, verifications, audits, evaluations of material and workmanship necessary to determine and document the quality of the constructed impoundment or structure, and corrective actions when necessary.

(4) "Construction quality control" or "CQC" means a planned system of operational techniques and activities used to preserve the quality of materials and ensure construction to specifications. Elements of a CQC include inspections, testing, data collection, data analysis and appropriate corrective actions.

(5) "Contiguous" means being in actual contact along a boundary or at a point.

(6) "CQA/CQC Report" means a report that summarizes all inspection, testing, data collection, data analysis and any corrective actions completed as part of CQA or CQC for a project.

(7) "Dairy facility" means the production area and the land application area, where the discharge and associated activities will or do take place.

(8) "Dairy rule" means 20.6.6 NMAC, as amended.

(9) "Date of postal notice" means the date when the United States postal service (USPS) first makes notice to the applicant or permittee of its possession of certified mail addressed to the applicant or permittee.

(10) "Discharge volume" means the measured daily volume of wastewater actually discharged within the production area. This definition does not include the volume of wastewater discharged to the land application area.

(11) "EPA" means the United States environmental protection agency.

(12) "Existing dairy facility" means a dairy facility that is currently discharging, or has previously discharged and has not been issued a notice from the department verifying that closure and post-closure monitoring activities have been completed.

(13) "Existing impoundment" means an impoundment that is currently receiving or has ever received wastewater or collected stormwater and that has not been closed pursuant to a discharge permit.

(14) "Expiration" means the date upon which the term of a discharge permit ends.

(15) "Field" means a unit of irrigated cropland within the land application area cultivated in the same manner to grow a specific crop for the uptake and removal of nutrients.

(16) "Flow meter" means a device used to measure the volume of water, wastewater or stormwater that passes a particular reference section in a unit of time.

(17) "Freeboard" means the vertical distance between the elevation at the lowest point of the top inside edge of the impoundment and the design high water elevation of the water level in the impoundment.

(18) "Impoundment" means any structure designed and used for storage or disposal by evaporation of wastewater, stormwater, or a combination of both wastewater and stormwater. A multiple-cell impoundment system having at least one shared berm or barrier whose smallest cells have a cumulative constructed capacity of 10 percent or less of the constructed capacity of the largest cell shall be considered a single impoundment for the purposes of the dairy rule. A wastewater or stormwater transfer sump or a solids settling separator is not an impoundment.

(19) "Land application area" means irrigated and cultivated fields collectively authorized by a discharge permit to receive wastewater or stormwater applications as a source of nutrients managed for crop production.

(20) "Land application data sheet" means a form used to report all nitrogen inputs applied to each field within the land application area, including the cropping status of the field at the time of application (i.e., fallow, corn, wheat, etc.).

(21) "Manure" means an agricultural waste composed of excreta of animals, and residual bedding materials, waste feed or other materials that have contacted excreta from such animals.

(22) "Maximum daily discharge volume" means the total daily volume of wastewater (expressed in gallons per day) authorized for discharge by a discharge permit. This definition does not include the volume of wastewater discharged to the land application area.

(23) "New dairy facility" means a dairy facility that has never before discharged wastewater.

(24) "Permittee" means a person who is issued or receives by transfer a discharge permit for a dairy facility or, in the absence of a discharge permit, a person who makes or controls a discharge at a dairy facility.

(25) "Production area" means that part of the animal feeding operation that includes the following: the animal confinement areas; the manure, residual solids and compost storage areas; the raw materials storage areas; and the wastewater and stormwater containment areas. The animal confinement areas include but are not limited to open lots, housed lots, feedlots, confinement barns, stall barns, free stall barns, milkrooms, milk centers, cowyards, barnyards, hospital pens and barns, and animal walkways. The manure, residual solids and compost storage areas include, but are not limited to, storage sheds, stockpiles, static piles, and composting piles. The raw materials storage areas include, but are not limited, to feed silos, silage storage areas, feed storage barns, and liquid feed tanks. The wastewater and stormwater containment

areas include, but are not limited to, settling separators, impoundments, sumps, runoff drainage channels, and areas within berms and diversions which prohibit uncontaminated stormwater from coming into contact with contaminants.

(26) "Spillway" means a structure used for controlled releases from an impoundment designed to receive stormwater, in a manner that protects the structural integrity of the impoundment.

(27) "Stormwater" means direct precipitation and runoff that comes into contact with water contaminants within the production area of a dairy facility.

(28) "Unauthorized discharge" means a release of wastewater, stormwater or other substances containing water contaminants not approved by a discharge permit.

(29) "Wastewater" means water, that has come into contact with water contaminants as a result of being directly or indirectly used in the operations of a dairy facility including, but not limited to, the following: washing, cleaning, or flushing barns or other roof-covered production areas; washing of animals; spray-cooling of animals (except in open lots); and cooling or cleaning of feed mills and equipment. Wastewater does not include overflow from the drinking water system or stormwater unless overflow or stormwater that is collected is comingled with wastewater, or it comes into contact with water contaminants as a result of being directly or indirectly used in dairy facility operations.

[20.6.6.7 NMAC - N, 01/31/2011; A, 06/16/2015]

20.6.6.8 REQUIREMENTS FOR DISCHARGING FROM DAIRY FACILITIES:

A. No person shall discharge from a dairy facility without a discharge permit. A person intending to discharge from a dairy facility shall submit an application for a discharge permit pursuant to 20.6.6.10 NMAC and remit fees pursuant to 20.6.6.9 NMAC.

B. Permittees, owners of record of a dairy facility and holders of an expired permit are responsible for complying with the dairy rule.

C. Unless otherwise noted in 20.6.6 NMAC, the requirements of 20.6.2.3101 through 20.6.2.3114 NMAC apply to a dairy facility.

D. Complying with the requirements of 20.6.6 NMAC does not relieve a dairy facility's owner, operator or permittee from complying with the requirements of other applicable local, state and federal regulations or laws.

[20.6.6.8 NMAC - N, 01/31/2011]

20.6.6.9 FEES:

In lieu of paying fees under the requirements of 20.6.2.3114 NMAC, an applicant or permittee shall pay fees to the department pursuant to this section.

A. An applicant for a discharge permit or a discharge permit renewal for a dairy facility shall remit with the application to the department a filing fee in the amount of one hundred dollars (\$100) and one-half of the applicable permit fee from table 1 of 20.6.2.3114 NMAC. The filing fee and the permit fee payment remitted with the application are not refundable and may not be applied toward future discharge permit applications. If the department issues a discharge permit, the permittee shall remit a permit fee payment equal to one-tenth of the applicable permit fee from table 1 of 20.6.2.3114 NMAC on the first occurrence of August 1 after the effective date of the discharge permit, and annually thereafter until the expiration or termination of the discharge permit.

B. An applicant for a discharge permit modification separate from a discharge permit renewal shall remit a filing fee of one hundred dollars (\$100) and a permit modification fee with the application. The permit modification fee shall be equal to one-half of the applicable permit fee from table 1 of 20.6.2.3114 NMAC. The filing fee and the permit modification fee payment remitted with the application are not refundable and may not be applied toward future discharge permit applications. Payment of the permit modification fee shall not relieve a permittee from remitting the permit fee payments required by Subsection A of this section. If the discharge permit modification is required by the secretary outside the context of an enforcement action, a permit modification fee is not required.

C. A permittee requesting temporary permission to discharge pursuant to Subsection B of 20.6.2.3106 NMAC shall pay the fee specified in 20.6.2.3114 NMAC.

[20.6.6.9 NMAC - N, 01/31/2011]

20.6.6.10 GENERAL APPLICATION REQUIREMENTS FOR ALL DAIRY FACILITIES:

This section specifies the general requirements for discharge permit applications for all types of dairy facilities.

A. In lieu of Subsection F of 20.6.2.3106 NMAC, a permittee shall submit an application for renewal of a discharge permit for a dairy facility to the department at least one year before the discharge permit expiration date, unless closure of the facility is approved by the department before that date. At least 180 days before the due date for an application for renewal, a permittee may request a pre-application meeting with the department. The pre-application meeting shall be held in Santa Fe, unless otherwise agreed by the department. Requests shall be made in writing and submitted to the department by certified mail. If a permittee requests a pre-application meeting, the department shall contact the permittee to discuss and schedule a date for the pre-application meeting. The department shall respond to the permittee's request in writing

by certified mail to confirm the pre-application meeting date. The pre-application meeting shall occur no less than 60 days before the application due date. If the permittee or his representative fails to participate in the scheduled pre-application meeting, the permittee forfeits the opportunity for a pre-application meeting.

B. For a dairy facility that has not been constructed or operated, a permittee shall submit to the department at least one year before the discharge permit expiration date an application for renewal pursuant to Subsection A of this section or a statement certifying that the dairy facility has not been and will not be constructed or operated and that no discharges have occurred or will occur. Upon the department's verification of the certification, the department shall terminate the discharge permit, if necessary, and retire the discharge permit number from use.

C. Instead of the information required by Subsection C of 20.6.2.3106 NMAC, an applicant:

(1) for a new discharge permit, shall provide the information and supporting technical documentation pursuant to this section and 20.6.6.11 NMAC;

(2) for a renewed or modified discharge permit, shall provide the information and supporting technical documentation pursuant to this section and 20.6.6.12 NMAC; or

(3) for a renewed discharge permit for closure, shall provide the information and supporting technical documentation pursuant to this section and 20.6.6.13 NMAC.

D. The department shall create a discharge permit application form for dairy facilities applying for a new discharge permit, for dairy facilities applying for a renewed, modified or renewed and modified discharge permit, and for dairy facilities applying for a discharge permit for closure to collect the information required by this section. The information requested on the form(s) shall be limited to the information required by this section. An applicant shall use the department's form to provide the information required by this section. An application shall consist of the appropriate form and required supporting documentation, regardless of previous submissions. The applicant shall attest to the truth of the information and supporting documentation in the application, and sign the form. The form shall be signed in the presence of a notary and notarized. The applicant shall provide to the department a hard copy (paper format) of the original signed and notarized completed application form and all supporting documentation. The applicant shall also provide an electronic copy of the original signed and notarized application and all supporting documentation in portable document format (PDF) on a compact disc (CD) or digital versatile disc (DVD).

E. If an applicant filing an application for a new discharge permit does not certify that the dairy facility complies with the setback requirements of 20.6.6.16 NMAC, as required by Subsection D of 20.6.6.11 NMAC, the department shall reject the

application. The department shall provide notice of the rejection to the applicant by certified mail.

F. Within 60 days of the department's receipt of proof of notice pursuant to Subsection D of 20.6.2.3108 NMAC, the department shall review the application for technical completeness. If proof of notice is not submitted to the department pursuant to Subsection D of 20.6.2.3108 NMAC, the department shall notify the applicant by certified mail of the violation and provide 15 days from the date of postal notice for the applicant to submit the proof pursuant to Subsection D of 20.6.2.3108 NMAC. If proof of notice is not submitted to the department following the issuance of a notice of violation, the department may deny the application.

G. For an application to be deemed technically complete, an application shall include the information required by Subsection C of this section. Submittals or supporting documentation that require the certification of persons specified in the dairy rule are deemed technically complete if the documentation is prepared in accordance with the dairy rule and is certified by persons specified in the dairy rule. If the department determines that an application is not technically complete, the department shall provide notice of technical deficiency to the applicant by certified mail within 60 days of receipt of the applicant's proof of notice. The applicant shall have 60 days from the date of postal notice of the technical deficiency correspondence to provide the information required by this section.

(1) If an application is technically complete, the department shall make available a proposed approval of a discharge permit (i.e., draft discharge permit) or denial of a discharge permit application, pursuant to Subsection H of 20.6.2.3108 NMAC.

(2) If an applicant filing an application for a new discharge permit does not provide all information required by this section to the department within 60 days of the date of postal notice of the technical deficiency correspondence, the department shall deny the application. The department shall provide notice of denial to the applicant by certified mail.

(3) If an applicant for a renewed or modified discharge permit does not provide all information required by this section to the department within 60 days of the date of postal notice of the technical deficiency correspondence, the department may deny the application or may propose a discharge permit for approval consistent with the requirements of the dairy rule. If the department denies the application, the department shall provide notice of denial to the applicant by certified mail.

H. An applicant may propose alternate methods and innovative technologies such as new or advanced storage, treatment or disposal methods not directly addressed by this rule or different from those specified in 20.6.6.17, 20 and 21 NMAC. At its discretion, the department may approve an alternate method provided all of the following conditions are met:

(1) A pre-application meeting is held prior to application submittal. The meeting may be held at an appropriate demonstration site to show the suitability/applicability of the proposed method.

(2) A demonstration is made to the department's satisfaction that the proposed alternate method or technology, including its engineering design, equipment, process, operation and maintenance, will not result in an exceedance of the water quality standards of 20.6.2.3103 NMAC.

(3) Plans and specifications are submitted that meet the requirements of Subsections A and B of 20.6.6.17 NMAC.

(4) A plan to monitor ground water that may be affected by the alternate method or technology shall be submitted that is consistent with requirements of 20.6.6.23 NMAC.

I. The department may impose additional conditions on a discharge permit in accordance with Section 74-6-5 NMSA 1978. If the department proposes an additional condition in a discharge permit that is not included in the dairy rule, the department shall include a written explanation of the reason for the additional condition with the copy of the proposed approval sent to the applicant pursuant to Subsection H of 20.6.2.3108 NMAC. Written comments about the additional condition may be submitted to the department during the 30-day comment period provided by Subsection K of 20.6.2.3108 NMAC. A hearing may be requested about the additional condition as provided by 20.6.6.15 NMAC.

J. The secretary shall approve a discharge permit provided that it poses neither a hazard to public health nor undue risk to property, and:

(1) the requirements of the dairy rule are met;

(2) the provisions of 20.6.2.3109 NMAC are met, with the exception of Subsection C of 20.6.2.3109 NMAC; and

(3) denial of an application for a discharge permit is not required pursuant to Subsection E of 74-6-5 NMSA 1978.

[20.6.6.10 NMAC - N, 01/31/2011; A, 06/16/2015; A, 06/30/2015]

20.6.6.11 APPLICATION REQUIREMENTS FOR NEW DISCHARGE PERMITS:

A. An application for a new discharge permit shall include the information in this section.

B. Contact information. An application shall include:

(1) applicant's name, title and affiliation with the dairy facility, mailing address, and phone number;

(2) dairy facility manager's or operator's name, title and affiliation with the dairy facility, mailing address and phone number;

(3) application preparer's name, title and affiliation with the dairy facility, mailing address, phone number and signature; and

(4) mailing address and phone number of any consultants authorized to assist the dairy facility with compliance with the Water Quality Act and 20.6.2 and 20.6.6 NMAC.

C. Ownership and real property agreements.

(1) An application shall include the dairy facility owner's name, title, mailing address and phone number.

(a) If more than one person has an ownership interest in the dairy facility or a partnership exists, then the applicant shall list all persons having an ownership interest in the dairy facility, including their names, titles, mailing addresses and phone numbers.

(b) If any corporate entity, including but not limited to a corporation or a limited liability company, holds an ownership interest in the dairy facility, then the applicant shall also list the name(s), as filed with the New Mexico public regulation commission, of the corporate entity, and the corporate entity's registered agent's name and address.

(2) If the applicant is not the owner of record of the real property upon which the dairy facility is or will be situated, or upon which dairy operations and land application will occur, then the applicant shall submit a copy of any lease agreement or other agreement which authorizes the use of the real property for the duration of the term of the requested permit. Lease prices or other price terms may be redacted.

D. Setbacks. The applicant shall certify that the setback requirements of 20.6.6.16 NMAC are met. An application shall include a scaled map of the dairy facility layout demonstrating that the proposed layout of the dairy facility meets the setback requirements of 20.6.6.16 NMAC.

E. Dairy facility information and location. An application shall include:

(1) the dairy facility name, physical address and county; and

(2) the township, range and section for the entire dairy facility, which includes the production area and fields within the land application area.

F. Public notice preparation. An application shall include the name of a newspaper of general circulation in the location of the dairy facility for the future display advertisement publication, the proposed public location(s) for posting of the 2-foot by 3-foot sign, and the proposed off-site public location for posting of the 8.5-inch by 11-inch flyer, as required by 20.6.2.3108 NMAC.

G. Pre-discharge total dissolved solids concentration in ground water. Pursuant to Paragraph (3) of Subsection C of 20.6.2.3106 NMAC, an application shall include the pre-discharge total dissolved solids concentration from analytical results of ground water obtained from the on-site test boring pursuant to Subsection X of 20.6.6.20 NMAC, if applicable, or from the nearest well within a one-mile radius of the dairy facility. A copy of the laboratory analysis stating the pre-discharge total dissolved solids concentration shall be submitted with the application.

H. Determination of maximum daily discharge volume. An application shall include the following information.

(1) The proposed maximum daily discharge volume and a description of the methods and calculations used to determine that volume.

(2) The identification of all sources of wastewater which may include, but are not limited to, hospital barns, maternity barns, bottle-washing operations and parlor/equipment washdown.

(3) The animal washing method(s) employed and the estimated daily wastewater volume generated by the method(s).

(4) Information regarding other wastewater discharges (i.e., domestic or industrial) at the dairy facility not generated by dairy operations. Permit identification numbers shall be submitted for those discharges that are already permitted.

I. Wastewater quality. An application shall include estimated concentrations of wastewater quality for total dissolved solids, chloride, total sulfur, nitrate as nitrogen, and total Kjeldahl nitrogen.

J. Identification and physical description of the dairy facility. An application shall include the following information.

(1) A scaled map of the entire dairy facility pursuant to Subsection U of 20.6.6.20 NMAC.

(2) The identification of each proposed impoundment, including information about its location, purpose (i.e., to store wastewater or stormwater, or dispose of it by evaporation), liner material and storage or evaporative disposal capacity.

(3) The identification of each field within the proposed land application area, including information about its location, acreage, proposed method of wastewater and stormwater application and proposed method of irrigation water application.

(4) The identification of proposed sumps and mix tanks, including information for each component regarding its location, purpose, construction material, dimensions and capacity.

(5) A description of the proposed method(s) employed to protect each area from stormwater runoff and run-on, and to minimize leachate.

K. Flow metering. An application shall describe a dairy facility's flow metering system pursuant to Subsections J, K, L, M, N and O of 20.6.6.20 NMAC and Subsections G and H of 20.6.6.21 NMAC, including:

(1) the identification of the method(s) (i.e., pumped versus gravity flow) of wastewater discharge, stormwater transfer, and wastewater and stormwater land application;

(2) the proposed flow measurement devices for each flow method; and

(3) the identification of flow meter locations.

L. Depth-to-most-shallow ground water and ground water flow direction. An application shall include the following information.

(1) The depth-to-most-shallow ground water pursuant to Subsection X of 20.6.6.20 NMAC.

(2) The ground water flow direction of the most-shallow ground water beneath the dairy facility based on the most recent regional water level data or published hydrogeologic information. Survey data from nearby monitoring wells and a ground water elevation contour map indicating the direction of ground water flow may be included. The sources of all information used to determine ground water flow direction shall be provided with the application.

M. Monitoring wells. An application shall include the proposed monitoring well locations pursuant to Subsections A and B of 20.6.6.23 NMAC.

N. Surface soil survey and vadose zone geology. An application shall include:

(1) the most recent regional soil survey map and associated descriptions identifying surface soil type(s); and

(2) if applicable, the lithologic log obtained from the on-site test boring pursuant to Subsection X of 20.6.6.20 NMAC to identify the geological profile of the vadose zone.

O. Location map. An application shall include a location map with topographic surface contours identifying all of the following features located within a one-mile radius of the dairy facility:

(1) watercourses, lakebeds, sinkholes, playa lakes and springs (springs used to provide water for human consumption shall be so denoted);

(2) wells supplying water for a public water system and private domestic water wells;

(3) irrigation supply wells; and

(4) ditch irrigations systems, acequias, irrigation canals and drains.

P. Flood zone map. An application shall include the most recent 100-year flood zone map developed by the federal emergency management administration, FEMA, documenting flood potential for the dairy facility, and a description of any engineered measures used for flood protection.

Q. Engineering and surveying. Pursuant to 20.6.6.17 NMAC an application shall include:

(1) plans and specifications for impoundments and associated liners;

(2) plans and specifications for a manure solids separator(s); and

(3) a grading and drainage report and plan.

R. Land application area. For a dairy facility with a land application area, an application shall include the following information.

(1) A nutrient management plan (NMP) pursuant to Subsections I and J of 20.6.6.21 NMAC.

(2) A written description of the wastewater sampling location(s) pursuant to Subsection C of 20.6.6.25 NMAC.

[20.6.6.11 NMAC - N, 01/31/2011; A, 12/31/2011]

20.6.6.12 APPLICATION REQUIREMENTS FOR DISCHARGE PERMIT RENEWAL OR MODIFICATION:

A. An application for a renewed or modified discharge permit shall include the information in this section.

B. Contact information. An application shall include the:

(1) applicant's name, title and affiliation with the dairy facility, mailing address, and phone number;

(2) dairy facility manager's or operator's name, title and affiliation with the dairy facility, mailing address and phone number;

(3) application preparer's name, title and affiliation with the dairy facility, mailing address, phone number and signature; and

(4) mailing address and phone number of any consultants authorized to assist the dairy facility with compliance with the Water Quality Act and 20.6.2 and 20.6.6 NMAC.

C. Ownership and real property agreements.

(1) An application shall include the dairy facility owner's name, title, mailing address and phone number.

(a) If more than one person has an ownership interest in the dairy facility or a partnership exists, then the applicant shall list all persons having an ownership interest in the dairy facility, including their names, titles, mailing addresses and phone numbers.

(b) If any corporate entity, including but not limited to a corporation or a limited liability company, holds an ownership interest in the dairy facility, then the applicant shall also list the name(s), as filed with the New Mexico public regulation commission, of the corporate entity and the corporate entity's registered agent's name and address.

(2) If the applicant is not the owner of record of the real property upon which the dairy facility is or will be situated, or upon which dairy operations and land application will occur, then the applicant shall submit a copy of any lease agreement or other agreement which authorizes the use of the real property for the duration of the term of the requested permit. Lease prices or other price terms may be redacted.

D. Dairy facility information and location. An application shall include:

(1) the dairy facility name, physical address and county;

(2) the discharge permit identification number as designated on the most recent discharge permit for the dairy facility;

(3) the township, range and section for the entire dairy facility, which includes the production area and fields within the land application area; and

(4) the date of initial discharge at the dairy facility.

E. Public notice preparation.

(1) An application for a modified or renewed and modified discharge permit shall include the name of a newspaper of general circulation in the location of the dairy facility for the future display advertisement publication, the proposed public location(s) for posting of the 2-foot by 3-foot sign, and the proposed off-site public location for posting of the 8.5-inch by 11-inch flyer, as required by Subsection B of 20.6.2.3108 NMAC.

(2) An application for a renewed discharge permit without modification shall include the name of a newspaper of general circulation in the location of the dairy facility for the future display advertisement publication as required by Subsection C of 20.6.2.3108 NMAC.

F. Pre-discharge total dissolved solids concentration in ground water.

Pursuant to Paragraph (3) of Subsection C of 20.6.2.3106 NMAC, an application shall include the pre-discharge total dissolved solids concentration in ground water, sample source (e.g., upgradient monitoring well, on-site supply well, nearest well within a one-mile radius of the dairy facility) and a copy of the laboratory analysis.

G. Determination of maximum daily discharge volume. An application shall include the following information.

(1) The proposed maximum daily discharge volume and a description of the methods and calculations used to determine that volume.

(2) The identification of all sources of wastewater which may include, but are not limited to, hospital barns, maternity barns, bottle-washing operations and parlor/equipment washdown.

(3) The animal washing method(s) employed and the estimated daily wastewater volume generated by the method(s).

(4) Information regarding other wastewater discharges (i.e., domestic or industrial) at the dairy facility not generated by dairy operations. Permit identification numbers shall be submitted for those discharges that are already permitted.

H. Identification and physical description of dairy facility. An application shall include the following information.

(1) A scaled map of the entire dairy facility pursuant to Subsection U of 20.6.6.20 NMAC.

(2) The identification of each proposed, existing and closed impoundment, including information for each impoundment regarding its location, purpose (i.e., to store wastewater or stormwater, or dispose of it by evaporation), date of original construction, past and existing liner material, date of current liner installation and storage or evaporative disposal capacity.

(3) The identification of each existing, proposed, and previously used field within the land application area, including information for each field about its location, date of initial application of wastewater or stormwater, acreage, status with regard to having received wastewater or stormwater (i.e. never, inactive, active), current method of backflow prevention employed, current method of wastewater and stormwater application and current method of irrigation water application.

(4) The identification of sumps and mix tanks, including information for each component regarding its location, purpose, date of original construction, construction material, dimensions and capacity.

(5) The settled solids thickness measurements for each existing wastewater and combination impoundment pursuant to Subsection D of 20.6.6.20 NMAC.

(6) A description of proposed and existing method(s) of solids separation pursuant to Paragraph (5) of Subsection C of 20.6.6.17 NMAC and Subsection F of 20.6.6.20 NMAC.

(7) A description of the method(s) employed to protect each manure, silage and compost storage area from stormwater runoff and run-on, and to minimize leachate.

I. Flow metering. An application shall describe a dairy facility's flow metering system pursuant to Subsections J, K, L, M, N and O of 20.6.6.20 NMAC and Subsections G and H of 20.6.6.21 NMAC including:

(1) the identification of the method(s) (i.e. pumped versus gravity flow) of wastewater discharge, stormwater transfer and wastewater and stormwater land application;

(2) a description of the existing and proposed flow measurement devices for each flow method; and

(3) the identification of flow meter locations.

J. Depth-to-most-shallow ground water and ground water flow direction.

(1) An application for renewal or modification shall provide the depth-to-most-shallow ground water and indicate ground water flow direction beneath the dairy facility on a ground water elevation contour map. The ground water elevation contour map shall be developed based upon the most recent ground water levels obtained with a water level measuring device and survey data from on-site monitoring wells obtained from a survey, pursuant to 20.6.6.23 NMAC.

(2) If a dairy facility does not have a monitoring well intersecting most-shallow ground water, an applicant shall provide the following information.

(a) The depth-to-most-shallow ground water pursuant to Subsection X of 20.6.6.20 NMAC.

(b) The ground water flow direction of the most-shallow ground water beneath the dairy facility based upon the most recent regional water level data or published hydrogeologic information. Survey data from nearby monitoring wells and a ground water elevation contour map indicating the direction of ground water flow may be included. The sources of all information used to determine ground water flow direction shall be provided with the application.

K. Monitoring wells. An application shall include:

(1) the construction logs for all existing, on-site monitoring wells, which indicate the date of installation and well driller; and

(2) the identification of monitoring well locations, proposed and existing, pursuant to Subsections A and B of 20.6.6.23 NMAC.

L. Surface soil survey and vadose zone geology. An application shall include:

(1) the most recent regional soil survey map and associated descriptions identifying surface soil type(s);

(2) the lithologic logs from all existing, on-site monitoring wells, if available; and

(3) if applicable, where a dairy facility does not have a monitoring well intersecting most-shallow ground water, the application shall include the lithologic log obtained from the on-site test boring pursuant to Subsection X of 20.6.6.20 NMAC to identify the geological profile of the vadose zone.

M. Location map. An application shall include a location map with topographic surface contours identifying all of the following features located within a one-mile radius of the dairy facility:

(1) watercourses, lakebeds, sinkholes, playa lakes and springs (springs used to provide water for human consumption shall be so denoted);

(2) wells supplying water for a public water system and private domestic water wells;

(3) irrigation supply wells; and

(4) ditch irrigations systems, acequias, irrigation canals and drains.

N. Flood zone map. An application shall include the most recent 100-year flood zone map developed by the federal emergency management administration, FEMA, documenting flood potential for the dairy facility, and a description of any engineered measures used for flood protection.

O. Engineering and surveying. An application shall include the following information.

(1) Plans and specifications for new or improved structures and associated liners proposed by the applicant pursuant to 20.6.6.17 NMAC.

(2) Record drawings and final specifications for existing structures and associated liners. For existing impoundments where record drawings and final specifications do not exist, survey data and capacity calculations shall be submitted pursuant to Subsection C of 20.6.6.20 NMAC.

P. Land application area. For a dairy facility with a land application area, an application shall include the following information.

(1) Documentation confirming the existence of infrastructure necessary to distribute and apply wastewater and stormwater to the land application area pursuant to Subsection E of 20.6.6.21 NMAC.

(2) A nutrient management plan (NMP) pursuant to Subsections I and J of 20.6.6.21 NMAC.

(3) A written description of the wastewater sampling location(s) pursuant to Subsection C of 20.6.6.25 NMAC.

[20.6.6.12 NMAC - N, 01/31/2011; A, 12/31/2011]

20.6.6.13 APPLICATION REQUIREMENTS FOR A DISCHARGE PERMIT FOR CLOSURE:

An application for a discharge permit for closure shall include the information required by Subsections B, C, D, E, F, J, K, L, M and N of 20.6.6.12 NMAC and Paragraphs (1),

(2), (3) and (4) of Subsection H of 20.6.6.12 NMAC. For dairy facilities with or previously having a land application area, the application shall also include Paragraph (1) of Subsection P of 20.6.6.12 NMAC, specifically pertaining to the past method(s) of wastewater discharge and stormwater application to the land application area.

[20.6.6.13 NMAC - N, 01/31/2011; A, 12/31/2011]

20.6.6.14 ADDITIONAL PUBLIC NOTICE REQUIREMENTS FOR APPLICATIONS FOR NEW DISCHARGE PERMITS:

A. The requirements of this section shall apply to dairy facilities whose application for a new discharge permit is received by the department after the effective date of the dairy rule.

B. Instead of the requirement for public notice specified in Paragraph (2) of Subsection B of 20.6.2.3108 NMAC, the applicant shall provide written notice of the discharge and a copy of the map referenced in Subsection O of 20.6.6.11 NMAC by mail to owners of record of all properties within a one-mile distance from the boundary of the property where the discharge site is located. If there are no properties other than properties owned by the discharger within a one-mile distance of the boundary of the property where the dairy facility is located, the applicant shall provide notice to owners of record of the next nearest properties not owned by the discharger.

C. Proof of notice required by Subsection D of 20.6.2.3108 NMAC shall include an affidavit of mailing(s) and a list of property owner(s) notified pursuant to Subsection B of this section.

[20.6.6.14 NMAC - N, 01/31/2011]

20.6.6.15 PROCEDURES FOR REQUESTING PUBLIC HEARINGS ON PERMITTING ACTIONS FOR DAIRY FACILITIES:

A. Requests for a hearing from any person, including the applicant for a discharge permit, on the proposed approval of a discharge permit (i.e., a draft discharge permit) or denial of a discharge permit application shall be postmarked on or before the end of the comment period, and submitted to the department pursuant to Subsection K of 20.6.2.3108 NMAC. The secretary shall deny requests that do not meet the requirements of Subsection K of 20.6.2.3108 NMAC and this section. The secretary shall provide notice of hearing denial by certified mail to the person(s) requesting a hearing.

B. The secretary shall deny a request for a hearing on the proposed approval of a discharge permit for a dairy facility (i.e., a draft discharge permit) disputing conditions contained in the dairy rule. Requests for a hearing on the proposed approval of a discharge permit for a dairy facility shall identify the specific additional discharge permit conditions being disputed or requested and the reasons such additional discharge

permit conditions are being disputed or requested. Hearings held upon the secretary's approval shall be limited in scope to the disputed or requested additional discharge permit conditions identified in the request for hearing. The secretary shall deny requests for a hearing that fail to identify disputed or requested additional discharge permit conditions and the reasons why the additional discharge permit conditions are disputed or requested. The secretary shall provide notice of hearing denial by certified mail to the person(s) requesting a hearing.

[20.6.6.15 NMAC - N, 01/31/2011]

20.6.6.16 SETBACK REQUIREMENTS FOR DAIRY FACILITIES APPLYING FOR NEW DISCHARGE PERMITS:

A. The setback requirements of this section apply to a dairy facility whose application for a new discharge permit is received by the department after the effective date of the dairy rule.

B. The setback requirements shall be measured as horizontal map distances.

C. The required setback distances shall be met as certified by the applicant as of the receipt date of the application.

D. If the setback requirements apply to a dairy facility, a permittee shall not propose or construct structures that violate the setback as determined as of the receipt date of the application for a new discharge permit by the department.

E. Production area setback requirements.

(1) The production area, excluding feed storage silos, feed storage barns and liquid feed tanks, shall be located:

(a) greater than 200 feet from the 100-year flood zone of any watercourse, or from the ordinary high-water mark of any watercourse for which no 100-year flood zone has been established (this setback distance shall not apply to ditch irrigations systems, acequias, irrigation canals and drains);

(b) greater than 200 feet (measured from the ordinary high-water mark) from a lakebed, sinkhole or playa lake;

(c) greater than 200 feet from any spring identified on a U.S. geological survey (USGS) topographic map and not identified as a supply of water for human consumption;

(d) greater than 350 feet from a private domestic water well or spring that supplies water for human consumption; and

(e) greater than 1000 feet from any water well or spring that supplies water for a public water system as defined by 20.7.10 NMAC, unless a wellhead protection program established by the public water system requires a greater distance.

(2) The requirements of Subparagraph (d) of Paragraph (1) of this subsection shall not apply to wells or springs that supply water to the dairy facility for human consumption and are located on the dairy facility.

(3) Setback distances for impoundments shall be measured from the top inside edge of the impoundment; distances for all other features shall be measured from the outer extent of the feature.

F. Land application area setback requirements.

(1) Any field within a land application area shall be located:

(a) greater than 100 feet from the 100-year flood zone of any watercourse, or from the ordinary high-water mark of any watercourse for which no 100-year flood zone has been established (this setback distance shall not apply to ditch irrigations systems, acequias, irrigation canals and drains);

(b) greater than 100 feet (measured from the ordinary high-water mark) from any lakebed, sinkhole or playa lake;

(c) greater than 100 feet from a private domestic water well or spring that supplies water for human consumption; and

(d) greater than 200 feet from any water well or spring that supplies water for a public water system as defined by 20.7.10 NMAC, unless a wellhead protection program established by the public water system requires a greater distance.

(2) The requirements of Subparagraph (c) of Paragraph (1) of this subsection shall not apply to wells or springs that supply water for human consumption to the dairy facility and are located on the dairy facility.

(3) Setback distances for fields shall be measured from the outer edge of the field.

[20.6.6.16 NMAC - N, 01/31/2011]

20.6.6.17 ENGINEERING AND SURVEYING REQUIREMENTS FOR ALL DAIRY FACILITIES:

A. Practice of engineering. All plans and specifications, supporting design calculations, record drawings, final specifications, final capacity calculations, grading and drainage reports and plans, and other work products requiring the practice of

engineering shall bear the seal and signature of a licensed New Mexico professional engineer pursuant to the New Mexico Engineering and Surveying Practice Act, NMSA 1978, Sections 61-23-1 through 61-23-32, and the rules promulgated under that authority.

B. Practice of surveying. All surveys of wastewater, stormwater, and combination wastewater/stormwater impoundments, monitoring well locations and casing elevations, and other work products requiring the practice of surveying shall bear the seal and signature of a licensed New Mexico professional surveyor pursuant to the New Mexico Engineering and Surveying Practice, NMSA 1978, Sections 61-23-1 through 61-23-32, and the rules promulgated under that authority.

C. Engineering plans and specifications requirements.

(1) Impoundment plans and specifications. An applicant or permittee proposing or required to construct a new impoundment or to improve an existing impoundment, including relining of an existing impoundment, shall submit detailed and complete construction plans and specifications and supporting design calculations developed pursuant to this section and 20.6.6.20 NMAC. The applicant or permittee proposing or required to construct an impoundment shall document compliance with the requirements of the dam safety bureau of the state engineer pursuant to Section 72-5-32 NMSA 1978, and rules promulgated under that authority, unless exempt by law from such requirements. The construction plans and specifications for an improvement(s) to an existing impoundment shall address the management of wastewater or stormwater during preparation and construction of the improvements.

(a) Construction plans and specifications proposed by the applicant or permittee shall be submitted to the department with the application for a new, renewed or modified discharge permit.

(b) Construction plans and specifications not proposed by the applicant or permittee but required to achieve compliance with the dairy rule shall be submitted to the department within 90 days of the effective date of the discharge permit.

(2) Impoundment CQA/CQC. Construction of a new impoundment or improvement to an existing impoundment shall be done in accordance with a construction quality assurance/construction quality control (CQA/CQC) plan. A CQA/CQC plan shall be included as part of the design plans and specifications. The CQA/CQC plan shall outline the observations and tests to be used to ensure that construction of the impoundment meets, at a minimum, all design criteria, plans and specifications. All testing and evaluation reports shall be signed and sealed by a licensed New Mexico professional engineer experienced in lagoon construction and liner installation. The CQA/CQC plan shall include, at a minimum, the following elements.

(a) The identity of persons responsible for overseeing the CQA/CQC program. The person responsible for overseeing with the CQA/CQC plan shall be a licensed New Mexico professional engineer experienced in lagoon construction and liner installation.

(b) A discussion of how inspections will be performed.

(c) The location, availability, applicability and calibration of testing equipment and facilities, both field and laboratory.

(d) The procedures for observing and testing the liner material.

(e) The procedures for reviewing inspection test results and laboratory and field sampling test results.

(f) The actions to be taken to replace or repair liner material should deficiencies be identified.

(g) The procedures for seaming synthetic liners.

(h) The reporting procedures for all inspections and test data.

(3) Impoundment improvement - wastewater/stormwater management.

An applicant or permittee proposing or required to improve an existing impoundment, including relining of an existing impoundment, shall submit a plan for managing wastewater or stormwater during the improvement as part of the design plans and specifications. The plan for wastewater or stormwater management shall include the following minimum elements and be implemented upon department approval.

(a) A description of how on-going wastewater discharges or stormwater collection will be handled and disposed of during improvement to the impoundment.

(b) A description of how solids and wastewater or stormwater within the impoundment will be removed and disposed of prior to beginning improvement to the impoundment.

(c) A schedule for implementation through completion of the project.

(d) If the plan proposes temporary use of a location for the discharge of wastewater not authorized by the effective discharge permit, the applicant or permittee shall request temporary permission to discharge from the department.

(4) Manure solids separation plans and specifications - new wastewater system. An applicant or permittee proposing or required to construct a new manure solids separator as a component of a newly designed wastewater storage or disposal

system shall submit construction plans and specifications and supporting design calculations that include the separator, pursuant to this section.

(a) Construction plans and specifications proposed by the applicant or permittee shall be submitted to the department with the application for a new, renewed or modified discharge permit.

(b) Construction plans and specifications not proposed by the applicant or permittee but required to achieve compliance with the dairy rule shall be submitted to the department within 90 days of the effective date of the discharge permit.

(5) Manure solids separation plans and specifications - existing wastewater system. An applicant or permittee proposing or required to construct a new manure solids separator as a component of an existing wastewater storage or disposal system shall submit a scaled design schematic and supporting documentation, including design calculations. The separator shall be designed to accommodate, at a minimum, the maximum daily discharge volume authorized by the discharge permit, and the volume of manure solids associated with the wastewater discharge. Components of the separator that collect, contain or store manure solids prior to removal or land application shall be designed with an impervious material(s) to minimize generation and infiltration of leachate. A scaled design schematic and supporting documentation for a proposed separator shall be submitted to the department with the application for a new, renewed or modified discharge permit.

(6) Grading and drainage report and plan. An applicant shall submit with the application for a new discharge permit, a grading and drainage report and a grading and drainage plan, including supplemental information associated with the plan. The submittal shall include, at a minimum, the following information.

- (a)** A scaled map showing:
- (i)** the dairy facility and the property boundaries of the dairy facility;
 - (ii)** all existing and proposed structures at the dairy facility, with the associated finished floor elevations;
 - (iii)** existing and proposed ground surface contours at two foot vertical intervals; and
 - (iv)** all existing and proposed stormwater management structures at the dairy facility including construction materials, size, type, slope, capacity and inlet and invert elevation of the structures, as applicable.

(b) A copy of the relevant federal emergency management administration, FEMA, flood insurance rate map (FIRM) or flood boundary and floodway map with the dairy facility clearly identified along with all flood zones.

(c) A description of existing drainage conditions at the dairy facility.

(d) A description of the proposed post-development drainage conditions.

(e) Supplemental information supporting the grading and drainage plan shall be submitted to the department with the plan and shall include, at a minimum, the following information:

(i) all hydrologic and hydraulic calculations for design storm events used;

(ii) hydraulic calculations demonstrating capacity or adequacy of existing and proposed stormwater impoundments;

(iii) hydraulic calculations demonstrating capacity of existing and proposed conveyance channels to contain and transport runoff to the stormwater impoundment(s); and

(iv) a description of computer software, documents, circulars, manuals, etc. used to develop the hydrologic and hydraulic calculations.

(7) Flow metering plans. An applicant or permittee proposing or required to install a flow meter(s) shall submit documentation to support the selection of the proposed device as appropriate for the expected flow rate along with a description of the location and information on the installation or construction of each device.

(a) Such information proposed by the applicant or permittee shall be submitted to the department with the application for a new, renewed or modified discharge permit.

(b) Such information not proposed by the applicant or permittee but required to achieve compliance with the dairy rule shall be submitted to the department within 90 days of the effective date of the discharge permit.

D. Engineering design requirements.

(1) Impoundment capacity requirements. Impoundments designed to store wastewater prior to discharging to a land application area or to dispose of wastewater by evaporation shall meet the capacity requirements specified in the dairy rule. The dairy rule does not specify capacity requirements for the containment of stormwater. However, the dairy rule does not exempt a dairy facility from other applicable local, state and federal regulations or laws, including the EPA regulatory requirements for concentrated animal feeding operations pursuant to 40 Code of Federal Regulations, Parts 122 and 412, as amended.

(2) Impoundment capacities - wastewater or wastewater/stormwater combination.

(a) Capacity requirements for dairy facilities discharging wastewater to a land application area.

(i) The wastewater impoundments intended to store wastewater prior to discharging to a land application area shall be designed to contain the maximum daily discharge volume authorized by the discharge permit for a minimum period of 21 days to accommodate periods when land application is not feasible, while preserving two feet of freeboard. This capacity requirement may be satisfied by a single wastewater impoundment or by the collective capacity of multiple impoundments intended to store wastewater.

(ii) The combination wastewater/stormwater impoundments intended to contain both wastewater and stormwater runoff for storage prior to discharging to a land application area shall be designed to contain the sum of the maximum daily discharge volume authorized by the discharge permit for a minimum period of 21 days to accommodate periods when land application is not feasible and the additional volume intended for the containment of stormwater runoff and direct precipitation, while preserving two feet of freeboard. This capacity requirement may be satisfied by a single combination wastewater/stormwater impoundment or by the collective capacity of multiple impoundments intended to store wastewater or wastewater/stormwater.

(b) Capacity requirements for dairy facilities discharging to an evaporative wastewater or combination wastewater/stormwater disposal system.

(i) The wastewater impoundments intended to dispose of wastewater by evaporation shall be designed to contain the maximum daily discharge volume authorized by the discharge permit for disposal by evaporation, while preserving two feet of freeboard. This capacity requirement may be satisfied by a single wastewater impoundment or by the collective capacity of multiple impoundments intended to dispose of wastewater by evaporation.

(ii) The combination wastewater/stormwater impoundments intended to dispose of both wastewater and stormwater runoff by evaporation shall be designed for disposal by evaporation, the sum of the maximum daily discharge volume authorized by the discharge permit and the additional volume intended for the containment of stormwater runoff and direct precipitation while preserving two feet of freeboard. This capacity requirement may be satisfied by a single combination wastewater/stormwater impoundment or by the collective capacity of multiple impoundments intended to dispose of wastewater or wastewater/stormwater by evaporation.

(c) An impoundment designed and used for solids settling shall not be used to satisfy the impoundment capacity requirements of this subsection.

(d) Notwithstanding Subparagraphs (a) and (b) of this paragraph, a wastewater impoundment or system of wastewater impoundments existing as of the effective date of the dairy rule may continue to be operated based upon the design capacity required under the applicable discharge permit as last issued or amended before the effective date of the dairy rule.

(3) Stormwater conveyance channels. Stormwater conveyance channels shall be designed in accordance with the grading and drainage report and plan required by this section.

(4) Impoundment design and construction - general. Impoundments required to be lined shall meet the following design and construction requirements.

(a) The inside slopes of an impoundment shall be a maximum of three (horizontal) to one (vertical), and a minimum of four (horizontal) to one (vertical).

(b) The outside slopes of an impoundment shall be a maximum of three (horizontal) to one (vertical).

(c) The sub-grade of an impoundment shall be compacted to a minimum of 90 percent of standard proctor density. If the existing material is unsuitable for compaction, a minimum depth of 18 inches of suitable material shall be used as sub-grade.

(d) The sub-grade of an impoundment shall provide a firm, unyielding surface with no sharp changes or abrupt breaks in grade.

(e) The minimum dike width of an impoundment shall be 12 feet to allow vehicle traffic for maintenance.

(5) Impoundment design and construction - liner. An applicant or permittee proposing or required to construct a new or to improve an existing impoundment liner, shall at a minimum use a synthetic liner or a two foot thick compacted clay liner with a maximum demonstrated hydraulic conductivity of 1×10^{-7} cm/sec and that is designed, constructed, installed and maintained in accordance with the Guide for Industrial Waste Management, Part IV: Protecting Ground Water, Chapter 7: Section B, Designing and Installing Liners, Technical Considerations for New Surface Impoundments, Landfills and Waste Piles (U.S. environmental protection agency), incorporated herein by this reference. Synthetic impoundment liners shall include a liner component that is at least 60 mil HDPE or other materials having equivalent performance characteristics with regard to permeability, resistance to degradation by ultraviolet light, compatibility with the liquids anticipated to be collected in the impoundment, tensile strength, and tear and puncture resistance and meet the following additional design and construction requirements.

(a) The liner shall be installed with sufficient slack in the liner material to accommodate shrinkage due to temperature changes. Folds in the liner material shall not be present in the completed liner.

(b) The sub-grade shall be free of sharp rocks, vegetation and stubble to a depth of at least six inches below the liner. The surface in contact with the liner shall be smooth to allow for good contact between liner and sub-grade. The surface shall be dry during liner installation. The liner installer shall provide the owner with a sub-grade acceptance certificate prior to installing the liner indicating acceptance of the earthwork.

(c) The liner shall be anchored in an anchor trench. The trench shall be a minimum of 12 inches wide, 12 inches deep and shall be set back at least 24 inches from the top inside edge of the impoundment.

(d) The liner panels shall be oriented such that all sidewall seams are vertical.

(e) If practicable, decomposing organic materials shall be removed from areas over which a liner will be installed. If such materials remain, a liner vent system shall be installed.

(f) Any opening in the liner through which a pipe or other fixture protrudes shall be sealed in accordance with the liner manufacturer's requirements. Liner penetrations shall be detailed in the construction plans and record drawings.

(g) The liner shall be installed by, or the installation supervised by, an individual that has the necessary training and experience as required by the liner manufacturer.

(h) Manufacturer's installation and field seaming guidelines shall be followed.

(i) Liner seams shall be field tested by the installer and verification of the adequacy of the seams shall be submitted to department along with the record drawings.

(j) Concrete slabs installed on top of a liner for operational purposes shall be completed in accordance with manufacturer and installer recommendations to ensure liner integrity.

(6) Impoundment liner - wastewater or wastewater/stormwater combination. An applicant or permittee proposing or required to construct a new or to improve an existing wastewater or combination wastewater/stormwater impoundment, shall, at a minimum, use a liner that meets the requirements of Paragraph (5) of this subsection.

(7) Impoundment liner - stormwater. Any applicant or permittee required to improve an existing stormwater impoundment pursuant to Subsection A or B of

20.6.6.27 NMAC shall, at a minimum, use a liner that meets the requirements in Paragraph (5) of this subsection.

(8) Separation between impoundments and ground water. Impoundments shall not be constructed in a location where the vertical distance between the seasonal high ground water level and the finished grade of the floor of the impoundment is less than or equal to four feet as documented through the most recent ground water data obtained from an on-site test boring(s) or monitoring well(s).

(9) Impoundment spillways. Impoundments intended to contain only wastewater shall not be designed with a spillway.

[20.6.6.17 NMAC - N, 01/31/2011; A, 12/31/2011; A, 06/16/2015]

20.6.6.18 VARIANCES:

A. A petition for variance from the dairy rule shall be submitted in accordance with Subsection A of 20.6.2.1210 NMAC.

B. In addition to any other criteria offered by the petitioner, the commission may consider as an unreasonable burden upon the petitioner's activity that the requirements of the dairy rule are unnecessary to prevent ground water pollution due to site-specific conditions.

C. In addition to any other information required under Paragraph (7) of that subsection, the petition shall, if applicable, identify any alternative facility design, alternative measuring device, or other variation from the requirements of the dairy rule and describe why variation from the dairy rule is warranted based upon site-specific conditions.

D. Notwithstanding Subsection C of 20.6.2.1210 NMAC, a variance from the requirements of the dairy rule may be granted for a period of time in excess of five years through the period of the expected useful life of the feature for which a variance is granted.

E. The department may review a variance every five years in conjunction with the discharge permit renewal to determine whether the variance is achieving its designed purpose and whether the variance has caused an exceedance of the standards of 20.6.2.3103 NMAC. If a five year review demonstrates that the variance cannot meet these criteria, the department may request a hearing before the commission to revoke the variance.

[20.6.6.18 NMAC - N, 12/31/2011]

20.6.6.19 [RESERVED]

20.6.6.20 OPERATIONAL REQUIREMENTS FOR ALL DAIRY FACILITIES:

A. Notice of presence of lactating cows and wastewater discharge. A permittee shall provide written notice to the department of the commencement, cessation, or recommencement of wastewater discharge or the placement, removal, or reintroduction of lactating cows as follows.

(1) For new dairy facilities.

(a) Placement of lactating cows. A permittee shall provide written notice to the department a minimum of 30 days before the placement of lactating cows at the dairy facility. A permittee shall provide written verification to the department of the actual date of placement of lactating cows within 30 days of placement.

(b) Commencement of wastewater discharge. A minimum of 30 days prior to the estimated initial wastewater discharge date a permittee shall provide written notice to the department indicating the date discharge is proposed to commence. A permittee shall provide written verification to the department of the actual date of discharge commencement within 30 days of commencement.

(2) For existing dairy facilities.

(a) Removal or reintroduction of lactating cows. A permittee shall provide written notice to the department indicating the date of removal of all lactating cows from the dairy facility or the date of reintroduction of any lactating cows at the dairy facility, if all lactating cows were previously removed, within 30 days of lactating cow removal or reintroduction.

(b) Cessation of wastewater discharge. A permittee shall provide written notice to the department indicating the date wastewater discharge ceased at the dairy facility within 30 days of the cessation of discharge.

(c) Recommencement of wastewater discharge. Written notification shall be submitted to the department a minimum of 30 days prior to the date wastewater discharge is expected to recommence. A permittee shall provide written notice to the department of the actual date of discharge recommencement within 30 days of recommencement.

B. Authorized use of new and existing impoundments. Impoundments shall meet the liner, design, and construction requirements of Subsection D of 20.6.6.17 NMAC; except an impoundment in existence on the effective date of the dairy rule that does not meet the requirements of Paragraphs (4) through (9) of Subsection D of 20.6.6.17 NMAC may continue to receive wastewater or stormwater provided the requirements of Paragraphs (1) or (2) of this subsection are met. If the requirements of Paragraph (1) and (2) of this subsection are not met, such an impoundment may

continue to receive wastewater or stormwater provided the requirements of Subsection B of 20.6.6.27 NMAC are met.

(1) The water contaminant concentration in a ground water sample and in any subsequent ground water sample collected from a monitoring well(s) intended to monitor the impoundment does not exceed any ground water standard of 20.6.2.3103 NMAC.

(2) The water contaminant concentration in a ground water sample and in any subsequent ground water sample collected from a monitoring well(s) intended to monitor the impoundment does not exceed the water contaminant concentration in a ground water sample collected from the upgradient monitoring well, if the water contaminant concentration associated with the upgradient monitoring well exceeds the ground water standard(s) of 20.6.2.3103 NMAC. For the purpose of this subsection, ground water samples obtained from the impoundment monitoring well and the upgradient monitoring well that are used for comparison of water contaminant concentrations shall be collected within two days of each other. In the event ground water quality data for the upgradient monitoring well are not submitted by the permittee, the ground water standard(s) of 20.6.2.3103 NMAC shall be the applicable standard(s) used to assess compliance with the requirements of this subsection.

C. Constructed capacity of existing impoundment - determination. If record drawings are unavailable or have not been completed for an impoundment constructed before the effective date of the dairy rule to indicate the impoundment capacity of each existing wastewater or combination wastewater/stormwater impoundment, the permittee shall complete an up-to-date survey and capacity calculation for each impoundment. The permittee shall submit the survey data and capacity calculations to the department with the application for a renewed or modified discharge permit.

D. Free-liquid capacity of existing impoundment - determination. An applicant or permittee shall measure the thickness of settled solids in each existing wastewater and combination wastewater/stormwater impoundment during the twelve-month period prior to the submission of an application for a renewed or modified discharge permit and in accordance with one of the following procedures.

(1) Measure settled solids when the impoundment contains water using the following method:

(a) The total surface area of the impoundment shall be divided into nine equal sub-areas.

(b) A settled solids measurement device shall be used to obtain one settled solids thickness measurement (to the nearest half-foot) per sub-area. The nine settled solids measurements shall be taken on the same day and the date shall be recorded and submitted to the department with the measurements.

(c) The nine settled solids measurements shall be averaged.

(d) The total volume of settled solids in the impoundment shall be estimated by multiplying the average thickness of the solids layer by the area of the top of the settled solids layer. The area shall be calculated using the impoundment dimensions corresponding to the estimated surface of the settled solids layer.

(e) The estimated volume of settled solids shall be subtracted from the design capacity of the impoundment (less two feet of freeboard) to estimate the actual free-liquid capacity.

(f) The settled solids measurements, calculations, estimation of total settled solids volume and volume of the actual free-liquid capacity for each impoundment shall be submitted to the department with the application for a renewed or modified discharge permit.

(2) Measure settled solids when the impoundment has been drained of water to its lowest seasonal level using the following method:

(a) Place a visible mark on each of the sidewalls of the pond showing the design depth allowed for sludge accumulation, or establish at least two vertical staff gauges marked to show the design depth allowed for sludge accumulation. The design depth shall be determined based upon the design capacity approved in the most recent discharge permit.

(b) When the pond is drained to its lowest seasonal level, such that the marks showing the depths described above are visible (or would be visible except for sludge accumulation), photograph each of the markings and submit the photographs with the application.

E. Impoundment construction or improvement. Construction of a new impoundment or improvements to an existing impoundment, including relining of an existing impoundment, shall be performed in accordance with the construction plans and specifications and supporting design calculations submitted with the application for a new, renewed or modified discharge permit, or those submitted after issuance of a discharge permit to achieve compliance with the dairy rule. An applicant or permittee shall notify the department at least five working days before starting construction or improvement of an impoundment to allow for an inspection by department personnel. An applicant or permittee shall submit to the department a construction certification report bearing the seal and signature of a licensed New Mexico professional engineer verifying that installation and construction was completed pursuant to Subsection C of 20.6.6.17 NMAC. The construction certification report shall include: record drawings, final specifications, final capacity calculations and the CQA/CQC report.

(1) For new dairy facilities, impoundment construction shall be completed as follows.

(a) Wastewater impoundment construction shall be completed and the construction certification report shall be submitted to the department before discharging wastewater at the dairy facility.

(b) Combination wastewater/stormwater impoundment construction shall be completed and the construction certification report shall be submitted to the department before placing any livestock at the dairy facility.

(2) For existing dairy facilities, impoundment construction shall be completed:

(a) within one year of the effective date of the discharge permit, if construction of a new impoundment or improvement of an existing impoundment is required to achieve compliance with the dairy rule, or pursuant to the contingency timeframe specified in Subsection B of 20.6.6.27 NMAC when invoked after the effective date of a discharge permit issued pursuant to the dairy rule; and

(b) the construction certification report shall be submitted to the department within 90 days of completion of impoundment construction.

F. Manure solids separator installation. A permittee shall employ manure solids separation. If a solid separator with a potential to contaminate ground water is proposed, such as a pond or settling basin, it shall be lined in accordance with Paragraph (5) of Subsection D of 20.6.6.17 NMAC. A permittee installing a new wastewater storage or disposal system shall, before discharging to the new system, construct a manure solids separator(s) in accordance with the construction plans and specifications submitted with the application for a new, renewed or modified discharge permit, or those submitted after issuance of a discharge permit to achieve compliance with the dairy rule. Before discharging to the new system, the permittee shall submit to the department confirmation of solids separator construction, including separator type(s) and location(s).

G. Grading and drainage report and plan - submittal and implementation. A permittee shall complete a new grading and drainage system, in accordance with the grading and drainage report and plan required by Subsection C of 20.6.6.17 NMAC and submitted with the application for a new discharge permit. A permittee shall submit a post-development drainage report, including record drawings, bearing the seal and signature of a licensed New Mexico professional engineer. The grading and drainage system shall be completed and the post-development drainage report shall be submitted to the department before placing any livestock at the dairy facility.

H. Stormwater conveyance. A permittee shall divert stormwater from the corrals and other applicable areas at the dairy facility (i.e., calf pens, alleys, feed storage and mixing, etc.) in accordance with the grading and drainage plan required by Subsection C of 20.6.6.17 NMAC. Stormwater shall be conveyed in a manner that minimizes ponding and infiltration of stormwater.

I. Stormwater management - unlined impoundment. A permittee shall transfer stormwater collected in an unlined impoundment(s) to the wastewater impoundment(s) or the distribution system for the land application area after a storm event to minimize the potential for movement to ground water. Operational pumps shall be available at the dairy facility at all times for the transfer of stormwater from stormwater impoundment(s) to the wastewater impoundment(s) or the distribution system for the land application area, as authorized by a discharge permit.

J. Flow meter installation. A permittee shall employ a flow metering system that uses flow measurement devices (flow meters) to measure the volume of wastewater discharged at the dairy facility. Flow meters shall be installed in accordance with the plans submitted with the application for a new, renewed or modified discharge permit, or those submitted after issuance of a discharge permit to achieve compliance with the dairy rule, pursuant to this section, Subsection C of 20.6.6.17 NMAC, and Subsections G and H of 20.6.6.21 NMAC. Flow meters shall be labeled with the discharge permit number, meter identification nomenclature as specified in a discharge permit, and the month and year of meter installation. All flow meters shall be calibrated in accordance with the manufacturer's requirements prior to installation or reinstallation following repair. The permittee shall maintain copies of the manufacturer's certificate of calibration and the manufacturer's recommended maintenance schedule. Confirmation of installation shall include a description of the device type, manufacturer, meter identification, location, record drawings, and a copy of the manufacturer's certificate of calibration and a copy of the manufacturer's recommended maintenance schedule.

(1) An applicant or permittee for a new dairy facility shall install flow meters and submit confirmation of flow meter installation to the department before discharging at the dairy facility.

(2) An applicant or permittee for an existing dairy facility shall install flow meters within 150 days of the effective date of the discharge permit and submit confirmation of flow meter installation to the department within 180 days of the effective date of the discharge permit.

K. Flow metering methods. Flow metering shall be accomplished by the following methods.

(1) For pumped flow discharge or transfer situations, an applicant or permittee shall install a closed-pipe velocity sensing totalizing flow meter(s) on the pressurized discharge or transfer line(s).

(2) For gravity flow discharge or transfer situations, an applicant or permittee shall install a closed pipe totaling flow meter or an open-channel primary flow measuring device(s) (flume or weir), equipped with head sensing and totalizing mechanisms, on the discharge or transfer line(s).

(3) An applicant may propose and the department may accept a proposal to meter flows by metering the water supply. The proposal shall provide specific detail regarding the flow meter to be used and the relationship between the volume of water supplied and wastewater volume.

L. Flow meter locations. An applicant or permittee shall identify flow meter locations in the application for a new, renewed or modified discharge permit. All flow meters shall be located pursuant to this section and Subsections G and H of 20.6.6.21 NMAC, and indicated on the scaled map required by Subsection U of this section.

M. Authorized use of existing flow meters. An applicant or permittee proposing to use an existing flow meter(s) shall submit documentation demonstrating that the existing flow meter(s) is installed consistent with this section, and Subsections G and H of 20.6.6.21 NMAC, as appropriate. The proposal shall be submitted with an application for a new, renewed and modified discharge permit and shall include the following documentation.

(1) The location of each existing flow meter indicated on the scaled map required by Subsection U of this section and the identification of the wastewater discharge, or wastewater or stormwater application it is intended to measure.

(2) A copy of the record drawings or manufacturer plans and technical specifications specific to each existing flow meter, if available.

N. Flow metering - wastewater to impoundment. A permittee shall install flow meters to measure the volume of wastewater discharged from all wastewater sources to the wastewater or combination wastewater/stormwater impoundment(s). The flow meter(s) shall be installed on the discharge line(s) from all wastewater sources to the wastewater impoundment(s). Meter installation and confirmation of meter installation shall be performed pursuant to this section. Alternatively, a dairy existing on the effective date of the dairy rule that does not utilize flow meters meeting the requirements of the preceding sentence may install a flow meter(s) on the water supply line(s) that serves all wastewater sources. Readings from flow meter(s) on water supply lines shall be used to estimate wastewater volumes discharged to wastewater or combination wastewater/stormwater impoundment(s) without adjustments or deductions to the meter readings.

O. Flow meter inspection and maintenance. A permittee shall visually inspect flow meters on a weekly basis for evidence of malfunction. If a visual inspection indicates a flow meter is not functioning to measure flow, the permittee shall initiate repair or replacement of the meter within seven days of discovery. The repaired or replaced flow meter shall be installed and calibrated pursuant to Subsection J of this section.

(1) For repaired meters, the permittee shall submit a report to the department with the next quarterly monitoring report following the repair that includes a description

of the malfunction, a statement verifying the repair, and a copy of the manufacturer's or repairer's certificate of calibration.

(2) For replacement meters, the permittee shall submit a report to the department with the next quarterly monitoring report following the replacement that includes plans for the device pursuant to Subsection C of 20.6.6.17 NMAC, a copy of the manufacturer's certificate of calibration, and a copy of the manufacturer's recommended maintenance schedule.

P. Impoundment inspection and maintenance. A permittee shall maintain impoundments to prevent conditions which could affect the structural integrity of the impoundments and associated liners. Such conditions include, but are not limited to, erosion damage; animal burrows or other animal damage; the presence of vegetation including aquatic plants, weeds, woody shrubs or trees growing within five feet of the top inside edge of a sub-grade impoundment, within five feet of the toe of the outside berm of an above-grade impoundment, or within the impoundment itself; evidence of seepage; evidence of berm subsidence; and the presence of large debris or large quantities of debris in the impoundments. A permittee shall inspect impoundments and surrounding berms on a monthly basis to ensure proper condition and control vegetation growing around the impoundments in a manner that is protective of the liners. Within 24 hours of discovery, a permittee shall report to the department any evidence of damage that threatens the structural integrity of a berm or liner of an impoundment or that may result in an unauthorized discharge. A permittee is not required to report routine berm maintenance to the department.

Q. Pipe and fixture inspection and maintenance. A permittee shall maintain pipes and fixtures used for the conveyance or distribution of wastewater or stormwater at the dairy facility to prevent the unauthorized release of wastewater or stormwater. The permittee shall visually inspect pipes and fixtures on a weekly basis for evidence of leaks or failure, and shall maintain written records at the dairy facility of all such inspections including repairs to the pipes and fixtures. Where pipes and fixtures cannot be visually inspected because they are buried, the permittee shall inspect the area directly surrounding the features for evidence of leaks or failure (e.g., saturated surface soil, surfacing wastewater, etc.). If there is evidence an unauthorized discharge has resulted from damaged or faulty pipe(s) or fixture(s), the permittee shall repair or replace the pipe(s) or fixture(s) within 72 hours of discovery. The permittee shall report the unauthorized discharge to the department pursuant to 20.6.2.1203 NMAC.

R. Leachate management - manure solids separation system. A permittee shall manage the solids captured by and removed from the manure solids separation system(s) and stored at the dairy facility before removal or land application to minimize generation and infiltration of leachate. The manure solids removed from the manure solids separation system and leachate generated from those solids shall be collected and contained on an impervious surface before disposal.

S. Leachate management - manure and compost storage. Unless land application of manure solids and composted materials is authorized by a discharge permit, a permittee shall remove manure solids and composted material from the dairy facility. A permittee shall minimize the generation and infiltration of leachate from stockpiled manure solids and composted material before removal from the dairy facility by diverting stormwater run-on and run-off, and preventing ponding within areas used for manure and compost stockpiling.

T. Leachate management - silage storage. A permittee shall minimize the generation and infiltration of leachate from silage storage areas and prevent ponding within silage storage areas. Leachate generated from the silage storage areas shall be collected and contained on an impervious surface or the stormwater impoundment before disposal.

U. Scaled map of dairy facility. An applicant or permittee shall submit a scaled map of the dairy facility to the department with an application for a new, renewed or modified discharge permit. The map shall be clear and legible, and drawn to a scale such that all necessary information is plainly shown and identified. The map shall show the scale in feet or metric measure, a graphical scale, a north arrow, and the effective date of the map. Multiple maps showing different portions of the facility may be provided using different scales as appropriate to represent the facility. Documentation identifying the means used to locate the mapped objects (i.e., global positioning system (GPS), land survey, digital map interpolation, etc.) and the relative accuracy of the data (i.e., within a specified distance expressed in feet or meters) shall be included with the map. Any object that cannot be directly shown due to its location inside of existing structures, or because it is buried without surface identification, shall be identified on the map in a schematic format and identified as such. The map shall include the following objects:

- (1) the overall dairy facility layout (barns, feed storage areas, pens, etc.);
- (2) the location of all sumps;
- (3) the location of all manure solids separators;
- (4) the location of all wastewater, stormwater, and combination impoundments;
- (5) the location of all mix tanks;
- (6) the location and acreage of each field within the land application area;
- (7) the location of all monitoring wells;
- (8) the location of all irrigation wells;

- (9) the location of all meters measuring wastewater discharges to and from impoundments;
- (10) the location of all meters measuring stormwater applied to the land application area;
- (11) the location of all fixed pumps for discharge and transfer of wastewater or stormwater;
- (12) the location of all wastewater and stormwater distribution pipelines;
- (13) the location of each ditch irrigation system, acequia, irrigation canal and drain;
- (14) the location of all backflow prevention methods or devices;
- (15) all wastewater sampling locations, with the exception of impoundments for disposal by evaporation; and
- (16) location of all septic tanks and leachfields.

V. Scaled map of dairy facility - updates. Following completion of additions or changes to the dairy facility layout which affects items required by Subsection U of this section, a permittee shall update and resubmit to the department the dairy facility map required by this section within 90 days of any additions or changes to the dairy facility layout which affects items required by Subsection U of this section.

W. Animal mortality management. All animal mortalities that may legally be disposed of (buried or composted) on a dairy facility shall be managed in accordance with the following requirements.

- (1) Only mortalities originating at the dairy facility may be disposed of at the dairy facility.
- (2) Mortalities shall not be stored or buried within 200 feet (measured as horizontal map distance) from private or public wells, or any watercourse.
- (3) Mortalities shall not be stored or buried within 100 feet (measured as horizontal map distance) from the 100-year flood zone of any watercourse, as defined by the most recent federal emergency management administration, FEMA, map.
- (4) Stormwater run-on to disposal areas shall be prevented by use of berms or other physical barriers.
- (5) Mortalities disposed of by burial shall be placed in a pit(s) where the vertical distance between the seasonal high ground water level and the floor of the pit(s)

is greater than 30 feet as documented through the most recent ground water data obtained from an on-site test boring(s) or monitoring well(s).

X. Determination of ground water conditions. An applicant or permittee for a dairy facility without a monitoring well from which depth-to-most-shallow ground water can be measured in accordance with the procedure required by Paragraph (1) of Subsection F of 20.6.6.23 NMAC shall evaluate ground water conditions by the following methods.

(1) The applicant or permittee shall obtain records from the office of the state engineer for all wells on file with the office of the state engineer located within one mile of the boundary of the dairy facility. The applicant or permittee shall submit to the department in tabular format the following information obtained from the office of the state engineer records: the well identification information; location of each well by latitude/longitude and township, range, and section; use of each well; depth to ground water in each well; and total depth of each well.

(2) If any well record information submitted pursuant to Paragraph (1) of this subsection indicates that depth to ground water is less than 100 feet, or in lieu of the requirement of Paragraph (1) of this subsection, the applicant or permittee shall conduct the following activities.

(a) The applicant or permittee shall drill one site-specific test boring to the depth of most-shallow ground water or a depth of 75 feet (measured from the ground surface), whichever is encountered first. The test boring shall be drilled in an area of low elevation within the production area outside of an existing or proposed impoundment.

(b) The applicant or permittee shall describe the lithology from the ground surface to the completed borehole depth and document the depth of most-shallow ground water or the absence of ground water within 75 feet of the ground surface. If ground water is encountered within 75 feet of the ground surface, the depth of most-shallow ground water shall be measured immediately upon ceasing drilling of the boring and again 24 hours following ceasing drilling. Lithology shall be characterized pursuant to American society of testing and materials (ASTM) test method D 2487 or D 2488 or characterized using standard visual geologic or soils descriptions that shall include lithology, grain size, color (Munsell soil color charts may be used), texture, sorting, percent gravel and degree of induration. The lithologic log and most-shallow ground water information shall be submitted to the department with the application for a new, renewed or modified discharge permit.

(c) Upon completion of ground water measurements, unless the borehole is completed as a monitoring or production well, the borehole shall be immediately abandoned by emplacing neat cement grout, bentonite based plugging material, or other sealing material approved by the state engineer in accordance with 19.27.4 NMAC in the borehole from the bottom of the borehole to the ground surface. A written record of borehole abandonment shall be submitted to the department with the

application for a new, renewed or modified discharge permit and shall describe the type of grout used and the depth interval sealed with grout. If a monitoring well is constructed in the borehole, the monitoring well shall be constructed in accordance with Subsection D of 20.6.6.23 NMAC, and a construction log including well record information specified by 19.27.4 NMAC shall be submitted to the department with the application for a new, renewed or modified discharge permit.

Y. Domestic wastewater. Domestic wastewater shall not be commingled with wastewater or stormwater generated at a dairy facility. Domestic wastewater shall be treated or disposed of pursuant to 20.7.3 NMAC or a discharge permit issued solely for the discharge of domestic wastewater, as appropriate.

[20.6.6.20 NMAC - N, 01/31/2011; A, 12/31/2011; A, 06/16/2015]

20.6.6.21 ADDITIONAL OPERATIONAL REQUIREMENTS FOR DAIRY FACILITIES WITH A LAND APPLICATION AREA:

A. Impoundment storage capacity management - wastewater and wastewater/stormwater combination. A permittee shall operate and maintain a wastewater or combination wastewater/stormwater impoundment(s) or a tank for the purpose of storing wastewater prior to discharging to the land application area. A permittee shall manage wastewater or combination wastewater/stormwater impoundments to maintain the capacity and two feet of freeboard required by Subsection D of 20.6.6.17 NMAC.

B. Authorized land application of wastewater and stormwater. A permittee shall apply wastewater and stormwater to fields within the land application area, up to the maximum acreage of irrigated cropland specifically authorized by a discharge permit. Wastewater and stormwater shall be distributed uniformly over the field at the planned rate consistent with the nutrient management plan (NMP); ponding shall be minimized.

C. Land application area - fresh irrigation water required. Wastewater shall only be applied to fields within the land application area receiving fresh irrigation water. Fresh irrigation water shall be used as the primary source to meet the water consumptive needs of the crop to support crop production and nutrient removal. Wastewater and stormwater are intended as sources of crop nutrients and shall not be used as a primary source to meet the water consumptive needs of the crop. An applicant may propose and the department may accept a proposal to apply wastewater to crops or grazing land without using fresh water for irrigation if the proposal demonstrates to the department's satisfaction that crops or plants to be grazed can be successfully maintained without fresh irrigation water.

D. Wastewater/irrigation water blending. Wastewater may be blended in-line (i.e., fresh irrigation water supply lines) when fresh water irrigation lines are equipped with backflow prevention that is installed, operated, inspected and maintained in accordance with Subsections L and M of this section. Wastewater may also be blended in a mix-

tank(s), applied alternately in the same irrigation line which has been physically disconnected from supply wells, or applied in a separate line, as authorized by a discharge permit. Wastewater may be blended with fresh water in a wastewater impoundment prior to land application so long as:

- (1) the permittee maintains an accurate written record of the volume of fresh water added to the wastewater and that volume is accounted for in determining the volumes of wastewater applied for purposes of the nutrient management plan;
- (2) fresh water is introduced in a safe manner to prevent scouring of the liner;
- (3) the impoundment capacity requirements of this rule are met.

E. Land application area - existing infrastructure. An applicant or permittee shall submit documentation for the existing infrastructure necessary to transfer, distribute and apply wastewater or stormwater to fields within the land application area that will receive wastewater or stormwater to the department with the application for a new, renewed or modified discharge permit. The documentation shall consist of a narrative statement and photographic documentation that confirm the existing land application distribution system including the type(s) and location(s) of the systems, and the method(s) of backflow prevention employed.

F. Land application area - new infrastructure. Before the initial application of wastewater or stormwater to any field within the land application area that has not previously received wastewater or stormwater, an applicant or permittee shall install a land application distribution system to distribute wastewater and stormwater to those fields. The land application distribution system shall be used to distribute and apply wastewater and stormwater to fields within the land application area to meet the requirements of this section. Before the initial application of wastewater or stormwater to any field within the land application area, an applicant or permittee shall submit documentation confirming installation of the land application distribution system. The documentation shall consist of a narrative statement and photographic documentation that confirms the new land application system including the type(s) and location(s) of the system(s), and the method(s) employed for backflow prevention.

G. Flow metering - wastewater to land application area. A permittee shall install flow meters to measure the volume of wastewater discharged from the wastewater or combination wastewater/stormwater impoundments to the land application area. The flow meter(s) shall be installed on the discharge line(s) from the wastewater impoundment(s) or tank to the distribution system for the land application area. Meter installation and confirmation of meter installation shall be performed pursuant to Subsections J, K and M of 20.6.6.20 NMAC.

H. Flow metering - stormwater to land application area. For a dairy facility transferring stormwater from a stormwater impoundment directly to a distribution system for the land application area, a permittee shall install flow meters to measure the volume

of stormwater applied directly to the land application area. The flow meter(s) shall be installed on the transfer line(s) from the stormwater impoundment(s) to the distribution system for the land application area. Meter installation and confirmation of meter installation shall be performed pursuant to Subsections J, K and M of 20.6.6.20 NMAC.

I. Nutrient management plan. Nutrients and other constituents required to be monitored under Subsection C of 20.6.6.25 NMAC and present in wastewater and stormwater shall be applied to irrigated cropland under cultivation in accordance with the requirements of a nutrient management plan (NMP) submitted to the department with the application for a new, renewed, or modified discharge permit. The NMP shall provide for development of a nutrient budget for nitrogen on an annual basis that accounts for the amount of nitrogen from all combined nitrogen sources, including but not limited to wastewater, stormwater, manure solids, composted material, irrigation water and other additional fertilizer(s), along with residual soil nitrogen and nitrogen credits from leguminous crops and that considers estimated and measured nitrogen removal by harvested crops and other losses, considering the monitoring data required to be collected under Section 20.6.6.25 NMAC. The NMP shall describe how planned total nitrogen application rates shall be determined each year based upon realistic yield goals for the planned crops. The information used to set the crop yield goals shall be identified in the NMP. The NMP shall address how nitrogen application rates will be adjusted based upon the results of soil tests required by Subsections K and L of 20.6.6.25 NMAC, consistent with applicable Natural Resource Conservation Service guidance for normal, high and excessive soil nitrogen levels. The NMP shall specify the maximum application rates for wastewater applied through irrigation so as not to exceed the soil intake/infiltration rate. The application of nitrogen to each field within the land application area shall be in accordance with the NMP, and any departures from the NMP due to growing conditions or other factors shall be addressed in the update to the NMP for the following year. Plant material and soil sampling protocols in the NMP shall be, at a minimum, equivalent to the requirements of Subsections I, K and L of 20.6.6.25 NMAC. The NMP shall identify the method(s) of crop removal to be employed. The NMP shall be developed for the term of the discharge permit and updated annually. The NMP shall be developed, signed and dated annually by an individual certified by the American society of agronomy as a certified crop advisor (CCA) or certified professional agronomist (CPAg) or by an individual certified by the New Mexico office of the U.S. department of agriculture natural resources conservation service as a nutrient management planner. The permittee may elect to submit an NMP meeting the requirements of this subsection that is incorporated into a broader plan, such as a comprehensive nutrient management plan or a nutrient management plan prepared to meet the requirements of a permit issued by EPA, in which case only the portions of such plan required by this subsection and Section 20.6.6.25 NMAC shall be considered for purposes of the dairy rule. For a renewed permit where the NMP was not submitted in an application, the permittee shall submit the initial NMP by May 1 of the first year the permit is in effect, and the permittee shall submit annual updates to the NMP to the department in the monitoring reports due by May 1 of each year.

J. Crop removal - mechanical or grazing. A permittee shall remove crops from fields within the land application area by mechanical harvest or grazing. An NMP which proposes grazing for crop removal shall also include, at a minimum, estimated values for the following elements.

- (1) The length of the grazing season.
- (2) The size and number of animals to be grazed.
- (3) The estimated weight gain of animals to be grazed, or estimated intake for maintenance or milk production.
- (4) The calculations to determine stocking rates, total acreage needed and residency period.
- (5) The plant species used to establish pastures and the pasture renovation practices to be employed.
- (6) The yield of plant species grown in each pasture and the forage supplied on a monthly basis.
- (7) The grazing management system employed and a map indicating key features of the system including water tanks, fencing, and pasture layout with numbering system and acreage of each pasture.

K. Irrigation ditches - inspection and maintenance. Irrigation ditches used to land apply wastewater or stormwater at a dairy facility shall be concrete-lined and shall be maintained in good repair. The permittee shall visually inspect the ditch system on a monthly basis to ensure proper maintenance. Any damage to a lined ditch shall be repaired within a reasonable time period. A log shall be kept on-site documenting the inspection findings and repairs made, and the log shall be made available to the department upon request.

L. Backflow prevention. A permittee shall protect all water wells used within the land application distribution system from contamination by wastewater or stormwater backflow by installing and maintaining backflow prevention methods or devices. Backflow prevention shall be achieved by a total disconnect (physical air gap separation of at least two times the pipe diameter or complete piping separation when wastewater is being pumped) or by the installation of, at a minimum an air/vacuum relief valve and a low pressure drain valve located immediately upstream of a check valve between the discharge head of the well pump and wastewater and stormwater delivery systems.

- (1) A permittee for a new dairy facility shall install backflow prevention methods or devices and submit written confirmation of installation to the department before discharging at the dairy facility.

(2) A permittee for an existing dairy facility that lacks backflow protection as required by this subsection shall install backflow prevention methods or devices within 90 days of the effective date of the discharge permit. The permittee shall submit written confirmation of installation to the department within 180 days of the effective date of the discharge permit.

M. Backflow prevention by check valve backflow prevention device - inspection and maintenance. A permittee shall inspect each check valve device at least monthly when the well is operating. A malfunctioning check valve device shall be repaired or replaced within 30 days of discovery, and use of all wastewater supply lines associated with the check valve device shall cease until repair or replacement has been completed. Copies of the inspection and maintenance records for each check valve device associated with the backflow prevention program for the previous year shall be submitted to the department annually in the monitoring reports due by May 1.

N. Supply well protection. With the exception of monitoring wells, all wells located within the land application area of a dairy facility shall have a surface pad constructed in accordance with the recommendations of Subsection G of 19.27.4.29 NMAC and a permanent well cap or cover pursuant to Subsection I of 19.27.4.29 NMAC.

[20.6.6.21 NMAC - N, 01/31/2011; A, 12/31/2011; A, 06/16/2015; A, 06/30/2015]

20.6.6.22 ADDITIONAL OPERATIONAL REQUIREMENTS FOR DAIRY FACILITIES DISCHARGING TO AN EVAPORATIVE WASTEWATER DISPOSAL SYSTEM:

Impoundment evaporative capacity - wastewater and wastewater/stormwater combination. A wastewater or combination wastewater/stormwater impoundment shall be operated and maintained for the purpose of disposing of wastewater or both wastewater and stormwater by evaporation. A permittee shall manage wastewater or combination wastewater/stormwater impoundments to maintain the capacity and two feet of freeboard as required by Subsection D of 20.6.6.17 NMAC.

[20.6.6.22 NMAC - N, 01/31/2011]

20.6.6.23 GROUND WATER MONITORING REQUIREMENTS FOR ALL DAIRY FACILITIES:

A. Monitoring wells - required locations. A permittee shall install a sufficient number of monitoring wells at appropriate depths and locations to monitor ground water quality upgradient of the dairy facility and hydrologically downgradient of each source of ground water contamination: wastewater, stormwater, and combination wastewater/stormwater impoundments, and fields within the land application area. Monitoring wells shall be located pursuant to this section in a location that is protective of the well and to detect an exceedance(s) or a trend towards exceedance(s) of the

ground water standards at the earliest possible occurrence, so that source control or abatement may be implemented.

(1) Ground water monitoring - installation schedule.

(a) For a new dairy facility, monitoring wells shall be installed before discharging at the dairy facility.

(b) For an existing dairy facility, any new monitoring wells shall be installed within 120 days of the effective date of the discharge permit, provided that the department may grant a one-time extension of 60 days for good cause shown.

(2) Use of existing monitoring wells. A monitoring well in existence before the effective date of the dairy rule, properly constructed in accordance with department guidelines applicable when the well was constructed, and operating as approved in a previous discharge permit, shall be approved for ground water monitoring at a dairy facility.

(3) Exceptions to monitoring well requirements. When appropriate, based on the documented ground water flow direction, one monitoring well may be authorized by a discharge permit to monitor ground water hydrologically downgradient of more than one contamination source under any of the following circumstances.

(a) Contiguous impoundments are oriented along a line that is parallel or approximately parallel to the direction of ground water flow beneath the impoundments.

(b) Adjacent impoundments are oriented along a line that is parallel or approximately parallel to the direction of ground water flow beneath the impoundments and separated by a distance of 50 feet or less as measured from the top inside edge of one impoundment to the nearest top inside edge of the adjacent impoundment.

B. Monitoring wells - location proposals. An applicant or permittee shall identify monitoring well locations in the application for a new, renewed or modified discharge permit pursuant to Subsection A of this section, and shall include the following information.

(1) The location of each monitoring well relative to the contamination source it is intended to monitor shall be indicated on the scaled map required by Subsection U of 20.6.6.20 NMAC.

(2) A written description of the specific location for each monitoring well including the horizontal map distance (in feet) and compass bearing of each monitoring well from the top inside edge of the impoundment berm or edge of the field it is intended to monitor.

(3) The ground water flow direction beneath the dairy facility used to determine the monitoring well location(s), including supporting documentation used to determine ground water flow direction.

C. Monitoring wells - identification tags. A permittee shall identify all monitoring wells required by the dairy rule with a well identification tag. For above-grade wells, the tag shall be affixed to the exterior of the steel well shroud. For wells finished below-grade, the tag shall be placed inside the well vault next to the well riser. The tag shall be printed adhesive or metal:

(1) if metal, made of aluminum;

(2) at least two inches by four inches in size;

(3) for monitoring wells installed after the effective date of the dairy rule, the tag shall include:

(a) the discharge permit number;

(b) the well identification nomenclature specified in a discharge permit;

(c) the name and New Mexico well driller license number of the well driller who drilled the well; and

(d) the month and year of well installation; and

(4) for monitoring wells installed before the effective date of the dairy rule and satisfying the requirements of Paragraph (6) of Subsection A of this section, the tag shall include:

(a) the discharge permit number;

(b) the well identification nomenclature specified in a discharge permit; and

(c) if available, the name and New Mexico well driller license number of the well driller who drilled the well, and the month and year of well installation.

D. Monitoring wells - construction and completion – new monitoring wells. A permittee shall construct monitoring wells pursuant to 19.27.4 NMAC and the following requirements.

(1) All well drilling activities shall be performed by an individual with a current and valid well driller license issued by the state of New Mexico pursuant to 19.27.4 NMAC.

(2) The well driller shall employ drilling methods that allow for accurate determinations of water table locations. All drill bits, drill rods, and down-hole tools shall be thoroughly cleaned immediately before drilling. The borehole diameter shall allow a minimum annular space of two inches between the outer circumference of the well materials (casing or screen) and the borehole wall to allow for the emplacement of sand and sealant.

(3) After completion, the well shall be allowed to stabilize for a minimum of 12 hours before development is initiated.

(4) The well shall be developed so that formation water flows freely through the screen and is not turbid, and all sediment and drilling disturbances are removed from the well.

(5) Schedule 40 (or heavier) polyvinyl chloride (PVC) pipe, stainless steel pipe, or carbon steel pipe shall be used as casing. The casing shall have an inside diameter not less than two inches. The casing material selected for use shall be compatible with the anticipated chemistry of the ground water and appropriate for the contaminants of interest at the dairy facility. The casing material and thickness selected for use shall have sufficient collapse strength to withstand the pressure exerted by grouts used as annular seals and thermal properties sufficient to withstand the heat generated by the hydration of cement-based grouts.

(6) Casing sections shall be joined using welded, threaded, or mechanically locking joints; the method selected shall provide sufficient joint strength for the specific well installation.

(7) The casing shall extend from the top of the screen to at least one foot above ground surface. The top of the casing shall be fitted with a removable cap, and the exposed casing shall be protected by a locking steel well shroud. The shroud shall be large enough in diameter to allow easy access for removal of the cap. Alternatively, monitoring wells may be completed below grade. In this case, the casing shall extend from the top of the screen to six to twelve inches below the ground surface; the monitoring wells shall be sealed with locking, expandable well plugs; a flush-mount, watertight well vault that is rated to withstand traffic loads shall be emplaced around the wellhead; and the cover shall be secured with at least one bolt. The vault cover shall indicate that the wellhead of a monitoring well is contained within the vault.

(8) A 20-foot section (maximum) of continuous well screen shall be installed across the water table. Screen shall consist of continuous-slot, machine slotted, or other manufactured schedule 40 (or heavier) PVC or stainless steel. Screens created by cutting slots into solid casing with saws or other tools shall not be used. The screen material selected for use shall be compatible with the anticipated chemistry of the ground water and appropriate for the contaminants of interest at the dairy facility. The screen slot size shall be selected to retain 90 percent of the filter pack.

(a) Requests for a 30-foot section of continuous well screen may be authorized by a discharge permit when the most recent two years of ground water level data demonstrates a declining water level trend of at least two feet per year. Data supporting ground water levels shall be specific to monitoring wells located at the dairy facility and obtained with a water level measuring device as required by Subsection F of this section.

(b) Requests for a 30-foot section of continuous well screen shall be submitted to the department in the application for a new, renewed or modified discharge permit.

(9) Screen sections shall be joined using welded, threaded, or mechanically locking joints. The method selected shall provide sufficient joint strength for the specific well installation and shall not introduce constituents that may reasonably be considered contaminants of interest at the dairy facility. A cap shall be attached to the bottom of the well screen. Sumps (i.e., casing attached to the bottom of a well screen) shall not be installed.

(10) The bottom of the screen shall be installed no more than 15 feet below the water table, or no more than 25 feet below the water table when additional screen length is authorized by a discharge permit. The top of the well screen shall be positioned not less than five feet above the water table. The well screen slots shall be appropriately sized for the formation materials.

(11) Casing and well screen shall be centered in the borehole by installing centralizers near the top and bottom of the well screen.

(12) A filter pack shall be installed around the screen by filling the annular space from the bottom of the screen to two feet above the top of the screen with clean silica sand. The filter pack shall be properly sized to exclude the entrance of fine sand, silt, and clay from the formation into the monitoring well. For wells deeper than 30 feet, the sand shall be emplaced by a tremie pipe. The well shall be surged or bailed to settle the filter pack and additional sand added, if necessary, before the bentonite seal is emplaced.

(13) A bentonite seal shall be constructed immediately above the filter pack by emplacing bentonite chips or pellets (three-eighths inch in size or smaller) in a manner that prevents bridging of the chips/pellets in the annular space. The bentonite seal shall be three feet in thickness and hydrated with clean water. Adequate time shall be allowed for expansion of the bentonite seal before installation of the annular space seal.

(14) The annular space above the bentonite seal shall be sealed with cement grout or bentonite-based sealing material acceptable to the state engineer in accordance with 19.27.4 NMAC. A tremie pipe shall be used to emplace the annular space seal (flow by gravity or pumping through the pipe) if the total depth of the well is greater than 20 feet from the land surface. Annular space seals shall extend from the

top of the bentonite seal to the ground surface (for wells completed above grade) or to a level three to six inches below the top of casing (for wells completed below grade).

(15) A concrete pad (two-foot minimum radius, four-inch minimum thickness) shall be poured around the shroud or well vault and wellhead. The concrete and surrounding soil shall be sloped to direct rainfall and runoff away from the wellhead.

E. Monitoring wells - office of the state engineer requirements. Should a well permit for a monitoring well be required by the office of the state engineer, the permittee shall obtain the permit prior to well drilling.

F. Ground water sample collection procedure. A permittee shall perform all ground water sample collection, preservation, transport and analysis according to the following procedure.

(1) Depth-to-most-shallow ground water shall be measured from the top of well casing at point of survey to the nearest 0.01 feet using an electronic water level indicator consisting of dual conductor wire encased in a cable or tape graduated to 0.01 feet, a probe attached to the end of the conductor wire, and a visual or audible indicator.

(2) Monitoring wells shall be purged before sample collection by one of the following methods.

(a) Three well volumes of water shall be purged from the well before sample collection.

(b) The monitoring well shall be purged until measurements of indicator parameters (pH, specific conductance, and temperature) have stabilized. Indicator parameters shall be measured periodically during purging. A parameter stabilization log shall be kept during each sampling event for each monitoring well and include: date; water quality indicator parameter measurements; time for all measurements; and the purge volume extracted. Indicator parameters are considered stable when three consecutive readings made no more than five minutes apart fall within the following ranges: temperature plus or minus 10 percent; pH plus or minus 0.5 units; specific conductance plus or minus 10 percent.

(3) Following purging and immediately before sample collection the following field parameters shall be measured and recorded: pH, specific conductance, and temperature.

(4) In-line flow-through cells shall be disconnected or by-passed during sample collection, if used during purging.

(5) Samples from the well shall be obtained, prepared, preserved and transported to an analytical laboratory for analysis pursuant to the methods authorized by Subsection B of 20.6.6.24 NMAC.

G. Ground water sampling and reporting - routine. A permittee shall collect ground water samples quarterly from all monitoring wells required by Subsection A of this section and Subsection C of 20.6.6.27 NMAC. Samples shall be analyzed for nitrate as nitrogen, total Kjeldahl nitrogen, chloride, sulfate and total dissolved solids pursuant to Subsection B of 20.6.6.24 NMAC. A permittee shall submit to the department in the quarterly monitoring reports the depth-to-most-shallow ground water, the field parameter measurements, the parameter stabilization log (if applicable), the analytical results (including the laboratory quality assurance and quality control summary report) and a map showing the location and number of each well in relation to the contamination source it is intended to monitor.

H. Ground water sampling - new monitoring wells. A permittee shall collect ground water samples from all newly installed monitoring wells. Samples shall be analyzed for nitrate as nitrogen, total Kjeldahl nitrogen, chloride, sulfate and total dissolved solids pursuant to Subsection B of 20.6.6.24 NMAC.

(1) Samples shall be collected from the newly installed monitoring wells at new dairy facilities before placing livestock at the dairy facility.

(2) Samples shall be collected from the newly installed monitoring wells at existing dairy facilities within 150 days of the effective date of the discharge permit.

(3) For dairy facilities installing a new monitoring well during the term of a discharge permit, during construction of a new impoundment, or as a result of required corrective actions, samples shall be collected from the newly installed monitoring wells within 30 days of well completion, provided the department may grant an extension for good cause shown.

I. Monitoring well survey and ground water flow determination. A permittee shall survey monitoring wells to a U.S. geological survey (USGS) benchmark and State Plane coordinates. Survey data shall include northing, easting and elevation to the nearest hundredth of a foot or shall be in accordance with the "Minimum Standards for Surveying in New Mexico", 12.8.2 NMAC. A survey elevation shall be established at the top-of-casing, with a permanent marking indicating the point of survey. The survey shall be completed and bear the seal and signature of a licensed New Mexico professional surveyor. Depth-to-most-shallow ground water shall be measured from the point of survey to the nearest hundredth of a foot in all surveyed wells pursuant to Subsection F of this section, and the data shall be used to develop a map showing the location of all monitoring wells and the direction and gradient of ground water flow at the dairy facility.

(1) For a new dairy facility, monitoring wells shall be surveyed before placing livestock at the dairy facility.

(2) For an existing dairy facility, monitoring wells not previously surveyed in a manner consistent with the requirements of this subsection and Subsection B of

20.6.6.17 NMAC shall be surveyed within 150 days of the effective date of the discharge permit.

J. Monitoring well completion report. A permittee shall submit to the department a monitoring well completion report pertaining to all monitoring wells. For a new dairy facility, the report shall be submitted before placing livestock at the dairy facility. For an existing dairy facility, the report shall be submitted within 180 days after the effective date of the discharge permit or within 60 days of completion as specified in a discharge permit. The report shall contain the following information.

(1) Construction and lithologic logs for the new monitoring wells including well record information specified by 19.27.4 NMAC.

(2) Depth-to-most-shallow ground water measured in each new and existing monitoring well.

(3) Survey data and a survey map showing the locations of each new and existing monitoring well and a ground water elevation contour map developed pursuant to Subsection L of this section.

(4) Analytical results of ground water samples collected from the new monitoring wells, including laboratory quality assurance and quality control summary reports, and field parameter measurements.

K. Monitoring well survey report - existing monitoring wells. For a dairy facility required to survey existing monitoring wells pursuant to this section a permittee shall submit the monitoring well survey report to the department within 180 days of the effective date of the discharge permit, provided the department may grant an extension for good cause shown. The report shall contain the depth-to-most-shallow ground water measured in each monitoring well, a surveyed map showing the locations of the monitoring wells, and the direction and gradient of ground water flow at the dairy facility.

L. Ground water elevation contour maps. A permittee shall develop ground water elevation contour maps on a quarterly basis using data associated with all monitoring wells used for ground water monitoring at the dairy facility. Top of casing elevation data, obtained from monitoring well surveys completed pursuant to this section and quarterly depth-to-most-shallow ground water measurements in monitoring wells, shall be used to calculate ground water elevations at monitoring well locations. Ground water elevations between monitoring well locations shall be estimated using common interpolation methods. Ground water elevations shall be expressed in feet. A contour interval appropriate to the data shall be used, but in no case shall the interval be greater than two feet. Ground water elevation contour maps shall depict the ground water flow direction, using arrows, based on the orientation of the ground water elevation contours, and the location and identification of each monitoring well, impoundment, and field within the land application area. A permittee shall submit ground water elevation contour maps to the department in the quarterly monitoring reports.

M. Proposed location of monitoring wells - dispute resolution. If the department provides a notice of technical deficiency pursuant to Subsection G of 20.6.6.10 NMAC due to a disagreement with the number or location of monitoring wells proposed in the application, or if the department notifies a permittee to replace a monitoring well pursuant to Subsection C of 20.6.6.27 NMAC, the applicant or permittee may notify the secretary by certified mail, sent within 30 days after the date of postal notice of the department's notice, that the applicant or permittee invokes dispute resolution under this subsection. Upon such notice, the department, as represented by the secretary, deputy secretary, or division director and the applicant or permittee shall meet in person within 30 days and shall attempt in good faith to resolve the dispute.

[20.6.6.23 NMAC - N, 01/31/2011; A, 12/31/2011; A, 06/16/2015]

20.6.6.24 MONITORING REQUIREMENTS FOR ALL DAIRY FACILITIES:

A. Monitoring reports - schedule of submittal. A permittee shall submit monitoring reports to the department on a quarterly schedule and shall contain monitoring data and information collected pursuant to the dairy rule. Quarterly monitoring reports shall be submitted according to the following schedule:

- (1) January 1 through March 31 (first quarter) - report due by May 1;
 - (2) April 1 through June 30 (second quarter) - report due by August 1;
 - (3) July 1 through September 30 (third quarter) - report due by November 1;
- and
- (4) October 1 through December 31 (fourth quarter) - report due by February 1.

B. Sampling and analysis methods. A permittee shall sample and analyze water pursuant to Subsection B of 20.6.2.3107 NMAC. Analysis of water for total sulfur shall be accomplished pursuant to environmental protection agency method 200.7 or equivalent. Sampling and analysis of soil shall be conducted in accordance with "*methods of soil analysis: part 1. physical and mineralogical methods*," 1986 edition; "*methods of soil analysis: part 2. microbiological and biochemical properties*," 1994 edition; and "*methods of soil analysis: part 3. chemical methods*," 1996 edition, published by the American society of agronomy.

C. Wastewater volume measurement and reporting. A permittee shall measure the volume of all wastewater discharged to the wastewater or combination wastewater/stormwater impoundment(s) using flow meters. Meter readings shall be recorded at intervals not to exceed monthly. The average daily discharge volume for each recording interval shall be calculated by dividing the difference between the meter readings by the number of days between meter readings. The permittee shall provide the meter readings including the date, time and units of each measurement, and

calculations for the average daily volumes of wastewater discharged to the impoundments, reported in gallons per day, in the quarterly monitoring reports submitted to the department.

D. Stormwater sampling and reporting. A permittee shall collect stormwater samples on a quarterly basis from each stormwater impoundment unless the stormwater will be transferred to a wastewater impoundment(s) before being sent to the land application area. The samples shall be analyzed for nitrate as nitrogen, total Kjeldahl nitrogen, chloride, total sulfur and total dissolved solids pursuant to this section. The permittee shall include analytical results, or a statement that stormwater runoff did not occur, in the quarterly monitoring reports submitted to the department.

[20.6.6.24 NMAC - N, 01/31/2011; A, 06/16/2015]

20.6.6.25 ADDITIONAL MONITORING REQUIREMENTS FOR DAIRY FACILITIES WITH A LAND APPLICATION AREA:

A. Volume of wastewater and wastewater/stormwater land applied - measurement and reporting. A permittee shall measure all wastewater discharges from a wastewater or combination wastewater/stormwater impoundment to each field within the land application area using flow meters. A permittee shall maintain a log recording the date and location of each discharge, flow meter readings immediately prior to and after each discharge, and the calculated total volume of each discharge reported in gallons and acre-feet. A permittee shall submit a copy of the log entries including units of measurement to the department in the quarterly monitoring reports.

B. Volume of stormwater land applied - measurement and reporting. A permittee shall measure all stormwater applications from a stormwater impoundment to each field within the land application area using flow meters. A permittee shall maintain a log recording the date and location of each application, flow meter readings immediately prior to and after each application, and the calculated total volume of each application reported in gallons and acre-feet. A permittee shall submit a copy of the log entries including units of measurement to the department in the quarterly monitoring reports.

C. Wastewater to be land applied - sampling and reporting. A permittee shall collect and analyze wastewater samples on an annual basis for nitrate as nitrogen, total Kjeldahl nitrogen, chloride, total sulfur and total dissolved solids pursuant to Subsection B of 20.6.6.24 NMAC. Representative samples shall be collected from the wastewater impoundments unless an alternative method is approved for good cause, including safety. The representative samples shall consist of eight samples taken from eight different locations evenly distributed throughout the impoundment or using an alternative method approved by the department for good cause. A permittee shall submit the analytical results to the department in the quarterly monitoring reports.

D. Manure solids - nitrogen content. The nitrogen content of the manure solids applied to each field within the land application area shall be estimated at 25 pounds of nitrogen per ton. Should a permittee choose to use actual nitrogen content values of on-site manure solids, the permittee shall collect a composite sample on an annual basis. The composite sample shall consist of a minimum of 30 sub-samples collected on the same day and thoroughly mixed. Manure samples shall be analyzed for total Kjeldahl nitrogen and moisture content. The permittee shall submit the analytical results to the department in the quarterly monitoring reports.

E. Irrigation water - sampling, volume applied, and reporting. A permittee shall monitor irrigation wells used to supply fresh water to the fields within the land application area to account for additional potential nitrogen supplied to the land application area in the following manner.

(1) Each irrigation well shall be identified in association with the field(s) to which it supplies fresh water.

(2) An annual sample of irrigation water supplied from each well or a group of physically connected wells shall be collected and analyzed for nitrate as nitrogen and total Kjeldahl nitrogen, pursuant to Subsection B of 20.6.6.24 NMAC. If the results are consistent for the first five years of annual sampling, sampling frequency may be reduced to once every other year.

(3) The annual volume of irrigation water applied to each field within the land application area shall be estimated for each well.

(4) The permittee shall submit the analytical results and the estimated annual volume of irrigation water applied from each well to each field within the land application area to the department in the monitoring reports due by May 1.

F. Fertilizer application reporting. A permittee shall maintain a log of all additional fertilizer(s) applied to each field within the land application area. The log shall contain the date of fertilizer application, the type and form of fertilizer, fertilizer analysis, the amount of fertilizer applied in pounds per acre to each field, and the amount of nutrients applied in pounds per acre to each field. The permittee shall submit a copy of the log entries to the department in the quarterly monitoring reports.

G. Land application data sheets. A permittee shall complete land application data sheets for each field within the land application area to document the crop grown and amount of total nitrogen applied from wastewater, stormwater, manure solids, composted material, irrigation water and other additional fertilizer(s), and the residual soil nitrogen and nitrogen credits from leguminous crops. The permittee shall submit a land application data sheet or a statement that land application did not occur to the department in the quarterly monitoring reports. The land application data sheet shall include the following elements.

(1) The total monthly volume, reported in acre-feet, of wastewater and stormwater applied to each field within the land application area. Total monthly volumes shall be obtained from flow meter readings of each application pursuant to Subsections A and B of this section.

(2) The total nitrogen concentration of wastewater and stormwater obtained from the corresponding quarterly or annual analyses collected pursuant to Subsection C of this section and Subsection D of 20.6.6.24 NMAC.

(3) The total monthly volume, reported in tons per acre, of manure solids applied to each field within the land application area.

(4) The total nitrogen content of the manure solids estimated at 25 pounds of nitrogen per ton or determined from analysis of manure solids samples collected pursuant to Subsection D of this section.

(5) The total nitrogen concentration within the irrigation water and the amount of irrigation water applied pursuant to Subsection E of this section.

(6) The amount of nitrogen reported in pounds per acre from additional fertilizer(s) applied pursuant to Subsection F of this section.

(7) The amount of residual soil nitrogen and nitrogen from leguminous crops credited to each field within the land application area pursuant to Subsections K and L of this section.

H. Crop yield documentation. A permittee shall submit crop yield documentation and plant and harvest dates of each crop grown to the department in the quarterly monitoring reports. Crop yield documentation shall consist of copies of scale-weight tickets or harvest summaries based on scale-weights.

I. Nitrogen concentration of harvested crop. A permittee shall determine the total nitrogen concentration of each harvested crop. A composite sample consisting of 15 sub-samples of plant material shall be taken from each field during the final harvest of each crop grown per year. Samples shall be analyzed for percent total nitrogen and percent dry matter. A permittee shall submit the analytical reports to the department in the quarterly monitoring reports.

J. Nitrogen removal summary of harvested crop. A permittee shall develop a nitrogen removal summary to determine total nitrogen removed by each crop grown on each field within the land application area. Nitrogen removal shall be determined using crop yield and total nitrogen concentration information collected pursuant to Subsections H and I of this section. A permittee shall submit the summary to the department in the quarterly monitoring reports.

K. Soil sampling - initial event in a discharge permit term. A permittee shall collect composite soil samples from each field within the land application area for the first soil sampling event during the first year following the effective date of the discharge permit. Composite soil samples shall be collected for all fields regardless of whether the field is cropped, remains fallow, or has received wastewater or stormwater. One surface composite soil sample (first-foot) and two sub-surface composite soil samples (second-foot and third-foot) shall be collected from each field. Composite soil samples shall be collected and analyzed according to the following procedure.

(1) Each surface and sub-surface soil sample shall consist of a single composite of 15 soil cores collected randomly throughout each field. Should a field consist of different soil textures (i.e., sandy and silty clay), a composite soil sample shall be collected from each soil texture within each field.

(2) Surface soil samples (first-foot) shall be collected from a depth of 0 to 12 inches.

(3) Each second-foot sub-surface soil sample shall be collected from a depth of 12 to 24 inches.

(4) Each third-foot sub-surface soil sample shall be collected from a depth of 24 to 36 inches.

(5) Each surface and sub-surface composite sample shall be analyzed for pH, electrical conductivity, total Kjeldahl nitrogen, nitrate as nitrogen, chloride, organic matter, potassium, phosphorus, sodium, calcium, magnesium, sulfate, soil texture, and sodium adsorption ratio.

(6) pH, electrical conductivity, sodium, calcium, magnesium, and sulfate shall be analyzed using a saturated paste extract in accordance with the analytical methodology required by Subsection B of 20.6.6.24 NMAC. Phosphorus shall be analyzed using the Olsen sodium bicarbonate method in accordance with the analytical methodology required by Subsection B of 20.6.6.24 NMAC. Nitrate as nitrogen shall be analyzed by a 2 molar KCl extract in accordance with the analytical methodology required by Subsection B of 20.6.6.24 NMAC. Total Kjeldahl nitrogen, chloride, organic matter, potassium, soil texture, and sodium adsorption ratio shall be analyzed in accordance with the analytical methodology required by Subsection B of 20.6.6.24 NMAC.

(7) The permittee shall submit the analytical results and a map showing the fields and the sampling locations within each field to the department in the monitoring report due by May 1 following the effective date of the discharge permit.

L. Soil sampling - routine. Beginning in the year following the initial soil sampling required by this section, the permittee shall collect annual soil samples from each field within the land application area that has received or is actively receiving wastewater or

stormwater. For those fields that have never before received wastewater, the permittee shall collect soil samples immediately before initial wastewater application and annually thereafter. Once a field has received wastewater it shall be sampled annually regardless of whether the field is cropped, remains fallow, or has recently received wastewater or stormwater. One surface composite soil sample (first-foot) and two sub-surface composite soil samples (second-foot and third-foot) shall be collected from each field. Composite soil samples shall be collected and analyzed according to the following procedure.

(1) Each surface and sub-surface soil sample shall consist of a single composite of 15 soil cores collected randomly throughout each field. Should a field consist of different soil textures (i.e., sandy and silty clay), a composite soil sample shall be collected from each soil texture within each field.

(2) Surface soil samples (first-foot) shall be collected from a depth of 0 to 12 inches.

(3) Each second-foot sub-surface soil sample shall be collected from a depth of 12 to 24 inches.

(4) Each third-foot sub-surface soil sample shall be collected from a depth of 24 to 36 inches.

(5) Surface soil samples shall be analyzed for pH, electrical conductivity, nitrate as nitrogen, chloride, organic matter, potassium, phosphorus, sodium, calcium, magnesium, and sodium adsorption ratio.

(6) Sub-surface soil samples shall be analyzed for electrical conductivity, nitrate as nitrogen, and chloride.

(7) pH, electrical conductivity, sodium, calcium, and magnesium shall be analyzed using a saturated paste extract in accordance with the analytical methodology required by Subsection B of 20.6.6.24 NMAC. Phosphorus shall be analyzed using the Olsen sodium bicarbonate method in accordance with the analytical methodology required by Subsection B of 20.6.6.24 NMAC. Nitrate as nitrogen shall be analyzed by a 2 molar KCl extract in accordance with the analytical methodology required by Subsection B of 20.6.6.24 NMAC. Chloride, organic matter, potassium, and sodium adsorption ratio shall be analyzed in accordance with the analytical methodology required by Subsection B of 20.6.6.24 NMAC.

(8) The permittee shall submit the analytical results and a map showing the fields and the sampling locations within each field to the department in the monitoring report due by May 1.

[20.6.6.25 NMAC - N, 01/31/2011; A, 12/31/2011; A, 06/16/2015]

20.6.6.26 ADDITIONAL MONITORING REQUIREMENTS FOR DAIRY FACILITIES DISCHARGING TO AN EVAPORATIVE WASTEWATER DISPOSAL SYSTEM:

Wastewater to be evaporated - sampling and reporting. A permittee shall collect a composite wastewater sample on a semi-annual (once every six months) basis from each wastewater or combination wastewater/stormwater impoundment used for disposal by evaporation. Samples shall be analyzed for nitrate as nitrogen, total Kjeldahl nitrogen, chloride, total sulfur and total dissolved solids pursuant to Subsection B of 20.6.6.24 NMAC. A permittee shall submit the analytical results to the department in the monitoring reports due by May 1 and November 1.

[20.6.6.26 NMAC - N, 01/31/2011; A, 06/16/2015]

20.6.6.27 CONTINGENCY REQUIREMENTS FOR ALL DAIRY FACILITIES:

A. Exceedance of ground water standards - all monitoring wells. If the constituent concentration in a ground water sample and in the next ground water sample collected from the same monitoring well intended to monitor a contamination source exceeds one or more of the ground water standards of 20.6.2.3103 NMAC and exceeds the concentration of such constituent(s) in a ground water sample collected from the upgradient monitoring well, or if the extent or magnitude of existing ground water contamination is significantly increasing, then the permittee shall take the following actions. For the purpose of this subsection, ground water samples obtained from the source monitoring well and the upgradient monitoring well that are used for comparison of constituent concentrations shall be collected within two days of each other, provided that if there is sufficient ground water quality data to demonstrate that samples from different periods should be compared, the department may allow such a comparison. If ground water quality data for the upgradient monitoring well are not submitted by the permittee, the ground water standards of 20.6.2.3103 NMAC shall be the applicable standard used to determine if the requirements of this subsection must be met. The contingency requirements of Paragraphs (1) and (2) of this subsection shall not apply if corrective action previously has been taken to address ground water contamination and constituent concentrations have stabilized or improved, but this exception shall no longer apply if a constituent concentration increases for two consecutive sampling events and exceeds its standard or the upgradient concentration. Once enacted the contingency requirements of this subsection apply until the permittee has fulfilled the requirements of this subsection and ground water monitoring pursuant to 20.6.6.23 NMAC confirms for a minimum of eight consecutive ground water sampling events that the standards of 20.6.2.3103 NMAC are not exceeded and the total nitrogen concentration in ground water is less than or equal to 10 milligrams per liter or until the department requires an abatement plan pursuant to Paragraph (3) of this subsection.

(1) A corrective action plan shall be submitted within 120 days of the subsequent sample analysis date unless a petition for variance is filed in accordance with Paragraph (2) of this subsection. The corrective action plan shall describe any repairs made to address the cause of the exceedance, and propose source control

measures and a schedule for implementation. The implementation schedule shall include a schedule of all proposed corrective action activities and the date that corrective action will be completed. The department shall approve or disapprove the corrective action plan within 60 days of receipt. Within 30 days of the date of postal notice of the department's approval of the corrective action plan, the permittee shall initiate implementation of the plan. If the department does not approve the corrective action plan, the department shall notify the permittee of the deficiencies by certified mail. The permittee shall submit a revised corrective action plan to the department within 60 days of the date of postal notice of the notice of deficiency. The department shall approve or disapprove the corrective action plan within 60 days of receipt. If the department does not approve the revised corrective action plan, or if the permittee fails to submit a revised plan as required by this subsection, the department may pursue enforcement actions authorized by Section 74-6-10 NMSA 1978.

(2) The permittee may investigate potential sources of contamination that may have caused a standard(s) to be exceeded. If such an investigation indicates that the source of the contamination is not the source intended to be monitored by the well, the permittee may petition within 120 days of the subsequent sample analysis date for a variance from the requirements of this section in accordance with 20.6.2.1210 NMAC. It is the permittee's burden to prove any claim that the source of the contamination is not the source intended to be monitored by the well. If the petition is denied the permittee shall submit a corrective action plan meeting the requirements of Paragraph (1) of this subsection within 60 days of the denial.

(3) The permittee may be required to submit an abatement plan proposal pursuant to 20.6.2.4106 NMAC within 60 days of written notice from the department. Abatement shall be performed pursuant to 20.6.2.4101, 20.6.2.4103, 20.6.2.4104, and 20.6.2.4106 through 20.6.2.4115 NMAC.

B. Exceedance of ground water standards - impoundment monitoring well. If the constituent concentration in a ground water sample collected from a monitoring well intended to monitor an impoundment(s) exceeds one or more of the ground water standards of 20.6.2.3103 NMAC and exceeds the concentration of such constituent(s) in a ground water sample collected from the upgradient monitoring well for four consecutive quarters, then the department may require the permittee, by written notice, to take one of the following measures. Before notifying the permittee that action is required under this subsection, the department shall take into consideration site-specific conditions including, but not limited to, geology, depth to ground water, threats to public health, and the trends in contamination at the site. For the purpose of this subsection, ground water samples obtained from the impoundment monitoring well and the upgradient monitoring well that are used for comparison of constituent concentrations shall be collected within two days of each other, provided that if there is sufficient ground water quality data to demonstrate that samples from different periods should be compared, the department may allow such a comparison. If ground water quality data for the upgradient monitoring well are not submitted by the permittee, the ground water standard(s) of 20.6.2.3103 NMAC shall be the applicable standard(s) used to determine

if the requirements of this subsection must be met. The contingency requirements of Subparagraphs (a) through (c) of Paragraph (1) and Sub-subparagraphs (i) through (iii) of Sub-paragraph (a) of Paragraph (2) of this subsection shall not apply if corrective action previously has been taken to address ground water contamination and constituent concentrations have stabilized or improved, but this exception shall no longer apply if a constituent concentration increases for two consecutive sampling events and exceeds its standard or the upgradient concentration. Once enacted the contingency requirements of this subsection apply until the permittee has fulfilled the requirements of this subsection and ground water monitoring pursuant to 20.6.6.23 NMAC confirms for a minimum of eight consecutive ground water sampling events that the standards of 20.6.2.3103 NMAC are not exceeded and the total nitrogen concentration in ground water is less than or equal to 10 milligrams per liter or until the department requires an abatement plan pursuant to Subparagraph (d) of Paragraph (1) or Sub-subparagraph (iv) of Subparagraph (a) of Paragraph (2) of this subsection.

(1) Clay liner or pre-dairy rule liner not composed of 40/30-mil HDPE (minimum) or equivalent. For impoundments using a clay liner or a liner installed prior to the effective date of the dairy rule and composed of a material that is not, at a minimum, 40-mil unreinforced HDPE, 30-mil reinforced HDPE, (or other material having equivalent characteristics with regard to permeability, resistance to degradation by ultraviolet light, compatibility with the liquids anticipated to be collected in the impoundment, tensile strength, and tear and puncture resistance), the following actions shall be taken.

(a) A corrective action plan shall be submitted within 120 days of the date of postal notice from the department that action is required under this subsection unless a petition for variance is filed in accordance with Subparagraph (c) of this paragraph. The corrective action plan shall describe any repairs or changes in practices made to address the cause of the exceedance, and propose source control measures and a schedule for implementation. The implementation schedule shall include a schedule of all proposed corrective action activities and the date that corrective action will be completed. The department shall approve or disapprove the corrective action plan within 60 days of receipt. If the corrective action plan proposes actions to correct deficiencies with the liner, the proposed actions shall include the following items.

(i) A proposal for reconstruction and relining of an existing impoundment, or construction and lining of a new impoundment utilizing a synthetic liner as specified in Paragraph (5) of Subsection D of 20.6.6.17 NMAC. Reconstruction or new construction shall be completed pursuant to 20.6.6.17 NMAC within one year of the date of postal notice from the department that action is required under this subsection. If a new impoundment is constructed, the existing impoundment shall be permanently closed pursuant to 20.6.6.30 NMAC.

(ii) Reconstruction or construction plans and specifications for the impoundment shall be completed pursuant to 20.6.6.17 NMAC.

(b) Within 30 days of the date of postal notice of the department's approval of the corrective action plan, the permittee shall initiate implementation of the plan. If the department does not approve the corrective action plan, the department shall notify the permittee of the deficiencies by certified mail. The permittee shall submit a revised correction action plan to the department within 60 days of the date of postal notice of the notice of deficiency. The department shall approve or disapprove the revised corrective action plan within 60 days of receipt. If the department does not approve the revised corrective action plan, or if the permittee fails to submit a revised plan as required by this subsection, the department may pursue enforcement actions authorized by Section 74-6-10 NMSA 1978.

(c) The permittee may investigate potential sources of contamination that may have caused a standard(s) to be exceeded. If such an investigation indicates that the source of the contamination is not the impoundment intended to be monitored by the well, the permittee may petition within 120 days of the date of postal notice from the department that action is required under this subsection for a variance from the requirements of this section in accordance with 20.6.2.1210 NMAC. It is the permittee's burden to prove any claim that the source of the contamination is not the impoundment intended to be monitored by the well. If the variance is denied the permittee shall submit a corrective action plan meeting the requirements of Subparagraph (a) of this paragraph within 60 days of the denial.

(d) The permittee may be required to submit an abatement plan proposal pursuant to 20.6.2.4106 NMAC within 60 days of written notice from the department. Abatement shall be performed pursuant to 20.6.2.4101, 20.6.2.4103, 20.6.2.4104, and 20.6.2.4106 through 20.6.2.4115 NMAC.

(2) Dairy rule liner or pre-dairy rule liner composed of 40/30-mil (minimum) HDPE or equivalent. For impoundments using a liner installed after the effective date of the dairy rule and composed of a material that is, at a minimum, 60-mil HDPE (or other material having equivalent characteristics with regard to permeability, resistance to degradation by ultraviolet light, compatibility with the liquids anticipated to be collected in the impoundment, tensile strength, and tear and puncture resistance), or impoundments using a liner installed prior to the effective date of the dairy rule and composed of a material that is, at a minimum, 40-mil unreinforced HDPE, 30-mil reinforced HDPE, (or other material having equivalent characteristics with regard to permeability, resistance to degradation by ultraviolet light, compatibility with the liquids anticipated to be collected in the impoundment, tensile strength, and tear and puncture resistance), the following actions shall be taken.

(a) Initial liner. For impoundments where the existing liner is the initial liner installed, the following actions shall be taken.

(i) A corrective action plan shall be submitted within 120 days of the date of postal notice from the department that action is required under this subsection unless a petition for variance is filed in accordance with Sub-subparagraph (iii) of this

subparagraph. The corrective action plan shall describe any repairs or changes in practices made to address the cause of the exceedance, and propose source control measures and a schedule for implementation. The implementation schedule shall include a schedule of all proposed corrective action activities and the date that corrective action will be completed. The department shall approve or disapprove the corrective action plan within 60 days of receipt. If the corrective action plan proposes actions to correct deficiencies with the liner, the proposed actions shall include repair or replacement of the existing liner, or construction and lining of a new impoundment. If liner repair is practicable, repairs shall be made pursuant to 20.6.6.17 NMAC or using a material that is equivalent to the existing liner with respect to material thickness and composition. Repairs shall be completed within 240 days of the date of postal notice from the department that action is required under this subsection. If liner repair is not practicable, the corrective action plan shall propose reconstruction and synthetic relining of the impoundment pursuant to 20.6.6.17 NMAC or construction and synthetic lining of a new impoundment pursuant to 20.6.6.17 NMAC within one year of the subsequent sample analysis date. Reconstruction or construction plans and specifications for the impoundment shall be completed pursuant to 20.6.6.17 NMAC and submitted with the corrective action plan. If a new impoundment is constructed the existing impoundment shall be closed pursuant to 20.6.6.30 NMAC.

(ii) Within 30 days of the date of postal notice of the department's approval of the corrective action plan, the permittee shall initiate implementation of the plan. If the department does not approve the corrective action plan, the department shall notify the permittee of the deficiencies by certified mail. The permittee shall submit a revised corrective action plan to the department within 60 days of the date of postal notice of the notice of deficiency. The department shall approve or disapprove the revised corrective action plan within 60 days of receipt. If the department does not approve the revised corrective action plan, or if the permittee fails to submit a revised plan as required by this subsection, the department may pursue enforcement actions authorized by Section 74-6-10 NMSA 1978.

(iii) The permittee may investigate potential sources of contamination that may have caused a standard(s) to be exceeded. If such an investigation indicates that the source of the contamination is not the impoundment intended to be monitored by the well, the permittee may petition within 120 days of the date of postal notice from the department that action is required under this subsection for a variance from the requirements of this section in accordance with 20.6.2.1210 NMAC. It is the permittee's burden to prove any claim that the source of the contamination is not the impoundment intended to be monitored by the well. If the variance is denied the permittee shall submit a corrective action plan meeting the requirements of Sub-subparagraph (i) of this subparagraph within 60 days of the denial.

(iv) The permittee may be required to submit an abatement plan proposal pursuant to 20.6.2.4106 NMAC within 60 days of written notification from the department. Abatement shall be performed pursuant to 20.6.2.4101, 20.6.2.4103, 20.6.2.4104, and 20.6.2.4106 through 20.6.2.4115 NMAC.

(b) Replacement liner. If source control measures have been previously implemented such that the existing liner replaced a previously installed liner in an impoundment and ground water standard(s) of 20.6.2.3103 NMAC continue to be exceeded, such impoundments are authorized to continue to receive wastewater or stormwater pursuant to the following requirements.

(i) The permittee may be required to submit an abatement plan proposal pursuant to 20.6.2.4106 NMAC within 60 days of written notice from the department if abatement has not been previously implemented. Abatement shall be performed pursuant to 20.6.2.4101, 20.6.2.4103, 20.6.2.4104, and 20.6.2.4106 through 20.6.2.4115 NMAC.

(ii) If the results of abatement activities indicate that the replacement liner does not successfully control the source of contamination, the department may modify the discharge permit pursuant to Subsection E of 20.6.2.3109 NMAC and include additional conditions pursuant to Subsection H of 20.6.6.10 NMAC. The additional conditions shall address, but are not limited to, further source control measures which may include, but are not limited to design, installation and construction of a composite liner system consistent with those described in the Guide for Industrial Waste Management, Part IV: Protecting Ground Water, Chapter 7: Section B, Designing and Installing Liners, Technical Considerations for New Surface Impoundments, Landfills and Waste Piles (U.S. environmental protection agency), incorporated herein by this reference. The requirements of 20.6.6.15 NMAC shall apply to hearing requests on the proposed additional discharge permit conditions.

(3) If the department notifies a permittee that action is required under this subsection, the applicant or permittee may notify the secretary by certified mail, sent within 30 days after the date of postal notice of the department's notice, that the applicant or permittee invokes dispute resolution under this paragraph. Upon such notice, the department, as represented by the secretary, deputy secretary, or division director and the applicant or permittee shall meet in person within 30 days and shall attempt in good faith to resolve the dispute.

C. Monitoring well replacement. If information available to the department indicates that a monitoring well(s) required by 20.6.6.23 NMAC is not located hydrologically downgradient of the contamination source it is intended to monitor, is not completed pursuant to 20.6.6.23 NMAC or contains insufficient water to monitor ground water quality effectively, a permittee shall install a replacement monitoring well(s). The replacement monitoring well(s) shall be installed within 120 days of the date of postal notice of notification from the department and a survey of the replacement monitoring well(s) shall be performed within 150 days of the date of postal notice of notification from the department, provided the department may grant an extension for good cause shown. The replacement monitoring well(s) shall be located, installed, completed, surveyed and sampled pursuant to 20.6.6.23 NMAC. The permittee shall develop a monitoring well completion report pursuant to Subsection J of 20.6.6.23 NMAC and submit it to the department within 180 days of the date of postal notice of notification

from the department, provided the department may grant an extension for good cause shown.

D. Exceedances of permitted maximum daily discharge volume. If the maximum daily discharge volume authorized by the discharge permit is exceeded by more than ten percent for any four average daily discharge volumes within any 12-week period, the permittee shall submit within 60 days of the fourth exceedance: a corrective action plan for reducing the discharge volume; or an application for a modified or renewed and modified discharge permit pursuant to 20.6.6.10 NMAC. Within 30 days of postal notice of department approval, the permittee shall initiate implementation of the corrective action plan.

E. Insufficient impoundment capacity. If a survey, capacity calculations, or settled solids thickness measurements, indicate an existing impoundment is not capable of meeting the capacity requirements required by Subsection D of 20.6.6.17 NMAC, then within 90 days of the effective date of the discharge permit the permittee shall submit a corrective action plan for department approval. The plan may include, but is not limited to, proposals for constructing an additional impoundment, reducing the discharge volume, removing accumulated solids, changing wastewater or stormwater management practices, or installing an advanced treatment system. The corrective action plan shall include a schedule for implementation through completion of corrective actions. The corrective action plan schedule shall propose completion not to exceed one year from the submittal date of the initial corrective action plan. Within 30 days of the date of postal notice of the department's approval of the corrective action plan, the permittee shall initiate implementation of the plan. Should the corrective action plan include removal of accumulated solids, solids shall be removed from the impoundment in a manner that is protective of the impoundment liner. The plan shall include the method of removal, and locations and methods for storage and disposal of the solids-slurry. If the plan proposes land application of the solids-slurry, the plan must also include the analytical results of total Kjeldahl nitrogen and chloride obtained from a representative sample of the solids-slurry to be applied. Notwithstanding Paragraph (6) of Subsection D of 20.6.6.17 NMAC, if a corrective action plan required under this subsection calls for construction of a new wastewater impoundment or improvement of an existing wastewater impoundment, and ground water quality standards have not been exceeded in monitoring wells installed to monitor the existing impoundment for the four quarters preceding submission of the corrective action plan, the permittee may propose and the department may approve a liner for the new wastewater impoundment or improvement of the existing impoundment consistent with the liner design approved by the department at the time of the last discharge permit issued by the department before the effective date of the dairy rule.

F. Inability to preserve required freeboard. If a minimum of two feet of freeboard cannot be preserved in the wastewater impoundment, the permittee shall submit a corrective action plan to the department for approval. The corrective action plan shall be submitted within 30 days of the date of the initial exceedance of the freeboard requirement. The plan may include, but is not limited to, proposals for constructing an

additional impoundment, reducing the maximum daily discharge volume, changing wastewater management practices, or installing an advanced wastewater treatment system. The corrective action plan shall include actions to be immediately implemented to regain and maintain a minimum of two feet of freeboard until permanent corrective actions have been completed. The corrective action plan shall include a schedule for implementation through completion of corrective actions. The corrective action plan schedule shall propose completion not to exceed one year from the submittal date of the initial corrective action plan. Within 30 days of the date of postal notice of the department's approval of the corrective action plan, the permittee shall initiate implementation of the plan. Notwithstanding Paragraph (6) of Subsection D of 20.6.6.17 NMAC, if a corrective action plan required under this subsection calls for construction of a new wastewater impoundment or improvement of an existing wastewater impoundment, and ground water quality standards have not been exceeded in monitoring wells installed to monitor the existing impoundment for the four quarters preceding submission of the corrective action plan, then the permittee may propose and the department may approve a liner for the new wastewater impoundment or improvement of the existing impoundment consistent with the liner design approved by the department at the time of the last discharge permit issued by the department before the effective date of the dairy rule.

G. Impoundment - structural integrity compromised. Within 24 hours of discovery, a permittee shall report to the department, any damage to the berms or the liner of an impoundment or any condition that exists that may compromise the structural integrity of the impoundment. Within 15 days of the reported discovery, the permittee shall submit to the department a corrective action plan describing any actions taken or proposed to be taken to repair the damage or condition. Within 30 days of receipt, the department shall respond to the proposed corrective action plan. Repairs to the impoundment liner or berms shall be completed pursuant to 20.6.6.17 NMAC. The corrective action plan shall include a schedule for implementation through completion of corrective actions. The corrective action plan schedule shall propose completion not to exceed one year from the submittal date of the initial corrective action plan. The schedule of corrective actions shall be commensurate to the magnitude and scope of the activities to be completed. Within 30 days of the date of postal notice of the department's approval of the corrective action plan, the permittee shall initiate implementation of the plan. Notwithstanding Paragraph (6) of Subsection D of 20.6.6.17 NMAC, if a corrective action plan required under this subsection calls for construction of a new wastewater impoundment or improvement of an existing wastewater impoundment, and ground water quality standards have not been exceeded for the four quarters preceding submission of the corrective action plan, then the permittee may propose and the department may approve a liner for the new wastewater impoundment or improvement of the existing impoundment consistent with the liner design approved by the department at the time of the last discharge permit issued by the department before the effective date of the dairy rule.

H. Unauthorized discharge - reporting and correction. In the event of a spill or release that is not authorized by the discharge permit, the permittee shall notify the

department and take corrective actions pursuant to 20.6.2.1203 NMAC. Wastewater or stormwater shall be contained and pumped to a permitted sump, impoundment, or land application area pursuant to the dairy rule. Wastewater or stormwater applied to the land application area shall conform to the requirements of 20.6.6.21 and 20.6.6.25 NMAC. The permittee shall repair or replace failed components within 48 hours from the time of failure or as soon as practicable.

[20.6.6.27 NMAC - N, 01/31/2011; A, 12/31/2011; A, 06/16/2015]

20.6.6.28 [RESERVED]

20.6.6.29 ADDITIONAL CONTINGENCY REQUIREMENTS FOR DAIRY FACILITIES DISCHARGING TO AN EVAPORATIVE WASTEWATER DISPOSAL SYSTEM:

Inability to maintain required freeboard. If a combination wastewater/stormwater impoundment used for disposal by evaporation does not have free capacity below the two-foot freeboard level required by Subsection D of 20.6.6.17 NMAC, then within seven days of the date of discovery of insufficient free capacity the permittee shall submit a corrective action plan for department approval. The plan shall include, but is not limited to, a request for temporary permission to discharge to allow immediate removal and disposal of combined wastewater and stormwater; a proposal for long-term corrective actions which may include constructing an additional impoundment; reducing the discharge volume; changing wastewater or stormwater management practices; or installing an advanced treatment system. The corrective action plan shall include schedule for implementation to complete corrective actions within one year from the submittal date of the initial corrective action plan. Upon department approval, the permittee shall initiate implementation of the corrective action plan.

[20.6.6.29 NMAC - N, 01/31/2011]

20.6.6.30 CLOSURE REQUIREMENTS FOR ALL DAIRY FACILITIES:

A. Permanent closure of dairy facility or impoundments. The following closure actions shall be performed at dairy facilities.

(1) For permanent closure of a dairy facility.

(a) The department shall be notified no later than 30 days after wastewater discharge has permanently ceased at the dairy facility.

(b) Installation of any additional monitoring wells shall be completed pursuant to 20.6.6.23 NMAC.

(c) All wastewater and combination wastewater/stormwater impoundments shall be emptied within six months of permanently ceasing wastewater discharge at the

dairy facility; combination wastewater/stormwater impoundments may continue to receive stormwater after removal of the impounded wastewater/stormwater. All stormwater and combination wastewater /stormwater impoundments shall be emptied of stormwater within one year of cessation of wastewater discharge. Wastewater and stormwater removed from impoundments shall be applied to the designated land application area, as authorized by a discharge permit. In the event that land application is not authorized by a discharge permit, a disposal plan shall be submitted for department approval and the plan implemented upon department approval.

(d) Manure solids and compost shall be removed from surface areas at the dairy facility and applied to the designated land application area, as authorized by a discharge permit, or transferred off-site for proper disposal.

(e) Complete removal of manure solids from the wastewater impoundment(s) shall be achieved within two years of permanently ceasing wastewater discharge. Complete removal of manure solids from the stormwater and combination wastewater/stormwater impoundment(s) shall be achieved within two years of cessation of wastewater discharge. Manure solids shall be applied to the designated land application area, as authorized by a discharge permit. In the event that land application is not authorized by a discharge permit, a disposal plan shall be submitted for department approval and the plan implemented upon department approval.

(f) Impoundment liners shall be perforated or removed and the impoundments shall be re-graded with clean fill to blend with surface topography to prevent ponding within two years of permanently ceasing wastewater discharge.

(2) For closure of an impoundment at a facility not undergoing permanent closure (e.g., existing impoundment replaced with new impoundment).

(a) Impoundments shall be emptied of wastewater and stormwater within six months of ceasing receipt of wastewater or stormwater into the impoundments. Wastewater and stormwater removed from impoundments shall be applied to the designated land application area, as authorized by a discharge permit. If land application is not authorized by a discharge permit, a disposal plan shall be submitted for department approval and the plan implemented upon department approval.

(b) Complete removal of manure solids from impoundments shall be achieved within two years of ceasing receipt of wastewater or stormwater into the impoundments. Manure solids shall be applied to the designated land application area, as authorized by a discharge permit. If land application is not authorized by a discharge permit, a disposal plan shall be submitted for department approval and the plan implemented upon department approval.

(c) Liners in impoundments shall be perforated or removed and the impoundments shall be re-graded with clean fill to blend with surface topography to

prevent ponding within two years of ceasing receipt of wastewater or stormwater into the impoundments.

B. Post-closure ground water sampling and reporting. Following completion and confirmation by the department of the requirements of Subsection A of this section, ground water monitoring shall continue pursuant to 20.6.6.23 NMAC until a minimum of eight consecutive ground water sampling events confirm that the standards of 20.6.2.3103 NMAC are not exceeded and the total nitrogen concentration in ground water is less than or equal to 10 milligrams per liter. If monitoring results show that one or more of the standards of 20.6.2.3103 NMAC is exceeded or the total nitrogen concentration in ground water is greater than 10 milligrams per liter, the permittee shall implement contingency requirements pursuant to 20.6.6.27 NMAC. Upon notification from the department that post-closure ground water monitoring may cease, the permittee shall abandon all monitoring wells and submit a report to the department pursuant to Subsection C of this section.

C. Monitoring well abandonment. Upon notification from the department, the permittee shall abandon monitoring wells pursuant to 19.27.4 NMAC and the following requirements.

(1) The well casing shall be removed and neat cement grout, bentonite based plugging material, or other sealing material approved by the state engineer in accordance with 19.27.4 NMAC shall be placed from the bottom of the borehole to the ground surface using a tremie pipe.

(2) If the casing cannot be removed, neat cement grout, bentonite based plugging material, or other sealing material approved by the state engineer in accordance with 19.27.4 NMAC shall be emplaced in the well using a tremie pipe from the bottom of the well to the ground surface.

(3) A well abandonment report shall be prepared by the permittee and shall provide information equivalent to the plugging record requirements of 19.27.4 NMAC. The well abandonment report shall be submitted to the department within 60 days of completion of well plugging activities.

[20.6.6.30 NMAC - N, 01/31/2011; A, 06/16/2015]

20.6.6.31 [RESERVED]

20.6.6.32 [RESERVED]

20.6.6.33 RECORD RETENTION REQUIREMENTS FOR ALL DAIRY FACILITIES:

A. A permittee shall retain a written record at the dairy facility of all data and information related to field measurements, sampling, and analysis conducted pursuant

to the dairy rule and the discharge permit. The following information shall be recorded and shall be made available to the department upon request.

- (1) The dates, exact place and times of sampling or field measurements.
- (2) The name and job title of the individuals who performed each sample collection or field measurement.
- (3) The date of the analysis of each sample.
- (4) The name and address of the laboratory and the name and job title of the person that performed the analysis of each sample.
- (5) The analytical technique or method used to analyze each sample or take each field measurement.
- (6) The results of each analysis or field measurement, including raw data.
- (7) The results of any split, spiked, duplicate or repeat sample.
- (8) A description of the quality assurance and quality control procedures used.

B. A permittee shall retain a written record at the dairy facility of any spills, seeps, or leaks of effluent, and of leachate or process fluids not authorized by the discharge permit. Records shall be made available to the department upon request.

C. A permittee shall retain a written record at the dairy facility of the operation, maintenance, and repair of all features/equipment used to treat, store or dispose of wastewater, measure flow rates, monitor water quality, or collect other data. Records shall include repair, replacement or calibration of any monitoring equipment and repair or replacement of any equipment used in the waste or wastewater treatment and disposal system. Records shall be made available to the department upon request.

D. A permittee shall retain records of all monitoring information at the dairy facility, including all calibration and maintenance records, copies of all reports, and the application for the discharge permit. Records shall be retained for a period of at least 10 years from the date of the sample collection, measurement, report or application.

[20.6.6.33 NMAC - N, 01/31/2011]

20.6.6.34 TRANSFER OF DAIRY DISCHARGE PERMITS:

A. Transfer of discharge permits for dairy facilities shall be made pursuant to 20.6.2.3111 NMAC and this section.

B. The transferee(s) shall notify the department, in writing, of the date of transfer of ownership and provide contact information for the new owner(s) pursuant to Subsection B of 20.6.6.11 NMAC and Subsection B of 20.6.6.12 NMAC. Notification shall be submitted to the department of the transfer within 30 days of the ownership transfer date.

[20.6.6.34 NMAC - N, 01/31/2011]

20.6.6.35 CONTINUING EFFECT OF PRIOR ACTIONS DURING TRANSITION:

A. A discharge permit issued pursuant to 20.6.2.3109 NMAC that has not expired on or before December 31, 2011, shall remain in effect and enforceable pursuant to the conditions of the discharge permit and for its term as designated by Section 74-6-5 NMSA 1978. If an effective discharge permit contains a permit condition with a time period for submittal of a renewal application that is different from the time period contained in Subsection A of 20.6.6.10 NMAC that condition will remain in effect for two years following the effective date of the dairy rule.

B. If an application for a new discharge permit or an application for a renewed or modified discharge permit was submitted to the department before December 31, 2011, and the department has not yet proposed a draft discharge permit for the facility, the application shall not be processed by the department. The applicant shall submit to the department an application for a new discharge permit or an application for a renewal, modification, renewal and modification or closure discharge permit pursuant to 20.6.6.10 NMAC and a filing fee and permit fee payment pursuant to 20.6.6.9 NMAC within 180 days of August 1, 2015. Application and permit fees already submitted by the facility shall be credited toward the fees required by 20.6.6.9 NMAC.

C. If a discharge permit for a dairy facility was expired on December 31, 2011, and an application for renewal has not been received by the department, the permittee, owner of record of the dairy facility or the holder of the expired discharge permit:

(1) shall within 90 days of August 1, 2015, submit to the department an application for a discharge permit renewal, renewal and modification or closure pursuant to 20.6.6.10 NMAC and a filing fee and permit fee payment pursuant to 20.6.6.9 NMAC; or

(2) if the dairy facility has not been constructed or operated, the permittee, the owner of record of the dairy facility or the holder of the expired discharge permit may submit a statement to the department instead of an application for renewal certifying that the facility has not been constructed or operated and that no discharges have occurred. Upon the department's verification of the certification, the department shall retire the discharge permit number from use.

D. The department shall take action on permit applications pending before the department as of August 1, 2015, and shall consider applications to modify final permits issued by the department under the dairy rule prior to August 1, 2015, as follows:

(1) If the department received an application for a discharge permit for a dairy facility after December 31, 2011, which is pending as of August 1, 2015, and the department has not issued a draft permit before August 1, 2015, then the department shall process the application in accordance with 20.6.6.10 NMAC and take action in accordance with the dairy rule, including the amendments effective as of August 1, 2015.

(2) If the department has issued a draft permit for a dairy facility, but not a final permit, as of August 1, 2015, then on or before September 30, 2015, the applicant may notify the department in writing to review the draft permit for changes to be consistent with the amendments to the dairy rule.

(a) If the department does not receive a written notice from the applicant to review the draft permit by September 30, 2015, then the department may act on the draft permit in accordance with Subsection J of 20.6.6.10 NMAC, including the issuance of a final permit, after considering all comments made on the draft permit and the record of any public hearing.

(b) If the department receives a written notice to review the draft permit by September 30, 2015, then the department may require the applicant to submit additional information, consistent with 20.6.6.12 NMAC, as necessary to reflect the amendments to the dairy rule effective as of August 1, 2015, and the applicant may supplement its permit application. After considering the additional information, the department shall either act on the application in accordance with Subsection G of 20.6.6.10 NMAC or, if the department determines that no significant changes to the draft permit are warranted, the department may proceed with a permit decision in accordance with Subsection J of 20.6.6.10 NMAC and shall explain in writing the reasons for not changing the draft permit. If a request for permit review is filed, any information submitted by an applicant who requested review of the draft permit shall be included in the administrative record filed by the department under Paragraph (2) of Subsection A of 20.1.3.16 NMAC.

(3) If the department has issued a final permit under the dairy rule before August 1, 2015, the permit holder may submit an application to modify the discharge permit to reflect amendments to the dairy rule pursuant to 20.6.6.10 NMAC along with the applicable fee specified in 20.6.6.9 NMAC.

(4) The department shall prioritize its review and permit actions under this subsection based upon potential impacts to ground water quality.

E. Any dairy facility discharging, capable of recommencing discharging, or that has ceased discharging within the term of its most recent discharge permit shall continue all monitoring and submittal of monitoring reports as prescribed in the most recent

discharge permit until the department issues a renewed or renewed and modified discharge permit.

[20.6.6.35 NMAC - N, 01/31/2011; A, 06/16/2015]

PART 7: GROUND WATER PROTECTION - SUPPLEMENTAL PERMITTING REQUIREMENTS FOR COPPER MINE FACILITIES

20.6.7.1 ISSUING AGENCY:

Water Quality Control Commission.

[20.6.7.1 NMAC - N, 12/1/13]

20.6.7.2 SCOPE:

All persons subject to the Water Quality Act, Sections 74-6-1 NMSA 1978 et seq. and specifically copper mine facilities and their operations.

[20.6.7.2 NMAC - N, 12/1/13]

20.6.7.3 STATUTORY AUTHORITY:

Standards and regulations are adopted by the commission under the authority of the Water Quality Act, Sections 74-6-1 through 74-6-17 NMSA 1978.

[20.6.7.3 NMAC - N, 12/1/13]

20.6.7.4 DURATION:

Permanent.

[20.6.7.4 NMAC - N, 12/1/13]

20.6.7.5 EFFECTIVE DATE:

12/1/13, unless a later date is cited at the end of a section.

[20.6.7.5 NMAC - N, 12/1/13]

20.6.7.6 OBJECTIVE:

The purpose of 20.6.7 NMAC is to supplement the general permitting requirements of 20.6.2.3000 through 20.6.2.3114 NMAC to control discharges of water contaminants specific to copper mine facilities and their operations to prevent water pollution. Compliance with these rules does not relieve an applicant or permittee of a copper mine

facility from complying with the Mining Act rules in Title 19, Chapter 10 NMAC under the authority of the mining and minerals division.

[20.6.7.6 NMAC - N, 12/1/13]

20.6.7.7 DEFINITIONS:

A. Terms defined in the Water Quality Act and 20.6.2.7 NMAC shall have the meanings as given in such.

B. A term defined in this part shall have the following meaning.

(1) "Acid mine drainage" means water that is discharged from an area affected by mining exploration, mining, or reclamation, with a pH of less than 5.5 and in which total acidity exceeds total alkalinity as defined by the latest edition of *standard methods for the examination of water and wastewater*.

(2) "Additional conditions" means conditions and requirements included in a discharge permit pursuant to Subsection D of Section 74-6-5 NMSA 1978 that are based on site specific circumstances and that are in addition to those imposed in the rules of the commission.

(3) "Applicable standards" means the standards set forth in 20.6.2.3103 NMAC; the background concentration approved by the department; or, any alternative abatement standard approved by the commission pursuant to Subsection F of 20.6.2.4103 NMAC.

(4) "Applicant" means the person applying for a new, renewed, modified, or amended discharge permit.

(5) "Area of open pit hydrologic containment" means, for an open pit that intercepts the water table, the area where ground water drains to the open pit and is removed by evaporation or pumping, and is interior to the department approved monitoring well network installed around the perimeter of an open pit pursuant to Paragraph (4) of Subsection B of 20.6.7.28 NMAC and also limited to the area of disturbance authorized by a discharge permit.

(6) "As-built drawings" means engineering drawings which portray units as constructed.

(7) "Background" means the concentration of water contaminants naturally occurring from undisturbed geologic sources of water contaminants.

(8) "Below-grade tank" means a tank including sumps where a portion of the tank's side walls is below the surrounding ground surface elevation. A below-grade tank

does not include an above ground tank that is located at or above the surrounding ground surface elevation and is surrounded by berms.

(9) "Closure" means all activities that are required pursuant to 20.6.7.33 NMAC through 20.6.7.35 NMAC and an approved discharge permit to monitor, minimize, control, mitigate, prevent or abate water pollution associated with a copper mine facility after operations at the copper mine facility, or at an individual unit within the copper mine facility, have ceased.

(10) "Construction quality assurance" or "CQA" means a planned system of activities necessary to ensure that standards and procedures are adhered to and that construction and installation meet design criteria, plans and specifications. A CQA includes inspections, verifications, audits, evaluations of material and workmanship necessary to determine and document the quality of the constructed impoundment or structure, and corrective actions when necessary.

(11) "Construction quality control" or "CQC" means a planned system of operational techniques and activities used to preserve the quality of materials and ensure construction to specifications. Elements of a CQC include inspections, testing, data collection, data analysis and appropriate corrective actions.

(12) "CQA/CQC report" means a report that summarizes all inspection, testing, data collection, data analysis and any corrective actions completed as part of CQA or CQC for a project.

(13) "Copper mine facility" means all areas within which copper mining and its related activities that may discharge water contaminants occurs and where the discharge will or does take place including, but not limited to open pits; waste rock piles; ore stockpiles; leaching operations; solution extraction and electrowinning plants; ore crushing, ore milling, ore concentrators; tailings impoundments; smelters; pipeline systems, tanks or impoundments used to convey or store process water, tailings or impacted stormwater; and truck or equipment washing units.

(14) "Copper mine rule" means 20.6.7 NMAC, as amended.

(15) "Cover system" means any engineered or constructed system designed as a source control measure to minimize to the maximum extent practicable the ingress of water or oxygen into a waste rock pile, leach stockpile or tailing material. A cover system may be comprised of a monolithic layer of, or any combination of, earthen materials, synthetic materials, vegetation, and amendments.

(16) "Critical structure" means earthen or rock structures or embankments (such as an outslope of a rock stockpile), that are likely to cause an exceedance of applicable groundwater standards or undue risk to property in the event of a significant unexpected slope movement.

(17) "Date of postal notice" means the date when the United States postal service first makes notice to the applicant or permittee of its possession of certified mail addressed to the applicant or permittee.

(18) "Discharge" means spilling, leaking, pumping, pouring, emitting, or dumping of a water contaminant in a location and manner where there is a reasonable probability that the water contaminant may reach ground water.

(19) "Discharge permit amendment" means a minor modification of a discharge permit that does not result in a significant change in the location of a discharge, an increase in daily discharge volume of greater than 10% of the original daily discharge volume approved in an existing discharge permit for an individual discharge location, a significant increase in the concentration of water contaminants discharged, or introduction of a new water contaminant discharged.

(20) "Discharge volume" means the volume of discharged process water, impacted stormwater or tailings measured at a specific point at the copper mine facility over a specified period of time.

(21) "Existing copper mine facility" means a copper mine facility operating under an approved discharge permit as of the effective date of the copper mine rule. Existing copper mine facility includes a copper mine covered under an approved discharge permit as of the effective date of the copper mine rule that is on standby status in accordance with mining and minerals division rules.

(22) "Existing impoundment" means an impoundment that is currently receiving or has ever received process water or collected impacted stormwater and that has not been closed pursuant to a discharge permit.

(23) "Expiration" means the date upon which the term of a discharge permit ends.

(24) "Factor of safety" means, for slope stability purposes, the ratio of the resisting forces to the driving forces.

(25) "Final CQA report" means a report prepared by the CQA officer that includes as-built drawings and a detailed description of the installation methods and procedures that document that the work was conducted as designed.

(26) "Flow meter" means a measuring device or structure used to measure the volume of water, process water, tailings or stormwater that passes a particular reference section in a unit of time.

(27) "Freeboard" means the vertical distance between the elevation at the lowest point of the top inside edge of the impoundment and the design high water elevation of the water level in the impoundment.

(28) "Highway" means any public road operated and maintained by the local, county, state or federal government.

(29) "Impacted stormwater" means direct precipitation and runoff that comes into contact with water contaminants within a copper mine facility which causes the stormwater to exceed one or more of the standards of 20.6.2.3103 NMAC and includes overflow from a primary process solution impoundment or other collection system resulting from a precipitation event.

(30) "Impoundment" means any structure designed and used for storage or containment of mine process water, or impacted stormwater, or used for solids settling, excluding a tailings impoundment. A process water or stormwater transfer sump or a tank, below-grade tank, drum or pit bottom is not an impoundment.

(31) "Interbench slope" means the outslope surface between terrace benches or between a terrace bench and any engineered conveyance system (i.e., a system to divert runoff).

(32) "Large copper mine facility" means a copper mine facility that has disturbed or is proposing to disturb an area of 1500 acres or greater.

(33) "Leach stockpile" means stockpiles of ore and all other rock piles associated with mining disturbances that have been leached, are currently being leached or have been placed in a pile for the purpose of being leached.

(34) "Liner system" means an engineered system required by the copper mine rule for the containment, management or storage of process water, leach stockpile material, waste rock, tailings or other materials that have the potential to generate water contaminants including all constructed elements of the system and may include the subgrade, liner bedding, leak detection systems, synthetic liners, earthen liners, overlayers, solution collection systems, anchor trenches, and berms, or other system elements, as applicable.

(35) "Maximum daily discharge volume" means the total daily volume of process water (expressed in gallons per day) or tailings (expressed in tons per day) authorized for discharge by a discharge permit.

(36) "Medium copper mine facility" means a copper mine facility that has disturbed or is proposing to disturb an area of a minimum of 500 acres but less than 1500 acres.

(37) "Mining and minerals division" means the mining and minerals division of the New Mexico energy, minerals, and natural resources department.

(38) "Mining Act" means the New Mexico Mining Act, Sections 69-36-1 through 69-36-20, NMSA 1978.

(39) "New copper mine facility" means a copper mine facility that is not operating under an approved discharge permit as of the effective date of the copper mine rule.

(40) "Non-impacted stormwater" means stormwater run-off generated as a result of direct precipitation at a copper mine facility that does not exceed the standards of 20.6.2.3103 NMAC.

(41) "Open pit" means the area within which ore and waste rock are exposed and removed by surface mining.

(42) "Open pit surface drainage area" means the area in which storm water drains into an open pit and cannot feasibly be diverted by gravity outside the pit perimeter, and the underlying ground water is hydrologically contained by pumping or evaporation of water from the open pit.

(43) "Operator" means the person or persons responsible for the overall operations of a copper mine facility.

(44) "Outslope" means the sloped perimeter of waste rock piles, leach stockpiles and tailings impoundments.

(45) "Owner" means the person or persons who own all or part of a copper mine facility.

(46) "Permittee" means a person who is issued or receives by transfer a discharge permit for a copper mine facility, the holder of an expired discharge permit, or, in the absence of a discharge permit, a person who makes or controls a discharge at a copper mine facility.

(47) "Pipeline corridor" means a constructed pathway that contains concentrate, tailing or process water pipelines, associated spill containment structures, the pipeline subgrade and access roads.

(48) "Pipeline system" means one or more pipelines and associated structures used to transport process water, concentrate, slurry, tailing or impacted stormwater.

(49) "PLS" means pregnant leach solution that is generated from leaching ore or rock stockpiles.

(50) "Process water" means any water containing water contaminants in excess of the standards of 20.6.2.3103 NMAC that is generated, managed or used within a copper mine facility including raffinate; PLS; leachate collected from waste rock stockpiles, leach stockpiles, and tailings impoundments; tailings decant water; pit dewatering water; intercepted ground water, laboratory or other waste discharges containing water contaminants; and domestic wastes mixed with process water.

(51) "Seepage" means leachate that is discharged from a waste rock stockpile or tailing impoundment and emerges above or at the ground surface or that is present in the vadose zone and may be captured prior to entering ground water.

(52) "Slag" means a partially vitreous by-product of the process of smelting ore.

(53) "Slope angle" means the horizontal run distance divided by the vertical rise, measured along the steepest gradient of the interbench slope's physical surface (for example, a 2.5:1 slope refers to 2.5 horizontal and 1 vertical).

(54) "Small copper mine facility" means a copper mine facility that has disturbed or is proposing to disturb less than 500 acres and that does not contain tailings impoundments or leach stockpiles.

(55) "Spillway" means a structure used for controlled releases from a stormwater or process water impoundment, in a manner that protects the structural integrity of the impoundment.

(56) "Stormwater" means all direct precipitation and runoff generated within a copper mine facility from a storm event.

(57) "Surface water(s) of the state" means all surface waters as defined in 20.6.4.7 NMAC.

(58) "SX/EW" means solution extraction and electrowinning.

(59) "Tailings" means finely crushed and ground rock residue and associated fluids discharged from an ore milling, flotation beneficiation and concentrating process.

(60) "Tailings impoundment" means an impoundment that is the final repository of tailings.

(61) "Unauthorized discharge" means a release of process water, tailings, leachate or seepage from individual copper mine facility components, impacted stormwater or other substances containing water contaminants not approved by a discharge permit.

(62) "Underground mine" means the below-surface mine workings within which ore and waste rock are removed.

(63) "Unit" means a component of a mining operation including but not limited to processing, leaching, excavation, storage, stockpile or waste units.

(64) "Variance" means a commission order establishing requirements for a copper mine facility or a portion of a copper mine facility that are different than the requirements in the copper mine rule.

(65) "Waste rock" means all material excavated from a copper mine facility that is not ore or clean top soil.

[20.6.7.7 NMAC - N, 12/1/13]

20.6.7.8 REQUIREMENTS FOR DISCHARGING FROM COPPER MINE FACILITIES:

A. No person shall discharge effluent or leachate from a copper mine facility so that it may move directly or indirectly into ground water without a discharge permit approved by the department. A person intending to discharge from a copper mine facility shall submit an application for a discharge permit pursuant to 20.6.7.10 NMAC and remit fees pursuant to 20.6.7.9 NMAC.

B. Permittees, owners of a copper mine facility and holders of an expired permit are responsible for complying with the copper mine rule.

C. Unless otherwise noted in 20.6.7 NMAC, the requirements of 20.6.2.3101 through 20.6.2.3114 NMAC apply to a copper mine facility.

D. Compliance with commission rules including the requirements of 20.6.7 NMAC does not relieve a copper mine facility owner, operator or permittee from complying with the requirements of other applicable local, state and federal regulations or laws.

[20.6.7.8 NMAC - N, 12/1/13]

20.6.7.9 FEES:

An applicant or permittee shall pay fees to the department's water quality management fund pursuant to this section in lieu of 20.6.2.3114 NMAC.

A. The permittee of a copper mine shall remit an annual permit fee as follows: large copper mines, one hundred and twenty-five thousand dollars (\$125,000); medium copper mines, sixty-two thousand and five hundred dollars (\$62,500); and small copper mines, twelve thousand and five hundred dollars (\$12,500). Annual permit fees shall be due each August 1 after the effective date of the discharge permit until the discharge permit is terminated.

B. An applicant for a discharge permit, a discharge permit renewal, discharge permit renewal and modification, or discharge permit modification for a copper mine facility shall remit an application fee of one thousand dollars (\$1,000). The application fee is not refundable and may not be applied toward future discharge permit applications.

C. A permittee requesting a discharge permit amendment separate from a discharge permit renewal or modification shall remit with the request a discharge permit amendment fee of five hundred dollars (\$500). The permit amendment fee is not refundable and may not be applied toward future discharge permit applications or amendments.

D. A permittee requesting temporary permission to discharge pursuant to Subsection B of 20.6.2.3106 NMAC shall remit with the request a temporary permission fee of one thousand dollars (\$1,000). The temporary permission fee is not refundable and may not be applied toward future discharge permit applications or requests for temporary permission to discharge.

[20.6.7.9 NMAC - N, 12/1/13]

20.6.7.10 GENERAL APPLICATION REQUIREMENTS FOR ALL COPPER MINE FACILITIES:

This section specifies the general requirements for discharge permit applications for all types of copper mine facilities.

A. Before submitting an initial application for a new copper mine facility, a prospective applicant shall schedule a pre-application meeting with the department to discuss the proposed location of the copper mine facility and individual units, the operating plans for the proposed process units, the physical characteristics of the copper mine facility's proposed site and other information that is required to be submitted in an application for a discharge permit. The pre-application meeting shall be held in Santa Fe, unless otherwise agreed to by the department. The pre-application meeting should occur no less than 60 days before the submission of the application except as approved by the department.

B. Instead of the information required by Subsection C of 20.6.2.3106 NMAC, an applicant shall provide information and supporting technical documentation pursuant to this section and 20.6.7.11 NMAC.

C. Notwithstanding Subsection F of 20.6.2.3106 NMAC, a permittee shall submit an application for renewal of a discharge permit for a copper mine facility or a unit of the copper mine facility to the department at least 270 days before the discharge permit expiration date, unless closure of the copper mine facility is approved by the department before that date.

D. For a copper mine facility that has been issued a discharge permit but has not been constructed or operated, a permittee shall submit to the department at least 270 days before the discharge permit expiration date an application for renewal pursuant to Subsection B of this section or a statement certifying that the copper mine facility has not been and will not be constructed and that no discharges have occurred or will occur.

Upon the department's verification of the certification, the department shall terminate the discharge permit, if necessary, and retire the discharge permit number from use.

E. An application for a new, renewed, or modified discharge permit for a copper mine facility shall include the information and supporting documentation required by this section except that previously submitted materials may be included by reference in discharge permit renewal or modification applications provided that the materials are current, readily available to the secretary and sufficiently identified to be retrieved. The applicant shall attest to the truth of the information and supporting documentation in the application. The applicant shall provide to the department a hard copy (paper format) of the original signed completed application and all supporting documentation. The applicant shall also provide an electronic copy of the original signed application and all supporting documentation in portable document format (PDF) on a compact disc (CD) or digital versatile disc (DVD) or other format approved by the department.

F. Within 90 days of the department notifying the applicant in writing that the application is deemed administratively complete pursuant to Subsection A of 20.6.2.3108 NMAC, the department shall review the application for technical completeness and shall issue a written notice by certified mail to the applicant indicating whether the application is technically complete or is deemed to be deficient. An application must include the information required by Subsection B of this section to be deemed technically complete.

G. If the department determines that an application is technically deficient, the applicant shall have 60 days from the date of postal notice of the technical deficiency notification to provide the information required by this section. Upon request by the applicant and for good cause shown, the department may grant one or more extensions of time for the applicant to provide the information required by the technical deficiency notification.

(1) If an applicant for a new discharge permit does not provide all information required by this section to the department within 60 days of the date of postal notice of the technical deficiency, or within any extension granted by the department, the department may deny the application. The department shall provide notice of denial to the applicant by certified mail.

(2) If an applicant for a renewed or modified discharge permit does not provide all information required by this section to the department within 60 days of the date of postal notice of the technical deficiency, or within any extension granted by the department, the department may deny the application or may propose a discharge permit for approval consistent with the requirements of the copper mine rule. If the department denies the application, the department shall provide notice of denial to the applicant by certified mail.

(3) An applicant may supplement an application at any time during the technical review period. The department shall review the information for technical completeness within 90 days of receipt.

H. Within 90 days after an application is deemed technically complete or all information has been submitted to the department pursuant to a technical deficiency notification, the department shall make available a proposed approval of a discharge permit and a draft discharge permit or a notice of denial of a discharge permit application pursuant to Subsection H of 20.6.2.3108 NMAC and provide a copy to the mining and minerals division. The draft discharge permit shall contain applicable conditions specified in the copper mine rule, any conditions based on a variance issued for the copper mine facility pursuant to 20.6.2.1210 NMAC, and any additional conditions imposed under Subsection I of this section. Requests for a hearing on the proposed approval of a discharge permit or denial of a discharge permit shall be submitted to the department pursuant to Subsection K of 20.6.2.3108 NMAC.

I. The department may impose additional conditions on a discharge permit in accordance with Section 74-6-5 NMSA 1978. If the department proposes an additional condition in a discharge permit that is not included in the copper mine rule, the department shall include a written explanation of the reason for the additional condition with the copy of the draft permit and proposed approval sent to the applicant pursuant to Subsection H of 20.6.2.3108 NMAC. Pursuant to subsection K of 20.6.2.3108 NMAC, written comments regarding the additional condition may be submitted to the department during the comment period and a hearing may be requested regarding the additional conditions.

J. The secretary shall approve a discharge permit provided that it poses neither a hazard to public health nor undue risk to property, and:

(1) the requirements of the copper mine rule are met;

(2) the provisions of 20.6.2.3109 NMAC are met, with the exception of Subsection C of 20.6.2.3109 NMAC; and

(3) the denial of an application for a discharge permit is not required pursuant to Subsection E of Section 74-6-5 NMSA 1978.

[20.6.7.10 NMAC - N, 12/1/13]

20.6.7.11 APPLICATION REQUIREMENTS FOR DISCHARGE PERMITS FOR A COPPER MINE FACILITY:

A. An application for a new discharge permit or a renewal of an existing discharge permit shall include the applicable information in this section. An application for a modification of an existing discharge permit shall include the information in this section relevant to the proposed modification but need not include information listed in this

section if the information was submitted to the department in the prior discharge permit application and the information has not changed since the discharge permit was issued. The department may require separate operational and closure discharge permits, or may combine operational and closure requirements in the same permit.

B. Contact information. An application shall include:

- (1) applicant's name, title and affiliation with the copper mine facility, mailing address, and telephone number;
- (2) the name, mailing address and telephone number of each owner and operator of the copper mine facility;
- (3) if different than the applicant, the application preparer's name, title and affiliation with the copper mine facility, mailing address, telephone number and signature;
- (4) the mailing address and telephone number of any independent contractor authorized to assist the copper mine facility with compliance with the Water Quality Act and 20.6.2 NMAC and 20.6.7 NMAC; and
- (5) if the person submitting the application is not the owner or operator of the copper mine facility, a certification that the person is duly authorized to submit the application on behalf of the owner or operator.

C. Ownership and real property agreements.

- (1) An application shall include the copper mine facility owner's name, title, mailing address and phone number.
 - (a) If more than one person has an ownership interest in the copper mine facility or a partnership exists, then the applicant shall list all persons having an ownership interest in the copper mine facility, including their names, titles, mailing addresses and telephone numbers.
 - (b) If any corporate entity holds an ownership interest in the copper mine facility, the applicant shall also list the name(s), as filed with the New Mexico public regulation commission, of the corporate entity, and the corporate entity's registered agent's name and address.
- (2) If the applicant is not the owner of the real property upon which the copper mine facility is or will be situated, or upon which the discharge will occur, the applicant shall submit the name, address and telephone number of the owner(s), and a notarized statement from the owner which authorizes the use of the real property for the duration of the term of the requested permit. In the event the property is under federal or state

ownership the applicant shall provide other evidence of authorization to enter public lands for mining.

D. Setbacks. An application for a new copper mine facility shall include a scaled map of the proposed copper mine facility layout demonstrating that the copper mine facility meets the setback requirements of 20.6.7.19 NMAC.

E. Copper mine facility information and location. An application shall include:

- (1) the copper mine facility name, physical address and county;
- (2) the township, range and section for the entire copper mine facility; and
- (3) the total acreage of the copper mine facility.

F. Public notice preparation.

(1) An application for a new, modified or renewed and modified discharge permit shall include the name of a newspaper of general circulation in the location of the copper mine facility for the display advertisement publication, the proposed public location(s) for posting of the 2-foot by 3-foot sign, and the proposed off-site public location for posting of the additional notice, as required by Subsection B of 20.6.2.3108 NMAC.

(2) An application for a renewed discharge permit that does not seek a discharge permit modification shall include the name of a newspaper of general circulation in the location of the copper mine facility for the future display advertisement publication as required by Subsection C of 20.6.2.3108 NMAC.

G. Pre-discharge total dissolved solids concentration in ground water. An application shall include the pre-discharge total dissolved solids concentration, or range of concentration, from analytical results of ground water obtained from on-site test data from the aquifer(s) that may be affected by discharges from the copper mine facility. A copy of the laboratory analysis stating the pre-discharge total dissolved solids concentration shall be submitted with the application.

H. Determination of maximum daily discharge volume. An application shall include the following information.

- (1) The proposed maximum daily discharge volume of process water and tailings for each discharge location and a description of the discharge locations and the methods and calculations used to determine that volume.
- (2) The identification of all sources of process water and tailings.
- (3) The estimated daily volume of process water and tailings generated.

(4) Information regarding other waste discharges (i.e., domestic or industrial) at the copper mine facility. Permit identification numbers shall be submitted for those discharges that are already permitted.

I. Process water and tailings quality. An application shall include estimated concentrations of process water and tailings slurry quality for the constituents identified in 20.6.2.3103 NMAC including the basis for these estimations.

J. Identification and physical description of the copper mine facility. An application shall include the following information;

(1) a scaled map of the entire existing or proposed copper mine facility showing the location of all features identified in Paragraphs (2) through (11) of this subsection; the map shall be clear and legible, and drawn to a scale such that all necessary information is plainly shown and identified; the map shall show the scale in feet or metric measure, a graphical scale, a north arrow, and the effective date of the map; multiple maps showing different portions of the copper mine facility may be provided using different scales as appropriate; documentation identifying the means used to locate the mapped objects (i.e., global positioning system (GPS), land survey, digital map interpolation, etc.) and the relative accuracy of the data (i.e., within a specified distance expressed in feet or meters) shall be included with the map; any object that cannot be directly shown due to its location inside of existing structures, or because it is buried without surface identification, shall be identified on the map in a schematic format and identified as such;

(2) a description of each existing or proposed tailing impoundment, leach stockpile, process water and impacted stormwater impoundment, waste rock stockpile, and slag including information about its location, purpose, liner material, storage or disposal capacity, and the methods proposed or used to prevent pollution of ground water;

(3) a description of each existing or proposed open pit and underground mine within the proposed copper mine facility and information about its location, depth, size, and acreage;

(4) a description of each existing or proposed material handling and processing unit including crushing, milling, concentrating, smelting and SX/EW units within the copper mine facility, and information about its location and proposed methods of process water handling and disposal;

(5) a description of existing or proposed sumps, tanks, pipelines and truck and equipment wash units, including information for each unit regarding its location, purpose, construction material, dimensions and capacity; for portable tanks or pipelines or those subject to periodic relocation, identify the areas within which they may be used;

(6) a description of the proposed method(s) to manage stormwater runoff and run-on to minimize leachate that may be discharged;

(7) a description of water wells and monitoring wells, including information for each well regarding its location, construction material, dimensions and capacity;

(8) a description of flow meters required pursuant to the copper mine rule or a discharge permit and fixed pumps for discharge of process water, tailings and impacted stormwater;

(9) a description of any surface water(s) of the state and any other springs, seeps, ditch irrigation systems, acequias, and irrigation canals and drains located within the boundary of the copper mine facility;

(10) a description of proposed sampling locations; and

(11) a description of all septic tanks and leachfields used for the disposal of domestic wastes.

K. Surface soil survey, geology and hydrology. An application shall include:

(1) the most recent regional soil survey map and associated descriptions identifying surface soil type(s);

(2) a geologic map covering the area within a one-mile radius of the copper mine facility and geologic and lithological information which provides a geologic profile of the subsurface conditions beneath the copper mine site, including the thickness of each geologic unit, identification of which geologic units are water bearing, cross sectional diagrams and sources of all such information; and

(3) hydrologic information on any surface waters of the state within one-half mile of the boundary of the copper mine facility, and of subsurface conditions for all water bearing zones beneath the copper mine facility including maximum and minimum depths to ground water, direction of ground water flow, hydrologic gradients shown by potentiometric maps, transmissivity and storativity, and ground water quality; the sources of all such information shall be provided with the application.

L. Location map. An application shall include a location map with topographic surface contours identifying all of the following features located within a one-mile radius of the copper mine facility:

(1) watercourses, lakebeds, sinkholes, playa lakes, seeps and springs (springs used to provide water for human consumption shall be so denoted);

(2) wells supplying water for a public water system and private domestic water wells;

- (3) irrigation and other water supply wells; and
- (4) ditch irrigations systems, acequias, irrigation canals and drains.

M. Flood zone map. An application shall include, if available, the most recent 100-year flood zone map developed by the federal emergency management administration (FEMA), flood insurance rate map or other flood boundary and floodway map with the copper mine clearly identified along with all 100-year frequency flood zones for the copper mine facility, and a description of any engineered measures used for flood protection.

N. Engineering design, construction and surveying. Pursuant to 20.6.7.17, 20.6.7.18, 20.6.7.20, 20.6.7.21, 20.6.7.22, 20.6.7.23 and 20.6.7.26 NMAC an application shall include:

- (1) plans and specifications for proposed new or modified tailings impoundments, leach stockpiles, waste rock stockpiles, and process water and impacted stormwater impoundments and associated liners;
- (2) plans and specifications for proposed new or modified tanks, pipelines, truck and equipment wash units and other containment systems; and
- (3) a stormwater management plan.

O. Material characterization plan and material handling plan. An application shall include a material characterization plan and, if applicable, a material handling plan for all waste rock excavated at the copper mine facility pursuant to Subsection A of 20.6.7.21 NMAC.

P. Hydrologic conceptual model. An application for a discharge permit for a new copper mine facility shall include a site hydrologic conceptual model providing:

- (1) a description of the hydrogeologic setting at the copper mine facility including ground water potentiometric maps, surface water drainages and flows, types of ground water and surface water recharge and its distribution, and hydrologic boundary conditions and divides;
- (2) the site hydrogeologic setting relative to both local and regional hydrology and geology including appropriate cross-sectional diagrams depicting major geologic formations and structures, aquifers, and ground water depths;
- (3) potential sources of water contaminants including discharge types and their locations;
- (4) potential pathways for migration of water contaminants to ground water and surface water; and

(5) any surface waters of the state that are gaining because of inflow of ground water that may be affected by water contaminants discharged from the copper mine facility.

Q. Waste minimization plan. An application shall include a waste minimization plan to implement, as practicable, best management practices for minimization and recycling of process water and wastes generated at the copper mine facility to reduce the potential for impacts to ground water.

R. Monitoring wells. An application shall include the location of all existing and proposed ground water monitoring wells pursuant to 20.6.7.28 NMAC.

S. Flow metering. An application shall describe a copper mine facility's flow metering system pursuant to Paragraph (5) of Subsection C of 20.6.7.17 NMAC, Subsection E of 20.6.7.18 NMAC, and Subsections C and E of 20.6.7.29 NMAC, including:

(1) the method(s) (i.e., pumped versus gravity flow) of process water discharge and stormwater transfer and handling;

(2) the proposed flow measurement devices for each flow method and information about its type and capacity; and

(3) the location of all existing and proposed flow meters required pursuant to the copper mine rule or a discharge permit.

T. Closure plan. An application shall include a closure plan for all portions of a copper mine facility pursuant to Subsection A of 20.6.7.18 NMAC, 20.6.7.33 NMAC, 20.6.7.34 NMAC and 20.6.7.35 NMAC unless closure of the copper mine facility is covered, or will be covered, by a separate closure discharge permit.

U. Financial assurance. An application shall include a proposal for financial assurance for those portions of a copper mine facility to be reclaimed in accordance with a closure plan submitted pursuant to Subsection A of 20.6.7.18 NMAC, 20.6.7.33 NMAC, 20.6.7.34 NMAC and 20.6.7.35 NMAC.

V. Variances. An application shall identify any issued or proposed variances for the copper mine facility pursuant to 20.6.2.1210 NMAC and the sections of the copper mine rule affected by the variance(s).

W. Meteorological data. An application shall include a plan to measure meteorological data at sites throughout the copper mine facility including precipitation, temperature, relative humidity, solar radiation, wind speed and wind direction.

[20.6.7.11 NMAC - N, 12/1/13]

20.6.7.12 [RESERVED]

20.6.7.13 [RESERVED]

20.6.7.14 REQUIREMENTS FOR A DISCHARGE PERMIT AMENDMENT:

A. A permittee may submit a request for a discharge permit amendment to the department at any time during the term of an approved discharge permit.

B. A permittee shall remit a fee pursuant to Subsection C of 20.6.7.9 NMAC with the request for a discharge permit amendment.

C. A discharge permit amendment shall be administratively reviewed and evaluated by the department and is not subject to public notice or a public hearing.

D. The department shall approve, disapprove or request additional information necessary for a determination regarding a discharge permit amendment within 30 days of receipt of a request.

E. The department shall provide notice of all discharge permit amendment approvals or denials to those persons on the copper mine facility-specific list maintained by the department who have requested notice of discharge permit applications.

[20.6.7.14 NMAC - N, 12/1/13]

20.6.7.15 [RESERVED]

20.6.7.16 [RESERVED]

20.6.7.17 GENERAL ENGINEERING AND SURVEYING REQUIREMENTS:

A. Practice of engineering. All plans, designs, drawings, reports and specifications required by the copper mine rule that require the practice of engineering shall bear the seal and signature of a licensed New Mexico professional engineer pursuant to the New Mexico Engineering and Surveying Practice Act, Sections 61-23-1 through 61-23-33, NMSA 1978, and the rules promulgated under that authority.

B. Practice of surveying. All plans, drawings and reports required by the copper mine rule that require the practice of surveying shall bear the seal and signature of a licensed New Mexico professional surveyor pursuant to the New Mexico Engineering and Surveying Practice Act, Sections 61-23-1 through 61-23-33, NMSA 1978, and the rules promulgated under that authority.

C. Engineering plans and specifications requirements. The following engineering plans and specifications and associated requirements shall be submitted to

the department for approval with an application for a new, renewed or modified discharge permit, as applicable.

(1) **Liner system plans and specifications.** An applicant or permittee proposing or required to construct a new or improve an existing liner system required by the copper mine rule or an existing discharge permit, including the repair, modification or replacement of a liner system, shall include the following elements in all liner system plans and specifications submitted to the department.

(a) **Construction plans and specifications.** Detailed and complete construction plans and specifications and supporting design calculations developed pursuant to this section and 20.6.7.18 and 20.6.7. 20 through 20.6.7.26 NMAC shall be submitted to the department.

(b) **Liner system CQA/CQC.** The construction and installation of all liner systems and the repair, modification or replacement of a liner system shall be conducted in accordance with a construction quality assurance/construction quality control (CQA/CQC) plan. A CQA/CQC plan shall be included as part of the design plans and specifications. The CQA/CQC plan shall specify the observations and tests to be used to ensure that construction of the liner system meets all design criteria, plans and specifications. All liner system testing and evaluation reports for liner construction and installation, including modifications and replacements shall be signed and sealed by a licensed New Mexico professional engineer with experience in liner system construction and installation. The CQA/CQC plan shall include the following elements.

(i) the identity of persons responsible for overseeing the CQA/CQC program. The person responsible for overseeing the CQA/CQC plan shall be a licensed New Mexico professional engineer with experience in liner system construction and installation;

(ii) an inspection protocol;

(iii) identification of field and laboratory testing equipment and facilities proposed to be used, and calibration methods;

(iv) the procedures for observing and testing the liner, subgrade, liner bedding, and other liner system construction material;

(v) a protocol for verification of any manufacturers' quality control testing and procedures;

(vi) the procedures for reviewing inspection test results and laboratory and field sampling test results;

(vii) the actions to be taken to replace or repair liner material, subgrade, liner bedding, or other liner system construction materials should deficiencies be identified;

(viii) the procedures for seaming synthetic liners;

(ix) the reporting procedures for all inspections and test data; and

(x) the submission of a CQA/CQC report.

(c) **Management of process water, solids and sludge or impacted stormwater during liner system improvement.** An applicant or permittee proposing or required to improve copper mine facility operational units that requires the use of a liner system, including re-lining or replacement of an existing liner system, shall submit a plan for managing process water, solids and sludges, or impacted stormwater during preparation and construction of the improvement. The plan shall be submitted as part of the design plans and specifications. The plan shall include the following minimum elements.

(i) a plan for handling and disposal of process water, solids and sludges and impacted stormwater discharges during improvement to the impoundment;

(ii) a plan for removal and disposal of process water, solids and sludges or impacted stormwater within the liner system prior to beginning improvement to the liner system;

(iii) a plan and schedule for implementation of the project; and

(iv) if the plan proposes a temporary location for the discharge of process water, solids and sludge, or impacted stormwater not authorized by the effective discharge permit, the applicant or permittee shall request temporary permission to discharge from the department pursuant to Subsection B of Section 20.6.2.3106 NMAC.

(d) **Dam safety.** An applicant or permittee proposing or required to construct a tailings impoundment shall submit documentation of compliance with the requirements of the dam safety bureau of the state engineer pursuant to Section 72-5-32 NMSA 1978, and rules promulgated under that authority, unless exempt by law from such requirements.

(2) **Tank, pipeline, sump or other containment system plans and specifications.** An applicant or permittee proposing or required to construct a new tank, pipeline, sump or other containment system for the management of tailings, process water or other water contaminants shall submit detailed and complete construction plans and specifications and supporting design calculations developed pursuant to this section and 20.6.7.23 NMAC. The construction plans and specifications for an

improvement(s) or replacement of an existing tank, pipeline, sump or other containment systems shall address the management of solids, waste, process water or other water contaminants generated during preparation and construction of the improvements or replacement. This requirement does not apply to portable or temporary tanks, pipelines, sumps, or other containment systems that are subject to periodic relocation during mining operations.

(3) **Process water or impacted stormwater treatment system plans and specifications.** An applicant or permittee proposing or required to construct a treatment system during mine operations for process water or impacted stormwater to be treated prior to discharge shall submit detailed and complete construction plans and specifications and supporting design calculations developed pursuant to this section and 20.6.7.18 NMAC.

(4) **Impacted stormwater management plans and specifications.** An applicant shall submit stormwater management plans and specifications to limit run-on of stormwater and manage impacted stormwater in a manner which prevents water pollution that may cause an exceedance of the applicable standards. The plans and specifications shall be submitted with an application for a new or renewed discharge permit, or as applicable with an application for a modified discharge permit, and shall include the following information.

(a) A scaled map of the copper mine facility showing:

- (i) the property boundaries of the copper mine facility and the mining areas;
- (ii) all existing and proposed structures;
- (iii) existing and proposed final ground surface contours outside of the open pit surface drainage area at appropriate vertical intervals; and
- (iv) existing and proposed stormwater containment and conveyance structures, including construction materials, size, type, slope, capacity and inlet and invert elevation (or minimum and maximum slopes) of the structures, as applicable.

(b) A description of existing surface water drainage conditions.

(c) A description of the proposed post-development surface water drainage conditions.

(d) Supplemental information supporting the stormwater management plan including the following information:

- (i) hydrologic and hydraulic calculations for design storm events;

(ii) hydraulic calculations demonstrating the capacity of existing and proposed stormwater impoundments;

(iii) hydraulic calculations demonstrating the capacity of existing and proposed conveyance channels to divert stormwater or contain and transport runoff to stormwater impoundment(s); and

(iv) a list of tools and references used to develop the hydrologic and hydraulic calculations such as computer software, documents, circulars, and manuals.

(e) A plan to manage impacted stormwater, and to divert run-on of non-impacted stormwater where practicable. The plan shall include, as necessary, design, construction, and installation of stormwater run-on and run-off diversion structures, collection of impacted stormwater, and a description of existing surface water drainage conditions. The plan shall consider:

(i) the amount, intensity, duration and frequency of precipitation;

(ii) watershed characteristics including the size, topography, soils and vegetation of the watershed; and

(iii) runoff characteristics including the peak rate, volumes and time distribution of runoff events.

(5) **Flow metering plans.** An applicant or permittee proposing or required to install a flow meter(s) pursuant to the copper mine rule shall submit a flow metering plan to support the selection of the proposed device along with information or construction plans and specifications, as appropriate, detailing the installation or construction of each device. This information or construction plans and specifications proposed by the applicant or permittee shall be submitted to the department with the application for a new discharge permit or a renewed or modified discharge permit if a new flow meter is proposed.

D. New impoundment engineering design requirements. At a minimum, construction of a new impoundment or replacement of an existing impoundment shall be in accordance with the applicable liner, design, and construction requirements of this subsection. These requirements do not apply to tailing impoundments that are subject to the specific engineering design requirements of Paragraph (4) of Subsection A of 20.6.7.22 NMAC.

(1) **General design and construction requirements.**

(a) The outside slopes of an impoundment shall be a maximum of two (horizontal) to one (vertical) and shall meet a minimum static factor of safety of 1.3 with water impounded to the maximum capacity design level, except where an impoundment is bounded by rock walls or is below the surrounding surface grade.

(b) The dikes of an impoundment shall be designed to allow for access for maintenance unless otherwise approved by the department.

(c) Liners shall be installed with sufficient slack in the liner material to accommodate expansion and contraction due to temperature changes. Folds in the liner material shall not be present in the completed liner except to the extent necessary to provide slack.

(d) Liners shall be anchored in an anchor trench. The trench shall be of a size and setback distance sufficient for the size of the impoundment.

(e) Liner panels shall be oriented such that all sidewall seams are vertical.

(f) Any opening in the liner through which a pipe or other fixture protrudes shall be sealed in accordance with the liner manufacturer's requirements. Liner penetrations shall be detailed in the construction plans and as-built drawings.

(g) All liners shall be installed by an individual that has the necessary training and experience as required by the liner manufacturer.

(h) Liner manufacturer's installation and field seaming guidelines shall be followed.

(i) All liner seams shall be field tested by the installer and verification of the adequacy of the seams shall be submitted to the department along with the as-built drawings.

(j) Concrete slabs installed on top of a liner for operational purposes shall be completed in accordance with manufacturer and installer recommendations to ensure liner integrity.

(2) **Impoundment capacity.** Impoundments shall meet the following design capacities. Capacity requirements may be satisfied by a single impoundment or by the collective capacity of multiple interconnected impoundments and any interconnected tanks.

(a) **Capacity requirements for impoundments that contain leach solutions.** Process water systems that impound leach solutions shall be designed for adequate overflow capacity for upset conditions such as power outages, pump or conveyance disruptions and significant precipitation events. Any impoundment that collects leach solutions and is routinely at capacity shall be designed to maintain a minimum of two feet of freeboard during normal operating conditions while conveying the maximum design process flows. The appropriate overflow capacity design shall consider system redundancies such as backup power systems and pumps. The overflow capacity shall be designed to contain the maximum design flows for the collection system for the maximum period of time that is required for maintenance

activities or restoration to normal operating conditions while maintaining two feet of freeboard. If the collection system receives direct precipitation run-off with little or no flow attenuation in the upgradient leach stockpile collection system, the overflow capacity shall be sized to contain the runoff from a 100 year, 24 hour storm event in addition to the upset condition capacity. For process water impoundments located within the open pit surface drainage area, the open pit bottom may be utilized for a portion of the permitted impoundment capacity. Impoundments constructed on a leach stockpile such that any overflow would discharge to and be contained by the approved leach stockpile system are not subject to this capacity requirement.

(b) **Other process water impoundment capacity requirements.** Process water impoundments intended to manage or dispose of process water, other than leach solutions, shall be designed for adequate overflow capacity for upset conditions such as power outages, pump or conveyance disruptions and significant precipitation events. Any impoundment that collects such process water and is routinely at capacity shall be designed to maintain a minimum of two feet of freeboard during normal operating conditions while conveying the maximum design process flows. The appropriate overflow capacity design shall consider system redundancies such as backup power systems and pumps. The overflow capacity shall be designed to contain the maximum design flows for the collection system for the maximum period of time that is required for maintenance activities or restoration to normal operating conditions while maintaining two feet of freeboard. For process water impoundments located within the open pit surface drainage area, the open pit bottom may be utilized for a portion of the permitted impoundment capacity. Impoundments constructed on a leach stockpile such that any overflow would discharge to and be contained by the approved leach stockpile system are not subject to this capacity requirement.

(c) **Combination process water/impacted stormwater impoundment capacity requirements.** Impoundments, other than impoundments for the containment of leach solutions, intended to dispose of a combination of process water and impacted stormwater shall be designed to contain, at a minimum, the volume described in Subparagraph (b) of Paragraph 2 of this subsection and the volume of stormwater runoff and direct precipitation generated from the receiving surface area resulting from a 100 year return interval storm event while preserving two feet of freeboard. For combination process water/impacted stormwater impoundments located within the open pit surface drainage area, the open pit bottom may be utilized for a portion of the impoundment capacity.

(d) **Evaporative impacted stormwater impoundment design requirements.** Impoundments intended to manage or dispose of impacted stormwater by evaporation shall be designed to contain, at a minimum, the volume of stormwater runoff and direct precipitation generated from the receiving surface area resulting from a 100 year return interval storm event while preserving two feet of freeboard. For impoundments located within the open pit surface drainage area, the open pit bottom may be utilized for a portion of the impoundment capacity.

(e) **Other impacted stormwater impoundment design requirements.**

Other impacted stormwater impoundment systems shall be designed to prevent overflow resulting from a 100 year return interval storm event while maintaining two feet of freeboard and may use interconnected impoundments, gravity flow conveyances and pumping systems designed to remove water from individual impoundments at rates to prevent overflow during the design storm event. The appropriate overflow capacity design shall consider system redundancies such as backup power systems and pumps. For impacted stormwater impoundments located within the open pit surface drainage area, the open pit bottom may be utilized for a portion of the permitted impoundment capacity.

(f) **Conveyance design requirement.** Open channel conveyance structures intended to transport stormwater to an impoundment shall be designed to convey, at a minimum, the peak flow from a 100 year return interval storm event while preserving adequate freeboard, but not less than six inches of freeboard. Conveyances shall be designed to minimize ponding and infiltration of stormwater.

(g) **Solids settling.** An impoundment designed and used for solids settling shall not be used to satisfy the impoundment capacity requirements of this paragraph.

(3) **Process water and impacted stormwater long-term storage impoundments.** Process water, and impacted stormwater impoundments that store impacted stormwater for longer than thirty days shall meet the following design and construction requirements, except that process water and impacted stormwater long-term impoundments located within an open pit surface drainage area of an existing copper mine facility may be designed and constructed in accordance with the requirements of Paragraph (4) of this subsection.

(a) **Liner system.** At a minimum, impoundments subject to this paragraph shall be designed and constructed as an engineered liner system consisting of a suitable subgrade and liner bedding overlain by a secondary synthetic liner which is overlain by a leak collection system overlain by a primary synthetic liner, unless an alternate design is approved by the department pursuant to Subparagraph (e) of this paragraph. The liner system shall be installed in accordance with a department approved CQA/CQC plan pursuant to Paragraph (2) of Subsection C of 20.6.7.17 NMAC.

(b) **Liner system sub-grade and bedding.** The liner system shall be placed upon a stable sub-grade. The sub-grade shall be free of sharp rocks, vegetation and stubble to a depth of at least six inches below the liner. Liners shall be placed on a liner bedding of sand or fine soil. The surface in contact with the liner shall be smooth to allow for good contact between liner bedding. The liner bedding surface shall be sufficiently dry during liner installation such that free or excess water will not hinder the welding of seams. The liner installer shall provide the owner or permittee with a sub-grade and liner bedding acceptance certificate prior to installing the liner indicating acceptance of the earthwork.

(c) **Liner type.** The primary and secondary synthetic liners for the impoundment shall provide the same or greater level of containment, including permeability, as a 60 mil HDPE geomembrane liner system. The liner system's tensile strength, tear and puncture resistance and resistance to degradation by ultraviolet light shall be compatible with design loads, exposure and conditions.

(d) **Leak collection system.** A leak collection system shall be constructed between the primary and secondary synthetic liners for the purpose of collecting and rapidly removing fluids from leaks that may occur in the primary liner so that minimal hydraulic head is maintained on the secondary liner. The leak collection system shall consist of a drainage layer, fluid collection pipes and a fluid removal system to prevent hydraulic head transference from the primary liner to the secondary liner and shall meet the following requirements.

(i) The drainage layer shall be constructed of granular soil materials or geosynthetic drainage net (geonet) with a design slope of at least two percent. Drainage material shall have a coefficient of permeability of 1×10^{-2} centimeters/second or greater.

(ii) Perforated fluid collection pipes shall be installed to transmit fluid from the drainage layer to a fluid collection sump(s). Collection pipe material, diameter, wall thickness, and slot size and distribution shall be sufficient to prevent deflection, buckling, collapse or other failure. Collection pipes shall be installed with slopes equivalent to the slope of the drainage layer. Collection pipe systems shall be designed to allow for cleaning of all collection pipes with standard pipe cleaning equipment.

(iii) A fluid removal system shall be installed to remove fluid from the leak collection system. The fluid removal system shall consist of a sump(s), a dedicated pump(s), an automated pump activation system that activates the pump(s) when a specific fluid level is reached in a sump(s), a totalizing flow meter to measure to measure the volume of leachate pumped from the system, and an automated alarm system that provides warning of pump failure. Alternately a gravity drain system may be utilized where practicable and approved by the department.

(e) An applicant or permittee may propose for department approval an alternative design for process water and impacted stormwater long-term storage impoundments that provides the same or greater level of containment as a double synthetically lined system with leak collection.

(4) **Impacted stormwater impoundments.** Impacted stormwater impoundments that store impacted stormwater for less than 30 days shall meet the following design and construction requirements; except that any such impoundments located within an open pit surface drainage area may not require a liner.

(a) **Liner system.** At a minimum, an impacted stormwater impoundment subject to this paragraph shall be constructed as an engineered liner system consisting of a compacted subbase overlain by a synthetic liner. The liner system shall be installed

in accordance with a department approved CQA/CQC plan pursuant to Paragraph (2) of Subsection C of 20.6.7.17 NMAC.

(b) **Liner system subgrade and liner bedding.** The liner system shall be prepared and placed upon a stable subgrade. The top surface of the subgrade shall be smooth and free of sharp rocks or any other material that could penetrate the overlying liner bedding or synthetic liner. Liner bedding shall be placed atop the subgrade and shall consist of a minimum of six inches of sand or fine soil to allow for good contact between liner and liner bedding. The liner bedding surface shall be sufficiently dry during liner installation such that free or excess water will not hinder the welding of seams. The liner installer shall provide the owner or permittee with a sub-grade and liner bedding acceptance certificate prior to installing the liner indicating acceptance of the earthwork.

(c) **Liner type.** Synthetic liners for an impacted stormwater impoundment shall provide the same or greater level of containment, including permeability, as a 60 mil HDPE geomembrane liner system. The liner system's tensile strength, tear and puncture resistance and resistance to degradation by ultraviolet light shall be compatible with design loads, exposure and conditions.

(d) **Wind protection.** Liner systems for impacted stormwater impoundments shall be designed and constructed with a weighting system to secure the liner and limit liner damage during periods of extreme wind events when the impoundment is empty.

(e) **Alternate design.** An applicant or permittee may propose for department approval an alternative design for an impacted stormwater impoundment that provides the same or greater level of containment as the liner system described in Subparagraphs (a) through (d) of this paragraph.

(5) **Non-impacted stormwater impoundments.** Non-impacted stormwater impoundments located outside the open pit surface drainage area over contaminated areas where the water has the potential to infiltrate and produce a leachate that may cause an exceedance of the applicable standards require a liner system designed and installed in accordance with Paragraph (4) this subsection.

(6) **Separation between impoundments and ground water.** Impoundments that require a liner pursuant to this subsection shall not be constructed in a location where the vertical distance between the seasonal high ground water level and the finished grade of the floor of the impoundment is less than or equal to four feet unless the applicant or permittee submits an engineering evaluation from a licensed New Mexico professional engineer that demonstrates that the impoundment design will not be affected by shallow ground water conditions.

(7) **Spillways.** Impacted stormwater impoundments shall have spillways to safely discharge the peak runoff of a 25-year, 24-hour precipitation event, or an event with a 90-percent chance of not being exceeded for the design life of the impoundment.

Impoundments intended as primary containment for process water shall not be designed with a spillway that empties onto the ground surface.

[20.6.7.17 NMAC - N, 12/1/13]

20.6.7.18 GENERAL OPERATIONAL REQUIREMENTS:

A. Planning for closure. To the extent practicable, copper mine facility units shall be designed and operated in a manner that considers implementation of the copper mine facility closure plan submitted pursuant to 20.6.7.33 NMAC including:

(1) identifying material that is suitable for use to construct covers and, when feasible, segregating that material from other mined materials to preserve it for use to construct covers; and

(2) consideration of closure grading and drainage plans in the design and construction of leach stockpiles, tailings impoundments, waste rock stockpiles, and other copper mine facilities.

B. Construction requirements. A permittee shall meet the following requirements for construction of a liner system for the containment of water contaminants, including repair or relining of a liner system.

(1) A permittee shall notify the department at least five working days before starting construction or repair or relining to allow for an inspection by the department, except in the case of an emergency repair. If an emergency repair is necessary, the permittee shall notify the department within 24 hours of starting the repair.

(2) A permittee shall submit to the department a construction certification report bearing the seal and signature of a licensed New Mexico professional engineer, when required by the New Mexico Engineering and Surveying Practice Act, Sections 61-23-1 through 61-23-33 NMSA 1978, and the rules promulgated under that authority, verifying that installation and construction was completed pursuant to Subsections C and D of 20.6.7.17 NMAC. The construction certification report shall include as-built drawings, final specifications, final capacity calculations and the CQA/CQC report.

(3) The construction certification report shall be submitted to the department before discharging or placing ore or wastes in a liner system.

C. Notice of mining operations and discharge. A permittee shall provide written notice to the department of the commencement, or recommencement of operations as follows.

(1) **For new copper mine facilities.**

(a) **Commencement of construction.** A permittee shall provide written notice to the department a minimum of 30 days before commencing construction of units covered by a permit issued pursuant to the copper mine rule.

(b) **Commencement of discharge.** A minimum of 30 days prior to discharging or emplacement of ore or waste rock in a constructed impoundment, stockpile, or tailings impoundment a permittee shall provide written notice to the department of the anticipated date that discharge or emplacement of ore or waste rock will commence. A permittee shall provide written verification to the department of the actual date of commencement within 30 days of commencement.

(2) **For existing copper mine facilities.**

(a) **Commencement of a new discharge.** A minimum of 30 days prior to discharging or emplacement of ore or waste in a newly constructed impoundment, stockpile, or tailings impoundment the permittee shall provide written notice to the department of the anticipated date that discharge or emplacement of ore or waste will commence. A permittee shall provide written verification to the department of the actual date of commencement within 30 days of commencement.

(b) **Recommencement of mining.** If a permittee is on standby pursuant to the Mining Act, a permittee shall provide written notice to the department indicating the planned date of recommencement of operations at a copper mine facility that include operation of units covered by a permit issued pursuant to the copper mine rule. Written notification shall be submitted to the department a minimum of 30 days prior to the date mining is to recommence.

D. Stormwater management. A permittee shall divert and manage stormwater from the open pit, leach stockpiles, waste rock and tailings impoundments and other copper mine facility areas containing material that could generate or release water contaminants in accordance with a stormwater management plan as required by Paragraph (4) of Subsection C of 20.6.7.17 NMAC.

E. Flow meters. A permittee shall employ a flow metering system that uses flow measurement devices (flow meters, weirs or other department approved method) to measure the volume of process water and tailings discharged at a copper mine facility as follows.

(1) **Flow meter installation.** Flow meters shall be installed in accordance with the flow meter plans submitted with the application for a new, renewed or modified discharge permit pursuant to Paragraph (5) of Subsection C of 20.6.7.17 NMAC, and this section. Flow meters shall be permanently labeled with meter identification nomenclature, and the month and year of meter installation.

(2) **Flow meter inspection and maintenance.** A permittee shall visually inspect flow meters on a monthly basis for evidence of malfunction. If a visual inspection

indicates a flow meter is not functioning to measure flow, the permittee shall repair or replace the meter within 30 days of or as soon as practicable following discovery. The repaired or replaced flow meter shall be installed and calibrated pursuant to this subsection. The permittee shall submit a report of repaired or replaced meters to the department in the subsequent monitoring report which shall include:

(a) information on repairs including a description of the malfunction; a statement verifying the repair, and a description of calibration of the flow meter pursuant to Paragraph (3) of this subsection.

(b) for replacement meters, information demonstrating that the device is in accordance with the plan for flow metering devices submitted pursuant to Paragraph (5) of Subsection C of 20.6.7.17 NMAC, and that the device has been calibrated pursuant to Paragraph (3) of this subsection.

(3) **Flow meter calibration.** All flow meters required under the copper mine rule shall be calibrated to have their accuracy ascertained according to the flow metering plan submitted pursuant to Paragraph (5) of Subsection C of 20.6.7.17 NMAC and the approved discharge permit. Flow meters shall be calibrated to within plus or minus ten percent of actual flow.

(4) **Excluded flow meters.** A permittee may utilize additional flow meters not required by the copper mine rule and those flow meters are not subject to the copper mine rule requirements.

F. Impoundments.

(1) **New impoundments.** Construction of an impoundment pursuant to a discharge permit issued after the effective date of the copper mine rule shall be performed in accordance with the liner, design, and construction requirements of Subsection D of 20.6.7.17 NMAC.

(2) **Existing impoundments.** An impoundment authorized by a discharge permit issued prior to the effective date of the copper mine rule and in existence on the effective date of the copper mine rule that does not meet the requirements of Paragraph (3) of Subsection D of 20.6.7.17 NMAC may continue to receive process water or impacted stormwater provided the requirements of Subparagraphs (a) and (b) or (c) of this paragraph are met or the impoundment is located within the open pit surface drainage area. If the requirements of Subparagraphs (a) and (b) or (c) of this paragraph are not met, the impoundment shall be replaced or improved in accordance with the liner, design, and construction requirements of Subsection D of 20.6.7.17 NMAC.

(a) Ground water monitoring data from monitoring wells downgradient of the impoundment indicates that the impoundment is functioning as designed.

(b) The impoundment has integrity and is capable of maintaining integrity for its operational life.

(c) The impoundment is covered by a variance granted pursuant to 20.6.2.1210 NMAC.

(3) **Impoundment inspection and maintenance.** A permittee shall maintain impoundments to prevent conditions which could affect the structural integrity of the impoundments and associated liners during active operations. Such conditions include, but are not limited to, erosion damage; animal burrows or other animal damage; the presence of vegetation including aquatic plants, weeds, woody shrubs or trees growing within five feet of the top inside edge of a sub-grade impoundment, within five feet of the toe of the outside berm of an above-grade impoundment, or within the impoundment itself; evidence of seepage; evidence of berm subsidence; and the presence of large debris or large quantities of debris in the impoundments. A permittee shall inspect impoundments and surrounding berms on a quarterly basis to ensure proper condition and control vegetation growing in and around the impoundments in a manner that is protective of the liners. Within 24 hours of discovery, a permittee shall report to the department any evidence of damage that threatens the structural integrity of a berm or liner of an impoundment or that may result in an unauthorized discharge. A permittee is not required to report routine berm maintenance to the department.

(4) **Freeboard.** The fluid level elevation in an impoundment shall be maintained such that a minimum of two feet of freeboard is preserved within the impoundment at all times.

(5) **Leak collection system inspection and maintenance:** A permittee shall inspect and maintain impoundments utilizing primary and secondary liners and equipped with leak collection systems as follows:

(a) liquid accumulation within the sump of the leak collection system shall be returned to the respective impoundment or the process water system utilizing an automatically activated pump or other engineered design approved by the department to minimize hydraulic head on the secondary liner by insuring the interstitial space between the liners does not become saturated; and

(b) the permittee shall inspect the sump(s), dedicated pump(s), any automated pump activation system, any automated alarm system and totalizing flow meter associated with the leak detection and collection system on a monthly basis for evidence of malfunction; if an inspection indicates malfunction of any of these components, the permittee shall repair the component(s) within 30 days of discovery or shall retain a record of why the repair took longer; the permittee shall notify the department of component malfunctions and repairs made in the subsequent quarterly report.

[20.6.7.18 NMAC - N, 12/1/13]

20.6.7.19 SETBACK REQUIREMENTS FOR A COPPER MINE FACILITY APPLYING FOR A DISCHARGE PERMIT:

A. The setback requirements of this section apply to a new copper mine facility for which an application for a discharge permit is received by the department after the effective date of the copper mine rule.

B. The setback requirements shall be measured as horizontal map distances.

C. The required setback distances shall be met as certified by the applicant as of the receipt date of the application.

D. If the setback requirements apply to a copper mine facility, an applicant or permittee shall not propose or construct a leach stockpile, waste rock stockpile, tailing impoundment, or process water and impacted stormwater impoundment that does not meet the setback as determined as of the receipt date of the application for a new discharge permit by the department.

E. Leach stockpile, waste rock stockpile, tailing impoundment, process water impoundment or impacted stormwater impoundment setback requirements.

(1) Leach stockpiles, waste rock stockpiles, tailing impoundments, process water impoundments or impacted stormwater impoundments shall be located:

(a) greater than 500 feet from a private domestic water well or spring that supplies water for human consumption; and

(b) greater than 1000 feet from any water well or spring that supplies water for a public water system as defined by 20.7.10 NMAC, unless a wellhead protection program established by the public water system requires a greater distance.

(2) The requirements of Subparagraph (a) of Paragraph (1) of this subsection shall not apply to wells or springs that supply water to the copper mine facility for human consumption and are located within the property boundary of the copper mine facility.

(3) The requirements of Paragraph (1) of this subsection shall not apply to wells that are constructed after a copper mine facility received a discharge permit for a leach stockpile, waste rock stockpile, tailing impoundment, process water impoundment or impacted stormwater impoundment.

(4) Setback distances shall be measured from the toe of the outer edge of a leach stockpile, waste rock stockpile, tailing impoundment, process water impoundment or impacted stormwater impoundment at its final design build out.

20.6.7.20 REQUIREMENTS FOR LEACH STOCKPILES AND SX/EW PLANTS:

A. Engineering design requirements. At a minimum, the following requirements shall be met in designing leach stockpiles at copper mine facilities unless the applicant or permittee can demonstrate that an alternate design will provide an equal or greater level of containment.

(1) **New leach stockpiles.** New leach stockpiles shall meet the following requirements.

(a) **Liner system.** A new leach stockpile shall be placed on an engineered liner system consisting of a subgrade and compacted earthen liner overlain by a synthetic liner which is overlain by a solution collection system designed to transmit process fluids out of the leach stockpile. The liner system shall be approved by the department prior to installation and shall be installed in accordance with a department approved CQA/CQC plan pursuant to Paragraph (1) of Subsection C of 20.6.7.17 NMAC.

(b) **Liner system subgrade and earthen liner.** A liner system earthen liner shall be prepared and placed upon a stable subgrade. The prepared earthen liner shall consist of a minimum of 12 inches of soil that has a minimum re-compacted in-place coefficient of permeability of 1×10^{-6} cm/sec. The top surface of the earthen liner shall be smooth and free of sharp rocks or any other material that could penetrate the overlying synthetic liner.

(c) **Liner type.** A synthetic liner for a leach stockpile shall provide the same or greater level of containment, including permeability, as a 60 mil HDPE geomembrane liner system. The liner system's tensile strength, tear and puncture resistance and resistance to degradation by ultraviolet light shall be compatible with design loads, exposures and conditions. A licensed New Mexico professional engineer with experience in liner system construction and installation shall identify the basis for the geomembrane composition and specific liner based upon:

- (i) the type, slope and stability of the subgrade;
- (ii) the overliner protection and provisions for hydraulic relief within the liner system;
- (iii) the load and the means of applying the load on the liner system;
- (iv) the compatibility of the liner material with process solutions applied to the leach stockpile and temperature extremes of the location at which it will be installed; and
- (v) the liner's ability to remain functional for five years after the implementation of closure of the leach stockpile.

(d) **Solution collection system.** A solution collection system shall be constructed in an overliner protection and drainage system. The solution collection system shall be designed to remain functional for five years after the operational life of the leach stockpile. The overliner protection shall be designed and constructed to protect the synthetic liner from damage during loading and minimize the potential for penetration of the synthetic liner. A sloped collection system shall be designed that will transmit fluids out of the drainage layer of the leach stockpile. The collection system shall be designed to maintain a hydraulic head of less than the thickness of the drainage layer but the drainage layer shall not exceed five feet in thickness. Any penetration of the liner by the collection system through which a pipe or other fixture protrudes shall be constructed in accordance with the liner manufacturer's requirements. Liner penetrations shall be detailed in the construction plans and as-built drawings.

(e) **Solution containment systems.** PLS flows exiting the leach stockpile shall be collected, contained and conveyed to a process water impoundment(s) or tank(s) using pipelines or lined conveyance systems.

(f) **Alternate design.** An applicant may propose and the department may approve an alternative design for a leach stockpile located within an open pit surface drainage area provided that the stockpile and solution capture systems are designed to maximize leach solution capture considering the site-specific conditions of the open pit, underlying geology and hydrology, and leach solutions will not migrate outside of the open pit surface drainage area.

(2) **Solution extraction/electrowinning (SX/EW) plants.** All SX/EW plants shall be designed to contain all associated process fluids within impermeable vessels with secondary containment or process water impoundments meeting the requirements of Subsection D of 20.6.7.17 NMAC. All pipeline and tank systems associated with SX/EW plants shall be designed and operated pursuant to 20.6.7.23 NMAC.

B. Construction.

(1) **New leach stockpile and SX/EW plants.** Construction of a new leach stockpile or SX/EW plant, including expansion of an existing leach stockpile beyond its ground surface footprint on the effective date of the copper mine rule, shall be performed in accordance with the applicable engineering requirements of Subsection A of 20.6.7.20 and 20.6.7.17 NMAC.

(2) **Existing leach stockpiles.** A leach stockpile system, including its associated solution collection or containment system, at a copper mine facility in existence on the effective date of the copper mine rule is not required to meet the design and construction requirements of Subsection A of 20.6.7.20 NMAC and may continue to operate as previously permitted under a discharge permit subject to compliance with the contingency requirements of 20.6.30 NMAC. A permit issued for such an existing leach stockpile system after the effective date of the copper mine rule

may include the conditions of the existing discharge permit, which shall not be considered to be "additional conditions" under Subsection I of 20.6.7 NMAC.

C. Operational requirements.

(1) **Leach stockpile operating requirements.** A permittee operating a leach stockpile shall operate the stockpile pursuant to the following requirements.

(a) The stockpile shall remain within the area identified in the discharge permit.

(b) The perimeter of the stockpile and the solution collection system shall be inspected monthly.

(c) Any evidence of instability in the stockpile that could potentially result in a slope failure or an unauthorized discharge shall be reported to the department as soon as possible, but not later than 24 hours after discovery and corrected pursuant to Subsection H of Section 20.6.7.30 NMAC.

(d) Any leaks or spills of PLS or leach solutions outside the leach stockpile or containment system shall be recorded and reported pursuant to 20.6.2.1203 NMAC.

(e) If seeps occur they shall be monitored on a monthly basis and an estimate of the seep flow rate shall be made. Monthly records of the seep inspections and flow rates shall be maintained and included in the site monitoring reports.

(f) Leach solution application rates shall not exceed the maximum rates approved in the discharge permit.

(g) The daily leach solution application and PLS collection rate shall be determined using flow meters installed in accordance with this section and Paragraph (5) of Subsection C of 20.6.7.17 NMAC.

(h) The daily rate and monthly volume of leach solution applied and PLS collected shall be recorded, maintained, and included in the site monitoring reports.

(2) **Solution extraction/electrowinning (SX/EW) plants.** A permittee operating a SX/EW plant shall operate the SX/EW plant pursuant to the following requirements.

(a) All solution management and extraction operations shall be contained within pipeline and tank systems designed and operated pursuant to 20.6.7.23 NMAC or process water impoundments meeting the requirements of Subsection D of 20.6.7.17 NMAC.

(b) Sludge and spent electrolyte from the SX/EW plant shall be either placed upon the leach stockpile for leaching or disposed of at an approved location.

[20.6.7.20 NMAC - N, 12/1/13]

20.6.7.21 REQUIREMENTS FOR COPPER MINE WASTE ROCK STOCKPILES:

A. Material characterization requirements.

(1) **Material characterization and acid mine drainage prediction.** All waste rock stored, deposited or disposed of at a copper mine facility shall be evaluated for its potential to generate acid and to release water contaminants at levels in excess of the standards of 20.6.2.3103 NMAC. A plan for determining the potential of the material to release water contaminants, and the method for such evaluations shall be submitted to the department for approval in a material characterization plan that includes the following.

(a) The geologic, mineralogical, physical, and geochemical characteristics of the material stored, deposited or disposed of at the copper mine facility.

(b) A sampling and analysis plan to provide representative samples of the entire range of material stored, deposited or disposed of at the copper mine facility. The plan shall include quality assurance/quality control procedures to be implemented to ensure the validity of the sample results. The plan shall consider the following factors in collecting and establishing representative samples.

- (i) lithological variations;
- (ii) particle size distribution of each lithology;
- (iii) hydraulic conductivity, water content and matric suction relationship for each lithology;
- (iv) mineralogical and textural variations;
- (v) the nature and extent of sulfide mineralization;
- (vi) color variation;
- (vii) degree and nature of fracturing;
- (viii) variations in oxidation and reducing conditions; and
- (ix) the nature and extent of secondary mineralization.

(c) A static testing program using, at a minimum, acid/base accounting, or a department approved equivalent testing method, to evaluate the acid generation and neutralization potential of the material; and meteoric water mobility procedure or other department approved method for whole rock testing to determine water contaminant leaching potential.

(d) If the results of static testing indicate that a material may be acid generating or may generate a leachate containing water contaminants, a kinetic testing program shall be proposed to evaluate reaction rates, provide data to estimate drainage quality, the lag time to acidification of the material, and primary weathering and secondary mineral precipitation/dissolution as it may affect acidification, neutralization and drainage quality. The length of and means of determining when kinetic tests will be discontinued shall be approved by the department prior to implementation of the kinetic testing program.

(e) If the results of the static testing or kinetic testing indicate that the material will be acid generating or generate water contaminants, and the materials will be placed outside of an open pit surface drainage area, a plan shall be submitted to the department to evaluate whether discharges of leachate from the stockpile may cause an exceedance of applicable standards, including an evaluation of the geology and hydrology of the area where the material is to be placed. The plan may include either a department approved model or other department approved demonstration.

(f) If an interceptor system pursuant to Subparagraph (d) of Paragraph (1) of Subsection B of this section or a liner system is proposed for storage or disposal of waste rock, the kinetic testing program is not required.

(2) **Material handling plan.** A permittee shall manage waste rock that may generate or release water contaminants according to a material handling plan approved by the department. The material handling plan shall address:

(a) segregation of acid generating materials and materials that may generate or release water contaminants and the method for handling, storage or disposal of the materials in a manner designed to prevent an exceedance of applicable standards;

(b) stockpiling of non-acid generating materials for potential use in neutralizing acid generating materials or in reclamation;

(c) blending or layering of material types to maximize the benefit of acid neutralizing material;

(d) any chemical amendments of the waste rock;

(e) a description of any proposed containment system(s) proposed in accordance with Subsection B of 20.6.7.21 NMAC.

B. Engineering design requirements for new waste rock stockpiles. At a minimum, the following requirements shall be met in designing engineered structures for waste rock stockpiles at copper mine facilities unless the applicant or permittee can demonstrate that an alternate design will provide an equal or greater level of containment.

(1) **New waste rock stockpiles located outside an open pit surface drainage area.** New waste rock stockpiles located outside an open pit surface drainage area shall meet the following requirements unless the applicant or permittee demonstrates through material characterization or implementation of a material handling plan pursuant to Subsection A of this section that the waste rock pile will not cause an exceedence of applicable standards.

(a) Stormwater run-on shall be diverted or contained to minimize contact between stormwater run-on and the stockpiled material.

(b) Seepage from the sides of a waste rock stockpile shall be captured and contained through the construction of headwalls, impoundments and diversion structures as applicable.

(c) Ground water impacted by waste rock stockpiles in excess of applicable standards shall be captured and contained through the construction of interceptor systems as applicable.

(d) The applicant shall submit design plans signed and sealed by a qualified licensed New Mexico professional engineer along with a design report that includes the following.

(i) The proposed areal extent and configuration of the waste rock stockpile.

(ii) The topography of the site where the waste rock stockpile will be located.

(iii) The geology of the site.

(iv) The design of waste rock stockpile seepage collection systems, to be proposed based on consideration of site-specific conditions.

(v) The design of stormwater diversion structures to minimize contact between stormwater run-on and the waste rock material. The design shall consider the amount, intensity, duration and frequency of precipitation; watershed characteristics including the area, topography, geomorphology, soils and vegetation of the watershed; and run-off characteristics of the watershed including the peak rate, volumes and time distribution of run-off events.

(vi) An aquifer evaluation to determine the potential nature and extent of impacts to ground water from the waste rock stockpile based on the proposed waste rock stockpile design and geochemical characteristics. The aquifer evaluation shall include a complete description of aquifer characteristics and hydrogeologic controls on the movement of leachate from the waste rock stockpile and ground water impacted by the waste rock stockpile based on actual field data.

(vii) A design report for a proposed interceptor system for containment and capture of ground water impacted by the waste rock stockpile based on the aquifer evaluation required in Subparagraph (d) of Paragraph (1) of Subsection B of this section. The design report shall include, at a minimum construction drawings and interceptor system performance information, recommended equipment including pumps and meters, recommended pump settings and pumping rates, methods for data collection, and a demonstration that the permittee has adequate water rights to operate the system as designed. The design report shall include a demonstration that the interceptor system design will capture ground water impacted by the waste rock stockpile such that applicable standards will not be exceeded at monitor well locations specified by 20.6.7.28 NMAC. The interceptor system shall be designed to maximize capture of impacted ground water and minimize the extent of ground water impacted by the waste rock stockpile.

(viii) within 120 days of completion of seepage collection and interceptor system construction, or liner system installation a final report shall be submitted to the department that includes complete as-built drawings and a summary of how the items in Subparagraph (a) of Paragraph (1) of Subsection B of 20.6.7.21 thru Subparagraph (d) of Paragraph (1) of Subsection B of 20.6.7.21 NMAC were incorporated into the design.

(e) If the department determines that the proposed waste rock stockpile, seepage collection and interceptor systems when operated in accordance with the design plan specified in this paragraph would cause ground water to exceed applicable standards at monitoring well locations specified by 20.6.7.28 NMAC, the department shall require additional controls which may include but are not limited to a liner system as additional conditions in accordance with Subsection H of 20.6.7.10 NMAC.

(2) **New waste rock stockpiles located inside an open pit surface drainage area.** Stormwater run-on shall be diverted or contained to minimize contact between stormwater run-on and the stockpiled material.

C. Construction.

(1) **New waste rock stockpiles.** Construction of a new waste rock stockpile shall be performed in accordance with the applicable engineering requirements of Subsection B of 20.6.7.21 NMAC and 20.6.7.17 NMAC.

(2) **Existing waste rock stockpiles.** A waste rock stockpile in existence on the effective date of the copper mine rule is not required to meet the design and

construction requirements of Subsection B of 20.6.7.21 NMAC and may continue to operate as previously authorized under a discharge permit unless ground water monitoring of the stockpile pursuant to 20.6.7.28 NMAC requires implementation of corrective action under Subsection A of 20.6.7.30 NMAC. A permit issued for such an existing waste rock stockpile after the effective date of the copper mine rule may include the conditions of the existing discharge permit, which shall not be considered to be "additional conditions" under Subsection I of 20.6.7 NMAC.

D. Operational requirements. A permittee operating a waste rock stockpile shall operate the stockpile pursuant to the following requirements.

(1) The stockpile shall remain within the area identified in the approved design plan required in Paragraph (1) of Subsection B of 20.6.7.21 NMAC.

(2) The perimeter of the stockpile and the solution collection systems shall be inspected monthly.

(3) Any evidence of mass instability in the stockpile that could potentially result in a slope failure that may result in an unauthorized discharge shall be reported to the department as soon as possible, but not later than 24 hours after discovery and corrected pursuant to Subsection H of Section 20.6.7.30 NMAC.

(4) Any leaks or spills of leachate outside the waste rock stockpile and any associated containment system shall be recorded and reported pursuant to 20.6.2.1203 NMAC.

(5) If seeps occur, they shall be monitored on a monthly basis and an estimate of the seep flow rate shall be made. Monthly records of the seep inspections and flow rates shall be maintained and included in the site monitoring reports.

(6) Interceptor system collection rates shall be determined using flow meters installed in accordance with Paragraph (5) of Subsection C of 20.6.7.17 NMAC.

(7) The placement of waste rock shall be in accordance with an operating plan that describes the sequencing of waste rock deposition on an annual basis, operation of seepage collection systems, operation of interceptor systems, operation of systems to return water to the concentrator or other locations as appropriate, and any other water management features.

(8) If an interceptor system to maintain capture of ground water impacted by a waste rock stockpile exists, the permittee shall submit an interceptor system monitoring and evaluation report pursuant to 20.6.7.29 NMAC.

[20.6.7.21 NMAC - N, 12/1/13]

20.6.7.22 REQUIREMENTS FOR COPPER CRUSHING, MILLING, CONCENTRATOR, SMELTING AND TAILINGS IMPOUNDMENT UNITS:

A. Engineering design requirements. At a minimum, the following requirements shall be met in designing crushing, milling, concentrating, smelting and tailings impoundment units at copper mine facilities unless the applicant or permittee can demonstrate that an alternate design will provide an equal or greater level of containment.

(1) **New crushing and milling units.** New crushing and milling units, including associated ore storage, except when located within the open pit surface drainage area, shall be designed to contain and manage all materials containing water contaminants that have the potential to migrate to ground water and cause an exceedance of applicable standards on concrete or low permeability surfaces approved by the department.

(2) **New concentrator units.** New concentrator units shall be designed to contain and manage in tank and pipeline systems designed and operated pursuant to 20.6.7.23 NMAC all materials containing water contaminants that have the potential to migrate to ground water and cause an exceedance of applicable standards. Tailing and concentrate thickener tanks may be constructed with concrete or low permeability bottoms consisting of a minimum of 12 inches of soil that has a minimum re-compacted in-place coefficient of permeability of 1×10^{-6} cm/sec. The tank designs shall be based on plans and specifications signed and sealed by a licensed New Mexico professional engineer. For low permeability bottoms, such plans and specifications shall describe how process rates, material density and settling rates were considered in the design to minimize infiltration such that water contaminants in the tank will not migrate to ground water and cause an exceedance of applicable standards.

(3) **New smelting units.** New smelting units shall be designed to contain and manage on impermeable surfaces all materials, including associated slag and flue dust, containing water contaminants that have the potential to migrate to ground water and cause an exceedance of applicable standards.

(4) **New tailings impoundments.** Tailings impoundments shall be designed according to the following requirements.

(a) Stormwater run-on shall be diverted and/or contained to minimize contact between stormwater run-on and the tailing material.

(b) Seepage from the sides of a tailing impoundment shall be captured and contained through the construction of headwalls, impoundments and diversion structures as applicable.

(c) Ground water impacted by the tailing impoundment in excess of applicable standards shall be captured and contained through the construction of interceptor

systems designed in accordance with Subparagraph (d) of Paragraph (4) of Subsection A of 20.6.7.22 NMAC.

(d) The applicant shall submit design plans signed and sealed by a licensed New Mexico professional engineer along with a design report that includes the following.

(i) The annual volumes and daily maximum design rates of tailings or other discharge approved by the department to be deposited in the impoundment.

(ii) The topography of the site where the impoundment will be located.

(iii) The geology of the site.

(iv) The design footprint of the tailing impoundment.

(v) The design of tailing seepage collection systems, to be proposed based on consideration of site-specific conditions.

(vi) The design of stormwater diversion structures to minimize contact between stormwater run-on and the tailing material. The design shall consider the amount, intensity, duration and frequency of precipitation; watershed characteristics including the area, topography, geomorphology, soils and vegetation of the watershed; and run-off characteristics of the watershed including the peak rate, volumes and time distribution of run-off events.

(vii) An aquifer evaluation to determine the potential nature and extent of impacts on ground water from the tailings impoundment based on the proposed tailings impoundment design. The aquifer evaluation shall include a complete description of aquifer characteristics and hydrogeologic controls on movement of tailing drainage and ground water impacted by the tailings impoundment.

(viii) A design report for a proposed interceptor system for containment and capture of ground water impacted by the tailings impoundment based on the aquifer evaluation required in Subparagraph (d) of Paragraph (4) of Subsection A of this section. The design report shall include, at a minimum construction drawings and interceptor system performance information, recommended equipment including pumps and meters, recommended pump settings and pumping rates, methods for data collection, and a demonstration that the permittee has adequate water rights to operate the system as designed. The design report shall include a demonstration that interceptor system design will capture ground water impacted by the tailings impoundment such that applicable standards will not be exceeded at monitoring well locations specified by 20.6.7.28 NMAC. The interceptor system shall be designed to maximize capture of impacted ground water and minimize the extent of ground water impacted by the tailings impoundment.

(ix) Within 120 days of seepage collection and interceptor well system construction, or liner system installation a final report shall be submitted to the department that includes complete as-built drawings and a summary of how the items in Subparagraph (a) thru Subparagraph (d) of Paragraph (4) of Subsection A of 20.6.7.22 NMAC were incorporated into the design.

(e) If the department determines that the proposed tailings impoundment, seepage collection and interceptor systems when constructed and operated in accordance with the design plan specified in this paragraph would cause ground water to exceed applicable standards at monitoring well locations specified by 20.6.7.28 NMAC, the department shall require additional controls, which may include but are not limited to, a liner system as additional conditions in accordance with Subsection I of 20.6.7.10 NMAC.

(5) **New dry stack tailing piles.** New dry stack tailings piles shall comply with the material characterization, engineering design, construction, and operational requirements of 20.6.7.21 NMAC, as applicable.

B. Construction.

(1) **New crushing, milling, concentrating, smelting, or tailings impoundment.** Construction of a new crushing, milling, concentrating, smelting, or tailings impoundment shall be performed in accordance with the applicable engineering requirements of Subsection A of 20.6.7.22 and 20.6.7.17 NMAC.

(2) **Existing crushing, milling, concentrating, smelting or tailings impoundments.** Crushing, milling, concentrating, smelting and tailings impoundments at an existing copper mine facility in existence on the effective date of the copper mine rule are not required to meet the liner, design, and construction requirements of Subsection A of 20.6.7.22 NMAC and may continue to operate as previously authorized under a discharge permit subject to compliance with the contingency requirements of 20.6.7.30 NMAC so long as they are maintained within the existing footprint. A permit issued for such an existing crushing, milling, concentrating, smelting or tailings impoundment after the effective date of the copper mine rule may include the conditions of the existing discharge permit, which shall not be considered to be "additional conditions" under Subsection I of 20.6.7 NMAC.

C. Operational Requirements.

(1) **Tailings impoundment operating requirements.** A permittee operating a tailings impoundment shall operate the impoundment pursuant to the following requirements.

(a) The tailings impoundment shall remain within the area identified in the approved design.

(b) The perimeter of the tailings impoundment and any associated solution collection systems shall be inspected monthly.

(c) Any evidence of instability in the tailings impoundment that could potentially result in a dam failure and an unauthorized discharge shall be reported to the department as soon as possible, but not later than 24 hours after discovery.

(d) Any leaks or spills outside the tailings impoundment and any associated containment system shall be recorded and reported pursuant to 20.6.2.1203 NMAC.

(e) If seeps occur, they shall be monitored on a monthly basis and an estimate of the seep flow rate shall be made. Monthly records of the seep inspections and flow rates shall be maintained and included in the site monitoring reports.

(f) The monthly volume of tailings placed in the impoundment shall be recorded, maintained, and included in the site monitoring reports.

(g) Tailings deposition rates shall not exceed the maximum rates approved in the discharge permit.

(h) The daily tailings deposition and associated solution system collection rate shall be determined using flow meters installed in accordance with Paragraph (5) of Subsection C of 20.6.7.17 NMAC.

(i) The average daily rate and monthly volume of tailings deposited and solution collected shall be recorded, maintained, and included in the site monitoring reports.

(j) The placement of tailings and effluent shall be in accordance with an operating plan that describes the following:

- (i) the sequencing of tailings deposition on an annual basis;
- (ii) measures to manage the surface impoundment area to maintain adequate freeboard;
- (iii) operation of seepage collection systems;
- (iv) operation of interceptor systems;
- (v) operation of systems to return water to the concentrator or other locations as appropriate; and
- (vi) any other water management features.

(k) If an interceptor system to maintain capture of ground water impacted by a tailings impoundment exists on the effective date of the Copper Rule, the permittee shall submit an interceptor system monitoring and evaluation report pursuant to 20.6.7.29 NMAC.

(2) **Smelting units.** A permittee operating a smelting unit shall operate pursuant to the following requirements.

(a) The smelting unit shall remain within the area identified in the discharge permit.

(b) Slag and flue dust generated as a result of smelting activities shall be characterized, managed, and properly stored and disposed of.

(c) Any leaks or spills outside the containment systems of the smelter unit shall be recorded and reported pursuant to 20.6.2.1203 NMAC.

(3) **Crushing, milling and concentrating unit operating requirements.** A permittee operating a crushing, milling, or concentrating unit shall operate pursuant to the following requirements.

(a) The crushing, milling and concentrating operations shall remain within the area identified in the discharge permit.

(b) All containment system structures shall be inspected monthly.

(c) Any leaks or spills of process water outside the containment system shall be recorded and reported pursuant to 20.6.2.1203 NMAC.

[20.6.7.22 NMAC - N, 12/1/13]

20.6.7.23 REQUIREMENTS FOR NEW PIPELINES AND TANKS:

A. Engineering design requirements. At a minimum, the following requirements shall be met in designing new pipeline or tank systems at copper mine facilities that contain process water or impacted stormwater unless the applicant or permittee can demonstrate that an alternate design will provide an equal or greater level of containment.

(1) **New Pipelines.** New pipelines shall:

(a) be constructed of impermeable materials that are compatible with the particular contents that are contained and carried in the pipeline and are resistant to degradation by ultraviolet light if they will be exposed to sunlight;

(b) for pipelines located outside of the open pit surface drainage area and outside an area authorized for discharge of process water, impacted stormwater or tailings, incorporate a mechanism for monitoring the integrity of the pipeline system including visual inspections, pressure change sensors, or other appropriate means; and

(c) for pipelines located outside of the open pit surface drainage area and outside an area authorized for discharge of process water, impacted stormwater or tailings, incorporate a mechanism of secondary containment to contain and control leaks and spills including berms, placement within or drainage toward areas authorized for discharge of the conveyed fluids, and impoundments that are constructed consistent with the requirements of Subsection D of 20.6.7.17.D NMAC.

(2) **Tanks.** New tank systems shall meet the following requirements.

(a) Tanks shall be designed and constructed of steel, concrete or impermeable materials that are compatible with the particular contents that are contained within the tank and resistant to degradation by ultraviolet light where exposed to sunlight.

(b) A tank system shall have a constructed foundation consisting of a stable, level base free of rocks, debris, sharp edges or irregularities that could puncture, crack or indent the tank materials.

(c) A tank system shall be designed to prevent overflow and the collection of surface water run-on.

(d) An above-ground tank system shall be bermed to contain 110 percent of the volume of the largest tank within the system or the largest interconnected tanks.

(e) A below-grade tank system shall either be placed in such a manner that the side walls are open for visual inspection or the tank shall be designed with a secondary containment and leak detection system.

B. Construction.

(1) **New pipeline and tank units.** Construction of a new pipeline or tank system shall be performed in accordance with the applicable requirements of Subsection A of 20.6.7.23 NMAC and 20.6.7.17 NMAC.

(2) **Existing pipeline and tank units.** A pipeline or tank system in existence on the effective date of the copper mine rule is not required to meet the design requirements of Subsection A of 20.6.7.23 NMAC and may continue to operate as previously permitted under a discharge permit provided that, for a tank in contact with the ground surface and located outside an open pit surface drainage area, it is inspected and tested at least once every ten years for integrity pursuant to Subsection C of 20.6.7.23 NMAC. If an existing tank or pipeline system cannot maintain integrity it

shall be replaced in accordance with the engineering requirements of Subsection A of 20.6.7.23 NMAC and 20.6.7.17 NMAC as applicable. A permit issued for such an existing tank or pipeline system after the effective date of the copper mine rule may include the conditions of the existing discharge permit, which shall not be considered to be "additional conditions" under Subsection I of 20.6.7 NMAC.

C. Operational requirements. A permittee operating a pipeline or tank system shall operate the system pursuant to the following requirements, as applicable.

(1) Pipelines and tanks shall remain within the area identified in the discharge permit.

(2) Pipelines, tanks and secondary containment systems shall be inspected on a monthly basis.

(3) The permittee shall maintain and operate a below-grade tank(s) to prevent overtopping of the tank(s).

(4) Any evidence of leaks or spills of fluids, process water or tailings from a pipeline or tank system outside of permitted secondary containment systems or outside an area permitted for discharge shall be recorded, reported and corrected pursuant to Subsection G of 20.6.7.30 NMAC.

(5) Any evidence of leaks or spills of fluids, process water or tailings from a pipeline or tank system inside of permitted secondary containment systems or inside an area permitted for discharge shall be recorded and reported to the department in the semiannual reports submitted pursuant to Subsection A of 20.6.7.29 NMAC.

(6) Existing pipelines that do not meet the engineering requirements of Subsection A of 20.6.7.23 NMAC shall be evaluated for integrity at least once every five years. A pipeline evaluation plan for such pipelines shall be included in an application for renewal of a discharge permit for a copper mine facility.

(7) Existing below-grade tanks that do not meet the engineering requirements of Subsection A of 20.6.7.23 NMAC shall be emptied and visually inspected for integrity at least once every five years.

(8) A written record of all pipeline and tank system inspections and integrity testing shall be maintained by the permittee for a period of at least five years.

(9) Any wastes generated from the cleaning of pipeline or tank systems shall be disposed of offsite in accordance with applicable laws or onsite in a manner approved by the department.

[20.6.7.23 NMAC - N, 12/1/13]

20.6.7.24 REQUIREMENTS FOR OPEN PITS:

Operational requirements. A permittee operating an open pit shall operate the open pit pursuant to the following requirements, as applicable.

A. The open pit shall remain within the area identified in the discharge permit.

B. Stormwater shall be diverted outward and away from the perimeter of the open pit and, to the extent practicable, shall not be directed into the open pit.

C. Water generated from within the perimeter of the open pit and pit dewatering activities shall be managed according to a mine operation water management plan. The water management plan shall be submitted to the department for approval in a discharge permit application for a new copper mine facility or in an application for a discharge permit renewal.

D. During operation of an open pit, the standards of 20.6.2.3103 NMAC do not apply within the area of open pit hydrologic containment.

E. Leach stockpiles, waste rock piles, and other regulated mine units in and surrounding an open pit surface drainage area shall be designed and located to minimize the size of the open pit surface drainage area to the extent practicable.

[20.6.7.24 NMAC - N, 12/1/13]

20.6.7.25 REQUIREMENTS FOR UNDERGROUND COPPER MINE FACILITIES:

A. Material characterization requirements: All waste rock removed from an underground mine and taken to the surface shall be characterized and managed pursuant to the copper mine rule. Any waste rock removed from an underground copper mine facility, any tailings or any other waste that is intended to be deposited in the mine shall be evaluated for its potential to generate acid or to release water contaminants that would cause an exceedance of applicable standards following placement in the underground mine. A plan for determining the potential of the material to release water contaminants, and the method for such evaluations, shall be submitted to the department for approval in a material characterization plan pursuant to Paragraph (1) of Section A of 20.6.7.21 NMAC.

B. Deposition of material in an underground copper mine. A permittee of an underground copper mine facility shall not:

(1) deposit any waste rock or tailings in an underground mine that may generate a leachate that may cause an exceedance of applicable standards as determined by Subsection A of this section;

(2) deposit any other wastes in an underground mine unless deposition of the waste is expressly authorized by a discharge permit approved by the department.

C. Operational requirements. A permittee authorized to deposit waste rock, tailings or other waste in an underground copper mine shall maintain records of the monthly volume of waste rock, tailings or waste placed in the mine, and include this information in the site monitoring reports submitted pursuant to 20.6.7.29 NMAC.

[20.6.7.25 NMAC - N, 12/1/13]

20.6.7.26 REQUIREMENTS FOR TRUCK AND EQUIPMENT WASHING UNITS:

A. Engineering design requirements. At a minimum, the following requirements shall be met in designing new truck and equipment washing units at copper mine facilities unless the applicant or permittee can demonstrate that an alternate design will provide an equal or greater level of containment.

(1) Truck and equipment washing shall be conducted on a concrete pad or a pad constructed of materials of equivalent or lower permeability designed to capture all wash water.

(2) Captured wash water shall freely drain from the containment pad and when necessary be conveyed to an oil water separator to remove oil and grease from the wash water.

(3) Wash water from the oil water separator shall be conveyed to a tank system designed and constructed pursuant to 20.6.7.23 NMAC, an impoundment meeting the requirements of Subsection D of 20.6.2.7.17 NMAC, or may be directed to the mine process water circuit for use.

B. Construction.

(1) **New wash units for trucks or equipment.** Construction of new truck or equipment wash shall be performed in accordance with the applicable engineering requirements of Subsection A of 20.6.7.26 and 20.6.7.17 NMAC.

(2) **Existing wash units for trucks and equipment.** A truck or equipment wash unit in existence on the effective date of the copper mine rule and located outside of the open pit surface drainage area shall meet the design requirements of Subsection A of 20.6.7.26 NMAC within one year of the approval of a discharge permit renewal pursuant to the copper mine rule.

C. Operational requirements. A permittee operating a truck or equipment wash unit at a copper mine facility shall operate pursuant to the following requirements.

(1) The truck or equipment wash unit shall remain within the area identified in the discharge permit.

(2) Wash water generated at the unit shall be contained within the designed containment pad, separator and tank system, or impoundment until treated to meet applicable standards for discharge or conveyed to the process water circuit.

(3) The tank systems associated with the unit shall meet the operational requirements of 20.6.7.26 NMAC.

(4) Any leaks or spills of wash water from the containment pad, separator, tank system or impoundment shall be recorded, reported and corrected pursuant to Subsection G of 20.6.7.30 NMAC.

(5) Any wastes generated from the oil water separator or the tank system shall be disposed of offsite in accordance with applicable laws or onsite in a manner approved by the department.

[20.6.7.26 NMAC - N, 12/1/13]

20.6.7.27 [RESERVED]

20.6.7.28 WATER QUALITY MONITORING REQUIREMENTS FOR ALL COPPER MINE FACILITIES:

The following water quality monitoring requirements apply to all copper mine facilities unless otherwise specified.

A. Monitoring wells - location proposals. An applicant for a new, renewed or modified discharge permit or permittee shall submit a plan for department approval identifying the proposed location of monitoring wells required pursuant to Subsection B of this section, and shall include the following information.

(1) The location of each monitoring well relative to the unit of the copper mine facility it is intended to monitor shall be indicated on the scaled map required by Subsection J of 20.6.7.11 NMAC.

(2) The ground water flow direction beneath the copper mine facility used to determine the monitoring well location(s), including supporting documentation used to determine ground water flow direction.

B. Monitoring wells – required locations. A permittee shall monitor ground water quality as close as practicable around the perimeter and downgradient of each open pit, leach stockpile, waste rock stockpile, tailings impoundment, process water impoundment, and impacted stormwater impoundment. The department may require additional wells around the perimeter of mine units that are underlain by areas where

ground water flow directions are uncertain, including fracture flow systems, and around copper mine units that have the potential to cause ground water mounding. The department may require additional monitoring wells at any other unit of a copper mine facility that has the potential to cause an exceedance of applicable standards as additional permit conditions in accordance with Subsection I of 20.6.7.10 NMAC. Monitoring wells shall be located pursuant to this section to detect an exceedance(s) or a trend towards exceedance(s) of the applicable standards at the earliest possible occurrence, so that investigation of the extent of contamination and actions to address the source of contamination may be implemented as soon as possible.

(1) **Use of existing monitoring wells.** A monitoring well in existence before the effective date of the copper mine rule shall be deemed to be in an approved location for ground water monitoring purposes provided the following requirements are met:

(a) the monitoring well location was previously approved by the department;
and

(b) the monitoring well is constructed as previously approved by the department; or

(c) if the monitoring well and construction was not previously approved by the department, the applicant or permittee can demonstrate that the well meets the location and construction requirements of this section.

(2) **Ground water monitoring - leach stockpiles, waste rock stockpiles, tailings impoundments.** A permittee shall install monitoring wells around the perimeter and downgradient of each new leach stockpile, waste rock stockpile and tailings impoundment located outside of the open pit surface drainage area, including its leachate and solution capture and containment systems, to adequately monitor ground water that may be impacted by water contaminants from those units. Each monitoring well shall be installed as close as practicable to the proposed leach stockpile, waste rock stockpile or tailings impoundment, including its leachate and solution capture and containment systems, taking into account surface topography, hydrogeologic conditions, geologic controls, infrastructure, engineering design plans, depth to ground water, working distance and safety.

(a) For a new copper mine facility, the monitoring well networks shall be installed at least 180 days before emplacement of ore, waste rock or discharge of tailings at an individual leach stockpile, waste rock stockpile or tailings impoundment to allow sampling prior to discharge.

(b) A permittee constructing a new leach stockpile, waste rock stockpile or tailings impoundment at an existing copper mine facility, or expanding the footprint of an existing leach stockpile, waste rock stockpile, or tailings impoundment, shall install the monitoring well networks required to monitor ground water around and downgradient of the leach stockpile, waste rock stockpile or tailings impoundment before emplacement

of ore, waste rock or discharge of tailings unless an existing monitor well network adequately monitors water quality in the area of the new leach stockpile, waste rock stockpile or tailings impoundment.

(3) **Ground water monitoring - process water and impacted stormwater impoundments.** A minimum of one monitoring well shall be located downgradient and within 75 feet (measured as horizontal map distance) or as close as practicable taking into account surface topography, hydrogeologic conditions, infrastructure, working distance and safety of each new process water or impacted stormwater impoundment located outside of an open pit surface drainage area.

(a) For a new copper mine facility, monitoring wells shall be installed at least 90 days before discharging to an individual process water or impacted stormwater impoundment at the copper mine facility to allow for sampling prior to discharge.

(b) A permittee constructing a new process water or impacted stormwater impoundment at an existing copper mine facility shall install the monitoring well(s) required to monitor ground water downgradient of the impoundment before discharging process water to the impoundment, before collecting impacted stormwater in the impoundment unless an existing monitor well network adequately monitors water quality in the area of the new impoundment.

(4) **Ground water monitoring - open pit.** A permittee shall install a sufficient number of monitoring wells around the perimeter of an open pit to monitor ground water quality and the hydrologic gradient around the pit. For a new open pit, an applicant or permittee shall submit a monitor well network installation plan to the department for approval. The plan shall include proposed locations of monitoring wells, a statement of the reasons for selection of the monitoring well locations, and a schedule for installation.

(5) **Ground water monitoring - upgradient of each potential contaminant source.** A minimum of one monitoring well shall be located upgradient of each new leach stockpile, waste rock stockpile, tailings impoundment, and process water and impacted stormwater impoundment at a copper mine facility to establish upgradient ground water quality conditions not likely to be affected by each contamination source that is being monitored. If an applicant or permittee has existing monitoring wells located appropriately to obtain sufficient background data at a copper mine facility and establish and monitor upgradient conditions, the department may waive the requirement for additional upgradient wells.

(a) For a new copper mine facility, upgradient source monitoring wells shall be installed a minimum of 180 days before emplacement of ore, waste rock or discharge of tailings or other water contaminants at an individual leach stockpile, waste rock stockpile, tailings impoundment or other impoundment.

(b) A permittee constructing a new leach stockpile, waste rock stockpile, tailings impoundment or other impoundment at an existing copper mine facility shall

install the monitoring well(s) required to monitor ground water quality upgradient of a leach stockpile, waste rock stockpile, tailings impoundment or other impoundment before emplacement of ore, waste rock or discharging of tailings or water contaminants into the individual source required to be monitored.

(6) **Ground water monitoring - upgradient of the copper mine facility.** A sufficient number of monitoring wells shall be located upgradient of all potential ground water contamination sources at a copper mine facility to establish upgradient ground water quality conditions that are not affected by any potential contamination sources at the copper mine facility. For a new copper mine facility, upgradient monitoring wells shall be installed at least 180 days before emplacement of ore, waste rock or discharge of tailings or other water contaminants at an individual leach stockpile, waste rock stockpile, tailings impoundment or other impoundment.

C. Monitoring wells - identification tags. A permittee shall clearly identify all monitoring wells required by the copper mine rule with a permanent well identification tag that contains well identification nomenclature included on the scaled map required by Subsection J of 20.6.7.11 NMAC.

D. Monitoring wells - construction and completion. A permittee shall construct monitoring wells pursuant to 19.27.4 NMAC and the following requirements unless the department approves of an alternate monitoring well construction and completion design based upon site-specific hydrogeologic conditions.

(1) All well drilling activities shall be performed by an individual with a current and valid well driller license issued by the state of New Mexico pursuant to 19.27.4 NMAC.

(2) The well driller shall employ drilling methods that allow for accurate determinations of water table locations unless otherwise approved by the department in advance of drilling. All drill bits, drill rods, and down-hole tools shall be thoroughly cleaned immediately before drilling. The borehole diameter shall allow a minimum annular space of two inches between the outer circumference of the well materials (casing or screen) and the borehole wall to allow for the emplacement of sand and sealant.

(3) The well shall be developed so that formation water flows freely through the screen and is not turbid, and sediment and drilling disturbances are removed from the well to the maximum extent practicable.

(4) Unless otherwise approved by the department, schedule 40 (or heavier) polyvinyl chloride (PVC) pipe, stainless steel pipe, or carbon steel pipe shall be used as casing. The casing shall have an inside diameter not less than two inches. The casing material selected for use shall be compatible with, and chemically inert with respect to the anticipated chemistry of the ground water and appropriate for the contaminants of interest at the copper mine facility. The casing material and thickness selected for use

shall have sufficient collapse strength to withstand the pressure exerted by grouts used as annular seals and thermal properties sufficient to withstand the heat generated by the hydration of cement-based grouts.

(5) Casing sections shall be joined using welded, threaded, or mechanically locking joints. The method selected shall provide sufficient joint strength for the specific well installation.

(6) The casing shall extend from the top of the screen to at least 18 inches above ground surface. The top of the casing shall be fitted with a removable cap, and the exposed casing shall be protected by a locking steel well shroud. The shroud shall be large enough in diameter to allow easy access for removal of the cap. Alternatively, monitoring wells may be completed below grade. In this case, the casing shall extend from the top of the screen to between six and twelve inches below the ground surface; the monitoring wells shall be sealed with locking, expandable well plugs; a flush-mount, watertight well vault that is rated to withstand traffic loads shall be emplaced around the wellhead; and the cover shall be secured with at least one bolt. The vault cover shall indicate that the wellhead of a monitoring well is contained within the vault.

(7) **Well Screen.**

(a) **For water table monitoring wells.** A maximum 20-foot section of continuous well screen shall be installed across the water table with at least five feet of well screen placed above the water table interface to allow for seasonal fluctuations. The department may approve a greater screen length based on the hydraulic properties of the aquifer, the hydrogeologic setting, predictable water level decline rates, or the depth of the well. Screen shall consist of continuous-slot, machine slotted, or other manufactured schedule 40 (or heavier) PVC or stainless steel. Screens created by cutting slots into solid casing with saws or other tools, other than as performed by the manufacturer, shall not be used. The screen material selected for use shall be compatible with the anticipated chemistry of the ground water and appropriate for the contaminants of interest at the copper mine facility. The screen slot size shall be selected to retain 90 percent of the filter pack.

(b) **For deep or confined aquifer monitoring wells.** Monitoring wells installed in confined aquifers or below the water table elevation of the shallowest aquifer to monitor ground water conditions in different aquifers at depth shall be installed with a maximum ten foot section of continuous well screen. The department may approve a greater screen length based on the hydraulic properties of the aquifer, the hydrogeologic setting, or the depth of the well. The top of the screen shall be placed at the location of the geologic boundary between the top of the aquifer and the bottom of confining aquifers. Screen shall consist of continuous-slot, machine slotted, or other manufactured schedule 40 or heavier PVC or stainless steel. Screens created by cutting slots into solid casing with saws or other tools shall not be used. The screen material selected for use shall be compatible with the anticipated chemistry of the ground water

and appropriate for the contaminants of interest at the copper mine facility. The screen slot size shall be selected to retain 90 percent of the filter pack.

(8) Screen sections shall be joined using welded, threaded, or mechanically locking joints. The method selected shall provide sufficient joint strength for the specific well installation and shall not introduce constituents that may reasonably be considered contaminants of interest at the copper mine facility. A cap shall be attached to the bottom of the well screen.

(9) Casing and well screen shall be centered in the borehole by installing centralizers near the top and bottom of the well screen.

(10) A filter pack shall be installed around the screen by filling the annular space from the bottom of the screen to at least two feet above the top of the screen with clean silica sand using methods that prevent bridging. The filter pack shall be properly sized to exclude the entrance of fine sand, silt, and clay from the formation into the monitoring well. All filter pack placed deeper than twenty feet below land surface shall be placed by tremie pipe. The well shall be surged or bailed to settle the filter pack and additional sand added, if necessary, before the bentonite seal is emplaced.

(11) A bentonite seal shall be constructed immediately above the filter pack by emplacing bentonite chips or pellets, three eighths of an inch in size or smaller, in a manner that prevents bridging of the chips/pellets in the annular space. All bentonite seals placed deeper than twenty feet below land surface shall be placed by tremie pipe. The bentonite seal shall be a minimum of three feet in thickness and hydrated with clean water. Adequate time shall be allowed for expansion of the bentonite seal before installation of the annular space seal.

(12) The annular space above the bentonite seal shall be sealed with cement grout or bentonite-based sealing material acceptable to the state engineer in accordance with 19.27.4 NMAC. All annular sealing materials placed deeper than twenty feet below land surface shall be placed by tremie pipe. Annular space seals shall extend from the top of the bentonite seal to the ground surface for wells completed above grade, or to a level three to six inches below the top of casing for wells completed at or below grade.

(13) A concrete pad with a minimum two-foot radius and a minimum four-inch thickness shall be poured around the shroud or well vault and wellhead. The concrete and surrounding soil shall be sloped to direct rainfall and runoff away from the wellhead.

E. Monitoring wells - office of the state engineer requirements. A permittee shall obtain any well permits required by the office of the state engineer prior to well drilling.

F. Ground water sample collection procedure. A permittee shall perform all ground water sample collection, preservation, transport and analysis according to the following procedure.

(1) Depth to ground water shall be measured from the top of well casing at point of survey to the nearest 0.01 feet using an electronic water level indicator consisting of dual conductor wire encased in a cable or tape graduated to 0.01 feet, a probe attached to the end of the conductor wire, and a visual or audible indicator; pneumatically or by using a fiberglass or steel measuring tape using the chalk method, or other method approved by the department.

(2) Monitoring wells shall be purged before sample collection by one of the following methods, unless otherwise approved by the department.

(a) Three well volumes of water shall be purged from the well using conventional methods before sample collection.

(b) The monitoring well shall be purged using low-flow purging methods as approved by the department until measurements of indicator parameters have stabilized. Low-flow purging shall be conducted with a low-flow pump using a low-stress approach, micro-purge method or minimal drawdown method. Indicator parameters shall be measured periodically during purging. A parameter stabilization log shall be kept during each sampling event for each monitoring well and include: date; water quality indicator parameter measurements; time for all measurements; and the purge volume extracted.

(c) For low yield wells, the well shall be purged of all available water.

(3) Following purging and immediately before sample collection the following field parameters shall be measured and recorded: pH, specific conductance, and temperature.

(4) In-line flow-through cells shall be disconnected or by-passed during sample collection, if used during purging.

(5) Samples from the well shall be obtained, prepared, preserved and transported to an analytical laboratory for analysis pursuant to the methods authorized by Subsection B of 20.6.7.29 NMAC.

G. Ground water sampling - existing copper mine facilities. For existing copper mine facilities a permittee shall collect ground water samples from all monitoring wells, seeps and springs for the analytes and at the frequency specified in an existing discharge permit. A permittee shall submit to the department semi-annual monitoring reports containing the information required in Section 20.6.7.29 NMAC.

H. Ground water sampling - reduction of sampling analytes. A permittee may request approval from the department to reduce the sampling frequency of individual water quality analytes. The basis for consideration of reduction of sampling frequency may include a demonstration that the analyte is not present in the impoundment or mine unit being monitored, or could not be generated from the materials present through degradation, oxidation, decay or any other expected process. A permittee may also request approval from the department to reduce sampling frequency of an individual analyte if it has not been detected in a particular monitoring well, is consistently below the applicable standard, or is stable and predictable for eight consecutive quarters. Ground water sampling analyte lists and the frequency of sampling shall be reevaluated upon permit renewal.

I. Ground water sampling - new monitoring wells. A permittee shall submit to the department for approval a proposal for quarterly ground water sampling from each newly installed monitoring required pursuant to this section. Sampling analyte lists shall be based on the geochemical characteristics of the solution or material contained in the impoundment or mine unit intended to be monitored, including constituents that can be generated from the materials present through degradation, oxidation, decay or any other expected process. Proposed analytes shall include field parameters as required in Subsection F of this section, alkalinity-bicarbonate, alkalinity-carbonate, metals, and other analytes from Section 20.6.2.3103 NMAC as applicable.

(1) Samples shall be collected from each newly installed monitoring well required pursuant to this section for a copper mine facility before emplacement of ore, waste rock or discharge of tailings or other water contaminants at an individual leach stockpile, waste rock stockpile, tailings impoundment or other impoundment.

(2) For copper mine facilities installing a new monitoring well during the term of a discharge permit, during construction of a new impoundment, or as a result of required corrective actions, samples shall be collected from the newly installed monitoring wells within 30 days of well completion and prior to commencing operation of the newly constructed unit as applicable.

J. Monitoring well survey and ground water flow determination. The permittee shall survey or otherwise locate monitoring wells and provide location information as required by this section. The coordinate location (northing and easting) shall be provided in the established coordinate system for the copper mine facility with an accuracy (rounded to the nearest foot/tenth meter) and shall also be provided to the department in one of the following coordinate systems: NM state plane (NAD 83) to the nearest foot, UTM (NAD 83) to the nearest tenth of a meter, or latitude/longitude (Lat/Long - WGS84) to the nearest tenth of a second. Elevation of the ground surface at the well location shall be provided to the nearest foot above mean sea level. Elevation of the water level measuring point shall be provided to the nearest hundredth of a foot above mean sea level. The water level measuring point for monitoring wells shall be clearly marked on the casing. Depth to ground water at each monitoring well location shall be measured from the point of survey to the nearest hundredth of a foot in all

surveyed wells pursuant to Subsection F of this section, and the data shall be used to develop a map showing the location of all monitoring wells and the direction and gradient of ground water flow at the copper mine facility.

K. Monitoring well completion report. A permittee shall submit to the department a monitoring well completion report for all newly installed monitoring wells. The report shall be submitted within 60 days of completion of installation of the monitoring well. The report shall contain the following information.

(1) Construction and lithologic logs for the new monitoring wells including well record information specified by 19.27.4 NMAC.

(2) Depth to ground water measured in each new monitoring well.

(3) Survey data and a survey map showing the locations of each new monitoring well and a ground water elevation contour map developed pursuant to Subsection L of this section.

(4) Analytical results of ground water samples collected from the new monitoring wells, including laboratory quality assurance and quality control summary reports, and field parameter measurements.

L. Ground water elevation contour maps. A permittee shall develop ground water elevation contour maps on a semi-annual basis using data associated with all monitoring wells installed in the appropriate geologic formation and as required pursuant to this section. Top of casing elevation data, obtained from monitoring well surveys completed pursuant to this section and quarterly depth to ground water measurements in monitoring wells shall be used to calculate ground water elevations at monitoring well locations. Ground water elevations between monitoring well locations shall be estimated using common interpolation methods. Ground water elevations shall be expressed in feet. A contour interval appropriate to the data shall be used. Ground water elevation data used to create potentiometric maps shall be limited to data collected during the quarter being reported. Ground water elevation contour maps shall depict the ground water flow direction, using arrows, based on the orientation of the ground water elevation contours, and the location and identification of each monitoring well and monitored structure or impoundment. A permittee shall submit ground water elevation contour maps to the department in the semi-annual monitoring reports, and submit annually a map showing the extent of the existing open pit surface drainage area as defined in Paragraph (43) of Subsection B of 20.6.7.7 NMAC.

M. Perennial stream sampling and reporting - routine. A permittee shall submit to the department for approval a proposal to collect quarterly surface water samples from each perennial surface waters of the state within a copper mine facility as necessary to monitor potential ground water inflow to the perennial surface water. Analytes to be sampled and analyzed shall be based on the geochemical characteristics of the solution or material contained in the impoundment or mine unit closest to or most

likely to effect the perennial stream being sampled. A permittee shall submit to the department in the semi-annual monitoring reports the field parameter measurements, the analytical results (including the laboratory quality assurance and quality control summary report) and a map showing the location of each sampling location in relation to the copper mine facility.

N. Process water, tailings slurry, impacted stormwater, seep, and spring sampling and reporting. An applicant for a new, renewed or modified discharge permit or permittee shall submit for department approval a sampling and analysis plan to monitor quarterly the quality of process water, tailings slurry, impacted stormwater, seeps and springs at a copper mine facility. Proposed analytes shall include field parameters as required in Subsection F of this section, alkalinity-bicarbonate, alkalinity-carbonate, metals, and other analytes from Section 20.6.2.3103 NMAC as applicable.

[20.6.7.28 NMAC - N, 12/1/13]

20.6.7.29 GENERAL MONITORING REQUIREMENTS FOR ALL COPPER MINE FACILITIES:

A. Monitoring reports – schedule of submittal. A permittee shall submit monitoring reports to the department on a semi-annual schedule that shall contain all quarterly monitoring data and information collected pursuant to the copper mine rule. Semi-annual monitoring reports shall be submitted according to the following schedule:

(1) January 1 through June 30 (first and second quarter sample periods) – report due by August 31; and

(2) July 1 through December 31 (third and fourth quarter sample periods) – report due by February 28.

B. Monitoring reports - general requirements. A permittee shall submit monitoring reports to the department that include a summary providing of all activities related to discharges at the copper mine facility during the preceding six months including, but not limited to the following:

- (1) operational activities;
- (2) minor spills and corrective actions not reportable under Section 20.6.2.1203 NMAC;
- (3) major spills and corrective actions reportable under Section 20.6.2.1203 NMAC;
- (4) maintenance and repairs of discharge systems or units;
- (5) a synopsis of completed studies relevant to the copper mine facility or unit;

- (6) monitoring well installation and abandonment;
- (7) construction or demolition of structures;
- (8) general locations and volumes of leach ore placement;
- (9) general locations and volumes of waste rock placement; and
- (10) a summary of seep and spring flows, if applicable.

C. Monitoring Reports - analytical requirements. A permittee shall submit monitoring reports to the department that include the following analytical information.

(1) A single table shall be provided semi-annually in a paper and electronic spreadsheet format approved by the department. The table shall include water quality data with those parameters analyzed and water levels measured shown in columns. Single sampling events for each monitoring site shall be shown in rows with the site name in the far left column, the sampling date in the second column, the water level in the third column, followed by individual analytes in the following columns. Tabulated electrical conductivity shall include the measured field values and corrected values to 25 degrees Celsius. Values exceeding standards shall be bolded. Any constituent not analyzed for a particular site shall be shown as "NA", any site not sampled shall be shown as "NS" with an associated reason, and any site not measured for water levels shall be shown as "NM" with an associated reason.

(2) Semi-annual monitoring reports shall include water quality trends, laboratory CQA/CQC, trends in hydrographs, and potentiometric surface maps. At a minimum, graphs with the previous five years of indicator parameter data shall be presented for TDS, sulfate, and water levels. pH may substituted for water levels at reservoirs or springs.

D. Sampling and analysis methods. A permittee shall sample and analyze water pursuant to Subsection B of 20.6.2.3107 NMAC.

E. Process water, leach solutions, tailings and liner solution collection system volume measurement and reporting. A permittee shall measure the volume of process water, leach solutions applied, and tailings discharges and solution collection system fluids collected using flow meters pursuant to Paragraph (5) of Subsection C of 20.6.7.16 NMAC. Meter readings shall be recorded at intervals no less than once per week. The average daily discharge volume for each recording interval shall be calculated by dividing the difference between the meter readings by the number of days between meter readings. The permittee shall provide the meter readings including the date, time and units of each measurement, and calculations for the average daily volumes discharged and collected in gallons per day, in the semi-annual monitoring reports submitted to the department.

F. Flow meter accuracy. Flow meters shall be monitored for accuracy by comparing flow meter readings with prior readings and noting any significant variations in readings that are not consistent with changes in operating conditions. If a flow meter shows inconsistent readings or otherwise appears to be non-operational, the permittee shall make a record of the inconsistent readings and shall repair or replace a flow meter that does not appear to be operating properly with a flow meter calibrated according to the flow metering plan pursuant to Paragraph (5) of Subsection C of 20.6.7.17 NMAC. The permittee shall submit the results of any inconsistent meter readings and the repair or replacement of any flow meter(s) to the department annually in the monitoring report due by February 1, including information on the location and meter identification nomenclature specified in Paragraph (1) of Subsection E of 20.6.7.18 NMAC.

G. Meteorological data. A permittee shall annually submit to the department meteorological data collected at sites throughout the copper mine facility during each calendar year according to the approved meteorological data plan submitted pursuant to Subsection W of 20.6.7.11 NMAC. The data shall be submitted to the department in the monitoring report due on February 28 of each year.

H. Interceptor system monitoring and evaluation. A permittee operating an interceptor well system for a tailing impoundment or a waste rock stockpile shall provide an annual monitoring and evaluation report of the interceptor system. The report shall be submitted to the department in the monitoring report due by February 28 of each year and shall include the following information obtained from within and surrounding the interceptor system as applicable:

(1) monthly measurements of the volume of impacted ground water pumped by individual wells, interceptor trenches, or other interceptor system components and the total volume pumped within the monitoring period;

(2) the operational status of interceptor system components;

(3) water level measurements of monitoring and interceptor wells or other system components as applicable;

(4) semi-annual ground water elevation contour maps pursuant to the requirements of Subsection L of 20.6.7.28 NMAC;

(5) semi-annual iso-concentration maps of contaminants of concern; and

(6) an annual performance evaluation assessment of the interceptor well system that contains information on:

(a) the performance of individual interceptor wells and/or other interceptor system components over time;

(b) accumulated drawdown maps showing the historical change in water level;

(c) time series hydrographs and graphs of water quality trends for contaminants of concern covering at a minimum data from the past five year time period;

(d) water quality distribution within the system over time;

(e) cross-sectional diagrams depicting the geologic, water level elevation and water quality in vertical profile;

(f) an analysis of the data, maps, graphs and diagrams contained in the assessment; and

(g) recommendations for changes to optimize performance of the system.

[20.6.7.29 NMAC - N, 12/1/13]

20.6.7.30 CONTINGENCY REQUIREMENTS FOR COPPER MINE FACILITIES:

A. Exceedance of ground water standards. If monitoring of a water contaminant source indicates that applicable standards are exceeded, or if the extent or magnitude of existing ground water contamination is significantly increasing, the permittee shall collect a confirmatory sample from the monitoring location(s) within 15 days to confirm the initial sampling results, unless the permittee elects to accept the initial sampling results as an accurate measurement of water quality. Within 30 days of the confirmation of the exceedance of applicable standards or significant increases in existing contamination, the permittee shall take the following actions. The department may approve a longer time period not to exceed 90 days for good cause shown.

(1) A corrective action plan shall be submitted to the department for approval. The corrective action plan shall describe any repairs made or proposed to address the cause of the exceedance or increase and shall propose source control measures and a schedule for implementation. The department shall approve or disapprove the corrective action plan within 60 days of receipt. Following the department's approval of the corrective action plan, the permittee shall initiate implementation of the plan according to the approved schedule. If the department does not approve the corrective action plan, the department shall notify the permittee of the deficiencies by certified mail. The permittee shall submit a revised corrective action plan to the department within 60 days of the date of postal notice of the notice of deficiency. The department shall approve or disapprove the revised corrective action plan within 60 days of receipt.

(2) If the corrective action plan proposes actions to correct deficiencies with a liner, the proposed actions shall include repair or replacement of the existing liner, or construction and lining of a new impoundment. If liner repair is practicable, repairs shall

be made pursuant to 20.6.7.17 NMAC or using a material that is equivalent to the existing liner with respect to material thickness and composition. Repairs shall be completed in accordance with the approved schedule. If liner repair is not practicable, the corrective action plan shall propose reconstruction and relining of the impoundment pursuant to 20.6.7.17 NMAC or construction and lining of a new impoundment pursuant to 20.6.7.17 NMAC. Reconstruction or construction plans and specifications for the impoundment shall be completed pursuant to 20.6.7.17 NMAC and submitted with the corrective action plan along with a schedule for implementation. If a new impoundment is constructed the existing impoundment shall be closed pursuant to 20.6.7.33 NMAC.

(3) The permittee may be required to submit to the department for approval an abatement plan, which includes a site investigation to define the source, nature and extent of contamination; a proposed abatement option, and a schedule for its implementation. The site investigation and abatement option shall be consistent with the requirements and provisions of Sections 20.6.2.4101, 20.6.2.4103, 20.6.2.4106, 20.6.2.4107, 20.6.2.4108 and 20.6.2.4112 NMAC.

(4) A corrective action plan or abatement plan approved or submitted prior to the date of the copper mine rule shall satisfy the requirements of this subsection provided that any substantial change in monitoring results after the effective date of the copper mine rule may require additional corrective action under this Subsection or modification of a previously approved or submitted corrective action plan or abatement plan.

B. Monitoring well replacement. If information available to the department indicates that a monitoring well(s) required by 20.6.7.28 NMAC is not located downgradient of or does not adequately monitor the contamination source it is intended to monitor, is not completed pursuant to 20.6.7.28 NMAC, or contains insufficient water to effectively monitor ground water quality, a permittee shall install a replacement monitoring well(s). The replacement monitoring well(s) shall be installed within 120 days of the date of postal notice of notification from the department and a survey of the replacement monitoring well(s) shall be performed within 150 days of the date of postal notice of notification from the department. The replacement monitoring well(s) shall be located, installed, completed, surveyed and sampled pursuant to 20.6.7.28 NMAC. The permittee shall develop a monitoring well completion report pursuant to Subsection K of 20.6.7.28 NMAC and submit it to the department within 180 days of the date of postal notice of notification from the department. The department may approve longer time periods for good cause shown.

C. Exceedance of permitted maximum daily discharge volume. If the maximum daily discharge volume authorized by the discharge permit at a particular permitted location is exceeded by more than 10% for any three average daily discharge volumes within any one year period, the permittee shall submit within 60 days of the third exceedance a corrective action plan for reducing the discharge volume or an application for a modified or renewed and modified discharge permit pursuant to 20.6.7.10 NMAC.

Within 30 days of postal notice of department approval, the permittee shall initiate implementation of the corrective action plan.

D. Insufficient impoundment capacity. If a survey or capacity calculations indicate an existing impoundment or impoundment system is not capable of meeting the capacity requirements in Subsection D of 20.6.7.17 NMAC, within 90 days of the effective date of the discharge permit the permittee shall submit a corrective action plan for department approval. The plan may include, but is not limited to, proposals for constructing an additional impoundment, reducing the discharge volume, removing accumulated solids, or changing process water or impacted stormwater management practices. The corrective action plan shall include a schedule for implementation. The schedule shall propose completion within one year from the submittal date of the initial corrective action plan. Within 30 days of the date of postal notice of the department's approval of the corrective action plan, the permittee shall initiate implementation of the plan. Should the corrective action plan include removal of accumulated solids, solids shall be removed from the impoundment in a manner that is protective of the impoundment liner. The plan shall include the method of removal, and locations and methods for storage and disposal of the solids.

E. Inability to preserve required freeboard. If a minimum of two feet of freeboard cannot be preserved in the process water or impacted stormwater impoundment, the permittee shall submit a corrective action plan to the department for approval. The corrective action plan shall be submitted within 30 days of the date of discovery of the initial exceedance of the freeboard requirement. The plan may include, but is not limited to, proposals for constructing an additional impoundment, reducing the maximum daily discharge volume, or changing process water or impacted stormwater management practices. The corrective action plan shall include actions to be immediately implemented to regain and maintain a minimum of two feet of freeboard until permanent corrective actions have been completed. The corrective action plan shall include a schedule for implementation. The schedule shall propose completion within one year from the submittal date of the initial corrective action plan. Within 30 days of the date of postal notice of the department's approval of the corrective action plan, the permittee shall initiate implementation of the plan.

F. Impoundment - structural integrity compromised. Within 24 hours of discovery, a permittee shall report to the department any damage to the berms or the liner of an impoundment or any condition that may compromise the structural integrity of the impoundment. Within 15 days of discovery, the permittee shall submit to the department a corrective action plan describing any actions taken or proposed to be taken to repair the damage or condition. Within 30 days of receipt, the department shall approve or disapprove the proposed corrective action plan. Repairs to the impoundment liner or berms shall be completed pursuant to 20.6.7.17 NMAC. The corrective action plan shall include a schedule for implementation. Within 30 days of the date of postal notice of the department's approval of the corrective action plan, the permittee shall initiate implementation of the plan.

G. Unauthorized discharge - reporting and correction. In the event of a spill or release that is not authorized by the discharge permit, the permittee shall notify the department and take corrective actions pursuant to 20.6.2.1203 NMAC. Process water or impacted stormwater or other material that is spilled or released that has the potential to impact water quality shall be contained and pumped to a sump, impoundment, or leach stockpile permitted pursuant to the copper mine rule. The permittee shall repair or replace failed components within 48 hours from the time of failure or as soon as practicable.

H. Leach stockpiles, tailings impoundment or waste rock stockpiles - unstable slopes. Within 24 hours of discovery, a permittee shall report to the department any evidence of instability of the slope of a leach stockpile or tailings impoundment or any condition that may compromise the structural integrity of the leach stockpile, tailings impoundment or waste rock stockpile. Within 15 days of discovery, the permittee shall submit to the department a corrective action plan describing any actions taken or proposed to be taken to repair the damage or condition. Within 30 days of receipt, the department shall respond to the proposed corrective action plan. Repairs to the slopes shall be completed consistent with the requirements of 20.6.7.20, 20.6.7.21, 20.6.7.22, and 20.6.7.33 NMAC, as applicable. The corrective action plan shall include a schedule for implementation. Within 30 days of the date of postal notice of the department's approval of the corrective action plan, the permittee shall initiate implementation of the plan.

I. Erosion of cover system or compromised stormwater conveyance structure, ponding of stormwater, or other conditions. Within 24 hours of discovery, a permittee shall report to the department any evidence of significant erosion of a cover system required by 20.6.7.33 NMAC or compromise of a stormwater conveyance structure; any significant ponding of stormwater on the cover system; or any other condition that may significantly compromise the cover system or stormwater conveyance structure. Within 15 days of the reported discovery, the permittee shall submit to the department a corrective action plan describing any actions taken or proposed to be taken to repair the damage or condition. Within 30 days of receipt, the department shall respond to the proposed corrective action plan. Repairs to the cover system or stormwater conveyance structure shall be completed consistent with the applicable requirements of 20.6.7.33 NMAC. The corrective action plan shall include a schedule for implementation. Within 30 days of the date of postal notice of the department's approval of the corrective action plan, the permittee shall initiate implementation of the plan.

J. Water management and water treatment system failure. Within 24 hours of discovery, a permittee shall report to the department any significant failure of a water management or water treatment system constructed and operated pursuant to 20.6.7.33 NMAC or any condition that may cause a significant failure of the water treatment system. Within 15 days of the reported discovery, the permittee shall submit to the department a corrective action plan describing any actions taken or proposed to be taken to repair the damage or condition. Within 30 days of receipt, the department

shall respond to the proposed corrective action plan. Repairs to the water treatment system shall be completed consistent with the applicable requirements of 20.6.7.33 NMAC. The corrective action plan shall include a schedule for implementation. Within 30 days of the date of postal notice of the department's approval of the corrective action plan, the permittee shall initiate implementation of the plan.

K. Interim Emergency Water Management. An applicant or permittee shall develop and submit to the department an interim emergency fluid management plan. The purpose of the interim emergency water management plan is to provide information to the department on how process water systems, interceptor wells, seepage collection systems and storm water management systems are operated and maintained to prevent discharges in the event the department assumes management of the copper mine facility. An applicant or permittee shall include in the plan process water flow charts showing electrical system requirements, pump operations, seepage collection and interceptor well operations and applicable operation and maintenance requirements. The interim process water management plan shall be updated as major process water system changes occur that would affect the interim emergency water management plan. The interim emergency water management plan shall be maintained on site and be available for department review. The plan shall be submitted within 180 days of discharge permit renewal for an existing copper mine facility and no less than 60 days prior to discharge at a new copper mine facility.

[20.6.7.30 NMAC - N, 12/1/13]

20.6.7.31 [RESERVED]

20.6.7.32 [RESERVED]

20.6.7.33 CLOSURE REQUIREMENTS FOR COPPER MINE FACILITIES:

An applicant or permittee shall submit a closure plan for all portions of a copper mine facility covered by a discharge permit that addresses the following requirements.

A. Design storm event. Permanent storm water conveyances, ditches, channels and diversions required for closure of a discharging unit at a copper mine facility shall be designed to convey the peak flow generated by the 100 year return interval storm event. The appropriate design storm duration shall be selected based on the maximum peak flow generated using generally accepted flood routing methods. Sediment traps or small basins intended as best management practices may not be subject to this requirement, based on department approval.

B. Slope stability. At closure, tailing impoundment(s) not regulated by the office of the state engineer, leach stockpile(s) or waste rock stockpile(s) shall be constructed to promote the long-term stability of the structure. Closure of all critical structures at a copper mine facility shall be designed for a long-term static factor of safety of 1.5 or greater and non-critical structures shall be designed for a long-term static factor of

safety of 1.3 or greater. The units being closed shall also be designed for a factor of safety of 1.1 or greater under pseudostatic analysis. A stability analysis shall be conducted for the unit and shall include evaluation for static and seismic induced liquefaction.

C. Surface re-grading. During closure of any tailing impoundment, waste rock pile or leach stockpile at a copper mine facility, the surface shall be re-graded to a stable configuration that minimizes ponding and promotes the conveyance of surface water off the unit. The operator may propose for department approval a grading plan that allows ponding as an appropriate part of closure provided additional ground water protection measures, such as synthetic liner systems, are included as part of the design.

(1) The top surfaces of all tailing impoundments at a copper mine facility shall be constructed to a minimum final grade of 0.5% after accounting for the estimated magnitude and location of large-scale settlement due to totaling consolidation or differential settlement. Prior to final re-grading activities, the permittee shall ensure that adequate drainage of the tailing impoundment has occurred to ensure that large-scale settlement following grading is minimized. The CQC and CQA plan shall provide the methods and procedures to ensure that the design and construction activities will be completed according to the approved final design and specifications, including design aspects related to potential future settlement.

(2) The top surfaces of all waste rock and leach stockpiles at a copper mine facility shall be constructed to a minimum final grade of 1%.

(3) The outslopes of all tailing impoundments, waste rock and leach stockpiles at a copper mine facility shall be constructed to an interbench slope no steeper than three horizontal to one vertical (3H:1V). Alternative slope gradients may be allowed within an open pit surface drainage area, or if the permittee provides information showing that the cover performance objectives in Subsection F of this section are met and the exception is approved by the department.

(a) At existing copper mine facilities, where re-grading of individual outslopes would intersect a highway, cultural resource, physical infrastructure or a surface water of the state, outslopes may be re-graded no steeper than 2.5:1 or as otherwise approved by the department in Paragraph (3) of this subsection.

(b) At existing copper mine facilities, the waste rock and leach stockpile outslopes within an open pit surface drainage area are not required to be graded and covered.

(4) For design purposes, allowable uninterrupted slope lengths shall be calculated using a generally accepted erosion estimation method and shall be based on the final slope angle and cover material characteristics representative of the cover materials proposed for use at the site. The maximum uninterrupted slope lengths shall be no greater than 300 feet for 4.0:1, 200 feet for 3:1 slopes and 175 feet for 2.5:1

slopes. Alternative slope lengths may be allowed if the permittee provides information showing that the cover performance objectives specified in Subsection F of this section will be achieved and the exception is approved by the department.

D. Open pits. The applicant or permittee shall provide detailed information and a closure plan for open pits that demonstrates how the following criteria will be addressed through water management or other activities at open pits to minimize the potential to cause an exceedance of applicable water quality standards:

(1) Open pits in which the evaporation from the surface of an open pit water body is predicted to exceed the water inflow shall be considered to be a hydrologic evaporative sink. If an open pit is determined to be a hydrologic evaporative sink, the standards of 20.6.2.3103 NMAC do not apply within the area of open pit hydrologic containment. This is limited to contaminants associated with standard copper mining practices and found to be present within the open pit, or that can be generated from the natural materials present in the open pit through degradation, oxidation, decay or other expected process.

(2) After closure, if water within an open pit is predicted to flow from the open pit into ground water and the discharge from an open pit may cause an exceedance of applicable standards at monitoring well locations specified by 20.6.7.28 NMAC, then the open pit shall be considered a flow-through pit. In a flow-through pit system the open pit water quality must meet ground water standards of 20.6.2.3103 NMAC or the open pit must be pumped in order to maintain an area of open pit hydrologic containment.

E. Surface water management. The permittee of a copper mine facility shall maintain and implement a plan for the management of all stormwater and sediment generated from the copper mine facility during reclamation and following closure.

F. Cover system. At closure, a permittee shall install a cover system on waste rock piles, leach stockpiles, tailing impoundments and other units that have the potential to generate leachate and cause an exceedance of applicable standards at monitoring well locations specified by 20.6.7.28 NMAC using the following criteria, as appropriate. Any soil cover systems installed before the effective date of the copper mine rule are not subject to the requirements of the copper mine rule unless the department determines that an exceedance of applicable standards has occurred or is likely to occur as a result of the existing installed cover system, and that modification of the cover will prevent further impacts to ground water. Any cover system installed at an existing copper mine facility after the effective date of the copper mine rule shall be a store and release earthen cover system with a thickness of thirty-six inches and shall be constructed in accordance with the applicable requirements of Paragraphs (1) through (3) of this subsection. For leach and waste rock stockpiles inside the open pit surface drainage area, a thirty-six inch cover is only required on the top surfaces.

(1) The cover system shall be constructed of thirty-six inches of earthen materials that are capable of sustaining plant growth without continuous augmentation

and have erosion resistant characteristics. Erosion rates shall be equal to or less than stable slopes in the surrounding environment after the vegetation has reached near-equilibrium cover levels. Erosion will be estimated using generally acceptable methods.

(2) Soil cover systems shall be designed to limit net-percolation by having the capacity to store within the fine fraction at least 95 percent of the long-term average winter (December, January and February) precipitation or at least 35% of the long-term average summer (June, July and August) precipitation, whichever is greater. The water holding capacity of the cover system will be determined by multiplying the thickness of the cover times the incremental water holding capacity of the approved cover materials. Appropriate field or laboratory test results or published estimates of available water capacity shall be provided by the permittee to show that the proposed cover material meets this performance standard.

(3) Cover thickness or other design criteria may be reduced or modified if:

(a) the cover system is installed over a lined unit and the design and function of the liner system will complement the cover system, or the permittee proposes a composite, layered or an alternate cover system with an equal or greater level of ground water protection described in Paragraphs (1) and (2) of this section; or

(b) a demonstration is made that an alternate proposed cover system will ensure that an exceedance of applicable standards will not occur in ground water; such a demonstration shall include:

(i) a comprehensive modeling study to estimate the quantity of net-percolation through a cover system that will not result in an exceedance of applicable standards in ground water;

(ii) a plan for performance monitoring of the cover system, including ground water monitoring; and

(iii) an agreement by the permittee to pay for the cost of a third party review of the modeling study and performance monitoring plan.

(4) A CQA/CQC plan shall be submitted for department review as part of the final cover design. The plan shall identify a licensed New Mexico professional engineer as the designated CQA officer and include his or her supervision of the CQA plan and shall identify the methods proposed to ensure that the closure construction will be completed in accordance with the design and specifications. Following the completion of the work, the CQA officer shall prepare a final CQA report. The final CQA report shall provide a detailed description of the installation methods and procedures and document that the work was conducted as designed.

G. Process solution reduction plans. The closure plan shall include a process solution reduction plan for the copper mine facility. The process solution reduction plan

shall be a conceptual engineering document that describes the processes and methods that are expected to be used at a copper mine facility to reduce the quantities of process water in storage and circulation inventory at the end of copper production in preparation for long-term water management or treatment. The plan shall describe and list the current or proposed process water management units and inventories of process water. The plan shall describe the modifications to the process water management system required to create an efficient process water reduction system and the operation and maintenance requirements for the system with material take-offs of sufficient detail to prepare an engineering-level cost estimate equivalent to the cost estimate to be provided with the closure plan. The plan shall provide an estimate of the required water reduction period based on the water reduction calculations provided in the plan to be used for planning and operation and maintenance cost calculations.

H. Closure water management and water treatment plan. The applicant or permittee shall submit a closure water management and water treatment plan. The closure water management and water treatment plan shall consist of a conceptual engineering document that describes the processes and methods that are expected to be used at a copper mine facility for long-term management or treatment of process water. The plan shall include an analysis of the expected operational life of each long-term water management or water treatment system, including interceptor systems, until each system is no longer needed to protect ground water quality and applicable standards are met. The plan shall describe the long-term water management and water treatment systems with sufficient detail, including locations of key components, expected operational life, material take-offs, and capital, operational and maintenance costs to prepare an engineering-level cost estimate. The plans shall provide sufficient detail to estimate capital and operating costs to provide the basis for financial assurance for these activities.

I. Impoundments. The permittee shall close all reservoirs and impoundments in a manner that ensures that the requirements of the Water Quality Act, commission rules and the discharge permit are met. Closure activities shall meet the following requirements:

(1) Fluids from reservoirs and impoundments shall be drained and appropriately disposed of.

(2) Sediments in the reservoir or impoundment shall be characterized and abated or appropriately disposed of in a manner that will not cause an exceedance of applicable standards.

(3) Materials underlying the reservoir or impoundment shall be characterized to determine if releases of water contaminants have occurred.

(4) Where characterization results show materials remaining within or beneath any reservoir or other impoundment that are not naturally occurring to be a source or potential source of ground water contamination outside the open pit surface

drainage area, the reservoir or impoundment, shall be covered and re-vegetated pursuant to this section.

(5) Based on the characterization conducted pursuant to Paragraph (4) of this subsection, further characterization of ground water beneath and adjacent to the reservoir or impoundment may be required to determine if abatement is necessary.

(6) Reservoirs and impoundments located outside the open pit surface drainage area shall be closed in a manner that creates positive drainage away from the impoundments, unless needed during closure and post closure for storm water retention or seepage interception, post-closure water management and treatment, or unless otherwise approved by the department. Post-closure reservoirs or impoundments to be used for the collection of non-impacted storm water and located over areas where residual wastes, vadose zone contamination or ground water contamination remains shall be synthetically lined pursuant to the design and construction criteria of Paragraph (4) of Subsection D of 20.6.7.17 NMAC.

(7) The department may approve alternative plans for closure of impoundments based on site-specific conditions when the alternative closure method will provide the same level of ground water protection as the methods specified in Paragraphs (1) through (6) of this subsection.

J. Pipelines, tanks and sumps. The permittee shall remove and properly dispose of the tailing, process water, or other materials contained in pipelines, tanks or sumps as soon as they are no longer needed for site operations, water treatment, or other post-closure water management. Any residual tailing, process water, sediments or contaminated water shall be removed from the pipelines, tanks or sumps prior to closure and dispose of the material in a department approved manner. Pipelines may be removed for appropriate disposal or cleaned and buried in place. Sumps may be removed for disposal or cleaned and broken up and buried in place. During pipeline, tank or sump closure, the permittee shall inspect the entire pipeline, tank or sump area for evidence of past spills and characterize the impacts and potential impacts of such spills. The permittee shall document all areas where there is evidence of spills and propose to the department appropriate corrective actions pursuant to 20.6.2.1203 NMAC. Following pipeline, tank or sump removal, the permittee shall remove for disposal or reclaim in place all acid generating pipeline, tank or sump bedding material that has the potential to impact water quality in excess of the applicable standards.

K. Crushing, milling, concentrating and smelting. The permittee shall close all crushing, milling, concentrating or smelting areas in a manner that ensures that the requirements of the Water Quality Act, commission rules and the discharge permit are met. Any remaining materials containing water contaminants that may cause an exceedance of the applicable standards shall be removed or disposed of in a department approved manner or covered pursuant to this section. The permittee shall characterize the crushing, milling, concentrating or smelting area for the presence of any remaining potential water contaminants. If water contaminants are present that may

with reasonable probability move directly or indirectly into ground water and cause an exceedance of the applicable standards, the area shall be covered pursuant to this section.

L. Closure monitoring and maintenance. During closure the permittee shall continue monitoring pursuant to 20.6.7.28 and 20.6.7.29 NMAC. The permittee may propose and the department may approve modifications to the required monitoring to reflect changes in conditions during closure, including abandonment of monitoring wells.

M. Exceptions to design criteria. The closure design criteria of this section may be modified if approved by the department. Design criteria required by the office of the state engineer dam safety bureau for regulated units, such as jurisdictional impoundments (including tailing impoundments), shall supersede the criteria in this section.

[20.6.7.33 NMAC - N, 12/1/13]

20.6.7.34 IMPLEMENTATION OF CLOSURE:

A. Notification of intent to close. A permittee shall notify the department in writing of its intent to implement the closure plan for a copper mine facility or an individual unit of a copper mine facility. Notification shall be given at least 30 days prior to implementation of closure construction activities.

B. Initiation of closure. Upon notice of intent to implement a closure plan, a permittee shall commence closure in accordance with the approved closure plan. Implementation of closure includes preparation and submittal of a final design and CQA/CQC plan. The permittee shall submit the final design and CQA/CQC plan to the department for approval within 180 days of submission of a notice of intent to implement the closure plan. The permittee shall commence final closure construction of the copper mine facility or unit within 180 days of receipt of written approval of the final design and CQA/CQC plan. These timelines may be modified by the department upon request by the permittee for good cause shown, including allowance for time for procurement and mobilization of construction services and materials prior to actual closure construction.

C. Notification of change in operational status. Whenever operation of a copper mine facility subject to closure requirements under the copper mine rule is suspended or resumed, the permittee shall provide the department written notification within 30 days of the date operation is suspended or resumed. Each subsequent semi-annual report submitted during suspension of operation of a copper mine facility shall state whether the permittee intends to resume operations and the anticipated date of resumption of operations or the conditions under which operations will resume.

D. Department notice regarding suspended operations and enforcement action. If leaching operations or milling operations at a copper mine facility are suspended for more than one year, the department may issue a written notice to the

permittee requesting that the permittee provide evidence that the permittee is capable of and intends to resume operation of the unit. If the permittee does not respond within 30 days of postal notice of the department's written notice, or if the permittee does not provide evidence that the copper mine facility or unit is capable of resuming operation, that the permittee intends to resume operation of the copper mine facility or unit, and that the copper mine facility or unit does not pose a threat to public health or cause undue damage to property, the department may determine that the permittee is in violation of the copper mine rule for failure to implement closure of the copper mine facility or unit in a timely manner and may take appropriate enforcement action pursuant to Section 74-6-10 NMSA 1978, including requiring implementation of closure in accordance with 20.6.7.33 NMAC and this section.

E. Deferral of closure. A permittee may request deferral of closure of a unit at a copper mine facility that has reached the end of its useful life with no intent by the permittee to resume operations if the proximity of active operations at the copper mine facility could result in ongoing contamination of the unit, closure would require relocation or replacement of infrastructure that supports ongoing operations, or for other good cause shown. The department may approve a deferral of closure if the permittee demonstrates that adequate water management measures are being implemented and maintained to protect ground water quality during the period of deferral.

F. Final design. The permittee shall submit a final design and CQA/CQC plan to the department for approval at least 60 days prior to construction, including commencement of surface shaping activities, of any area subject to a closure plan pursuant to the copper mine rule including, but not limited to, tailing impoundments, waste rock piles, leach stockpiles, and any other area where cover is required under the approved closure plan. The CQA/CQC plan must include detailed engineering designs for storm water management structures and associated conveyance systems, cover design specifications, a cover material suitability assessment, a borrow source location, a rip rap suitability assessment, a rip rap source location, a post reclamation storm water management plan, and a schedule for completion. In addition, the final design and CQA/CQC plan shall include best management practices that will be employed during reclamation to address erosion and storm water management in a manner that meets the requirements of the Water Quality Act and commission regulations. The final design and CQA/CQC plan shall bear the signature and seal of a licensed professional engineer in accordance with Subsection A of 20.6.7.17 NMAC.

G. CQA/CQC report. Within 180 days after project completion, the permittee shall submit a final CQA/CQC report to the department. The CQA/CQC report shall include, at a minimum, as-built drawings of the entire reclaimed area including test pit locations and cover thickness data, a final survey report and topographic map following cover placement, a summary of work conducted, construction photographs, the location of reclaimed borrow areas, soil testing results, and laboratory analytical reports. The contour intervals on topographic maps shall be no greater than two feet for the top surfaces and no greater than 10 feet for the out slopes for closure of tailing impoundments, leach stockpiles or waste rock stockpiles. The CQA/CQC report shall

provide summaries of the quality assurance data, documenting that the project was completed according to the approved final design and CQA/CQC plan with significant exceptions explained. The CQA/CQC report shall bear the signature and seal of a licensed professional engineer in accordance with Subsection A of 20.6.7.17 NMAC.

[20.6.7.34 NMAC - N, 12/1/13]

20.6.7.35 POST-CLOSURE REQUIREMENTS:

For each unit closed at a copper mine facility, the closure period shall cease, and the post-closure period shall commence, following the permittee's submission and department approval of a final CQA/CQC report that includes as-built drawings and a closure report documenting completion of regrading, covering, seeding, and construction of any other elements required for closure of a unit. The post-closure period for a copper mine facility or unit shall begin when the final CQA report is approved and only monitoring, inspections, maintenance, or operation of a closure water treatment and management plan remain to be conducted. During the post-closure period, a permittee shall conduct post-closure monitoring, inspection, reporting, maintenance, and implementation of contingency actions as specified by this section. The post-closure period shall end for a unit of a copper mine facility upon the completion of post-closure monitoring, inspection and maintenance for the unit as required by this section. The post-closure period shall cease when all monitoring, inspections, maintenance, and operation of the water management and treatment plan required under this section may cease. For units of a copper mine facility subject to an abatement plan, monitoring, inspection, reporting, and operation of abatement systems shall be conducted in accordance with the approved abatement plan rather than this section.

A. Interceptor system inspections. A permittee shall perform quarterly inspections and annual evaluations of all interceptor systems and perform maintenance as necessary to ensure that the systems are performing as designed and are functioning in a manner that is protective of ground water quality. The inspection results and any maintenance performed by the permittee on interception systems shall be reported pursuant to Subsection D of this section.

B. Water quality monitoring and reporting. A permittee shall perform water quality monitoring and reporting during the post-closure period pursuant to 20.6.7.28 and 20.6.7.29 NMAC, as applicable and modified by this section. Ground water elevation contour maps required pursuant to Subsection L of 20.6.27 NMAC shall be submitted annually during the post-closure period. A permittee may request to reduce the frequency of or cease sampling a water quality monitoring location if the water contaminants in a monitoring well have been below the applicable standards for eight consecutive quarters, provided an adequate monitoring well network remains. If sampling of a monitoring well ceases in accordance with this subsection, the monitoring well shall be abandoned in accordance with applicable requirements unless the

permittee requests and the department approves the monitoring well to remain in place for an alternative use or future monitoring.

C. Reclamation monitoring, maintenance, and inspections.

(1) **Vegetation.** To ensure that vegetated covers required by the copper mine rule or the approved discharge permit are protective of water quality, a permittee shall perform post-closure monitoring of vegetation pursuant to schedules and monitoring requirements approved by the mining and minerals division. Any proposed changes to the closure or post-closure vegetation monitoring plan to meet Mining Act requirements shall be submitted to the department to ensure monitoring is protective of water quality. The permittee shall provide the department with a copy of monitoring results for vegetated covers, including photographic documentation as required by the mining and minerals division. At such time as the mining and minerals division vegetation success requirements under the Mining Act have been met, the permittee shall provide a final report to the department and vegetation monitoring may cease.

(2) **Erosion, subsidence, slope instability, ponding, and other features.** The permittee shall visually inspect closed discharge permit areas where a cover was installed for signs of excessive erosion, subsidence features, slope instability, ponding, development of fissures, or any other feature that may compromise the functional integrity of the cover system or drainage channels. Drainage channels, diversion structures, retention ponds, and auxiliary erosion control features shall be inspected in accordance with professionally recognized standards (e.g., U.S. department of agriculture natural resources conservation service standards). The inspections shall be conducted monthly for the first year following submission of the final CQA/CQC report for the unit, and quarterly thereafter until the end of post-closure monitoring, provided the department may approve a schedule allowing less-frequent monitoring. Discharge permit areas where covers were installed shall also be inspected for evidence of excessive erosion within 24 hours, or the next business day, following storm events of one inch or greater as measured at the nearest rain gauge on the copper mine facility. The permittee shall report and take corrective action pursuant to 20.6.2.7.30 NMAC regarding signs of excessive erosion, subsidence features, slope instability, ponding, development of fissures, or any other feature that may compromise the functional integrity of the cover system or drainage channels. Monitoring and inspection results shall be reported as required by Subsection D of this section.

(3) **Entry.** A permittee shall inspect and maintain the fencing or other management systems required by the discharge permit to prevent access by wildlife and unauthorized members of the public to an open pit, reservoir, impoundment or any sump that contains water that may present a hazard to public health or wildlife.

(4) **Cover maintenance.** A permittee shall perform maintenance on all areas where a cover system was installed as required by the copper mine rule, including associated drainage channels and diversion structures if their performance may affect cover system function. Based on monitoring of vegetation and erosion required by

Paragraphs (1) and (2) of this subsection, a permittee shall provide recommendations for maintenance work in semiannual monitoring reports described in Subsection D of this section, including a schedule for completion of work.

(5) **Other inspection and maintenance.** A permittee shall routinely inspect and maintain all structures, units, and equipment the failure of which may impact ground water quality. Water collected that exceeds the ground water quality standards in Section 20.6.2.3103 NMAC shall be stored, conveyed, treated and discharged in a manner that is consistent with the closure water treatment and management plan any other applicable regulatory requirements. The inspection results shall be reported as required in Subsection D of this section. Inspections and maintenance shall include but are not limited to:

- (a) storm water retention reservoir(s);
- (b) water treatment plant(s);
- (c) pumps and pipelines to deliver water to water treatment plant(s); and
- (d) seepage collection ponds.

(6) **Implementation of water management and treatment plan.** The permittee shall continue to implement the water management and treatment plan required by Subsection H of 20.6.7.33 NMAC during the post-closure period. The water management and treatment plan may be modified in accordance with its terms or by approval of the department to reflect changes in site conditions.

D. Reporting. A permittee shall submit to department semi-annual reports pursuant to the schedule in Subsection A of 20.6.7.29 NMAC until the post-closure period ends for the copper mine facility. The reports shall contain:

- (1) a description and the results of all post-closure monitoring conducted pursuant to this section;
- (2) a description of any work completed during the preceding semi-annual period including but not limited to:
 - (a) the status of post-closure activities for the copper mine facility; and
 - (b) any maintenance and repair work conducted for any closure unit; and
- (3) semi-annual potentiometric maps including data from all monitoring wells, extraction wells, piezometers, seeps and springs appropriate to the water table being mapped.

E. The contingency requirements of 20.6.7.30 NMAC apply to any deficiencies in the implemented closure systems discovered during the post-closure monitoring and inspections required pursuant to this section.

[20.6.7.35 NMAC - N, 12/1/13]

20.6.7.36 [RESERVED]

20.6.7.37 RECORD RETENTION REQUIREMENTS FOR ALL COPPER MINE FACILITIES:

A. A permittee shall retain a written record at the copper mine facility of all data and information related to field measurements, sampling, and analysis conducted pursuant to the copper mine rule and the discharge permit. The following information shall be recorded and shall be made available to the department upon request.

- (1) The dates, exact location and times of sampling or field measurements.
- (2) The name and title of the individuals who performed each sample collection or field measurement.
- (3) The date of the analysis of each sample.
- (4) The name and address of the laboratory and the name and title of the person that performed the analysis of each sample.
- (5) The analytical technique or method used to analyze each sample or take each field measurement.
- (6) The results of each analysis or field measurement, including raw data.
- (7) The results of any split, spiked, duplicate or repeat sample.
- (8) A description of the quality assurance and quality control procedures used.

B. A permittee shall retain a written record at the copper mine facility of any spills, seeps, or leaks of effluent, and of leachate or process fluids not authorized by the discharge permit. Records shall be made available to the department upon request.

C. A permittee shall retain a written record at the copper mine facility of the operation, maintenance, and repair of all features/equipment used as required by the copper mine rule or the approved discharge permit to treat, store or dispose of process water, tailings, and impacted stormwater, measure flow rates, monitor water quality, or collect other data. Records shall include repair, replacement or calibration of any monitoring equipment and repair or replacement of any equipment used in the process

water, tailings or impacted stormwater discharge system required by the copper mine rule or the approved discharge permit. Records shall be made available to the department upon request.

D. A permittee shall retain records of all monitoring information at the copper mine facility required by the copper mine rule, including all sampling results and other monitoring, calibration and maintenance records, copies of all reports, and the application for the discharge permit. Records shall be retained for a period of at least ten years from the date of the sample collection, measurement, report or application.

[20.6.7.37 NMAC - N, 12/1/13]

20.6.7.38 TRANSFER OF COPPER MINE DISCHARGE PERMITS:

A. Transfer of discharge permits for copper mine facilities shall be made pursuant to 20.6.2.3111 NMAC and this section.

B. The transferor(s) shall notify the department, in writing, of the date of transfer of ownership, control or possession and provide contact information for the transferee(s) pursuant to Subsection B of 20.6.7.11 NMAC and Subsection B of 20.6.7.12 NMAC. Notification shall be submitted to the department of the transfer within 30 days of the ownership transfer.

[20.6.7.38 NMAC - N, 12/1/13]

20.6.7.39 CONTINUING EFFECT OF PRIOR ACTIONS DURING TRANSITION:

A. A discharge permit issued pursuant to 20.6.2.3109 NMAC that has not expired on or before the effective date of the copper mine rule shall remain in effect and enforceable pursuant to the conditions of the discharge permit and for its term as designated by the permit. If an effective discharge permit contains a permit condition with a time period for submittal of a renewal application that is different from the time period contained in Subsection C of 20.6.7.10 NMAC that condition will remain in effect for two years following the effective date of the copper mine rule.

B. An application for a new discharge permit or an application for a renewed or modified discharge permit for an existing copper mine facility submitted to the department before the effective date of the copper mine rule and for which a draft permit has not been provided to the applicant shall be processed by the department pursuant to the copper mine rule. The applicant shall submit applicable permit fees to the department pursuant to 20.6.7.9 NMAC within 90 days of the effective date of the copper mine rule.

C. An application for a new discharge permit or an application for a renewed or modified discharge permit for an existing copper mine facility submitted to the department before the effective date of the copper mine rule and for which a draft permit

has been provided to the applicant shall be processed by the department pursuant to 20.6.2.3000 through 20.6.2.3113 NMAC. The applicant shall submit applicable permit fees to the department pursuant to 20.6.7.9 NMAC within 90 days of the effective date of the copper mine rule.

D. If a discharge permit for a copper mine facility is expired on the effective date of the copper mine rule and an application for renewal has not been received by the department, the permittee or owner of the copper mine facility:

(1) shall within 90 days of the effective date of the copper mine rule submit to the department an application for a discharge permit renewal, renewal and modification or closure pursuant to 20.6.7.10 NMAC and applicable permit fees pursuant to 20.6.7.9 NMAC; or

(2) if the copper mine facility has not been constructed or operated, the permittee or the owner of record of the copper mine facility may submit a statement to the department instead of an application for renewal certifying that the copper mine facility has not been constructed or operated and that no discharges have occurred. Upon the department's verification of the certification, the department shall retire the discharge permit number from use.

E. The permittee or owner of record of any copper mine facility discharging, capable of recommencing discharging, or that has ceased discharging within the term of its most recent discharge permit shall continue all monitoring and submittal of monitoring reports as prescribed in the most recent discharge permit until the department issues a renewed or renewed and modified discharge permit.

[20.6.7.39 NMAC - N, 12/1/13]

CHAPTER 7: WASTEWATER AND WATER SUPPLY FACILITIES

PART 1: GENERAL PROVISIONS [RESERVED]

PART 2: RURAL WATER SUPPLY, WASTEWATER AND SOLID WASTE INFRASTRUCTURE

20.7.2.1 ISSUING AGENCY:

Department of Environment.

[20.7.2.1 NMAC - Rp, 20 NMAC 7.2.100, 10/31/2001]

20.7.2.2 SCOPE:

All persons applying for financial assistance under the Rural Infrastructure Act, Chapter 75, Article 1 NMSA 1978.

[20.7.2.2 NMAC - Rp, 20 NMAC 7.2.101, 10/31/2001]

20.7.2.3 STATUTORY AUTHORITY:

NMSA 1978, Section 75-1-3, and NMSA 1978, Section 9-7A-6D.

[20.7.2.3 NMAC - Rp, 20 NMAC 7.2.102, 10/31/2001]

20.7.2.4 DURATION:

Permanent.

[20.7.2.4 NMAC - Rp, 20 NMAC 7.2.103, 10/31/2001]

20.7.2.5 EFFECTIVE DATE:

October 31, 2001. Unless a later date is cited at the end of a section.

[20.7.2.5 NMAC - Rp, 20 NMAC 7.2.104, 10/31/2001]

20.7.2.6 OBJECTIVES:

A. To provide financial assistance to local authorities for the construction or modification of water supply, wastewater, and solid waste facilities.

B. To provide guidelines for the department's ranking of water supply, wastewater and solid waste facility construction projects submitted pursuant to the RIA, for highest priority based on public health needs.

[20.7.2.6 NMAC - Rp, 20 NMAC 7.2.105, 10/31/2001; A, 10/29/2007]

20.7.2.7 DEFINITIONS:

A. "Administrative account" means a separate account established within the fund to carry out the administrative functions of the Rural Infrastructure Act.

B. "Average residential user cost reduction grant" means a grant for the purpose of reducing the average residential user cost to a reasonable level as determined by the department for an eligible financially needy loan recipient whose water supply facility serves a population of less than three thousand.

C. "Base interest rate" means the annual interest rate for loans to local authorities that do not qualify for average user cost reduction grants or zero percent loans.

D. "Fund" means the rural infrastructure revolving loan fund.

E. "Local authority" means a mutual domestic association, or water and sanitation district that supplies water, wastewater or solid waste services to, or a municipality that has a population of less than twenty thousand or a county with a population less than two hundred thousand.

F. "Operate and maintain" means to conduct all necessary activities, including but not limited to replacement of equipment or appurtenances, to assure the dependable and economical function of a water supply or wastewater facility in accordance with its intended purpose.

G. "Priority ranking system" means the system for ranking water supply, wastewater, and solid waste facility construction projects for which loan applications have been received pursuant to the Rural Infrastructure Act.

H. "Priority list" means a list of water supply, wastewater and solid waste facility construction projects ranked according to the priority ranking system.

I. "RIA" means the Rural Infrastructure Act, Chapter 75, Article 1 NMSA 1978.

J. "Secretary" means the secretary of the environment department.

K. "Solid waste facility" includes transfer and convenience facilities, landfills or other equipment or systems used for processing, transformation, recycling or disposal of solid waste.

L. "Water supply facility" includes the source of supply of water, pumping equipment, storage facilities, transmission lines, treatment works, and distribution systems.

M. "Wastewater facility" includes collection lines, pumping equipment, treatment works, and disposal piping or process units.

N. "Zero percent loan" means a loan which carries no interest for the purpose of reducing the average residential user cost to a reasonable level as determined by the department for an eligible financially needy loan recipient whose water supply, wastewater, or solid waste facility serves a population of less than 3,000.

[20.7.2.7 NMAC - Rp, 20 NMAC 7.2.106, 10/31/2001; A, 10/29/2007]

20.7.2.8-20.7.2.199 [RESERVED]

[20.7.2.8 - 20.7.2.199 NMAC - Rp, 20 NMAC 7.2.107 - 199, 10/31/2001]

20.7.2.200 ELIGIBILITY:

A. Grants and loans shall be made only to local authorities that:

- (1) agree to operate and maintain the water supply, wastewater, or solid waste facilities so that the facilities will function properly over their structural and material design life, which shall not be less than twenty years;
- (2) require the contractor of the construction project to post a performance and payment bond in accordance with the requirements of Section 13-4-18 NMSA 1978;
- (3) provide a written assurance, signed by an attorney, that the local authority has proper title, easements, and rights-of-way to the property upon or through which the water supply, wastewater, or solid waste facility proposed for funding is to be constructed or extended;
- (4) meet the requirements for financial capability set by the department to assure sufficient revenues to operate and maintain the facility for its useful life and to repay the loan;
- (5) pledge sufficient revenues for repayment of the loan, provided that such revenues may by law be pledged for that purpose;
- (6) agree to properly maintain financial records and to conduct an audit of the project's financial records;
- (7) are included on the RIA priority list;
- (8) have a treasurer, clerk, secretary-treasurer, or other individual responsible for the financial aspects of the project who is bonded;
- (9) employ a registered professional engineer licensed in the state of New Mexico to provide and be responsible for all engineering services on a project; and
- (10) provide a written notice to the department of completion and start of operation of the water supply, wastewater, or solid waste facility.

B. Loans and grants made pursuant to the RIA shall not be used by the local authority on any project constructed in fulfillment or partial fulfillment of requirements made of a subdivider by the provisions of the Land Subdivision Act, Sections 47-5-1 to 47-5-8 NMSA 1978, or the New Mexico Subdivision Act, Sections 47-6-1 to 47-6-29, and 47-5-9 NMSA 1978.

C. Plans and specifications for a water supply, wastewater, or solid waste facility construction project shall be approved by the department before grant or loan disbursements to pay for construction costs are made to a local authority.

D. A local authority which receives RIA funds shall comply with all applicable federal, state, and local laws and regulations, including those related to procurement practices, construction wage rates, and these regulations.

[20.7.2.200 NMAC - Rp, 20 NMAC 7.2.200, 10/31/2001; A, 10/29/2007]

20.7.2.201 ELIGIBLE AND NONELIGIBLE ITEMS:

A. Eligible items include the costs of engineering feasibility reports, contracted engineering services, archeological surveys, and contracted construction.

B. The following items are eligible for loan funds only: water rights, land, system acquisition, easements, rights-of-way, legal costs, fiscal agents' fees, and refinancing of program loans.

C. Administrative costs of the local authority are ineligible.

[20.7.2.201 NMAC - Rp, 20 NMAC 7.2.201, 10/31/2001; A, 10/29/2007]

20.7.2.202 RESPONSIBILITIES OF THE DEPARTMENT; APPLICATION PROCEDURES:

A. The department shall administer the RIA Program. Money in the fund is appropriated to the department to carry out the provisions of the Rural Infrastructure Act. The department may allocate up to two percent of the total balance in the fund to pay for administrative expenses necessary to carry out the provisions of the Rural Infrastructure Act. Money allocated for administrative expenses shall be placed in a separate administrative account in the fund to be used solely for administrative expenses, and the department shall at the beginning of the fiscal year determine the projected administrative costs for the year and deposit in the account the appropriate amount; provided that the amount to be deposited does not exceed two percent of the total balance fund. Money in the account shall remain in the account at the end of a fiscal year.

B. Applications are to be submitted on standard forms provided by the department.

C. All applications for assistance under the RIA are due on the date(s) specified by the department.

D. The department shall review the application for eligibility, technical merits, and financial capability, and rate the applications based on the priority ranking system described in Section 20.7.2.300 NMAC.

E. The department shall make loans and, if applicable, average user cost reduction grants and/or zero percent loans to local authorities in order of priority on the current fiscal year priority list and considering the following:

- (1) willingness of a local authority to accept a loan;
- (2) financial capability of the local authority to repay the loan, to properly operate and maintain the water supply, wastewater or solid waste facility, to maintain a replacement fund and a debt service reserve fund; and
- (3) readiness to proceed with the project.

F. The department shall establish procedures to determine when the principal and interest portion of an average residential user cost is a reasonable cost.

G. The department shall establish procedures for the allocation and approval of average residential user cost reduction grants and zero percent loans which:

- (1) shall reduce only the principal and interest portion of the average residential user cost for a recipient whose water supply, wastewater or solid waste facility serves a population of less than 3,000; and
- (2) shall be for financially needy local authorities receiving RIA loan funds and which comply with the conditions outlined in the RIA:
 - (a) the construction project is designed using the most cost-effective and dependable option;
 - (b) the system is designed with adequate built-in expansion capacity;
 - (c) other sources of grant funds have been sought and are not available in a timely manner;
 - (d) the project cannot feasibly be reduced in scope or phased, so as to bring it within available loan funds and within reasonable user cost; and
 - (e) the local authority's median household income (MHI) is less than ninety percent of the statewide non-metropolitan MHI based on the most current decennial census.

H. Loan agreements will be prepared by the department and executed for those projects which can be financed with available funds.

I. The department may:

- (1) conduct periodic reviews of the operation of a local authority that has received funding from the department;
- (2) require the local authority to submit information relevant to the loan to the department;

(3) require the submission of financial reports relevant to the ability of the local authority to repay the loan; and

(4) review and require changes to the rate-setting analysis that supports the loan payments.

[20.7.2.202 NMAC - Rp, 20 NMAC 7.2.202, 10/31/2001; A, 10/29/2007]

20.7.2.203 LOAN AND GRANT DISBURSEMENT REQUIREMENTS:

A. Interim loan disbursements to pay for contracted engineering services and other professional services may be made prior to approval of the plans and specifications by the department.

B. Interim and final loan and grant disbursements may be made by the department on a monthly basis as work is progressing.

C. The above loan and grant disbursements shall be made provided the local authority receiving RIA funds has complied with the requirements of these regulations and the department's administrative procedures.

[20.7.2.203 NMAC - Rp, 20 NMAC 7.2.203, 10/31/2001]

20.7.2.204 LOAN AND GRANT LIMITATIONS:

A. The base interest rate shall be an annual interest rate set by the secretary that is at or below market interest rate.

B. No loan recipient eligible to receive a grant under the RIA shall receive a grant in any one year totaling more than \$500,000.

C. A zero percent interest loan, in any one year, may not exceed \$500,000.

D. The total of all loans in any one year for any single local authority may not exceed \$2,000,000.

E. The maximum assistance, including both loans and grants, which a local authority may receive in any one year under the RIA is \$2,000,000.

F. A loan under RIA shall be for a period of time not to exceed twenty years.

G. The repayment of a loan shall be in annual, quarterly, or monthly installments as approved by the department beginning one year after completion of the project. The repayment of the interest on the loan accumulated during the design and construction of a project may be included in the final loan amount, but it shall not be counted in determining the maximum loan amount.

H. Existing loans under the Rural Infrastructure Act may be refinanced when the annual interest rate set by the department is at least one percentage point less than the annual interest rate on the existing loan. The request for refinance of an existing loan must be submitted in writing to the department.

[20.7.2.204 NMAC - Rp, 20 NMAC 7.2.204, 10/31/2001; A, 10/29/2007]

20.7.2.205 RATE-SETTING AUTHORITY:

In the event a local authority fails to make the prescribed loan repayment, the department is authorized to set water, wastewater, or solid waste user rates in the area of the local authority's jurisdiction in order to provide sufficient money for repayment of the loan and proper operation and maintenance of the water supply, wastewater, or solid waste facility.

[20.7.2.205 NMAC - Rp, 20 NMAC 7.2.205, 10/31/2001; A, 10/29/2007]

20.7.2.206-20.7.2.299 [RESERVED]

[20.7.2.206 - 20.7.2.299 NMAC - Rp, 20 NMAC 7.2.206 - 299, 10/31/2001]

20.7.2.300 ELEMENTS OF RANKING CRITERIA:

A. The department's ranking procedures for water supply construction projects submitted pursuant to the RIA shall include evaluation of:

- (1) microbiological, turbidity, inorganic, organic, radiological, secondary parameters, and any other water quality parameters determined by the department to be pertinent to the overall quality of the water provided by the water supply facility;
- (2) components of the water supply facility, including but not limited to:
 - (a) treatment;
 - (b) disinfection;
 - (c) storage;
 - (d) distribution capacity;
 - (e) reliability of the system;
 - (f) potential for emergency assistance;
 - (g) need for expansion;

(h) age of the system; and

(i) overall condition of the system; and

(3) the number of individuals served by the local authority's water supply facility, with a project serving a smaller number of individuals receiving a higher ranking than a project serving a larger number of individuals.

B. The department's ranking procedures for wastewater facility construction projects submitted pursuant to the RIA shall include evaluation of:

(1) stream standards, groundwater quality, quality of wastewater discharge, and any other water quality parameters determined by the department to be pertinent to the quality of surface or ground waters of the state.

(2) components of the wastewater facility, including but not limited to:

(a) collection;

(b) pumping;

(c) treatment;

(d) disposal;

(e) reliability of the system;

(f) potential for emergency assistance;

(g) need for expansion;

(h) age of the system;

(i) overall condition of the system; and

(3) the number of individuals served by the local authority's wastewater facility, with a project serving a smaller number of individuals receiving a higher ranking than a project serving a larger number of individuals.

C. The department's ranking procedures for solid waste facility construction projects submitted pursuant to the RIA shall include evaluation of:

(1) current solid waste standards within the state, any potential impact of current solid waste systems to groundwater and/or surface water quality, closure or upgrades to facilities that do not meet current state standards for liner and/or cover systems, regionalization of substandard facilities, solid waste collection, recycling, re-

use or disposal facilities that do not meet current state regulation(s) and/or have an administrative order for compliance in force at the time of application, and any other solid waste practice standard determined by the department to be pertinent to the overall quality of solid waste collection, recycling, reuse, or disposal provided by the solid waste facility.

(2) components of the solid waste facility, including:

- (a) collection;
- (b) transportation;
- (c) disposal;
- (d) storage;
- (e) source separation;
- (f) recycling;
- (g) reuse;
- (h) capacity;
- (i) reliability of the system;
- (j) age of the system;
- (k) overall condition of the system; and

(3) the number of individuals served by the authority's solid waste system, with a project serving a smaller number of individuals receiving a higher ranking than a project serving a larger number of individuals.

D. New systems shall be rated by evaluating only those applicable elements of the ranking criteria listed in Subsection A, B or C of this section.

[20.7.2.300 NMAC - Rp, 20 NMAC 7.2.300, 10/31/2001; A, 10/29/2007]

PART 3: LIQUID WASTE DISPOSAL AND TREATMENT

20.7.3.1 ISSUING AGENCY:

New Mexico Environmental Improvement Board.

[20.7.3.1 NMAC - Rp, 20.7.3.1 NMAC, 9/1/13]

20.7.3.2 SCOPE:

A. This part, 20.7.3 NMAC, applies to on-site liquid waste systems, and effluent from such systems, that receive 5,000 gallons or less of liquid waste per day, and that do not generate discharges that require a discharge plan pursuant to 20.6.2 NMAC or a national pollutant discharge elimination system (NPDES) permit.

B. 20.7.3.306 and 808 NMAC apply to the disposal of on-site septage and holding tank wastes.

[20.7.3.2 NMAC - Rp, 20.7.3.2 NMAC, 9/1/13; A, 9/15/14]

20.7.3.3 STATUTORY AUTHORITY:

NMSA 1978, Sections 74-1-6, 74-1-7(A)(3), 74-1-8(A)(3), and 74-1-9 (Repl. Pamp 1993 and Cum. Supp. 1997).

[20.7.3.3 NMAC - Rp, 20.7.3.3 NMAC, 9/1/13]

20.7.3.4 DURATION:

Permanent.

[20.7.3.4 NMAC - Rp, 20.7.3.4 NMAC, 9/1/13]

20.7.3.5 EFFECTIVE DATE:

September 1, 2013, except where a later effective date is indicated in the history note at the end of a section.

[20.7.3.5 NMAC - Rp, 20.7.3.5 NMAC, 9/1/13]

20.7.3.6 OBJECTIVE:

To protect the health and welfare of present and future citizens of New Mexico by providing for the prevention and abatement of public health hazards and surface and groundwater contamination from on-site liquid waste disposal practices.

[20.7.3.6 NMAC - Rp, 20.7.3.6 NMAC, 9/1/13; A, 9/1/13]

20.7.3.7 DEFINITIONS:

As used in 20.7.3 NMAC.

A. Terms starting with the letter 'A' are defined as follows:

(1) "absorption area" means the area in square feet of infiltrative surface in a soil disposal system designated to receive effluent from a treatment unit;

(2) "absorption bed" means a conventional disposal bed greater than three feet in width and where the minimum horizontal dimension is greater than the vertical dimension;

(3) "advanced treatment" means any process of wastewater treatment that removes a greater amount of contaminants than is accomplished through primary treatment; "advanced treatment" may include physical or chemical processes;

(4) "aggregate" means clean washed gravel or crushed rock, having a hardness value of 3 or more on the Mohs scale of hardness, or a synthetic media reviewed by the wastewater technical advisory committee and approved by the department; shall have a minimum size of 3/4 inch and a maximum size of 2 1/2 inches, no greater than 4% fines by weight or volume and provide no less than 35% void space under field conditions; shall be durable, inert, maintain its integrity, not collapse or disintegrate with time, and not be detrimental to the performance of the system or to groundwater quality;

(5) "alternative disposal" means any approved on-site liquid waste disposal method used in lieu of, including modifications to, a conventional disposal method;

(6) "amendment of permit" means a change that does not affect the permitability of a liquid waste system, including a change of ownership or installer, and is not a "modification" as defined in this section;

(7) "applicant" means the owner applying for a permit to install, modify or operate an on-site liquid waste system;

(8) "approved" means:

(a) materials, products or procedures that have been reviewed by the wastewater technical advisory committee, if required, and accepted for use by the department;

(b) a liquid waste system that was permitted and installed in compliance with the standards and requirements of this regulation and received department authorization for use;

(c) a person or entity authorized by the department to design, install, modify or maintain liquid waste systems or a person authorized by the department to perform site or liquid waste system evaluations;

(d) materials, products or procedures that are approved or meet minimum standards certified by the international association of plumbing and mechanical officials (IAPMO), as applicable; and

(9) "arroyo" means a dry wash or draw that flows occasionally in response to precipitation, a watercourse (as a creek or stream) in an arid region or a water carved gully or channel.

B. Terms starting with the letter 'B' are defined as follows:

(1) "bedrock" means the more or less solid, undisturbed rock in place either at the surface or beneath surficial deposits of gravel, sand or soil, or a consolidated rock formation of impervious material that may exhibit jointed, fractured or deteriorated characteristics, or the R horizon of a soil profile as defined in the United States department of agriculture (USDA) soil survey manuals;

(2) "bedroom" means any room within a building that is designated as a sleeping room on drawings submitted to the responsible building permitting authority, manufactured housing authority, or in the case of unpermitted systems, to the department;

(3) "biochemical oxygen demand" or "BOD" means the rate at which organisms use the oxygen in water or wastewater while stabilizing decomposable organic matter under aerobic conditions;

(4) "blackwater" means waste from a liquid flushing toilet, urinal, kitchen sinks, dishwashers or laundry water from the washing of material soiled with human excreta, such as diapers;

(5) "body of water" means all constrained water including water situated wholly or partly within or bordering upon New Mexico, whether surface or subsurface, public or private;

(6) "building drain" means that part of the lowest piping of a drainage system that receives the collective liquid waste discharge from soil, waste and other drainage piping inside a building and conveys it to the building sewer that begins two feet outside the vertical plane of the building wall, residential or commercial unit; and

(7) "building sewer" means that part of the horizontal piping of a drainage system that extends from the end of the building drain located two feet outside the building wall and that receives the liquid waste discharge from the building drain and conveys it to a liquid waste treatment unit or approved point of disposal.

C. Terms starting with the letter 'C' are defined as follows:

(1) "canal" means a man-made ditch or channel that carries water for purposes other than domestic consumption;

(2) "certificate of registration" means a permit to operate an unpermitted liquid waste system installed prior to February 1, 2002 after an evaluation is conducted pursuant to Subsection J of 20.7.3.401 NMAC;

(3) "cesspool" means an excavation or non-water tight unit that receives untreated water-carried liquid waste allowing direct discharge to the soil;

(4) "clay" means:

(a) a soil separate consisting of particles less than 0.002 millimeters in diameter; or

(b) the textural class name of any soil that contains 40% or more clay, less than 45% sand and less than 30% silt;

(5) "clearance" means the vertical thickness of suitable soil between the lowest point of a liquid waste disposal system and the seasonal high groundwater table, bedrock or other limiting layer;

(6) "cluster system" means a wastewater system that serves more than one unit and treats 5,000 gallons per day or less of wastewater;

(7) "coarse sand" means soil comprised of 25% or more of soil particles 0.5 to 2.0 mm in diameter and less than 50% of any other grade of sand;

(8) "commercial unit" means a structure that is not a residential unit but which has sewage producing fixtures such as sinks, baths, showers, toilets, urinals, dish- and clothes-washers or floor drains for receiving liquid waste including but not limited to uses included in Table 201.1;

(9) "conditional approval" means the approval of an on-site treatment or dispersal product that has been reviewed by the wastewater technical advisory committee and granted permission by the department to install the product or products on a limited number of sites for the purpose of verifying performance of the product;

(10) "conventional disposal" means a subsurface soil absorption system with gravity distribution of the effluent, with or without a lift station, constructed in accordance with the standards set forth in this regulation, including trenches, absorption beds and seepage pits;

(11) "conventional treatment" means a septic tank where primary treatment occurs; and

(12) "conventional treatment system" means an on-site liquid waste system utilizing both conventional treatment and conventional disposal, including privies, holding tanks and vaults.

D. Terms starting with the letter 'D' are defined as follows:

(1) "degrade a body of water" means to reduce the physical, chemical or biological qualities of a body of water and includes, but is not limited to, the release of material that could result in the exceeding of standards established by 20.6.4 NMAC, Standards for Interstate and Intrastate Surface Waters, by 20.6.2 NMAC, Ground and Surface Water Protection and by 20.7.10 NMAC, Drinking Water;

(2) "department" means the New Mexico environment department;

(3) "design flow" means the flow rate for which an on-site liquid waste system must be designed in order to assure acceptable system performance, assuming the use of conventional plumbing fixtures;

(4) "disinfected" or "disinfection" means the use of any process designed to effectively kill most micro-organisms contained in liquid waste effluent including essentially all pathogenic (disease causing) organisms, as indicated by the reduction of

the E. coli concentration to a specific level; these processes include, but are not limited to, suitable oxidizing agents such as chlorine, ozone and ultraviolet light;

(5) "disposal system" means a generally recognized system for disposing of the discharge from a liquid waste treatment unit and includes, but is not limited to, seepage pits, drainfields, evapotranspiration systems, sand mounds and irrigation systems;

(6) "domestic liquid waste" means wastewater that does not exceed 300 mg/l BOD, 300 mg/l TSS, 80 mg/l total nitrogen or 105 mg/l fats, oils and grease; and

(7) "drainage ditch" means an unlined trench dug for the purpose of draining water from the land or for transporting water for use on the land.

E. Terms starting with the letter 'E' are defined as follows:

(1) "edge of a watercourse, canal or arroyo" means that point of maximum curvature at the upper edge of a definite bank or, if no definite bank exists, the highest point where signs of seasonal high water flow exist;

(2) "effluent" means the discharge from the final treatment unit;

(3) "effluent disposal well" means a prohibited method of disposal consisting of a drilled, driven or bored shaft or dug hole with depth greater than any surface dimension, used for subsurface emplacement of liquid waste, including, but not limited to, abandoned water supply wells, irrigation wells and test holes, but excluding seepage pits used as disposal systems, which conform to the standards in 20.7.3.702 NMAC;

(4) "effluent irrigation" means the use of wastewater effluent to water landscaped areas, fruit trees or nut trees;

(5) "elevated system" means a system installed either partially or completely above grade in a constructed fill area for the purpose of meeting clearance to a limiting layer;

(6) "enclosed system" means a watertight on-site liquid waste system that does not discharge to the soil, including, but not limited to, holding tanks and lined evapotranspiration systems;

(7) "established on-site liquid waste system" means an on-site liquid waste system that has been in active use at any time during the 10 years prior to submission of a permit application and in compliance with any liquid waste disposal regulation in effect at the time of installation, excluding the permitting or registration process, but does not include cesspools installed after September 14, 1973;

(8) "evaluator" or "third party evaluator" means a third party who has the qualifications as set forth in Paragraph (2) of Subsection B of 20.7.3.904 NMAC;

(9) "evapotranspiration system" means a disposal system designed to dispose of effluent through evaporation and plant uptake and transpiration; and

(10) "experimental approval" means the approval of an on-site treatment or dispersal product that has been reviewed by the wastewater technical advisory committee and granted permission by the department to install the product or products on a very limited number of sites for the purpose of verifying performance and obtaining advancement to conditional approval.

F. Terms starting with the letter 'F' are defined as follows:

(1) "failed system" means, without limitation, an on-site liquid waste system that does not operate as permitted, that does not provide a level of treatment at least as effective as that provided by on-site liquid waste systems that meet the requirements of 20.7.3 NMAC or that poses a hazard to public health or degrades a body of water; and

(2) "fixture units" means a quantity of flow as defined in the New Mexico plumbing code upon which plumbing systems are sized.

G. Terms starting with the letter 'G' are defined as follows:

(1) "gravel" means, for purposes of soils classification, a soil separate consisting of particles greater than 2 mm in diameter;

(2) "graywater" means untreated household wastewater that has not come in contact with toilet waste and includes wastewater from bathtubs, showers, washbasins, clothes washing machines and laundry tubs, but does not include wastewater from kitchen sinks, dishwashers or laundry water from the washing of material soiled with human excreta, such as diapers; and

(3) "groundwater" means interstitial water that occurs in saturated earth material and is capable of entering a well in sufficient amounts to be utilized as a water supply.

H. Terms starting with the letter 'H' are defined as follows:

(1) "hazard to public health" means the indicated presence in water or soil of biological, chemical or other contaminants under such conditions that could adversely impact human health, including, but is not limited to, surfacing liquid waste, degradation to a body of water used as, or has the potential to be used as, a domestic water supply source, presence of an open cesspool or tank or exposure of liquid waste or septage in a manner that allows transmission of disease;

(2) "holding tank" means a non-discharging watertight tank designed to receive and retain liquid waste for periodic pumping and disposal off-site;

(3) "homeowner" means a person or persons who owns and occupies, or plans to occupy, a single family home; and

(4) "household hazardous waste" means a wide range of household products that have the characteristics of hazardous waste when discarded, including but not limited to, pesticides and herbicides, oil-based paints and stains, automobile fluids (antifreeze, motor oil, transmission, steering and brake fluids, gasoline), pool chemicals, hobby chemicals and darkroom chemicals.

I. Terms starting with the letter 'I' are defined as follows:

(1) "imminent hazard to public health" means any situation with the potential to immediately and adversely impact or threaten public health or safety;

(2) "impervious formation" means any soil or rock formation with a hydraulic conductivity of 10^{-7} cm/sec or less;

(3) "industrial process wastewater" means non-household wastewater, excepting the following: human excreta; used water from showers, washbasins and dishwashers; and food preparation waste; any wastewater generated in a commercial activity that contains the materials prohibited by Subsection A of 20.7.3.304 NMAC is industrial process wastewater;

(4) "inspector" means a person employed by the department who is competent in the physical examination and evaluation of on-site liquid waste systems;

(5) "installer" means any person who holds a valid and appropriate classification of contractor's license issued by the New Mexico construction industries division for the construction of on-site liquid waste systems;

(6) "installer specialist" means a person certified by the department pursuant to Subsection E of 20.7.3.904 NMAC;

(7) "interstitial water" means water in spaces between solid earth particles;
and

(8) "invert" means the lowest portion of the internal cross section of a pipe or fitting.

J. Terms starting with the letter 'J' are defined as follows: **[RESERVED]**

K. Terms starting with the letter 'K' are defined as follows: **[RESERVED]**

L. Terms starting with the letter 'L' are defined as follows:

(1) "lateral" means a secondary water or wastewater pipeline branching directly from a central supply pipeline or manifold leading to an irrigation site;

(2) "limiting layer" means an impervious formation, bedrock or the seasonal high groundwater table;

(3) "liner" means a manufactured or naturally occurring substance that restricts seepage to no more than 10^{-7} cm/sec. over the design service life of the lined unit; manufactured liners must have a minimum single-ply thickness of 20 mils and have no leaks;

(4) "liquid capacity" means the volume of liquid that is contained in a septic tank or treatment unit measured from the invert of the outlet; "liquid capacity" shall be calculated by multiplying the inside length by the inside width by the depth measured from the invert of the outlet to the unit's floor and converting the result of this calculation to gallons;

(5) "liquid waste" means wastewater generated from any residential or commercial unit where the total wastewater received by a liquid waste system is 5,000 gallons per day or less; liquid waste includes without limitation human excreta and water carried waste from plumbing fixtures, including, but not limited to, wastes from toilets, sinks, showers, baths, clothes- and dish-washing machines and floor drains; "liquid waste" also includes non-water carried wastes discharged into holding tanks, privies and vaults; specifically excluded from the definition of "liquid waste" are industrial process wastewaters, roof drainage, mine or mill tailings or wastes;

(6) "liquid waste system" means a liquid waste treatment unit or units and associated disposal systems, or parts thereof, serving a residential or commercial unit; "liquid waste systems" include enclosed systems, holding tanks, vaults and privies but do not include systems or facilities designed to receive or treat mine or mill tailings or wastes;

(7) "liquid waste treatment unit" means a component of the on-site liquid waste system where removal, reduction or alteration of the objectionable contaminants of wastewater is designed to occur; it may include a holding component but does not include soil;

(8) "load" or "loading" means:

(a) in the context of the biological or chemical load received by an on-site liquid waste system, the amount of material applied to an on-site system liquid waste component per unit area or unit volume;

(b) in the context of the structural load applied to an on-site liquid waste structural component, the structural force applied to a liquid waste system component per surface area; and

(9) "lot" means a unified parcel legally recorded or validated by other means, including any contiguous parcel subject to a legally recorded perpetual easement that dedicates the servient parcel for the disposal of liquid waste generated on the dominant parcel.

M. Terms starting with the letter 'M' are defined as follows:

(1) "maintenance contract" means a contract between the system owner and a maintenance service provider in which the maintenance service provider agrees to provide periodic inspections in regards to the operation, maintenance and repair of the system;

(2) "maintenance service provider" means a public entity, company or individual in the business of maintaining liquid waste systems according to manufacturers' specifications;

(3) "manifold" means a part of a water distribution system normally located between the laterals and central supply line; the "manifold" splits the flow into a number of flows, either for distribution or for application to the land;

(4) "may" means discretionary, permissive or allowed; and

(5) "modify" or "modification" of a liquid waste system means:

(a) to change the method of on-site liquid waste treatment or disposal;

(b) to change the design of the on-site liquid waste system;

(c) to increase the design flow or load received by the on-site liquid waste system above the original design flow or load; or

(d) replace or expand the treatment unit or disposal system.

N. Terms starting with the letter 'N' are defined as follows:

(1) "New Mexico plumbing code" means 14.8.2 NMAC; and

(2) "non-discharging system" means a watertight system that allows no discharge of wastewater except through evaporation, transpiration or pumping, including, but not limited to, lined evaporation systems, lined evapotranspiration systems, holding tanks and vaults.

O. Terms starting with the letter 'O' are defined as follows:

- (1) "off-site water" means the domestic water supply for the lot is from:
 - (a) a private water supply source that is neither within the lot nor outside the lot within one hundred (100) feet of the property line of the lot; or
 - (b) a public water supply source that is not within the lot;
- (2) "on-site" means located on or within a lot;
- (3) "on-site liquid waste system" means a liquid waste system located on the lot where the liquid waste is generated;
- (4) "on-site water" means the domestic water supply for the lot is from:
 - (a) a private water supply source that is within the lot or within 100 feet of the property line of the lot; or
 - (b) a public water supply source that is within the boundaries of the lot; and
- (5) "owner" means any person or persons who own:
 - (a) an on-site liquid waste system or any component thereof; or
 - (b) any lot upon which any on-site liquid waste system or any component thereof is located; in the case of property sold or purchased on a real estate contract, the "owner" of the property is the buyer; if the property sold or purchased is owned collectively by multiple owners, the "owner" of the common property is the entity or governing body specifically designated in governance documents for the common property.

P. Terms starting with the letter 'P' are defined as follows:

- (1) "percolation rate" means the rate of entry of water into soil as determined by a standard soil percolation test at the depth and location of the proposed soil disposal system;
- (2) "permanently displayed" means, in context of septic tank legends, embossed into the tank surface or a mechanically attached, non-corrosive plate;
- (3) "permit" means a written approval from the department to install, modify, or operate an on-site liquid waste system;
- (4) "permittee" means any owner of a permitted on-site liquid waste system;

(5) "person" means any individual, partnership, firm, public or private corporation, association, trust, estate, the state or any political subdivision or agency or any other legal entity or their legal representative, agent or assign;

(6) "primary treatment" means a liquid waste treatment process that takes place in a treatment unit and allows those substances in wastewater that readily settle or float to be separated from the water being treated;

(7) "primary treatment standards" means the primary treated wastewater does not exceed 200 mg/l BOD, 100 mg/l TSS, 60 mg/l total nitrogen or 60 mg/l fats, oils and grease;

(8) "private water supply source" means a water supply source such as a well, spring, infiltration gallery or surface water withdrawal point used to provide water to a water supply system, if such system does not have a least 15 service connections and does not serve an average of 25 individuals at least 60 days out of the year;

(9) "privy" or "outhouse" means a receptacle for non-liquid-carried human excreta allowing direct discharge to the soil;

(10) "professional engineer" or "P.E." means a professional engineer licensed under the New Mexico Engineering and Surveying Practice Act; "professional engineer" includes engineers licensed in any state of the United States for engineering related to a product design and manufacture of proprietary products;

(11) "proprietary system" means a system patented, trademarked or otherwise the intellectual property of manufacturers not in the public domain; and

(12) "public water supply source" means a water supply source such as a well, spring, infiltration gallery or surface water intake structure used to provide water to a public water supply system for human consumption if the system served has at least 15 service connections or regularly services an average of 25 individuals at least 60 days out of the year.

Q. Terms starting with the letter 'Q' are defined as follows:

(1) "qualified homeowner" means a person who is the owner residing at the property who has been provided homeowner installation training materials and who has passed an exam administered by the department.

(2) **[RESERVED]**

R. Terms starting with the letter 'R' are defined as follows:

(1) "real estate contract" means a contractual document creating rights and obligations between a seller and buyer of real property under which the buyer acquires

equitable title to the property at the time the parties enter into the real estate contract and the seller agrees to transfer legal title to the property to the buyer at some time in the future upon buyer's fulfillment of all terms and conditions of the real estate contract;

(2) "repair" means servicing or replacing, with like kind, mechanical or electrical parts of an approved liquid waste system, pumping of septage or making minor structural corrections to a tank or distribution box;

(3) "residential unit" means a structure that is primarily used for living quarters but does not include facilities listed in Table 201.1; and

(4) "retention/detention area" means an area on a parcel of property specifically designated and designed to capture and hold water resulting from the runoff of precipitation.

S. Terms starting with the letter 'S' are defined as follows:

(1) "sand" means:

(a) a soil separate consisting of individual rock or mineral fragments that range in diameter from 0.05 to 2.0 millimeters; or

(b) the textural class name of any soil that contains 85% or more sand and not more than 10% clay;

(2) "sand-lined trench" means a combined treatment component and disposal system consisting of 24 inches of sand, meeting the latest version of ASTM C33-03 specifications or equivalent, below a low pressure pipe disposal system;

(3) "seasonal high groundwater table" means the highest level to which the upper surface of groundwater may be expected to rise within 24 consecutive months;

(4) "seasonal high water flow" means the highest level that perennial or intermittent surface waters may be expected to rise as a result of a 25 year, 6-hour storm event;

(5) "secondary treatment" means a reduction of the 5-day biochemical oxygen demand (BOD5) and total suspended solids (TSS) concentrations;

(6) "secretary" means the secretary of environment or a designated representative;

(7) "seepage pit" means a type of absorption system that uses a vertical, underground receptacle so constructed as to allow the disposal of effluent by soil absorption through the sidewalls; the maximum horizontal dimension shall not exceed the vertical dimension;

(8) "septage" means the residual wastes and water periodically pumped from a liquid waste treatment unit or from a holding tank;

(9) "septic tank" means a liquid waste treatment unit designed to provide primary treatment and anaerobic treatment prior to disposal;

(10) "setback distance" means the distance measured by a straight horizontal line between the on-site liquid waste system, or portion thereof, and the object being considered;

(11) "shall" means mandatory;

(12) "silt" means:

(a) a soil separate consisting of particles between 0.05 and 0.002 millimeters in diameter; or

(b) the textural class name of any soil that contains 80% or more silt and less than 12% clay;

(13) "soil" means sediment or other unconsolidated accumulations of mineral particles that may or may not contain organic material and that have filtering properties;

(14) "soil replacement" means replacement of existing soil with suitable soil in a new or existing disposal system site to overcome limitations of the existing soil;

(15) "split flow" means a building drain for the conveyance of wastewater that is designed to capture two waste streams, one stream from the toilet and the other stream from all other fixtures including bathtubs, showers washbasins, clothes washing machines, laundry tubs, kitchen sinks and dishwashers, for the purpose of reducing the total nitrogen discharged from the building; a "split flow" system shall consist of a holding tank for the toilet waste only and a disposal system for the remainder of the waste;

(16) "suitable soil" means a soil, whether naturally occurring or introduced, that will treat the primary effluent effectively and act as an effective filter and remove organisms and suspended solids prior to the effluent reaching groundwater, bedrock or a limiting layer, and that will provide adequate transmission to prevent a failed system; suitable soils are classified Table 703.1; and

(17) "surface application" means the application of disinfected effluent to the ground surface where access is restricted by artificial or natural conditions.

T. Terms starting with the letter 'T' are defined as follows:

(1) "tertiary treatment" means additional treatment beyond secondary treatment standards, specifically, the reduction in the total nitrogen concentration;

(2) "test hole" means a hole dug in the proposed disposal field area a minimum of seven feet deep or four feet below the bottom of disposal field, whichever is greater, and a minimum of two feet wide; the "test hole" shall be sufficient to examine the soil visually for type, structure, mottling, impervious layers and other soil characteristics, and to determine the seasonal high water table level; a soil boring may be used to determine the soil characteristics and soil depth;

(3) "total design flow" means the sum of design flows for all on-site liquid waste systems and other wastewater discharges on a lot;

(4) "total nitrogen" or "TN" means the combined organic nitrogen, ammonia, nitrite and nitrate contained in the wastewater or effluent;

(5) "total suspended solids" or "TSS" means the measurable component of solid matter suspended in water or wastewater; and

(6) "transfer" means the transfer of equitable or legal title to a property.

U. Terms starting with the letter 'U' are defined as follows: **[RESERVED]**

V. Terms starting with the letter 'V' are defined as follows:

(1) "vault" means a non-discharging, watertight tank designed to receive and retain non-liquid carried human excreta for periodic pumping and disposal off-site; and

(2) "variance" means an administrative procedure authorizing the issuance of a permit or use of a system that does not meet the specific requirements of 20.7.3 NMAC but which meet the intent of 20.7.3 NMAC.

W. Terms starting with the letter 'W' are defined as follows:

(1) "wastewater" means blackwater and graywater;

(2) "wastewater technical advisory committee" or "WTAC" means the wastewater technical advisory committee created by NMSA 1978 Section 9-7A-15;

(3) "watercourse" means any perennial, intermittent or ephemeral surface water conveyance channel including but not limited to a river, creek, arroyo, canyon, draw, canal or wash, or any other channel having definite banks and beds with visible evidence of the flow of water;

(4) "water(s) of the state" means surface waters of the state as defined by Paragraph (5), Subsection S of 20.6.4.7 NMAC, or its successor definition;

(5) "watertight" means not allowing water to pass in or out or as otherwise determined in 20.7.3 NMAC; and

(6) "wetlands" means those areas that are inundated or saturated by surface water or groundwater at a frequency and duration sufficient to support, and under normal circumstances do support, a prevalence of vegetation typically adapted for life in saturated soil conditions in New Mexico; constructed wetlands are not included in this definition.

X. Terms starting with the letter 'X' are defined as follows: **[RESERVED]**

Y. Terms starting with the letter 'Y' are defined as follows: **[RESERVED]**

Z. Terms starting with the letter 'Z' are defined as follows: **[RESERVED]**

[20.7.3.7 NMAC - Rp, 20.7.3.7 NMAC, 9/1/13; A, 9/1/13; A, 9/15/14]

20.7.3.8 GENERAL PROVISIONS:

A. Interpretation: The definitions in 20.7.3.7 NMAC shall be construed so as to achieve the objective of 20.7.3 NMAC.

B. Alternative resources: When guidance is sought in areas not covered by 20.7.3 NMAC, the most recent version of the following resources may provide guidance. In cases where reference to these alternative resources is proposed the department shall make the final determination of applicability.

(1) The American national standards institute (ANSI) book of codes.

(2) The American society for testing and materials (ASTM) testing manual.

(3) The international association of plumbing and mechanical officials (IAPMO) codes.

(4) The national sanitation foundation (NSF) standard 40, standard 41, and standard 46.

(5) EPA design manuals for onsite wastewater treatment and disposal systems.

(6) USDA soil survey manuals.

(7) New Mexico administrative code.

(8) Wisconsin mound soil absorption system: siting, design and construction manual, university of Wisconsin-Madison.

(9) The consortium of institutes for decentralized wastewater treatment (CIDWT), decentralized wastewater treatment glossary and installation manual.

(10) other technical publications.

C. The department field offices shall make educational materials regarding on-site liquid waste systems available to the public and to permit applicants. Information on proper maintenance of systems shall be given to new permittees. Educational materials shall be in both English and Spanish.

[20.7.3.8 NMAC - Rp, 20.7.3.8 NMAC, 9/1/13]

20.7.3.9-20.7.3.200 [RESERVED]

20.7.3.201 PROCEDURES; GENERAL REQUIREMENTS:

A. Every owner shall be responsible for the storing, treating and disposing of liquid waste generated on that property. Every owner shall be responsible for ensuring that the liquid waste system on that property and any excavation related to the liquid waste system do not pose a public safety hazard.

B. No person shall discharge untreated liquid waste except into a permitted and approved enclosed system, a permitted and approved liquid waste treatment unit or a public sewer system, except for the discharge of graywater pursuant to 20.7.3.810 NMAC. All liquid waste systems installed in accordance with a liquid waste permit issued by the department prior to July 1, 2012 shall be deemed to have operational approval. No person shall discharge liquid waste or effluent into a cesspool or effluent disposal well.

C. No person shall discharge effluent from a liquid waste treatment unit except through a permitted and approved liquid waste disposal system or to a permitted public sewer system. No person shall discharge effluent from a liquid waste treatment unit to a cesspool or effluent disposal well.

D. No person shall install, have installed, modify or have modified, own, operate or use an on-site liquid waste system that, by itself or in combination with other on-site liquid waste systems, may cause a hazard to public health or degrade any body of water. All on-site liquid waste systems shall be installed, operated and maintained in accordance with the permit and applicable regulations.

E. All residential and commercial units utilizing an on-site liquid waste system shall connect to a public sewer upon availability and if required in accordance with the local authority that has jurisdiction. A public sewer shall be deemed available when the public sewer has capacity and is located in any thoroughfare, right-of-way or easement abutting the lot on which the residential or commercial unit is located. The on-site liquid

waste system shall be properly abandoned in accordance with 20.7.3.307 NMAC within 30 days of connection to the public sewer.

F. The type of on-site liquid waste system shall be determined on the basis of location, lot size, soil and site characteristics. The system, except as otherwise approved, shall consist of a liquid waste treatment unit and associated disposal system.

G. An on-site liquid waste system shall be located wholly on the same lot, which is the site of the source or sources served by the on-site liquid waste system.

H. A privy may be used for the disposal of human excreta and toilet paper, but not for the disposal of other liquid wastes.

I. On-site liquid waste systems, other than holding tanks, receiving waste from recreational vehicles (RVs) shall provide treatment of the waste to concentrations equal to or less than primary treatment standards as defined in Paragraph (7), Subsection P of 20.7.3.7 NMAC, if necessary, prior to discharging to a conventional disposal system. Monitoring of the effluent may be required in accordance with 20.7.3.901 NMAC. Existing permitted on-site liquid waste systems receiving waste from recreational vehicles (RVs) shall continue to be authorized to operate. Upon modification of these existing systems, the system shall be required to provide the level of treatment of the waste identified above. This subsection shall not apply to homeowners who occasionally empty waste from one personal RV into the on-site liquid waste system serving their residence, provided that the RV is not used as a permanent living quarters.

J. On-site liquid waste systems permitted, but not installed, prior to the effective date of 20.7.3 NMAC shall be installed in accordance with the regulations in effect at the time of the permit issuance, provided that the installation of the system shall be completed within one year of the effective date of 20.7.3 NMAC.

K. Existing on-site liquid waste systems shall meet the regulations in effect at the time of their initial installation or subsequent modification or the current regulation, whichever is less stringent, unless otherwise noted in this regulation.

L. Nothing contained in 20.7.3 NMAC shall be construed to prevent the department from requiring compliance with more stringent requirements than those contained herein, where the department finds that such more stringent requirements are necessary to prevent a hazard to public health or the degradation of a body of water. The following parameters may be considered when determining if a body of water is potentially vulnerable to degradation from liquid waste effluents, and if more stringent requirements may be necessary to prevent such degradation:

(1) a water-table aquifer (includes both unconfined and semi-confined conditions) with a vadose zone thickness of 100 feet or less containing no soil or rock formation that would act as a barrier to saturated or unsaturated wastewater flow;

- (2) sites within 1/4 mile of a known groundwater plume of anthropogenic anoxic or nitrate contamination caused by migration through undisturbed vadose zone, provided that the site overlies the same aquifer;
- (3) an aquifer overlain by fractured bedrock;
- (4) an aquifer in karst terrain; and
- (5) a gaining stream or other body of water adversely affected by nutrients from liquid waste systems.

M. Upon written request, the department shall provide a letter of determination stating whether or not more stringent requirements may be imposed on a lot or parcel of land. This determination shall be valid for one year. The department shall issue the determination letter within 10 working days of receipt of the written request. This letter of determination in no way neither waives or precludes an applicant's regulatory requirements under this part nor predetermines the regulatory requirements of this part when obtaining a permit.

N. The secretary, or a designated representative, upon presentation of proper credentials and with consent or with an administrative search warrant:

- (1) shall have the right of entry to any property on which a permitted or unpermitted on-site liquid waste system regulated by 20.7.3 NMAC exists or is required for the limited purpose of inspecting the liquid waste system or to determine compliance with these regulations or permit conditions; failure to provide reasonable access for the purpose of inspecting a liquid waste system or to determine compliance with these regulations or permit conditions shall be cause for revocation or suspension of a permit;

- (2) shall have access to and may copy any record required to be established and maintained by these regulations or permit conditions; failure to provide reasonable access to or copies of any record required to be established and maintained by these regulations or permit conditions shall be cause for revocation or suspension of a permit; and

- (3) may obtain any samples required to determine compliance with 20.7.3 NMAC or permit conditions; failure to provide reasonable access to facilities for the purpose of obtaining samples shall be cause for revocation or suspension of a permit.

O. Eligibility for permitting under 20.7.3.2 NMAC, which restricts effluent flow to 5,000 gallons per day or less, shall be determined as follows:

- (1) Wastewater flows from residential sources shall be calculated at 80% of the design flow as determined according to Subsection P of 20.7.3.201 NMAC. Multiple families dwelling unit wastewater flows shall be calculated as the sum of wastewater flows for each single family unit included.

(2) Wastewater flows from residential and nonresidential sources shall be based on Table 201.1 or generally accepted references, such as the New Mexico plumbing code or the EPA design manuals for on-site wastewater treatment and disposal.

(3) Wastewater flows for residential and nonresidential sources also may be based on:

(a) professional engineering design calculations that bear the seal and signature of a professional engineer licensed in New Mexico, pursuant to the New Mexico engineering and surveying practice act and the rules promulgated under that authority; such calculations shall be reviewed by a department engineer, as appropriate; or

(b) the submittal of actual metered water use or effluent flow meter data; to use actual meter data to establish wastewater flow, the applicant must present at least one year of existing meter data collected within the previous five years; calculate the daily wastewater flow according to the following formula: $A \div B = Q$, where **A** = highest quarterly totalized meter reading in gallons for the minimum one year period; **B** = total number of days in highest metered quarter; **Q** = daily wastewater flow in gallons per day.

(c) Meter data or certification by a professional engineer shall not be used to determine wastewater flow on exclusively residential properties consisting of less than five residential units.

(d) If meter data is not representative of the actual wastewater discharge, as determined by the department, the applicant may be required to submit additional meter data or the department may disallow the use of meter data where its use would result in a gross misrepresentation of the wastewater discharge.

(e) The department may require a calibration of the meter used for determining water or wastewater flow and may disallow the use of inaccurate meter data. Applicants may be required to make future records of metered flow available for inspection by the department.

(f) If a permit is issued and there are meter records for any quarter that indicate the daily wastewater flow exceeds 5,000 gallons per day, quarterly meter records for the following two quarters shall be submitted to the department within 30 days of becoming available to the permittee. If meter data or other information available to department indicates the average daily wastewater flow has exceeded 5,000 gallons per day, the department may void the permit and refer the facility to the ground water quality bureau. The department may require a tamper-proof type meter be installed to verify that future wastewater flows do not exceed 5,000 gallons per day.

P. Determining treatment and disposal system design flow:

(1) For residential sources, the design flow shall be based on the number of bedrooms as follows:

- (a) 1 bedroom = 150 gallons per day;
- (b) 2 bedrooms = 300 gallons per day;
- (c) 3 bedrooms = 375 gallons per day;
- (d) 4 bedrooms = 440 gallons per day;
- (e) 5 bedrooms = 500 gallons per day; and
- (f) each additional bedroom = 50 gallons per day;

(g) design flows for multiple family dwelling units shall be calculated as the sum of design flows for each single family unit included.

(2) Where nonresidential wastewater flow is calculated based upon Table 201.1 or generally accepted references, no design factor is necessary to determine the design flow except as noted in Paragraph (3) below.

(3) For residential and nonresidential facilities with highly variable flows not certified by a professional engineer, a design factor greater than 1.5 may be required to be applied to determine the design flow. Alternatively, flow equalization or other methods of accommodating peak flows may be used with department approval.

(4) Where residential and nonresidential wastewater flow is certified by a professional engineer, no design factor is necessary to determine the design flow, unless deemed appropriate by the professional engineer.

(5) Where residential or nonresidential wastewater flow is determined using existing meter data and calculated in accordance with Subparagraph (b) of Paragraph (3) of Subsection O of 20.7.3.201 NMAC, a design factor of 1.5 shall be applied to the daily average flow to determine design flow. An additional peaking factor may be required in accordance with Paragraph (3) above.

(6) If the design flow could increase significantly beyond existing meter data due to increased occupancy or facility size, the department may require that additional area be available for future expansion of both the treatment and disposal systems.

Table 201.1: Established liquid waste design flow rates

TYPE OF OCCUPANCY	GALLONS PER DAY

1. Airport, Bus Terminal, Train Station	20 per employee 5 per passenger
2. Beauty & Barber Shop	75 per service chair
3. Bowling alleys (snack bar only)	75 per lane
4. Bed and Breakfast	150 first bedroom 100 each additional bedroom
5. Camps:	
campground with central comfort station	35 per person
with flush toilets, no showers	25 per person
day camps (no meals served)	15 per person
summer and seasonal	50 per person
6. Churches (Sanctuary)	2 per seat
with kitchen waste	7 per seat
7. Dance hall	5 per person
8. Doctor and Dentist Office	250 per practitioner, 15 per employee
9. Factories, excluding industrial waste: per 8-hour shift	
no showers	25 per employee
with showers	35 per employee
cafeteria, add	5 per employee
10. Food Operations:	
Restaurants operating 16 hours or less per day	40 per seat 60 per seat
Restaurants operating more than 16 hours per day	20 per seat
Bar, cocktail lounge	15 each
add per pool table or video game	50 per 100 sq ft floor space
Carry out only, including caterers	20 per employee

add per 8-hour shift	10 per 100 sq ft floor space
Food outlets only	40 per 100 sq ft floor space
add for deli	40 per 100 sq ft floor space
add for bakery	75 per 100 sq ft floor space
add for meat department	200
add per public restroom	
11. Hotels, Motels, Lodges	60 per bed
laundries, lounges and restaurants calculated separately	
12. Institutions (resident)	75 per person
nursing homes	125 per person
rest homes	125 per person
13. Laundries	
self-service (minimum 10 hours/day)	50 per wash cycle
commercial	per manufacturer's specifications
14. Offices	20 per employee per 8-hour shift
15. Parks:	
picnic park - toilets only	20 per parking space
16. Recreation Vehicles (RV) Park	
without water hookup	75 per space
with water and sewer hookup	100 per space
RV dump stations	50 per RV
17. Schools - staff and office	20 per person
elementary and day care	15 per student
intermediate and high	20 per student
boarding, total waste	100 per person

	gym and showers, add	5 per student
	with cafeteria, add	3 per student
18.	Service stations and convenience stores	400 per toilet
	uni-sex restrooms	800 per toilet
19.	Stores	20 per employee
	public restrooms	10 per 100 sq ft. floor
20.	Swimming and bathing places, including spas and hot tubs, public	10 per person
21.	Theaters, auditoriums	5 per seat
	Drive-ins	10 per space
22.	Veterinary Clinic	250 per practitioner
	add	15 per employee
	add	20 per kennel, stall, or cage

Liquid waste generated by the occupancies above, that exceeds the concentrations in the definition of domestic liquid waste, shall require treatment to primary treatment standards as defined in Paragraph (7), Subsection P of 20.7.3.7 NMAC prior to discharging to a conventional disposal system.

Q. The minimum liquid capacity of a septic tank shall be determined as follows:

(1) for residential units, the liquid capacity shall be based on the number of bedrooms using Table 201.2; and

(2) for commercial units, the liquid capacity shall be based on the number of plumbing fixture units using Table 201.2; or

(3) if based on flows calculated from Table 201.1 or from estimated design flows pursuant to Paragraphs (2), (3), (4) or (5) of Subsection P of 20.7.3.201 NMAC, the minimum liquid capacity shall be 2.5 times the design flow, whichever is greater.

Table 201.2: Capacity of septic tanks

Single family dwellings, number of bedrooms	Other uses maximum fixture units*	Minimum septic tank capacity in gallons served
1	10	750

2 - 3	12	1000
4	15	1200
5 - 6	20	1500
7 - 9	27	2000
	29	2250
	32	2500
	35	2750

* 100 fixture units or less are equal to 31.1 gallons per fixture unit.

R. Waste from a water softener unit shall comply with the following.

(1) Softener waste may be discharged to a conventional treatment unit. If the waste is not discharged to the treatment unit, the waste may be disposed in accordance with other applicable regulations.

(2) For new construction utilizing an advanced treatment system, the softener waste shall not be discharged to the advanced treatment unit. The softener waste shall bypass the advanced treatment unit and discharge directly to the drainfield or be disposed of in some manner acceptable to the department and meets all other state and local regulations.

(3) If a water softener unit is installed at an existing residential or commercial unit utilizing an advanced treatment unit:

(a) the current liquid waste permit shall be amended to reflect the installation;

(b) a written notice shall be submitted to the maintenance service provider of the advanced treatment unit; and

(c) either a demand-initiated regeneration control device (DIR device) shall be installed or the softener waste shall bypass the advanced treatment unit.

(4) If an advanced treatment unit is to be installed at an existing residential or commercial unit with an existing water softener, the installation shall be done in accordance with the permit.

[20.7.3.201 NMAC - Rp, 20.7.3.201 NMAC, 9/1/13; A, 9/1/13; A, 9/15/14]

20.7.3.202 PROCEDURES; MODIFICATION OF EXISTING SYSTEMS:

A. Prior to the modification of an established on-site liquid waste system, a permit application must be submitted in accordance with 20.7.3.401-405 NMAC. The portion of the system requiring modification shall be in accordance with the current version of 20.7.3 NMAC except as noted in Subsections C and D of 20.7.3.202 NMAC below.

B. Replacement components for on-site liquid waste systems shall be of materials approved by the department.

C. On-site liquid waste systems modified after the effective date of this regulation:

(1) shall meet the lot size requirements of the regulations in effect at the time of the initial installation or most recent permitted modification; and

(2) the total lot flow shall be increased only if all current standards and requirements are met pursuant to 20.7.3 NMAC. More stringent requirements may be required pursuant to Subsection L of 20.7.3.201 NMAC.

D. The septic tank need not be replaced as part of the modification if the tank is structurally sound, watertight, constructed of approved materials, is functioning properly and if the existing tank has a liquid capacity within one tank size of the capacity required by Subsection Q of 20.7.3.201 NMAC. In addition, the tank shall be pumped and the inlet and outlet baffles or sanitary tees checked and repaired or replaced, if needed.

E. Upon modification of any part of the system, an approved effluent filter shall be installed in accordance with Subsection H of 20.7.3.502 NMAC and access risers shall be installed over the tank inlet and outlet access openings in accordance with Subsection D of 20.7.3.502 NMAC.

F. Upon the issuance of the permit to modify and the subsequent inspection and approval of the modification, a previously unpermitted system shall be considered permitted and authorized to operate.

[20.7.3.202 NMAC - Rp, 20.7.3.202 NMAC, 9/1/13; A, 9/1/13]

20.7.3.203 PROCEDURES; CONSTRUCTION INSPECTIONS AND TESTING:

A. The department may perform site inspections prior to making a decision on a permit application or variance petition, during construction or modification of the system and after completion of the system. The department may require test holes to be excavated and documentation to be provided for purposes of determining soil types, depth of soil and water table depths. In areas where soil conditions are well characterized and groundwater depth is documented, test holes may be waived. The department may collect samples of soil, liquid waste and water, including water from wells, to determine compliance with 20.7.3 NMAC.

B. Upon granting the permit or variance application, if the department determines an inspection is necessary, the department shall indicate the point in the construction process where the first construction inspection is to be scheduled or in accordance with Subsection A of this section.

(1) The person doing the work authorized by the permit shall notify the department, orally or in writing, to schedule an inspection time, a minimum of two working days prior to the inspection. The department may assess a re-inspection fee if the work is not ready for inspection at the time of the scheduled inspection. In the event the inspection is not conducted within one hour after the appointed time of inspection, the installer shall take photographs that accurately identify the site and features of the installation and proceed with the installation. Copies of such photographs shall be submitted to the department.

(2) All homeowner installed systems shall be inspected by the department.

(3) If an inspection results in the issuance of a notice of non-approval, a re-inspection shall be required. The person shall notify the department as indicated above.

(4) An installer specialist doing the work authorized by the permit shall notify the department, orally or in writing, of the day and time the work will be ready for inspection. Such notification shall be given at least two working days, calculated to the hour, prior to the time of the requested inspection. If the department inspector does not arrive at the site within one hour of the notified time of completion, the installer specialist shall take digital photographs of all components of the installation, shall complete an inspection form provided by the department and may complete the installation. The installer specialist shall provide electronic copies of the photographs and inspection form to the department within five working days.

C. System components shall be properly identified as to manufacturer and shall meet all specifications specified in 20.7.3 NMAC.

D. The department may require testing to verify watertight construction and initial functioning of any liquid waste system.

(1) Liquid waste treatment units, pump stations or pump chambers shall be considered watertight by successfully completing one of the following testing procedures.

(a) Water pressure testing: Seal the unit, fill with water and let stand for 24 hours. Refill the unit. The unit is approved if the water level is held for 60 minutes.

(b) Vacuum testing: Seal the unit and apply a vacuum to two inches (50mm) of mercury. The unit is approved if the vacuum is held for 60 minutes.

(2) The department may require a flow test be performed through the system to the point of effluent disposal. All lines and components shall be watertight. Capacities, required air space and fittings shall meet the requirements of 20.7.3 NMAC.

(3) The department may require operational testing of advanced treatment components to verify initial functioning.

[20.7.3.203 NMAC - Rp, 20.7.3.203 NMAC, 9/1/13]

20.7.3.204-20.7.3.300 [RESERVED]

20.7.3.301 STANDARDS; LOT SIZE REQUIREMENTS:

A. The requirements of this section apply to all conventional treatment systems that discharge to the soil. Compliance with the requirements of this section shall be based on the total design flow for the lot. Water conservation devices or demonstrated actual flows shall not be used to reduce the requirements of this section. For the purposes of 20.7.3 NMAC, lot sizes shall be calculated to the nearest hundredth (0.01) acre.

B. The date of record for a lot shall be considered to be either:

(1) the date of legal recording in the county clerk's office or validation by other means associated with the most recent change in lot size or boundaries; or

(2) for those lots in subdivisions having received final approval from governments having jurisdiction therein prior to February 1, 1990, such date of record shall be two and one-half years from the date of final government approval or July 1, 1992, whichever occurs first.

C. A conventional treatment system shall not be installed on a lot sized smaller than 0.75 acre, where there is not an established on-site liquid waste system, except as otherwise provided in Subsection F of 20.7.3.301 NMAC. The size of a lot shall be the total area of the lot plus or minus the area of any liquid waste disposal easements granted to or by another lot, respectively. The design flow for a conventional treatment system shall not exceed 500 gallons per day per acre. For total design flows that exceed the allowable flow or for lots that do not meet the minimum lot size, the total nitrogen discharged to the lot shall be reduced in accordance with Subsection B of 20.7.3.603 NMAC.

D. On-site liquid waste systems installed prior to the effective date of 20.7.3 NMAC shall meet the lot size requirements of the regulations in effect at the time of their initial installation or if there has been a permitted modification, the regulations in effect at the time of the most recent prior permitted modification.

E. Table 301.1 lists the minimum lot sizes required for typical flow rates for conventional treatment systems for lots with a date of record of February 1, 1990 or later.

Table 301.1

TOTAL DESIGN FLOW (gallons per day)	MINIMUM LOT SIZE (acres)
375 or less	0.75

440	0.88	
500	1.00	
750	1.50	
1125	2.25	
1500	3.00	
1875	3.75	
2000	4.00	

F. The department may issue permits for lots not complying with Subsection C of 20.7.3.301 NMAC for areas the department has identified and mapped where groundwater is not at risk from nitrogen loading from on-site liquid waste systems. The following hydrogeologic conditions may be considered when determining if groundwater is not at risk:

- (1) groundwater does not exist;
- (2) the uppermost groundwater contains a total dissolved solids concentration greater than 10,000 milligrams per liter;
- (3) the uppermost groundwater occurs under confined conditions;
- (4) the uppermost groundwater occurs at a depth between 400 and 600 feet with one or more geologic strata in the vadose zone that may act as a capillary barrier; and
- (5) the uppermost groundwater occurs at a depth greater than 600 feet.

In areas that have not been identified and mapped by the department, the applicant must demonstrate one of the above conditions exists prior to the issuance of a permit.

G. The following Table 301.2 summarizes the minimum lot size requirements, in acres, and permissible design flows in effect prior to February 1, 1990 and is for the purpose of determining the requirements existing at the time of initial installation or most recent permitted modification.

Table 301.2

RECORD DATE				
01/01/60	11/01/73	09/07/79	03/01/80	11/09/85
to	to	to	to	to
11/01/73	09/07/79*	03/01/80	11/09/85	02/01/90

	Minimum Lot Size	Soil Group**	Min. Lot Size	Total Design Flow (gpd)	Min. Lot Size	Total Design Flow (gpd)	Min. Lot Size	Total Design Flow (gpd)	Min. Lot Size
OFF-SITE WATER**	0.25***	A	0.50	0-1000	0.50	0-375	0.33	0-375	0.33
		B	0.75	1000-1500	1.00	376-1000	0.50	376-750	0.50
		C	1.00	1500-2000	1.25	1000-1500	1.00	750-1125	1.00
		D	****			1501-2000	1.25	1126-1500	1.25
								1501-2000	1.75
ON-SITE WATER**	0.50***	A	0.75	0-1000	0.75	0-1000	0.75	0-375	0.75
		B	1.00	1000-1500	1.25	1000-1500	1.25	376-750	1.50
		C	1.25	1500-2000	1.70	1501-2000	1.70	750-1125	2.00
		D	****					1126-1500	2.75
								1501-2000	3.50

(1) * The maximum total design flow was 1,000 gpd for the lot sizes shown.

(2) ** See Subsection H of 20.7.3.301 NMAC.

(3) *** These requirements applied to lots in subdivisions that were required at the time of subdivision to obtain state health department review and approval.

(4) **** No on-site liquid waste disposal to soil allowed.

(5) NOTE: Roadways were excluded from figuring lot sizes from 11/09/85 to 9/1/13.

H. The following Table 301.3 lists the soil types for lot size determinations for the period November 1, 1973 to September 7, 1979: The minimum lot size required for the location of an individual liquid waste disposal system is determined by the most limiting soil group under which any soil characteristic falls.

Table 301.3

SOIL CHARACTERISTICS	A Slight Limitations	B Slight Limitations	C Moderate Limitations	D Severe Limitations
1. SOIL DEPTH (depth to bedrock, in feet)	More than 6 and	More than 6 and	4 - 6 or	Less than 4 or
2. PERCOLATION RATE (rate of percolation of water into soil in minutes per inch)	0 - 15 and	16 - 30 and	31 - 60 or	More than 60 or
3. SEASONAL WATER TABLE (depth to shallowest water table during the year, in feet)	More than 12 and	More than 12 and	4 - 12 or	Less than 4 or
4. SLOPE (incline of the land surface, in percent)	0 - 8 and	0 - 8 and	8 - 25 or	More than 25 or

5. FLOODING POTENTIAL (overflow frequency, in years)	None	None	No more than 1 in 25	More than 1 in 25
---	------	------	--------------------------------	--------------------------

I. If the size or boundaries of a lot with an existing on-site liquid waste system are changed so that the total design flow for the lot exceeds the total design flow limitation provided for in Subsection C of 20.7.3.301 NMAC, the permit for the system shall be void.

J. If the size or boundaries of a lot with an existing on-site liquid waste system are changed so that the total design flow for the lot does not exceed the total design flow limitation provided for in Subsection C of 20.7.3.301 NMAC, an amendment to the existing permit shall be submitted.

[20.7.3.301 NMAC - Rp, 20.7.3.301 NMAC, 9/1/13; A, 9/1/13]

20.7.3.302 STANDARDS; SETBACK REQUIREMENTS:

A. On-site liquid waste systems shall be located to meet setback distances, in feet, specified in the following Table 302.1. Setback distances apply to any part of the on-site liquid waste system.

Table 302.1: Minimum setback and clearance requirements

From: To:	Building Sewer	Treatment Unit*	Disposal Field	Seepage Pit
Property lines	clear	5 ft.	5 ft.	8 ft.
Building or structure	2 ft.	5 ft.	8 ft.	8 ft.
Distribution box	--	--	5 ft.	5 ft.
Disposal field	--	10 ft.*****	4 ft****	10 ft.
Seepage pit	--	10 ft.	10 ft.	12 ft.
Drinking water line*****:				
- private	1 ft.	10 ft.	10 ft.	10 ft.
- public	10 ft.	10 ft.	10 ft.	10 ft.
Drinking water source/well:				
- private	50 ft.	50 ft.	100 ft.	100 ft.
- public	50 ft.	100 ft.	200 ft.	200 ft.
Irrigation well	50 ft.	50 ft.	100 ft.	100 ft.
Lined canals	--	10 ft.**	10 ft.**	10 ft.**
Unlined canals, drainage ditches	--	15 ft.**	25 ft.**	25 ft.**
Arroyos	--	15 ft.**	25 ft.**	25 ft.**

Other watercourses,				
Waters of the state	--	50 ft.	100 ft.	100 ft.
Retention/detention area or flood irrigation areas	--	15 ft.	15 ft.	15 ft.
Seasonal high water table, bedrock and other impervious layers***	--	--	4 ft. to bottom of system	4 ft. to bottom of system

- (1) * Applies to privy pits, enclosed systems, other liquid waste treatment units.
- (2) ** Plus depth of channel.
- (3) *** Unlined privy pits shall provide clearance of at least four feet.
- (4) **** Plus two feet for each additional foot of depth below the invert of the distribution pipe.
- (5) ***** May be five feet when Schedule 40 PVC/DWV pipe is used.
- (6) *****Or applicable plumbing code.

B. Setback distances to watercourses, canals and arroyos shall be measured from the edge of the defined bank to the on-site liquid waste system component. Setback distances to artificially controlled lakes or reservoirs shall be measured from the closest projected shoreline at the maximum controlled water level.

C. Multiple liquid waste systems, each with an actual design flow of 5,000 gallons per day (gpd) or less, may be permitted by the department even if they are located on a single lot provided that the disposal systems are set back from each other by a distance equal to the sum of two radii of adjacent circular areas, each circular area representing certain boundaries of a disposal system. The center of each circle is located at a point nearest to the outer boundary of each adjacent liquid waste disposal system. The radius for each circle may be calculated utilizing Table 302.2 below based on the number of bedrooms, or by using the following formula: $r = \sqrt{A/\pi}$ or $r^2 = A/\pi$, where:

- (1) "r" means radius of the circular area measured in feet;
- (2) " $\sqrt{\quad}$ " means square root;
- (3) "A" means the area of a circle in square feet, calculated as follows:
 - (a) $A = (\text{design flow, gpd}) \times (1 \text{ acre}/500 \text{ gpd}) \times (43,560 \text{ square feet/acre});$ or

(b) $A = (\text{design flow, gpd}) \times 87.12$; and

(4) $\pi (\text{pi}) = 3.1416$.

D. Table 302.2 below provides examples of radii for design flows based on number of bedrooms only. Radii for other design flows shall be calculated with the formula above. Separation distances to facilities permitted by other entities, such as the ground water quality bureau, may be considered on a case by case basis.

Table 302.2: Radii for calculating minimum distance between systems on a large parcel

No. of bedrooms	Actual flow, gpd	Minimum acreage	Radius of A, feet
1	150	0.75	102.0
2	300	0.75	102.0
3	375	0.75	102.0
4	440	0.88	110.5
5	500	1.0	117.8
6	550	1.1	123.5

E. In order to meet the criteria of this section, the disposal system may be moved to meet the minimum separation distance. This may require the use of an effluent pump system. Alternatively, if the minimum separation distance cannot be achieved, tertiary treatment may be installed. Other methods of providing equal protection will be considered on a case by case basis by the department.

F. Lots with existing liquid waste systems totaling less than 5,000 gallons per day may be permitted to add additional liquid waste systems provided the individual systems do not exceed 5,000 gallons per day, meet the setback requirements to the existing systems as allowed above and meet lot size requirements in Subsection C of 20.7.3.301 NMAC.

G. If the department discovers that a private drinking water well has been drilled at a location that is not set back from an existing liquid waste system by the distance required in Table 302.1, the department shall:

(1) send a certified letter to the owners of the water well and liquid waste system that identifies the subject water well and liquid waste system, and describes the potential hazards created by insufficient setback;

(2) provide the office of the state engineer with a copy of the letter; and

(3) not administer the water well setback requirements in Table 302.1 pertaining to the subject well provided that the liquid waste system remains in compliance with 20.7.3 NMAC, and is not modified.

[20.7.3.302 NMAC - Rp, 20.7.3.302 NMAC, 9/1/13; A, 9/1/13; A, 9/15/14]

20.7.3.303 STANDARDS; CLEARANCE REQUIREMENTS:

A. Seasonal high groundwater levels and seasonal high water flows shall be determined by the department either by direct observation, by the presence of mottling in the soil profile, by reliance upon the findings of a qualified professional or upon published scientific material, well records or other sources acceptable to the department. The department may adjust the measured water table to compensate for factors such as season, drought, irrigation or flooding. Compliance with seasonal high groundwater table and seasonal high water flow clearances in this section shall be based on the best-documented evidence available to the department at the time of installation or modification.

B. No conventional on-site liquid waste system shall discharge liquid waste into the soil where the vertical clearance from the bottom of the absorption area to seasonal high groundwater table, impervious formation or other limiting layer is less than four feet of suitable soil. A reduction in this clearance may be allowed with appropriate advanced treatment or alternative disposal.

C. Unlined privy pits shall provide a clearance of no less than four feet of suitable soil from the bottom of the excavation to the seasonal high groundwater table, the seasonal high water flow, impervious formation or other limiting layer.

[20.7.3.303 NMAC - Rp, 20.7.3.303 NMAC, 9/1/13; A, 9/1/13]

20.7.3.304 STANDARDS; PROHIBITIONS:

A. No person shall introduce into an on-site liquid waste system household hazardous wastes, solvents, fertilizers, livestock wastes, vehicle and equipment wash water or other materials of a composition or concentration not generally considered liquid waste as defined in 20.7.3 NMAC.

B. Liquid waste treatment additives shall not be used as a means to reduce the frequency of proper maintenance and removal of septage from a treatment unit.

C. Effluent shall not be stored with any other source of water, either potable or non-potable.

[20.7.3.304 NMAC - Rp, 20.7.3.304 NMAC, 9/1/13; A, 9/1/13]

20.7.3.305 STANDARDS; WASTE INTERCEPTORS:

A. When liquid wastes are discharged containing excessive amounts of grease, garbage, flammable wastes, sand or other ingredients that may affect the operation of

an onsite liquid waste system, an interceptor for such wastes shall be installed in-line prior to the liquid waste treatment unit.

B. Installation of interceptors shall require a permit from the authorized building department.

C. Waste interceptors shall be maintained in accordance with manufacturer's specifications and require a maintenance contract to be in effect at all times.

[20.7.3.305 NMAC - Rp, 20.7.3.305 NMAC, 9/1/13]

20.7.3.306 STANDARDS; SEPTAGE:

Disposal of septage shall occur only at a permitted facility with the knowledge and consent of the facility owner, and shall not cause a hazard to public health nor degrade a body of water. Transport and disposal of septage shall be in conformance with applicable federal, state and local regulations. Septage pumpers shall keep customer invoices and disposal records for three years and shall, upon written request by the department, make such records available to the department for inspection.

[20.7.3.306 NMAC - Rp, 20.7.3.306 NMAC, 9/1/13; A, 9/1/13]

20.7.3.307 STANDARDS; ABANDONED SEWERS AND ON-SITE LIQUID WASTE SYSTEMS:

A. Every abandoned building sewer, or part thereof, shall be plugged or capped within five feet of the property line using a cap or plug prescribed by the New Mexico plumbing code.

B. Every cesspool, holding tank, septic tank, seepage pit or other liquid waste treatment unit that has been abandoned or has otherwise been discontinued from further use or to which no waste or building sewer from a plumbing fixture is connected shall have the liquid waste pumped there from and properly disposed. The bottom of the unit shall be opened or ruptured, or the entire unit collapsed so as to prevent the unit from retaining water. The unit shall be completely filled with earth, sand, gravel, concrete or other approved material.

C. The top cover or arch over the cesspool, holding tank, septic tank, seepage pit or other liquid waste treatment unit shall be removed or collapsed before filling and the filling shall not extend above the top of the vertical portions of the sidewalls or above the level of any outlet pipe until inspection or authorization by the department. After such inspection or authorization, the cesspool, holding tank, septic tank, seepage pit or other liquid waste treatment unit shall be filled to the level of the top of the ground.

D. Where on-site treatment systems are abandoned consequent to connecting any premises with a public sewer, the permittee making the connection shall fill all

abandoned treatment units as required by the department within 30 days from the time of connection.

[20.7.3.307 NMAC - Rp, 20.7.3.307 NMAC, 9/1/13]

20.7.3.308-20.7.3.400 [RESERVED]

20.7.3.401 PERMITTING; GENERAL REQUIREMENTS:

A. No person shall install or have installed a new on-site liquid waste system or modify or have modified an existing on-site liquid waste system, unless that person obtains a permit issued by the department, including payment of the permit fee, prior to construction of such installation or modification. Failure to obtain the required permit may result in the initiation of enforcement actions by the department.

B. No person shall construct or modify a residential or commercial unit on, or transport a residential or commercial unit onto, a lot for which an on-site liquid waste system is required unless the department has issued an on-site liquid waste system permit prior to such construction, modification or transportation.

C. No person shall construct, install or modify an on-site liquid waste system unless that person holds a valid and appropriate classification of contractor's license issued by the New Mexico construction industries division, except that a qualified homeowner may install or modify permitted septic tanks and conventional trench or bed disposal fields. Obtaining a permit from the department for the installation or modification of an on-site liquid waste system does not relieve any person from the responsibility of obtaining any other approval, license or permit required by state, city or county regulations or ordinances or other requirements of state or federal laws.

D. A permit is not required for graywater discharges or for systems designed for the discharge of graywater that meet the requirements of 20.7.3.810 NMAC.

E. An applicant seeking a permit shall do so by submitting an application to the field office of the department having jurisdiction for the area where the system is to be installed or modified. The application shall be:

- (1) made on a form provided by the department;
- (2) accompanied by the recorded deed or other recorded description and such other relevant information as the department may reasonably require to establish lot size, boundaries, date of record and ownership; and
- (3) signed by the applicant or their authorized representative.

F. The department shall require complete and accurate information before a permit is issued for an on-site liquid waste system.

G. The department shall deny the application if the proposed system will not meet the requirements of 20.7.3 NMAC.

H. The department shall maintain a file of all permits issued and applications denied. The file shall be open for public inspection.

I. All systems shall be installed, operated and maintained in accordance with the permit and applicable regulations.

J. Unpermitted conventional systems installed or modified prior to February 1, 2002 may be issued a certificate of registration for continued operation if, after evaluation by the department or by an installer specialist:

(1) the treatment unit is pumped by a septage pumper hired by the system owner and the unit is determined to be watertight, is functioning properly and the tank has a liquid capacity within one tank size of the capacity required in Subsection Q of 20.7.3.201 NMAC;

(2) the liquid waste system appears to meet setback and clearance requirements based on a non-intrusive evaluation;

(3) the disposal system appears to be functioning properly;

(4) meets the lot size requirements of the regulation in effect at the time of the initial installation;

(5) the system does not constitute a public health or safety hazard; and

(6) the appropriate permit fee is paid for the system installed.

If any of the above conditions are not met, a certificate of registration cannot be issued and an application for modification pursuant to 20.7.3.202 NMAC must be submitted.

K. Unpermitted conventional systems installed or modified on or after February 1, 2002 may be permitted if:

(1) the treatment unit and the disposal system are adequately exposed to allow full inspection by the department to determine all relevant aspects of construction and materials, including, but not limited to: soil type; pipe size, type and material; proper placement of aggregate and cover; and proper trench size, slope and spacing;

(2) the on-site liquid waste system is determined, upon inspection by the department, to meet all requirements of 20.7.3 NMAC; and

(3) the appropriate permit fee is paid; and

(4) at the discretion of the department, an administrative penalty is paid in accordance with Environmental Improvement Act, Chapter 74, Article 1 NMSA 1978.

L. If the department finds that specific requirements in addition to, or more stringent than, those specifically provided in 20.7.3 NMAC are necessary to prevent a hazard to public health or the degradation of a body of water, the department shall issue permit conditions with more stringent requirements or additional specific requirements. Such additional or more stringent requirements may apply to system design, siting, construction, inspection, operation and monitoring.

M. The installation or modification of an on-site liquid waste system shall be in accordance with the permit and all regulatory requirements of 20.7.3 NMAC. Any change from the permitted installation or modification, including a change of installer, must receive department approval prior to implementation. An amendment of the permit shall be submitted within seven days of the completion of the installation.

N. No person shall operate or use an on-site liquid waste system until the department has granted final approval of the system after installation or modification of the system is completed. No person shall occupy a newly constructed or transported dwelling for which an on-site liquid waste system is required until the department has granted such final approval and, if applicable, until the governmental body with authority to regulate construction has granted an occupancy permit. The department shall not grant final approval if the system as installed or modified does not meet the requirements of 20.7.3 NMAC.

O. The department may cancel a permit if the installation or modification of the on-site liquid waste system has not been completed within one year after issuance or if the department determines that material information in the application is false, incomplete or inaccurate and that the correct information would have resulted in the department denying the original application. If a permit is canceled, the department shall notify the permittee of the decision in writing and the reason for cancellation and appropriate regulations cited.

P. Only the permittee may request that the department cancel a permit. The request must be made in writing.

Q. An installer whose New Mexico construction industries division license number is on a permit approved by the department for construction may, upon written notice to both the permittee and to the department, withdraw from the permit. Upon installer withdrawal, the permit approval shall be suspended until the permittee amends the permit either to include another licensed installer or to reflect approval as a qualified homeowner in accordance with Subsection A of 20.7.3.904 NMAC. Construction of the liquid waste system shall not proceed until the permit amendment is approved by the department. If the contractor withdraws after construction has commenced, the owner shall eliminate any public safety hazards posed by open treatment systems, excavations or other conditions related to unfinished construction.

R. A permittee may amend the permit to change the installer without installer withdrawal, provided that the permittee provides written notice to the installer.

[20.7.3.401 NMAC - Rp, 20.7.3.401 NMAC, 9/1/13]

20.7.3.402 PERMITTING; CONVENTIONAL TREATMENT AND DISPOSAL SYSTEMS:

A. For liquid waste systems utilizing conventional treatment and conventional disposal, the department shall require the following information to be included with the application.

(1) A detailed site plan, completely dimensioned, showing direction and approximate slope of surface; location of all present or proposed retaining walls; arroyos, canals, irrigation or drainage channels; water supply lines, wells or other water sources; other on-site liquid waste systems; paved areas, roadways and structures; location of the proposed liquid waste system with relation to lot lines and structures; and to all sources of water supply located within 200 feet.

(2) Sufficient details of construction, materials and components necessary to assure compliance with the requirements of 20.7.3 NMAC.

(3) A set of floor plans or verification of the total flow for the structure(s) served by the liquid waste system.

B. The department may also require the following information be included with the application:

(1) A detailed log of soil formations and groundwater level as determined by soil borings or a test hole(s) dug in close proximity to any proposed seepage pit or disposal field.

(2) Any additional information that may be necessary to demonstrate that the permit will not create a hazard to public health or degrade a body of water.

C. Except as otherwise provided in Subsection D of this section, the department shall, within 10 working days after receipt of the completed application, grant the permit, grant the permit subject to conditions or deny the permit and shall notify the applicant of the action taken. Within five working days, the department shall determine if a permit application is administratively complete. The department shall notify the applicant, orally or in writing, if the application is administratively incomplete. The determination that an application is administratively complete does not mean that the proposed system meets the requirements of 20.7.3 NMAC.

D. If the department's initial review of the application indicates that the imposition of more stringent requirements may be necessary pursuant to Subsection L of 20.7.3.201

NMAC or Subsection L of 20.7.3.401 NMAC, the department may extend the time for the review of the application until 20 working days after receipt of the completed application provided that the department shall notify the applicant of such extension within 10 working days after receipt of the completed application.

E. When the permit is granted subject to conditions, denied or more stringent conditions applied, the reason for the action shall refer to the appropriate regulation(s) and be given in writing.

[20.7.3.402 NMAC - Rp, 20.7.3.402 NMAC, 9/1/13]

20.7.3.403 PERMITTING; ADVANCED TREATMENT OR ALTERNATIVE DISPOSAL:

A. An application for a permit proposing advanced treatment (with conventional or alternative disposal) or alternative disposal (with conventional treatment) may be submitted.

B. Applications shall include the information required for a conventional treatment or disposal system, and:

(1) for applications proposing advanced treatment with either conventional or alternative disposal:

(a) the applicant shall demonstrate that the system has been approved by the department and shall include operation and maintenance information, monitoring plans and maintenance agreements;

(b) the applicant must demonstrate the applicability and effectiveness of the technology on the site where it is to be used;

(c) a copy of all signed maintenance and sampling contracts shall be attached to the application; the effective date of the maintenance and sampling contracts shall be the day of final permit approval;

(d) the property owner shall have maintenance and sampling contracts in effect for the duration of the permit; and

(e) the property owner shall provide to the department copies of all maintenance and sampling contracts within 30 days of contract issuance or renewal; and

(2) for applications proposing alternative disposal with conventional treatment, the applicant shall include details of design, sizing, construction and operation; such disposal systems include, but are not limited to, mounds, evapotranspiration systems,

pressure dosed systems, alternating drainfields, non-discharging constructed wetlands, non-gravity systems and approved surface applications.

C. For applications proposing advanced treatment or alternative disposal, within 10 working days, the department shall determine if a permit application for advanced treatment or alternative disposal is administratively incomplete. The department shall notify the applicant, orally or in writing, if the application is administratively incomplete. The determination that an application is administratively complete does not mean that the proposed system meets the requirements of 20.7.3 NMAC. Within 20 working days after receipt of the administratively complete application, the department shall grant the permit, grant the permit subject to conditions or deny the permit and shall notify the applicant of the action taken.

D. When the permit is granted subject to conditions or the application denied, the reason for the action shall refer to the appropriate regulation(s) and be given in writing.

E. For advanced treatment systems, the authorization to operate the system shall be valid until a change of ownership of the system occurs. At the time of transfer of ownership, the new owner shall submit an amendment of permit updating the ownership change and also provide the department a copy of the valid maintenance and sampling contract in the name of the new owner.

[20.7.3.403 NMAC - Rp, 20.7.3.403 NMAC, 9/1/13]

20.7.3.404 PERMITTING; HAVING RECEIVED EXPERIMENTAL OR CONDITIONAL APPROVAL:

A. The department may issue a permit, on an individual basis, for the installation of an on-site liquid waste system that has received experimental or conditional approval. The permit applicant must demonstrate that the proposed system, by itself or in combination with other on-site liquid waste systems, will neither cause a hazard to public health nor degrade a body of water and that the proposed system will provide a level of treatment at least as effective as that provided by on-site liquid waste systems, except privies and holding tanks, that meet the requirements of 20.7.3 NMAC.

B. Prior to the approval of a permit for an on-site liquid waste system that has received experimental or conditional approval, the system shall be reviewed by the wastewater technical advisory committee pursuant to 20.7.3.905 NMAC.

C. A field demonstration, which meets the following requirements, shall be required for a system proposed for experimental approval.

(1) Conditions for installation, operation, maintenance and monitoring at the proposed demonstration site shall be reviewed and approved by the department. Systems with experimental approval may only be installed on lots where a conventional system would be allowed.

(2) On-site testing and evaluation, as required by the department and paid for by the permit applicant, shall be performed for a period recommended by the wastewater technical advisory committee and adopted by the department. The results of the evaluation period shall be forwarded to the wastewater technical advisory committee for review and further action.

D. A contingency plan shall be included to provide liquid waste treatment that meets the requirements of 20.7.3 NMAC if the system with experimental or conditional approval fails to meet the requirements of 20.7.3 NMAC.

E. A copy of a signed maintenance contract and sampling contract, if applicable, between the property owners and a certified maintenance service provider shall be attached to the permit application for each system with experimental or conditional approval. The property owner shall have a maintenance contract in effect for the duration of the permit. The property owner shall provide to the department copies of all maintenance contracts required to be in effect within 30 days of contract issuance or renewal.

[20.7.3.404 NMAC - Rp, 20.7.3.404 NMAC, 9/1/13; A, 9/1/13]

20.7.3.405 PERMITTING; VARIANCES:

A. Any person seeking a variance from the requirements contained in 20.7.3 NMAC shall do so by filing a written petition with the field office of the department having jurisdiction for the area where the system is to be installed.

B. The petition shall be made on a form provided by the department, signed by the petitioner or an authorized representative and accompanied by relevant documents or materials that supports the petitioner's request for a variance. The petitioner shall give notice to all landowners sharing a common boundary and within 100 feet when sharing a common right-of-way. If no property boundary is within 1000 feet of the system, notification is not required, except as otherwise provided in this part. In addition, all parties sharing a private or public water supply source located on the lot where the variance is proposed shall be notified. Said notice shall include the nature of the variance petition, the date of submission of the petition to the department, the address of the department field office to which the petition is being submitted and the time frame for department action as provided in Subsection D of 20.7.3.405 NMAC below.

C. Upon review of the petition, the department may require the submittal of other relevant information to provide reasonable assurance that the conditions set forth in Paragraphs (1) and (2) of Subsection E of 20.7.3.405 NMAC are met.

D. The department shall, after a minimum of 10 but not more than 20 working days following receipt of the completed petition, grant the variance, grant the variance subject to conditions or deny the variance and shall so notify the applicant and any other person

making a written submission concerning the petition. The reason for the department's action shall be provided in writing and the appropriate regulations cited.

E. The department shall deny the variance petition unless the petitioner establishes by clear and convincing evidence that:

(1) the proposed on-site liquid waste system will, by itself or in combination with other on-site liquid waste systems or other discharges subject to 20.6.2.3000 through 20.6.2.3114 NMAC, neither cause a hazard to public health or degrade any body of water; and

(2) granting the variance will result in public health and environmental protection equal to or greater than the minimum protection provided by the varied requirement.

F. The department shall maintain a file of all variances granted and denied. The file shall be open for public inspection.

[20.7.3.405 NMAC - Rp, 20.7.3.405 NMAC, 9/1/13]

20.7.3.406 PERMITTING; APPEALS:

A. Any affected person who is dissatisfied with action taken by the department on a permit application or variance petition may appeal to the secretary. The request must be made in writing to the secretary within 15 working days after notice of the department's action has been issued. Unless an appeal is received by the secretary within 15 working days after notice to the applicant or petitioner of the department's action, the decision of the department shall be final.

B. If an appeal is received within the 15 working day time limit, the secretary shall hold a hearing within 15 working days after receipt of the request. The secretary shall notify the person who requested the hearing of the date, time and place of the hearing by certified mail. If the appeal is on a variance petition, the secretary shall also notify all persons involved under Subsection B of 20.7.3.405 NMAC of the hearing date, time and place of the hearing by certified mail.

C. In the appeal hearing, the burden of proof is on the person who requested the hearing. Where the department requires more stringent requirements pursuant to Subsection L of 20.7.3.201 NMAC, the burden of proof of the necessity for the more stringent requirements shall be upon the department.

D. Appeal hearings shall be held at a place designated by the secretary in the area where the proposed on-site liquid waste system is to be located, unless other mutually agreed upon arrangements are made. The secretary may designate a person to conduct the hearing and make a final decision or make recommendations for a final

decision. The secretary's hearing notice shall indicate who will conduct the hearing and make the final decision.

E. Upon request, the hearing shall be recorded. The person who requests the recording shall pay recording costs.

F. In appeal hearings, the rules governing civil procedure and evidence in district court do not apply. Hearings shall be conducted so that all relevant views, arguments and testimony are amply and fairly presented without undue repetition. The secretary shall allow department staff and the hearing requestor to call and examine witnesses, to submit written and oral evidence and arguments, to introduce exhibits and to cross-examine persons who testify. All testimony shall be taken under oath. At the end of the hearing, the secretary shall decide and announce if the hearing record will remain open and for how long and for what reason it will be left open.

G. Based upon the evidence presented at the hearing, the secretary shall sustain, modify or reverse the action of the department. The secretary's decision shall be by written order within 15 working days following the close of the hearing record. The decision shall state the reasons therefore and shall be sent by certified mail to the hearing requestor and any other affected person who requests notice. Appeals from the secretary's final decision are by Rule 1-075 NMRA.

[20.7.3.406 NMAC - Rp, 20.7.3.406 NMAC, 9/1/13]

20.7.3.407-20.7.3.500 [RESERVED]

20.7.3.501 DESIGN; LIQUID WASTE TREATMENT UNITS; GENERAL:

A. Plans for treatment units that have not been previously approved by the department, including septic tanks, shall be submitted to the department for approval and certification. Such plans shall show all dimensions, reinforcement, structural calculations and such other pertinent data as may be required by the department. Plans for advanced treatment units shall be submitted to the department for review by the wastewater technical advisory committee pursuant to 20.7.3.905 NMAC. Plans for advanced treatment units that have not been previously approved by the department shall meet the requirements set forth by the wastewater technical advisory committee. All plans shall be stamped by a professional engineer.

(1) Septic tanks shall be recertified on an annual basis. A recertification fee is required pursuant to 20.7.11.9 NMAC. Failure to recertify shall result in the suspension of department approval.

(2) Failure of the manufacturer of an advanced treatment unit to comply with the conditions of approval by the department shall result in non-approval or suspension of department approval for the advanced treatment unit.

B. All treatment units and tanks, regardless of material or method of construction and unless otherwise specified in 20.7.3 NMAC, shall:

- (1) be designed and constructed to withstand all reasonable lateral earth pressures under saturated soil conditions with the tank empty;
- (2) support a minimum live load at the surface of 300 pounds per square foot with three feet of cover unless heavier loads are expected;
- (3) not be subject to excessive corrosion or decay;
- (4) have the manufacturer's name, New Mexico registration number, year of construction and tank capacity in gallons permanently displayed on the tank above the outlet pipe;
- (5) be watertight;
- (6) not be constructed or manufactured on site, in the ground, when saturated soil conditions during construction are closer than three inches to the bottom of the excavation;
- (7) be protected against flotation under high groundwater conditions and for units installed in floodplains;
- (8) be installed so that they are easily locatable and accessible;
- (9) be approved by the international association of plumbing and mechanical officials (IAPMO); or meet IAPMO minimum standards as demonstrated to the department by approved laboratory testing; or meet all requirements of 20.7.3.501 and 502 NMAC as certified by a professional engineer; or be recommended by the wastewater technical advisory committee and approved by the department; and
- (10) all access risers shall be attached to the treatment unit with a watertight or water resistant seal.

C. Treatment units may be constructed of the following materials:

- (1) precast reinforced concrete;
- (2) poured-in-place concrete;
- (3) fiberglass;
- (4) polyethylene; or
- (5) other materials as approved in writing by the department.

D. Metal, wooden, concrete block and homeowner built tanks are prohibited.

E. A secure lid shall consist of one or more of the following:

- (1) a padlock;
- (2) a twist lock cover requiring special tools for removal;
- (3) covers weighing 58 pounds or more, net weight;
- (4) a hinge and hasp mechanism that uses stainless steel or other corrosion resistant fasteners to fasten the hinge and hasp to the lid and tank for fiberglass, metal or plastic lids; or
- (5) other mechanisms approved by the department.

F. Wherever vehicular traffic is anticipated to cross over the liquid waste treatment unit, pump station or pump chamber, the unit shall be designed by a professional engineer to withstand the anticipated traffic loading.

G. All solid wall pipe connections, fittings and penetrations shall be watertight.

H. Each tank shall be structurally designed to withstand all anticipated earth or other loads. All septic tank covers shall be capable of supporting an earth load of not less than 300 pounds per square foot when the maximum fill coverage does not exceed three feet. All access risers covers shall be capable of supporting a live load of not less than 300 pounds per square foot.

I. Fiberglass or reinforced plastic septic tanks shall be certified to IAPMO standards. Fiberglass or plastic septic tanks shall be installed according to the manufacturer's instructions. A copy of the manufacturer's installation instructions shall be available for inspection by the department at the installation site.

J. Concrete liquid waste treatment units.

- (1) Minimum concrete thickness.
 - (a) walls: two and one-half inches in thickness.
 - (b) floors: three inches in thickness.
 - (c) covers: three inches in thickness.
- (2) Floors shall be an integral part of the tank.

(3) Where sections are used, tongue and groove joints or keyways shall be used and shall be sealed with an approved sealer and shall be watertight.

(4) Poured-in-place tanks shall be designed and certified by a professional engineer.

(5) All concrete liquid waste treatment units, except those approved for use utilizing concrete meeting type V specifications, shall be protected from corrosion by coating internally with an approved bituminous coating or by other acceptable means. The coating shall cover all exposed concrete and shall extend to at least six inches below the waterline.

(6) Treatment unit construction materials shall meet the following minimum specifications:

(a) concrete strength - 3500 psi @ 28 days, density 140 PCF;

(b) cement Portland type II or V per the latest version ASTM specifications;

(c) admixtures per the latest version of ASTM specifications; and

(d) reinforcing per the latest version of ASTM specifications for steel bars, grade 40/60 or equivalent.

(7) Be installed level on undisturbed or compacted soil, 1/4 to 3/4 inch pea gravel or sand.

[20.7.3.501 NMAC - Rp, 20.7.3.501 NMAC, 9/1/13; A, 9/1/13]

20.7.3.502 DESIGN; CONVENTIONAL TREATMENT UNITS; CONSTRUCTION STANDARDS:

A. All conventional treatment units, regardless of material or method of construction and unless otherwise specified in this part, shall be designed to produce a clarified effluent and shall provide adequate space for sludge and scum accumulations based on a minimum hydraulic retention time of 24 hours at maximum sludge depth and scum accumulation.

B. Septic tanks shall have a minimum of two compartments. The inlet compartment of a septic tank shall be 2/3 of the total liquid capacity of the tank, but not less than 500 gallons liquid capacity, and shall be at least three feet in width and five feet in length. Liquid depth shall be not less than two feet and six inches nor more than six feet. The second compartment of a septic tank shall have a liquid capacity of 1/3 of the total capacity of such tank. In septic tanks having over ,1500 gallons capacity, the second compartment may not be less than three feet in length.

C. Multiple tanks installed in series may be allowed with department approval provided the total tank volume is at least 2.5 times the system design flow. Minimum tank sizes are as follows:

(1) for flows up to 1,000 gpd, the capacity of each tank must be at a minimum 900 gallons; and

(2) for flows between 1,000 and 5,000 gpd, the capacity of each tank must be a minimum of 1,200 gallons.

D. Access to each septic tank shall be provided by at least two access openings, each of which shall be at least 20 inches in minimum dimension. One access opening shall be placed over the inlet and one access opening shall be placed over the outlet. Whenever a first compartment exceeds 12 feet in length, an additional access opening shall be provided over the baffle wall. Each access opening shall be extended to the surface of the ground with a secure lid. These access risers shall be 24 inches in diameter for depths of zero to three feet and for depths greater than three feet shall be at least 30 inches in diameter. If the access risers are made of concrete, they shall be coated with a coating approved by the department. "Wet-or-dry" coatings and mastics, or other water-based materials are not acceptable. Access risers shall be constructed of precast concrete, premanufactured plastic made for risers, culvert or double wall high density polyethylene or equivalent plastic with proper covers or lids. Rain barrels, trash cans or 55-gallon drums or other inappropriate materials are not acceptable access riser material.

E. The inlet and outlet pipe openings shall be not less in size than the connecting sewer pipe and shall have a watertight seal approved by the department. The vertical leg of round inlet and outlet fittings shall not be less in size than the connecting sewer pipe nor less than four inches. A baffle type fitting shall have the equivalent cross-sectional area of the connecting sewer pipe and not less than a four inch horizontal dimension when measured at the inlet and outlet pipe inverts, unless it is a pumped system.

F. The inlet and outlet pipe or baffle shall extend at least four inches above and at least 12 inches below the water surface. The invert of the inlet pipe shall be at a level not less than two inches above the invert of the outlet pipe. Inlet and outlet pipe or baffles shall be, at a minimum, schedule 40 PVC, ABS or cast-in-place concrete.

G. Inlet and outlet pipe fittings or baffles and compartment partitions shall have a free vent area equal to the required cross-sectional area of the building sewer or private sewer discharging into the septic tank to provide free ventilation above the water surface from the disposal field or seepage pit through the septic tank, building sewer and stack to the outer air.

H. All septic tanks shall include an effluent filter approved by the department, installed on the outlet of the tank before final discharge, with an access riser installed to grade, and with a handle extending to within six inches of the top of the riser.

I. The sidewalls, except on cylindrical tanks, shall extend at least nine inches above the liquid depth. The cover of the septic tank shall be at least two inches above the back vent openings.

J. Partitions or baffles between compartments shall be of solid, non-corrosive, durable material and shall extend at least four inches above the water level. Metal or wooden baffles are prohibited.

(1) An inverted fitting equivalent in size to the tank inlet, but in no case less than four inches in size, shall be installed in the inlet compartment side of the baffle with the bottom of the fitting placed midway in the depth of the liquid.

(2) If a horizontal slot is used, the slot shall extend the width of the tank, be no more than six inches in height and located midway in the depth of the liquid.

K. Fiberglass or reinforced plastic tanks shall be certified to current IAPMO standards.

(1) Each access and inspection hole cover shall have approved fasteners not subject to deterioration by liquid or gases normally present in septic tank systems to assure that the covers will remain in place. All covers shall overlap the hole by a minimum of two inches in all directions.

(2) Each tank shall be free from visual defects such as foreign inclusions, dry spots, air bubbles, pimples and delamination. The inner and outer surfaces shall have a smooth, continuous finish with no exposed fibers. Both the inner and outer surfaces shall have a continuous resin rich surface and no fibers shall be exposed either directly from cracks, porosity or holes, or indirectly through bubbles that may break and expose fibers.

[20.7.3.502 NMAC - Rp, 20.7.3.502 NMAC, 9/1/13; A, 9/15/14]

20.7.3.503 DESIGN; PUMP STATIONS AND EQUIPMENT:

A. Pump stations or pump chambers shall be watertight and shall be constructed of concrete, plastic, fiberglass or other approved material. Tanks and chambers shall be designed and constructed so as to serve their intended purpose, meet appropriate material and structural requirements equal to those required of septic tanks as described in 20.7.3.501 NMAC, and appropriately coated to resist corrosion with the exception of concrete tanks constructed of type V concrete. Tanks are subject to water tightness testing at the department's discretion.

B. All valves, motors, pumps, aerators and other mechanical or electrical devices shall be located where they will be accessible for inspection and repair at all times without requiring entry into the tank and protected with a locking removable cover on an access port of at least 20 inches in minimum dimension. Concrete tanks and chambers may have covers of at least 58 pounds in place of a cover and locking mechanism.

C. Pump stations or pump chambers shall be equipped with both audible and visible alarms, or remote and visual alarms, for high water and pump failure. All alarm and control circuits shall be on a separate circuit from pumps and shall be contained in weather-proof control boxes or located inside a building or other weather-proof structure. Alarms shall be placed in a conspicuous location approved by the department.

D. Pumps and equipment shall be designed to pump sewage, septic effluent or treated wastewater as appropriate, to prevent freezing and prevent siphoning of the dispersal area back to the tank and shall be sized to serve their intended purpose.

[20.7.3.503 NMAC - Rp, 20.7.3.812 NMAC, 9/1/13]

20.7.3.504 DESIGN; BUILDING SEWER:

A. The building sewer connects the building drain to the septic tank or liquid waste treatment unit. Horizontal building sewer piping shall be run in practical alignment and a uniform slope of not less than 1/4 of an inch per foot or 2% toward the point of disposal provided that where it is impractical due to the structural features or arrangement of any building or structure to obtain a slope of 1/4 of an inch or 2%, any such pipe or piping four inches in diameter or larger may have a slope of not less than 1/8 of an inch per foot or 1%, when first approved by the department.

B. Each horizontal sewer pipe shall be provided with a cleanout at its upper terminal and each run of pipe that is more than 100 feet in length shall be provided with a cleanout for each 100 feet or fraction thereof. Cleanouts shall be installed pursuant to the New Mexico plumbing code.

C. Sewer piping shall be approved material having a smooth uniform bore. Vitrified clay pipe or fittings shall not be used above ground or where pressurized by a pump or ejector. Vitrified clay pipe or fittings shall be a minimum of 12 inches below ground.

[20.7.3.504 NMAC - Rp, 20.7.3.813 NMAC, 9/1/13]

20.7.3.505-20.7.3.600 [RESERVED]

20.7.3.601 DESIGN; ADVANCED TREATMENT SYSTEMS; GENERAL:

A. The level of treatment required and the type of disposal allowed shall be determined by the site evaluation and the character of the waste to be treated and

disposed using 20.3.7.605 NMAC. A liquid waste system with an approved non-discharging disposal design may be installed in lieu of the required advanced treatment system.

B. Prior to installation, all proprietary treatment systems proposed for secondary or tertiary treatment must be capable of meeting the performance standards of 20.7.3.602-604 NMAC, must be recommended for approval by the wastewater technical advisory committee and approved by the secretary of the department. Manufacturers of advanced treatment systems must comply with all conditions set by the department.

C. Any design of a conventional or advanced treatment system with site or other limiting conditions that cannot be addressed by following a standard design from alternative resources recognized by the department shall be designed and sealed by a professional engineer.

D. Ventilation of treatment units providing advanced treatment shall be in accordance with the manufacturer's recommendation.

E. If an adequate sampling port or sampling point is not provided in the design of an advanced treatment system, the installer shall provide an acceptable sampling port in the effluent line for the treatment unit. The installer may propose a sampling port configuration.

(1) An acceptable sampling port for a residential unit may be manufactured from an eight inch diameter pipe. The sample port shall be watertight. The water depth in the pipe shall be at least four inches. The outlet will be one inch lower than the inlet.

(2) If there are significant settled solids in the sampling well, the sampler shall clean out the sampling port. The sample can be collected either from the influent overflow or from the water collected in the sample port after cleaning.

[20.7.3.601 NMAC - Rp, 20.7.3.601 NMAC, 9/1/13]

20.7.3.602 DESIGN; SECONDARY TREATMENT STANDARDS:

A. Secondary treatment systems shall produce an effluent that meets the following requirements:

- (1) 5-day biochemical oxygen demand of 30 mg/l; and
- (2) total suspended solids of 30 mg/l.

B. Secondary treatment systems may be installed to overcome site conditions set forth in 20.7.3.605 NMAC.

C. The secondary treatment unit shall be operated in accordance with the manufacturer's specifications and department approval conditions.

[20.7.3.602 NMAC - Rp, 20.7.3.602 NMAC, 9/1/13; A, 9/1/13]

20.7.3.603 DESIGN; TERTIARY TREATMENT STANDARDS:

A. Tertiary treatment systems shall provide total nitrogen (TN) removal in addition to secondary treatment.

B. For lots that exceed the allowable hydraulic loading pursuant to Subsection C of 20.7.3.301 NMAC, a department approved tertiary treatment unit may be installed. The treatment unit must be capable of removing TN to a concentration equal to or less than the concentration limit calculated pursuant to Subsection C 20.7.3.603 NMAC.

C. Utilizing the standard loading equation, $(\text{flow (gpd)} \times \text{conc. (mg/l)} \times 8.34 \text{ lbs./gal.} \times 365 \text{ days/yr}) / 1,000,000 = \text{lbs./yr/ac.}$, and assuming an average of 60 mg/l of TN in the septic tank effluent and a maximum flow of 500 gpd/ac, the following simplified equation shall be used for determining the required TN concentration allowed for a specific lot size: $\text{total nitrogen concentration (in mg/l)} = [\text{lot size (in acres)} / \text{design flow (in gpd)}] \times 30,000$.

D. The treatment unit shall be operated in accordance with the manufacturer's specifications and department approval conditions.

E. Total nitrogen effluent testing, when required pursuant to Subsection C of 20.7.3.901 NMAC, shall meet the concentration limit calculated pursuant to Subsection C of 20.7.3.603 NMAC.

[20.7.3.603 NMAC – Rp, 20.7.3.603 NMAC, 9/1/13; A, 9/1/13; A, 9/15/14]

20.7.3.604 DESIGN; DISINFECTION TREATMENT STANDARDS:

A. Systems requiring disinfection shall provide treated effluent that shall not exceed 126 colony forming units (CFUs) of E. coli bacteria per 100 ml.

B. Disinfection is required to meet the specific site conditions set forth in 20.7.3.605 NMAC.

C. When disinfection is required, the effluent shall be subject to a minimum of secondary treatment prior to disinfection.

[20.7.3.604 NMAC - Rp, 20.7.3.604 NMAC, 9/1/13]

20.7.3.605 DESIGN; MINIMUM REQUIRED TREATMENT LEVELS FOR SITE CONDITIONS:

A. The required level of treatment shall be based on the most restrictive combination of siting conditions.

B. The following treatment levels are required for the soil types as described in Table 703.1:

- (1) type Ia - secondary treatment and disinfection except as noted in Subsection F of 20.7.3.703 NMAC;
- (2) type Ib, II, and III - primary treatment; and
- (3) type IV - primary treatment with an appropriate disposal method as approved by the department.

C. The following treatment levels are required for the depth of suitable soil:

- (1) greater than or equal to four feet of suitable soil - primary treatment;
- (2) one to less than four feet of suitable soil - secondary treatment and disinfection; and
- (3) no discharge with less than one foot of suitable soil to groundwater, karst or fractured bedrock.

D. The following treatment levels are required for hydraulic loading rates and lot size:

- (1) less than or equal to 500 gallons per day per acre with a minimum lot size of 0.75 acre - primary treatment; and
- (2) greater than 500 gallons per day per acre or less than 0.75 acre - tertiary treatment;
- (3) for lots less than 0.75 acre overlaying anoxic groundwater, secondary treatment shall be required and tertiary treatment may be required; to be exempt from tertiary treatment requirements, the permit applicant shall show by clear and convincing evidence that the discharge of liquid waste shall not degrade a body of water.

E. The following are requirements for a reduction in the disposal field setback distance, as set forth in Table 302.1:

- (1) Tertiary treatment and disinfection are required for any reduction in setback distance between 50 feet and less than 100 feet from a private drinking water well located on the subject property.

(2) A variance is required and tertiary treatment and disinfection are required for any reduction in setback distance to:

(a) any private drinking water well located on the subject property less than 50 feet from the disposal system;

(b) any private drinking water well not located on the subject property; or

(c) any public drinking water well.

F. A non-discharging system may be used in lieu of advanced treatment.

G. A mound system or elevated system in accordance with 20.7.3.806 NMAC may be used to meet clearance requirements or to overcome soil type limitations in lieu of advanced treatment. A sand-lined trench or bottomless sand filter in accordance with 20.7.3.812 NMAC may be used to meet clearance requirements in lieu of advanced treatment.

H. If the existing level of nitrate-N in the groundwater exceeds 5 mg/l, more stringent requirements pursuant to Subsection L of 20.7.3.201 NMAC may be required.

[20.7.3.605 NMAC - Rp, 20.7.3.605 NMAC, 9/1/13; A,9/1/13]

20.7.3.606-20.7.3.700 [RESERVED]

20.7.3.701 DESIGN; CONVENTIONAL DISPOSAL FIELD; DESIGN AND CONSTRUCTION:

A. Disposal trenches shall conform to the following:

(1) the trench width shall be no less than one foot or no more than three feet;

(2) a minimum of six inches of aggregate shall be placed below the invert of the distribution pipe; and

(3) up to a maximum of three feet of aggregate may be placed below the distribution pipe.

B. Absorption beds shall conform to the following:

(1) a minimum of six inches of aggregate shall be placed below the invert of the distribution pipes; and

(2) up to an additional one foot of aggregate may be placed below the distribution pipes.

C. For conventional disposal trenches and absorption beds, the distribution lines shall have an inside diameter of no less than four inches. Perforated pipe shall have two rows of holes and a minimum perforated area of one and one-half square inches per linear foot. Perforations shall be located not less than 30 degrees or more than 60 degrees from the vertical on either side of the center line of the bottom of the pipe. All plastic pipe and fittings shall conform to the current and appropriate ASTM standards. End caps shall be installed on all distribution lines.

D. Before placing aggregate or drain lines in a prepared excavation, all smeared or compacted surfaces shall be removed from trenches by raking to a depth of one inch and the loose material removed. Aggregate shall be placed in the trench to the depth and grade required. Drain lines shall be placed on the aggregate. The drain lines shall then be covered with aggregate to a minimum depth of two inches and then covered with untreated building paper, straw or similar porous material to prevent closure of voids with earth backfill. When geotextile fabric is utilized, no aggregate cover of the drainlines is required. No earth backfill shall be placed over the aggregate cover until authorized by the department.

E. The department shall allow drainfields for proprietary systems to be sized in accordance with recommendations by the wastewater technical advisory committee that have been approved by the secretary. The wastewater technical advisory committee shall make its recommendations upon standardized, objective evaluations in accordance with Section 9-7A-15 NMSA 1978. Drainfields for proprietary systems shall not be reduced in size by more than 30% in comparison to a conventional system.

F. Capped inspection ports shall be constructed, at a minimum, of four inch diameter, SDR 35 or better pipe installed at the end of each trench, provide inspection access to the bottom of the trench and terminate at finished ground level. Inspection ports may be installed below grade if located in a protective enclosure and locatable with GPS coordinates or a metal detector.

G. If seepage pits are used in combination with disposal fields, the aggregate in the trenches shall terminate at least 10 feet from the pit excavation and the line extending from such points to the seepage pit shall be constructed of approved pipe with watertight joints.

H. Where two or more drain lines are installed, an approved distribution box of sufficient size to receive lateral lines shall be installed at the head of each disposal field. The inverts of all outlets shall be level and the invert of the inlet shall be at least one inch above the outlets. Distribution boxes shall be designed to ensure equal flow and shall be installed on a level base in natural undisturbed or compacted soil or on a concrete footing. Access to the distribution box shall be provided at the ground surface. However, the installer, after approval by the department, may install in lieu of a distribution box a tee fitting and a distribution header to multiple trenches provided that the tee and header pipe are level.

(1) Concrete distribution boxes shall be coated on the inside with bituminous coating or other approved method acceptable to the department.

(2) All laterals from a distribution box to the disposal field shall be approved pipe with watertight joints. Multiple disposal field laterals, wherever practicable, shall be of uniform length.

(3) Connections between a septic tank and distribution box or drainfield shall be laid with approved pipe with watertight joints on natural ground or compacted fill or appropriate bedding material. Such approved pipe shall be SDR 35 or better.

I. When more than 500 lineal feet of distribution line is required, a low-pressure dosed system shall be used.

J. Disposal fields shall be constructed as follows:

	MINIMUM	MAXIMUM
Number of drain lines	1 per field	
Length of each line	--	160 ft.
Bottom width of trench	12 in.	36 in.
Depth of earth cover of lines	9 in.	--
Grade of lines	level	3 inch/100 ft.
Aggregate under drain lines	6 in.	3 ft.
Aggregate over drain lines with:		
geotextile fabric	0 in.	--
other material	2 in.	--

K. Minimum spacing between trenches or absorption beds shall be four feet plus two feet for each additional foot of depth below the invert of the distribution line. Distribution drain lines in absorption beds shall not be more than six feet apart on centers and no part of the perimeter of the bed shall be more than three feet from a distribution drain line.

L. When necessary to prevent line slope in excess of three inches per 100 feet, absorption trenches or beds shall be stepped. The lines between each horizontal

section shall be made with watertight joints and shall be designed so each horizontal trench or bed shall be utilized to the maximum capacity before the effluent shall pass to the next lower trench or bed. The lines between each horizontal absorption section shall be made with approved watertight joints and installed on natural or unfilled ground.

M. Sites with type Ia or type IV soils may use soil replacement. Sites with failed disposal systems may also use soil replacement. In addition to other design, setback and clearance requirements of 20.7.3 NMAC, the following conditions are required:

(1) The replacement soil shall be type Ib, or a higher level, as described in Table 703.1.

(2) Replacement soil shall be placed to a depth of at least 48 inches below the bottom of each trench.

(3) Replacement soil is placed to a width of at least 24 inches on both sides and ends of each trench.

(4) The application rate used for design of the trench shall be 2.00 square feet per gallon per day.

N. Disposal systems, including both conventional and alternative disposal, shall not be paved over or covered by concrete or any material that can reduce or inhibit any possible evaporation of effluent. Disposal systems shall not be subjected to vehicular traffic of any kind.

[20.7.3.701 NMAC - Rp, 20.7.3.701 NMAC, 9/1/13; A, 9/1/13; A, 9/15/14]

[For specifications for drainfield pipe, see the most recent versions of the ASTM standards: For Type PSM Poly (Vinyl Chloride)(PVC) Sewer Pipe and Fittings, for Poly (Vinyl Chloride)(PVC) Pipe and Fittings, for Corrugated Polyethylene (PE) Tubing and Fittings, and for Smoothwall Polyethylene (PE) Pipe for Use in Drainage and Waste Disposal Absorption Fields]

20.7.3.702 DESIGN; SEEPAGE PIT; DESIGN AND CONSTRUCTION:

Seepage pits should only be installed on sites where conventional disposal systems cannot be installed due to site restrictions.

A. The minimum capacity of seepage pits shall conform to the requirements of 20.7.3.703 NMAC.

B. Multiple seepage pit installations shall be served through an approved distribution box or be connected in series by means of a watertight connection laid on undisturbed or compacted soil. The outlet from each seepage pit shall have an approved vented leg fitting extending at least 12 inches below the inlet fitting.

C. Each seepage pit shall have an excavated horizontal dimension of not less than four feet and the maximum horizontal dimension shall not exceed the vertical dimension. Each such pit shall be lined with approved type whole, new, hard-burned clay brick, concrete brick, concrete circular type cesspool blocks or other approved materials.

D. The lining in each seepage pit shall be circular and laid on a firm foundation. Lining materials shall be placed tight together and laid with joints staggered. Except in the case of approved type pre-cast concrete circular sections, no brick or block shall be greater in height than its width and shall be laid flat to form at least a four inch wall. Brick or block greater than 12 inches in length shall have chamfered matching ends and be scored to provide for seepage. Excavation voids behind the brick, block or concrete liner shall have a minimum of six inches of clean 3/4 inch gravel or rock.

E. All brick or block used in seepage pit construction shall have a minimum compressive strength of 2500 pounds per square inch.

F. Each seepage pit shall have a minimum sidewall (not including the arch) of 10 feet below the inlet pipe.

G. The arch, cover or dome of any seepage pit shall be constructed in one of the following three ways.

(1) Approved type hard-burned clay brick, solid concrete brick or block laid in cement mortar.

(2) Approved brick or block laid dry. In both of the above methods, an approved cement mortar covering of at least two inches in thickness shall be applied, said covering to extend at least six inches beyond the sidewalls of the pit.

(3) Approved type one or two piece reinforced concrete slab of 3,000 pounds per square inch minimum compressive strength, not less than five inches thick and designed to support an earth load of not less than 400 pounds per square foot.

H. Each such arch, dome or cover shall be provided with a nine inch minimum inspection hole with plug or cover and shall be coated on the underside with an approved bituminous or other nonpermeable protective compound.

I. The top of the arch, dome or cover must be a minimum of 12 inches but not more than four feet below the surface of the ground. Risers must be provided to extend the arch, dome or cover to within 12 inches of the surface.

J. An approved vented inlet fitting shall be provided in every seepage pit so arranged as to prevent the inflow from damaging the sidewall. When using a one or two piece concrete slab cover, the inlet fitting must be an approved 1/4 bend fitting discharging through an opening in the top of the slab cover. On multiple seepage pit

installations, the outlet fittings shall meet the requirements of Subsection B of 20.7.3.702 NMAC.

K. A six inch layer of bentonite clay shall be installed at the bottom of the seepage pit to restrict effluent flow through the bottom area. Alternative material to the bentonite clay may be approved by the department after review.

[20.7.3.702 NMAC - Rp, 20.7.3.702 NMAC, 9/1/13]

20.7.3.703 DESIGN; AREA OF DISPOSAL FIELD AND SEEPAGE PITS:

A. The minimum required absorption area in a disposal field in square feet, and in seepage pits in square feet of side wall, shall be predicated on the liquid waste design flow rate and shall be determined by utilizing the following Table 703.1 based on the soil classification found in the proposed location of the disposal field.

B. Two test holes, located at opposite ends of the proposed disposal area, may be required for obtaining the soil profile and as provided in Subsection A of 20.7.3.203 NMAC.

C. A detailed soil profile, in accordance with USDA soil classification methodology, shall be submitted with the liquid waste application for each hole, indicating soil horizons, horizon thickness as a function of depth, and soil texture.

D. USDA soil surveys may be used where available to help assess typical soils in the area of the proposed installation.

E. The required absorption area shall be sized on the most restrictive soil horizon located below and within four feet of the bottom of the absorption area.

F. Conventional treatment systems shall not be constructed in type Ia soils where the depth to groundwater is less than 30 feet. For these soils, refer to 20.7.3.605 NMAC.

G. Effluent distribution to type IV soils shall be accomplished with an appropriate disposal method as approved by the department such as timed low pressure dosed distribution or alternating drainfields.

H. The required absorption area shall be calculated by the following formula:
ABSORPTION AREA = Q X AR, where: Q = the design flow rate in gallons per day; AR = application rate (from Table 703.1)

Table 703.1: Application Rates by Soil Types for Conventional Treatment Systems

Soil Type	Soil Texture	Application Rate (AR) (sq. ft./gal/day)
Ia Ib	Coarse Sand or up to 30% gravel Medium Sand, Loamy Sand	1.25 (See Subsection F of 20.7.3.703 NMAC) 2.00
II	Sandy Loam, Fine Sand , Loam	2.00
III	Silt, Silt Loam, Clay Loam, Silty Clay Loam, Sandy Clay Loam	2.00
IV	Sandy Clay, Silty Clay, Clay	5.00 (See Subsection G of 20.7.3.703 NMAC)

I. The gravel content of in-place natural soil shall not exceed 30%. The department may identify and map areas of the state where groundwater is not at risk from microbial contamination from on-site liquid waste disposal systems that discharge into gravel, and where gravel contents greater than 30% may be allowed. The following hydrogeologic conditions may be considered when determining if groundwater is not at risk:

- (1) groundwater does not exist;
- (2) uppermost groundwater contains a total dissolved solids concentration greater than 10,000 milligrams per liter;
- (3) uppermost groundwater occurs under confined conditions; and

(4) uppermost groundwater occurs at a depth of 30 feet or greater with at least four feet of suitable soil in the vadose zone.

J. Disposal trenches:

(1) The total absorption area shall be calculated utilizing the total trench bottom and sidewall area below the distribution pipe.

(2) The total absorption area shall not exceed seven square feet per linear foot of trench.

(3) A minimum of 300 square feet of absorption area shall be provided for each system exclusive of any hard pan, caliche, rock, clay or other impervious formations.

K. Absorption beds may be used in lieu of trenches. The absorption area of the bed shall be at least 50% greater than the minimum required absorption area for trenches with a minimum of 450 square feet of absorption area. The total absorption area shall be calculated utilizing the total bed bottom and sidewall area.

L. The minimum effective absorption area in any seepage pit shall be calculated as the excavated side wall area below the inlet pipe exclusive of any hardpan, caliche, rock, clay or other impervious formations and may be provided in one or more seepage pits.

M. For secondary and tertiary treated effluent, the minimum calculated absorption area required for conventional treatment may be reduced 30%. In no case shall the maximum reduction for the drainfield absorption area exceed 30%.

[20.7.3.703 NMAC - Rp, 20.7.3.703 NMAC, 9/1/13; A, 9/1/13]

20.7.3.704-20.7.3.800 [RESERVED]

20.7.3.801 PRIVIES AND VAULTS:

A. A privy may be used to dispose of non-liquid-carried human excreta directly to the soil. A vault may be used to dispose of non-liquid-carried human excreta for subsequent pumping and disposal in accordance with 20.7.3.306 NMAC. In addition to all setback and clearance requirements in 20.7.3 NMAC, the following conditions are required.

(1) The privy or vault is constructed to prevent access by flies or vermin.

(2) The privy or vault is located to prevent flooding.

(3) There are sufficient replacement locations for two additional privy pits. Vaults do not require replacement locations.

(4) Privy pits shall be filled with clean earth when excreta accumulate to within one foot of the ground surface.

B. No person shall install or have installed a privy or vault unless that person obtains a permit issued by the department prior to construction of such installation. At the time of application, the total number of privies or vaults and their replacement locations, if required, shall be indicated. When a privy pit is filled, the privy may be moved to a previously identified replacement location on the same lot without modifying or amending the permit.

[20.7.3.801 NMAC - Rp, 20.7.3.802 NMAC, 9/1/13; A, 9/1/13]

20.7.3.802 CLUSTER SYSTEMS:

A. Use of a cluster system may be considered when lot sizes, location or site conditions make conventional disposal unacceptable.

B. Cluster systems shall be designed and constructed in accordance with the requirements of this regulation. In addition, cluster systems shall be maintained in accordance with 20.7.3.902 NMAC.

C. Each user and successors and assignees in interest connected to the system shall be a permittee and shall be indicated on the permit.

D. After the effective date of the regulation, each permittee and successors and assignees in interest on a cluster system shall be a party to a legally binding, written agreement that provides for the service and maintenance for the life of the system. The agreement shall be recorded in the county in which the property is located. A copy of the agreement shall be provided to the department.

E. The parties to the written agreement shall obtain all necessary rights-of-way, easements or ownership of properties necessary for the operation of the system. All parties that use the cluster system shall be a party to the agreement.

F. The combined area of the lots served by the cluster system plus the area of the parcel where the system is located, if separated from the lots served, shall be used to determine the allowable lot size.

[20.7.3.802 NMAC - Rp, 20.7.3.803 NMAC, 9/1/13]

20.7.3.803 COMPOSTING AND INCINERATING TOILETS:

A. The installation of composting and incinerating toilets shall be in accordance with the New Mexico plumbing code and the local plumbing authority.

B. The installation of a composting/incinerating toilet shall not reduce the design flow for the property.

[20.7.3.803 NMAC - Rp, 20.7.3.804 NMAC, 9/1/13]

20.7.3.804 EFFLUENT IRRIGATION/REUSE SYSTEMS:

A. Effluent used for irrigation shall meet secondary treatment standards.

B. The effluent may only be utilized subsurface.

C. Application of the effluent resulting in standing or ponding of the effluent, whether liquid or frozen, shall be prohibited. The application of effluent shall not result in the effluent leaving the application area.

D. Effluent irrigation systems shall have no cross connections, direct or indirect, with potable water systems.

E. All effluent irrigation systems shall be pressure dosed to assure an even distribution and loading of effluent throughout the application area.

F. All parts of the reuse system shall be protected from freezing.

G. Effluent shall be contained on the permitted property.

H. The effluent shall only be applied to a suitable landscaped area or to fruit trees or nut trees.

I. Secondary treated and disinfected effluent may be used for toilet flushing or fire suppression with department approval.

J. Setback requirements for effluent irrigation systems shall meet the requirements of 20.7.3.302 NMAC except for the following:

(1) property lines, two feet for disposal area; and

(2) building or structure, two feet for disposal area.

K. Approved proprietary effluent drip irrigation systems shall be designed and installed according to manufacturers' specification.

L. A permitted and approved disposal system shall be provided for times when effluent irrigation is not utilized.

[20.7.3.804 NMAC - Rp, 20.7.3.805 NMAC, 9/1/13]

20.7.3.805 EVAPOTRANSPIRATION SYSTEMS:

A. Evapotranspiration systems shall consist of a treatment unit and an evapotranspiration bed (ET bed) for disposal. Evapotranspiration systems shall meet the requirements of 20.7.3.302 NMAC. Unlined ET beds are a discharging system and shall meet the clearance, set back and lot size requirements for conventional absorption systems. Lined ET beds are non-discharging systems and shall be underlain by a liner as specified in Paragraph (3) of Subsection L of 20.7.3.7 NMAC.

B. The minimum bottom area of ET beds shall be determined from the following formula:

A = 391 x Q ÷ E_L, where: A = the bottom area of the bed in square feet; Q = the design flow in gallons per day; and E_L = the average annual lake evaporation for the site in inches per year.

C. The average annual lake evaporation shall be determined from the map "Gross Annual Lake Evaporation, New Mexico", USDA, April 1972, or successor version or a mutually acceptable evaporation rate.

D. The minimum bed depth shall be 24 inches as measured from the bottom of the ET bed to the overflow level. The surface crowning, which increases runoff from the ET bed, is above the overflow level of the ET bed. Maximum ET bed depth shall be 30 inches. The bottom of the ET bed shall be level.

E. The ET bed location shall be in an area where exposure to the sun and wind will be maximized.

F. The distribution piping within the ET bed shall be embedded in gravel and covered meeting the specifications in 20.7.3.701 NMAC. Use of approved proprietary drainfield products may be used in lieu of pipe and gravel.

G. The capillary sand fill shall contain 85% or more sand; the percentage of silt plus one and one-half times the percentage of clay shall not exceed 15%. Fine to medium sand is preferred.

H. Loamy sand shall be used for the surface crown. Where loamy sand is not available, capillary sand may be used.

I. The crown surface shall be planted with vegetation suited to the climate and soil of the site and to the wastewater quality and quantity.

J. For a gravity feed system, the overflow height of the ET bed shall be lower than the invert of the septic tank outlet.

K. All ET beds shall be equipped with an inspection port that is suitable to use to pump the system, if needed.

[20.7.3.805 NMAC - Rp, 20.7.3.806 NMAC, 9/1/13]

20.7.3.806 MOUND AND ELEVATED SYSTEMS:

A. Mound systems shall meet the requirements of 20.7.3.302 NMAC.

B. Mounds are generally constructed entirely above the surrounding ground surface, however, the mound may be partially buried.

C. The design of the mound system shall be in accordance with the most current design standards of the Wisconsin mound system as specified in the reference materials in Paragraph (8) of Subsection B of 20.7.3.8 NMAC, or other system designs as approved by the department.

D. Pressure distribution to the mound shall be required.

E. An elevated system shall meet the requirements of 20.7.3.302 NMAC.

F. Elevated systems may be constructed entirely above the surrounding grade or partially buried, as site conditions require.

G. An elevated system must be installed in accordance with proven design criteria and approved by the department.

[20.7.3.806 NMAC - Rp, 20.7.3.807 NMAC, 9/1/13]

20.7.3.807 LOW PRESSURE DISPOSAL SYSTEMS:

A. Low pressure dosed (LPD) disposal systems are used to achieve uniform distribution of wastewater throughout the entire disposal system. Effluent is pumped under low pressure through solid pipe into perforated lateral lines installed within a disposal system.

(1) Low pressure dosed disposal systems may be used with any on-site liquid waste system including conventional treatment systems, gray water systems and advanced treatment systems.

(2) Low pressure dosed disposal systems may be used with any disposal system including trenches, beds, mounds, gravelless systems and evapotranspiration systems.

(3) Lift stations are not classified as low pressure dosed disposal systems.

(4) Low pressure dosed disposal systems may use a timer to equalize the flow over a 24-hour period. LPD disposal systems may also be designed to rotate between separate disposal areas by using rotator valves.

(5) All pumps shall be rated by the manufacturer for pumping sewage or effluent.

(6) A single pump may be used for design flows equal to or less than 1,000 gpd. Dual alternating pumps are required for design flows over 1,000 gpd.

(7) Design of the system shall include:

(a) design flow;

(b) except for mound systems, soil absorption area sized according to the effluent loading rates found in 20.7.3.703 NMAC;

(c) total length of header and lateral pipes;

(d) diameter of perforated lateral lines used;

(e) size and spacing of holes or emitters; and

(f) pump performance sizing with allowances for head and friction losses at rated flows in gallons per minute.

(8) A ball valve shall be located vertically at the end of each lateral line for inspection and flushing except for proprietary drip irrigation systems.

B. A low pressure pipe (LPP) disposal system is a pressurized distribution system placed in shallow, narrow trenches. The effluent discharged to a LPP system must meet, at a minimum, primary treatment standards.

(1) The low pressure pipe system shall be sized as follows.

(a) The required absorption area shall be sized in accordance with Subsection H of 20.7.3.703 NMAC.

(b) A sizing credit of five square feet per linear foot of lateral pipe shall be applied to the total required absorption area.

(c) Each individual lateral shall not exceed 75 feet in length from the feed point unless the design is such that the discharge rate between any two points in the system does not exceed 10%.

(2) Design for LPP systems shall conform to the following.

- (a) Trenches shall be 12 inches to 18 inches wide and 12 inches deep.
 - (b) When aggregate is used, the lateral pipe shall be embedded at or above the center of the column of aggregate.
 - (c) The aggregate shall be covered with geotextile material to prevent soil intrusion.
 - (d) If a proprietary drainfield product other than aggregate is used, the distribution pipe shall be placed so as to prevent soil intrusion into the pipe.
 - (e) A minimum of four inches and a maximum of 18 inches of soil cover over the trench is required.
 - (f) Lateral lines shall be placed parallel to the natural contours of the site.
 - (g) Provisions shall be made for the prevention of siphoning back to the pump tank on upgrade systems and the prevention of draining of the tank on downgrade or flat systems.
 - (h) All requirements for conventional disposal systems shall be met, including but not limited to, setback and clearance requirements, lot size, design flow calculations, septic tank sizing, prohibitions, wastewater characteristics and advanced treatment requirements.
 - (i) Runoff shall be diverted away from the system to avoid oversaturation, where possible.
 - (j) A vegetative cover shall be maintained over the disposal area.
- (3) Materials and equipment for LPP systems shall conform to the following.
- (a) All treatment units and pump tanks shall meet the structural requirements of 20.7.3.501 NMAC.
 - (b) The pump tank shall be a single compartment with a 500 gallon minimum useful volume and allowance to be made for tank volume between the pump intake and tank floor. For septic tank effluent, a separate pump tank, in addition to the septic tank, is required.
 - (c) Effluent type pumps are required on all systems.
 - (d) A system design shall demonstrate that the system comes to the design pressure during every pumping cycle.

(e) An alternating valve or solenoid valve system is required to feed separate laterals with elevation differences resulting in 23 feet (10 psi) or greater head differentials. Manual or automatic flushing valves with turn-ups are required on distal ends of all laterals.

(f) In areas of freezing conditions, provisions for the draining of the headers must be made, such as vacuum breakers or vent holes at the system high points.

(g) Pipe shall be rated at 160 psi minimum, ASTM compression drainpipe, schedule 40 or better.

(h) The manifold pipe shall be sized appropriately for system size and configuration. The lateral pipe shall be one inch to two inches in diameter.

(i) The orifice size shall be 5/32 inch to 1/4 inch for septic effluent and 1/8 inch to 1/4 inch for secondary and tertiary treated effluent.

(j) The lateral pipe shall be installed with orifices facing upward.

(4) A maintenance contract shall be required on all LPP systems. Maintenance is to include pump inspection and cleaning, float operation (if applicable), lateral flushing annually at a minimum and septic tank and pump tank pumping as needed.

C. Designs that do not conform to the design parameters specified in Subsections A and B above must be accompanied by documentation justifying the design submitted, including proprietary software input and output reports, and will be considered on a case-by-case basis.

[20.7.3.807 NMAC - Rp, 20.7.3.808 NMAC, 9/1/13; A, 9/1/13]

20.7.3.808 HOLDING TANK REQUIREMENTS:

A. The installation of holding tanks for the disposal of liquid wastes shall be authorized on a temporary basis only and only for residential units where conventional or alternative liquid waste treatment systems cannot be installed, except where noted in Subsection E below.

B. The installation of holding tanks shall not be authorized for commercial units except where noted in Subsection E below.

C. Holding tanks shall not be installed to serve any design flow greater than 375 gallons per day, except for the direct collection of RV waste or to replace an existing holding tank. Total design flow on any property served by a holding tank shall not exceed 375 gallons per day except for the direct collection of RV waste.

D. The installation of holding tanks shall be authorized for no more than one year from the date of installation for units occupied more than 120 days per calendar year.

E. The installation of holding tanks shall be authorized for permanent use only for the following:

(1) residential units, with a design flow rate of 375 gpd or less, occupied 120 days or less per calendar year;

(2) residential units utilizing the holding tank only for the discharge of toilet waste in conjunction with a conventional treatment system for the remainder of the wastewater;

(3) non-residential, non-commercial units, such as guard shacks, toll booths, etc., with a design flow rate of 100 gpd or less; and

(4) the direct collection of RV waste and portable toilet waste for disposal in accordance with 20.7.3.306 NMAC.

F. Holding tanks shall be constructed of the same materials, by the same procedures and to the same standards as described in 20.7.3.501-502 NMAC except that they shall have no discharge outlet.

G. All holding tank installations shall be tested on-site for water tightness.

H. The minimum size of a holding tank shall be 1,000 gallons or four times the design flow, whichever is greater.

I. Holding tanks shall be located in an area readily accessible to a pump vehicle under all weather conditions and where accidental spillage during pumping will not create a nuisance or a hazard to public health.

J. Holding tanks shall be protected against flotation under high groundwater conditions by weight of tank (ballasting), earth anchors or by surface or shallow installation. Holding tanks shall be protected from freezing.

K. Holding tanks shall be equipped with a visible and audible high water alarm system placed in a conspicuous location approved by the department. The alarm shall be set to activate at 80% of the tank capacity. It shall be a violation of these regulations to tamper with or disconnect the alarm system.

L. The owner of a holding tank shall have the tank pumped to prevent discharge from the tank and the liquid waste (septage) properly disposed of in compliance with all applicable laws and regulations. Owners of holding tanks shall maintain records demonstrating pumping and proper disposal of septage from the units to prevent discharge. Copies of pumping and disposal manifests shall be retained by the owner for

at least seven years and shall be made available to the department for inspection on request. The records shall be:

- (1) kept on a form provided by the department if requested;
- (2) accompanied by such other documentation as the department may reasonably require;
- (3) signed by the lot owner or an authorized representative;
- (4) submitted on a semi-annual basis, or a schedule otherwise determined by the department, to the department field office having jurisdiction, and
- (5) included in any transfer inspection report or unpermitted system inspection report.

M. No person shall install, operate, modify or maintain a holding tank that allows discharge to the soil or to waters of the state.

N. The department may perform site inspections periodically to ensure that a holding tank does not discharge.

O. All units utilizing a holding tank shall connect to a public sewer upon availability and in accordance with the local authority that has jurisdiction. A public sewer shall be deemed available when the public sewer is located in any thoroughfare, right-of-way or easement abutting the lot on which the unit is located. The holding tank shall be properly abandoned in accordance with 20.7.3.307 NMAC within 30 days of connection to the public sewer.

[20.7.3.808 NMAC - Rp, 20.7.3.809 NMAC, 9/1/13; A, 9/1/13]

20.7.3.809 GRAYWATER SYSTEMS:

Graywater systems not meeting the requirements of 20.7.3.810 NMAC shall meet the following requirements.

A. The installation of separate graywater systems shall be authorized for residential units and shall be located on the lot served. The capacity of the on-site liquid waste system shall not be decreased or otherwise affected by the existence or proposed installation of a graywater system servicing the lot.

B. All information required in 20.7.3.402 NMAC for the issuance of a permit shall be required.

C. Design flows for graywater systems shall be calculated by the following:

(1) 20% of the liquid waste design flow for the segregation of laundry waste;
and

(2) 33% of the liquid waste design flow for the segregation of the bathroom (showers, tubs and wash basin) waste.

D. For graywater systems on lots where the residential unit is served by a sewerage system, the minimum lot size set forth in 20.7.3.301 NMAC shall not be required.

E. Clearance requirements for graywater systems shall meet the requirements of 20.7.3.303 NMAC.

F. Setback requirements for graywater systems shall meet the requirements of 20.7.3.302 NMAC except for the following:

- (1) property lines, two feet for disposal area;
- (2) building or structure, two feet for disposal area; and
- (3) building or structure, zero feet for above ground tanks.

G. A treatment unit shall be required for all graywater systems. If a tank is utilized as the treatment unit:

- (1) the tank may be a single compartment;
- (2) the tank shall be sized to accommodate one day design flow; and
- (3) access to the tank shall be provided by a tamper resistant lid installed to grade.

H. Graywater should be utilized within 24 hours of collection unless additional treatment is provided.

I. Tanks installed below ground shall meet the requirements of 20.7.3.501-502 NMAC except for the requirements in Subsection G of this section. Tanks shall be protected against possible floatation.

J. Above ground tanks shall be constructed of solid, durable materials, not subject to corrosion or decay and shall be approved by the department. Above ground tanks shall be set on a three inch minimum concrete pad. Metal tanks shall not be authorized.

K. All tanks shall have an overflow drain with a permanent connection to the building drain or building sewer. The tank shall be protected against sewer line backflow by a backwater valve.

L. Each tank shall be vented as required by the New Mexico plumbing code.

M. Each tank shall have its rated liquid capacity permanently marked on the unit. In addition, a sign "GRAYWATER SYSTEM, DANGER – UNSAFE WATER" shall be permanently marked on the tank.

N. The disposal system shall be constructed in accordance with 20.7.3.804 NMAC.

O. The graywater system shall have no direct or indirect cross connection with potable water systems.

P. Graywater use for purposes other than irrigation or toilet flushing is prohibited. Irrigation of edible food crops except for fruit trees or nut trees is prohibited.

[20.7.3.809 NMAC - Rp, 20.7.3.811 NMAC, 9/1/13; A, 9/1/13]

20.7.3.810 GRAYWATER DISCHARGES:

Graywater discharge of less than 250 gallons per day of private residential graywater originating from a residence for the resident's household flower gardening, composting or landscaping irrigation shall be allowed if:

A. a constructed graywater distribution system provides for overflow into the sewer system or on-site wastewater treatment and disposal system;

B. a graywater storage tank is covered to restrict access and to eliminate habitat for mosquitos or other vectors;

C. a graywater system is sited outside of a floodway;

D. graywater is vertically separated at least five feet above the groundwater table;

E. graywater pressure piping is clearly identified as a non-potable water conduit;

F. graywater is used on the site where it is generated and does not run off the property lines;

G. graywater is discharged in a manner that minimizes the potential for contact with people or domestic pets;

H. ponding is prohibited, discharge of graywater is managed to minimize standing water on the surface and to ensure that the hydraulic capacity of the soil is not exceeded;

I. graywater is not sprayed;

J. graywater is not discharged to a watercourse;

K. graywater use within municipalities or counties complies with all applicable municipal or county ordinances enacted pursuant to Chapter 3, Article 53 NMSA 1978;

L. graywater is not stored longer than 24 hours before being discharged;

M. graywater use for purposes other than irrigation or composting is prohibited, unless a permit for such use is issued by the department;

N. graywater is not used to irrigate food plants except for fruit and nut trees;

O. graywater is discharged to a mulched surface area or to an underground irrigation system;

P. graywater is not discharged closer than 100 feet to a watercourse or private domestic well, or closer than 200 feet to a public water supply well;

Q. graywater does not create a public nuisance;

R. for residential units using an on-site liquid waste system for blackwater treatment and disposal, the use of a graywater system does not change the design, capacity or absorption area requirements for the on-site liquid waste system at the residential unit, and the on-site liquid waste system is designed and sized to handle the combined blackwater and graywater flow if the graywater system fails or is not fully used; and

S. graywater does not contain hazardous chemicals derived from activities such as cleaning car parts, washing greasy or oily rags or disposing of waste solutions from home photo labs or similar hobbyist or home occupational activities.

[20.7.3.810 NMAC - Rp, 20.7.3.810 NMAC, 9/1/13; A, 9/1/13]

20.7.3.811 SPLIT FLOW SYSTEMS:

Split flow systems may be installed for the purpose of reduction of total nitrogen discharges in lieu of installation of non-discharging or tertiary treatment systems.

A. Based on the assumption that toilet waste contains 80% of the total nitrogen in domestic liquid waste and that the quantity of liquid waste from toilets is 25% of the total domestic waste stream, the following formula shall be used to calculate the minimum lot size allowed for permitting of a split flow system: minimum lot size (in acres) = 0.0003 x design flow.

B. The disposal system for non-toilet waste shall be based on the assumption that non-toilet waste comprises 75% of the design flow and therefore may be reduced to 75% of the minimum required absorption area in 20.7.3.703 NMAC.

C. The toilet waste holding tank shall have a minimum capacity of 1000 gallons and shall meet all requirements of holding tanks described in 20.7.3.808 NMAC, except for Subsections A, B, C, D, E and H.

D. Effluent from the waste holding tank may be discharged to an ET bed constructed in accordance with 20.7.3.805 NMAC and sized at 25% of design flow. An effluent filter is required on the waste holding tank.

[20.7.3.811 NMAC - N, 9/1/13]

20.7.3.812 SAND-LINED TRENCHES AND BOTTOMLESS SAND FILTERS:

A. Effluent applied to a sand-lined trench shall not exceed primary treatment standards.

B. The required absorption area shall be calculated based on a maximum loading rate of 1.00 gallon per day per square foot of sand surface. No sidewall credit is allowed.

C. The distribution system shall conform to the requirements of 20.7.3.807 NMAC, Low Pressure Disposal Systems.

D. A minimum of 24 inches of sand, meeting the latest version of ASTM specifications, shall be installed beneath the distribution system.

E. Trench width shall be a minimum of 12 inches and a maximum of 36 inches.

F. The effluent dosing rate shall be at least four doses per day and not more than 24 doses per day.

G. A sand-lined trench may be used to reduce setbacks and clearances as follows:

- (1) one foot to a limiting layer;
- (2) 50 feet to waters of the state; or
- (3) 50 feet to an irrigation well located on the subject property.

H. A bottomless sand filter is a special case sand-lined trench consisting of a bottomless containment structure located partially above or at grade of the existing ground level. A bottomless sand filter must be located parallel to the contours on a sloping site and be as long and narrow as possible to limit the linear loading rate on the disposal area.

I. A maintenance contract shall be required. Maintenance is to include pump inspection and cleaning, float operation (if applicable), lateral flushing annually at a minimum and septic tank and pump tank pumping as needed.

[20.7.3.812 NMAC - N, 9/1/13]

20.7.3.813-20.7.3.900 [RESERVED]

20.7.3.901 MONITORING:

A. As a condition to any permit, the owner of an on-site liquid waste system shall allow department personnel or maintenance service provider personnel right of entry to the property at reasonable times to allow for maintenance, system monitoring, effluent sampling or evaluating the general state of repair or function of the system.

B. Advanced treatment liquid waste systems require maintenance and monitoring. These systems shall be maintained and monitored, at a minimum, semi-annually or more as per manufacturer's recommendations.

(1) Monitoring will include all the following parameters:

(a) dissolved oxygen (DO);

(b) temperature;

(c) pH;

(d) sludge depth; and

(e) other parameters recommended by the manufacturer.

(2) Parameters should be measured at locations within the treatment unit that will demonstrate the effectiveness of treatment.

(3) Monitoring shall be completed utilizing field instruments including a DO meter, thermometer, pH meter, sludge sampler or other approved instruments.

(4) Parameters and maintenance requirements shall be included in the permit application design statement and be consistent with the manufacturer's recommendations for proper operation.

(5) Field instruments shall be calibrated as per manufacturer's recommendations and a log maintained on the operation and calibration of each instrument. Logs shall be made available to the department upon request.

C. Effluent sampling shall be required for on-site liquid waste systems that do not conform to manufacturer's guidelines for field parameters pursuant to Subsection B of 20.7.3.901 NMAC, for systems where the manufacturer has not established guidelines for field parameters or for systems that the department has determined are not operating properly. Sampling shall be conducted annually or as otherwise required by the department.

(1) On-site liquid waste systems that require primary treatment levels be achieved may be sampled and analyzed or monitored as specified in the permit.

(2) On-site liquid waste systems that require secondary treatment levels be achieved may be sampled and analyzed only for 5-day BOD (BOD5) or monitored as specified in the permit. Chemical oxygen demand (COD) may be substituted for BOD5 with a calibration curve acceptable to the department.

(3) On-site liquid waste systems that require tertiary treatment levels be achieved may be sampled and analyzed only for total nitrogen or monitored as specified in the permit.

(4) On-site liquid waste systems that require disinfection may be sampled and analyzed only for E. coli or monitored as specified in the permit. In addition:

(a) when chlorine is used for disinfection, the total chlorine residual, at all times, shall be equal to or greater than 1.0 mg/l after 30 minutes detention time at peak flows; and

(b) alternative disinfection methods, such as ultraviolet light, ozone or other methods, may be used.

D. All sampling, maintenance, monitoring and analysis shall be performed by certified personnel in accordance with the most current edition of *standard methods for the examination of water and wastewater* or other methods, including field instruments, approved by the department and recommended by the manufacturer.

E. Monitoring and sampling shall occur between the hours of 7:00 am and 7:00 pm.

F. Monitoring reports, sampling records and maintenance reports/logs shall be submitted to the local field office within 30 days of the maintenance, monitoring or required sampling event.

G. All monitoring or sampling results exceeding the permit limits shall be reported to the local field office within five working days.

H. If any two consecutive samples exceed the permitted treatment limit, the system design and operation shall be evaluated by a professional engineer or a maintenance service provider for conformance with permitting conditions and shall be adjusted to

bring the effluent quality into compliance. The system shall be resampled no later than 30 days from the evaluation and results submitted to the department within five working days of analysis.

I. If the resample required in Subsection H above exceeds the permitted treatment limit, the treatment system shall be subject to review and re-evaluation with regard to operation and maintenance. A department approved contingency plan, including more training for the maintenance service provider or replacement with a more experienced operator, may be implemented.

J. The following shall be considered as violations of the monitoring requirements of the permit.

(1) Failure to collect, analyze and report maintenance, monitoring or sampling results.

(2) The submission, by the owner or maintenance entity of an advanced treatment system or agent or employee thereof, of misleading or inaccurate information to the department, through neglect.

(3) The submission of fraudulent data including the following:

(a) apparent measurement results for which no measurement or test results were actually made as determined by the absence of the supporting records that are usually made;

(b) measurements or test results obtained by deliberately and knowingly making measurements or collecting samples at places and times other than as specified in the permit or 20.7.3 NMAC; and

(c) test results obtained through use of unapproved and erroneous sampling, preservation, storage or analysis procedures.

[20.7.3.901 NMAC - Rp, 20.7.3.901 NMAC, 9/1/13; A, 9/1/13]

20.7.3.902 OPERATION AND MAINTENANCE REQUIREMENTS AND EVALUATION REQUIREMENTS AT TIME OF TRANSFER:

A. The owner of an on-site liquid waste system, including systems existing prior to the effective date of this regulation, shall be responsible for properly operating and maintaining the system in accordance with the recommendations of the manufacturer or designer of the system.

B. The owner of an advanced treatment system installed after the effective date of this regulation shall enter into a department approved maintenance contract with a maintenance service provider that will assure maintenance of the system in accordance

with the recommendations of the manufacturer or designer of the system. A maintenance contract shall be in effect at all times.

C. Household hazardous waste shall not be introduced into the system. Wastewater that exceeds domestic liquid waste may be treated by an appropriately designed advanced treatment system.

D. Any spillage that may occur during tank pumpout shall be cleaned up immediately and the spill area disinfected with a sodium or calcium hypochloride solution.

E. Prior to the transfer of a property with an established on-site liquid waste system, the transferor of the property shall have the system evaluated. Liquid waste systems shall be evaluated by an evaluator qualified in accordance with Subsection B of 20.7.3.904 NMAC utilizing a department approved form. Unpermitted liquid waste systems shall be registered pursuant to Subsections J of 20.7.3.401 NMAC or permitted pursuant to Subsection K of 20.7.3.401 NMAC.

F. For permitted conventional liquid waste systems, a non-invasive evaluation shall be conducted, with a report provided to the buyer. The evaluation shall determine whether or not:

(1) the treatment unit is watertight, is functioning properly and the existing tank has a liquid capacity within one tank size of the capacity required by Subsection Q of 20.7.3.201 NMAC;

(2) the disposal system appears to be functioning properly;

(3) the liquid waste system appears to meet setbacks and clearances;

(4) lot size requirements of the regulations in effect at the time of the initial installation, or in effect at the time of the most recent permitted modification, are met; and

(5) the system does not constitute a public health or safety hazard.

G. For permitted advanced treatment systems, in addition to the requirements of Subsection F of 20.7.3.902 NMAC:

(1) the system shall be sampled in accordance with permit conditions for compliance with 20.7.3.602-604 NMAC if a regularly scheduled sampling event has not occurred within 180 days of the evaluation; the sampling results shall be included with the system report; if a regularly scheduled sampling event has occurred within 180 days of the evaluation, the results of the sampling shall be included in the evaluation report; and

(2) an amendment of permit reflecting ownership change is required pursuant to Subsection E of 20.7.3.403 NMAC.

H. Evaluations shall be recorded on forms approved by the department. Evaluation reports shall be kept on file by the evaluator of the on-site liquid waste system. Evaluators shall submit to the department copies of all evaluation reports, whether completed or not, within 15 days of the evaluation. A permit or variance application shall be submitted within 15 days of the evaluation by the party who is or will be the owner of the property on the 15th day following the evaluation to correct any deficiencies or permit violations identified by the evaluation. In addition, all evaluation reports shall include the global positioning system (GPS) coordinates of the treatment unit. Once an evaluation is requested, all results, whether complete or not, shall be submitted to the department.

I. If a final inspection with final approval for a new or modified system or a property transfer evaluation for an existing system has been done within 180 days of the transfer of the property, the property transfer evaluation need not be conducted.

J. In the event of a failed system, that includes, but is not limited to disposal fields, the owner shall remedy the failed system with department approval. In the event, property with an existing permitted on-site liquid waste system is transferred prior to the remediation of a failed system, the transferee becomes responsible under these regulations for remedying the failed system.

[20.7.3.902 NMAC - Rp, 20.7.3.902 NMAC, 9/1/13]

20.7.3.903 MAINTENANCE SERVICE PROVIDERS (MSP) FOR CONVENTIONAL AND ADVANCED ON-SITE LIQUID WASTE SYSTEMS:

A. Maintenance service providers (MSP) shall at a minimum:

(1) inspect, operate and maintain the system in accordance with the manufacturer's specification and permit requirements; and

(2) submit pumping and inspection records as requested by the department.

B. The MSP personnel shall possess a valid and appropriate CID license when required for the specific activities performed and have at least one of the certifications listed below:

(1) certification by the manufacturer for the proprietary unit being maintained,
or

(2) operator certification for small advanced wastewater systems, or higher, from the state of New Mexico; or

(3) certification at an acceptable level as a wastewater operator from another state; or

(4) certification based on other credentials as approved by the department.

C. The MSP personnel shall have the ability to sample the unit in accordance with approved sampling methods under this part.

D. The MSP shall be able to respond to emergency situations within 48 hours of being notified.

E. A public MSP shall adopt an ordinance, bylaw or rule, as appropriate, approved by the department, detailing the terms and conditions of service.

F. A private MSP shall use a contract for service that contains, at least, minimum standards approved by the department.

G. The MSP shall have a quality assurance/quality control plan acceptable to the department and shall provide a copy to the department upon request.

H. The MSP shall notify the department within five working days of any failed system.

I. The MSP must properly maintain and sample all systems for which they have an active maintenance or sampling contract.

[20.7.3.903 NMAC - Rp, 20.7.3.903 NMAC, 9/1/13; A, 9/1/13]

20.7.3.904 REQUIREMENTS FOR QUALIFICATION:

A. Qualified homeowner.

(1) A homeowner must become qualified to install an on-site liquid waste system by passing an exam administered by the department.

(2) Homeowner training materials and opportunities for exams, by appointment, shall be available at all department field offices.

(3) A qualified homeowner may apply for a permit to install or modify a conventional on-site liquid waste treatment and disposal system serving the qualified homeowner's personal residence in accordance with Subsection C of 20.7.3.401 NMAC.

(4) A qualified homeowner shall not install or modify an on-site liquid waste system serving a rental unit, or other property that is not the qualified homeowner's personal residence.

(5) A homeowner qualification shall be valid for one year from the date of issuance of qualification; the department may extend the qualification beyond one year for good cause shown.

(6) A qualified homeowner may install no more than one liquid waste system during a twelve month period.

(7) A qualified homeowner who self-installs a system shall not compensate any person to perform any phase of the system construction, unless that person holds a valid and appropriate classification of contractor's license issued by the New Mexico construction industries division.

B. Third party evaluators.

(1) Evaluations of liquid waste systems prior to property transfers are required by Subsection E of 20.7.3.902 NMAC. The department shall inspect unpermitted liquid waste systems installed after February 1, 2002. Third party evaluators shall evaluate permitted liquid waste systems and unpermitted systems installed prior to February 1, 2002.

(2) Qualification as a third party evaluator shall be based on one of the following:

(a) a valid and appropriate classification of licensure by the construction industries division of the regulation and licensing department;

(b) licensure as a professional engineer;

(c) accreditation in on-site wastewater inspection by the national sanitation foundation (NSF);

(d) certification by the national environmental health association (NEHA) as an installer of on-site wastewater treatment systems;

(e) certification as a registered environmental health specialist (REHS) or a registered sanitarian (RS); or

(f) demonstration of a similar accreditation or certification or a combination of training and experience as approved by the department.

(3) Inspection of advanced wastewater treatment systems shall be performed only by persons qualified pursuant to Subsection C of 20.7.3.904 NMAC.

C. Maintenance service provider of an advanced treatment system.

(1) Maintenance service providers shall comply with 20.7.3.903 NMAC.

(2) In order to obtain approval by the department, and in addition to receiving a recommendation for approval by the wastewater technical advisory committee, manufacturers or their authorized trainers of advanced treatment systems shall provide a written training and certification program, for approval by the department, for installers and maintenance service providers of their systems. Installers and maintenance service providers of advanced treatment systems shall receive the training approved by the department at least once per year. Department representatives may audit training classes provided by the manufacturers for the purpose of evaluating the training provided.

D. Septage pumpers.

(1) Septage pumpers shall demonstrate familiarity with applicable regulations and demonstrate competence in locating and exposing septic tanks, measuring septic sludge and scum levels, the complete pumping of septic tank sludge, maintenance of pumping equipment in a sanitary condition, prevention of pathogen transmission and preparation of an appropriate safety plan for normal operations.

(2) Septage pumpers shall maintain his or her equipment to ensure no sewage spills occur during transport or storage and that his or her employees or the public are not subjected to a hazard to public health.

(3) Septage pumpers shall have a written contingency plan for spill abatement and shall have the equipment and supplies needed to abate spills onsite during each pumping operation.

(4) Septage pumpers shall notify the department of the facilities they use for the septage disposal and shall provide the department with copies of any permits or licenses issued by the owner of the disposal facility to the septage pumper.

E. Installer specialist.

(1) Any person who possesses all of the following minimum qualifications may apply to the department for certification as an installer specialist:

(a) a valid and appropriate classification of contractor's license issued by the New Mexico construction industries division for the construction of on-site liquid waste systems;

(b) three years of professional experience installing on-site liquid waste systems in New Mexico; or the installation or repair of either 100 on-site liquid waste systems in New Mexico in compliance with liquid waste permits approved by the department or Bernalillo county; or 50 on-site liquid waste systems in New Mexico in compliance with liquid waste permits approved by the department or by Bernalillo county, plus certification as an installer of on-site wastewater systems by a national industry or trade organization;

(c) 16 hours of training credits approved by the department completed during the previous three calendar years;

(d) successful completion of a 20.7.3 NMAC training class and examination provided by the department during the previous twelve months;

(e) no compliance orders issued to the applicant within the past three years for violation of any provision of 20.7.3 NMAC, except for compliance orders that are presently under appeal or that have been overturned on appeal or withdrawn by the department; and

(f) no criminal convictions pursuant to NMSA 1978, Section 74-1-10 within the past five years for violation of any provision of 20.7.3 NMAC.

(2) Application for certification as an installer specialist shall be made in writing on a form provided by the department and shall include documentation of qualification requirements in Subparagraph (a), (b) and (c) of Paragraph (1) of Subsection E of 20.7.3.904 NMAC.

(3) The department shall, within 15 working days of receipt of a complete application, notify the applicant in writing of approval or disapproval of the application.

(4) Department disapproval of an application may be appealed pursuant to the adjudicatory procedures in 20.1.5 NMAC.

(5) Installer specialist certification shall be valid for no longer than three years, expiring on January 31 of the applicable year.

(6) Installer specialists shall be recertified upon submission to the department, no later than January 31 of each applicable year, of documentation that the installer specialist has received 16 hours of approved training credits completed during the previous three calendar years.

(7) The department shall maintain on its internet website a list of training curricula that have been approved for qualification and recertification as installer specialist.

(8) The department shall accept registrations for a 20.7.3 NMAC training class and exam no less frequently than quarterly within each department district.

(9) The department shall maintain on its internet website a list of certified installer specialists, along with a description of the minimum qualification requirements for certification.

(10) Subsection E of 20.7.3.904 NMAC shall cease to be effective three years after September 1, 2013 unless the department has provided prior to that date a written

report to the New Mexico environmental improvement board documenting or stating successful implementation of the installer specialist certification and recommending that Subsection E of 20.7.3.904 NMAC continue to be effective.

F. Suspensions, revocations and denials.

(1) The department may deny a qualification if it determines that an applicant does not meet all eligibility requirements set forth above.

(2) The department, at any time, may suspend or revoke a qualification for cause to include fraud, misrepresentation, failure to provide required documentation, failure to provide service in accordance with the qualification or failure to comply with 20.7.3 NMAC. Suspension or revocation shall be by issuance of an order by the department.

(3) Any person who desires to appeal a denial, suspension, revocation or disqualification may appeal to the secretary. An appeal is initiated by submitting a request for a hearing. The request for a hearing must be in writing and made no later than 30 days after notice of the action is served. Upon such request, the secretary shall conduct a hearing pursuant to the adjudicatory procedures in 20.1.5 NMAC.

[20.7.3.904 NMAC - Rp, 20.7.3.904 NMAC, 9/1/13; A, 9/1/13]

20.7.3.905 WASTEWATER TECHNICAL ADVISORY COMMITTEE:

Technical product review and approval shall be in accordance with 9-7A-15 NMSA 1978.

[20.7.3.905 NMAC - Rp, 20.7.3.905 NMAC, 9/1/13; A, 9/1/13]

20.7.3.906 ADMINISTRATIVE ENFORCEMENT:

A. Any violation of these regulations is a petty misdemeanor subject to criminal penalties as authorized by NMSA 74-1-10.

B. The department may appear and prosecute any misdemeanor proceeding if the appearance is by an employee authorized by the secretary to institute or cause to be instituted an action on behalf of the department.

C. The secretary, at his discretion, may elect to pursue criminal or civil penalties, or both, for any violations of these regulations.

D. Upon any violation of these regulations, the department may:

(1) issue a compliance order stating the nature of the violation requiring compliance immediately or within a specific time period and assess a civil penalty for any past or current violation or both; or

(2) commence a civil action in district court for appropriate relief, including a temporary or permanent injunction.

E. Any penalty assessed in the compliance order for residential on-site liquid waste systems shall not exceed one hundred dollars (\$100) for each violation.

F. Any penalty assessed in the compliance order for non-residential on-site liquid waste systems shall not exceed one thousand dollars (\$1,000) for each violation.

G. If a violator fails to achieve compliance within the time specified in the compliance order, the secretary shall assess civil penalties of not more than one thousand dollars (\$1,000) for each noncompliance with the order.

H. A compliance order issued pursuant to this section shall become final unless, no later than 30 days after the compliance order is served, the party named in the order submits a written request to the secretary for a hearing.

I. All requests for hearings shall be in accordance with 20.7.3.406 NMAC.

J. Penalties collected pursuant to violations of 20.7.3 NMAC shall be deposited in the state treasury to be credited to the general fund.

K. Any noncompliance with any provision of 20.7.3 NMAC or any permit provision may be subject to penalties.

[20.7.3.906 NMAC - Rp, 20.7.3.906 NMAC, 9/1/13]

20.7.3.907 AUTHORITY TO DISCONNECT SOURCE OF WATER SUPPLY:

After due process is provided, the department may disconnect the source of water supply to a commercial or residential unit that is served by any on-site liquid waste system that has become a failed system and that presents an imminent hazard to public health. This authority includes authority to disconnect power utilities if necessary to disconnect the source of water supply. The department shall give notice of its actions to the unit owner and the tenants affected or as otherwise provided by the law.

[20.7.3.907 NMAC - Rp, 20.7.3.907 NMAC, 9/1/13]

20.7.3.908-20.7.3.1000 [RESERVED]

20.7.3.1001 CONSTRUCTION:

20.7.3 NMAC shall be liberally construed to carry out its purpose.

[20.7.3.1001 NMAC - Rp, 20.7.3.1001 NMAC, 9/1/13]

20.7.3.1002 TEMPORARY PROVISIONS:

All registration certificates, permits, orders, rulings and variances issued pursuant to the regulations in effect at the time such registration certificates, permits, orders, rulings, or variances were issued shall remain in full force and effect until repealed, replaced, superseded or amended pursuant to 20.7.3 NMAC.

[20.7.3.1002 NMAC - Rp, 20.7.3.1002 NMAC, 9/1/13]

20.7.3.1003 SEVERABILITY:

If any provision or application of 20.7.3 NMAC is held invalid, the reminder, or its application to other situations or persons, shall not be affected.

[20.7.3.1003 NMAC - Rp, 20.7.3.1003 NMAC, 9/1/13]

20.7.3.1004 REFERENCES IN OTHER REGULATIONS:

Any reference to the liquid waste treatment and disposal regulations in any other rule shall be construed as a reference to 20.7.3 NMAC.

[20.7.3.1004 NMAC - Rp, 20.7.3.1004 NMAC, 9/1/13]

20.7.3.1005 SAVINGS CLAUSE:

Repeal or supersession of prior versions of the liquid waste disposal regulations shall not affect any administrative or judicial action for the enforcement thereof.

[20.7.3.1005 NMAC - Rp, 20.7.3.1005 NMAC, 9/1/13]

20.7.3.1006 COLLATERAL REQUIREMENTS:

Compliance with 20.7.3 NMAC does not relieve any person from the responsibility of meeting more stringent city or county regulations or ordinances or other requirements of state or federal laws governing the treatment or disposal of liquid waste.

[20.7.3.1006 NMAC - Rp, 20.7.3.1006 NMAC, 9/1/13]

20.7.3.1007 LIMITATIONS OF DEFENSE:

The existence of a valid permit for installation or modification of an on-site liquid waste system shall not constitute a defense to a violation of any section of 20.7.3 NMAC except the requirement for obtaining a permit (20.7.3.401-404 NMAC).

[20.7.3.1007 NMAC - Rp, 20.7.3.1007 NMAC, 9/1/13]

20.7.3.1008-20.7.3.1100 [RESERVED]

PART 4: UTILITY OPERATOR CERTIFICATION

20.7.4.1 ISSUING AGENCY:

Water Quality Control Commission.

[20.7.4.1 NMAC - Rp, 20 NMAC 7.4.100, 1-26-01]

20.7.4.2 SCOPE:

All persons, facilities and systems subject to the act.

[20.7.4.2 NMAC - Rp, 20 NMAC 7.4.101, 1-26-01; A, 11-15-06]

20.7.4.3 STATUTORY AUTHORITY:

Utility Operators Certification Act, NMSA 1978, Sections 61-33-1 to 10.

[20.7.4.3 NMAC - Rp, 20 NMAC 7.4.102, 1-26-01]

20.7.4.4 DURATION:

Permanent.

[20.7.4.4 NMAC - Rp, 20 NMAC 7.4.103, 1-26-01]

20.7.4.5 EFFECTIVE DATE:

January 26, 2001, unless a later date is indicated in the history note at the end of a section.

[20.7.4.5 NMAC - Rp, 20 NMAC 7.4.104, 1-26-01]

20.7.4.6 OBJECTIVE:

The objective of this part is to implement the act.

[20.7.4.6 NMAC - Rp, 20 NMAC 7.4.105, 1-26-01; A, 11-15-06]

20.7.4.7 DEFINITIONS:

All terms used in this part shall have the following meanings:

A. "act" means the Utility Operators Certification Act, NMSA 1978, Sections 61-33-1 to 10;

B. "board" means the utility operators certification advisory board;

C. "certified operator" means a person who is certified by the department as being qualified to operate one of the classifications of public water supply systems or public wastewater facilities;

D. "collection system" means pipelines or conduits, pumping stations, force mains, and all other devices, appurtenances and facilities used for collecting and conducting waste to a point of treatment and disposal;

E. "commission" means the water quality control commission;

F. "department" means the New Mexico environment department;

G. "distribution system" means pipelines, appurtenances, devices and facilities which carry potable water under pressure to each consumer;

H. "domestic liquid waste" means human excreta and water-carried waste from typical residential plumbing fixtures and activities, including but not limited to waste from toilets, sinks, bath fixtures, clothes or dishwashing machines and floor drains;

I. "domestic liquid waste treatment unit" means any system that is designed to discharge less than two thousand gallons per day and that is subject to the rules promulgated by the environmental improvement board pursuant to Paragraph (3) of Subsection (A) of Section 74-1-8 NMSA 1978 or a watertight unit designed, constructed and installed to stabilize only domestic liquid waste and to retain solids contained in such domestic liquid waste, including septic tanks;

J. "education" means academic credit received attending any public or private primary, secondary or high school, approved vocational training courses in the water supply and wastewater field, college or university;

K. "experience" means actual work experience, full or part-time, as an operator in the fields of public water supply or public wastewater treatment; work experience in a related field may be accepted at the discretion of the department;

L. "operate" means performing any activity or function or making any process control or system integrity decision regarding water quality or water quantity that has the potential to affect the proper functioning of a public water supply system or public

wastewater facility or to affect human health, public welfare or the environment; the term "operate" does not include the operation of monitoring equipment from a distantly remote location;

M. "operator" means any person who operates a public water supply system or public wastewater facility;

N. "owner" means the person or persons who own(s) any part of a public water supply system or public wastewater facility;

O. "person" means any agency, department or instrumentality of the United States and any of its officers, agents or employees, the state or any agency, institution or political subdivision thereof, any public or private corporation, individual, partnership, association or other entity, and includes any officer or governing or managing body of any political subdivision or public or private corporation;

P. "population served" means actual or estimated maximum number of persons served by the public water supply system or public wastewater facility;

Q. "public wastewater facility" means a system of structures, equipment and processes designed to collect and treat domestic and industrial waste and dispose of the effluent, but does not include:

(1) any domestic liquid waste treatment unit;

(2) any industrial facility subject to an industrial pretreatment program regulated by the United States environmental protection agency under the requirement of the federal Clean Water Act of 1977; or

(3) any waste treatment system which is strictly limited to treating non-human, agricultural waste;

R. "public water supply system" means:

(1) a system for the provision through pipes or other constructed conveyances to the public of water for human consumption or domestic purposes if the system:

(a) has at least fifteen service connections; or

(b) regularly serves an average of at least twenty-five individuals at least sixty days of the year;

(2) any water supply source and any treatment, storage and distribution facilities under control of the operator of the system; and

(3) any collection device, including but not limited to wells, spring boxes, infiltration galleries or intake structures, and any treatment, storage, and distribution facilities under the control of the operator of such system and any collection device or pretreatment storage facilities not under such control which are used primarily in connection with such system;

S. "supervision" means the coordination, direction, oversight or inspection of the operation of a public water supply system or a public wastewater facility; the term "supervision" does not include the operation of monitoring equipment from a distantly remote location;

T. "training" means approved education or non-academic training in the fields of public water supply system or public wastewater facility operations;

U. "training credit" means the amount of credit earned by a participant in a training program; and

V. "treatment works" means any plant or other works used for the purpose of treating, stabilizing or holding wastes.

[20.7.4.7 NMAC - Rp, 20 NMAC 7.4.108, 1-26-01; A, 10-17-01; A, 11-15-06]

20.7.4.8 CONSTRUCTION:

This part shall be liberally construed to carry out the purposes of the act. If any provision or application of this part is held invalid, the remainder or its application to other situations or persons shall not be affected.

[20.7.4.8 NMAC - Rp, 20 NMAC 7.4.106, 1-26-01; A, 11-15-06]

20.7.4.9 COMPLIANCE WITH OTHER REGULATIONS:

Compliance with this part does not relieve a person from the obligation to comply with other applicable state and federal regulations.

[20.7.4.9 NMAC - Rp, 20 NMAC 7.4.107, 1-26-01]

20.7.4.10 LEVELS OF CERTIFICATION FOR OPERATORS OF PUBLIC WATER SUPPLY SYSTEMS AND PUBLIC WASTEWATER FACILITIES:

A. The levels of general certification for operators of public water supply systems from lowest to highest shall be:

- (1)** level 1 water supply (WS1);
- (2)** level 2 water supply (WS2);

- (3) level 3 water supply (WS3); and
- (4) level 4 water supply (WS4).

B. The levels of special certification for operators of public water supply systems from lowest to highest shall be:

- (1) small water (SW); and
- (2) small water advanced (SWA);

C. The levels of certification for water sample technicians at public water supply systems from lowest to highest shall be:

- (1) water sample technician 1 (WST1); and
- (2) water sample technician 2 (WST2).

D. The levels of certification for operators of distribution systems at public water supply systems from lowest to highest shall be:

- (1) distribution systems 1 (DS1);
- (2) distribution systems 2 (DS2); and
- (3) distribution systems 3 (DS3).

E. The levels of general certification for operators of public wastewater facilities from lowest to highest shall be:

- (1) level 1 wastewater (WW1);
- (2) level 2 wastewater (WW2);
- (3) level 3 wastewater (WW3); and
- (4) level 4 wastewater (WW4).

F. The levels of special certification for operators of public wastewater facilities from lowest to highest shall be:

- (1) small wastewater (SWW); and
- (2) small wastewater advanced (SWWA).

G. The levels of certification for wastewater laboratory technicians at public wastewater facilities from lowest to highest shall be:

- (1) wastewater laboratory technician 1 (WWLT1);
- (2) wastewater laboratory technician 2 (WWLT2); and
- (3) wastewater laboratory technician 3 (WWLT3).

H. The levels of certification for operators of collection systems at public wastewater facilities from lowest to highest shall be:

- (1) collection systems 1 (CS1); and
- (2) collection systems 2 (CS2).

[20.7.4.10 NMAC - Rp, 20 NMAC 7.4.109 - 110, 1-26-01; A, 11-15-06]

20.7.4.11 CLASSIFICATION OF PUBLIC WATER SUPPLY SYSTEMS AND PUBLIC WASTEWATER FACILITIES:

A. Public water supply systems and public wastewater facilities are classified based on: (1) the size and type of the system or facility; (2) the capacity of the system or facility in terms of size service area and number of users served; (3) the type and character of the water or wastewater to be treated; and (4) the physical conditions affecting the treatment plants, collection systems and distribution systems.

B. Public water supply systems and public wastewater facilities are classified in accordance with the requirements of 20.7.4.12 NMAC and 20.7.4.13 NMAC.

[20.7.4.11 NMAC - Rp, 20 NMAC 7.4.111, 1-26-01; A, 11-15-06]

20.7.4.12 PUBLIC WATER SUPPLY SYSTEMS:

A. In order to operate the various types of treatment processes at public water supply systems, the indicated level of certification shall be required:

Type of Treatment Process	Population Served				
	25 to 500	501 to 5,000	5,001 to 10,000	10,001 to 20,000	20,000+
Filtration (sand, gravity)	SWA	WS3	WS3	WS3	WS4
Coagulation, sedimentation, filtration	SWA	WS3	WS3	WS4	WS4
Chemical precipitation (Mn, Fe, softening)	SWA	WS3	WS3	WS4	WS4
Aeration	SW	WS2	WS3	WS3	WS4

Odor and taste control (activated carbon)	SW	WS2	WS3	WS3	WS4
Chemical addition (stabilization)	SW	WS2	WS2	WS3	WS4
Pressure filtration	SWA	WS2	WS2	WS3	WS4
Ion exchange (softening, defluoridation)	SWA	WS2	WS3	WS3	WS4
Chlorination	SW	WS2	WS2	WS3	WS4
Fluoridation	SW	WS2	WS2	WS3	WS4
Arsenic removal	SWA	WS3	WS3	WS3	WS4
Radionuclide removal	SWA	WS3	WS3	WS3	WS4
Special, such as desalinization	SWA	WS4	WS4	WS4	WS4
Production, ground water only	SW	WS1	WS2	WS3	WS4

B. In order to operate various types of distribution systems at public water supply systems, the indicated level of certification shall be required:

Type of Distribution Systems	Population Served				
	25 to 500	501 to 5,000	5,001 to 10,000	10,001 to 20,000	20,000+
Distribution of treated surface water	SW	DS2	DS2	DS2	DS3
Distribution of chlorinated groundwater	SW	DS2	DS2	DS2	DS3
Distribution of unchlorinated groundwater	SW	DS1	DS2	DS2	DS3

C. In order to perform the various types of water sampling at public water supply systems after January 1, 2008, the indicated level of certification shall be required:

Type of Water Sampling	Population Served				
	25 to 500	501 to 5,000	5,001 to 10,000	10,001 to 20,000	20,000+
Microbiology	SW or WST1	WST1	WST1	WST1	WST1
Chemical and Radiological	WST2	WST2	WST2	WST2	WST2

[20.7.4.12 NMAC - Rp, 20 NMAC 7.4.112, 1-26-01; A, 11-15-06]

20.7.4.13 PUBLIC WASTEWATER FACILITIES:

A. In order to operate the various types of treatment processes at public wastewater facilities, the indicated level of certification shall be required:

Type of Treatment Process	Population Served
---------------------------	-------------------

	25 to 500	501 to 5,000	5,001 to 10,000	10,001 to 20,000	20,000+
Raw wastewater lagoons	SWW	WW1	WW1	WW1	WW1
Aerated lagoons	SWW	WW2	WW2	WW2	WW2
Primary treatment	SWW	WW2	WW2	WW2	WW2
Primary treatment and oxidation ponds	SWW	WW2	WW2	WW2	WW2
Secondary treatment, trickling filter	SWW	WW2	WW3	WW3	WW4
Secondary treatment, aeration	SWWA	WW3	WW3	WW4	WW4
Physical-chemical treatment processes	SWWA	WW3	WW3	WW3	WW4
Advanced waste treatment process	SWWA	WW3	WW4	WW4	WW4
Phosphorous and nitrogen removal	SWWA	WW3	WW3	WW4	WW4

B. In order to operate collection systems at the various sizes of public wastewater facilities, the indicated level of certification shall be required:

Population Served	25 to 500	501 to 5,000	5,001 to 10,000	10,001 to 20,000	20,000+
Level of Certification	SWW	CS1	CS1	CS2	CS2

C. In order to perform wastewater analysis for regulatory compliance at public wastewater facilities after January 1, 2011, the indicated level of certification shall be required:

Level of Certification Needed	Type of Methodology Performed
WWLT1	Analyses involving colorimetry and commercially prepared reagents, including but not limited to Dissolved Oxygen (DO) and pH by probe, and commercially available test kits.

<p style="text-align: center;">WWLT2</p>	<p>WWLT1 plus analyses involving other specific ion electrodes, titration, gravimetry, microbiology, media and standards preparation, including but not limited to Biochemical Oxygen Demand (BOD), fecal coliform, E.coli, residuals (Total Suspended Solids (TSS), Total Volatile Solids (TVS), Volatile Suspended Solids (VSS), etc.), Total Residual Chlorine (TRC) by titration, and Dissolved Oxygen by the Winkler method.</p>
<p style="text-align: center;">WWLT3</p>	<p>WWLT1 and WWLT2 plus analyses involving digestion, distillation, spectrophotometry, chromatography, reagents and standards preparation, live organisms, including but not limited to nitrogen (Nitrate (NO₃), Ammonium (NH₄), Total Kjeldahl Nitrogen (TKN)), trace metals, anions, and whole effluent toxicity.</p>
<p>SWW, SWWA, WW1, WW2, WW3, WW4, WWLT1, WWLT2 or WWLT3</p>	<p>TRC by the N-diethyl-p-phenylene-diamine (DPD) method, pH, Temperature and DO by probe.</p>

[20.7.4.13 NMAC - Rp, 20 NMAC 7.4.113, 1-26-01; A, 11-15-06; A, 1-15-11]

20.7.4.14 LESSER INCLUDED CERTIFICATIONS:

A. An operator holding a SWA certification is certified to perform any activity or function or make any process control or system integrity decision which requires a SW certification.

B. An operator holding a SWWA certification is certified to perform any activity or function or make any process control or system integrity decision which requires a SWW certification.

C. An operator holding a WS1 certification is certified to perform any activity or function or make any process control or system integrity decision which requires a SW, WST1 and DS1 certification.

D. An operator holding a WS2 certification is certified to perform any activity or function or make any process control or system integrity decision which requires a SW, WS1, WST1, WST2, DS1 and DS2 certification.

E. An operator holding a WS3 certification is certified to perform any activity or function or make any process control or system integrity decision which requires a SW, SWA, WS1, WS2, WST1, WST2, DS1, DS2 and DS3 certification.

F. An operator holding a WS4 certification is certified to perform any activity or function or make any process control or system integrity decision which requires a SW, SWA, WS1, WS2, WS3, WST1, WST2, DS1, DS2 and DS3 certification.

G. An operator holding a WW1 certification is certified to perform any activity or function or make any process control or system integrity decision which requires a SWW and CS1 certification.

H. An operator holding a WW2 certification is certified to perform any activity or function or make any process control or system integrity decision which requires a SWW, WW1, WWLT1, CS1 and CS2 certification.

I. An operator holding a WW3 certification is certified to perform any activity or function or make any process control or system integrity decision which requires a SWW, SWWA, WW1, WW2, WWLT2, CS1 and CS2 certification.

J. An operator holding a WW4 certification is certified to perform any activity or function or make any process control or system integrity decision which requires a SWW, SWWA, WW1, WW2, WW3, WWLT2, CS1 and CS2 certification.

[20.7.4.14 NMAC - N, 11-15-06; A, 1-15-11]

20.7.4.15 MINIMUM NUMBER OF CERTIFIED OPERATORS:

A. A public wastewater facility or public water supply system shall provide the minimum number of certified operators needed to operate the system or facility to protect human health, public welfare or the environment.

B. If the department determines a public wastewater facility or public water supply system is in violation of Subsection A of this section, the department may determine the minimum number of certified operators needed for the public wastewater facility or public water supply system. The determination shall be made in writing and delivered by certified mail. Violation of the department determination shall be considered a violation of the rule.

C. In determining the minimum number of certified operators needed to operate a public wastewater facility or public water supply system in compliance with Subsection A of this section, the department shall consider the following criteria:

- (1) current compliance with applicable state and federal regulations;
- (2) historical compliance with applicable state and federal regulations;
- (3) actual discharge/production compared to design capacity;
- (4) availability of redundant facilities;
- (5) geographic area served by the public wastewater facility or public water supply system;
- (6) level of automation;
- (7) staffing plan;
- (8) capacity assessment findings;
- (9) sanitary survey deficiencies;
- (10) mechanical reliability; and
- (11) currency of federally required vulnerability assessments and risk management plans.

[20.7.4.15 NMAC - N, 2/2/09]

20.7.4.16 CODE OF PROFESSIONAL CONDUCT:

A. This code expresses in general terms the level of professional conduct expected of certified operators in the state of New Mexico. This code of professional conduct is intended to guide the actions of certified operators and depends upon the integrity of each certified operator to conduct themselves in a responsible and straightforward manner in operating public water supply systems and public wastewater facilities.

B. All certified operators are charged with understanding this code of professional conduct and are expected to be familiar with the provisions of these rules and the utility operator certification regulations. Failure to follow the code of professional conduct shall be considered gross incompetence by the department. The department shall, following notification of the certified operator, first seek the advisement of the utility operators certification advisory board prior to any application of enforcement made pursuant to this code of professional conduct.

C. The certified operator shall:

- (1)** protect the safety, health, and welfare of the public in the performance of the operator's duties;
- (2)** report to the proper authority or the department as necessary any conduct that would endanger the safety, health, and welfare of the public in regards to the operation of a public water supply system or public wastewater facility;
- (3)** submit objective and truthful information in all reports, statements, and testimony as required by state and federal law;
- (4)** conscientiously and proficiently operate and maintain public water supply systems and public wastewater facilities;
- (5)** act honestly, responsibly, ethically, and lawfully in a manner that enhances the reputation of the profession;
- (6)** avoid any conflict of interest that could influence the operator's professional judgment and promptly report any such conflict of interest to the operator's employer as necessary; and
- (7)** not falsify any academic or professional qualifications and not misrepresent such qualifications to the operator's employer, the department, or any member of the public.

[20.7.4.16 NMAC - N, 1-17-17]

20.7.4.17-20.7.4.19 [RESERVED]

20.7.4.20 CERTIFICATION GENERAL PROVISIONS:

A. It is unlawful to operate or allow the operation of a public water supply system or public wastewater facility unless the system or facility is operated by or under the supervision of a certified operator who meets or exceeds the appropriate level of certification required to operate the system or facility.

B. Separate certification is required for the operation of public water supply systems and public wastewater facilities.

C. The name(s) of the certified operator(s) employed by a public water supply system or public wastewater facility must be on file at all times with the department. A certified operator may be replaced with another certified operator of the required level at any time. The owner shall notify the department in writing of the name of the new certified operator within thirty days after the replacement of the certified operator.

D. The department may issue certifications restricted to distribution systems or collection systems.

[20.7.4.20 NMAC - Rp, 20 NMAC 7.4.200, 1-26-01; A, 11-15-06]

20.7.4.21 REQUIREMENTS FOR APPLICATION FOR CERTIFICATION:

A. Each applicant for certification as a certified operator shall:

(1) complete an application on forms furnished by the department; applications shall be submitted to the department not later than thirty days prior to the date of the examination;

(2) submit evidence that the applicant has reached the age of majority;

(3) pay a nonrefundable examination application fee, in advance, to the department; the examination application fee for certification as a SW, SWA, SWW, SWWA, WST1, WST2 and WWLT1 shall be \$25.00; the examination application fee for certification as a WS1, WS2, WS3, WS4, WW1, WW2, WW3, WW4, WWLT2, WWLT3, CS1, CS2, DS1, DS2 and DS3 shall be \$30.00;

(4) successfully meet the educational, experience and training requirements stipulated in 20.7.4.22 NMAC; all training programs must be approved by the department, and the department shall assign the number of training credits for each approved training program; and

(5) successfully pass the written examination for the level of certification being applied for.

B. Written examinations for certification shall be scheduled at such times and locations as the department deems appropriate. Written examinations shall be used in determining skill, knowledge, ability and judgment of the applicant. All written examinations will be graded and the applicants notified of the results. Examination papers will not be returned to the applicant, but may be reviewed by the applicant at the department.

[20.7.4.21 NMAC - Rp, 20 NMAC 7.4.201, 1-26-01; A, 11-15-06]

20.7.4.22 MINIMUM REQUIREMENTS FOR CERTIFICATION:

A. The minimum requirements for each level of certification are:

(1) SW, SWA, SWW, SWWA, WS1, WW1, WWLT1, DS1 and CS1 certification require high school graduation, or general equivalency diploma, one year of experience and successful completion of ten training credits;

(2) WS2, WW2, WWLT2, DS2 and CS2 certification require high school graduation, or general equivalency diploma, two years of experience and successful completion of thirty training credits;

(3) WS3, WW3, WWLT3 and DS3 certification require high school graduation, or general equivalency diploma, four years of experience and successful completion of fifty training credits;

(4) WS4 and WW4 certification require high school graduation, or general equivalency diploma, one year's experience, as appropriate, as a WS3 and WW3 certificate holder and successful completion of eighty training credits;

(5) WST1 certification requires high school graduation, or general equivalency diploma, and successful completion of five training credits;

(6) WST2 certification requires high school graduation, or general equivalency diploma, and successful completion of ten training credits.

B. Substitutions.

(1) In no case shall the actual experience be less than one year for any level except as in Subparagraph (d) of Paragraph (2) of Subsection B of this section.

(2) Education may be substituted for the basic requirements or used for training credits as follows. In no case may the same education serve both as a substitution for experience and as training credits except as provided in this section.

(a) One year of additional experience may be substituted for the high school graduation or general equivalency diploma requirement for all levels of certification except level 4.

(b) No more than one year (30 semester hours) of successfully completed college education in a non-related field may be substituted for an additional six months of the required experience.

(c) One year of an approved vocational school in the water and/or wastewater field may be substituted for only one additional year of the required experience.

(d) An associate's degree for a two-year program in an approved school in the water and/or wastewater field and six months of actual experience in that field (which may be accrued before, during, or after the school program) may be substituted for the requirements of any level up to and including level 2. An associate's degree for a two-year program in an approved school in the water and/or wastewater field and twelve months of actual experience in that field (which may be accrued before, during, or after the school program) may be substituted for the requirements of a level 3.

(e) Completion of at least three years of actual experience in the water and/or wastewater field plus high school diploma or equivalent, plus 15 semester hours of successfully completed college education directly related to the water or wastewater field may be substituted for any level up to and including level 3.

(f) A bachelor's degree for a major directly related to the water or wastewater field plus two years of actual experience in that field may be substituted for any level up to and including level 3.

(3) Full time water and wastewater laboratory experience may be substituted for operator experience in a respective field at a rate of 25 percent of the actual experience held.

[20.7.4.22 NMAC - Rp, 20 NMAC 7.4.202, 1-26-01; A, 11-15-06]

20.7.4.23 TEMPORARY CERTIFICATION:

A. If, after reasonable time and effort by an owner, a qualified operator cannot be employed, the system or facility may apply for temporary certification for the operator of a system or facility. In support of the application, the system or facility shall submit documentation demonstrating that it cannot employ a qualified operator and a schedule of compliance that includes the actions the system or facility will take to employ a certified operator, the date by which the system or facility will employ a certified operator, and a contingency plan that outlines the actions to be taken if the system's or facility's schedule fails to result in the employment of a certified operator.

B. A temporary certificate may be issued to an individual for a period not to exceed six months.

C. A temporary certificate may be extended to a maximum of 18 months if the operator is involved in a training program that will qualify the operator for the required level in that period.

D. An extension to the six-month temporary certification will require prior approval of a training program to ensure coverage of areas that are specific to the system, facility or individual's knowledge and skills.

[20.7.4.23 NMAC - Rp, 20 NMAC 7.4.203, 1-26-01; A, 10-17-01; A, 11-15-06]

20.7.4.24 CERTIFICATION WITHOUT EXAMINATION:

A. Certificates shall be issued without an examination to persons who, on July 1, 1993, were operators of a system or facility serving under 2,500 persons. Applications for certification under this subsection must have been made on or before December 1, 1993.

(1) Persons making application under this subsection must meet the basic requirements for certification outlined in 20.7.4.22 NMAC.

(2) Certificates issued under this subsection will be restricted to the particular system or facility for which the applicant is employed as it existed on July 1, 1993. Major changes in the type of treatment employed, or the size of the population served, that would significantly affect the operation of the system or facility shall cause any certificate issued under this subsection to become invalid. The limitations of any certificate issued under this subsection will be printed thereon.

(3) The department may deny any application for certification under this subsection if, in the opinion of the department, approval of the application could adversely affect the health and safety of the public or the environment.

(4) Application for certification under this subsection must be accompanied by a \$30.00 fee per certificate requested, payable to the department.

B. The department may issue certificates, at an equivalent level of certification, without examination to applicants who hold valid certificates or licenses issued by any state, territory, or foreign jurisdiction, provided that the requirements for issuance of such certificates or licenses are, in the opinion of the department, equal to or higher than those set forth in this part. Application for certification under this provision must be accompanied by a \$30.00 fee per certificate requested, payable to the department.

[20.7.4.24 NMAC - Rp, 20 NMAC 7.4.204, 1-26-01; A, 11-15-06]

20.7.4.25 RENEWAL OF CERTIFICATES:

A. All initial certifications shall expire on the last day of the certificate holder's birth month following the third anniversary of certification. All renewals shall be for three years. A renewal fee will be payable to the department for each renewal. Renewal fees shall be paid for each individual certification and shall be in accordance with the following fee schedule.

(1) The renewal fee for SW, SWA, SWW and SWWA certifications shall be \$20.00.

(2) The renewal fee for WS1, WS2, WW1, WW2, WST1, WST2, WWLT1, WWLT2, WWLT3, CS1, CS2, DS1 and DS2 certifications shall be \$25.00.

(3) The renewal fee for WS3, WW3, WS4, WW4 and DS3 certifications shall be \$30.00.

B. The department shall mail each holder of a certificate a renewal notice at least thirty days prior to the expiration date, mailed to his last address of record. Failure to

receive such notice shall not relieve the holder of his responsibility to apply for renewal prior to the expiration date.

C. Each certificate issued under 20.7.4.24 NMAC must be renewed at three-year intervals.

D. Renewal will require that each certificate holder be credited with having obtained thirty training credits in the three-year period preceding the date on which renewal application is due, except for renewals of WST1 certifications which require five hours of training credits and WST2 certifications which require ten hours of training credits. The thirty training credits must include at least ten training credits for approved training in the operation and maintenance of the same type of public water supply system or public wastewater facility as each certificate being renewed.

[20.7.4.25 NMAC - Rp, 20 NMAC 7.4.205, 1-26-01; A, 10-17-01; A, 11-15-06]

20.7.4.26 LAPSED CERTIFICATES:

A. Certificates, which have not been renewed in accordance with 20.7.4.25 NMAC, will be considered lapsed and invalid.

B. Lapsed certificates may be reinstated without penalty upon application within thirty days of the date of expiration. A lapsed certificate which has not been reinstated within the thirty-day period may be reinstated within one year of expiration date upon reapplication and payment of a \$10.00 per month penalty fee for each month or portion thereof beyond the expiration date. Reinstatement of lapsed certificate will also require satisfaction of all the renewal requirements of 20.7.4.25 NMAC.

C. If a lapsed certificate has not been reinstated within one year of its expiration date, re-examination will be required for reinstatement. All applicants for re-examination must meet the requirements of 20.7.4.21 and 20.7.4.22 NMAC of this part.

[20.7.4.26 NMAC - Rp, 20 NMAC 7.4.206, 1-26-01; A, 11-15-06]

20.7.4.27 SUSPENSION AND REVOCATION:

A. The department may suspend or revoke any or all certificate(s) held by a certified operator as provided for in Section 61-33-7 of the act.

B. In the event of a contemplated suspension or revocation of a certificate, the department shall notify the certificate holder by registered mail of the reason for such action. Within 20 days after receipt of the notice, the certificate holder may request in writing that a hearing be held by the department.

C. When the department contemplates the suspension or revocation of a certificate, the department shall serve upon the certificate holder a written notice containing a statement:

(1) that the department has sufficient evidence which, if not rebutted or explained, will justify the department in suspending or revoking the certificate;

(2) indicating the general nature of the evidence;

(3) that unless the certificate holder within twenty days after service of the notice deposits in the mail a certified return receipt requested letter addressed to the department and containing a request for a hearing, the department will take the contemplated action; and

(4) calling the certificate holder's attention to their rights under the Uniform Licensing Act, NMSA 1978, Section 61-1-8.

D. If the certificate holder does not mail a request for a hearing within the time and in the manner required by this section, the department may take the action contemplated in the notice and such action shall be final and not subject to judicial review.

E. If the certificate holder does mail a request for a hearing as required by this section, the department shall, within twenty days of receipt of such request, notify the certificate holder of the time and place of hearing, the name or names of the person or persons who shall conduct the hearing for the department and the statutes and regulations authorizing the department to take the contemplated action, which hearing shall be held not more than sixty nor less than fifteen days from the date of service of such notice.

F. Re-issuance of a revoked certificate shall be accomplished by reapplication as provided for in an original certificate. Any person whose certificate is revoked shall be ineligible for admission to any examination for certification for the entire period of revocation as set by the department.

G. A certificate may be suspended for a specified period of time to be determined by the department.

[20.7.4.27 NMAC - Rp, 20 NMAC 7.4.207, 1-26-01; A, 11-15-06]

20.7.4.28 ELIGIBILITY FOR OPERATOR TRAINING GRANT FUNDS:

Each applicant for operator training grant funds administered by the department shall.

A. Submit evidence satisfactory to the department that the recipient of the training:

(1) is a person who is a candidate for employment as a "certified operator" as defined under 20.7.4.7 NMAC of this part; or

(2) is a person in a supervisory role responsible for the management of a public water supply system or public wastewater facility; or

(3) is a person who is or will be involved in the instruction of operators.

B. Submit evidence satisfactory to the department that not less than ten percent of the training cost is provided by the employer of the utility operator; the cost of per diem and mileage may not be paid from grant funds but may be accounted in determining the training cost provided by the employer; and

C. Supply any other pertinent information deemed necessary by the department.

[20.7.4.28 NMAC - Rp, 20 NMAC 7.4.208, 1-26-01; A, 11-15-06]

20.7.4.29 UTILITY OPERATORS CERTIFICATION ADVISORY BOARD:

A. Pursuant to Section 61-33-4(G) of the act, a board shall be appointed by the commission to function with the commission to establish qualifications of operators, classify systems and facilities, adopt rules and advise the department on the administration of the act.

B. The commission shall properly notify the board of all matters brought before the commission to which the act is applicable.

C. The board shall consist of seven certified operators. The commission shall also appoint two certified operators to serve as alternates to board members in their absence. All alternates appointed prior to the effective date of this part will be allowed to serve out the remainder of their three-year terms.

D. Appointments to the board shall be for three-year terms. The commission shall appoint new board members at its first meeting of each fiscal year. The terms shall overlap so that no more than three terms shall expire in any one year.

E. At the first meeting of each fiscal year, the board shall elect from its membership a chairman, a vice chairman, and two members to sit as commission members on all matters to which the act is applicable.

F. A quorum shall consist of a least four members.

G. The duties of the board shall include:

(1) reviewing proposed rules, regulations and guidelines regarding the administration of the act for action by the commission including:

(a) the basis for classifying public water supply systems and public wastewater facilities;

(b) qualifications for the various classifications of operators;

(c) proposing criteria for the evaluation of the minimum number of certified operators needed to operate a public water supply system or public wastewater facility; and

(d) developing criteria for the classification of wastewater laboratory technicians based on the complexity of analytical work performed;

(2) reviewing proposed examinations for each level and type of certification;

(3) proposing criteria for the evaluation of applicant qualifications;

(4) reviewing applications for issuance of certificates by reciprocity or endorsement;

(5) proposing criteria for the evaluation of proposed training programs;

(6) making recommendations to the commission for replacement when a board vacancy occurs; and

(7) performing any other function in regard to the act as directed by the commission.

H. Any board member failing to attend three consecutive regular meetings is automatically removed as a member of the board. The commission may remove any member of the board for neglect of any duty required by law, for incompetence or for unprofessional conduct and shall remove any board member who violates any provision of the act. The commission shall fill any vacancies on the board.

PART 5: WASTEWATER FACILITY CONSTRUCTION LOANS

20.7.5.1 ISSUING AGENCY:

Water Quality Control Commission.

[20.7.5.1 NMAC - Rp, 20.7.5.1 NMAC, 12/16/2015]

20.7.5.2 SCOPE:

This part applies to financial assistance and actions pursuant to the Wastewater Facility Construction Loan Act.

[20.7.5.2 NMAC - Rp, 20.7.5.2 NMAC, 12/16/2015]

20.7.5.3 STATUTORY AUTHORITY:

Wastewater Facility Construction Loan Act, Sections 74-6A-1 to 15 NMSA 1978, as amended.

[20.7.5.3 NMAC - Rp, 20.7.5.3 NMAC, 12/16/2015]

20.7.5.4 DURATION:

Permanent.

[20.7.5.4 NMAC - Rp, 20.7.5.4 NMAC, 12/16/2015]

20.7.5.5 EFFECTIVE DATE:

December 16, 2015, unless a later date is cited at the end of a section.

[20.7.5.5 NMAC - Rp, 20.7.5.5 NMAC, 12/16/2015]

20.7.5.6 OBJECTIVE:

The objective of this part is to establish a program to provide low cost financial assistance to state agencies, local authorities, interstate agencies, and other qualified borrowers for the acquisition, construction, or modification of wastewater facilities or other eligible projects or activities pursuant to the act.

[20.7.5.6 NMAC - Rp, 20.7.5.6 NMAC, 12/16/2015; A, 09/29/2018]

20.7.5.7 DEFINITIONS:

As used in this part.

A. "Act" means the Wastewater Facility Construction Loan Act.

B. "Administrative fee" means a fee assessed and collected by the department from the qualified borrower on each loan and expressed as a percentage per year on the outstanding principal amount of the loan, payable by the borrower on the same date that principal and interest on the loan are due, for deposit in the clean water administrative fund.

C. "Base rate" means the highest loan interest rate.

D. "Clean Water Act" means the federal Clean Water Act of 1977 and its subsequent amendments or successor provisions.

E. "Clean water state revolving loan administrative fund" means a separate fund created outside the wastewater facility construction loan fund/clean water state revolving fund designated solely for the costs of administering the clean water state revolving loan fund, in accordance with the Clean Water Act. Money remaining in the fund at the end of any fiscal year shall not revert to the general fund but shall accrue to the loan administrative fund and shall be used explicitly for the purpose above.

F. "Commission" means the water quality control commission.

G. "Department" means the New Mexico environment department.

H. "Eligible project" means any project or activity that is eligible for funding assistance under Section 603(c) of the Clean Water Act, Section 1383 of Title 33 of the United States Code, as of January 1, 2018, including a wastewater facility project, a nonpoint source water pollution control project, and a watershed project that meet the criteria of the Clean Water Act.

I. "Final loan agreement" means an agreement executed by the qualified borrower and the department upon completion of the project in order to document the permanent financing of the final loan amount.

J. "Final loan amount" means the aggregate amount of the principal disbursed by the department to the qualified borrower during the construction of the eligible project, together with accrued and unpaid interest on the aggregate principal thereof.

K. "Financial assistance" means loans, combination loan/grants, the purchase or refinancing of existing state agency or local political subdivision obligations, loan guarantees, credit enhancement techniques to reduce interest on loans and bonds, bond insurance and bond guarantees or any combination of these purposes.

L. "Force account construction" means construction performed by the employees of a local authority rather than through a contractor.

M. "Fund" means the wastewater facility construction loan fund established in Section 74-6A-4 NMSA 1978 of the act.

N. "Local authority" means a municipality, intermunicipal agency, county, incorporated county, mutual domestic water consumers association as defined by the Sanitary Projects Act, sanitation district, water and sanitation district or any similar district, recognized Indian tribe, or other issuing agency created pursuant to a joint powers agreement acting on behalf of any entity listed in this subsection.

O. "Payment" means a disbursement from the fund directly to the qualified borrower.

P. "Priority list" means the list of eligible projects ranked according to the priority system pursuant to the act.

Q. "Priority system" means the system approved by the commission for ranking eligible projects for which financial assistance applications have been received pursuant to the act.

R. "Qualified borrower" means a creditworthy borrower with an identified and verifiable repayment source that is eligible for funding pursuant to the Clean Water Act, as of January 1, 2018, including a state agency, an interstate agency, and a local authority.

S. "State agency" means an agency or department of the executive branch of government.

T. "Wastewater facility" means a publicly owned system for treating or disposing of sewage or wastes either by surface or underground methods, including any equipment, plant, treatment works, structure, machinery, apparatus or land in any combination, that is acquired, used, constructed or operated for the storage, collection, reduction, recycling, reclamation, disposal, separation or treatment of water or wastes, or for the final disposal of residues resulting from the treatment of water or wastes, such as pumping and ventilating stations, facilities, plants and works, outfall sewers, interceptor sewers and collector sewers, and other real or personal property and appurtenances incidental to their use or operation.

[20.7.5.7 NMAC - Rp, 20.7.5.7 NMAC, 12/16/2015; A, 9/29/2018; A, 10/27/2020]

20.7.5.8 CONSTRUCTION:

This part shall be liberally construed to effectuate the purposes of the act. If any provision or application of this part is held invalid, the remainder, or its application to other situations or persons, shall not be affected.

[20.7.5.8 NMAC - Rp, 20.7.5.8 NMAC, 12/16/2015]

20.7.5.9 COMPLIANCE WITH OTHER REGULATIONS:

Compliance with this part does not relieve a person from the obligation to comply with other applicable state and federal regulations.

[20.7.5.9 NMAC - Rp, 20.7.5.9 NMAC, 12/16/2015]

20.7.5.10 ELIGIBILITY REQUIREMENTS FOR FINANCIAL ASSISTANCE:

A. Only qualified borrowers will be eligible for financial assistance from the fund.

B. The project must appear on the current priority list at the time of the financial assistance award.

C. To be eligible for financial assistance from the fund, qualified borrowers shall:

(1) meet the requirements of financial capability set by the department to assure sufficient revenue to operate and maintain the facility for its useful life, if applicable, and to repay the financial assistance;

(2) agree to operate and maintain the eligible project so that the project will function properly over its structural and material design life, if applicable;

(3) agree to maintain separate project accounts, to maintain project accounts properly in accordance with generally accepted accounting principles and to conduct an audit of the project's financial records;

(4) agree to provide a written assurance prior to construction, signed by an attorney, or other authorized representative, that the qualified borrower has or will acquire proper title, easements and rights-of-way to the property upon or through which the eligible project proposed for funding is to be constructed or extended;

(5) require the contractor of the eligible project to post a performance and payment bond in accordance with the requirements of Section 13-4-18 NMSA 1978 and its subsequent amendments and successor provisions;

(6) provide a written notice of project completion; and

(7) provide such information to the department as required in order to comply with the provisions of the Clean Water Act and state law.

D. Financial assistance shall be made only to qualified borrowers that establish one or more dedicated sources of revenue to repay the money received from the commission and to provide for operation, maintenance, and equipment replacement expenses.

[20.7.5.10 NMAC - Rp, 20.7.5.10 NMAC, 12/16/2015; A, 09/29/2018]

20.7.5.11 APPLICATION PROCEDURES FOR PRIORITY LIST PLACEMENT:

A. Applications for financial assistance shall be made by the qualified borrower on a form specified by the department.

B. Applicants for financial assistance shall provide the department with:

- (1) a description of the scope of work of the project;
- (2) a cost estimate of the project; and
- (3) a target date for initiation of construction.

C. The department will review the application for eligibility, and technical merits. The department will notify the qualified borrower of any inadequacies in the submittal. The qualified borrower may correct any inadequacies and resubmit the application.

D. Upon determination by the department that an application is eligible and complete, the application will be ranked utilizing the priority system and will be placed on the priority list.

[20.7.5.11 NMAC - Rp, 20.7.5.11 NMAC, 12/16/2015; A, 09/29/2018]

20.7.5.12 PRIORITY SYSTEM AND PRIORITY LIST:

A. Financial assistance shall only be made to qualified borrowers on the project priority list developed in accordance with the priority system as adopted by the commission.

B. The commission shall adopt a system for the ranking of projects for financial assistance.

C. The department shall prepare a priority list of applicants for financial assistance based on the priority system approved by the commission.

[20.7.5.12 NMAC - Rp, 20.7.5.12 NMAC, 12/16/2015; A, 09/29/2018]

20.7.5.13 ELIGIBLE AND INELIGIBLE FINANCIAL ASSISTANCE ITEMS:

A. Eligible items for financial assistance made from state-only funds include but are not limited to the costs of engineering reports, contracted engineering design, inspection of construction, special engineering services, start-up services, contracted construction, materials purchased or equipment leased for force account construction, land or acquisition of existing facilities. For financial assistance made from federal funds, eligible items are those identified pursuant to the Clean Water Act.

B. Financial assistance shall be made only to qualified borrowers that employ or contract with a New Mexico licensed professional engineer to provide and be responsible for engineering services on the project. Such services include, but are not limited to engineering reports, construction contract documents, supervision of construction, and start-up services.

C. Ineligible for financial assistance made with state-only funds items include:

- (1) the costs of water rights;
- (2) administrative costs;
- (3) fulfillment or partial fulfillment of requirements made of a subdivider by the provisions of the Land Subdivision Act or the New Mexico Subdivision Act;
- (4) force account construction; and
- (5) administrative fees.

[20.7.5.13 NMAC - Rp, 20.7.5.13 NMAC, 12/16/2015; A, 09/29/2018]

20.7.5.14 ADMINISTRATION OF THE LOAN PROGRAM AND FUND:

A. The loan program and fund is administered by the department as agent for the commission. Pursuant to Paragraph 10 of Subsection A of Section 74- 6A-9 NMSA 1978 of the act, the department shall develop new, and implement existing, policies, procedures and guidelines necessary and appropriate to implement the provisions of the act and the Clean Water Act.

B. The necessary administrative expenses required of the board, the commission, and the department to implement the provisions of the act will be appropriated from the fund.

C. The department may impose and collect a fee from each qualified borrower that receives financial assistance from the fund, which fee shall be deposited into the clean water state revolving loan administrative fund, and used solely for the costs of administering the fund as follows:

(1) an administrative fee may be assessed on all financial assistance provided after January 1, 1996, and will be assessed on the refinancing of financial assistance after October 1, 1993;

(2) if an administrative fee is assessed pursuant to Paragraph (1) of Subsection C of 20.7.5.14 NMAC above, the total administrative fee assessed shall not exceed five percent of the total loan amount; the fee will be assessed on the outstanding principal balance of the loan payable; these fees are due on the same dates the payment of principal and interest on the loans are due, and shall be charged to each borrower, unless waived from the requirement by the department; the department may determine, establish and revise from time to time, the precise amount of the administrative fee to be charged, based on the projected costs of administering the program and other revenue available to pay such costs; the administrative fee payments must be deposited in the clean water state revolving loan administrative fund as they are received; interest on the clean water state revolving loan administrative fund shall be transferred to the administrative fund as it is received; and

(3) an administrative fee of two percent of the unpaid principal balance of the refinanced loan will be assessed against the qualified borrower and shall be paid into the clean water state revolving loan administrative fund at the time of closing of the refinancing.

D. Financial assistance agreements will be prepared by the department and executed by the qualified borrower for the project which can be financed with available balances in the fund.

E. Repayment of the loan portion of the financial assistance shall begin no later than one year after completion of the project for which the loan was executed and shall be repaid in full no later than 30 years after completion of the project. All principal and interest on loan payments shall be deposited in the fund.

F. The interest rate for the loan portion of the financial assistance shall be the rate in effect when the loan agreement is executed. The interest rate shall not change during the term of the financial assistance unless refinanced in accordance with Subsection J. of 20.7.5.14 NMAC.

G. At the beginning of each state fiscal year, the commission may determine a base rate for the state fiscal year which is less than or greater than the current base rate.

H. Local authority interest rates and interest rate conditions shall be determined by the department and reported to the commission at the beginning of each state fiscal year.

I. The interest rate for a state agency shall be the lowest interest rate available above zero percent in Subsection H of Section 14 of 20.7.5 NMAC.

J. The interest rate for all other eligible borrowers will be the base rate at the time the loan agreement is executed.

K. A local authority may refinance the loan portion of the financial assistance if the local authority later qualifies for a reduced rate. The refinancing may only occur at or after the execution of a final loan agreement.

L. Financial assistance recipients shall comply with all applicable federal, state and local laws and regulations, including but not limited to:

- (1)** procurement;
- (2)** record keeping;
- (3)** accounting;
- (4)** audit and inspection;

- (5) occupational health and safety;
- (6) environmental review; and
- (7) non-discrimination.

M. In the event of default by the qualified borrower, the department as agent for the commission may enforce its rights by suit or mandamus or may utilize all other available remedies under state law.

[20.7.5.14 NMAC - Rp, 20.7.5.14 NMAC, 12/16/2015; A, 5/30/2017; A, 9/29/2018; A, 10/27/2020]

PART 6: WASTEWATER FACILITY CONSTRUCTION LOAN POLICIES AND GUIDELINES

20.7.6.1 ISSUING AGENCY:

New Mexico Environment Department.

[20.7.6.1 NMAC - Rp, 20.7.6.1 NMAC, 12/30/2015]

20.7.6.2 SCOPE:

These policies, procedures and guidelines apply to all construction projects funded in-part from funds within the wastewater facilities construction loan fund.

[20.7.6.2 NMAC - Rp, 20.7.6.2 NMAC, 12/30/2015]

20.7.6.3 STATUTORY AUTHORITY:

Department of Environment Act, NMSA 1978, 9-7A-6.F; Wastewater Facility Construction Loan Act, NMSA 1978, Sections 74-6A-1 to 15; and Water Quality Control Act, NMSA 1978, Sections 74-6-1 to 17.

[20.7.6.3 NMAC - Rp, 20.7.6.3 NMAC, 12/30/2015]

20.7.6.4 DURATION:

Permanent.

[20.7.6.4 NMAC - Rp, 20.7.6.4 NMAC, 12/30/2015]

20.7.6.5 EFFECTIVE DATE:

December 30, 2015, unless a later date is cited at the end of a section.

A. All references to HED 88-2 (EID) or to the New Mexico Wastewater Facility Construction Loan Fund Policies, Procedures and Guidelines in any other rule shall be construed as a reference to this part.

B. The amendment and replacement of HED 88-2 (EID) shall not affect any administrative or judicial enforcement action pending on the effective date of such amendment nor the validity of any financial assistance provided pursuant to HED 88-2 (EID).

[20.7.6.5 NMAC - Rp, 20.7.6.5 NMAC, 12/30/2015]

20.7.6.6 OBJECTIVE:

The objective of this part is to establish policies, procedures and guidelines in the administration of loans from the wastewater facility construction loan fund.

[20.7.6.6 NMAC - Rp, 20.7.6.6 NMAC, 12/30/2015]

20.7.6.7 DEFINITIONS:

As used in this part.

A. "Administrative fee" means a fee assessed and collected by the department from the state agency or qualified borrower on each loan with an interest greater than zero percent and expressed as a percentage per year on the outstanding principal amount of the loan, payable by the borrower on the same date that principal and interest on the loan are due, for deposit in the clean water administrative fund.

B. "Applicant" means a state agency or qualified borrower that meets the following criteria: (1) placement on the current fiscal year priority list, (2) financial capability to service a loan, to perform operation and maintenance, to maintain a replacement fund and debt service reserve fund, and (3) readiness to proceed.

C. "Borrower" means a state agency or qualified borrower whose application has been approved for eligibility and is ready to proceed to an interim loan agreement.

D. "Commission" or "WQCC" means the New Mexico water quality control commission.

E. "Department" or "NMED" means the New Mexico environment department.

F. "Event of default" means the borrower failed to make the complete annual payment of principal, plus interest and administrative fee when the same shall become due and payable, as identified in the repayment schedule of the final loan agreement.

G. "Final loan agreement" means a note issued by the borrower and the state upon completion of the project to document the permanent financing of the final loan amount in substantially the form as shown in the attachments.

H. "Final loan amount" means the aggregate amount of the principal disbursed by NMED to the borrower during the project, together with accrued interest on the aggregate principal thereof.

I. "Force account" means construction performed by the employees of a local authority rather than through a contractor.

J. "Fund" or "SRF" means the state water pollution control revolving fund pursuant to Title VI of the Clean Water Act.

K. "Interim loan agreement" means a note, in the form of a line-of-credit, issued by the borrower and the state at the beginning of the project in anticipation of the issuance of the final loan agreement upon completion of the project in substantially the form as shown in the attachments.

L. "Loan issuance" means execution of the final loan agreement and revised promissory note.

M. "Local authority" means any municipality, intermunicipal agency, county, incorporated county, water and sanitation district or any similar district, recognized Indian tribe, mutual domestic water consumers association as defined by the Sanitary Projects Act, or other issuing agency created pursuant to a joint powers agreement acting on behalf of any entity listed in this subsection.

N. "Operate and maintain" means all necessary activities including replacement of equipment or appurtenances to ensure the dependable and economical function of a wastewater facility in accordance with its intended purpose.

O. "Priority system" means the system for ranking eligible projects for which loan applications have been received pursuant to the Wastewater Facility Construction Loan Act.

P. "Priority list" means the list of eligible projects ranked according to the priority system pursuant to the Wastewater Facility Construction Loan Act.

Q. "Project" means the planning, design, construction, repair, extension, improvement, alteration, or reconstruction of the wastewater facilities or other eligible projects as listed in the Clean Water Act by the borrower as described in the loan application.

R. "Project completion" means the date that the Department has procedurally determined that the project, phase, or segment is completed.

S. "Project engineer" means the NMED staff engineer assigned to the project.

T. "Qualified Borrower" means any credit worthy borrower with an identified and verifiable repayment source that is eligible for funding pursuant to the Clean Water Act.

U. "State agency" means an agency or department of the executive branch of government.

V. "Wastewater facility" means a publicly owned system for treating or disposing of sewage or wastes either by surface or underground methods, including any equipment, plant, treatment works, structure, machinery, apparatus or land in any combination, that is acquired, used, constructed or operated for the storage, collection, reduction, recycling, reclamation, disposal, separation or treatment of water or wastes, or for the final disposal of residues resulting from the treatment of water or wastes, such as pumping stations, facilities, plants and works, outfall sewers, interceptor sewers and collector sewers and other real or personal property and appurtenances incidental to their use or operation. "Wastewater facility" also includes a nonpoint source water pollution control or Brownfield redevelopment project as eligible under the Clean Water Act.

[20.7.6.7 NMAC - Rp, 20.7.6.7 NMAC, 12/30/2015; A, 3/10/2020]

20.7.6.8 BACKGROUND:

The Department of Environment Act, Section 9-7A-6.D, NMSA 1978, provides authority to the secretary of environment to make and adopt reasonable and procedural rules and regulations as may be necessary to carry out the duties of the department and its division. The authority for the New Mexico environment department to provide loans to eligible applicants for the construction of wastewater facilities is provided in Sections 74-6A-1 to 15 NMSA 1978, Wastewater Facility Construction Loan Act and in Sections 74-6-1 to 17 NMSA 1978, the New Mexico Water Quality Act. The water quality control commission adopted regulations pursuant to the Wastewater Facility Construction Loan Act which establish a program to provide financial assistance to state agencies, local authorities, interstate agencies, and other qualified borrowers for the acquisition, construction, or modification of wastewater facilities or other eligible projects or activities. Title VI of the Federal Clean Water Act, as amended, authorizes the U.S. environmental protection agency (EPA) to make capitalization grants to states for deposit in the wastewater facility construction loan fund (state revolving fund - SRF). "Final Initial Guidance - State Water Pollution Control Revolving Fund" was published by EPA on January 28, 1988, which represents EPA's approach to implementation of Title VI. EPA updated its approach to implementation of Title VI with the "Interpretive Guidance for Certain Amendments in the Water Resources Reform and Development Act to Titles I, II, V, and VI of the Federal Water Pollution Control Act" published on January 6, 2015.

[20.7.6.8 NMAC - Rp, 20.7.6.8 NMAC, 12/30/2015; A, 3/10/2020]

20.7.6.9 CONSTRUCTION:

This part shall be liberally construed to carry out the purposes of the act. If any provision or application of this part is held invalid, the remainder or its application to other situations or persons shall not be affected.

[20.7.6.9 NMAC - Rp, 20.7.6.9 NMAC, 12/30/2015]

20.7.6.10 COMPLIANCE WITH OTHER REGULATIONS:

Compliance with this part does not relieve a person from the obligation to comply with other applicable state and federal regulations.

[20.7.6.10 NMAC - Rp, 20.7.6.10 NMAC, 12/30/2015]

20.7.6.11 GENERAL:

A. Direct loans from the fund may be offered for up to one hundred percent of total eligible project costs under state and federal statutes and regulations, subject to availability of loan monies.

B. Two types of loans are available: planning/design loans and construction loans.

(1) Planning/design loans. The maximum repayment period is limited to five years from the date of the interim loan agreement. If the borrower receives a construction loan for the same project, the borrower will be provided the option of re-amortizing any remaining principal balance plus accrued interest and administrative fees on the planning/design loan upon completion of the construction project, or may make payments under both loans.

(2) Construction loans. The length of the loan repayment period will not exceed 30 years or the expected life of the project improvements, whichever is less. Loans of lesser amounts will receive a shorter repayment period depending upon the borrower's ability to service the debt in a reduced time period. The construction loan may include the cost of design and may precede the design phase of the project if the design period is relatively short and if a reasonable estimate of construction costs is available. Since the interim loan agreement is essentially a line-of-credit for planning, design, and construction of the project the borrower must agree to complete the appropriate planning requirements prior to proceeding to the design and construction phases of the project.

C. A long-term commitment for future funding of a phased or segmented project will not be made; although, partial or phased funding for a project (without a guarantee of future funding) may be offered when deemed necessary to meet state water quality and financial assistance objectives.

D. Monies in the fund shall be loaned to eligible applicants as soon as possible after the monies become available. The fund will be managed so that a reserve is held available. The amount of the reserve will be dependent on the total size of the fund, including both available and committed monies. This reserve may be used for administration of the fund, investment, and limited-purpose contingencies, including increases subject to federal and state statutes.

E. In the event project costs exceed the estimates in the interim loan agreement, the borrower may request that NMED consider an increase to the loan. Such request will be evaluated with respect to available uncommitted monies in the fund, financial risk of the request, and other criteria set by NMED. NMED may follow any procedure deemed appropriate under the circumstances, including renegotiation of the loan agreement in accordance with federal and state statutes.

F. In the event project costs are less than the estimates in the interim loan agreement, then the loan amount shall be adjusted downward by a corresponding amount at the time the final loan agreement is executed following completion of the project.

G. A loan shall be declared in default if the full payment is not received on the due date. Should a loan be declared in default, NMED may initiate legal action to collect past due amounts. NMED may also notify other state agencies and may take actions to preclude the borrower from receiving grant or other financial assistance from state agencies until all delinquent amounts due on the loan have been paid. In addition to these provisions, technical assistance will be provided to a borrower with a loan in default to help assess the problem and advise on corrective actions needed to bring the loan current. Should these efforts fail to produce results and the borrower fails to adhere to the prescribed payment schedule, NMED will dispatch an interdisciplinary team (representatives of the general counsel, state auditor, and local government division, as needed) to conduct a comprehensive assessment of the borrower, including, but not limited to, financial condition, management practices, fiscal capacity, economic circumstances, and violations of the terms and conditions of the legally binding final loan agreement. Upon the report of this team, NMED shall take whatever actions deemed appropriate, including court actions, to resolve the outstanding obligation.

H. NMED may waive or adjust any rule relative to the administration of the wastewater facility construction loan fund where it is deemed that the waiver or adjustment is in the best interest of the state and the community, and the waiver or adjustment does not violate any state or federal statute or regulation.

[20.7.6.11 NMAC - Rp, 20.7.6.11 NMAC, 12/30/2015; A, 3/10/2020]

20.7.6.12 APPLICATION PROCEDURES FOR PRIORITY LIST PLACEMENT:

A. The commission at 20.7.5.11 NMAC specifies loan program application procedures. Applicants for loans shall submit a complete loan application to NMED on a

form specified by NMED. Applications may be submitted at any time; although, generally an annual funding cycle is followed.

B. NMED shall review the applications for eligibility, technical merits, and rank the applications based on the project priority system described in 20.7.5.12 NMAC, following NMED procedures for priority system and priority list.

[20.7.6.12 NMAC - Rp, 20.7.6.12 NMAC, 12/30/2015; A, 3/10/2020]

20.7.6.13 PRIORITY SYSTEM AND PRIORITY LIST PROCEDURES:

A. A project must be on the state priority list to receive a planning/design or construction loan. It is the policy of NMED to make loans to state agencies and qualified borrowers in order of priority on the current state priority list for loans to the extent reasonable considering the following:

- (1) willingness of an applicant to accept a loan;
- (2) financial capability of the applicant to service the loan, to perform operation and maintenance, and to maintain a debt coverage ratio as determined by NMED; and
- (3) readiness to proceed.

B. Procedures for developing and handling the annual priority system and priority list under the loan program generally follow existing procedures for the construction grants program which are briefly summarized here.

(1) A specific cap on an individual loan amount may be established by NMED each fiscal year so that the fund will be able to assist several communities each year. The cap may be set as a total of the loan funds available or as a specific dollar amount.

(2) This policy serves to maintain the flexibility of the fund each year by not excluding higher cost projects from participation, yet ensures that more than one worthwhile project will be funded each year.

(3) Fundable applicants will be notified by NMED following approval of the final priority list and a preplanning conference will be held with the applicant and its consulting engineer to identify the procedures and requirements which must be met prior to execution of an interim loan agreement.

[20.7.6.13 NMAC - Rp, 20.7.6.13 NMAC, 12/30/2015; A, 3/10/2020]

20.7.6.14 APPLICATION FOR FUNDABLE PROJECTS GUIDELINES - PROJECT PREPLANNING CONFERENCE:

At NMED's request, a preplanning conference will be scheduled. The applicants' representatives and possibly the applicants' consulting engineers will meet with the NMED project engineers to discuss the project. Items that may be discussed are:

- A. review of SRF policies, procedures, and guidelines;
- B. enforceable requirements;
- C. eligibility of applicant;
- D. appropriate technology;
- E. user charges in relation to financial capability of the applicant being able to repay the loan;
- F. environmental impacts;
- G. procurement of A/E services;
- H. the importance of public participation; (citizen involvement will be an asset in the development of plans that reflect the needs and values of your community; informing the public early on can result in issues being resolved before delay and additional costs occur; citizen support is necessary for capital and user charge systems to fund a project); and
- I. project schedule.

[20.7.6.14 NMAC - Rp, 20.7.6.14 NMAC, 12/30/2015]

20.7.6.15 GENERAL PROJECT ADMINISTRATIVE REQUIREMENTS:

A. Loan agreement.

(1) An interim loan agreement will be prepared by NMED and executed by the borrower for the project which can be financed with available loan funds and which has completed requirements set by NMED pursuant to the Clean Water Act, as amended, and the New Mexico Wastewater Facility Construction Loan Act. Projects which are not ready to proceed to the interim loan agreement stage within six months of allocation of available loan funds may be bypassed by projects lower on the priority list which are ready to proceed.

(2) The interim loan agreement contains several conditions and certifications including:

(a) certification that the borrower is a legal entity with authority to execute a loan agreement by ordinance; certification that a resolution designating signatory authority has been passed;

(b) copies of all executed contracts, subcontracts, agreements, and related amendments entered into by the borrower prior to the interim loan agreement, but related to this project;

(c) request for proposals (RFP) documentation and an engineering agreement, or letter of certificate if employing staff engineers.

B. Security interest.

(1) Upon execution of an interim loan agreement with NMED for a construction project and before any proceeds of the loan are paid out to the borrower, the borrower shall execute a promissory note for the principal amount of the interim loan agreement plus interest and administrative fee on the unpaid balance at the appropriate rate per annum, and may transfer title to the property upon which the facilities are to be constructed to NMED. In lieu of, or in addition to, the transfer of title requirement, the borrower may transfer whatever interest it possesses in the property upon which facilities are to be constructed, to NMED. In either case, the value of such property or interest so transferred shall be at least equal to the amount of the loan. All such titles and interest transferred to NMED shall be secured by title insurance, if applicable, the cost of which shall be paid by the borrower. NMED shall be named as primary beneficiary of all such title insurance policies. If title insurance for the property is not applicable or is not reasonably available, as determined by NMED, then the borrower shall provide a title company's opinion on the abstract of title to the property up to the time the property was acquired by the borrower for use as a wastewater facility.

(2) Upon repayment of the loan, such interest or title shall be reconveyed to the borrower. Where the transfer of title or interest in the property would preclude the obtaining of federal grants, or where such transfer of title or interest is inappropriate or is prohibited by or would be in violation of existing grant-in-aid agreements, NMED may waive the requirements of transfer of title or transfer of any interest in the property, and substitute therefore such other security of sufficient value it deems necessary such as an irrevocable pledge of revenue covenant by the borrower.

(3) After the borrower transfers title or its interest in the property to NMED as security, the borrower shall:

(a) continue to insure the property;

(b) be liable for all taxes and assessments; and

(c) refrain from making major alterations that destroy the value of the security, unless NMED gives prior approval.

C. Allowable and unallowable costs.

(1) Allowable costs shall be limited to those costs which are necessary, reasonable, and directly related to the efficient achievement of the objectives of the project. Costs incurred by the borrower for work performed on the project prior to execution of the interim loan agreement, but which received NMED prior approval, may be considered as allowable costs. The borrower must justify all expenditures for which it requests a disbursement of loan funds according to accepted NMED criteria and procedures. NMED may withhold disbursement of funds and may reclaim improperly documented disbursements until the borrower provides sufficient justification.

(2) All unallowable costs, including but not limited to overhead charges, administrative expenses, indirect costs, and all costs of borrower's employed inspectors and noneligible construction costs shall be paid by the borrower. The administrative fee shall not be included as principal in the loans and therefore considered an unallowable cost.

(3) The borrower agrees that it will implement, in all respects, the project outlined in the interim loan agreement.

(4) The borrower agrees to make no change in the project description without first submitting a written request to NMED and obtaining NMED approval of the required change.

D. Accounting. Funds received by the borrower from NMED and those funds which are contributed by the borrower shall be deposited in separate bank accounts or in a separate, identifiable ledger account. In addition, the borrower shall establish and maintain accounting procedures which will ensure strict accountability for all funds received and disbursements made by the borrower in connection with the interim loan agreement. NMED shall be responsible for examining the borrower's audited financial statements in accordance with the most recent circular on audits of states, local governments and non-profit organizations as published by the U.S. office of management and budget.

E. Records. The borrower shall maintain books, records, documents, and other evidence sufficient to reflect properly all costs of whatever nature claimed to have been incurred for the performance of this interim loan agreement. Such books, records, documents, ledgers, and other evidence shall be preserved and made available to NMED, state auditor, U.S. governmental accounting office, and U.S.E.P.A. office of the inspector general during the loan agreement period and for a period of six years from date of final repayment. If upon termination of the interim loan agreement, questions exist concerning proper expenditure of funds, then the borrower shall preserve and make available all books, records, documents, ledgers and other evidence relating to the interim loan agreement until such questions are settled and the borrower has received written notification to that effect from NMED.

F. Audit and inspection. The project sites and borrower facilities which are in any part the subject of the loan agreement, and borrower records as defined elsewhere herein, shall be subject at all reasonable times to inspection and audit by NMED, state auditor, U.S. governmental accounting office, and U.S.E.P.A. office of the inspector general during the period of the loan agreement and for a period of six years following final payment hereunder. All subcontracts let by the borrower, the cost of which are included in the interim loan agreement, shall include the substance of this audit and inspection clause.

G. Occupational health and safety. The borrower covenants that it will take affirmative action to ensure that the project shall be conducted in conformance with federal and state laws and regulations relating to occupational health and safety. In addition, the borrower shall assure that any contract entered into by the borrower for the performance of work on this project shall contain language by which the contractor and the borrower agree that authorized representatives of NMED occupational health and safety bureau shall have free access to the project site, and shall not be impeded in any way from performance of their duties.

H. Nondiscrimination.

(1) During the performance of the interim loan agreement, the borrower shall not discriminate against any employee or applicant for employment because of race, color, age, religion, sex, or national origin. The borrower shall take affirmative action to ensure nondiscrimination in employee recruitment advertising, hiring, upgrading, promotion, and selection for training (including apprenticeship).

(2) The borrower agrees to post in conspicuous places, available to employees and applicants for employment, notices setting forth the provisions of this clause. All solicitation or advertisement for employees placed by or on behalf of the borrower shall state that all qualified applicants will receive consideration without regard to race, color, age, religion, sex, sexual preference, or national origin. The borrower shall comply with all provisions of Title VI of the Civil Rights Act of 1964, Executive Order 11246, dated September 24, 1965, and all relevant rules, regulations, and orders of the U.S. secretary of labor. The borrower shall include the provisions of the clause in all project subcontracts.

I. Termination. NMED shall have the right to terminate the interim loan agreement if at any time in the judgement of NMED, the terms of the interim loan agreement have been violated or the activities described in the project description are not progressing satisfactorily. The borrower may terminate the interim loan agreement with sufficient reason. In either case, NMED shall establish following negotiations with the borrower a repayment schedule for the funds disbursed to the borrower. Such termination must be in writing.

J. Procurement. Sections 13-1-28 through 13-1-199 NMSA 1978 of, The Procurement Code, imposes civil and criminal penalties for its violation. In addition, New

Mexico criminal statutes impose felony penalties for illegal bribes, gratuities, and kick-backs.

[20.7.6.15 NMAC - Rp, 20.7.6.15 NMAC, 12/30/2015; A, 3/10/2020]

20.7.6.16 PROJECT PLANNING GUIDELINES:

A. Facilities planning consists of those necessary plans and studies that directly relate to treatment works or other eligible projects needed to comply with enforceable requirements of the Federal Clean Water Act and New Mexico Water Quality Act. Facilities planning will substantiate the need for the proposed facilities. It is a systematic evaluation of alternatives in regard to unique demographic, topographic, hydrologic, and institutional characteristics of the area that demonstrates that the selected alternative is cost effective in meeting the applicable effluent, groundwater, and surface water quality and public health requirements over the design life of the facility or other eligible project (while recognizing environmental and other nonmonetary considerations).

B. The most important outcome of the planning process is the selection of the best water pollution control alternative. The facilities plan (feasibility report or engineer's report) should include:

- (1)** A description of the proposed project and the complete system of which it is a part.
- (2)** A description of the best practicable water pollution control technology (BPWPCT).
- (3)** A cost-effective analysis of the project in meeting enforceable requirements over the design life of the project which includes a 30-year reserve capacity, if appropriate. Costs to be considered must include the present worth or equivalent annual value of all capital costs as well as operation and maintenance costs. Population forecasts should be consistent with the state needs survey.
- (4)** An evaluation of improved water quality attainable by upgrading the operation and maintenance ("O & M") and efficiency of existing facilities as an alternative to new construction.
- (5)** Cost information on total capital costs and annual O & M as well as estimated annual or monthly costs to residential and commercial users.
- (6)** A demonstration of the nonexistence or possible existence of excessive infiltration/inflow in an existing system.
- (7)** An adequate evaluation of the environmental impacts of alternatives.
- (8)** An evaluation of the water supply implications of the project.

(9) For the selected alternative, a concise description of relevant design parameters.

(10) A description of the proposed pretreatment program if applicable.

(11) A demonstration that the selected alternative is consistent with the applicable water quality management (WQM) plan.

(12) Demonstration that the borrower has the legal, institutional, managerial, and financial capability to ensure adequate construction and operation and maintenance of the treatment works throughout the service area. Financial capability to service this loan must also be demonstrated.

(13) Summary of public participation in the development of the facilities plan.

C. If any of the above information has been developed separately, it may be incorporated by reference rather than duplication.

[20.7.6.16 NMAC - Rp, 20.7.6.16 NMAC, 12/30/2015]

20.7.6.17 INTERIM PAYMENTS:

A. For satisfactory performance of all work and services required to be performed under the terms of the interim loan agreement, NMED shall reimburse the borrower its actual costs incurred. The borrower may submit requests for reimbursement as often as every month. NMED shall disburse funds to the borrower when NMED determines, in its sole discretion, that expenditures have been properly documented as provided for in general requirements for allowable and unallowable costs, accounting procedures, and record keeping. Copies of all pay request vouchers shall be submitted to NMED with request for payment. Copies of all requests shall be submitted on the appropriate form furnished by NMED and shall be accompanied by appropriate documentation to assure that those costs are correct and within the approved scope of work and attached budget form. Requests shall include expenditures to date by category.

B. NMED and the borrower will comply with the Retainage Act (Section 57-28-2 et. seq. NMSA 1978) if money is to be withheld during construction. The project will not be considered complete until the work as defined in the interim loan agreement has been fully performed and finally and unconditionally accepted by the borrower and NMED.

C. Interim payments will be made as the work progresses. Said payments will be based upon requests for payment prepared and certified by the borrower or the borrower's engineer to include value of work performed, materials on hand, and materials in place in accordance with the contract. Interim payments for engineering, inspection, legal services, or other approved services shall be made in accordance with the approved contracts or agreements.

D. Any portion of funds allocated to the project which remain unexpended after completion of the project shall revert to the wastewater facility construction loan fund.

E. The borrower shall furnish NMED with an estimated disbursement schedule at the beginning of the project.

[20.7.6.17 NMAC - Rp, 20.7.6.17 NMAC, 12/30/2015]

20.7.6.18 FINAL PAYMENT:

Upon completion of the project, final payment shall be made after final inspection has been conducted and the following have been provided, reviewed, and approved by NMED:

A. The borrower's certified request for payment prepared by the engineer and approved by the borrower.

B. A statement by the project engineer that work has been satisfactorily completed and the contractor has fulfilled all of the obligations required under the contract documents with the borrower, or if payment and materials performance bonds are "called," an acceptable close-out settlement to the borrower and contractors shall be submitted to NMED for review and approval.

C. Final engineering statement and recap of all engineering services, legal, administrative, and other eligible and ineligible expenses and a final request for disbursement.

D. Certification by the borrower that the labor standards contract provisions have been met.

E. Final project inspection report prepared by the engineer.

F. Record drawings and, if applicable, an operation and maintenance manual.

G. Final budget showing all funding sources utilized for costs incurred for the project by designated budget categories.

H. Written consent of the surety, if any, to final payment is prepared and submitted.

I. For projects which receive planning/design loans but do not proceed to the construction phase, completion of the project is defined as substantial completion of the project description in the interim loan agreement as determined by NMED.

[20.7.6.18 NMAC - Rp, 20.7.6.18 NMAC, 12/30/2015]

20.7.6.19 PROJECT DESIGN REQUIREMENTS:

Before beginning the design of the project, the following requirements must be completed and submitted by the borrower to NMED and approved by NMED:

A. Engineering report/facilities plan, which will include:

(1) When real property is to be acquired as part of the project and within the project period submit documentation of the acquisition, including legal description, the date the property was acquired, a certified copy of title to the property, and an appraisal report by a qualified appraiser.

(2) Cost effective analyses of project alternatives capable of meeting state and federal water quality and public health requirements.

(3) Consideration of present worth or equivalent annual value of all capital cost, operation, and replacement costs.

(4) Environmental information document (EID) in detail sufficient to determine categorical exclusion, finding of no significant impact (FONSI), or need for an environmental impact statement (EIS).

(5) Evidence of public participation.

(6) Information to demonstrate legal, managerial, and financial capability to properly operate and maintain the facility, maintain a repair and replacement reserve, and the ability to service this debt.

B. Proof of adequate property, liability, and fidelity insurance coverage for the project as shall be required by NMED. Fidelity insurance shall cover the borrower(s) employees who are responsible for handling loan monies.

C. Draft plan of operation which outlines staffing in compliance with the New Mexico Utility Operator Certification Act with start-up procedures that assure efficient operation and maintenance for the facilities.

D. Project schedule.

E. Proposed sewer use ordinance.

F. Proposed user charge system. The user charge system represents revenue for good operation and maintenance and replacement of worn-out equipment. One basis for the system is actual use which is measured in terms of water meter readings, measurement of sewer flow, etc. The rates are uniformly applied to each class (residential, commercial, or industrial) of user in proportions. If there is no existing user charge system, the first year rates should be based on the estimates of O & M costs and then adjusted annually thereafter to reflect actual O & M and replacement costs.

G. Number and name of NPDES permit and state groundwater permit, as applicable.

H. Sludge management plan which assures compliance with Sections 201 and 405 of the Clean Water Act, 40 CFR, Parts 35, 257 and 503, and New Mexico Water Quality Control Commission Groundwater Discharge Regulations 20.6.2 NMAC.

I. Design of the project shall be done by a consulting engineer who is registered in the state.

(1) Designs should adhere to sound construction practice using materials, methods, and equipment of proven dependability.

(2) Buildings shall be economical to operate and maintain and should be accessible to the handicapped.

(3) Design shall insure compliance with the NPDES permit or state groundwater discharge permit as appropriate.

(4) Safety shall be a prime consideration in design.

[20.7.6.19 NMAC - Rp, 20.7.6.19 NMAC, 12/30/2015]

20.7.6.20 PROJECT CONSTRUCTION REQUIREMENTS:

A. All plans and specifications and related addenda for the project must be submitted to NMED for review and approval before the project is advertised for sealed construction bids.

B. All work relating to easements, rights of way, other property rights, and financing provisions shall be completed prior to advertising for construction sealed bids.

C. Certified bid tabulation, recommendation of award, and evidence of full project financing should be submitted to NMED for review and approval prior to construction contract award.

D. Competitive bidding, in accordance with applicable state laws (including local wage determinations as provided for in Section 13-4-11 NMSA 1978), shall be used for awarding of contracts. Contracts shall be awarded to the responsible bidder who submits the lowest acceptable bid, or as provided for by state law.

E. Following NMED approval of the proposed award the borrower shall provide for each contract: (1) notice of award, (2) notice of preconstruction conference, (3) executed copies of previously approved contract form documents, and (4) notice to contractor to proceed. Performance, and payment bonds in the amount of one hundred percent of the project bid will be required of each contractor and copies of said

documents will be filed with NMED. A copy of bid bond (for five percent of the construction cost) for the selected contractor will be filed with NMED.

F. The contractor shall be required to submit a schedule for construction at the preconstruction conference for that contract.

G. The borrower shall submit all modifications to plans, specifications, and contract change orders to NMED's project engineer promptly for approval prior to implementation of such modification or change. NMED's decision shall be rendered promptly in writing. In cases necessitating immediate action, a verbal decision will be rendered by NMED and followed by a written notification.

H. The borrower shall arrange for the services of a qualified full-time resident project inspector, unless waived by NMED, during construction of the project. Borrower shall provide NMED with a summary of the inspector's qualifications and training to be approved by NMED prior to the preconstruction conference.

I. Notwithstanding those inspections performed by the borrower and its engineer, NMED shall have the right to examine all installations comprising the project, including materials delivered and stored on-site for use on the project.

J. After completion of the project, the borrower shall obtain from its engineer as built drawings for the project and certify to NMED that such drawings have been received.

K. The borrower shall provide for NMED review and approval, unless waived by NMED, an operation and maintenance manual for the project prior to ninety percent construction completion. The operation and maintenance manual shall conform to NMED requirements.

L. If this assistance is awarded for construction of collection lines, the borrower shall assure NMED that the existing population will connect to the collection system within a reasonable time after project completion. This shall be accomplished by adoption and annual review of an ordinance and user charge system requiring such connection to the system.

[20.7.6.20 NMAC - Rp, 20.7.6.20 NMAC, 12/30/2015; A, 3/10/2020]

20.7.6.21 FINAL LOAN AGREEMENT AND REPAYMENT POLICY:

Upon completion of the planning/design or construction project and after final disbursement of principal to the borrower:

A. NMED and borrower shall execute a final loan agreement which details the final loan amount plus accrued interest and administrative fees due to the date of the final loan agreement.

B. NMED and borrower shall execute a revision to the promissory note and real estate mortgage (if applicable) which were recorded at the county seat at the time of the initial loan agreement. The revision shall reflect final loan amount, plus accrued interest and administrative fees due.

C. NMED shall prepare a repayment schedule for the borrower which details principal, plus accrued interest and administrative fees due. The schedule shall fully amortize the loan within 30 years of project completion. In some cases the amortization shall be less than 30 years. NMED shall address each loan on a case-by-case basis. The borrower may prepay the loan or any portion thereof at any time. The repayment period for a planning/design loan shall not exceed five years. The first annual repayment of principal, interest and administrative fees shall be due within one year after completion of the project.

D. For borrowers with planning/design loans who subsequently receive a construction loan and who choose to reamortize (roll-over) the planning/design loan, repayments for the planning/design loan may be postponed until construction of the project is completed, at which time the principal plus accrued interest and administrative fees for the planning/design loan will be rolled into the final loan agreement for the construction loan with one subsequent repayment schedule.

E. NMED shall annually prepare and send to the borrower a notice of payment due.

F. The borrower shall make a check for the full amount of the notice payable to Wastewater Facility Construction Loan Fund, Attention:

Chief, Construction Programs Bureau

New Mexico Environment Department

P.O. Box 5469

Santa Fe, New Mexico 87502-6110

and mail in time to insure delivery by due date.

G. In the event of late payment or default by the borrower, NMED shall have the option to declare the principal, interest accrued and administrative fee on, any outstanding indebtedness forthwith due and payable automatically without notice or demand of any kind, whereupon the same shall become forthwith due and payable; and NMED may take legal recourse to implement collection.

[20.7.6.21 NMAC - Rp, 20.7.6.21 NMAC, 12/30/2015; A, 3/10/2020]

PART 7: REVIEW PROCEDURES FOR WASTEWATER CONSTRUCTION LOANS

20.7.7.1 ISSUING AGENCY:

New Mexico Environment Department.

[20.7.7.1 NMAC - Rp, 20.7.7.1 NMAC, 3/10/2020]

20.7.7.2 SCOPE:

These procedures apply to all construction or planning/design projects funded in-part from the Wastewater Facilities Construction Loan Fund which is derived from the federal capitalization grant except as provided in Section 11 of 20.7.7 NMAC.

[20.7.7.2 NMAC - Rp, 20.7.7.2 NMAC, 3/10/2020]

20.7.7.3 STATUTORY AUTHORITY:

Department of Environment Act, Subsection D of Section 9-7A-6 NMSA 1978; Wastewater Facility Construction Loan Act, Sections 74-6A-1 to 15 NMSA 1978; and Water Quality Act, NMSA 1978, Sections 74-6-1 to 17.

[20.7.7.3 NMAC - Rp, 20.7.7.3 NMAC, 3/10/2020]

20.7.7.4 DURATION:

Permanent.

[20.7.7.4 NMAC - Rp, 20.7.7.4 NMAC, 3/10/2020]

20.7.7.5 EFFECTIVE DATE:

March 10, 2020. This Part amends and replaces the Environmental Review Procedures for Projects Funded Through the Wastewater Facility Construction Loan Program, HED 88-3 (EID), filed September 22, 1988, as amended.

A. All references to HED 88-3 (EID) or to the Review Procedures for Projects Funded through the Wastewater Facility Construction Loan Program in any other rule shall be construed as a reference to this Part.

B. The amendment and replacement of HED 88-3 (EID) shall not affect any administrative or judicial enforcement action pending on the effective date of such amendment nor the validity of any financial assistance provided pursuant to HED 88-3 (EID).

[20.7.7.5 NMAC - Rp, 20.7.7.5 NMAC, 3/10/2020]

20.7.7.6 OBJECTIVE:

This Part establishes the New Mexico Environment Department's policy and procedures for the identification and analysis of the environmental impacts of construction of wastewater facilities funded in-part through loans from the Wastewater Facility Construction Loan Fund (which is New Mexico's SRF) and the preparation and processing of Environmental Impact Statements (EISs). This procedure shall be coordinated with and shall be consistent with NMED's environmental review responsibilities pursuant to the Governor's Executive Order 83-73, "State Clearinghouse Review Process."

[20.7.7.6 NMAC - Rp, 20.7.7.6 NMAC, 3/10/2020]

20.7.7.7 DEFINITIONS:

All terminology used in this Part will be consistent with the terms as defined in 40 CFR Part 1508 (the CEQ Regulations) except as provided in this Part.

A. "Applicant" means any state agency or other qualified borrower, which has filed an application for loan assistance from the SRF.

B. "Environmental Information Document" (EID) means any written analysis prepared by an applicant or contractor describing the environmental impacts of a proposed project. This document will be of sufficient scope to enable the responsible official to assess the environmental impacts of the proposed project;

C. "Department" or "NMED" means the New Mexico environment department.

D. "environmental review" means the process whereby an evaluation is undertaken by NMED to determine whether a proposed project may have a significant impact on the environment and therefore require the preparation of an Environmental Impact Statement (EIS);

E. "Loan" means a loan of funds by a written loan agreement from the SRF;

F. "Planning/design loan" means a loan which is issued for the purpose of preparation of a plan (including environmental review process) or preparation of design drawings and specifications for a potential construction project.

G. "Project" means a construction project which receives a loan for the purpose of building a publicly owned treatment works (POTW) or other eligible works.

H. "Record of Decision" (ROD) means a document prepared and issued by the NMED responsible official on the Environmental Impact Statement (EIS) which includes an identification of mitigation measures.

I. "Responsible Official" means the Secretary of the department who is authorized to fulfill the requirements of these procedures. The Chief of the Construction

Programs Bureau is delegated the day-to-day responsibilities for implementing these procedures.

J. "SRF" means the state revolving loan fund as established by the Wastewater Facility Construction Loan Act.

K. "State agency" means an agency or department of the New Mexico executive branch of government.

[20.7.7.7 NMAC - Rp, 20.7.7.7 NMAC, 3/10/2020]

20.7.7.8 BACKGROUND:

A. On June 10, 2014, the President signed into law the Water Resources Reform and Development Act of 2014. The U.S. Environmental Protection Agency (EPA) issued on September 18, 2014, Interpretive Guidance for Certain Amendments in the Water Resources Reform and Development Act to Titles I, II, V, and VI of the Federal Water Pollution Control Act (FWPCA). Section 5002 states the following: All CWSRF-funded projects involving the construction of treatment works, regardless of the source of the funding must undergo an environmental review. The [EPA] has consistently interpreted the statement "with assistance made available by a State water pollution control revolving fund authorized under this title" to mean that the specific requirement identified applies to all CWSRF-funded projects, not just equivalency projects. Consistent with this prior interpretation, any project that is considered a "treatment work" as defined in the FWPCA section 212, now incorporated in FWPCA Section 502(26), must comply with the FWPCA 511(c)(1) regardless of which eligibility it is funded under (see section 603(c)). A state may choose to apply its own "NEPA-like" state environmental review process for complying with the FWPCA 511(c)(1) provided that the elements in 40 CFR 35.3140(b)(1) through (5) are met.

B. The department, pursuant to Section 9-7A-6 NMSA 1978, revised and adopted the procedures as outlined at 40 CFR Part 6 - Procedures for Implementing the Requirements of the Council on Environmental Quality on the National Environmental Policy Act of 1969 (NEPA).

C. NMED is authorized by Subsection A of Section 74-6A-4 NMSA 1978 of the Wastewater Facility Construction Loan Act to establish and administer a program to make loans to state agencies and other qualified borrowers for construction or modification of wastewater facilities. In carrying out this responsibility, the Secretary of the department has adopted policies, requirements, procedures, and guidelines for administration of the SRF which includes the primary responsibility for conducting environmental reviews and evaluations of SRF projects. Legal remedies available to the public to challenge environmental review determinations and enforcement pursuant to this procedure are provided by appeal by an aggrieved party(s) of the determination or action through administrative channels to higher authorities within NMED.

D. The New Mexico Water Quality Act, Sections 74-6-1 to 17 NMSA 1978, created the Water Quality Control Commission (WQCC) which is the state water pollution control agency for all purposes of the federal Clean Water Act, as amended. The WQCC may take all action necessary and appropriate to secure to New Mexico and its political subdivisions the benefits of the federal act. The Water Quality Act identifies legal remedies available to it and its constituent agencies (including NMED) in enforcement of its regulations, and legal remedies available to the public regarding implementation of programs covered by the Water Quality Act which includes the SRF.

[20.7.7.8 NMAC - Rp, 20.7.7.8 NMAC, 3/10/2020]

20.7.7.9 CONSTRUCTION:

This Part shall be liberally construed to carry out the purposes of the Act. If any provision or application of this Part is held invalid, the remainder or its application to other situations or persons shall not be affected.

[20.7.7.9 NMAC - Rp, 20.7.7.9 NMAC, 3/10/2020]

20.7.7.10 COMPLIANCE WITH OTHER REGULATIONS:

Compliance with this Part does not relieve a person from the obligation to comply with other applicable state and federal regulations.

[20.7.7.10 NMAC - Rp, 20.7.7.10 NMAC, 3/10/2020]

20.7.7.11 OVERVIEW:

The process for conducting an environmental review of wastewater facility construction projects includes the following steps.

A. Consultation. The applicant is encouraged to consult with NMED early in project formulation or the facilities planning stage to determine whether a project is eligible for a categorical exclusion from the remaining substantive environmental review requirements of these procedures, to determine alternatives to the proposed project for evaluation, to identify potential environmental issues, and to determine the potential need for partitioning the environmental review process or the need for an Environmental Impact Statement (EIS).

B. Determining categorical exclusion eligibility. At the request of an applicant, NMED will determine if a project is eligible for a categorical exclusion in accordance with the submission of a loan application and other documents submitted to NMED to substantiate the request.

C. Documenting environmental information. If the project is determined to be ineligible for a categorical exclusion, or if no request for a categorical exclusion is made,

the potential applicant subsequently prepares an Environmental Information Document (EID) for the project.

D. In the event that the proposed action is of a limited nature, but does not qualify for a categorical exclusion, and that an EID had been approved previously by the EPA or NMED for wastewater facilities, the responsible official may determine to what extent updated information may suffice to provide the requisite environmental review of the project.

E. Assessing environmental impacts. NMED reviews the EID, prepares an environmental assessment (EA), and based upon an assessment of the environmental impacts of the proposed project NMED:

(1) Prepares and issues a Finding of No Significant Impact (FONSI); or

(2) Prepares or issues a Notice of Intent to prepare an original or supplemental EIS and Record of Decision (ROD).

F. Monitoring. The construction and post-construction operation and maintenance of the facilities are monitored to ensure implementation of mitigation measures identified in the FONSI or ROD.

[20.7.7.11 NMAC - Rp, 20.7.7.11 NMAC, 3/10/2020]

20.7.7.12 CONSULTING DURING THE PRELIMINARY ENGINEERING PROCESS:

The responsible official shall initiate the environmental review process early to identify environmental effects, avoid delays, and resolve conflicts. The environmental review process should be integrated throughout the preliminary engineering process. Potential applicants should consult with NMED early in the preliminary engineering process. The consultation should be conducted during the evaluation of project alternatives prior to the selection of a preferred alternative, to assist in resolving any identified environmental problems.

[20.7.7.12 NMAC - Rp, 20.7.7.12 NMAC, 3/10/2020]

20.7.7.13 COORDINATION WITH OTHER ENVIRONMENTAL REVIEW AND CONSULTATION REQUIREMENTS:

Pertinent laws, regulations, or executive orders should be included in a coordinated environmental review effort as outlined in the NMED Construction Programs Bureau State Environmental Review Process (SERP), EPA' general terms and conditions of the grant, and the EPA CWSRF guidance.

[20.7.7.13 NMAC - Rp, 20.7.7.13 NMAC, 3/10/2020]

20.7.7.14 REVIEW OF COMPLETED PRELIMINARY ENGINEERING REPORTS:

NMED shall review the completed preliminary engineering reports (PER) and EID in the development of alternatives and the selection of a preferred alternative. An adequate EID shall be an integral part of planning submitted to NMED. The EID shall be of sufficient scope to enable the responsible official to make determinations on requests for partitioning the environmental review process and for preparing an environmental assessment (EA).

[20.7.7.14 NMAC - Rp, 20.7.7.14 NMAC, 3/10/2020]

20.7.7.15 ENVIRONMENTAL ASSESSMENT:

The environmental assessment process shall cover all potentially significant environmental impacts. NMED personnel shall assess environmental impacts before PER approval. The EID shall address all elements in 40 CFR Part 6 and follow the SERP. In minimizing the adverse effects of the proposed action:

A. Structural and nonstructural measures, directly or indirectly related to the facilities plan, to mitigate or eliminate adverse effects on the human and natural environments shall be identified during the environmental review. Among other measures, structural provisions include changes in facility design, size, and location; nonstructural provisions include staging facilities, monitoring and enforcement of environmental regulations, and local commitments to develop and enforce land use regulations.

B. NMED shall not accept a PER, nor approve loan assistance for its implementation, if the applicant has not made, or agreed to make, changes in the project, in accordance with determinations made in a FONSI or the ROD for an EIS. NMED shall condition a loan or seek other ways to ensure that the applicant will comply with such environmental review determinations.

[20.7.7.15 NMAC - Rp, 20.7.7.15 NMAC, 3/10/2020]

20.7.7.16 FONSI/EID DETERMINATION:

The responsible official shall apply the criteria under Section 19 of 20.7.7 NMAC to the following:

A. A complete PER;

B. The EID; and

C. Other documentation deemed necessary by the responsible official adequate to make an EIS determination by NMED. Following an independent environmental review of the projects, the responsible official shall document in writing the reasons for his

determination to issue a FONSI or to prepare an EIS. The responsible official's determination to issue a FONSI or to prepare an EIS shall constitute final department action.

[20.7.7.16 NMAC - Rp, 20.7.7.16 NMAC, 3/10/2020]

20.7.7.17 PARTITIONING THE ENVIRONMENTAL REVIEW PROCESS:

A. Purpose. Under certain circumstances, the building of a component/portion of a wastewater treatment system may be justified in advance of completing all environmental review requirements for the remainder of the system(s). When there are overriding considerations of cost or impaired program effectiveness the responsible official may approve a loan for a discrete component of a complete wastewater treatment system(s). The process of partitioning the environmental review for the discrete component shall comply with the criteria and procedures described in subsection (B) of this section. In addition, all reasonable alternatives for the overall wastewater treatment works system(s), of which the component is a part, shall have been previously identified and each part of the environmental review for the remainder of the overall facilities plan shall comply with all requirements under Sections 14 and 15 of 20.7.7 NMAC.

B. Criteria for partitioning. The project component must:

- (1)** Immediately remedy a severe public health, water quality, or other environmental problem;
- (2)** Not foreclose any reasonable alternatives identified for the overall wastewater treatment works system(s);
- (3)** Not cause significant adverse direct or indirect environmental impacts including those which cannot be acceptably mitigated without completing the entire wastewater treatment system of which the component is a part; and
- (4)** Not be highly controversial.

C. Request for partitioning. The applicant's request for partitioning must contain the following:

- (1)** A description of the discrete component proposed for construction before completing the environmental review of the entire facilities plan;
- (2)** How the component meets the above criteria;
- (3)** The environmental information required by Sections 14 and 15 of 20.7.7 NMAC for the component; and

(4) Any preliminary information that may be important to NMED in an EA determination for the entire facilities plan.

D. Approval of requests for partitioning. The responsible official shall:

(1) Review the request for partitioning against all requirements of this procedure;

(2) If approvable, prepare and issue a FONSI;

(3) Include a loan condition prohibiting the building of additional or different components of the entire facilities plan for which the environmental review is not complete.

[20.7.7.17 NMAC - Rp, 20.7.7.17 NMAC, 3/10/2020]

20.7.7.18 FINDING OF NO SIGNIFICANT IMPACT (FONSI) DETERMINATION:

A. Criteria for producing and distributing a FONSI. If, after completion of the EA, NMED determines that an EIS will not be required, the responsible official shall issue a FONSI. The FONSI will be based on NMED independent review of the EID and any other environmental information deemed necessary by the responsible official, consistent with the requirements of Sections 14 and 15 of 20.7.7 NMAC. The FONSI shall list mitigation measures necessary to make the recommended alternative environmentally acceptable.

B. Proceeding with loan agreement.

(1) Once the issued FONSI becomes effective for the project, after a 30 day public comment period construction may proceed unless the responsible official determines that the project or environmental conditions have changed significantly from that which underwent environmental review.

(2) For an EID five or more years old, the responsible official shall re-evaluate the project, environmental conditions, and public views, and, prior to approval of loan agreement, either:

(a) Reaffirm - issue a public notice reaffirming the original environmental determination to proceed with the project without revising the EID;

(b) Supplement - require an update of the EID, issue and distribute a revised FONSI with the necessary public notice or

(c) Reassess - withdraw the FONSI and publish a notice of intent to produce an EIS, followed by the preparation, issuance, and distribution of the EIS and ROD.

C. Revisions to the Project.

(1) Statement of Findings. If the project scope of work is revised after FONSI has been issued, but the revision is determined by NMED to be a minor revision, NMED shall issue a Statement of Findings (SOF) documenting the reason for the revision and its impact, if any, on the environment. The SOF shall be distributed to parties who previously indicated interest in the project environmental review process.

(2) Amendment. If the project scope of work is revised after a FONSI has been issued, but the revision is determined by NMED to be significant, NMED shall issue an amendment to the FONSI with proper public notification as identified in Section 23 of 20.7.7 NMAC and shall provide for a public meeting to discuss the amendment.

[20.7.7.18 NMAC - Rp, 20.7.7.18 NMAC, 3/10/2020]

20.7.7.19 CRITERIA FOR INITIATING ENVIRONMENTAL IMPACT STATEMENTS:

Conditions requiring an EIS. The responsible official shall assure that an EIS will be prepared and issued when it is determined that the proposed project will cause any of the following conditions to exist, or when:

A. The proposed action would result in a discharge of treated effluent from a new or modified existing facility into a body of water and the discharge is likely to have a significant effect on the quality of the receiving waters.

B. The proposed action is likely to directly, or through induced development, have significant adverse effect upon local ambient air quality or local ambient noise levels.

C. The proposed action is likely to have significant adverse effects on surface water reservoirs or navigation projects.

D. The proposed action would be inconsistent with state or local government, or federally-recognized Indian tribe approved land use plans or regulations, or federal land management plans.

E. The proposed action would be inconsistent with state or local government, or federally-recognized Indian tribe environmental, resource-protection, or land-use laws and regulations for protection of the environment.

F. The proposed action is likely to significantly affect the environment through the release of radioactive hazardous or toxic substances, or biota.

G. The proposed action involves uncertain environmental effects or highly unique environmental risks that are likely to be significant.

H. The proposed action is likely to significantly affect national natural landmarks or any property on or eligible for the National Register of Historic Places.

I. The proposed action is likely to significantly affect environmentally important natural resources such as wetlands, significant agricultural lands, aquifer recharge zones, coastal zones, barrier islands, wild and scenic rivers, and significant fish or wildlife habitat.

J. The proposed action in conjunction with related federal, state or local government, or federally-recognized Indian tribe projects is likely to produce significant cumulative impacts.

K. The proposed action is likely to significantly affect the pattern and type of land use (industrial, commercial, recreational, residential) or growth and distribution of population including altering the character of existing residential areas.

[20.7.7.19 NMAC - Rp, 20.7.7.19 NMAC, 3/10/2020]

20.7.7.20 ENVIRONMENTAL IMPACT STATEMENT (EIS) PREPARATION:

A. Steps in preparing the EIS. In addition to the other requirements specified in this procedure, the responsible official will conduct the following activities:

(1) Notice of intent. If a determination is made that an EIS will be required, the responsible official shall prepare and distribute a notice of intent.

(2) Scoping. As soon as possible, after the publication of the notice of intent, the responsible official will convene a meeting of affected federal, state, and local agencies, or affected Indian tribes, the applicant and other interested parties to determine the scope of the EIS. As part of the scoping meeting, NMED will, as a minimum:

(a) Determine the significance of issues for and the scope of those significant issues to be analyzed in depth in the EIS;

(b) Identify the preliminary range of alternatives to be considered;

(c) Identify potential cooperating agencies and determine the information or analyses that may be needed from cooperating agencies or other parties;

(d) Discuss the method for EIS preparation and the public participation strategy;

(e) Identify consultation requirements of other environmental laws; and

(f) Determine the relationship between the EIS and the completion of the facilities plan and any necessary coordination arrangements between the preparers of both documents.

(3) Identifying and evaluating alternatives. Immediately following the scoping process, the responsible official shall commence the identification and evaluation of all potentially viable alternatives to adequately address the range of issues identified in the scoping process. Additional issues may be addressed, or others eliminated, during this process and the reasons documented as part of the EIS.

B. Methods for preparing EIS. After NMED determines the need for an EIS, it shall select one of the following methods for its preparation:

(1) By NMED contracting directly with a qualified consulting firm;

(2) By utilizing a third party method whereby the responsible official enters into "third party agreements" for the applicant to engage and pay for the services of a third party to prepare the EIS. Such agreement shall not be initiated unless both the applicant and the responsible official agree to its creation. A third party agreement will be established prior to the applicant's EID and eliminate the need for the document. In proceeding under the third party agreement, the responsible official shall carry out the following practices:

(a) In consultation with the applicant, choose the third party contractor and manage that contract;

(b) Select the consultant based on ability and absence of conflict of interest. Third party contractors shall execute a disclosure statement prepared by the responsible official signifying they have no financial or other conflicting interest in the outcome of the project; and

(c) Specify the information to be developed and supervise the gathering, analysis, and presentation of the information. The responsible official shall have sole authority for approval and modification of the statements, analyses, and conclusions included in the third party EIS.

[20.7.7.20 NMAC - Rp, 20.7.7.20 NMAC, 3/10/2020]

20.7.7.21 THE ENVIRONMENTAL IMPACT STATEMENT (EIS) FORMAT:

Preparers of EIS must conform with the requirements of 40 CFR, Part 1502, in writing the EIS. The format used for the EIS shall encourage good analysis and clear presentation of alternatives, including the proposed action, and their environmental, economic, and social impacts. The following standard format for EISs should be used unless the responsible official determines that there is a compelling reason to do otherwise:

- A. Cover Sheet;
- B. Executive Summary;
- C. Table of Contents;
- D. Purpose of and need for action;
- E. Alternatives including proposed action;
- F. Affected environment;
- G. Environmental consequences of the alternative;
- H. Coordination (includes list of agencies, organizations, and persons to whom copies of the EIS are sent);
- I. List of preparers;
- J. Index (commensurate with complexity of EIS);
- K. Appendices.

[20.7.7.21 NMAC - Rp, 20.7.7.21 NMAC, 3/10/2020]

20.7.7.22 MONITORING FOR COMPLIANCE:

A. General. The responsible official shall ensure adequate monitoring of mitigation measures and other loan conditions identified in the FONSI or ROD.

B. Enforcement. If the applicant fails to comply with loan conditions, the responsible official may consider applying the sanctions.

[20.7.7.22 NMAC - Rp, 20.7.7.22 NMAC, 3/10/2020]

20.7.7.23 PUBLIC, FEDERAL AGENCY, AND OTHER STATE AGENCY INVOLVEMENT:

A. NMED shall make diligent efforts to involve the public in the environmental review process consistent with program regulations and State Clearinghouse for Intergovernmental Review policies on public participation. The responsible official shall ensure that public notice is provided and shall ensure that public involvement is carried out following state policies and guidelines on public participation.

B. General. It is NMED's policy that certain public participation steps be achieved before NMED completes the environmental review process. At a minimum, potential

applicants shall conduct one public hearing prior to formal adoption of a facilities plan to discuss the proposed facilities plan and any needed mitigation measures.

C. Publication of notices of intent. As soon as practicable after a decision is rendered to issue a categorical exclusion or FONSI, or to prepare an EIS (but before the signing process), the responsible official shall send the notice of intent to interested and affected members of the public, and shall publish the notice of intent in a newspaper of general circulation in the community of the project.

D. The responsible official shall not take administrative action on the project for at least 30 calendar days after release of the notice of determination on the categorical exclusion or release of the FONSI to allow time for public response.

E. EIS. The responsible official shall follow, as applicable, procedures identified at 40 CFR, Part 6, Subpart B, for official filing requirements, availability of documents, commenting process, and supplements to the EIS.

F. Record of Decision. The responsible official shall disseminate the record of decision to those parties which commented on the draft or final EIS. One copy shall be submitted to EPA.

G. Scope. The responsible official may institute additional NEPA-related public participation procedures as are deemed necessary during the environmental review process.

[20.7.7.23 NMAC - Rp, 20.7.7.23 NMAC, 3/10/2020]

20.7.8.4 DURATION:

Permanent.

[11/30/95; 20.7.8.4 NMAC – Rn, 20 NMAC 7.8.I.103, Recompiled 11/27/01]

20.7.8.5 EFFECTIVE DATE:

November 30, 1995. This Part amends and replaces the Priority Rating System for Colonias Wastewater Construction Projects, WQCC 93-1, filed January 29, 1993, as amended.

A. All references to WQCC 93-1, or to the Priority Rating System for Colonias Wastewater Construction Projects in any other rule shall be construed as a reference to this Part.

B. The amendment and replacement of WQCC 93-1 shall not affect any administrative or judicial enforcement action pending on the effective date of such amendment nor the validity of any financial assistance provided pursuant to WQCC 93-1.

[11/30/95; 20.7.8.5 NMAC – Rn, 20 NMAC 7.8.I.104, Recompiled 11/27/01]

20.7.8.6 OBJECTIVE:

The objective of this Part is to establish a rating system to provide financial assistance to local authorities for wastewater projects in colonias.

[2/28/93; 11/30/95 NMAC – Rn, 20 NMAC 7.8.I.105, Recompiled 11/27/01]

20.7.8.7 DEFINITION:

"Total nitrogen" means the sum of nitrate nitrogen, nitrite nitrogen, organic nitrogen, and total ammonia nitrogen.

[2/28/93; 20.7.8.7 NMAC – Rn, 20 NMAC 7.8.I.108, Recompiled 11/27/01]

20.7.8.8-20.7.8.105 [RESERVED]

20.7.8.106 CONSTRUCTION:

This Part shall be liberally construed to effectuate the purposes of the Act. If any provision or application of this Part is held invalid, the remainder, or its application to other situations or persons, shall not be affected.

[2/28/93, 11/30/95; 20.7.8.106 NMAC – Rn, 20 NMAC 7.8.I.106, Recompiled 11/27/01]

20.7.8.107 COMPLIANCE WITH OTHER REGULATIONS:

Compliance with this Part does not relieve a person from the obligation to comply with other applicable state and federal regulations.

[2/28/93; 11/30/95; 20.7.8.107 NMAC – Rn, 20 NMAC 7.8.I.107, Recompiled 11/27/01]

20.7.8.108-20.7.8.199 [RESERVED]

20.7.8.200 SUBPART II FORMULA AND FACTORS:

A. Formula: The basic formula is: priority rating number = S (P) + Q + W

B. Factors: The formula factors S, P, Q and W are:

(1) S = severity of pollution or public health factor;

(2) P= population factor;

(3) Q = water quality preservation factor;

(4) W = absence or presence of community water system factor.

C. Severity of Pollution or Public Health Factor(s): This factor ensures that limited construction funds are utilized first to reduce significant existing water pollution or public health problems that cannot be solved by adequate operation and maintenance (O&M). Assignment of values shall be done by the New Mexico Environment Department (NMED) using data from water quality studies conducted by NMED, review and verification of data from other sources including data on adequacy of O&M, or environmental surveys conducted by NMED. Only one value (the highest) shall be assigned to a project.

(1) Surface Water: Discharges to surface water shall be rated on the basis of their demonstrated impact on the quality of a receiving stream, lake, or impoundment. Values will be assigned according to compliance with numerical or general standards established for the receiving water in the latest edition of "State of New Mexico Standards for Interstate and Intrastate Stream" 20 NMAC 6.1 [20.6.1 NMAC]. The value shall be:

(a) 10- if the discharge is causing violation of two or more stream standards (other than fecal coliform);

(b) 8- if the discharge is causing violation of one stream standard (other than fecal coliform);

(c) 6- if the discharge is causing violation of the stream standard for fecal coliform only;

(d) 4- if the discharge is not in compliance with NPDES permit discharge parameters;

(e) 3- if the project consists primarily of construction of a wastewater treatment facility and none of the above conditions can be demonstrated;

(f) 2- if the project consists primarily of construction of an interceptor or lift station and none of the above conditions can be demonstrated;

(g) 1- if the project consists primarily of construction of a collection system and none of the above conditions can be demonstrated.

(2) Groundwater: Discharges onto or below the surface of the ground shall be rated on the basis of demonstrated groundwater contamination or violation of groundwater protection regulations. If inadequate well construction is identified as a significant contributing cause of a contamination problem, points will be assigned in this category only when modification of the wastewater treatment method is the most cost-effective solution. The value shall be:

(a) 12- if a total nitrogen (as N) concentration greater than 10 mg/l is demonstrated in a public water supply well where a municipal discharge is the probable cause of this condition;

(b) 10- if a total nitrogen (as N) concentration greater than 10 mg/l is demonstrated in 10% of the private water supply wells within the zone of influence of a municipal discharge where the municipal discharge is the probable cause of this condition. For this category, only wells used primarily as a domestic water supply will be considered;

(c) 8- if, in an area of groundwater contamination where the probable cause of this condition is on-site waste disposal systems, total nitrogen (as N) concentrations greater than 10 mg/l are present in a public water supply well or in more than 10% of the private water supply wells in the total unsewered portion of the project planning area. When this value is assigned to projects consisting primarily of new interceptor or collection systems, only the area and populace to be serviced by the proposed interceptor or collection system shall be considered in establishing severity of pollution or public health (S) and population (P) factors.

(d) 6- if there is existing or projected noncompliance as determined by the NMED with standards for groundwater as that established by Water Quality Control Commission Regulation, 20 NMAC 6.2.3103 [20.6.2 NMAC] and a municipal discharge or septic systems are the probable cause of this noncompliance. Projected noncompliance with Water Quality Control Commission Regulation, 20 NMAC 6.2.3103

[20.6.2 NMAC] should be demonstrated through the use of accepted predictive hydrologic models used in conjunction with on-site monitoring data.

(e) 3- if the project consists primarily of construction of a wastewater treatment facility and none of the above conditions can be demonstrated.

(f) 2- if the project consists primarily of construction of an interceptor or lift station and none of the above conditions can be demonstrated.

(g) 1- if the project consists primarily of construction of a collection system and none of the above conditions can be demonstrated.

D. Population Factor (P): This factor is a multiplier based on the estimated population, Bureau of Census figures projected to current calendar year, of the wastewater facilities planning area.

For a population estimate of:	The factor shall be:
Less than 500	1.5
500 - 999	2.0
1,000 - 4,999	3.0
5,000 - or over	3.5

E. Water Quality Preservation (O): This factor considers the need for preservation of those surface waters in New Mexico which are the most suitable for recreation and support of desirable aquatic life or for groundwater which has an existing concentration of 10,000 mg/l or less of total dissolved solid (TDS), for present and potential future use as domestic and agricultural water supply, and to protect those segments of surface waters which are gaining because of groundwater inflow. Values shall be assigned only to existing surface or groundwater discharges and only one value (the highest) shall be assigned to each project. Designated uses listed in Subpart 2 of the latest edition of the "State of New Mexico Standards for Interstate and Intrastate Stream" 20 NMAC 6.1 [20.6.1 NMAC] shall apply. The value shall be:

(1) 8- if the discharge is to a stream with designated beneficial uses of primary contact recreation or high quality cold water fishery or if there is a reservoir or permanent pool within 25 miles downstream of the discharge; or if the discharge is to groundwater which lies within 20 feet of the surface or which will be negatively impacted by the discharge as evaluated by the NMED;

(2) 6- if the discharge is to a stream with a designated beneficial use of cold water fishery; or if the discharge is to groundwater which lies within 40 feet of the surface;

(3) 4- if the discharge is to a stream with designated beneficial uses of marginal cold water fishery or warmwater fishery; of if the discharge is to groundwater which lies within 60 feet of the surface; or;

(4) 2- if the discharge is to a stream with designated beneficial uses of secondary contact recreation or limited warmwater fishery; or if the discharge is to groundwater which lies below 60 feet of the surface.

F. Absence or Presence of Community Water System Factor (W): This factor considers the risks associated with the community's dependency on on-site domestic water wells which would normally be at greater risk of being contaminated by on-site liquid waste disposal systems than community water supply systems. The value shall be:

(1) 4- absence of community water system; or

(2) 0- presence of community water system.

[2/28/93, 11/30/95; 20.7.8.200 NMAC – Rn, 20 NMAC 7.8.II.200, 201, 202, 203, 204, 205, Recompiled 11/27/01]

20.7.8.206-20.7.8.299 [RESERVED]

PART 9: COLONIAS WASTE WATER GRANT POLICIES

20.7.9.1 ISSUING AGENCY:

New Mexico Environment Department.

[11/30/95; 20.7.9.1 NMAC - Rn, 20 NMAC 7.9.I.100, Recompiled 11/27/01]

20.7.9.2 SCOPE:

This Part applies to local authorities seeking financial assistance to alleviate unsanitary wastewater conditions in the border area colonias in New Mexico.

[2/28/93; 20.7.9.2 NMAC - Rn, 20 NMAC 7.9.I.101, Recompiled 11/27/01]

20.7.9.3 STATUTORY AUTHORITY:

Water Quality Act, NMSA 1978, 74-6-4.

[2/28/93, 11/30/95; 20.7.9.3 NMAC - Rn, 20 NMAC 7.9.I.102, Recompiled 11/27/01]

20.7.9.4 DURATION:

Permanent.

[11/30/95; 20.7.9.4 NMAC - Rn, 20 NMAC 7.9.I.103, Recompiled 11/27/01]

20.7.9.5 EFFECTIVE DATE:

November 30, 1995. This Part amends and replaces the Colonias Wastewater Construction Grant Program Policies and Procedures, NMED 93-1, filed January 29, 1993, as amended.

A. All references to NMED 93-1, or to the Colonias Wastewater Construction Grant Program Policies and Procedures in any other rule shall be construed as a reference to this Part.

B. The amendment and replacement of NMED 93-1 shall not affect any administrative or judicial enforcement action pending on the effective date of such amendment nor the validity of any financial assistance provided pursuant to NMED 93-1.

[11/30/95; 20.7.9.5 NMAC - Rn, 20 NMAC 7.9.I.104, Recompiled 11/27/01]

20.7.9.6 OBJECTIVE:

The objective of this Part is to establish policies to administer the Colonias Wastewater Construction Grant Program including compliance with Federal "cross-cutting authorities such as the National Environmental Policy Act, Davis-Bacon Act, etc. The New Mexico legislature created the Water Quality Control Commission ("Commission") to take all action necessary and appropriate to secure to the state the benefit of the Clean Water Act. NMSA 1978, 74-6-3.E. NMSA 1978, 74-6-4 states that the Water Quality Control Commission "may accept and supervise the administration of loans and grants from the federal government and from other sources, public or private, which loans and grants shall not be expended for other than the purpose for which provided." The Commission is an unfunded agency of the state. The Commission has no budget or funds allocated to it, rather, it is administratively attached to, and receives staff support from, the Environment Department. NMSA 1978, 74-6-3.F and 9-7A-6.B. The Commission, therefore, exercises its independent functions while the Department provides budgeting, record-keeping, and related administrative functions for the commission. NMED is one of the Commission's constituent agencies. In 1983 and again in 1986, the Commission delegated to the NMED authority to administer the Wastewater Construction Grants Program.

[2/28/93, 11/30/95; 20.7.9.6 NMAC - Rn, 20 NMAC 7.9.I.105, Recompiled 11/27/01]

20.7.9.7 DEFINITIONS:

A. "Applicant" means a local authority designated as a colonias or acting on behalf of one or more colonias that meets the following criteria:

- (1) placement on the current fiscal year priority list;
- (2) financial capability to perform operation and maintenance and to maintain a replacement fund; and
- (3) readiness to proceed.

B. "Colonias" means an identifiable unincorporated community that:

- (1) is situated within 100 kilometers (approximately 62 miles) of the United States -- Mexico border;
- (2) is designated by the State or county in which it is located as a colonia;
- (3) is determined to be a colonia on the basis of objective criteria, including lack of adequate potable water supply, lack of adequate sewage systems and lack of decent, safe and sanitary housing, and
- (4) was in existence before November 28, 1990.

C. "Commission" or "WQCC" means the New Mexico Water Quality Control Commission.

D. "Department" or "NMED" means the New Mexico Environment Department.

E. "Force account" means that the local authority provides the materials, equipment, or labor necessary to design or construct the project.

F. "Local authority" means any colonia designated as a colonia by the county within which it is situated or county, district, cooperative, association, sanitation district acting on behalf of one or more colonia.

G. "Operate and maintain" means all necessary activities including replacement of equipment or appurtenances to assure the dependable and economical function of a wastewater facility in accordance with its intended purpose.

H. "Priority system" means the system for ranking colonias wastewater construction projects for which grant applications have been received.

I. "Project" means the planning, design, construction, repair, extension, improvement, alteration, or reconstruction of the wastewater facilities by the grantee as described in the grant agreement.

J. "Project completion" means the date that operation of the completed works are initiated or capable of being initiated, whichever is earlier. This also applies to individual phases or segments.

K. "Project engineer" means the NMED staff engineer assigned to the project.

L. "Wastewater facility" means a publicly owned system for treating and/or disposing of waste, either by surface or underground methods, and includes any equipment, plant, treatment works, structure, machinery, apparatus, land, or any combination thereof, which is acquired, used, constructed, or operated for the storage, collection, reduction, recycling, reclamation, disposal, separation, or treatment of water or waste, or for the final disposal of residues resulting from the treatment of water or waste, and includes, but is not limited to: pumping and ventilating stations, facilities, plants and works, outfall sewer, interceptor sewers and collector sewers, and other real or personal property and appurtenances incident to their use or operation.

[1/29/93, 2/28/93, 11/30/95; 20.7.9.7 NMAC - Rn, 20 NMAC 7.9.I.108, Recompiled 11/27/01]

20.7.9.8-20.7.9.105 [RESERVED]

20.7.9.106 CONSTRUCTION:

This Part shall be liberally construed to effectuate the purposes of the Act. If any provision or application of this Part [20.7.9 NMAC] is held invalid, the remainder, or its application to other situations or persons, shall not be affected.

[11/30/95; 20.7.9.106 NMAC - Rn, 20 NMAC 7.9.I.106, Recompiled 11/27/01]

20.7.9.107 COMPLIANCE WITH OTHER REGULATIONS:

Compliance with this Part [20.7.9 NMAC] does not relieve a person from the obligation to comply with other applicable state and federal regulations. [11/30/95; 20.7.9.107 NMAC - Rn, 20 NMAC 7.9.I.107, Recompiled 11/27/01]

20.7.9.108 GENERAL POLICY DECLARATION:

A. Grants from the program may be offered for up to 100% of the total eligible project costs under state and federal statutes and regulations, subject to availability of grant monies. Two types of grants are available: planning grants and design/construction grants.

(1) Planning grants are intended to enable the applicant to identify: if the project is feasible, the most cost effective collection and treatment process, and reasonable design and construction costs. Generally, a grant increase would be provided for the design and construction phase if funds are available.

(2) The design/construction grant may include the cost of planning and design and may precede the design phase of the project if the planning and design periods are relatively short and if a reasonable estimate of construction costs is available.

B. A long-term commitment for future funding of a phased or segmented project will not be made; although, partial or phased funding for a project (without a guarantee of future funding) may be offered when deemed necessary to meet state water quality and public health objectives.

C. Grant funds shall be awarded to eligible applicants as soon as possible after the monies become available. The program will be managed so that a contingency reserve is held available. The amount of the reserve will be dependent on both available and committed monies. This contingency reserve may be used for administration of the program, and limited-purpose contingencies, including grant increases subject to federal and state statutes.

D. In the event project costs exceed the estimates in the grant agreement, the Grantee may request that the NMED consider an increase to the grant. Such requests will be evaluated in respect to available uncommitted monies in the program, and other criteria set by the NMED. The NMED may follow any procedure deemed appropriate under the circumstances.

E. In the event project costs are less than the estimates in the grant agreement, then the grant amount shall be adjusted downward by a corresponding amount at the time the final project closeout is executed following completion of the project.

F. The NMED may waive or adjust any rule relative to the administration of the program where it is deemed that the waiver or adjustment is in the best interest of the State and the community, and the waiver or adjustment does not violate any state or Federal statute or regulation.

[2/28/93, 11/30/95; 20.7.9.108 NMAC - Rn 20 NMAC 7.9.I.109]

20.7.9.109-20.7.9.199 [RESERVED]

20.7.9.200 PROCEDURES FOR PRIORITY LIST PLACEMENT:

A. Application:

(1) Applicants for a grant shall submit a complete application to the NMED on a form specified by the NMED. Applications may be submitted at any time; although, generally an annual funding cycle is followed.

(2) The NMED shall review the applications for eligibility, technical merit and financial capability, and rank the applications based on the project priority system

approved by the Commission WQCC and following NMED procedures for priority system and priority list.

B. Priority System and Priority List Procedures: Procedures for developing and handling the priority system and priority list under the Colonias Wastewater Construction Grant Program generally following existing procedures for the EPA/NMED construction grants program and State loan program which are briefly summarized here.

(1) A project must be on the current federal fiscal year priority list in order to receive a planning or design/construction grant. It is the policy of NMED to make grants to applicants in order of priority on the priority list to the extent reasonable considering the following:

(a) Willingness of a community to accept a grant;

(b) Financial capability of the community to perform operation and maintenance and to maintain a replacement fund; and

(c) Readiness to proceed.

(2) A specific cap of \$1,000,000 on an individual grant amount is established by the NMED so that the program will be able to assist several applicants.

(3) This policy serves to maintain the flexibility of the program by not excluding higher cost projects from participation, yet ensures that several worthwhile projects will be funded.

(4) Fundable applicants will be notified by the NMED following approval of the final priority list and a preplanning conference will be held with the applicant and its consulting engineer to identify the procedures and requirements which must be met prior to execution of the grant agreement.

[2/28/93, 11/30/95; 20.7.9.200 NMAC - Rn, 20 NMAC 7.9.II.200 and 201, Recompiled 11/27/01]

20.7.9.201-20.7.9.299 [RESERVED]

20.7.9.300 PROJECT AND ADMINISTRATIVE REQUIREMENTS:

A. Preplanning Conference: At NMED or the applicant's request, a preplanning conference will be scheduled. The applicant's representatives and possibly the applicant's consulting engineer will meet with the NMED project engineers to discuss the project. Items that may be discussed are:

(1) Review of Colonias Grant Program procedures;

- (2) Enforceable requirements, water quality and public health concerns;
- (3) Eligibility of project components;
- (4) Procurement of A/E services;
- (5) Appropriate technology;
- (6) User charges in relation to financial capability of applicant being able to operate and maintain the facility;
- (7) Environmental impacts;
- (8) The importance of public participation; (Citizen involvement will be an asset in the development of plans that reflect the needs and value of your community. Informing the public early on can result in issues being resolved before delay and additional costs occur. Citizen support is necessary for capital and user charge systems to fund a project.) and
- (9) Project schedule.

B. Grant Agreement: A grant agreement will be prepared by the NMED and executed by the grantee for projects which can be financed with available grant funds and which have completed requirements set by the NMED. Projects which are not ready to proceed to the grant agreement stage within six months of allocation of available funds will be bypassed by projects lower on the priority list which are ready to proceed. The grant agreement contains several conditions and certifications including:

- (1) Certification that the Grantee is a legal entity with authority to execute a grant agreement by ordinance. Certification that a resolution designating signatory authority has been passed.
- (2) Copies of all executed contracts, subcontracts, agreements, and related amendments entered into by the grantee prior to the grant agreement, but related to this project.
- (3) Request for proposals (RFP) documentation and an engineering agreement, or letter of certificate if employing staff engineers.

C. Allowable and Unallowable Costs:

(1) Allowable costs shall be limited to those costs which are necessary, reasonable, and directly related to the efficient achievement of the objectives of the project. Costs incurred by the Grantee for work performed on the project prior to execution of the grant agreement, but which received NMED prior approval, may be considered as allowable costs. The Grantee must justify all expenditures for which it

requests a disbursement of grant funds according to accepted NMED criteria and procedures. NMED may withhold disbursement of funds and may reclaim improperly documented disbursements until the Grantee provides sufficient justification.

(2) All unallowable costs, including but not limited to overhead charges, indirect costs, and noneligible construction costs shall be paid by the Grantee from sources other than the Colonias Wastewater Construction Grant Program.

(3) The Grantee agrees that it will implement, in all respects, the project outlined in the grant agreement.

(4) The Grantee agrees to make no change in the project description without first submitting a written request to the NMED and obtaining the NMED approval of the required change.

D. Accounting: Funds received by the Grantee from the NMED and those funds which are contributed by the Grantee shall be deposited in separate bank accounts or in a separate, identifiable ledger account. In addition, the Grantee shall establish and maintain accounting procedures which will ensure strict accountability for all funds received and disbursements made by the Grantee in connection with the grant agreement. The NMED shall be responsible for examining the Grantee's accounting procedures for purposes of this agreement, and their adequacy in accordance with generally accepted government accounting standards. These standards are usually defined as those contained in the U.S. General Accounting Office (GAO) publication, "Standards for Audit of Governmental Organizations, Programs, Activities, and Functions," dated 2/27/81.

E. Records: The Grantee shall maintain books, records, documents, and other evidence sufficient to reflect properly all costs of whatever nature claimed to have been incurred for the performance of this agreement. Such books, records, documents, ledgers, and other evidence shall be preserved and made available to the NMED, State Auditor, US Governmental Accounting Office, and USEPA Office of the Inspector General during the Grant agreement period and for a period of six (6) years from date of final payment. If upon termination of the grant agreement, questions exist concerning proper expenditure of funds, then the Grantee shall preserve and make available all books, records, documents, ledgers and other evidence relating to the grant agreement until such questions are settled and the Grantee has received written notification to that effect from NMED.

F. Audit and Inspection: The project sites and Grantee facilities which are in any part the subject of the grant agreement, and Grantee records as defined elsewhere herein, shall be subject at all reasonable times to inspection and audit by the NMED, State Auditor, US Governmental Accounting Office, and USEPA Office of the Inspector General during the period of the grant agreement and for a period of six (6) years following final payment hereunder. All subcontracts let by the Grantee, the cost of which

are included in the grant agreement, shall include the substance of this audit and inspection clause.

G. Occupation Health and Safety: The Grantee covenants that it will take affirmative action to ensure that the project shall be conducted in conformance with federal and state laws and regulations relating to occupational health and safety. In addition, the Grantee shall assure that any contract entered into by the Grantee for the performance of work on this project shall contain language by which the contractor and the Grantee agree that authorized representatives of the NMED Occupational Health and Safety Bureau shall have free access to the project site, and shall not be impeded in any way from performance of their duties.

H. Nondiscrimination:

(1) During the performance of the grant agreement, the Grantee shall not discriminate against any employee or applicant for employment because of race, color, age, religion, sex, handicap or national origin. The Grantee shall take affirmative action to ensure nondiscrimination in employee recruitment advertising, hiring, upgrading, promotion, and selection for training (including apprenticeship).

(2) The Grantee agrees to post in conspicuous places, available to employees and applicants for employment, notices setting forth the provisions of this clause. All solicitation or advertisement for employees placed by or on behalf of the Grantee shall state that all qualified applicants will receive consideration without regard to race, color, age, religion, sex, handicap, or national origin. The Grantee shall comply with all provisions of Title VI of the Civil Rights Act of 1964, Executive Order 11246, dated September 24, 1965, and all relevant rules, regulations, and orders of the U.S. Secretary of Labor. The Grantee shall include the provisions of the clause in all project subcontracts.

I. Termination: NMED shall have the right to terminate the grant agreement if at any time in the judgment of NMED the terms of the grant agreement have been violated or the activities described in the project description are not progressing satisfactorily. The Grantee may terminate the grant agreement with sufficient reason. Such termination must be in writing.

J. Procurement: The Procurement Code, NMSA 1978, Section 13-1-28 through 13-1-199, imposes civil and criminal penalties for its violation. In addition, New Mexico criminal statutes impose felony penalties for illegal bribes, gratuities, and kick-backs. The Grantee shall comply with 40 CFR Part 31, Federal regulations governing procurement which include requirements for the participation of minority and women owned businesses (MBE/WBEs).

K. Environmental Review: The Grantee shall comply with the requirements of the National Environmental Policy Act as implemented by the Environmental Review Procedures adopted by NMED.

L. Davis-Bacon Act Wage Rates: Federal wage rates provisions pursuant to 29 CFR, Part 5 shall be paid by the Grantee for construction projects in conformance to the prevailing wage rates established for the locality by the U.S. Department of Labor under the Davis-Bacon Act.

M. Federal Cross-Cutting Authorities: Several cross-cutting federal laws and authorities apply, by their own terms, to all activities assisted with federal funds. Colonias Wastewater Construction Grant projects are funded by a USEPA grant to NMED and therefore must comply with these federal "cross-cutters", three of which are described in the paragraphs above.

[2/28/93, 11/30/95; 20.7.9.300 NMAC - Rn, 20 NMAC 7.9.III.300 through 312, Recompiled 11/27/01]

20.7.9.301-20.7.9.399 [RESERVED]

20.7.9.400 PAYMENT REQUIREMENTS:

A. Interim Payments:

(1) For satisfactory performance of all work and services required to be performed under the terms of the grant agreement, NMED shall reimburse the Grantee its actual costs incurred. The Grantee may submit requests for reimbursement as often as every month. NMED shall disburse funds to the Grantee when NMED determines, in its sole discretion, that expenditures have been properly documented, as provided for in the general requirements for allowable and unallowable costs, accounting procedures, and record keeping. Copies of all pay request vouchers shall be submitted to the NMED with request for payment. Two copies of all requests shall be submitted on the appropriate form furnished by NMED and shall be accompanied by appropriate documentation to assure that those costs are correct and within the approved scope of work and attached budget form. Requests shall include expenditures to date by category.

(2) Unless good cause exists which would justify a higher amount, the NMED shall withhold five percent of payments due and owing a contractor from the Grantee until fifty percent of the contract has been billed. Unless good cause exists, the NMED shall not withhold any additional retainage from billings after fifty percent of the contract has been billed by the Grantee and approved by the NMED.

(3) Such retainage shall be held by NMED pending its final project inspection and acceptance, which shall be performed promptly and the results of which convey to the Grantee in writing. The project will not be considered complete until the work as defined in the grant agreement and the State approved plans and specifications has been fully performed and finally and unconditionally accepted by the Grantee and NMED.

(4) Interim payments will be made as the work progresses. Said payments will be based upon requests for payment prepared and certified by the Grantee or the Grantee's engineer to include value of work performed, materials on hand, and materials in place in accordance with the contract. Interim payments for engineering, inspection, legal services, or other approved services shall be made in accordance with the approved contracts or agreements.

(5) Any portion of funds paid by NMED to the Grantee which remain unexpended after completion of the project shall revert to Colonias Wastewater Construction Grant Program.

(6) The Grantee shall furnish the NMED with an estimated disbursement schedule at the beginning of the project.

B. Final Payment: Upon completion of the project, final payment shall be made after final inspection has been conducted and the following have been provided, reviewed, and approved by the NMED:

(1) The Grantee's certified request for payment prepared by the engineer and approved by the NMED.

(2) A statement by the project engineer that work has been satisfactorily completed and the contractor has fulfilled all of the obligations required under the contract documents with the Grantee, or if payment and materials performance bonds are "called," an acceptable close-out settlement to the Grantee and contractors shall be submitted to the NMED for review and approval.

(3) Final engineering statement and recap of all engineering services, legal, administrative, and other eligible and ineligible expenses and final request for disbursement.

(4) Certification by the Grantee that the labor standards contract provisions have been met.

(5) Final project inspection report prepared by the engineer.

(6) Record drawings and, if applicable, an operation and maintenance manual.

(7) Final budget showing all funding sources utilized for costs incurred for the project by designated budget categories.

(8) Written consent of the surety, if any, to final payment is prepared and submitted.

(9) For projects which receive planning grants but do not proceed to the design/construction phase, completion of the project is defined as substantial completion of the project description in the Grant agreement as determined by the NMED.

(10) The final payment to the consultant will be made after the one year performance period has ended and the granted has provided project performance certification.

[2/28/93, 11/30/95; 20.7.9.300 NMAC - Rn, 20 NMAC 7.9.III.400 and 401, Recompiled 11/27/01]

20.7.9.402-20.7.9.499 [RESERVED]

20.7.9.500 PROJECT PLANNING GUIDELINES, DESIGN REQUIREMENTS AND CONSTRUCTION REQUIREMENTS:

A. Planning Guidelines:

(1) Facilities planning consists of those necessary plans and studies that directly relate to the collection system and treatment works needed to comply with the Federal Clean Water Act and New Mexico Water Quality Act. Facilities planning will substantiate the need for the proposed facilities. It is a systematic evaluation of alternatives in regard to unique demographic, topographic, hydrologic, and institutional characteristics of the area that demonstrates that the selected alternative is cost effective in meeting the applicable effluent, groundwater and surface water quality, and public health requirements over the design life of the facility (while recognizing environmental and other nonmonetary considerations).

(2) The selection of the best wastewater and sludge management alternative is the most important outcome of the planning process.

(3) The facilities plan (feasibility report or engineer's report) should include:

(a) A description of the proposed project and the complete system of which it is a part.

(b) A cost-effective analysis of the project in providing wastewater services to meet existing Colonias residents' wastewater needs. Costs to be considered must include the present worth or equivalent annual value of all capital costs as well as operation and maintenance costs. Population forecasts should be consistent with county or state planning assessments.

(c) Cost information on total capital costs and annual O&M as well as estimated annual or monthly costs to residential and commercial users.

(d) An adequate evaluation of the environmental impacts of alternatives.

(e) For the selected alternative, a concise description that details:

(i) Relevant design parameters;

(ii) Estimated capital construction cost and operation and maintenance costs identifying sources of funds and local share; and

(iii) Cost impact on users.

(f) Demonstration that the Grantee has the legal, institutional, managerial, and financial capability to ensure adequate construction and operation and maintenance of the treatment works throughout the service area.

(g) Summary of public participation in the development of the facilities plan.

(4) If any of the above information has been developed separately, it may be incorporated by reference rather than duplication.

B. Design Requirements:

(1) Before beginning the design of the project, the following requirements must be completed and submitted by the Grantee to the NMED and approved by the NMED.

(a) Engineering Report/Facilities Plan: When real property is to be acquired as part of the project and within the project period submit documentation of the acquisition, including legal description, the date the property was acquired, a certified copy of title to the property, and an appraisal report by a qualified appraiser.

(b) Proof of adequate property, liability, and fidelity insurance coverage to the project as shall be required by NMED. Fidelity insurance shall be for Grantee employees who are responsible for handling grant monies.

(c) Draft plan of operation which outlines staffing in compliance with the New Mexico Utility Operator Certification Act with start-up procedures that assure efficient operation and maintenance for the facilities.

(d) Project schedule.

(e) Proposed sewer use ordinance.

(f) Proposed User Charge System: The user charge system represents revenue for good operation and maintenance and replacement of worn-cut equipment (O M & R). One basis for the system is actual use which is measured in terms of water

meter readings, measurement of sewer flow, etc. The rates are uniformly applied to each class (residential, commercial, or industrial) of user in proportions. If there is no existing user charge system, the first year rates should be based on the estimates of O&M costs and then adjusted annually thereafter to reflect actual O&M and replacement costs.

(g) Number and name of NPDES permit and/or state groundwater permit.

(h) Sludge management plan which assures compliance with 40 CFR Parts 257 and 503, and New Mexico Water Quality Control Commission Groundwater Discharge Regulations 20 NMAC 6.2. Process Design Manual -- Land Application of Sludge (EPA-625/1-83-016) & EPA BGM77 may be referenced in the development of the plan.

(2) Design of the project shall be done by a consulting engineer who is registered in New Mexico.

(a) Designs should adhere to sound construction practice using materials, methods, and equipment of proven dependability.

(b) Buildings shall be economical to operate and maintain and should be assessable to the handicapped.

(c) Designs shall insure nonviolation of the NPDES permit or state groundwater discharge permit as appropriate.

(d) Safety shall be a prime consideration in design.

C. Construction Requirements:

(1) All plans and specifications and related addenda for the project must be submitted to NMED for review and approval before the project is advertised for sealed construction bids.

(2) All work relating to easements, rights-of-way, other property rights, and financing provisions shall be completed prior to advertising for construction sealed bids.

(3) Certified bid tabulation, recommendation of award, and evidence of full project financing should be submitted to NMED for review and approval prior to construction contract award.

(4) Competitive bidding, in accordance with 40 CFR Part 31 and applicable state laws (including local wage determinations as provided for in NMSA 1978, 13-4-11), shall be used for awarding of contracts. Contracts shall be awarded to the responsive and responsible bidder who submits the lowest acceptable bid, or as provided for by 40 CFR Part 31.

(5) Following NMED approval of the proposed award the Grantee shall provide for each contract: 1) notice of award, 2) notice of preconstruction conference, 3) executed copies of previously approved contract form documents, and 4) notice to contractor to proceed. Performance, and payment bonds in the amount of 100 percent of the project bid will be required of each contractor and copies of said documents will be filed with NMED. A copy of bid bond (for 5% of the construction cost) for the selected contractor will be filed with the NMED.

(6) The contractor shall be required to submit a schedule for construction at the preconstruction conference for that contract.

(7) The Grantee shall submit all modifications to plans, specifications, and contract change orders to NMED's project engineer promptly for approval prior to implementation of such modification or change. The NMED's decision shall be rendered promptly in writing. In cases necessitating immediate action, a verbal decision will be rendered by NMED and followed by a written notification.

(8) The Grantee shall arrange for the services of a qualified resident project inspector, unless waived by NMED, during construction of the project. The Grantee shall provide NMED with a summary of the inspector's qualifications and training to be approved by NMED prior to the preconstruction conference.

(9) Notwithstanding those inspections performed by the Grantee and its engineer, NMED shall have the right to examine all installations comprising the project, including materials delivered and stored on site for use on the Project.

(10) After completion of the project, the Grantee shall obtain from its engineer and provide NMED record drawings for the project.

(11) The Grantee shall provide for NMED review and approval, unless waived by NMED, an operation and maintenance manual for the project prior to 90% construction completion. The operation and maintenance manual shall conform to NMED requirements.

(12) If this assistance is awarded for construction of collection lines, the Grantee shall assure NMED that the existing population will connect to the collection system within a reasonable time after project completion. This shall be accomplished by adoption and annual review of an ordinance and user charge system requiring such connection to the system.

(13) On the date one year after the completion of construction and initial operation of the project, the Grantee shall certify to NMED whether or not the project meets the project performance standards. If the Grantee cannot certify that the project meets such project performance standards, any failure to meet such project performance standards shall be corrected in a timely manner, to allow such affirmative certification, at other than Federal expense.

[2/28/93, 11/30/95; 20.7.9.500 NMAC - Rn, 20 NMAC 7.9.V.500 to 502, Recompiled 11/27/01]

20.7.9.503-20.7.9.599 [RESERVED]

PART 10: DRINKING WATER

20.7.10.1 ISSUING AGENCY:

Environmental Improvement Board.

[20.7.10.1 NMAC - Rp 20 NMAC 7.1.I.1, 12/04/2002]

20.7.10.2 SCOPE:

All persons who own or operate a public water system or for sections 200 and 201, any persons constructing a public water system project. This part shall apply to each public water system, unless the public water system meets all of the following conditions: (a) it consists of only distribution and storage facilities (and does not have any collection and treatment facilities); (b) it obtains all of its water from, but is not owned or operated by, a public water system to which such regulations apply; (c) it does not sell water to any person; and (d) it is not a carrier which conveys passengers in interstate commerce.

[20.7.10.2 NMAC - Rp 20 NMAC 7.1.I.2, 12/04/2002; A, 01/06/2013]

20.7.10.3 STATUTORY AUTHORITY:

NMSA 1978, Sections 74-1-6, 74-1-8, 74-1-10, 74-1-13 and 74-1-13.1.

[20.7.10.3 NMAC - Rp 20 NMAC 7.1.I.3, 12/04/2002; A, 04/16/2007; A, 01/06/2013]

20.7.10.4 DURATION:

Permanent.

[20.7.10.4 NMAC - Rp 20 NMAC 7.1.I.4, 12/04/2002]

20.7.10.5 EFFECTIVE DATE:

December 4, 2002, except where a later effective date is indicated in the history note at the end of a section.

[20.7.10.5 NMAC - Rp 20 NMAC 7.1.I.5, 12/04/2002; A, 04/16/2007]

20.7.10.6 OBJECTIVE:

The objective of Part 10 of Chapter 7 is to establish regulations for public water systems.

[20.7.10.6 NMAC - Rp 20 NMAC 7.1.1.6, 12/04/2002]

20.7.10.7 DEFINITIONS:

In addition to any other terms defined in 40 CFR Parts 141 and 143, the following terms, as used in this part shall have the following meanings.

A. "Definitions that begin with the letter "A." "Appurtenance" or "Appurtenances" means machinery, appliances, structures and other parts of the main structure necessary to allow the main structure to operate as intended, but not considered part of the main structure.

B. "Definitions that begin with the letter "B."

(1) "Bag filters" has the meaning defined in 40 CFR Part 141.

(2) "Best available technology" or "BAT" has the meaning defined in 40 CFR Part 141.

(3) "Bureau" means the drinking water bureau of the New Mexico environment department.

"CFR" means the code of federal regulations.

C. "Definitions that begin with the letter "C."

(1) "Cartridge filters" has the meaning defined in 40 CFR Part 141.

(2) "CFR" means the code of federal regulations.

(3) "Challenge test" means a study conducted to determine the removal efficiency (i.e., log removal value (LRV)) of a membrane material for a particular organism, particulate, or surrogate.

(4) "Community water system" has the meaning defined in 40 CFR Part 141.

(5) "Consecutive systems" has the meaning defined in 40 CFR Part 141.

(6) "Contaminant" has the meaning defined in 40 CFR Part 141.

(7) "Cross-connection" means any unprotected actual or potential connection or structural arrangement between a public water system and any other source or

system through which it is possible to introduce into any part of the public water system any contaminant or non-potable substance.

(8) "CT" or "CT_{calc}" has the meaning defined in 40 CFR Part 141 and under the definition of inactivation ratio.

D. "Definitions that begin with the letter "D."

(1) "Department" means the New Mexico environment department.

(2) "Direct integrity test" has the meaning defined in 40 CFR Part 141.

(3) "Disinfectant" has the meaning defined in 40 CFR Part 141.

(4) "Disinfectant contact time ("T" in CT calculations)" has the meaning defined in 40 CFR Part 141.

(5) "Disinfection" has the meaning defined in 40 CFR Part 141.

E. "Definitions that begin with the letter "E." **[RESERVED]**

F. "Definitions that begin with the letter "F."

(1) "Filtration" has the meaning defined in 40 CFR Part 141.

(2) "Finished water" has the meaning defined in 40 CFR Part 141.

G. "Definitions that begin with the letter "G."

(1) "Ground water under the direct influence of surface water (GWUDI)" has the meaning defined in 40 CFR Part 141.

(2) "Guidance document" means any manual or other document developed or adopted by the department for determining generally acceptable standards for construction and operation of public water systems.

H. "Definitions that begin with the letter "H." "Human consumption " means drinking, bathing, showering, cooking dishwashing, and maintaining oral hygiene. The term "bathing" means use of the water for personal hygiene purposes. The term "bathing" does not refer to situations such as (1) swimming in an open canal or (2) incidental, casual contact with water from an open canal in connection with outdoor activities such as agricultural work, canal maintenance, or lawn and garden care.

I. "Definitions that begin with the letter "I." "Inactivation ratio" with respect to viruses means the ratio that quantifies inactivation of viruses. The sum of the virus inactivation ratios, or total virus inactivation ratio shown as $\Sigma(\text{CT}_{\text{calc}})/(\text{CT}_{99.99})$. "CT or CT_{calc}" is the

product of "residual disinfectant concentration" (C) in mg/l determined before or after the first customer, and the corresponding "disinfectant contact time" (T) in minutes, i.e., "C" x "T." If a public water system applies disinfectants at more than one point prior to the first customer, it must determine the total percent inactivation or "total inactivation ratio." In determining the total inactivation ratio, the public water system must determine the residual disinfectant concentration of each disinfection sequence and corresponding contact time before any subsequent disinfection application point(s). "CT_{99.99}" is the CT value required for 99.99 percent (4-log) inactivation of viruses. CT_{99.99} for a variety of disinfectants and conditions appears in Tables D-7, D-9, D-11, D-13 and D-14 in the EPA Handbook for Optimizing Water Treatment Plant Performance Using the Composite Correction Program.

J. "Definitions that begin with the letter "J." **[RESERVED]**

K. "Definitions that begin with the letter "K." **[RESERVED]**

L. "Definitions that begin with the letter "L." **[RESERVED]**

M. "Definitions that begin with the letter "M."

(1) "Maximum contaminant level" has the meaning defined in 40 CFR Part 141.

(2) "Membrane filtration" has the meaning defined in 40 CFR Part 141.

(3) "Modified" or "modification" means a change, installation, addition, rehabilitation, or construction of a component of an existing public water system to substantially increase or decrease the system's capability to draw or supply water. For the purposes of this part, "modification" does not include routine maintenance.

N. "Definitions that begin with the letter "N."

(1) "Non-community water system" has the meaning defined in 40 CFR Part 141.

(2) "Non-public water source" means a water source that is not regulated as a public water source.

(3) "Non-public water system" means a water system that does not meet the definition of a public water system as defined in 40 CFR Part 141.

(4) "Non-transient non-community water system or NTNCWS" has the meaning defined in 40 CFR Part 141.

O. "Definitions that begin with the letter "O." **[RESERVED]**

P. "Definitions that begin with the letter "P."

(1) "Performance demonstration" means documentation that proves the efficacy of a treatment technology.

(2) "Person" has the meaning defined in 40 CFR Part 141.

(3) "Pilot study" means a specific type of performance demonstration in which the efficacy of a treatment system is tested by using a full scale model of the treatment system.

(4) "Plans and specifications" means the technical design drawings and precise standards of performance for construction work, materials and manufactured products certified by a registered professional engineer on behalf of the owner or operator of a public water system.

(5) "Point-of-entry treatment device (POE)" has the meaning defined in 40 CFR Part 141.

(6) "Point-of-use treatment device (POU)" has the meaning defined in 40 CFR Part 141.

(7) "Public water system project" or "project" means the construction of a new public water system, modification to an existing public water system, or conversion of a non-public water system to a public water system.

Q. "Definitions that begin with the letter "Q." [RESERVED]

R. "Definitions that begin with the letter "R."

(1) "Record drawings" means drawings that show detail or work as originally planned plus modifications and deviations to reflect actual construction, certified by a registered professional engineer on behalf of the owner or operator of a public water system.

(2) "Registered professional engineer " means a professional engineer registered in the state of New Mexico.

(3) "Regulated contaminant" means a contaminant for which an action level, maximum contaminant level or treatment technique is provided in 40 CFR Part 141.

(4) "Residual disinfectant concentration ("C" in CT calculations)" has the meaning defined in 40 CFR Part 141 and under the definition of inactivation ratio.

(5) "Routine maintenance" means activities associated with regularly scheduled and general upkeep of a building, equipment, machine, plant, appurtenance,

or system against normal wear and tear, including but not limited to those activities set forth in Subsection B of 20.7.10.200 NMAC.

S. "Definitions that begin with the letter "S."

(1) "Sample tap" means a device (e.g. sillcocks, storage tank hatches, sampling stations etc.) where access, pressure, and volume can be controlled to the extent that the sample collected is representative of the water quality.

(2) "Sanitary survey" means an onsite review of the water source, facilities, equipment, operation and maintenance of a public water system for the purpose of evaluating the adequacy of such source, facilities, equipment, operation and maintenance for producing and distributing safe drinking water. Pursuant to 40 CFR Part 141, a sanitary survey evaluates at least eight components: source; treatment; distribution system; finished water storage; pump facilities and controls; monitoring and reporting and data verification; system management and operation; and operator compliance with state requirements.

(3) "Secondary contaminant" means a contaminant listed in 40 CFR Part 143.

(4) "Secretary" means the secretary of the department, or an authorized representative.

(5) "Service connection" in addition to the meaning given in 40 CFR Part 141, means a pipe, hose, appurtenance, constructed conveyance or any other temporary or permanent connection between a public water system and a user. Service connection, as used in the definition of a public water system, does not include a connection to a system that delivers by constructed conveyance other than a pipe if: (1) the water is used exclusively for purposes other than residential uses (consisting of drinking, bathing, and cooking, or other similar uses); (2) the department determines that alternative water to achieve the equivalent level of public health protection provided by the applicable national primary drinking water regulation is provided for residential or similar uses for drinking and cooking; or (3) the department determines that the water provided for residential or similar uses for drinking, cooking, and bathing is centrally treated or treated at the point of entry by the provider, a pass-through entity, or the user to achieve the equivalent level of protection provided by the applicable national primary drinking water regulations.

(6) "State" means the New Mexico environment department when used in 40 CFR Part 141 and 40 CFR Part 143 in lieu of the meaning set forth in 40 CFR Part 141 and 40 CFR Part 143.

(7) "State act" means the Environmental Improvement Act, NMSA 1978, Section 74-1-1 et seq.

(8) "Storage facility" means a compartment used to accumulate the product water from a water treatment unit so that sufficient quantity, pressure, or both are available for intermittent periods of higher flow-rate water use.

(9) "Subpart H systems" has the meaning defined in 40 CFR Part 141.

(10) "Supplier of water" has the meaning defined in 40 CFR Part 141.

(11) "Surface water" has the meaning defined in 40 CFR Part 141.

T. "Definitions that begin with the letter "T." "Transient non-community water system or TWS" has the meaning defined in 40 CFR Part 141.

U. "Definitions that begin with the letter "U." "USEPA" means the United States environmental protection agency.

V. "Definitions that begin with the letter "V." **[RESERVED]**

W. "Definitions that begin with the letter "W." "Water hauler" means a person in the business of transporting by vehicle water intended for human consumption to at least 15 service connections or who regularly serves an average of at least 25 individuals daily at least 60 days out of the year.

X. "Definitions that begin with the letter "X." **[RESERVED]**

Y. "Definitions that begin with the letter "Y." **[RESERVED]**

Z. "Definitions that begin with the letter "Z." **[RESERVED]**

[20.7.10.7 NMAC - Rp 20 NMAC 7.1.I.103, 12/04/2002; A, 04/16/2007; A, 01/06/2013]

20.7.10.8 SUBMITTALS TO THE DEPARTMENT:

The submittal to the department of any application, notification, or other information required in this part shall be accomplished by submitting the required documents to the drinking water bureau within the department, unless otherwise specified.

[20.7.10.8 NMAC - N, 01/06/2013]

20.7.10.9 DOCUMENTATION REQUIRED FOR POPULATION DETERMINATION:

A. Owners or operators of community water systems shall document, and make available to the department upon request, a determination of the population served by the water system. The residential portion of the population shall be calculated by multiplying the number of service connections by the average household size in the county where the service connections are located. The most recent census conducted

by the U.S. census bureau shall be the source of the average household size data. Water haulers shall document, and make available to the department upon request, the number of residential accounts using water for human consumption.

B. Owners or operators of nontransient non-community water systems and transient non-community water system shall document, and make available to the department upon request, a determination of the population served (e.g., number of employees, number of students, restaurant seating capacity, number of patrons, etc.)

C. Owners or operators of water systems may present written documentation to the department for consideration of a population determination that differs from that described in Subsection A or B of this section.

D. The department will document, in writing, approval or disapproval of any population determination that differs from the population determination described in Subsections A or B of this section.

E. Owners or operators of public water systems shall make the information required in this section available to the department upon request within 45 days of the request.

[20.7.10.9 NMAC - N, 01/06/2013]

20.7.10.10-20.7.10.99 [RESERVED]

20.7.10.100 ADOPTION OF 40 CFR PART 141:

A. Except as otherwise provided in this section, the regulations of the USEPA set forth at 40 CFR Part 141 as amended from time to time, are hereby incorporated by reference into this part.

B. The term "state" means the New Mexico environment department when used in 40 CFR Part 141, in lieu of the meaning set forth in 40 CFR Part 141.

[20.7.10.100 NMAC - N, 12/04/2002; A, 04/16/2007; A, 10/15/2008; A, 10/28/2010; A, 01/06/2013]

20.7.10.101 ADOPTION OF 40 CFR PART 143:

A. Except as otherwise provided, the regulations of the USEPA set forth at 40 CFR Part 143 as amended from time to time, are hereby incorporated by reference into this part.

B. The term "state" means the New Mexico environment department when used in 40 CFR Part 143, in lieu of the meaning set forth in 40 CFR Part 143.

[20.7.10.101 NMAC - N, 12/04/2002; A, 04/16/2007; A, 10/15/2008; A, 01/06/2013]

[20.7.10.104 NMAC - N, 01/06/2013]

20.7.10.105-20.7.10.199 [RESERVED]

20.7.10.200 PUBLIC WATER SYSTEM PROJECTS:

A. Any person undertaking a public water system project shall submit an application to the department and shall not use the new or modified facility to produce, treat, store or distribute water for human consumption until the department has approved the application in writing except that:

(1) a person conducting the activities under Subsection B of this section need not submit an application or obtain department approval; and

(2) a person undertaking a water projects under Subsection C of this section must submit an application but may undertake the project without written approval from the department; the department will respond to each application within the period specified in Subsection K of Section 201 of this part.

B. The following activities are considered on-going operation and routine maintenance procedures. These activities are not considered public water system projects. There is no requirement to notify or seek approval of the department for these activities:

(1) pipeline leak repair;

(2) replacement of existing deteriorated pipeline, or addition of distribution pipeline, if such replacements or additions, or both, total less than 1,000 feet in any 60 calendar day period;

(3) entry into a drinking water storage facility for the purposes of cleaning and maintenance;

(4) the replacement of chemical feed pumps and associated appurtenances;

(5) the replacement of electrical or mechanical equipment in an existing public water supply system; and

(6) the replacement of equipment or pipeline appurtenances with the same type, size and rated capacity (fire hydrants, valves, pressure regulators, meters, service laterals, chemical feeders and booster pumps including deep well pumps).

C. Any person proposing to undertake the following public water system projects must give the department written notice by submitting an application; department approval is not required:

(1) a modification that involves only the replacement or construction of more than 1,000 feet of distribution lines, or of appurtenances, pump stations, or pressure regulating facilities for which the public water system employs, either by contract or direct employment, a registered professional engineer who is responsible for the project; or

(2) installation of a hypochlorination system, including an on-site hypochlorination generation system, in a public water system under the following conditions:

(a) water is supplied by ground water that is not under the direct influence of surface water;

(b) the owner or operator of the system employs, by contract or direct employment, a water operator certified in New Mexico at the level required in the Utility Operator Certification Regulations, 20.7.4 NMAC; and

(c) the certified operator is responsible for the project and certifies the inactivation ratio achieved by the hypochlorination system; the water system operator shall calculate the inactivation ratio and document the calculation on a form provided by the department.

D. In order to expedite future public water system projects, a public water system with the legal authority to adopt construction plans, details, and specifications by ordinance or resolution may submit a master design plan to the department for approval. Such plan must at a minimum contain:

(1) identification of existing system components and service area;

(2) a complete set of plans, details, and specifications for any component or facility to be eligible for a consideration under this section; and

(3) written verification that the plans, details, and specifications have been adopted by ordinance or resolution in such a manner as to require their use in all associated projects.

E. The approval requirement in Subsection A of Section 201 of this part is satisfied when a transmission, storage, or distribution project is proposed for implementation that

is certified to be in conformance with a master design plan previously approved by the department. For a project to be considered under this subsection, the owner or operator of the system must submit in lieu of the application materials in Section 201 of this part, a written summary of the project and certification that the project will be installed in accordance with the approved drawings and specifications, signed by a registered professional engineer who is responsible for the design, development, or maintenance of the public water system. A project request under this subsection shall include all of the documentation listed in this subsection.

[20.7.10.200 NMAC - Rp 20 NMAC 7.1.V.501 and 502, 12/04/2002; A, 04/16/2007; A, 01/06/2013]

20.7.10.201 APPLICATIONS FOR PUBLIC WATER SYSTEM PROJECT APPROVAL:

A. Any person proposing to undertake a public water system project for which an application is required under Section 200 of this part shall complete, sign and submit an application to the department as described in this section.

B. The application shall be made on forms furnished by the department. Applications for projects that require department approval shall include:

(1) one set of complete plans and specifications for the project; the plans and specifications must be prepared under the direct supervision of and sealed by a registered professional engineer;

(2) an engineering design summary which shall include engineering information that sets forth the basis of the project design;

(3) a plan to disinfect the system and sample for the presence of bacterial contamination following completion of the project and prior to providing water to the public; the criteria used by the department to review the adequacy of the plan shall include the current standards of the American water works association for disinfecting water mains, wells, water-storage facilities and water treatment plants; and

(4) any other relevant information requested by the department in order to determine compliance with this part.

C. For a project involving the construction of a new public water system or conversion of an existing water system to a public water system, an applicant proposing to undertake a public water system project shall submit, in addition to the materials set forth in Subsection B of this section documents demonstrating that the public water system has sufficient technical, managerial and financial capacity, such as a certified operator, testing equipment required to meet regulatory treatment techniques, ownership accountability, staffing and organization, revenue sufficiency, and credit worthiness and fiscal management.

D. For a project involving a storage facility or distribution facility, the applicant shall submit an application to the department no less than 30 days prior to advertising the public water system project for bid; or if the project is not advertised for bid prior to commencement of construction. In addition to the materials set forth in Subsection B and Subsection C of this section the application shall include:

- (1) a description of an adequate foundation for each storage facility; and
- (2) plans and specifications showing hydrants or blow-offs to provide for complete flushing or cleaning of the newly constructed facility if existing flushing appurtenances are insufficient.

E. For a project that involves construction of a new water source or conversion of an existing non-public source to a public source, in addition to the materials set forth in Subsection B and Subsection C, of this section the application shall include:

- (1) the appropriate state engineer office permit;
- (2) analytical results for regulated contaminants and secondary contaminants sampling prior to commencement of construction; this section requires sampling for those regulated contaminants and secondary contaminants that are monitored at the source or at the entry point(s).

F. For a project involving a ground water source that is not under the direct influence of surface water, the applicant shall submit an application to the department no less than 30 days: prior to advertising the public water system project for bid; or if the project is not advertised for bid prior to commencement of construction.

(1) In addition to the requirements in Subsection E of this section, a project involving a new ground water source that is not under the direct influence of surface water must include an inventory of existing and planned facilities and land uses that are actual or potential sources of contaminants of concern located within 1,000 feet of a water source.

(2) At a minimum, potential sources of contamination and land uses in Appendix K of the NMED *source water assessment and protection program report of a New Mexico water utility, July 2004 (template for ground water)* must be considered.

G. For a project involving a 40 CFR Part 141 Subpart H source, including an existing non-public surface water source or a non-public ground water under the direct influence of surface water source that is converted to a public 40 CFR Part 141 Subpart H source, the applicant shall submit:

- (1) an application to the department no less than 60 days: prior to advertising the public water system project for bid; or if the project is not advertised for bid prior to commencement of construction; and

(2) an inventory of existing and planned facilities and land uses that are actual or potential sources of contaminants of concern, located within the delineation specified in *source water assessment and protection program report of a New Mexico water utility, February 2004 (template for surface water)* New Mexico environment department, drinking water bureau.

H. For a project using a best available technology identified in 40 CFR Part 141 for treatment of chemical, radiological or microbiological contaminants, except for *Cryptosporidium*, the application shall be submitted to the department no less than 45 days; prior to advertising the public water system project for bid; or if the project is not advertised for bid prior to commencement of construction. Treatment using a point-of-entry treatment device (POE) or a point-of-use treatment device (POU) will be considered only for treatment of chemical contaminants, except nitrate, nitrite and chlorine dioxide, within systems serving not more than 100 service connections.

I. For a project involving treatment of *Cryptosporidium* or a project involving treatment of chemical, radiological or microbiological contaminants that uses a technology other than those identified in 40 CFR 141 as a best available technology, the applicant shall submit an application to the department no less than 120 days: prior to advertising the public water system project for bid; or, prior to commencement of construction. The application shall include a performance demonstration. A pilot study submitted as a performance demonstration shall have been conducted by a field testing organization in accordance with Subsection J of this section.

(1) The following requirements apply to each surface water project involving treatment for *Cryptosporidium*:

(a) The application shall include a test protocol to demonstrate the performance of *Cryptosporidium* treatment meeting the requirements of the Long Term 2 Enhanced Surface Water Treatment rule, 40 CFR Part 141 Section 715 (microbial toolbox options for meeting *Cryptosporidium* treatment requirements).

(b) For a project involving treatment of *Cryptosporidium* using bag filters or cartridge filters or membrane filtration, the application shall also include a challenge test demonstrating performance, pursuant to 40 CFR Section 141.719(a)(2) through (a)(10) or (b)(2) as applicable.

(c) For a project involving treatment of *Cryptosporidium* using membrane filtration, pursuant to 40 CFR Section 141.719(b)(3), the application shall include documentation of the log removal that can be verified by a direct integrity test in addition to the challenge required in Paragraph (2) of Subsection I of Section 201 of this part.

(d) If the project will be conducted by a public water system that serves at least 10,000 people:

(i) turbidity shall be measured;

(ii) a surface water microscopic particulate analysis (MPA) shall be conducted; and

(iii) removal efficiencies for *E. coli* (analyzed by an enumeration method) and *Cryptosporidium* shall be determined; and

(iv) plant detention time shall be factored into the sample collection.

(e) If the project will be conducted by a public water system that serves fewer than 10,000 people:

(i) removal efficiencies for *E. coli* shall be determined (*E. coli* shall be analyzed by an enumeration method); and

(ii) plant detention time shall be factored into the sample collection.

(2) For all contaminants other than *Cryptosporidium*, the application shall include a test protocol developed by the "USEPA environmental technology verification program" for demonstrating treatment performance of chemical, radiological or microbiological contaminants. The department will also consider other test protocols.

J. A pilot study submitted pursuant to Subsection I of Section 201 of this part must be or must have been conducted by a field testing organization or person with the following qualifications:

(1) a registered professional engineer with experience in conducting drinking water pilot studies who will oversee field testing operations; or

(2) experience in conducting drinking water pilot studies for a state or an organization conforming to the requirements of that state; or

(3) experience in preparing and executing a project-specific QA/QC plan (i.e., a quality assurance project plan (QAPP)) for a drinking water treatment project or pilot study under the direction of the USEPA, water research foundation, national water research institute or other relevant organization.

K. Incomplete applications will not be reviewed. The applicant will be notified within 15 days of the need to submit a complete application. The department shall either approve an application, approve an application subject to conditions, or deny an application, and shall notify the applicant of such determination. The department shall not condition or in any manner require as part of an approval that the applicant use a specific process or type of equipment.

(1) For a project involving a storage facility, or for a project involving a distribution facility, the department shall notify the applicant of the determination within 30 days after receipt of the complete application.

(2) For a project involving ground water sources that are not under the direct influence of surface water, the department shall notify the applicant of the determination within 30 days after receipt of the complete application.

(3) For a project involving a surface water source or ground water under the direct influence of surface water, the department shall notify the applicant of the determination within 60 days after receipt of the complete application.

(4) For a project using a best available technology identified in 40 CFR Part 141 for treatment of a chemical, radiological or microbiological contaminant, except for *Cryptosporidium*, the department shall notify the applicant of the determination within 45 days after receipt of the complete application.

(5) For a project involving treatment of *Cryptosporidium* or for a project involving treatment of a chemical, radiological or microbiological contaminant that use a technology other than those identified in 40 CFR Part 141 as a best available technology, the department shall notify the applicant of the determination within 120 days after receipt of the complete application.

L. If, in the judgment of the department, exigent circumstances warrant a waiver of the requirement for approval of an application prior to construction, the department may permit a prospective applicant to commence construction of a public water system project upon receipt of written permission from the department. The owner or operator of the public water system must submit an application within 30 days of receipt of the permission.

M. The department may deny an application for a public water system project, in whole or in part, if the department determines that:

(1) any maximum contaminant level (MCL) or treatment technique set forth at 40 CFR Part 141 will not be met after completion of the project;

(2) any other requirement of 20.7.10 NMAC will not be met after completion of the project;

(3) the design of the project is inconsistent with generally acceptable standards for construction of public water systems and their components including, but not limited to, *the recommended standards for water facilities, construction programs bureau*, New Mexico environment department;

(4) the design of the project will not meet project goals;

(5) the public water system does not demonstrate sufficient technical, managerial or financial capacity;

(6) an existing or planned source of actual or potential contamination may adversely impact a water source proposed to be utilized by the system; to make this determination, the department may require the applicant to submit to the department analyses relating to hydrogeological, soil or ground water conditions at the site, and information regarding proposed technology or installation methods that may be employed to prevent or mitigate the impact of the contaminant source on the water source; or

(7) a regulated contaminant or disinfectant will be injected into the source (e.g., chlorine pellet drop system).

N. The department's approval of an application is limited to the sanitary features of design and other features of public health significance. The department's approval of an application does not imply a guarantee of any type for the constructed project nor does it relieve the applicant from the responsibility for the overall integrity of the project, the adequacy of the project's design, or from the responsibility of complying with any of the provisions of this part or other applicable state and federal laws or regulations.

O. The department is not responsible for increased costs resulting from defects in the plans, design drawings and specifications or any other contract documents.

P. The applicant shall notify the department in writing when work on the public water system project is initiated. The department may inspect the project during construction and at completion to ensure compliance with the approved plans and specifications.

Q. If a public water system project receives approval from the department but does not commence construction within one year after the date of department approval, the supplier of water must submit a new application to the department.

R. Any deviations from approved plans or specifications affecting capacity, operating units, the functioning of water treatment processes, or the quality of water to be delivered, shall be reported to the department in writing. If deemed appropriate, the department may require that revised plans and specifications be submitted for review. Revised plans or specifications shall be submitted to the department in time to permit the review and approval of such plans or specifications before any construction work, which will be affected by such changes, is begun. In the event that this requirement would result in construction delays, verbal approval by the department may be given followed by written review within 30 days. The applicant must submit a copy of the completed change order to the department as soon as possible for review, final approval and filing.

S. Staff from the department, after reasonable notice and presentation of credentials, may make visits to the work site to assure compliance with these rules. In the event deficiencies are noted, the applicant will be notified in writing of any deficiency. All deficiencies must be resolved prior to the start-up of the system or component of the system.

T. The department shall be notified when a public water supply system project, or well-defined phase thereof, is at or near completion. This notification shall consist of:

(1) for a project requiring department approval, a written statement from a registered professional engineer or a representative of the water system that all conditions of project approval were accomplished;

(2) evidence of proper flushing and disinfection in accordance with the appropriate ANSI/AWWA standard, including bacteriological sampling results;

(3) other water quality data where appropriate;

(4) all other documentation which may have been required during the plan review process;

(5) confirmation that the water system owner has been provided with an operation and maintenance manual for the new facility, where appropriate; and

(6) when the project includes construction of a new source or incorporation of an existing source into a public water supply system, documents filed with the state engineer office, including the well log and proof of completion of well for ground water sources, and a proof of completion of works for surface water sources.

U. For a project requiring department approval, the supplier of water shall submit record drawings and certification of project completion in an electronic format acceptable to the department within 120 days after completion of the project.

[20.7.10.201 NMAC - Rp 20 NMAC 7.1.I.109 and 20 NMAC 7.1.V.502, 12/04/2002; A, 04/16/2007; A, 01/06/2013]

20.7.10.202 APPLICATION FOR WATER HAULERS THAT ARE NOT OWNED OR OPERATED BY ANOTHER PUBLIC WATER SYSTEM:

A. This section applies to each water hauler that is not owned or operated by a public water system. This section does not apply to the transport of bottled water regulated pursuant to 21 CFR Part 165.

B. Any person proposing to commence a water hauling operation for human consumption under this section shall complete, sign and submit an application to the department no later than 30 days prior to entering a service contract for delivering water for human consumption. The water hauler shall not produce, withdraw, store, transport or deliver water for human consumption until the department has approved the application in writing.

C. The application shall be made on form(s) furnished by the department and shall include:

(1) evidence that the water tank and other delivery components are approved for contact with water for human consumption;

(2) a declaration that the water tank and other water delivery components have never come into contact with a non-potable or non-food grade product, or a declaration listing any such products and evidence that the tank has been sufficiently reconditioned to enable hauling of potable water;

(3) a contract with a public water system authorizing receipt of water or other documentation demonstrating that the water to be hauled will come from a drinking water system that is included in the safe drinking water information system (SDWIS) inventory;

(4) a description of water hauling operation including the procedures for obtaining, storing, treatment of and delivery of water; and

(5) a disinfection plan for routine and seasonal disinfection of each tank.

[20.7.10.202 NMAC - N, 01/06/2013]

20.7.10.203-20.7.10.299 [RESERVED]

20.7.10.300 COMPLIANCE; EMERGENCY POWERS:

A. No public water system shall supply drinking water to the public unless the system is operated and maintained in compliance with this part.

B. Powers of the secretary.

(1) The secretary may take any action necessary to protect the health of persons who are or may be served by a public water system, including but not limited to issuing orders, assessing penalties or commencing a civil action for appropriate relief:

(a) if the public water system fails to meet any requirement of this part;

(b) upon receiving information that a contaminant, whether or not listed in 40 CFR Part 141, Subparts B and G, is present in or likely to enter the public water system, that the presence of such contaminant may present an imminent and substantial endangerment to the health of persons served by the system, and that appropriate local authorities have not acted to protect the health of such persons; or

(c) in response to a civil emergency involving public drinking water; the secretary's response shall be coordinated, when appropriate, with other state emergency response and relief efforts.

(2) If the secretary determines that treatment of water is necessary for a public water system to achieve concentrations no greater than the maximum contaminant levels set forth at 40 CFR Part 141, Subparts B and G, such treatment shall be continuously maintained until the public water system can demonstrate to the secretary that such treatment is no longer necessary.

[20.7.10.300 NMAC - Rp 20 NMAC 7.1.II.201, 12/04/2002; A, 04/16/2007; A, 01/06/2013]

20.7.10.301-20.7.10.399 [RESERVED]

20.7.10.400 GENERAL OPERATING REQUIREMENTS:

A. Protection of public water systems during maintenance or replacement of electrical or mechanical equipment. The owner or operator of a public water system shall prevent contamination of the water in the system while undergoing maintenance or replacement of electrical or mechanical equipment.

B. Security and protection of a public water system. Any part or component of a public water system including but not limited to spring junction boxes, well houses, storage reservoirs, collection devices, pump facilities, and treatment facilities shall be constructed, operated and maintained to prevent:

- (1) unauthorized entry to the water supply;
- (2) flooding of the water supply; and
- (3) contamination of, the water supply.

C. Protection of a public water system well. A ground water supply well serving a public water system shall have a sanitary seal installed at the wellhead to protect against entry of storm water and other non-potable fluids or foreign materials and against access by insects, rodents, birds or other vermin. All vents installed in the well casing shall be protected against entrance of foreign material and flooding. If the well is completed in a subsurface vault, the casing shall extend above the potential flooding height. All cracks, joints or other openings at the wellhead and all penetrations to the casing at or near the ground surface shall be tightly sealed with an impermeable material.

D. Finished water storage facilities. A finished water storage facility shall be protected from flooding or infiltration of raw or non-potable water and from entry by birds, insects, rodents or other vermin. Overflow pipes and vents shall be screened with a corrosion-resistant material or be fitted with an acceptable flap valve. Access hatches or openings that are below the maximum operating water level shall be fitted with a watertight cover or appropriate seal or gasket. Roof hatches or other openings above the maximum operating water level shall be fitted with a watertight cover, appropriate

seal or gasket, or framed above the surface of the tank at the opening. Framed hatches must be fitted with a solid cover that overlaps the framed opening and extends down around the frame. All framed hatches must restrict the entry of vermin or water.

E. Notice to the department. If the safety precautions or preventive measures required to be employed under this section fail to protect the public water system from unauthorized entry or contamination, or if the water supply is endangered for any reason, the supplier of water shall immediately notify the department and take appropriate action to protect the supply.

F. Disinfection following the completion of a public water system project requiring department approval. Any part or component of a public water system that has undergone construction or modification requiring department approval shall be flushed, disinfected and sampled for the presence of bacterial contaminants upon completion of the project and prior to providing water to the public. Disinfection and sampling shall be conducted in accordance with a plan submitted to and approved by the department pursuant to Paragraph (3) of Subsection B of 20.7.10.201 NMAC.

G. Disinfection following construction, modification or repair not requiring department approval. Any part or component of a public water system that has undergone repair, construction or modification not requiring department approval shall be flushed, disinfected and sampled in accordance with the current editions of the *standards for disinfecting water mains*, American water works association; *standards for disinfection of wells*, American water works association; *standards for disinfection of water-storage facilities*, American water works association; and *standards for disinfection of water treatment plants*, American water works association.

H. Disinfection of seasonally operated facilities. A public water system that operates on a seasonal basis shall be flushed and disinfected following the non-use period and shall conduct special sampling to demonstrate the absence of bacterial contaminants in the system prior to providing drinking water to the public. During the public water system's non-use period, the public water system shall be maintained to prevent unauthorized entry to, and contamination of, the water supply.

I. Maintenance and disinfection of storage structures. All materials used to re-coat or repair the interior of water storage structures must be suitable for potable water contact. After the interior of a storage structure has undergone maintenance or re-coating, the storage structure must be flushed and disinfected pursuant to Subsection G of this section.

J. Prohibition of iodine as a disinfectant. No public water system shall use iodine as a disinfectant.

K. Standards for additives, materials and equipment - direct additives. Each product added directly to water during production or treatment, including treatment in storage and distribution, shall conform to American national standards institute (ANSI)

or national sanitation foundation international (NSF) Standard 60. Products covered by this subsection may include but are not limited to:

- (1) coagulation and flocculation chemicals;
- (2) chemicals for corrosion and scale control;
- (3) chemicals for softening, precipitation, sequestering, and pH adjustment;
- (4) disinfection and oxidation chemicals;
- (5) chemicals for fluoridation, defluoridation, algae control, and dechlorination;
- (6) dyes and tracers;
- (7) antifreezes, antifoamers, regenerants, and separation process scale inhibitors and cleaners;
- (8) water well drilling and rehabilitation aids; and
- (9) well pump lubricants and well sealants.

L. Standards for additives, materials and equipment - indirect additives.

Except as identified in Subsections N and O, a material or product that comes into contact with water or water treatment chemical shall conform to ANSI/NSF Standard 61. Products and materials covered by this subsection may include but are not limited to:

- (1) process media, such as carbon and sand;
- (2) joining and sealing materials, such as solvents, cements, welding materials, and gaskets;
- (3) mechanical plumbing devices;
- (4) pipes and related products, such as pipe and fittings;
- (5) mechanical devices used in treatment, transmission, or distribution systems such as tanks, valves, chlorinators, and separation membranes; and
- (6) protective (barrier) materials such as coatings.

M. Standards for additives, materials and equipment - certification. The appearance on the product or product package of a seal of a certifying entity that is accredited by the ANSI/NSF to provide the certification or inclusion of the product in the NSF product and service listings shall be considered as proof that a product conforms to the requirement of this section.

N. Standards for additives, materials and equipment - alternative certification.

In those instances where a chemical, additive or drinking water system component that comes into contact with drinking water is essential to the design, construction or operation of the drinking water system and has not been certified by the ANSI/NSF, the operator may utilize the alternatives given in this subsection:

(1) a water system owner or operator may submit evidence that a chemical not included in ANSI/NSF Standard 60, such as EPI-DMA polyamines, anhydrous monosodium phosphate, permanganates other than potassium permanganate and sodium fluorosilicate, meets standards consistent with NSF Standard 60;

(2) a water system owner or operator may submit evidence that a system is made entirely of components certified under ANSI/NSF Standard 61; or

(3) a water system owner or operator may submit evidence that a component meets standards consistent with ANSI/NSF Standard 61.

O. Standards for additives, materials and equipment - exemptions. The following materials and products are exempt from the requirement to conform to ANSI/NSF Standard 61.

(1) an uncoated concrete structure, tank or treatment basin that is constructed onsite if the structure, tank, or basin is not normally coated or sealed and the construction materials used in the concrete are consistent with Subsection N;

(2) an earthen reservoir or canal located upstream of water treatment; and

(3) a water treatment plant that is comprised of components that comply with Subsections L or N.

P. Cross-connections. Cross-connections to a public water system or within a public water system shall be prohibited, unless the public water system is protected by a method acceptable to the department using either a device listed in the American society of sanitary engineering "*prevention rather than cure*" seal authorization booklet or a device acceptable to the department to prevent the back flow of water.

Q. Operator certification. Public water systems shall comply with the utility operator certification requirements in the Utility Operator Certification Act, NMSA 1978, 61-33-1 et seq. as amended, and in regulations and program requirements adopted pursuant to the Safe Drinking Water Act.

[20.7.10.400 NMAC - Rp 20 NMAC 7.1.II.208, 12/04/2002; A, 04/16/2007; A, 01/06/2013]

20.7.10.401 GENERAL OPERATING REQUIREMENTS FOR WATER HAULERS:

A. This section applies to each water hauler.

B. A water hauler subject to this section shall obtain for delivery disinfected water only from public water systems that are part of the department safe drinking water information system (SDWIS) inventory and do not pose an acute health threat based on violation of a maximum contaminant level or treatment technique.

C. A water hauler subject to this section shall:

- (1) disinfect each tank, before filling the tank for delivery, if it has not been used more than eight consecutive days;
- (2) disinfect each tank after every three months of continuous operation;
- (3) measure and record the disinfectant residual at the same time and place water is obtained from the public water system and immediately prior to when the water is delivered to the customer;
- (4) maintain a record of the date and time that each water hauling truck is disinfected;
- (5) for those water haulers that are owned or operated by a public water system, comply with the sampling requirements applicable to consecutive systems in accordance with Subsection E of Section 500 of this part; and
- (6) make each vehicle used for water hauling available for inspection by the department; at the time of the inspection the tank shall be empty and have a hatch or other opening to facilitate internal inspection.

D. A water hauler subject to this section shall use only water tanks with the following features:

- (1) Hatches or openings must have water tight covers.
- (2) The tank drain must allow for complete draining of the tank.
- (3) All hoses and other dispensing units must be equipped with water tight caps.

[20.7.10.401 NMAC - N, 01/06/2013]

20.7.10.402-20.7.10.499 [RESERVED]

20.7.10.500 MONITORING REQUIREMENTS:

A. Pursuant to NMSA 1978, 74-1-13.1, the department shall test non-transient non-community water systems for arsenic, fluoride and radionuclides. The reporting and public notification requirements for non-transient non-community water systems for these contaminants shall be identical to those for community water systems as set forth in 40 CFR Subpart Q.

B. Each supplier of water shall begin routine sampling in accordance with 40 CFR Part 141 within 90 days after providing water for human consumption.

C. All public water systems shall conduct sampling at the rates set forth in 40 CFR Part 141, Subpart C, except that non-transient non-community systems shall conduct coliform sampling at the same rates as like-sized community water systems in 40 CFR 141.21(a)(2) and except that consecutive systems shall sample as required in Subsection E of Section 500 of this part. The department may order a supplier of water, when necessary, to conduct more frequent sampling than is required under 40 CFR Part 141.

D. The department may order a public water system that uses two or more water sources to collect special purpose samples directly from the water sources, in addition to routine samples from sampling points as required under 40 CFR Part 141.

E. Consecutive systems shall collect samples for those contaminants for which monitoring is required in the distribution system. This includes measurement of disinfectant residuals and collection of samples for total coliform, lead and copper, and disinfection byproducts.

F. All public water systems must have sample taps to collect water representative of each applicable facility at sampling points required under 40 CFR Part 141.

G. For systems subject to triggered monitoring under 40 CFR Part 141 ground water rule: for each total coliform positive sample collected from the distribution system, at least one ground water source sample must be collected from each ground water source that was in use at the time the total coliform-positive sample was collected.

[20.7.10.500 NMAC - Rp 20 NMAC 7.1.III.301, 12/04/2002; A, 04/16/2007; A, 01/06/2013]

20.7.10.501 [RESERVED]

[20.7.10.501 NMAC - Rp 20 NMAC 7.1.III.309, 12/04/2002; Repealed, 01/06/2013]

20.7.10.502 VALIDATION OF ANALYTICAL DATA OR CONDITIONS:

The department may take any action it deems necessary to validate the results of a sample taken pursuant to this part. Data that the department determines to be invalid shall not be used to determine compliance with this part.

[20.7.10.502 NMAC - Rp 20 NMAC 7.1.III.311, 12/04/2002]

20.7.10.503 DEPARTMENT MONITORING AND SAMPLING:

Nothing in this part shall be construed to preclude the department from taking samples or from using the results from such samples to determine compliance with this part or in an enforcement proceeding for violation of this part.

[20.7.10.503 NMAC - Rp 20 NMAC 7.1.III.312, 12/04/2002]

20.7.10.504 INSPECTIONS, INVESTIGATIONS AND SANITARY SURVEYS:

A. The secretary may, upon the presentation of proper credentials and after receiving consent from the supplier of water, enter at reasonable times upon or through the premises of any public water system to conduct a sanitary survey, inspection or investigation and during such survey, inspection or investigation:

- (1) have access to and copy, at reasonable times, any records required to be kept pursuant to this part;
- (2) inspect or review any monitoring equipment or methods required under this part;
- (3) sample or otherwise test the water supplied by such system; and
- (4) have access to a public water system facility for visual inspection.

B. If permission to enter a public water system to conduct a sanitary survey, inspection or investigation in accordance with Subsection A of this section is denied, the secretary may apply to a court of competent jurisdiction for an order allowing for such entry.

C. To aid the secretary in conducting sanitary surveys, inspections or investigations pursuant to this part, the supplier of water or his duly authorized representative shall, prior to the commencement of such inspection or investigation, be given the opportunity to accompany the inspector upon or through the premises of the public water system.

[20.7.10.504 NMAC - Rp 20 NMAC 7.1.I.108, 12/04/2002; A, 01/06/2013]

20.7.10.505 SUBPART H SYSTEM REPORTING:

In addition to complying with any other reporting requirements in 40 CFR Part 141, operators of public water systems shall submit the following reports electronically on forms furnished by the department, if applicable:

- A.** monthly operating reports required of 40 CFR 141 Subpart H systems; and

B. for systems that use membrane filtration, a direct integrity test required of 40 CFR Part 141 Subpart W.

[20.7.10.505 NMAC - N, 01/06/2013]

20.7.10.506-20.7.10.599 [RESERVED]

20.7.10.600 PUBLIC NOTIFICATION:

A. Non-transient non-community water systems that exceed the MCL for arsenic or radionuclides set forth at 40 CFR sections 141.11, 141.62 and 141.66 or exceed one-half the MCL for fluoride set forth at 40 CFR section 141.62 shall comply with the public notification requirements set forth at 40 CFR Subpart Q.

B. A supplier of water shall notify persons served by the public water system to boil water used for drinking or culinary purposes if routine coliform samples indicate the presence of bacterial contamination which would not otherwise trigger the public notice requirements set forth at 40 CFR Subpart Q but which, in the judgment of the department, poses a threat to public health and safety. If the supplier of water fails to provide notice on its own, or at the direction of the department, the department may directly notify the persons served by the system.

C. If the safety of a water supply is endangered for any reason, the supplier of water shall notify persons served by the public water system of appropriate action to protect themselves against any waterborne hazards. If the supplier of water fails to take such action on its own, or at the direction of the department, the department may directly notify the persons served by the system.

PART 11: LIQUID WASTE TREATMENT AND DISPOSAL FEES

20.7.11.1 ISSUING AGENCY:

Environmental Improvement Board.

[20.7.11.1 NMAC - Rp, 20.7.11.1 NMAC, 7/1/2020]

20.7.11.2 SCOPE:

All persons required under 20.7.3 NMAC to obtain a:

- A. Permit;
- B. Modification to a permit;
- C. Registration;

D. Septage pump truck registration;

E. Certificate of qualification for:

- (1) Homeowner certification,
- (2) Third-party evaluator certification,
- (3) Maintenance service provider certification,
- (4) Septage pumper certification, or
- (5) Installer specialist certification

F. Septic Tank Certification; or

G. Re-inspection.

[20.7.11.2 NMAC - Rp, 20.7.11.2 NMAC, 7/1/2020]

20.7.11.3 STATUTORY AUTHORITY:

Environmental Improvement Act, Section 74-1-1 through 74 -1-10 NMSA 1978.

[20.7.11.3 NMAC - Rp, 20.7.11.3 NMAC, 7/1/2020]

20.7.11.4 DURATION:

Permanent.

[20.7.11.4 NMAC - Rp, 20.7.11.4 NMAC, 7/1/2020]

20.7.11.5 EFFECTIVE DATE:

July 1, 2020, unless a later date is cited at the end of a section.

[20.7.11.5 NMAC - Rp, 20.7.11.5 NMAC, 7/1/2020]

20.7.11.6 OBJECTIVE:

The objective of this rule is to provide for liquid waste treatment and disposal fees for the administration of the state liquid waste regulations. The purpose of the state liquid waste treatment and disposal program is to protect the health and welfare of present and future citizens of New Mexico by providing for the prevention and abatement of public health hazards and surface and ground water contamination from on-site liquid waste disposal practices.

[20.7.11.6 NMAC - Rp, 20.7.11.6 NMAC, 7/1/2020]

20.7.11.7 DEFINITIONS:

A. Unless otherwise defined in this part, the words and phrases used in this part have the same meanings as in 20.7.3.7 NMAC, Liquid Waste Disposal.

B. As used in this part:

(1) "**advanced treatment**" means any process of wastewater treatment that removes a greater amount of contaminants than is accomplished through primary treatment. Advanced treatment may include physical or chemical processes;

(2) "**advanced treatment system**" means a method or technology implemented to achieve advanced treatment;

(3) "**alternative disposal**" means any approved, on-site liquid waste disposal method used in lieu of, including modifications to, a conventional disposal method;

(4) "**alternative disposal system**" means a method or technology implemented to achieve alternative disposal;

(5) "**alternative system**" means any on-site liquid waste system utilizing a method of liquid waste treatment and disposal used in lieu of a conventional system, including modifications that are recognized and allowed by Liquid Waste Disposal and Treatment, 20.7.3 NMAC (9/1/13 as amended through 9/15/14).

(6) "**commercial unit**" means a structure that is not a residential unit but which has sewage producing fixtures such as sinks, baths, showers, toilets, urinals, dish- and clothes-washers, or floor drains for receiving liquid waste including but not limited to uses included in Subsection Q of 20.7.3.201 NMAC, Table 201.1;

(7) "**conventional system**" means an on-site liquid waste system consisting of a septic tank or a subsurface soil absorption system with gravity distribution of the effluent constructed in accordance with the standards set forth in 20.7.3 NMAC including privies, holding tanks and vaults;

(8) "**gpd**" means gallons-per-day;

(9) "**hazard to public health**" means the indicated presence in water or soil of biological, chemical, or other contaminants under such conditions that could adversely impact human health, including without limitation, surfacing liquid waste, damage to a domestic water supply source, presence of a cesspool or an open tank, or exposure of liquid waste or septage in a manner that allows possible transmission of disease;

(10) **"large system"** means any liquid waste treatment or disposal system that receives, or is designed to receive, more than 2,000 gpd but not more than 5,000 gpd;

(11) **"notice of non-approval"** means notification that inspection of a permitted liquid waste system is not in compliance with 20.7.3 NMAC;

(12) **"on-site liquid waste system"** means a liquid waste system, or part thereof, serving a dwelling, establishment, or group, and using a liquid waste treatment unit designed to receive liquid waste followed by either a soil treatment or other type of disposal system; on-site liquid waste systems include enclosed systems and privies but do not include systems or facilities designed to receive or treat mine or mill tailings or wastes;

(13) **"septic tank"** means liquid waste treatment units designed to provide primary treatment and anaerobic treatment prior to disposal;

(14) **"small system"** means any liquid waste treatment and disposal system that receives, or is designed to receive, no more than 2,000 gpd.

[20.7.11.7 NMAC - Rp, 20.7.11.7 NMAC, 7/1/2020]

20.7.11.8 PERMIT FEES:

Payment of permit fees are due prior to the issuance of a permit meeting all the requirements of 20.7.3 NMAC.

A. Fees for permits to register, construct, or modify a conventional system of a specified design flow. The fee for a system designed for:

- (1) zero gpd up to 1,000 gpd is \$225.00;
- (2) 1,001 gpd up to 2,000 gpd is \$325.00;
- (3) 2,001 gpd up to 5,000 gpd is \$500.00;

B. Fees for permits to register, construct or modify an alternative system or advanced treatment system of a specified design flow. The fee for a system designed for:

- (1) zero gpd up to 1,000 gpd is \$450.00;
- (2) 1,001 gpd up to 2,000 gpd is \$550.00;
- (3) 2,001 gpd up to 5,000 gpd is \$750.00;

C. Annual operating permit renewal fees:

(1) The annual operating permit renewal fee for:

(a) an alternative system or advanced treatment system is \$50.00;

(b) a holding tank system or, a split flow system with a holding tank, excluding alternative systems and advanced treatment systems is \$30.00.

D. Application of annual operating permit fees: The annual operating permit fees will apply to the following:

(1) alternative disposal systems, advanced treatment systems, and holding tank systems installed after the effective date of this rule;

(2) alternative disposal systems, advanced treatment systems, and holding tank systems modified after the effective date of this rule; and

(3) alternative disposal systems, advanced treatment systems, and holding tank systems subject to transfer of ownership after the effective date of this rule.

E. Term of annual operating permits and renewals; non-transferability:

(1) Annual operating permits are issued upon final approval of the most recent permit to register, construct, or modify an alternative system or advanced treatment system, a holding tank system, or a split flow system with a holding tank. Annual operating permits are granted for a period of 12 consecutive months from the date of issuance and expire on the last day of the anniversary month in which the operating permit was issued.

(2) Annual operating permit renewals are due 12 months after the system owner is granted permission to operate the system and are issued for a period of 12 consecutive months from the date of issuance and expire on the last day of the anniversary month in which the operating permit was issued or renewed.

(3) Annual Operating permits and their renewals will be issued upon all appropriate fees being paid and demonstration that the system meets all applicable requirements of 20.7.3 NMAC. A property owner that fails to renew their annual operating permit in a timely manner may be subject to enforcement action by the department.

(4) Annual operating permits are non-transferrable.

[20.7.11.8 NMAC - Rp, 20.7.11.8 NMAC, 7/1/2020]

20.7.11.9 QUALIFICATION CERTIFICATE FEES:

If a qualification certificate is requested as provided for in 20.7.3.904 NMAC, a fee as indicated in subsections A through F of this section shall be submitted upon issuance of the qualification certificate in addition to any associated permit fee required in 20.7.11 NMAC. The fee for a qualification certificate for:

- A. a qualified homeowner is \$170.00;
- B. a third-party evaluator is \$50.00;
- C. a maintenance service provider is \$50.00;
- D. a septage pumper is \$30.00;
- E. an installer specialist is \$150.00;
- F. renewal for an installer specialist is \$75.00

[20.7.11.9 NMAC - N, 7/1/2020]

20.7.11.10 SEPTAGE PUMPING TRUCK ANNUAL REGISTRATION FEE:

Effective July 1, 2021, the annual fee for registration of a septage pumping truck is \$30.00.

[20.7.11.10 NMAC - N, 7/1/2020]

20.7.11.11 PROPERTY TRANSFER REPORT FILING FEE:

The fee for filing a property transfer report is \$50.00.

[20.7.11.11 NMAC - N, 7/1/2020]

20.7.11.12 SEPTIC TANK MANUFACTURER CERTIFICATION FEE:

The annual fee for the certification/re-certification of septic tank designs as required in 20.7.3 NMAC is \$150.00.

[20.7.11.12 NMAC - Rp, 20.7.11.9 NMAC, 7/1/2020]

20.7.11.13 RE-INSPECTION FEE:

If a site inspection results in an issuance of a notice of non-approval, a fee of \$125.00 shall be assessed for the re-inspection of the system. The re-inspection fee shall be remitted to the department prior to a subsequent inspection being conducted.

[20.7.11.13 NMAC - Rp, 20.7.11.10 NMAC, 7/1/2020]

20.7.11.14 UNPERMITTED SYSTEM INSPECTION FEE:

If a property owner requests that the department conduct an unpermitted system inspection, the fee is \$250.00.

[20.7.11.14 NMAC – N, 7/1/2020]

20.7.11.15 VARIANCE FEE:

If a variance is requested as provided for in 20.7.3 NMAC, a fee of \$100.00 for small systems and \$250.00 for large systems shall be submitted upon issuance of the variance in addition to the permit fee required in 20.7.11.8 NMAC above.

[20.7.11.15 NMAC - Rp, 20.7.11.11 NMAC, 7/1/2020]

20.7.11.16 PAYMENT OF FEES:

A. The department shall not issue a permit, variance or tank design certification until payment is received by the department. The fees required in this part are non-refundable.

B. All fees shall be remitted to the department, payable to the environment department liquid waste fund. All fees collected pursuant to this part shall be transmitted to the state treasurer for deposit in the liquid waste fund.

[20.7.11.16 NMAC - Rp, 20.7.11.12 NMAC, 7/1/2020]

20.7.11.17 LIQUID WASTE DISPOSAL SYSTEM ASSISTANCE FUND:

Pursuant to Section 74-1-15.1 NMSA 1978, the liquid waste disposal system assistance fund will be funded annually with \$40.00 from each permit issued pursuant to subsections A and B of Section 8 of this part, up to a maximum of \$200,000.00. Money from the fund will be used for the sole purpose of assisting indigent individuals or households that qualify for funding to accomplish one of the following purposes where there is a real or potential negative impact to public health or water quality from on-site liquid waste disposal system effluent:

A. to pay for a liquid waste disposal system to replace a cesspool or other failed or improper on-site liquid waste disposal system;

B. to purchase, install, or maintain an advanced treatment system as required by the Environmental Improvement Act or regulations issued pursuant to that act;

C. to pay for the decommissioning and removal of a cesspool or other failed or improper on-site liquid waste disposal system; or

D. to pay for all or a portion of the connection fees in order to connect an individual or household to a centralized wastewater collection and treatment system.

[20.7.11.17 NMAC - N, 7/1/2020]

20.7.11.18 APPLICABILITY:

A. The requirement for payment of the permit application fee shall apply only to those applications received on or after the effective date of this part.

B. The annual tank certification fee shall apply on or after the effective date of this part. The annual fee shall be received by the department no later than January 1 of each year.

C. The requirements concerning payment of a re-inspection fee shall apply only to those re-inspections occurring on or after the effective date of this part.

[20.7.11.18 NMAC - Rp, 20.7.11.13 NMAC, 7/1/2020]

20.7.11.19 PERIODIC REVIEW:

In order for the environmental improvement board to fulfill its obligation to establish onsite liquid system fees in accordance with Paragraph 3 of Subsection A of Section 74-1-8 NMSA 1978, the department shall provide information by January 15th of each year to the environmental improvement board as follows:

A. liquid waste fund revenues for the previous fiscal year;

B. liquid waste fund expenditures for the previous fiscal year:

(1) personal services and benefits;

(2) contracts;

(3) other costs;

(4) indirect;

C. external audit report for the previous fiscal year;

D. current fiscal year budget for field operations bureau approved by the department of finance and administration and the legislative finance committee;

E. report on contiguous states' fees:

(1) for Arizona, Oklahoma and Texas: report of state program fee schedules (although some Texas counties have their own fee schedules);

(2) Colorado and Utah: report of fee schedule for each county or health district;

F. performance measures report for previous fiscal year;

G. copy of liquid waste annual strategic plan;

H. copy of training plan, if any, for the upcoming year.

[20.7.11.19 NMAC - Rp, 20.7.11.14 NMAC, 7/1/2020]

20.7.11.20 COMPLIANCE WITH OTHER REGULATIONS:

Compliance with this part does not relieve a person of the obligation to comply with other applicable state and federal regulations.

[20.7.11.20 NMAC - Rp, 20.7.11.15 NMAC, 7/1/2020]

20.7.11.21 CONSTRUCTION:

This part shall be liberally construed to implement the purpose of the act.

[20.7.11.21 NMAC - Rp, 20.7.11.16 NMAC, 7/1/2020]

20.7.11.22 SEVERABILITY:

If any provision or application of this part is held invalid, the remainder shall not be affected.

[20.7.11.22 NMAC - Rp, 20.7.11.17 NMAC, 7/1/2020]

CHAPTER 8: NUISANCE ABATEMENT

PART 1: GENERAL PROVISIONS [RESERVED]

PART 2: MOSQUITO ABATEMENT AND CONTROL

20.8.2.1 ISSUING AGENCY:

New Mexico Environmental Improvement Board.

[11/30/95; Recompiled 11/27/01]

20.8.2.2 SCOPE:

All persons having ownership of or control over any property upon which water may collect.

[11/30/95; Recompiled 11/27/01]

20.8.2.3 STATUTORY AUTHORITY:

Section 74-1-8 NMSA 1978.

[11/30/95; Recompiled 11/27/01]

20.8.2.4 DURATION:

Permanent.

[11/30/95; Recompiled 11/27/01]

20.8.2.5 EFFECTIVE DATE:

November 30, 1995 [unless a later date is cited at the end of a section].

[11/30/95; Recompiled 11/27/01]

20.8.2.6 OBJECTIVE:

To prevent or control the occurrence of mosquitoes that are a nuisance or are capable of transmitting disease to man or domestic animals.

[9/22/72; 11/30/95; Recompiled 11/27/01]

20.8.2.7 DEFINITIONS:

As used in this part [now 20.8.2 NMAC]:

A. "abatement" means the control or elimination of mosquitoes by elimination of their breeding sources or by poisoning, spraying, or the use of biological and environmental controls, or any other method approved by the department;

B. "collection of water" includes any collection of water contained in ditches, borrow pits, pools, crop fields, ponds, streams, excavations, holes, depressions, open cesspools, privy vaults, fountains, cisterns, tanks, shallow wells, troughs, sewage oxidation ponds and lagoons, barrels, urns, cans, boxes, bottles, tubes, buckets, roof gutters, tanks of flush closets, reservoirs, vessels, receptacles of any kind, or other containers or devices which may hold water;

C. "department" means the New Mexico environment department;

D. "mosquito" means any arthropod belonging to the class insects, order diptera, family culicidae, subfamily culicinae;

E. "mosquito larvae" means the immature aquatic stages of mosquitoes occurring between the egg and pupal stages;

F. "mosquito pupae" means the aquatic stages between the larval and adult stages of mosquitoes; and

G. "person" means any individual, partnership, firm, public or private corporation, trust, estate, company, society, political subdivision or agency, or any other legal entity or their legal representatives, agents or assigns.

[9/22/72; 11/30/95; Recompiled 11/27/01]

20.8.2.8-20.8.2.106 [RESERVED]

20.8.2.107 PROHIBITED ACTS:

No person shall create or maintain any collection of water in or on which mosquitoes breed or are likely to breed unless approved methods of abatement are employed as specified by the department. The presence of mosquito larvae or mosquito pupae, or both, in collections of water shall constitute conclusive evidence that mosquitoes are breeding there.

[9/22/72; 11/30/95; Recompiled 11/27/01]

20.8.2.108 APPROVED METHODS OF ABATEMENT:

Approved methods of mosquito abatement may consist of one or more of the following procedures:

- A. eliminate collections of water by filling or draining;
- B. free collections of water of all vegetative growth, floating debris and other obstruction;
- C. clean premises by disposal, removal or destruction of the cans, boxes, broken or empty bottles, vehicles, tires and similar articles likely to hold water;
- D. empty collections of water every four (4) days;
- E. stock collections of water with mosquito-destroying fish;
- F. screen collections of water with corrosion resistant netting of at least 16 meshes to the inch each way, or with other material which will effectually prevent the ingress and egress of mosquitoes;
- G. treat collections of water with chemicals approved by the department; or
- H. any other method approved by the department.

[9/22/72; 11/30/95; Recompiled 11/27/01]

20.8.2.109 SEVERABILITY:

If any provision of application of this part is held invalid, the remainder, or its application to other situations or persons, shall not be affected.

[11/30/95; Recompiled 11/27/01]

20.8.2.110 AMENDMENT AND SUPERSESSION OF PRIOR REGULATIONS:

This part shall be construed as amending and superseding the Regulations Governing Mosquito Abatement and Control, EIB 72-1, filed August 23, 1972. All references to the regulations governing mosquito abatement and control in any other rule shall be construed as a reference to this part.

[11/30/95; Recompiled 11/27/01]

20.8.2.111 SAVING CLAUSE:

Super-session of the regulations governing mosquito abatement and control shall not affect any administrative or judicial enforcement action pending on the effective date of this part.

[11/30/95; Recompiled 11/27/01]

20.8.2.112 COMPLIANCE WITH OTHER REGULATIONS:

Compliance with this part does not relieve a person from the obligation to comply with other applicable state and federal regulations.

[11/30/95; Recompiled 11/27/01]

CHAPTER 9: SOLID WASTE

PART 1: GENERAL PROVISIONS [RESERVED]

PART 2: SOLID WASTE MANAGEMENT GENERAL REQUIREMENTS

20.9.2.1 ISSUING AGENCY:

New Mexico Environmental Improvement Board.

[20.9.2.1 NMAC - Rp, 20 NMAC 9.1.1.001, 08/02/07]

20.9.2.2 SCOPE:

This part applies to the transportation, storage, transfer, processing, transformation, recycling, composting, nuisance abatement and disposal of solid waste.

Permanent.

[20.9.2.4 NMAC - Rp, 20 NMAC 9.1.1.004, 08/02/07]

20.9.2.5 EFFECTIVE DATE:

August 2, 2007, unless a later date is cited at the end of a section.

[20.9.2.5 NMAC - Rp, 20 NMAC 9.1.1.005, 08/02/07]

20.9.2.6 OBJECTIVE:

The objective of Part 2 of Chapter 9 is to establish regulations in the following areas of solid waste management:

- A. general requirements;
- B. requirements for public entities;
- C. prohibited acts and exceptions;
- D. entry by the department; and
- E. procedures for exemptions, specific approvals, waivers for small municipal landfills and variances.

[20.9.2.6 NMAC - Rp, 20 NMAC 9.1.1.006, 08/02/07]

20.9.2.7 DEFINITIONS:

Whenever a term used in 20.9.2 - 20.9.10 NMAC is defined in the Solid Waste Act, the term shall have the meaning given in the Solid Waste Act, unless otherwise defined in this part.

- A. Terms starting with the letter 'A' are defined as follows.
 - (1) "Act" means the Solid Waste Act, NMSA 1978, Sections 74-9-1, et seq.
 - (2) "Active life" means the period of operation beginning with the initial receipt of solid waste and ending at completion of closure activities in accordance with 20.9.6 NMAC.
 - (3) "Active portion" means that part of a facility that has received or is receiving wastes and that has not been closed in accordance with 20.9.6 NMAC.
 - (4) "Air curtain incinerator" means an incineration facility used for burning yard refuse that operates by forcefully projecting a curtain of air across an open chamber or pit in which combustion occurs, controls emission of the combustion products, is not designed to burn more than ten tons of yard refuse per hour, and has obtained an air quality permit or registration.
 - (5) "Airport" means public use airports open to the public without prior permission and without restrictions within the physical capacities of available facilities, but does not include aero-club airports operated on a military installation.

(6) "Alluvial fan" means a low, outspread, relatively flat to gentle sloping mass of loose sediment, shaped like an open fan or a segment of a cone, deposited by a stream at a place where it issues from a narrow mountain valley upon a plain or broad valley.

(7) "Antineoplastic drug" means cancer chemotherapy drugs previously called cytotoxics or anti-cancer drugs that have the ability to kill or stop growth in living cells.

(8) "Aquifer" means a geologic formation, group of formations, or portions of a formation capable of yielding ground water to wells or springs. The uppermost aquifer is the aquifer nearest the natural ground surface including lower aquifers that are hydraulically interconnected with this aquifer.

(9) "Areas susceptible to mass movement" means those areas of influence (i.e., areas characterized as having an active or substantial possibility of mass movement) where the movement of earth material at, beneath, or adjacent to the landfill unit, because of natural or man-induced events, results in the down slope transport of soil and rock material by means of gravitational influence. Areas of mass movement include, but are not limited to, landslides, avalanches, debris slides and flows, solifluction, block sliding, and rock fall.

(10) "Asbestos waste" means a solid waste that contains more than 1 percent asbestos:

(a) "friable asbestos material" means any material containing more than 1 percent asbestos, that, when dry, can be crumbled, pulverized, or reduced to powder by hand pressure;

(b) "category I non-friable asbestos containing material" means asbestos containing packings, gaskets, resilient floor covering, and asphalt roofing products containing more than 1 percent asbestos;

(c) "category II non-friable asbestos containing material" means any material, excluding category I non-friable asbestos containing material, containing more than one percent asbestos, that, when dry, cannot be crumbled, pulverized, or reduced to powder by hand; and

(d) "regulated asbestos waste" means friable asbestos material; category I non-friable asbestos containing material that has become friable; category I non-friable asbestos containing material that will be or has been subjected to sanding, grinding, cutting or abrading; or category II non-friable asbestos containing material that has a high probability of becoming or has become broken, crumbled, pulverized, or reduced to powder by the forces expected to act on the material in the course of excavation, renovation, demolition, storage, transportation, or while exposed during disposal operations.

(11) "Ash" means the ash that results from the incineration or transformation of solid waste at a power generating facility or solid waste facility and includes both fly ash and bottom ash, and ash from the incineration of densified-refuse-derived fuel and refuse-derived fuel, but does not include residue from structure fires, fireplaces, air curtain incinerators, or small animal crematoria or ash generated by the combustion of yard waste for energy production, or fly ash waste, bottom ash waste, slag waste and flue gas emission control waste generated primarily from the combustion of coal or other fossil fuels and wastes produced in conjunction with the combustion of fossil fuels that are necessarily associated with the production of energy and that traditionally have been and actually are mixed with and are disposed of or treated at the same time with fly ash, bottom ash, boiler slag or flue gas emission control wastes from coal combustion.

B. Terms starting with the letter 'B' are defined as follows.

(1) "Background" means, for purposes of 20.9.2 - 20.9.10 NMAC, the amount of ground water contaminants naturally occurring from undisturbed geologic sources or level of water contamination that the owner or operator establishes is from a source other than the responsible person's facility. This definition shall not prevent the secretary from requiring abatement of commingled plumes of pollution, shall not prevent the owner or operator from seeking contribution or other legal or equitable relief from other persons, and shall not preclude the secretary from exercising enforcement authority under any applicable statute, regulation or common law.

(2) "Biologicals" means preparations made from living organisms or their products, including vaccines, cultures, or other biological products intended for use in diagnosing, immunizing, or treating humans or animals or in research pertaining to these activities.

(3) "Biological conversion" means, as a form of transformation, the conversion of organic waste materials into an energy source by an aerobic or anaerobic process other than composting.

C. Terms starting with the letter 'C' are defined as follows.

(1) "Cell" means a confined area engineered for the disposal of solid waste.

(2) "Certified operator" means any individual who meets the experience and training requirements of 20.9.7 NMAC, has successfully completed the testing requirement of the department, and has been issued a New Mexico certificate.

(3) "Change in ownership" means the sale or other transfer of a partner's interest in a partnership, a change in controlling interest of a partnership, corporation, limited liability company or limited liability partnership or the sale or other transfer of a sole proprietorship.

(4) "Clean fill" means broken concrete, brick, rock, stone, glass, reclaimed asphalt pavement, or soil that is uncontaminated, meaning the fill has not been mixed with any waste other than the foregoing and has not been subjected to any known spill or release of chemical contaminants, including petroleum product, nor treated to remediate such contamination; reinforcement materials which are an integral part, such as rebar, may be included as clean fill; clean fill must be free of other solid waste, to include land clearing debris, construction and demolition debris, municipal solid waste, radioactive waste, hazardous waste or special waste.

(5) "Closed cell" means a cell at finished grade which has been covered with intermediate cover or final cover.

(6) "Collection center" means a facility managed for the collection and accumulation of solid waste with an operational rate of less than 240 cubic yards per day monthly average and that serves the general public.

(7) "Commercial hauler" means any person transporting solid waste for hire by whatever means for the purpose of transferring, processing, storing or disposing of the solid waste in a solid waste facility, except that the term does not include an individual transporting solid waste generated on his residential or business premises for the purpose of disposing of it in a solid waste facility.

(8) "Commercial solid waste" means all types of solid waste generated by stores, offices, restaurants, warehouses, and other non-manufacturing activities, excluding household and industrial solid wastes.

(9) "Commission" means the New Mexico water quality control commission.

(10) "Commission regulations" means the regulations of the New Mexico water quality control commission, including 20.6.1 NMAC and 20.6.2 NMAC.

(11) "Community" for purposes of preparation of a community impact assessment, means an area of human habitation within a four mile radius around a proposed landfill, transformation facility or existing landfill that is proposing a lateral or vertical expansion.

(12) "Compost" means organic material that has undergone a controlled process of biological decomposition and pathogen reduction, and has been stabilized to a degree that the final product is potentially beneficial to plant growth and can be used as a soil amendment, growing medium amendment or other similar uses. Compost does not include final product that contains sewage sludge that fails to meet the requirements of 40 CFR 503.

(13) "Composting" means the process by which biological decomposition of organic material is carried out under controlled conditions. The process stabilizes the

organic fraction into a material which can be easily and safely stored, handled and used in an environmentally acceptable manner.

(14) "Composting facility" means a facility, other than a transformation facility, that is capable of providing biological stabilization of organic material.

(15) "Construction and demolition landfill" means a landfill that receives only construction and demolition debris in quantities equal to or less than 50 tons per day monthly average. Any landfill that receives more than 50 tons per day monthly average of construction and demolition debris waste in any month is defined as a municipal landfill.

(16) "Cooperative association" means a refuse disposal district created pursuant to the Refuse Disposal Act, NMSA 1978, Sections 4-52-1 through 4-52-15, or a sanitation district created pursuant to the Water and Sanitation District Act, NMSA 1978, Sections 73-21-1 through 73-21-54, a special district created pursuant to the Special District Procedures Act, NMSA 1978, Sections 4-53-1 through 4-53-11, a solid waste authority created pursuant to the Solid Waste Authority Act, NMSA 1978, Sections 74-10-1 through 74-10-100, or other such association created pursuant to the Joint Powers Act, NMSA 1978, Sections 11-1-1 through 11-1-7.

D. Terms starting with the letter 'D' are defined as follows.

(1) "Dangerous drug" also known as a "prescription drug" means a drug other than a controlled substance enumerated in schedule I of the Controlled Substance Act, that because of potentiality for harmful effect or the method of its use or the collateral measures necessary to its use is not safe except under the supervision of a practitioner licensed by law to direct the use of such drug and hence for which adequate directions for use (directions under which the layman can use a drug or device safely and for the purposes for which intended) cannot be prepared.

(2) "Department" means the New Mexico environment department.

(3) "Discharge" means spilling, leaking, pumping, pouring, emitting, emptying, or dumping into water or in a location and manner where there is a reasonable probability that the discharged substance will reach surface or ground water.

(4) "Disease vectors" means any rodents, flies, mosquitoes, or other animals and insects, capable of transmitting disease to humans.

(5) "Displacement of a fault" means the relative movement of any two sides of a fault fracture measured in any direction.

(6) "Dispose or disposal" means causing, allowing, or maintaining the abandonment, discharge, deposit, placement, injection, dumping, burning, spilling, or leaking of any solid waste into or on any land or water.

(7) "Distillation" means a process by which components in a chemical mixture are purified or separated by the application and removal of heat and the separation is achieved by the redistribution of the components between the liquid and vapor phase as they approach equilibrium within the distillation unit.

(8) "Drug" means articles:

(a) recognized as drugs in any official compendium or supplement thereto, designated from time to time by the New Mexico board of pharmacy for the use in the diagnosis, cure, mitigation, treatment or prevention of disease in humans or other animals;

(b) intended for use in the diagnosis, cure mitigation, treatment or prevention of disease in humans or other animals;

(c) other than food, intended to affect the structure or any function of the body of humans or other animals; or

(d) intended for use as a component of any articles specified in Paragraphs (1), (2), (3) or (4) of Subsection N of 16.19.8.7 NMAC.

(9) "Drug enforcement administration" means the drug enforcement administration of the United States department of justice.

E. Terms starting with the letter 'E' are defined as follows.

(1) "Economically stressed household" means a household that reports at or less than 150 percent of the poverty level as set forth in the most recent federal department of health and human services poverty guidelines for a family of four.

(2) "Environmental justice" is the fair treatment and meaningful involvement of all people regardless of race, color, national origin, or income with respect to the development, implementation, and enforcement of environmental laws, regulations, and policies.

F. Terms starting with the letter 'F' are defined as follows.

(1) "Fault" means a fracture or a zone of fractures in lithified rock or unconsolidated sediments along which material on one side has been displaced with respect to that on the other side.

(2) "Floodplain" means the lowland and relatively flat areas adjoining inland and coastal waters that are inundated by the 100 year flood. The 100 year flood has a one percent chance of recurring in any given year or a flood of magnitude equaled or exceeded once in 100 years on the average over a significantly long period.

G. Terms starting with the letter 'G' are defined as follows.

(1) "Gasification" means a thermal process for the generation of combustible gas from a solid waste material.

(2) "Generator" means any person, whose act or process produces solid waste or whose act first causes solid waste to become subject to regulation.

(3) "Geosynthetic" means the generic classification of all synthetic materials used in geotechnical applications, including the following classifications:

(a) "geocomposite" means a manufactured material using geotextiles, geogrids, geomembranes, or combinations thereof, in a laminated or composite form;

(b) "geogrid" means a deformed or non-deformed netlike polymeric material used to provide reinforcement to soil slopes;

(c) "geomembrane" means an essentially impermeable membrane used as an integral part of an engineered structure or system designed to limit the movement of liquid or gas in the system;

(d) "geonet" means a type of a geogrid that allows planar flow of liquids and serves as a drainage system;

(e) "geosynthetic clay liner (GCL)" means a layer of sodium bentonite which is held between or on carrier layers of geotextiles or a geomembrane; and

(f) "geotextile" means any permeable textile used as an integral part of an engineered structure or system to serve as a filter to prevent the movement of soil fines into drainage systems, to provide planar flow for drainage, or to serve as a cushion to protect geomembranes, or to provide structural support.

(4) "Ground water" means interstitial water which occurs in the earth's saturated zone and which is capable of entering a well in sufficient amounts to be utilized as a water supply.

(5) "Ground water scientist" means a scientist or engineer who has received a baccalaureate or post graduate degree in the natural sciences or engineering and has sufficient training and experience in ground water hydrology and related fields as may be demonstrated by state registration, professional certifications or completion of accredited university programs that enable that individual to make sound professional judgments regarding ground water monitoring, contaminant fate and transport, and corrective action.

H. Terms starting with the letter 'H' are defined as follows.

- (1) "Hauler" means any person transporting solid waste.
- (2) "Hazardous constituent" means any constituent listed in 40 CFR 258 Appendix I or II or Subsection A of 20.6.2.3103 NMAC, and any potential toxic pollutant listed in 20.6.2.7 NMAC.
- (3) "Hazardous waste" means a hazardous waste as defined in 40 CFR 261.3.
- (4) "Hot waste" means any waste which is on fire or smoldering when delivered to the solid waste facility.
- (5) "Household pharmaceutical waste" means solid waste consisting of unused or expired drugs or dangerous drugs.
- (6) "Household waste" means any solid waste including garbage and trash, derived from households including single and multiple residences, hotels and motels, bunkhouses, ranger stations, crew quarters, campgrounds, picnic grounds and day use recreation areas.

I. Terms starting with the letter 'I' are defined as follows.

- (1) "Impact" means a present or future effect on the environment or the health of residents of a community.
- (2) "Incineration" means the reduction of combustible solid wastes by burning in an enclosed device under conditions of controlled airflow and temperature.
- (3) "Incinerator" means an enclosed device using controlled flame combustion, the primary purpose of which is to thermally break down solid waste, including, but not limited to, rotary kiln, fluidized bed, and liquid injection incinerators, but does not include air curtain incinerators or small animal crematoria.
- (4) "Industrial solid waste" means solid waste generated by manufacturing or industrial processes that is not hazardous waste regulated under Subtitle C of RCRA. Such waste may include, but is not limited to, waste resulting from the following processes: electric power generation; fertilizer/agricultural chemicals; food and related products/by-products; inorganic chemicals; iron and steel manufacturing; leather and leather products; nonferrous metals manufacturing/foundries; organic chemicals, plastics and resins manufacturing; pulp and paper industry; rubber and miscellaneous plastic products; stone, glass, clay, and concrete products; textile manufacturing; transportation equipment, and water treatment. This term does not include mining waste or commercial solid waste.

(5) "Infectious waste" means a solid waste that carries a probable risk of transmitting disease to humans or animals, and includes the following which shall be considered infectious waste:

(a) cultures and stocks of infectious agents and associated biologicals, including: cultures from medical and pathological laboratories; cultures and stock of infectious agents from research and industrial laboratories; wastes from the production of biologicals; discarded live and attenuated vaccines except for residue in emptied containers; and culture dishes, assemblies and devices used to conduct diagnostic tests or to transfer, inoculate, and mix cultures;

(b) human pathological wastes, including tissues, organs, and body parts that are removed during surgery, autopsy, other medical procedures, or laboratory procedures, but not including hair, or nails;

(c) human and body fluid waste, including:

(i) liquid waste human blood;

(ii) blood products;

(iii) items with human blood (caking, flaking, saturated or dripping);

(iv) items with human blood, including serum, plasma, and other blood components, which were used or intended for use in patient care, specimen testing, or the development of biological products or pharmaceuticals;

(v) intravenous bags that have been used for blood transfusions;

(vi) items, including dialysate, that have been in contact with the blood of patients undergoing hemodialysis at hospitals or independent treatment centers;

(vii) items contaminated by body fluids from persons at trauma scenes, during surgery, autopsy, other medical procedures, or laboratory procedures;

(viii) specimens of blood products, and their containers; and

(ix) other potentially infectious materials as defined by the U.S. department of labor occupational safety and health administration at 29 CFR 1910.1030(b), including the following body fluids: semen, vaginal secretions, cerebrospinal fluid, synovial fluid, pleural fluid, pericardial fluid, peritoneal fluid, amniotic fluid, saliva in dental procedures, any body fluid that is visibly contaminated with blood, and all body fluids in situations where it is difficult or impossible to differentiate between body fluids;

(d) contaminated animal carcasses, body parts, blood, blood products, secretions, excretions, and bedding of animals that were known to have been exposed to zoonotic infectious agents or non-zoonotic human pathogens, including during research (including research in veterinary schools and hospitals), production of biologicals, or testing of pharmaceuticals;

(e) biological wastes and waste contaminated with bloody excretions, exudates, or secretions from:

(i) humans who are isolated to protect others from rare diseases such as viral hemorrhagic fevers (Ebola, Lassa, Marburg) or other emerging infectious diseases whose biological wastes and waste contaminated with bloody excretions, exudates, or secretions are deemed infectious waste as described by advisory agencies such as the center for disease control (CDC);

(ii) isolated animals known or suspected to be infected with rare diseases such as bovine spongiform encephalopathy (BSE) or other emerging infectious diseases identified by an advisory agency;

(f) discarded sharps, used or unused (unless in original packaging), generated at a facility, that have, or are likely to have, come in contact with infectious agents while involved in human or animal patient care, treatment, or research, including hypodermic needles, syringes (with the attached needle), Pasteur pipettes, scalpel blades, blood vials, needles with attached tubing, culture dishes, suture needles, slides, cover slips, and other broken or unbroken glass or plasticware, unless properly treated or otherwise specifically exempted;

(g) infectious waste does not include:

(i) wastes generated in a household (except for infectious wastes generated by home health care professionals);

(ii) human corpses, remains, and anatomical parts that are intended for interment or incineration as specified in Paragraphs (4) and (5) of Subsection E of 20.9.8.13 NMAC, or are donated and used for scientific or medical education, research, or treatment;

(iii) etiological agents being transported for purposes other than waste processing or disposal pursuant to the requirements of the United States department of transportation (49 CFR 171.1-190) and the New Mexico department of transportation and other applicable shipping requirements;

(iv) reusable or recyclable containers or other non-disposable materials, if they are cleaned and disinfected by a method approved by the secretary pursuant to NMSA 1978 74-9-3 P, or if there has been no direct contact between the surface of the container and materials identified as "infectious waste;"

(v) soiled diapers that do not contain materials identified as infectious waste;

(vi) body excretions such as feces and secretions such as nasal discharges, saliva, sputum, sweat, tears, urine, and vomitus unless visibly contaminated with blood or waste from a person or animal as described in Subparagraph (e) of Paragraph (5) of Subsection I of 20.9.2.7 NMAC; or

(vii) used or unused syringes that have not come into contact with human blood or other bodily fluids or infectious agents and do not have a needle attached.

J. Terms starting with the letter 'J'. **[RESERVED]**

K. Terms starting with the letter 'K'. **[RESERVED]**

L. Terms starting with the letter 'L' are defined as follows.

(1) "Landfill" means a solid waste facility that receives solid waste for disposal and includes the following categories and classifications:

(a) "category 1 landfill" means a landfill that closed between April 11, 1974 and May 14, 1989;

(b) "category 2 landfill" means a landfill that stopped receiving waste between May 14, 1989, and October 9, 1993

(c) "category 3 landfill" means a landfill that began operations before October 9, 1993 and continued to operate after October 9, 1993;

(d) "category 4 landfill" means a landfill that began operations after October 9, 1993;

(e) "category 5 landfill" means a landfill that began operations after the effective date of these rules;

(f) "municipal landfill";

(g) "construction and demolition landfill";

(h) "special waste landfill"; and

(i) "monofill."

(2) "Lateral expansion" means a horizontal expansion of the permitted waste boundaries of a landfill.

(3) "Law enforcement household pharmaceutical take-back program" means a service or limited-duration event sponsored by a law enforcement agency, state, municipality, county or cooperative association that collects and properly disposes of household pharmaceutical waste for which the presence of law enforcement personnel is required.

(4) "Law enforcement pharmaceutical incinerator" means a stationary or mobile incinerator that meets the requirements of the solid waste rules, is owned or operated by a law enforcement agency and is used to destroy household pharmaceutical waste collected during a law enforcement household pharmaceutical take-back program.

(5) "Leachate" means the liquid that has passed through, or emerged from solid waste and contains soluble, suspended, or miscible materials removed from that solid waste.

(6) "Lift" means an accumulation of solid waste which is compacted into a cell and over which compacted cover is placed.

(7) "Liner" means a continuous layer constructed of natural or man-made materials beneath and on the sides of a surface impoundment, landfill, or landfill cell that restricts the downward and lateral movement of solid waste, gases or leachate.

(8) "Liquid waste" means any waste material that is determined to contain free liquids, defined by the Paint Filter Liquids Test, described in "Test Methods for Evaluating Solid Waste" referenced in Paragraph (5) of Subsection C of 20.9.8.11 NMAC.

(9) "Lithified earth material" means all rock, including metamorphic, igneous, and sedimentary.

(10) "Locked facility" means any solid waste facility which has permanently stopped receiving solid waste, but has not yet met the requirements of 20.9.6 NMAC.

(11) "Lower explosive limit" means the lowest percent by volume of a mixture of explosive gases in air that will propagate a flame at 25 degrees C and atmospheric pressure.

M. Terms starting with the letter 'M' are defined as follows.

(1) "Manure" means an agricultural waste composed of excreta of animals, residual bedding materials, or other materials that have been used for sanitary or feeding purposes for such animals.

(2) "Maximum contaminant level" (MCL) means, the level that has been promulgated under Section 1412 of the Safe Drinking Water Act (42 U.S.C. Sections 300f, et seq.) at 40 CFR Part 141.

(3) "Maximum horizontal acceleration in lithified earth material" means the maximum expected horizontal acceleration as depicted on a seismic hazard map, with a 90 percent or greater probability that the acceleration will not be exceeded in 250 years, or the maximum expected horizontal acceleration based on a site-specific seismic risk assessment.

(4) "Modify" means:

(a) to change material terms or any conditions of a permit, including:

(i) types of solid waste included in the permit;

(ii) except as provided in Items (v) and (vi) of Subparagraph (b) of Paragraph (4) of this subsection, to change pollution control systems or water, soil, or gas monitoring programs from those permitted;

(iii) any change in the fundamental design or method of operation of a solid waste facility from that permitted;

(iv) any lateral or vertical expansion beyond permitted waste boundaries;

(v) any change in the facility boundary; or

(vi) any change in the approved process or method for the treatment of infectious waste; but

(b) "modify" does not include:

(i) routine maintenance, repair, or replacement;

(ii) an increase in the disposal rate or process rate, if such increase does not exceed the design capacity of the solid waste facility;

(iii) a change in the hours of operation, unless such hours are specified in a permit condition;

(iv) a change in the operating plan that is not the subject of a permit condition;

(v) substitution, addition, or elimination of a construction material or operational process that provides equivalent or greater environmental protection than

the permitted design or process, if specifically approved in writing by the secretary under 20.9.2.13 NMAC;

(vi) installation of a gas collection and control system required by 40 CFR Part 60, Subparts Cc and WWW or 20.9.4.16 NMAC and 20.9.5.9 NMAC;

(vii) a permit transfer approved pursuant to 20.9.3.23 NMAC;

(viii) any approval granted under the provisions of 20.9.2.13;

(ix) temporary changes allowed by the secretary under Subsection C of 20.9.5.8 NMAC when there is an imminent danger to public health, welfare, or the environment;

(x) changes to comply with an order of the secretary approving or withdrawing approval of an infectious waste treatment method under Paragraph (4) of Subsection F of 20.9.8.13 NMAC and Subsection G of 20.9.8.13 NMAC;

(xi) changes to implement a remedy selected by the secretary under 20.9.9.16 NMAC;

(xii) changes to implement interim measures ordered by the secretary under Subsection F of 20.9.9.15 NMAC; or

(xiii) addition of a type of solid waste (except for a special waste) if the type is within the definition of construction and demolition debris, and there will be no adverse effect on health and the environment, unless the permit or 20.9.2 - 20.9.10 NMAC specifically excludes the type of waste.

(5) "Monofill" means a landfill or cell that receives only scrap tires or only asbestos waste.

(6) "Mulch" means a protective covering spread and left upon the ground to reduce evaporation, maintain even soil temperature, prevent erosion, or control weeds.

(7) "Municipal landfill" means a discrete area of land or an excavation that receives municipal solid waste and that is not a land application unit, surface impoundment, injection well or waste pile as these terms are defined in 40 CFR 257.2; "municipal landfill" may include a landfill that is designed to receive other types of RCRA Subtitle D waste such as construction and demolition debris, conditionally exempt small quantity generator waste, industrial solid waste, and special wastes as defined in Paragraph (13) of Subsection S of this section.

(8) "Municipal solid waste" means household solid waste, commercial solid waste, and industrial solid waste or petroleum contaminated soils that are not a special waste.

N. Terms starting with the letter 'N'. **[RESERVED]**

O. Terms starting with the letter 'O' are defined as follows.

(1) "Open burning" means the combustion of solid waste without:

(a) control of combustion air to maintain adequate temperature for efficient combustion;

(b) containment of the combustion reaction in an enclosed device to provide sufficient residence time and mixing for complete combustion; and

(c) control of the emission of the combustion products.

(2) "Operator" means the person(s) responsible for the overall operation of all or any portion of a solid waste facility.

(3) "Owner" means the person(s) who owns all or part of a solid waste facility.

P. Terms starting with the letter 'P' are defined as follows.

(1) "Permitted waste boundary" means the outside boundary of the proposed cells over the expected life of a landfill as specified in the permit or registration.

(2) "Person" means any individual, partnership, company, corporation, firm, association, trust, estate, state or federal agency, government instrumentality or agency, institution, county, city, town, village, or municipal authority, or other legal entity however organized.

(3) "Petroleum waste" means those liquids and sludges that are accumulated as a result of exploration or production activities regulated under the New Mexico Oil and Gas Act.

(4) "Pharmacist" means a person duly licensed by the New Mexico board of pharmacy to engage in the practice of pharmacy pursuant to the Pharmacy Act, NMSA 1978, Section 61-11-1.

(5) "Poor foundation conditions" means those areas where features exist which indicate that a natural or man-induced event may result in inadequate foundation support for the structural components of a landfill.

(6) "Practical quantitation limit" or "PQL" means the lowest concentration of analytes in ground waters that can be reliably determined within specified limits of precision and accuracy under routine laboratory operating conditions.

(7) "Processing" means techniques to change the physical, chemical, biological, or pathological character or composition of solid waste, but does not include composting, transformation, grinding or chipping of yard refuse, compaction, or incineration.

(8) "Processing facility" means a facility where processing of solid waste occurs.

(9) "Putrescible" means organic material subject to decomposition by microorganisms.

(10) "Pyrolysis" means the process whereby solid waste is thermally decomposed in an oxygen-deficient atmosphere.

Q. Terms starting with the letter 'Q' are defined as follows. "Quasi-judicial proceeding" means a public hearing held after notice reasonably calculated to reach people interested in the subject matter of the proceeding that affords all people with a significant interest in the proceeding (parties) an opportunity to present their views as well as to cross-examine other parties. Other interested individuals also have an opportunity to state their views. Testimony is taken under oath or affirmation and is included in a record of proceedings. The planning and zoning commission or the governing body of the local government is required to make its decision based upon the testimony and evidence contained in the record of the hearing. The proceeding must consider whether the facility at issue would result in a disproportionate effect on the health or environment of a particular socioeconomic group or in an unreasonable concentration of regulated facilities.

R. Terms starting with the letter 'R' are defined as follows.

(1) "Radioactive waste" means:

(a) high-level radioactive waste or spent nuclear fuel as defined in Section 2 of the Nuclear Waste Policy Act of 1982 (42 U.S.C. 10101(12));

(b) transuranic waste as defined in Section 11(ee) of the Atomic Energy Act of 1954, 42 U.S.C. 2014(ee);

(c) waste source material as defined in Section 11(z) of the Atomic Energy Act of 1954, 42 U.S.C. 2014(z);

(d) waste special nuclear material as defined in Section 11(aa) of the Atomic Energy Act of 1954, 42 U.S.C. 2014(aa);

(e) waste by-product material as defined in Section 11e of the Atomic Energy Act of 1954, 42 U.S.C. 2014(e);

(f) material the nuclear regulatory commission, consistent with existing law, classifies as low level radioactive waste; and

(g) waste radioactive material that requires licensure in accordance with the New Mexico radiation protection rules, 20.3.3 NMAC.

(2) "RCRA" means the federal Resource Conservation and Recovery Act of 1976, 42 U.S.C. 6901, et seq., as amended.

(3) "Recyclable materials" means materials that would otherwise become solid waste if not recycled and that can be collected, separated, processed, reclaimed or composted and placed in use in the form of raw materials, products or densified-refuse-derived fuels.

(4) "Recycling" means any process by which recyclable materials are collected, separated, processed, reclaimed or composted and reused or returned to use in the form of raw materials or products.

(5) "Recycling facility" means a facility that collects, transfers, or processes recyclable materials for recycling, but does not include a composting facility.

(6) "Regulated facility" means a facility that is:

(a) a solid waste facility permitted to construct, operate, or close pursuant to the Solid Waste Act, NMSA 1978, Sections 74-9-1, et. seq. and 20.9.2 - 20.9.10 NMAC, or pursuant to the laws or regulations of a neighboring state;

(b) a hazardous waste facility authorized to operate pursuant to interim status or permitted to construct, operate, or close pursuant to the Hazardous Waste Act, NMSA 1978, Sections 74-4-1, et. seq. and the New Mexico hazardous waste management rules, 20.4.1 NMAC, or pursuant to the laws or regulations of a neighboring state, including all units or areas subject to corrective action requirements under the facility permit or order;

(c) a site listed on the National Priorities List pursuant 42 U.S.C. 9605 or a federal facility required to take response or remedial action pursuant to the Comprehensive Environmental Response, Compensation, and Liability Act of 1980, as amended, 42 U.S.C. 9601, et. seq.;

(d) a facility that has, or is required to obtain a Title V air quality permit, 42 U.S.C. 7661 et seq. and 20.7.2.70 NMAC.

(7) "Run-off" means any rainwater, leachate, or other liquid that drains over land from any part of a solid waste facility.

(8) "Run-on" means any rainwater, leachate, or other liquid that drains over land onto any part of a solid waste facility.

S. Terms starting with the letter 'S' are defined as follows.

(1) "Saturated zone" means that part of the earth's crust in which all voids are filled with water.

(2) "Scavenging" means the uncontrolled removal of solid waste from a solid waste facility.

(3) "Secretary" means the secretary of the New Mexico environment department or her or his designee.

(4) "Seismic impact zone" means an area with a 10 percent or greater probability that the maximum horizontal acceleration in lithified earth material, expressed as a percentage of the earth's gravitational pull, will exceed 0.10g in 250 years.

(5) "Septage" means the residual wastes and water periodically pumped from a liquid waste treatment unit or from a holding tank, as defined in 20.7.3.7 NMAC.

(6) "Sewage sludge" means solid, semi-solid, or liquid residue generated during the treatment of domestic sewage in a treatment works. Sewage sludge includes domestic septage, scum or solids removed in primary, secondary, or advanced wastewater treatment processes, and a material derived from sewage sludge. Sewage sludge does not include ash generated during the firing of sewage sludge in a sewage sludge incinerator or grit and screenings generated during preliminary treatment of domestic sewage in a treatment works.

(7) "Sludge" means any solid, semi-solid, or liquid waste generated by a municipal, commercial, or industrial waste water treatment plant, water supply treatment plant, or air pollution control facility, but does not include treated effluent from a waste water treatment plant.

(8) "Small animal crematoria" means a multi-chambered facility designed for the purpose of cremating dead animals and animal parts with a charging capacity of less than five tons per day.

(9) "Solid waste" means any garbage, refuse, sludge from a waste treatment plant, water supply treatment plant, or air pollution control facility and other discarded material including solid, liquid, semisolid, or contained gaseous material resulting from industrial, commercial, mining, construction, demolition and agricultural operations and from community activities, but does not include:

(a) drilling fluids, produced waters and other non-domestic wastes associated with the exploration, development or production, transportation, storage, treatment or refinement of crude oil, natural gas, carbon dioxide gas or geothermal energy, except for waste that has been authorized for disposal at a solid waste facility under provisions of 19.15.9.712 NMAC and has been delivered to a solid waste facility permitted to receive such waste;

(b) fly ash waste, bottom ash waste, slag waste and flue gas emission control waste generated primarily from the combustion of coal or other fossil fuels and wastes produced in conjunction with the combustion of fossil fuels that are necessarily associated with the production of energy and that traditionally have been and actually are mixed with and are disposed of or treated at the same time with fly ash, bottom ash, boiler slag or flue gas emission control wastes from coal combustion;

(c) waste from the extraction, beneficiation and processing of ores and minerals, including phosphate rock and overburden from the mining of uranium ore, coal, copper, molybdenum and other ores and minerals;

(d) agricultural waste, including, but not limited to, manures and crop residues converted to beneficial value added products such as energy products or building materials or returned to the soil as fertilizer or soil conditioner;

(e) cement kiln dust waste;

(f) sand and gravel;

(g) solid or dissolved material in domestic sewage, or solid or dissolved materials in irrigation return flows or industrial discharges that are point sources subject to permits under Section 402 of the federal Water Pollution Control Act, 33 U.S.C. Section 1342;

(h) source, special nuclear or by-product material as defined by the Atomic Energy Act of 1954, 42 U.S.C. Sections 2011, et seq., as amended;

(i) densified-refuse-derived fuel;

(j) any material regulated by Subtitle C or Subtitle I of RCRA (except petroleum contaminated soils);

(k) substances other than asbestos regulated by the federal Toxic Substances Control Act, 15 U.S.C. Sections 2601, et seq., as amended;

(l) radioactive waste;

(m) whole or processed scrap tires that are stored or used in compliance with provisions of the New Mexico Tire Recycling rule, 20.9.20 NMAC, and applicable law;

(n) any recyclable material in transit or temporary storage;

(o) compost; or

(p) materials, other than those that are regulated as hazardous, toxic or special waste, that are retained as evidence in a criminal proceeding and that are required to be destroyed or managed in accordance with a court or administrative order.

(10) "Solid waste disposal area" means an area where solid waste has been disposed and includes all landfills, and areas where more than 120 cubic yards of solid waste have been disposed but does not include landfills and areas identified as solid waste management units in a hazardous waste facility permit or administrative order.

(11) "Solid waste facility" means any public or private system, facility, location, improvements on the land, structures or other appurtenances or methods used for processing, transformation, or disposal of solid waste, including landfill disposal facilities, transfer stations, resource recovery facilities, incinerators and other similar facilities not specified. Solid waste facility does not include:

(a) equipment or processing methods approved by order of the secretary to render infectious waste generated on site non-infectious;

(b) a facility that is permitted pursuant to the provisions of the Hazardous Waste Act, NMSA 1978, Sections 74-4-1 through 74-4-14, as amended;

(c) a facility fueled by a densified-refuse-derived fuel as long as that facility accepts no other solid waste;

(d) a recycling facility that accepts only source separated recyclable materials;

(e) that portion of a facility that refurbishes or re-sells used clothing, furniture or appliances for reuse;

(f) commercial scrap metal or auto salvage operations;

(g) a composting facility that accepts only source separated compostable materials;

(h) manufacturing facilities that use recyclable material in production of a new product;

(i) facilities designed and operated to dispose of sewage sludge on land, such as land application or land injection;

(j) landfarming of petroleum contaminated soils unless within a landfill, where "landfarming" is the remediation of petroleum contaminated soils on the land surface;

(k) any facility or location where clean fill material is accepted, stockpiled, or used, if the facility or location would not otherwise be classified as a solid waste facility;

(l) collection centers;

(m) a facility that uses tire-derived fuel for the purpose of extracting its stored energy; or

(n) air curtain incinerators.

(12) "Source separation" means the separation of recyclable or compostable materials from solid waste at the point of generation by the generator.

(13) "Special waste" means solid waste that has unique handling, transportation, or disposal requirements to assure protection of the environment and the public health, welfare and safety, including:

(a) treated formerly characteristic hazardous wastes (TFCH);

(b) packing house and killing plant offal;

(c) regulated asbestos waste;

(d) ash, except ash produced by a law enforcement pharmaceutical incinerator from the incineration of household pharmaceutical waste;

(e) infectious waste;

(f) sludge, except; sludge that is land applied under 40 CFR Part 503 as intermediate or final cover at a landfill and meets the requirements of Subpart B of 40 CFR Part 503;

(g) industrial solid waste that, unless specially handled or disposed, may harm the environment or endanger the public health or safety;

(h) spill of a chemical substance or commercial product that, unless specially handled or disposed, may harm the environment or endanger the public health or safety; and

(i) petroleum contaminated soils, that have a sum of benzene, toluene, ethylbenzene, and xylene isomer concentrations of greater than 50 mg/kg, or benzene individually greater than 10 mg/kg, or a total petroleum hydrocarbon concentration of greater than 100 mg/kg.

(14) "Special waste landfill" means a landfill that receives one or more types of special wastes as defined in Paragraph 13 of Subsection S of this section.

(15) "Stabilized" means, for composting, that the biological decomposition of the wastes has ceased or diminished to a level such that decomposition no longer poses a health, odor, or safety hazard and does not violate any provisions of these or other applicable rules.

(16) "Storage" means the accumulation of solid waste for the purpose of transfer, processing or disposal.

(17) "Structural components" means liners, leachate collection systems, final covers, run-on/run-off systems, gas collection and control systems, and any other component used in the construction or operation of the landfill that is necessary for protection of public health, welfare and the environment.

T. Terms starting with the letter 'T' are defined as follows.

(1) "Tire-derived fuel" means a fuel product derived from scrap tires that is suitable for efficient combustion.

(2) "Transfer" means the handling and storage of solid waste for reshipment, resale, or disposal, or for waste reduction or resource conservation.

(3) "Transfer station" means a facility managed for the collection and accumulation of solid waste with an operational rate of greater than 240 cubic yards per day monthly average.

(4) "Transformation facility" means a facility used for the transformation of solid waste, but does not include air curtain incinerators or small animal crematoria, and law enforcement pharmaceutical incinerators.

U. Terms starting with the letter 'U' are defined as follows. "Unstable area" means a location that is susceptible to natural or human-induced events or forces capable of impairing the integrity of some or all of the landfill structural components responsible for preventing releases from a landfill. Examples of unstable areas are poor foundation conditions, areas susceptible to mass movements, and Karst terrain areas where Karst topography, with its characteristic surface and subterranean features, is developed as a result of dissolution of limestone, dolomite, or other soluble rock. Characteristic physiographic features present in Karst terrains include, but are not limited to, sinkholes, sinking streams, caves, large springs, and blind valleys.

V. Terms starting with the letter 'V' are defined as follows.

(1) "Vadose zone" means earth material below the land surface and above ground water, or in between bodies of ground water.

(2) "Vertical expansion" means an upward or downward expansion of the permitted waste boundaries of a landfill.

(3) "Vulnerable area" means an area within a four mile radius from the geographic center of a facility or proposed facility, and:

(a) has a percentage of economically stressed households greater than the state percentage based on the most recent actual census bureau data within any square mile within the four mile radius surrounding the facility or proposed facility; and

(b) where the New Mexico portion has a population of 50 people or more within any square mile within the four mile radius; and

(c) has within it 3 or more regulated facilities not including the applicant's facility.

W. Terms starting with the letter 'W' are defined as follows.

(1) "Waste management unit boundary" means a vertical surface located at the hydraulically down gradient limit of the landfill. This vertical surface extends down into the uppermost aquifer.

(2) "Watercourse" means any river, creek, arroyo, canyon, draw, or wash, or any other channel having definite banks and beds, with visible evidence of continuous or intermittent flow of water.

(3) "Water table" means that surface in unconfined ground water at which the pressure is atmospheric; defined by the levels at which water stands in wells that penetrate the water just far enough to hold standing water.

(4) "Well" means a bored, drilled or driven shaft, or a dug hole, whose depth is greater than the largest surface dimension.

(5) "Wetlands" means those areas that are inundated or saturated by surface or ground water at a frequency and duration sufficient to support, and that under normal circumstances do support, a prevalence of vegetation typically adapted for life in saturated soil conditions.

(6) "White goods" means large household appliances (such as ovens, washers, dryers, freezers, water heaters and refrigerators) that have been discarded for disposal or recycling.

X. Terms starting with the letter 'X'. **[RESERVED]**

Y. Terms starting with the letter 'Y'. **[RESERVED]**

Z. Terms starting with the letter 'Z'. **[RESERVED]**

[20.9.2.7 NMAC - Rp, 20 NMAC 9.1.I.105, 08/02/07; A, 07/30/11]

20.9.2.8 GENERAL REQUIREMENTS:

A. Any person who hauls solid waste or recyclable materials or provides solid waste or recyclable collection services shall only haul to a permitted or registered facility, and shall use vehicles that have covers or enclosures to prevent the solid waste or recyclable materials from blowing from the vehicle during collection and transportation, and that are cleaned at such times and in such manner as to prevent offensive odors and unsightliness, and that use devices to retain or control free liquids.

B. Any person who generates solid waste shall store the solid waste in suitable storage containers for the solid waste, unless the solid waste is construction and demolition debris, yard refuse, or white goods. Storage containers shall prevent insect and rodent harborage and shall be kept covered and reasonably clean. Outside containers shall also prevent blowing litter, be leak-proof and shall:

(1) if manually handled by a commercial or municipal hauler, be of sufficient size and weight bearing capacity to be safely handled without presenting undue risk of harm to human health or the environment, with safe, usable handles, or shall be bags that are not filled to an extent that they rupture with normal handling; or

(2) if mechanically handled, be compatible with collection vehicles.

C. Any person who stores solid waste, recyclable materials, yard refuse or white goods shall store such materials in a manner that prevents blowing litter, insect and rodent harborage and does not create a public nuisance or public health hazard.

D. Any person who generates, stores, processes, transports or disposes of solid waste shall do so in a manner that does not create a public nuisance.

E. All notifications to the department required by 20.9.2 - 20.9.10 NMAC shall be directed to the bureau chief of the solid waste bureau.

F. Soil, water, and special waste testing methods used to demonstrate compliance with the Solid Waste Act or 20.9.2 - 20.9.10 NMAC shall conform with permit requirements or otherwise be specifically approved by the department prior to use.

G. Any person who excavates a closed cell or solid waste disposal area in response to an emergency situation shall notify the department of such excavation within 48 hours.

H. Any person who accepts, stockpiles, or uses clean fill material shall:

(1) manage the material in a manner that does not create a public nuisance or potential safety hazard, or adversely impact the environment;

(2) not place the material in a watercourse or wetland unless appropriate permits are obtained; and

(3) cover the material with two feet of clean earth within 30 days after being deposited, unless the clean fill material is clean soil, or unless a longer period or alternative material or depth is specifically approved by the department.

[20.9.2.8 NMAC - Rp, 20 NMAC 9.1.1.106, 08/02/07]

20.9.2.9 REQUIREMENTS FOR PUBLIC ENTITIES:

A. Any municipality with a population greater than 3,000 shall provide solid waste collection services at least once weekly or as often as otherwise necessary to comply with the requirements of 20.9.2 - 20.9.10 NMAC.

B. The state, and each municipality, county, or cooperative association shall provide a means to dispose of solid waste generated within its respective jurisdiction that has been approved by the secretary and complies with 20.9.2 - 20.9.10 NMAC.

C. The state, municipality, county, or cooperative association may contract with any person for the collection, transportation, recycling, or disposal of solid waste. Contracting for the collection, transportation, recycling, or disposal of solid waste does not relieve the state, municipality, county or cooperative association of the responsibility for compliance with 20.9.2 - 20.9.10 NMAC.

[20.9.2.9 NMAC - Rp, 20 NMAC 9.1.1.106, 08/02/07]

20.9.2.10 PROHIBITED ACTS:

A. In addition to the prohibited acts identified in Section 74-9-31(A) and Section 74-13-4(J), and subject to the exemptions in Section 74-9-31(B) of the Solid Waste Act, no person shall:

(1) store, process, or dispose of solid waste except by means approved by the secretary and in accordance with board rules;

(2) dispose of any solid waste in this state in a manner that the person knows or should know will harm the environment or endangers the public health, welfare or safety;

(3) dispose of any solid waste in a place other than a solid waste facility that meets the requirements of 20.9.2 - 20.9.10 NMAC;

(4) dispose of any solid waste, including special waste, in a solid waste facility when that facility's permit does not authorize the disposal of the particular type of solid waste in that facility;

(5) construct, operate, modify or close a solid waste facility unless the facility has approval under 20.9.2 - 20.9.10 NMAC from the department for the described action;

(6) modify permit conditions or modify a solid waste facility unless the facility has applied for and received permission from the secretary for the modification pursuant to 20.1.4 NMAC Permit Procedures - Environment Department;

(7) dispose of petroleum waste, sludge which that does not meet the analytical criteria of 20.9.8.16 NMAC, septage, domestic sewage, or treated domestic sewage at any solid waste facility;

(8) dispose of hazardous wastes which are subject to regulation under Subtitle C of the Resource Conservation and Recovery Act, 42 USC 6901 et seq, at any solid waste facility, unless the facility is permitted for the disposal of hazardous wastes;

(9) dispose of liquid waste at any landfill unless:

(a) the liquid waste is household waste other than septic waste and is in a small container similar in size to that normally found in household waste and the container is designed to hold liquids for use other than storage;

(b) the liquid waste is leachate or landfill gas condensate generated on-site which is recirculated in accordance with applicable laws and rules; or

(c) the liquid waste is managed in accordance with an approval issued by the secretary;

(d) the use of uncontaminated water for dust control or to improve vegetation on a final or intermediate cover is not considered disposal;

(10) process, recycle, transfer, transform, or dispose of radioactive waste in a solid waste facility;

(11) dispose of lead-acid batteries at any landfill or incinerator;

(12) dispose of any infectious waste in a landfill;

(13) dispose of any material regulated under the federal Toxic Substances Control Act, 15 U.S.C. Sections 2601-2692, except in a solid waste facility, registered facility or operation authorized to accept such waste;

(14) allow open burning at a solid waste facility;

(15) excavate or trench a closed cell or solid waste disposal area without written approval by the department and a determination whether an excavation plan will be required, unless in response to an emergency situation; excavation and trenching do not include excavations or trenches of less than 120 cubic yards or exploratory borings for the purpose of waste characterization, site investigation or mapping, nor does it include removal of waste for routine maintenance on gas collection and control and venting systems;

(16) violate a term or condition of a closure and post-closure care plan, a registration, or conditions contained in an approval of the department under 20.9.2.17 NMAC;

(17) allow liquid extraction from sludge at a solid waste facility unless authorized by permit; or

(18) process, transfer, store, dispose, or allow the disposal of special waste at a collection center;

(19) dispose at a solid waste facility any type of non-hazardous material that is excluded from the definition of solid waste, unless permitted to do so, except that a landfill may dispose of non-hazardous excluded waste listed under the following subparagraphs of Paragraph (9) of Subsection S of 20.9.2.7 NMAC unless prohibited from doing so in its permit; Subparagraphs (d) (agricultural), (f) (sand and gravel), (i) (densified refuse derived fuel), (m) (scrap tires), (n) (recyclable materials), (o) (compost), and (p) (materials, other than those that are regulated as hazardous, toxic or special waste, that are retained as evidence in a criminal proceeding and that are required to be destroyed or managed in accordance with a court or administrative order, and ash derived from such materials).

B. Any person who generates, stores, processes, transports or disposes of solid waste shall take reasonable measures to determine the characteristics of the waste being handled to assure that no prohibited act is being performed.

C. A Subtitle C facility authorized to accept special waste for disposal may accept solid waste if allowed under its permit.

D. Nothing in this section shall prohibit a person for whom a drug or dangerous drug has been dispensed in accordance with a valid prescription from transferring the drug or dangerous drug to a law enforcement agency that collects, stores, transports, or disposes of drugs or dangerous drugs pursuant to a program in compliance with applicable state or federal law or a law enforcement household pharmaceutical take-back program that complies with the solid waste rules.

E. Household pharmaceutical waste collected through a law enforcement household pharmaceutical take-back program may only be disposed of or incinerated in accordance with the solid waste rules.

[20.9.2.10 NMAC - Rp, 20 NMAC 9.1.I.107, 08/02/07; A, 07/30/11]

20.9.2.11 EXCEPTIONS:

20.9.2 - 20-9-10 NMAC does not apply to:

A. disposal of solid waste by a homeowner, residential lessee or tenant, or agricultural enterprise, on the property she or he owns, rents or leases, if the waste was generated on that property, and the disposal by the homeowner, residential lessee or tenant, or agricultural enterprise of the solid waste does not harm the environment or endanger the public health, welfare or safety and does not violate any provision of 20.9.2 - 20.9.10 NMAC;

B. on-site disposal of domestic solid waste generated by a person residing and occupying that same property only if that property is located in a place where it is not feasible, as determined by the department, to dispose of the solid waste in a permitted solid waste facility and the disposal of the solid waste does not harm the environment or endanger the public health, welfare or safety and does not violate any provision of 20.9.2 - 20.9.10 NMAC; or

C. disposal of construction and demolition debris or yard refuse by a person in possession of property if the material was generated on the property and if the disposal of the solid waste does not violate any provision of 20.9.2 - 20.9.10 NMAC.

[20.9.2.11 NMAC - Rp, 20 NMAC 9.1.I.108, 08/02/07]

20.9.2.12 SOLID WASTE FACILITIES; ENTRY BY DEPARTMENT; AVAILABILITY OF RECORDS TO DEPARTMENT:

The secretary or any authorized representative, employee or agent of the department may enter, inspect, monitor, sample, or obtain records of a solid waste facility, or commercial hauler as provided in Section 74-9-33 of the Solid Waste Act.

[20.9.2.12 NMAC - Rp, 20 NMAC 9.1.I.111, 08/02/07]

[(Facilities, entry by the department and availability of records was formerly in 20 NMAC 9.1.I.111; recordkeeping was moved to 20.9.5.16 NMAC)]

20.9.2.13 SPECIFIC APPROVALS:

A. Where a specific approval or authorization for an alternative time period, test method or other requirement is allowed under 20.9.2 - 20.9.10 NMAC, the following procedures apply.

(1) The owner or operator shall submit a written request to the department seeking the specific approval or authorization and indicate the regulatory provision allowing the approval or authorization. If the requested approval is for a background ground water quality determination, the request shall include all sample results, approved practical quantitation limits, and a detailed explanation supporting the requested levels. If the request is for an alternative time period, test method or other requirement under 20.9.2 - 20.9.10 NMAC, the request shall explain why the proposed alternative is at least as protective of the public health, safety and welfare as the requirement for which an alternative is requested. In addition, the request shall provide any technical information required in the section allowing the specific approval. The department may request further information prior to acting on the request.

(2) The department shall approve, approve with terms and conditions, or deny the request in writing.

(3) Any affected person who is dissatisfied with action taken by the department on a request for a specific approval or authorization may appeal to the secretary. The request must be made in writing to the secretary within fifteen (15) days after notice of the department's action has been issued. Unless an appeal is received by the secretary within fifteen (15) days after notice to the applicant of the department's action the decision of the department shall be final.

B. If an appeal is received within the fifteen (15) day time limit, the secretary shall hold a hearing within fifteen (15) days after receipt of the request, unless extended for good cause. The secretary shall notify the person who requested the hearing of the date, time and place of the hearing by certified mail.

C. In the appeal hearing, the burden of proof is on the person who requested the hearing.

D. Appeal hearings shall be held at a place designated by the secretary. The secretary may designate a person to conduct the hearing and make a final decision or make recommendations for a final decision. The secretary's hearing notice shall indicate who will conduct the hearing and make the final decision.

E. Upon request the hearing shall be recorded or transcribed by a court reporter. The person who requests the recording or transcription shall pay recording or transcription costs. A request for recording or transcription shall be made at least 5 working days prior to the hearing.

F. In appeal hearings, the rules governing civil procedure and evidence in district court do not apply. Hearings shall be conducted so that all relevant views, arguments

and testimony are amply and fairly presented without undue repetition. The secretary shall allow department staff and the hearing requestor to call and examine witnesses, to submit written and oral evidence and arguments, to introduce exhibits, and to cross-examine persons who testify. All testimony shall be taken under oath. At the end of the hearing, the secretary or his designee shall decide and announce if the hearing record will remain open and for how long and for what reason it will be left open.

G. Based upon the evidence presented at the hearing, the secretary shall sustain, modify or reverse the action of the department. The secretary's decision shall be by written order within fifteen (15) days following the close of the hearing record. The decision shall state the reasons therefore and shall be sent by certified mail to the hearing requestor and any other affected person who requests notice. Appeals from the secretary's final decision are by Rule 1-075 NMRA.

[20.9.2.13 NMAC - N, 08/02/07]

20.9.2.14 WAIVERS FOR SMALL MUNICIPAL LANDFILLS:

A. Owners or operators of new or existing municipal landfills that dispose of less than 20 tons of solid waste daily, based on an annual average, and do not accept any special waste other than regulated asbestos, may apply in the permit application or for a specific approval for a waiver from the design requirements of 20.9.4.13 - 20.9.4.15 NMAC and ground water monitoring requirements in 20.9.9.8 - 20.9.9.11 NMAC. To obtain a waiver, the owner or operator must demonstrate that:

(1) the groundwater protection standards for constituents listed or referenced in 20.9.9.20 NMAC will not be exceeded in the uppermost aquifer, and, for an existing landfill, there is no groundwater contamination attributable to the landfill;

(2) the community has no practicable waste management alternative; and

(3) the landfill is located in an area that receives, on average, 25 inches or less annual precipitation.

B. If a waiver is granted under this section, then the secretary may require the owner or operator to submit a ground water monitoring system plan and ground water monitoring plan for approval, and to conduct periodic ground water and vadose zone monitoring, at any time during the active life or post-closure period to demonstrate the landfill is not contaminating ground water. The secretary may also require a ground water monitoring system plan and a ground water monitoring plan to be submitted in the application. If ground water contamination from the landfill is detected after a waiver has been granted under this section, the waiver is revoked and the requirements of 20.9.4.13 - 20.9.4.15 NMAC and 20.9.9.8 - 20.9.9.11 NMAC shall thereafter apply.

[20.9.2.14 NMAC - Rp, 20 NMAC 9.1.I.110, 08/02/07]

20.9.2.15 VARIANCES:

A. Any person seeking a variance from any requirements of 20.9.2 - 20.9.10 NMAC shall do so in accordance with Permit Procedures - Environment Department, 20.1.4 NMAC.

B. Variance petitions shall be accompanied by proof of public notice as in accordance with the Solid Waste Act and with Permit Procedures - Environment Department, 20.1.4 NMAC. The public notice shall:

- (1) contain the name of the owner and operator of the solid waste facility;
- (2) address and telephone number at which interested persons may obtain further information;
- (3) briefly describe for what the variance is being sought and the proposed alternative;
- (4) state the time period for which the variance is sought;
- (5) be provided by certified mail to the owners of record, as shown by the most recent property tax schedule and tax exempt entities of record, of all properties:
 - (a) within one hundred feet of the property on which the facility is located if the facility is in a class A or H class county or a municipality with a population of more than 2,500 persons; or
 - (b) within one-half mile of the property on which the facility is located in a county or municipality other than those specified in Subparagraph (a) of Paragraph (5) of Subsection B of this section;
- (6) be provided by certified mail to all municipalities and counties within a 10 mile radius of the property on which the facility is located;
- (7) be published once in a newspaper of general circulation in each county in which the property on which the facility is located; this notice shall appear in either the classified or legal advertisements section of the newspaper and at one other place in the newspaper calculated to give the general public the most effective notice and, and when appropriate shall be printed in both English and Spanish; and
- (8) be posted in at least four publicly accessible and conspicuous places, including the existing facility entrance on the property on which the facility is located.

C. The secretary shall deny the variance petition unless the petitioner establishes evidence that:

(1) application of the regulation would result in an arbitrary and unreasonable taking of the applicant's property or would impose an undue economic burden upon any lawful business, occupation or activity; and

(2) granting the variance will not result in any condition injurious to public health, safety or welfare or the environment.

D. No variance shall be granted until the secretary has considered the relative interests of the applicant, other owners of property likely to be affected, and the general public.

E. Variance or renewal of a variance shall be granted for time periods and under conditions consistent with reasons for the variance but within the following limitations:

(1) if the variance is granted on the grounds that there are no practicable means known or available for the adequate prevention of degradation of the environment or the risk to the public health, safety or welfare, it shall continue only until the necessary means for the prevention of the degradation or risk become known and available;

(2) if the variance is granted on the grounds that it is justified to relieve or prevent hardship of a kind other than that provided for in Paragraph (1) of this subsection, it shall not be granted for more than one year.

F. Any variance granted by the secretary shall be reviewed for consistency with existing federal regulations.

[20.9.2.15 NMAC - Rp, 20 NMAC 9.1.X.1001, 08/02/07]

20.9.2.16 EXEMPTIONS:

A. Any person seeking an exemption pursuant to NMSA 1978, Section 74-9-32 shall do so by filing a written petition with the board, and serving a copy of the petition to the secretary. The petition shall be reviewed in accordance with Adjudicatory Procedures - Environmental Improvement Board, 20.1.2 NMAC.

B. A petition for exemption shall:

(1) state each provision of the Solid Waste Act or 20.9.2 - 20.9.10 NMAC from which exemption is sought;

(2) cite, and have attached as exhibits, each provision of applicable federal or state law the petitioner alleges that imposes as stringent or more stringent requirements than those imposed by the Solid Waste Act or 20.9.2 - 20.9.10 NMAC;

(3) be signed by the petitioner or the petitioner's representative; and

(4) contain proof of public notice in accordance with the Solid Waste Act's requirements for applications for solid waste facility permits.

C. Each petition filed with the board for an exemption shall include proof that the applicant has provided notice of the filing of the petition to the public and other affected individuals and entities. The notice shall be:

(1) provided by certified mail to the owners of record, as shown by the most recent property tax schedule and tax exempt entities of record, of all properties:

(a) within one hundred feet of the property on which the facility is located or proposed to be located if the facility is or will be in a class A or H county or a municipality with a population of more than 2,500 persons; or

(b) within one-half mile of the property on which the facility is located or proposed to be located if the facility is or will be in a county or municipality other than those specified in Subparagraph (a) of this paragraph;

(2) provided by certified mail to all municipalities, counties, and tribal governments in which the facility is or will be located and to all municipalities, counties, and tribal governments within a ten mile radius of the property on which the facility is proposed to be constructed, operated or closed;

(3) published once in a newspaper of general circulation in each county in which the property in which the facility is proposed to be constructed, operated or closed is located; this notice shall appear in either the classified or legal advertisements section of the newspaper and at one other place in the newspaper calculated to give the general public the most effective notice and, when appropriate, shall be printed in both English and Spanish; and

(4) posted in at least four publicly accessible and conspicuous places, including the proposed or existing facility entrance on the property on which the facility is or is proposed to be located.

[20.9.2.16 NMAC - Rp, 20 NMAC 9.1.X.1002, 08/02/07]

20.9.2.17 SEVERABILITY:

If any provision or application of 20.9.2 - 20.9.10 NMAC is held invalid by a court of competent jurisdiction, the remainder, or its application to other situations or persons, shall not be affected.

[20.9.2.17 NMAC - Rp, 20 NMAC 9.1.X.1003, 08/02/07]

20.9.2.18 COMPLIANCE WITH OTHER REGULATIONS:

Compliance with 20.9.2 - 20.9.10 NMAC does not relieve a person of the obligation to comply with other applicable local, state and federal laws.

[20.9.2.18 NMAC - Rp, 20 NMAC 9.1.X.1004, 08/02/07]

20.9.2.19 SAVINGS CLAUSE:

20.9.2 - 20.9.10 NMAC does not apply to pending litigation or affect violations of prior, effective regulations, permits, registrations, closure and post-closure care plans.

[20.9.2.19 NMAC - Rp, 20 NMAC 9.1.X.1005, 08/02/07]

20.9.2.20 INTERPRETATION:

20.9.2 - 20.9.10 NMAC shall be liberally construed to carry out its purpose.

[20.9.2.20 NMAC - Rp, 20 NMAC 9.1.X.1006, 08/02/07]

20.9.2.21 CONTINUING EFFECT OF PRIOR ACTIONS; EXCEPTIONS:

A. All permits and certificates of registration issued, and all closure and post-closure care plans approved, pursuant to previous regulations shall remain in effect until they expire or they are suspended, revoked, or otherwise modified.

B. Landfills that were in operation prior to May 14, 1989 may continue to operate without a permit until final action is taken upon a permit application or closure plan. Such landfills are not allowed to construct or operate a lateral expansion until permitted to do so.

C. If a permit application, permit renewal application, permit modification application, closure plan, or registration application has been submitted to the department prior to the effective date of this part, the relevant sections of permit application, permit renewal application, permit modification application, closure plan or registration application requirements under 20 NMAC 9.1.201 - 208, 210, 212, 213, and 501-505 shall remain in effect for that application or closure plan. However, all other requirements of 20.9.2 - 20.9.10 NMAC shall apply.

[20.9.2.21 NMAC, Rp, 20 NMAC 9.1.X.1008, 08/02/07]

20.9.2.22 DOCUMENTS:

Copies of all documents cited in 20.9.2 - 20.9.10 NMAC may be viewed at the department's Solid Waste Bureau, 1190 St. Francis Drive, Santa Fe, New Mexico.

[20.9.2.22 NMAC - Rp, 20 NMAC 9.1.X.1009, 08/02/07]

PART 3: SOLID WASTE FACILITY PERMITS AND REGISTRATIONS

20.9.3.1 ISSUING AGENCY:

New Mexico Environmental Improvement Board.

[20.9.3.1 NMAC - Rp, 20 NMAC 9.1.1.001, 08/02/07]

20.9.3.2 SCOPE:

This part applies to the transportation, storage, transfer, processing, transformation, recycling, composting, nuisance abatement and disposal of solid waste.

[20.9.3.2 NMAC - Rp, 20 NMAC 9.1.1.002, 08/02/07]

20.9.3.3 STATUTORY AUTHORITY:

NMSA 1978, Sections 74-1-1 to 74-1-15, NMSA 1978, Sections 74-9-1 to 74-9-43, and NMSA 1978 Sections 74-13-1 to 74-13-20.

[20.9.3.3 NMAC - Rp, 20 NMAC 9.1.1.003, 08/02/07]

20.9.3.4 DURATION:

Permanent.

[20.9.3.4 NMAC - Rp, 20 NMAC 9.1.1.004, 08/02/07]

20.9.3.5 EFFECTIVE DATE:

August 2, 2007, unless a later date is cited at the end of a section.

[20.9.3.5 NMAC - Rp, 20 NMAC 9.1.1.005, 08/02/07]

20.9.3.6 OBJECTIVE:

The objective of Part 3 of Chapter 9 is to establish regulations in the following areas of solid waste management:

- A. solid waste facility permits;
- B. permitting procedures, application review, issuance, denial and revocation;
- C. permit modification, transfer, renewal and expiration;

D. registration of composting and recycling facilities, collection centers and air curtain incinerators;

E. nuisance abatement plans;

F. commercial hauler registrations;

G. registration of haulers of special waste; and

H. fee schedules.

[20.9.3.6 NMAC - Rp, 20 NMAC 9.1.1.0016, 08/02/07]

20.9.3.7 DEFINITIONS:

[RESERVED]

[See 20.9.2.7 NMAC for Definitions.]

20.9.3.8 PERMIT APPLICATION REQUIREMENTS:

A. Any person seeking to construct, operate, modify or close a solid waste facility shall first obtain a permit.

B. Any person who owns or operates an existing solid waste facility for which a permit application has not been submitted shall submit a permit application within one year of the effective date of this part. If the facility is a landfill that seeks to close rather than continue to operate, the owner or operator shall submit a plan for closure and post closure care for approval within one year of the effective date of this part. The closure and post closure care plan shall meet the requirements of 20.9.6 NMAC.

C. Any person seeking a permit to construct, operate or modify a solid waste facility shall file an application, which shall:

(1) contain all information required by the Solid Waste Act and 20.9.2 - 20.9.10 NMAC;

(2) comply with Permit Procedures - Environment Department, 20.1.4 NMAC;

(3) contain information required by Section 74-9-21 of the Solid Waste Act, and if applicable, disclosure statements shall be on forms provided by the department;

(4) provide site information including:

(a) the name and address of the applicant, property owner, and solid waste facility owner and operator;

(b) total acreage, legal description and maps of the proposed facility site, including land use and zoning of the site and adjacent properties;

(c) a description of the facility's water source and its location;

(d) a description of the prevailing winds, including a wind rose diagram;

(e) a demonstration of compliance with the siting criteria in 20.9.4.9-12 NMAC;

(f) facility plans and drawings of the existing or proposed facility, with corresponding elevations and contours, signed and sealed by a professional engineer registered in New Mexico; and

(g) the latitude and longitude of the geographical center of the existing or proposed facility (as approved by the department) in NAD-83 or equivalent;

(5) contain a plan for compliance with 20.9.4.17 NMAC, if appropriate;

(6) contain an operating plan for compliance with operational criteria, including

(a) the means for controlling access to the facility and controlling and mitigating odors and litter;

(b) a listing and description of the number, type and size of equipment to be used at the proposed solid waste facility for processing, recovering, diversion of recyclables, transforming or disposing of solid wastes;

(c) a description of the proposed solid waste facility, including:

(i) the anticipated origin, composition and weight or volume of solid waste and other materials that are projected to be received at the facility;

(ii) the processes to be used at the facility;

(iii) the daily operational methodology of the proposed process;

(iv) the loading rate, the expected life of the facility; and

(v) the design capacity through the expected life of the facility and through the permit life of the facility;

(d) a plan for an alternative waste handling or disposal system during periods when the proposed solid waste facility is not in operation, including procedures to be followed in case of equipment breakdown; procedures may include the use of standby

equipment, extension of operating hours and contractual agreements for diversion of waste to other facilities;

- (e) the anticipated start-up date of the facility;
- (f) the planned operating hours of the proposed facility;
- (g) the plans for transportation to and from the facility including:
 - (i) the size and approximate number of vehicles that will deliver waste to the facility daily;
 - (ii) the anticipated routes that will be used by waste vehicles and the suitability of roads and bridges involved;
 - (iii) measures for controlling litter, dust and noise caused by traffic;
 - (iv) other predicted impacts of traffic to and from the facility; and
 - (v) plans, if any, for diverting solid waste from the waste stream; and
- (h) a plan for complying with record keeping requirements in 20.9.5.16 NMAC as applicable;
- (7) contain an emergency contingency plan that meets the requirements of 20.9.5.15 NMAC;
- (8) contain a closure and post-closure care plan in compliance with 20.9.6 NMAC;
- (9) demonstrate the ability to comply with any applicable special waste requirements in 20.9.8 NMAC;
- (10) contain a proposed ground water monitoring system plan in compliance with 20.9.9 NMAC, including, if site assessment bore holes are drilled to obtain data, a certification that the holes were plugged or sealed in accordance with the New Mexico office of state engineer's requirements for plugging or sealing of test holes, or will be converted to monitoring wells as part of the ground water monitoring system;
- (11) include a cost estimate in accordance with the requirements of 20.9.10 NMAC, in a format as specified by the department; and
- (12) contain any other information required by the secretary.

D. Any person seeking an initial permit for a landfill or a transformation facility, or for a permit modification of a landfill resulting in a lateral or vertical expansion, excluding an

on-site scrap tire monofill, shall first submit to the secretary the information that is necessary for the secretary to determine if the proposed site is in a vulnerable area. If the secretary determines that the site or the proposed site is in a vulnerable area, and the applicant is proposing to site the facility, or expand the facility, in an area that has not been designated for the proposed use as the result of a land-use zoning process conducted by the local government that requires a quasi-judicial public hearing, with the opportunity for public participation, the applicant shall follow the following procedures.

(1) Prior to filing the application, the applicant shall give notice to the public of its proposed plans, and of the procedures allowing residents to file comments on the proposal with the department. This notice shall contain the following.

(a) For a proposed new facility, the name and location of the proposed facility, a description of the proposed facility, a description of any transportation routes to be used to and from the proposed facility and expected hours of operation, contact information stating where a person may obtain further information from the applicant, contact information for the environment department solid waste bureau, and procedures for filing comments on the proposal with the department. The notice shall be approved by the department prior to publication. The notice shall also give notice of a community meeting for the purpose of informing the surrounding community of the plans for the proposed facility, and for taking comments and questions. The meeting shall not be held less than 30 days following publication of the notice.

(b) For a proposed permit modification of a landfill resulting in a lateral or vertical expansion, the name and location of the facility, a description of the proposed modification, a description in any changes in operation resulting from the modification, contact information stating where a person may obtain further information from the applicant, contact information for the environment department solid waste bureau, and procedures for filing comments with the department. The notice shall be approved by the department prior to publication. The notice shall also give notice of a community meeting for the purpose of informing the surrounding community of the plans for the proposed facility. The community meeting shall not be held less than 30 days following publication of the notice.

(2) Community residents shall have 60 days following the community meeting to submit comments to the department. If the secretary determines that there is significant community opposition to the proposed landfill; transformation facility; or permit modification resulting in a lateral or vertical expansion, excluding on-site scrap tire monofill, then the secretary shall require that the applicant prepare a community impact assessment. If a community impact assessment is required, the applicant shall give notice of a scoping meeting, pre-assessment meeting and opportunity for comment on the resulting community impact assessment. The applicant can either provide combined notice or separate notices of each event. At the scoping meeting, the public shall be given the opportunity to identify specific concerns regarding the proposed facility or modification, and the applicant will advise the public that the issues listed below will be addressed in a community impact assessment. The public will be asked if

additional issues should be included in the scope of the assessment, if existing issues need additional consideration, and if the community impact assessment should be produced in a language in addition to English. The secretary may order that the assessment be produced in a language in addition to English based on, but not limited to expressions of interest at the scoping meeting. After the applicant incorporates public input from the scoping meeting, the applicant shall hold a pre-assessment meeting to describe the final scope of the study to the public. The public shall be given opportunities to make comments and raise questions at this meeting. Before completion of the community impact assessment, a draft assessment shall be issued and made available to the public for comment. The public shall be allowed to submit comments on the assessment to the applicant for a period of 30 days following the issuance of the draft assessment. The applicant shall consider the comments and modify the community impact assessment as appropriate. The applicant shall file the community impact assessment, all written comments, and the applicant's resolution of the comments with its application. The community impact assessment shall contain an executive summary that is in English and, if appropriate, in any other predominant language of the community, and in plain language so it can be understood by the residents of the community. At a minimum the community impact assessment will address, to the extent New Mexico residents are affected, the following issues in the four mile radius around the proposed facility or existing facility that is proposing a horizontal or vertical expansion:

(a) description of:

- (i) purpose and need for the project;
- (ii) site location and description;
- (iii) land use;
- (iv) known existing and documented proposed regulated facilities within the vulnerable area;
- (v) other existing development and documented planned development in the vulnerable area;
- (vi) historic and cultural resources;
- (vii) visual and scenic resources; and
- (viii) climatology, meteorology, and air quality, including odors and dust;

(b) socioeconomic profile and environmental justice:

- (i) population, demographic profile, education, age and language; and

- (ii) occupational profile and household income;

- (c) noise;

- (d) litter;

- (e) transportation;

- (i) local roads and highways;

- (ii) railroads;

- (iii) other transportation issues;

- (iv) access to facility;

- (v) air quality, including odors and dust;

- (vi) noise; and

- (viii) traffic;

- (f) public and occupational health and safety issues;

- (g) positive and negative socioeconomic impacts:

- (i) local employment;

- (ii) community services;

- (iii) revenue to local funds;

- (iv) property values;

- (v) property taxes;

- (vi) cost effective disposal of community solid waste; and

- (vii) other quality of life concerns raised at public meetings;

- (h) cumulative and individual impacts of the proposed facility, other existing development and other planned development submitted to a local government within the vulnerable area, to:

- (i) land use in the area;

- (ii) historical and cultural resources;
 - (iii) visual and scenic resources;
 - (iv) air quality, including odors and dust;
 - (v) socioeconomics and environmental justice, including population, demographic profile, education, age, language, occupational profile and household income;
 - (vi) transportation;
 - (vii) unavoidable adverse environmental impacts; and
 - (viii) analysis of short-term, intermediate term and long term effects of the proposed facility;
- (i) summary of reasonable mitigation measures proposed to address the facility's contribution to any expected adverse impacts; these measures may include but are not limited to:
- (i) historical and cultural resources impact mitigation measures;
 - (ii) visual and scenic resource impact mitigation measures;
 - (iii) air quality impact mitigation measures, including for odors and dust;
 - (iv) socioeconomic and environmental justice impacts mitigation measures;
 - (v) noise impact mitigation measures;
 - (vi) transportation impact mitigation measures; and
 - (vii) public and occupational health impacts mitigation measures; and
- (j) consultation, coordination and public involvement:
- (i) agencies and local governments consulted;
 - (ii) public involvement;
 - (iii) responsive summary; and
 - (iv) comments.

E. If the proposed landfill, transformation facility or landfill modification resulting in a lateral or vertical expansion is proposed in a vulnerable area, or is not sited in an area that has been designated for the proposed use as the result of a land-use zoning process conducted by the local government that requires a quasi-judicial public hearing, with the opportunity of public participation, the applicant shall demonstrate that, within the state of New Mexico, granting the permit or permit modification will not result in a disproportionate effect on the health and environment of a particular socioeconomic group in the vulnerable area.

F. If the proposed initial landfill or transformation facility permit, or landfill modification resulting in a lateral or vertical expansion is not in a vulnerable area, or is sited in an area that has been designated for the proposed use as the result of a land-use zoning process conducted by the local government that requires a quasi-judicial public hearing, with the opportunity for public participation, the applicant is not required to prepare a community impact assessment.

G. Each permit application filed with the secretary shall include proof that the applicant has provided notice of the filing of the application and any community impact assessment scoping meetings, pre-assessment meetings or other notifications required by 20.9.2 - 20.9.10 NMAC, and unless otherwise specified by 20.9.2 - 20.9.10 NMAC, to the public and other affected individuals and entities. The notice shall:

(1) be provided by certified mail to the owners of record, as shown by the most recent property tax schedule, and tax exempt entities of record, of all properties:

(a) within one hundred feet of the property on which the facility is located or proposed to be located if the facility is or will be in a class A or class H county or a municipality with a population of more than two thousand five hundred (2,500) persons; or

(b) within one-half mile of the property on which the facility is located or proposed to be located if the facility is or will be in a class B county or municipality with a population of 2,500 or less;

(2) be provided by certified mail to all municipalities and counties in which the facility is or will be located and to the governing body of any county, municipality, Indian tribe or pueblo when the boundary of the territory of the county, municipality, Indian tribe or pueblo is within ten miles of the property on which the facility is proposed to be constructed, operated or closed;

(3) be provided to all parties and interested participants of record for a permit modification or renewal;

(4) be published once in a newspaper of general circulation in each county where the facility is proposed to be constructed, operated or closed; this notice shall appear in either the classified or legal advertisements section of the newspaper and at

one other place in the newspaper calculated to give the general public the most effective notice; notice also shall be provided to residents of each community that is or will be affected significantly by the existing or proposed solid waste facility at least once in one or more other media in a manner that effectively reaches a substantial number of members of each community, and where printed shall be printed in both English and Spanish;

(5) be posted in at least eight publicly accessible and conspicuous places, including the proposed or existing entrance to the property on which the facility is or is proposed to be located; and

(6) include the following:

(a) name, address, and telephone number of the applicant and contact person;

(b) the anticipated start-up date of the facility or modification, and planned hours of operation;

(c) a description of the facility, including the general process, location, size, quantity, rate, and type of waste to be handled and a description of any proposed modification;

(d) the anticipated origin of the waste; and

(e) a statement that comments regarding the application should be provided to the applicant and the department.

H. Notices shall be submitted to the department for approval prior to publication, service and posting. The applicant shall submit a certificate from an American translators association certified translator showing that English versions have been accurately translated into Spanish.

[20.9.3.8 NMAC - Rp, 20 NMAC.9.1.II.201, 08/02/07]

20.9.3.9 ADDITIONAL PERMIT APPLICATION REQUIREMENTS FOR MUNICIPAL, MONOFILL OR SPECIAL WASTE LANDFILL FACILITIES:

A. Prior to the submission of a permit application or an application for a modification resulting in a lateral or vertical expansion for a municipal, monofill or special waste landfill, the applicant shall:

(1) meet with department representatives to discuss the proposed facility or modification; and

(2) submit a site assessment boring plan for departmental approval, including a demonstration that the installation of any monitoring well will comply with 20.9.9.9 NMAC:

(a) an applicant for approval of a site assessment boring plan shall submit a notice of intent to the secretary at least 14 days prior to the installation or decommissioning of any borings; and

(b) borings may be converted into piezometers or ground water monitoring wells provided they are constructed in accordance with 20.9.9.9 NMAC, and the conversion is consistent with the ground water monitoring plan and system plan approved by the department.

B. Any person seeking a permit for a municipal or special waste landfill shall submit the following information in addition to that required under 20.9.3.8 NMAC:

(1) a schedule of filling and methods of compaction of solid waste;

(2) a soil balance calculation and types and sources of daily, intermediate and final cover;

(3) site plans and cross-sections of the facility, drawn to scale, indicating the location of any:

(a) ground water monitoring wells and landfill gas monitoring points;

(b) materials recovery operation(s);

(c) borrow and fill areas;

(d) fire protection equipment;

(e) barriers for concealing the site from public view and noise abatement;

(f) surface drainage;

(g) water supply, including lines, tanks and wells;

(h) buildings, roads, utilities, storage ponds, fences and other site improvements;

(i) electric power transmission and distribution lines, pipelines, railroads, water, gas, oil wells, and public and private roads within 300 feet of the facility; and

(j) access roads to and within the landfill, including description, slopes, grades, length, load limits and points of entrance and exit;

(4) a topographic map of the site at a scale of 1"=200 feet, with a contour interval of two feet or less where relief is less than 50 feet; and five feet or less where relief exceeds 50 feet, with property boundaries of the landfill indicated;

(5) the most recent full size United States geological survey topographic map of the area, showing the waste facility boundary and existing utilities and structures within 500 feet of the boundary of the facility site;

(6) if available, the most recent federal emergency management agency 100-year frequency floodplain map, and if not available, the applicant shall otherwise demonstrate the site is not located in a 100-year frequency floodplain;

(7) a description of site geology and hydrology including:

(a) characterization of the uppermost aquifer including depth, estimated thickness, estimated sustainable yield, water quality (including all constituents referenced in Subsection A of 20.9.9.20 NMAC, flow direction, gradient and velocity unless the application includes a petition for suspension of ground water monitoring requirements in accordance with Subsection C of 20.9.9.8 NMAC;

(b) characterization of the geology, including:

(i) the results of the site assessment borings conducted in accordance with the approved boring plan;

(ii) a site plan showing the location, surface elevation and total depth of each boring;

(iii) lithologic log results of each boring, drawn to a scale of 1"=10' (except that borings of greater than 200 feet may be drawn to a scale of 1"=20'), graphically depicting the soil and/or rock strata penetrated and describing each layer; a) if soil: color, degree of compaction, moisture content, and any additional information necessary for an adequate description and visual classification of each stratum based on the unified soils classification system; and b) if rock: a detailed lithologic description, including rock type, degree of induration, presence of fractures, fissility, porosity (including vugs), and any other information necessary for an adequate description; the descriptions shall be certified by a qualified ground water scientist who shall be on-site at all times during drilling operations (all field notes of the ground water scientist shall be made available upon request of the department); and

(iv) if ground water was encountered, the initial depth it was encountered shall be indicated on the lithologic log;

(8) a demonstration that run-off from the landfill will not discharge contaminants in violation of the New Mexico Water Quality Act, commission regulations

or standards, or the Federal Clean Water Act, including an analysis of proposed run-on and run-off flow and control systems;

(9) a groundwater monitoring plan in conformance with 20.9.9.10 NMAC;

(10) plans and specifications for ground water monitoring systems in accordance with 20.9.9.9 NMAC;

(11) plans and specifications for liner and leachate collection systems in accordance with 20.9.4.13 NMAC and 20.9.4.15 NMAC;

(12) plans and specifications for landfill gas monitoring and management programs in accordance with 20.9.4.16 NMAC; and

(13) provide proof the applicant has notified the federal aviation administration and the affected airport if the facility is to be located within six miles of an airport used by the public and that the federal aviation administration does not object to the site being operated as a solid waste facility.

C. Applicants shall include disposal management plans for all types of special waste proposed to be disposed at the landfill. Such disposal management plans shall include, at a minimum:

(1) a description of methods to identify the various special wastes, including the use of test parameters in 20.9.8.11 NMAC;

(2) disposition procedures for incoming special wastes;

(3) procedures for notifying the department in the event wastes either fail the tests listed in 20.9.8.11 NMAC or prove not to be one of the listed special wastes;

(4) the tracking system to be used to:

(a) compile and record the amounts and types of wastes received;

(b) identify the area or disposal coordinates where the waste was placed in the disposal cell; and

(c) complete the manifest requirements of 20.9.8.19 NMAC;

(5) emergency and mitigation measures in case of a spill or leak; and

(6) a description of procedures to meet applicable requirements in 20.9.8.12-17 NMAC.

D. Applicants shall identify any types of material not within the definition of solid waste that the owner or operator seeks to dispose.

[20.9.3.9 NMAC - Rp, 20 NMAC 9.1.II.202, 08/02/07]

20.9.3.10 ADDITIONAL PERMIT APPLICATION REQUIREMENTS FOR CONSTRUCTION AND DEMOLITION LANDFILLS:

Any person seeking a permit for a construction and demolition landfill shall submit the following information in addition to that required under 20.9.3.8 NMAC:

A. site plans and cross-sections of the proposed facility, drawn to scale, indicating the location of:

- (1) the tipping areas;
 - (2) fencing and gates;
 - (3) entrances, exits and access roads;
 - (4) locations of buildings within 500 feet of the facility;
 - (5) public water supply wells and private wells within 1000 feet of the facility;
- and,
- (6) borrow and fill areas;

B. frequency of construction and demolition debris disposal; and

C. if recycling operations are conducted, the method of diversion and storage of the recyclable materials, the frequency of collection for reuse from the facility, method of transport, and destination; the recycling operation shall comply with 20.9.3.29 NMAC.

[20.9.3.10 NMAC - Rp, 20 NMAC 9.1.II.203, 08/02/07]

20.9.3.11 ADDITIONAL PERMIT APPLICATION REQUIREMENTS FOR PROCESSING FACILITIES AND FOR RECYCLING FACILITIES THAT ACCEPT SOLID WASTE THAT ACCOMPANIES THE RECYCLABLE MATERIAL:

A. Any person seeking a permit for a processing facility or for a recycling facility that accepts solid waste shall submit the following information in addition to that required under 20.9.3.8 NMAC:

- (1) a description of the survey and analysis process used to determine the characteristics of all solid waste expected to be accepted or processed;

(2) plans and elevations, drawn to scale, of all structures used for processing, storage, alternate storage, and disposal of waste materials;

(3) a process description of the sampling capability and locations designed into the facility so the process stream can be safely sampled and analyzed;

(4) a description of the methods to be employed for the containment or removal of residues and spills in a manner that protects the public health, welfare, safety and the environment; and

(5) an operation and maintenance manual that addresses all of the operating requirements.

B. Any person seeking a permit for a processing facility that will process special waste shall, in addition to the requirements of this section, submit the following additional information:

(1) the proposed location and method for storage or processing of liquid or solid residues and end products produced by operation of the facility;

(2) the process for separation, storage and disposal of waste generated by the process, including the temporary storage of wastes;

(3) the minimum and maximum volumes of the types of material or solid waste to be stored prior to processing or disposal, and the minimum and maximum time that material or waste will be stored;

(4) facility plans and elevations, drawn to scale, and specifications including:

(a) equipment layout;

(b) the most recent full size United States geological survey topographic map of the area, showing the waste facility boundary, the property boundary, and existing utilities and structures within 500 feet of the property boundary;

(c) the location of electric power transmission and distribution lines, pipelines, railroads and public and private roads within 300 feet of the proposed facility;

(d) the processing unit, with loading area and residue removal;

(e) all conveyors, ramps and other devices used to move material through the facility;

(f) control room and equipment; and

(g) pollution control equipment;

- (5) an operations and maintenance manual that includes:
 - (a) current policies and procedures;
 - (b) the operating requirements for the various stages of processing; and
 - (c) all information that would enable supervisory and operating personnel, and persons evaluating the operation of the facility, to determine the sequence of operation, plans, diagrams, policies, procedures and legal requirements which must be followed for orderly and successful operations;
- (6) a description of the facility operation which includes:
 - (a) a sequential description of the major components used for the processing of the solid waste starting from its delivery at the facility and continuing through the treatment and loading operations;
 - (b) procedures for facility start-up, and scheduled and unscheduled shut downs;
 - (c) a description of potential safety hazards and methods of control, including, but not limited to, arrangements to detect explosion potential and equipment installed to minimize the impact of explosion; and
 - (d) a description of personnel safety equipment and protective gear, including, but not limited to, showers, eye wash, fire extinguishers, hoses, hard hats, safety goggles, hearing protection, and proposed personnel hygiene facilities;
- (7) an operations plan that includes all plant systems complete with process flow and instrumentation diagrams and heat and material balances; and
- (8) residue testing methods and procedures.

[20.9.3.11 NMAC - Rp, 20 NMAC 9.1.II.204 NMAC, 08/02/07]

20.9.3.12 ADDITIONAL PERMIT APPLICATION REQUIREMENTS FOR TRANSFORMATION FACILITIES:

A. Any person seeking a permit for a transformation facility shall submit the following information in addition to that required under 20.9.3.8 NMAC:

- (1) the composition of the waste to be received at the facility;
- (2) the method to be used to convert the waste into a feedstock for the transformation process, including material separation and recovery systems;

(3) if the transformation process is other than biological, a characterization of the feedstock used as the design basis of the facility that shows:

(a) composition by material type; and

(b) physical and chemical properties, including moisture content, ash content, and higher heating value;

(4) if the transformation is by means of a biological process, a characterization of the feedstock used as the design basis of the facility that shows:

(a) composition by material type;

(b) physical and chemical properties, including moisture content and percent organic and inorganic matter;

(c) process efficiency, as measured by conversion of volatile solids; and

(d) end products or residue;

(5) the proposed location and method for disposal, storage or processing of liquid or solid residues and end products produced by operation of the facility;

(6) the process for separation, storage and disposal of waste generated by the process, including the temporary storage of bulky wastes;

(7) the minimum and maximum volumes of the types of material or solid waste to be stored prior to sale, reuse or disposal, and the minimum and maximum time that material or waste will be stored;

(8) facility plans and elevations, drawn to scale, and specifications including:

(a) equipment layout;

(b) the most recent full size United States geological survey topographic map of the area, showing the waste facility boundary, the property boundary, and existing utilities and structures within 500 feet of the property boundary;

(c) the location of electric power transmission and distribution lines, pipelines, railroads and public and private roads within 300 feet of the proposed facility;

(d) the transformation unit, with feed area and residue removal;

(e) all conveyors, ramps and other devices used to move material the facility;

(f) control room and equipment; and

(g) pollution control equipment;

(9) an operations and maintenance manual that includes:

(a) current policies and procedures;

(b) the operating requirements for the various stages of transformation; and

(c) all information that would enable supervisory and operating personnel, and persons evaluating the operation of the facility, to determine the sequence of operation, plans, diagrams, policies, procedures and legal requirements which must be followed for orderly and successful operations;

(10) a description of the facility operation which includes:

(a) a sequential description of the major components used for the treatment of the solid waste starting from its delivery at the facility and continuing through the residue and ash treatment and loading operations;

(b) procedures for facility start-up, and scheduled and unscheduled shut downs;

(c) a description of potential safety hazards and methods of control, including, but not limited to, arrangements to detect explosion potential and equipment installed to minimize the impact of explosion; and

(d) a description of personnel safety equipment and protective gear, including, but not limited to, showers, eye wash, fire extinguishers, hoses, hard hats, safety goggles, hearing protection, and proposed personnel hygiene facilities;

(11) an operations plan that includes all plant systems complete with process flow and instrumentation diagrams and heat and material balances; and

(12) residue testing methods and procedures.

B. The design and operation of the transformation facility shall conform to all applicable codes and standards including, but not limited to, the American society of testing materials, the American national standards institute, the American society of mechanical engineers, the American concrete institute, and the uniform building code, most recent edition, as well as the building code requirements in the city, county, or municipality in which the facility is to be located.

C. Within 30 days of permit issuance, the permittee shall submit to the department a comprehensive project schedule that indicates each major design, procurement, construction, and start-up activity in a properly sequenced and coordinated fashion.

Progress reports shall be submitted at least once a month indicating major activities accomplished and percentage of work completed.

[20.9.3.12 NMAC - Rp, 20 NMAC 9.1.II.205 NMAC, 08/02/07]

20.9.3.13 ADDITIONAL PERMIT APPLICATION REQUIREMENTS FOR SOLID WASTE FACILITIES THAT ACCEPT SPECIAL WASTE:

Any person seeking a permit to accept special waste at a solid waste facility shall submit the following information in addition to that required under 20.9.3.8 NMAC:

- A. a list of the types of wastes to be accepted and the anticipated sources of such wastes;
- B. the anticipated amount and frequency of receipt of the wastes, including the anticipated amount of each type of special waste expected to be accepted over the life of the permit;
- C. a description of the method of handling, including, but not limited to, disposal, processing, or transformation;
- D. a general disposal management plan, in accordance with 20.9.8 NMAC, for each type of special wastes proposed to be accepted at the facility; and
- E. emergency and mitigation measures in case of a spill or leak.

[20.9.3.13 NMAC - Rp, 20 NMAC 9.1.II.206 NMAC, 08/02/07]

20.9.3.14 ADDITIONAL PERMIT APPLICATION REQUIREMENTS FOR COMPOSTING FACILITIES THAT ACCEPT SOLID WASTE:

Any person seeking a permit for a composting facility that accepts solid waste shall submit the following information in addition to the information required by 20.9.3.8 NMAC.

- A. Operating plans for the facility, including, but not limited to, the origin, expected composition and weight or volume of materials to be composted, the process, the loading rate, the proposed capacity of the facility, proposed size and operational rate, and the expected disposition rate of the compost from the facility.
- B. The composition and weight or volume of the non-compostable solid waste to be received at the facility.
- C. The process or method used to separate the non-compostable solid waste from the compostable material.

D. The disposal path for the non-compostable solid waste.

E. A characterization of the feedstock used as the design basis of the composting facility shall be included showing:

- (1) composition by material type;
- (2) physical and chemical properties including moisture content and percent organic and inorganic matter; and
- (3) process efficiency as measured by conversion of volatile solids.

F. A description of methods used to assure that rodents and other animals will be kept from the facility.

G. For composting facilities that accept sewage sludge, a plan showing testing methods and procedures for compliance with 40 CFR 503 and 20.6.2 NMAC.

H. A demonstration that a groundwater discharge permit has been applied for, if applicable.

[20.9.3.14 NMAC - Rp, 20 NMAC 9.1.II.207 NMAC, 08/02/07]

20.9.3.15 ADDITIONAL PERMIT APPLICATION REQUIREMENTS FOR TRANSFER STATIONS:

A. Any person seeking a permit for a transfer station shall submit the following information in addition to that required by 20.9.3.8 NMAC:

B. plans and elevations, drawn to scale, of all structures proposed to be used for handling and storage of solid waste and diversion of recyclables;

C. a site plan of the proposed facility, drawn to scale, indicating the location of:

- (1) storage, loading and unloading areas;
- (2) fencing and gates;
- (3) entrances, exits, and access roads; and
- (4) area map showing locations of structures within 100 feet of the facility boundary;

D. methods of collection, treatment, or disposal of waste water from the facility;

E. the frequency of solid waste and recyclables deposit and pick-up from the facility, method of transport, and destination;

F. specific operational procedures, including traffic patterns and procedures for handling recyclables, household hazardous waste, white goods, bulky items, tires, yard refuse, and used oil; and

G. a demonstration that the facility will be capable of handling the predicted waste stream.

[20.9.3.15 NMAC - Rp, 20 NMAC 9.1.II.208 NMAC, 08/02/07]

20.9.3.16 PERMITTING PROCEDURES:

A. The permitting procedures in 20.9.3.8 - 20.9.3.25 NMAC supplement the permitting requirements in the Solid Waste Act and Permitting Procedures - Environment Department, 20.1.4 NMAC.

B. A permit shall be issued only after a public hearing as required by NMSA 1978 Section 74-9-24 A of the Solid Waste Act. If a public hearing is held for a permit application, modification, renewal, or petition, the applicant shall pay one-half the actual cost of:

(1) court reporting services, including the cost to provide a copy of the transcript to the department;

(2) any translation or interpretation services; and

(3) providing the facility where the public hearing is held, including any security and ancillary costs.

C. The department shall submit an invoice to the applicant for payment. Payment shall be made before action on a permit will be finalized. A public entity may seek a waiver of payment for its share of hearing costs if it demonstrates to the secretary that payment would impose a financial hardship to the entity.

[20.9.3.16 NMAC - Rp, 20 NMAC 9.1.II.212 NMAC, 08/02/07]

20.9.3.17 PERMIT APPLICATION REVIEW:

A. The applicant shall submit three copies of the initial permit application for approval. Upon receipt of an application for a permit, the department shall review the application to determine if additional information is necessary or shall determine the application administratively complete. The department shall issue a notice of administrative completeness or a notice that additional information is necessary within 120 days after receipt of the application and within 90 days of any subsequent

responses to requests for further information. The secretary may extend the time for good cause.

B. In the event the department requests additional information, the applicant shall submit any information requested within 120 days of receipt of the first request, and 90 days of receipt of subsequent requests, or the application may be denied without prejudice. The secretary may extend the response time for good cause, and set up an alternative permit review schedule. When submitting the information in response to a request for additional information, the applicant shall submit three copies. If the permit application is not administratively complete after two requests for additional information, the secretary may deny the permit application without prejudice. This subsection is not intended to limit informal informational exchanges during the permit review period or prior to submission of an application. Denial of a renewal application under this subsection does not automatically terminate the existing permit of a facility.

C. Within 14 days after the application is deemed administratively complete, the applicant shall submit to the department:

(1) six complete new copies of the application; and

(2) an updated list of all property owners as specified in Subsection G of 20.9.3.8 NMAC; the list must be date stamped and signed by the appropriate county agent, or certified as accurate by the applicant as of the date the application is deemed complete.

D. Acceptance of the application as administratively complete allows the permit application to be processed according to the permitting procedures. Acceptance of the application as administratively complete is not an indication that the department supports the permit without conditions or that it will be approved.

[20.9.3.17 NMAC - Rp, 20 NMAC 9.1.II.212 NMAC, 08/02/07]

20.9.3.18 PERMIT ISSUANCE:

A. The secretary shall issue a permit if the applicant demonstrates that the requirements of 20.9.2 - 20.9.10 NMAC and the Solid Waste Act are met and that neither a hazard to public health, welfare or the environment nor undue risk to property will result.

B. The secretary shall consider the information in the community impact assessment and any demonstrations made pursuant to Subsection E of 20.9.3.8 NMAC, together with other information in the record, in any decisions to issue, issue with conditions or deny the permit.

C. The terms and conditions of the permit or permit modification shall be specifically identified by the secretary.

D. Multiple contiguous facilities may be permitted under one solid waste facility permit provided each facility meets the applicable requirements of 20.9.2 - 20.9.10 NMAC and the Solid Waste Act.

[20.9.3.18 NMAC - Rp, 20 NMAC 9.1.II.212 NMAC, 08/02/07]

20.9.3.19 PERMIT DENIAL OR REVOCATION:

A. In addition to the causes for denial or revocation listed in Subsections A and B of 74-9-24 of the Solid Waste Act and 20.9.3.18 NMAC, the secretary may deny or revoke a permit during its term for:

(1) a material violation of any term or condition of the permit, any requirement of 20.9.2 - 20.9.10 NMAC, or any requirement of the Solid Waste Act by the owner or operator, after taking into consideration the seriousness of the violation, any good faith efforts to comply with the applicable requirements and other relevant factors;

(2) failure of the applicant in the application or during the permit issuance process to disclose fully all material facts;

(3) misrepresentation by the owner or operator of any material facts at any time;

(4) a determination that the permitted activity endangers public health, welfare or the environment;

(5) failure of the owner or operator to demonstrate the knowledge and ability to operate a facility in accordance with 20.9.2 - 20.9.10 NMAC; and

(6) a history of non-compliance by the owner or operator with environmental regulations or statutes at another facility.

B. A permit shall be revoked in accordance with the procedures set forth in Adjudicatory Procedures - Environment Department, 20.1.5 NMAC. Construction, modification and operation, if any, shall cease upon the effective date of the revocation.

[20.9.3.19 NMAC - Rp, 20 NMAC 9.1.II.212 NMAC, 08/02/07]

20.9.3.20 EFFECT OF PERMIT:

A. Any terms or conditions of the permit shall be enforceable to the same extent as a regulation of the board.

B. The existence of a permit issued under 20.9.2 - 20.9.10 NMAC shall not constitute a defense to a violation of 20.9.2 - 20.9.10 NMAC or the Solid Waste Act.

[20.9.3.20 NMAC - Rp, 20 NMAC 9.1.II.212 NMAC, 08/02/07]

20.9.3.21 PERMITTED FACILITIES - DUTIES PRIOR TO OPERATION:

A. At least 14 days prior to the start of solid waste facility construction, the owner or operator shall provide the department with a major milestone schedule.

B. After a permit is granted for a solid waste facility or for the expansion of a solid waste facility, and at least 14 days prior to disposal, processing, or transforming of any solid waste at the solid waste facility or expansion, the owner or operator shall:

(1) provide to the department a written notice of construction completion with "as built" construction drawings signed and sealed by a registered professional engineer; and

(2) for landfills, provide the department a quality assurance/quality control report, certified by a registered professional engineer licensed in New Mexico and experienced in liner installation, for construction of the liner and leachate collection system.

C. The owner and operator shall prohibit the disposal, processing, or transformation of solid waste at a new or modified portion of a solid waste facility until the department has either inspected the solid waste facility or modified portion and determined that the site has been developed in accordance with the permit or permit modification, 20.9.2 - 20.9.10 NMAC and the Solid Waste Act, or the department fails to inspect the solid waste facility within 30 calendar days of receipt of written notice of construction completion and any quality assurance/quality control report or engineer's certification that the facility or modification has been constructed in accordance with the permit or permit modification, 20.9.2 - 20.9.10 NMAC and the Solid Waste Act, and that a quality assurance/quality control report is being prepared.

D. The owner and operator shall prohibit the disposal, processing, or transformation of solid waste at a new or modified portion of a solid waste facility until the owner or operator has secured financial assurance and has submitted appropriate documentation to the department prior to the initial receipt of waste at a new or modified portion of a solid waste facility.

[20.9.3.21 NMAC - N, 08/02/07]

20.9.3.22 PERMIT OR FACILITY MODIFICATION:

A. Any owner or operator of a solid waste facility who seeks to modify such facility or permit conditions shall obtain a permit modification prior to making any modifications. A permit modification shall not extend the initial term of any permit.

B. An application for a modification shall demonstrate compliance with the portions of 20.9.2 - 20.9.10 NMAC that pertain to such a modification.

C. The secretary may initiate the modification of permit conditions or require modification of the facility if:

(1) changes occur after permit issuance which justify permit conditions that are different from or are not included in the existing permit;

(2) the secretary has received information that was not in the record at the time of permit issuance and would have justified the application of different permit conditions at the time of issuance;

(3) the standards or regulations on which the permit was based have changed by statute, through promulgation of new or amended standards or regulations, or by judicial decision after the permit was issued;

(4) the secretary determines good cause exists for modification, such as an act of God, strike, flood, or materials shortage, or other events over which the permittee has little or no control and for which there is no reasonable remedy.

D. All permit modifications, whether initiated by the owner or operator or by the secretary, shall be subject to Permit Procedures - Environment Department, 20.1.4 NMAC and permitting procedures in this part.

[20.9.3.22 NMAC - Rp, 20 NMAC 9.1.II.210 NMAC, 08/02/07]

20.9.3.23 TRANSFER OF PERMITS AND CHANGE IN PERMIT APPLICANT:

A. A change in ownership of a permitted entity requires a permit transfer and shall be allowed according to the following procedure.

(1) Where a permitted entity undergoes a change in ownership, but the permitted entity remains the same, the new owner shall, within 30 days after the change submit the following:

(a) a description of the change in ownership;

(b) the date of the change in ownership;

(c) a statement that the current financial assurance will remain in effect, or a new proposed financial assurance to meet the requirements of 20.9.10 NMAC;

(d) information required by Section 74-9-21 of the Solid Waste Act, and if applicable, disclosure statements shall be submitted for the new owner on forms provided by the department;

(e) a statement whether the new owner has been convicted of a felony or other crime within 10 years immediately preceding the date of the transfer, and if so details of the crime and conviction;

(f) a statement whether the new owner has been fined within the past 5 years for alleged violations of any environmental laws of this state, any other state or the United States, and if so, details of any allegations, settlements or compliance orders;

(g) proof of public notice of the change in ownership; and

(h) any other information required by the secretary.

(2) The permittee shall provide public notice of the ownership change by publishing once in a newspaper of general circulation in the county where the facility is located, and shall indicate in the public notice that the department will accept public comment on the ownership change for a period of 30 days after the date of publication.

(3) The existing financial assurance required by 20.9.10 NMAC shall remain in effect until the secretary has approved any new proposed financial assurance submitted by the new owner.

B. A change in the permittee requires a permit transfer and shall be allowed according to the following procedure.

(1) Where the person owning the permit seeks to transfer the permit to a new person to be named as permittee, the existing owner and the proposed new owner shall file an application with the department requesting transfer of the permit. The application shall contain the following information:

(a) a description of the proposed change of permittee;

(b) an explanation of whether the change in permittee will have any effect on the operations;

(c) a new proposed financial assurance to meet the requirements of 20.9.10 NMAC;

(d) information required by Section 74-9-21 of the Solid Waste Act, and if applicable, disclosure statements shall be submitted for the new proposed permittee on forms provided by the department;

(e) a statement whether the new owner has been convicted of a felony or other crime within 10 years immediately preceding the date of the transfer, and if so, details of the crime and conviction;

(f) a statement whether the new owner has been fined within the past five years for alleged violations of any environmental laws of this state, any other state or the United States, and if so, details of any allegations, settlements or compliance orders;

(g) proof of public notice of the proposed change in permittee; and

(h) any other information required by the secretary;

(2) The permittee shall provide public notice of a proposed permit transfer by publishing once in a newspaper of general circulation in the county where the facility is located, and shall indicate in the public notice that the department will accept public comment on the permit transfer for a period of 30 days after the date of publication.

(3) The existing financial assurance required by 20.9.10 NMAC shall remain in effect until the secretary has approved any new proposed financial assurance submitted by the proposed new permittee.

C. If a permit applicant changes ownership or seeks to transfer the application to a new proposed permittee, the applicant and transferee shall follow the procedures in this section. If the application has already been deemed complete, the application shall be re-noticed and re-submitted.

[20.9.3.23 NMAC - Rp, 20 NMAC 9.1.II.211 NMAC, 08/02/07]

20.9.3.24 PERMIT REVIEW:

No later than 60 days before a permit review is required by Section 74-9-24 of the Solid Waste Act, the owner or operator shall submit to the department a complete description of the following:

A. facility operations;

B. compliance history;

C. environmental monitoring results, releases, and any remediation;

D. changes in information from the disclosure forms;

E. any other technical requirements requested by the secretary;

F. financial assurance;

G. any behavior or incidents of the nature described in Subsection B of 74-9-24 of the Solid Waste Act; and

H. proof of public notice of the review provided in accordance with Section 74-9-22 of the Solid Waste Act and 20.9.2 - 20.9.19 NMAC.

[20.9.3.24 NMAC - Rp, 20 NMAC 9.1.II.212, 08/02/07]

20.9.3.25 PERMIT RENEWAL:

A. To renew a permit, the owner or operator of a solid waste facility shall file a permit renewal application no later than 12 months prior to the expiration date of the facility permit. A permit renewal application shall include a complete description of the following:

- (1) facility operations;
- (2) compliance history;
- (3) environmental monitoring results, releases, and any remediation;
- (4) changes in information from the most recent disclosure forms filed with the department;
- (5) any other technical requirements requested by the secretary;
- (6) financial assurance;
- (7) any behavior or incidents of the nature described in Subsection B of 74-9-24 of the Solid Waste Act;
- (8) compliance demonstrations under Subsection A of 20.9.4.9 NMAC; and
- (9) proof of public notice of the renewal application provided in accordance with Section 74-9-22 of the Solid Waste Act.

B. A solid waste facility may continue to operate under the terms and conditions of the existing permit until the renewal permit is issued or denied provided that:

- (1) the owner and operator are in compliance with the existing permit, 20.9.2 - 20.9.10 NMAC, the Solid Waste Act, and any federal regulations which apply;
- (2) a permit renewal application was submitted in a timely fashion in accordance with this section; and
- (3) the owner or operator submits any requested additional information by the deadline(s) specified by the secretary.

C. The secretary may establish new deadlines for the permit renewal application if the application is denied under 20.9.3.17 NMAC. The secretary may issue an order for the revocation of the existing permit if the provisions in Subsection B of 20.9.3.17 NMAC are not met.

[20.9.3.25 NMAC - Rp, 20 NMAC 9.1.II.212, 08/02/07]

20.9.3.26 PERMIT EXPIRATION; AUTOMATIC CLOSURE:

A. A permit shall automatically expire when the secretary verifies that the closure and any post-closure care plan, including corrective action, have been completed.

B. If a permitted facility begins operation, and thereafter suspends operation in full for at least five years, authorization to accept waste is suspended and closure activities shall begin.

[20.9.3.26 NMAC - Rp, 20 NMAC 9.1.II.212, 08/02/07]

20.9.3.27 REGISTRATION OF RECYCLING AND COMPOSTING FACILITIES THAT ACCEPT ONLY SOURCE SEPARATED RECYCLABLE OR COMPOSTABLE MATERIALS, COLLECTION CENTERS AND AIR CURTAIN INCINERATORS AND LAW ENFORCEMENT PHARMACEUTICAL INCINERATORS:

A. The owner or operator of the following facilities shall file an application for a registration at least 30 days prior to any operations and every five years thereafter. Existing facilities of the type listed below shall apply for a registration at least 30 days prior to the expiration of their existing permit or registration, or within two years after the effective date of these regulations, whichever occurs first. Facilities covered by this section that do not timely file a complete application for registration are hereby deemed unpermitted solid waste facilities, and the owner or operator may be subject to penalties, permit requirements and nuisance abatement orders. Facilities required to register are:

- (1) recycling facilities that accept only source separated recyclable materials;
- (2) composting facilities that accept only source separated compostable materials;
- (3) collection centers;
- (4) small animal crematoria;
- (5) air curtain incinerators; and
- (6) law enforcement pharmaceutical incinerators.

B. Registration is not required for a recycling facility that accepts only source separated recyclable materials and accepts the recyclables for less than seven days in any calendar year.

C. Registration is not required for collection facilities that are part of a commercial hauler operation, that have an operational rate of less than 240 cubic yards per day monthly average, and that do not serve the general public, but such facilities shall be included in the registration of the commercial hauler under Paragraph (10) of Subsection A of 20.9.3.31 NMAC.

D. Any person who is required to register under this section with the department shall provide the following information:

(1) the name, address, and telephone number of the business, owner, operator and contact person;

(2) the anticipated start up date (unless it is an existing operation);

(3) a legal description, and map of the proposed facility site, including land use and zoning of the site and surrounding area, including setbacks;

(4) a description of means that will be used to prevent the facility from becoming a public nuisance, including:

(a) signs to indicate the location of the site, the hours of operation, emergency telephone numbers, delivery instructions, and that fires and scavenging are prohibited;

(b) storage containers that are leak-proof and manufactured of non-biodegradable material;

(c) means to control litter and prevent and extinguish fires;

(d) conducting any recycling operations in a safe and sanitary manner;

(e) storing any recyclable materials in a manner that does not create a nuisance, harbor vectors, or create a public health hazard;

(f) providing sufficient unloading areas to meet peak demands;

(g) for collection centers, providing separate storage areas for bulky wastes, such as brush, white goods, appliances and scrap tires, and removing the bulky wastes at a frequency approved in the registration;

(h) for collection centers, confining unloading of solid waste to as small an area as possible;

(i) for collection centers, removal of solid waste from the center at the end of the operating day unless otherwise approved in the registration;

(j) a means of controlling access to the facility;

(k) a means of controlling and mitigating noise and odors;

(l) operating plans for the facility, including, but not limited to, the origin, expected composition and weight or volume of materials to be composted or recycled or incinerated, the process, loading rate, proposed capacity, size and operational rate, and the expected disposition rate of the recyclables, compost, ash or waste from the facility;

(m) for composting facilities that accept sewage sludge, a plan showing testing methods and procedures for compliance with 40 CFR 503 and 20.6.2 NMAC;

(n) for composting facilities, a demonstration that a groundwater discharge permit has been applied for, if applicable;

(o) for air curtain incinerators, a copy of the air quality permit, registration or notice of intent filed with the air quality bureau;

(p) for air curtain incinerators, a designation of the intended recipient of ash waste; and

(q) any additional information requested by the secretary.

E. The owner or operator shall comply with the terms of its approved registration.

F. A violation of the terms of an approved registration may be deemed to be a public nuisance or the facility may be deemed to be an unpermitted solid waste facility subject to enforcement orders under the Solid Waste Act.

G. The owner or operator of a facility required to be registered under this section shall update its registration to reflect any material change in its operations.

H. The owner or operator of a recycling facility, composting facility, collection center, small animal crematorium, an air curtain incinerator, or a law enforcement pharmaceutical incinerator shall not create a public nuisance. Failure to comply with the terms of the registration may be deemed a public nuisance. If the secretary determines, based on the information submitted with the registration or based upon any other information that the facility will be or has become a public nuisance, or that a facility covered by this section is in violation of the Solid Waste Act or 20.9.2 - 20.9.10 NMAC, the secretary may deny the registration, issue an order requiring the owner or operator to abate the public nuisance, or may issue any other order pursuant to the Solid Waste Act or 20.9.2 - 20.9.10 NMAC, or any combination thereof. The owner or operator or other affected person may appeal the secretary's order by filing a request for hearing

within 30 days of the date of the secretary's order. The appeal shall be conducted in accordance with the procedures in 20.1.5 NMAC, Adjudicatory Procedures- Environment Department.

I. The owner or operator of every recycling facility and composting facility shall have a certified operator or representative present at all times while the facility is being operated.

J. The owner or operator of a recycling facility or composting facility that accepts only source separated recyclable or compostable material shall submit an annual report to the department within 45 days from the end of each calendar year, describing the operations of the past year. The reports must be certified as true and accurate by the owner or operator and shall include:

- (1) the type and weight or volume of recyclable material received during the year;
- (2) the type and weight or volume of recyclable material sold or otherwise disposed off site during the year;
- (3) final disposition of material sold or otherwise disposed off-site; and
- (4) any other information requested by the secretary.

K. The owner or operator of a recycling facility, composting facility or collection center that conducts a tire recycling operation shall comply with the applicable operating procedures required by 20.9.20 NMAC.

L. The owners or operators of law enforcement pharmaceutical incinerators shall utilize one of the following types of incinerators:

- (1) a high temperature incinerator such as cement kilns (furnaces that operate in the range of 1000° C - 2000° C) used for the destruction of hazardous waste;
- (2) a two-chamber incinerator that operates at a minimum temperature of 850° C, with a combustion time of at least two seconds in the second chamber; or
- (3) an alternative incinerator at least as protective as any of the incinerators as described in paragraphs (1) and (2) of this subsection and approved by the department.

M. The owners and operators of law enforcement pharmaceutical incinerators shall retain on file incinerator specifications, including an operation and maintenance manual, temperatures reached, controls, retention time, pollution control equipment, maintenance requirements, and process efficiency.

N. The owners and operators of law enforcement pharmaceutical incinerators shall retain on file a plan that addresses the storage, transport, and disposal of the incinerator ash and encapsulated pharmaceutical waste. Owners and operators of law enforcement pharmaceutical incinerators may store ash for up to 12 months before disposal.

O. The design and operation of a law enforcement pharmaceutical incinerator shall conform to all applicable codes and standards including, but not limited to, the American national standards institute, local zoning, and the building code requirements for the city, county or municipality in which the facility is located.

P. Plastic containers, infectious waste, and syringes and needles shall not be burned in a law enforcement pharmaceutical incinerator.

Q. The owners and operators of law enforcement pharmaceutical incinerators shall submit a summary describing the household pharmaceutical waste collections to the department within 7 calendar days of a limited-duration event or 45 days from the end of each calendar year for an on-going program. The reports shall include:

(1) the weight or volume of household pharmaceutical wastes received during the limited-duration event or program year;

(2) the weight or volume of household pharmaceutical wastes received during the limited-duration event or program year by disposal method, including incineration or disposal at a permitted landfill, processing facility or hazardous waste facility, and the weight or volume of ash generated and disposed of; and

(3) final disposal destinations of any household pharmaceutical wastes and ash disposed of off-site.

[20.9.3.27 NMAC - Rp, 20 NMAC 9.1.II.213, 08/02/07; A, 07/30/11]

20.9.3.28 ADDITIONAL REGISTRATION REQUIREMENTS FOR COMPOSTING FACILITIES THAT ACCEPT GREATER THAN 25 TONS PER DAY COMPOSTABLE MATERIAL OR GREATER THAN 5 TONS PER DAY OF MATERIAL THAT WOULD OTHERWISE BECOME SPECIAL WASTE:

A. Any person operating or proposing to operate a composting facility that accepts greater than 25 tons per day annual average compostable material or greater than 5 tons per day annual average of material that would otherwise become special waste (e.g. sludge, offal, petroleum contaminated soils), shall submit the following information in addition to that contained in 20.9.3.27 NMAC:

(1) site plans and cross-sections of the proposed facility, drawn to scale, indicating the location of buildings, access roads, entrances and exits, drainage, material storage and treatment areas, utilities, fences and other site improvements;

- (2) the composition of the waste to be received at the facility;
- (3) the method to be used to convert the waste into a feedstock for the composting process, including material separation and recovery systems;
- (4) a characterization of the feedstock used as the design basis of the facility which describes:
 - (a) composition by material type;
 - (b) physical and chemical properties including:
 - (i) moisture content; and
 - (ii) percent organic and inorganic matter; and
 - (iii) process efficiency as measured by conversion of volatile solids;
 - (5) a description of the composting process to be used, including:
 - (a) the method of measuring, shredding, and mixing materials;
 - (b) temperature monitoring equipment and the location of all temperature and any other type of monitoring points, and the frequency of monitoring;
 - (c) the method of moisture control, including moisture quantity, source, monitoring and frequency of monitoring;
 - (d) a description of any proposed additive material, including its quantity, quality, and frequency of use;
 - (e) special precautions or procedures for operation during high wind, heavy rain, snow and freezing conditions;
 - (f) estimated composting time duration;
 - (g) for windrow systems, the windrow construction, including width, length, and height;
 - (h) the method and frequency of aeration; and
 - (i) for in-vessel composting systems, a process flow diagram of the entire process, including all major equipment and flow streams;
- (6) a general description of the ultimate use for the finished compost and method for removal from the site;

(7) for composting facilities accepting sewage sludge, a plan for compliance with 40 CFR Part 503, including, but not limited to, reporting, composting methods and times, and testing methods and frequencies; and

(8) a demonstration that the ground water will be protected and will comply with all applicable ground water protection standards, including those specified in 20.6.2 NMAC.

B. The owner operator of a composting facility that is designed to or does accept more than 5 tons per day annual average of material that would otherwise be special waste or more than 25 tons annual average of total compostable material per day shall submit a nuisance abatement plan detailing how it will comply with Subsection E of 20.9.3.28 NMAC if so ordered.

C. The owner operator of a composting facility that is designed to or does accept more than 5 tons per day annual average of material that would otherwise be special waste or more than 25 tons annual average of total compostable material per day shall submit a financial assurance mechanism in compliance with 20.9.10.1- 20.9.10.13 NMAC, in order to assure sufficient funds in the event that the secretary requires abatement of a nuisance at the facility. The financial assurance mechanism must be approved by the secretary prior to the operation of the facility.

D. The owner or operator of a composting facility that is designed to or does accept more than 5 tons per day annual average of sludge or more than 25 tons of total compostable material per day annual average shall keep records sufficient to demonstrate that its inventory of compostable material or end product does not exceed the inventory used for purposes of estimating the cost of abatement of a nuisance pursuant to Paragraph (2) of Subsection A of 20.9.10.9 NMAC. If the records are insufficient to make this demonstration, or the records are not produced at the request of the department, storage of the materials are hereby deemed illegal disposal of solid waste and the facility is hereby deemed to be an unpermitted solid waste facility and the owner or operator may be subject to penalties, permitting requirements and nuisance abatement orders.

E. Owners and operators of composting facilities that accept greater than 25 tons per day annual average of compostable material or greater than 5 tons per day of what would otherwise be special waste shall comply with the following requirements when ordered by the secretary for the purpose of abating nuisance:

- (1) cleanup and disposal of all compostable material;
- (2) cleanup and disposal of all end product from the composting facility; and
- (3) cleanup and disposal of all fugitive trash, solid waste, or other materials creating a nuisance at the facility.

[20.9.3.28 NMAC - N, 08/02/07; A, 07/30/11]

20.9.3.29 ADDITIONAL REQUIREMENTS FOR RECYCLING FACILITIES THAT DO NOT ACCEPT SOLID WASTE:

A. A recycling facility that does not accept solid waste shall include, in its registration application filed pursuant to 20.9.3.27 NMAC, a plan for disposal of solid wastes that are unavoidably collected.

B. A recycling facility that does not accept solid waste shall keep records sufficient to demonstrate the following:

(1) that it takes reasonable measures to assure that it accepts only source separated recyclable materials and solid wastes are not accepted;

(2) that after an initial accumulation period, the quantity of recyclable materials that were recycled during each successive calendar year was at least 75 percent of the quantity of recyclable materials in inventory; the accumulation period is to be based on a three year rolling average of the facility's stock of the recyclable material at the end of the previous calendar year; and

(3) that the inventory of recyclable materials or end product does not exceed the inventory used for purposes of estimating the cost of abatement of a nuisance pursuant to Paragraph (2) of Subsection A of 20.9.10.9 NMAC.

C. If the operating procedures and records are insufficient to make the demonstrations in Subsection B of this section, or the records are not produced at the request of the department, storage of the materials are hereby deemed illegal disposal of solid waste and the facility is hereby deemed an unpermitted solid waste facility and the owner or operator may be subject to penalties, permitting requirements and nuisance abatement orders.

D. The owner operator of a recycling facility that is designed to or does accept more than 25 tons per day annual average per calendar year of recyclable material shall submit a nuisance abatement plan detailing how it will comply with Subsection G of 20.9.3.29 NMAC if so ordered.

E. The owner operator of a recycling facility that is designed to or does accept more than 25 tons per day annual average per calendar year of recyclable material shall submit a financial assurance mechanism in compliance with 20.9.10.9-13 NMAC, in order to assure sufficient funds in the event that the secretary requires abatement of a nuisance at the facility. The financial assurance mechanism must be approved by the secretary prior to the operation of the facility.

F. The owner or operator of a recycling facility that is designed to or does accept more than 25 tons per day annual average of recyclable material shall have a certified operator or representative present at all times while the facility is operational.

G. Owners and operators of recycling facilities that accept greater than 25 tons per day annual average of recyclable materials shall comply with the following requirements when ordered by the secretary for the purpose of abating nuisance:

- (1) cleanup and disposal of all recyclable material;
- (2) cleanup and disposal of all end product from the recycling facility; and
- (3) cleanup and disposal of all fugitive trash, solid waste, or other materials creating a nuisance at the facility.

[20.9.3.29 NMAC - N, 08/02/07; A, 07/30/11]

20.9.3.30 PERMIT BY RULE REQUIREMENTS FOR LAW ENFORCEMENT HOUSEHOLD PHARMACEUTICAL TAKE-BACK PROGRAMS:

A. Any law enforcement household pharmaceutical take-back program that collects, stores, processes, transports or disposes of household pharmaceutical waste must comply with the following requirements:

- (1) the law enforcement household pharmaceutical take-back program must maintain a registration with the New Mexico board of pharmacy;
- (2) antineoplastic drugs should be handled, segregated and disposed of as hazardous waste under 40 CFR 261, Subparts C and D, and not as solid waste;
- (3) Resource Conservation and Recovery Act (RCRA) P and U-listed hazardous pharmaceutical wastes, and D-list chemicals that cause a waste to exhibit toxicity characteristics when present above the maximum concentration level (e.g., arsenic D004, barium D005) should be disposed of at a permitted hazardous waste disposal facility, and not as solid wastes;
- (4) collected household pharmaceutical waste shall not be disposed of by placing in drains, toilets, storm water drains, surface waters, on the ground, or in an unpermitted solid waste landfill;
- (5) household pharmaceutical waste may not be incinerated within the state with other waste materials, construction and demolition debris, or special wastes;
- (6) law enforcement household pharmaceutical waste collection events must retain an operating plan on file that contains the following:

(a) a description of how household pharmaceutical waste will be disposed of using a method found in Paragraph (7) of Subsection A of 20.9.3.30 NMAC;

(b) a description of the specific screening and acceptance criteria that ensure that only authorized household pharmaceutical waste is accepted and disposed of;

(c) the hours of operation and dates of law enforcement household pharmaceutical take-back program collection events, and details of any drop-box programs using secure bins outside the normal hour of operation;

(d) procedures for response to emergency situations, including equipment break downs, to ensure that stored household pharmaceutical waste, ash and encapsulated household pharmaceutical waste will be removed from the facility in a timely manner to avoid nuisances or hazards; and

(e) a hazard communication, health and safety plan for law enforcement household pharmaceutical take-back program personnel that includes safety procedures and the proper use of personal protective equipment;

(7) collected household pharmaceutical waste may only be disposed of in the approved methods listed below:

(a) at a registered high-temperature incinerator (furnaces that operate in the range of 1000°C - 2000°C) used for the destruction of hazardous waste, such as cement kilns;

(b) at a permitted infectious or medical waste processing facility;

(c) at a registered two-chamber incinerator that operates at a minimum temperature of 850° C, with a combustion time of at least two seconds in the second chamber;

(d) at a permitted landfill after the household pharmaceutical waste has been encapsulated in a plastic drum filled with a hardening medium such as PPC cement or a cement/lime mixture;

(e) at a transformation facility permitted to accept pharmaceutical waste; or

(f) an alternate disposal method at least as protective as any of the methods described in subparagraphs (a) through (e) of this paragraph and approved by the department.

B. The department must be notified both orally and in writing within 24 hours of an occurrence of a spill, fire, flood, explosion or similar incident at a law enforcement household pharmaceutical take-back program collection event.

[20.9.3.30 NMAC - N, 08/02/07; 20.9.3.30 NMAC - Repealed, 07/30/11; 20.9.3.30 NMAC - N, 07/30/11]

20.9.3.31 REGISTRATION OF COMMERCIAL HAULERS AND HAULERS OF SPECIAL WASTE:

A. Commercial haulers of solid waste and any haulers that transport special waste shall register with the department 30 days prior to beginning operations and every five years thereafter, and shall submit the following information:

(1) the name, address, and telephone number of the operation for which registration is sought, and the name, address, telephone number, date of birth, driver's license number, and social security number of the owner and operator, unless the owner and operator are public entities or are a publicly held corporation that has on file and in effect with the federal securities and exchange commission a registration statement required under 15 U.S.C. Section 77e (c);

(2) the anticipated start up date, hours of operation, and days of collection;

(3) a list of types of storage containers required for residences, commercial, institutional and industrial establishments to be served;

(4) location of vehicle maintenance yard;

(5) certification that drivers, trailers and vehicles are, and will continue to be, properly licensed or registered;

(6) means of controlling and mitigating odors;

(7) the transport distance from the nearest and farthest points of collection to the solid waste facility where the waste will be disposed;

(8) any transfer requirements;

(9) location of transfer station(s) to be used, if any;

(10) the name and location of any storage or collection or solid waste disposal facility to be used, and including;

(a) the size and type of all storage and collection facilities to be used; and

(b) methods use to mitigate odor and litter from any storage and collection facilities to be used;

(11) an outline of proposed training for drivers and crew to be able to differentiate between hazardous waste, special waste and other solid waste;

(12) certification that the waste identification training program will be implemented;

(13) a statement whether any of the owners or operators have been fined for violation of any environmental laws of any state or the United States (for owners or operators that are public entities or publicly held corporations, this statement may be limited to fines for violations within the last 5 years and within the state of New Mexico);

(14) a statement whether any of the owners or operators have had any permit or registration revoked or permanently suspended for cause under the environmental laws of any state or the United States (for owners or operators that are public entities or publicly held corporations, this statement may be limited to revocations or suspensions within the last 5 years and within the state of New Mexico); and

(15) if applicable, proof that a current valid warrant has been issued by the New Mexico public regulation commission, or in the case of a public entity hauling special waste, proof of financial responsibility.

B. All haulers that transport special waste, in addition to the requirements of Subsection A of this section, shall:

- (1) register with the department on a form provided by the department;
- (2) submit the exact locations and permit number(s) of solid waste facilities to be used;
- (3) submit a contingency plan to address potential emergency situations to the department for approval; and
- (4) submit a list of contents of clean-up kits to be carried in each vehicle used for hauling.

C. Commercial waste haulers registered prior to the effective date of these regulations shall register pursuant to this section within two years after the effective date of these regulations.

[20.9.3.31 NMAC - Rp, 20 NMAC 9.1.II.214, 08/02/07]

20.9.3.32 COMMERCIAL HAULER REGISTRATION PROCEDURES:

A. The registration procedures in 20.9.3.31-36 NMAC apply to commercial haulers of solid waste.

B. Upon receipt of an application for registration, the department shall review the application to determine if additional information is necessary or shall deem the

application complete. If the department determines that additional information is necessary, it shall notify the applicant in writing;

C. Within 60 days of receipt of a request for additional information regarding any commercial hauler registration application, the owner or operator shall submit the information requested by the department, or the secretary may deny the registration application without prejudice.

[20.9.3.32 NMAC - N, 08/02/07]

20.9.3.33 COMMERCIAL HAULER REGISTRATION ISSUANCE:

A. Within 30 days after an application for a commercial hauler registration is deemed complete, the secretary shall issue the registration, issue the registration with terms and conditions, or deny the registration.

B. The secretary shall issue a registration if the owner or operator demonstrates that the requirements of 20.9.2 - 20.9.10 NMAC and the Solid Waste Act are met and that neither a hazard to public health, welfare or the environment nor undue risk to property will result.

C. The terms and conditions of a registration shall be specifically identified by the secretary.

[20.9.3.33 NMAC - N, 08/02/07]

20.9.3.34 REGISTRATION DENIAL, REVOCATION, OR SUSPENSION:

A. The secretary may deny, revoke, or suspend a commercial hauler registration on the basis of information in the application or evidence in the administrative record, or both, after taking into consideration the seriousness of the violation, any good faith efforts to comply with the applicable requirements and other relevant factors.

B. Causes for denying, revoking, or suspending a registration include a finding that the applicant or owner or operator has:

(1) knowingly misrepresented a material fact in the application, or at any time after issuance of the registration;

(2) refused to disclose or failed to disclose the information required under the provisions of 20.9.2 - 20.9.10 NMAC or the Solid Waste Act;

(3) exhibited a history of willful disregard for the environmental laws of any state or the United States;

(4) had any permit revoked or permanently suspended for cause under the environmental laws of any state or the United States; or

(5) violated a term or condition of the registration, any requirement of 20.9.2 - 20.9.10 NMAC, or any requirement of the Solid Waste Act.

C. If the department recommends denial of a commercial hauler registration, notice shall be provided to the applicant by registered mail. The applicant may request a hearing on the registration denial by filing a written request for hearing with the hearing clerk within 30 days of receipt of the notice. A request for hearing shall be treated as a hearing determination and the hearing conducted pursuant to 20.1.4 NMAC. If no request for hearing is filed within 30 days of receipt of the notice, the recommended denial shall become a final action of the secretary.

D. A commercial hauler registration may be revoked or suspended in accordance with the procedures set forth in 20.1.5 NMAC, Adjudicatory Procedures - Environment Department. Construction, modification and interim operation, if any, shall cease upon the effective date of the revocation or suspension.

[20.9.3.34 NMAC - N, 08/02/07]

20.9.3.35 EFFECT OF REGISTRATION:

A. Any terms or conditions of the registration shall be enforceable to the same extent as a regulation of the board.

B. The existence of a registration issued under 20.9.2 - 20.9.10 NMAC shall not constitute a defense to a violation of 20.9.2 - 20.9.10 NMAC or the Solid Waste Act.

[20.9.3.35 NMAC - N, 08/02/07]

20.9.3.36 REGISTRATION RENEWAL:

A. A commercial hauler shall renew its registration every five years. To renew a registration, the commercial hauler shall file a complete renewal application no later than 30 days prior to the expiration date of the registration. A registration renewal application shall include the same information required in 20.9.3.31 NMAC, and in addition provide a complete description of its compliance history and any other information requested by the secretary.

B. A registered commercial hauler may continue to operate under the terms and conditions of the existing registration until the registration renewal is issued or denied provided that:

(1) the owner and operator are in compliance with the existing registration, 20.9.2 - 20.9.10 NMAC, and any applicable federal regulations;

(2) a complete renewal application was submitted in a timely fashion in accordance with this section; and

(3) the owner or operator adequately submits any requested additional information by the deadline specified by the secretary.

[20.9.3.36 NMAC - N, 08/02/07]

20.9.3.37 REGISTRATION EXPIRATION:

A. A commercial hauler registration shall expire five years from the date of issuance of the registration.

B. A commercial hauler registration shall terminate upon any change of owners or operators of the registered commercial hauler, and the new owner or operator shall obtain a new registration prior to operation.

[20.9.3.37 NMAC - N, 08/02/07]

20.9.3.38 CONFIDENTIALITY OF INFORMATION:

A. Permit applicants, owners or operators, or commercial haulers who submit information to the department may claim such information as confidential. Any claim of confidentiality must be asserted at the time of submittal.

B. To claim confidentiality of information in a submittal, the submitter must clearly mark each page in the document on which the submitter claims there is confidential information, and submit to the department a written description of the basis for the claim of confidentiality at the time of submission. The department shall review the claim of confidentiality based on the written submittal and determine whether the information may be maintained as confidential pursuant to the Inspection of Public Records Act, NMSA 1978, Sections 14-2-1, et seq. If the department determines that information in a submittal is confidential, the department may require submission of redacted copies of the submittal for the public record.

C. If no claim of confidentiality is made at the time of submission, any such claims are deemed waived and the department may make the information available to the public without further notice.

D. Information that is determined by the department to be confidential may be disclosed to officers, employees, or authorized representatives of the United States concerned with implementing RCRA, or when relevant in any proceedings under the Solid Waste Act or this chapter.

[20.9.3.38 NMAC - N, 08/02/07]

20.9.3.39 FEE SCHEDULE:

A. Fees are required from applicants for all permit applications, modifications, and applications for permit renewals. Fees shall be paid by the applicant at the time of application and are non-refundable. Fees for individual facility types shall be cumulative if more than one type is included in the permit application.

B. For a municipal or special waste landfill which receives, based on the projected operational rate:

(1) 20 tons or less of waste per day, annual average, the permit application fee shall be \$6,000;

(2) more than 20 tons of waste per day, annual average, the permit application fee shall be \$10,000;

(3) special waste, in addition to the facility permit application fee, an additional \$1000 per type of special waste, up to \$10,000 shall be paid.

C. For a construction and demolition landfill, the permit application fee shall be \$5,000.

D. For a processing facility, the permit application fee shall be \$5,000.

E. For a transformation facility, the permit application fee shall be \$10,000.

F. For a transfer station, the permit application fee shall be \$5,000.

G. For a recycling facility or composting facility that accepts solid waste, the permit application fee shall be \$2,000.

H. For a commercial hauler registration, the registration fee shall be \$100 if the hauler registers two trucks or fewer and hauls no special waste, and shall be \$300 if the hauler registers three trucks or more or hauls any special waste.

I. Fees for permit modifications shall be half of the stated permit application fee for that type facility.

J. Fees for permit renewals shall be the same as for new facilities.

K. The fee for resubmittal of an application that has been denied without prejudice shall be half of the stated permit application fee for that type of facility.

L. Fees shall be paid by check or money order, payable to "New Mexico Environment Department."

PART 4: SOLID WASTE AND REGISTERED FACILITY MAXIMUM SIZE, SITING CRITERIA, AND DESIGN CRITERIA

20.9.4.1 ISSUING AGENCY:

New Mexico Environmental Improvement Board.

[20.9.4.1 NMAC - Rp, 20 NMAC 9.1.I.001, 08/02/07]

20.9.4.2 SCOPE:

This part applies to the transportation, storage, transfer, processing, transformation, recycling, composting, nuisance abatement and disposal of solid waste.

[20.9.4.2 NMAC - Rp, 20 NMAC 9.1.I.002, 08/02/07]

20.9.4.3 STATUTORY AUTHORITY:

NMSA 1978, Sections 74-1-1 to 74-1-15, NMSA 1978, Sections 74-9-1 to 74-9-43, and NMSA 1978 Sections 74-13-1 to 74-13-20.

[20.9.4.3 NMAC - Rp, 20 NMAC 9.1.I.003, 08/02/07]

20.9.4.4 DURATION:

Permanent.

[20.9.4.4 NMAC - Rp, 20 NMAC 9.1.I.004, 08/02/07]

20.9.4.5 EFFECTIVE DATE:

August 2, 2007, unless a later date is cited at the end of a section.

[20.9.4.5 NMAC - Rp, 20 NMAC 9.1.I.005, 08/02/07]

20.9.4.6 OBJECTIVE:

The objective of Part 4 of Chapter 9 is to establish regulations governing solid waste and registered facility size, siting criteria and design criteria.

[20.9.4.6 NMAC - Rp, 20 NMAC 9.1.I.006, 08/02/07]

20.9.4.7 DEFINITIONS:

[RESERVED]

[See 20.9.2.7 NMAC for Definitions.]

20.9.4.8 MAXIMUM SIZE:

The secretary shall not issue a permit for any solid waste facility larger than 500 acres.

[20.9.4.8 NMAC - Rp, 20 NMAC 9.1.III.301, 08/02/07]

20.9.4.9 SITING CRITERIA FOR MUNICIPAL, OR SPECIAL WASTE, CONSTRUCTION AND DEMOLITION LANDFILLS, AND MONOFILLS:

A. No municipal, construction and demolition, or special waste landfill or monofill shall be located where, on the date of the first public notice as required in 20.9.3 NMAC, any portion of the proposed disposal area is:

(1) in a floodplain, within 500 feet of a wetlands, or within 200 feet of a watercourse unless the watercourse has been altered pursuant to an approval from the army corps of engineers or other appropriate authority;

(2) where the top of the uppermost aquifer will be closer than 100 feet to the bottom of the fill, or for construction and demolition landfills that do not accept more than 25 tons per day annual average, where the top of the uppermost aquifer will be closer than 50 feet to the bottom of the fill;

(3) where new, abandoned, or exploration subsurface mines registered with the New Mexico department of energy, minerals and natural resources a may pose a risk of subsidence or instability;

(4) within 200 feet of a fault that has had a displacement within Holocene time (i.e., the past 11,000 years), unless the owner or operator demonstrates to the secretary that an alternative setback of less than 200 feet will prevent damage to the structural integrity of the facility and will be protective of public health, welfare and the environment;

(5) within historically or archaeologically significant sites, unless in compliance with the Cultural Properties Act, NMSA 1978, Sections 18-6-1 to 18-6-23 and the Prehistoric and Historic Sites Preservation Act, NMSA 1978, Sections 18-8-1 to 18-8-8;

(6) within 1,000 feet of a public water supply well or a private drinking water supply well with a sustainable yield of 100 gallons per minute or more, unless, in the case of registered unpermitted landfills, the well was constructed after the landfill began operations;

(7) within 350 feet of a public water supply well or private well with a maximum sustainable yield of less than 100 gallons per minute, unless the well was constructed after the landfill began operations or the well was installed by the landfill owner or operator for operational use;

(8) within the distance to airports set by the federal aviation administration unless the landfill owner or operator demonstrates that the federal aviation administration does not object to construction and operation of the landfill at the proposed site;

(9) within 50 feet of the facility property boundaries nor within 500 feet of a permanent residence, school, hospital, institution or church, or unless, in the case of registered unpermitted landfills, the permanent residence, school, hospital, institution or place of worship was constructed after the landfill began operations;

(10) in an active alluvial fan (i.e., areas being currently aggraded by either permanent or intermittent streams;

(11) within areas that will result in the destruction or adverse modification of the critical habitat of endangered or threatened species as identified in either 50 CFR Part 17 or by the New Mexico department of game and fish in its most recent biennial review;

(12) within seismic impact zones, unless the owner or operator demonstrates that all containment structures, including liners, leachate collection systems, and surface water control systems, are designed to resist the maximum horizontal acceleration in lithified earth material for the site; or

(13) within an unstable area, unless the owner or operator demonstrates that engineering measures have been incorporated into the landfill design to ensure that the integrity of the structural components of the landfill will not be disrupted.

B. Category 3 landfills that cannot make the demonstration specified in Paragraph (1) of Subsection A of this section pertaining to floodplains or Paragraph (8) of Subsection A of this section pertaining to airports, or Paragraph (13) of Subsection A of this section, pertaining to unstable areas, shall close in accordance with the closure and post-closure provisions in 20.9.6 NMAC.

[20.9.4.9 NMAC - Rp, 20 NMAC 9.1.III.302, 08/02/07]

20.9.4.10 SITING CRITERIA FOR COMPOSTING FACILITIES THAT ACCEPT SOLID WASTE:

No composting facility that accepts solid waste shall be located:

A. in a floodplain, within 500 feet of a wetland, or within 200 feet of a watercourse, unless the watercourse has been altered pursuant to an approval from the army corps of engineers or other appropriate authority; or

B. within 500 feet of any permanent residence, school, hospital, institution or place of worship in existence at the time the permit application for the facility is filed.

[20.9.4.10 NMAC - Rp, 20 NMAC 9.1.III.304, 08/02/07]

20.9.4.11 SITING CRITERIA FOR TRANSFORMATION FACILITIES:

A. No transformation facility shall be located:

(1) in a floodplain, within 500 feet of a wetland, or within 200 feet of a watercourse unless the watercourse has been altered pursuant to an approval from the army corps of engineers or other appropriate authority;

(2) where new, abandoned or exploration subsurface mines may pose a risk of subsidence, instability, or ground water contamination;

(3) within historically or archaeologically significant sites, unless in compliance with the Cultural Properties Act, NMSA 1978, Sections 18-6-1 to 18-6-23 and the Prehistoric and Historic Sites Preservation Act, NMSA 1978, Sections 18-8-1 to 18-8-8;

(4) within 150 feet of the facility property boundaries; nor

(5) within an unstable area, unless the owner or operator demonstrates that engineering measures have been incorporated into the facility design to ensure that the integrity of the structural components of the facility will not be disrupted.

B. No transformation facility having a throughput capacity of less than 1,000 pounds per hour shall be located within one mile of any residence, institution, school, place of worship, hospital or other transformation facility in existence on the date the initial permit application is filed with the department.

C. No transformation facility having a throughput capacity of 1,000 pounds per hour or greater shall be located within three miles of any residence, institution, school, place of worship, hospital or other transformation facility in existence on the date the initial permit application is filed with the department.

[20.9.4.11 NMAC - Rp, 20 NMAC 9.1.III.305, 08/02//07]

20.9.4.12 SITING CRITERIA FOR TRANSFER STATIONS AND PROCESSING FACILITIES:

No transfer station or processing facility initially permitted after the effective date of these regulations shall be located in the following areas:

A. a floodplain, a watercourse, or a wetland, except:

(1) a transfer station property boundary may extend into or cross a floodplain, watercourse, or wetland if those areas will not be impacted by structures or activities of the facility; and

(2) engineering structures designed to prevent impacts to or from a floodplain, watercourse, or wetland may be constructed subject to prior approval of the secretary;

B. within 250 feet of a permanent residence, institution, school, place of worship, or hospital, that existed at the time the transfer station permit application was submitted, unless the applicant demonstrates that a shorter distance of no less than 50 feet has been affirmatively approved by the local government;

C. within an unstable area, except where the owner or operator demonstrates that engineering measures have been incorporated into the facility design to ensure that the integrity of the structural components of the facility will not be disrupted or unless otherwise approved by the secretary; or

D. within historically or archaeologically significant sites, unless in compliance with the Cultural Properties Act, NMSA 1978, Sections 18-6-1 to 18-6-23 and the Prehistoric and Historic Sites Preservation Act, NMSA 1978, Sections 18-8-1 to 18-8-8.

[20.9.4.12 NMAC - N, 08/02/07]

20.9.4.13 DESIGN CRITERIA FOR MUNICIPAL LANDFILLS, SPECIAL WASTE LANDFILLS AND MONOFILLS:

A. Except as specified in 20.9.2.14 NMAC and Subsection C of this section, all new municipal and special waste landfills and lateral expansions to existing municipal and special waste landfills shall provide a containment layer beneath the solid waste which is constructed:

(1) with a composite liner consisting of two components;

(a) the upper component shall consist of a minimum 30-mil flexible or a 60-mil high density polyethylene (HDPE) geomembrane liner or equivalent material; the geomembrane component shall be installed in direct and uniform contact with the lower component; and

(b) the lower component shall consist of a geosynthetic clay liner (GCL) or a minimum 24-inch thick layer of compacted soil having a saturated hydraulic conductivity

of no more than 1×10^{-7} centimeters per second (cm/sec) throughout its thickness; the soil must be free of particles greater than one inch in any dimension; or

(2) with an alternative liner in accordance with a design, which provides protection equivalent to the composite liner defined in Paragraph (1) of this subsection.

B. When approving an alternative liner design under this section, the secretary shall consider at least the following factors:

- (1) the climatic factors of the area; and
- (2) the volume and physical and chemical characteristics of the leachate.

C. Asbestos waste monofills and scrap tire monofills may be exempted from the design criteria in this section if the owner or operator demonstrates to the secretary in the permit application that the waste will not generate leachate which poses a threat to ground water quality, but shall still comply with Subparagraph (h) of Paragraph (1) of Subsection A of 20.9.6.9 NMAC.

D. Scrap tire monofills shall be designed with trenches not to exceed a maximum depth of 15 feet, a maximum width of 50 feet, and a maximum length of 100 feet. A distance of 40 feet shall be maintained between trenches. Trenches shall be filled to original grade.

E. The design and construction of all liners shall conform to the following criteria:

(1) general requirements:

(a) all liners must be able to withstand the projected loading stresses and disturbances from overlying waste, waste cover materials, and equipment operation;

(b) all liners shall incorporate a leachate collection system that meets the requirements of 20.9.4.15 NMAC; and

(c) all liners must be constructed with a minimum two percent slope to promote positive drainage and facilitate leachate collection;

(2) requirements for geosynthetic components:

(a) geosynthetic components of a liner system must be compatible with the waste to be contained; they must be able to resist chemical attack from the waste or leachate; this shall be demonstrated by means of manufacturer's test reports, or laboratory analyses;

(b) any geosynthetic materials installed on slopes greater than 25 percent, or on any slope where waste is projected to be more than 100 feet deep, must be

designed to withstand the calculated tensile forces acting upon the geosynthetic materials; the design must consider the maximum friction angle of the geosynthetic with regard to any soil-geosynthetic or geosynthetic-geosynthetic interface and must ensure that overall slope stability is maintained; and

(c) field seams in geosynthetic material shall be oriented parallel to the line of maximum slope (i.e., oriented along, not across the slope); the number of field seams in corners and irregular shaped areas shall be minimized; there shall be no horizontal seam within five feet of the toe of the slope;

(3) requirements for the soil component of all liners:

(a) the bottom geosynthetic layer, shall be placed on a prepared subgrade consisting of, at a minimum, of a 6-inch layer of in-situ soil or select fill compacted to 90 percent standard Proctor density;

(b) the surface of the soil upon which a geosynthetic liner will be installed must be free of stones greater than 1/2-inch in any dimension, organic matter, local irregularities, protrusions, loose soil, and any abrupt changes in grade that could damage the geosynthetic liner; and

(c) the soil component of the composite liner defined in Subparagraph (b) of Paragraph (1) of Subsection A of this section shall be compacted to a minimum of 90 percent standard Proctor density and shall have the following physical characteristics unless otherwise specifically approved by the department:

(i) plasticity index greater than 10 percent;

(ii) liquid limit between 25 percent and 50 percent;

(iii) portion of material passing the No. 200 sieve (0.074 mm and less fraction) greater than 40 percent (by weight); and

(iv) clay content greater than 18 percent (by weight);

(4) all liners shall have a top protective cover of at least two feet of granular soil or other material specifically approved by the department; the protective cover shall, in addition to providing physical protection for the liner, facilitate the collection of leachate in the leachate collection system; materials used to construct the protective cover must ensure the hydraulic leachate head on the liner does not exceeds one foot; the soil material shall be free of any organic matter and have the following physical characteristics unless otherwise specifically approved by the secretary:

(a) portion of material passing the No. 200 sieve (0.074 mm and less fraction) no greater than 5 percent by weight; and

(b) uniformity coefficient (Cu) less than 6 where Cu is defined as D60/D10.

[20.9.4.13 NMAC - Rp, 20 NMAC 9.1.III.306, 08/02/07]

20.9.4.14 TESTING AND QUALITY CONTROL FOR LINERS AND FINAL COVERS:

A. All testing of geosynthetic and soil materials shall be performed in accordance with applicable American society of testing materials (ASTM) standards.

B. The construction and installation of all liners and final covers shall be done in accordance with a quality control plan approved in the permit. All testing and evaluation of liners shall be certified by a professional engineer licensed in New Mexico and experienced in liner installation, and shall be completed prior to the placement of the protective cover. All field testing of liners and final covers shall be the responsibility of an individual experienced in liner or cover installation and soils or geotextile engineering, as appropriate. The quality control plan shall:

(1) define the procedures required for obtaining samples and testing and reporting the test results for the installation of the liner and final cover;

(2) describe and illustrate to operating personnel all necessary procedures for maintaining the integrity of the liner, leachate collection systems, and final cover;

(3) for the soil component, prescribe the following minimum frequency of testing for the soil component of all liners and final covers, unless otherwise specifically approved by the department:

(a) soil from the borrow source shall be tested as follows:

(i) grain size shall be tested once every 1,000 cubic yards;

(ii) Atterberg limits shall be tested once every 5,000 cubic yards;

(iii) Proctor compaction moisture-density curve conformance shall be tested once every 5,000 cubic yards; and

(iv) laboratory permeability shall be tested once every 5,000 cubic yards; and

(b) during construction of the liner or cover, the soil shall be tested as follows:

(i) density and moisture content tested by nuclear densiometer shall be tested four times per acre per lift;

(ii) laboratory or in-situ permeability shall be tested once per 2 acres and laboratory samples shall be undisturbed or recompact to the site-specific field conditions; and

(iii) total thickness (by survey) shall be tested once per acre (on grid);

(4) for the protective cover component of liners, when used to facilitate leachate drainage, prescribe the following minimum frequency of testing of the granular drainage layer, unless specifically approved by the department:

(a) grain size of the soil shall be tested once every 1,500 cubic yards; and

(b) total thickness of the drainage layer shall be tested five times per acre;
and

(5) for the geomembrane component of all liners and final covers as defined in Subsection A of 20.9.4.13 NMAC and Subsection A of 20.9.6.9 NMAC, all testing, both shop and field, shall be as recommended by the manufacturer unless otherwise specifically approved by the department; the minimum frequency of taking seam samples for destructive testing shall be one per 500 feet of seam length, with a portion of each test sample tested in the field and another in the laboratory; seam samples shall be tested for peel adhesion and bonded seam strength; non-destructive testing shall be performed for all seams, seam repairs, and liner repairs.

[20.9.4.14 NMAC - Rp, 20 NMAC 9.1.III.307, 08/02/07]

20.9.4.15 LEACHATE COLLECTION SYSTEMS FOR LANDFILLS:

A. Except as specified in 20.9.2.14 NMAC and Subsection C of 20.9.4.13 NMAC, all new municipal and special waste landfills and lateral expansions shall include a leachate collection system, which shall be designed by a professional engineer licensed to practice in New Mexico, and which shall incorporate a piping collection network comprised of perforated pipe having a minimum diameter of 6 inches and a minimum wall thickness of schedule 80 PVC or equivalent and shall be designed and constructed to:

(1) maintain less than a one-foot depth of leachate on the liner;

(2) maintain a minimum of two percent slope throughout the system, within the lined landfill cell; an alternate slope may be specifically approved by the secretary for leachate conveyance piping outside the disposal cell footprint;

(3) withstand chemical attack from waste and leachate; and

(4) withstand the loads, stresses, and disturbances from overlying waste, waste cover materials, and equipment operation.

B. Any geosynthetic materials such as geonets and geotextiles, if used as components of the leachate collection system, must have a hydraulic conductivity, transmissivity and chemical and physical qualities that will not be adversely affected by waste placement, equipment, operation, or leachate generation. These geosynthetics, if used and operating in conjunction with the soil protective cover for the liner as described in Paragraph (4) of Subsection E of 20.9.4.13 NMAC, must have a hydraulic conductivity and transmissivity designed to ensure the hydraulic head on the liner never exceeds one foot.

C. A written leachate management plan shall be submitted for approval by the secretary. The plan shall describe anticipated amounts of leachate, duration of generation and final disposal options for the leachate and shall include:

- (1) a description of the means of analysis; and
- (2) a description of the type of treatment and proposed disposal method.

D. Leachate storage and collection ponds shall be designed to meet the requirements of 20.9.4.13 NMAC. A pond may be designed to maintain greater than one foot of leachate, provided it is equipped with a double, composite liner as specified in 20.9.4.13 NMAC, or an alternative design providing equivalent protection and approved in the permit.

[20.9.4.15 NMAC - Rp, 20 NMAC 9.1.III.308, 08/02/07]

20.9.4.16 LANDFILL GAS CONTROL SYSTEMS:

A. Owners and operators of landfills who install a landfill gas control system in order to conform with the requirements of Subsection B of 20.9.5.9 NMAC shall submit a description of the physical and chemical characteristics of expected condensates or residues that are generated and a plan for their disposal. The disposal plan shall be submitted with a permit application or as a request for a specific approval. In addition, if the gas control system is not subject to the Air Quality Control Act, NMSA Sections 74-2-1, et seq., the owner or operator shall include the following information in its submission:

(1) the design of the system, indicating the location and design of vents, barriers, collection piping and manifolds and other control measures that will be installed; and

(2) if gas recovery is proposed, the design of the proposed gas recovery system and the major on-site components of the system including storage, transportation, processing, treatment or disposal measures required in the management of the generated gases, condensates or other residues.

B. If a gas processing system is proposed, it shall be designed:

(1) so that it will not interfere with activities on the site or required control measures; and

(2) so that it will not create a nuisance, endanger or cause harm to persons or property.

C. If a gas disposal system is proposed, it shall be designed:

(1) so that it will not interfere with activities on the site or required control measures;

(2) so that it will not create a nuisance, endanger or cause harm to persons or property; and

(3) with active forced ventilation, using vents located at least one foot above the landfill surface at the location of each gas vent.

[20.9.4.16 NMAC - Rp, 20 NMAC 9.1.III.309, 08/02/07]

20.9.4.17 RESEARCH, DEVELOPMENT, AND DEMONSTRATION PERMITS:

A. The secretary may issue a research, development, and demonstration permit in conjunction with a new solid waste facility permit for a municipal or special waste landfill, or as a permit modification for an already permitted municipal or special waste landfill, under the following conditions:

(1) the owner or operator proposes to utilize innovative and new methods which vary from either or both of the following criteria:

(a) the run-on control systems required by Subsection E of 20.9.5.9 NMAC;
and

(b) if sludge is used, the liquids restrictions in Paragraph (9) of Subsection A of 20.9.2.10 NMAC and 20.9.8.16 NMAC;

(2) the landfill has a leachate collection system designed and constructed to maintain less than a one foot depth of leachate on the liner; and

(3) the landfill is not operating under an exemption set forth in 20.9.2.14 NMAC.

B. The following requirements shall apply to any landfill that is issued a research, development, and demonstration permit under Subsection A of this section:

(1) the liquids to be used at the landfill shall be pre-approved by the department in accordance with Paragraph (9) of Subsection A of 20.9.2.10 NMAC and 20.9.8.16 NMAC;

(2) the landfill shall install a landfill gas collection and control system in accordance with emission control requirements as specified in 40 CFR Part 60; and

(3) the fluids to be used at the landfill shall be pre-approved by the department.

C. The secretary may issue a research, development, and demonstration permit for a permitted landfill for which the owner or operator proposes to utilize innovative and new methods which vary from the final cover criteria of Subparagraphs (b) and (c) of Paragraph (1) of Subsection A of 20.9.6.9 NMAC or Subparagraph (a) of Paragraph (2) of Subsection A of 20.9.6.9 NMAC provided the landfill owner or operator demonstrates that the infiltration of liquid through the alternative cover system will not cause contamination of ground water or surface water, or cause leachate depth on the liner to exceed one foot.

D. Any permit issued under Subsection C of this section shall include terms and conditions at least as protective as the criteria for municipal solid waste landfills to assure protection of human health and the environment. Such permits shall:

(1) provide for the construction and operation of such facilities as necessary, for not longer than two and one-half years, unless renewed as provided in Subsection F of this section;

(2) provide that the landfill must receive only those types and quantities of municipal solid waste and non-hazardous wastes which the secretary deems appropriate for the purposes of determining the efficacy and performance capabilities of the technology or process;

(3) include such requirements as necessary to protect human health and the environment, including such requirements as necessary for testing and providing information to the secretary with respect to the operation of the facility;

(4) require the owner or operator of a landfill permitted under this section to submit an annual report to the secretary showing whether and to what extent the site is progressing in attaining project goals; the report shall also include a summary of all monitoring and testing results, as well as any other operating information specified by the secretary in the permit; and

(5) require compliance with all criteria in 20.9.2 - 20.9.10 NMAC, except as permitted under this section.

E. The secretary may order an immediate termination of all operations at the facility allowed under this section or other corrective measures at any time the secretary determines that imminent danger exists to human health or the environment. The owner or operator may appeal the secretary's order by filing a request for hearing within 30 days of the date of the secretary's order. The appeal shall be conducted in accordance with the procedures in 20.1.5 NMAC, Adjudicatory Procedures - Environment Department.

F. Any permit issued under this section shall not exceed two and one-half years and each renewal of a permit shall not exceed two and one-half years.

(1) The total term for a permit for a project including renewals shall not exceed twelve years.

(2) During permit renewal, the applicant shall provide a detailed assessment of the project showing the status with respect to achieving project goals, a list of problems and status with respect to problem resolutions, and any other information requested by the secretary.

[20.9.4.17 NMAC - N, 08/02/07]

PART 5: SOLID WASTE FACILITY AND COMMERCIAL HAULERS OPERATING REQUIREMENTS

20.9.5.1 ISSUING AGENCY:

New Mexico Environmental Improvement Board.

[20.9.5.1 NMAC - Rp, 20 NMAC 9.1.I.001, 8/2/2007]

20.9.5.2 SCOPE:

This part applies to the transportation, storage, transfer, processing, transformation, and disposal of solid waste.

[20.9.5.2 NMAC - Rp, 20 NMAC 9.1.I.002, 8/2/2007]

20.9.5.3 STATUTORY AUTHORITY:

NMSA 1978, Sections 74-1-1 to 74-1-15, NMSA 1978, Sections 74-9-1 to 74-9-43, and NMSA 1978 Sections 74-13-1 to 74-13-20.

[20.9.5.3 NMAC - Rp, 20 NMAC 9.1.I.003, 8/2/2007]

20.9.5.4 DURATION:

Permanent.

[20.9.5.4 NMAC - Rp, 20 NMAC 9.1.1.004, 8/2/2007]

20.9.5.5 EFFECTIVE DATE:

August 2, 2007, unless a later date is cited at the end of a section.

[20.9.5.5 NMAC - Rp, 20 NMAC 9.1.1.005, 8/2/2007]

20.9.5.6 OBJECTIVE:

The objective of Part 5 of Chapter 9 is to establish regulations governing operating requirements for solid waste facilities and commercial haulers.

[20.9.5.6 NMAC - Rp, 20 NMAC 9.1.1.006, 8/2/2007]

20.9.5.7 DEFINITIONS:

[RESERVED]

[See 20.9.2.7 NMAC for Definitions.]

20.9.5.8 GENERAL OPERATING REQUIREMENTS FOR ALL SOLID WASTE FACILITIES:

A. Owners and operators of each solid waste facility shall:

- (1) operate the facility in a manner that does not cause a public nuisance or create a potential hazard to public health, welfare or the environment;
- (2) control and mitigate odor and litter; and
- (3) post signs to indicate the location of the site, the hours of operation, emergency telephone numbers, disposal instructions, and that fires and scavenging are prohibited.

B. Owners and operators of a solid waste facility shall:

- (1) have a certified operator or representative present at all times while the facility is operational;
- (2) implement a plan approved by the secretary to inspect loads to detect and prevent the disposal of unauthorized waste, including:
 - (a) inspection frequency;

- (b) inspection personnel;
 - (c) method of inspection; and
 - (d) a training program for the facility employees in the identification of unauthorized waste, including hazardous waste, hot waste, and PCB's;
- (3) maintain a written operating record in compliance with 20.9.5.16 NMAC;
 - (4) notify the department both orally and in writing within 24 hours of an occurrence of a spill, fire, flood, explosion, mass movement of waste, or similar event;
 - (5) upon discovery of the receipt of unauthorized waste:
 - (a) notify the department, the hauler, and the generator in writing within 48 hours;
 - (b) restrict the area from public access and from facility personnel; and
 - (c) assure proper cleanup, transport and disposal of the waste;
 - (6) ensure that copies of contingency plans are readily accessible to employees on duty; and
 - (7) train employees when hired and at least annually thereafter on when and how to implement contingency plans and document in the operating record that such training has been conducted.

C. The secretary may order temporary changes in operation or facility design in emergency situations when the secretary determines there is an imminent danger to public health, welfare or the environment.

D. If recyclable materials such as used oil, antifreeze, paint, or similar materials are diverted from the waste stream at a solid waste facility, the materials shall be stored for no longer than twelve months and shall be maintained in a covered area, not exposed to the weather, with secondary containment.

[20.9.5.8 NMAC - Rp, 20 NMAC 9.1.IV.401, 8/2/2007]

20.9.5.9 ADDITIONAL MUNICIPAL, SPECIAL WASTE, AND MONOFILL LANDFILL OPERATING REQUIREMENTS:

All municipal and special waste landfill owners and operators shall:

- A. utilize the principles of sanitary engineering to:

- (1) confine the working face to the smallest practical area;
- (2) compact the solid waste to the smallest practical volume; and
- (3) minimize exposure of landfill employees and the public to animal carcasses and offal, and immediately cover such wastes when they are received;

B. prevent the generation and lateral migration of methane such that:

(1) the concentration of methane generated by the facility does not exceed 25 percent of the lower explosive limit (LEL) for methane in facility structures (excluding gas control or recovery system components); and

(2) the concentration of methane does not exceed the LEL at the facility property boundary;

C. implement a routine methane monitoring program to ensure that the requirements of Paragraphs (1) and (2) of Subsection B of this section are met;

(1) the type and frequency of monitoring shall be determined based on the following conditions:

(a) soil conditions;

(b) the hydrogeologic conditions surrounding the facility;

(c) the hydraulic conditions surrounding the facility; and

(d) the location of facility structures and property lines;

(2) the minimum frequency of monitoring shall be quarterly, except that landfills that receive less than 20 tons per day annual average, or closed prior to October 9, 1993, or monofills may be permitted for less frequent monitoring, provided on-site measurements indicate methane levels are consistently less than 25 percent of the LEL for methane; and

(3) if methane gas levels exceed the limits specified in Paragraphs (1) and (2) of Subsection B of this section, the owner or operator shall:

(a) immediately take all necessary steps to ensure protection of public health, welfare and the environment and notify the secretary;

(b) within seven days of detection, record the methane levels detected and a description of the steps taken to protect public health, welfare and the environment; and

(c) within 60 days of detection, implement a remediation plan approved by the secretary for the methane releases, and notify the secretary that the plan has been implemented; the plan shall describe the nature and extent of the problem and proposed remedy;

D. prevent unauthorized access by the public and entry by large animals to the active portion of the landfill through the use of fences, gates, locks, or other means;

E. control run-on water onto the site and run-off water from the site, such that:

(1) the run-on control system shall prevent flow onto the active portion of the landfill during the peak discharge from a 24-hour, 25-year storm;

(2) the run-off control system from the active portion of the landfill collects and controls at least the water volume resulting from a 24-hour, 25-year storm; and

(3) run-off from the active portion of the landfill shall not be allowed to discharge any pollutant to the waters of the state or United States that violates any requirements of the New Mexico Water Quality Act, commission regulations and standards or the federal Clean Water Act;

F. prohibit scavenging;

G. provide adequate means to prevent and extinguish fires;

H. direct the deposit of hot waste at a specific location at the facility which is remote from the operating area; the hot waste shall be immediately spread out for cooling and extinguished if on fire; the hot waste shall not be mixed with the regular solid waste stream until it reaches a temperature that will not support combustion;

I. provide and maintain access roads at the facility site, such that traffic can enter and exit the site safely, will flow smoothly, and will not be interrupted by inclement weather;

J. provide sufficient unloading areas to meet demands of peak periods;

K. measure leachate head on the liner and sump pump as necessary, and except as otherwise allowed in Paragraph (9) of Subsection A of 20.9.2.10 NMAC, 20.9.2.14 NMAC and Subsection C of 20.9.4.13 NMAC, collect and treat leachate by a method approved by the secretary and maintain records on a quarterly basis of leachate generation and treatment;

L. control litter, disease vectors, dust and odors;

M. notify the department prior to installing exploratory borings for the purpose of waste characterization or mapping or removing waste for routine maintenance on gas

collection and control or venting systems, unless the event involves less than 120 cubic yards of solid waste;

N. cover the active face with a six-inch layer of earth or specifically approved alternate daily cover at the conclusion of each day's operation or more often as conditions may dictate, except that for landfills that receive less than 20 tons of waste per day annual average or monofills, the permit may allow alternate frequencies to the daily cover requirements; when permitting a reduced frequency, the secretary shall:

- (1) consider the unique characteristics of small communities;
- (2) consider climatic and hydrogeologic conditions;
- (3) consider measures to prevent vector harborage and animal intrusion; and
- (4) determine that the approved frequency will be protective of human health and the environment;

O. provide intermediate cover which shall be:

- (1) at least one foot thick, or other specifically approved thickness;
- (2) placed on all areas of a landfill that have not received waste for 60 days or longer, or have not reached final elevation;
- (3) stabilized with vegetation or other specifically approved method on any areas that have been inactive for more than two years; and
- (4) constructed and maintained to prevent erosion and infiltration; and

P. if diversion of recyclable materials is conducted:

- (1) perform the diversion in a sanitary manner, with storage confined to an area remote from the operating area of the landfill, and in a manner which does not interfere with or delay the operation of the landfill or create a nuisance, litter problem, vector harborage, or public health hazard;
- (2) remove all recyclable materials from the facility in a timely manner such that the area does not become a permanent storage area; and
- (3) store recyclables in such a manner that the area is clean, materials are separated by type, and the potential for contamination is minimized;

Q. owners or operators of municipal or special waste landfills permitted after the effective date of these regulations to accept 25,000 tons per year or more, shall, prior to commencing operations, install scales at the landfill and weigh incoming waste;

R. owners or operators of municipal or special waste landfills permitted or registered before the effective date of these regulations to accept 25,000 tons per year or more, shall no later than five years after the effective date of these regulations, install scales at the landfill and weigh incoming waste;

S. owners and operators of scrap tire monofills shall accept no solid waste for disposal other than baled scrap tires;

T. a landfill permitted as a special waste landfill may accept municipal waste and construction and demolition waste if approved in its permit.

[20.9.5.9 NMAC - Rp, 20.9.1.IV.402 NMAC, 8/2/2007]

20.9.5.10 ADDITIONAL CONSTRUCTION AND DEMOLITION LANDFILL OPERATING REQUIREMENTS:

All construction and demolition landfill owners and operators shall:

A. minimize the on-site population of disease vectors through the periodic application of cover material or other techniques as appropriate so as to protect public health, welfare and the environment;

B. apply and compact soil or apply other suitable material over disposed construction and demolition debris at the end of each operating day or at such frequencies and in such a manner as to reduce the risk of fire and impede vectors' access to the waste;

C. prevent the generation and lateral migration of methane such that:

(1) the concentration of methane generated by the facility does not exceed 25 percent of the lower explosive limit (LEL) for methane in facility structures (excluding gas control or recovery system components); and

(2) the concentration of methane does not exceed the LEL at the property boundary; and

D. limit public access so as to not expose the public to potential health and safety hazards at the facility.

[20.9.5.10 NMAC - Rp, 20 NMAC 9.1.IV.403, 8/2/2007]

20.9.5.11 ADDITIONAL TRANSFER STATION OPERATING REQUIREMENTS:

Owners and operators of transfer stations shall:

A. accept special wastes only when specifically authorized to do so by a permit;

B. use containers for storage of solid waste that are leak-proof and manufactured of non-biodegradable material;

C. provide adequate means to control litter and prevent and extinguish fires;

D. conduct any recycling operations in a safe and sanitary manner, confined to an area remote from the tipping area, and in a manner that does not interfere with transfer operations;

E. store recyclable materials in a manner that does not create a nuisance, harbor vectors, or create a public health hazard, and remove recyclable materials in a timely manner;

F. provide sufficient unloading areas to meet demands of peak periods;

G. provide adequate off-street parking facilities for transfer vehicles;

H. not park collection or transfer vehicles containing putrescible materials on public streets or roads except under emergency conditions;

I. remove solid waste from the station at the end of the operating day unless otherwise approved in the permit; and

J. provide separate storage areas for bulky wastes, such as brush, white goods, appliances, and scrap tires, and remove the bulky wastes at a frequency approved in the permit.

[20.9.5.11 NMAC - Rp, 20 NMAC 9.1.IV.404, 8/2/2007]

20.9.5.12 ADDITIONAL TRANSFORMATION FACILITY OPERATION OPERATING REQUIREMENTS:

Owners and operators of transformation facilities shall:

A. control dust in the unloading and charging areas in such a manner as to prevent explosions and fugitive dust emissions;

B. maintain appropriate fire-fighting equipment in the charging and storage areas and elsewhere as needed;

C. conduct any recycling operations in a sanitary manner, which does not interfere with transformation operations and remove all recyclable materials, in a timely manner or store them so as not to create a nuisance, vector harborage, or public health hazard;

D. provide sufficient unloading areas to meet demands of peak periods;

E. provide sufficient training for all new employees so that equipment may be operated according to design specifications, and conduct review training annually;

F. prominently post key operational procedures;

G. store any special wastes generated by the transformation facility in covered buildings, in covered leak-proof containers, or in tanks, which shall be labeled with a description of the contents and the date the wastes were placed in storage;

H. provide audible signals to alert operating personnel of critical operating unit malfunctions;

I. provide sampling points of each process stream that do not interfere with normal facility operation;

J. if a facility is permitted to handle special wastes, provide separate areas for storage while the special wastes await processing or transport;

K. store special wastes in a manner to assure that they are protected from weather elements and fire and to assure that incompatible wastes are kept separate; and

L. establish an ash testing program prior to start-up of the transformation facility; representative samples of both fly ash and bottom ash shall be tested in accordance with 20.9.8.11 NMAC; test methods, the number of tests, detection limits, and parameters to be tested shall be approved in the permit or registration; frequency of testing shall be one sample per month taken within 5 days of the beginning of the month, unless an alternate test frequency is specifically approved by the department based on a demonstration that the ash is homogenous.

[20.9.5.12 NMAC - Rp, 20 NMAC 9.1.IV.405, 8/2/2007]

20.9.5.13 ADDITIONAL OPERATING REQUIREMENTS FOR RECYCLING FACILITIES THAT ACCEPT SOLID WASTE AND PROCESSING FACILITIES:

Owners and operators of recycling facilities that accept solid waste and processing facilities shall:

A. prominently post key operational procedures;

B. store any special wastes:

(1) in separate, clearly marked areas;

(2) in covered buildings; and

(3) in covered leak-proof containers, or in tanks labeled with a description of the contents and the date the wastes were placed in storage;

C. provide audible signals to alert operating personnel of critical operating unit malfunctions;

D. provide sampling points of each process stream that do not interfere with normal facility operation;

E. provide for periodic wash-down or other cleanup of the facility and dispose of any waste waters in accordance with all applicable state and federal regulations;

F. store waste residues by means that prevent the material and containers from falling, leaking, blowing, and exposure to the weather;

G. store all materials that are physically or chemically incompatible in separate areas;

H. provide storage capacity for any special waste by-products generated during the initial start-up characterization period;

I. store any material containers that have the potential of discharging any oils, polychlorinated biphenyls (PCB's), battery acid, battery alkalines, or other liquids in a restricted area identified by signs on a covered, substance-compatible, bermed containment pad; and

J. include a schedule and contacts for removal of stored wastes in the operations and maintenance manual.

[20.9.5.13 NMAC - Rp, 20 NMAC 9.1.IV.406, 8/2/2007]

20.9.5.14 COMMERCIAL HAULER OPERATING REQUIREMENTS:

A. Commercial haulers shall:

(1) collect and transport waste so as to prevent environmental, safety, and public health or welfare hazards and nuisances;

(2) utilize equipment that is designed, constructed and operated so as to be leak-proof and protective of human health and safety and the environment;

(3) cover or enclose the waste to prevent littering during transportation;

(4) keep collection and transportation equipment in a clean condition through the use of sufficient washings and cleanouts;

(5) only transport waste to a facility that is permitted or registered under 20.9.2 - 20.9.10 NMAC or that is authorized by another government; provided that this is not to be construed to limit initial sorting of solid waste on site;

(6) immediately clean up any solid waste spilled during collection or hauling operations;

(7) conspicuously label all solid waste collection vehicles with the company, municipality, or county department name;

(8) conspicuously label all solid waste collection vehicles with the environment department registration number;

(9) take reasonable measures to assure that unauthorized wastes are not accepted; and

(10) if hauling special waste, carry a contingency plan and clean-up kit as approved pursuant to Paragraphs (3) and (4) of Subsection B of 20.9.3.31 NMAC.

B. Commercial haulers shall provide prior notification to the department, in writing, of any major changes in collection operations or disposal facility being used. A major change includes an addition of a type of waste, a change in ownership, a change in location and a change in the disposal facility being used. In the case of emergency, where prior notice cannot be given, written notice shall be given within 48 hours after the change.

C. All infectious waste commercial haulers shall comply with the following transportation requirements:

(1) infectious waste shall not be transported in the same vehicle with other waste unless the infectious waste is contained in a separate, fully enclosed leak-proof container within the vehicle compartment, unless all of the waste has been treated as infectious waste in accordance with 20.9.8.13 NMAC;

(2) employers of persons loading or unloading containers of infectious waste shall assure that employees wear appropriate personal protective equipment and shall conform with 29 CFR 1910.132 and shall have available for inspection a certification that the required workplace hazard assessment has been performed;

(3) surfaces of transport vehicles contaminated by infectious waste shall be decontaminated;

(4) vehicles transporting infectious waste shall be identified on each side of the vehicle with the name or trademark of the commercial hauler, the environment department registration number, and a biohazard symbol;

(5) each vehicle or container used for shipping infectious waste shall be so designed and constructed, and its contents limited so that under conditions normally incident to transportation, there shall be no releases of infectious waste to the environment;

(6) any vehicle or container used for shipping infectious waste shall be free from leaks, and all discharge openings shall be securely closed during transportation;

(7) no person shall transport infectious waste into the state for treatment, storage, or disposal unless the waste is packaged, contained, labeled and transported in the manner required by 20.9.8.13 NMAC;

(8) all generator storage containers shall be labeled with the generator's name, the city of origin, and date of collection;

(9) periods of storage and transportation of infectious waste by commercial haulers shall be limited to seven days prior to disposal or treatment unless the waste is refrigerated at or below 45 degrees fahrenheit; the total period of storage and transportation shall not exceed 45 days unless specifically approved by the secretary; and

(10) all accidents, spills, releases, or other similar incidents with the potential to adversely impact public health or welfare or the environment shall be immediately reported to the New Mexico emergency response center.

D. Commercial haulers shall maintain an operating record documenting activities for at least the preceding three year period. The operating record shall include:

- (1) type and weight or volume of solid waste hauled;
- (2) state, county, and municipality in which the solid waste originated; and
- (3) solid waste facilities utilized.

[20.9.5.14 NMAC - Rp, 20 NMAC 9.1.IV.408, 8/2/2007]

20.9.5.15 CONTINGENCY PLAN FOR EMERGENCIES:

A. 20.9.5.15 NMAC applies to owners and operators of all solid waste facilities except as otherwise provided.

B. The owner or operator shall maintain a current contingency plan at each solid waste facility. The contingency plan shall be designed to minimize hazards to public health, welfare or the environment from fires, explosions, or any release of contaminants or hazardous constituents to air, soil, surface water or ground water.

C. A copy of the contingency plan shall be kept at the facility and copies shall be provided to the emergency response authority of the local emergency management center.

D. The provisions of the contingency plan shall be carried out immediately whenever there is a fire, explosion, or release of contaminants or hazardous constituents which could pose an immediate or imminent threat to public health, welfare or the environment.

E. The contingency plan shall be amended immediately, if necessary, whenever:

- (1) the facility permit is renewed or modified;
- (2) the plan fails in an emergency;
- (3) the facility's design, operations, maintenance, or other circumstances change in a way that increases the potential for fires, explosions, or releases of hazardous constituents, or necessitate changes to the planned emergency response;
- (4) the list of emergency coordinators changes; or
- (5) the list of emergency equipment changes.

F. The contingency plan for emergencies shall, if applicable:

- (1) describe the actions facility personnel should take in response to fires, explosions, or releases of contaminants or hazardous constituents to air, soil, surface water, or ground water;
- (2) describe arrangements with local police departments, fire departments, hospitals, contractors, and state and local emergency response teams to coordinate emergency services;
- (3) list the name(s) and telephone numbers of the emergency coordinator(s); if more than one person is listed, one must be named as the primary emergency coordinator;
- (4) include a list of all emergency equipment at the facility (such as fire extinguishing systems, spill control equipment, communications and alarm systems and decontamination equipment), along with the location, physical description, and a summary of the capabilities of each item;
- (5) include an evacuation plan for facility personnel which describes signal(s) to be used to begin evacuation, evacuation routes, and alternate evacuation routes in cases where the primary routes could be blocked by fire or releases of wastes;

(6) include an evaluation of potential contaminants, potential media contaminated, and procedures for investigation, containment, and correction or remediation;

(7) indicate when the contingency plan must be amended;

(8) instruct the emergency coordinator or his designee, in case of an imminent or actual emergency situation, to immediately:

(a) activate internal facility alarms or communication systems, where applicable, to notify all facility personnel; and

(b) notify appropriate state and local agencies with designated response roles if their assistance is needed;

(9) instruct the emergency coordinator, whenever there is a release, fire, or explosion, to as quickly as possible identify the nature, source, amount, and extent of any release by means of observation, review of facility records or manifests, or if necessary, by chemical analysis;

(10) instruct the emergency coordinator to assess possible hazards to public health, welfare or the environment that may result from the release, fire, or explosion;

(11) instruct the emergency coordinator to provide for monitoring for leaks, pressure buildup, gas generation or rupture in valves, pipes, or equipment, if appropriate;

(12) instruct the emergency coordinator to provide for appropriate treatment, storage, or disposal of recovered waste, or any other material that results from a release, fire, or explosion at a facility, after the emergency situation is under control; and

(13) instruct the emergency coordinator to ensure that waste which may be incompatible with the released material is not treated, stored, or disposed until cleanup procedures are complete.

[20.9.5.15 NMAC - Rp, 20 NMAC 9.1.VIII.811, 8/2/2007]

20.9.5.16 RECORD KEEPING AND ANNUAL REPORTS:

A. Owners and operators of solid waste facilities shall make and maintain an operating record during the active life of the facility, for each day that operations, monitoring, or closure occurs, including:

(1) the type (including special waste) and weight or volume of each load of solid waste received;

- (2) the country (if other than the United States), state, county, and municipality in which the solid waste originated (i.e. the origin);
- (3) the business name of any commercial hauler of solid waste for each load of the solid waste if it can be reasonably obtained;
- (4) type and weight or volume of non-solid waste materials, as referenced in Paragraph (9) of Subsection S of 20.9.2.7 NMAC, received;
- (5) a record of load inspections, including:
 - (a) date and time of inspection;
 - (b) business name of the commercial hauler and driver name;
 - (c) vehicle license number and description;
 - (d) origin of the waste; and
 - (e) any pertinent observations made during the inspection;
- (6) a description of solid waste or special waste handling problems or emergency disposal activities;
- (7) a record of deviations from the approved design or operational plans;
- (8) for a transfer station, the origin of and destination of the solid waste if transported out of state;
- (9) all monitoring and testing results;
- (10) plans for operations, contingencies, detection and identification of unauthorized waste, and any other plans required by 20.9.2 - 20.9.10 NMAC;
- (11) documentation of the implementation of required plans;
- (12) copies of special waste manifests required under 20.9.8.19 NMAC;
- (13) copies of certificates of processing, transformation, or disposal of special wastes required under 20.9.8.13 NMAC;
- (14) financial assurance information, including a copy of the current standby trust document, current estimates for closure, post-closure care, phase I and phase II assessments and a copy of the financial assurance mechanism being utilized;

(15) a complete and current copy of the facility permit, final order issuing the permit, and any approvals granted by the secretary under 20.9.2 - 20.9.10 NMAC;

(16) a daily log of construction activities; and

(17) for landfills, any demonstration made to the secretary under Paragraphs (12) and (13) of Subsection A of 20.9.4.9 NMAC regarding seismic impact areas and unstable areas.

B. A copy of the operating record for the current month and the previous twelve months, at a minimum, shall be kept on site, unless the facility no longer accepts solid waste, after which time it shall be kept in a place where it can be made available to the department.

C. Owners and operators of solid waste facilities shall make and maintain an operating record during the post-closure period of the facility for each day that monitoring, corrective action, or other post-closure activity occurs, including:

(1) a record of any deviations from the approved post-closure care plan;

(2) all monitoring and testing results;

(3) documentation of the implementation of required plans and any exceptions to those plans;

(4) financial assurance information, including current estimates for closure, post-closure care, phase I and phase II assessments and a copy of the financial assurance mechanism being utilized;

(5) a complete and current copy of the facility permit, final order issuing the permit, and any approvals granted by the secretary under 20.9.2 - 20.9.10 NMAC; and

(6) any other information specifically required by the secretary.

D. Owners or operators of solid waste facilities shall submit an annual report to the department for each facility or operation, within 45 days from the end of each calendar year, describing the operations of the past year. The reports must be certified as true and accurate by the owner or operator and shall include:

(1) the type and weight or volume of waste materials received each month and the country (if other than the U.S.), state, county, and municipality in which the waste originated;

(2) the type and weight or volume of solid waste received from each commercial hauler that delivered waste to the facility;

(3) for a landfill, a description of the capacity used in the previous year and the remaining capacity;

(4) for a landfill, a description of the acreage used for disposal, the acreage seeded, the acreage where vegetation is permanently established and a description of the progress in implementing the closure plan;

(5) the weight or volume of each type of special waste received at the solid waste facility in the previous year;

(6) a summary of all monitoring results (not including the results required under 20.9.9.10 NMAC);

(7) written notice to the secretary if any change in operation has occurred that will reduce the active life of the facility by 25 percent or more;

(8) type and weight or volume of materials recycled during the year;

(9) final disposition of materials not stored or recycled;

(10) amount of leachate generated and treated or recirculated;

(11) an annual financial assurance certification on forms supplied by the department;

(12) the latitude and longitude of the geographical center of the existing or proposed facility (as approved by the department) in NAD-83 or equivalent; and

(13) any other information requested by the secretary.

E. All records and plans required by 20.9.2 - 20.9.10 NMAC shall be furnished upon request and made available at all reasonable times for inspection by the secretary.

F. Operating records and copies of annual reports for solid waste facilities shall be retained by the owner or operator through the post-closure period.

[20.9.5.16 NMAC - Rp, 20 NMAC 9.1.I.109, 8/2/2007]

PART 6: SOLID WASTE FACILITY AND COMPOSTING FACILITY CLOSURE AND POST-CLOSURE REQUIREMENTS

20.9.6.1 ISSUING AGENCY:

New Mexico Environmental Improvement Board.

[20.9.6.1 NMAC - Rp, 20 NMAC 9.1.I.001, 8/2/2007]

20.9.6.2 SCOPE:

This part applies to the transportation, storage, transfer, processing, transformation, recycling, composting, nuisance abatement and disposal of solid waste.

[20.9.6.2 NMAC - Rp, 20 NMAC 9.1.1.002, 8/2/2007]

20.9.6.3 STATUTORY AUTHORITY:

NMSA 1978, Sections 74-1-1 to 74-1-15, NMSA 1978, Sections 74-9-1 to 74-9-43, and NMSA 1978 Sections 74-13-1 to 74-13-20.

[20.9.6.3 NMAC - Rp, 20 NMAC 9.1.1.003, 8/2/2007]

20.9.6.4 DURATION:

Permanent.

[20.9.6.4 NMAC - Rp, 20 NMAC 9.1.1.004, 8/2/2007]

20.9.6.5 EFFECTIVE DATE:

August 2, 2007, unless a later date is cited at the end of a section.

[20.9.6.5 NMAC - Rp, 20 NMAC 9.1.1.005, 8/2/2007]

20.9.6.6 OBJECTIVE:

The objective of Part 6 of Chapter 9 is to establish regulations governing closure and post-closure care of solid waste facilities.

[20.9.6.6 NMAC - Rp, 20 NMAC 9.1.1.006, 8/2/2007]

20.9.6.7 DEFINITIONS:

[RESERVED]

[See 20.9.2.7 NMAC for Definitions.]

20.9.6.8 GENERAL REQUIREMENTS FOR CLOSURE AND POST CLOSURE CARE:

A. Closure and post-closure care plans are required of all solid waste facilities that operated on or after May 14, 1989. The owner or operator of a solid waste facility that has closed but not submitted a closure and post-closure care plan shall submit such a

plan within 180 days of the effective date of these regulations. The submitted plan shall meet the requirements of 20.9.6 NMAC.

B. The owner or operator of the solid waste facility shall prepare a written closure and post-closure care plan that describes the steps necessary for closure and post-closure care of the solid waste facility and any anticipated future uses of the property following closure.

C. Closure and post-closure care plans are required in the application for a permit or permit modification. One initial copy of the plan and two copies of the completed plan shall be submitted to the department.

D. The owner or operator of the solid waste facility shall notify the secretary in writing of the intent to close at least 90 days before closure occurs and shall notify the secretary in writing within 14 days after becoming a locked facility.

E. Closure and post-closure care plans for new solid waste facilities and modifications to existing facilities shall be approved as part of the facility permit.

F. All closure and post-closure care plans shall be approved by the secretary and may be subject to conditions.

G. Closure and post-closure care plans for existing non-permitted landfills that seek to close rather than continue to operate, shall be submitted for approval by the secretary within one year after the effective date of this part. The closure and post-closure care plan shall meet the requirements of 20.9.6 NMAC. After determining that the plan is complete, the secretary shall provide public notice of the plan in a newspaper of general circulation in the county where the facility is located. A non-adjudicatory hearing will be held if significant public interest warrants it. Approved closure and post-closure plans for unpermitted category 2 and 3 landfills shall be enforceable as a permit or regulation for purposes of 20.9.2 - 20.9.10 NMAC and the Solid Waste Act. Any landfill that operates after the effective date of these regulations shall have a closure and post-closure care plan approved as part of the permit, or shall seek approval of a closure and post-closure care plan.

H. Responses to the secretary's requests for additional information concerning a proposed closure and post-closure care plan shall be made within 90 days of receipt of such a request. The secretary may extend the response time for good cause.

I. Post-closure inspection and maintenance shall not be required of the facility if the owner or operator demonstrates to the secretary that all solid waste has been removed, requirements of the closure plan have been met, and following the removal of such wastes, a demonstration is made that the soil and ground water have not been contaminated.

J. All landfills, regardless of category, except construction and demolition debris landfills, which close after October 9, 1991, shall comply with the final cover requirements contained in 20.9.6.9 NMAC in addition to other closure requirements in effect at the time of closure.

K. The length of the post-closure care period may be decreased by the secretary if the owner or operator demonstrates that the reduced period is sufficient to protect public health, welfare, and the environment, or it may be increased by the secretary if the secretary determines that a longer period is necessary to protect health, welfare, and the environment. The time period for application of the provisions for financial assurance as defined in 20.9.10 NMAC shall be coincident with the time period of the post-closure care period. Any reduction or extension of the post-closure care period as described in this section shall be accompanied by an identical reduction or extension of the financial assurance provisions.

L. The owner or operator shall submit a closure report to the department within 60 days after closure completion. The report shall include:

(1) a summary of closure activities: and

(2) a certification by a New Mexico registered professional engineer that the closure of the solid waste facility has been completed and all conditions of the approved closure plan have been satisfied.

M. The active life of the facility terminates, and post-closure care begins, upon written verification by the department that the facility has been closed in accordance with the closure plan approved by the secretary.

N. The owner or operator shall submit a post-closure report to the department within 60 days after the post-closure period expires. The report shall include:

(1) a summary of post-closure activities: and

(2) a certification by a New Mexico registered professional engineer that the post-closure requirements, and if applicable, any corrective action requirements have been completed and all conditions of the approved post-closure care plan have been satisfied.

O. The post-closure care period for the facility terminates upon written verification by the secretary that the requirements of the approved post-closure care plan have been satisfied. If the secretary does not issue a verification, the secretary shall notify the owner or operator in writing that the activities required under 20.9.6 NMAC and 20.9.9 NMAC have not been conducted satisfactorily, and specify the reasons for such determination.

P. The secretary may require the owner or operator to amend the post-closure care plan if the secretary believes that the present or future implementation of the plan may cause a threat to human health or the environment.

[20.9.6.8 NMAC - Rp, 20 NMAC 9.1.V.501, 8/2/2007]

20.9.6.9 CLOSURE AND POST-CLOSURE REQUIREMENTS FOR MUNICIPAL AND SPECIAL WASTE LANDFILLS, AND MONOFILLS:

A. Owners and operators of municipal landfills and special waste landfills shall begin closure within 30 days after the landfill receives the final receipt of waste or within 30 days after approval of the closure and post-closure care plan, whichever is later.

(1) Owners and operators shall install a final cover system which consists of the following:

(a) for municipal and special waste landfills (except monofills) that are not lined and which never received more than 7,300 tons of waste (i.e., an average of 20 tons or less per day annual average) during any calendar year, an infiltration layer comprised of a minimum of 18 inches of earthen material having a saturated hydraulic conductivity no greater than 1×10^{-5} cm/sec;

(b) for municipal landfills which exceed the tonnage requirements of Subparagraph (a) of this paragraph and for all special waste landfills (other than monofills), an infiltration layer comprised of a minimum of 18 inches of earthen material having a saturated hydraulic conductivity less than or equal to the saturated hydraulic conductivity of any bottom liner system or natural subsoils present, or a saturated hydraulic conductivity no greater than 1×10^{-5} cm/sec., whichever provides for less infiltration;

(c) a layer for minimizing erosion consisting of a minimum of six inches of earthen material that is capable of sustaining native plant growth;

(d) any necessary gas vents provided they are sealed to assure no water infiltration;

(e) finished grades over filled areas which shall not exceed 25 percent (four feet horizontal to one foot vertical), or be less than five percent for new landfills and lateral expansions permitted for construction, operation, and closure after the effective date of these regulations or two percent for all other landfills;

(f) run-off controls designed for a peak discharge of a 24-hour, 25-year storm;

(g) cover material compacted to no less than 75 percent and no more than 85 percent standard proctor density unless otherwise approved in the permit, closure plan or by specific approval; and

(h) for closure of a cell containing only regulated asbestos waste or scrap tires, the owner or operator shall cover with 30 inches of compacted native soils and 6 inches topsoil on top of the 30-inch cover, to provide a 36-inch final cover to the original grade and implement measures where necessary to control erosion and rodent intrusion.

(2) The secretary may permit an alternative final cover design that includes:

(a) an infiltration layer that achieves an equivalent reduction in infiltration as specified in Subparagraph (a) or (b) of Paragraph (1) of this subsection, as applicable; and

(b) an erosion layer that provides equivalent protection from wind and water erosion as the erosion layer specified in Subparagraph (c) of Paragraph (1) of this subsection;

(c) for landfills that stopped accepting waste prior to the effective date of this part, finished grades different from those specified in Subparagraph (e) of Paragraph (1) of this subsection, provided a demonstration is made that the alternate grades will prevent erosion and will provide equivalent reduction in infiltration; and

(d) for landfills accepting waste after the effective date of this part and lateral expansions permitted after the effective date of this part, finished grades different than those specified in Subparagraph (e) of Paragraph (1) of this subsection, provided no grade is greater than 33 percent and a demonstration is made in the closure plan or permit or modification application that the alternate grades will prevent erosion and will provide equivalent reduction in infiltration.

(3) The written closure plan, at a minimum, shall include the following information:

(a) a schedule for completion of all activities necessary to meet the closure criteria specified in this part;

(b) a report that includes:

(i) a description of the local geology;

(ii) a description of the hydrogeology of the landfill site, including maps and cross-sections illustrating subsurface features;

(iii) well locations, depths to ground water, and, if available, ground water quality, flow direction and gradient shown on a topographic map; and

(iv) a description of the landfill, including: a) the date operations commenced and the date of final receipt of waste; b) the types of waste accepted at the landfill; c) the total volume of waste disposed; d) a topographic map that shows the size and dimensions of fill areas; e) a topographic map that shows structures, drainages, and water wells in the area of the landfill; and f) a topographic map that shows methane monitoring points and methane concentrations along the landfill property boundary and within structures located on landfill property;

(c) a description of the final cover and its placement, including:

(i) thickness and saturated hydraulic conductivity;

(ii) source of the cover material;

(iii) a construction quality assurance/construction quality control plan for placement of the final cover that meets the requirements of 20.9.4.14 NMAC;

(iv) equipment that will be utilized to apply the final cover and ensure it is adequately compacted to obtain the appropriate proctor density; and

(v) a map that shows final contours that meet the requirements of Subparagraph (e) of Paragraph (1) of this subsection;

(d) a vegetation plan, including:

(i) the seeding method to obtain proper growth density; and

(ii) species of vegetation to be planted, including grasses or local seed mix as recommended for the area by the natural resources conservation service for permanent soil stabilization and to minimize wind and water erosion;

(e) a plan to prevent unauthorized access by the public and entry by large animals to the landfill through the use of fences, gates, locks, or other means;

(f) a plan to remove structures, unless otherwise approved by the secretary;

(g) a description of the signs indicating that the site is a closed landfill and no dumping is permitted; all signs shall include the name and telephone number of the landfill owner; and

(h) a post-closure care plan, including:

(i) a monitoring and repair plan that describes methods to be used to ensure cover integrity, including but not limited to settlement, ponding, water erosion, wind erosion, and inadequate drainage, to ensure the final cover meets the slope requirements of 20.9.6.9 NMAC, and to maintain adequate vegetation during the post-closure period;

(ii) a methane monitoring plan in compliance with Subsections B and C of 20.9.5.9 NMAC;

(iii) a ground water monitoring plan; and

(iv) a leachate collection system plan, if applicable;

(4) prior to beginning closure of a landfill, the owner or operator shall notify the secretary that a notice of the intent to close the landfill has been placed in the operating record;

(5) the owner or operator shall complete closure activities in accordance with the closure plan within 180 days following the beginning of closure, unless otherwise approved in the closure plan; extensions of the closure period may be granted by the secretary if the owner or operator demonstrates that closure will, of necessity, take longer than 180 days and has taken and will continue to take all steps necessary to prevent threats to public health, welfare and the environment;

(6) upon completion of closure, a detailed description of the location of areas of waste disposal at the facility, including a plat signed by a registered surveyor, shall be filed with the appropriate county land recording agent; the description and the plat shall be filed so that it will be found during a title search and proof of the filing shall be submitted to the secretary; the description shall perpetually notify any potential purchaser of the property that:

(a) the land has been used as a landfill facility;

(b) its use is restricted as described in the post-closure care plan; and

(7) the owner or operator may request permission from the secretary to file a revised description if all wastes are removed from the facility.

B. Landfill owners or operators shall submit reports of monitoring performance and data to the secretary within 45 days after the end of each calendar year.

C. The post-closure care period for a landfill shall be 30 years.

D. The owner or operator may amend the post-closure care plan, provided the amendment is not a permit modification, by submitting a request to the secretary at

least 30 days prior to the proposed change. No proposed amendment shall be effective unless first approved in writing by the secretary.

E. The secretary may require the owner or operator to modify or amend the post-closure care plan if the secretary determines that the present or future implementation of the plan may cause a threat to public health, welfare and or the environment.

[20.9.6.9 NMAC - Rp, 20 NMAC 9.1.V.502, 8/2/2007]

20.9.6.10 CONSTRUCTION AND DEMOLITION LANDFILL CLOSURE AND POST-CLOSURE REQUIREMENTS:

A. Owners and operators of construction and demolition landfills shall comply with the following closure requirements.

(1) A final cover of not less than 24 inches of approved material shall be placed over the entire surface of each portion of the final lift starting no later than 30 days and completed within 60 days after the known final receipt of waste. The final cover shall consist of a compacted layer of not less than 18 inches of approved material and a layer for minimizing erosion of not less than 6 inches of approved material that is capable of sustaining native plant growth.

(2) The finished grades over filled areas shall not exceed 25 percent (four feet horizontal to one foot vertical), or be less than five percent for landfills permitted after the effective date of these regulations or two percent for all other landfills. The slope shall be sufficient to prevent the ponding of water and the erosion of the cover material. For existing landfills, the secretary may approve slopes which exceed 25 percent grade provided the owner demonstrates there is no practicable alternative and the steeper slopes can be permanently stabilized to prevent erosion.

(3) The owner or operator shall provide a plan showing the final contours and vegetation in relationship to the surrounding land, the description of final use of the land with drawings as appropriate, and a description of vegetation to provide permanent soil stabilization.

(4) Upon completion of closure, a detailed description of the location of areas of waste disposal at the site, including a plat signed by a registered surveyor, shall be filed with the appropriate county land recording agency. The description and the plat shall be filed so that it will be found during a title search and proof of the filing shall be submitted to the secretary. The description shall perpetually notify any potential purchaser of the property that:

(a) the land has been used as a landfill; and

(b) its use is restricted as described in the post-closure care plan.

(5) The owner or operator may request permission from the secretary to file a revised description if all wastes are removed from the facility.

B. Post-closure care for construction and demolition landfills shall be for a period of 30 years and includes control of erosion, maintenance of cover, top slopes, side slopes, drainage, and vegetation. The owner or operator of a construction and demolition landfill shall conduct post-closure care inspections:

- (1) at least once a year for the first three years; and
- (2) at least once every three years, thereafter.

[20.9.6.10 NMAC - Rp, 20 NMAC 9.1.V.503, 8/2/2007]

20.9.6.11 CLOSURE AND POST-CLOSURE REQUIREMENTS FOR COMPOSTING FACILITIES THAT ACCEPT SOLID WASTE:

A. Within 30 days of closure, composting facility owners or operators shall:

- (1) remove all windrows and in-vessel compost material on the compost facility's real property;
- (2) remove or vegetate compacted compost material that may be left on the land;
- (3) drain ponds or leachate collection systems, back fill, and assure removed contents are properly disposed;
- (4) provide cover if necessary; and
- (5) if required in the approved closure plan, remove buildings, fences, roads, and equipment, clean up the site, and conduct tests on the soils for contamination.

B. Composting facility owners or operators shall:

- (1) maintain ground water monitoring, if required to detect possible migration of contaminants; and
- (2) inspect and maintain any cover material.

C. Post-closure inspection and maintenance shall not be required if the facility owner or operator demonstrates that all requirements of closure have been met and there is no evidence of contamination.

[20.9.6.11 NMAC - Rp, 20 NMAC 9.1.V.504, 8/2/2007]

20.9.6.12 CLOSURE AND POST-CLOSURE REQUIREMENTS FOR OTHER SOLID WASTE FACILITIES:

A. Owners or operators of solid waste facilities other than landfills shall comply with the following requirements:

- (1) cleanup of the area;
- (2) dismantling and removal of any improvements related to solid waste handling or disposal, if required in the approved closure plan, such as:
 - (a) removal of buildings;
 - (b) removal of fences;
 - (c) removal of roads; and
 - (d) removal of equipment;
- (3) testing of soils and ground water for contamination, if required in the approved closure plan; and
- (4) all other conditions of the permit.

B. Post-closure inspection and maintenance may be waived upon written approval of the secretary, if the facility owner or operator demonstrates to the department that all requirements of closure have been met and there is no evidence of contamination.

PART 7: SOLID WASTE FACILITY AND REGISTERED FACILITY OPERATOR CERTIFICATION

20.9.7.1 ISSUING AGENCY:

New Mexico Environmental Improvement Board.

[20.9.7.1 NMAC - Rp, 20 NMAC 9.1.I.001, 8/2/2007]

20.9.7.2 SCOPE:

This part applies to all certified operators of solid waste facilities, composting facilities and recycling facilities.

[20.9.7.2 NMAC - Rp, 20 NMAC 9.1.I.002, 8/2/2007]

20.9.7.3 STATUTORY AUTHORITY:

NMSA 1978, Sections 74-1-1 to 74-1-15, NMSA 1978, Sections 74-9-1 to 74-9-43, and NMSA 1978 Sections 74-13-1 to 74-13-20.

[20.9.7.3 NMAC - Rp, 20 NMAC 9.1.1.003, 8/2/2007]

20.9.7.4 DURATION:

Permanent.

[20.9.7.4 NMAC - Rp, 20 NMAC 9.1.1.004, 8/2/2007]

20.9.7.5 EFFECTIVE DATE:

August 2, 2007, unless a later date is cited at the end of a section.

[20.9.7.5 NMAC - Rp, 20 NMAC 9.1.1.005, 8/2/2007]

20.9.7.6 OBJECTIVE:

The objective of Part 7 of Chapter 9 is to establish a rule governing operator certification requirements for operators of solid waste facilities, composting facilities and recycling facilities.

[20.9.7.6 NMAC - Rp, 20 NMAC 9.1.1.006, 8/2/2007]

20.9.7.7 DEFINITIONS:

[RESERVED]

[See 20.9.2.7 NMAC for Definitions.]

20.9.7.8 GENERAL PROVISIONS:

A. Owners and operators of landfills and transformation facilities shall require the managers of those facilities to attend, at least once every three years, a training program offered by the department or department certified training program on the subject of environmental justice.

B. To become a certified operator an individual shall:

(1) complete a certification training course offered by the department or its designated agent, or equivalent training approved by the department;

(2) pass an examination approved by the department;

(3) have at least one year of experience in the operation of a facility of the same type as that for which certification is sought;

(4) file an application with the department on a form provided by the department;

(5) meet the requirements of the Parental Responsibility Act, NMSA 1978, Sections 40-5A-1 to 40-5A-13 (1998 Cum. Supp.);

(6) for operators of municipal waste incinerators, also meet the training requirements of New Mexico Municipal Waste Combustion rule, 20.2.62 NMAC; and

(7) for operators of biomedical waste incinerators, also meet the training requirements of New Mexico Biomedical Waste Combustion rule, 20.2.63 NMAC.

C. Operator certification is valid for three years from date of issuance.

D. The department may certify an operator with alternate training. Alternate training shall be equivalent to or more extensive than the department's course work, and shall be approved by the department. It shall be the applicant's responsibility to submit any documentation the department may require to evaluate the equivalency of alternate training.

E. A person holding certification in a particular facility type may operate any facility of that type.

[20.9.7.8 NMAC - Rp, 20 NMAC 9.1.VI.601, 8/2/2007]

20.9.7.9 OPERATOR CERTIFICATION TRAINING COURSES:

A. All operator certification training courses, with the exception of the transformation facility operator training course, will be offered by the department or other approved authority at least once every twelve months.

B. All operator certification training courses shall, at a minimum, address:

- (1) composition of wastes;
- (2) facility design;
- (3) facility staffing and operations;
- (4) transportation requirements;
- (5) traffic flow control;

- (6) environmental monitoring;
- (7) handling of special wastes;
- (8) identification of unauthorized wastes, including hot waste, hazardous wastes and materials, and PCB's;
- (9) environmental health and safety;
- (10) waste diversion;
- (11) applicable laws and rules;
- (12) the permitting process;
- (13) documentation, including manifests, operating records, and reports;
- (14) pollution prevention; and
- (15) environmental justice.

C. In addition to the requirements of Subsection B of this section, the landfill operator training course shall address:

- (1) interpretation and use of engineering plans;
- (2) surveying techniques;
- (3) waste decomposition;
- (4) basic geology and hydrology;
- (5) landfill gas generation and control;
- (6) leachate generation and control;
- (7) landfill cover systems;
- (8) closure and post-closure care;
- (9) vector control; and
- (10) odor control.

D. In addition to the requirements of Subsection B of this section, the recycling facility operator training course shall address:

- (1) equipment operation and technology;
- (2) materials flow;
- (3) quality control; and
- (4) distribution and marketing.

E. In addition to the requirements of Subsection B of this section, the transformation facility operator training course shall address:

- (1) theory of combustion;
- (2) basic chemistry;
- (3) basic thermodynamics;
- (4) equipment operation and technology;
- (5) air pollution control technology;
- (6) ash handling and disposal;
- (7) control room operation;
- (8) continuous emissions monitors and their calibration;
- (9) efficacy testing;
- (10) waste decomposition; and
- (11) waste flow.

F. In addition to the requirements of Subsection B of this section, the composting facility operator training course shall address:

- (1) basic microbiology;
- (2) basic chemistry;
- (3) waste decomposition;
- (4) compost end use, distribution and marketing;
- (5) composting equipment operations, care and maintenance;

- (6) composting processing methods and techniques;
- (7) quality control;
- (8) yard waste and food waste collection systems;
- (9) sludge handling;
- (10) odor control; and
- (11) vector control.

G. In addition to the requirements of Subsection B of this section, the transfer station operator training course shall address:

- (1) controls and operations;
- (2) equipment operation and technology;
- (3) waste flow;
- (4) vehicle operations and safety;
- (5) large waste item handling;
- (6) odor control; and
- (7) vector control.

[20.9.7.9 NMAC - Rp, 20 NMAC 9.1.VI.602 - 20 NMAC 9.1.VI.607, 8/2/2007]

20.9.7.10 EXAMINATION:

A. A written examination shall be administered at the conclusion of each training course. Certification requires a score of at least 70 percent on the examination.

B. Results of the examination shall be forwarded to the trainee within 60 days after the date of the examination. A certificate shall be forwarded to the trainee within 60 days after the trainee provides documentation that he has met all the applicable requirements of Subsection B of 20.9.7.8 NMAC.

[20.9.7.10 NMAC - Rp, 20 NMAC 9.1.VI.608, 8/2/2007]

20.9.7.11 RECIPROCITY:

The department may issue certificates without examination to applicants who hold valid certificates or licenses issued by any state, territory, or foreign jurisdiction, provided, the department determines the requirements for such certification are equivalent to those set forth in 20.9.7.8 - 20.9.7.10 NMAC.

[20.9.7.11 NMAC - Rp, 20 NMAC 9.1.VI.609, 8/2/2007]

20.9.7.12 RECERTIFICATION:

A. To maintain certification, certified operators shall apply for recertification at least 30 days prior to the expiration date of their certification.

B. Recertification shall be obtained by making application to the department and successfully completing:

- (1) an operator certification training course offered by the department or its designated agent;
 - (2) an alternate training course which has been approved by the department;
- or
- (3) 24 hours of course work which has been approved by the department.

[20.9.7.12 NMAC - Rp, 20 NMAC 9.1.VI.610, 8/2/2007]

20.9.7.13 SUSPENSION OR REVOCATION OF CERTIFICATION:

A. An operator's certification may be suspended or revoked by the secretary for:

- (1) failure to comply with the terms or conditions of a solid waste facility permit or a facility registration;
- (2) fraud, deceit or submission of inaccurate qualification information;
- (3) violation of the Solid Waste Act or 20.9.2 - 20.9.10 NMAC by the certified operator; or
- (4) failure to comply with the Parental Responsibility Act, NMSA 1978, Sections 40-5A-1 to 40-5A-13 (1998 Cum. Supp.).

B. Suspension and revocation proceedings shall be conducted in accordance with the Uniform Licensing Act, NMSA 1978, Sections 61-1-1 to 61-1-33; 20.1.5 NMAC and if applicable, 20.1.7 NMAC.

[20.9.7.13 NMAC - Rp, 20 NMAC 9.1.VI.611, 8/2/2007]

PART 8: SPECIAL WASTE REQUIREMENTS

20.9.8.1 ISSUING AGENCY:

New Mexico Environmental Improvement Board.

[20.9.8.1 NMAC - Rp, 20 NMAC 9.1.1.001, 8/2/2007]

20.9.8.2 SCOPE:

This part applies to the transportation, storage, transfer, processing, transformation, recycling, composting, nuisance abatement and disposal of solid waste.

[20.9.8.2 NMAC - Rp, 20 NMAC 9.1.1.002, 8/2/2007]

20.9.8.3 STATUTORY AUTHORITY:

NMSA 1978, Sections 74-1-1 to 74-1-15, NMSA 1978, Sections 74-9-1 to 74-9-43, and NMSA 1978 Sections 74-13-1 to 74-13-20.

[20.9.8.3 NMAC - Rp, 20 NMAC 9.1.1.003, 8/2/2007]

20.9.8.4 DURATION:

Permanent.

[20.9.8.4 NMAC - Rp, 20 NMAC 9.1.1.004, 8/2/2007]

20.9.8.5 EFFECTIVE DATE:

August 2, 2007, unless a later date is cited at the end of a section.

[20.9.8.5 NMAC - Rp, 20 NMAC 9.1.1.005, 8/2/2007]

20.9.8.6 OBJECTIVE:

The objective of Part 8 of Chapter 9 is to establish regulations governing the management of special waste, including manifest requirements for the transportation of special waste.

[20.9.8.6 NMAC - Rp, 20 NMAC 9.1.1.006, 8/2/2007]

20.9.8.7 DEFINITIONS:

[RESERVED]

[See 20.9.2.7 NMAC for Definitions.]

20.9.8.8 GENERAL:

The generator of a special waste shall assure that the special waste is disposed of in a solid waste facility permitted to accept the special waste or treated at a permitted facility, prior to disposal, to render it a non-special waste.

[20.9.8.8 NMAC - Rp, 20 NMAC 9.1.VII.701, 8/2/2007]

20.9.8.9 RESTRICTIONS:

A. No solid waste facility shall accept special waste unless the facility owner or operator has been issued a permit to accept that type of special waste for disposal, transfer, processing, or transformation.

B. No person may incinerate infectious waste except in an infectious waste incinerator permitted under 20.9.2 - 20.9.10 NMAC.

C. A hauler of special waste shall not deliver special waste to any place or person except to a facility that has been issued a permit to accept that type of special waste for disposal, transfer, processing or transformation.

[20.9.8.9 NMAC - Rp, 20 NMAC 9.1.VII.702, 8/2/2007]

20.9.8.10 GENERAL REQUIREMENTS FOR SPECIAL WASTE:

A. Any person who stores a special waste shall assure that the special waste is stored at designated special waste storage areas meeting the requirements of 20.9.8 NMAC.

B. No person who stores special waste shall store the waste for longer than 90 days from the date the waste is placed in storage awaiting transportation, processing, or final disposal, unless otherwise approved by the department, except no person other than the generator shall store infectious waste for over seven days without refrigeration at or below 45 degrees fahrenheit.

C. A generator of special waste shall assure that all containers of special waste when deemed full and placed in storage are clearly labeled or marked, indicating the name and address of the generator, contents, date placed in storage and potential health, safety, and environmental hazards associated with the waste.

D. A generator of special waste shall assure that all containers of special waste that are prepared for transportation are clearly labeled or marked, indicating the name and address of the generator, contents, and potential health, safety, and environmental hazards associated with the waste.

E. A hauler of special waste shall assure that all containers of special waste are clearly labeled or marked prior to transportation, indicating the name and address of the generator, contents, date transported, and potential health, safety, and environmental hazards associated with the waste.

F. Any generator or hauler of special waste shall assure that a manifest in accordance with 20.9.8.19 NMAC accompanies each load of special waste originating in or to be disposed in New Mexico;

G. A hauler of special waste shall carry an appropriate clean-up kit in each vehicle used for hauling.

[20.9.8.10 NMAC - Rp, 20 NMAC 9.1.VII.703, 8/2/2007]

20.9.8.11 REQUIRED ANALYSIS:

A. The generator of a special waste shall document the physical and chemical characteristics of all special wastes for storage, transportation or disposal, by means of:

- (1) records of the results of analyses performed in accordance with this section as applicable; or
- (2) detailed descriptions of the generator's knowledge of specific wastes, including process, source and chemical and physical properties;
- (3) or both.

B. All laboratory analyses shall be performed by a laboratory that follows U.S. EPA quality assurance and quality control procedures in accordance with U.S. EPA approved analytical methods or such other methods acceptable to the department.

C. Representative sample(s) shall be analyzed in conformance with the following parameters as appropriate:

- (1) ignitability characteristic as defined in 40 CFR Part 261;
- (2) corrosivity characteristic as defined in 40 CFR Part 261;
- (3) reactivity characteristic as defined in 40 CFR Part 261;
- (4) toxicity characteristic as defined by U.S. EPA test method 1311: toxicity characteristic leaching procedure (TCLP);
- (5) paint filter liquids test as defined by U.S. EPA Test Method 9095;
- (6) additional parameters as identified by the department;

(7) RCRA Subtitle C listed wastes as defined in 40 CFR Part 261; and

(8) Toxic Substance Control Act (TSCA), Federal Insecticide, Fungicide and Rodenticide Act (FIFRA), or other applicable statutes.

[20.9.8.11 NMAC - Rp, 20 NMAC 9.1.VII.704, 8/2/2007]

20.9.8.12 ASBESTOS WASTE:

A. The generator of asbestos waste shall prevent public access to asbestos wastes at the point of generation. Haulers of asbestos waste shall prevent public access to asbestos waste during transportation.

B. Generators of asbestos waste shall determine whether the asbestos waste is regulated asbestos waste. If it is not regulated asbestos waste, and it is to be disposed as non-regulated asbestos waste, the generator shall assure that the asbestos waste is handled in a manner to prevent the asbestos waste from becoming regulated asbestos waste. The handling of non-regulated asbestos waste shall include measures to assure that any category I non-friable asbestos containing material is not subjected to sanding, grinding, cutting or abrading and that any category II non-friable asbestos containing material is not subjected to forces expected to break, crumble, pulverize or reduce the material to powder during the course of excavation, renovation, demolition, or storage, and that it is disposed at a permitted landfill. If the waste is regulated asbestos waste it shall be disposed at a landfill permitted to accept regulated asbestos waste and shall be handled accordingly.

C. If non-regulated asbestos waste is to be disposed as non-regulated asbestos waste, the hauler of non-regulated asbestos waste shall handle the waste in a manner to prevent the asbestos waste from becoming regulated asbestos waste. The handling of non-regulated asbestos waste by a hauler shall include measures to assure that any category I non-friable asbestos containing material is not subjected to abrading and that any category II non-friable asbestos containing material is not subjected to forces expected to break, crumble, pulverize or reduce the material to powder during the course of storage, transportation, or while exposed during disposal operations. The hauler shall notify the landfill operator that the load contains non-regulated asbestos waste that must be disposed of in a manner to prevent breakage and release of fibers while exposed during disposal operations.

D. A landfill that accepts non-regulated asbestos waste shall assure that the asbestos containing material is not broken, abraded, crumbled, pulverized or reduced to powder while exposed during disposal operations. The non-regulated asbestos waste shall be covered with at least six inches of non-waste containing material prior to compaction.

E. The generator of regulated asbestos waste shall properly wet and containerize the waste. No hauler shall accept or transport regulated asbestos waste unless the waste has been properly wetted and containerized.

(1) Regulated asbestos waste is properly wetted when its moisture content prevents fiber release.

(2) Regulated asbestos waste is properly containerized when it is placed in a plastic bag of 6-mil or thicker, sealed in such a way to be leak-proof, and the amount of void space or air in the bag is minimized. Asbestos waste slurries shall be packaged in leak-proof drums if they are too heavy for the plastic bag containers. Regulated asbestos waste may also be containerized by double bagging, using plastic-lined cardboard containers, plastic-lined metal containers, or the use of vacuum trucks for the transport of slurry.

(a) Pipes or other facility components that are removed as sections without first removing the asbestos shall be wrapped in a minimum of 6-mil plastic sufficient to prevent asbestos fibers from escaping.

(b) The hauler shall ensure that regulated asbestos waste is properly contained in a manner to prevent asbestos fibers from escaping and with appropriate labels, and that the outsides of the containers are not contaminated with asbestos debris adhering to the containers. The transporter shall not accept nor transport regulated asbestos waste if there is a reason to believe that the condition of the asbestos waste may allow fiber release.

(3) The hauler shall ensure that the regulated asbestos waste containers are loaded into the transport vehicle in a manner which prevents the breaking of the containers. The hauler shall ensure that the asbestos waste containers are transferred at the disposal site in such a manner to prevent fiber release.

(a) If the hauler discovers that the regulated asbestos waste is not properly containerized in conformance with Paragraph (2) of this subsection, the hauler shall immediately clean up the contaminated area and repair or reseal the container by appropriate methods. The department shall be notified of any release within 24 hours. The transporter shall ensure that all containers in his possession are of adequate design and condition to prevent the release of fibers during transport.

(b) Vehicles used for transport of containerized regulated asbestos waste shall have an enclosed carrying compartment or utilize a canvas or plastic lined covering sufficient to contain the transported waste, prevent damage to containers, and prevent fiber release. All surfaces of vehicles and other asbestos handling equipment and facilities shall be maintained free from the accumulation of dusts and waste containing asbestos and shall have a smooth, non-absorbent finish. No vehicle which uses compactors to reduce waste volume may be used to transport asbestos waste.

Vacuum trucks used to transport waste slurry shall be inspected to ensure that liquid is not leaking from the truck.

(c) The hauler of the regulated asbestos waste shall notify the landfill operator that the load contains regulated asbestos waste.

F. All regulated asbestos containers, to include individually wrapped facility components or pipes, shall have a warning label specified by the U.S. EPA or the occupational safety and health administration (OSHA). Labels shall be printed in both English and Spanish.

G. The operator of a landfill permitted to accept regulated asbestos waste shall:

(1) inspect the loads at the time of disposal at the landfill to verify that the regulated asbestos waste is properly contained and labeled;

(2) if the wastes are not properly containerized and the landfill operator accepts the load, thoroughly soak the asbestos with a water spray prior to unloading, rinse out the truck, and immediately cover the wastes with non-waste containing material to prevent fiber release, prior to compacting the waste in the landfill;

(3) prepare a separate excavation to receive only regulated asbestos wastes; the excavation shall be as narrow as possible while complying with all occupational safety and health administration (OSHA) regulations and standards;

(4) align the excavation perpendicular to the prevailing winds;

(5) off-load asbestos containers within the excavation with sufficient care to avoid breaking the containers;

(6) completely cover the containerized waste within 18 hours with a minimum of six inches of non-waste containing material;

(7) completely cover improperly containerized regulated asbestos waste with six inches of non-waste containing material immediately; and

(8) not compact the regulated asbestos waste until it is completely covered with six inches of non-waste containing material.

H. If, at any time during the generation or transportation of non-regulated asbestos waste the waste material is subjected to handling that renders it to be regulated asbestos waste, the generator or hauler shall immediately begin handling the regulated asbestos waste according the requirements of this part, and shall dispose of the regulated asbestos waste in a landfill or monofill permitted to accept such waste.

I. When closing a cell containing regulated asbestos waste, the landfill operator shall:

- (1) cover with an additional 30 inches of compacted non-waste containing material to provide a 36-inch final cover to the original grade; and
- (2) implement measures as necessary to control erosion and rodent intrusion.

J. The operator of a landfill that accepts regulated asbestos shall provide barriers adequate to control public access. At a minimum, the owner or operator shall:

(1) limit access to the regulated asbestos management site to no more than two entrances by gates that can be locked when left unattended and by fencing adequate to deter access by the general public: and

(2) place warning signs at the entrance and at intervals no greater than 100 feet along the perimeter of the sections where regulated asbestos waste is deposited. The sign shall read as follows in English and other languages as approved by the department:

ASBESTOS WASTE DISPOSAL SITE

DO NOT CREATE DUST

BREATHING ASBESTOS IS HAZARDOUS

TO YOUR HEALTH
