

TITLE 20: ENVIRONMENTAL PROTECTION

CHAPTER 1: ENVIRONMENTAL PROTECTION GENERAL

PART 1: RULEMAKING PROCEDURES - ENVIRONMENTAL IMPROVEMENT BOARD

20.1.1.1 ISSUING AGENCY:

Environmental Improvement Board.

[20.1.1.1 NMAC - Rp, 20.1.1.1 NMAC, 4/14/2018]

20.1.1.2 STATUTORY AUTHORITY:

This part is adopted pursuant to Sections 14-4-1 to -11, 50-9-12, 74-1-5, 74-1-8, 74-1-9, 74-2-6, 74-3-5, 74-4-5 and 74-9-27 NMSA 1978.

[20.1.1.2 NMAC - Rp, 20.1.1.2 NMAC, 4/14/2018]

20.1.1.3 SCOPE:

This part governs the procedures in all rulemaking hearings before the board, except to the extent that this part may be inconsistent with specific procedures in governing law. In cases where this part is inconsistent with any rulemaking procedures specified in governing law, the procedures in governing law apply, rather than the procedures in this part.

[20.1.1.3 NMAC - Rp, 20.1.1.3 NMAC, 4/14/2018]

20.1.1.4 DURATION:

Permanent.

[20.1.1.4 NMAC - Rp, 20.1.1.4 NMAC, 4/14/2018]

20.1.1.5 EFFECTIVE DATE:

April 14, 2018, unless a later date is cited at the end of a section.

[20.1.1.5 NMAC - Rp, 20.1.1.5 NMAC, 4/14/2018]

20.1.1.6 OBJECTIVE:

The purposes of this part are:

- A.** to standardize the procedures used in rulemaking proceedings before the board;
- B.** to encourage public participation in the hearings conducted by the board for the promulgation of regulations;
- C.** to make possible the effective presentation of the evidence and points of view of parties and members of the general public; and
- D.** to assure that board hearings are conducted in a fair and equitable manner.

[20.1.1.6 NMAC - Rp, 20.1.1.6 NMAC, 4/14/2018]

20.1.1.7 DEFINITIONS:

As used in this part:

- A.** "board administrator" means the department employee designated by the secretary of environment to provide staff support to the board;
- B.** "board" means the environmental improvement board;
- C.** "department" means the New Mexico environment department;
- D.** "document" means any paper, exhibit, pleading, motion, response, memorandum, decision, order or other written or tangible item that is filed in a proceeding under this part, or brought to or before the board for its consideration, but does not include a cover letter accompanying a document transmitted for filing;
- E.** "exhibit" means any document or tangible item submitted for inclusion in the hearing record;
- F.** "general public" includes any person attending a hearing who has not submitted a notice of intent to present technical testimony;
- G.** "governing law" means the statute, including any applicable case law, which authorizes and governs the decision on the proposed regulatory change;
- H.** "hearing officer" means the person designated by the board to conduct a hearing under this part;
- I.** "hearing record" means:

- (1) the transcript of proceedings; and
- (2) the record proper;

J. "participant" means any person who participates in a rulemaking proceeding before the board;

K. "party" means the petitioner; any person filing a notice of intent to present technical testimony, and any person filing an entry of appearance;

L. "person" means an individual or any entity, including federal, state and local governmental entities, however organized;

M. "petitioner" means the person who petitioned the board for the regulatory change that is the subject of the hearing;

N. "provide to the public" means for the board to distribute rulemaking information by:

- (1) posting it on the board's website;
- (2) posting it on the New Mexico sunshine portal;
- (3) making it available at the department's district, field, and regional offices;
- (4) sending it by email to persons who have made a written request for notice of announcements addressing the subject of the rulemaking proceeding and who have provided an email address to the board administrator;
- (5) sending it by email to persons who have participated in the rulemaking and who have provided an email address to the board administrator;
- (6) sending written notice that includes, at a minimum, an internet and street address where the information may be found to persons who provided a postal address; and
- (7) providing it to the New Mexico legislative council for distribution to appropriate interim and standing legislative committees.

O. "record proper" means all documents related to the hearing and received or generated by the board prior to the beginning, or after the conclusion, of the hearing, including, but not limited to:

- (1) the petition for hearing and any response thereto;

(2) the minutes (or an appropriate extract of the minutes) of the meeting at which the petition for hearing was considered, and of any subsequent meeting at which the proposed regulatory change was discussed;

(3) the notice of hearing;

(4) affidavits of publication;

(5) a copy of all publications in the New Mexico register relating to the proposed rule;

(6) notices of intent to present technical testimony;

(7) all written pleadings, including motions and responsive pleadings and orders;

(8) a copy of any technical information that was relied upon in formulating the final rule;

(9) statements for the public record or other relevant materials received by the agency during the public comment period;

(10) the hearing officer's report, if any;

(11) a copy of the full text of the initial proposed rule, the full text of the final adopted rule, and the concise explanatory statement filed with the state records administrator;

(12) post-hearing submissions, if allowed;

(13) the audio recordings (or an appropriate extract of the recordings) of the meeting(s) at which the board deliberated on the adoption of the proposed regulatory change;

(14) the board's decision and the reasons therefore; and

(15) any corrections made by the state records administrator pursuant to Section 14-4-3 NMSA 1978.

P. "regulation" means any rule, regulation or standard promulgated by the board and affecting one or more persons, besides the board and the department, except for any order or decision issued in connection with the disposition of any case involving a particular matter as applied to a specific set of facts;

Q. "regulatory change" means the adoption, amendment or repeal of a regulation;

R. "service" means personally delivering a copy of the document, exhibit or pleading to the person required by this part to be served; mailing it to that person; or, if that person has agreed, sending it by facsimile or electronic transmission; if a person is represented by an attorney, service of the document shall be made on the attorney; service by mail is complete upon mailing the document; service by facsimile or electronic transmission is complete upon the transmission of the document.

S. "technical testimony" means scientific, engineering, economic or other specialized testimony, but does not include legal argument, general comments, or statements of policy or position concerning matters at issue in the hearing; and

T. "transcript of proceedings" means the verbatim record (audio recording or stenographic) of the proceedings, testimony and argument in the matter, together with all exhibits proffered at the hearing, whether or not admitted into evidence, including the record of any motion hearings or prehearing conferences.

[20.1.1.7 NMAC - Rp, 20.1.1.7 NMAC, 4/14/2018]

20.1.1.8-20.1.1.106 [RESERVED]

20.1.1.107 POWERS AND DUTIES OF BOARD AND HEARING OFFICER:

A. Board: The board shall exercise all powers and duties prescribed under this part and not otherwise delegated to the hearing officer or the board administrator.

B. Hearing officer: The board shall designate a hearing officer for each hearing who shall exercise all powers and duties prescribed or delegated under this part. The hearing officer may be a member of the board. The hearing officer shall conduct a fair and equitable proceeding, assure that the facts are fully elicited and avoid delay. The hearing officer shall have authority to take all measures necessary for the maintenance of order and for the efficient, fair and impartial consideration of issues arising in proceedings governed by this part, including, but not limited to:

- (1) conducting hearings under this part;
 - (2) taking, admitting or excluding evidence, examining witnesses and allowing post-hearing submissions;
 - (3) making such orders as may be necessary to preserve decorum and to protect the orderly hearing process;
 - (4) if requested by the board, preparing and filing a report of the hearing, with recommendations for board action;
 - (5) requesting parties to file original documents with the board administrator;
- and

(6) requesting a party to submit a proposed statement of reason in support of the board's decision.

[20.1.1.107 NMAC - Rp, 20.1.1.107 NMAC, 4/14/2018]

20.1.1.108 LIBERAL CONSTRUCTION:

This part shall be liberally construed to carry out their purpose.

[20.1.1.108 NMAC - Rp, 20 NMAC 1.1.108, 4/14/2018]

20.1.1.109 SEVERABILITY:

If any part or application of this part is held invalid, the remainder of this part, or their application to other persons or situations, shall not be affected.

[20.1.1.109 NMAC - Rp, 20.1.1.109 NMAC, 4/14/2018]

20.1.1.110 GENERAL PROVISIONS- COMPUTATION OF TIME:

A. Computation of time: In computing any period of time prescribed or allowed by this part, except as otherwise specifically provided, the day of the event from which the designated period begins to run shall not be included. The last day of the computed period shall be included, unless it is a Saturday, Sunday, or legal state holiday, in which event the time is extended until the end of the next day, which is not a Saturday, Sunday, or legal state holiday. Whenever a party must act within a prescribed period after service upon him, and service is by mail, three days is added to the prescribed period. The three-day extension does not apply to any deadline under the act.

B. Extension of time: The board or hearing officer may grant an extension of time for the filing of any document upon timely motion of a party to the proceeding, for good cause shown, and after consideration of prejudice to other parties.

[20.1.1.110 NMAC – Rp, 20.1.1.110 NMAC, 4/14/2018]

20.1.1.111 GENERAL PROVISIONS- RECUSAL:

No board member shall participate in any action in which his or her impartiality of fairness may reasonably be questioned, and the member shall recuse himself or herself in any such action by giving notice to the board and the general public by announcing this recusal on the record. In making a decision to recuse himself or herself, the board member may rely upon the Governmental Conduct Act, Sections 10-16-1 through 10-16-18 NMSA 1978, the Financial Disclosures Act, Sections 10-16A-1 through 10-16A-8 NMSA 1978, or any other relevant authority.

[20.1.1.111 NMAC – RP, 20.1.1.111 NMAC, 4/14/2018]

20.1.1.112 GENERAL PROVISIONS- EX PARTE DISCUSSIONS:

At no time after the initiation and before the conclusion of a proceeding under this part, shall the department, or any other party, interested participant, or their representatives discuss ex parte the merits of the proceeding with any board member or the hearing officer.

[20.1.1.112 NMAC – Rp, 20.1.1.112 NMAC, 4/14/2018]

20.1.1.113-20.1.1.199 [RESERVED]

20.1.1.200 DOCUMENT REQUIREMENTS - FILING AND SERVICE OF DOCUMENTS:

A. The filing of any document as required by this part shall be accomplished by delivering the document to the board administrator and the board legal counsel.

B. Any person filing any document shall:

(1) provide the board administrator with the original and nine copies of the document, provided that the board administrator may waive the requirement to provide nine copies if an electronic copy of the original is provided in a format acceptable for distribution to the board members;

(2) if the document is a notice of intent to present technical testimony filed by any person other than the petitioner, serve a copy thereof on the petitioner;

(3) any document filed pursuant to this part shall be filed with the board administrator at least 20 days before any meeting at which the board will consider the document. If the document is a motion seeking an order from the hearing officer in a rules hearing, the motion must also be served at the same time with the hearing officer and the board legal counsel.

C. Whenever this part requires service of a document, service shall be made by delivering a copy to the person to be served by mailing it, or, if that person has agreed, by sending it by facsimile or by electronic transmission to that person. Agreement to be served by facsimile or electronic transmission may be evidenced by placing the person's facsimile number or email address on a document filed pursuant to this part. Service shall also be made upon the board's legal counsel. If a person is represented by an attorney, service of the document shall be made on the attorney. Service by mail is complete upon mailing the document. Service by facsimile or electronic transmission is complete upon transmission of the document.

D. The petitioner and any person who has filed a timely notice of intent to present technical testimony under this part may inspect all documents that have been filed in a proceeding in which they are involved as participants. Such inspection shall be

permitted in accordance with the Inspection of Public Records Act, Sections 14-2-1 through 14-2-12 NMSA 1978. The board administrator shall notify the petitioner and all persons who have filed a timely notice of intent to present technical testimony by email whenever any document is filed in a proceeding under this part. Any such person who does not provide an email address shall instead be notified by mail.

E. All documents filed under this part shall be made available to any person for inspection upon request and shall, to the extent required by law, be made available on the department's website and the New Mexico sunshine portal.

F. The board administrator shall provide copies of all documents to each board member at least 15 days before the meeting at which the board will consider the documents. With regard to those documents filed in conjunction with any rules hearing, the hearing officer may make exception to this requirement.

[20.1.1.200 NMAC - Rp, 20.1.1.200 NMAC, 4/14/2018]

20.1.1.201 EXAMINATION OF DOCUMENTS FILED:

A. Examination allowed: Subject to the provisions of law restricting the public disclosure of confidential information, any person may, during normal business hours, inspect and copy any document filed in any rulemaking proceeding before the board. Such documents shall be made available by the board administrator, as appropriate, and shall also be made available on the New Mexico sunshine portal. If the board administrator determines that any part of the rulemaking record cannot be practicably displayed or is inappropriate for public display on the New Mexico sunshine portal, the board administrator shall describe that part of the record, shall note on the New Mexico sunshine portal that the part of the record is not displayed, and shall provide instructions for accessing or inspecting that part of the record.

B. Cost of duplication: The cost of duplicating documents shall be borne by the person seeking copies of such documents, but the board administrator shall not charge a fee for providing the notice of proposed rulemaking in electronic form.

[20.1.1.201 NMAC - Rp, 20.1.1.201 NMAC, 4/14/2018]

20.1.1.202-20.1.1.299 [RESERVED]

20.1.1.300 PREHEARING PROCEDURES - PETITION FOR REGULATORY CHANGE:

A. Any person may file a petition with the board to adopt, amend or repeal any regulation within the jurisdiction of the board.

B. The petition shall be in writing and shall include a statement of the reasons for the regulatory change. The petition shall cite the relevant statutes that authorize the

board to adopt the proposed rules and shall estimate the time that will be needed to conduct the rules hearing, if at all possible. A copy of the entire rule, including proposed regulatory change, indicating any language proposed to be added or deleted, shall be attached to the petition. The entire rule and its proposed changes shall be submitted to the board in redline fashion, and shall include line numbers. Any document that does not include all the items required to be in a petition shall be returned to the petitioner along with a copy of these rules and a check-off list of required items, and the petitioner will be asked to resubmit the petition in the form required by these rules.

C. The board shall determine, at a public meeting occurring at least 15 days and no later than 60 days, after receipt of the petition, whether or not to hold a public hearing on the proposal. Any person may respond to the petition either in writing prior to the public meeting or in person at the public meeting.

D. If the board determines to hold a public hearing on the petition, it may issue such orders specifying procedures for conduct of the hearing, in addition to those provided by this part, as may be necessary and appropriate to fully inform the board of the matters at issue in the hearing or control the conduct of the hearing. Such orders may include requirements for giving additional public notice, holding pre-hearing conferences, filing direct testimony in writing prior to the hearing, or limiting testimony or cross-examination

[20.1.1.300 NMAC - Rp, 20.1.1.300 NMAC, 4/14/2018]

20.1.1.301 NOTICE OF HEARINGS:

A. Unless otherwise allowed by governing law and specified by the board, the board shall provide to the public notice of the proposed rulemaking at least 60 days prior to the hearing. Notice of the proposed rulemaking shall include publication in at least one newspaper of general circulation in the state, publication in the New Mexico register, and such other means of providing notice as the board may direct or are required by law.

B. The notice of proposed rulemaking shall state:

(1) the subject of the proposed rule, including a summary of the full text of the proposed rule and a short explanation of the purpose of the proposed rule;

(2) a citation to the specific legal authority authorizing the proposed rule and a short explanation of the purpose of the proposed rule;

(3) a citation to technical information, if any, that served as a basis for the proposed rule, and information on how the full text of the technical information may be obtained;

(4) the statutes, regulations and procedural rules governing the conduct of the hearing;

(5) the manner in which persons may present their views or evidence to the board, including the time, place, and information on participating in the public hearing;

(6) the location where persons may secure copies of the full text of the proposed regulatory change;

(7) an internet link providing free access to the full text of the proposed rule; and

(8) if applicable, that the board may make a decision on the proposed regulatory change at the conclusion of the hearing.

[20.1.1.301 NMAC - Rp, 20.1.1.301 NMAC, 4/14/2018]

20.1.1.302 TECHNICAL TESTIMONY:

A. Any person, including the petitioner, who intends to present technical testimony at the hearing shall, no later than 20 days prior to the hearing, file a notice of intent to present technical testimony with the board administrator. The notice shall:

(1) identify the person for whom the witness(es) will testify;

(2) identify each technical witness the person intends to present and state the qualifications of that witness, including a description of their educational and work background;

(3) if the hearing will be conducted at multiple locations, indicate the location or locations at which the witnesses will be present;

(4) include a copy of the direct testimony of each technical witness in narrative form;

(5) include the text of any recommended modifications to the proposed regulatory change; and

(6) list and attach all exhibits anticipated to be offered by that person at the hearing, including any proposed statement of reasons for adoption of rules.

B. The hearing officer may enforce the provisions of this section through such action as the hearing officer deems appropriate, including, but not limited to, exclusion of the technical testimony of any witness for whom a notice of intent was not timely filed. If such testimony is admitted, the hearing officer may keep the record open after the hearing to allow responses to such testimony. The hearing officer may also require that written rebuttal testimony be submitted prior to hearing.

[20.1.1.302 NMAC - Rp, 20.1.1.302 NMAC, 4/14/2018]

20.1.1.303 ENTRY OF APPEARANCE:

Any person may file an entry of appearance as a party. The entry of appearance shall be filed with the board administrator no later than 20 days before the date of the hearing on the petition. In the event of multiple entries of appearance by those affiliated with one interest group, the hearing officer may consolidate the entries, or divide the service list to avoid waste of resources.

[20.1.1.303 NMAC – Rp, 20.1.1.303 NMAC, 4/14/2018]

20.1.1.304 PARTICIPATION BY GENERAL PUBLIC:

A. Any member of the general public may testify at the hearing. No prior notification is required to present non-technical testimony at the hearing. Any such member may also offer non-technical exhibits in connection with his testimony, so long as the exhibit is not unduly repetitious of the testimony.

B. A member of the general public who wishes to submit a written statement for the record, in lieu of providing oral testimony at the hearing, shall file the written statement prior to the hearing or submit it at the hearing. Written comment must be mailed or delivered to the board administrator; email comments will not be accepted. However, comments may be submitted electronically on the board webpage.

C. If the board changes the date of the hearing or the deadline for submitting comments as stated in the notice of proposed rulemaking, the board shall provide to the public notice of the change.

[20.1.1.304 NMAC - Rp, 20.1.1.304 NMAC, 4/14/2018]

20.1.1.305 LOCATION OF HEARING:

Unless otherwise provided by governing law, the board may hold hearings on proposed regulatory changes of statewide application in Santa Fe or within any area of the state substantially affected by the proposed regulatory change, and shall hold hearings on proposed changes of local application within the area affected by the proposal.

[20.1.1.305 NMAC - Rp, 20.1.1.305 NMAC, 4/14/2018]

20.1.1.306 PARTICIPATION BY CONFERENCE TELEPHONE OR OTHER SIMILAR DEVICE:

A. A member of the board may participate in a meeting or hearing of the board by means of a conference telephone or other similar communications equipment, when it is otherwise difficult or impossible for the member to attend the meeting or hearing in person, provided that each member participating by conference telephone can be identified when speaking, all participants are able to hear each other at the same time

and members of the public attending the meeting or hearing are able to hear any member of the board who speaks at the meeting or hearing. A board member's participation by such means shall constitute presence in person at the meeting or hearing. A board member who wishes to participate in a rules hearing in this manner must receive permission from the hearing officer sufficiently in advance of the rules hearing so as to permit the board administrator to arrange for adequate telephone hookup.

B. A witness may participate in a rules hearing of the board by means of a telephone conference or other similar communications equipment when an emergency or circumstances make it impossible for the witness to attend the hearing in person. A witness who wishes to participate in a rules hearing in this manner must receive permission from the hearing officer sufficiently in advance of the rules hearing. No witness may participate in a rules hearing by telephone conference unless he makes a request sufficiently in advance of the rules hearing so as to permit the board administrator to arrange for an adequate telephone hookup. Each witness participating by telephone must be identified when speaking, all participants must be able to hear each other at the same time and members of the public attending the hearing must be able to hear any witness who speaks during the hearing.

[20.1.1.306 NMAC - Rp, 20.1.1.306 NMAC, 4/14/2018]

20.1.1.307 MOTIONS:

A. General: All motions, except those made orally during a hearing, shall be in writing, specify the grounds for the motion and state the relief sought. Each motion shall be accompanied by an affidavit, certificate or other evidence relied upon and shall be served as provided by 20.1.1.200 NMAC.

B. Unopposed motions: An unopposed motion shall state that the concurrence of all other parties was obtained. The moving party shall submit a proposed order approved by all parties for the hearing officer's review.

C. Opposed motions: Any opposed motion shall state either that concurrence was sought and denied, or why concurrence was not sought. A memorandum brief in support of such motion may be filed with the motion.

D. Response to motions: Any party upon whom an opposed motion is served shall have 15 days after service of the motion to file a response. A non-moving party failing to file a timely response shall be deemed to have waived any objection to the granting of the motion.

E. Reply to response: The moving party may, but is not required to, submit a reply to any response within 10 days after service of the response.

F. Decision: All motions shall be decided by the hearing officer without a hearing, unless otherwise ordered by the hearing officer *sua sponte* or upon written request of any party. The hearing officer shall refer any motion that would effectively dispose of the matter, and may refer any other motion to the board for a decision. A procedural motion may be ruled upon prior to the expiration of the time for response; any response received thereafter shall be treated as a request for reconsideration of the ruling. The hearing officer shall file all original documents with the board administrator.

[20.1.1.307 NMAC - Rp, 20.1.1.307 NMAC, 4/14/2018]

20.1.1.308-20.1.1.399 [RESERVED]

20.1.1.400 HEARING PROCEDURES - CONDUCT OF HEARINGS:

A. The rules of civil procedure and the rules of evidence shall not apply.

B. The hearing officer shall conduct the hearing so as to provide a reasonable opportunity for all persons to be heard without making the hearing unreasonably lengthy or cumbersome, or burdening the record with unnecessary repetition. The hearing shall proceed as follows.

(1) The hearing shall begin with an opening statement from the hearing officer. The statement shall identify the nature and subject matter of the hearing and explain the procedures to be followed.

(2) The hearing officer may allow a brief opening statement by any party who wishes to make one.

(3) Unless otherwise ordered, the petitioner shall present its case first.

(4) The hearing officer shall establish an order for the testimony of other participants. The order may be based upon notices of intent to present technical testimony, sign-in sheets and the availability of witnesses who cannot be present for the entire hearing.

(5) If the hearing continues for more than one day, the hearing officer shall provide an opportunity each day for testimony from members of the general public. Members of the general public who wish to present testimony should indicate their intent on a sign-in sheet.

(6) The hearing officer may allow a brief closing argument by any person who wishes to make one.

(7) At the close of the hearing, the hearing officer shall determine whether to keep the record open for written submittals in accordance with 20.1.1.404 NMAC. If the

record is kept open, the hearing officer shall determine and announce the subject(s) on which submittals will be allowed and the deadline for filing the submittals.

C. If the hearing is conducted at multiple locations, the hearing officer may require the petitioner's witnesses to summarize their testimony or be available for cross-examination at each location. Other participants are not required to testify at more than one location, and the hearing officer may prohibit a witness from testifying at more than one location.

[20.1.1.400 NMAC - Rp, 20.1.1.400 NMAC, 4/14/2018]

20.1.1.401 TESTIMONY AND CROSS-EXAMINATION:

A. All testimony will be taken under oath or affirmation which may be accomplished in mass or individually.

B. The hearing officer shall admit any relevant evidence, unless the hearing officer determines that the evidence is incompetent or unduly repetitious. The hearing officer shall require all oral testimony be limited to the position of the witness in favor of or against the proposed rule.

C. Any person who testifies at the hearing is subject to cross-examination on the subject matter of his or her direct testimony and matters affecting his or her credibility. Any person attending the hearing is entitled to conduct such cross-examination as may be required for a full and true disclosure of matters at issue in the hearing. The hearing officer may limit cross-examination to avoid harassment, intimidation, needless expenditure of time or undue repetition.

[20.1.1.401 NMAC - Rp, 20.1.1.401 NMAC, 4/14/2018]

20.1.1.402 EXHIBITS:

A. Any person offering an exhibit at hearing, other than a document filed and served before the hearing, shall provide at least an original and nine copies for the board, and a sufficient number of copies for every other party.

B. All exhibits offered at the hearing shall be marked with a designation identifying the person offering the exhibit and shall be numbered sequentially. If a person offers multiple exhibits, he shall identify each exhibit with an index tab or by other appropriate means.

C. Large charts and diagrams, models and other bulky exhibits are discouraged. If visual aids are used, legible copies shall be submitted for inclusion in the record.

[20.1.1.402 NMAC - Rp, 20.1.1.402 NMAC, 4/14/2018]

20.1.1.403 TRANSCRIPT OF PROCEEDINGS:

A. Unless specified by the board or hearing officer, a verbatim transcript shall be made of the hearing. The cost of the original transcript of the proceeding and of providing a copy for each board member shall be borne by the petitioner.

B. Any person may obtain a copy of the transcript of a proceeding. It shall be obtained directly from the court reporter, and the cost of the transcript shall be paid directly to the source.

[20.1.1. 403 NMAC - Rp, 20.1.1.403 NMAC, 4/14/2018]

20.1.1.404 POST-HEARING SUBMISSIONS:

The hearing officer may allow the record to remain open for a reasonable period of time following the conclusion of the hearing for written submission of additional evidence, comments and arguments, and proposed statements of reasons. The hearing officer's determination regarding post-hearing submissions shall be announced at the conclusion of the hearing. In considering whether the record will remain open, the hearing officer shall consider the reasons why the material was not presented during the hearing, the significance of the material to be submitted and the necessity for a prompt decision.

[20.1.1. 404 NMAC - Rp, 20.1.1.404 NMAC, 04/14/2018]

20.1.1.405 HEARING OFFICER'S REPORT:

If the board directs, the hearing officer shall file a report of the hearing. The report shall identify the issues addressed at the hearing, identify the parties' final proposals and the evidence supporting those proposals, including discussion or recommendations as requested by the board, and shall be filed with the board administrator within the time specified by the board. The board administrator shall promptly notify each party that the hearing officer's report has been filed and shall provide a copy of the report along with a notice of any deadline set for comments on that report.

[20.1.1.405 NMAC - Rp, 20.1.1.405 NMAC, 4/14/2018]

20.1.1.406 DELIBERATION AND DECISION:

A. If a quorum of the board attended the hearing, and if the hearing notice indicated that a decision might be made at the conclusion of the hearing, the board may immediately deliberate and make a decision on the proposed regulatory change.

B. If the board does not reach a decision at the conclusion of the hearing, the board administrator, following receipt of the transcript, will promptly furnish a copy of the transcript to each board member that did not attend the hearing and, if necessary, to

other board members, board counsel and the hearing officer. Exhibits provided to those persons at the time of the hearing need not be supplied again.

C. The board shall reach its decision on the proposed regulatory change within 60 days following the close of the record or the date the hearing officer's report is filed, whichever is later.

D. If, during the course of its deliberations, the board determines that additional testimony or documentary evidence is necessary for a proper decision on the proposed regulatory change, the board may, consistent with the requirements of due process, reopen the hearing for such additional evidence only.

E. The board shall issue its decision on the proposed regulatory change in a suitable format, which shall include its reasons for the action taken.

F. The board's written decision is the official version of the board's action, and the reasons for that action. Other written or oral statements by board members are not recognized as part of the board's official decision or reasons.

G. If the board fails to act on a proposed rule within two years after the notice of proposed rulemaking is published in the New Mexico register, the rulemaking is automatically terminated unless the board acts to extend the period for an additional two years by filing a statement of good cause for the extension in the rulemaking record. If the board extends the rulemaking period, it shall provide for additional public participation, comments, and hearing prior to adopting the rule.

H. The board may terminate a rulemaking at any time by publishing a notice of termination in the New Mexico register. If the board terminates a rulemaking in this manner, it shall provide to the public notice of its action.

[20.1.1.406 NMAC - Rp, 20.1.1.406 NMAC, 4/14/2018]

20.1.1.407 NOTICE OF BOARD ACTION:

A. The board administrator shall provide to the public notice of the board's action and a concise explanatory statement.

B. The adopted rule shall not take effect unless within 15 days of adoption of the rule, the board delivers the final rule to the state records administrator, accompanied by a concise explanatory statement that contains:

(1) the date that the board adopted the rule;

(2) a reference to the specific statutory or other authority authorizing the rule;

and

(3) any findings required by law for adoption of the rule.

C. Adoption of the final rule occurs upon signature of the written decision.

D. If the state records administrator notifies the board of having made any minor, nonsubstantive corrections in spelling, grammar, and format in the filed rule, the board administrator shall provide to the public notice of the correction within 30 days of receiving the state records administrator's record of correction.

[20.1.1.407 NMAC - Rp, 20.1.1.407 NMAC, 4/14/2018]

20.1.1.408-20.1.1.499 [RESERVED]

20.1.1.500 APPEALS AND STAYS - APPEAL OF REGULATIONS:

A. Appeal of any regulatory change by the board shall be taken in accordance with governing law.

B. The appellant shall serve a copy of the notice of appeal on the board and on each party.

C. The appellant shall be responsible for preparation of a sufficient number of copies of the hearing record at the expense of appellant.

D. Unless otherwise provided by governing law, the filing of an appeal shall not act as a stay of the regulatory change being appealed.

[20.1.1.500 NMAC - Rp, 20.1.1.500 NMAC, 4/14/2018]

20.1.1.501 STAY OF BOARD REGULATIONS:

A. Any person who is or may be affected by a rule adopted by the board may file a motion with the board seeking a stay of that rule or regulatory change. The motion shall include the reason for, and the legal authority supporting, the granting of a stay. The movant shall file the motion with the board administrator at least 30 days before the meeting at which the board will consider the motion. The movant shall serve the motion for a stay as provided by this part, and shall further serve all parties in the rulemaking proceeding. The board chair will decide at which meeting the stay motion will be heard.

B. Unless otherwise provided by governing law, the board may grant a stay pending appeal of any regulatory change promulgated by the board. The board may only grant a stay if good cause is shown after a motion is filed and a hearing is held.

C. In determining whether good cause is present for the granting of a stay, the board, upon at least a two-thirds vote of the members voting shall consider:

- (1) the likelihood that the movant will prevail on the merits of the appeal;
- (2) whether the moving party will suffer irreparable harm if a stay is not granted;
- (3) whether substantial harm will result to other interested persons; and
- (4) whether harm will ensue to the public interest.

D. If no action is taken within 60 days after filing of the motion, the board shall be deemed to have denied the motion for stay.

[20.1.1.501 NMAC - Rp, 20.1.1.501 NMAC, 4/14/2018]

PART 2: ADJUDICATORY PROCEDURES - ENVIRONMENTAL IMPROVEMENT BOARD

20.1.2.1 ISSUING AGENCY:

Environmental Improvement Board.

[20.1.2.1 NMAC - Rp, 20 NMAC 1.2.I.100, 8/27/06]

20.1.2.2 SCOPE:

A. This part governs the following adjudicatory proceedings of the environmental improvement board:

(1) proceedings for the granting of variances, or for the appeal from permitting actions, pursuant to the Air Quality Control Act, Sections 74-2-7(H) and 74.2-8 NMSA 1978 ("petition hearings"); and

(2) any other adjudicatory proceedings under the jurisdiction of the board to which the board applies this part.

B. Uniform Licensing Act proceedings: Subparts I, III and IV of this part [now 20.1.2.1 through 20.1.2.7 NMAC, and 20.1.2.106 through 20.1.2.113 NMAC; 20.1.2.200 through 20.1.2.208 NMAC; and 20.1.2.400 through 20.1.2.405 NMAC] apply to any board adjudicatory proceedings conducted under the Uniform Licensing Act, Sections 61-1-1 NMSA 1978 et seq., ("ULA"), including proposed denial, suspension or revocation of certificates held or applied for under the Medical Radiation Health and Safety Act, Section 61-14E-11 NMSA 1978 ("ULA hearings"). Any conflict between this part and the ULA shall be resolved in favor of the ULA.

[20.1.2.2 NMAC - Rp, 20 NMAC 1.2.I.101, 8/27/06]

20.1.2.3 STATUTORY AUTHORITY:

This part is adopted under the authority of the Air Quality Control Act, Sections 74-2-5, 74-2-7 and 74-2-8 NMSA 1978; the Medical Radiation Health and Safety Act, Section 61-14E-5 NMSA 1978; and the Environmental Improvement Act, Section 74-1-8 NMSA 1978, as amended.

[20.1.2.3 NMAC - Rp, 20 NMAC 1.2.1.102, 8/27/06]

20.1.2.4 DURATION:

Permanent.

[20.1.2.4 NMAC - Rp, 20 NMAC 1.2.1.103, 8/27/06]

20.1.2.5 EFFECTIVE DATE:

August 27, 2006, unless a later date is cited at the end of a paragraph.

[20.1.2.5 NMAC - Rp, 20 NMAC 1.2.1.104, 8/27/06]

20.1.2.6 OBJECTIVE:

The objective of this part is to establish procedures that govern the adjudicatory proceedings of the environmental improvement board.

[20.1.2.6 NMAC - Rp, 20 NMAC 1.2.1.105, 8/27/06]

20.1.2.7 DEFINITIONS:

GENERAL: As used in this part. Terms defined in act or regulations: Terms defined in the act or regulations and not defined in this part are used consistent with the meanings given in the act or regulations.

A. "Act" means, as the context requires:

(1) the Air Quality Control Act, Chapter 74, Article 2 NMSA 1978, and its subsequent amendments and successor provisions;

(2) the Medical Radiation Health and Safety Act, Chapter 61, Article 14E NMSA 1978, and its subsequent amendments and successor provisions; and

(3) any other statute that includes authority for adjudicatory proceedings before the board when the board applies this part to such proceedings.

B. "Applicant" means the person who is the holder of, or the applicant for, the permit to which an appeal petition applies.

C. "Board" means the environmental improvement board or its successor agency under the act.

D. "Department" means the New Mexico environment department or its successor agency under the act.

E. "Board administrator" means the department employee designated by the secretary of environment to provide staff support to the board, and, further, is the person designated by the board to maintain the official record of the proceeding.

F. "Hearing officer" means the person designated under this part or appointed by the board to conduct a proceeding under this part.

G. "Interested participant" means any person, other than a party, who files an entry of appearance in accordance with Subsection A of 20.1.2.207 NMAC.

H. "Party" means the petitioner, the applicant if different from the petitioner, the department, any person who is entitled, and who timely requests, to be heard under the ULA or any person who is permitted to intervene in the particular hearing pursuant to NMRA 1-024.

I. "Petition" means a variance petition filed pursuant to Section 74-2-8(D) NMSA 1978, or an appeal petition filed pursuant to Section 74-2-7(H) NMSA 1978.

J. "Petitioner" means any person who files a timely petition.

K. "Record proper" means all documents filed by or with the board administrator during the proceeding and also includes:

(1) the verbatim record of the hearing (transcript or tapes, as applicable) and all exhibits offered into evidence at the hearing, whether or not admitted;

(2) for an appeal petition proceeding, the administrative record of the department; and

(3) minutes, or an appropriate extract of minutes, of any board meeting where the board deliberated or acted on any procedural or substantive issue in the proceeding.

L. "Regulations" means any rules promulgated by the board to implement the act.

M. "Service" means personally delivering a copy of the document, exhibit or any pleading to the person required by these rules to be served; mailing it to that person, or, if that person agrees, by sending it by facsimile or electronic transmission. If a person is

represented by an attorney, service of the document shall be made on the attorney. Service by mail is complete upon mailing the document; service by facsimile or by electronic transmission is accomplished when the transmission of the document is completed or upon acknowledgement by the recipient.

N. "Technical evidence" means scientific, engineering, economic or other specialized testimony, but does not include legal argument, general comments, or statements of policy or position concerning matters at issue in the hearing.

O. "ULA hearing" means a proceeding conducted by the board under the Uniform Licensing Act, Sections 61-1-1 NMSA 1978 et seq.

[20.1.2.7 NMAC - Rp, 20 NMAC 1.2.I.108, 8/27/06]

20.1.2.8-20.1.2.105 [RESERVED]

20.1.2.106 APPLICABILITY OF RULES OF CIVIL PROCEDURE AND RULES OF EVIDENCE:

In the absence of a specific provision in this part governing an action, the board may look to the New Mexico Rules of Civil Procedure, NMRA 1-001 et seq., and the New Mexico Rules of Evidence, NMRA 11-101 et seq., for guidance. Any reference to the rules of civil procedure shall not be construed to extend or otherwise modify the authority and jurisdiction of the board under the act.

[20.1.2.106 NMAC - Rp, 20 NMAC 1.2.I.106, 8/27/06]

20.1.2.107 CONSTRUCTION, SEVERABILITY, SAVINGS CLAUSE:

This part shall be liberally construed to carry out its purposes. If any part or application of this part is held invalid, the remainder of this part, or its application to other persons or situations, shall not be affected. This part does not apply to petitions filed prior to the effective date of this part, except as stipulated to by the parties to such proceeding.

[20.1.2.107 NMAC - Rp, 20 NMAC 1.2.I.107, 8/27/06]

20.1.2.108 [RESERVED]

20.1.2.109 POWERS AND DUTIES OF THE BOARD AND HEARING OFFICER:

A. Board: The board shall exercise all powers and duties as prescribed under the act, the regulations and this part and not otherwise delegated to a staff member, the hearing officer or the board administrator. The board may specify procedures in addition to or that vary from those provided in this part in order to expedite the efficient resolution of the action or to avoid obvious injustice, so long as such procedures do not conflict with the act, the ULA or the regulations or prejudice the rights of any party.

B. Hearing officer: The board may appoint one or more hearing officers to perform the functions described in Paragraph (2) of Subsection B of 20.1.2.109 NMAC. From the date a proceeding is initiated under this part, the chair of the board shall serve as hearing officer, until such time as another hearing officer is appointed. The board or the board chair may appoint another hearing officer. The appointment of a hearing officer does not preclude the board members from attending or participating in the proceeding.

(1) Qualifications: A hearing officer may be an independent contractor, board counsel or a member of the board and shall not be:

(a) an employee of the department, unless employed by the department as a hearing officer;

(b) a person who has a personal bias or prejudice concerning a party, or has personal knowledge of disputed facts concerning the proceeding, or is related to a party within the third degree of relationship, or has a financial interest in the proceeding; or

(c) a person who has performed prosecutorial or investigative functions in connection with the licensing or permitting action at issue in the hearing.

(2) Functions: The hearing officer shall exercise all powers and duties prescribed or delegated under the act or this part. The hearing officer shall conduct a fair and impartial proceeding, assure that the facts are fully elicited and avoid delay. The hearing officer shall have authority to take all measures necessary for the maintenance of order and for the efficient, fair and impartial adjudication of issues arising in proceedings governed by this part, including, but not limited to:

(a) conduct hearings under this part;

(b) rule upon motions and procedural requests that do not seek final resolution of the proceeding and issue all necessary orders;

(c) issue subpoenas, as authorized by law, for the attendance and testimony of witnesses and the production of documentary evidence;

(d) administer oaths and affirmations, examine witnesses, and admit or exclude evidence;

(e) require parties to attend conferences for the settlement or simplification of issues, or the expedition of proceedings;

(f) impose sanctions, subject to review by the board, on parties and interested participants who cause undue delay and fail to cooperate with the board;

(g) file original documents with the board administrator.

C. Notice of hearing officer assignment: If a hearing officer, other than a board member, is assigned, the board administrator shall notify the parties of the name and address of the hearing officer. The board administrator shall also, at that time, forward to the hearing officer copies of all documents filed to date.

D. Participation by conference, telephone or other similar device: A member of the board may participate in a meeting or hearing of the board by means of a conference telephone or other similar communications equipment when it is otherwise difficult or impossible for the member to attend the meeting or hearing in person, provided that each member participating by conference telephone can be identified when speaking, all participants are able to hear each other at the same time and members of the public attending the meeting or hearing are able to hear any member of the board who speaks at the meeting or hearing. A board member's participation by such means shall constitute presence in person at the meeting or hearing. A board member who wishes to participate in a permit hearing in this manner must receive permission from the hearing officer sufficiently in advance of the permit hearing so as to permit the board administrator to arrange for an adequate telephone hookup.

[20.1.2.109 NMAC - Rp, 20 NMAC 1.2.I.109, 8/27/06]

20.1.2.110 EX PARTE DISCUSSIONS:

At no time after the initiation and before the conclusion of a proceeding under this part, shall the department, any other party, interested participant or their representatives discuss ex parte the merits of the proceeding with any board member or the hearing officer. This prohibition does not preclude a hearing officer from considering and acting upon any motion filed pursuant to this part.

[20.1.2.110 NMAC - Rp, 20 NMAC 1.2.I.110, 8/27/06]

20.1.2.111 GENERAL PROVISIONS - COMPUTATION AND EXTENSION OF TIME:

A. Computation of time: Time shall be calculated in accordance with the Uniform Statute and Rule Construction Act, NMSA 1978, Section 12-2 A-7. In computing any period of time prescribed or allowed by this part, except as otherwise specifically provided, the day of the event from which the designated period begins to run shall not be included. The last day of the computed period shall be included, unless it is a Saturday, Sunday or legal state holiday, in which event the time is extended until the end of the next day which is not a Saturday, Sunday or legal state holiday. Whenever a party must act within a prescribed period after service upon him, and service is by mail, three (3) days is added to the prescribed period. The three-day extension does not apply to any deadline under the act.

B. Extension of time: The board or hearing officer may grant an extension of time for the filing of any document upon timely motion of a party to the proceeding, for good cause shown, and after consideration of prejudice to other parties.

[20.1.2.111 NMAC - Rp, 20 NMAC 1.2.I.111, 8/27/06]

20.1.2.112 GENERAL PROVISIONS - DOCUMENTS:

FILING, SERVICE, FORM AND EXAMINATION:

A. As used in this section, "document" means any pleading, motion, response, memorandum, decision, order or other written material filed in a proceeding under this part, but does not include a cover letter accompanying a document transmitted for filing.

B. Filing of documents: Except as otherwise provided, a party filing documents shall file the originals and eight (8) copies with the board administrator and shall serve copies thereof upon the hearing officer, the board legal counsel, and all other parties. If there is no hearing officer the party shall serve the document upon the board chair. All documents shall be filed at least fifteen (15) days before the hearing at which the board will consider the matter. A certificate of service, as shown in Appendix A, (20.1.2.600 NMAC) shall accompany each filed document.

C. Service of documents: Except as otherwise provided, all documents may be served personally, by express or first class mail, or, if the person agrees, by facsimile or by electronic transmission.

D. Form of documents: Unless otherwise provided by this part or by order of the hearing officer, all documents, except exhibits, shall be prepared on 8 1/2 x 11-inch white paper, printed double-sided, if possible, and where appropriate, the first page of every document shall contain a heading and caption as illustrated in Appendix A, (20.1.2.600 NMAC).

E. Documents issued by board or hearing officer: All original documents issued by the board or hearing officer shall be filed with the board administrator. The board administrator shall promptly serve copies of the documents upon all parties and interested participants.

F. Examination of documents filed:

(1) Examination allowed: Subject to the provisions of law restricting the public disclosure of confidential information, any person may, during normal business hours, inspect and copy any document filed in any proceeding. Inspection shall be permitted in accordance with the Inspection of Public Records Act, NMSA 1978, Sections 14-2-1 through 14-2-12, and may be limited by the Environmental Improvement Act, NMSA 1978, Section 74-2-11. Documents subject to inspection shall be made available by the board administrator, as appropriate.

(2) Cost of duplication: Unless waived by the department, the cost of duplicating documents or tapes filed in any proceeding shall be borne by the person seeking the copies.

[20.1.2.112 NMAC - Rp, 20 NMAC 1.2.I.112, 8/27/06]

20.1.2.113 MOTIONS:

A. General: All motions, except those made orally during a hearing, shall be in writing, specify the grounds for the motion and state the relief sought. Each motion shall be accompanied by an affidavit, certificate or other evidence relied upon and shall be served as provided by 20.1.2.112 NMAC.

B. Unopposed motions: An unopposed motion shall state that the concurrence of all other parties was obtained. The moving party shall submit a proposed order approved by all parties for the hearing officer's review.

C. Opposed motions: Any opposed motion shall state either that concurrence was sought and denied, or why concurrence was not sought. A memorandum brief in support of such motion may be filed with the motion.

D. Response to motions: Any party upon whom an opposed motion is served shall have fifteen (15) days after service of the motion to file a response. A non-moving party failing to file a timely response shall be deemed to have waived any objection to the granting of the motion.

E. Reply to response: The moving party may, but is not required to, submit a reply to any response within ten (10) days after service of the response.

F. Decision: All motions shall be decided by the hearing officer without a hearing, unless otherwise ordered by the hearing officer sua sponte or upon written request of any party. The hearing officer shall refer any motion that would effectively dispose of the matter, and may refer any other motion to the board for a decision. A procedural motion may be ruled upon prior to the expiration of the time for response; any response received thereafter shall be treated as a request for reconsideration of the ruling. The hearing officer shall file all original documents with the board administrator.

G. Recusal: No board member shall participate in any action in which his or her impartiality or fairness may reasonably be questioned, and the member shall recuse himself or herself in any such action by giving notice to the board and the general public by announcing this recusal on the record. In making a decision to recuse himself or herself, the board member may rely upon the Governmental Conduct Act, NMSA 1978, Sections 10-16A-1 through 10-16A-8, The Uniform Financial Disclosure Act or any other relevant legal authority.

[20.1.2.113 NMAC - Rp, 20 NMAC 1.2.I.113, 8/27/06]

20.1.2.114-20.1.2.199 [RESERVED]

20.1.2.200 PREHEARING PROCEDURES - INITIATION OF PETITION HEARING:

A petition hearing shall be initiated by the filing of a variance petition or an appeal petition. The petitioner shall:

A. sign the petition under oath or affirmation and attest to the truth of the information contained therein; and

B. file the original and eight (8) copies of the petition with the board and serve a copy on the department.

[20.1.2.200 NMAC - Rp, 20 NMAC 1.2.II.200, 8/27/06]

20.1.2.201 VARIANCE PETITION:

A. Contents: A variance petition shall comply with Subsection B of 20.2.1.114 NMAC.

B. Response of the department: The department shall review each variance petition and, within sixty (60) days after receipt of the petition, file a recommendation with the board to grant, grant with conditions or deny the variance request. The recommendation shall include reasons and a copy shall be served on the petitioner by certified mail and on any other party or interested participant.

C. Hearing requirement: If the department recommends granting the variance request, or any part of the variance request, with or without conditions, the board shall hold a hearing on those requests recommended for approval. If the department recommends denial of all or part of the variance request, the board shall only hold a hearing on the variances recommended for denial if the petitioner files a request for hearing within fifteen (15) days after receipt of the department's recommendation. If a timely request for hearing is not filed, the recommended denial shall become a final action of the board and shall not be subject to review.

D. Timing of hearing: If a hearing on a variance petition is required, the hearing shall be held within ninety (90) days after the later of the filing of a department recommendation to grant a variance or the filing of a request for hearing by the petitioner, as applicable.

[20.1.2.201 NMAC - Rp, 20 NMAC 1.2.II.201, 8/27/06]

20.1.2.202 APPEAL PETITION:

A. Timing and contents: An appeal petition shall:

(1) be filed with the board within thirty (30) days from the date notice is given of the permitting action;

(2) identify the petitioner, and certify that the petitioner has standing under the act to file the petition;

(3) identify the permitting action appealed from, specify the portions of the permitting action to which petitioner objects and generally state the objections; and

(4) attach a copy of the permitting action.

B. Hearing delay: A petitioner may delay a hearing to negotiate with the department by waiving in the petition the right to a hearing within sixty (60) days. The waiver will stay all other deadlines under this part for sixty (60) days; the stay may be extended by a stipulated or unopposed motion. Any such stipulated or unopposed motion must be filed with the board, and served as required by this part, at least fifteen (15) days before the expiration of the sixty (60) day period.

C. Response of department: The department shall, within thirty (30) days after receipt of an appeal petition:

(1) file with the board the administrative record of the permitting action which is the subject of the petition; the department shall serve only the index to the record on other parties; the parties may stipulate that only the relevant portions of the record be filed with the board;

(2) deliver to the board administrator a list of all persons who have expressed in writing an interest in the facility or the permitting action that is the subject of the petition or who participated in a public hearing on the permitting action; and

(3) file an answer to the petition responding to each objection in the petition.

[20.1.2.202 NMAC - Rp, 20 NMAC 1.2.II.202, 8/27/06]

20.1.2.203 NOTICE OF DOCKETING:

A. Docketing notice: The board administrator shall, as soon as practicable after receipt of a petition, issue and serve upon the parties, each board member, and the board legal counsel a notice of docketing, containing the caption and docket number of the case, and the date upon which the petition was received by the board administrator. A copy of this part shall be included with a notice of docketing sent to a petitioner or applicant.

B. Untimeliness: The board administrator shall docket any petition, without regard to whether it appears to be timely; but the board or any party may move to dismiss an untimely petition.

[20.1.2.203 NMAC - Rp, 20 NMAC 1.2.II.203, 8/27/06]

20.1.2.204 SCHEDULING THE HEARING:

A. Hearing date: The hearing shall be scheduled to begin no later than sixty (60) days after the date an appeal petition was received, or for a variance petition, within the sixty (60) day period set forth in Subsection D of 20.1.2.201 NMAC, unless a stipulated or unopposed motion is filed requesting that the ninety day deadline be waived. The stipulated or unopposed motion must be filed with the board, and served as required by this part, at least fifteen (15) days prior to the expiration of the sixty (60) day deadline.

B. Scheduling order: Unless the sixty (60) day hearing deadline has been waived, the hearing officer shall, no later than forty-five (45) days prior to the hearing deadline, issue a scheduling order setting the date, time and location of the hearing. The order may include other procedural matters. The parties may, jointly or singly, submit to the hearing officer, at least fifteen (15) days prior to the deadline for the issuance of the scheduling order, a request regarding the date and location of the hearing and other procedural matters, such as the assignment of a non-board member hearing officer. The hearing officer may consult with the board on procedural matters at a board meeting.

[20.1.2.204 NMAC - Rp, 20 NMAC 1.2.II.204, 8/27/06]

20.1.2.205 PUBLIC NOTICE OF HEARING:

A. Publication: The board administrator shall, upon direction from the board or hearing officer, prepare a notice of hearing setting forth the date, time and location of the hearing, a brief description of the petition, and information on the requirements for entry of appearance and statement of intent to present evidence, and:

(1) no later than thirty (30) days prior to the hearing date, send copies, with requests for publication, to at least one newspaper of general circulation in the state, and to at least one additional newspaper published or distributed at least weekly in the county where the facility is located;

(2) mail a copy to each interested participant who has filed an entry of appearance, and to each person who participated in the department's permitting proceeding or who has expressed, in writing to the department or the board, an interest in the facility or permitting action that is the subject of the petition; and

(3) immediately upon receipt of an entry of appearance that is received after the initial mailing, mail a copy to such interested participant and participant in the department's permitting proceeding.

B. Certification: After the notice of hearing has been distributed in accordance with this section, the board administrator shall file an affidavit certifying how and when notice was given with a copy of the notice of hearing and affidavits of publication attached.

[20.1.2.205 NMAC - Rp, 20 NMAC 1.2.II.205, 8/27/06]

20.1.2.206 STATEMENT OF INTENT TO PRESENT TECHNICAL EVIDENCE:

A. Requirement to file: Any person who wishes to present technical evidence at the hearing shall, no later than fifteen (15) days prior to the hearing, file a statement of intent.

B. Content: The statement of intent to present technical evidence shall include:

- (1) the name of the person filing the statement;
- (2) indication of whether the person filing the statement supports or opposes the petition at issue;
- (3) the name of each witness;
- (4) an estimate of the length of the direct testimony of each witness;
- (5) a list of exhibits, if any, to be offered into evidence at the hearing; and
- (6) a summary or outline of the anticipated direct testimony of each witness.

[20.1.2.206 NMAC - Rp, 20 NMAC 1.2.II.206, 8/27/06]

20.1.2.207 PARTICIPATION BY PERSONS OTHER THAN PARTIES:

A. Interested participants: Entry of appearance: Any person who wishes to be treated as an interested participant and to cross-examine witnesses at the hearing shall file and serve upon all parties an entry of appearance at least fifteen (15) days prior to the hearing. For purposes of this subsection, a statement of intent to present evidence filed under 20.1.2.206 NMAC shall be considered an entry of appearance if the person has not previously filed a separate entry of appearance. The entry of appearance shall identify the person wishing to be treated as an interested participant and any individual who may appear on behalf of that person.

B. Participation by the general public: Any person who has not timely filed either an entry of appearance or a statement of intent to present evidence may present a general non-technical statement as follows.

- (1) Any member of the general public may testify at the hearing. No prior notification is required to present general non-technical statements in support of or in opposition to the petition. Any such member may also offer exhibits in connection with his testimony, so long as the exhibit is non-technical in nature and not unduly repetitious of the testimony.

(2) A member of the general public who wishes to submit a written statement for the record, in lieu of providing oral testimony at the hearing, shall file the written statement prior to or at the hearing.

[20.1.2.207 NMAC - Rp, 20 NMAC 1.2.II.207, 8/27/06]

20.1.2.208 DISCOVERY:

For a ULA hearing, discovery shall be governed by the provisions of the ULA. For other board adjudicatory proceedings, formal discovery is not a right, and therefore, formal discovery is discouraged and shall only be allowed by order of the hearing officer under the following procedures:

A. Grounds for discovery: Discovery shall only be permitted upon a determination by the hearing officer that:

(1) the type of discovery sought will not unreasonably delay the proceeding and is neither unreasonably burdensome nor unreasonably expensive; and

(2) the information to be obtained is relevant and is not otherwise reasonably obtainable, may be lost, or may become unavailable.

B. Order for discovery: Upon motion for discovery by a party and determination by the hearing officer that such motion should be granted, the hearing officer shall issue an order for the taking of such discovery together with the conditions and terms thereof.

[20.1.2.208 NMAC - Rp, 20 NMAC 1.2.II.208, 8/27/06]

20.1.2.209-20.1.2.299 [RESERVED]

20.1.2.300 HEARING PROCEDURES - HEARING:

A. Location of the hearing: Unless otherwise ordered by the board or hearing officer, the hearing shall be in Santa Fe.

B. Postponement of hearing: No request for postponement of a hearing shall be granted, except upon consent of all parties or for good cause shown.

[20.1.2.300 NMAC - Rp, 20 NMAC 1.2.III.300, 8/27/06]

20.1.2.301 CONDUCT OF HEARING:

A. The hearing officer shall conduct the hearing so as to provide a reasonable opportunity for all interested persons to be heard without making the hearing unreasonably lengthy or cumbersome or burdening the record with unnecessary repetition.

B. The hearing officer shall establish the order of testimony, except that the party with the burden of persuasion shall present its case first. The hearing officer may allow brief opening or closing statements.

[20.1.2.301 NMAC - Rp, 20 NMAC 1.2.III.301, 8/27/06]

20.1.2.302 BURDEN OF PERSUASION:

In a petition hearing, the petitioner has the burden of going forward with the evidence and of proving by a preponderance of the evidence the facts relied upon to justify the relief sought in the petition. Following the establishment of a prima facie case by the petitioner, any person opposed to the relief sought in the petition has the burden of going forward with any adverse evidence and showing why the relief should not be granted.

[20.1.2.302 NMAC - Rp, 20 NMAC 1.2.III.302, 8/27/06]

20.1.2.303 EVIDENCE:

A. General: The hearing officer shall admit any relevant evidence, unless the hearing officer determines that the evidence is unduly repetitious, or otherwise unreliable or of little probative value. The department shall formally move into evidence the administrative record filed by the department pursuant to Subparagraph (a) of Paragraph (3) of Subsection C of 20.1.2.200 NMAC. In a ULA hearing involving the suspension or revocation of a license, rules of privilege shall be applicable to the same extent as in proceedings before the courts of this state.

B. Examination of witnesses: Witnesses shall be examined orally, under oath or affirmation, except as otherwise provided in this part or by the hearing officer. The board members, hearing officer, parties and interested participants shall have the right to cross-examine a witness. The hearing officer may limit cross-examination that is unduly repetitious, harassing or beyond the scope of the witness' direct testimony.

C. Exhibits: All exhibits offered in evidence shall be marked with a designation identifying the person by whom the exhibit is offered, and numbered serially in the sequence in which offered. Large charts and diagrams, models and other bulky exhibits are discouraged. Exhibits should be limited to 8 1/2 x 11 inches, or be capable of being folded to that size, unless otherwise necessary for adequate presentation of evidence. Any person offering an exhibit shall provide at least an original and twenty (20) copies for the board and for persons attending the hearing.

D. Official notice: Official notice may be taken of any matter that may be judicially noticed in the New Mexico courts. In a ULA hearing, parties shall be given adequate opportunity to show that such facts are erroneously noticed.

[20.1.2.303 NMAC - Rp, 20 NMAC 1.2.III.303, 8/27/06]

20.1.2.304 OBJECTIONS AND OFFERS OF PROOF:

A. Objection: Any objection concerning the conduct of the hearing may be stated orally or in writing during the hearing. The party raising the objection must supply a short statement of its grounds. The ruling by the hearing officer on any objection and the reasons given for it shall be part of the record.

B. Offer of proof: Whenever evidence is excluded from the record, the party offering the evidence may make an offer of proof, which shall be included in the record. The offer of proof for excluded oral testimony shall consist of a brief statement describing the nature of the evidence excluded and what such evidence would have proven. The offer of proof for excluded documents or exhibits shall consist of the insertion in the record of the documents or exhibits excluded.

[20.1.2.304 NMAC - Rp, 20 NMAC 1.2.III.304, 8/27/06]

20.1.2.305-20.1.2.399 [RESERVED]

20.1.2.400 POST-HEARING PROCEDURES - FILING THE TRANSCRIPT:

Unless the board orders the hearing to be tape recorded, the hearing shall be transcribed verbatim. Any person, other than the board, desiring a copy of a transcript must order a copy from the court reporter. Any person, other than the board, desiring a copy of hearing tapes must arrange copying with the board administrator at their expense.

[20.1.2.400 NMAC - Rp, 20 NMAC 1.2.IV.400, 8/27/06]

20.1.2.401 PROPOSED FINDINGS AND CONCLUSIONS:

The hearing officer may allow the record to remain open for a reasonable period of time after the conclusion of the hearing to allow any party or interested participant to submit proposed findings of fact and conclusions of law and closing argument. The hearing officer's determination shall be announced at the conclusion of the hearing. All such submissions shall be in writing, shall be served upon all parties, and shall contain adequate references to the record and authorities relied on. No new evidence shall be presented unless specifically allowed by the hearing officer.

[20.1.2.401 NMAC - Rp, 20 NMAC 1.2.IV.401, 8/27/06]

20.1.2.402 RECOMMENDED DECISION:

If the board directs, the hearing officer shall issue a recommended decision within a period established by the board. The recommended decision shall contain the hearing officer's findings of fact; conclusions regarding all material issues of law or discretion, as well as reasons therefor; and a proposed final order. Upon receipt of a recommended

decision, the board administrator shall forward a copy to all parties and to the board. At the board's discretion, the board may allow any party or interested participant to file comments regarding the recommended decision.

[20.1.2.402 NMAC - Rp, 20 NMAC 1.2.IV.402, 8/27/06]

20.1.2.403 DELIBERATION AND DECISION:

A. Deliberation: The board shall reach a final decision on each adjudicatory matter at a public meeting. If allowed by the Open Meetings Act, Sections 10-15-1 NMSA 1978 et seq., the board may deliberate in closed session; however, any final action must occur in an open meeting.

(1) If a quorum of the board attended the hearing and the hearing notice indicated that the board may act at the conclusion of the hearing, the board may immediately deliberate and act on the matter.

(2) If the board does not reach a decision at the hearing, the board administrator shall, following receipt of the transcript, promptly provide copies to board members who did not attend the hearing and, if requested, to other board members, board counsel and the hearing officer. The board administrator shall also notify all parties and interested participants of the availability of the transcript.

(3) In a ULA hearing, the board shall leave the record open to receive any advice and recommendation required by the act. The board shall reach its decision within the time period established by the ULA.

B. Order: After reaching a decision, the board shall direct a member, its counsel or a party to prepare a final order. The board may approve the order at a meeting or direct the board chair to sign the order.

(1) The final order shall contain findings of fact, conclusions of law, an order based on the findings and conclusions, and a statement as to the availability of judicial review. If a recommended decision was prepared, the board may adopt, modify or set aside the recommended decision and provide reasons therefor.

(2) In a ULA hearing, if the board takes any action specified in the ULA against the licensee, the final order shall specify that the licensee shall bear all costs of the proceeding.

(3) The board administrator shall promptly send copies of the final order to each party and interested participant, and to all other persons who have made written requests for notification of the action taken.

[20.1.2.403 NMAC - Rp, 20 NMAC 1.2.IV.403, 8/27/06]

20.1.2.404 JUDICIAL REVIEW:

Judicial review of the final order shall be as provided by law. The filing of an appeal does not stay the final order, unless otherwise ordered by the board or a court.

[20.1.2.404 NMAC - Rp, 20 NMAC 1.2.IV.404, 8/27/06]

20.1.2.405 PREPARATION OF RECORD PROPER:

The preparation of the record proper for an appeal or for any other reason shall be the responsibility of the hearing clerk. The appellant shall make satisfactory arrangements, including copying or transcript costs, with the board administrator.

[20.1.2.405 NMAC - Rp, 20 NMAC 1.2.IV.405, 8/27/06]

20.1.2.406-20.1.2.499 [RESERVED]

20.1.2.500 ALTERNATE RESOLUTION - SUMMARY PROCEDURES:

A. Use of summary procedures: The board may dispose of a petition after an expedited hearing if a party requests that the merits of the petition be decided solely on legal arguments presented in written briefs and oral arguments.

B. Expedited hearing: If the hearing officer determines that the request has a likelihood of success and could fairly expedite the resolution of the proceeding, the hearing officer may allow the parties and interested participants to brief the issue and present oral arguments at an expedited hearing, and then present the issue to the board for a decision. If an expedited hearing is conducted, the hearing officer shall:

(1) assure that public notice is given in accordance with 20.1.2.205 NMAC and include in the public notice instructions for persons other than parties who wish to participate in the oral argument to submit a statement of intent equivalent to the statement provided in 20.1.2.206 NMAC; and

(2) allow the public to attend the expedited hearing, but may limit presentations at the hearing to oral arguments by parties and interested participants on the specific issue before the board.

C. Decision: After an expedited hearing, the board may decide to either dispose of the matter and issue a final order, or decide not to dispose of the matter and proceed with a full hearing under this part.

[20.1.2.500 NMAC - Rp, 20 NMAC 1.2.V.500, 8/27/06]

20.1.2.501 WITHDRAWAL:

A. Notice of withdrawal: A petitioner may withdraw a petition, or the department may withdraw the permitting action which is the subject of the proceeding, at any time prior to a decision by the board by filing a notice of withdrawal with the board and serving the notice on all other parties and interested participants. A party or interested participant may file a written objection to the notice within ten (10) days after receipt. If an objection is filed, the board shall rule on the notice.

B. Effect of withdrawal: An effective notice of withdrawal under this section results in the following:

(1) when a petitioner withdraws an appeal petition, the permitting action becomes final;

(2) when a petitioner withdraws a variance petition, the petitioner is barred from petitioning for the same variance without permission from the board; and

(3) when the department withdraws a permitting action, the appeal petition is vacated and the agency must issue a new permitting action within sixty (60) days, unless either the board approves a different time period or the applicant withdraws its application; upon issuance of a new permitting action, the right to file a new appeal petition under the act is available.

[20.1.2.501 NMAC - Rp, 20 NMAC 1.2.V.501, 8/27/06]

20.1.2.502 SETTLEMENT:

The board encourages the settlement of a proceeding at any time if the settlement is consistent with the provisions and objectives of the act and regulations. The parties may request that the board stay a proceeding under this part while settlement negotiations are being held. The board may approve a settlement that modifies a permitting action only after evidence supporting such modification is presented at a hearing. The department, however, may withdraw and reissue a modified permitting action under 20.1.2.501 NMAC.

[20.1.2.502 NMAC - Rp, 20 NMAC 1.2.V.502, 8/27/06]

PART 3: ADJUDICATORY PROCEDURES - WATER QUALITY CONTROL COMMISSION

20.1.3.1 ISSUING AGENCY:

Water Quality Control Commission ("Commission").

[20.1.3.1 NMAC - Rp, 20 NMAC 1.3.I.100, 10/15/2010]

20.1.3.2 SCOPE:

A. This part governs the following adjudicatory proceedings of the water quality control commission:

(1) permit reviews, which include proceedings for the appeal from permitting actions pursuant to the Water Quality Act, NMSA 1978 Section 74-6-5(O);

(2) abatement plan hearings which include proceedings for the appeal of certain abatement plan actions pursuant to commission regulation 20.6.2.4114 NMAC;

(3) variance hearings, which include proceedings for: (a) the consideration of variance requests pursuant to the Water Quality Act, NMSA 1978 Section 74-6-4(G), and (b) the consideration of alternative abatement standards pursuant to commission regulation, Subsection F of 20.6.2.4103 NMAC;

(4) compliance order hearings, which include proceedings for the appeal from compliance orders pursuant to the Water Quality Act, NMSA 1978 Section 74-6-10, and the Utility Operators Certification Act, NMSA 1978 Section 61-33-10; and

(5) any other adjudicatory proceedings under the jurisdiction of the commission to which the commission applies this part.

B. Uniform Licensing Act proceedings: In any commission adjudicatory proceeding conducted under the Uniform Licensing Act, NMSA 1978 Sections 61-1-1 NMSA 1978 et seq. ("ULA"), including the suspension or revocation of a certification under the Utility Operators Certification Act, NMSA 1978 Section 61-33-7, the procedures in the ULA shall govern the proceeding. However, the commission may, in the absence of a specific provision in the ULA governing an action, look to this part for guidance.

[20.1.3.2 NMAC - Rp, 20 NMAC 1.3.I.101, 10/15/2010]

20.1.3.3 STATUTORY AUTHORITY:

This part is adopted under the authority of the Water Quality Act, NMSA 1978 Sections 74-6-4, 74-6-5 and 74-6-10, as amended, and the Utility Operators Certification Act, NMSA 1978 Section 61-33-10, as amended.

[20.1.3.3 NMAC - Rp, 20 NMAC 1.3.I.102, 10/15/2010]

20.1.3.4 DURATION:

Permanent.

[20.1.3.4 NMAC - Rp, 20 NMAC 1.3.I.103, 10/15/2010]

20.1.3.5 EFFECTIVE DATE:

10/15/2010, unless a later date is cited at the end of a section.

[20.1.3.5 NMAC - Rp, 20 NMAC 1.3.I.104, 10/15/2010]

20.1.3.6 OBJECTIVE:

The objective of this part is to establish procedures that govern the adjudicatory proceedings of the water quality control commission.

[20.1.3.6 NMAC - Rp, 20 NMAC 1.3.I.105, 10/15/2010]

20.1.3.7 DEFINITIONS:

A. General: As used in this part:

(1) "abatement plan action" means those actions that may be appealed to the commission pursuant to 20.6.2.4114 NMAC;

(2) "abatement plan hearing" means a proceeding before the commission initiated by the timely filing of an abatement plan petition filed pursuant to 20.6.2.4114 NMAC;

(3) "act" means, as the context requires:

(a) the Water Quality Act, NMSA 1978 Chapter 74, Article 6 and its subsequent amendments and successor provisions;

(b) the Utility Operators Certification Act, NMSA 1978 Chapter 61, Article 33 and its subsequent amendments and successor provisions; and

(c) any other statute enacted or amended by the legislature that includes authority for adjudicatory proceedings before the commission when the commission applies this part to such proceedings;

(4) "applicant" means the person who is the holder of, or the applicant for, the permit or abatement plan that is the subject of the action to which a permit review petition or abatement appeal petition applies;

(5) "commission" means the water quality control commission or its successor agency under the act;

(6) "compliance order" means a written administrative order issued by the department pursuant to NMSA 1978 Sections 61-33-10 or 74-6-10;

(7) "compliance order hearing" means a proceeding before the commission initiated by the timely filing of a request for compliance order hearing;

(8) "department" means the applicable constituent agency, that, pursuant to its authority under the act, either (a) performed the permitting action or abatement plan action which is the subject of a petition; (b) is charged with implementing the regulations at the site where the variance is sought; or (c) issued the compliance order;

(9) "hearing" means the evidentiary hearing conducted before the commission or a hearing officer on an abatement plan petition, a variance petition or a request for compliance order hearing unless the context requires otherwise;

(10) "hearing clerk" means the person designated to maintain the official record of the proceeding and unless otherwise ordered is the commission administrator;

(11) "hearing officer" means the person designated under this part or appointed by the commission to conduct a proceeding under this part ;

(12) "party" means:

(a) for the purposes of a permit review, the petitioner, the applicant if different from the petitioner, the department, and, upon motion to the commission, any person who permitted to intervene in the review pursuant to NMRA 1-024;

(b) for purposes of an abatement plan hearing, the petitioner, the applicant if different from the petitioner, the department, any person who participated in the abatement plan action before the department and who files an entry of appearance, and any constituent agency;

(c) for purposes of a variance hearing, the petitioner, the department, any person who has an interest in the proceeding and files an entry of appearance, and any other constituent agency; and

(d) for purposes of a compliance order hearing, the respondent and the department;

(13) "permit review" means a record review proceeding before the commission initiated by the timely filing of a record review petition filed pursuant to NMSA 1978 Section 74-6-5(O);

(14) "permitting action" means those actions that may be appealed to the commission pursuant to the Water Quality Act, NMSA 1978 Section 74-6-5(O), including the certification of a federal water quality permit;

(15) "petition" means a written petition (a) for review of a permitting action filed under NMSA 1978 Section 74-6-5(O); (b) for hearing on an abatement plan action filed under 20.6.2.4114 NMAC; or (c) for hearing on a variance filed under NMSA 1978 Section 74-6-4(G) or 20.6.2.1210 NMAC;

(16) "petitioner" means any person who files a timely petition and who is entitled to be a party pursuant to Subparagraphs (a), (b), and (c) of Paragraph (12) of this subsection;

(17) "record proper" means all documents filed by or with the hearing clerk during the proceeding and includes:

(a) the verbatim record of the hearing and all exhibits offered into evidence at the hearing, whether or not admitted;

(b) for a permit review, the administrative record of the department; and

(c) minutes, or an appropriate extract of minutes, of any commission meeting where the commission deliberated or acted on any procedural or substantive issue in the proceeding;

(18) "regulations" means any rules or standards promulgated by the commission to implement the act;

(19) "request for compliance order hearing" means a written request for hearing on a compliance order filed by a respondent pursuant to NMSA 1978 Section 61-33-10(E) or 74-6-10(G);

(20) "respondent" means any person to whom a compliance order has been issued;

(21) "technical evidence" means scientific, engineering, economic or other specialized testimony, but does not include legal argument, general comments, or statements of policy or position concerning matters at issue in the hearing; and

(22) "variance hearing" means a proceeding before the commission initiated by the timely filing of a variance petition filed pursuant to NMSA 1978 Section 74-6-4(G), Subsection F of 20.6.2.4103 NMAC or 20.6.2.1210 NMAC.

B. Terms defined in act or regulations: Terms defined in the act or regulations and not defined in this part are used consistent with the meanings given in the act or regulations.

[20.1.3.7 NMAC - Rp, 20 NMAC 1.3.I.108, 10/15/2010]

20.1.3.8 APPLICABILITY OF RULES OF CIVIL PROCEDURE:

In the absence of a specific provision in this part governing an action, the commission may look to the New Mexico Rules of Civil Procedure, SCRA 1986, 1-001 to 1-102 and the New Mexico Rules of Evidence, SCRA 1986, 11-101 to 11-1102 for guidance. Any reference to the Rules of Civil Procedure and the Rules of Evidence shall not be construed to extend or otherwise modify the authority and jurisdiction of the commission under the act.

[20.1.3.8 NMAC - Rp, 20 NMAC 1.3.I.106, 10/15/2010]

20.1.3.9 CONSTRUCTION; SEVERABILITY SAVINGS CLAUSE:

This part shall be liberally construed to carry out its purpose. If any part or application of this part is held invalid, the remainder of this part , or its application to other persons or situations, shall not be affected.

[20.1.3.9 NMAC - Rp, 20 NMAC 1.3.I.107, 10/15/2010]

20.1.3.10 POWERS AND DUTIES OF THE COMMISSION AND HEARING OFFICER:

A. Commission: The commission shall exercise all powers and duties as prescribed under the act, the regulations and this part, and not otherwise delegated to a staff member, the hearing officer or the hearing clerk.

(1) The commission may issue procedural orders that, based on the nature of the proceeding, either impose additional procedural duties, such as expanded public notice, or simplify the procedures provided in this part, such as foregoing post-hearing submittals or holding the hearing before the full commission. In no event may the commission eliminate any procedural requirements of the act.

(2) The appointment of a hearing officer does not preclude the commissioners from attending or participating in the proceeding.

B. Hearing officer: With respect to abatement plan hearings, variance hearings, and compliance order hearings, the commission may appoint one or more hearing officers to perform the functions described in Paragraph (2) of this subsection. With respect to permit reviews, the commission may appoint a hearing officer to review the record and the arguments of the parties and to recommend a decision to the commission. From the date the petition or request for compliance order hearing is received by the commission, the chair of the commission shall serve as hearing officer until such time as another hearing officer is appointed.

(1) Qualifications: Hearing officer may be an independent contractor or a commissioner, shall be knowledgeable of the laws of the state and of administrative hearing procedures, and shall not be:

(a) an employee of the department, except for the commissioners themselves or their designees, or unless employed by the department as a hearing officer;

(b) a person who has a personal bias or prejudice concerning a party or a party's lawyer or consultant, or has personal knowledge of disputed facts concerning the proceeding, or is related to a party within the third degree of relationship, or has a financial interest in the proceeding; or

(c) a person who has performed prosecutorial or investigative functions in connection with the compliance order or permitting action at issue in the hearing.

(2) Functions: The hearing officer shall exercise all powers and duties prescribed or delegated by the commission under the act or this part. The hearing officer shall conduct a fair and impartial proceeding, assure that the facts are fully elicited, and avoid delay. The hearing officer shall have authority to take all measures necessary for the maintenance of order and for the efficient, fair and impartial adjudication of issues arising in proceedings governed by this part including, but not limited to:

(a) conduct permit reviews or hearings under this part;

(b) rule upon motions and procedural requests that do not seek final resolution of the proceeding and issue all necessary orders;

(c) issue subpoenas, as authorized by the act, for the attendance and testimony of witnesses and the production of documentary evidence as provided for in this part;

(d) administer oaths and affirmations, examine witnesses, and admit or exclude evidence;

(e) require parties to attend conferences for the settlement or simplification of issues, or the expedition of proceedings; and

(f) impose sanctions, subject to review by the commission, on parties who cause undue delay and fail to cooperate in the proceeding.

C. Notice of hearing officer assignment: If a hearing officer other than a commissioner is assigned, the hearing clerk shall notify the parties of the name and address of the hearing officer. The hearing clerk shall also, at that time, forward to the hearing officer copies of all documents filed to date.

[20.1.3.10 NMAC - Rp, 20 NMAC 1.3.I.109, 10/15/2010]

20.1.3.11 EX PARTE DISCUSSIONS:

At no time after the initiation and before the conclusion of a proceeding under this part shall any person discuss ex parte the merits of the proceeding with any commissioner or the hearing officer. This prohibition does not preclude any constituent agency commissioner from conferring with commission counsel, the commission administrator, or agency employees who are not, and have not been, involved in the matter before the commission.

[20.1.3.11 NMAC - Rp, 20 NMAC 1.3.I.110, 10/15/2010]

20.1.3.12 COMPUTATION AND EXTENSION OF TIME:

A. Computation of time: In computing any period of time prescribed or allowed by this part, except as otherwise specifically provided, the day of the event from which the designated period begins to run shall not be included. The last day of the computed period shall be included, unless it is a Saturday, Sunday or legal state holiday, in which event the time is extended until the end of the next day which is not a Saturday, Sunday or legal state holiday. Whenever a party must act within a prescribed period after service upon him, and service is by mail, three days is added to the prescribed period. The three day extension does not apply to any deadline under the act.

B. Extension of time: The commission or hearing officer may grant an extension of time for the filing of any document upon timely motion of a party to the proceeding, for good cause shown, and after consideration of prejudice to other parties.

[20.1.3.12 NMAC - Rp, 20 NMAC 1.3.I.111, 10/15/2010]

20.1.3.13 DOCUMENTS:

FILING, SERVICE, FORM AND EXAMINATION:

A. As used in this section, "document" means any pleading, motion, response, memorandum, decision, order or other written material filed in a proceeding under this part, but does not include a cover letter accompanying a document transmitted for filing.

B. Filing of documents:

(1) Except as otherwise provided, the originals of all documents served in the proceeding shall be filed with the hearing clerk.

(2) Except as otherwise provided, a party filing documents shall serve copies thereof upon all other parties. A certificate of service, as shown in appendix A, shall accompany each filed document.

C. Service of documents: Except as otherwise provided, all documents may be served personally, by telefax, by e-mail or by express or first-class mail.

D. Form of documents: Unless otherwise ordered by the hearing officer, all documents, except exhibits, shall be prepared on 8 1/2 x 11-inch white paper, printed single-sided, if possible, and where appropriate, the first page of every document shall contain a heading and caption as illustrated in appendix A.

E. Documents issued by commission or hearing officer: All documents issued by the commission or hearing officer shall be filed with the hearing clerk. The hearing clerk shall promptly serve copies of the documents upon all parties.

F. Examination of documents filed.

(1) Examination allowed: Subject to the provisions of law restricting the public disclosure of confidential information, any person may, during normal business hours, inspect and copy any document filed in any proceeding. Such documents shall be made available by the hearing clerk, as appropriate.

(2) Cost of duplication: Unless waived by the department, the cost of duplicating documents or tapes filed in any proceeding shall be borne by the person seeking copies of such documents or tapes.

[20.1.3.13 NMAC - Rp, 20 NMAC 1.3.I.112, 10/15/2010]

20.1.3.14 NOTICE OF DOCKETING:

A. Docketing notice: The hearing clerk shall, as soon as practicable after initiation of a proceeding under this part, issue and serve upon the parties and each commissioner a notice of docketing, containing the caption and docket number of the case, and the date upon which the petition or request for compliance order hearing was received by the hearing clerk. A copy of this part shall be included with a notice of docketing sent to a petitioner, applicant or respondent.

B. Untimeliness: The hearing clerk shall docket any petition or request for compliance order hearing, without regard to whether it appears to be timely; but the commission or any party may move to dismiss an untimely petition or request for compliance order hearing.

[20.1.3.14 NMAC - Rp, 20 NMAC 1.3.I.113, 10/15/2010]

20.1.3.15 MOTIONS:

A. General: All motions, except those made orally during a hearing, shall be in writing, specify the grounds for the motion, state the relief sought and state whether it is opposed or unopposed. Each motion shall be accompanied by an affidavit, certificate or other evidence relied upon and shall be served as provided by 20.1.3.13 NMAC.

B. Unopposed motions: An unopposed motion shall state that the concurrence of all other parties was obtained. The moving party shall submit a proposed order approved by all parties for the hearing officer's review.

C. Opposed motions: Any opposed motion shall state either that concurrence was sought and denied, or why concurrence was not sought. A memorandum brief in support of such motion may be filed with the motion.

D. Response to motions: Any party upon whom an opposed motion is served shall have (15) days after service of the motion to file a response. A non-moving party failing to file a timely response shall be deemed to have waived any objection to the granting of the motion.

E. Reply to response: The moving party may, but is not required to, submit a reply to any response within 10 days after service of the response.

F. Decision: All motions shall be decided by the hearing officer without a hearing, unless otherwise ordered by the hearing officer. The hearing officer shall refer any motion that would effectively dispose of the matter and may refer any other motion to the commission for a decision. A procedural motion may be ruled upon prior to the

expiration of the time for response; any response received thereafter shall be treated as a request for reconsideration of the ruling.

[20.1.3.15 NMAC - Rp, 20 NMAC 1.3.I.114, 10/15/2010]

20.1.3.16 PERMIT REVIEW:

A. Initiation and conduct of permit review: A permit review shall be initiated by the filing of a permit review petition under Paragraph (1) of Subsection A of 20.1.3.16 NMAC.

(1) Timing and contents: A permit review petition shall:

(a) be filed with the commission within 30 days from the date notice is received of the permitting action;

(b) identify the petitioner, and state that the petitioner has standing under NMSA 1978 Section 74-6-5(O) or 20.6.2.3112 NMAC to file the petition;

(c) identify the permitting action to be reviewed;

(d) specify the portions of the permitting action to which petitioner objects;

(e) include a statement of the issues to be raised and the relief sought;

(f) have a copy of the permitting action attached;

(g) be signed under oath or affirmation and attest to the truth of the information contained therein; and

(h) be filed with the commission and a copy served on the department, the applicant or permittee, if the petitioner is not the applicant or permittee, and on any person who submitted evidence, data, views or arguments in the proceeding before the constituent agency.

(2) Filing of administrative record by the department: The department shall within 15 days after receipt of the petition:

(a) file with the commission the administrative record of the permitting action which is the subject of the petition, including the transcript or audio recording of any public hearing held on the application or draft permit and the action taken; the department shall serve only the index to the record on other parties; the parties may stipulate that only specific portions of the record be filed with the commission; and

(b) deliver to the hearing clerk a list of all persons who have expressed in writing an interest in the facility or the permitting action that is the subject of the petition

or who registered with the hearing clerk as a participant at a public hearing on the permitting action.

(3) Remand to the department. A party may request the commission to remand the matter to the department. A request for remand must be filed simultaneously with the permit review petition. If a party shows to the satisfaction of the commission that there was no reasonable opportunity to submit comment or evidence on an issue being challenged, the commission shall order that additional comment or evidence be taken by the department. Based on the additional evidence, the department may revise the decision and shall promptly file with the commission the additional evidence received and the action taken.

(4) Briefing by the parties.

(a) Within 25 days of the department filing the administrative record or 25 days of the department filing additional evidence received and the action taken after a remand, whichever is applicable, the petitioner and any parties in support of the petitioner shall file opening briefs which shall contain a summary of the proceedings before the department and an argument with respect to each issue presented by the petitioner. The opening brief may include proposed findings of fact and conclusions of law. All statements of fact shall contain citations to the administrative record before the department. The opening brief shall not exceed 30 pages.

(b) Within 25 days of the petitioner filing an opening brief, the department and any parties in support of the department shall file answer briefs. The answer brief shall conform to the requirements of the opening brief, except that a summary of proceedings shall not be included unless deemed necessary by the party filing an answer brief.

(c) Within 10 days of the department filing an answer brief, the petitioner and any parties in support of the petitioner may file reply briefs.

(5) The failure to file a timely permit review petition shall be grounds for dismissal of the appeal.

B. Scheduling the permit review:

(1) Review date: The permit review shall be scheduled to begin no later than 90 days after the date a permit review petition is received or 90 days after the date the department files the additional evidence received and action taken after a remand, whichever is applicable, unless a stipulated or unopposed motion is filed requesting that the 90 day deadline be waived. The motion must be filed prior to the expiration of the 90 day deadline.

(2) Scheduling order: Unless the 90 day deadline has been waived, the hearing officer shall, no later than 30 days prior to the deadline, issue an order setting the date, time and location of the review by the commission, which the hearing clerk

shall send to the parties by certified mail. The order shall provide information on whether the commission will hear oral argument from the parties. The order may include other procedural matters. The parties may, jointly or singly, submit to the hearing officer, prior to the issuance of the scheduling order, requests regarding the date and location of the review and other procedural matters, including the assignment of a non-commissioner hearing officer. The hearing officer may consult with the commission on procedural matters at a commission meeting.

C. Public notice of permit review.

(1) Content: The hearing clerk shall, upon direction from the commission or hearing officer, prepare a notice of review setting forth the permit for which the review is sought, the date, time, and location of the permit review, the name and address of the petitioner and where the permit and petition may be viewed.

(2) Distribution: The hearing clerk shall:

(a) no later than 30 days prior to the review date, send copies, with requests for publication, to at least one newspaper of general circulation in the state, and to at least one additional newspaper published or distributed at least weekly in the county where the facility is located; and

(b) mail a copy to each party and to each person who has expressed in writing to the department or the commission an interest in the facility or permitting action that is the subject of the petition.

(3) Certification: After the notice of permit review has been distributed in accordance with this section, the hearing clerk shall file an affidavit certifying how and when notice was given with a copy of the notice of permit review and any affidavits of publication attached.

D. Location of permit review: Unless otherwise ordered by the commission or hearing officer, the review shall be in Santa Fe.

E. Postponement of permit review: No request for postponement of a review or hearing shall be granted except upon consent of all parties or for good cause shown.

F. Conduct of permit review.

(1) Argument before the commission: The commission may, upon request of a party or its own initiative, allow oral argument prior to its deliberations. If oral argument is allowed, the commission shall specify the time and place for such oral argument after giving due consideration to the convenience of the parties and the need for expeditious resolution of the proceeding. No new evidence will be admitted during oral argument.

(2) The hearing clerk shall audio record any oral argument before the commission. Any party may, at its own expense, have the oral argument stenographically recorded by a certified court reporter. Any party may, at its own expense, have the audio recording or stenographic recording transcribed by a certified court reporter.

(3) Decision: The commission shall consider and weigh only the evidence contained in the record before the department and the recommended decision of the hearing officer, if any, and shall not be bound by the factual findings or legal conclusions of the department. The commission shall sustain, modify or reverse the action of the department based on a review of the evidence, the arguments of the parties and recommendations of the hearing officer. The commission shall set forth in the final order the reasons for its actions.

G. Judicial review: Judicial review of the final order shall be as provided by law. The filing of an appeal does not stay the final order, unless otherwise ordered by the commission or a court.

H. Preparation of record proper: The hearing clerk shall prepare the record proper for any appeal, which shall include a transcript of any oral argument before the commission. The appellant shall make satisfactory arrangements for payment of preparation of the record proper with the hearing clerk, including copying costs and transcription costs. If any oral argument was stenographically recorded by a certified court reporter, the appellant shall have a transcription made at its own expense. If any oral argument was not stenographically recorded by a certified court reporter, the appellant shall have the hearing clerk's audio recording of the oral argument transcribed by a certified court reporter certifying the accuracy of the transcription.

[20.1.3.16 NMAC - N, 10/15/2010]

20.1.3.17 ABATEMENT PLAN HEARING:

A. Initiation of abatement plan hearing: An appeal hearing shall be initiated by the filing of an abatement plan petition under Paragraph (1) of Subsection A of 20.1.3.17 NMAC.

(1) Timing and contents: an abatement plan petition shall:

(a) be filed with the commission within 30 days from the date notice is received of the abatement plan action;

(b) identify the petitioner, and state that the petitioner has standing under 20.6.2.4114 NMAC to file the petition;

(c) identify the abatement plan action being appealed, specify the portions of the abatement plan action to which petitioner objects and generally state the objections;

(d) have a copy of the abatement plan action attached;

(e) be signed under oath or affirmation and attest to the truth of the information contained therein; and

(f) be filed with the commission and a copy served on the department.

(2) Response of the department: If an abatement plan petition is filed under Paragraph (1) of Subsection A of 20.1.3.17 NMAC, the department shall within 30 days after receipt of the petition:

(a) file with the commission the administrative record of the abatement plan action which is the subject of the petition, including the transcript or audio recording of any public hearing held. The department shall serve only the index to the record on other parties. The parties may stipulate that only the relevant portions of the record be filed with the commission;

(b) deliver to the hearing clerk a list of all persons who have expressed in writing an interest in the facility or the abatement plan action that is the subject of the petition or who participated in a public hearing on the abatement plan action; and

(c) file an answer to the petition clearly and directly responding to each of the objections in the petition;

(d) the failure to file a timely abatement plan petition shall be grounds for dismissal of the appeal.

B. Scheduling the hearing.

(1) Hearing date: The hearing shall be scheduled to begin no later than 90 days after the date an abatement plan petition is received unless a stipulated or unopposed motion is filed requesting that the 90 day deadline be waived. The motion must be filed prior to the expiration of the ninety day deadline.

(2) Scheduling order: Unless the 90 day hearing deadline has been waived, the hearing officer shall, no later than 45 days prior to the hearing deadline, issue an order setting the date, time and location of the hearing. The order may include other procedural matters. The parties may, jointly or singly, submit to the hearing officer, prior to the issuance of the scheduling order, requests regarding the date and location of the hearing and other procedural matters, such as the assignment of a non-commissioner hearing officer. The hearing officer may consult with the commission on procedural matters at a commission meeting.

C. Public notice of hearing.

(1) Content: The hearing clerk shall, upon direction from the commission or hearing officer, prepare a notice of hearing setting forth the date, time, and location of the hearing, a brief description of the petition, and information on the requirements for entry of appearance and the statement of intent to present evidence.

(2) Distribution: The hearing clerk shall:

(a) no later than 30 days prior to the hearing date, send copies, with requests for publication, to at least one newspaper of general circulation in the state, and to at least one additional newspaper published or distributed at least weekly in the county where the facility is located;

(b) mail a copy to each interested participant who has previously filed an entry of appearance, and to each person who has expressed in writing to the department or the commission an interest in the facility or abatement plan action that is the subject of the petition; and

(c) immediately upon receipt of an entry of appearance that is received after the initial mailing, mail a copy to such interested participant.

(3) Certification: After the notice of hearing has been distributed in accordance with this section, the hearing clerk shall file an affidavit certifying how and when notice was given with a copy of the notice of hearing and any affidavits of publication attached.

D. Transcription of hearing: The petitioner shall, at its own expense, have the hearing stenographically recorded and transcribed by a certified court reporter unless, after a showing of substantial financial hardship, the hearing officer orders the department to hire a certified court reporter. The petitioner shall, no later than 30 days prior to the hearing date, file with the hearing clerk a certification that the petitioner has hired a certified court reporter and will deliver 16 copies of the hearing transcript to the hearing clerk or a request that the department hire a certified court reporter.

E. Statement of intent to present technical evidence.

(1) Requirement to file: Any person who wishes to present technical evidence at the hearing shall, no later than 10 days prior to the hearing, file a statement of intent.

(2) Content: The statement of intent to present technical evidence shall include:

(a) the name of the person filing the statement;

(b) indication of whether the person filing the statement supports or opposes the petition at issue;

- (c) the name of each witness;
- (d) an estimate of the length of the direct testimony of each witness;
- (e) a list of exhibits, if any, to be offered into evidence at the hearing; and
- (f) a summary or outline of the anticipated direct testimony of each witness.

F. Participation by the general public: Any person who has not timely filed either an entry of appearance or a statement of intent to present evidence may present a general non-technical statement as follows:

(1) Any member of the general public may testify at the hearing. Any testimony provided will be subject to cross-examination. No prior notification is required to present general non-technical statements in support of or in opposition to the petition. Any such member may also offer exhibits in connection with his testimony, so long as the exhibit is non-technical in nature and not unduly repetitious of the testimony.

(2) A member of the general public who wishes to submit a written statement for the record, in lieu of providing oral testimony at the hearing, shall file the written statement prior to or at the hearing.

G. Discovery:

(1) Grounds for discovery: Discovery shall only be permitted upon a determination by the hearing officer that:

(a) the type of discovery sought will not unreasonably delay the proceeding, and is neither unreasonably burdensome nor unreasonably expensive; and

(b) the information to be obtained is relevant and is not otherwise reasonably obtainable, may be lost, or may become unavailable.

(2) Order for discovery: Upon motion for discovery by a party and determination by the hearing officer that such motion should be granted, the hearing officer shall issue an order for the taking of such discovery together with the conditions and terms thereof.

H. Hearing: Burden of persuasion: at the hearing, the petitioner has the burden of going forward with the evidence and of proving by a preponderance of the evidence the facts relied upon to justify the relief sought in the petition. Following the establishment of a prima facie case by the petitioner, any person opposed to the relief sought in the petition has the burden of going forward with any adverse evidence and showing why the relief should not be granted.

20.1.3.18 VARIANCE HEARING:

A. Initiation of variance hearing:

(1) Variance hearing shall be initiated by the filing of a variance petition. A copy of the petition shall be served on the department.

(2) Contents: A variance petition shall comply with Subsection A of 20.6.2.1210 NMAC or Subsection F of 20.6.2.4103 NMAC, as applicable.

(3) Response of the department: The department shall review each variance petition and, within 60 days after receipt of the petition, file a recommendation with the commission to grant, grant with conditions, or deny the variance request. The recommendation shall include reasons and a copy shall be served on the petitioner by certified mail and on any other party.

B. Hearing requirement: If the department recommends granting the variance request, or any part of the variance request, with or without conditions, the commission shall hold a hearing on those requests recommended for approval. If the department recommends denial of all or part of the variance request, the commission shall only hold a hearing on the variances recommended for denial if the petitioner files a request for hearing within 15 days after receipt of the department's recommendation. If a timely request for hearing is not filed, the recommended denial shall become a final action of the commission and shall not be subject to review.

C. Scheduling the hearing:

(1) Timing of hearing: If a hearing on a variance petition is required, the hearing shall be held within 90 days after the later of the filing of a department recommendation to grant a variance or the filing of a request for hearing by the petitioner, as applicable. The 90 day deadline may be waived upon the filing of a stipulated or unopposed motion prior to the expiration of the deadline.

(2) Scheduling order and public notice: If a hearing on a variance petition is required, a scheduling order shall be issued as provided in Subsection B of 20.1.3.16 NMAC, and public notice shall be given as provided in Subsection C of 20.1.3.16 NMAC.

D. Participation by the general public: Any person who has not timely filed either an entry of appearance or a statement of intent to present evidence may present a general non-technical statement as follows:

(1) Any member of the general public may testify at the hearing. Any testimony provided will be subject to cross-examination. No prior notification is required to present general non-technical statements in support of or in opposition to the petition.

Any such member may also offer exhibits in connection with his testimony, so long as the exhibit is non-technical in nature and not unduly repetitious of the testimony.

(2) A member of the general public who wishes to submit a written statement for the record, in lieu of providing oral testimony at the hearing, shall file the written statement prior to or at the hearing.

E. Transcription of hearing: The petitioner shall, at its own expense, have the hearing stenographically recorded and transcribed by a certified court reporter unless, after a showing of substantial financial hardship, the hearing officer orders the department to hire a certified court reporter. The petitioner shall, no later than 30 days prior to the hearing date, file with the hearing clerk a certification that the petitioner has hired a certified court reporter and will deliver 16 copies of the hearing transcript to the hearing clerk or a request that the department hire a certified court reporter.

F. Additional procedures: Procedures for statements of intent to present technical evidence, for discovery and for the burden of persuasion in variance hearings shall follow the procedures for abatement plan hearings, Subsection E to Subsection H of 20.1.3.17 NMAC.

[20.1.3.18 NMAC - Rp, 20 NMAC 1.3.III 300-303, 10/15/2010]

20.1.3.19 COMPLIANCE ORDER HEARING:

A. Initiation of compliance order hearing:

(1) Filing of request: A compliance order hearing shall be initiated by the filing of a request for compliance order hearing within 30 days after the compliance order is served. The respondent shall file the original of the request for compliance order hearing with the commission and serve a copy on the department.

(2) Request for compliance order hearing: The request for compliance order hearing shall also serve as an answer to the compliance order and shall:

(a) clearly and directly admit or deny each of the factual assertions contained in the compliance order; but where the respondent has no knowledge of a particular factual assertion and so states, the assertion may be denied on that basis; any allegation of the compliance order not specifically denied shall be deemed admitted;

(b) indicate any affirmative defenses upon which the respondent intends to rely; affirmative defenses not asserted in the request for compliance order hearing, except a defense asserting lack of subject matter jurisdiction, shall be deemed waived;

(c) be signed by a person authorized to do so; and

(d) attach a copy of the compliance order.

B. Scheduling the hearing:

(1) Hearing date: The hearing shall be scheduled to begin no later than 90 days after the date a request for compliance order hearing is received, unless a stipulated or unopposed motion is filed requesting that the 90 day deadline be waived. The motion must be filed prior to the expiration of the 90 day deadline.

(2) Scheduling order and public notice: A scheduling order shall be issued as provided in Subsection B of 20.1.3.17 NMAC, and public notice shall be given as provided in Subsection C of 20.1.3.17 NMAC.

C. Transcription of hearing: The respondent shall, at its own expense, have the hearing stenographically recorded and transcribed by a certified court reporter unless, after a showing of substantial financial hardship, the hearing officer orders the department to hire a certified court reporter. The respondent shall, no later than 30 days prior to the hearing date, file with the hearing clerk a certification that the respondent has hired a certified court reporter and will deliver 16 copies of the hearing transcript to the hearing clerk or request that the department hire a certified court reporter.

D. General rules regarding discovery:

(1) Discovery request: Except as otherwise provided by the commission, a party requesting discovery shall serve the discovery request directly upon the party from whom discovery is sought and shall file a notice with the hearing clerk, indicating the date of service of the discovery request, the type of discovery sought, and the party from whom discovery is sought.

(2) Response to discovery request: A party responding to a discovery request shall serve the response, including any objections, upon the party making the discovery request and shall file a notice with the hearing clerk, indicating the date of service of the response, the type of discovery request being responded to, and the party upon whom the response was served.

(3) Continuing obligation to supplement responses: Any party from whom discovery is sought has a continuing obligation, subject to any objections interposed and not overruled by the hearing officer, to supplement responses with relevant information obtained after serving of the initial response and any previous supplemental responses. Unless otherwise ordered by the commission or hearing officer, supplemental responses shall be served as soon as practicable but not later than five days from when the information became available. If the new information becomes available less than five days prior to the hearing or during the hearing, it shall be brought to the attention of the hearing officer for direction and ruling on the use of the information.

(4) Protective order: The hearing officer may, upon motion and for good cause shown, issue any order which justice requires to protect a party or person from

annoyance, embarrassment, oppression or undue burden or expense, including that discovery be limited or that a trade secret or other confidential information not be disclosed.

(5) Failure to make discovery; sanctions: Upon motion by a party showing that another party from whom discovery was requested has failed to respond within the required time, the hearing officer may order the response and may impose such sanctions as may be appropriate, including:

(a) refusal to allow the testimony of a witness not identified as required by Subsection E of 20.1.3.20 NMAC;

(b) denial of admission of a document not disclosed as required by Subsection F of 20.1.3.20 NMAC;

(c) drawing of adverse inference against the non-responsive party; and

(d) in an extreme case, dismissal or default judgment against the non-responding party.

E. Identity of witnesses: Except as allowed by the hearing officer, each party shall, 15 days before the hearing, provide the name and address of each person expected to be called as a witness and a description of the general subject matter of the anticipated testimony of each witness, and a list of exhibits, if any, to be offered into evidence at the hearing.

F. Production of documents:

(1) Definition: As used in this section, "document" includes writings, drawings, graphs, charts, photographs, videotapes and other data compilations from which information can be obtained, and if necessary, translated by a party through detection devices into reasonably usable form. In addition, each copy of a document that is not identical in all respects to every other copy shall be considered a separate document.

(2) Request: Any party, upon written request to another party, is entitled to inspect and make copies of any relevant documents in the possession or control of the other party. The request shall specify a reasonable time (not less than 20 days after service of the request), place and manner of making the inspection and copies. The party responding to the request shall also provide a list of privileged documents, identified by title, author and date.

G. Subpoenas: As allowed by the act, the hearing clerk shall, upon request by any party and without the necessity for notice to other parties, prepare a subpoena requiring the attendance and testimony of any witness and the production of any evidence in the possession or under the control of the witness at the hearing or at a deposition authorized by the hearing officer under Subsection I of 20.1.3.19 NMAC, and forward

the subpoena to the hearing officer for issuance. A subpoena may be issued with the name and address of the witness blank, to be completed by the requesting party.

H. Request for admissions: Any party may serve upon any other party a written request for the admission of any statement or opinion of fact or the application of law to fact, including the genuineness of any document. If the request includes a request for admission of the genuineness of a document, the document shall be attached to the request unless it has been otherwise furnished. Each statement shall be deemed admitted unless, within 20 days after service of the request, or such other time prescribed by the hearing officer, the party to whom the Request is directed serves upon the requesting party a sworn written response specifically denying such matter.

I. Other discovery:

(1) Additional discovery not favored: Discovery not specifically provided for under this part, including interrogatories and depositions, is discouraged. Requests for additional discovery may be made by motion to the hearing officer setting forth:

(a) the circumstances and necessity warranting the taking of the discovery;

(b) the nature of the information expected to be discovered; and

(c) the proposed time and place where the discovery will be taken.

(2) Findings for additional discovery: Discovery may be permitted upon determination by the hearing officer that:

(a) such discovery will not unreasonably delay the proceeding;

(b) the information to be obtained is not otherwise reasonably obtainable, may be lost, or may become unavailable because of physical illness or infirmity; and

(c) there is a substantial reason to believe that the information sought will be admissible at the hearing or will be likely to lead to the discovery of admissible evidence.

(3) Order for additional discovery: Upon determining that a motion for additional discovery should be granted, the hearing officer shall issue an order for the taking of such discovery together with any conditions and terms of the additional discovery.

J. Hearing burden of persuasion: At compliance order hearing, the department has the burden of going forward with the evidence and of proving by a preponderance of the evidence that the violation occurred, and that the proposed civil penalty, revocation, or suspension, as the case may be, is appropriate. Following the establishment of a prima

facie case, the respondent shall have the burden of going forward with any adverse evidence or defense to the allegations.

[20.1.3.19 NMAC - Rp, 20 NMAC 1.3.IV.400-409, 10/15/2010]

20.1.3.20 GENERAL HEARING PROCEDURES FOR ABATEMENT PLAN, VARIANCE AND COMPLIANCE ORDER HEARINGS:

A. Hearing:

(1) Location of the hearing: Unless otherwise ordered by the commission or hearing officer, the hearing shall be in Santa Fe.

(2) Postponement of hearing: No request for postponement of a hearing shall be granted except upon consent of all parties or for good cause shown.

B. Conduct of hearing:

(1) The hearing officer shall conduct the hearing so as to provide a reasonable opportunity for all interested persons to be heard without making the hearing unreasonably lengthy or cumbersome or burdening the record with unnecessary repetition.

(2) The hearing officer shall establish the order of testimony except that the party with the burden of persuasion shall present its case first. The hearing officer may allow brief opening or closing statements.

C. Evidence:

(1) General: The hearing officer shall admit any relevant evidence, unless the hearing officer determines that the evidence is unduly repetitious or otherwise unreliable or of little probative value. Evidence relating to settlement that would be excluded in the courts under SCRA 1986, 11-408 is not admissible.

(2) Examination of witnesses: Witnesses shall be examined orally, under oath or affirmation, except as otherwise provided in this part or by the hearing officer. The commission, hearing officer, and parties shall have the right to cross-examine a witness. The hearing officer may limit cross-examination that is unduly repetitious, harassing or beyond the scope of the witness' direct testimony.

(3) Exhibits: All exhibits offered in evidence shall be marked with a designation identifying the person by whom the exhibit is offered, and numbered serially in the sequence in which offered. Large charts and diagrams, models, and other bulky exhibits are discouraged. Exhibits should be limited to 8 1/2 X 11 inches, or be capable of being folded to that size, unless otherwise necessary for adequate presentation of evidence.

(4) Official notice: Official notice may be taken of any matter that may be judicially noticed in the New Mexico courts.

(5) Preponderance of evidence: Each matter of controversy shall be determined upon a preponderance of the evidence.

D. Objections and offers of proof:

(1) Objection: Any objection concerning the conduct of the hearing may be stated orally or in writing during the hearing. The party raising the objection must supply a short statement of its grounds. The ruling by the hearing officer on any objection and the reasons given for it shall be part of the record.

(2) Offer of proof: Whenever evidence is excluded from the record, the party offering the evidence may make an offer of proof, which shall be included in the record. The offer of proof for excluded oral testimony shall consist of a brief statement describing the nature of the evidence excluded and what such evidence would have proved. The offer of proof for excluded documents or exhibits shall consist of the insertion in the record of the documents or exhibits excluded. Where the commission decides that the ruling of the hearing officer in excluding the evidence was both erroneous and prejudicial, the hearing may be reopened to permit the taking of such evidence.

[20.1.3.20 NMAC - Rp, 20 NMAC 1.3.V.500-503, 10/15/2010]

20.1.3.21 POST-HEARING PROCEDURES FOR ABATEMENT PLAN, VARIANCE AND COMPLIANCE ORDER HEARINGS:

A. Filing the transcript: If post-hearing submittals are allowed, the hearing clerk shall, promptly following receipt of the transcript, transmit a copy to the hearing officer, and notify all parties of its availability. Any person, other than the commission, desiring a copy of a transcript may order a copy from the court reporter.

B. Proposed findings and conclusions: Unless otherwise ordered by the commission, within 30 days after conclusion of the hearing, or within such time as may be fixed by the hearing officer, any party may submit proposed findings of fact and conclusions of law and closing argument. All such submissions shall be in writing, shall be served upon all parties, and shall contain adequate references to the record and authorities relied on. No new evidence shall be presented unless specifically allowed by the hearing officer.

C. Recommended decision:

(1) Filing and contents: Unless otherwise ordered by the commission, the hearing officer shall issue a recommended decision within 30 days after the deadline for

filing of proposed findings and conclusions under Subsection B of 20.1.3.21 NMAC. The recommended decision shall contain the hearing officer's:

(a) findings of fact;

(b) conclusions regarding all material issues of law or discretion, as well as reasons therefor;

(c) a proposed final order; and

(d) for compliance order hearings, if the hearing officer determines that a violation has occurred, the hearing officer shall review the proposed civil penalty to determine if the department acted within its discretion in setting the penalty amount; if the hearing officer decides to recommend a penalty different in amount or nature from the department's proposed penalty, the hearing officer shall set forth the reasons for the change.

(2) Comment on recommended decision: At the commission's discretion, any party may file, within 15 days after service of the recommended decision, comments regarding the recommended decision, including arguments to adopt, reject or modify the recommended decision.

(3) Argument before the commission: The commission may, upon request of a party or its own initiative, allow oral argument on the recommended decision. If oral argument is allowed, the commission shall specify the time and place for such oral argument after giving due consideration to the convenience of the parties and the need for expeditious resolution of the proceeding.

D. Final order by commission: The commission shall reach a final decision at a public meeting, but may deliberate on the decision in closed session in accordance with the Open Meetings Act. The commission may circulate a draft order during closed session so long as no final decision is reached during closed session. After reaching a decision, the commission shall direct a member, its counsel or a party to prepare a final order. The commission may approve the order at a meeting or direct the commission chair to sign the order.

(1) Decision: The commission may adopt, modify, or set aside the hearing officer's recommended decision, and shall set forth in the final order the reasons for its actions.

(2) Penalty: For a compliance order hearing, the commission may change the amount and nature of the civil penalty, if any, recommended by the hearing officer and shall set forth the reasons for the change.

(3) The hearing clerk shall send copies of the final order to each party, and to all other persons who have made written requests for notification of the action taken.

E. Payment of civil penalty: The respondent shall pay the full amount of the civil penalty, if any, assessed in the final order within 60 days after receipt of the final order, unless otherwise ordered by the commission. Payment shall be made by forwarding to the hearing clerk a cashier's check or certified check in the amount of the penalty assessed, payable to the fund specified in the act.

F. Judicial review: Judicial review of the final order shall be as provided by law. The filing of an appeal does not stay any action or payment of penalty required by the final order, unless otherwise ordered by the commission or a court.

G. Preparation of record proper: The hearing clerk shall prepare the record proper for any appeal, which shall include a transcript of the hearing before the commission. The appellant shall make satisfactory arrangements for payment of preparation of the record proper with the hearing clerk, including copying costs and transcription costs.

[20.1.3.21 NMAC - Rp, 20 NMAC 1.3.VI.600-606, 10/15/2010]

20.1.3.22 ALTERNATE RESOLUTION:

A. Summary procedures:

(1) Use of summary procedures: The commission may dispose of a abatement plan petition, variance petition or request for compliance order hearing after an expedited hearing if a party requests that the matter be decided solely on legal arguments presented in written briefs and oral arguments.

(2) Expedited hearing: If the hearing officer determines that the motion or request has a likelihood of success and could fairly expedite the resolution of the proceeding, the hearing officer may submit a recommended decision to the commission based on briefs and oral arguments presented at an expedited hearing. If an expedited hearing is conducted, public notice shall be given in accordance with Subsection C of 20.1.3.17 NMAC, Subsection C of 20.1.3.18 NMAC or Subsection C of 20.1.3.19 NMAC. For abatement plan or variance hearings, the hearing officer shall also:

(a) include in the public notice instructions for persons other than parties who wish to participate in the oral argument to submit a statement of intent equivalent to the statement provided in Subsection E of 20.1.3.17 NMAC; and

(b) allow the public to attend the expedited hearing but may limit presentations at the hearing to oral arguments by parties on the specific issue before the commission.

(3) Commission: Upon a referral of a recommended expedited decision, the commission may either reach a final decision and issue a final order or remand to the hearing officer to proceed with a full hearing under this part.

B. Settlement: The commission encourages the settlement of a proceeding at any time if the settlement is consistent with the provisions and objectives of the act and regulations.

(1) Compliance order hearing: The commission may approve a stipulated final order signed by all parties. The stipulated final order shall include all the terms and conditions agreed to by the parties, and shall state that, for the purpose of this proceeding, the respondent admits the jurisdictional allegations of the compliance order and consents to the relief specified, including the assessment of the stated civil penalty, if any.

(2) Permit reviews: The commission may approve a settlement that modifies a permitting action only after evidence supporting such modification is presented at a hearing. The department, however, may withdraw and reissue a modified permitting action under Subsection C of 20.1.3.22 NMAC.

(3) Disapproval of settlement: If the commission disapproves the settlement or stipulated final order, the matter shall proceed as if there had been no settlement or stipulated final order.

C. Withdrawal:

(1) Notice of withdrawal: A petitioner or respondent may withdraw a petition or request for compliance order hearing, or the department may withdraw the compliance order or the permitting action or abatement plan action which is the subject of the proceeding, at any time prior to a decision by the commission by filing a notice of withdrawal with the commission and serving the notice on all other parties. A party may file a written objection to the notice within 10 days after receipt. If an objection is filed, the commission shall rule on the notice.

(2) Effect of withdrawal: An effective notice of withdrawal under this section results in the following:

(a) when a petitioner withdraws an permit review petition, the permitting action becomes final;

(b) when a petitioner withdraws an abatement plan appeal petition, the abatement plan action becomes final;

(c) when a petitioner withdraws a variance petition, the petitioner is barred from petitioning for the same variance without permission from the commission;

(d) when a respondent withdraws a request for compliance order hearing, the compliance order becomes final;

(e) when the department withdraws a compliance order, the request for compliance order hearing is vacated; and

(f) when the department withdraws a permitting action or an abatement plan action, the petition is vacated and the department must issue a new permitting action or an abatement plan action within 60 days unless either the commission approves a different time period, the applicant withdraws its application, or the department determines that a permitting action or abatement plan action is no longer required. Upon issuance of a new permitting action or abatement plan action, the right to file a new petition under the act, Section 74-6-5 (O), or regulations, 20.6.2.4114 NMAC, is available.

PART 4: PERMIT PROCEDURES - ENVIRONMENT DEPARTMENT

20.1.4.1 ISSUING AGENCY:

Environment Department.

[12/1/97; 20.1.4.1 NMAC – Rn, 20 NMAC 1.4.I.101, Recompiled 11/27/01]

20.1.4.2 SCOPE:

This Part sets forth procedural regulations for public hearings before the Environment Department involving permit issuance, renewal, denial, or modification, license, and variance petitions, except to the extent any provision of this Part is inconsistent with any rule promulgated by the Environmental Improvement Board or the Water Quality Control Commission. These regulations may be adopted by the Environmental Improvement Board or Water Quality Control Commission; however, nothing in this Part shall be construed as limiting or affecting, in any manner, the authority of the Board or Commission to adopt rulemaking for permit procedures as provided by law.

[12/1/97; 20.1.4.2 NMAC – Rn, 20 NMAC 1.4.I.102, Recompiled 11/27/01]

20.1.4.3 STATUTORY AUTHORITY:

This Part is adopted under the authority of NMSA 1978, 9-7A-6.D, 74-1-1 through 13, 74-4-4.A.7, 74-9-28.A (1) and (3) and 74-9-29.

[12/1/97; 20.1.4.3 NMAC – Rn, 20 NMAC 1.4.I.103, Recompiled 11/27/01]

20.1.4.4 DURATION:

Permanent.

[12/1/97; 20.1.4.4 NMAC – Rn, 20 NMAC 1.4.I.104, Recompiled 11/27/01]

20.1.4.5 EFFECTIVE DATE:

December 1, 1997, unless a later date is cited at the end of a section or paragraph.

[12/1/97; 20.1.4.5 NMAC – Rn, 20 NMAC 1.4.I.105, Recompiled 11/27/01]

20.1.4.6 OBJECTIVE:

The objective of this Part is to establish hearing procedures for permit issuance, renewal, denial, or modification, license and variance petitions; to ensure due process for all persons; to ensure the ability to participate of all persons and entities who desire to take part; and to give an orderly structure to the proceedings.

[12/1/97; 20.1.4.6 NMAC – Rn, 20 NMAC 1.4.I.106, Recompiled 11/27/01]

20.1.4.7 DEFINITIONS:

GENERAL:

A. As used in this Part:

(1) "Act" means, as the context requires:

(a) the Department of Environment Act, NMSA 1978, Chapter 9, Article 7A;

(b) the Air Quality Control Act, NMSA 1978, Chapter 74, Article 2;

(c) the Radiation Protection Act, NMSA 1978, Chapter 74, Article 3;

(d) the Hazardous Waste Act, NMSA 1978, Chapter 74, Article 4;

(e) the Water Quality Act, NMSA 1978, Chapter 74, Article 6;

(f) the Solid Waste Act, NMSA 1978, Chapter 74, Article 9; and

(g) any rule adopted or amended by the Board or Commission that utilizes this Part;

(2) "Administrative Record" means all public records used by the Division in evaluating the application or petition, including the application or petition and all supporting data furnished by the applicant or petitioner, all materials cited in the application or petition, public comments, correspondence, and as applicable, the draft permit and statement of basis or fact sheet, and any other material used by the Division to evaluate the application or petition;

- (3) "Applicant" means any person whose application for a permit, renewal or modification to a permit, or license is the subject of the proceeding under this Part;
- (4) "Application" means an application for a permit, renewal or modification to a permit, or license;
- (5) "Completeness Determination" means a determination made by the Secretary that an application under the Solid Waste Act contains all information required by the Act and Regulations;
- (6) "Department" means the Environment Department or its successor agency;
- (7) "Division" means the appropriate Division within the Environment Department;
- (8) "document" means any pleading, motion, response, reply, memorandum, decision, order, entry of appearance, or other writing filed in a proceeding under this Part;
- (9) "Draft Permit" means a document prepared by the Division indicating the Division's proposed decision to issue, deny, or modify a permit;
- (10) "final order" means the order issued by the Secretary that is dispositive of the matter;
- (11) "Hearing Clerk" means the person designated by the Secretary to maintain the Hearing Record;
- (12) "Hearing Determination" means a determination made by the Secretary that a public hearing is required under the Act or Regulations;
- (13) "Hearing Officer" means the person designated under this Part or appointed by the Secretary to conduct a proceeding under this Part;
- (14) "Hearing Record" means the Record Proper and the written transcript or recorded tape of the public hearing, including all exhibits offered into evidence, whether or not admitted;
- (15) "license" means a license issued pursuant to the Radiation Protection Act, NMSA 1978, Chapter 74, Article 3;
- (16) "party" means the Petitioner, the Applicant, the Division, or a person who files an entry of appearance on or before the deadline set forth in the Notice of Hearing;
- (17) "Petition" means a Petition for Variance;

(18) "Petitioner" means a person who timely files a Petition;

(19) "Record Proper" means the Administrative Record and all documents filed by or with the Hearing Clerk;

(20) "Regulations" means any rule adopted pursuant to the Act;

(21) "Secretary" means the Secretary of Environment, the Secretary's designee, or any person who assumes the role of the Secretary for purposes of this Part in the event of the Secretary's recusal or disqualification;

(22) "technical testimony" means scientific, engineering, economic or other specialized testimony, whether oral or written, but does not include legal argument, general comments, or statements of policy or position concerning matters at issue in the hearing;

(23) "technical materials" means all data, studies and tangible materials used to form the basis of opinion(s) held by a witness presenting technical testimony; and

(24) "Variance" means a waiver from one or more substantive regulations under the Solid Waste Act.

B. Terms Used In Act or Regulations: Terms defined in the Act or Regulations and not defined in this Part are used consistent with the meanings given in the Act or Regulations.

20.1.4.8-20.1.4.99 [RESERVED]

20.1.4.100 GENERAL PROVISIONS:

A. Applicability of Rules of Civil Procedure and Evidence: The New Mexico Rules of Civil Procedure, SCRA 1986, 1-001 to 1-102 and the New Mexico Rules of Evidence, SCRA 1986, 11-101 to 11-1102 shall not apply to proceedings under this Part. At the discretion of the Hearing Officer, the rules may be used for guidance and shall not be construed to limit, extend, or otherwise modify the authority and jurisdiction of the Secretary under any Act.

B. Liberal Construction: This Part shall be liberally construed to carry out its purpose and the purposes of the statute or statutes and regulations pursuant to which the proceeding at issue is conducted. This part shall also be liberally construed to facilitate participation by members of the public, including those who are not represented by counsel.

C. Severability: If any section or application of this Part is held invalid, the remainder of this Part or any other application shall not be affected.

D. Savings Clause:

(1) Limitation of Applicability: This Part does not apply to pending proceedings for which a Notice of Hearing has been published as provided in Section 202 of 20 NMAC 1.4 [Paragraph C. of Section 200 of 20.1.4 NMAC] filed October 31, 1995, does not affect any permit issued prior to the effective date of this Part until the permittee applies for a modification or renewal of the permit, and does not affect any license or variance issued prior to the effective date of this Part. Any amendment to this Part shall not apply to a proceeding pending on the effective date of the amendment.

(2) References In Other Rules: Any reference in any other rule to NMED 91-1, or to 20 NMAC 1.4 as filed October 31, 1995 and amended May 17, 1996, or to any provision thereof shall be construed as a reference to this Part, or to the corresponding provision thereof.

E. Powers and Duties of the Secretary and Hearing Officer:

(1) Secretary: The Secretary shall exercise all powers and duties as prescribed under the Act, the Regulations and this Part, and not otherwise delegated to a staff member, the Hearing Officer, or the Hearing Clerk. The Secretary may specify procedures in addition to or that vary from those provided in this Part in order to expedite the efficient resolution of the action or to avoid obvious injustice, so long as such procedures do not conflict with the Act or the Regulations or prejudice the rights of any party.

(2) Hearing Officer: The Secretary may appoint one or more Hearing Officers to perform the functions described in this Section. The Hearing Officer shall exercise all powers and duties prescribed or delegated under the Act, the Regulations, or this Part. The Hearing Officer shall conduct a fair and impartial proceeding, assure that the facts are fully elicited, and avoid delay. The Hearing Officer shall have authority to take all measures necessary for the maintenance of order and for the efficient, fair and impartial adjudication of issues arising in proceedings governed by this Part which includes, but is not limited to, authority to:

(a) conduct hearings under this Part;

(b) rule upon motions, procedural requests, and offers of proof;

(c) issue all necessary orders, except final orders issued by the Secretary under this Part;

(d) issue subpoenas, as authorized under the Solid Waste Act and Section 205.D [Paragraph 4, Subsection E., of 20.1.4.200 NMAC];

(e) administer oaths and affirmations, examine witnesses and admit or exclude evidence; and

(f) require parties to attend conferences for the settlement or simplification of the issues, or the expedition of the proceedings.

(3) Secretary and Hearing Officer; Qualifications; disqualification:

(a) Qualifications: The Secretary or the Hearing Officer shall not perform any function provided for in this Part regarding any matter in which the Secretary or the Hearing Officer:

(i) has a personal bias or prejudice concerning a party, the Application or Petition, involved in the proceeding;

(ii) has a financial interest in the proceeding or facility that is the subject of the proceeding;

(iii) is related to a party to the proceeding; or

(iv) is an officer, director or trustee of a party to the proceeding.

(v) The Secretary shall not be disqualified solely because of having been briefed on the matter prior to initiation of a proceeding under this Part.

(b) Disqualification:

(i) Any party, by motion and for cause listed in Section 112.C.1 [Item (i), Subparagraph (a), Paragraph (3), Subsection E. of 20.1.4.100 NMAC], may request the disqualification of the Hearing Officer at any time prior to the hearing, or of the Secretary at any time prior to filing of the Final Order.

(ii) The Hearing Officer shall file a recommended decision on a motion under this Section within five (5) days. The Secretary shall file an order on a motion under this Section within five (5) days of the filing of the recommended decision. If the Secretary grants the motion, the order shall designate the person who shall assume the duties of the Secretary or Hearing Officer.

F. Computation and Extension of Time:

(1) Computation: In computing any period of time prescribed or allowed by this Part, by any applicable statute, or by order of the Hearing Officer or Secretary, except as otherwise specifically provided, the day of the event from which the designated period begins to run shall not be included. The last day of the computed period shall be included, unless it is a Saturday, Sunday, or legal state holiday, in which event the time is extended until the end of the next day which is not a Saturday, Sunday, or legal state holiday. Whenever a party must act within a prescribed period after service upon him and service is by mail, three (3) days is added to the prescribed

period. The three days extension does not apply to any deadline mandated under the Act.³

(2) Extensions of Time: The Secretary or Hearing Officer may grant an extension of time to file a document or may continue a hearing upon timely motion of a party to the proceeding, for good cause shown, and after consideration of prejudice to other parties and undue delay to the proceeding.

G. Ex Parte Discussions: At no time shall any person discuss the merits of the proceeding ex parte with the Secretary or the Hearing Officer. "Ex parte" means any written or oral communication relating to the merits of the proceedings, between the Secretary or Hearing Officer and any person, including communications between Department staff directly involved in the proceeding and the Secretary or Hearing Officer. Ex parte does not include communications between any party or person and department staff. This prohibition shall begin to apply on the date the Secretary or Division makes a completeness or hearing determination and shall terminate on the date of the final order.

H. Filing Service, and Form of Documents:

(1) Filing of Documents: Except as otherwise provided, the original of a document to be filed in the proceeding shall be filed with the Hearing Clerk.

(a) A telefax copy of a document may be filed in lieu of the original by telefaxing the document directly to the Hearing Clerk, provided:

(i) the document is preceded by a cover sheet addressed to the Hearing Clerk and indicating: the sender's name, address, telephone number, and telefax number; the case name and number; and the number of pages transmitted;

(ii) the document is no more than ten (10) pages in length excluding the telefax cover sheet; and

(iii) the sender does not request return of a conformed copy of the document; or

(b) for documents greater than 10 pages in length, telefaxing the document to a person other than the Department who files the document for the sender.

(c) A hand-delivered or mailed document, including a document telefaxed to a consenting agent who files the document for the sender, shall be deemed filed on the day the document is received by the Hearing Clerk, provided the document is received before the close of business on a working day. A document telefaxed directly to the Hearing Clerk shall be deemed filed upon completion of successful transmission of the document, provided successful transmission is completed before the close of business on a working day. The close of business on a working day shall be 5:00 p.m. or such

earlier time when the Department's main offices are officially closed before 5:00 p.m. A working day shall not include a Saturday, Sunday, or state or federal holiday. A document received after close of business or on a non-working day shall be deemed filed on the next business day.

(d) A party filing a document by telefax shall retain the original of the document throughout the pendency of the proceeding. Any party shall have the right to inspect the original of the document.

(2) Service of Documents:

(a) Except as otherwise provided, a person filing a document shall serve a copy thereof upon all parties.

(b) Any service required under this Part shall be deemed adequate if the document is:

(i) hand-delivered or mailed first class or express to the most recent address provided by the person upon whom service is made; or

(ii) telefaxed to the most recent telefax number that: (1) appears on a document filed in the proceeding by the person upon whom service is made; or (2) has been provided to the person making service by the person upon whom service is made, with that person's consent to be served by telefax.

(c) A certificate of service, conforming substantially to Section 116.B, [Paragraph I. Of this Section] shall accompany a filed document.

(d) A person serving a document by telefax, upon request of the person upon whom service is made, shall provide to that person a hand-delivered or mailed copy of the document.

(3) Form of Documents: Unless otherwise ordered by the Hearing Officer, all documents, except exhibits, shall be on 8 1/2 x 11-inch white paper, and the first page of every document shall conform substantially to Section 116.A [Paragraph I. Of 20.1.4.100 NMAC].

(4) Documents Issued by Secretary or Hearing Officer: All documents issued by the Secretary or Hearing Officer shall be filed with the Hearing Clerk. The Hearing Clerk shall promptly serve copies of the document upon all parties.

(5) Examination of Hearing Record:

(a) Examination Allowed: Subject to the provisions of law restricting the public disclosure of confidential information, any person may, during normal business hours, inspect and copy the Hearing Record or any part thereof.

(b) Cost of Duplication: Unless waived by the Department, the cost of duplicating the Hearing Record or any part thereof shall be borne by the person seeking duplication.

20.1.4.101-20.1.4.199 [RESERVED]

20.1.4.200 PREHEARING PROCEDURES:

A. Initiation of Hearing:

(1) Filing of Completeness or Hearing Determination: A proceeding under this Part shall be initiated by the filing of a Completeness or Hearing Determination by the Secretary.

(2) Administrative Record to Hearing Clerk: Upon the filing of a Completeness or Hearing Determination, the Division shall, no later than the hearing, forward the Administrative Record to the Hearing Clerk. Material readily available at the Division's office, or published material which is generally available, need not be physically included in the Administrative Record, provided that the material is identified in an index to the Administrative Record filed with the Hearing Clerk. The Administrative Record is available for public review at all times.

(3) Petition: A Petition shall:

(a) specify each provision of the Solid Waste Managements Regulations from which the variance is sought;

(b) specify the length of time for which the variance is sought; and

(c) contain a recitation of all facts the Petitioner relies upon to support the Petition, including a showing that:

(i) application of the provisions from which variance is sought would result in an arbitrary and unreasonable taking of the Petitioner's property or would impose an undue economic burden upon the Petitioner's lawful business, occupation, or activity;

(ii) granting the variance will not result in any condition injurious to human health, safety, or welfare, or the environment; and

(iii) if the variance is requested for longer than one (1) year, facts showing that there are no practicable means known or available for the adequate prevention of degradation of the environment or the risk to the public health, safety, or welfare.

(4) Combined Action: Nothing in this Part shall preclude the filing of a combined Application and Petition by the same person, provided the caption and title clearly indicate that the document is to be treated as both an Application and a Petition.

(5) Division Response to Petition: The Division shall promptly review the Petition to determine whether it is complete and if not, notify the Petitioner of that fact, and of the reasons the Petition is deemed incomplete.

(6) Completeness Determination: In making a Completeness Determination, the Division shall consider whether the Applicant has addressed all the administrative requirements required by the Act and the Regulations. The Completeness Determination shall not be considered to be a determination that the Application is approvable.

B. Notice of Docketing; Identification of Secretary or Designee and hearing Officer: The Hearing Clerk shall, as soon as practicable after receipt of a Completeness or Hearing Determination, issue a Notice of Docketing. The Notice of Docketing shall contain the caption and docket number of the case, the date upon which the Completeness or Hearing Determination was received by the Hearing Clerk, the name of the Secretary or designee who will issue the Final Order, and the name of the Hearing Officer, if one has been designated. If a Hearing Officer has not been designated, the Hearing Clerk shall notify the parties of the name of the Hearing Officer as soon as one is assigned. The Hearing Clerk shall include a copy of this Part with the Notice of Docketing sent to the Applicant or Petitioner.

C. Scheduling the Hearing:

(1) Hearing Date: Unless otherwise provided by law, the Hearing Clerk shall distribute the Notice of Public Hearing as set forth in Section 203.B [Subparagraph (2) of Paragraph C of this Section] no later than sixty (60) days after the filing of a Completeness or Hearing Determination.

(2) Notice of Hearing:

(a) Content: The Department shall promptly prepare and file with the Hearing Clerk a Notice of Hearing setting forth:

(i) the date, time, and location of the hearing;

(ii) a brief description of the nature and location of the action to be considered in the Draft Permit, Application or Petition, including the name and address of the Applicant or Petitioner;

(iii) the name, address and telephone number of a person from whom further information, including a copy of the Draft Permit, Application or Petition, may be obtained;

(iv) the requirements for an Entry of Appearance, a Statement of Intent to Present Technical Testimony, and a general written or oral statement;

- (v) a statement that this Part shall apply at the hearing; and
- (vi) any other requirement set forth in the Act or applicable regulation.

(b) Service: Except as provided under Section 205,[Paragraph E. of this Section] the Hearing Clerk shall, no later than thirty (30) days prior to the hearing:

(i) send copies of the Notice of Hearing, with requests for publication, to at least one newspaper of general circulation in the state, and to at least one additional newspaper, if any, published or distributed at least weekly in the area where the facility is located;

(ii) mail a copy of the Notice of Hearing to each party and to each person who filed a written request for a hearing or who expressed to the Department in writing an interest in the facility that is the subject of the proceeding;

(iii) mail a copy of the Notice of Hearing to each local, state, or federal agency and Tribal government affected by the facility that is the subject of the proceeding;

(iv) immediately upon receipt of an entry of appearance received after the initial mailing, mail a copy of the Notice of Hearing to such person; and

(v) file in the Hearing Record the Affidavits of Publication from the newspapers in which the Notice of Hearing was published.

(3) Continuance of Hearing: A request to continue a hearing may be granted upon motion by a party, for good cause shown, and after consideration of prejudice to other parties and undue delay to the proceeding.

(4) Location of the Hearing: Unless otherwise provided by law, the hearing shall be in Santa Fe or at a place in the area affected by the facility which is the subject of the proceeding.

D. Motions:

(1) General: Any party may file a motion with the Hearing Clerk. All motions, except those made orally on the record during a hearing, shall be in writing, specify the grounds for the motion, state the relief or order sought and state whether it is opposed or unopposed. Each motion may be accompanied by affidavits, certificates, or other evidence relied upon, and shall be served as provided by Section 115.B [Subparagraph (2) of Paragraph H. of 20.1.4.100 NMAC].

(2) Unopposed Motions: An unopposed motion shall state that concurrence of all other parties was obtained. The moving party shall submit a proposed order approved by all parties for review by the Hearing Officer.

(3) Opposed Motions: Any opposed motion shall state either that concurrence of other parties was sought and denied, or why concurrence was not sought. A memorandum brief in support of such motion may be filed.

(4) Response to Motions: Any party upon whom an opposed motion is served shall have fifteen (15) days after service of the motion to file a response. A non-moving party failing to file a timely response shall be deemed to have waived any objection to the granting of the motion.

(5) Reply to Response: The moving party may, but is not required to, submit a reply to a non-moving party's response within ten (10) days after service of the response.

(6) Decision: Except as provided in Section 112.C.2 [XX Paragraph of 20.1.4.100 NMAC] or otherwise ordered by the Hearing Officer, all motions shall be decided by the Hearing Officer without a hearing.

E. Special Procedures for Hearings Under the Solid Waste Act:

(1) Service of Public Notice: No later than sixty (60) days after the Hearing Clerk receives a Completeness Determination, the Hearing Clerk shall provide public notice of the hearing and service in the form and manner set forth under NMSA 1978, 74-9-22.

(2) Discovery: Discovery shall only be permitted upon a determination by the Hearing Officer that:

(a) the discovery will not unreasonably delay the proceeding and is not unreasonably burdensome or expensive;

(b) the information sought is not privileged and is relevant to the subject matter of the proceeding; and

(c) the information to be obtained is not unreasonably cumulative or duplicative, or not otherwise reasonably obtainable.

(3) Order For Discovery: Upon motion for discovery by a party and determination that such motion should be granted, the Hearing Officer shall issue an order for the taking of such discovery together with any conditions and terms of the discovery.

(4) Subpoenas: The Secretary has and may delegate to the Hearing Officer the power to issue subpoenas for the attendance and testimony of witnesses and the production of relevant documentary evidence.

[12/1/97; 20.1.4.200 NMAC – Rn, 20 NMAC 1.4.1.201 through 205, Recompiled 11/27/01]

20.1.4.201-20.1.4.299 [RESERVED]

20.1.4.300 PARTICIPATION:

A. Participation:

(1) Entry of Appearance: Any person who wishes to be a party shall file, and serve upon all other parties of record, an Entry of Appearance, on or before the deadline set forth in the Notice of Hearing. A timely Statement of Intent to Present Technical Testimony shall be considered an Entry of Appearance, if the person filing such statement has not previously filed a separate Entry of Appearance.

(2) Effect of Failure to File: Failure to file a timely Entry of Appearance shall preclude a person from being a party in the proceeding, but shall not preclude a person from presenting a general written or oral statement or non-technical testimony in the proceeding.

(3) Orders for Conduct of Proceedings: In proceedings under this Part, the Hearing Officer may conduct pre-hearing conferences and issue pre-hearing orders that are not inconsistent with these rules, for purposes including but not limited to expediting the disposition of the proceeding, discouraging unnecessary, duplicative or wasteful pre-hearing activities, formulating and simplifying issues, obtaining stipulations or admissions of fact or law, obtaining advance rulings regarding the admissibility of evidence, avoiding the presentation of unnecessary or cumulative evidence or motions and adopting special procedures for managing proceedings involving difficult or complex issues and/or large numbers of parties. With respect to proceedings involving large numbers of parties, the Hearing Officer may require that service of documents under Section 115.B [Paragraph XX of 20.1.4.100 NMAC] be made on designated representatives of groups of parties with similar interests and may make such other orders as are consistent with this Subpart.

B. Procedure for Submittal of Statements and Testimony:

(1) Technical Written Statements and Oral Testimony: Any person who intends to provide a technical written statement or oral testimony concerning a Draft Permit, Application or Petition shall file a Statement of Intent to Present Technical Testimony on or before the deadline in the Notice of Hearing, but in no event later than fourteen (14) days prior to the hearing.

(a) Content of Statement of Intent: The Statement of Intent to Present Technical Testimony shall

(i) identify the person filing the statement;

(ii) state whether the person filing the statement supports or opposes the Draft Permit, Application, or Petition, or in the case of the Division, the Division's recommended decision to approve, deny, or approve with conditions the Draft Permit, Application, or Petition;

(iii) identify each witness, including name, address, affiliation(s), and educational and work background;

(iv) estimate the length of the direct testimony of each witness;

(v) identify all exhibits which are part of the Record Proper and, for exhibits not part of the Record Proper, attach a copy;

(vi) list or make available all technical materials relied upon by each witness in making statement of technical of fact or opinion contained in his or her direct testimony; and

(vii) attach a summary of the testimony of each witness, stating any opinion(s) to be offered by such witness, and an explanation of the basis for such opinion(s).

(b) Effect of Failure to File: Failure to file a timely Statement of Intent to Present Technical Testimony meeting the requirements of Section 302.A.1 [Paragraph B. of this Section] shall preclude a person from presenting technical testimony, and if the person has not filed a timely Entry of Appearance, from being a party in the proceeding, but shall not preclude a person from presenting a general written or oral statement or non-technical testimony in the proceeding.

(2) General Written and Oral Statements; Non-Technical Testimony: Any person may provide a general written statement concerning the Draft Permit, Application, or Petition at or before the hearing. Any person may provide a general oral statement or non-technical testimony concerning the Draft Permit, Application, or Petition at the hearing.

[12/1/97; 20.1.4.300 NMAC – Rn, 20 NMAC 1.4.III.301 and 302, Recompiled 11/27/01]

20.1.4.301-20.1.4.399 [RESERVED]

20.1.4.400 HEARING PROCEDURES:

A. Burden of Persuasion; Order of Testimony; Evidence Required:

(1) Burden of Persuasion: The Applicant or Petitioner has the burden of proof that a permit, license, or variance should be issued and not denied. This burden does not shift. The Division has the burden of proof for a challenged condition of a permit or license which the Department has proposed. Any person who contends that a permit

condition is inadequate, improper, or invalid, or who proposes to include a permit condition shall have the burden of going forward to present an affirmative case on the challenged condition.

(2) Order of Testimony: Unless otherwise agreed to by the parties or ordered by the Hearing Officer, testimony shall be presented in the following order:

- (a) testimony by, and examination of, the Applicant or Petitioner;
- (b) testimony by, and examination of, technical witnesses in support of the Draft Permit, Application, or Petition;
- (c) testimony by, and examination of, technical witnesses in opposition to the Draft Permit, Application, or Petition;
- (d) all other testimony or oral statement;
- (e) direct testimony by the parties, as appropriate, in the same order as testimony in the proceeding; and
- (f) rebuttal testimony by the parties, as appropriate, in the same order as testimony in the proceeding.

(3) Standard for Decision: The Hearing Officer shall determine each matter in controversy by a preponderance of the evidence.

B. Evidence:

(1) General: Except as otherwise provided in this subsection, the Hearing Officer shall admit all relevant evidence that is not unduly prejudicial or repetitious, or otherwise unreliable or of little probative value.

(a) Evidence relating to settlement that would be excluded in the courts of New Mexico under SCRA 1986, 11-408 is not admissible.

(b) All privileges recognized in the courts of New Mexico shall be recognized to the same extent in proceedings under this Part.

(c) No person shall be allowed to testify as an expert unless identified as a technical witness in a timely filed Statement of Intent to Present Technical Testimony.

(2) Examination of Witnesses: All persons shall have an opportunity to examine witnesses at the hearing in the order set forth under Section 401.B[Subparagraph (2) of this Section]. Witnesses shall be examined orally, under oath or affirmation, except as otherwise provided in this Part or by the Hearing Officer. The Hearing Officer may limit cross-examination to avoid harassment, intimidation,

needless expenditure of time, or undue repetition. Technical information, including but not limited to data, studies, and tangible materials, shall not be offered or introduced during the examination of witnesses unless the technical information is in the Hearing Record, and was filed on or before the deadline for a Statement of Intent to Present Technical Testimony. Nothing in this Section shall be construed to limit the right of a party to offer or introduce technical information for impeachment or rebuttal.

(3) Exhibits: Each exhibit offered in evidence shall be marked with a designation identifying the person by whom the exhibit is offered, and shall be numbered serially in the sequence in which offered. A series of exhibits illustrative of the same subject, such as a series of photographs or diagrams showing different aspects of the same activity, may be numbered with the same number and sequential letters (e.g., 1a, 1b, etc.). The Record Proper and any part thereof shall be evidence, and shall not be offered as exhibits at the hearing, but persons may use copies in the course of testimony. Unless otherwise ordered by the Hearing Officer:

(a) A person offering an exhibit during the course of testimony shall provide a copy of the exhibit to each party.

(b) The original of the following types of exhibits shall be replaced in the Hearing Record with the indicated substitute:

(i) Charts, maps, diagrams, and photographs larger than 8 1/2 by 11 inches which cannot be folded or rolled shall be replaced with paper copies of 8 1/2 by 11 inches or larger which can be folded or rolled;

(ii) Photographic slides shall be replaced with photographic prints of 8 1/2 by 11 inches or smaller or paper copies of 8 1/2 by 11 inches;

(iii) Overhead projector slides shall be replaced with paper copies of 8 1/2 by 11 inches;

(iv) Models, samples, and other non-documentary exhibits shall be replaced with photographic prints of 8 1/2 by 11 inches or smaller, paper copies (of such photographic prints) of 8 1/2 by 11 inches, or oral testimony describing the exhibits.

(c) A person offering an exhibit for which a substitute is placed in the Hearing Record shall retain the original of the exhibit during the pendency of the proceeding, including any appeal(s), and shall, upon request, deliver the original of the exhibit to the Hearing Officer, Secretary, or court(s).

(4) Official Notice: The Hearing Officer may take official notice of any matter that may be judicially noticed in the courts of New Mexico.

C. Objections and Offers of Proof:

(1) Objection: A party may make any objection concerning the conduct of the hearing which may be stated orally or in writing during the hearing. The party raising the objection shall supply a short statement of its grounds. The objection, the short statement of its grounds, and the ruling by the Hearing Officer shall be included in the written transcript or recorded tape of the proceeding.

(2) Offer of Proof: Whenever evidence is excluded, the person offering the evidence may make an offer of proof, which shall be included in the written transcript or recorded tape of the proceeding.

(a) The offer of proof for excluded oral testimony shall consist of a brief statement describing the nature of the evidence excluded.

(b) The offer of proof for an excluded exhibit shall consist of the insertion of the excluded exhibit in the written transcript or recorded tape of the proceeding.

(c) Failure to make an offer of proof shall waive any error in the exclusion of evidence.

(3) Prejudicial Error: Where the Secretary decides that the ruling of the Hearing Officer in excluding the evidence was erroneous and prejudicial, the Secretary may remand the matter to the Hearing Officer for the taking of the excluded evidence, subject to examination and rebuttal, unless otherwise agreed to by the parties.

[12/1/97; 20.1.4.400 NMAC – Rn, 20 NMAC 1.4.IV.401 through 403, Recompiled 11/27/01]

20.1.4.401-20.1.4.499 [RESERVED]

20.1.4.500 POST HEARING PROCEDURES:

A. Filing the Transcript: The hearing shall be transcribed or tape-recorded verbatim. If the hearing is transcribed, the Hearing Clerk shall promptly notify all parties of the availability of the transcript. Any person desiring a copy of the transcript shall order a copy from the court reporter at his or her own expense. Any person desiring a copy of the hearing tapes shall arrange copying with the Hearing Clerk at his or her own expense.

B. Proposed Findings and Conclusions and Closing Argument: Unless otherwise ordered by the Hearing Officer, any party may submit proposed findings of fact, conclusions of law, and closing argument within thirty (30) days after filing of the transcript. All submissions shall be in writing and shall contain adequate references to the Hearing Record and authorities relied upon. No new evidence shall be presented.

C. Hearing Officer's Report:

(1) **Deadline and Content:** Unless otherwise provided by law or ordered by the Secretary, the Hearing Officer shall file a report within thirty (30) days after expiration of the period under Section 502 [Subsection B. of 20.1.4.500 NMAC]. The report shall contain the Hearing Officer's findings of fact, conclusions of law, recommended decision, and proposed final order.

(2) **Comment on Hearing Officer's Report:** Unless otherwise ordered by the Secretary, a party may file comments on the Hearing Officer's Report, including argument for or against the Hearing Officer's Report or for or against modification of the Hearing Officer's Report, within fifteen (15) days after service of the Hearing Officer's Report. No new evidence shall be presented.

(3) **Argument Before the Secretary:** The Secretary may allow oral argument on the Hearing Officer's Report. A request for oral argument shall be filed no later than the expiration of the period under Section 503.B [Subparagraph (2) of this Section]. If oral argument is allowed, the Secretary shall notify the parties in writing regarding the time and place for oral argument, after giving due consideration to the convenience of the parties and to the deadline for issuance of the final order specified in Section 504 [Paragraph D. of this Section].

D. Final Order By Secretary:

(1) **Deadline:** Unless otherwise provided by law or by order of the Secretary, the Secretary shall file a final order no later than thirty (30) days after the expiration of the applicable deadline in Section 503.

(2) **Order:** The Secretary may adopt, modify, or set aside the Hearing Officer's recommended decision, and shall set forth in the final order the reasons for the action taken.

(3) **Notification of Final Order:** The Hearing Clerk shall send a copy of the final order, by certified mail, to each party and to each person who submits a written request for notification of the final order.

E. Judicial Review: Judicial or administrative review of the final order shall be as provided by law. The filing of an appeal does not act as a stay of the final order, the permit, license, or variance, or any provision of the Act or the Regulations, unless otherwise ordered by the Secretary or the court, or provided by law.

F. Preparation of hearing Record: The Hearing Clerk shall prepare the Hearing Record for an appeal from the final order. Appellant shall make satisfactory arrangements for the preparation of the Hearing Record, including costs for copies or transcripts, with the Hearing Clerk.

20.1.4.501-20.1.4.599 [RESERVED]

20.1.4.600 ALTERNATE RESOLUTION:

A. Withdrawal: No later than the beginning of the hearing, the Applicant or Petitioner may file a Motion for Withdrawal. The Secretary shall grant or deny the Motion for Withdrawal. [12-1-97]

B. Summary Procedures:

(1) Use of Summary Procedures: The Secretary may issue a final order after an expedited hearing on a motion by a party if not inconsistent with the law:

(a) to dismiss the Application or Petition for a jurisdictional defect; or

(b) to decide the merits of the Application or Petition on legal arguments presented in writing or oral argument.

(2) Expedited Hearing: If the Hearing Officer determines that the relief requested is likely to be granted, the Hearing Clerk shall prepare and file a Notice of Hearing as set forth in this Part. The hearing shall be conducted and post hearing procedures shall be followed as set forth in this Part. The final order of the Secretary on any expedited hearing under this Section may remand the matter to the Hearing Officer for a full hearing under this Part.

20.1.4.601-20.1.4.699 [RESERVED]

PART 5: ADJUDICATORY PROCEDURES - ENVIRONMENT DEPARTMENT

20.1.5.1 ISSUING AGENCY:

Environment Department.

[11/30/95; 20.1.5.1 NMAC – Rn, 20 NMAC 1.5.I.100, Recompiled 11/27/01]

20.1.5.2 SCOPE:

Except as otherwise specifically provided by statute or by any other rule or regulation of the Board or the Department, this Part governs administrative appeals of compliance orders, administrative orders, field citations or compliance determinations issued or administered by the Department. This Part further governs administrative hearings for permit suspensions and revocations. In any Department proceeding conducted under the Uniform Licensing Act, NMSA 1978, Sections 61-1-1 et seq. (ULA), the procedures

in the ULA shall govern the proceeding. In the absence of a specific provision in the ULA governing an action, the Department may look to this Part for guidance.

[11/15/90, 11/30/95; 20.1.5.2 NMAC – Rn, 20 NMAC 1.5.I.101, Recompiled 11/27/01]

20.1.5.3 STATUTORY AUTHORITY:

This Part is adopted under the authority of NMSA 1978, 9-7A-6, 74-2-12, 74-4-10, 74-6B-8, 74-6B-13, 74-9-28.A(2), 74-9-29, 74-9-36, 74-11-10 and 74-11-11, as amended.

[11/15/09, 11/30/95; 20.1.5.3 NMAC – Rn, 20 NMAC 1.5.I.102, Recompiled 11/27/01]

20.1.5.4 DURATION:

Permanent.

[11/30/95; 20.1.5.4 NMAC – Rn, 20 NMAC 1.5.I.103, Recompiled 11/27/01]

20.1.5.5 EFFECTIVE DATE:

November 1, 1995.

[11/30/95; 20.1.5.5 NMAC – Rn, 20 NMAC 1.5.I.104, Recompiled 11/27/01]

20.1.5.6 OBJECTIVE:

The objective of this Part is to establish regulations that govern adjudicatory proceedings of the Environment Department. This Part is to ensure due process for all the parties and give an orderly structure to the proceedings.

[11/30/95; 20.1.5.6 NMAC – Rn, 20 NMAC 1.5.I.105, Recompiled 11/27/01]

20.1.5.7 DEFINITIONS:

A. GENERAL. As used in this Part:

(1) "Act" means, as the context requires:

(a) the Department of Environment Act, NMSA 1978, Chapter 9, Article 7A, and its subsequent amendments and successor provisions;

(b) the Air Quality Control Act, NMSA 1978, Chapter 74, Article 2, and its subsequent amendments and successor provisions;

(c) the Hazardous Waste Act, NMSA 1978, Chapter 74, Article 4, and its subsequent amendments and successor provisions;

(d) the Solid Waste Act, NMSA 1978, Chapter 74, Article 9, and its subsequent amendments and successor provisions;

(e) the Ground Water Protection Act, NMSA 1978, Chapter 74, Article 6B, and its subsequent amendments and successor provisions;

(f) the Tire Recycling Act, NMSA 1978, Chapter 74, Article 11, and its subsequent amendments and successor provisions; or

(g) any other statute enacted or amended by the Legislature and including authority for issuance of compliance orders or field citations by the Division or the Secretary or any other adjudicatory proceedings as consistent with law;

(2) "Board" means the Environmental Improvement Board;

(3) "Complainant" means the Division that issues Compliance Orders, or the party requesting a hearing on a Compliance Determination;

(4) "Compliance Determination" means a decision by the Division listed in the Corrective Action Fund Payment and Reimbursement, 20 NMAC 5.17; [20.5.17 NMAC]

(5) "Compliance Order" means a written administrative order or any field citation issued by the Division;

(6) "Department" means the New Mexico Environment Department or its successor agency under the Act;

(7) "Division" means the appropriate Division within the Environment Department;

(8) "document" means, except as otherwise used in Subpart III, any pleading, motion, response, memorandum, decision, order, or other written material filed or served in a proceeding under this Part, but does not include a cover letter accompanying a document transmitted for filing;

(9) "final order" means an order issued by the Secretary that is dispositive of the matter;

(10) "Hearing Clerk" means the person designated by the Secretary to maintain the official record of the proceeding;

(11) "Hearing Officer" means the person appointed by the Secretary to conduct a proceeding under this Part;

(12) "Notice of Contemplated Action" means a notice issued by the Secretary under NMSA 1978, Section 61-1-4 of the ULA;

(13) "party" means the Complainant, the Division, Respondent, any person who is entitled and who timely requests to be heard under the ULA, or any person who is permitted to intervene in the hearing pursuant to SCRA 1986, 1-024;

(14) "Petition" means a Petition for revocation or suspension of a permit;

(15) "Petitioner" means the Department when the Petition is for revocation or suspension of a permit;

(16) "Record Proper" means all documents filed by or with the Hearing Clerk during the proceeding and includes the written transcript or tape of the hearing and all exhibits offered into evidence at the hearing, whether or not admitted;

(17) "Regulations" means any rule promulgated and adopted pursuant to the Act;

(18) "Request for Hearing" means a written appeal for review of a decision or Compliance Order issued by Division;

(19) "Respondent" means any person to whom a Compliance Order has been issued; or the Division in the case of a Compliance Determination under the Ground Water Protection Act; and

(20) "Secretary" means the Secretary of Environment, or any person who assumes the role of Secretary for purposes of this Part in the event of the Secretary's disqualification.

B. Terms Used in Act or Regulations: Terms defined in the Act or Regulations and not defined in this Part are used consistent with the meanings given in the Act or Regulations.

[11/15/95, 11/30/95; 20.1.5.7 NMAC – Rn, 20 NMAC 1.5.I.111, Recompiled 11/27/01]

20.1.5.8 to 20.1.5.99 RESERVED]

20.1.5.100 GENERAL PROVISIONS:

A. Applicability of Rules of Civil Procedure: In the absence of a specific provision in this Part governing an action, the New Mexico Rules of Civil Procedure, SCRA 1986, 1-001 to 1-102 and the New Mexico Rules of Evidence, SCRA 1986, 11-101 to 11-1102 may apply as necessary in the discretion of the Secretary or Hearing Officer. The reference to the Rules of Civil Procedure or the Rules of Evidence shall not be construed to extend or otherwise modify the authority and jurisdiction of the Secretary under any statute.

B. Liberal Construction: This Part shall be liberally construed to carry out its purpose.

C. Severability: If any Part or application of this Part is held invalid, the remainder of the Part, or its application to other persons or situations, shall not be affected.

D. Replacement of Prior Rules: This Part replaces the Rules Governing Appeals From Compliance Orders Under the Hazardous Waste Act and the Solid Waste Act, HED 90-10 (EID), filed October 16, 1990. Any reference in this Title to these Rules shall be construed as a reference to this Part.

E. Savings Clause: Replacement of the Rules Governing Appeals From Compliance Orders Under the Hazardous Waste Act and the Solid Waste Act, HED 90-10 (EID), filed October 16, 1990, does not affect pending litigation, nor any Compliance Orders or Compliance Determinations issued prior to the effective date of this Part.

F. Powers and Duties of the Secretary, Hearing Officer:

(1) Secretary: The Secretary shall exercise all powers and duties as prescribed under the Act and this Part, and not otherwise delegated to a staff member, the Hearing Officer, or the Hearing Clerk.

(2) Hearing Officer: The Secretary may appoint one or more Hearing Officers to perform the functions described in Paragraph 2 of this Subsection [Subparagraph (b) of this Subsection].

(a) Qualifications: If an independent Hearing Officer is required by the Act, then the Hearing Officer may be an independent contractor or a State employee who is employed in the capacity as a Hearing Officer. The Hearing Officer shall not be anyone who has performed prosecutorial or investigative functions in connection with the matter at issue in the proceeding.

(b) Functions: The Hearing Officer shall exercise all powers and duties prescribed or delegated by the Secretary under the Act or this Part. The Hearing Officer shall conduct a fair and impartial proceeding, assure that the facts are fully elicited, and avoid delay. The Hearing Officer shall have authority to take all measures necessary for the maintenance of order and for the efficient, fair and impartial adjudication of issues arising in proceedings governed by this Part, which includes, but is not limited to authority to:

- (i) conduct hearings under this Part;
- (ii) rule upon motions, procedural requests, offers of proof, and issue all necessary orders;

(iii) issue subpoenas, as authorized by the Act, for the attendance and testimony of witnesses and the production of documentary evidence as provided for in Subpart III [20.1.5.300 NMAC];

(iv) administer oaths and affirmations, examine witnesses and admit or exclude evidence;

(v) require parties to attend conferences for the settlement or simplification of the issues, or the expedition of the proceedings; and

(vi) impose sanctions, subject to review by the Secretary, on parties who cause undue delay or fail to cooperate in the proceeding.

(3) Secretary or Hearing Officer; Disqualification or Withdrawal:

(a) Neither the Secretary nor any Hearing Officer may perform functions provided for in this Part regarding any matter in which the Secretary or the Hearing Officer:

(i) has a personal bias or prejudice concerning a party or personal knowledge of facts or information concerning the proceeding;

(ii) has a financial interest in the proceeding;

(iii) is related to a party; or

(iv) is an officer, director or trustee of a party to the proceeding.

(b) The Secretary shall not be disqualified solely because of having been briefed on the matter prior to issuance of the Compliance Order or having authorized further investigation of the matter prior to issuance of the Compliance Order.

(c) Any party, by motion and for cause listed in Section 112.C.1, [Subparagraph (a) of Paragraph (3) of this Subsection] may request the disqualification of the Secretary or the Hearing Officer within ten (10) days after the matter has been docketed or the Hearing Officer designated, or if a new Secretary is appointed, within ten (10) days after the Secretary takes office.

(d) Any motion seeking disqualification of the Hearing Officer or the Secretary shall be ruled upon by the Secretary. Upon disqualification of the Secretary, the Deputy Secretary shall assume the duties of the Secretary. In the event that the Deputy Secretary is also subject to disqualification, a division director other than the Complainant shall assume the duties of the Secretary.

G. Computation and Extension of Time:

(1) Computation of Time: In computing any period of time prescribed or allowed by this Part, except as otherwise specifically provided, the day of the event from which the designated period begins to run shall not be included. The last day of the computed period shall be included, unless it is a Saturday, Sunday, or legal state holiday, then the time is extended until the next day which is not a Saturday, Sunday, or legal state holiday. Whenever a party must act within a prescribed period after service upon him and service is by mail, three (3) days is added to the prescribed period. The three days extension does not apply to any deadline mandated otherwise under the Act.

(2) Extensions of Time: The Secretary or Hearing Officer may grant an extension of time to file a document or continuance of a hearing upon timely motion of a party to the proceeding, for good cause shown, and after consideration of prejudice to other parties and undue delay to the proceedings.

H. Ex Parte Discussions: At no time shall any party to a proceeding under this Part discuss ex parte with the Secretary or the Hearing Officer the merits of the proceeding.

I. Filing, Service, and Form of Documents:

(1) Filing of Documents:

(a) Except as otherwise provided, the original of all documents served in the proceeding shall be filed with the Hearing Clerk.

(b) Except as otherwise provided, a party filing documents shall serve copies thereof upon all other parties. A certificate of service, as shown in Section 118, [Subsection L. of this Section] shall accompany each filed document.

(2) Service of Documents: Except as otherwise provided, all documents may be served personally, by express mail, by telefax or by first class mail.

(3) Form of Documents:

(a) Unless otherwise ordered by the Hearing Officer, all documents, except exhibits, shall be on 8 1/2 x 11-inch white paper, and where appropriate, the first page of every document shall contain a heading and caption as illustrated in Section 118 [Subsection L. of this Section]. Any field citation may be on a pre-printed, multi-copy form.

(b) The original of each document, except exhibits, shall be signed by the party or the party's counsel or other representative, and shall include address and telephone number. The signature constitutes a certificate that the signer has read the document; that to the best of the signer's knowledge, information, and belief, there is good ground to support it; and that, except for motions for extension of time, it is not interposed for delay.

(c) Any notice or service required under this Part shall be deemed adequate if made to the most recent address provided by the person upon whom service is made.

J. Filing and Service of Documents Issued by Secretary or Hearing Officer: All documents issued by the Hearing Officer shall be filed with the Hearing Clerk. The Hearing Clerk shall promptly serve copies of the document upon all parties.

K. Examination of Documents Filed:

(1) Examination Allowed: Subject to the provisions of law restricting the public disclosure of confidential information, any person may, during normal business hours, inspect and copy any document filed in any proceeding. Such documents shall be made available by the Hearing Clerk, as appropriate.

(2) Cost of Duplication: Unless waived by the Department, the cost of duplicating documents filed in any proceeding shall be borne by the person seeking copies of such documents.

L. Sample Document:

STATE OF NEW MEXICO

I hereby certify that a copy of the foregoing [name of document] was [hand-delivered/express mailed/faxed/mailed first class] on the following [party/counsel] of record [date]:

[names and addresses of persons upon whom service is made.]

Signature _____

Name of signer

[11/15/90, 11/30/95; 20.1.5.100 NMAC – Rn, 20 NMAC 1.5.I.106 through 110, and 20 NMAC 1.5.I.112 through 118, Recompiled 11/27/01]

20.1.5.101-20.1.5.199 [RESERVED]

20.1.5.200 PREHEARING PROCEDURES:

A. Initiation of Process:

(1) Filing of Request: The appeal process governed by this Part shall be initiated by the filing of a Request for Hearing and served on the Department and any other party.

(2) Request for Hearing: The Request for Hearing shall include an Answer. The Answer shall:

(a) clearly and directly admit or deny each of the factual assertions contained in the Compliance Order/Determination; but where the Respondent/Complainant has no knowledge of a particular factual assertion and so states, the assertion may be denied on that basis. Any allegation of the Compliance Order/Determination not specifically denied shall be deemed admitted;

(b) indicate any affirmative defenses upon which the Respondent/Complainant intends to rely. Any affirmative defense not asserted in the Request for Hearing, except a defense asserting lack of subject matter jurisdiction, shall be deemed waived;

(c) be signed under oath or affirmation that the information contained therein is to the best of the signer's knowledge believed to be true and correct; and

(d) have a copy of the Compliance Order/Determination attached.

B. Notice of Docketing; Notice of Hearing Officer Assignment:

(1) Notice of Docketing; Notice of Hearing Officer Assignment: The Hearing Clerk shall, as soon as practicable after receipt of a Request for Hearing, issue a Notice of Docketing containing the caption and docket number of the case, the date upon which the Request for Hearing was received by the Hearing Clerk, and the name of the Hearing Officer, if one has been designated. If a Hearing Officer has not been designated, the parties shall be notified of the name and address of the Hearing Officer as soon as one is assigned. A copy of this Part shall be included with a Notice of Docketing sent to the Respondent/Complainant.

(2) Untimeliness: The Hearing Clerk shall docket any Request for Hearing, without regard to whether it appears to be timely; but any party may move to dismiss an untimely Request for Hearing.

C. Scheduling the Hearing:

(1) Compliance Determinations: The hearing for Compliance Determinations shall be scheduled to begin no later than ninety (90) days after the date the Request for Hearing was received, unless a stipulated or unopposed motion is filed requesting that the ninety day deadline be waived. The motion to waive must be filed prior to the expiration of the ninety day deadline.

(2) Tire Recycling Act Compliance Order: Within five days of receipt of a Request for Hearing, a public hearing shall be scheduled to begin at least fifteen days and not more than twenty days after the date the notice of hearing is mailed to the Respondent.

(3) Notice of Hearing: The Hearing Clerk shall in consultation with the Hearing Officer, but no later than thirty (30) days prior to the hearing date, issue and serve upon the parties a Notice of Hearing setting forth the date, time, and location of the hearing.

(4) Postponement of Hearing: No request for postponement of a hearing shall be granted except upon consent of all parties or for good cause shown.

(5) Location of the Hearing: Unless otherwise ordered by the Secretary, the hearing shall be in Santa Fe.

D. Motions:

(1) General: All motions, except those made orally during a hearing, shall be in writing, specify the grounds for the motion, state the relief sought and state whether it is opposed or unopposed. Each motion may be accompanied by an affidavit, certificate, or other evidence relied upon and shall be served as provided by Section 115 [Subsection I. of 20.1.5.100 NMAC].

(2) Unopposed Motions: An unopposed motion shall state that concurrence of all other parties was obtained. The moving party shall submit a proposed order approved by all parties for the Hearing Officer's review.

(3) Opposed Motions: Any opposed motion shall state either that concurrence was sought and denied, or why concurrence was not sought. A memorandum brief in support of such motion may be filed with the motion.

(4) Response to Motions: Any party upon whom an opposed motion is served shall have fifteen (15) days after service of the motion to file a response. A non-moving

party failing to file a timely response shall be deemed to have waived any objection to the granting of the motion.

(5) Reply to Response: The moving party may, but is not required to, submit a reply to any response within ten (10) days after service of the response.

(6) Decision: All motions shall be decided by the Hearing Officer without a hearing, unless otherwise ordered by the Hearing Officer sua sponte or upon written request of any party.

[11/15/90, 11/30/95; 20.1.5.200 NMAC – Rn, 20 NMAC 1.5.II 200 through 203, Recompiled 11/27/01]

20.1.5.201-20.1.5.299 [RESERVED]

20.1.5.300 DISCOVERY:

A. Scope of Discovery:

(1) Grounds: For a ULA Hearing, discovery shall be governed by the provisions of the ULA. Discovery of information not privileged may be permitted if it meets the following:

(a) the discovery will not unreasonably delay the proceeding;

(b) the information to be obtained is not unreasonably cumulative or duplicative, or not otherwise reasonably obtainable;

(c) the discovery is not unreasonably burdensome; and

(d) there is a substantial reason to believe that the information sought will be admissible at the hearing or will be likely to lead to the discovery of admissible evidence.

(2) Request: Unless otherwise directed by the Hearing Officer, a party requesting discovery shall serve the discovery request directly upon the party from whom discovery is sought and shall file a notice with the Hearing Clerk, indicating the date of service of the discovery request, the type of discovery sought and the party from whom discovery is sought.

(3) Response to Discovery Request: A party responding to a discovery request shall serve the response, including any objections, upon the party making the discovery request and shall file a notice with the Hearing Clerk, indicating the date of service of the response, the type of discovery request being responded to, and the party upon whom the response was served.

(4) Continuing Obligation to Supplement Responses: Any party from whom discovery is sought has a continuing obligation, subject to any objections interposed and not overruled by the Hearing Officer, to supplement responses with relevant information obtained after serving of the initial response and any previous supplemental responses. Unless otherwise ordered by the Hearing Officer, supplemental responses shall be served as soon as practicable, but no later than five (5) days from when the information became available. If the information becomes available less than five days before the hearing or during the hearing, it shall be brought to the attention of the Hearing Officer for direction and ruling on use of the information.

(5) Privilege: A list of privileged documents, identified by titles, author, date, and privilege or protection claimed shall be provided in response to discovery.

(6) Protective Order: The Hearing Officer may, upon motion and for good cause shown, protect the discovery from disclosure. If such motion is granted, the moving party may not present the protected discovery at the hearing.

(7) Motion to Compel, Sanctions: A party may move for an order compelling discovery where the party from whom discovery was requested has failed to adequately or timely respond. The Hearing Officer may order the response and may impose such sanctions as may be appropriate, including but not limited to the following:

(a) refusal to allow the testimony of a witness not identified as required by Section 301 [Subsection B. of this Section];

(b) denial of admission of a document not disclosed as required by Section 302; [Subsection C. of this Section]

(c) drawing of adverse inferences against the non-responsive party; and

(d) in an extreme case, dismissal or default judgment against the non-responding party.

B. Identity of Witness: Except as provided in Subsection B of this Section [Paragraph (2) of Subsection A. of this Section] or allowed by the Hearing Officer, each party shall, within fifteen (15) days after receipt of notice of the scheduling of the hearing or within forty-five (45) days before the hearing, whichever is closer to the hearing date, provide the name and address of each person expected to be called as a witness and a description of the general subject matter of the anticipated testimony of each witness.

C. Production of Documents:

(1) Definition: As used in this Subpart, "document" includes writings, memos, correspondence, financial information, drawings, graphs, charts, photographs, video tapes and other data compilations from which information can be obtained, and if necessary, translated by the party through detection devices into reasonably usable

form. In addition, each copy of a document that is not identical in all respects to every other copy shall be considered a separate document.

(2) Request: Provided the grounds in Section 300.A [Paragraph (1) of Subsection A. of this Section] are met, any party, upon written request to another party, may inspect and make copies of any designated documents in the possession or control of the other party. The request shall set forth the items to be inspected either by individual item or by category and describe each item and category with reasonable particularity. The request shall specify a reasonable time, place and manner of making the inspection and copies. Reasonable time means not less than twenty (20) days after service of the request in the case of a Compliance Order and not less than ten (10) days after service of the request in the case of a Compliance Determination.

D. Subpoenas: As allowed by the Act, the Hearing Clerk shall, upon written request by any party, issue a subpoena requiring the attendance and testimony of any witness and the production of any evidence in the possession or under the control of the witness at the hearing or at deposition authorized by the Hearing Officer under Section 304 [Subsection E. of this Section]. A subpoena may be issued with the name and address of the witness blank, to be completed by the requesting party.

E. Request for Admissions: Provided the grounds in Section 300.A [Paragraph (1) of Subsection A. of this Section] are met, any party may serve upon any other party a written request for the admission of any statement or opinion of fact or the application of law to fact, including the genuineness of any document. If the request includes a request for admission of the genuineness of a document, the document shall be attached to the request unless it has been or is otherwise furnished or made available for inspection and copying. Each statement shall be deemed admitted unless, within twenty (20) days after service of the Request, or such longer or shorter period as the Hearing Officer may prescribe, the party to whom the request is directed serves upon the requesting party a sworn written response specifically denying such matter.

F. Depositions and Interrogatories:

(1) Motion: Requests for Depositions and Interrogatories must be made by motion to the Hearing Officer and may be permitted only upon determination by the Hearing Officer that the Grounds listed in Section 300.A [Paragraph (1) of Subsection A. of this Section] are met.

(2) Order: Upon determining that a motion for depositions or interrogatories should be granted, the Hearing Officer shall issue an order for the taking of such discovery together with any conditions and terms of the discovery.

[11/15/90, 11/30/95; 20.1.5.300 NMAC – Rn, 20 NMAC 1.5.III.300 through 305, Recompiled 11/27/01]

20.1.5.301-20.1.5.399 [RESERVED]

20.1.5.400 HEARING PROCEDURES:

A. Evidence:

(1) General: The Hearing Officer shall admit all relevant evidence, unless the Hearing Officer determines that the evidence is irrelevant, immaterial, unduly repetitious or otherwise unreliable or of little probative value. Evidence relating to settlement that would be excluded in the courts under SCRA 1986, 11-408 is not admissible.

(2) Examination of Witnesses: Witnesses shall be examined orally, under oath or affirmation, except as otherwise provided in this Part or by the Hearing Officer. Parties shall have the right to cross-examine a witness. The Hearing Officer may limit cross-examination that is unduly repetitious, harassing or beyond the scope of the witness' direct testimony.

(3) Exhibits: All exhibits offered in evidence shall be marked with a designation identifying the person by whom the exhibit is offered, and numbered serially in the sequence in which offered. Large charts and diagrams, models, and other bulky exhibits are discouraged. Exhibits should be limited to 8 1/2 by 11 inches or be capable of being folded to that size, unless otherwise necessary for adequate presentation of evidence.

(4) Official Notice: Official notice may be taken of any matter that may be judicially noticed in the New Mexico courts. In a ULA Hearing, parties shall be given adequate opportunity to show that such facts are erroneously noticed.

B. Objections and Offers of Proof:

(1) Objection: Any objection concerning the conduct of the hearing may be stated orally or in writing during the hearing. The party raising the objection must supply a short statement of its grounds. The ruling by the Hearing Officer on any objection and the reasons given for it shall be part of the record.

(2) Offer of Proof: Whenever evidence is excluded from the record, the party offering the evidence may make an offer of proof, which shall be included in the record. The offer of proof for excluded oral testimony shall consist of a brief statement describing the nature of the evidence excluded and what such evidence would have proved. The offer of proof for excluded documents or exhibits shall consist of the insertion in the record of the documents or exhibits excluded. Where the Secretary decides that the ruling of the Hearing Officer in excluding the evidence was both erroneous and prejudicial, the hearing may be reopened to permit the taking of such evidence.

C. Burden of Persuasion:

(1) Compliance Order: The Complainant has the burden of going forward with the evidence and of proving by a preponderance of the evidence the facts relied upon to show the violation occurred and that the proposed civil penalty is appropriate. Following the establishment of a prima facie case, the Respondent shall have the burden of going forward with any adverse evidence or defense to the allegations.

(2) Compliance Determination: The Complainant has the burden of proving cost eligibility and substantial compliance with the Act and Corrective Action Fund Payment and Reimbursement Regulations.

(3) Preponderance of Evidence: Each matter of controversy shall be determined by the Hearing Officer upon a preponderance of the evidence.

[11/15/90, 11/30/95; 20.1.5.400 NMAC – Rn, 20 NMAC 1.5.IV.400 through 402, Recompiled 11/27/01]

20.1.5.401-20.1.5.499 [RESERVED]

20.1.5.500 POST-HEARING PROCEDURES:

A. Filing the Transcript: Unless otherwise ordered by the Secretary or Hearing Officer, the hearing shall be transcribed verbatim. The Hearing Clerk shall promptly notify all parties and interested participants of the availability of the transcript. Any person desiring a copy of the transcript must order a copy from the reporter.

B. Proposed Findings and Conclusions: Unless otherwise ordered by the Hearing Officer, within thirty (30) days after the filing of the transcript, or within such time as may be fixed by the Hearing Officer, any party may submit proposed findings of fact and conclusions of law and closing argument. All such submissions shall be in writing, served on all parties and contain adequate references to the record and authorities relied on. No new evidence shall be presented unless specifically allowed by the Hearing Officer.

C. Recommended Decision:

(1) Content: Unless otherwise ordered by the Secretary, the Hearing Officer shall issue a recommended decision within thirty (30) days after the period for filing of proposed findings and conclusions under Section 501 [Subsection B. of this Section] has expired. The recommended decision shall contain the following:

(a) the Hearing Officer's findings of fact; conclusions regarding all material issues of law or discretion, as well as reasons therefor;

(b) if applicable, a review of the penalty amount to determine if the agency acted within its discretion in setting the penalty amount. If the Hearing Officer decides to recommend a civil penalty different in amount or nature from the penalty recommended

to be assessed in the Compliance Order, the Hearing Officer shall set forth in the recommended decision the specific reasons for the change; and

(c) a proposed final order.

(2) Comment on Recommended Decision: Any party may file, within fifteen (15) days after service of the recommended decision, comments regarding the recommended decision, including argument for, against or modification of the recommended decision.

(3) Argument Before the Secretary: The Secretary may, upon request of a party or sua sponte, allow oral argument on the recommended decision. If oral argument is allowed, the Secretary shall specify the time and place for such oral argument, after giving due consideration to the convenience of the parties and the need for expeditious resolution of the proceeding.

D. Final Order by Secretary: As soon as practicable, but not later than thirty (30) days, after expiration of the time for filing of comments on the recommended decision or conclusion of oral argument, if allowed, the Secretary shall issue a final written order in the matter.

(1) Decision: The Secretary may adopt, modify, or set aside the Hearing Officer's recommended decision, and shall set forth in the final order the reasons for the action taken. In a ULA Hearing, if the Secretary takes any action specified in the ULA against the licensee, the final order shall specify that the licensee shall bear all costs of the proceeding.

(2) Penalty: The Secretary may change the amount and nature of the civil penalty, if any, assessed from the amount recommended by the Hearing Officer and shall set forth reasons for the change. The final order shall also specify the fund to which any civil penalty assessed shall be paid.

E. Payment of Civil Penalty: The Respondent shall pay the full amount of the civil penalty, if any, assessed in the final order within ninety (90) days after receipt of the final order unless otherwise ordered by the Secretary. Payment shall be made by forwarding to the Hearing Clerk a cashier's check or certified check in the amount of the penalty assessed in the final order, payable to the fund specified in the final order.

F. Judicial Review: Judicial review of the Secretary's final order shall be as provided by law. The filing of an appeal does not stay any action, compliance, corrective action or payment of penalty required by the final order, unless otherwise ordered by the Secretary or the Court.

G. Preparation of Record Proper: The preparation of the Record Proper for an appeal or for any other reason shall be the responsibility of the Hearing Clerk.

Appellant shall make satisfactory arrangements, including copying or transcript costs, with the Hearing Clerk.

[11/15/90, 11/30/95; 20.1.5.500 NMAC – Rn, 20 NMAC 1.5.V.500 through 506, Recompiled 11/27/01]

20.1.5.501-20.1.5.599 [RESERVED]

20.1.5.600 ALTERNATE RESOLUTION:

A. Summary Procedures:

(1) Use of Summary Procedures: Under the following limited circumstances, the Secretary may dispose of a Request for Hearing after an expedited hearing for:

(a) a motion by a party to dismiss the Request for Hearing for jurisdictional defects (i.e., an untimely Request, lack of final action); or

(b) a request by a party to decide the merits of the Request for Hearing on legal arguments presented in writing and oral argument.

(2) Expedited Hearing: If the Hearing Officer determines that a request for an expedited hearing has a likelihood of success and could fairly expedite the resolution of the proceeding, then notice for a hearing shall be given as set forth in this Part. The Hearing Officer shall then submit a recommended decision to the Secretary. The Secretary shall either follow Section 503 [Subsection D. of 20.1.5.500 NMAC] for final orders or remand to the Hearing Officer to proceed with a full hearing under this Part.

B. Settlement:

(1) Settlement Policy: The Secretary encourages settlement of a proceeding at any time if the settlement is consistent with the provisions and objectives of the Act and Regulations. Settlement conferences shall not affect any party's obligation to timely respond to any matter governed by this Part, including the Respondent's obligation to file a timely Request for Hearing under Section 200 [20.1.5.200 NMAC].

(2) Stipulated Final Order: The Secretary may approve a Stipulated Final Order signed by all the parties. The Stipulated Final Order shall include all the terms and conditions agreed to by the parties, and shall state that, for the purpose of this proceeding, the parties admit the jurisdictional allegations of the Compliance Order/Determination and consent to the relief specified, including the assessment of the stated civil penalty, if any. If the Secretary disapproves the Stipulated Final Order, the matter shall proceed as if there had been no Stipulated Final Order or settlement.

(3) Withdrawal: The Respondent/Complainant may withdraw the Request for Hearing or the Compliance Order at any time prior to a decision by the Secretary. A

Notice of Withdrawal shall be filed with the Hearing Clerk and served on all other parties. The parties may file written objections to the Notice within ten (10) days after receipt. If any objection is filed, the Secretary shall rule on the Notice.

[11/15/90, 11/30/95; 20.1.5.600 NMAC – Rn, 20 NMAC 1.5.VI.601, Recompiled 11/27/01]

20.1.5.601-20.1.5.699 [RESERVED]

PART 6: RULEMAKING PROCEDURES - WATER QUALITY CONTROL COMMISSION

20.1.6.1 ISSUING AGENCY:

New Mexico Water Quality Control Commission.

[20.1.6.1 NMAC - Rp, 20.1.6.1 NMAC, 03/16/2018]

20.1.6.2 SCOPE:

This part governs the procedures to be followed by the commission, and by participants before the commission, in connection with all rulemaking hearings before the commission, except to the extent this part may be inconsistent with specific procedures in governing law. In cases where this part is inconsistent with any rulemaking procedures specified in governing law, the procedures in governing law apply, rather than the procedures in this part.

[20.1.6.2 NMAC - Rp, 20.1.6.2 NMAC, 03/16/2018]

20.1.6.3 STATUTORY AUTHORITY:

Subsection E of Section 74-6-4 NMSA 1978 directs the commission to adopt, promulgate and publish regulations. Section 74-6-6 NMSA 1978 requires a public hearing prior to the adoption, amendment or repeal of a regulation, and specifies requirements for such a hearing. Sections 14-4-1 through 14-4-11 NMSA 1978 require specific public notice process and specifies filing requirements with the State Records Administrator.

[20.1.6.3 NMAC - Rp, 20.1.6.3 NMAC, 03/16/2018]

20.1.6.4 DURATION:

Permanent.

[20.1.6.4 NMAC - Rp, 20.1.6.4 NMAC, 03/16/2018]

20.1.6.5 EFFECTIVE DATE:

March 16, 2018, unless a later date is cited at the end of a section.

[20.1.6.5 NMAC - Rp, 20.1.6.5 NMAC, 03/16/2018]

20.1.6.6 OBJECTIVE:

The objectives of this rule are:

A. to standardize the procedures used in rulemaking proceedings before the commission;

B. to encourage public participation in the hearings conducted by the commission for the promulgation of regulations;

C. to make possible the effective presentation of the evidence and points of view of parties and members of the general public;

D. to allow all interested persons a reasonable opportunity to submit data, views or arguments orally or in writing; and

E. to assure that commission hearings are conducted in a fair and equitable manner.

[20.1.6.6 NMAC - Rp, 20.1.6.6 NMAC, 03/16/2018]

20.1.6.7 DEFINITIONS:

As used in this part:

A. "Act" means the Water Quality Act, Sections 74-6-1 through 74-6-17 NMSA 1978.

B. "Commission administrator" means the department employee designated by the secretary of environment to provide staff support to the commission.

C. "Commission" means the water quality control commission.

D. "Constituent agency" means any or all agencies of the state defined as such under the act.

E. "Department" means the New Mexico environment department.

F. "Document" means any paper, exhibit, pleading, motion, response, memorandum, decision, order or other written or tangible item that is filed in a

proceeding under this part, or brought to or before the commission for its consideration, but does not include a cover letter accompanying a document transmitted for filing.

G. "Exhibit" means any document or tangible item submitted for inclusion in the hearing record.

H. "General public" means any person attending a hearing who has not submitted a notice of intent to present technical testimony.

I. "Governing law" means the statute, including any applicable case law, which authorizes and governs the decision on the proposed regulatory change.

J. "Hearing officer" means the person designated by the commission to conduct a hearing under this part.

K. "Hearing record" means:

- (1) the transcript of proceedings; and
- (2) the record proper.

L. "Participant" means any person who participates in a rulemaking proceeding before the commission.

M. "Party" means the petitioner, any person filing a notice of intent to present technical testimony, and any person filing an entry of appearance.

N. "Person" means an individual or any entity, including federal, state and local governmental entities, however organized.

O. "Petitioner" means the person who petitioned the commission for the regulatory change that is the subject of the hearing.

P. "Provide to the public" means for the commission to distribute rulemaking information by:

- (1) posting it on the commission's website;
- (2) posting it on the New Mexico sunshine portal;
- (3) making it available at the applicable constituent agency's district, field, and regional offices, if any;
- (4) sending it by email to persons who have made a written request for notice of announcements addressing the subject of the rulemaking proceeding and who have provided an email address to the commission administrator;

(5) sending it by email to persons who have participated in the rulemaking and who have provided an email address to the commission administrator;

(6) sending written notice that includes, at a minimum, an internet and street address where the information may be found to persons who provide a postal address; and

(7) providing it to the New Mexico legislative council for distribution to appropriate interim and standing legislative committees.

Q. "Record proper" means all documents related to the hearing and received or generated by the commission prior to the beginning, or after the conclusion, of the hearing, including, but not limited to:

(1) the petition for hearing and any response thereto;

(2) the minutes (or an appropriate extract of the minutes) of the meeting at which the petition for hearing was considered, and of any subsequent meeting at which the proposed regulatory change was discussed;

(3) the notice of hearing;

(4) affidavits of publication;

(5) a copy of all publications in the New Mexico register relating to the proposed rule;

(6) notices of intent to present technical testimony;

(7) a copy of any technical information that was relied upon in formulating the final rule;

(8) all written pleadings, including motions and responsive pleadings, and orders;

(9) statements for the public record or other relevant materials received by the agency during the public comment period;

(10) the hearing officer's report, if any;

(11) a copy of the full text of the initial proposed rule, the full text of the final adopted rule, and the concise explanatory statement filed with the state records administrator;

(12) post-hearing submissions, if allowed;

(13) the audio recordings (or an appropriate extract of the recordings) of the meeting(s) at which the commission deliberated on the adoption of the proposed regulatory change;

(14) the commission's decision and the reasons therefore; and

(15) any corrections made by the state records administrator pursuant to Section 14-4-3 NMSA 1978.

R. "Regulation" means any rule, regulation or standard promulgated by the commission and affecting one or more persons, besides the commission and the department, except for any order or decision issued in connection with the disposition of any case involving a particular matter as applied to a specific set of facts.

S. "Regulatory change" means the adoption, amendment or repeal of a regulation.

T. "Service" means personally delivering a copy of the document, exhibit or pleading to the person required by this part to be served; mailing it to that person; or, if that person has agreed, sending it by electronic transmission; if a person is represented by an attorney, service of the document shall be made on the attorney; service by mail is complete upon mailing the document; service by electronic transmission is complete upon transmission of the document.

U. "Technical testimony" means scientific, engineering, economic or other specialized testimony, but does not include legal argument, general comments, or statements of policy or position concerning matters at issue in the hearing.

V. "Transcript of proceedings" means the verbatim record (audio recording or stenographic) of the proceedings, testimony and argument in the matter, together with all exhibits proffered at the hearing, whether or not admitted into evidence, including the record of any motion hearings or prehearing conferences.

[20.1.6.7 NMAC - Rp, 20.1.6.7 NMAC, 03/16/2018]

20.1.6.8 LIBERAL CONSTRUCTION:

This part shall be liberally construed to carry out its purpose.

[20.1.6.8 NMAC - Rp, 20.1.6.8 NMAC, 03/16/2018]

20.1.6.9 SEVERABILITY:

If any provision or application of this part is held invalid, the remainder of this part, or its application to other situations or persons, shall not be affected.

[20.1.6.9 NMAC - Rp, 20.1.6.9 NMAC, 03/16/2018]

20.1.6.10-20.1.6.99 [RESERVED]

20.1.6.100 POWERS AND DUTIES OF THE COMMISSION AND HEARING OFFICER:

A. Commission: The commission shall exercise all powers and duties prescribed under the act and this part not otherwise delegated to the hearing officer or the commission administrator.

(1) The commission may issue procedural orders that either impose additional procedural requirements or simplify the procedures provided in this part. In no event, may the commission eliminate any procedural requirements of the act.

(2) The appointment of a hearing officer does not preclude the commissioners from attending or participating in the proceeding.

B. Hearing officer: The commission shall designate a hearing officer for each hearing who shall exercise all powers and duties prescribed or delegated under this part. The hearing officer shall conduct a fair and equitable proceeding, assure that the facts are fully elicited, and avoid delay. The hearing officer shall have authority to take all measures necessary for the maintenance of order and for the efficient, fair and impartial consideration of issues arising in proceedings governed by this part, including, but not limited to:

(1) conducting hearings under this part;

(2) ruling on motions and procedural requests that do not seek final resolution of the proceeding, and issuing all necessary orders;

(3) administering oaths and affirmations, admitting or excluding evidence, examining witnesses and allowing post-hearing submissions;

(4) making such orders as may be necessary to preserve decorum and to protect the orderly hearing process;

(5) if requested by the commission, preparing and filing a report of the hearing, with recommendations for commission action;

(6) requesting parties to file original documents with the commission administrator; and

(7) requesting a party to submit a proposed statement of reasons in support of the commission's decision.

C. Qualifications: The hearing officer may be an independent contractor or a commissioner, shall be knowledgeable of the laws of the state and of administrative hearing procedures, and shall not be:

(1) an employee of the department, except for the commissioners themselves or their designees, or unless employed by the department as a hearing officer;

(2) a person who has a personal bias or prejudice concerning a party or a party's lawyer or consultant, or has personal knowledge of disputed facts concerning the proceeding, or is related to a party within the third degree of relationship, or has a financial interest in the proceeding.

D. Notice of hearing officer assignment: If a hearing officer other than a commissioner is assigned, the commission administrator shall notify the parties of the name and address of the hearing officer. The commission administrator shall also, at that time, forward to the hearing officer copies of all documents filed to date.

[20.1.6.100 NMAC - Rp, 20.1.6.100 NMAC, 03/16/2018]

20.1.6.101 GENERAL PROVISIONS- COMPUTATION OF TIME:

A. Computation of time: In computing any period of time prescribed or allowed by this part, except as otherwise specifically provided, the day of the event from which the designated period begins to run shall not be included. The last day of the computed period shall be included, unless it is a Saturday, Sunday, or legal state holiday, in which event the time is extended until the end of the next day, which is not a Saturday, Sunday, or legal state holiday. Whenever a party must act within a prescribed period after service upon them, and service is by mail, three days is added to the prescribed period.

B. Extension of time: The commission or hearing officer may grant an extension of time for the filing of any document upon timely motion of a party to the proceeding, for good cause shown, and after consideration of prejudice to other parties.

[20.1.6.101 NMAC - Rp, 20.1.6.101 NMAC, 03/16/2018]

20.1.6.102 GENERAL PROVISIONS- RECUSAL:

No commission member shall participate in any action in which his or her impartiality of fairness may reasonably be questioned, and the member shall recuse himself or herself in any such action by giving notice to the commission and the general public by announcing this recusal on the record. In making a decision to recuse himself or herself, the commission member may rely upon the Governmental Conduct Act, Sections 10-16-1 through 10-16-18 NMSA 1978, the Financial Disclosures Act, Sections 10-16A-1 through 10-16A-8 NMSA 1978, or any other relevant authority.

[20.1.6.102 NMAC - Rp, 20.1.6.102 NMAC, 03/16/2018]

20.1.6.103 GENERAL PROVISIONS- EX PARTE DISCUSSIONS:

At no time after the commission's determination to hold a public hearing on a petition and before the issuance of the commission's written decision under this part, shall the department, or any other party, interested participant or their representatives discuss *ex parte* the merits of the proceeding with any commission member or the hearing officer.

[20.1.6.103 NMAC - Rp, 20.1.6.103 NMAC, 03/16/2018]

20.1.6.104 DOCUMENT REQUIREMENTS - FILING AND SERVICE OF DOCUMENTS:

A. The filing of any document as required by this part shall be accomplished by delivering the document to the commission administrator.

B. Any person filing any document shall:

- (1) provide the commission administrator with the original along with up to 15 copies of the document, provided that the commission administrator may waive the requirement to provide up to 15 copies if an electronic copy of the original is provided in a format acceptable for distribution to the commission members;
- (2) serve a copy of the document on each other party. If a party is represented by an attorney, service of the document shall be made on the attorney; and
- (3) include a certificate of service, as shown in Section 500 of this rule.

C. Whenever this part requires service of a document, service shall be made by delivering a copy to the person to be served by mailing it, or, if that person has agreed, by sending it by electronic transmission to that person. Agreement to be served by electronic transmission may be evidenced by placing the person's email address on a document filed pursuant to this part. Service by mail is complete upon mailing the document. Service by electronic transmission is complete upon transmission of the document.

D. Form of documents: Unless otherwise ordered by the hearing officer, all documents, except exhibits, shall be prepared on 8 ½ x 11-inch white paper, printed single-sided, and where appropriate, the first page of every document shall contain a heading and caption as shown in Section 500 of this rule.

E. Documents issued by commission or hearing officer: All documents issued by the commission or hearing officer shall be filed with the commission administrator, who shall promptly serve copies of the documents upon all parties.

[20.1.6.104 NMAC - Rp, 20.1.6.104 NMAC, 03/16/2018]

20.1.6.105 EXAMINATION OF DOCUMENTS FILED:

A. Examination allowed: Subject to the provisions of law restricting the public disclosure of confidential information, any person may, during normal business hours, inspect and copy any document filed in any rulemaking proceeding before the commission. Such documents shall be made available by the commission administrator, as appropriate and shall also be made available on the New Mexico sunshine portal. If the commission administrator determines that any part of the rulemaking record cannot be practicably displayed or is inappropriate for public display on the New Mexico sunshine portal, the commission administrator shall describe that part of the record, shall note on the New Mexico sunshine portal that the part of the record is not displayed, and shall provide instructions for accessing or inspecting that part of the record.

B. Cost of duplication: The cost of duplicating documents shall be borne by the person seeking copies of such documents, but the commission administrator shall not charge a fee for providing the notice of proposed rulemaking in electronic form.

[20.1.6.105 NMAC - Rp, 20.1.6.105 NMAC, 03/16/2018]

20.1.6.106-20.1.1.199 [RESERVED]

20.1.6.200 PREHEARING PROCEDURES - PETITION FOR REGULATORY CHANGE:

A. Any person may file a petition with the commission to adopt, amend, or repeal any regulation within the jurisdiction of the commission.

B. The petition shall be in writing and shall include a statement of the reasons for the regulatory change. The petition shall cite the relevant statutes that authorize the commission to adopt the proposed rules and shall estimate the time that will be needed to conduct the hearing. A copy of the entire rule, including the proposed regulatory change, indicating any language proposed to be added or deleted, shall be attached to the petition. The entire rule and its proposed changes shall be submitted to the commission in redline fashion, and shall include line numbers. Any document that does not include all the items required to be in a petition shall be returned to the petitioner along with a copy of these rules and a check-off list of required items, and the petitioner will be asked to resubmit their petition in the form required by these rules.

C. The commission shall determine, at a public meeting occurring no later than 90 days after receipt of the petition, whether or not to hold a public hearing on the proposal. Any person may respond to the petition either in writing prior to the public meeting or in person at the public meeting.

D. If the commission determines to hold a public hearing on the petition, it may issue such orders specifying procedures for conduct of the hearing, in addition to those provided by this part, as may be necessary and appropriate to fully inform the commission of the matters at issue in the hearing or control the conduct of the hearing. Such orders may include requirements for giving additional public notice, holding pre-hearing conferences, filing direct testimony in writing prior to the hearing, or limiting testimony or cross-examination.

[20.1.6.200 NMAC - Rp, 20.1.6.200 NMAC, 03/16/2018]

20.1.6.201 NOTICE OF HEARINGS:

A. Unless otherwise allowed by governing law and specified by the commission, the commission shall provide to the public notice of the proposed rulemaking at least 60 days prior to the hearing.

B. Public notice for proposed regulatory changes of general application to the state shall include publication in at least one newspaper of general circulation in the state, publication in the New Mexico register, and such other means of providing notice as the commission may direct or are required by law. Notice for proposed regulatory changes that are confined in effect to a specific geographic area shall also be published in a newspaper of general circulation in the area affected.

C. The notice of proposed rulemaking shall state:

(1) the subject of the proposed rule, including a summary of the full text of the proposed rule and a short explanation of the purpose of the proposed rule;

(2) a citation to the specific legal authority authorizing the proposed rule and the adoption of the rule;

(3) a citation to technical information, if any, that served as a basis for the proposed rule, and information on how the full text of the technical information may be obtained;

(4) the statutes, regulations, and procedural rules governing the conduct of the hearing;

(5) the manner in which persons may present their views or evidence to the commission including information on participating in the public hearing;

(6) the location where persons may secure copies of the proposed regulatory change;

(7) an internet link providing free access to the full text of the proposed rule;
and

(8) if applicable, that the commission may make a decision on the proposed regulatory change at the conclusion of the hearing.

[20.1.6.201 NMAC - Rp, 20.1.6.201 NMAC, 03/16/2018]

20.1.6.202 TECHNICAL TESTIMONY:

A. Any person, including the petitioner, who intends to present technical testimony at the hearing shall, no later than 20 days prior to the hearing, file a notice of intent to present technical testimony. The notice shall:

- (1) identify the person for whom the witness(es) will testify;
- (2) identify each technical witness the person intends to present, and state the qualifications of that witness, including a description of their educational and work background;
- (3) if the hearing will be conducted at multiple locations, indicate the location or locations at which the witnesses will be present;
- (4) include a copy of the direct testimony of each technical witness in narrative form, and state the estimated duration of the direct oral testimony of that witness;
- (5) include the text of any recommended modifications to the proposed regulatory change; and
- (6) list and attach all exhibits anticipated to be offered by that person at the hearing.

B. The hearing officer may enforce the provisions of this section through such action as the hearing officer deems appropriate, including, but not limited to, exclusion of the technical testimony of any witness for whom a notice of intent was not timely filed. If such testimony is admitted, the hearing officer may keep the record open after the hearing to allow responses to such testimony. The hearing officer may also require that written rebuttal testimony be submitted prior to hearing.

[20.1.6.202 NMAC - Rp, 20.1.6.202 NMAC, 03/16/2018]

20.1.6.203 ENTRY OF APPEARANCE:

Any person may file an entry of appearance as a party. The entry of appearance shall be filed no later than 20 days before the date of the hearing on the petition. In the event of multiple entries of appearance by those affiliated with one interest group, the hearing officer may consolidate the entries, or divide the service list to avoid waste of resources.

[20.1.6.203 NMAC - Rp, 20.1.6.203 NMAC, 03/16/2018]

20.1.6.204 PARTICIPATION BY GENERAL PUBLIC:

A. Any member of the general public may testify at the hearing. No prior notification is required to present non-technical testimony at the hearing. Any such member may also offer non-technical exhibits in connection with their testimony, so long as the exhibit is not unduly repetitious of the testimony.

B. A member of the general public who wishes to submit a written statement for the record, in lieu of providing oral testimony at the hearing, shall file the written statement prior to the hearing or submit it at the hearing. Written comment must be mailed or delivered to the commission administrator.

C. If the commission changes the date of the hearing or the deadline for submitting comments as stated in the notice of proposed rulemaking, the commission shall provide to the public notice of the change.

[20.1.6.204 NMAC - Rp, 20.1.6.204 NMAC, 03/16/2018]

20.1.6.205 LOCATION OF HEARING:

Unless otherwise provided by governing law, the commission shall hold hearings on proposed regulatory changes of statewide application in Santa Fe, and at other places the commission may prescribe. The commission may hold hearings on proposed regulatory changes that are not of statewide application within the area substantially affected by the proposal.

[20.1.6.205 NMAC - Rp, 20.1.6.205 NMAC, 03/16/2018]

20.1.6.206 PARTICIPATION BY CONFERENCE TELEPHONE OR OTHER SIMILAR DEVICE:

A. A member of the commission may participate in a meeting or hearing of the commission by means of a conference telephone or other similar communications equipment when it is otherwise difficult or impossible for the member to attend the meeting or hearing in person, provided that each member participating by conference telephone can be identified when speaking, all participants are able to hear each other at the same time and members of the public attending the meeting or hearing are able to hear any member of the commission who speaks at the meeting or hearing. A commission member's participation by such means shall constitute presence in person at the meeting or hearing. A commission member who needs to participate in this manner must notify the commission administrator sufficiently in advance so as to permit the commission administrator to arrange for the appropriate communications equipment.

B. A witness may participate in a hearing of the commission by means of a conference telephone or other similar communications equipment when an emergency or circumstances make it impossible for the witness to attend the hearing in person. A witness who needs to participate in this manner must receive permission from the hearing officer sufficiently in advance of the hearing so as to permit the commission administrator to arrange for the appropriate communications equipment. Each witness participating in this manner must be identified when speaking, all participants must be able to hear each other at the same time, and members of the public attending the hearing must be able to hear any witness who speaks during the hearing.

[20.1.6.206 NMAC - Rp, 20.1.6.206 NMAC, 03/16/2018]

20.1.6.207 MOTIONS:

A. General: All motions, except those made orally during a hearing, shall be in writing, specify the grounds for the motion, and state the relief sought. Each motion shall be accompanied by an affidavit, certificate or other evidence relied upon and shall be served as provided by 20.1.6.104 NMAC.

B. Unopposed motions: An unopposed motion shall state that the concurrence of all other parties was obtained. The moving party shall submit a proposed order approved by all parties for the hearing officer's review.

C. Opposed motions: Any opposed motion shall state either that concurrence was sought and denied, or why concurrence was not sought. A memorandum brief in support of such motion may be filed with the motion.

D. Response to motions: Any party upon whom an opposed motion is served shall have 15 days after service of the motion to file a response. A non-moving party failing to file a timely response shall be deemed to have waived any objection to the granting of the motion.

E. Reply to response: The moving party may, but is not required to, submit a reply to any response within 10 days after service of the response.

F. Decision: Non-dispositive motions may be decided by the hearing officer without a hearing. The hearing officer shall refer any motion that would effectively dispose of the matter to the commission for a decision, and may refer any other motion to the commission. A procedural motion may be ruled upon prior to the expiration of the time for response; any response received thereafter shall be treated as a request for reconsideration of the ruling. The hearing officer shall file all original documents with the commission administrator.

[20.1.6.207 NMAC - Rp, 20.1.6.207 NMAC, 03/16/2018]

20.1.6.208-20.1.6.299 [RESERVED]

20.1.6.300 HEARING PROCEDURES - CONDUCT OF HEARINGS:

A. The rules of civil procedure and the rules of evidence shall not apply.

B. The hearing officer shall conduct the hearing so as to provide a reasonable opportunity for all persons to be heard without making the hearing unreasonably lengthy or cumbersome, or burdening the record with unnecessary repetition. The hearing shall proceed as follows.

(1) The hearing shall begin with an opening statement from the hearing officer. The statement shall identify the nature and subject matter of the hearing and explain the procedures to be followed.

(2) The hearing officer may allow a brief opening statement by any party who wishes to make one.

(3) Unless otherwise ordered, the petitioner shall present its case first.

(4) The hearing officer shall establish an order for the testimony of other participants. The order may be based upon notices of intent to present technical testimony, sign-in sheets and the availability of witnesses who cannot be present for the entire hearing.

(5) If the hearing continues for more than one day, the hearing officer shall provide an opportunity each day for testimony from members of the general public. Members of the general public who wish to present testimony should indicate their intent on a sign-in sheet.

(6) The hearing officer may allow a brief closing argument by any person who wishes to make one.

(7) At the close of the hearing, the hearing officer shall determine whether to keep the record open for written submittals in accordance with 20.1.6.304 NMAC. If the record is kept open, the hearing officer shall determine and announce the subject(s) on which submittals will be allowed and the deadline for filing the submittals.

C. If the hearing is conducted at multiple locations, the hearing officer may require the petitioner's witnesses to summarize their testimony or be available for cross-examination at each location. Other participants are not required to testify at more than one location, and the hearing officer may prohibit a witness from testifying at more than one location.

[20.1.6.300 NMAC - Rp, 20.1.6.300 NMAC, 03/16/2018]

20.1.6.301 TESTIMONY AND CROSS-EXAMINATION:

A. All testimony will be taken under oath or affirmation which may be accomplished in mass or individually.

B. The hearing officer shall admit any relevant evidence, unless the hearing officer determines that the evidence is incompetent or unduly repetitious. The hearing officer shall require all oral testimony be limited to the position of the witness in favor of or against the proposed rule.

C. Any person who testifies at the hearing is subject to cross-examination on the subject matter of his or her direct testimony and matters affecting his or her credibility. Any person attending the hearing is entitled to conduct such cross-examination as may be required for a full and true disclosure of matters at issue in the hearing. The hearing officer may limit cross-examination to avoid harassment, intimidation, needless expenditure of time or undue repetition.

[20.1.6.301 NMAC - Rp, 20.1.6.301 NMAC, 03/16/2018]

20.1.6.302 EXHIBITS:

A. Any person offering an exhibit at hearing other than a document filed and served before the hearing shall provide at least an original and 15 copies for the commission, and a sufficient number of copies for every other party.

B. All exhibits offered at the hearing shall be marked with a designation identifying the person offering the exhibit and shall be numbered sequentially. If a person offers multiple exhibits, he shall identify each exhibit with an index tab or by other appropriate means.

C. Large charts and diagrams, models, and other bulky exhibits are discouraged. If visual aids are used, legible copies shall be submitted for inclusion in the record.

[20.1.6.302 NMAC - Rp, 20.1.6.302 NMAC, 03/16/2018]

20.1.6.303 TRANSCRIPT OF PROCEEDINGS:

A. Unless specified by the commission or the hearing officer, a verbatim transcript shall be made of the hearing, including any deliberations. The cost of the original transcript of the proceeding and of providing a copy for each commission member shall be borne by the petitioner.

B. Any person may obtain a copy of the transcript of a proceeding. It shall be obtained directly from the court reporter, and the cost of the transcript shall be paid directly to the source.

[20.1.6.303 NMAC - Rp, 20.1.6.303 NMAC, 03/16/2018]

20.1.6.304 POST-HEARING SUBMISSIONS:

The hearing officer may allow the record to remain open for a reasonable period of time following the conclusion of the hearing for written submission of additional evidence, comments and arguments, revised proposed rule language, and proposed statements of reasons. The hearing officer's determination regarding post-hearing submissions shall be announced at the conclusion of the hearing. In considering whether the record will remain open, the hearing officer shall consider the reasons why the material was not presented during the hearing, the significance of the material to be submitted and the necessity for a prompt decision.

[20.1.6.304 NMAC - Rp, 20.1.6.304 NMAC, 03/16/2018]

20.1.6.305 HEARING OFFICER'S REPORT:

If the commission directs, the hearing officer shall file a report of the hearing. The report shall identify the issues addressed at the hearing, identify the parties' final proposals, and the evidence supporting or opposing those proposals, including discussion or recommendations as requested by the commission, and shall be filed with the commission administrator within the time specified by the commission. The commission administrator shall promptly notify each party that the hearing officer's report has been filed and shall provide a copy of the report along with a notice of any deadline set for comments on that report.

[20.1.6.305 NMAC - Rp, 20.1.6.305 NMAC, 03/16/2018]

20.1.6.306 DELIBERATION AND DECISION:

A. If a quorum of the commission attended the hearing, and if the hearing notice indicated that a decision might be made at the conclusion of the hearing, the commission may immediately deliberate and make a decision on the proposed regulatory change.

B. If the commission does not reach a decision at the conclusion of the hearing, the commission administrator, following receipt of the transcript, will promptly furnish a copy of the transcript to each commission member that did not attend the hearing and, if necessary, to other commission members, commission counsel and the hearing officer. Exhibits provided to those persons at the time of the hearing need not be supplied again.

C. The commission shall reach its decision on the proposed regulatory change within 60 days following the close of the record or the date the hearing officer's report is filed, whichever is later.

D. If, during the course of its deliberations, the commission determines that additional testimony or documentary evidence is necessary for a proper decision on the

proposed regulatory change, the commission may, consistent with the requirements of due process, reopen the hearing for such additional evidence only.

E. The commission shall issue its decision on the proposed regulatory change in a suitable format, which shall include its reasons for the action taken.

F. The commission's written decision is the official version of the commission's action, and the reasons for that action. Other written or oral statements by commission members are not recognized as part of the commission's official decision or reasons.

G. If the commission fails to act on a proposed rule within two years after the notice of proposed rulemaking is published in the New Mexico register, the rulemaking is automatically terminated unless the commission acts to extend the period for an additional two years by filing a statement of good cause for the extension in the rulemaking record. If the commission extends the rulemaking period, it shall provide for additional public participation, comments, and hearing prior to adopting the rule.

H. The commission may terminate a rulemaking at any time by publishing a notice of termination in the New Mexico register. If the commission terminates a rulemaking in this manner, it shall provide to the public notice of its action.

[20.1.6.306 NMAC - Rp, 20.1.6.306 NMAC, 03/16/2018]

20.1.6.307 NOTICE OF COMMISSION ACTION:

A. The commission administrator shall provide to the public notice of the commission's action and a concise explanatory statement.

B. The adopted rule shall not take effect unless within 15 days of adoption of the rule, the commission delivers the final rule to the state records administrator, accompanied by a concise explanatory statement that contains:

- (1) the date that the commission adopted the rule;
- (2) a reference to the specific statutory authority authorizing the rule; and
- (3) any findings required by law for adoption of the rule.

C. Adoption of the final rule occurs upon signature of the written decision.

D. If the state records administrator notifies the commission of having made any minor, nonsubstantive corrections in spelling, grammar, and format in the filed rule, the commission administrator shall provide to the public notice of the correction within 30 days of receiving the state records administrator's record of correction.

[20.1.6.307 NMAC - Rp, 20.1.6.307 NMAC, 03/16/2018]

20.1.6.308-20.1.6.399 [RESERVED]

20.1.6.400 APPEAL OF REGULATIONS:

A. Appeal of any regulatory change by the commission shall be taken in accordance with governing law.

B. The appellant shall serve a copy of the notice of appeal on the commission and on each party.

C. The appellant shall be responsible for preparation of a sufficient number of copies of the hearing record at the expense of appellant.

D. Unless otherwise provided by governing law, the filing of an appeal shall not act as a stay of the regulatory change being appealed.

[20.1.6.400 NMAC - Rp, 20.1.6.400 NMAC, 03/16/2018]

20.1.6.401 STAY OF COMMISSION REGULATIONS:

A. Any person who is or may be affected by a rule adopted by the commission may file a motion with the commission seeking a stay of that rule or regulatory change. The motion shall include the reason for, and the legal authority supporting, the granting of a stay. The movant shall file and serve the motion in accordance with the requirements of Section 104 of this part at least 30 days before the meeting at which the commission will consider the motion. The commission chair will decide at which meeting the motion will be heard.

B. Unless otherwise provided by governing law, the commission may grant a stay pending appeal of any regulatory change promulgated by the commission. The commission may only grant a stay if good cause is shown after a motion is filed and a hearing is held.

C. In determining whether good cause is present for the granting of a stay, the commission, upon at least a two-thirds vote of the members voting shall consider:

- (1) the likelihood that the movant will prevail on the merits of the appeal;
- (2) whether the moving party will suffer irreparable harm if a stay is not granted;
- (3) whether substantial harm will result to other interested persons; and
- (4) whether harm will ensue to the public interest.

D. If no action is taken within 60 days after filing of the motion, the commission shall be deemed to have denied the motion for stay.

PART 7: PARENTAL RESPONSIBILITY ACT COMPLIANCE

20.1.7.1 ISSUING AGENCY[IES]:

New Mexico Environment Department and Water Quality Control Commission, and any other agency that may adopt this Part by reference.

[11/30/95; 20.1.7.1 NMAC - Rn, 20 NMAC 1.7.I.100, Recompiled 11/27/01]

20.1.7.2 SCOPE:

This Part applies to disciplinary proceedings by an issuing agency pursuant to the Parental Responsibility Act against a license, certificate, registration or permit required to engage in a profession or occupation.

[11/30/95; 20.1.7.2 NMAC - Rn, 20 NMAC 1.7.I.101, Recompiled 11/27/01]

20.1.7.3 STATUTORY AUTHORITY:

This Part is adopted pursuant to the Parental Responsibility Act, NMSA 1978, Sections 40-5A-1 to 40-5A-13, the Department of Environment Act, Section 9-7A-6, and the following licensing laws:

- A. Utility Operators Certification Act, NMSA 1978, Sections 61-33-1 et seq.;
- B. Hazardous Waste Act, NMSA 1978, Section 74-4-4.4; and
- C. Solid Waste Act, NMSA 1978, Section 74-9-8(N).

[11/30/95; 20.1.7.3 - Rn, 20 NMAC 1.7.I.102, Recompiled 11/27/01]

20.1.7.4 DURATION:

Permanent.

[11/30/95; 20.1.70.4 NMAC - Rn, 20 NMAC 1.7.I.103, Recompiled 11/27/01]

20.1.7.5 EFFECTIVE DATE:

November 30, 1995.

[11/30/95; 20.1.7.5 - Rn, 20 NMAC 1.7.I.104, Recompiled 11/27/01]

20.1.7.6 OBJECTIVE:

This Part is intended to implement the requirements of the Parental Responsibility Act as they apply to the issuance, renewal, suspension or revocation of any license, certificate, registration or permit required to engage in a profession or license by an issuing agency.

[11/30/95; 20.1.7.6 NMAC - Rn, 20 NMAC 1.7.I.105, Recompiled 11/27/01]

20.1.7.7 DEFINITIONS:

A. All terms defined in the Parental Responsibility Act shall have the same meanings in this Part unless defined below.

B. As used in this Part:

(1) "Agency" means, as the context requires, either the New Mexico Environment Department, the Water Quality Control Commission or any other agency that adopts this Part by reference. The Water Quality Control Commission delegates to the Environment Department the administration and enforcement of this Part except for the conducting of hearings and the issuance of final orders;

(2) "HSD" means the New Mexico Human Services Department;

(3) "license" means a license, certificate, registration or permit issued by an Agency that a person is required to have to engage in a profession or occupation in New Mexico;

(4) "Statement of Compliance" means a certified statement from HSD stating that an applicant or licensee is in compliance with a judgment and order for support; and

(5) "Statement of Non-compliance" means a certified statement from HSD stating that an applicant or licensee is not in compliance with a judgment and order for support.

[11/30/95; 20.1.7.7 NMAC - Rn, 20 NMAC 1.7.I.106, Recompiled 11/27/01]

20.1.7.8 GENERAL PROVISIONS: DISCIPLINARY PROCEEDINGS:

A. Disciplinary Action: If an applicant or licensee is not in compliance with a judgment and order for support, the Agency:

- (1) Shall deny an application for a license;
- (2) Shall deny the renewal of a license; and
- (3) Has grounds for suspension or revocation of a license.

B. Certified List: Upon receipt of HSD's certified list of obligors not in compliance with a judgment and order for support, the Agency shall match the certified list against the current list of Agency applicants and licensees. Upon the later receipt of an application for licensure or renewal, the Agency shall match the applicant against the current certified list. By the end of the month in which the certified list is received, the Agency shall report to HSD the names of Agency applicants and licensees who are on the certified list and the action the Agency has taken in connection with such applicants and licensees.

C. Initial Action: Upon determination that an applicant or licensee appears on the certified list, the Agency shall:

(1) Commence a formal proceeding under Section 203 [Subsection D of 20.1.7.8 NMAC] to take the appropriate action under Section 200 [Subsection A of 20.1.7.8 NMAC]; or

(2) For current licensees only, informally notify the licensee that the licensee's name is on the certified list, and that the licensee must provide the Agency with a subsequent Statement of Compliance by the earlier of the application for license renewal or a specified date not to exceed six months. If the licensee fails to provide the

Statement, the Agency shall commence a formal proceeding under Section 203 [Subsection D of 20.1.7.8 NMAC].

D. Notice of Contemplated Action: Prior to taking any action specified in Section 200 [Subsection A of 20.1.7.8 NMAC], the Agency shall serve upon the applicant or licensee a written notice stating that:

(1) The Agency has grounds to take such action, and that the Agency shall take such action unless the licensee or applicant:

(a) Mails a letter (certified mail return receipt requested) within twenty (20) days after service of the notice requesting a hearing; or

(b) Provides the Agency, within thirty (30) days of the date of the notice, with a Statement of Compliance; and

(2) If the applicant or licensee disagrees with the determination of non-compliance, or wishes to come into compliance, the applicant or licensee should contact the HSD Child Support Enforcement Division.

E. Evidence and Proof: In any hearing under this Part, relevant evidence is limited to the following:

(1) A Statement of Non-compliance is conclusive evidence that requires the Agency to take the appropriate action under section 200 [Subsection A of 20.1.7.8 NMAC], unless:

(2) The applicant or licensee can provide the Agency with a subsequent Statement of Compliance which shall preclude the Agency from taking any action based solely on the prior Statement of Non-compliance.

F. Order: When an action is taken under this Part solely because the applicant or licensee is not in compliance with a judgment and order for support, the order shall state that the application or license shall be reinstated upon presentation of a subsequent Statement of Compliance. The Agency may also include any other conditions necessary to comply with Agency requirements for reapplications or reinstatement of lapsed licenses.

G. Procedures: Proceedings under this Part shall be governed by the Uniform Licensing Act, Section 61-1-1, et seq., and any adjudicatory procedures adopted by the Agency.

[11/30/95; 20.1.7.8 NMAC - Rn, 20 NMAC 1.7.II.200 through 206, Recompiled 11/27/01]

PART 8: ENVIRONMENTAL IMPROVEMENT BOARD OPEN MEETINGS

20.1.8.1 ISSUING AGENCY:

Environmental Improvement Board.

[20.1.8.1 NMAC - N, 08-27-06]

20.1.8.2 SCOPE:

This part governs meetings conducted by the environmental improvement board in addition to the requirements of 20.1.1 NMAC, except to the extent that this part may be inconsistent with state law.

[20.1.8.2 NMAC - N, 08-27-06]

20.1.8.3 STATUTORY AUTHORITY:

This part is adopted pursuant to Sections 50-9-12, 74-1-9, 74-2-6, 74-3-5, 74-4-5 and 74-9-27 NMSA 1978.

[20.1.8.3 NMAC - N, 08-27-06]

20.1.8.4 DURATION:

Permanent.

[20.1.8.4 NMAC - N, 08-27-06]

20.1.8.5 EFFECTIVE DATE:

08-27-06, unless a later date is cited at the end of a section.

[20.1.8.5 NMAC - N, 08-27-06]

20.1.8.6 OBJECTIVE:

The objective of this part is to establish procedures for running the meeting.

[20.1.8.6 NMAC - N, 08-27-06]

20.1.8.7 DEFINITIONS:

[RESERVED]

[20.1.8.7 NMAC - N, 08-27-06]

20.1.8.8 OPEN MEETINGS RESOLUTION:

The board shall annually adopt an open meetings resolution, in accordance with the Open Meetings Act.

[20.1.8.8 NMAC - N, 08-27-06]

20.1.8.9 BOARD MEMBER PARTICIPATION:

A. Pursuant to the provisions of the Open Meetings Act, a board member may participate in a meeting of the board by means of a conference telephone or other similar communications equipment when it is otherwise difficult or impossible for the board member to attend the meeting in person.

B. Each board member participating by conference telephone must be identified when speaking, all participants must be able to hear each other at the same time and members of the public attending the meeting must be able to hear any board member who speaks during the meeting.

C. Participation by such means shall constitute presence in person at the meeting.

[20.1.8.9 NMAC - N, 08-27-06]

20.1.8.10 PROCEDURE OF BOARD MEETINGS:

Robert's Rules of Order shall generally govern the procedure of the board meetings except as otherwise provided for by relevant statute or by the board rules.

[20.1.8.10 NMAC - N, 08-27-06]

20.1.8.11 ELECTION OF BOARD OFFICERS:

A. At its last regular meeting of every calendar year, the board shall elect from its members the following officers: chair, vice-chair and secretary.

B. A member shall not be elected to the same office for more than two (2) consecutive years.

C. The board shall fill a vacancy in any of these offices at its next regular meeting after the vacancy occurs.

[20.1.8.11 NMAC - N, 08-27-06]

20.1.8.12 DUTIES OF BOARD CHAIR:

A. The chair of the board shall preside at all meetings; shall appoint all committees; shall sign all certificates of registration, vouchers and other official documents; and shall otherwise perform all duties pertaining to the office of the chair.

B. The vice-chair of the board shall, in the absence or incapacity of the chair, exercise the duties and shall possess all the powers of the chair.

[20.1.8.12 NMAC - N, 08-27-06]

20.1.8.13 DUTIES OF BOARD SECRETARY:

The secretary of the board shall be responsible for insuring the timely preparation of meeting minutes and shall consult with the board administrator in responding to requests made pursuant to the Inspection of Public Records Act.

[20.1.8.13 NMAC - N, 08-27-06]

20.1.8.14 MEETING AGENDA:

A. The board chair and vice-chair shall work with the board administrator in preparing and setting the agenda for all board meetings.

B. A board member who wishes to place an item on the meeting agenda must submit a request to the board chair and vice-chair at least fifteen (15) days in advance of the meeting at which the board member wishes the matter to be heard.

C. Any other person who wishes to place an item on the meeting agenda must submit a request in writing to the board chair and vice-chair at least twenty (20) days in advance of the meeting at which the person wishes the matter to be heard.

[20.1.8.14 NMAC - N, 08-27-06]

20.1.8.15 MEETING ATTENDANCE:

Any board member failing to attend three (3) consecutive meetings after receiving proper notice shall be recommended for removal by the governor.

[20.1.8.15 NMAC - N, 08-27-06]

PART 9: RULEMAKING PROCEDURES - ENVIRONMENT DEPARTMENT

20.1.9.1 ISSUING AGENCY:

New Mexico Environment Department.

[20.1.9.1 NMAC - Rp 20.1.9.1 NMAC, 12/11/18]

20.1.9.2 STATUTORY AUTHORITY:

This part is adopted pursuant to Section 3-29-9, Subsection D of Section 9-7A-6, and Sections 14-4-1 through 14-4-11 NMSA 1978.

[20.1.9.2 NMAC - Rp 20.1.9.2 NMAC, 12/11/2018]

20.1.9.3 SCOPE:

This part governs the procedures in all regulatory change hearings before the department pursuant to the Department of Environment Act, Subsection D of Section 9-7A-6 NMSA 1978; the Sanitary Projects Act, Sections 3-29-1 through 3-29-20 NMSA 1978; and the State Rules Act Sections 14-4-1 through 14-4-11 NMSA 1978.

[20.1.9.3 NMAC - Rp 20.1.9.3 NMAC, 12/11/2018]

20.1.9.4 DURATION:

Permanent.

[20.1.9.4 NMAC - Rp 20.1.9.4 NMAC, 12/11/2018]

20.1.9.5 EFFECTIVE DATE:

December 11, 2018, unless a later date is cited at the end of a section.

[20.1.9.5 NMAC - Rp 20.1.9.5 NMAC, 12/11/2018]

20.1.9.6 OBJECTIVE:

The purposes of this part are:

A. to standardize the procedures used in rulemaking proceedings before the department pursuant to the Department of Environment Act, the Sanitary Projects Act, and the State Rules Act;

B. to encourage public participation in the regulatory change hearings conducted by the department pursuant to the Department of Environment Act and Sanitary Projects Act;

C. to make possible the effective presentation of the evidence and points of view of parties and members of the general public;

D. to allow all interested persons a reasonable opportunity to submit data, views, or arguments orally or in writing; and

E. to assure that rulemaking proceedings pursuant to the Department of Environment Act, the Sanitary Projects Act, and the State Rules Act are conducted by the department in a fair and equitable manner.

[20.1.9.6 NMAC - Rp 20.1.9.6 NMAC, 12/11/2018]

20.1.9.7 DEFINITIONS:

As used in this part:

A. "**department**" means the New Mexico environment department;

B. "**document**" means any paper, exhibit, pleading, motion, response, memorandum, decision, order, or other written or tangible item that is filed in a proceeding under this part, or is brought to or before the secretary for consideration, but does not include a cover letter accompanying a document transmitted for filing;

C. "**exhibit**" means any document or tangible item submitted for inclusion in the hearing record;

D. "**general public**" includes any person attending a hearing who has not submitted a notice of intent to present technical testimony;

E. "**governing law**" means the statute, including any applicable case law, which authorizes and governs the decision on the proposed regulatory change;

F. "**hearing clerk**" means the department employee designated by the secretary as the hearing clerk for the department;

G. "**hearing officer**" means the person designated by the secretary of the department to conduct a hearing under this part; the hearing officer may be an employee of the department;

H. "**hearing record**" means:

(1) the transcript of proceedings; and

(2) the record proper;

I. "**participant**" means any person who participates in a rulemaking proceeding before the secretary;

J. "**party**" means the petitioner, any person filing a notice of intent to present technical testimony, and any person filing an entry of appearance;

K. "person" means an individual or entity, including federal, state, local, and tribal governmental entities, however organized;

L. "petitioner" means the person who petitioned the secretary for the regulatory change that is the subject of the rulemaking hearing;

M. "provide to the public" means for the secretary to distribute rulemaking information by:

- (1) posting it on the department website;
- (2) posting it on the New Mexico sunshine portal;
- (3) making it available at the department's district, field, and regional offices;
- (4) sending it by email to persons who have made a written request for notice of announcements addressing the subject of the rulemaking proceeding and who have provided an email address to the secretary's hearing office administrator;
- (5) sending it by email to persons who have participated in the rulemaking and who have provided an email address to the secretary's hearing office administrator;
- (6) sending written notice that includes, at a minimum, an internet and street address where the information may be found to persons who provided a postal address; and
- (7) providing it to the New Mexico legislative council service for distribution to appropriate interim and standing legislative committees.

N. "record proper" means all documents related to the hearing and received or generated by the secretary prior to the beginning, or after the conclusions, of the hearing, including but not limited to:

- (1) the petition for hearing, including the proposed regulatory change and any response thereto;
- (2) the notice of hearing;
- (3) affidavits of publication;
- (4) a copy of all publications in the New Mexico register relating to the proposed rule;
- (5) notices of intent to present technical testimony;

- (6) all written pleadings, including motions and responsive pleadings and orders;
- (7) a copy of any technical information that was relied upon in formulating the final rule;
- (8) statements for the public record or other relevant materials received by the department during the public comment period;
- (9) the hearing officer's report, if any;
- (10) a copy of the full text of the initial proposed rule, the full text of the final adopted rule, and the concise explanatory statement filed with the state records administrator;
- (11) post-hearing submissions, if allowed; and
- (12) the secretary's decision and the reasons therefore; and
- (13) any correction made by the state records administrator pursuant to Section 14-4-3 NMSA 1978.

O. "regulation" means any regulation, rule, or standard promulgated by the secretary and affecting one or more persons, besides the secretary and the department, except for any order or decision issued in connection with the disposition of any case involving a particular matter as applied to a specific set of facts;

P. "regulatory change" means the adoption, amendment or repeal of a regulation;

Q. "secretary" means the secretary of the New Mexico environment department, the secretary's designee, or any person who properly assumes the role of the secretary in the event of the secretary's recusal or disqualification.

R. "service" means personally delivering a copy of the document, exhibit, or pleading to the person required by this part to be served; mailing it to that person; or if that person has agreed, sending it by facsimile or electronic transmission; if a person is represented by an attorney, service of the document shall be made on the attorney; service by mail is complete upon mailing the document; service by facsimile or electronic transmission is complete upon transmission of the document.

S. "technical testimony" means scientific, engineering, economic, or other specialized testimony, but does not include legal argument, general comments, or statements of policy or position concerning matters at issue in the hearing; and

T. "transcript of proceedings" means the verbatim record (audio recording or stenographic) of the proceedings, testimony, and argument in the matter, together with

all exhibits proffered at the hearing, whether or not admitted into evidence, including the recording of any motion hearings or prehearing conferences.

[20.1.9.7 NMAC - Rp 20.1.9.7 NMAC, 12/11/18]

20.1.9.8 POWERS AND DUTIES OF THE DEPARTMENT AND HEARING OFFICER:

A. Department: The secretary of the department shall exercise all powers and duties prescribed by Subsection D of Section 9-7A-6 or Section 3-29-9 NMSA 1978, and by this part, and not otherwise delegated to the hearing officer. The secretary shall have the authority to take all measures necessary and appropriate to maintain an orderly, efficient and fair proceeding.

B. Hearing officer: The secretary shall designate a hearing officer for each hearing who shall exercise all powers and duties prescribed or delegated under this part. The hearing officer shall conduct a fair and equitable proceeding, assure that the facts are fully elicited, and avoid delay. The hearing officer shall have authority to take all measures necessary for the maintenance of order and or the efficient, fair, and impartial consideration of issues arising in proceedings governed by this part, including, but not limited to:

- (1) conducting hearings under this part;
- (2) ruling on motions and procedural requests that do not seek final resolution of the proceeding, and issuing all necessary orders;
- (3) administering oaths and affirmations, admitting or excluding evidence, examining witnesses, and allowing post-hearing submissions;
- (4) making such orders as may be necessary to preserve decorum and to protect the orderly hearing process;
- (5) if requested by the secretary, preparing and filing a report of the hearing, with recommendations for the secretary's action;
- (6) requesting parties to file original documents with the secretary's hearing office administrator; and
- (7) requesting a party to submit a proposed statement of reasons in support of the secretary's decision.

C. Qualifications: The hearing officer may be an independent contractor, shall be knowledgeable of the laws of the state and of administrative hearing procedures, and shall not be:

(1) an employee of the department, except for the secretary, or unless employed by the department as a hearing officer;

(2) a person who has a personal bias or prejudice concerning a party, a party's lawyer, or consultant; has personal knowledge of disputed facts concerning the proceeding; is related to a party within the third degree of relationship; or has a financial interest in the proceeding.

D. Notice of hearing officer assignment: If a hearing officer other than the secretary is assigned, the secretary's hearing office administrator shall notify the parties of the name and address of the hearing officer. The secretary's hearing office administrator shall also, at that time, forward to the hearing officer copies of all documents filed to date.

[20.1.9.8 NMAC - Rp 20.1.9.8 NMAC, 12/11/2018]

20.1.9.9 GENERAL PROVISIONS:

A. Liberal construction: This part shall be liberally construed to carry out its purpose.

B. Severability: If any part or application of this part is held invalid, the remainder of this part or its application to other persons or situations shall not be affected.

C. Computation of time: In computing any period of time prescribed or allowed by this part, except as otherwise specifically provided, the day of the event from which the designated period begins to run shall not be included. The last day of the computed period shall be included, unless it is a Saturday, Sunday, or legal state holiday, in which event the time is extended until the end of the next day, which is not a Saturday, Sunday, or legal state holiday. Whenever a party must act within a prescribed period after service upon them, and service is by mail, three days is added to the prescribed period.

D. Extension of time: The secretary or hearing officer may grant an extension of time for the filing of any document upon timely motion of a party to the proceeding, for good cause shown, and after consideration of prejudice to other parties.

[20.1.9.9 NMAC - Rp 20.1.9.9 NMAC, 12/11/2018]

20.1.9.10 DOCUMENT REQUIREMENTS – FILING, SERVICE, AND EXAMINATION:

A. The filing of any document as required by this part shall be accomplished by delivering the document to the secretary's hearing office administrator.

B. Any person filing any document shall:

(1) provide the secretary's administrator with the original document;

(2) if the document is a notice of intent to present technical testimony filed by any person other than the petitioner, serve a copy thereof on the petitioner.

C. The petitioner and any person who has filed a timely notice of intent to present technical testimony under this part may inspect all documents that have been filed in a proceeding in which they are involved as participants. Such inspection shall be permitted in accordance with the Inspection of Public Records Act, Sections 14-2-1 through 14-2-12 NMSA 1978. The secretary's hearing office administrator shall notify the petitioner and all persons who have filed a timely notice of intent to present technical testimony by email whenever any document is filed in a proceeding under this part. Any such person who does not provide an email address shall instead be notified by mail.

D. All documents filed under this part shall be made available to any person for inspection upon request and shall, to the extent required by law, be made available on the department's website and the New Mexico sunshine portal.

E. Examination allowed: Subject to the provisions of law restricting the public disclosure of confidential information, any person may, during normal business hours, inspect and copy any document filed in any rulemaking proceeding before the secretary. Such documents shall be made available by the secretary's hearing office administrator, as appropriate, and shall also be made available on the New Mexico sunshine portal. If the secretary's hearing office administrator determines that any part of the rulemaking record cannot be practicably displayed or is inappropriate for public display on the New Mexico sunshine portal, the secretary's hearing office administrator shall describe that part of the record, shall note on the New Mexico sunshine portal that the part of the record is not displayed, and shall provide instructions for accessing or inspecting that part of the record.

F. Cost of duplication: The cost of duplicating documents shall be borne by the person seeking copies of such documents, but the secretary's hearing office administrator shall not charge a fee for providing the notice of proposed rulemaking in electronic form.

[20.1.9.10 NMAC – Rp 20.1.9.10 NMAC, 12/11/2018]

20.1.9.11 EX PARTE DISCUSSIONS:

At no time after the filing of a petition under this part shall any petitioner or member of the public discuss ex parte the merits of the proceeding with the secretary or hearing officer. This prohibition does not preclude department staff who are not and have not been involved in the petition from conferring with the secretary or hearing officer.

[20.1.9.11 NMAC - Rp 20.1.9.11 NMAC, 12/11/2018]

20.1.9.12 PREHEARING PROCEDURES:

A. Petition for regulatory changes.

(1) Any person, including the department, may file a petition with the secretary to adopt, amend or repeal any regulation within the jurisdiction of the secretary.

(2) If the department is the petitioner and intends to file a petition under the Sanitary Projects Act, the department shall prepare the proposed regulatory change in consultation with representatives of the associations as defined in Section 3-29-2 NMSA 1978.

(3) The petition shall be in writing and shall include a statement of reasons for the regulatory change. The proposed regulatory change, indicating any language to be added or deleted, shall be attached to the petition.

(4) The secretary shall determine no later than 60 days after receipt of the petition whether or not to hold a public hearing on the petition.

(5) If the secretary determines to hold a public hearing on the petition, the secretary may issue such orders specifying procedures for the conduct of the hearing, in addition to those provided by this part, as may be necessary and appropriate.

B. Notice of hearings.

(1) The secretary shall provide to the public notice of the proposed rulemaking at least 30 days prior to the hearing. Notice of the proposed rulemaking shall include publication in at least one newspaper of general circulation in the state, publication in the New Mexico register, the department's website, and such other means as the secretary may direct or are required by law.

(2) The notice of proposed rulemaking shall state:

(a) the subject of the proposed rule, including a summary of the full text of the proposed rule and a short explanation of the purpose of the proposed rule;

(b) a citation to the specific legal authority authorizing the proposed rule and a short explanation of the purpose of the proposed rule;

(c) a citation to technical information, if any, that served as a basis for the proposed rule, and information on how the full text of the technical information may be obtained;

(d) the statutes, regulations, and procedural rules governing the conduct of the hearing;

(e) the manner in which persons may present their views or evidence to the secretary, including the time, place, and information on participating in the public hearing;

(f) the location where persons may secure copies of the full text of the proposed regulatory change;

(g) an internet link providing free access to the full text of the proposed rule;
and

(h) if applicable, that the secretary may make a decision on the proposed regulatory change at the conclusion of the hearing.

C. Participation by public.

(1) Any member of the general public may testify at the hearing. No prior notification is required to present non-technical testimony at the hearing. Any such member may also offer non-technical exhibits in connection with his or her testimony, so long as the exhibit is not unduly repetitious of the testimony.

(2) Any member of the general public who wishes to submit a written statement for the record, in lieu of giving oral testimony at the hearing, shall file the written statement prior to the hearing or submit it at the hearing. Written comment must be mailed or delivered to the secretary's administrator.

D. Location of hearing: Unless otherwise permitted by governing law, the secretary shall hold hearings on proposed regulatory changes in Santa Fe and at other places the secretary may prescribe.

E. If the secretary changes the date of the hearing or the deadline for submitting comments as stated in the notice of proposed rulemaking, the secretary shall provide notice to the public of the change.

[20.1.9.12 NMAC - Rp 20.1.9.12 NMAC, 12/11/2018]

20.1.9.13 TECHNICAL TESTIMONY:

A. Any person, including the petitioner, who intends to present technical testimony at the hearing shall, no later than 15 days prior to the hearing, file a notice of intent to present technical testimony with the secretary's hearing office administrator. The notice shall:

(1) identify the person for whom the witness(es) will testify;

(2) identify each technical witness the person intends to present and state the qualifications of that witness, including a description of their education and work background;

(3) if the hearing will be conducted at multiple locations, indicate the location or locations at which the witnesses will be present;

(4) include a copy of the direct testimony of each technical witness in narrative form;

(5) include the text of any recommended modifications to the proposed regulatory change; and

(6) list and attach all exhibits anticipated to be offered by that person at the hearing, including any proposed statement of reasons for adoption of rules.

B. The hearing officer may enforce the provisions of this section through such action as the hearing officer deems appropriate, including, but not limited to, exclusion of the technical testimony of any witness for whom a notice of intent was not timely filed. If such testimony is admitted, the hearing officer may keep the record open after the hearing to allow responses to such testimony. The hearing officer may also require that written rebuttal testimony be submitted prior to the hearing.

[20.1.9.13 NMAC - Rp 20.1.9.13 NMAC, 12/11/2018]

20.1.9.14 ENTRY OF APPEARANCE:

Any person may file an entry of appearance as a party. The entry of appearance shall be filed with the secretary's hearing office administrator no later than 20 days before the date of the hearing on the petition. In the event of multiple entries of appearance by those affiliated with one interest group, the hearing officer may consolidate the entries, or divide the service list to avoid waste of resources.

[20.1.9.14 NMAC - Rp 20.1.9.14 NMAC, 12/11/2018]

20.1.9.15 PARTICIPATION BY CONFERENCE TELEPHONE OR OTHER SIMILAR DEVICE:

A witness may participate in a rulemaking hearing before the secretary by means of a telephone conference or other similar communications equipment when an emergency or circumstances make it impossible for the witness to attend the hearing in person. A witness who wishes to participate in a rulemaking hearing in this manner must receive permission from the hearing officer or the secretary sufficiently in advance of the rulemaking hearing. No witness may participate in a rulemaking hearing by telephone conference unless the witness makes a request sufficiently in advance of the rulemaking hearing so as to permit the secretary's hearing office administrator to

arrange for an adequate telephone hookup. Each witness participating by telephone must be identified when speaking, all participants must be able to hear each other at the same time, and members of the public attending the hearing must be able to hear any witness who speaks during the hearing.

[20.1.9.15 NMAC – N, 12/11/2018]

20.1.9.16 MOTIONS:

A. General: All motions, except those made orally during a hearing, shall be in writing, specify the grounds for the motion and state the relief sought. Each motion shall be accompanied by an affidavit, certificate, or other evidence relied upon and shall be served as provided by 20.1.9.10 NMAC.

B. Unopposed motions: An unopposed motion shall state that the concurrence of all other parties was obtained. The moving party shall submit a proposed order approved by all parties for the hearing officer's review.

C. Opposed motions: Any opposed motion shall state either that concurrence was sought and denied, or why concurrence was not sought. A memorandum brief in support of such motion may be filed with the motion.

D. Response to motions: Any party upon whom an opposed motion is served shall have 15 days after service of the motion to file a response. A non-moving party failing to file a timely response shall be deemed to have waived any objection to the granting of the motion.

E. Reply to response: The moving party may, but is not required to, submit a reply to any response within 10 days after service of the response.

F. Decision: All motions shall be decided by the hearing officer without a hearing, unless otherwise ordered by the hearing officer *sua sponte* or upon written request of any party. The hearing officer shall refer any motion that would effectively dispose of the matter, and may refer any other motion, to the secretary for a decision. A procedural motion may be ruled upon prior to the expiration of the time for response; any response received thereafter shall be treated as a request for reconsideration of the ruling. The hearing officer shall file all original documents with the secretary's hearing office administrator.

[20.1.9.16 NMAC – N, 12/11/2018]

20.1.9.17 HEARING PROCEDURES – CONDUCT OF HEARINGS:

A. The rules of civil procedure and the rules of evidence shall not apply.

B. The hearing officer shall conduct the hearing so as to provide a reasonable opportunity for all persons to be heard without making the hearing unreasonably lengthy or cumbersome or burdening the record with unnecessary repetition. The hearing shall proceed as follows:

(1) The hearing shall begin with an opening statement from the hearing officer. The statement shall identify the nature and subject matter of the hearing and explain the procedures to be followed.

(2) The hearing officer may allow a brief opening statement by any party who wishes to make one.

(3) Unless otherwise ordered, the petitioner shall present its case first.

(4) The hearing officer shall establish an order for the testimony of other participants. The order may be based upon notices of intent to present technical testimony, sign-in sheets, and the availability of witnesses who cannot be present for the entire hearing.

(5) If the hearing continues for more than one day, the hearing officer shall provide an opportunity each day for testimony from the members of the general public. Members of the general public who wish to present testimony should indicate their intent on a sign-in sheet.

(6) The hearing officer may allow a brief closing argument by any person who wishes to make one.

(7) At the close of the hearing, the hearing officer shall determine whether to keep the record open for written submittals in accordance with 20.1.9.21 NMAC. If the record is kept open, the hearing officer shall determine and announce the subject(s) on which submittals will be allowed and the deadline for filing the submittals.

C. If the hearing is conducted at multiple locations, the hearing officer may require the petitioner's witnesses to summarize their testimony or be available for cross-examination at each location. Other participants are not required to testify at more than one location, and the hearing officer may prohibit a witness from testifying at more than one location.

[20.1.9.17 NMAC - N, 12/11/2018]

20.1.9.18 TESTIMONY AND CROSS-EXAMINATION:

A. All testimony will be taken under oath or affirmation which may be accomplished en masse or individually.

B. The hearing officer shall admit any relevant evidence, unless the hearing officer determines that the evidence is incompetent or unduly repetitious. The hearing officer shall require all oral testimony be limited to the position of the witness in favor or against the proposed rule.

C. Any person who testifies at the hearing is subject to cross-examination on the subject matter of his or her direct testimony and matters affecting his or her credibility. Any person attending the hearing is entitled to conduct such cross-examination as may be required for a full and true disclosure of matters at issue in the hearing. The hearing officer may limit cross-examination to avoid harassment, intimidation, needless expenditure of time, or undue repetition.

[20.1.9.18 NMAC - N, 12/11/2018]

20.1.9.19 EXHIBITS:

A. Any person offering an exhibit at hearing, other than a document filed and served before the hearing, shall provide an original for the secretary and a sufficient number of copies for every other party.

B. All exhibits offered at the hearing shall be marked with a designation identifying the person offering the exhibit and shall be numbered sequentially. If a person offers multiple exhibits, he or she shall identify each exhibit with an index tab or by other appropriate means.

C. Large charts and diagrams, models, and other bulky exhibits are discouraged. If visual aids are used, legible copies shall be submitted for inclusion in the record.

[20.1.9.19 NMAC - N, 12/11/2018]

20.1.9.20 TRANSCRIPT OF PROCEEDINGS:

A. Unless specified by the secretary or hearing officer, a verbatim transcript shall be made of the hearing. The cost of the original transcript of the proceeding and of providing a copy for each member shall be borne by the petitioner.

B. Any person may obtain a copy of the transcript of a proceeding. It shall be obtained directly from the court reporter, and the cost of the transcript shall be paid directly to the source.

[20.1.9.20 NMAC - N, 12/11/2018]

20.1.9.21 POST-HEARING SUBMISSIONS:

The hearing officer may allow the record to remain open for a reasonable period of time following conclusion of the hearing for written submission of additional evidence,

comments arguments, and proposed statements of reasons. The hearing officer's determination regarding post-hearing submissions shall be announced at the conclusion of the hearing. In considering whether the record will remain open, the hearing officer shall consider the reasons why the material was not presented during the hearing, the significance of material to be submitted, and the necessity for a prompt decision. If the record is kept open, the hearing officer shall determine and announce the subject(s) on which submittals will be allowed and the deadline for filing the submittals.

[20.1.9.21 NMAC - N, 12/11/2018]

20.1.9.22 HEARING OFFICER'S REPORT:

If the secretary directs, the hearing officer shall file a report of the hearing. The report shall identify the issues addressed at the hearing, identify the parties' final proposals, and the evidence supporting those proposals, including discussion or recommendations as requested by the secretary, and shall be filed with the secretary's administrator within the time specified by the secretary. The secretary's hearing office administrator shall promptly notify each party that the hearing officer's report has been filed and shall provide a copy of the report along with a notice of any deadline set for comments on that report.

[20.1.9.22 NMAC - N, 12/11/2018]

20.1.9.23 DELIBERATION AND DECISION:

A. If the hearing notice indicated that a decision might be made at the conclusion of the hearing, the secretary may immediately make a decision on the proposed regulatory change.

B. The secretary shall reach a decision on the proposed regulatory change within 60 days following close of the record or the date the hearing officer's report is filed, whichever is later.

C. If the secretary determines that additional testimony or documentary evidence is necessary for a proper decision on the proposed regulatory change, the secretary may, consistent with the requirements of due process, reopen the hearing for such additional evidence only.

D. The secretary shall issue a decision on the proposed regulatory change in a suitable format which shall include the secretary's reasons for the action taken.

E. The secretary's written decision is the official version of the secretary's action, and the reasons for that action. Other written or oral statements by the secretary are not recognized as part of the secretary's official decision.

F. If the secretary fails to act on a proposed regulatory change within two years after the notice of proposed rulemaking is published in the New Mexico register, the rulemaking is automatically terminated unless the secretary acts to extend the period for an additional two years by filing a statement of good cause for the extension in the rulemaking record. If the secretary extends the rulemaking period, the secretary shall provide for additional public participation, comments, and hearing(s) prior to adopting the rule.

G. The secretary may terminate a rulemaking at any time by publishing a notice of termination in the New Mexico register. If the secretary terminates a rulemaking in this manner, the secretary shall provide to the public notice of the action.

[20.1.9.23 NMAC - N, 12/11/2018]

20.1.9.24 NOTICE OF SECRETARY ACTION:

A. The secretary's administrator shall provide to the public notice of the secretary's action and a concise explanatory statement.

B. The adopted rule shall not take effect unless within 15 days of adoption of the rule, the secretary delivers the final rule to the state records administrator, accompanied by a concise explanatory statement that contains:

- (1)** the date that the secretary adopted the rule;
- (2)** the effective date of the rule;
- (3)** a reference to the specific statutory or other authority authorizing the rule;
- (4)** any findings required by law for adoption of the rule;
- (5)** reasons for any change between the published proposed rule and the final rule; and
- (6)** reasons for not accepting substantive argument made through public comment.

C. Adoption of the final rule occurs upon signature of the written decision.

D. If the state records administrator notifies the secretary of having made any minor, non-substantive corrections in spelling, grammar, or format in the filed rule, the secretary's hearing office administrator shall provide to the public notice of the correction within 30 days of receiving the state records administrator's record of correction.

[20.1.9.24 NMAC - N, 12/11/2018]

20.1.9.25 STAYS AND APPEALS OF SECRETARY REGULATIONS:

A. Any person who is or may be affected by a rule adopted by the secretary may file a motion with the secretary's hearing administrator seeking a stay of that rule or regulatory change. The motion shall include the reason for, and the legal authority supporting, the granting of a stay. The movant that serve the motion for a say as provided by this part and shall further serve all parties in the rulemaking proceeding. The secretary will decide when the motion will be heard. Unless otherwise ordered by the secretary or otherwise provided by law, the filing of an appeal shall not act as a stay on the regulatory change being appealed.

B. Unless otherwise provided by governing law, the secretary may grant a stay pending appeal of any regulatory change promulgated by the secretary. The secretary may only grant a stay if good cause is shown after a motion is filed and a hearing is held.

C. In determining whether good cause is present for the granting of a stay, the secretary shall consider:

- (1)** the likelihood that the movant will prevail on the merits of the appeal;
- (2)** whether the moving party will suffer irreparable harm if a stay is not granted;
- (3)** whether substantial harm will result to other interested persons; and
- (4)** whether harm will ensue to the public interest.

D. If no action is taken within 60 days after filing the motion, the secretary shall be deemed to have denied the motion for stay.

E. Appeal of any final decision of the secretary shall be taken in accordance with the governing law.

F. The appellant shall service a copy of the appeal on the secretary and the petitioner.

G. The appellant shall be responsible for preparation of a sufficient number of copies of the hearing record at the appellant's expense.

[20.1.9.25 NMAC - N, 12/11/2018]

CHAPTER 2: AIR QUALITY (STATEWIDE)

PART 1: GENERAL PROVISIONS

20.2.1.1 ISSUING AGENCY:

New Mexico Environmental Improvement Board.

[09/05/95; 20.2.1.1 NMAC - Rn, 20 NMAC 2.1.100, 10/31/02]

20.2.1.2 SCOPE:

The provisions of this part apply to all parts of this chapter.

[09/05/95; 20.2.1.2 NMAC - Rn, 20 NMAC 2.1.101, 10/31/02]

20.2.1.3 STATUTORY AUTHORITY:

Statutory authority comes from the *Environmental Improvement Act*, NMSA 1978, Sections 74-1-1 et seq., and the *Air Quality Control Act*, NMSA 1978, Sections 74-2-1 et seq.

[09/05/95; 20.2.1.3 NMAC - Rn, 20 NMAC 2.1.102, 10/31/02]

20.2.1.4 DURATION:

Permanent.

[09/05/95; 20.2.1.4 NMAC - Rn, 20 NMAC 2.1.103, 10/31/02]

20.2.1.5 EFFECTIVE DATE:

October 27, 1995, unless a later date is cited at the end of a section.

[09/05/95, 10/27/95; 20.2.1.5 NMAC - Rn, 20 NMAC 2.1.104, 10/31/02; A, 06/01/10]

[The latest effective date of any section in this part is 02/27/15]

20.2.1.6 OBJECTIVE:

The purpose of this Part (20.2.1 NMAC) is to establish general provisions which apply to all parts of this chapter (20.2.1 through 20.2.99 NMAC).

[09/05/95; 20.2.1.6 NMAC - Rn, 20 NMAC 2.1.105, 10/31/02]

20.2.1.7 DEFINITIONS:

[RESERVED]

20.2.1.8-20.2.1.105 [RESERVED]

20.2.1.106 AMENDMENT AND SUPERSESSION OF PRIOR REGULATIONS:

A. This part amends and supersedes Air Quality Control Regulations (AQCRs):

- (1) 110, *Confidential Information Protection*, last filed May 29, 1990;
- (2) 701, *Procedures for Requesting a Variance Hearing*, last filed Oct. 7, 1975;
- (3) 1001, *Sampling Equipment*, last filed Jan. 27, 1970;
- (4) 1101, *Severability*, last filed Jan. 27, 1970;
- (5) 1201, *Effective Date*, last filed Jan. 27, 1970;
- (6) 1301, *Conflicts*, last filed Jan. 27, 1970.

B. All references to AQCRs 110, 701, 1001, 1101, 1201 and 1301 in any other rule shall be understood as a reference to this part.

[09/05/95, 10-27-95; 20.2.1.106 NMAC - Rn, 20 NMAC 2.1.106, 10/31/02]

20.2.1.107 SEVERABILITY:

If any provision or application of any part under Chapter 2 of Title 20 is held invalid, the remainder, or its application to other situations or persons, shall not be affected.

[09/05/95; 20.2.1.107 NMAC - Rn, 20 NMAC 2.1.107, 10/31/02]

20.2.1.108 SAVING CLAUSE:

Supersession of any Air Quality Control Regulation (AQCR) shall not affect any administrative or judicial enforcement action pending on the effective date of any part under Chapter 2 of Title 20, nor the validity of any permit issued pursuant to any AQCR.

[09/05/95; 20.2.1.108 NMAC - Rn, 20 NMAC 2.1.108, 10/31/02; A, 02/27/15]

20.2.1.109 CONSTRUCTION:

Any part under Chapter 2 of Title 20 shall be liberally construed to effectuate the purpose of the *Environmental Improvement Act*, NMSA 1978, 74-1-1 et seq. and the *Air Quality Control Act*, NMSA 1978, 74-2-1 et seq.

[09/05/95; 20.2.1.109 NMAC - Rn, 20 NMAC 2.1.109, 10/31/02]

20.2.1.110 COMPLIANCE WITH OTHER REGULATIONS:

Compliance with any part under Chapter 2 of Title 20 does not relieve a person from the obligation to comply with other applicable state and federal regulations.

[09/05/95; 20.2.1.110 NMAC - Rn, 20 NMAC 2.1.110, 10/31/02]

20.2.1.111 AVAILABILITY OF MATERIALS INCORPORATED BY REFERENCE:

Materials incorporated by reference into any part under Chapter 2 of Title 20 may be viewed at the state records center or at the New Mexico environment department, air quality bureau.

[09/05/95; 20.2.1.111 NMAC - Rn, 20 NMAC 2.1.111, 10/31/02; A, 02/27/15]

[As of 02/27/15, the State Records Center is located at 1205 Camino Carlos Rey, Santa Fe, NM 87505; and the New Mexico Environment Department, Air Quality Bureau, is located at 525 Camino de los Marquez, Suite 1, Santa Fe, NM, 87505]

20.2.1.112 EFFECT OF STAY OR INVALIDATION OF INCORPORATED FEDERAL REGULATIONS:

If a federal court stays, invalidates or otherwise renders unenforceable by the environmental protection agency (EPA), in whole or in part, any federal regulation incorporated by reference in any part under Chapter 2 of Title 20, such incorporated federal regulation shall be enforceable by the department only to the extent it is enforceable by EPA.

[09/05/95; 20.2.1.112 NMAC - Rn, 20 NMAC 2.1.112, 10/31/02]

20.2.1.113 SAMPLING EQUIPMENT:

When directed by the environment department, or its designated representative, the necessary openings for sampling equipment shall be provided on stacks or other openings through which emissions are released to the atmosphere.

[09/05/95; 20.2.1.113 NMAC - Rn, 20 NMAC 2.1.113, 10/31/02]

20.2.1.114 PETITION PROCEDURES FOR REQUESTING A VARIANCE HEARING:

A. Definition: As used in this section (part), "**petitioner**" means a person seeking a variance from a regulation of the environmental improvement board or limitation prescribed under the *Air Quality Control Act* pursuant to NMSA 1978, Section 74-2-8.

B. Petition procedures:

(1) Any person seeking a variance from a regulation of the environmental improvement board, or a permit condition imposed by the department, or from the

limitations prescribed under the *Air Quality Control Act* pursuant to Section 74-2-8 NMSA 1978, shall do so by filing a written petition with the secretary. Petition forms may be obtained from the environment department.

(2) Petitions shall:

- (a) state the petitioner's name and address;
- (b) state the date of the petition;
- (c) describe the facility or activity for which the variance is sought;
- (d) state the address or description of the property upon which the facility is located;
- (e) identify the regulation of the board or limitation prescribed under the *Air Quality Control Act* from which the variance is sought;
- (f) state in detail the extent to which the petitioner wishes to vary from the regulation or limitations;
- (g) state why the petitioner believes the variance is justified; and
- (h) state the period of time for which the variance is desired.

(3) The petitioner may submit with the petition any relevant documents or material which the petitioner believes would support the petition.

C. The environment department's response and any further action and proceedings shall be in accordance with general adjudicatory procedures of the environmental improvement board.

[10/27/95; 20.2.1.114 NMAC - Rn, 20 NMAC 2.1.114, 10/31/02]

20.2.1.115 CONFIDENTIAL INFORMATION PROTECTION:

A. Definitions: As used in this section:

- (1) "**Claimant**" refers to a person or business who makes a claim of confidentiality.
- (2) "**Confidential business information**" refers broadly to information that, if made public, would harm a business' competitive position. This includes trade secrets and may include data relating to the profits and costs of the owner or operator which have not previously been released to the public.

(3) **"Nature and amount of emissions"** means information necessary to determine the identity, amount, frequency, concentration, or other characteristics (to the extent related to air quality) of any air contaminant emission and includes a general description of the location and nature of the source.

(4) **"Source"** or **"stationary source"** means any building, structure, equipment, facility, installation (including temporary installations), operation or portable stationary source which emits or may emit any air contaminant. Any research facility may group its sources for the purpose of this section, at the discretion of the secretary.

(5) **"Trade secret"** refers to a secret plan or process, tool or mechanism unique to the owner or operator of a business.

B. Confidentiality determinations: The environment department shall keep confidential trade secrets or confidential business information under applicable legal principles to the extent that:

(1) business information furnished to or obtained by the environment department concerning air contaminant sources shall be considered for confidential treatment if specifically marked as confidential at the time such information is submitted;

(2) the department is not required to disclose this information pursuant to a statutory provision; and

(3) the following conditions are satisfied:

(a) the claimant has asserted a claim of confidentiality which has not been waived, withdrawn or denied;

(b) the claimant has satisfactorily shown that it has taken reasonable measures to protect the confidentiality of the information, and that it intends to continue to take such measures;

(c) the information is not, and has not been, reasonably obtainable without the business' consent; and

(d) the claimant has satisfactorily shown that disclosure of the information is likely to cause substantial harm to the business' competitive position.

C. This Section (20.2.1.115 NMAC) shall not be construed to prohibit disclosure of records and information:

(1) to other officers, employees or authorized representatives of the department, the local agency, the environmental improvement board, or the local board concerned with carrying out the *Air Quality Control Act*,

(2) to officers, employees or authorized representatives of the United States environmental protection agency concerned with carrying out the federal act;

(3) when relevant, in any proceeding under the *Air Quality Control Act* or the federal act;

(4) of data concerning the nature and amount of emissions from any source;
or

(5) limit the use of such records or information in any civil or criminal action, subject to such protection as the court may give.

D. Procedures for handling requests for confidentiality:

(1) The department's office of general counsel (OGC) in each case shall determine whether and to what extent the information qualifies for confidential treatment under this section.

(2) If the department determines it will need additional information in order to decide whether information submitted by the claimant qualifies for confidential treatment, the department shall send the claimant a written notice requesting additional information.

(a) The claimant shall submit the requested additional information within thirty (30) days of receiving the department's request. The department shall keep the claimant's information confidential and not disclose it to the public during that thirty (30) day time period.

(b) If the claimant does not submit the requested additional information within the thirty (30) day time period, then the department shall assume that the claimant has abandoned or withdrawn the claim of confidentiality, and may release the information to the public upon request (following the expiration of the thirty (30) day period).

(3) Within thirty (30) days of receiving material marked as confidential or within thirty (30) days of receiving any additional information the department requested, the department shall determine whether and to what extent the information qualifies for confidential treatment under this section.

(4) Once a decision is reached, the department shall send the claimant a written notice of the decision by certified mail.

(5) If the department notifies a claimant that his or her claim of confidentiality will not be honored, the department shall not make the information available for public inspection or copying for thirty (30) days in order to give the claimant an opportunity to request administrative review of the decision. The department shall not make the

information available for public inspection or copying while an administrative review, or legal action to prevent disclosure, is pending.

(6) Business information that has been determined to be confidential shall not be made a part of any public record unless the claimant expressly agrees to its publication.

E. Administrative review: Every claimant has the right to request additional review of any denial of a request for confidential treatment of business information or documents. The secretary shall be responsible for conducting reviews of denials made by department personnel. The secretary shall use his or her best efforts to review denials within thirty (30) days of receiving the request for review.

[10/27/95; 20.2.1.115 NMAC - Rn, 20 NMAC 2.1.115, 10/31/02]

20.2.1.116 SIGNIFICANT FIGURES:

A. All emissions standards are deemed to have at least two significant figures, but not more than three significant figures.

B. At least five significant figures shall be retained in all intermediate calculations.

C. In calculating emissions to determine compliance with an emission standard, the following rounding off procedures shall be used:

(1) if the first digit to be discarded is less than the number five, the last digit retained shall not be changed;

(2) if the first digit discarded is greater than the number five, or if it is the number five followed by at least one digit other than the number zero, the last figure retained shall be increased by one unit; and

(3) if the first digit discarded is exactly the number five, followed only by zeros, the last digit retained shall be rounded upward if it is an odd number, but no adjustment shall be made if it is an even number.

D. The final result of the calculation shall be expressed in the units of the standard.

[20.2.1.116 NMAC - N, 06/01/10; A, 02/27/15]

20.2.1.117 ELECTRONIC REPORTING AND PERMIT APPLICATIONS:

A. Applicability. Pursuant to the *Cross-Media Electronic Reporting Rule* (CROMERR) as defined by Title 40 of the Code of Federal Regulations (CFR) Part 3, and the *Uniform Electronic Transactions Act*, NMSA 1978, Sections 14-16-1 to -21 (2001 as amended through 2013), any submittal to the department required by any part

under Chapter 2, *Air Quality (Statewide)*, of Title 20, *Environmental Protection*, of the New Mexico administrative code, for which the department has notified persons subject to the applicable requirement that it is accepting specified electronic documents in lieu of paper, shall be submitted electronically, provided that the method of submittal complies with applicable federal and state standards for electronic submissions. The department may grant a waiver of this requirement on a case-by-case basis if requested by the regulated source.

B. Deadline extension due to computer system failure.

(1) If electronic submittal capability is in place, but the department's electronic document receiving system is temporarily unavailable, then the department may grant a deadline extension to the regulated source.

(2) If electronic submittal capability is in place, but the regulated source's computer system or its internet service provider is temporarily unavailable, then the source may request a deadline extension. The department may grant a deadline extension to the regulated source.

[20.2.1.117 NMAC - N, 02/27/15]

PART 2: DEFINITIONS

20.2.2.1 ISSUING AGENCY:

New Mexico Environmental Improvement Board.

[10/27/95; 20.2.2.1 NMAC - Rn, 20 NMAC 2.100, 10/31/02]

20.2.2.2 SCOPE:

The provisions of this part shall apply to all New Mexico regulations regarding air quality, and codified as 20.2.3 NMAC through 20.2.99 NMAC.

[10/27/95; 20.2.2.2 NMAC - Rn, 20 NMAC 2.101, 10/31/02]

20.2.2.3 STATUTORY AUTHORITY:

The environmental improvement board "shall promulgate regulations and standards in ... air quality management" (NMSA 1978, section 74-1-8.A) and "the Environmental Improvement Board... shall adopt... regulations to attain and maintain national ambient air quality standards and prevent or abate air pollution..." (NMSA 1978, section 74-2-5.B).

[10/27/95; 20.2.2.3 NMAC - Rn, 20 NMAC 2.102, 10/31/02]

20.2.2.4 DURATION:

Permanent.

[10/27/95; 20.2.2.4 NMAC - Rn, 20 NMAC 2.103, 10/31/02]

20.2.2.5 EFFECTIVE DATE:

October 27, 1995.

[10/27/95; 20.2.2.5 NMAC - Rn, 20 NMAC 2.104, 10/31/02]

[The latest effective date of any section in this Part is 08/31/09.]

20.2.2.6 OBJECTIVE:

To provide specific definitions for terms used and not defined in air quality regulations 20.2.3 NMAC through 20.2.99 NMAC.

[10/27/95; 20.2.2.6 NMAC - Rn, 20 NMAC 2.105, 10/31/02]

20.2.2.7 DEFINITIONS:

The following definitions apply to all Parts of Title 20, Chapter 2 NMAC.

A. "Administrator" means the administrator of the United States environmental protection agency (US EPA) or his or her designee.

B. "Aerodynamic diameter" means the diameter of a sphere of unit density which behaves aerodynamically the same as the particle of the test substance. It is used to predict where particles of different size and density may be deposited in the respiratory tract.

C. "Air contaminant" means any airborne substance, including but not limited to, any particulate matter, fly ash, dust, fumes, gas, mist, smoke, vapor, micro-organisms, radioactive material, any combination thereof or any decay or reaction product thereof.

D. "Air pollution" means the emission, except as such emission occurs in nature, into the outdoor atmosphere of one or more air contaminants in such quantities and duration as may with reasonable probability injure human health, animal or plant life, or as may unreasonable interfere with the public welfare, visibility or the reasonable use of property.

E. "Asbestos" includes chrysolite, crocidolite, amosite, anthophyllite, tremolite, and actinolite.

F. "Board" means the New Mexico environmental improvement board or its successor agency or authority.

G. "Carbon dioxide" means the chemical compound containing one atom of carbon and two atoms of oxygen.

H. "Carbon monoxide" means the chemical compound containing one atom of carbon and one atom of oxygen.

I. "Department" means the New Mexico environment department or its successor agency or authority, as represented by the department secretary or his or her designee.

J. "Federal act" means the Federal Clean Air Act, as amended, 42 U.S.C. sections 7401 et seq.

K. "Flue" means, any duct for air, gases, or the like, such as a stack or chimney.

L. "Fugitive dust" or "fugitive particulate matter" means particulate emissions which escape to the atmosphere due to leakage; materials handling, transfer or storage; travel over unpaved roads or parking areas; or other industrial activities, and which are not ducted through exhaust systems.

M. "Greenhouse gas" means any of the following: carbon dioxide, methane, nitrous oxide, hydrofluorocarbons, perfluorocarbons or sulfur hexafluoride.

N. "Heavy metal" means any metal having an atomic number greater than 21.

O. "Hydrofluorocarbons" means gaseous chemical compounds containing only hydrogen, carbon, and fluorine atoms.

P. "Hydrogen sulfide" means the chemical compound containing two atoms of hydrogen and one atom of sulfur.

Q. "Kraft pulp" means the fibrous cellulose material produced in a kraft mill.

R. "Lead" means elemental lead; alloys in which one of the elements is lead; or compounds containing lead, which are measured as elemental lead.

S. "Methane" means the chemical compound containing one atom of carbon and four atoms of hydrogen.

T. "mg/m³" means milligrams per cubic meter.

U. "Nitrogen dioxide" means the chemical compound containing one atom of nitrogen and two atoms of oxygen, for the purposes of ambient determinations. The term "nitrogen dioxide," for the purposes of stack emissions monitoring, shall include

nitrogen dioxide (the chemical compound containing one atom of nitrogen and two atoms of oxygen), nitric oxide (the chemical compound containing one atom of nitrogen and one atom of oxygen), and other oxides of nitrogen which may test as nitrogen dioxide.

V. "Nitrous oxide" means the chemical compound containing two atoms of nitrogen and one atom of oxygen.

W. "Non-methane hydrocarbons" means any combination of hydrocarbons (chemical compounds consisting of hydrogen and carbon) excluding only the molecule methane.

X. "Ozone" means the chemical compound having the molecular composition of three oxygen atoms.

Y. "Particulate matter" means any airborne, finely divided solid or liquid material with an aerodynamic diameter smaller than 100 micrometers.

Z. "Particulate matter emissions" means all finely divided solid or liquid material, other than uncombined water, emitted to the ambient air as measured by: applicable reference methods; an equivalent or alternative method specified by the administrator; or a test method specified in the New Mexico state implementation plan.

AA. "Perfluorocarbons" means gaseous chemical compounds containing only carbon and fluorine atoms.

AB. "Person" means any individual; partnership; corporation; association; municipality; the state or political subdivision of the state; and any agency, department, or instrumentality of the United States and any of their officers, agents, or employees.

AC. "Photochemical oxidants" means those oxidizing chemical compounds which are the products of photo initiated reactions involving organic compounds and nitrogen oxides, consisting primarily of ozone and peroxyacetyl nitrate (PAN).

AD. "PM10" means particulate matter with an aerodynamic diameter less than or equal to a nominal 10 micrometers.

AE. "PM10 emissions" means finely divided solid or liquid material with an aerodynamic diameter less than or equal to a nominal 10 micrometers, emitted to the ambient air, as measured by: an applicable reference method; an equivalent or alternative method specified by the EPA administrator; or a test method specified in the New Mexico state implementation plan.

AF. "PM2.5" means particulate matter with an aerodynamic diameter less than or equal to a nominal 2.5 micrometers.

AG. "PM2.5 emissions" means finely divided solid or liquid material with an aerodynamic diameter less than or equal to a nominal 2.5 micrometers, emitted to the ambient air, as measured by: an applicable reference method; an equivalent or alternative method specified by the EPA administrator; or a test method specified in the New Mexico state implementation plan.

AH. "ppm" means parts per million by volume.

AI. "Ringelmann scale" means the grading of opacity, appearance, density or shade of a smoke emission, in determining the light-obscuring power of smoke.

AJ. "Schedule of compliance" means a schedule or timetable, acceptable to the board, which clearly sets out in detail, the steps to be taken in achieving the objectives of a regulation or standard.

AK. "Secretary" means the secretary of the New Mexico environment department or his or her designee.

AL. "Smoke" means small gas-borne particles resulting from incomplete combustion, consisting predominantly, but not exclusively, of carbon, soot and combustible material.

AM. "Sulfur dioxide" means the chemical compound containing one atom of sulfur and two atoms of oxygen, for the purposes of ambient determinations. The term sulfur dioxide, for the purposes of stack emissions monitoring, shall include sulfur dioxide (chemical compound containing one atom of sulfur and two atoms of oxygen), and other oxides of sulfur which may test as sulfur dioxide.

AN. "Sulfur hexafluoride" means the chemical compound containing one atom of sulfur and six atoms of fluorine.

AO. "Total reduced sulfur" means any combination of sulfur compounds, except sulfur dioxide and free sulfur, which test as total reduced sulfur, including, but not limited to, hydrogen sulfide, methyl mercaptan, and ethyl mercaptan.

AP. "Total suspended particulates (TSP)" means particulate matter as measured by the method described in 40 CFR Part 50, Appendix B.

AQ. "ug/m3" means micrograms per cubic meter.

AR. "US EPA" means the United States environmental protection agency.

AS. "Volatile organic compound (VOC)" means any organic compound which participates in atmospheric photochemical reactions; that is, any organic compound other than those which the administrator designates as having negligible photochemical reactivity.

[10/27/95; 20.2.2.7 NMAC - Rn, 20 NMAC 2.2.200 10/31/02; A, 01/01/08; A, 08/31/09]

20.2.2.8 AMENDMENT AND SUPERSESSION OF PRIOR REGULATIONS:

This part supersedes AQCR 100, originally filed on January 23, 1970, and subsequently amended and refiled on May 26, 1971, September 1, 1971, September 14, 1973, June 14, 1974, July 15, 1974, February 7, 1983, May 26, 1983, August 1, 1988, and May 29, 1990.

[10/27/95; 20.2.2.8 NMAC - Rn, 20 NMAC 2.2.106, 10/31/02]

20.2.2.9 DOCUMENTS:

Documents cited in this part may be viewed at the New Mexico Environment Department, Air Quality Bureau, Runnels Building, 1190 Saint Francis Drive, Santa Fe, NM 87503 [2048 Galisteo St., Santa Fe, NM 87505].

[10/27/95; 20.2.2.9 NMAC - Rn, 20 NMAC 2.2.107, 10/31/02]

PART 3: AMBIENT AIR QUALITY STANDARDS

20.2.3.1 ISSUING AGENCY:

Environmental Improvement Board.

[11/30/95; 20.2.3.1 NMAC - Rn, 20 NMAC 2.3.100 10/31/02]

20.2.3.2 SCOPE:

All geographic areas within the jurisdiction of the environmental improvement board.

[11/30/95; 20.2.3.2 NMAC - Rn, 20 NMAC 2.3.101 10/31/02]

20.2.3.3 STATUTORY AUTHORITY:

Environmental Improvement Act, Paragraph (4) of Subsection A of Section 74-1-8 NMSA 1978 and Air Quality Control Act, Section 74-2-1 et seq. NMSA 1978, including specifically, Subsections A and B of Section 74-2-5 NMSA 1978.

[11/30/95; 20.2.3.2 NMAC - Rn, 20 NMAC 2.3.102 10/31/02]

20.2.3.4 DURATION:

Permanent.

[11/30/95; 20.2.3.4 NMAC - Rn, 20 NMAC 2.3.103 10/31/02]

20.2.3.5 EFFECTIVE DATE:

November 30, 1995.

[11/30/95; 20.2.3.5 NMAC - Rn, 20 NMAC 2.3.104 10/31/02]

[The latest effective date of any section in this Part is 11/30/18.]

20.2.3.6 OBJECTIVE:

The objective of this part is to establish ambient air quality standards for the areas of New Mexico under the jurisdiction of the environmental improvement board.

[11/30/95; 20.2.3.6 NMAC - Rn, 20 NMAC 2.3.105 10/31/02]

20.2.3.7 DEFINITIONS:

In addition to the terms defined in 20.2.2 NMAC (Definitions), as used in this part: "Part" means an air quality control regulation under Title 20, Chapter 2 of the New Mexico Administrative Code, unless otherwise noted; as adopted or amended by the board.

[11/30/95; 20.2.3.7 NMAC - Rn, 20 NMAC 2.3.107 10/31/02]

20.2.3.8 AMENDMENT AND SUPERSESSION OF PRIOR REGULATIONS:

This part amends and supersedes air quality control regulations ("AQCR") 200 - preamble and 201 - ambient air quality standards last filed January 27, 1970 and June 15, 1981, respectively.

A. All references to AQCR 200 or 201 in any other rule shall be construed as a reference to this part.

B. The amendment and supersession of AQCR 200 and 201 shall not affect any administrative or judicial enforcement action pending on the effective date of such amendment nor the validity of any permit issued pursuant to AQCR 200 or 201.

[11/30/95; 20.2.3.8 NMAC - Rn, 20 NMAC 2.3.106 10/31/02]

20.2.3.9 LIMITATION OF APPLICABILITY TO 20.2.70 NMAC:

The requirements of this part are not applicable requirements under 20.2.70 NMAC, as defined by that part. This section does not limit the applicability of this part to sources required to obtain a permit under 20.2.72 NMAC, nor does it limit which terms and conditions of permits issued pursuant to 20.2.72 NMAC are applicable requirements for permits issued pursuant to 20.2.70 NMAC.

[20.2.3.9 NMAC - N, 9/6/06]

20.2.3.10-20.2.3.107 [RESERVED]

20.2.3.108 PREAMBLE:

Ambient air quality standards are not intended to provide a sharp dividing line between air of satisfactory quality and air of unsatisfactory quality. They are, however, numbers which represent objectives that will preserve our air resources. It is understood that at certain times, due to unusual meteorological conditions, these standards may be exceeded for short periods of time without the addition of specific pollutants into the atmosphere. The adoption of these statewide ambient air quality standards does not prohibit the promulgation of standards for specific areas, functions, and conditions within the state such as air sheds, municipalities, and certain counties, as authorized under the act. As scientific data accumulates on the effects of a contaminant, these standards may be revised or additional standards added.

[11/30/95; 20.2.3.108 NMAC - Rn, 20 NMAC 2.3.108 10/31/02]

20.2.3.109 [RESERVED]

[11/30/95; 20.2.3.109 NMAC - Rn, 20 NMAC 2.3.109 10/31/02; Repealed, 11/30/18]

20.2.3.110 SULFUR COMPOUNDS:

The maximum allowable concentrations of the following sulfur-containing air contaminants in the ambient air are as follows:

A. Sulfur dioxide:

(1) For the state except on the area within 3.5 miles of the Chino mines company smelter furnace stack at Hurley:

(a) 24-hour average: 0.10 ppm;

(b) Annual arithmetic average: 0.02 ppm;

(2) For the area within three and one-half miles of the Chino mines company smelter furnace stack at Hurley:

(a) 24-hour average, not be exceeded more than once per year: 0.14 ppm;

(b) three-hour average, not to be exceeded more than once per year: 0.50 ppm;

(c) Annual arithmetic average: 0.03 ppm.

B. Hydrogen sulfide:

(1) For the state, except the Pecos-Permian basin intrastate air quality control region (one-hour average, not to be exceeded more than once per year): 0.010 ppm;

(2) For the Pecos-Permian basin intrastate air quality control region (one-half hour average): 0.100 ppm;

(3) For within corporate limits of municipalities within the Pecos-Permian basin intrastate air quality control region (one-half hour average): 0.030 ppm;

(4) For within five miles of the corporate limits of municipalities having a population of greater than 20,000 and within the Pecos-Permian basin intrastate air quality control region (one-half hour average): 0.030 ppm.

C. Total reduced sulfur:

(1) For the state, except the Pecos-Permian basin intrastate air quality control region except for hydrogen sulfide (one-half hour average): 0.003 ppm;

(2) For the Pecos-Permian basin intrastate air quality control region, except for hydrogen sulfide (one-half hour average): 0.010 ppm;

(3) For within corporate limits of municipalities within the Pecos-Permian basin intrastate air quality control region, except for hydrogen sulfide (one-half hour average): 0.003 ppm;

(4) For within five miles of the corporate limits of municipalities having a population of greater than 20,000 and within the Pecos-Permian basin intrastate air quality control region, except for hydrogen sulfide (one-half hour average): 0.003 ppm.

[11/30/95; 20.2.3.110 NMAC - Rn, 20 NMAC 2.3.110 10/31/02]

20.2.3.111 OTHER AIR CONTAMINANTS:

The maximum allowable concentrations of the following air contaminants in the ambient air are as follows:

A. Carbon monoxide:

(1) eight-hour average: 8.7 ppm;

(2) one-hour average: 13.1 ppm;

B. Nitrogen dioxide:

- (1) 24-hour average: 0.10 ppm;
- (2) Annual arithmetic average: 0.05 ppm.

20.2.5.8 AMENDMENT AND SUPERSESSION OF PRIOR REGULATIONS:

This Part amends and supersedes Air Quality Control Regulation 704 - Source Surveillance, filed July 31, 1972, as amended (AQCR 704).

A. All references to AQCR 704 in any other rule shall be construed as a reference to this Part.

B. The amendment and supersession of AQCR 704 shall not affect any administrative or judicial enforcement action pending on the effective date of such amendment.

[11/30/95; 20.2.5.8 NMAC - Rn, 20 NMAC 2.5.106 10/31/02]

20.2.5.9-20.2.5.107 [RESERVED]

20.2.5.108 RECORD KEEPING:

The owner or operator of any stationary source of an air contaminant shall, upon notification by the Department, maintain records of the nature and amounts of emissions, to which an air quality control emission regulation applies, from the source and any other information as may be deemed necessary by the Department to determine whether the source is in compliance with applicable regulations.

[11/30/95; 20.2.5.108 NMAC - Rn, 20 NMAC 2.5.108 10/31/02]

20.2.5.109 DATA SUBMISSION:

The information recorded shall be summarized and reported to the Department, on forms furnished by the Department, and shall be submitted within forty-five days after the end of the reporting period. Reporting periods are November 1 through April 30 and May 1 through October 31 or such other periods as the Department may deem

necessary. Information reported to the Department shall be signed by the person responsible for its accuracy.

[11/30/95; 20.2.5.109 NMAC - Rn, 20 NMAC 2.5.109 10/31/02]

20.2.5.110 PUBLIC ACCESS:

Emission data obtained by the Department shall be correlated with applicable emission limitations and other control measures and be made available to the public during normal business hours.

[11/30/95; 20.2.5.110 NMAC - Rn, 20 NMAC 2.5.110 10/31/02]

PART 6: [RESERVED]

PART 7: EXCESS EMISSIONS

20.2.7.1 ISSUING AGENCY:

Environmental Improvement Board.

[20.2.7.1 NMAC - Rp, 20.2.7.1 NMAC, 08/01/08]

20.2.7.2 SCOPE:

All geographic areas within the jurisdiction of the environmental improvement board.

[20.2.7.2 NMAC - Rp, 20.2.7.2 NMAC, 08/01/08]

20.2.7.3 STATUTORY AUTHORITY:

Environmental Improvement Act, NMSA 1978, section 74-1-8(A)(4) and (7), and Air Quality Control Act, NMSA 1978, sections 74-2-1 et seq., including specifically, section 74-2-5(A), (B) and (C).

[20.2.7.3 NMAC - Rp, 20.2.7.3 NMAC, 08/01/08]

20.2.7.4 DURATION:

Permanent.

[20.2.7.4 NMAC - Rp, 20.2.7.4 NMAC, 08/01/08]

20.2.7.5 EFFECTIVE DATE:

08/01/08, unless a later date is cited at the end of a section.

[20.2.7.5 NMAC - Rp, 20.2.7.5 NMAC, 08/01/08]

[The latest effective date of any section in this part is 8/1/2008.]

20.2.7.6 OBJECTIVE:

A. Establish requirements for a source whose operation results in an excess emission.

B. Establish criteria for a source whose operation results in an excess emission to claim an affirmative defense in an administrative or judicial enforcement action from a civil penalty.

[20.2.7.6 NMAC - Rp, 20.2.7.6 NMAC, 08/01/08]

20.2.7.7 DEFINITIONS:

In addition to the terms defined in 20.2.2 NMAC (Definitions), as used in this part, the following definitions apply.

A. "Air pollution control equipment" means any apparatus, including acid plants, afterburners, baghouses, cyclones, electrostatic precipitators, flares, incinerators, and particulate or gaseous scrubbers, utilized to control the emission of a regulated air contaminant, including a fugitive emission.

B. "Air quality regulation or permit condition" means any regulation adopted by the board, including a federal new source performance standard adopted by reference, or any condition of an air quality permit issued by the department. National emission standards for hazardous air pollutants and maximum achievable control technology standards are not included in this definition.

C. "Bypass" means the diversion of a regulated air contaminant around air pollution control equipment or process equipment.

D. "Excess emission" means the emission of an air contaminant, including a fugitive emission, in excess of the quantity, rate, opacity or concentration specified by an air quality regulation or permit condition.

E. "Malfunction" means any sudden and unavoidable failure of air pollution control equipment or process equipment beyond the control of the owner or operator, including malfunction during startup or shutdown. A failure that is caused entirely or in part by poor maintenance, careless operation, or any other preventable equipment breakdown shall not be considered a malfunction.

F. "Part" means an air quality regulation under Title 20, Chapter 2 of the New Mexico Administrative Code.

G. "Regular business day" means any day on which state government offices are open for normal business. Saturdays, Sundays, and official federal and state holidays are not regular business days.

H. "Shutdown" means the cessation of operation of any air pollution control equipment or process equipment.

I. "Startup" means the setting into operation of any air pollution control equipment or process equipment.

[20.2.7.7 NMAC - Rp, 20.2.7.7 NMAC, 08/01/08]

20.2.7.8 AMENDMENT OR SUPERSESION OF PRIOR REGULATIONS:

This part supersedes New Mexico Administrative Code ("NMAC") 20.2.7 -- Excess Emissions During Malfunction, Startup, Shutdown, or Scheduled Maintenance last filed October 30, 1995.

[20.2.7.8 NMAC - Rp, 20.2.7.8 NMAC, 08/01/08]

20.2.7.9 DOCUMENTS:

No documents are cited in this part.

[20.2.7.9 NMAC - N, 08/01/08]

20.2.7.10 SEVERABILITY:

If any provision of this part, or the application of such provision to any person or circumstance, is held invalid, the remainder of this part, or the application of such provision to any person or circumstance other than those as to which it is held invalid, shall not be affected thereby.

[20.2.7.10 NMAC - N, 08/01/08]

20.2.7.11 CONSTRUCTION:

This part shall be liberally construed to carry out its purpose.

[20.2.7.11 NMAC - N, 08/01/08]

20.2.7.12 SAVINGS CLAUSE:

Repeal or supersession of a prior version of this part shall not affect any administrative or judicial action initiated under that prior version.

[20.2.7.12 NMAC - N, 08/01/08]

20.2.7.13 COMPLIANCE WITH OTHER REGULATIONS:

Compliance with this part does not relieve a person from the responsibility to comply with any other applicable federal, state, or local statute or regulation.

[20.2.7.13 NMAC - N, 08/01/08]

20.2.7.14 REQUIREMENTS REGARDING ROUTINE OR PREDICTABLE EMISSIONS DURING STARTUP, SHUTDOWN, AND MAINTENANCE:

A. The owner or operator of a source subject to a permit or to the notification requirement under section 15 of this part, shall establish and implement a plan to minimize emissions during routine or predictable startup, shutdown, and scheduled maintenance through work practice standards and good air pollution control practices. This requirement shall not apply to any affected facility defined in and subject to an emissions standard and an equivalent plan under 40 CFR Part 60 (NSPS), 40 CFR Part 63 (MACT), or an equivalent plan under 20.2.72 NMAC - Construction Permits, 20.2.70 NMAC - Operating Permits, 20.2.74 NMAC - Permits - Prevention of Significant Deterioration (PSD), or 20.2.79 NMAC - Permits - Nonattainment Areas.

B. The owner or operator shall maintain the plan at the location authorized by the permit, at the facility, or at the nearest occupied facility, and provide the plan to the department upon written request.

C. This requirement shall become effective 180 days after the effective date of this part.

[20.2.7.14 NMAC - Rp, 20.2.7.14 NMAC, 08/01/08]

20.2.7.15 TEMPORARY PROVISIONS FOR ROUTINE OR PREDICTABLE EMISSIONS DURING STARTUP, SHUTDOWN, AND SCHEDULED MAINTENANCE:

A. If the inclusion of emissions during routine or predictable startup, shutdown, or scheduled maintenance in addition to the potential emission rate or potential to emit of a source could exceed an applicable emissions limitation, or would cause the source to exceed an applicability threshold in 20.2.72 NMAC - Construction Permits, 20.2.70 NMAC - Operating Permits, 20.2.74 NMAC - Permits - Prevention of Significant Deterioration (PSD), or 20.2.79 NMAC - Permits - Nonattainment Areas, the owner or operator shall notify the department in writing no later than 180 days after the effective date of this part. The notice shall include a preliminary estimate of emissions by pollutant to the extent practicable and identify the nature of permitting action likely to be required.

B. The owner or operator shall submit the necessary permit application no later than 120 days after receiving a request from the department.

C. If a timely notice is submitted under Subsection A of 20.2.7.15 NMAC for any excess emission during routine or predictable startup, shutdown, or scheduled maintenance, the owner or operator shall comply only with Paragraph (2) of Subsection A of 20.2.7.110 NMAC - Final Report, until the permit is issued or denied.

D. At the request of the department, the owner or operator of a source that does not submit a notification under Subsection A of 20.2.7.15 NMAC shall submit the basis for its determination and supporting analysis.

[20.2.7.15 NMAC - N, 08/01/08]

20.2.7.16-20.2.7.107 [RESERVED]

20.2.7.108 APPLICABILITY:

A. Any source:

(1) whose operation results in an emission of an air contaminant, including a fugitive emission, in excess of the quantity, rate, opacity or concentration specified by an air quality regulation or permit condition; or

(2) subject to the requirements of 20.2.73 NMAC - Notices of Intent and Emissions Inventory Requirements, 20.2.72 NMAC - Construction Permits, 20.2.70 NMAC - Operating Permits, 20.2.74 - Permits - Prevention of Significant Deterioration (PSD), or 20.2.79 - Permits - Nonattainment Areas.

B. Deviations under 20.2.70 NMAC - Operating Permits that do not result in excess emissions are not subject to the provisions of 20.2.7 NMAC.

C. This part does not create a separate cause of action for failure to obtain a permit under 20.2.72 NMAC - Construction Permits, 20.2.70 NMAC - Operating Permits, 20.2.74 - Permits - Prevention of Significant Deterioration (PSD), or 20.2.79 - Permits - Nonattainment Areas.

[20.2.7.108 NMAC - N, 08/01/08]

20.2.7.109 OPERATION RESULTING IN AN EXCESS EMISSIONS:

The emission of an air contaminant in excess of the quantity, rate, opacity, or concentration specified in an air quality regulation or permit condition that results in an excess emission is a violation of the air quality regulation or permit condition and may be subject to an enforcement action. The owner or operator of a source having an excess emission shall, to the extent practicable, operate the source, including

associated air pollution control equipment, in a manner consistent with good air pollution control practices for minimizing emissions.

[20.2.7.109 NMAC - Rp, 20.2.7.109 NMAC, 08/01/08]

20.2.7.110 NOTIFICATION:

A. The owner or operator of a source having an excess emission shall report the following information to the department on forms provided by the department. The department may authorize the submittal of such reports in electronic format.

(1) Initial report: the owner or operator shall file an initial report, no later than the end of the next regular business day after the time of discovery of an excess emission that includes all available information for each item in Subsection B of 20.2.7.110 NMAC.

(2) Final report: the owner or operator shall file a final report that contains specific and detailed information for each item in Subsection B of 20.2.7.110 NMAC, no later than ten (10) days after the end of the excess emission.

B. The report shall include the following information.

- (1) The name of the source.
- (2) The name of the owner and operator of the source.
- (3) The name and title of the person preparing the report.
- (4) Identifying information such as permit and database numbers.
- (5) The specific date(s) and time(s) the excess emission occurred.
- (6) Identification of the equipment involved and the emission point(s) (including bypass) from which the excess emission occurred.
- (7) The air quality regulation or permit condition that was exceeded.
- (8) Identification of the air contaminant(s) and the magnitude of the excess emission expressed in the units of the air quality regulation or permit condition.
- (9) The method for determining the magnitude and duration of the excess emission.
- (10) The cause and nature of the excess emission.

(11) The steps taken to limit the duration and magnitude of the excess emission.

(12) The corrective action(s) taken to eliminate the cause of the excess emission. If one or more corrective actions are required, the report shall include a schedule for implementation of those actions, with associated progress reports. If no corrective actions are required, the report shall include a detailed explanation for that conclusion.

(13) The corrective action(s) taken to prevent a recurrence of the excess emission.

(14) Whether the owner or operator attributes the excess emission to malfunction, startup or shutdown.

(15) Whether the owner or operator will claim an affirmative defense under Sections 111, 112, or 113 of 20.2.7 NMAC. If claiming an affirmative defense, an analysis with and the supporting evidence for each criterion shall be submitted no later than thirty (30) days after submittal of the final report required by this subsection (Subsection B of 20.2.7.110 NMAC). Upon the department's receipt of a written request by the owner or operator no later than thirty (30) days after submittal of the final report, the department may grant an extension to complete the analysis not to exceed thirty (30) additional days.

(16) The contents of the final report shall contain a signed certification of truth, accuracy, and completeness. This certification shall be signed by the person who is reporting the excess emission.

C. The department may request that the owner or operator of a source provide additional information. This information shall be reported within a time period specified by the department.

D. If the period of an excess emission extends beyond the deadline specified in Paragraph (2) of Subsection A of 20.2.7.110 NMAC, the owner or operator shall notify the department in writing within seventy-two (72) hours of the date and time when the excess emission ceased. This notification shall include all items required in Subsection B of 20.2.7.110 NMAC.

[20.2.7.110 NMAC - Rp, 20.2.7.110 NMAC, 08/01/08]

20.2.7.111 AFFIRMATIVE DEFENSE FOR AN EXCESS EMISSION DURING MALFUNCTION:

A. The owner or operator of a source subject to this part may claim an affirmative defense for an excess emission during malfunction for a civil penalty in an administrative or judicial enforcement action, except for an action to enforce a federal

new source performance standard. There shall be no affirmative defense for an excess emission during malfunction for the owner or operator's liability or the department's claim for injunctive relief for the excess emission. The owner or operator claiming an affirmative defense for an excess emission during malfunction shall bear the burden of proof to demonstrate the following criteria.

(1) The excess emission was caused by a malfunction.

(2) The excess emission:

(a) did not stem from any activity or event that could have been foreseen and avoided, or planned for; and

(b) could not have been avoided by better operation and maintenance practices.

(3) To the maximum extent practicable the air pollution control equipment or processes were maintained and operated in a manner consistent with good practice for minimizing emissions.

(4) Repairs were made in an expeditious fashion when the operator knew or should have known that applicable emission limitations were being exceeded. Off-shift labor and overtime must have been utilized, to the extent practicable, to ensure that such repairs were made as expeditiously as practicable.

(5) The amount and duration of the excess emission (including any bypass) were minimized to the maximum extent practicable during periods of such emissions.

(6) All possible steps were taken to minimize the impact of the excess emission on ambient air quality.

(7) All emission monitoring systems were kept in operation if at all possible.

(8) The excess emission was not part of a recurring pattern indicative of inadequate design, operation, or maintenance.

(9) The owner or operator complied with the notification requirements in Section 110 of 20.2.7 NMAC.

(10) The owner or operator's actions in response to the excess emission were documented by properly signed, contemporaneous operating logs, or other relevant evidence.

B. The department may request that the owner or operator of a source provide additional information beyond what is required in this section (20.2.7.111 NMAC). This

additional information shall be reported within the time period specified by the department.

[20.2.7.111 NMAC - N, 08/01/08]

20.2.7.112 AFFIRMATIVE DEFENSE FOR AN EXCESS EMISSION DURING STARTUP OR SHUTDOWN:

A. The owner or operator of a source subject to this part may claim an affirmative defense for an excess emission during startup or shutdown for a civil penalty in an administrative or judicial enforcement action, except for an action to enforce a federal new source performance standard. There shall be no affirmative defense for an excess emission during startup or shutdown for the owner or operator's liability or the department's claim for injunctive relief for the excess emission. The owner or operator claiming an affirmative defense for an excess emission during startup or shutdown shall bear the burden of proof to demonstrate the following criteria.

- (1) The excess emission occurred during a startup or shutdown.
- (2) The duration of the excess emission that occurred during startup and shutdown was short and could not have been prevented through careful planning and design.
- (3) The excess emission was not part of a recurring pattern indicative of inadequate design, operation, or maintenance.
- (4) If the excess emission was caused by a bypass (an intentional diversion of control equipment), then the bypass was unavoidable to prevent loss of life, personal injury, or severe property damage.
- (5) At all times, the source was operated in a manner consistent with good practices for minimizing emissions.
- (6) The frequency and duration of operation in startup or shutdown mode was minimized to the maximum extent practicable.
- (7) All possible steps were taken to minimize the impact of the excess emission on ambient air quality.
- (8) All emissions monitoring systems were kept in operation if at all possible.
- (9) The owner or operator complied with the notification requirements in Section 110 of 20.2.7 NMAC.

(10) The owner or operator's actions during the period of the excess emission were documented by properly signed, contemporaneous operating logs, or other relevant evidence.

B. The department may request that the owner or operator of a source provide additional information beyond what is required in this section (20.2.7.112 NMAC). This additional information shall be reported within the time period specified by the department.

C. An excess emission due to malfunction during a period of startup or shutdown which is authorized by permit shall be treated as a malfunction under 20.2.7.111 NMAC.

[20.2.7.112 NMAC - Rp, 20.2.7.112 NMAC, 08/01/08]

20.2.7.113 AFFIRMATIVE DEFENSE FOR AN EMERGENCY:

A. An "emergency" means any situation arising from sudden and reasonably unforeseeable events beyond the control of the permittee, including acts of God, which situation requires immediate corrective action to restore normal operation, and that causes the source to exceed a technology-based emission limitation due to unavoidable increases in emissions attributable to the emergency. An emergency shall not include noncompliance to the extent caused by improperly designed equipment, lack of preventive maintenance, or careless or improper operation.

B. An emergency constitutes an affirmative defense to an action brought for noncompliance with the technology-based emission limitation if the owner or operator of the source demonstrates through properly signed, contemporaneous operating logs, or other relevant evidence that:

(1) an emergency occurred and that the owner or operator can identify the cause(s) of the emergency;

(2) the source was at the time being properly operated;

(3) during the period of the emergency the owner or operator took all reasonable steps to minimize levels of emissions that exceeded the technology-based emission limitation; and

(4) the owner or operator fulfilled the notification requirements under Subsection A of 20.2.7.110 NMAC, including a description of the emergency, any steps taken to mitigate emissions, and corrective actions taken.

C. In any enforcement proceeding, the owner or operator seeking to establish the occurrence of an emergency has the burden of proof.

D. The department may request that the owner or operator of a source provide additional information beyond what is required in this section (20.2.7.113 NMAC). This additional information shall be reported within the time period specified by the department.

[20.2.7.113 NMAC - N, 08/01/08]

20.2.7.114 ROOT CAUSE AND CORRECTIVE ACTION ANALYSIS:

A. The owner or operator of a source having an excess emission, upon written request of the department, shall prepare an analysis that uses appropriate analytical tools and contains the following information.

(1) an analysis describing the root cause and all contributing causes of the excess emission;

(2) an analysis of the corrective actions implemented or available to reduce the likelihood of a recurrence of the excess emission resulting from the causes identified under Paragraph (1) of Subsection A of 20.2.7.114 NMAC, including, as applicable:

(a) identification of implemented or available corrective action alternatives, such as changes in design, operation and maintenance;

(b) the estimated cost associated with each corrective action alternative;

(c) the probable effectiveness of each corrective action alternative;

(d) if no corrective action alternatives are available, a clear explanation providing an adequate justification for that conclusion; and

(e) if one or more corrective actions are identified, a schedule for implementation and progress reports.

B. The department shall make the request no later than ninety (90) days after receipt of the final report under Subsection A of 20.2.7.110 NMAC.

C. The department may request the analysis specified in Subsection A of 20.2.7.114 NMAC after considering relevant factors. Examples of such relevant factors may include but are not limited to the significance of the excess emission, the nature or pattern of excess emissions, or the history of the source, as well as other factors determined to be relevant by the department.

D. The completed analysis shall be submitted to the department no later than sixty (60) days after the request for submittal pursuant to Subsection A of 20.2.7.114 NMAC. The department may grant an extension to submit the analysis for good cause shown.

E. The owner or operator of a source complying with this section may assert a claim for confidential information protection pursuant to 20.2.1.115 NMAC.

[20.2.7.114 NMAC - N, 08/01/08]

20.2.7.115 REVIEW OF THE DEPARTMENT'S DETERMINATIONS UNDER SECTIONS 111, 112, AND 113:

The department may issue a determination regarding an owner or operator's assertion of the affirmative defense under Section 111, 112, or 113 of 20.2.7 NMAC on the basis of any relevant information, including but not limited to information submitted pursuant to this part or obtained through an inspection. Any such determination is not a final action and is not reviewable, shall not be a prerequisite to the commencement of an administrative or judicial enforcement action, does not constitute a waiver of liability pursuant to Section 116 of 20.2.7 NMAC, and shall not preclude an enforcement action by the federal government or a citizen pursuant to the federal Clean Air Act. A source may not assert an affirmative defense under Section 111, 112, or 113 of 20.2.7 NMAC in an administrative or judicial enforcement action unless it asserted such defense pursuant to Subsection B of 20.2.7.110 NMAC.

[20.2.7.115 NMAC - Rp, N, 08/01/08]

20.2.7.116 FUTURE ENFORCEMENT ACTION:

The department may commence an administrative or judicial enforcement action against the owner or operator of a source for an excess emission for which it has made a determination pursuant to Section 115 of 20.2.7 NMAC if the department determines that the excess emission is related to a pattern of excess emission events, poor maintenance, careless or marginal operation, or other appropriate reason.

[20.2.7.116 NMAC - Rp, 20.2.7.116 NMAC, 08/01/08]

PART 8: EMISSIONS LEAVING NEW MEXICO

20.2.8.1 ISSUING AGENCY:

Environmental Improvement Board.

[11/30/95; 20.2.8.1 NMAC - Rn, 20 NMAC 2.8.100 10/31/02]

20.2.8.2 SCOPE:

All geographic areas within the jurisdiction of the Environmental Improvement Board.

[11/30/95; 20.2.8.2 NMAC - Rn, 20 NMAC 2.8.101 10/31/02]

20.2.8.3 STATUTORY AUTHORITY:

Environmental Improvement Act, NMSA 1978, section 74-1-8(A)(4) and (7), and Air Quality Control Act, NMSA 1978, sections 74-2-1 et seq., including specifically, section 74-2-5(A), (B) and (C).

[11/30/95; 20.2.8.3 NMAC - Rn, 20 NMAC 2.8.102 10/31/02]

20.2.8.4 DURATION:

Permanent.

[11/30/95; 20.2.8.4 NMAC - Rn, 20 NMAC 2.8.103 10/31/02]

20.2.8.5 EFFECTIVE DATE:

November 30, 1995.

[11/30/95; 20.2.8.5 NMAC - Rn, 20 NMAC 2.8.104 10/31/02]

[The latest effective date of any section in this Part is 10/31/02.]

20.2.8.6 OBJECTIVE:

The objective of this Part is to establish requirements for emissions leaving New Mexico.

[11/30/95; 20.2.8.6 NMAC - Rn, 20 NMAC 2.8.105 10/31/02]

20.2.8.7 DEFINITIONS:

In addition to the terms defined in 20.2.2 NMAC (Definitions), as used in this Part: "Part" means an air quality control regulation under Title 20, Chapter 2 of the New Mexico Administrative Code, unless otherwise noted; as adopted or amended by the Board.

[11/30/95; 20.2.8.7 NMAC - Rn, 20 NMAC 2.8.107 10/31/02]

20.2.8.8 AMENDMENT AND SUPERSESSION OF PRIOR REGULATIONS:

This Part amends and supersedes Air Quality Control Regulation ("AQCR") 901 - To Control Emissions Leaving New Mexico, last filed January 27, 1970.

A. All references to AQCR 901 in any other rule shall be construed as a reference to this Part.

B. The amendment and supersession of AQCR 901 shall not affect any administrative or judicial enforcement action pending on the effective date of such amendment nor the validity of any permit issued pursuant to AQCR 901.

[11/30/95; 20.2.8.8 NMAC - Rn, 20 NMAC 2.8.106 10/31/02]

20.2.8.9-20.2.8.107 [RESERVED]

20.2.8.108 REQUIREMENTS:

When emissions generated from sources in New Mexico cross the state boundary line, such emissions shall not exceed the standards and regulations of the receiving state, provided, regulations are in effect and reciprocal action is taken by the receiving state.

[11/30/95; 20.2.8.108 NMAC - Rn, 20 NMAC 2.8.108 10/31/02]

PART 9: [RESERVED]

PART 10: WOODWASTE BURNERS

20.2.10.1 ISSUING AGENCY:

Environmental Improvement Board.

[11/30/95; 20.2.10.1 NMAC - Rn. 20 NMAC 2.10.100 10/31/02]

20.2.10.2 SCOPE:

All geographic areas within the jurisdiction of the Environmental Improvement Board.

[11/30/95; 20.2.10.2 NMAC - Rn. 20 NMAC 2.10.101 10/31/02]

20.2.10.3 STATUTORY AUTHORITY:

Environmental Improvement Act, NMSA 1978, section 74-1-8(A)(4) and (7), and Air Quality Control Act, NMSA 1978, sections 74-2-1 et seq., including specifically, section 74-2-5(A), (B) and (C).

[11/30/95; 20.2.10.3 NMAC - Rn. 20 NMAC 2.10.102 10/31/02]

20.2.10.4 DURATION:

Permanent.

[11/30/95; 20.2.10.4 NMAC - Rn. 20 NMAC 2.10.103 10/31/02]

20.2.10.5 EFFECTIVE DATE:

November 30, 1995.

[11/30/95; 20.2.10.5 NMAC - Rn. 20 NMAC 2.10.104 10/31/02]

[The latest effective date of any section in this Part is 10/31/02.]

20.2.10.6 OBJECTIVE:

The objective of this Part is to establish controls on the use of woodwaste burners. This Part is not intended to preempt any more stringent controls on burning provided in the Board's Solid Waste Management Regulations (20.9.1 NMAC) or in any local ordinance or regulation.

[11/30/95; 20.2.10.6 NMAC - Rn. 20 NMAC 2.10.105 10/31/02]

20.2.10.7 DEFINITIONS:

In addition to the terms defined in 20.2.2 NMAC (Definitions), as used in this Part:

A. "Daily burndown" means the period of operation during which the supply of woodwaste to the burner has stopped and the operation of the sawmill has ceased and does not include work shift changes.

B. "Part" means an air quality control regulation under Title 20, Chapter 2 of the New Mexico Administrative Code, unless otherwise noted; as adopted or amended by the Board.

C. "Woodwaste burner" means any device used for woodwaste including but not limited to a wigwam-type burner.

[11/30/95; 20.2.10.7 NMAC - Rn. 20 NMAC 2.10.107 10/31/02]

20.2.10.8 AMENDMENT AND SUPERSESSION OF PRIOR REGULATIONS:

This Part amends and supersedes Air Quality Control Regulation ("AQCR") 402 - Woodwaste Burners last filed February 8, 1983.

A. All references to AQCR 402 in any other rule shall be construed as a reference to this Part.

B. The amendment and supersession of AQCR 402 shall not affect any administrative or judicial enforcement action pending on the effective date of such amendment nor the validity of any permit issued pursuant to AQCR 402.

[11/30/95; 20.2.10.8 NMAC - Rn. 20 NMAC 2.10.106 10/31/02]

20.2.10.9 DOCUMENTS:

Documents cited in this Part may be viewed at the New Mexico Environment Department, Air Quality Bureau, Runnels Building, 1190 Saint Francis Drive, Santa Fe, NM 87505 [2048 Galisteo St., Santa Fe, NM 87505].

[11/30/95; 20.2.10.9 NMAC - Rn. 20 NMAC 2.10.108 10/31/02]

20.2.10.10-20.2.10.108 [RESERVED]

20.2.10.109 EMISSION AND TEMPERATURE LIMITATIONS:

Except as provided in subsections A and B of 20.2.10.109 NMAC and subsection C of 20.2.10.111 NMAC, the owner or operator of a woodwaste burner shall not permit, cause, suffer or allow emissions from the woodwaste burner to equal or exceed an opacity of 20 percent; and no person owning or operating a woodwaste burner which operates during nighttime hours shall permit the temperature of the woodwaste burner exhaust gases to be lower than 750 [degrees] F. during nighttime hours unless the owner or operator can demonstrate, to the satisfaction of the Department, that a lower temperature can achieve an opacity of 20 percent or less.

A. 20.2.10.109 NMAC shall not apply during the first sixty minutes of the daily operation of a woodwaste burner.

B. The owner or operator of a woodwaste burner shall not permit, cause, suffer or allow emissions from the woodwaste burner to equal or exceed an opacity of 40 percent during the daily burndown period.

[11/30/95; 20.2.10.109 NMAC - Rn. 20 NMAC 2.10.109 10/31/02]

20.2.10.110 TEMPERATURE RECORDINGS:

A woodwaste burner, except a certified "contingency-use woodwaste burner", must be equipped with an instrument, approved by the Department, in a location, approved by the Department, which shall continuously measure and record the temperature of the exiting gases from the woodwaste burner. The owner or operator shall retain such records, showing the date of recordings, for a period of six months from the date of each day's recordings and shall make such records available to the Department at the Department's request.

[11/30/95; 20.2.10.110 NMAC - Rn. 20 NMAC 2.10.110 10/31/02]

20.2.10.111 CONTINGENCY-USE WOODWASTE BURNERS:

A. Certification: The Department may certify a woodwaste burner as "contingency-use woodwaste burner" if the owner or operator can demonstrate, to the satisfaction of the Department, that under normal operating conditions of the mill, the woodwaste

burner will not be used to burn woodwaste. The Department may review and rescind, if necessary, such a certification at any time.

B. Startup notification: No person shall operate a certified "contingency-use woodwaste burner" unless the owner or operator has notified the Department within 24 hours after the initial startup as to the following:

- (1) the time of initial startup;
- (2) the reason why the owner or operator is unable to dispose of the woodwaste in the normal manner;
- (3) the period of time that the owner or operator will need to use the "contingency-use woodwaste burner"; and
- (4) the steps that are being taken to enable the owner or operator to return to disposition of the woodwaste in the normal manner.
- (5) Upon receipt of aforesaid information, the Department shall promptly approve or disapprove such contingency use and the duration thereof.

C. Opacity limitation: No person owning or operating a certified "contingency-use woodwaste burner" shall permit, cause, suffer or allow emissions to equal or exceed an opacity of 40 percent.

[11/30/95; 20.2.10.111 NMAC - Rn. 20 NMAC 2.10.111 10/31/02]

20.2.10.112 OPACITY DETERMINATION:

The Department shall determine the opacity of emissions from a woodwaste burner by averaging instantaneous opacity readings made at regular intervals over a time period of no less than ten minutes. Such readings shall be made only by a certified opacity reader.

[11/30/95; 20.2.10.112 NMAC - Rn. 20 NMAC 2.10.112 10/31/02]

PART 11: ASPHALT PROCESS EQUIPMENT

20.2.11.1 ISSUING AGENCY:

Environmental Improvement Board.

[11/30/95; 20.2.11.1 NMAC - Rn, 20 NMAC 2.11.100 10/31/02]

20.2.11.2 SCOPE:

All geographic areas within the jurisdiction of the Environmental Improvement Board.

[11/30/95; 20.2.11.2 NMAC - Rn, 20 NMAC 2.11.101 10/31/02]

20.2.11.3 STATUTORY AUTHORITY:

Environmental Improvement Act, NMSA 1978, section 74-1-8(A)(4) and (7), and Air Quality Control Act, NMSA 1978, sections 74-2-1 et seq., including specifically, section 74-2-5(A), (B) and (C).

[11/30/95; 20.2.11.3 NMAC - Rn, 20 NMAC 2.11.102 10/31/02]

20.2.11.4 DURATION:

Permanent.

[11/30/95; 20.2.11.4 NMAC - Rn, 20 NMAC 2.11.103 10/31/02]

20.2.11.5 EFFECTIVE DATE:

November 30, 1995.

[11/30/95; 20.2.11.5 NMAC - Rn, 20 NMAC 2.11.104 10/31/02]

[The latest effective date of any section in this Part is 10/31/02.]

20.2.11.6 OBJECTIVE:

The objective of this Part is to establish particulate matter emission standards for asphalt process equipment.

[11/30/95; 20.2.11.6 NMAC - Rn, 20 NMAC 2.11.105 10/31/02]

20.2.11.7 DEFINITIONS:

In addition to the terms defined in 20.2.2 NMAC (Definitions), as used in this Part:

A. "Part" means an air quality control regulation under Title 20, Chapter 2 of the New Mexico Administrative Code, unless otherwise noted; as adopted or amended by the Board.

B. "Rural area" means any area five or more miles from a community of more than fifty people and one or more miles from any residence.

[11/30/95; 20.2.11.7 NMAC - Rn, 20 NMAC 2.11.107 10/31/02]

20.2.11.8 AMENDMENT AND SUPERSESSION OF PRIOR REGULATIONS:

This Part amends and supersedes Air Quality Control Regulation ("AQCR") 501 -- Asphalt Processing Equipment last filed July 1, 1971.

A. All references to AQCR 501 in any other rule shall be construed as a reference to this Part.

B. The amendment and supersession of AQCR 501 shall not affect any administrative or judicial enforcement action pending on the effective date of such amendment nor the validity of any permit issued pursuant to AQCR 501.

[11/30/95; 20.2.11.8 NMAC - Rn, 20 NMAC 2.11.106 10/31/02]

20.2.11.9-20.2.11.107 [RESERVED]

20.2.11.108 ALLOWABLE EMISSION RATES:

A. The owner or operator of asphalt process equipment shall not permit, cause, suffer or allow particulate matter emissions to the atmosphere in excess of the maximum amounts specified in the following table:

Aggregate Process Rate	Maximum Stack Emission Rate
Pounds per Hour	Pounds per Hour
10,000	10
20,000	15
30,000	22
40,000	28
50,000	31
100,000	33
200,000	37
300,000	40
400,000	43
500,000	47
600,000 and above	50

B. When the process rate is between any two consecutive process rates in the table, the maximum stack emission rate is determined by interpolation. Where a plant or operation has more than one stack, the maximum stack emission rate applies to the total of the emissions from all stacks.

[11/30/95; 20.2.11.108 NMAC - Rn, 20 NMAC 2.11.108 10/31/02]

20.2.11.109 FUGITIVE DUST CONTROL:

The owner or operator of asphalt process equipment shall not operate the equipment without a fugitive dust control system. The fugitive dust control system shall be operated and maintained so that all particulate emissions are limited to the stack outlet.

[11/30/95; 20.2.11.109 NMAC - Rn, 20 NMAC 2.11.109 10/31/02]

20.2.11.110 TEMPORARY EXEMPTIONS:

A. Upon request, the Department, by written permit, may suspend the operational requirements of this Part for portable asphalt process equipment to be operated temporarily in rural areas. A permit shall not be issued for any period exceeding ninety operating days, but may be renewed when reasonably necessary for completion of a project. A written request that has not been acted upon within ten days after its receipt shall be deemed granted.

B. In making its decision on a petition, the Department shall give weight it deems appropriate to all facts and circumstances, including but not limited to:

(1) character and degree of injury to, or interference with, health, welfare, visibility and property;

(2) the public interest, including the social and economic value of the sources and subjects of the air contaminants involved; and

(3) technical practicability and economic reasonableness of complying with this Part.

C. The Department may require the requestor to submit his request in writing and any or all of the following information:

(1) requestor's name, address and telephone number;

(2) nature of the project and the location where the unit is to be operating;

(3) the proposed length of time of operation;

(4) the aggregate process rate (pounds per hour) of the equipment to be utilized; and

(5) reasons why the requestor believes the suspension of the operational requirements is necessary.

[11/30/95; 20.2.11.110 NMAC - Rn, 20 NMAC 2.11.110 10/31/02]

PART 12: CEMENT KILNS [REPEALED]

[This part was repealed on August 18, 2014]

PART 13: GYPSUM PROCESSING PLANTS

20.2.13.1 ISSUING AGENCY:

Environmental Improvement Board.

[11/30/95; 20.2.13.1 NMAC - Rn, 20 NMAC 2.13.100 10/31/02]

20.2.13.2 SCOPE:

All geographic areas within the jurisdiction of the Environmental Improvement Board.

[11/30/95; 20.2.13.2 NMAC - Rn, 20 NMAC 2.13.101 10/31/02]

[The latest effective date of any section in this Part is 10/31/02.]

20.2.14.6 OBJECTIVE:

The objective of this Part is to establish particulate matter emission standards for coal burning equipment.

[11/30/95; 20.2.14.6 NMAC - Rn, 20 NMAC 2.14.105 10/31/02]

20.2.14.7 DEFINITIONS:

In addition to the terms defined in 20.2.2 NMAC (Definitions), as used in this Part:

A. "Commenced" means that an owner or operator has undertaken a continuous program of construction or that an owner or operator has entered into a binding agreement or contractual obligation to undertake and complete, within a reasonable time, a continuous program of construction.

B. "Construction" means fabrication, erection, or installation of an affected facility.

C. "Existing coal burning equipment" means coal burning equipment that was fully constructed and operational or under construction prior to September 1, 1971.

D. "New coal burning equipment" means coal burning equipment the construction of which is commenced after September 1, 1971.

E. "Part" means an air quality control regulation under Title 20, Chapter 2 of the New Mexico Administrative Code, unless otherwise noted, as adopted or amended by the Board.

[11/30/95; 20.2.14.7 NMAC - Rn, 20 NMAC 2.14.107 10/31/02]

20.2.14.8 AMENDMENT AND SUPERSESSION OF PRIOR REGULATIONS:

This Part amends and supersedes Air Quality Control Regulation ("AQCR") 504 -- Particulate Emissions from Coal Burning Equipment last filed June 13, 1978.

A. All references to AQCR 504 in any other rule shall be construed as a reference to this Part.

B. The amendment and supersession of AQCR 504 shall not affect any administrative or judicial enforcement action pending on the effective date of such amendment nor the validity of any permit issued pursuant to AQCR 504.

[11/30/95; 20.2.14.8 NMAC - Rn, 20 NMAC 2.14.106 10/31/02]

20.2.14.9 DOCUMENTS:

Documents cited in this Part may be viewed at the New Mexico Environment Department, Air Quality Bureau, Harold Runnels Building, 1190 Saint Francis Drive, Santa Fe, NM, 87503 [2048 Galisteo St., Santa Fe, NM 87505].

20.2.14.10-20.2.14.199 [RESERVED]

20.2.14.200 EMISSION LIMITATIONS - EQUIPMENT LESS THAN OR EQUAL TO 250 MBTU/HOUR HEAT CAPACITY:

A. The owner or operator of coal burning equipment having a rated heat capacity less than or equal to 250 million British Thermal Units per hour (higher heating value) shall not permit, cause, suffer or allow particulate matter emissions to the atmosphere to exceed the limits set forth in the following table:

I Heat Input in Million British Thermal Units Per Hour (higher heating value)	E Maximum Allowable Emissions for Particulate Matter in Pounds per Million British Thermal Units Input Per Hour
10	0.56
20	0.48
30	0.43
40	0.40

50	0.38
70	0.35
100	0.33
200	0.28
250	0.26

B. For values of heat input not specified in the table, maximum allowable emissions shall be calculated by the following formula:

- (1) E = Allowable Particulate Emissions (lbs./million BTU);
- (2) I = Total Heat Input (in units of million BTU's /hr., higher heating value);
- (3) When I equals 1 to 250, E equals 0.996135 times I raised to the power - 0.23471.

[11/30/95; 20.2.14.200 NMAC - Rn, 20 NMAC 2.14.200 10/31/02]

20.2.14.201 EMISSION

Limitations - New Equipment Greater Than 250M BTU/Hour Heat Capacity: The owner or operator of new coal burning equipment having a rated heat capacity greater than 250 million British Thermal Units per hour (higher heating value) shall not permit, cause, suffer, or allow:

A. Particulate matter emissions to the atmosphere in excess of 0.05 pounds per million British Thermal Units of heat input (higher heating value); or

B. Fine particulate matter emissions of less than two microns equivalent aerodynamic diameter to the atmosphere in excess of 0.02 pounds per million British Thermal Units of heat input (higher heating value) as determined pursuant to Procedure I for fine particulate sampling from stationary coal burning equipment set forth in 20.2.14.300 NMAC -20.2.14.399 NMAC or an equivalent method approved by the Department.

[11/30/95; 20.2.14.201 NMAC - Rn, 20 NMAC 2.14.201 10/31/02]

20.2.14.202 EMISSION LIMITATIONS - EXISTING EQUIPMENT GREATER THAN 250M BTU/HOUR AND LESS THAN 5000M BTU/HOUR HEAT CAPACITY:

The owner or operator of existing coal burning equipment having a rated heat capacity greater than 250 million British Thermal Units and less than 5000 million British Thermal Units per hour (higher heating value) shall not permit, cause, suffer or allow:

A. Particulate matter emissions to the atmosphere in excess of 0.05 pounds per million British Thermal Units of heat input (higher heating value); or

B. Fine particulate matter emissions of less than two microns equivalent aerodynamic diameter to the atmosphere in excess of 0.04 pounds per million British Thermal Units of heat input (higher heating value) as determined pursuant to Procedure II for fine particulate sampling from stationary coal burning equipment set forth in 20.2.14.400 NMAC - 20.2.14.499 NMAC or an equivalent method approved by the Department.

[11/30/95; 20.2.14.202 NMAC - Rn, 20 NMAC 2.14.202 10/31/02]

20.2.14.203 EMISSION LIMITATIONS--EXISTING EQUIPMENT EQUAL TO OR GREATER THAN 5000M BTU/HOUR:

After December 31, 1982, The owner or operator of existing coal burning equipment having a rated heat capacity equal to or greater than 5000 million British Thermal Units per hour (higher heating value) shall not permit, cause, suffer, or allow:

A. Particulate matter emissions to the atmosphere in excess of 0.05 pounds per million British Thermal Units of heat input (higher heating value); or

B. Fine particulate matter emissions of less than two microns equivalent aerodynamic diameter to the atmosphere in excess of 0.04 pounds per million British Thermal Units of heat input (higher heating value) as determined pursuant to Procedure II for fine particulate sampling from stationary coal burning equipment set forth in 20.2.14.400 NMAC - 20.2.14.499 NMAC or an equivalent method approved by the Department.

[11/30/95; 20.2.14.203 NMAC - Rn, 20 NMAC 2.14.203 10/31/02]

20.2.14.204 METHOD FOR DETERMINING EMISSIONS LIMITATIONS:

Particulate matter emissions governed by 20.2.14.200 NMAC, and subsection A of 20.2.14.201 NMAC, subsection A of 20.2.14.202 NMAC, and subsection A of 20.2.14.203 NMAC, shall be determined by a method consistent with the method set forth by the US EPA at 40 CFR, Part 60, Appendix A, Methods 1 through 5, or any other method receiving prior approval from the Department.

[11/30/95; 20.2.14.204 NMAC - Rn, 20 NMAC 2.14.204 10/31/02]

20.2.14.205 PETITION FOR TEST METHOD OF EMISSION LIMITATION FOR EXISTING EQUIPMENT - HEAT CAPACITY EQUAL TO OR GREATER THAN 5000M BTU/HOUR:

A. With regard to existing coal burning equipment having a rated heat capacity greater than 250 million British Thermal Units and less than 5000 million British Thermal Units per hour (higher heating value) or with regard to existing coal burning equipment having a rated heat capacity equal to or greater than 5000 million British Thermal Units

per hour (higher heating value) the Department, any other interested person or any person owning or operating existing coal burning equipment of such capacities may petition the Board to amend subsection B of 20.2.14.202 NMAC or subsection B of 20.2.14.203 NMAC to require all existing coal burning equipment of the capacity specified in 20.2.14.202 NMAC or 20.2.14.203 NMAC, whichever is the subject of the petition, to comply with the emission limitation of subsection B of 20.2.14.201 NMAC pursuant to the test method contained therein.

B. The Board, after receipt of the petition, shall:

(1) Notify all persons owning or operating coal burning equipment which are the subject of the petition of the filing of said petition, and the date of the Board's regularly scheduled meeting at which the Board plans to consider the request for hearing;

(2) Make available for public inspection a copy of the petition at its office;

(3) Not less than 30 days nor more than forty-five days after the mailing of the notification provided in paragraph (1) of subsection B of 20.2.14.205 NMAC at its regularly scheduled meeting, consider setting the date, time and place of a public hearing on the petition; provided, however, that if any person owning or operating coal burning equipment of the capacities covered by the petition appears before the Board at such meeting and informs the Board that it does not possess sufficient testing information to determine whether its equipment does or does not comply with the emission limitation contained in paragraph (2) of subsection A of 20.2.14.201 NMAC pursuant to the test method specified therein, the Board, if it determines additional testing information is justified, shall specify a period of testing deemed adequate to permit such person to conduct such testing and shall set the date of the public hearing on the petition at its next regularly scheduled meeting following the expiration of such testing period;

(4) Within five days following the scheduling of the hearing, notify the petitioner and all persons who own or operate the coal burning equipment affected by the petition by certified mail of the date, time and place of the public hearing on the petition;

(5) Publish notice of the hearing and conduct the hearing according to the procedures set forth in the New Mexico Air Quality Control Act, section 74-2-6; and

(6) At the conclusion of the hearing on the petition or at the next Board meeting after transcripts of the hearing are available, if the Board determines that all the equipment regulated pursuant to 20.2.14.202 NMAC and 20.2.14.203 NMAC, whichever was the subject of the hearing, complies with the emission limitation of subsection B of 20.2.14.201 NMAC pursuant to the test method contained therein, the Board may amend subsection B of 20.2.14.202 NMAC or subsection B of 20.2.14.203 NMAC, whichever was the subject of the hearing.

[11/30/95; 20.2.14.205 NMAC - Rn, 20 NMAC 2.14.205 10/31/02]

20.2.14.206-20.2.14.299 [RESERVED]

20.2.14.300 PROCEDURE I, INTRODUCTION:

A method is specified for use in sampling the emissions from stationary coal-burning equipment for particulate matter of less than two microns (2u) equivalent aerodynamic diameter. This procedure shall be used for testing emissions from coal-burning equipment operating in the State of New Mexico for compliance with 20.2.14 NMAC (Particulate Emissions from Coal Burning Equipment), as specified within the regulation. It is generally intended that sampling for fine particulates, as described below, be carried out only on those stacks (or ducts) which are controlled for gross particulates and which have already been demonstrated to be in compliance with the sections of the regulation for total particulate emissions.

[11/30/95; 20.2.14.300 NMAC - Rn, 20 NMAC 2.14.300 10/31/02]

20.2.14.301 PROCEDURE I, METHOD:

A. Principle: Particulate matter is withdrawn at an approximately isokinetic rate from the source, the large (over 2u) [over 2 micrometer] particles separated from the gas stream, and the fine particles collected on a filter. The weight of the fine particles is determined gravimetrically after removal of uncombined water.

B. Apparatus:

(1) Sampling Train: The recommended sampling train is shown schematically in Figure 1 (20.2.14.302 NMAC). It is based on the US EPA sampling train described in the Code of Federal Regulations, Title 40, Part 60, Appendix A, Method 5, Section 2.1 (hereinafter referred to as US EPA Method 5). To the Method 5 train is added a particle separator. The purpose of the particle separator is to trap essentially all of the particles greater than 2u [two micrometers]; to do this, a certain gas flowrate is required through this device as specified in Section 2.2.1.3.

(2) Nozzle: Stainless steel (type 304 or 316).

(3) Probe: Pyrex glass, insulated and heated uniformly to a temperature sufficient to prevent condensation from occurring at any point in the tube. For lengths greater than about 8 feet, a metal tube may be used. Incoloy 825 is preferred, but types 304 or 316 stainless steel are acceptable. Long probes shall be reinforced or supported to prevent excessive droop or gas stream whip. For sampling stacks carrying electrically charged particles (as for installations using electrostatic precipitators), the probe shall be grounded to prevent electrical shock to personnel and the inner shell of the probe shall be electrically conductive and shall be grounded to prevent size discriminative trapping of particles within the probe.

(4) Particulate Separator and Filter: The particle separator and filter system shall be housed in a temperature-controlled container.

(a) Particle Separator: The particle separator shall be a cascade impactor, such as the Andersen Mark II or Mark III Stack Head, manufactured by 2000 Inc., Atlanta, Georgia, or other if approved by the Department. The stack head must be modified to use only five of the collection plates arranged in the following order 0, 1, 2, 3, 4, 1 (manufacturer's numbers) and a filter holder as specified in subparagraph (b) of paragraph (4) of subsection B of 20.2.14.301 NMAC. The complete arrangement is shown in Figure 2 (20.2.14.303 NMAC). The gas flowrate through the stack head must be controlled to maintain a particle impaction efficiency of 50% on plate 4 for particles of 2 microns aerodynamic diameter. The procedure for doing this is described in paragraphs (3) and (4) of subsection D of 20.2.14.301 NMAC.

(b) Filter Holder: The filter holder shall immediately follow the last collection plate, as indicated in Figure 2 (20.2.14.303 NMAC), and contain a filter similar to those specified in paragraph (2) of subsection C of 20.2.14.301 NMAC.

(5) Metering System: Vacuum gage, leak-free pumps, thermometers capable of measuring to within 3 degrees Fahrenheit., dry test meter with 2 percent accuracy, and related equipment, as required to maintain an approximately isokinetic sampling rate through the probe and specified flowrate through the Andersen Stack Head, and to determine sample volume.

(6) Other Sampling Train Equipment: Pitot tube (type S, or equivalent), impingers/condensers, and barometer shall be as specified in US EPA Method 5, Section 2.1. Note that an equivalent condenser may be used in place of the impinger train.

(7) Sample Recovery Accessories: As specified in Section 2.2 of US EPA Method 5.

(8) Analytical Accessories: As specified in US EPA Method 5, Section 2.3.

C. Reagents:

(1) Sampling:

(2) Filters: Glass fiber type, having high efficiency for collecting small particles (99% or higher efficiency for particles 0.3 microns or larger in diameter). Cambridge Media CM-114 or Gelman Type A filters are acceptable types.

(3) Other Sampling Reagents: As specified in US EPA Method 5, Section 3.1.

(4) Sample Recovery and Analytical Reagents: Acetone and water, as specified in Sections 3.2 and 3.3 of US EPA Method 5.

D. Sampling Procedure:

(1) Selection of Sampling Site and Sampling Points: The sampling site is preferably located in a vertical duct or stack, at least eight stack diameters downstream and two diameters upstream of a major disturbance (bend, expansion, contraction, or visible flame). In large ducts (of 20 feet or greater diameter), a distance five diameters downstream of a disturbance will be considered adequate, providing the velocity traverse does not show the flow to be highly irregular. Under these recommended conditions, a single sampling point is considered to be adequate (See Industrial Gas Cleaning Institute, Test Procedures for Gas Scrubbers, Publication No. 1, p. 6): This point shall be located between 0.2 and 0.5 of the diameter from the outside toward the center of the stack, preferably at a point whose velocity approximates the average velocity of the flue gases. For conditions which do not meet the criteria given above, additional sampling points must be considered and will be determined as agreed upon between the coal-burning equipment operator and the Department.

(2) Determination of Stack Pressure, Temperatures, Moisture and Distribution of Velocity Heads: Prior to actual sampling for particulates, a preliminary survey of stack pressure, temperature, moisture content, and velocity distribution shall be made to assess overall sampling conditions and establish isokinetic sampling velocities.

(a) Stack Pressure and Temperature: Stack pressure shall be obtained at one or more points at the sampling station using a water-filled U-tube manometer to sense pressure from a hole in the side of the stack or duct to within 0.1 in water. Temperatures shall be determined from a thermocouple (or equivalent device) attached to the pitot tube, capable of measuring to within 1.5% of the minimum absolute stack temperature.

(b) Distribution of Velocity Heads: The US EPA Method 1 (40 CFR, Part 60, Appendix A) shall be used as a general guide in determining the number and distribution of pitot tube traverse points. US EPA Method 2 (40 CFR, Part 60, Appendix A) shall be used as a guide in selection of pitot tube equipment, procedure for making and recording measurements, and calibration of the instrument. In calibration, the procedure shall be modified in that the pitot tube to be used in testing shall be mounted on the probe and the probe shall have attached to it a 1/4-inch sampling nozzle so that the arrangement is similar to that used in testing. A complete velocity traverse shall be done each day of testing.

(c) Moisture Determination: Moisture content of the gas stream is determined by extracting a measured quantity of gas from the stack, condensing the moisture in an external condenser (or in the impingers), and measuring the volume of condensate. A single, preliminary measurement shall be made using either the stack sampling train or a simplified apparatus consisting mainly of a filter, condenser, pump, and dry gas meter. If liquid drops are present in the gas stream, proceed as follows: Assume the stream to be saturated, determine the average stack gas temperature from the data obtained in subparagraph (a) of paragraph (2) of subsection D of 20.2.14.301 NMAC above, and use a psychometric chart with appropriate altitude correction along with steam tables to

calculate the approximate percentage of moisture. A further determination of moisture content is made as a part of the particulate sampling as described below.

(3) Preparation of Collection Train: Check to see that the probe, nozzle, etc., are clean and that there is sufficient ice to fill the ice bath, place 100 ml. of water in the first two impingers, leave the third impinger empty, and place approximately 200 g. of preweighed indicating silica gel in the fourth impinger. Complete the preparation by desiccating the filter, checking the train for leaks and adjusting the probe heater, generally as specified in US EPA Method 5, Section 4.1.2. To establish near isokinetic sampling conditions at the start of testing, the desired flowrate through the particle separator is corrected to stack conditions and the desired sample nozzle size is calculated. To do this record the temperature of the container surrounding the particle separator. Find this temperature in the abscissa of the graph in Figure 3 (20.2.14.304 NMAC), go up to the curve and read the correction factor on the ordinate of the graph. Multiply the correction factor by 2 microns and obtain the temperature corrected aerodynamic diameter. Locate the corrected aerodynamic diameter on the abscissa of the graph on Figure 4 (20.2.14.305 NMAC), go up to the curve and read on the ordinate the flowrate needed to maintain an impaction efficiency of 50% on plate #4. Correct this flowrate to stack conditions by adjusting for the difference in particle separator temperature and stack temperature. Using the equation $Q = VA$ where Q = volumetric flowrate through the separator adjusted to stack temperature (cfm), V = velocity of the stack gas at the point in the stack where the sampling is to take place (fpm) and A is area of the nozzle (sq. ft.) calculate the desired sampling nozzle diameter. Attach a nozzle to the probe that matches this calculated diameter within 1%. To establish at the start of testing the correct gas flow through the separator, using the dry gas meter, correct the desired flowrate through the separator to meter conditions by correcting for the difference in temperature between the separator and the dry gas meter and subtract out that portion of the gas volume which will be condensed in the impingers.

(4) Particulate Train Operation: To begin sampling, position the nozzle at the selected point in the stack with the nozzle tip pointing directly into the gas stream. Immediately after, start the pump and adjust the dry gas meter to the flowrate calculated in paragraph (3) of subsection D of 20.2.14.301 NMAC. Sample for at least 5 minutes and then record the temperature of the gas on the outlet end of the separator. If the temperature is different from that of the container surrounding the separator readjust the dry gas meter flowrate by repeating the steps described in paragraph (3) of subsection D of 20.2.14.301 NMAC using Figures 3 (20.2.14.304 NMAC) and 4 (20.2.14.305 NMAC) excluding the step used in calculating nozzle diameter. Continue the run until 30 standard cubic feet (70 degrees Fahrenheit, 29.92 inches Hg) have been drawn through the sampling train. For each run record the required data on a sheet such as the one shown in Figure 5-2 of US EPA Method 5 and include the temperature monitored at the outlet of the separator. Record the data after every 5 minutes of testing. At the end of the run, turn off the pump and record the final readings. Remove the probe and nozzle from the stack. Remove the filter from the separator and place in a container. Repeat the sampling procedure until three runs have been obtained. Desiccate the filters for at

least 24 hours and weigh to the nearest 0.5 mg in a room where the relative humidity is less than 50%.

E. Calibration: Use approved methods and equipment for calibration of the particle separator, orifice meter, pitot tube, temperature sensors and dry test meter. Recalibrate after every third test or three months whichever comes first except for the particle separator which shall be recalibrated as agreed upon between the owner or operator of the coal burning equipment and the Department.

F. Calculations: After completing the test series, average the dry gas meter temperatures and average orifice pressure drops, correct the sample volume measure to standard conditions and calculate the water vapor and moisture content. Calculate the concentration of particulate matter in the stack gas in pounds per standard cubic foot on a dry basis by using equation 5-5 given in Section 6.6.2 of US EPA Method 5. Use only the weight of the particulate collected on the filter. Using the stack volumetric flowrate corrected to standard conditions on a dry basis calculate the emission rate in pounds per hour. Using the average heat input to the coal burning equipment during the time of testing, in million Btu per hour, calculate the emission rate in pounds per million Btu. Average the emission rate for the three runs.

G. Acceptable results: Validity of each run shall be determined by calculating the actual flow through the particle separator from the recorded data. If the flowrate is within 10% of the ideal flow calculated from Figure 4 (20.2.14.305 NMAC) the run will be considered valid. Deviations from isokinetic sampling rate shall not invalidate the test.

20.2.14.306-20.2.14.399 [RESERVED]

20.2.14.400 PROCEDURE II, INTRODUCTION:

A method is specified for use in sampling the emissions from stationary coal burning equipment for particulate matter of less than two microns (2μ) equivalent aerodynamic diameter. This procedure shall be used for testing emissions from coal burning equipment in the State of New Mexico for compliance with 20.2.14 NMAC (Particulate Emissions from Coal Burning Equipment), as specified within that regulation. It is generally intended that sampling for fine particulates, as described below, be carried out

only on those stacks (or ducts) which have already been demonstrated to be in compliance with the sections of the regulation for total particulate emissions.

[11/30/95; 20.2.14.400 NMAC - Rn, 20 NMAC 2.14.400 10/31/02]

20.2.14.401 PROCEDURE II, METHOD:

A. Principle: Particulate matter is withdrawn at an approximately isokinetic rate from the source. The particles are then separated by equivalent aerodynamic diameter by an in-stack size separating device to determine the percentage by mass of particles less than 2 microns equivalent aerodynamic diameter. This percentage is then applied to the total mass loading in pounds per million British Thermal Units as determined by US EPA Method 5, contained in 40 CFR, Part 60, Appendix A, in order to determine emissions of particulates of less than two micron equivalent aerodynamic diameter in pounds per million British Thermal Units.

B. Apparatus:

(1) Sampling Train:

(a) The sampling train for total mass loading is described by the Environmental Protection Agency in 40 CFR, Part 60, Appendix A, Method 5 (hereinafter referred as US EPA Method 5). The percentage by mass of particles less than two microns equivalent aerodynamic diameter shall be as follows.

(b) The recommended sampling train is shown in Figure 1 (20.2.14.402 NMAC). It is based on the sampling train described in US EPA Method 5, Section 2.1, with the addition of an Andersen Mark III in-stack sampler. The purpose of the in-stack particle collector is to collect the particles and segregate them by aerodynamic size; to do this, a certain gas flowrate is required through this device as specified in paragraph (4) of subsection B of 20.2.14.401 NMAC.

(2) Nozzle: Stainless steel (type 304 or 316).

(3) Probe: Pyrex glass, insulated and heated uniformly to a temperature sufficient to prevent condensation from occurring at any point in the tube. For lengths greater than about 8 feet, a metal tube may be used. Incoloy 825 is preferred, but types 304 or 316 stainless steel are acceptable. Long probes shall be reinforced or supported to prevent excessive droop or gas stream whip. For sampling stacks carrying electrically charged particles (as for installations using electrostatic precipitators), the probe shall be grounded to prevent electrical shock to personnel and the inner shell of the probe shall be electrically conductive and shall be grounded to prevent size discriminative trapping of particles within the probe.

(4) Particulate Separator: The particle collector shall be heated so that the temperature of the collection plates and back up filter is above the dew point of the stack gases.

(5) Particle Collector: The particle collector shall be a cascade impactor, such as the Andersen Mark III Stack Sampler (Mark III sampler) manufactured by 2000 Inc., Atlanta, Georgia or other similar cascade impactor approved by the Department. The Mark III Sampler shall use a complete set of collector plates consisting of the following: Ten plates numbered 0, 1, 2, 3, 4, 5, 6, 7, 8, and F, eleven spacers, eight crossbars, eight glass fiber collection discs, one glass fiber filter, and one plate holder. Collector plates are installed as follows; 0, 1, 2, 3, 4, 5, 6, 7, 8, F. The complete arrangement is shown in Figure 2 (20.2.14.403 NMAC). The gas flowrate through the Mark III Sampler must be controlled to maintain a particle impaction efficiency of 50% on plate 4 for particles of 2 microns aerodynamic diameter. The procedure for doing this is described in paragraphs (4) and (5) of subsection D of 20.2.14.401 NMAC.

(6) Metering System: Vacuum gage, leak-free pumps, thermometers capable of measuring to within 3 degrees Fahrenheit., dry test meter with 2 percent accuracy, and related equipment, as required to maintain an approximately isokinetic sampling rate through the probe and specified flowrate through the Mark III Sampler, and to determine sample volume.

(7) Other Sampling Train Equipment: Pitot tube (type S, or equivalent), impingers/condensers, and barometer shall be as specified in US EPA method 5, Section 2.1. Note that an equivalent condenser may be used in place of the impinger train.

(8) Sample Recovery Accessories: As specified in US EPA Method 5, Section 2.2.

(9) Analytical Accessories: As specified in US EPA Method 5, Section 2.3.

C. Reagents:

(1) Sampling: Sampling for total particulate mass loading shall be in accordance with US EPA Method 5. Procedures for determining the percent by mass of particles less than two microns equivalent aerodynamic diameter shall be as follows.

(2) Filters: Glass fiber type, having high efficiency for collecting small particles (99% or higher efficiency for particles 0.3 microns or larger in diameter). Cambridge Media CM-114 or Gelman Type A filters are acceptable types.

(3) Other Sampling Reagents: As specified in US EPA Method 5, Section 3.1.

(4) Sample Recovery and Analytical Reagents: Acetone and water, as specified in US EPA Method 5, Sections 3.2 and 3.3.

D. Sampling Procedure:

(1) Procedures: Sampling procedures for total particulate mass loading shall be in accordance with US EPA Method 5. Procedures for determining the percent by mass of particles less than two microns equivalent aerodynamic diameter shall be as follows.

(2) Selection of Sampling Site and Sampling Points: The sampling site is preferably located in a vertical duct or stack, at least eight stack diameters downstream and two diameters upstream of a major disturbance (bend, expansion, contraction or visible flame). In large ducts (of 20 feet or greater diameter), a distance five diameters downstream of a disturbance will be considered adequate, providing the velocity traverse does not show the flow to be highly irregular. Under these recommended conditions, a single sampling point is considered to be adequate (See Industrial Gas Cleaning Institute, Test Procedures for Gas Scrubbers, Publication No. 1, p.6): This point shall be located between 0.2 and 0.5 of the diameter from the outside toward the center of the stack, preferably at a point whose velocity approximates the average velocity of the flue gases. For conditions which do not meet the criteria given above, additional sampling points must be considered and will be determined as agreed upon between the coal burning equipment operator and the Department.

(3) Determination of Stack, Pressure, Temperatures, Moisture and Distribution of Velocity Heads: Prior to actual sampling for particulates, a preliminary survey of stack pressure, temperatures, moisture content, and velocity distribution shall be made to assess overall sampling conditions and establish isokinetic sampling velocities.

(a) Stack Pressure and Temperature: Stack pressure shall be obtained at one or more points at the sampling station using a water-filled U-tube manometer to sense pressure from a hole in the side of the stack or duct to within 0.1 in water. Temperatures shall be determined from a thermocouple (or equivalent device) attached to the pitot tube, capable of measuring to within 1.5% of the minimum absolute stack temperature.

(b) Distribution of Velocity Heads: The US EPA Method 1 (found in 40 CFR, Part 60, Appendix A) shall be used as a general guide in determining the number and distribution of pitot tube traverse points. US EPA Method 2, (found in 40 CFR, Part 60, Appendix A) shall be used as a guide in selection of pitot tube equipment, procedure for making and recording measurements, and calibration of the instrument. In calibration, the procedure shall be modified in that the pitot tube to be used in testing shall be mounted on the probe and the probe shall have attached the Mark III Sampler and nozzle so that the arrangement is similar to that used in testing. A complete velocity traverse shall be done each day of testing.

(c) Moisture Determination: Moisture content of the gas stream is determined by extracting a measured quantity of gas from the stack, condensing the moisture in an external condenser (or in the impingers), and measuring the volume of condensate. A

single, preliminary measurement shall be made using either the stack sampling train or a simplified apparatus consisting mainly of a filter, condenser, pump, and dry gas meter. If liquid drops are present in the gas stream proceed as follows: Assume the stream to be saturated, determine the average stack gas temperature from the data obtained in subparagraph (a) of paragraph (3) of subsection D of 20.2.14.401 NMAC above, and use a psychometric chart with appropriate altitude correction along with steam tables to calculate the approximate percentage of moisture. A further determination of moisture content is made as a part of the particulate sampling as described below.

(4) Preparation of Collection Train: Check to see that the probe, nozzle, etc., are clean and that there is sufficient ice to fill the ice bath, place 100 ml. of water in the first two impingers, leave the third impinger empty, and place approximately 200 g. of preweighed indicating silica gel in the fourth impinger. Complete the preparation by desiccating the filter, checking the train for leaks and adjusting the probe heater, generally as specified in the US EPA Method 5, Section 4.1.2. To establish near isokinetic sampling conditions at the start of testing, the desired flowrate through the particle separator is corrected to stack conditions and the desired sample nozzle size is calculated. To do this record the temperature of the in-stack Mark III Sampler. Find this temperature in the abscissa of the graph on Figure 3 (20.2.14.404 NMAC), go up to the curve and read the correction factor on the ordinate of the graph. Multiply the correction factor by two microns and obtain the temperature corrected aerodynamic diameter. Locate the corrected aerodynamic diameter on the abscissa of the graph on Figure 4 (20.2.14.405 NMAC) go up to the curve and read on the ordinate the flowrate needed to maintain an impaction efficiency of 50% on plate #4. Correct this flowrate to stack conditions by adjusting for the difference in particle separator temperature and stack temperature. Using the equation $Q = VA$ where Q = volumetric flowrate through the separator adjusted to stack temperature (cfm), V = velocity of the stack gas at the point in the stack where the sampling is to take place (fpm) and A is area of the nozzle (sq. ft.) calculate the desired sampling nozzle diameter. Attach a nozzle to the probe that matches this calculated diameter within 1%. To establish at the start of testing the correct gas flow through the separator, using the dry gas meter, correct the desired flowrate through the separator to meter conditions by correcting for the difference in temperature between the separator and the dry gas meter and subtract out that portion of the gas volume which will be condensed in the impingers.

(5) Particulate Train Operation: To begin sampling, position the nozzle at the selected point in the stack with the nozzle tip pointing directly into the gas stream. Immediately after, start the pump and adjust the dry gas meter to the flowrate calculated in paragraph (4) of subsection D of 20.2.14.401 NMAC. Sample for at least 5 minutes and then record the temperature of the gas on the outlet end of the separator. If the temperature is different from that of the container surrounding the separator readjust the dry gas meter flowrate by repeating the steps described in paragraph (4) of subsection D of 20.2.14.401 NMAC using Figures 3 (20.2.14.404 NMAC) and 4 (20.2.14.405 NMAC) excluding the step used in calculating nozzle diameter. Continue the run until 30 standard cubic feet (70 degrees Fahrenheit, 29.92 inches Hg) have been drawn through the sampling train. For each run record the required data on a sheet such as the one

shown in Figure 5-2 of the US EPA Method 5 and include the temperature monitored at the outlet of the separator. Record the data after every 5 minutes of testing. At the end of the run, turn off the pump and record the final readings. Remove the probe and nozzle from the stack. Remove the filter and glass fiber collection discs from the separator and place each in a separate container. Collect in a container all particles brushed and washed from the nozzle, the impactor inlet cone and the zero stage plate. Repeat the sampling procedure until three runs have been obtained. Filter wash-solution and dry filter. Desiccate the filters and collection discs for at least 24 hours and weigh to the nearest 0.5 mg in a room where the relative humidity is less than 50%.

E. Calibration: Use methods and equipment for calibration of the particle separator, orifice meter, pitot tube, temperature sensors and dry test meter approved by the Department. Recalibrate after every third test or three months whichever comes first except for the particle separator which shall be recalibrated as agreed upon between the owner or operator of the coal burning equipment and the Department. Figures 3 (20.2.14.404 NMAC) and 4 (20.2.14.405 NMAC) shall reflect results of such calibration.

F. Calculations:

(1) Total Particulate Emissions: After completing the test series, average the dry gas meter temperatures and average orifice pressure drops, then correct the sample volumes measured to standard conditions and calculate the water vapor and moisture content. Using data gathered, using US EPA Method 5, calculate the concentration of total particulate matter in the stack gas in pounds per standard cubic foot on a dry basis by using equation 5-5 given in Section 6.6.2 of US EPA Method 5. Using the stack volumetric flowrate corrected to standard conditions on a dry basis calculate the emission rate in pounds per hour. Using the average heat input to the coal burning equipment during the time of testing, in millions of British Thermal Units per hour, calculate the emission rate in pounds per million British Thermal Units. Average the emission rate for the three runs to determine total particulate emissions.

(2) Percent of Particles Less Than Two Microns: The data obtained from the Mark III Sampling shall be used to determine the quantity of particulate matter larger than two microns Equivalent Aerodynamic Diameter and the quantity of particulate matter less than two microns Equivalent Aerodynamic Diameter. Particulate matter larger than two microns equivalent aerodynamic diameter shall be defined to be the particulate matter collected on the glass fiber collection discs from plates numbered 1, 2, 3, and 4 and the material brushed and washed from the nozzle, the impactor inlet cone and the zero stage plate. Particulate matter less than two microns equivalent aerodynamic diameter shall be defined to be the particulate material collected on the glass fiber collection discs from plates numbered 5, 6, 7 and 8 and the particulate matter collected on the glass fiber filter. The sum of the mass' of the particulates which are greater than two microns Equivalent Aerodynamic Diameter and the particles less than two microns equivalent aerodynamic diameter is the total particulate collected for the purposes of determining percent less than two microns. After determining the quantity of particulate collected, determine the percent by mass of the total particulate

collected which is compassed of particles of less than two microns equivalent aerodynamic diameter.

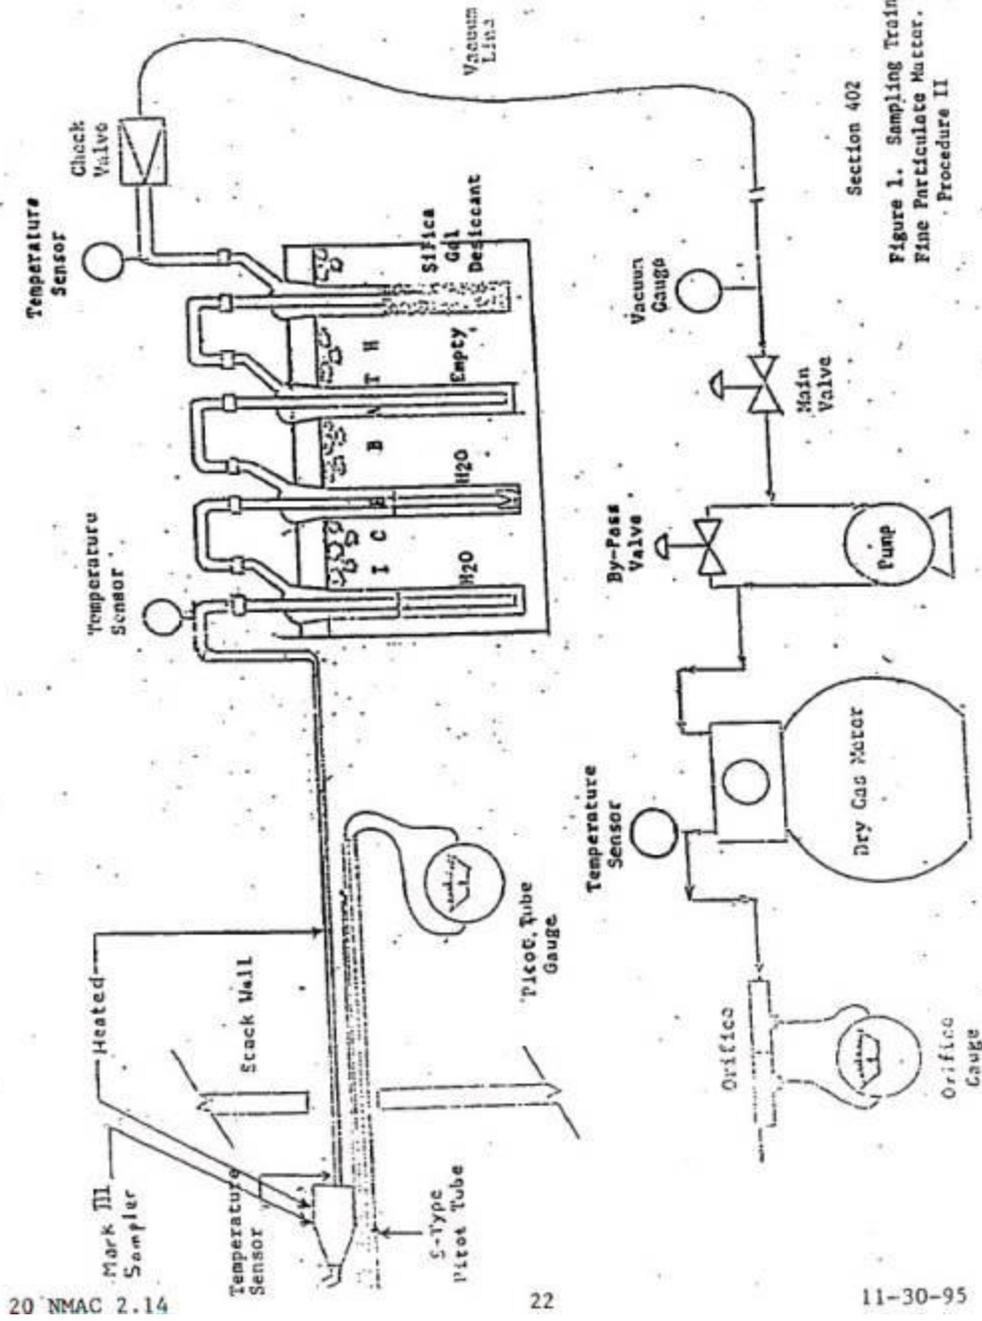

(3) Loading of Particles Less Than Two Microns: The percentage by mass of particles as determined from the Mark III sampling results as described in the previous paragraph is applied to the total mass loading in pounds per million British Thermal Units as determined by US EPA Method 5. The resulting loading in pounds per million British Thermal Units of particulates less than two microns equivalent aerodynamic diameter shall be used to determine compliance with the particulate emission limitations contained in subsection B of 20.2.14.202 NMAC and subsection B of 20.2.14.203 NMAC.

G. Acceptable results: Validity of each run shall be determined by calculating the actual flow through the particle separator from the recorded data. If the flowrate is within 10% of the calculated flow from Figure 4 (20.2.14.405 NMAC), the run will be considered valid. Deviations from isokinetic sampling rate by more than 10% shall invalidate the test.

Permanent.

[11/30/95; 20.2.15.4 NMAC - Rn, 20 NMAC 2.15.103 10/31/02]

20.2.15.5 EFFECTIVE DATE:

November 30, 1995.

[11/30/95; 20.2.15.5 NMAC - Rn, 20 NMAC 2.15.104 10/31/02]

[The latest effective date of any section in this Part is 10/31/02.]

20.2.15.6 OBJECTIVE:

The objective of this Part is to establish particulate matter emission standards for pumice, mica and perlite process equipment.

[11/30/95; 20.2.15.6 NMAC - Rn, 20 NMAC 2.15.105 10/31/02]

20.2.15.7 DEFINITIONS:

In addition to the terms defined in 20.2.2 NMAC (Definitions), as used in this Part:

A. "Part" means an air quality control regulation under Title 20, Chapter 2 of the New Mexico Administrative Code, unless otherwise noted; as adopted or amended by the Board.

B. "Process weight" means the total of all materials including solid fuel but not including liquid or gaseous fuel or combustion air introduced into any specific process.

C. "Process weight per hour" means a quantity derived by dividing the total process weight by the number of hours in the complete operation, excluding any time during which the equipment is idle.

[11/30/95; 20.2.15.7 NMAC - Rn, 20 NMAC 2.15.107 10/31/02]

20.2.15.8 AMENDMENT AND SUPERSESSION OF PRIOR REGULATIONS:

This Part amends and supersedes Air Quality Control Regulation ("AQCR") 505 -- Pumice, Mica and Perlite Process Equipment last filed September 13, 1971.

A. All references to AQCR 505 in any other rule shall be construed as a reference to this Part.

B. The amendment and supersession of AQCR 505 shall not affect any administrative or judicial enforcement action pending on the effective date of such amendment nor the validity of any permit issued pursuant to AQCR 505.

[11/30/95; 20.2.15.8 NMAC - Rn, 20 NMAC 2.15.106 10/31/02]

20.2.15.9-20.2.15.107 [RESERVED]

20.2.15.108 EMISSION LIMITATIONS:

A. The owner or operator of pumice, mica or perlite process equipment shall not permit, cause, suffer or allow particulate matter emissions to the atmosphere from a stack or stacks in excess of the maximum amounts specified in the following table:

Process Rate Pounds per Hour	Maximum Stack Emission Rate Pounds per Hour
10,000	10
20,000	15
30,000	22
40,000	28
50,000	31
100,000	33
200,000	37
300,000	40
400,000	43
500,000	47
600,000 & above	50

B. When the process rate is between any two consecutive process rates in the table, the maximum stack emission rate is determined by interpolation. Where an operation has more than one stack, the maximum stack emission rate applies to the total of the emissions from all stacks.

[11/30/95; 20.2.15.108 NMAC - Rn, 20 NMAC 2.15.108 10/31/02]

20.2.15.109 STACK CONFINEMENT OF EMISSIONS:

Within technical feasibility, all particulate matter emissions to the atmosphere resulting directly from the operation of pumice, mica or perlite process equipment shall be limited to the stack outlet or outlets. Particulate matter emissions not governed by this section are governed by 20.2.15.110 NMAC.

[11/30/95; 20.2.15.109 NMAC - Rn, 20 NMAC 2.15.109 10/31/02]

20.2.15.110 OTHER PARTICULATE CONTROL:

The owner or operator of pumice, mica or perlite process equipment shall not permit, cause, suffer or allow any material to be handled, transported, stored or disposed of or a building or road to be used, constructed, altered or demolished without taking reasonable precautions to prevent particulate matter from becoming airborne.

[11/30/95; 20.2.15.110 NMAC - Rn, 20 NMAC 2.15.110 10/31/02]

20.2.16.6 OBJECTIVE:

The objective of this Part is to establish particulate matter emission standards for nonferrous smelters.

[11/30/95; 20.2.16.6 NMAC - Rn, 20 NMAC 2.16.105 10/31/02]

20.2.16.7 DEFINITIONS:

In addition to the terms defined in 20.2.2 NMAC (Definitions), as used in this Part:

A. "Construction" means fabrication, erection or installation of an affected facility.

B. "Commenced" means that an owner or operator has undertaken a continuous program of construction or that an owner or operator has entered into a binding agreement or contractual obligation to undertake and complete within a reasonable time a continuous program of construction.

C. "Existing nonferrous smelter" means nonferrous smelter that was fully constructed and operational prior to September 1, 1971.

D. "Modification" means a physical change or change in the manner of operation which increases the amount of any air contaminant emitted by the nonferrous smelter or which results in the emission of any air contaminant not previously emitted.

E. "New nonferrous smelter" means nonferrous smelter the construction or modification of which was commenced after September 1, 1971.

F. "Part" means an air quality control regulation under Title 20, Chapter 2 of the New Mexico Administrative Code, unless otherwise noted; as adopted or amended by the Board.

G. "Standard conditions" means temperature of 68 degrees Fahrenheit and pressure of 29.92 inches of mercury.

[11/30/95; 20.2.16.7 NMAC - Rn, 20 NMAC 2.16.107 10/31/02]

20.2.16.8 AMENDMENT AND SUPERSESION OF PRIOR REGULATIONS:

This Part amends and supersedes Air Quality Control Regulation ("AQCR") 506 -- Nonferrous Smelters -- Particulate Matter last filed November 21, 1978.

A. All references to AQCR 506 in any other rule shall be construed as a reference to this Part

B. The amendment and supersession of AQCR 506 shall not affect any administrative or judicial enforcement action pending on the effective date of such amendment nor the validity of any permit issued pursuant to AQCR 506.

[11/30/95; 20.2.16.8 NMAC - Rn, 20 NMAC 2.16.106 10/31/02]

20.2.16.9 DOCUMENTS:

Documents cited in this Part may be viewed at the New Mexico Environment Department, Air Quality Bureau, Runnels Building, 1190 Saint Francis Drive, Santa Fe, NM 87505 [2048 Galisteo St., Santa Fe, NM 87505].

[11/30/95; 20.2.16.9 NMAC - Rn, 20 NMAC 2.16.108 10/31/02]

20.2.16.10-20.2.16.108 [RESERVED]

20.2.16.109 ALLOWABLE EMISSION RATES:

A. The owner or operator of a new nonferrous smelter shall not permit, cause, suffer or allow particulate matter emissions to the atmosphere in excess of 0.03 grains per dry cubic foot of discharge gas measured at standard conditions.

B. The owner or operator of an existing nonferrous smelter shall not permit, cause, suffer or allow particulate matter emissions to the atmosphere from:

(1) The stack or stacks connected directly to the reverberatory furnace in excess of 1100 pounds per hour;

(2) The stack or stacks serving the acid plant in excess of 0.05 grains per dry cubic foot of discharge gas measured at standard conditions;

(3) The stack or stacks serving the reverberatory feed dryer in excess of 0.05 grains per dry cubic foot of discharge gas measured at standard conditions;

(4) The stack or stacks serving the fire refining furnace in excess of:

(a) 30 pounds per hour during the charging operation;

(b) 50 pounds per hour during the blowing operation;

- (c) 200 pounds per hour during the poling operation; and
- (d) 550 pounds per hour during the fluxing operation.

C. The stack or stacks used solely for venting captured fugitive emissions from the matte tapping, matte ladle, and slag skimming areas on the reverberatory furnace of an existing nonferrous smelter do not have a particulate limitation.

[11/30/95; 20.2.16.109 NMAC - Rn, 20 NMAC 2.16.109 10/31/02]

20.2.16.110 TEST METHODS:

Compliance with subsections A and B of 20.2.16.109 NMAC shall be determined by a method consistent with the method set forth by the US EPA at 40 CFR, Part 60, Appendix A, Methods 1 through 5, except that Method 5 is modified as follows: The distilled water specified in the first impinger of Method 5 is replaced with isopropyl alcohol solution as specified within Method 8 of 40 CFR, Part 60, Appendix A. The temperature of the probe and oven containing the cyclone and filter should be maintained above the dew point of sulfuric acid mist in order to prevent condensation of acid mist within the probe or on the filter. After sample collection, the isopropyl alcohol solution within the first impinger is analyzed for sulfur trioxide and sulfuric acid mist as described in Method 8. Solid particulate matter is collected within the nozzle, probe, cyclone and filter while liquid particulate matter is collected within the isopropyl alcohol impinger. Compliance with subsections A and B of 20.2.16.109 NMAC shall be determined by comparison of the sum of the solid and liquid particulate matter to the applicable emission limitation. Upon request of the Department, the owner or operator of nonferrous smelters subject to this Part shall perform stack testing according to the method stated above and report the results of such tests in the format and time period specified by the Department. The owner or operator shall inform the Department of the dates and times of such testing so that the Department may have the opportunity to have an observer present during testing.

20.2.18.5 EFFECTIVE DATE:

November 30, 1995.

[11/30/95; 20.2.18.5 NMAC - Rn, 20 NMAC 2.18.104 10/31/02]

[The latest effective date of any section in this Part is 10/31/02.]

20.2.18.6 OBJECTIVE:

The objective of this Part is to establish particulate matter emission standards for oil burning equipment.

[11/30/95; 20.2.18.6 NMAC - Rn, 20 NMAC 2.18.105 10/31/02]

20.2.18.7 DEFINITIONS:

In addition to the terms defined in 20.2.2 NMAC (Definitions), as used in this Part:

A. "Commenced" means that an owner or operator has undertaken a continuous program of construction or that an owner or operator has entered into a binding agreement or contractual obligation to undertake and complete, within a reasonable time, a continuous program of construction.

B. "Construction" means fabrication, erection or installation of an affected facility.

C. "Existing oil-burning equipment" means oil burning equipment that was fully constructed and operational or under construction prior to August 17, 1971. Existing oil burning equipment also includes any gas burning equipment that is converted to burn oil for energy considerations if the gas burning equipment was fully constructed and operational on January 21, 1979.

D. "New oil burning equipment" means oil burning equipment the construction of which is commenced after August 17, 1971.

E. "Opacity" means the degree to which emissions reduce the transmission of light and obscure the view of an object in the background.

F. "Part" means an air quality control regulation under Title 20, Chapter 2 of the New Mexico Administrative Code, unless otherwise noted; as adopted or amended by the Board.

G. "Visible emissions" means particulate or gaseous matter which can be detected by the human eye.

[11/30/95; 20.2.18.7 NMAC - Rn, 20 NMAC 2.18.107 10/31/02]

20.2.18.8 AMENDMENT AND SUPERSESION OF PRIOR REGULATIONS:

This Part amends and supersedes Air Quality Control Regulation ("AQCR") 507 -- Oil Burning Equipment -- Particulate Matter last filed December 21, 1978.

A. All references to AQCR 507 in any other rule shall be construed as a reference to this Part.;

B. The amendment and supersession of AQCR 507 shall not affect any administrative or judicial enforcement action pending on the effective date of such amendment nor the validity of any permit issued pursuant to AQCR 507.

[11/30/95; 20.2.18.8 NMAC - Rn, 20 NMAC 2.18.106 10/31/02]

20.2.18.9 DOCUMENTS:

Documents cited in this Part may be viewed at the New Mexico Environment Department, Air Quality Bureau, Runnels Building, 1190 Saint Francis Drive, Santa Fe, NM 87505 [2048 Galisteo St., Santa Fe, NM 87505].

[11/30/95; 20.2.18.9 NMAC - Rn, 20 NMAC 2.18.108 10/31/02]

20.2.18.10-20.2.18.108 [RESERVED]

20.2.18.109 EMISSION LIMITATIONS -- NEW EQUIPMENT:

The owner or operator of new oil burning equipment having a rated heat capacity greater than 250 million British Thermal Units per hour (higher heating value) per unit shall not permit, cause, suffer or allow particulate matter emissions to the atmosphere in excess of 0.03 pounds per million British Thermal Units of heat input (higher heating value) or visible emissions in excess of an opacity of twenty percent (20%) except as provided in 20.2.18.111 NMAC

[11/30/95; 20.2.18.109 NMAC - Rn, 20 NMAC 2.18.109 10/31/02]

20.2.18.110 EMISSION LIMITATIONS -- EXISTING EQUIPMENT:

The owner or operator of existing oil burning equipment having a rated heat capacity greater than 250 million British Thermal Units per hour (higher heating value) per unit shall not permit, cause, suffer or allow particulate matter emissions to the atmosphere:

A. in excess of 0.05 pounds per million British Thermal Units of heat input (higher heating value) from equipment used to generate steam or electrical power for other than on-site use;

B. in excess of 0.10 pounds per million British Thermal Units of heat input (higher heating value) from equipment used to generate steam or electrical power for on-site use only and constructed on or after January 1, 1950; and

C. in excess of 0.20 pounds per million British Thermal Units of heat input (higher heating value) from equipment used to generate steam or electrical power for on-site use only and constructed before January 1, 1950.

[11/30/95; 20.2.18.110 NMAC - Rn, 20 NMAC 2.18.110 10/31/02]

20.2.18.111 VISIBLE EMISSIONS EXCEPTIONS:

Visible emissions resulting from light off of new flames, blowing tubes and flues, or changing fuels while operating shall not be deemed violations provided the visible emissions do not exceed twenty-seven percent (27%) opacity for a period or periods aggregating not more than 6 minutes in any 60 minute period for units governed by 20.2.18.109 NMAC.

[11/30/95; 20.2.18.111 NMAC - Rn, 20 NMAC 2.18.111 10/31/02]

20.2.18.112 EMISSIONS DETERMINATIONS:

Particulate matter emissions governed by 20.2.18.109 NMAC and 20.2.18.110 NMAC shall be determined by a method consistent with the method set forth by the US EPA at 40 CFR, Part 60, Appendix A, Methods 1 through 5 or any other equivalent method receiving prior approval from the Department. Upon request of the Department, the owner or operator of oil burning equipment regulated by 20.2.18.109 NMAC and 20.2.18.110 NMAC shall perform stack testing according to the method stated above and report the results of such tests in the format and time period specified by the Department. The owner or operator shall inform the Department of the dates and times of such testing so that the Department may have an opportunity to have an observer present during testing.

[11/30/95; 20.2.18.112 NMAC - Rn, 20 NMAC 2.18.112 10/31/02]

20.2.18.113 OPACITY DETERMINATIONS:

Opacity of emissions from oil burning equipment subject to this Part shall be determined consistent with the method set forth by the US EPA at 40 CFR, Part 60, Appendix A, Method 9 or any other equivalent method receiving prior approval from the Department. The time period for taking opacity readings shall be for a minimum of six minutes.

[11/30/95; 20.2.18.113 NMAC - Rn, 20 NMAC 2.18.113 10/31/02]

PART 19: POTASH, SALT OR SODIUM SULFATE PROCESSING EQUIPMENT - PARTICULATE MATTER

20.2.19.1 ISSUING AGENCY:

Environmental Improvement Board.

[11/30/95; 20.2.19.1 NMAC - Rn, 20 NMAC 2.19.100 10/31/02]

20.2.19.2 SCOPE:

All geographic areas within the jurisdiction of the Environmental Improvement Board.

[11/30/95; 20.2.19.2 NMAC - Rn, 20 NMAC 2.19.101 10/31/02]

20.2.19.3 STATUTORY AUTHORITY:

Environmental Improvement Act, NMSA 1978, section 74-1-8(A)(4) and (7) and Air Quality Control Act, NMSA 1978, sections 74-2-1 et seq., including specifically, section 74-2-4(A), (B), and (C).

[11/30/95; 20.2.19.3 NMAC - Rn, 20 NMAC 2.19.102 10/31/02]

20.2.19.4 DURATION:

Permanent.

[11/30/95; 20.2.19.4 NMAC - Rn, 20 NMAC 2.19.103 10/31/02]

20.2.19.5 EFFECTIVE DATE:

November 30, 1995.

[11/30/95; 20.2.19.5 NMAC - Rn, 20 NMAC 2.19.104 10/31/02]

[The latest effective date of any section in this Part is 10/31/02.]

20.2.19.6 OBJECTIVE:

The objective of this Part is to establish particulate matter emission standards for potash, salt or sodium sulfate processing equipment.

[11/30/95; 20.2.19.6 NMAC - Rn, 20 NMAC 2.19.105 10/31/02]

20.2.19.7 DEFINITIONS:

In addition to the terms defined in 20.2.2 NMAC (Definitions), as used in this Part:

A. "Best engineering practices" means, with respect to control of fugitive particulate matter emissions, the installation and use of hoods, enclosures, ducts, covers, sprays, or other equipment or measures on potash, salt or sodium sulfate processing equipment as necessary to prevent particulate matter from becoming airborne.

B. "Compactor operations" means compaction of fine muriate of potash materials and recrushing, screening or other size classification, and drying of the compacted materials.

C. "Commenced" means that an owner or operator has undertaken a continuous program of construction or that an owner or operator has entered into a binding contractual obligation to undertake and complete within a reasonable time a continuous program of construction.

D. "Existing potash, salt or sodium sulfate processing equipment" means process equipment in which the fabrication, erection or installation was commenced prior to January 1, 1979, and includes all crushers, grinders, screens, and other size-classification units, compactors, granulators, evaporators, dryers, conveyors, storage piles (including ore, product or other storage piles), facilities for bagging and loading, and any other process units with particulate matter emissions to the atmosphere.

E. "Fugitive particulate matter emissions" means particulate matter emissions which escape from potash, salt or sodium sulfate processing equipment due to leakage, materials handling, transfer and storage or other causes without being ducted through a stack.

F. "Good engineering practice" means, with respect to stack heights, the height necessary to insure that emissions from the stack do not result in excessive concentrations of any pollutant in the immediate vicinity of the source as a result of atmospheric downwash, eddies and wakes which may be created by the source itself, nearby structures or nearby terrain obstacles. Such height shall not exceed:

(1) a thirty meters for stacks not influenced by the source itself, nearby structures or terrain; or

(2) for stacks that are influenced by nearby structures or terrain, the height determined by use of the equation $H_g = H + 1.5 L$, where: H_g = good engineering practice stack heights; H = the height of the source or nearby structure; and L = the lesser dimension (height or width) of the source or nearby structure.

G. "Modification" means a physical change or change in the manner of operation which increases the amount of any air contaminant emitted by the potash, salt or sodium sulfate processing equipment or which results in the emission of any air contaminant not previously emitted.

H. "New potash, salt or sodium sulfate processing equipment" means process equipment or process unit thereof, the fabrication, erection, installation or modification of which is commenced on or after January 1, 1979, and includes all crushers, grinders, screens and other size-classification units, compactors, granulators, evaporators, dryers, conveyors, storage piles (including ore, product or other storage piles) facilities for bagging and loading, and any other process units with particulate matter emissions

to the atmosphere. New potash, salt or sodium sulfate processing equipment does not include process equipment installed solely to replace equivalent equipment installed prior to January 1, 1979, if the replacement equipment will not result in a significant increase in capacity.

I. "Part" means an air quality control regulation under Title 20, Chapter 2 of the New Mexico Administrative Code, unless otherwise noted; as adopted or amended by the Board.

J. "Potash" means muriate potash (the chemical compound potassium chloride, KCl), sulfate of potash (the chemical compound sulfate K_2SO_4), and langbeinite (the chemical compound potassium magnesium sulfate, $K_2SO_4 \cdot 2MgSO_4$), or any other potassium, magnesium or mixed-potassium salts, and includes ores, intermediates, products and reaction products of such compounds.

K. "Salt" means the chemical compound sodium chloride (NaCl) and includes ores, intermediates, products and reaction products of this compound.

L. "Sodium sulfate" means the chemical compound sodium sulfate (Na_2SO_4) and includes ores, intermediates, products and reaction products of this compound.

M. "Standard conditions" means temperature of 68 degrees Fahrenheit and pressure of 29.92 inches of mercury.

N. "Submerged combustion evaporators" means vessels in which combustion occurs beneath the surface of a solution of dissolved potash, salt or sodium sulfate materials for the purpose of evaporating water.

[11/30/95; 20.2.19.7 NMAC - Rn, 20 NMAC 2.19.107 10/31/02]

20.2.19.8 AMENDMENT AND SUPERSESSION OF PRIOR REGULATIONS:

This Part amends and supersedes Air Quality Control Regulation ("AQCR") 508 -- Potash, Salt or Sodium Sulfate Processing Equipment -- Particulate Matter last filed July 16, 1986.

A. All references to AQCR 508 in any other rule shall be construed as a reference to this Part.

B. The amendment and supersession of AQCR 508 shall not affect any administrative or judicial enforcement action pending on the effective date of such amendment nor the validity of any permit issued pursuant to AQCR 508.

[11/30/95; 20.2.19.8 NMAC - Rn, 20 NMAC 2.19.106 10/31/02]

20.2.19.9 DOCUMENTS:

Documents cited in this Part may be viewed at the New Mexico Environment Department, Air Quality Bureau, Runnels Building, 1190 Saint Francis Drive, Santa Fe, NM 87505 [2048 Galisteo St., Santa Fe, NM 87505].

[11/30/95; 20.2.19.9 NMAC - Rn, 20 NMAC 2.19.108 10/31/02]

20.2.19.10-20.2.19.108 [RESERVED]

20.2.19.109 ALLOWABLE EMISSIONS:

A. The owner or operator of new potash, salt or sodium sulfate processing equipment shall not permit, cause, suffer or allow particulate matter emissions to the atmosphere:

(1) to exceed 0.10 grains per dry cubic foot of discharge gas adjusted to standard conditions from dryers; or

(2) to exceed 0.04 grains per dry cubic foot of discharge gas adjusted to standard conditions from all other processing equipment.

B. The owner or operator of existing potash, salt or sodium sulfate processing equipment shall not permit, cause, suffer or allow particulate matter emissions to the atmosphere:

(1) in excess of a total of 90 pounds per hour from all stacks serving equipment used in drying muriate of potash and all associated compactor operations;

(2) in excess of a total of 90 pounds per hour from all stacks serving equipment used in drying langbeinite;

(3) in excess of a total of 35 pounds per hour from all stacks serving equipment used in drying sulfate of potash and associated screening operations;

(4) in excess of a total of 15 pounds per hour from all stacks serving equipment used in dry milling of fine langbeinite; and

(5) in excess of a total of 50 pounds per hour from all stacks serving equipment used in drying salt or sodium sulfate.

C. The owner or operator of existing potash, salt or sodium sulfate processing equipment shall not permit, cause, suffer or allow particulate matter emissions to the atmosphere in excess of a total of 30 pounds per hour from all stacks serving evaporators.

D. The owner or operator of existing potash, salt or sodium sulfate processing equipment shall not permit, cause, suffer or allow particulate matter emissions from any

equipment not regulated by subsections A, B, or C of 20.2.19.109 NMAC to exceed the allowable rates specified within Table 1.

(1) Interpolation of rates not specified within the table shall be accomplished by use of the equation: $E = 0.045 \text{ times } q \text{ raised to the power } 0.62$, where E is the allowable emission rate expressed in pounds per hour and q is the stack volumetric flow rate expressed in dry cubic feet per minute adjusted to standard conditions.

(2) Table 1 - Allowable Particulate Emission Rates for Specific Stack Volumetric Flow Rates:

Volumetric Flow Rate (dscfm)	Allowable Emission Rate (lb/hr)
1,000 or less	3.3
2,000	5.0
4,000	7.7
6,000	9.9
8,000	11.8
10,000	13.6
20,000	20.9
30,000	26.9
40,000	32.1
50,000	36.9
60,000	41.3
70,000 or greater	45.4

[11/30/95; 20.2.19.109 NMAC - Rn, 20 NMAC 2.19.109 10/31/02]

20.2.19.110 PROCESSING EQUIPMENT AND STACKS:

A. The owner or operator of potash, salt or sodium sulfate processing equipment shall not install or utilize any equipment or mechanism which increases the volume of gases emitted from a stack or stacks so as to decrease the apparent concentration of particulate matter within the gas stream so as to circumvent the requirements of subsection A of 20.2.19.109 NMAC above or increase the allowable emission rate as specified within subsection D of 20.2.19.109 NMAC.

B. The owner or operator of potash, salt or sodium sulfate processing equipment shall not permit, cause, suffer or allow emissions of particulate matter to the atmosphere except through stacks equipped with sampling ports and platforms in such number, location and size to allow accurate sampling to be performed. Stack height shall meet standards for good engineering practice. When it is not feasible to direct certain emissions through a stack, the owner or operator must utilize best engineering practices to minimize the release of fugitive particulate matter emissions to the atmosphere.

C. Where a stack or stacks regulated by subsection B or C of 20.2.19.109 NMAC also carry discharge gases from equipment regulated by subsection D of 20.2.19.109 NMAC, the allowable emission limit for the stack or stacks shall be increased by the allowable emission rate for the volume of discharge gases arising from the equipment regulated by subsection D of 20.2.19.109 NMAC. The additional allowed emissions shall be calculated as specified within subsection D of 20.2.19.109 NMAC based upon a determination of the volume of discharge gases prior to the point at which they are combined with discharged gases from equipment regulated by subsections B or C of 20.2.19.109 NMAC. In no case shall the allowable emissions from a stack or stacks which carry combined discharge gases exceed the sum of the allowable emission if the discharge gases were not combined.

[11/30/95; 20.2.19.110 NMAC - Rn, 20 NMAC 2.19.110 10/31/02]

20.2.19.111 TEST METHODS:

Compliance with 20.2.19.109 NMAC shall be determined consistent with the method for manual stack testing set forth by the US EPA at 40 CFR, Part 60, Appendix A, Methods 1 through 5, or any other method receiving prior approval from the Department. Upon request of the Department, the owner or operator of potash, salt or sodium sulfate processing equipment shall perform stack testing according to the method stated above and report the results of such tests in the format and time period specified by the Department. The Department shall not require testing of a stack or stacks more frequently than annually unless the Department has reason to believe that the emissions from the stack or stacks may be in violation of applicable emission limits, or a test is necessary to demonstrate compliance after the completion of measures intended to gain compliance on a stack or stacks previously determined to be in violation of applicable emission limits. The owner or operator shall inform the Department of the dates and times of such testing so that the Department may have the opportunity to have an observer present during testing.

[11/30/95; 20.2.19.111 NMAC - Rn, 20 NMAC 2.19.110 10/31/02]

PART 20: LIME MANUFACTURING PLANTS - PARTICULATE MATTER [REPEALED]

PART 21: FUGITIVE PARTICULATE MATTER EMISSIONS FROM NONFERROUS SMELTERS

20.2.21.1 ISSUING AGENCY:

Environmental Improvement Board.

[11/30/95; 20.2.21.1 NMAC - Rn, 20 NMAC 2.21.100 10/31/02]

20.2.21.2 SCOPE:

All geographic areas within the jurisdiction of the Environmental Improvement Board.

[11/30/95; 20.2.21.2 NMAC - Rn, 20 NMAC 2.21.101 10/31/02]

20.2.21.3 STATUTORY AUTHORITY:

Environmental Improvement Act, NMSA 1978, section 74-1-8(A)(4) and (7), and Air Quality Control Act, NMSA 1978, sections 74-2-1 et seq., including specifically, section 74-2-5(A), (B) and (C).

[11/30/95; 20.2.21.3 NMAC - Rn, 20 NMAC 2.21.102 10/31/02]

20.2.21.4 DURATION:

Permanent.

[11/30/95; 20.2.21.4 NMAC - Rn, 20 NMAC 2.21.103 10/31/02]

20.2.21.5 EFFECTIVE DATE:

November 30, 1995.

[11/30/95; 20.2.21.5 NMAC - Rn, 20 NMAC 2.21.104 10/31/02]

[The latest effective date of any section in this Part is 10/31/02.]

20.2.21.6 OBJECTIVE:

The objective of this Part is to establish fugitive particulate matter emission standards for nonferrous smelters.

[11/30/95; 20.2.21.6 NMAC - Rn, 20 NMAC 2.21.105 10/31/02]

20.2.21.7 DEFINITIONS:

In addition to the terms defined in 20.2.2 NMAC (Definitions), as used in this Part:

A. "Existing nonferrous smelter" means a nonferrous smelter that was constructed and operational prior to September 1, 1971.

B. "Fugitive particulate matter" means particulate matter emissions which escape to the atmosphere due to leakage, materials handling, transfer or storage, travel over unpaved roads or parking areas, or other activities and are not ducted through primary exhaust systems.

C. "New nonferrous smelter" means nonferrous smelter the construction or modification of which was commenced after September 1, 1971.

D. "Part" means an air quality control regulation under Title 20, Chapter 2 of the New Mexico Administrative Code, unless otherwise noted; as adopted or amended by the Board.

[11/30/95; 20.2.21.7 NMAC - Rn, 20 NMAC 2.21.107 10/31/02]

20.2.21.8 AMENDMENT AND SUPERSESSION OF PRIOR REGULATIONS:

This Part amends and supersedes Air Quality Control Regulation ("AQCR") 510 -- Fugitive Particulate Matter Emissions from Nonferrous Smelters last filed on July 16, 1986.

A. All references to AQCR 510 in any other rule shall be construed as a reference to this Part.

B. The amendment and supersession of AQCR 510 shall not affect any administrative or judicial enforcement action pending on the effective date of such amendment nor the validity of any permit issued pursuant to AQCR 510.

[11/30/95; 20.2.21.8 NMAC - Rn, 20 NMAC 2.21.106 10/31/02]

20.2.21.9-20.2.21.107 [RESERVED]

20.2.21.108 CONTROL REQUIREMENTS:

A. The owner or operator of an existing nonferrous smelter shall not permit, cause, suffer, or allow the operation of the nonferrous smelter unless the owner or operator:

(1) Installs and operates well-designed exhaust hoods, fans and ducts, or other control systems approved by the Department as at least as effective to capture fugitive particulate matter emissions from the matte tapping, transfer, ladle filling and slag skimming operation of the reverberatory furnace;

(2) Maintains and operates all furnaces, converters and converter hoods so that fugitive particulate matter emissions are minimized to the maximum extent practicable; and

(3) Maintains all ducts, flues, waste-heat boilers and stacks in as near, leak-free condition as practicable.

B. The owner or operator of an existing nonferrous smelter shall not permit, cause, suffer or allow the transfer or conveying of particulate matter from electrostatic

precipitators, waste-heat boilers or other dry particulate control equipment unless fugitive particulate matter emissions are controlled by:

(1) Production of a pelletized, wet, or other non-dusting product within an enclosed system to prevent the escape of fugitive particulate matter to the atmosphere; or

(2) The use of hoods or enclosures and venting collected particulate matter through fabric filters or other control systems approved by the Department as at least as effective to reduce fugitive particulate matter emissions to the atmosphere.

[11/30/95; 20.2.21.108 NMAC - Rn, 20 NMAC 2.21.108 10/31/02]

20.2.21.109 STORAGE PILES:

The owner or operator of an existing nonferrous smelter shall not permit, cause, suffer or allow the establishment, operation, or use of storage piles for copper ore concentrate, copper precipitate, lime or limestone, or fine silica flux materials within the boundary of the smelter unless the storage and associated materials handling areas are enclosed or other control methods approved by the Department as at least as effective to reduce fugitive particulate matter emissions to the atmosphere are utilized.

[11/30/95; 20.2.21.109 NMAC - Rn, 20 NMAC 2.21.109 10/31/02]

20.2.21.110 ROADWAYS AND PARKING AREAS:

The owner or operator of an existing nonferrous smelter shall not permit, cause, suffer, or allow the use of any roadway or parking area within the boundaries of the smelter and associated facilities unless the roadway or parking area is paved and frequently cleaned, or other control measures approved by the Department as at least effective to reduce fugitive particulate matter emissions to the atmosphere are utilized. Where the owner or operator of an existing nonferrous smelter demonstrates to the satisfaction of the Department that certain roadways or parking areas are used infrequently, the Department may allow the use of less effective control measures such as the application of crushed stone or periodic treatment with dust suppressant chemicals or oils to such roadways or parking areas.

[11/30/95; 20.2.21.110 NMAC - Rn, 20 NMAC 2.21.110 10/31/02]

PART 22: FUGITIVE PARTICULATE MATTER EMISSIONS FROM ROADS WITHIN THE TOWN OF HURLEY

20.2.22.1 ISSUING AGENCY:

Environmental Improvement Board.

[11/30/95; 20.2.22.1 NMAC - Rn, 20 NMAC 2.22.100 10/31/02]

20.2.22.2 SCOPE:

The town of Hurley, New Mexico.

[11/30/95; 20.2.22.2 NMAC - Rn, 20 NMAC 2.22.101 10/31/02]

20.2.22.3 STATUTORY AUTHORITY:

Environmental Improvement Act, NMSA 1978, section 74-1-8(A)(4) and (7), and Air Quality Control Act, NMSA 1978, sections 74-2-1 et seq., including specifically, section 74-2-5(A), (B) and (C).

[11/30/95; 20.2.22.3 NMAC - Rn, 20 NMAC 2.22.102 10/31/02]

20.2.22.4 DURATION:

Permanent:

[11/30/95; 20.2.22.4 NMAC - Rn, 20 NMAC 2.22.103 10/31/02]

20.2.22.5 EFFECTIVE DATE:

November 30, 1995.

[11/30/95; 20.2.22.5 NMAC - Rn, 20 NMAC 2.22.104 10/31/02]

[The latest effective date of any section in this Part is 10/31/02.]

20.2.22.6 OBJECTIVE:

The objective of this Part is to establish fugitive particulate matter emission standards for roads within the town of Hurley.

[11/30/95; 20.2.22.6 NMAC - Rn, 20 NMAC 2.22.105 10/31/02]

20.2.22.7 DEFINITIONS:

In addition to the terms defined in 20.2.2 NMAC (Definitions), as used in this Part:

A. "Fugitive particulate matter emissions" means dust or other solid material released to the atmosphere from any road surface.

B. "Part" means an air quality control regulation under Title 20, Chapter 2 of the New Mexico Administrative Code, unless otherwise noted; as adopted or amended by the Board.

C. "Road" means streets or highways, including the shoulders thereof, but does not include driveways, alleys or parking areas.

[11/30/95; 20.2.22.7 NMAC - Rn, 20 NMAC 2.22.107 10/31/02]

20.2.22.8 AMENDMENT AND SUPERSESSION OF PRIOR REGULATIONS:

This Part amends and supersedes Air Quality Control Regulation ("AQCR") 511 -- Fugitive Particulate Matter Emissions from Roads Within the Town of Hurley last filed on November 21, 1978.

A. All references to AQCR 511 in any other rule shall be construed as a reference to this Part.

B. The amendment and supersession of AQCR 511 shall not affect any administrative or judicial enforcement action pending on the effective date of such amendment nor the validity of any permit issued pursuant to AQCR 511.

[11/30/95; 20.2.22.8 NMAC - Rn, 20 NMAC 2.22.106 10/31/02]

20.2.22.9-20.2.22.107 [RESERVED]

20.2.22.108 REQUIREMENTS:

The owner or person responsible for maintaining any road within the municipal limits of the town of Hurley shall not permit, cause, suffer, or allow the use of such roads unless the surface of the road is paved, maintained with adequate cover of crushed stone, treated periodically with dust suppressant chemicals or oils, or utilize other control measures approved by the Department to minimize the release of fugitive particulate matter emissions to the atmosphere.

[11/30/95; 20.2.22.108 NMAC - Rn, 20 NMAC 2.22.108 10/31/02]

PART 23: FUGITIVE DUST CONTROL

20.2.23.1 ISSUING AGENCY:

Environmental Improvement Board.

[20.2.23.1 NMAC - N, 01/01/2019]

20.2.23.2 SCOPE:

All geographic areas within the jurisdiction of the Environmental Improvement Board.

[20.2.23.2 NMAC - N, 01/01/2019]

20.2.23.3 STATUTORY AUTHORITY:

Environmental Improvement Act, Section 74-1-1 to 74-1-16 NMSA 1978, including specifically Paragraph (4) and (7) of Subsection A of Section 74-1-8 NMSA 1978, and Air Quality Control Act, Sections 74-2-1 to 74-2-22 NMSA 1978, including specifically Subsections A, B and C of Section 74-2-5 NMSA 1978.

[20.2.23.3 NMAC - N, 01/01/2019]

20.2.23.4 DURATION:

Permanent.

[20.2.23.4 NMAC - N, 01/01/2019]

20.2.23.5 EFFECTIVE DATE:

January 01, 2019.

[20.2.23.5 NMAC - N, 01/01/2019]

20.2.23.6 OBJECTIVE:

The objective of this part is to limit human-caused emissions of fugitive dust into the ambient air by ensuring that control measures are utilized to protect human health and welfare.

[20.2.23.6 NMAC - N, 01/01/2019]

20.2.23.7 DEFINITIONS:

In addition to the terms defined in 20.2.2 NMAC, as used in this part, the following definitions apply.

A. "Agricultural facility" means any land, building, structure, pond, impoundment, appurtenance, machinery or equipment that is used for the production of crops or livestock.

B. "Bulk material" means sand, gravel, soil, aggregate, pumice or any other inorganic or organic solid material capable of creating fugitive dust.

C. "Construction" or "construction activity" means any activity preparatory to, or related to building or demolishing a structure, road construction or maintenance, or altering, rehabilitating or improving land, including grading, excavation, loading, crushing, pavement milling, cutting, clearing, grubbing, topsoil removal, blading, shaping, dry sweeping, blasting and ground breaking.

D. "Control measure" means a technique, process, practice or procedure used to prevent or minimize the generation, emission, entrainment, suspension or airborne transport of fugitive dust, including those more fully described in 20.2.23.111 NMAC.

E. "Disturbed surface area" means an area of the earth's surface that may become a fugitive dust source or track-out due to construction or other activity.

F. "Dust suppressant" or "suppressant" means water, hygroscopic material, solution of water and chemical surfactant, foam, non-toxic chemical stabilizer or any other material, which is not prohibited for ground surface application by the U.S. environmental protection agency or the New Mexico environment department, or any applicable law, rule or regulation, as a treatment material for reducing fugitive dust emissions.

G. "Fugitive dust" means particulate matter emissions which may become entrained in the atmosphere due to mechanical or wind forces, or both; construction activity; materials handling, transfer or storage; disturbed surface areas; or similar commercial or industrial activities, and; which are not ducted through exhaust systems.

H. "Inactive disturbed surface area" means any disturbed surface area on which construction or other activity is not presently occurring, but which continues to be a potential fugitive dust source or track-out.

I. "Part" means an air quality control regulation under Title 20, Chapter 2 of the New Mexico Administrative Code, unless otherwise noted; as adopted or amended by the environmental improvement board.

J. "Paved" or "paving" means asphalt, recycled asphalt, concrete or asphaltic concrete, routinely maintained asphalt millings or combinations thereof, that covers a surface traveled or used by motor vehicles.

K. "Roadway" or "road" means any public or private paved or unpaved surface that can be entered or used with the primary purpose of public or private travel by motor vehicles or is used for maintenance of electrical or other transmission lines. This definition does not include roadways under construction or easements, rights of way, or access roads used in association with construction activity, bulk material handling and transport, disturbed surface areas or inactive disturbed surface areas.

L. "Source" or "fugitive dust source" means the origin of fugitive dust emissions.

M. "Stockpile" means the depositing of bulk material by mechanical means for the purpose of creating a pile formation on top of an existing or man-made surface.

N. "Track-out" means bulk material deposited by a motor vehicle or vehicles upon an unpaved or paved publicly or privately owned roadway if the bulk material can become airborne due to mechanical or wind action.

[20.2.23.7 NMAC - N, 01/01/2019]

20.2.23.8 CONSTRUCTION:

This part shall be liberally construed to carry out its purpose.

[20.2.23.8 NMAC - N, 01/01/2019]

20.2.23.9 SAVINGS CLAUSE:

Repeal or supersession of prior versions of this part shall not affect any administrative or judicial action initiated under those prior versions.

[20.2.23.9 NMAC - N, 01/01/2019]

20.2.23.10 COMPLIANCE WITH OTHER REGULATIONS:

Compliance with this part does not relieve a person from the responsibility to comply with any other applicable federal, state, or local laws, rules or regulations, including more stringent controls on fugitive dust emissions.

[20.2.23.10 NMAC - N, 01/01/2019]

20.2.23.11-20.2.23.107 [RESERVED]

20.2.23.108 APPLICABILITY:

A. This part shall apply to persons owning or operating the following fugitive dust sources in areas requiring a mitigation plan in accordance with 40 CFR Part 51.930:

- (1)** disturbed surface areas or inactive disturbed surface areas, or a combination thereof, encompassing an area equal to or greater than one acre;
- (2)** any commercial or industrial bulk material processing, handling, transport or storage operations.

B. The following fugitive dust sources are exempt from this part:

- (1)** agricultural facilities, as defined in this part;

- (2) roadways, as defined in this part;
- (3) operations issued permits pursuant to the state of New Mexico Air Quality Control Act, Mining Act or Surface Mining Act; and
- (4) lands used for state or federal military activities.

[20.2.23.108 NMAC - N, 01/01/2019]

20.2.23.109 GENERAL PROVISIONS:

No person subject to this part, shall cause or allow visible emissions from fugitive dust sources that:

- A. pose a threat to public health;
- B. interfere with public welfare, including animal or plant injury or damage, visibility or the reasonable use of property.

[20.2.23.109 NMAC - N, 01/01/2019]

20.2.23.110 EMISSION LIMITATIONS:

A. No person shall cause or allow visible emissions from the following fugitive dust sources subject to this part to traverse any exterior property line of the property on which the source is located for more than a total of five minutes in any consecutive 60 minutes:

- (1) construction or other activity, disturbed surface areas and inactive disturbed surface areas;
- (2) bulk material handling; or
- (3) bulk material storage.

B. Compliance with this condition shall be determined by a visible emissions test conducted in accordance with reference method 22 in 40 CFR Subpart 60, Appendix A.

C. Alternative test methods to determine compliance including opacity observations, visible crust determinations and vegetation cover determinations, may be approved by the department on a case-by-case basis.

[20.2.23.110 NMAC - N, 01/01/2019]

20.2.23.111 CONTROL MEASURES FOR FUGITIVE DUST SOURCES AND IMPLEMENTATION:

Every person subject to this part shall utilize one or more control measures included in 20.2.23.111 NMAC or one or more other control measure(s) for fugitive dust sources under their control as necessary to meet the requirements of 20.2.23.110 NMAC.

A. Implementation. Control measures must be implemented before, after, and during any dust-generating operation, including during weekends, after work hours and on holidays.

B. Disturbed surface areas and inactive disturbed surface areas. Control measures include:

- (1) scheduling or phasing of active operations to include consideration of such factors as time of year and prevailing wind direction;
- (2) limiting disturbance of natural vegetation;
- (3) application and maintenance of mulch, dust suppressants or other control measures in accordance with manufacturer's specifications;
- (4) geotextiles, plastic covers, or erosion control mats or blankets;
- (5) wind fencing;
- (6) landscaping to include xeriscaping, reseeding and conventional techniques;
- (7) installing permanent perimeter and interior walls;
- (8) restricting public access and use by fencing and signage;
- (9) paving or application of gravel sufficient to prevent fugitive dust emissions;
- (10) prevention, clean up and removal of track-out material;
- (11) restricting vehicle speed;
- (12) substitution of conveyor systems for haul trucks and covering of conveyor systems when conveyed loads are subject to wind erosion; and
- (13) cessation of operations.

C. Bulk material handling. Control measures include:

- (1) use of spray bars;

(2) application of dust suppressants in accordance with manufacturer's specifications;

(3) reduced process rates;

(4) reduced drop heights; and

(5) cessation of operations.

D. Bulk material storage. Control measures include:

(1) use of enclosures with at least three sides;

(2) application of dust suppressants in accordance with manufacturer's specifications;

(3) use of wind breaks; and

(4) limit stockpile height to no higher than 15 feet and limit surface area.

[20.2.23.111 NMAC - N, 01/01/2019]

20.2.23.112 DUST CONTROL PLAN:

The owner or operator of a fugitive dust source shall develop and maintain a dust control plan. This plan shall be kept by the owner or operator and shall be available upon request to the department. A dust control plan shall, at a minimum, contain all of the following information:

A. Name(s), address(es) and telephone numbers of person(s) responsible for the development and implementation of the dust control plan and responsible for the dust-generating operation.

B. A drawing, on eight and one-half inch by eleven inch paper, that shows:

(1) the entire project site including property lines;

(2) the acreage to be disturbed with linear dimensions;

(3) the nearest public road(s);

(4) private roads within the project site; and

(5) the planned exit locations onto paved areas accessible to the public.

C. Documentation of the control measure(s), as described in Section 20.2.23.111 NMAC, utilized to meet the requirements of 20.2.23.110 NMAC for every actual and potential dust-generating source or operation, including, as applicable, the specific dust suppressants to be applied, together with the product specifications or label instructions for approved usage. The control measure(s) shall be documented in the dust control plan on a department approved form. The dust control plan shall include the following record keeping requirements for the use of control measure(s):

(1) for persons that utilize a control measure(s) requiring recurring application, operation or maintenance activities, including the use of dust suppressants or cleanup of track out, the date, time, frequency, quantity and location(s) of the actions taken to implement the control measure(s) shall be recorded on a weekly basis; and

(2) for persons that utilize a control measure(s) requiring a single action, including changes in operating procedure, cessation of operations, or installation of landscaping or fencing, the date, time and length of activities or changes in operations to implement the control measure(s) shall be recorded.

D. Specific surface treatment(s) or control measures implemented for material track-out and sedimentation where unpaved roadways or access points join paved areas accessible to the public.

E. The records required by this subpart shall be maintained for a period of two years after the date of collection.

F. The dust control plan shall be enforceable to the same extent as the provisions of this part.

[20.2.23.112 NMAC-N, 01/01/2019]

20.2.23.113 DUST CONTROL PLAN REVISIONS:

A. If the department determines that a dust control plan does not contain the minimum requirements of 20.2.23.112 NMAC, then the department may issue a written notice to the person identified in Subsection A of 20.2.23.112 NMAC explaining such determination.

B. If the department determines that a dust control plan meeting the requirements of 20.2.23.112 NMAC has been followed, yet fugitive dust emissions from any fugitive dust source still exceed the standards of 20.2.23.110 NMAC, then the department may issue a written notice to the person identified in the dust control plan explaining this determination.

C. Once notified that a dust control plan does not meet minimum requirements or that fugitive dust emissions still exceed the standards despite a dust control plan being in place, the owner or operator of a fugitive dust source shall make written revisions to

the fugitive dust plan and submit such revised dust control plan to the department within 14 days of receipt of the department's written notice, unless such time period is extended by the department, upon request, for good cause. During the time that the owner or operator is preparing revisions to the dust control plan, such owner or operator shall still comply with all requirements of this part.

[20.2.23.113 NMAC-N, 01/01/2019]

PART 24-29: [RESERVED]

PART 30: KRAFT MILLS

20.2.30.1 ISSUING AGENCY:

Environmental Improvement Board.

[11/30/95; 20.2.30.1 NMAC - Rn, 20 NMAC 2.30.100 10/31/02]

20.2.30.2 SCOPE:

All geographic areas within the jurisdiction of the Environmental Improvement Board.

[11/30/95; 20.2.30.2 NMAC - Rn, 20 NMAC 2.30.101 10/31/02]

20.2.30.3 STATUTORY AUTHORITY:

Environmental Improvement Act, NMSA 1978, section 74-1-8(A)(4) and (7), and Air Quality Control Act, NMSA 1978, sections 74-2-1 et seq., including specifically, section 74-2-5 (A), (B) and (C).

[11/30/95; 20.2.30.3 NMAC - Rn, 20 NMAC 2.30.102 10/31/02]

20.2.30.4 DURATION:

Permanent.

[11/30/95; 20.2.30.4 NMAC - Rn, 20 NMAC 2.30.103 10/31/02]

20.2.30.5 EFFECTIVE DATE:

November 30, 1995.

[11/30/95; 20.2.30.5 NMAC - Rn, 20 NMAC 2.30.104 10/31/02]

[The latest effective date of any section in this Part is 10/31/02.]

20.2.30.6 OBJECTIVE:

The objective of this Part is to regulate emissions from kraft mills.

[11/30/95; 20.2.30.6 NMAC - Rn, 20 NMAC 2.30.105 10/31/02]

20.2.30.7 DEFINITIONS:

In addition to the terms defined in 20.2.2 NMAC (Definitions), as used in this Part:

A. "Kraft mill" means any industrial operation which uses for a cooking liquor an alkaline solution containing sulfur compounds in its pulping process.

B. "Part" means an air quality control regulation under Title 20, Chapter 2 of the New Mexico Administrative Code, unless otherwise noted; as adopted or amended by the Board.

C. "Recovery furnace stack" means the stack from which the products of combustion are emitted to the ambient air from the recovery furnace.

[11/30/95; 20.2.30.7 NMAC - Rn, 20 NMAC 2.30.107 10/31/02]

20.2.30.8 AMENDMENT AND SUPERSESSION OF PRIOR REGULATIONS:

This Part amends and supersedes Air Quality Control Regulation ("AQCR") 601 -- Regulation Governing Emission from Kraft Mills last filed January 27, 1970.

A. All references to AQCR 601 in any other rule shall be construed as a reference to this Part.

B. The amendment and supersession of AQCR 601 shall not affect any administrative or judicial enforcement action pending on the effective date of such amendment nor the validity of any permit issued pursuant to AQCR 601.

[11/30/95; 20.2.30.8 NMAC - Rn, 20 NMAC 2.30.106 10/31/02]

20.2.30.9-20.2.30.107 [RESERVED]

20.2.30.108 EMISSIONS LIMITATIONS:

A. The owner or operator of a kraft mill shall not permit, cause, suffer or allow the daily average emission of total reduced sulfur from a recovery furnace stack to exceed 0.1 pounds of sulfur per ton of equivalent air-dried kraft pulp expressed as H₂S on a dry gas basis, or 4.0 pounds of particulate matter per ton of pulp on the same basis.

B. The owner or operator of a kraft mill shall not permit, cause, suffer or allow the daily average emission of particulate matter from lime kilns to exceed one pound per ton of equivalent air-dried kraft pump.

C. The owner or operator of a kraft mill shall not permit, cause, suffer or allow the daily average emission of particulate matter from smelt tanks to exceed one-half pound per ton of air-dried kraft pulp.

D. The owner or operator of a kraft mill shall not permit, cause, suffer or allow the daily average emission of total reduced sulfur from any and all operations of a kraft mill to exceed 0.2 pounds per ton of air- dried kraft pulp

[11/30/95; 20.2.30.108 NMAC - Rn, 20 NMAC 2.30.108 10/31/02]

PART 31: COAL BURNING EQUIPMENT - SULFUR DIOXIDE

20.2.31.1 ISSUING AGENCY:

Environmental Improvement Board.

[11/30/95; 20.2.31.1 NMAC - Rn, 20 NMAC 2.31.100 10/31/02]

20.2.31.2 SCOPE:

All geographic areas within the jurisdiction of the Environmental Improvement Board.

[11/30/95; 20.2.31.2 NMAC - Rn, 20 NMAC 2.31.101 10/31/02]

20.2.31.3 STATUTORY AUTHORITY:

Environmental Improvement Act, NMSA 1978, section 74-1-8(A)(4) and (7), and Air Quality Control Act, NMSA 1978, sections 74-2-1 et seq., including specifically, section 74-2-5(A), (B) and (C).

[11/30/95; 20.2.31.3 NMAC - Rn, 20 NMAC 2.31.102 10/31/02]

20.2.31.4 DURATION:

Permanent:

[11/30/95; 20.2.31.4 NMAC - Rn, 20 NMAC 2.31.103 10/31/02]

20.2.31.5 EFFECTIVE DATE:

November 30, 1995.

[11/30/95; 20.2.31.5 NMAC - Rn, 20 NMAC 2.31.104 10/31/02]

[The latest effective date of any section in this Part is 10/31/02.]

20.2.31.6 OBJECTIVE:

The objective of this Part is to establish sulfur dioxide emission standards for coal burning equipment.

[11/30/95; 20.2.31.6 NMAC - Rn, 20 NMAC 2.31.105 10/31/02]

20.2.31.7 DEFINITIONS:

In addition to the terms defined in 20.2.2 NMAC (Definitions), as used in this Part:

A. "Commenced" means that an owner or operator has undertaken a continuous program of construction or that an owner or operator has entered into a binding agreement or contractual obligation to undertake and complete, within a reasonable time, a continuous program of construction.

B. "Commercial operation" means operation within sixty days after achieving the maximum production rate at which the equipment will be operated but not later than 180 days after initial startup.

C. "Construction" means fabrication, erection, or installation of an affected facility.

D. "Excess emissions" means the emission of sulfur dioxide in excess of any applicable emission limitation of this Part.

E. "Existing coal burning equipment" means coal burning equipment that was fully constructed and operational or under construction prior to September 1, 1971.

F. "Existing coal burning station" means one or the combination of two or more units of existing coal burning equipment at one location.

G. "Modules" means pollution control devices that remove sulfur dioxide for the flue gas that can be operated independently of each other.

H. "New coal burning equipment or units" means coal burning equipment the construction of which is commenced after September 1, 1971 and the commercial operation of which is initiated as shown hereinafter:

(1) Vintage 1 -- coal burning equipment which began commercial operating between the period of December 31, 1976 to October 31, 1979;

(2) Vintage 2 -- coal burning equipment which began commercial operation between the period of November 1, 1979 to March 31, 1982;

(3) Vintage 3 -- coal burning equipment which began commercial operation between the period of April 1, 1982 to December 31, 1982;

(4) Vintage 4 -- coal burning equipment which is not Vintage 1, 2 or 3.

I. **"Part"** means an air quality control regulation under Title 20, Chapter 2 of the New Mexico Administrative Code, unless otherwise noted; as adopted or amended by the Board.

[11/30/95; 20.2.31.7 NMAC - Rn, 20 NMAC 2.31.107 10/31/02]

20.2.31.8 AMENDMENT AND SUPERSESSION OF PRIOR REGULATIONS:

This Part amends and supersedes Air Quality Control Regulation ("AQCR") 602 -- Coal Burning Equipment -- Sulfur Dioxide last filed on November 17, 1993.

A. All references to AQCR 602 in any other rule shall be construed as a reference to this Part.

B. The amendment and supersession of AQCR 602 shall not affect any administrative or judicial enforcement action pending on the effective date of such amendment nor the validity of any permit issued pursuant to AQCR 602.

[11/30/95; 20.2.31.8 NMAC - Rn, 20 NMAC 2.31.106 10/31/02]

20.2.31.9 DOCUMENTS:

Documents cited in this Part may be viewed at the New Mexico Environment Department, Air Quality Bureau, Harold Runnels Building, 1190 St. Francis Drive, Santa Fe, NM 87505 [2048 Galisteo St., Santa Fe, NM 87505].

[11/30/95; 20.2.31.9 NMAC - Rn, 20 NMAC 2.31.108 10/31/02]

20.2.31.10-20.2.31.108 [RESERVED]

20.2.31.109 NEW EQUIPMENT:

New coal burning equipment is subject to the following requirements:

A. The owner or operator of Vintage 4 new coal burning equipment having a power generating capacity in excess of 25 megawatts or a rated heat input of greater than 250 million British Thermal Units per hour (higher heating value) shall not permit, cause, suffer or allow sulfur dioxide emissions to the atmosphere in excess of 0.34 pounds per

million British Thermal Units of heat input (higher heating value) averaged over a 3 hour period.

B. The owner or operator of Vintage 1, 2, or 3 new coal burning equipment having a power generating capacity in excess of 25 megawatts or a heat input of greater than 250 million British Thermal Units per hour (higher heating value) shall not permit, cause, suffer or allow sulfur dioxide emissions to the atmosphere in excess of 1.2 pounds per million British Thermal Units of heat input (higher heating value) averaged over a 3 hour period as determined by 20.2.31.111 NMAC, which emission limitation shall apply, effective January 1, 1983 and thereafter, to these vintage units.

C. The owner or operator of a station consisting of any combination of at least one Vintage 1, 2, or 3 new and existing coal burning equipment, after December 31, 1982, shall not permit, cause, suffer or allow sulfur dioxide emissions to the atmosphere in excess of 0.55 pounds per million British Thermal Units of heat input (higher heating value) averaged over a thirty day period, and in excess of 13,000 pounds per hour averaged over a three hour period, both determined on a total station basis. Existing coal burning equipment in a station with Vintage 1, 2, or 3 units must continue to meet the requirements of 20.2.31.110 NMAC.

D. If the owner or operator of a station consisting of any combination of at least one Vintage 1, 2, or 3 new and existing coal burning equipment, in the optimum operation of their sulfur dioxide equipment, cannot meet on a continuous basis with a two module operation per unit, excluding upset conditions, the 0.55 pounds per million British Thermal Units requirement, then in that event such station shall, after a showing of its inability to do so to the Board, in no event permit, cause, suffer or allow sulfur dioxide emissions to the atmosphere, in excess of 0.65 pounds per million British Thermal Units of heat input, averaged over a thirty day period, but shall continue to meet the 13,000 pounds per hour averaged over a three hour period that is required by subsection C of 20.2.31.109 NMAC. Additionally, existing coal burning equipment must continue to meet the requirements of 20.2.31.110 NMAC.

[11/30/95; 20.2.31.109 NMAC - Rn, 20 NMAC 2.31.109 10/31/02]

20.2.31.110 EXISTING EQUIPMENT:

A. The owner or operator of existing coal burning equipment shall not permit, cause, suffer or allow sulfur dioxide emissions to the atmosphere in excess of 28 percent on or after December 31, 1981 of that which is produced by the coal burning equipment averaged over any thirty-day period, if such coal burning equipment has a rated heat capacity greater than 3,000 million British Thermal Units per hour (higher heating value) and less than or equal to 5,000 million British Thermal Units per hour (higher heating value).

B. After December 31, 1984, The owner or operator of a coal burning station consisting of two or more units of existing coal burning equipment having a rated heat

capacity greater than 250 million British Thermal Units per hour (higher heating value) shall not permit, cause, suffer or allow sulfur dioxide emissions to the atmosphere:

(1) In excess of 28 percent of that which is produced by such existing coal burning equipment, averaged over any thirty-day period, determined on a total station basis; or

(2) More than once per year, total sulfur dioxide emissions in excess of 17,900 pounds per hour, averaged over any three-hour period, determined on a total station basis.

C. Prior to December 31, 1984, the owner or operator of an existing coal burning station consisting of two or more units of existing coal burning equipment shall submit to the Department individual stack emission limitations expressed in pounds per hour for all stacks from which flue gases are released from existing coal burning equipment of the station such that total sulfur dioxide emissions from the station do not exceed 17,900 pounds per hour. Upon request of the owner or operator of an existing coal burning station, the Department may later approve alternative individual emission limitations for each stack serving existing coal burning equipment of the station as long as the total of the individual stack emission limitations from the station do not exceed 17,900 pounds per hour, averaged over any three-hour period. Until alternative individual stack emission limitations are approved by the Department, the previously approved individual emission limitations shall remain in effect.

[11/30/95; 20.2.31.110 NMAC - Rn, 20 NMAC 2.31.110 10/31/02]

20.2.31.111 COMPLIANCE:

A. Compliance with the emission limitations contained within this Part shall be determined by a method consistent with the manual method of sampling for sulfur dioxide set forth by the Environmental Protection Agency at 40 CFR, Part 60 Appendix A, Methods 1 through 4 and 6, except for the thirty-day average and the station requirements contained within subsections C and D of 20.2.31.109 NMAC, and subsection A and paragraph (1) of subsection B of 20.2.31.110 NMAC in which the determination of compliance shall be based upon continuous emissions monitoring as required by 20.2.31.112 NMAC. Compliance with the percentage removal requirements of 20.2.31.110 NMAC shall be determined based upon continuous monitoring of sulfur dioxide concentrations within the flue gases both prior to entering the sulfur dioxide removal system and at all locations at which sulfur dioxide emissions are released to the atmosphere, unless the Department has approved an alternative means of determining sulfur dioxide concentrations prior to the sulfur dioxide removal system.

B. Compliance with the pounds per hour station emission limitation contained within paragraph (2) of subsection B of 20.2.31.110 NMAC shall be determined as follows: Individual stacks serving existing coal burning equipment shall be sampled by use of the manual sampling method for sulfur dioxide referenced above. Emissions in excess of

the approved individual emission limitation applicable to a specific stack shall be deemed a violation of this Part unless the owner or operator demonstrates to the satisfaction of the Department, by continuous stack emission monitoring or other means, that the total sulfur dioxide emissions from all stacks serving existing coal burning equipment within the station do not exceed 17,900 pounds per hour.

[11/30/95; 20.2.31.111 NMAC - Rn, 20 NMAC 2.31.111 10/31/02]

20.2.31.112 MONITORING:

A. The owner or operator of new or existing coal burning equipment subject to this Part shall not permit, cause, suffer or allow operation of the coal burning equipment without normally maintaining in good operating condition at least one monitor, approved by the Department, which shall continuously measure and record sulfur dioxide concentrations in the gases within each stack from which flue gases serving coal burning equipment are released to the atmosphere. All sampling points for monitoring sulfur dioxide concentrations shall be approved by the Department. Existing coal burning equipment having a rated heat capacity less than or equal to 5,000 million British Thermal Units per hour shall be equipped and operated with such continuous sulfur dioxide monitors as soon as practicable but in no case later than December 31, 1981. Existing coal burning equipment having a rated heat capacity greater than 5,000 million British Thermal Unit per hour shall be equipped and operated with such continuous sulfur dioxide monitors no later than December 31, 1984.

B. Coal burning equipment subject to the percentage removal requirements of 20.2.31.110 NMAC shall also continuously measure and record sulfur dioxide concentrations within the flue gases prior to their entering any sulfur dioxide removal system, unless the Department has approved an alternative means of determining sulfur dioxide concentrations within the flue gases prior to their entry into the sulfur dioxide removal system based upon a finding by the Department that continuous monitoring at such locations is infeasible or otherwise unreasonable.

C. Instruments and sampling systems installed and used pursuant to this section shall be calibrated in accordance with the methods prescribed by manufacturer's recommended zero adjustment and calibration check procedures at least once every 24-hours of operation, unless the instrument manufacturer specifies or recommends calibration checks more frequently; provided however, that no calibration and adjustments shall be required during the period when coal burning equipment is not operating. The reference method shall be consistent with the method for manual sampling of sulfur dioxide specified in 20.2.31.111 NMAC. The owner or operator of coal burning equipment shall retain for a period of two years all raw data and quality assurance measurements and procedures.

[11/30/95; 20.2.31.112 NMAC - Rn, 20 NMAC 2.31.112 10/31/02]

20.2.31.113 REPORTING AND RECORDKEEPING:

A. To aid the Department in determining compliance with this Part, persons owning or operating existing coal burning equipment subject to this Part shall, after the applicable date when continuous monitoring is required pursuant to 20.2.31.112 NMAC, submit quarterly reports to the Department for the periods January 1 through March 31, April 1 through June 30, July 1 through September 30, and October 1 through December 31 of each year, each report to be received by the Department within forty-five days of the end of the quarterly period. The quarterly reports shall contain the following:

(1) Hourly average of the concentrations of sulfur dioxide, expressed in parts per million, in the gases which are being emitted to the atmosphere, except for periods of instrument calibration and zero adjustments;

(2) Hourly averages of the percent excess oxygen in the gases coming from the coal burning equipment;

(3) Rate of heat input (higher heating value) into the coal burning equipment calculated for each day; and

(4) Daily average or daily composite percent sulfur and heat content (higher heating value) of the coal utilized by the coal burning equipment determined for each day.

B. To aid the Department in determining compliance with this Part, persons owning or operating new coal burning equipment subject to 20.2.31.109 NMAC shall, after the date for compliance provided in 20.2.31.109 NMAC, submit quarterly reports to the Department for the periods January 1 through March 31, April 1 through June 30, July 1 through September 30, and October 1 through December 31 of each year, each report to be received by the Department within forty-five days of the end of the quarterly period. The quarterly report shall contain the following:

(1) A report of excess emissions, including the nature and cause of the excess emissions (if known), the magnitude of the excess emissions and the time period(s) when the excess emissions occurred. Excess emissions shall be reported for and in the units of both total station emission limits in subsection C of 20.2.31.109 NMAC;

(2) Specific identification of each period of excess emissions that occur during startups, shutdowns, and malfunctions of the affected facility, including the nature and causes of any malfunctions and the corrective action taken or preventative measures taken;

(3) The date and time identifying each period during which the continuous monitoring system was inoperative except for zero and span checks and the nature of the system repairs or adjustments; and

(4) When no excess emissions have occurred or the continuous monitoring system(s) have not been inoperative, repaired, or adjusted, such information shall be stated in the report.

C. Upon request, the Department may approve alternative methods of monitoring and reporting the information specified in subsection A of 20.2.31.113 NMAC.

[11/30/95; 20.2.31.113 NMAC - Rn, 20 NMAC 2.31.113 10/31/02]

20.2.31.114 PERFORMANCE TESTS:

Instruments and sampling systems installed and used pursuant to 20.2.31.112 NMAC, shall be operated, installed and maintained in accordance with the performance specifications and other requirements set forth by the US EPA in 40 CFR Part 60, Appendix B. In the event of significant breakdown of the monitoring system, the owner or operator shall demonstrate to the Department after the repair work that the system continues to meet the applicable performance specifications. The Department may require the owner or operator to conduct a performance test of the equipment as specified in 40 CFR, Part 60, Appendix B, but not more frequently than once per year unless the Department has reason to believe that the continuous monitoring equipment is not operating within the applicable performance specifications. The Department may approve alternate means of verifying the performance of the continuous monitoring system. The Department may also perform independent audit on the continuous monitoring system utilizing the method specified in 20.2.31.111 NMAC.

PART 32: COAL BURNING EQUIPMENT - NITROGEN DIOXIDE

20.2.32.1 ISSUING AGENCY:

Environmental Improvement Board.

[11/30/95; 20.2.32.1 NMAC - Rn, 20 NMAC 2.32.100 10/31/02]

20.2.32.2 SCOPE:

All geographic areas within the jurisdiction of the Environmental Improvement Board.

[11/30/95; 20.2.32.2 NMAC - Rn, 20 NMAC 2.32.101 10/31/02]

20.2.32.3 STATUTORY AUTHORITY:

Environmental Improvement Act, NMSA 1978, section 74-1-8(A)(4) and (7), and Air Quality Control Act, NMSA 1978, sections 74-2-1 et seq., including specifically, section 74-2-5(A), (B) and (C).

[11/30/95; 20.2.32.3 NMAC - Rn, 20 NMAC 2.32.102 10/31/02]

20.2.32.4 DURATION:

Permanent.

[11/30/95; 20.2.32.4 NMAC - Rn, 20 NMAC 2.32.103 10/31/02]

20.2.32.5 EFFECTIVE DATE:

November 30, 1995.

[11/30/95; 20.2.32.5 NMAC - Rn, 20 NMAC 2.32.104 10/31/02]

[The latest effective date of any section in this Part is 10/31/02.]

20.2.32.6 OBJECTIVE:

The objective of this Part is to establish nitrogen dioxide emission standards for coal burning equipment.

[11/30/95; 20.2.32.6 NMAC - Rn, 20 NMAC 2.32.105 10/31/02]

20.2.32.7 DEFINITIONS:

In addition to the terms defined in 20.2.32 NMAC (Definitions), as used in this Part:

A. "Commenced" means that an owner or operator has undertaken a continuous program of construction or that an owner or operator has entered into a binding agreement or contractual obligation to undertake and complete, within a reasonable time, a continuous program of construction.

B. "Construction" means fabrication, erection, or installation of an affected facility.

C. "Daily average" means the arithmetic average of the hourly values measured in a 24-hour period from midnight to midnight.

D. "Existing coal burning equipment" means coal burning equipment that was fully constructed and operational or under construction prior to August 17, 1971.

E. "Heat input" means heat derived from combustion of fuel in a steam generating unit and does not include the heat input from preheated combustion air, recirculated flue gases, or exhaust gases from other sources, such as gas turbines, internal combustion engines, kilns, etc.

F. "Malfunction" means any sudden and unavoidable failure of air pollution control equipment, process equipment, or process to operate in an expected manner. Failures that are caused entirely or in part by poor maintenance, careless operation, or other preventable equipment breakdown shall not be considered a malfunction..

G. "New coal burning equipment" means coal burning equipment the construction of which commenced after August 17, 1971.

H. "Part" means an air quality control regulation under Title 20, Chapter 2 of the New Mexico Administrative Code, unless otherwise noted; as adopted or amended by the Board.

I. "Shutdown" means the cessation of operation of any air pollution control equipment, process equipment, or process for any purpose, except routine phasing out of process units.

J. "Startup" means the setting into operation of any air pollution control equipment, process equipment, or process for any purpose, except routine phasing in of process units.

K. "Station" means all coal burning equipment at one location.

L. "Vintage A" means coal burning equipment that was fully constructed and operational prior to December 31, 1963.

M. "Vintage B" means coal burning equipment that was fully constructed and became operational in the period from December 31, 1963, to December 31, 1964.

N. "Vintage C" means coal burning equipment that was fully constructed and became operational in the period from January 1, 1965 to August 17, 1971.

O. "Vintage D" means coal burning equipment the construction of which commenced prior to, and which became operational after August 17, 1971.

[11/30/95; 20.2.32.7 NMAC - Rn, 20 NMAC 2.32.107 10/31/02]

20.2.32.8 AMENDMENT AND SUPERSESSION OF PRIOR REGULATIONS:

This Part amends and supersedes Air Quality Control Regulation ("AQCR") 603 -- Coal Burning Equipment -- Nitrogen Dioxide last filed on July 9, 1991.

A. All references to AQCR 603 in any other rule shall be construed as a reference to this Part.

B. The amendment and supersession of AQCR 603 shall not affect any administrative or judicial enforcement action pending on the effective date of such amendment nor the validity of any permit issued pursuant to AQCR 603.

[11/30/95; 20.2.32.8 NMAC - Rn, 20 NMAC 2.32.106 10/31/02]

20.2.32.9 DOCUMENTS:

Documents cited in this Part may be viewed at the New Mexico Environment Department, Air Quality Bureau, Harold Runnels Building, 1190 St. Francis Drive, Santa Fe, NM 87505 [2048 Galisteo St., Santa Fe, NM 87505].

[11/30/95; 20.2.32.9 NMAC - Rn, 20 NMAC 2.32.108 10/31/02]

20.2.32.10-20.2.32.108 [RESERVED]

20.2.32.109 EMISSION LIMITATION -- NEW COAL BURNING EQUIPMENT:

The owner or operator of new coal burning equipment having a power generating capacity in excess of 25 megawatts or a heat input of greater than 250 million British Thermal Units (BTU) per hour shall not permit, cause, suffer or allow nitrogen dioxide emissions to the atmosphere in excess of 0.45 pounds per million BTU of heat input.

[11/30/95; 20.2.32.109 NMAC - Rn, 20 NMAC 2.32.109 10/31/02]

20.2.32.110 EMISSION LIMITATIONS -- EXISTING COAL BURNING EQUIPMENT:

A. The owner or operator of Vintage A coal burning equipment having a power generating capacity in excess of 25 megawatts or a heat input of greater than 250 million BTU per hour shall not permit, cause, suffer or allow nitrogen dioxide emissions to the atmosphere in excess of 0.85 pounds per million BTU of heat input.

B. The owner or operator of Vintage B or Vintage C coal burning equipment having a power generating capacity in excess of 25 megawatts or a heat input of greater than 250 million BTU per hour shall not permit, cause, suffer or allow nitrogen dioxide emissions to the atmosphere in excess of 0.65 pounds per million BTU of heat input.

C. The owner or operator of Vintage D coal burning equipment having a power generating capacity in excess of 25 megawatts or a heat input of greater than 250 million BTU per hour shall not permit, cause, suffer or allow nitrogen dioxide emissions to the atmosphere in excess of 0.7 pounds per million BTU of heat input.

[11/30/95; 20.2.32.110 NMAC - Rn, 20 NMAC 2.32.110 10/31/02]

20.2.32.111 TOTAL EMISSION LIMITATION:

A. After April 30, 1992, the owner or operator of a facility with Vintage A, B, and C coal burning equipment shall not permit, cause, suffer or allow, on a station-wide basis, nitrogen dioxide emissions to the atmosphere in excess of 335,000 pounds per day, measured from midnight to midnight.

B. For periods when coal burning equipment identified in subsection A of 20.2.32 NMAC is not operated, the station-wide limitation shall be reduced by the following amounts:

- (1) Vintage A or Vintage B coal burning equipment -- 1542 pounds per hour.
- (2) Vintage C coal burning equipment -- 4667 pounds per hour.

[11/30/95; 20.2.32.111 NMAC - Rn, 20 NMAC 2.32.111 10/31/02]

20.2.32.112 COMPLIANCE DETERMINATION METHODS:

A. Unless otherwise required by 40 CFR Part 60, a facility subject to an emission limitation of 20.2.32.109 NMAC or 20.2.32.110 NMAC shall use any of the applicable reference methods specified by the US EPA at 40 CFR Part 60, Appendix A to determine compliance with the nitrogen dioxide emission limitation.

B. Compliance with the total emission limitation of 20.2.32.111 NMAC shall be based on measurements using a continuous emission monitoring system (CEMS) as required by 20.2.32.114 NMAC. Compliance determinations shall be performed using the following formula:

$$TE = \sum_{i=1}^n E_i \cdot H_i$$

where:

TE = total station-wide nitrogen dioxide emissions (lb NO₂/day);

E_i = daily average emission rate of each unit (lb NO₂/MBTU);

H_i = daily average heat input for each unit (MBTU);

n = the number of units of coal burning equipment operated during the day.

[11/30/95; 20.2.32.112 NMAC - Rn, 20 NMAC 2.32.112 10/31/02]

20.2.32.113 EMISSION TESTING:

The owner or operator of any coal burning equipment subject to the emission limitations of subsections A or B of 20.2.32.110 NMAC shall conduct the reference method tests required under subsection A of 20.2.32.112 NMAC semi-annually.

[11/30/95; 20.2.32.113 NMAC - Rn, 20 NMAC 2.32.113 10/31/02]

20.2.32.114 EMISSION MONITORING:

A. The owner or operator of a facility subject to 20.2.32.111 NMAC shall install, calibrate, maintain and operate a CEMS, approved by the Department, which shall continuously measure and record nitrogen dioxide concentrations in the flue gases released into the atmosphere from each unit of coal burning equipment. Continuous emissions monitoring shall apply during all periods of operation of the coal burning equipment, including periods of startup, shutdown and malfunction, except for CEMS breakdowns, repair, calibration checks, and zero and span adjustment. All sampling points for monitoring nitrogen dioxide concentrations shall be approved in writing by the Department.

B. The CEMS required by this section shall complete a minimum of one cycle of operation (sampling, analyzing, and data recording) for each successive 15 minute period. One-hour averages shall be computed from four or more data points equally spaced over each one-hour period. Data recorded during periods of CEMS breakdown, repairs, calibration checks and zero and span adjustments shall not be included in the daily averages computed under this paragraph.

C. When CEMS emission data required under this section are not obtained because of CEMS breakdowns, repairs, calibration checks and zero and span adjustments, emission data will be obtained by using other monitoring systems approved by the Department and the Administrator or one of the reference methods specified by the US EPA in 40 CFR Part 60, Appendix A, to provide emission data for a minimum of 18 hours in each day, midnight to midnight, in at least 22 out of 30 successive days.

D. The CEMS installed and used pursuant to this section shall be operated, installed and maintained in accordance with the performance specifications and other requirements set forth by the US EPA in 40 CFR Part 60, Appendix B, Performance Specifications 2 and 3. In the event of significant breakdown of the CEMS, the owner or operator shall demonstrate to the Department after the repair work that the CEMS continues to meet the applicable performance specifications. The Department may require the owner or operator to conduct a performance test of the equipment as specified in 40 CFR Part 60, Appendix B, but not more frequently than once per year unless the Department has reason to believe that the CEMS is not operating within the applicable performance specifications. An alternate means of verifying the performance of the CEMS may be used if approved by the Department and the Administrator. The Department may also perform independent audits on the CEMS.

E. Each CEMS required under this section shall be subject to the quality assurance requirements of 40 CFR Part 60, Appendix F. All reports required thereunder shall be submitted to the Department.

[11/30/95; 20.2.32.114 NMAC - Rn, 20 NMAC 2.32.114 10/31/02]

20.2.32.115 REPORTING REQUIREMENTS:

A. Persons subject to 20.2.32.113 NMAC shall submit reports to the Department for each semi-annual period, each report to be received by the Department within 30 days after the end of the period. The semi-annual report shall contain the following information:

- (1) Date of test;
- (2) Reference method used for the test;
- (3) Coal burning equipment tested;
- (4) Emissions data obtained by sample number, expressed in pounds nitrogen dioxide emitted per million BTU;
- (5) Arithmetic average of sample data, expressed in pounds nitrogen dioxide emitted per million BTU;
- (6) Any variances from the reference method.

B. Persons subject to 20.2.32.111 NMAC shall submit reports on the CEMS-based data to the Department for each calendar quarter, each report to be received by the Department within 45 days after the end of the quarterly period. The quarterly reports for each unit of coal burning equipment shall contain the following:

- (1) Hourly and daily averages of the concentrations of nitrogen dioxide, expressed in pounds per million BTU, in the gases which are being emitted to the atmosphere, except for periods of instrument calibration and zero adjustments;
- (2) Hourly and daily averages of the percent excess oxygen in the gases coming from the coal burning equipment;
- (3) Hourly and daily average generation output of the coal burning equipment, expressed in megawatts;
- (4) Daily average heat input into each unit of coal burning equipment;
- (5) Total nitrogen dioxide discharged per day, on a station-wide basis, expressed in pounds per day, measured midnight to midnight;

(6) Nitrogen dioxide discharged per day per unit of coal burning equipment, measured from midnight to midnight, expressed as pounds per day and the number of hours used to calculate the limits in subsection B of 20.2.32.111 NMAC;

(7) The date and time identifying each period during which the CEMS was inoperative except for zero and span checks and the nature of the systems repairs or adjustments;

(8) Identification of the times when daily average emission data have been obtained by other monitoring systems or reference methods pursuant to subsection C of 20.2.32.114 NMAC;

(9) Identification of the days for which nitrogen dioxide or diluent data have not been obtained by an approved method for at least 18 hours of operation of the facility; justification for not obtaining sufficient data; and description of corrective actions taken;

(10) Identification of times when the nitrogen dioxide concentration as measured by the CEMS exceeded the full span of the CEMS;

(11) A report of emissions in excess of the limitation contained in 20.2.32.111 NMAC, the magnitude of the excess emissions and the time period(s) when the excess emissions occurred;

(12) Specific identification of each period of emissions in excess of the limitation contained in 20.2.32.111 NMAC that occurred during startup, shutdowns, and malfunctions of the affected facility, including the nature and causes of any malfunctions and the corrective action taken or preventative measures taken;

(13) Description of any modifications to the CEMS which could affect the ability of the continuous monitoring system to comply with the operating specifications of subsection D of 20.2.32.114 NMAC.

20.2.34.9-20.2.34.107 [RESERVED]

20.2.34.108 REQUIREMENT:

The owner or operator of oil burning equipment having a heat input of greater than 1,000,000 million British Thermal Units per year per unit shall not permit, cause, suffer or allow nitrogen dioxide emissions to the atmosphere in excess of 0.3 pounds per million British Thermal Units of heat input.

[11/30/95; 20.2.34.108 NMAC - Rn, 20 NMAC 2.34.108 10/31/02]

PART 35: NATURAL GAS PROCESSING PLANT - SULFUR

20.2.35.1 ISSUING AGENCY:

Environmental Improvement Board.

[11/30/95; 20.2.35.1 NMAC - Rn, 20 NMAC 2.35.100 10/31/02]

20.2.35.2 SCOPE:

All geographic areas within the jurisdiction of the Environmental Improvement Board.

[11/30/95; 20.2.35.2 NMAC - Rn, 20 NMAC 2.35.101 10/31/02]

20.2.35.3 STATUTORY AUTHORITY:

Environmental Improvement Act, NMSA 1978, section 74-1-8(A)(4) and (7), and Air Quality Control Act, NMSA 1978, sections 74-2-1 et seq., including specifically, section 74-2-5(A), (B), and (C).

[11/30/95; 20.2.35.3 NMAC - Rn, 20 NMAC 2.35.102 10/31/02]

20.2.35.4 DURATION:

Permanent.

[11/30/95; 20.2.35.4 NMAC - Rn, 20 NMAC 2.35.103 10/31/02]

20.2.35.5 EFFECTIVE DATE:

November 30, 1995, except where a later date is cited at the end of a section.

[11/30/95; 20.2.35.5 NMAC - Rn, 20 NMAC 2.35.104 10/31/02; A, 11/10/07]

[The latest effective date of any section in this Part is 11/10/07.]

20.2.35.6 OBJECTIVE:

The objective of this Part is to establish sulfur emission standards for natural gas processing plants.

[11/30/95; 20.2.35.6 NMAC - Rn, 20 NMAC 2.35.105 10/31/02]

20.2.35.7 DEFINITIONS:

In addition to the terms defined in 20.2.2 NMAC (Definitions), as used in this Part:

A. "Existing natural gas processing plant" means a gas processing plant the fabrication, erection or installation of which was commenced prior to July 1, 1974, and includes all vessels, boilers, heaters, compressors (engines and turbines), sweetening and regeneration units, dehydration units, piping, storage and loading facilities, sulfur recovery facilities, flares and any other facility connected with the processing or storage of field gas, sour residue gas, and other hydrocarbons associated with field gas.

B. "New natural gas processing plant" means a natural gas processing plant, or part thereof the fabrication, erection, installation, or modification of which is commenced on or after July 1, 1974, and includes all vessels, boilers, heaters, compressors (engines and turbines), sweetening and regeneration units, dehydration units, piping, storage and loading facilities, sulfur recovery facilities, flares and any other facility connected with the processing or storage of field gas, sour residue gas and other hydrocarbons associated with field gas.

C. "Part" means an air quality control regulation under Title 20, Chapter 2 of the New Mexico Administrative Code, unless otherwise noted; as adopted or amended by the Board.

D. "Plant processes" includes but is not limited to fuel burning, including flaring of sour gas, and regeneration.

E. "Sulfur" means elemental sulfur and the sulfur component of any mixture or compound.

[11/30/95; 20.2.35.7 NMAC - Rn, 20 NMAC 2.35.107 10/31/02]

20.2.35.8 AMENDMENT AND SUPERSESSION OF PRIOR REGULATIONS:

This Part amends and supersedes Air Quality Control Regulation ("AQCR") 621, -- Natural Gas Processing Plant -- Sulfur last filed February 8, 1983.

A. All references to AQCR 621 in any other rule shall be construed as a reference to this Part.

B. The amendment and supersession of AQCR 621 shall not affect any administrative or judicial enforcement action pending on the effective date of such amendment nor the validity of any permit issued pursuant to AQCR 621.

[11/30/95; 20.2.35.8 NMAC - Rn, 20 NMAC 2.35.106 10/31/02]

20.2.35.9 DOCUMENTS:

Documents cited in this Part may be viewed at the New Mexico Environment Department, Air Quality Bureau, Runnels Building, 1190 Saint Francis Drive, Santa Fe, NM 87505 [2048 Galisteo St., Santa Fe, NM 87505].

[11/30/95; 20.2.35.9 NMAC - Rn, 20 NMAC 2.35.108 10/31/02]

20.2.35.10-20.2.35.108 [RESERVED]

20.2.35.109 EXISTING NATURAL GAS PROCESSING PLANTS:

A. The owner or operator of an existing natural gas processing plant that releases an average of ten tons a day or greater of sulfur in plant processes and that has an off-gas stream that undiluted contains greater than 20 mole percent hydrogen sulfide shall not permit, cause, suffer or allow at any time sulfur emissions to the atmosphere in excess of 10 pounds of sulfur for every 100 pounds of sulfur released in plant processes.

B. The owner or operator of an existing natural gas processing plant that releases an average of ten tons a day or greater of sulfur in plant processes and that has an off-gas stream that undiluted contains less than or equal to 20 mole percent hydrogen sulfide shall not permit, cause, suffer or allow at any time sulfur emissions to the atmosphere in excess of 12 pounds of sulfur for every 100 pounds of sulfur released in plant processes.

C. The owner or operator of an existing natural gas processing plant that releases an average of 7.5 or more tons a day but less than 10 tons a day of sulfur in plant processes and has an off-gas stream that undiluted contains greater than 20 mole percent hydrogen sulfide shall not permit, cause, suffer or allow at any time sulfur emissions to the atmosphere in excess of 10 pounds of sulfur for every 100 pounds of the sulfur released in plant processes.

D. The owner or operator of an existing natural gas processing plant that releases an average of 7.5 or more tons a day but less than 10 tons a day of sulfur in plant processes and has an off-gas stream that undiluted contains less than or equal to 20 mole percent hydrogen sulfide shall not permit, cause, suffer or allow sulfur emissions to the atmosphere in excess of 12 pounds of sulfur for every 100 pounds of sulfur released in plant processes.

E. The owner or operator of an existing natural gas processing plant that sends residue gas containing greater than 0.25 grains hydrogen sulfide per 100 cubic feet of gas to a facility, other than the natural gas processing plant, for the purpose of residue gas purification; shall not permit, cause, suffer or allow sulfur emissions to the atmosphere, in excess of 10 pounds of sulfur for every 100 pounds of sulfur released in plant processes; unless the natural gas processing plant releases less than 2 1/2 tons a day of sulfur in plant processes.

F. The owner or operator of an existing natural gas processing plant that is governed by a sulfur emission limitation of an Air Quality Control Regulation shall not permit, cause, suffer or allow gas coming off any off-gas sweetening regeneration unit or other sulfur releasing unit to be sent to a facility other than the natural gas processing plant for the purpose of sulfur recovery or disposal:

(1) unless all the gas coming off a gas sweetening regeneration unit or other sulfur releasing unit is sent to the facility other than the natural gas processing plant, except mercaptan gas, and the amount of sulfur in the off-gas stream from fuel burning equipment does not exceed the quantity of sulfur that would exist if the sulfur content of the gas used for fuel was 10 grains of sulfur per 100 standard cubic feet of fuel gas; or

(2) unless only a portion of the gas coming off a gas sweetening regeneration unit or other sulfur releasing unit is sent to the facility other than the natural gas processing plant; and

(a) if the natural gas processing plant releases a average of 7.5 tons a day or greater of sulfur in plant processes and has an off-gas stream that undiluted contains greater than 20 mole percent hydrogen sulfide, sulfur emissions from the existing natural gas processing plant do not exceed 10 pounds of sulfur for every 100 pounds of sulfur that are released in plant processes but not sent for sulfur recovery or disposal to another facility; or

(b) if the natural gas processing plant releases a average of 7.5 tons a day or greater of sulfur in plant processes and has an off-gas stream that undiluted contains less than or equal to 20 mole percent hydrogen sulfide, sulfur emissions from the existing natural gas processing plant do not exceed 12 pounds of sulfur for every 100 pounds of sulfur that are released in plant processes but not sent for sulfur recovery or disposal to another facility.

20.2.35.110 NEW NATURAL GAS PROCESSING PLANTS:

A. The owner or operator of a new natural gas processing plant that releases an average of five or more tons a day and less than twenty tons a day of sulfur in plant processes shall not permit, cause, suffer or allow sulfur emissions to the atmosphere in excess of 10 pounds of sulfur for every 100 pounds of sulfur released in plant processes.

B. The owner or operator of a new natural gas processing plant that releases an average of 20 or more tons a day and less than 50 tons a day of sulfur in plant processes shall not permit, cause, suffer or allow sulfur emissions to the atmosphere in excess of 4,000 pounds per day.

C. The owner or operator of a new natural gas processing plant that releases an average of 50 tons a day or greater of sulfur in plant processes shall not permit, cause, suffer or allow sulfur emissions to the atmosphere in excess of 2 pounds of sulfur for every 100 pounds of sulfur released in plant processes.

D. The owner or operator of a new natural gas processing plant that is governed by a sulfur emission limitation of an Air Quality Control Regulation shall not permit, cause, suffer or allow gas coming off any off-gas sweetening regeneration unit or other sulfur releasing unit to be sent to a facility other than the natural gas processing plant for the purpose of sulfur recovery or disposal:

(1) unless all the gas coming off the gas sweetening regeneration unit or other sulfur releasing unit is sent to the facilities other than the natural gas processing plant, except mercaptan gas, and the amount of sulfur in the off-gas stream from fuel burning equipment does not exceed the quantity of sulfur that would exist if the sulfur content of the gas used for fuel was 10 grains of sulfur per 100 standard cubic feet of fuel gas; or

(2) unless only a portion of the gas coming off the gas sweetening regeneration unit or other sulfur releasing unit is sent to the facility other than the natural gas processing plant; and

(a) if the natural gas processing plant is a new natural gas processing plant that releases an average of five or more tons a day but less than twenty tons a day of sulfur in plant processes, sulfur emissions from the new natural gas processing plant do not exceed 10 pounds of sulfur for every 100 pounds of sulfur that are released in plant processes but not sent for sulfur recovery or disposal to another facility; or

(b) if the natural gas processing plant is a new natural gas processing plant that releases an average of twenty tons a day or greater of sulfur in plant processes, sulfur emissions from the new natural gas processing plant do not exceed 2 pounds of sulfur for every 100 pounds of sulfur in plant processes but not sent for sulfur recovery or disposal to another facility.

[11/30/95; 20.2.35.110 NMAC - Rn, 20 NMAC 2.35.110 10/31/02]

20.2.35.111 STACK HEIGHT:

A. The owner or operator of a natural gas processing plant shall not permit, cause, suffer or allow sulfur compounds to be emitted to the atmosphere unless the sulfur compound emission is from a stack of a sufficient physical height to prevent concentrations of sulfur compounds near ground level equal to or exceed any state or federal ambient air standard. The necessary physical stack height shall be determined by the following graph in 20.2.35.115 NMAC (Figure 1) or through the use of dispersion modeling approved by the department.

B. If the natural gas processing plant is an existing natural gas processing plant, the requirements of this section shall not apply to that existing natural gas processing plant until January 1, 1977.

C. By January 1, 1977, any person owning or operating an existing natural gas processing plant must file with the department the following:

- (1) the height of all stacks from which sulfur is emitted;
- (2) the quantity of the sulfur emitted from each stack;
- (3) the exit gas temperature for each stack;
- (4) the total mass flow rate of the stack effluent gases (for flares, the total effluent mass flow rate shall consist of the stack effluent mass flow rate plus that amount of air required for complete combustion); and
- (5) any other information the department deems necessary to determine whether or not the physical height of any stack from which sulfur is emitted complies with the requirements of this subsection.

[11/30/95; 20.2.35.111 NMAC - Rn, 20 NMAC 2.35.111 10/31/02; A, 11/10/07]

20.2.35.112 RECORD KEEPING AND REPORTING REQUIREMENTS:

A. To aid the Department in determining compliance with this Part, the owner or operator of a natural gas processing plant to which this Part applies shall submit to the Department quarterly reports in the months of January, April, July and October of each year containing the following information:

- (1) the sulfur content of feedstock entering the natural gas processing plant, determined no less frequently than three times per week; and no more frequently than once every twenty-four hours;

(2) the sulfur content of all fuel burned in the plant and the amount of each type of fuel burned determined no less frequently than quarterly;

(3) the sulfur content of the products produced by the natural gas processing plant determined no less frequently than weekly;

(4) the sulfur content of the inlet and outlet gas stream or streams of the sulfur recovery plant determined no less frequently than quarterly; and

(5) the weight of the recovered sulfur determined no less frequently than weekly.

B. If it appears necessary, the Department may require reports on a more frequent basis, but no more frequently than monthly.

C. The Department may, upon the request of the owner or operator of a natural gas processing plant, alter the sampling periods specified in this section.

[11/30/95; 20.2.35.112 NMAC - Rn, 20 NMAC 2.35.112 10/31/02]

20.2.35.113 DECLINING EMISSION NATURAL GAS PROCESSING PLANTS:

A. Subsections A, B, D and E of 20.2.35.109 NMAC, and 20.2.35.112 NMAC shall not apply to a natural gas processing plant that the Department has certified as a "declining emission natural gas processing plant".

B. The department shall certify an existing natural gas processing plant as a "declining emission natural gas processing plant" and include in the certification a "sulfur release schedule" setting forth the maximum amounts of sulfur that may be released in plant processes in quarterly increments through January 1, 1980, if all of the following are met:

(1) the sulfur released in plant processes in the plant will decrease to the extent that by January 1, 1980, less than 7.5 tons of sulfur per day will be released in plant processes;

(2) the decrease in the amount of sulfur released in plant processes will be a continuous decrease due to reduction in the amount of sour feedstock into the plant;

(3) the owner or operator of the plant has furnished a schedule to the Department detailing the projected decreases in sour feedstock that will result in the continuous decrease of sulfur released in plant processes to less than 7.5 tons by 1980;

(4) the owner or operator of the plant has stated his intention to follow the submitted schedule setting forth the projected decreases in sour feedstock to the plant;

(5) the plant does not have a sulfur recovery plant;

(6) the owner or operator of the plant has furnished to the Department all of the information requested in Subsection N [20.2.35.113 NMAC] and has certified the accuracy and completeness of the information furnished;

(7) the Department has reviewed the application and all of the information submitted in support thereof, solicited and reviewed comments of the Oil Conservation Commission, and reviewed all comments received in writing from interested persons; and

(8) the Department has determined, after considering the information specified in the above paragraphs and such other information as it may wish to consider, that the processing of sour feedstock by the plant will decrease according to the "sulfur release schedule" resulting in a continuous decrease of sulfur in plant processes to less than 7.5 tons per day by January 1, 1980.

C. Application to the Department for certification as a "declining emission natural gas processing plant" must be filed with the Department no later than January 1, 1975, and contain the following:

(1) the applicant's name and address;

(2) date of the application;

(3) description of the facility for which the certification is sought;

(4) detailed description, including sulfur content, of the feedstock into the plant and its sources at the time of application, for the preceding two years and projected through 1985;

(5) the amount of sulfur released in plant processes, specifying each process and the amount of sulfur released in each process at the time of application, for the preceding two years and projected through 1985;

(6) the amount of sulfur leaving the plant at the time of application, for the preceding two years and projected through 1985;

(7) such additional information as the Department, after conferring with the Oil Conservation Commission, may require relating to reservoir data;

(8) a "sulfur release schedule" setting forth the amounts of sulfur expected to be released in plant processes in quarterly increments through January 1, 1980; and

(9) such additional information as the Department may require.

D. The owner or operator of a natural gas processing plant that is certified as a "declining emission natural gas processing plant" may petition the Department for a modification of the "sulfur release schedule". The Department may grant the petition for modification of the "sulfur release schedule" if all of the requirements of subsection B of 20.2.35.113 NMAC are met. The petition should explain in detail the reasons why the modification is necessary and include supporting data and such additional information as the Department may require.

E. The Department shall notify the applicant or petitioner and all interested persons who submitted written comments of the Department's action on the application for certification or petition for modification of the "sulfur release schedule" and the reasons therefore. The Department shall notify the applicant or petitioner by certified mail. If the Department denies certification or the petition for modification, the applicant or petitioner may appeal the decision of the Department to the Board by filing a petition for review within thirty days of the date of denial. If the Department grants the certification of the petition for modification, any interested person who submitted written comments opposing the certification or modification may appeal the decision of the Department to the Board by filing a petition for review within thirty days of the date of the granting of certification or modification.

F. The owner or operator of a "declining emission natural gas processing plant" shall submit to the Department quarterly reports for the periods January 1 through March 31, April 1 through June 30, July 1 through September 30, and October 1 through December 31 of each year, each report to be received by the Department within 45 days of the end of the quarterly period:

(1) The amount of gas received into the plant for the three month period including the average sulfur content of the gas determined no less frequently than three times per week and no more frequently than once every twenty-four hours and the total amount of sulfur received into plant processes in the three month period;

(2) the sulfur content of all fuel burned in the plant and the amount of each type of fuel burned determined no less frequently than weekly;

(3) the amount and sulfur content of the products produced by the plant determined no less frequently than weekly;

(4) the amount of sulfur released in plant processes, specifying each process and the amount of sulfur released in each;

(5) the quantity of sulfur disposed of and the method of disposal determined no less frequently than weekly;

(6) such information as the Department, after consulting with the Oil Conservation Commission, may require relating to new wells or re-worked wells from which the plant receives feedstock; and

(7) such additional information as the Department may require, including but not limited to new recovery techniques being used in the field.

(8) If it appears necessary, the Department may require reports on a more frequent basis, but no more frequently than monthly.

G. The owner or operator of a "declining emission natural gas processing plant" that has for any quarterly report period exceeded by more than one thousand pounds the average daily amount of sulfur (averaged over the quarterly period) that was projected by the "sulfur release schedule" for that quarterly period shall submit to the Department within 30 days after the filing of the quarterly report information as to why the projected average daily sulfur emission rate was exceeded.

H. The Department shall revoke any natural gas processing plant's certification as a "declining emission natural gas processing plant" if the natural gas processing plant exceeds by more than one thousand pounds for any two consecutive quarterly periods the amount of sulfur to be released in plant processes as set forth in the "sulfur release schedule" contained in the "declining emission natural gas processing plant" certification. The Department shall notify the owner or operator of the natural gas processing plant by certified mail of the revocation of the plant's certification as a "declining emission natural gas processing plant".

I. The owner or operator of a natural gas processing plant whose certification as a "declining emission natural gas processing plant" has been revoked may appeal to the Environmental Improvement Board the Department's determination that the "declining emission natural gas processing plant" exceeded by more than one thousand pounds for two consecutive quarterly periods the amount of sulfur to be released in plant processes as set forth in the "sulfur release schedule" contained in the "declining emission natural gas processing plant" certification. A petition for review of the Department's determination must be filed with the board within twenty days of receipt of the certified notice of revocation.

[11/30/95; 20.2.35.113 NMAC - Rn, 20 NMAC 2.35.113 10/31/02]

20.2.35.114 HEARINGS -- ACTIONS BY THE BOARD:

A. Upon receipt by the board of a petition for review pursuant to subsections E and I of 20.2.35.113 NMAC, the Secretary shall mail notice of hearing to the petitioner, all persons who have submitted written comments on the application, and all persons who have requested notice of hearings held pursuant to this subsection.

B. At least seven days prior to the hearing date, the Secretary shall publish notice of the date, time, place, and subject of the hearing in a newspaper of general circulation in the county in which the facility is located and in a newspaper of general circulation in the state.

C. Public hearings shall be held before the board not less than fifteen days and no more than forty-five days from the date the Secretary mails the notice of the hearing to the petitioner.

D. Public hearings shall be held in Santa Fe unless the board and the petitioner agree upon another site in the state.

E. The board may designate a hearing officer to take evidence at the hearing.

F. A record shall be made at each hearing, the cost of which shall be borne by the Department. Transcript costs shall be paid by those persons requesting transcripts. The cost of providing transcripts to the board members shall be borne by the Department.

G. In the hearing, the technical rules of evidence and the rules of civil procedure shall not apply, but the hearings shall be conducted so that all relevant views are amply and fairly presented without undue repetition. The board may require reasonable substantiation of statements or records tendered and may require any view to be stated in writing when the circumstances justify.

H. The board shall allow all persons a reasonable opportunity at a hearing to submit written and oral evidence and arguments, introduce exhibits, and cross-examine persons who testify.

I. A petitioner may represent himself at the hearing or be represented by any other individual.

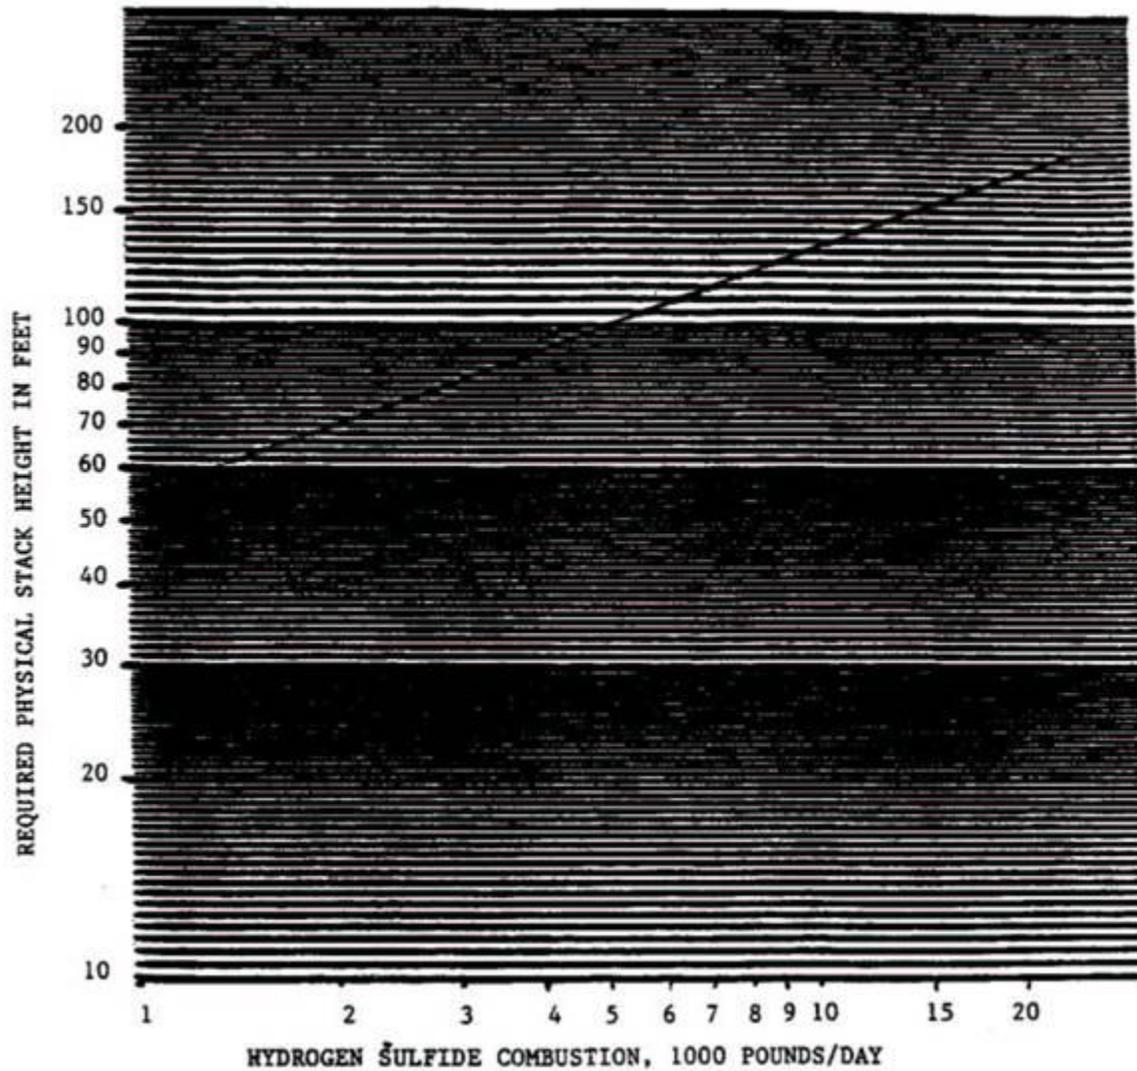

J. The board shall render its decision based upon the transcript of the hearing as soon as possible following the preparation of the transcript.

K. The owner or operator of any plant whose certification as a "declining emission natural gas processing plant" has been revoked shall comply with the requirements of the applicable subsections of this section [sections of this Part] within twelve months after the revocation of certification becomes final.

L. As used in subsections B, C, F, G, and I of 20.2.35.113 NMAC the sulfur released in plant processes shall include the sulfur content of any gas sent from the plant for further processing.

20.2.38.7 DEFINITIONS:

In addition to the terms defined in 20.2.2 NMAC (Definitions), as used in this Part:

A. "New hydrocarbon storage facility" means any hydrocarbon storage facility, or part thereof, the fabrication, erection, installation, or modification of which is commenced on or after January 1, 1975.

B. "New tank battery" means any tank battery, or part thereof, the fabrication, erection, installation, or modification of which is commenced on or after January 1, 1975.

C. "Part" means an air quality control regulation under Title 20, Chapter 2 of the New Mexico Administrative Code, unless otherwise noted; as adopted or amended by the Board.

D. "Petroleum production facility" includes tank batteries, separators and heater-treaters used in producing or storing any crude oil, condensate or natural gas that has been extracted from a well.

E. "Tank battery" means a tank or group of tanks that receive crude oil or condensate from a well for storage until shipment.

20.2.38.10-20.2.38.108 [RESERVED]

20.2.38.109 TANK STORAGE ASSOCIATED WITH PETROLEUM PRODUCTION OR PROCESSING FACILITY:

The owner or operator shall not place, hold or store hydrocarbons containing hydrogen sulfide in a container associated with a petroleum production facility or petroleum processing facility and having a capacity of 20,000 gallons or greater with a throughput of at least 30,000 gallon per week, unless the container is equipped with:

A. a method of discharging the hydrocarbons into the container below the liquid level; or

B. any other method or device equally effective to minimize hydrocarbon and hydrogen sulfide loss to the atmosphere.

[11/30/95; 20.2.38.109 NMAC - Rn, 20 NMAC 2.38.109 10/31/02]

20.2.38.110 TANK BATTERY OR STORAGE FACILITY -- WITHIN MUNICIPALITY:

The owner or operator of, within the corporate limits of a municipality, a tank battery having a throughput greater than 10,000 barrels (420,000 gallons) per year operated in conjunction with a petroleum production facility, or a hydrocarbon storage facility operated in conjunction with a petroleum processing facility, shall not place, store or hold in a stationary tank or other container any hydrocarbon liquids, the vapor of which contains at any time 24 ppm or more of hydrogen sulfide unless the tank or other container is equipped with:

A. a well-maintained vapor-recovery system consisting of:

(1) a vapor-gathering system capable of collecting the vapor and gases discharged; and

(2) a vapor-disposal system capable of processing the vapor and gases so as to minimize emission of sulfur compounds to the atmosphere; or

B. any other device that is at least as efficient to minimize the loss of vapor or gas containing sulfur or its compounds to the atmosphere; or

C. a floating roof, consisting of an external floating roof, internal floating cover or covered floating roof, which is equipped with a closure seal or seals maintained in good repair to close the space between the roof or cover edge and tank wall, if the stationary tank or other container is equipped with a floating roof on January 1, 1974.

[11/30/95; 20.2.38.110 NMAC - Rn, 20 NMAC 2.38.110 10/31/02]

20.2.38.111 TANK BATTERY OR STORAGE FACILITY -- WITHIN FIVE MILES OF MUNICIPALITY OF TWENTY THOUSAND OR MORE:

The owner or operator of, within five miles, of the corporate limits of a municipality that has a population of twenty thousand or greater, a tank battery having a throughput greater than 50,000 barrels (2,100,000 gallons) per year operated in conjunction with a petroleum production facility, or a hydrocarbon storage facility operated in conjunction with a petroleum processing facility, shall not place, store, or hold in a stationary tank or other container any hydrocarbon liquids the vapor of which contains at any time 24 ppm or more of hydrogen sulfide unless the tank or other container is equipped as required in 20.2.38.110 NMAC.

[11/30/95; 20.2.38.111 NMAC - Rn, 20 NMAC 2.38.111 10/31/02]

20.2.38.112 NEW TANK BATTERY -- MORE THAN 65,000 GALLONS CAPACITY:

The owner or operator of a new tank battery operated in conjunction with a petroleum production facility shall not place, store, or hold in a stationary tank or other container, if the tank battery has a storage capacity of 65,000 gallons or greater, any hydrocarbon liquid unless the tank or other container is equipped with:

A. a floating roof, consisting of an external floating roof, internal floating cover or covered floating roof, which is equipped with a closure seal or seals maintained in good repair to close the space between the roof or cover edge and tank wall; or

B. a well-maintained vapor-recovery system consisting of:

(1) a vapor-gathering system capable of collecting the organic compound vapors and gases discharged; and

(2) a vapor-disposal system capable of collecting the organic vapor and gases so as to minimize their emission to the atmosphere; or

C. any other device which is at least as effective to minimize vapor or gas loss to the atmosphere.

[11/30/95; 20.2.38.112 NMAC - Rn, 20 NMAC 2.38.112 10/31/02]

20.2.38.113 NEW TANK BATTERY AND THE PECOS-PERMIAN INTERSTATE AIR QUALITY CONTROL REGION:

The owner or operator of a new tank battery operated in conjunction with a petroleum production facility, or a new hydrocarbon storage facility operated in conjunction with a petroleum processing facility, located outside the Pecos-Permian intrastate air quality control region, located within the corporate limits of any municipality within the state or located within five miles of the corporate limits of any municipality within the state that has a population of twenty thousand or greater shall not place, store, or hold in a stationary tank or other container any hydrocarbon liquid, the vapor of which contains at

any time 24 ppm or more of hydrogen sulfide, unless the tank or other container is equipped with:

A. a well-maintained vapor-recovery system consisting of:

(1) a vapor-gathering system capable of collecting the vapors and gases discharged; and

(2) a vapor-disposal system capable of processing the vapors and gases so as to minimize emission of sulfur compounds to the atmosphere; or

B. any other device that is at least as effective to minimize the loss of vapor or gas containing sulfur or its compounds to the atmosphere.

PART 39: SULFUR RECOVERY PLANT - SULFUR

20.2.39.1 ISSUING AGENCY:

Environmental Improvement Board.

[11/30/95; 20.2.39.1 NMAC - Rn, 20 NMAC 2.39.100 10/31/02]

20.2.39.2 SCOPE:

All geographic areas within the jurisdiction of the Environmental Improvement Board.

[11/30/95; 20.2.39.2 NMAC - Rn, 20 NMAC 2.39.101 10/31/02]

20.2.39.3 STATUTORY AUTHORITY:

Environmental Improvement Act, NMSA 1978, section 74-1-8(A)(4) and (7), and Air Quality Control Act, NMSA 1978, sections 74-2-1 et seq., including specifically, section 74-2-5(A), (B), and (C).

[11/30/95; 20.2.39.3 NMAC - Rn, 20 NMAC 2.39.102 10/31/02]

20.2.39.4 DURATION:

Permanent.

[11/30/95; 20.2.39.4 NMAC - Rn, 20 NMAC 2.39.103 10/31/02]

20.2.39.5 EFFECTIVE DATE:

November 30, 1995.

[11/30/95; 20.2.39.5 NMAC - Rn 20 NMAC 2.39.104 10/31/02]

[The latest effective date of any section in this Part is 10/31/02.]

20.2.39.6 OBJECTIVE:

The objective of this Part is to establish sulfur emission standards for sulfur recovery plants which are not part of petroleum or natural gas processing facilities.

[11/30/95; 20.2.39.6 NMAC - Rn, 20 NMAC 2.39.105 10/31/02]

20.2.39.7 DEFINITIONS:

In addition to the terms defined in 20.2.2 NMAC (Definitions), as used in this Part:

A. "Part" means an air quality control regulation under Title 20, Chapter 2 of the New Mexico Administrative Code, unless otherwise noted; as adopted or amended by the Board.

B. "Sulfur" means elemental sulfur and the sulfur component of any mixture or compound.

[11/30/95; 20.2.39.7 NMAC - Rn, 20 NMAC 2.39.107 10/31/02]

20.2.39.8 AMENDMENT AND SUPERSESSION OF PRIOR REGULATIONS:

This Part amends and supersedes Air Quality Control Regulation ("AQCR") 632, -- Sulfur Recovery Plant -- Sulfur last filed February 8, 1983.

A. All references to AQCR 632 in any other rule shall be construed as a reference to this Part.

B. The amendment and supersession of AQCR 632 shall not affect any administrative or judicial enforcement action pending on the effective date of such amendment nor the validity of any permit issued pursuant to AQCR 632.

[11/30/95; 20.2.39.8 NMAC - Rn, 20 NMAC 2.39.106 10/31/02]

20.2.39.9 DOCUMENTS:

Documents cited in this Part may be viewed at the New Mexico Environment Department, Air Quality Bureau, Runnels Building, 1190 Saint Francis Drive, Santa Fe, NM 87505 [2048 Galisteo St., Santa Fe, NM 87505].

[11/30/95; 20.2.39.9 NMAC - Rn, 20 NMAC 2.39.108 10/31/02]

20.2.39.10-20.2.39.109 [RESERVED]

20.2.39.110 EXISTING SULFUR RECOVERY PLANT:

The owner or operator of an existing (the fabrication, erection, or installation of which was commenced before August 14, 1974) sulfur recovery plant shall not permit, cause, suffer or allow at any time sulfur emissions to the atmosphere in excess of 12 pounds of sulfur for every 100 pounds of sulfur introduced into the plant.

[11/30/95; 20.2.39.110 NMAC - Rn, 20 NMAC 2.39.110 10/31/02]

20.2.39.111 SULFUR RECOVERY PLANT -- LESS THAN 20 TONS PER DAY OF SULFUR:

The owner or operator of a new (the fabrication, erection, installation, or modification of which was commenced on or after August 14, 1974) sulfur recovery plant that introduces less than twenty tons a day of sulfur into the plant shall not permit, cause, suffer or allow at any time sulfur emissions to the atmosphere in excess of 10 pounds of sulfur for every 100 pounds of sulfur introduced into the plant.

[11/30/95; 20.2.39.111 NMAC - Rn, 20 NMAC 2.39.111 10/31/02]

20.2.39.112 SULFUR RECOVERY PLANT -- MORE THAN 20 TONS PER DAY OF SULFUR:

The owner or operator of a new (the fabrication, erection, installation, or modification of which was commenced on or after August 14, 1974) sulfur recovery plant that introduces twenty tons a day or greater of sulfur into the plant shall not permit, cause, suffer or allow at any time sulfur emissions to the atmosphere in excess of 2 pounds of sulfur for every 100 pounds of sulfur introduced into the plant.

[11/30/95; 20.2.39.112 NMAC - Rn, 20 NMAC 2.39.112 10/31/02]

20.2.39.113 SULFUR RECOVERY PLANTS OTHERWISE REGULATED:

This Part shall not apply to a sulfur recovery plant for which a sulfur emission limitation is established by any other air quality control regulation. For purposes of this section, the establishment by an air quality control regulation of a limitation on the amount of hydrogen sulfide that may be emitted is not the establishment of a sulfur emission limitation.

[11/30/95; 20.2.39.113 NMAC - Rn, 20 NMAC 2.39.113 10/31/02]

20.2.39.114 REPORTING REQUIREMENTS:

A. To aid the Department in determining compliance with this Part, the owner or operator of a sulfur recovery plant to which this Part applies shall submit to the Department quarterly reports for the periods January 1 through March 31, April 1 through June 30, July 1 through September 30, and October 1 through December 31 of each year, each report to be received by the Department within 45 days of the end of the quarterly period. The quarterly report shall contain the following:

(1) the sulfur content of feedstock entering the sulfur recovery plant, determined no less frequently than weekly;

(2) the weight of the recovered sulfur, determined no less frequently than weekly; and

(3) the concentration of sulfur dioxide and hydrogen sulfide in the exit gas stream or streams, determined no less frequently than monthly.

B. When the sulfur recovery plant has at some time during the quarterly period operated under the provisions of 20.2.7 NMAC (Excess Emissions During Malfunction, Startup, Shutdown, or Scheduled Maintenance), and complied with the notification requirements of that regulation, quantities and time periods involved in the quarterly reports may be modified to exclude the time periods and the quantities involved during those time periods if the quantities are determined separately for those time periods and submitted in the quarterly report.

[11/30/95; 20.2.39.114 NMAC - Rn, 20 NMAC 2.39.114 10/31/02]

PART 40: SULFURIC ACID PRODUCTION UNITS - SULFUR DIOXIDE, ACID MIST AND VISIBLE EMISSIONS

20.2.40.1 ISSUING AGENCY:

Environmental Improvement Board.

[11/30/95; 20.2.40.1 NMAC - Rn, 20 NMAC 2.40.100 10/31/02]

20.2.40.2 SCOPE:

All geographic areas within the jurisdiction of the Environmental Improvement Board.

[11/30/95; 20.2.40.2 NMAC - Rn, 20 NMAC 2.40.101 10/31/02]

20.2.40.3 STATUTORY AUTHORITY:

Environmental Improvement Act, NMSA 1978, section 74-1-8(A)(4) and (7), and Air Quality Control Act, NMSA 1978, sections 74-2-1 et seq., including specifically, section 74-2-5(A), (B) and (C).

[11/30/95; 20.2.40.3 NMAC - Rn, 20 NMAC 2.40.102 10/31/02]

20.2.40.4 DURATION:

Permanent.

[11/30/95; 20.2.40.4 NMAC - Rn, 20 NMAC 2.40.103 10/31/02]

20.2.40.5 EFFECTIVE DATE:

November 30, 1995.

[11/30/95; 20.2.40.5 NMAC - Rn, 20 NMAC 2.40.104 10/31/02]

[The latest effective date of any section in this Part is 10/31/02.]

20.2.40.6 OBJECTIVE:

The objective of this Part is to establish requirements and standards for sulfuric acid production units to minimize emissions.

[11/30/95; 20.2.40.6 NMAC - Rn, 20 NMAC 2.40.105 10/31/02]

20.2.40.7 DEFINITIONS:

In addition to the terms defined in 20.2.2 NMAC (Definitions), as used in this Part:

A. "Acid mist" means sulfuric acid mist as measured by the method referenced in 20.2.40.110 NMAC and includes liquid mist as well as sulfur trioxide and sulfuric acid vapor.

B. "Commenced" means that an owner or operator has undertaken a continuous program of construction or that an owner or operator has entered into a binding agreement or contractual obligation to undertake and complete within a reasonable time a continuous program of construction.

C. "Construction" means fabrication, erection or installation of an affected facility.

D. "Existing sulfuric acid production unit" means a sulfuric acid production unit the construction or modification of which was commenced on or before August 17, 1971.

E. "Good engineering practice" means:

(1) With respect to stack heights less than 65 meters, the height necessary to insure that emissions from the stack do not result in excessive concentrations of any

pollutant in the immediate vicinity of the source as result of atmospheric downwash, eddies and wakes which may be created by the source itself, nearby structures or nearby terrain obstacles. Such height shall not exceed:

(a) Thirty meters for stacks not influenced by the source itself, nearby structures or terrain; or

(b) The height determined by use of the equation: $H_g = H + 1.5 L$; where: H_g = good engineering practice stack heights; H = the height of the source or nearby structure; and L = the lesser dimension (height or width) of the source or nearby structure for stacks that are influenced by nearby structures or terrain;

(2) With respect to stack heights equal to or greater than 65 meters, the owner or operator must satisfy all provisions and obtain all applicable approvals required under 20.2.80 NMAC (Stack Heights).

F. "Modification" means a physical change or change in the manner of operation which increases the amount of any air contaminant emitted by the sulfuric acid production unit or which results in the emission of any air contaminant not previously emitted.

G. "Pecos-Permian Basin Intrastate Air Quality Control Region" means Chaves, Curry, De Baca, Eddy, Lea, Quay and Roosevelt Counties.

H. "Sulfuric acid" means the chemical compound H_2SO_4 .

I. "Sulfuric acid produced" means the production expressed as 100 percent H_2SO_4 .

J. "Sulfuric acid production unit" means any facility producing sulfuric acid by the contact process by burning elemental sulfur, alkylation acid, hydrogen sulfide, organic sulfides and mercaptans, or acid sludge, but does not include facilities where conversion to sulfuric acid is utilized primarily as a means of preventing emissions to the atmosphere of sulfur dioxide or other sulfur compounds.

K. "Ton" means 2,000 pounds.

[11/30/95; 20.2.40.7 NMAC - Rn, 20 NMAC 2.40.107 10/31/02]

20.2.40.8 AMENDMENT AND SUPERSESSION OF PRIOR REGULATIONS:

This Part amends and supersedes Air Quality Control Regulation ("AQCR") 651 -- Sulfuric Acid Production Units -- Sulfur Dioxide, Acid Mist and Visible Emissions last filed November 17, 1993:

A. All references to AQCR 651 in any other rule shall be construed as a reference to this Part.

B. The amendment and supersession of AQCR 651 shall not affect any administrative or judicial enforcement action pending on the effective date of such amendment nor the validity of any permit issued pursuant to AQCR 651.

[11/30/95; 20.2.40.8 NMAC - Rn, 20 NMAC 2.40.106 10/31/02]

20.2.40.9 DOCUMENTS:

Documents cited in this Part may be viewed at the New Mexico Environment Department, Air Quality Bureau, Harold Runnels Building, 1190 St. Francis Drive, Santa Fe, NM 87505 [2048 Galisteo St., Santa Fe, NM 87505].

[11/30/95; 20.2.40.9 NMAC - Rn, 20 NMAC 2.40.108 10/31/02]

20.2.40.10-20.2.40.108 [RESERVED]

20.2.40.109 EXISTING UNITS:

A. The owner or operator of an existing sulfuric acid production unit located within the Pecos-Permian Basin Intrastate Air Quality Control Region shall not permit, cause, suffer or allow sulfur dioxide emissions to the atmosphere in excess of 575 pounds per hour, with a minimum stack height of 40 meters, or acid mist emissions in excess of 0.5 pounds per ton of sulfuric acid produced. Stack height shall meet standards for good engineering practice.

B. The owner or operator of an existing sulfuric acid production unit located outside the Pecos-Permian Basin Intrastate Air Quality Control Region shall not permit, cause, suffer or allow sulfur dioxide emissions to the atmosphere in excess of 680 pounds per hour, or acid mist emissions in excess of 0.5 pounds per ton of sulfuric acid produced.

[11/30/95; 20.2.40.109 NMAC - Rn, 20 NMAC 2.40.109 10/31/02]

20.2.40.110 COMPLIANCE:

Compliance with sulfur dioxide and acid mist emission limitations of this Part shall be determined consistent with the method and procedures specified by the US EPA in 40 CFR Section 60.85 or any other equivalent method and procedures receiving prior approval from the Department and the US EPA. Upon request of the Department, the owner or operator of sulfuric acid production units subject to this regulation shall perform stack testing for sulfur dioxide and acid mist emissions according to the method stated above and report the results of such tests in the format and time period specified by the Department. The owner or operator shall inform the Department of the dates and

times of such testing so that the Department may have opportunity to have an observer present during testing.

[11/30/95; 20.2.40.110 NMAC - Rn, 20 NMAC 2.40.110 10/31/02]

20.2.40.111 VISIBLE EMISSIONS:

Opacity of visible emissions from existing sulfuric acid production units shall be determined consistent with the method set forth by the US EPA in 40 CFR Part 60, Appendix A, Method 9 or any other equivalent method receiving prior approval from the Department and the US EPA. The time period for taking opacity readings shall be for a minimum of six minutes.

[11/30/95; 20.2.40.111 NMAC - Rn, 20 NMAC 2.40.111 10/31/02]

20.2.40.112 MONITORING:

A. The owner or operator of an existing sulfuric acid production unit shall not permit, cause, suffer or allow operation of the sulfuric acid production unit without maintaining in good operating condition a monitor which continuously measures and records the sulfur dioxide concentration in the gases within the stack from which the gases are emitted to the atmosphere. The sampling point for monitoring emissions and the method for determining the volumetric flow rate of the gases shall be approved by the Department. Instruments and sampling systems installed and used pursuant to this section shall be calibrated in accordance with the methods prescribed by the manufacturer's recommended zero adjustment and calibration check procedures at least once every 24 hours of operation, unless the manufacturer specifies or recommends more frequent calibration checks. The owner or operator of a sulfuric acid production unit shall retain for a period of two years all raw data and quality assurance measurements and procedures. This section is applicable to existing sulfuric acid production units after December 31, 1980.

B. Instruments and sampling systems installed and used pursuant to subsection A of 20.2.40.112 NMAC shall be installed, operated and maintained in accordance with the performance specifications and other requirements set forth by the US EPA in 40 CFR Section 60.84. The continuous emission monitoring system shall complete a minimum of one cycle of operation (sampling, analyzing, and data recording) for each successive 15-minute period. In the event that significant repair work is performed on the monitoring system, the owner or operator of a sulfuric acid production unit shall demonstrate to the Department that the system continues to meet applicable performance specifications. The Department may require the owner or operator to conduct performance tests as specified at 40 CFR Part 60, Appendix B at any time that the Department determines that such a test is necessary to verify the performance of the monitoring system. An alternative means of verifying the performance of the monitoring system may be used if approved by the Department and the US EPA. The

Department may also perform independent audits on the continuous monitoring system using the method referenced above, or other applicable methods.

[11/30/95; 20.2.40.112 NMAC - Rn, 20 NMAC 2.40.112 10/31/02]

20.2.40.113 REPORTING:

To aid the Department in determining compliance with this Part, persons owning or operating existing sulfuric acid production units subject to this Part shall submit quarterly reports to the Department for the periods January 1 through March 31, April 1 through June 30, July 1 through September 30, and October 1 through December 31 of each year; each report to be received by the Department within 45 days of the end of the quarterly period. The quarterly reports shall contain:

A. For each day that the plant is operating, the maximum 3-hour integrated average sulfur dioxide emissions, expressed in terms of pounds of sulfur dioxide per hour; and

B. All 3-hour periods during which the integrated average sulfur dioxide emissions exceed the sulfur dioxide emission limit.

[11/30/95; 20.2.40.113 NMAC - Rn, 20 NMAC 2.40.113 10/31/02]

PART 41: NONFERROUS SMELTERS - SULFUR

20.2.41.1 ISSUING AGENCY:

Environmental Improvement Board.

[11/30/95; 20.2.41.1 NMAC - Rn, 20 NMAC 2.41.100 10/31/02]

20.2.41.2 SCOPE:

All geographic areas within the jurisdiction of the Environmental Improvement Board.

[11/30/95; 20.2.41.2 NMAC - Rn, 20 NMAC 2.41.101 10/31/02]

20.2.41.3 STATUTORY AUTHORITY:

Environmental Improvement Act, NMSA 1978, section 74-1-8(A)(4) and (7), and Air Quality Control Act, NMSA 1978, sections 74-2-1 et seq., including specifically, section 74-2-5(A), (B) and (C).

[11/30/95; 20.2.41.3 NMAC - Rn, 20 NMAC 2.41.102 10/31/02]

20.2.41.4 DURATION:

[11/30/95; 20.2.41.4 NMAC - Rn, 20 NMAC 2.41.103 10/31/02]

20.2.41.5 EFFECTIVE DATE:

November 30, 1995.

[11/30/95; 20.2.41.5 NMAC - Rn, 20 NMAC 2.41.104 10/31/02]

[The latest effective date of any section in this Part is 10/31/02.]

20.2.41.6 OBJECTIVE:

The objective of this Part is to establish requirements and standards for nonferrous smelters to minimize sulfur emissions.

[11/30/95; 20.2.41.6 NMAC - Rn, 20 NMAC 2.41.105 10/31/02]

20.2.41.7 DEFINITIONS:

In addition to the terms defined in 20.2.2 NMAC (Definitions), as used in this Part:

A. "Captured fugitive emissions" means sulfur emissions which escape from various points in the smelting process and are captured.

B. "Exceedance" means the state of being exceeded.

C. "Existing nonferrous smelter" means a nonferrous smelter which was constructed and fully operational prior to September 1, 1971.

D. "Good operating conditions" means monitors operated in accordance with the specifications at 40 CFR Part 52, Appendices D and E.

E. "Malfunction" means any sudden and unavoidable failure of air pollution control equipment, process equipment or process to operate in an expected manner. Failures that are caused entirely or in part by poor maintenance, careless operation or any other preventable equipment breakdown shall not be considered a malfunction.

F. "Median" means the middle value in a series of numbers below and above which fall an equal number of values.

G. "Modification" means a modification as defined by section 74- 2-2(M), NMSA 1978.

H. "Modified nonferrous smelter" means any existing smelter that has incorporated a modification.

I. "New nonferrous smelter" means a nonferrous smelter, the construction of which commenced after September 1, 1971.

J. "Part" means an air quality control regulation under Title 20, Chapter 2 of the New Mexico Administrative Code, unless otherwise noted; as adopted or amended by the Board.

K. "Startup" means the setting into operation of any air pollution control equipment, process equipment or process for any purpose.

L. "Sulfur" means elemental sulfur and the sulfur component of any sulfur mixtures or compounds.

M. "Sulfur dioxide" means the chemical compound containing two atoms of oxygen and one of sulfur.

N. "Uncaptured fugitive emissions" means sulfur emissions which escape to the atmosphere from various points in the smelting process due to leakage, materials charging and handling, transfer and storage, or other causes.

[11/30/95; 20.2.41.7 NMAC - Rn, 20 NMAC 2.41.107 10/31/02]

20.2.41.8 AMENDMENT AND SUPERSESSION OF PRIOR REGULATIONS:

This Part amends and supersedes Air Quality Control Regulation ("AQCR") 652 -- Nonferrous Smelters -- Sulfur last filed November 17, 1993.

A. All references to AQCR 652 in any other rule shall be construed as a reference to this Part.

B. The amendment and supersession of AQCR 652 shall not affect any administrative or judicial enforcement action pending on the effective date of such amendment nor the validity of any permit issued pursuant to AQCR 652.

[11/30/95; 20.2.41.8 NMAC - Rn, 20 NMAC 2.41.106 10/31/02]

20.2.41.9 DOCUMENTS:

Documents cited in this Part may be viewed at the New Mexico Environment Department, Air Quality Bureau, Runnels Building, 1190 Saint Francis Drive, Santa Fe, NM 87505 [2048 Galisteo St., Santa Fe, NM 87505].

[11/30/95; 20.2.41.9 NMAC - Rn, 20 NMAC 2.41.108 10/31/02]

20.2.41.10-20.2.41.108 [RESERVED]

20.2.41.109 EMISSION LIMITATIONS -- EXISTING OR MODIFIED NONFERROUS SMELTER:

The owner or operator of any existing or modified nonferrous smelter shall not permit, cause, suffer or allow:

A. Annual average emissions in excess of 7000 pounds of sulfur dioxide per hour except as provided for in 20.2.41.112 NMAC;

B. A median 3-hour running average to exceed 5309 pounds of sulfur dioxide per hour during any 365-day compliance period;

C. More than N occurrences of three-hour running average sulfur dioxide emissions in excess of the corresponding E values shown in the following table in any 365-day compliance period when there are malfunction or startup conditions:

N	E
(number of occurrences)	(pounds per hour of sulfur dioxide emissions)
0	3,000
1	49,000
2	45,500
4	42,300
7	39,200
12	36,200
20	33,400
32	31,300
48	29,200
68	27,200
94	25,600
130	23,800
180	21,700
245	20,000
330	18,700
435	17,200
560	15,800
710	14,600
890	13,200
1100	12,200
[greater than] 1100	7,800

D. More than N occurrences of three-hour running average sulfur dioxide emissions in excess of the corresponding E values shown in the following table in any 365-day compliance period when there are not malfunction or startup conditions:

N (number of occurrences)	E (pounds per hour of sulfur dioxide emissions)
0	12,200
240	10,700
510	9,800
810	8,700
1,140	7,800

(1) Any three-hour average that includes a period of time when there are malfunction or startup conditions shall be included in either the cumulative occurrence limits of subsections C and D of 20.2.41.109 NMAC, at the choice of the smelter owner or operator;

(2) Any three-hour average that does not include a period of time when there are malfunction or startup conditions shall be included in the cumulative occurrence table in subsection D of 20.2.41.109 NMAC.

E. The release of fugitive sulfur emissions to the atmosphere unless the owner or operator utilizes best engineering practices to minimize the release of such fugitive emissions. Best engineering practices shall, as a minimum, include:

(1) Maintaining and operating all furnaces, converters, and converter hoods so that leakage of gases to the atmosphere will be minimized to the maximum extent practicable;

(2) Maintaining all ducts, flues, and stacks in leak-free condition;

(3) Installing and operating tight-fitting exhaust hoods where feasible on all tapholes, launders, and other significant sources of fugitive sulfur emissions; and

(4) Venting all captured fugitive emissions through the tallest stack serving the smelter;

F. Operation of the smelter without including all measured emissions to the atmosphere in compliance calculations.

[11/30/95; 20.2.41.109 NMAC - Rn, 20 NMAC 2.41.109 10/31/02]

20.2.41.110 EMISSION LIMITATIONS -- NEW NONFERROUS SMELTER:

The owner or operator of a new nonferrous smelter shall not permit, cause, suffer or allow:

A. sulfur emissions to the atmosphere in excess of ten pounds of sulfur for every one hundred pounds of sulfur fed to the smelter;

B. the release of fugitive sulfur emissions to the atmosphere unless best engineering practices, including practices listed in subsection E of 20.2.41.109 NMAC, are utilized to minimize the release of such fugitive emissions.

[11/30/95; 20.2.41.110 NMAC - Rn, 20 NMAC 2.41.110 10/31/02]

20.2.41.111 MONITORING -- EXISTING OR MODIFIED NONFERROUS SMELTER:

A. Continuous Monitoring: The owner or operator of an existing or modified nonferrous smelter shall maintain monitors in good operating condition which continuously measure and record the sulfur dioxide concentration and stack gas volumetric flow rate of the gases within the stacks serving all furnaces, liquid sulfur dioxide plants, converters, acid plants, reverberatory feed dryers, and stacks from which captured fugitive emissions are vented to the atmosphere. Any continuous monitors required by this section (20.2.41.111 NMAC) shall record the sulfur dioxide concentration and stack gas volumetric flow rate at least 95 percent of the time for any twelve consecutive calendar months. The 95 percent data recovery shall only apply for the time or times that the stack is used to release sulfur dioxide to the atmosphere. If the monitor does not measure the sulfur dioxide concentration and stack gas volumetric flow rate for the required amount of time, the smelter owner shall use alternative methods approved by the Department and the US EPA to supply the missing concentration data.

B. Sampling Locations: The sampling point or points of the continuous monitoring system shall be located at least eight stack diameters (diameter measured at sampling point) downstream and two diameters upstream from any flow disturbance such as a bend, expansion, constriction or flame, unless another location is approved by the Department. The sampling point for monitoring emissions shall be in the duct at the centroid (geometrical centered 1.0 per cent area) of the cross-section if the cross-sectional area is less than 113 square feet or at a point no closer to the wall than six feet if the cross-sectional area is more than 113 square feet unless otherwise approved by the Department. The sampling point shall be in an area of low spatial concentration gradient and shall be representative of the concentration in the duct.

C. Exemptions: Upon the request of the owner or operator of the smelter, the Department may exempt stacks from this monitoring requirement if the Department determines that they do not carry more than ten (10) pounds per hour sulfur dioxide emissions.

D. Instrument Calibration and Data Retention: Instruments and sampling systems installed and used pursuant to this section shall be calibrated in accordance with the methods prescribed by manufacturer's recommended zero adjustment and calibration check procedures at least once every 24 hours of operation, unless the manufacturer specifies or recommends calibration checks more frequently. The owner or operator of the smelter shall retain all raw data and quality assurance measurements and procedures for a minimum of three years.

E. Performance Audits of Monitoring System: Instruments and sampling systems installed and used pursuant to subsections A, B and C of 20.2.41.111 NMAC, shall be installed, operated and maintained in accordance with the performance specifications and other requirements set forth at 40 CFR Part 52, Appendices D and E. Alternative procedures for this paragraph may be used with approval of the Department and the EPA. In the event that repair work is performed on the monitoring system, that could result in inaccurate readings, the owner or operator of the smelter shall demonstrate to the Department that the system continues to meet the applicable performance specifications. The Department may require the owner or operator of the smelter to conduct performance tests as specified at 40 CFR Part 52, Appendices D and E at any time that the Department determines that such a test is necessary to verify the performance of the monitoring system. The Department and the US EPA may approve alternative means of verifying the performance of the continuous monitoring system. The Department may also perform independent audits on the continuous monitoring system, utilizing Methods 1, 2, 4 and 8, found at 40 CFR Part 60, Appendix A, or other applicable methods.

F. Test Notification, Reporting and Reevaluation of CEMS: The owner or operator of an existing or modified nonferrous smelter shall:

(1) Notify the Department at least forty-five (45) days in advance of the start of the field tests required at 40 CFR Part 52, Appendices D and E;

(2) Submit a report to the Department within forty-five (45) days of the completion of any performance specification test required by this Part or the Department; and

(3) Reevaluate the continuous emission monitoring systems installed and operated pursuant to subsection E of 20.2.41.111 NMAC at least once during any twelve (12) calendar months following the installation of such systems. The evaluation shall demonstrate acceptability of zero and calibration drift, relative accuracy error, and calibration error of measurements contained in the applicable performance specification at 40 CFR Part 52, Appendices D and E, or as otherwise approved by the Department.

[11/30/95; 20.2.41.111 NMAC - Rn, 20 NMAC 2.41.111 10/31/02]

20.2.41.112 COMPLIANCE -- EXISTING OR MODIFIED NONFERROUS SMELTERS:

Compliance with 20.2.41.109 NMAC shall be determined in accordance with the requirements specified in this section:

A. Annual running average emissions shall be calculated at the end of each calendar day. The smelter shall be in violation if two (2) consecutive annual averages exceed the emission limit and the second average exceeds the first average. The smelter shall also be in violation if ten (10) consecutive annual averages exceed the annual average emission limit;

B. The median running 3-hour average for the previous 365 days shall be calculated at the end of each calendar day. Such compliance determinations shall be calculated at the end of each day for each compliance period;

C. Compliance with the cumulative occurrence tables in 20.2.41.109 NMAC shall be determined on the basis of all running three-hour averages measured in the previous 365 days or less. Such compliance determinations shall be calculated at the end of each day. Three-hour averages shall be calculated at the end of each clock hour by averaging the hourly emissions for the preceding three (3) consecutive hours whenever each hour was measured in accordance with 20.2.41.109 NMAC and subsections A, B and C of 20.2.41.111 NMAC.

D. If the smelter is not operating for an extended period of time, and with the approval of the Department, zeros may be recorded on an hourly basis without operating the continuous monitoring system if emissions to the atmosphere are shown to be below ten (10) pounds per hour;

E. A three-hour emissions average in excess of an emission level (E) is a violation if the number of all three-hour emissions averages that exceed the emission level (E) measured during the compliance period exceeds the cumulative occurrence limit (N);

F. The compliance period shall consist of the 365 days immediately preceding each day;

G. A three-hour emissions average can only violate the cumulative occurrence limit (N) of an emissions level (E) in the day containing the last hour in the average;

H. Multiple exceedances of a cumulative occurrence limit by different three-hour emissions averages containing any common hour constitute a single violation.

[11/30/95; 20.2.41.112 NMAC - Rn, 20 NMAC 2.41.112 10/31/02]

20.2.41.113 COMPLIANCE -- NEW NONFERROUS SMELTERS:

Compliance with subsection A of 20.2.41.110 NMAC shall be determined in accordance with the requirements specified in this section:

A. It shall be a violation of this Part if the sulfur removal requirement in subsection A of 20.2.41.110 NMAC is not achieved for any calendar month;

B. The owner or operator of any new nonferrous smelter shall calculate the sulfur removal rate for the smelter for each calendar month. This calculation shall be done in accordance with a written plan approved by the Department and US EPA.

[11/30/95; 20.2.41.113 NMAC - Rn, 20 NMAC 2.41.113 10/31/02]

20.2.41.114 REPORTING:

Persons owning or operating any existing, modified or new nonferrous smelter shall submit quarterly reports to the Department for the periods January 1 through March 31, April 1 through June 30, July 1 through September 30 and October 1 through December 31 of each year. Each report shall be filed with the Department within forty five (45) days of the end of the quarterly period.

A. Existing and Modified Nonferrous Smelters:

(1) The quarterly reports for existing and modified nonferrous smelters shall include:

(a) the annual average emissions in pounds of sulfur dioxide per hour calculated at the end of each day;

(b) all exceedances of the cumulative occurrence tables in 20.2.41.109 NMAC, including the associated date, time, E value and N value; and

(c) the twenty (20) highest running three-hour averages with the associated time and date of occurrence;

(d) the median 3-hour running average for each compliance period in pounds of sulfur dioxide per hour at the end of each day.

(2) All three-hour running averages, E-values, N-values, and continuous monitoring measurements shall be retained by the owner or operator of any existing or modified nonferrous smelter for at least three (3) years. Upon request, the owner or operator of the smelter shall report such data in a timely manner to the Department.

B. New Nonferrous Smelters: The quarterly reports for new nonferrous smelters shall include:

(1) Sulfur removal rates for each calendar month;

(2) Identification of all exceedances of the requirement in subsection A of 20.2.41.110 NMAC; and

(3) Identification of all periods of time for which notification was provided to the Department pursuant to 20.2.7 NMAC (Excess Emissions During Malfunction, Startup, Shutdown, or Scheduled Maintenance).

(4) The owner or operator of any new nonferrous smelter shall retain all records utilized as the basis for the quarterly report for a period of at least three (3) years. Upon request, such records shall be made accessible or reported to the Department.

[11/30/95; 20.2.41.114 NMAC - Rn, 20 NMAC 2.41.114 10/31/02]

20.2.41.115 FUGITIVE EMISSIONS EVALUATION:

No later than the end of the first two years of operation, the owner or operator of a modified smelter shall submit to the Department the results of an evaluation of the fugitive sulfur dioxide emissions from the smelter. The evaluation shall contain the following information:

A. A measurement or accurate estimate of captured and uncaptured fugitive emissions from the smelter. The measurement or estimate shall contain the amount of both short-term and long-term fugitive emissions from the smelter. The evaluation plan shall be approved in advance by the Department and shall specify the method used to determine the fugitive emission amounts;

B. A measurement or accurate estimate of the relative proportion (expressed as a percentage) of captured and uncaptured fugitive emissions produced by the following smelter processes: Roaster or dryer operation; Calcine or dried concentrate transfer; Furnace operations (including feeding, slag return, matte and slag tapping); Matte transfer; and Converter operations. The measurement technique or method of estimation used to fulfill this requirement shall be approved in advance by the Department;

C. the results of a one year fugitive emission impact analysis. The study shall utilize sufficient measurements of fugitive emissions, meteorological conditions and ambient sulfur dioxide concentrations to associate fugitive emissions with specific measured ambient concentrations of sulfur dioxide. The study shall describe in detail the techniques used to make the required determinations. It shall include an analysis of the feasibility of using sulfur balance figures for the above determinations. The design of the study shall be submitted within 60 days of the startup of the modified smelter for approval by the Department.

[11/30/95; 20.2.41.115 NMAC - Rn, 20 NMAC 2.41.115 10/31/02]

20.2.41.116 MONITORING EQUIPMENT:

In order to assess the sufficiency of the cumulative occurrence and emission limits contained in 20.2.41.109 NMAC and in order to maintain the ambient air quality standards for sulfur dioxide, the owner or operator of a smelter subject to 20.2.41.109 NMAC shall continue to calibrate, maintain and operate any ambient sulfur dioxide monitoring equipment owned by the smelter owner or operator and in operation on December 17, 1993. Such monitors shall be operated and maintained as prescribed at 40 CFR Parts 53 and 58. The location of ambient sulfur dioxide monitors and length of time such monitors remain at a location shall be determined by the Department.

[11/30/95; 20.2.41.116 NMAC - Rn, 20 NMAC 2.41.116 10/31/02]

20.2.41.117 DATA SUBMISSION:

The data accumulated from the programs detailed in 20.2.41.115 NMAC and 20.2.41.116 NMAC shall be submitted to the Department for its review. The reports should confirm whether or not the emission limitations contained in 20.2.41.109 NMAC are adequate to maintain state and federal ambient air quality standards. The Department, upon reasonable notice and at reasonable times, shall have access to all raw and verified data for verification purposes and shall be permitted access to the monitors, and shall have the opportunity to perform quality assurance audits.

[11/30/95; 20.2.41.117 NMAC - Rn, 20 NMAC 2.41.117 10/31/02]

PART 42: COAL MINING AND PREPARATION PLANTS - PARTICULATE MATTER

20.2.42.1 ISSUING AGENCY:

Environmental Improvement Board.

[11/30/95; 20.2.42.1 NMAC - Rn, 20 NMAC 2.42.100 10/31/02]

20.2.42.2 SCOPE:

All geographic areas within the jurisdiction of the Environmental Improvement Board.

[11/30/95; 20.2.42.2 NMAC - Rn, 20 NMAC 2.42.101 10/31/02]

20.2.42.3 STATUTORY AUTHORITY:

Environmental Improvement Act, NMSA 1978, section 74-1-8(A)(4) and (7), and Air Quality Control Act, NMSA 1978, sections 74-2-1 et seq., including specifically, section 74-2-5(A), (B) and (C).

[11/30/95; 20.2.42.3 NMAC - Rn, 20 NMAC 2.42.102 10/31/02]

20.2.42.4 DURATION:

Permanent.

[11/30/95; 20.2.42.4 NMAC - Rn, 20 NMAC 2.42.103 10/31/02]

20.2.42.5 EFFECTIVE DATE:

November 30, 1995.

[11/30/95; 20.2.42.5 NMAC - Rn, 20 NMAC 2.42.104 10/31/02]

[The latest effective date of any section in this Part is 10/31/02.]

20.2.42.6 OBJECTIVE:

The objective of this Part is to establish requirements and standards for coal mines and preparation plants to minimize particulate matter emissions

[11/30/95; 20.2.42.6 NMAC - Rn, 20 NMAC 2.42.105 10/31/02]

20.2.42.7 DEFINITIONS:

In addition to the terms defined in 20.2.2 NMAC (Definitions), as used in this Part: "Part" means an air quality control regulation under Title 20, Chapter 2 of the New Mexico Administrative Code, unless otherwise noted; as adopted or amended by the Board.

[11/30/95; 20.2.42.7 NMAC - Rn, 20 NMAC 2.42.107 10/31/02]

20.2.42.8 AMENDMENT AND SUPERSESSION OF PRIOR REGULATIONS:

This Part amends and supersedes Air Quality Control Regulation ("AQCR") 672 -- Coal Mining and Preparation Plants - Particulate Matter last filed November 16, 1973.

A. All references to AQCR 672 in any other rule shall be construed as a reference to this Part.

B. The amendment and supersession of AQCR 672 shall not affect any administrative or judicial enforcement action pending on the effective date of such amendment nor the validity of any permit issued pursuant to AQCR 672.

[11/30/95; 20.2.42.8 NMAC - 20 NMAC 2.42.106 10/31/02]

20.2.42.9-20.2.42.107 [RESERVED]

20.2.42.108 EQUIPMENT:

All persons operating coal preparation plants shall equip all crushers, conveyors, screens, cleaners, hoppers, and chutes, which are designed for the continuous transportation or preparation of coal at the coal preparation plant, with hoods, shields or sprays where reasonably necessary to prevent particulate matter from becoming airborne.

[11/30/95; 20.2.42.108 NMAC - Rn, 20 NMAC 2.42.108 10/31/02]

20.2.42.109 HAUL ROADS:

All persons operating a coal mine shall cause main coal haulage roads to be sprayed or to be otherwise treated where reasonably necessary to prevent particulate matter from becoming airborne.

[11/30/95; 20.2.42.109 NMAC - Rn, 20 NMAC 2.42.109 10/31/02]

PART 43: GASIFICATION PLANTS

20.2.43.1 ISSUING AGENCY:

New Mexico Environmental Improvement Board.

[11/23/98; 20.2.43.1 NMAC - Rn, 20 NMAC 2.43.100 10/31/02]

20.2.43.2 SCOPE:

All geographic areas within the jurisdiction of the Environmental Improvement Board.

[11/23/98; 20.2.43.2 NMAC - Rn, 20 NMAC 2.43.101 10/31/02]

20.2.43.3 STATUTORY AUTHORITY:

Environmental Improvement Act, NMSA 1978, section 74-1-8(A)(4) and (7), and Air Quality Control Act, NMSA 1978, sections 74-2-1 et seq., including specifically, section 74-2-5(A), (B) and (C).

[11/23/98; 20.2.43.3 NMAC - Rn, 20 NMAC 2.43.102 10/31/02]

20.2.43.4 DURATION:

Permanent.

[11/23/98; 20.2.43.4 NMAC - Rn, 20 NMAC 2.43.103 10/31/02]

20.2.43.5 EFFECTIVE DATE:

November 23, 1998, except where a later date is cited at the end of a section or paragraph.

[11/23/98; 20.2.43.5 NMAC - Rn, 20 NMAC 2.43.104 10/31/02]

[The latest effective date of any section in this Part is 10/31/02.]

20.2.43.6 OBJECTIVE:

The objective of this Part is to establish emission standards for gasification plants.

[11/23/98; 20.2.43.6 NMAC - Rn, 20 NMAC 2.43.105 10/31/02]

20.2.43.7 DEFINITIONS:

In addition to the terms defined in 20.2.2 NMAC (Definitions), as used in this Part:

A. "Feed" means those materials which enter directly into the manufacture of synthetic natural gas, and includes, but is not limited to coal, tars, oils and naphtha.

B. "Gasification plant" means a plant that manufactures synthetic gas and includes: all process gas streams and products produced in the gasification process; all operations associated with treatment of gasification products; ash removal equipment; regeneration of any absorbent or oxidizing agents (and any off gases so produced) used in the treatment or removal of products produced in the gasification process; catalyst regeneration; storage facilities for liquids, solids and gases; and pretreatment of coal. Gasification plant does not include the coal preparation plant, the sizing and briquetting of coal or any process gas streams after the streams enter a boiler and undergo combustion.

C. "Sulfur" means elemental sulfur and the sulfur component of any sulfur mixtures or compounds.

[11/23/98; 20.2.43.7 NMAC - Rn, 20 NMAC 2.43.107 10/31/02]

20.2.43.8 AMENDMENT AND SUPERSESSION OF PRIOR REGULATIONS:

This Part amends and supersedes Air Quality Control Regulations (AQCRs): 670, 671, 673, 674, 675, 676, 677, 678, 679, 680, 681, and 682. All references to these AQCRs in any other rule shall be understood as a reference to this Part. See 20.2.43.10 NMAC for detailed filing history.

[11/23/98; 20.2.43.8 NMAC - Rn, 20 NMAC 2.43.106 10/31/02]

20.2.43.9 DOCUMENTS:

Documents incorporated and cited in this Part may be viewed at the New Mexico Environment Department, Air Quality Bureau, Harold Runnels Building, 1190 St. Francis Dr., or 2048 Galisteo St., Santa Fe, NM 87502 [87505].

[11/23/98; 20.2.43.9 NMAC - Rn, 20 NMAC 2.43.108 10/31/02]

20.2.43.10 PRE-NMAC REGULATORY FILING HISTORY:

The material in this Part was derived from that previously filed with the State Records Center and Archives under Air Quality Control Regulations (AQCRs): 670 - Gasification Plants - Monitoring, filed Nov. 16, 1973 and Feb. 8, 1983; 671 - Gasification Plants - Coal Briquet Forming Facility - Particulate Matter, filed Nov. 16, 1973, Feb. 8, 1983, and July 24, 1984; 673 - Gasification Plants - Hydrogen Sulfide - Carbon Disulfide - Carbon Oxysulfide, filed Nov. 16, 1973, Feb. 8, 1983, and July 24, 1984; 674 - Gasification Plants - Hydrogen Cyanide, filed Nov. 16, 1973, and Feb. 8, 1983; 675 - Gasification Plants - Hydrogen Chloride - Hydrochloric Acid, filed Nov. 16, 1973, and Feb. 8, 1983; 676 - Gasification Plants - Particulate Matter, filed Nov. 16, 1973, and Feb. 8, 1983; 677 - Gasification Plants - Ammonia, filed Nov. 16, 1973 and Feb. 8, 1983; 678 - Gasification Plants - Gas Burning Boilers - Particulate Matter, filed Nov. 16, 1973 and Feb. 8, 1983; 679 - Gasification Plants - Gas Burning Boilers - Sulfur Dioxide, filed Nov. 16, 1973, Feb. 8, 1983, and July 24, 1984; 680 - Gasification Plants - Sulfur, filed Nov. 16, 1973, Feb. 8, 1983, and July 24, 1984; 681 - Gasification Plants - Hydrocarbons - Storage - Handling - Pumping - Safety Relief Valves - Blowdown System, filed Nov. 16, 1973 and Feb. 8, 1983; 682 - Boilers Operated in Conjunction With Gasification Plants - Enforcement, filed Nov. 16, 1973, Feb. 8, 1983, and July 24, 1984.

[11/23/98; 20.2.43.10 NMAC - Rn, 20 NMAC 2.43.103A 10/31/02]

20.2.43.11-20.2.43.108 [RESERVED]

20.2.43.109 MONITORING:

No person owning or operating a gasification plant shall permit, cause, suffer or allow emissions of gas streams to the atmosphere except through stacks at least ten diameters in length equipped with sampling ports and platforms in such number, location and size as to allow for accurate sampling to be performed.

[11/23/98; 20.2.43.109 NMAC - Rn, 20 NMAC 2.43.109 10/31/02]

20.2.43.110 COAL BRIQUET FORMING FACILITY - PARTICULATE MATTER:

No person owning or operating a coal briquet forming facility in conjunction with a gasification plant shall permit, cause, suffer or allow particulate matter emissions to the atmosphere in excess of 0.03 grains per standard cubic foot of exhaust gas. Within

technical feasibility, all particulate matter emissions to the atmosphere shall be limited to a stack outlet or outlets.

[11/23/98; 20.2.43.110 NMAC - Rn, 20 NMAC 2.43.110 10/31/02]

20.2.43.111 HYDROGEN SULFIDE - CARBON DISULFIDE- CARBON OXYSULFIDE:

No person owning or operating a gasification plant shall permit, cause, suffer or allow any combination of hydrogen sulfide, carbon disulfide and carbon oxysulfide emissions to the atmosphere in excess of 100 ppm by volume in the effluent gas stream or streams. The hydrogen sulfide component in the combined effluent gas stream or streams is limited to 10 ppm by volume.

[11/23/98; 20.2.43.111 NMAC - Rn, 20 NMAC 2.43.111 10/31/02]

20.2.43.112 HYDROGEN CYANIDE:

No person owning or operating a gasification plant shall permit, cause, suffer or allow hydrogen cyanide emissions to the atmosphere in excess of 10 ppm by volume in the effluent gas stream or streams.

[11/23/98; 20.2.43.112 NMAC - Rn, 20 NMAC 2.43.112 10/31/02]

20.2.43.113 HYDROGEN CHLORIDE - HYDROCHLORIC ACID:

No person owning or operating a gasification plant shall permit, cause, suffer or allow any combination of hydrogen chloride and hydrochloric acid emissions to the atmosphere in excess of 5 ppm by volume in the effluent gas stream or streams.

[11/23/98; 20.2.43.113 NMAC - Rn, 20 NMAC 2.43.113 10/31/02]

20.2.43.114 PARTICULATE MATTER:

A. No person owning or operating a gasification plant shall permit, cause, suffer or allow particulate matter emissions to the atmosphere in excess of 0.03 grains per cubic foot of effluent gas at seventy degrees Fahrenheit and 14.7 pounds per square inch absolute.

B. Particulate matter emissions governed by this section shall be determined by the method described in 36 Federal Register No. 247, p. 24888 (Dec. 23, 1971) where technically feasible. Where not technically feasible to use this method, samples shall consist of at least one cubic foot of gas and collected over a period of at least twenty minutes.

C. No person owning or operating a gasification plant and related facilities shall permit, cause, suffer or allow any material to be handled, transported, stored or disposed of or a building or road to be used, constructed, altered or demolished without taking reasonable precautions to prevent particulate matter from becoming airborne.

[11/23/98; 20.2.43.114 NMAC - Rn, 20 NMAC 2.43.114 10/31/02]

20.2.43.115 AMMONIA:

A. No person owning or operating a gasification plant shall place, store or hold in any stationary tank or other container any ammonia unless the tank or other container is:

(1) A pressure tank capable of maintaining working pressures sufficient to prevent loss of ammonia to the atmosphere; or

(2) Equipped with other equally effective control equipment to prevent loss of ammonia to the atmosphere.

B. No person owning or operating a gasification plant shall permit, cause, suffer or allow ammonia emissions to the atmosphere in excess of 25 ppm by volume in the effluent gas stream or streams.

[11/23/98; 20.2.43.115 NMAC Rn, 20 NMAC 2.43.115 10/31/02]

20.2.43.116 GAS BURNING BOILERS - PARTICULATE MATTER:

A. No person owning or operating gas-burning boilers in conjunction with a gasification plant shall permit, cause, suffer or allow particulate matter emissions to the atmosphere in excess of 0.03 pounds per million British Thermal Units of heat input (lower heating value) to the boilers. For purposes of this section (20.2.43.116 NMAC) all gas-fired boilers will be considered as one unit for each gasification plant.

B. Particulate matter emissions governed by this section shall be determined by the method described in 36 Federal Register No. 247, p. 24888 (Dec. 23, 1971) where technically feasible. Where not technically feasible to use this method, samples shall consist of at least one cubic foot of gas and collected over a period of at least twenty minutes.

[11/23/98; 20.2.43.116 NMAC - Rn, 20 NMAC 2.43.116 10/31/02]

20.2.43.117 GAS BURNING BOILERS - SULFUR DIOXIDE:

No person owning or operating gas-burning boilers in conjunction with a gasification plant shall permit, cause, suffer or allow sulfur dioxide emissions to the atmosphere in

excess of a total of 0.16 pounds per million British Thermal Units of heat input (lower heating value) fed to all boilers.

[11/23/98; 20.2.43.117 NMAC - Rn, 20 NMAC 2.43.117 10/31/02]

20.2.43.118 SULFUR:

No person owning or operating a gasification plant shall permit, cause, suffer or allow sulfur emissions to the atmosphere in excess of a total of 0.008 pounds per million British Thermal Units of heat input (higher heating value) contained in the feed introduced into the gasification plant.

[11/23/98; 20.2.43.118 NMAC - Rn, 20 NMAC 2.43.118 10/31/02]

20.2.43.119 HYDROCARBONS -STORAGE - HANDLING - PUMPING - SAFETY RELIEF VALVES - BLOWDOWN SYSTEM:

No person owning or operating a gasification plant shall:

A. Place, store or hold in any stationary tank or other container (except wastewater treatment basins, ponds, clarifiers, and settlers) any phenols or any organic compound having a Reid vapor pressure of 1.5 pounds per square inch or greater, unless the tank or other container is designed, equipped and maintained with:

(1) A floating roof, consisting of a pontoon-type, double-deck roof or internal floating cover, which rests on the surface of the liquid contents and is equipped with a closure seal or seals to close the space between the roof or cover edge and tank wall;

(2) A vapor recovery system consisting of:

(a) A vapor gathering system capable of collecting the organic compound vapors and gases discharged; and

(b) A vapor disposal system capable of processing the organic vapors and gases so as to prevent their emission to the atmosphere; or

(3) Any other device which is at least as efficient to prevent vapor or gas loss to the atmosphere.

B. Place, store or hold in any stationary tank or other container (except wastewater treatment basins, ponds, clarifiers, and settlers) any phenols or any organic compound having a Reid vapor pressure of 1.5 pounds per square inch or greater without the tank or other container gauging and sampling devices being gas tight, except when gauging or sampling is taking place.

C. Load or unload into any tank, truck or trailer any phenols or any organic compound having a Reid vapor pressure of 1.5 pounds per square inch or greater, unless:

(1) The loading facility is equipped with:

(a) A loading arm having a vapor collection adapter to force a vapor-tight seal between the adapter and the hatch and having a means of collecting the vented vapors and preventing their emission to the atmosphere; or

(b) Any other device which is at least as efficient to prevent vapor or gas loss to the atmosphere; and

(2) A means is provided to prevent liquid organic compound drainage from the loading device when it is removed from the hatch of any tank, truck or trailer or to accomplish complete drainage before its removal.

D. Use a pump or compressor which handles any phenols or any organic compound having a Reid vapor pressure of 1.5 pounds per square inch or greater, unless the pump or compressor is equipped with mechanical seals or other devices of equal or greater efficiency to prevent liquid or vapor losses.

E. Install safety relief valves, except valves installed on gas streams containing steam, product gas, nitrogen or oxygen, unless they are connected to a blowdown system.

F. Operate a blowdown system without disposing of the gases in a manner which will prevent hydrocarbon emissions to the atmosphere. If combustion is the means of disposal, it shall be by smokeless flare or similar means to achieve complete combustion.

[11/23/98; 20.2.43.119 NMAC - Rn, 20 NMAC 2.43.119 10/31/02]

20.2.43.120 BOILERS OPERATED IN CONJUNCTION WITH GASIFICATION PLANTS - ENFORCEMENT:

In gasification plants, if more than one fuel is fired simultaneously in a boiler:

A. The boiler shall be considered as two or more units, each firing the equivalent amount of fuel with the appropriate heat content separately but having a common stack for determination of allowable emissions.

B. Allowable emissions shall be calculated according to the following formula: $ET = E_o Q_o + E_c Q_c + E_g Q_g$, where ET is the total allowed emission in pounds per given period of time; E_o is the allowed emission from oil in pounds per million BTU's; E_c is the allowed emission from coal in pounds per million BTU's; E_g is the allowed emission

from gas in pounds per million BTU's; Q_o is the heat released by the oil based on the higher heating value in BTU's per period of time; Q_c is the heat released by the coal based on the higher heating value in BTU's per period of time; and Q_g is the heat released by the gas based on the lower heating value in BTU's per period of time.

C. In addition, the total allowable emissions of particulates two microns equivalent aerodynamic diameter or less shall be calculated according to: $E_f = 0.40 E_c (Q_o + Q_c + Q_g)$ where: E_f is the total allowed emission of fine particulates in pounds per given period of time, and all other terms remain as previously defined.

[11/23/98; 20.2.43.120 NMAC - Rn, 20 NMAC 2.43.120 10/31/02]

PART 44-49: [RESERVED]

PART 50 OIL AND GAS SECTOR – OZONE PRECURSOR POLLUTANTS

20.2.50.1 ISSUING AGENCY:

Environmental Improvement Board.

[20.2.50.1 NMAC – N, 08/05/2022]

20.2.50.2 SCOPE:

This Part applies to sources located within areas of the state under the board's jurisdiction that, as of the effective date of this Part or anytime thereafter, are causing or contributing to ambient ozone concentrations that exceed ninety-five percent of the national ambient air quality standard for ozone, as measured by a design value calculated and based on data from one or more department monitors. As of the effective date, sources located in the following counties of the state are subject to this Part: Chaves, Dona Ana, Eddy, Lea, Rio Arriba, Sandoval, San Juan, and Valencia.

A. If, at any time after the effective date of this Part, sources in any other area(s) of the state not previously specified are determined to be causing or contributing to ambient ozone concentrations that exceed ninety-five percent of the national ambient air quality standard for ozone, as measured by a design value calculated by the U.S. Environmental Protection Agency based on data from one or more department monitors, the department shall petition the Board to amend this Part to incorporate the sources in those areas.

(1) The notice of proposed rulemaking shall be published no less than 180 days before sources in the affected areas will become subject to this Part, and shall include, in addition to the requirements of the board's rulemaking procedures at 20.1.1.301 NMAC:

(a) a list of the areas that the department proposed to incorporate into this Part, and the date upon which the sources in those areas will become subject to this Part; and

(b) proposed implementation dates, consistent with the time provided in the phased implementation schedules provided for throughout this Part, for sources within the areas subject to the proposed rulemaking to come into compliance with the provisions of this Part.

(2) In any rulemaking pursuant to this section, the board shall be limited to consideration of only those proposed changes necessary to incorporate other areas of the state into this Part.

B. Once a source becomes subject to this Part based upon its potential to emit, all requirements of this Part that apply to the source are irrevocably effective unless the source obtains a federally enforceable limit on the potential to emit that is below the applicability thresholds established in this Part, or the relevant section contains a threshold below which the requirements no longer apply.

[20.2.50.2 NMAC – N, 08/05/2022]

20.2.50.3 STATUTORY AUTHORITY:

Environmental Improvement Act, Section 74-1-1 to 74-1-16 NMSA 1978, including specifically Paragraph (4) and (7) of Subsection A of Section 74-1-8 NMSA 1978, and Air Quality Control Act, Sections 74-2-1 to 74-2-22 NMSA 1978, including specifically Subsections A, B, C, D, F, and G of Section 74-2-5 NMSA 1978 (as amended through 2021).

[20.2.50.3 NMAC - N, 08/05/2022]

20.2.50.4 DURATION:

Permanent.

[20.2.50.4 NMAC - N, 08/05/2022]

20.2.50.5 EFFECTIVE DATE:

August 05, 2022, except where a later date is specified in another section.

[20.2.50.5 NMAC - N, 08/05/2022]

20.2.50.6 OBJECTIVE:

The objective of this Part is to establish emission standards for volatile organic compounds (VOC) and oxides of nitrogen (NOx) for oil and gas production, processing, compression, and transmission sources.

[20.2.50.6 NMAC - N, 08/05/2022]

20.2.50.7 DEFINITIONS:

In addition to the terms defined in 20.2.2 NMAC - Definitions, as used in this Part, the following definitions apply.

A. Definitions beginning with the letter "A": "Auto-igniter" means a device that automatically attempts to relight the pilot flame of a control device in order to combust VOC emissions, or a device that will automatically attempt to combust the VOC emission stream.

B. Definitions beginning with the letter "B": "Bleed rate" means the rate in standard cubic feet per hour at which gas is continuously vented from a pneumatic controller.

C. Definitions beginning with the letter "C":

(1) "Calendar year" means a year beginning January 1 and ending December 31.

(2) "Centrifugal compressor" means a machine used for raising the pressure of natural gas by drawing in low-pressure natural gas and discharging significantly higher-pressure natural gas by means of a mechanical rotating vane or impeller. A screw, sliding vane, and liquid ring compressor is not a centrifugal compressor.

(3) "Closed vent system" means a system that is designed, operated, and maintained to route the VOC emissions from a source or process to a process stream or control device with no loss of VOC emissions to the atmosphere during operation.

(4) "Commencement of operation" means for an oil and natural gas well site, the date any permanent production equipment is in use and product is consistently flowing to a sales line, gathering line or storage vessel from the first producing well at the stationary source, but no later than the end of well completion operation.

(5) "Component" means a pump seal, flange, pressure relief device (including thief hatch or other opening on a storage vessel), connector or valve that contains or contacts a process stream with hydrocarbons, except for components where process streams consist solely of glycol, amine, produced water, or methanol.

(6) **"Connector"** means flanged, screwed, or other joined fittings used to connect pipeline segments, tubing, pipe components (such as elbows, reducers, "T's" or valves) to each other; or a pipeline to a piece of equipment; or an instrument to a pipe, tube, or piece of equipment. A common connector is a flange. Joined fittings welded completely around the circumference of the interface are not considered connectors for the purpose of this Part.

(7) **"Construction"** means fabrication, erection, or installation of a stationary source, including but not limited to temporary installations and portable stationary sources, but does not include relocations or like-kind replacements of existing equipment.

(8) **"Control device"** means air pollution control equipment or emission reduction technologies that thermally combust, chemically convert, or otherwise destroy or recover air contaminants. Examples of control devices may include but are not limited to open flares, enclosed combustion devices (ECDs), thermal oxidizers (TOs), vapor recovery units (VRUs), fuel cells, condensers, catalytic converters (oxidative, selective, and non-selective), or other emission reduction equipment. A control device may also include any other air pollution control equipment or emission reduction technologies approved by the department to comply with emission standards in this Part. A VRU or other equipment used primarily as process equipment is not considered a control device.

D. Definitions beginning with the letter "D":

(1) **"Department"** means the New Mexico environment department.

(2) **"Design value"** means the 3-year average of the annual fourth-highest daily maximum 8-hour average ozone concentration.

(3) **"Downtime"** means the period of time when equipment is not in operation.

(4) **"Drilling" or "drilled"** means the process to bore a hole to create a well for oil and/or natural gas production.

(5) **"Drill-out"** means the process of removing the plugs placed during hydraulic fracturing or refracturing. Drill-out ends after the removal of all stage plugs and the initial wellbore cleanup.

E. Definitions beginning with the letter "E":

(1) **"Enclosed combustion device"** means a combustion device where waste gas is combusted in an enclosed chamber solely for the purpose of destruction. This may include, but is not limited to, an enclosed flare or combustor.

(2) **"Existing"** means constructed or reconstructed before the effective date of this Part.

F. Definitions beginning with the letter "F":

(1) **"Flowback"** means the process of allowing fluids and entrained solids to flow from a well following stimulation, either in preparation for a subsequent phase of treatment or in preparation for cleanup and placing the well into production. The term flowback also means the fluids and entrained solids flowing from a well after drilling or hydraulic fracturing or refracturing. Flowback ends when all temporary flowback equipment is removed from service. Flowback does not include drill-out.

(2) **"Flowback vessel"** means a vessel that contains flowback.

G. Definitions beginning with the letter "G". [RESERVED]

(1) **"Gathering and boosting station"** means a facility, including all equipment and compressors, located downstream of a well site that collects or moves natural gas prior to the inlet of a natural gas processing plant; or prior to a natural gas transmission pipeline or transmission compressor station if no gas processing is performed; or collects, moves, or stabilizes crude oil or condensate prior to an oil transmission pipeline or other form of transportation. Gathering and boosting stations may include equipment for liquids separation, natural gas dehydration, and tanks for the storage of water and hydrocarbon liquids.

(2) **"Glycol dehydrator"** means a device in which a liquid glycol absorbent, including ethylene glycol, diethylene glycol, or triethylene glycol, directly contacts a natural gas stream and absorbs water.

H. Definitions beginning with the letter "H":

(1) **"High-bleed pneumatic controller"** means a continuous bleed pneumatic controller that is designed to have a continuous bleed rate that emits in excess of 6 standard cubic feet per hour (scfh) of natural gas to the atmosphere.

(2) **"Hydraulic fracturing"** means the process of directing pressurized fluids containing any combination of water, proppant, and any added chemicals to penetrate tight formations, such as shale, coal, and tight sand formations, that subsequently requires flowback to expel fracture fluids and solids.

(3) **"Hydraulic refracturing"** means conducting a subsequent hydraulic fracturing operation at a well that has previously undergone a hydraulic fracturing operation.

(4) "Hydrocarbon liquid" means any naturally occurring, unrefined petroleum liquid and can include oil, condensate, and intermediate hydrocarbons. Hydrocarbon liquid does not include produced water.

I. Definitions beginning with the letter "I":

(1) "Inactive well site" means a well site where the well is not being used for beneficial purposes, such as production or monitoring, and is not being drilled, completed, repaired or worked over.

(2) "Injection well site" means a well site where the well is used for the injection of air, gas, water or other fluids into an underground stratum.

(3) "Intermittent pneumatic controller" means a pneumatic controller that is not designed to have a continuous bleed rate but is designed to only release natural gas above de minimis amounts to the atmosphere as part of the actuation cycle.

J. Definitions beginning with the letter "J": [RESERVED]

K. Definitions beginning with the letter "K": [RESERVED]

L. Definitions beginning with the letter "L":

(1) "Liquid unloading" means the removal of accumulated liquid from the wellbore that reduces or stops natural gas production.

(2) "Liquid transfer" means the unloading of a hydrocarbon liquid from a storage vessel to a tanker truck or tanker rail car for transport.

(3) "Local distribution company custody transfer station" means a metering station where the local distribution company receives a natural gas supply from an upstream supplier, which may be an interstate transmission pipeline or a local natural gas producer, for delivery to customers through the local distribution company's intrastate transmission or distribution lines.

(4) "Low-bleed pneumatic controller" means a continuous bleed pneumatic controller that is designed to have a continuous bleed rate that emits less than or equal to 6 scfh of natural gas to the atmosphere.

M. Definitions beginning with the letter "M": [RESERVED]

N. Definitions beginning with the letter "N": "non-porous" means multi-use items such as metal, glass and plastic;

(1) **"Natural gas-fired heater"** means an enclosed device using a controlled flame and with a primary purpose to transfer heat directly to a process material or to a heat transfer material for use in a process.

(2) **"Natural gas processing plant"** means the processing equipment engaged in the extraction of natural gas liquid from natural gas or fractionation of mixed natural gas liquid to a natural gas product, or both. A Joule-Thompson valve, a dew point depression valve, or an isolated or standalone Joule-Thompson skid is not a natural gas processing plant.

(3) **"New"** means constructed or reconstructed on or after the effective date of this Part.

(4) **"Non-emitting controller"** means a device that monitors a process parameter such as liquid level, pressure, or temperature and sends a signal to a control valve in order to control the process parameter and does not emit natural gas to the atmosphere. Examples of non-emitting controllers include but are not limited to instrument air or inert gas pneumatic controllers, electric controllers, mechanical controllers and Routed Pneumatic Controllers.

O. Definitions beginning with the letter "O":

(1) **"Occupied area"** means the following:

(a) a building or structure used as a place of residence by a person, family, or families, and includes manufactured, mobile, and modular homes, except to the extent that such manufactured, mobile, or modular home is intended for temporary occupancy or for business purposes;

(b) indoor or outdoor spaces associated with a school that students use commonly as part of their curriculum or extracurricular activities;

(c) five-thousand (5,000) or more square feet of building floor area in commercial facilities that are operating and normally occupied during working hours; and

(d) an outdoor venue or recreation area, such as a playground, permanent sports field, amphitheater, or similar place of outdoor public assembly.

(2) **"Operator"** means the person or persons responsible for the overall operation of a stationary source.

(3) **"Optical gas imaging (OGI)"** means an imaging technology that utilizes a high-sensitivity infrared camera designed for and capable of detecting hydrocarbons.

(4) **"Owner"** means the person or persons who own a stationary source or part of a stationary source.

P. Definitions beginning with the letter "P":

(1) **"Permanent pit or pond"** means a pit or pond used for collection, retention, or storage of produced water or brine and is installed for longer than one year.

(2) **"Pneumatic controller"** means a device that monitors a process parameter such as liquid level, pressure, or temperature and uses pressurized gas (which may be released to the atmosphere during normal operation) and sends a signal to a control valve in order to control the process parameter. Controllers that do not utilize pressurized gas are not pneumatic controllers.

(3) **"Pneumatic diaphragm pump"** means a positive displacement pump powered by pressurized gas that uses the reciprocating action of flexible diaphragms in conjunction with check valves to pump a fluid. A pump in which a fluid is displaced by a piston driven by a diaphragm is not considered a diaphragm pump. A lean glycol circulation pump that relies on energy exchange with the rich glycol from the contactor is not considered a diaphragm pump.

(4) **"Potential to emit (PTE)"** means the maximum capacity of a stationary source to emit any air pollutant under its physical and operational design. Any physical or operational limitation on the capacity of a source to emit an air pollutant, including air pollution control equipment and restrictions on the hours of operation or on the type or amount of material combusted, stored or processed, shall be treated as part of its design if the limitation is federally enforceable. The PTE for nitrogen dioxide shall be based on total oxides of nitrogen.

(5) **"Pre-production operations"** means the drilling through the hydrocarbon bearing zones, hydraulic fracturing or refracturing, drill-out, and flowback of an oil and/or natural gas well.

(6) **"Produced water"** means a liquid that is an incidental byproduct from well completion and the production of oil and gas.

(7) **"Produced water management unit"** means a recycling facility or a permanent pit or pond that is a natural topographical depression, man-made excavation, or diked area formed primarily of earthen materials (although it may be lined with man-made materials), which is designed to accumulate produced water and has a design storage capacity equal to or greater than 50,000 barrels.

Q. Definitions beginning with the letter "Q": "Qualified Professional Engineer" means an individual who is licensed by a state as a professional engineer to practice one or more disciplines of engineering and who is qualified by education, technical

knowledge, and experience to make the specific technical certifications required under this Part.

R. Definitions beginning with the letter "R":

(1) **"Reciprocating compressor"** means a piece of equipment that increases the pressure of process gas by positive displacement, employing linear movement of a piston rod.

(2) **"Reconstruction"** means a modification that results in the replacement of the components or addition of integrally related equipment to an existing source, to such an extent that the fixed capital cost of the new components or equipment exceeds fifty percent of the fixed capital cost that would be required to construct a comparable entirely new facility.

(3) **"Recycling facility"** means a stationary or portable facility used exclusively for the treatment, re-use, or recycling of produced water and does not include oilfield equipment such as separators, heater treaters, and scrubbers in which produced water may be used.

(4) **"Responsible official"** means one of the following:

(a) for a corporation: president, secretary, treasurer, or vice-president of the corporation in charge of a principal business function, or any other person who performs similar policy or decision-making functions for the corporation, or a duly authorized representative.

(b) for a partnership or sole proprietorship: a general partner or the proprietor, respectively.

(5) **"Routed pneumatic controller"** means a pneumatic controller of any type that releases natural gas to a process, sales line, or to a combustion device instead of directly to the atmosphere.

S. Definitions beginning with the letter "S":

(1) **"Small business facility"** means, for the purposes of this Part, a source that is independently owned or operated by a company that is not a subsidiary or a division of another business, that employs no more than 10 employees at any time during the calendar year, and that has a gross annual revenue of less than \$250,000. Employees include part-time, temporary, or limited-service workers.

(2) **"Stabilized"** means, when used to refer to stored condensate, that the condensate has reached substantial equilibrium with the atmosphere and that any emissions that occur are those commonly referred to within the industry as "working and breathing losses."

(3) **"Standalone tank battery"** means a tank battery that is not designated as associated with a well site, gathering and boosting station, natural gas processing plant, or transmission compressor station.

(4) **"Startup"** means the setting into operation of air pollution control equipment or process equipment.

(5) **"Stationary source" or "source"** means any building, structure, equipment, facility, installation (including temporary installations), operation, process, or portable stationary source that emits or may emit any air contaminant. Portable stationary source means a source that can be relocated to another operating site with limited dismantling and reassembly.

(6) **"Storage vessel"** means a single tank or other vessel that is designed to contain an accumulation of hydrocarbon liquid or produced water and is constructed primarily of non-earthen material including wood, concrete, steel, fiberglass, or plastic, which provide structural support. A well completion vessel that receives recovered liquid from a well after commencement of operation for a period that exceeds 60 days is considered a storage vessel. A storage vessel does not include a vessel that is skid-mounted or permanently attached to a mobile source and located at the site for less than 180 consecutive days, such as a truck or railcar; a process vessel such as a surge control vessel, bottom receiver, or knockout vessel; a pressure vessel designed to operate in excess of 204.9 kilopascals (29.72 psi) without emissions to the atmosphere; or a floating roof tank complying with 40 CFR Part 60, Subpart Kb.

T. Definitions beginning with the letter "T":

(1) **"Tank battery"** means a storage vessel or group of storage vessels that receive or store crude oil, condensate, or produced water from a well or wells for storage. The owner or operator shall designate whether a tank battery is a standalone tank battery or is associated with a well site, gathering and boosting station, natural gas processing plant, or transmission compressor station. The owner or operator shall maintain records of this designation and make them available to the department upon request. A tank battery associated with a well site, gathering or boosting station, natural gas processing plant, or transmission compressor station is subject to the requirements in this Part for those facilities, as applicable. Tank battery does not include storage vessels at saltwater disposal facilities or produced water management units.

(2) **"Temporarily abandoned well site"** means an inactive well site where the well's completion interval has been isolated. The completion interval is the reservoir interval that is open to the borehole and is isolated when tubing and artificial equipment has been removed and a bottom plug has been set.

(3) **"Transmission compressor station"** means a facility, including all equipment and compressors, that moves pipeline quality natural gas at increased pressure from a well site or natural gas processing plant through a transmission pipeline

for ultimate delivery to the local distribution company custody transfer station, underground storage, or to other industrial end users. Transmission compressor stations may include equipment for liquids separation, natural gas dehydration, and tanks for the storage of water and hydrocarbon liquids.

U. Definitions beginning with the letter "U": [RESERVED]

V. Definitions beginning with the letter "V": "Vessel measurement system" means equipment and methods used to determine the quantity of the liquids inside a vessel (including a flowback vessel) without requiring direct access through the vessel thief hatch or other opening.

W. Definitions beginning with the letter "W":

(1) "Wellhead only facility" means a well site that does not contain any production or processing equipment other than artificial lift natural gas driven pneumatic controllers and emergency shutdown device natural gas driven pneumatic controllers.

(2) "Well workover" means the repair or stimulation of an existing production well for the purpose of restoring, prolonging, or enhancing the production of hydrocarbons.

(3) "Well site" means the equipment under the operator's control directly associated with one or more oil wells or natural gas wells upstream of the natural gas processing plant or gathering and boosting station, if any. A well site may include equipment used for extraction, collection, routing, storage, separation, treating, dehydration, artificial lift, combustion, compression, pumping, metering, monitoring, and product piping. A well site does not include an injection well site.

[20.2.50.7 NMAC - N, 08/05/2022]

20.2.50.8 SEVERABILITY:

If any provision of this Part, or the application of this provision to any person or circumstance is held invalid, the remainder of this Part, or the application of this provision to any person or circumstance other than those as to which it is held invalid, shall not be affected thereby.

[20.2.50.8 NMAC - N, 08/05/2022]

20.2.50.9 CONSTRUCTION:

This Part shall be liberally construed to carry out its purpose.

[20.2.50.9 NMAC - N, 08/05/2022]

20.2.50.10 SAVINGS CLAUSE:

Repeal or supersession of prior versions of this Part shall not affect administrative or judicial action initiated under those prior versions.

[20.2.50.10 NMAC - N, 08/05/2022]

20.2.50.11 COMPLIANCE WITH OTHER REGULATIONS:

Compliance with this Part does not relieve a person from the responsibility to comply with other applicable federal, state, or local laws, rules or regulations, including more stringent controls.

[20.2.50.11 NMAC - N, 08/05/2022]

20.2.50.12 DOCUMENTS:

Documents incorporated and cited in this Part may be viewed at the New Mexico environment department, air quality bureau.

[20.2.50.12 NMAC - N, 08/05/2022]

20.2.50.13-20.2.50.110 [RESERVED]

20.2.50.111 APPLICABILITY:

A. This Part applies to certain crude oil and natural gas production and processing equipment associated with operations that extract, collect, separate, dehydrate, store, process, transport, transmit, or handle hydrocarbon liquids or produced water in the areas specified in 20.2.50.2 NMAC and are located at well sites, tank batteries, gathering and boosting stations, natural gas processing plants, and transmission compressor stations, up to the point of the local distribution company custody transfer station.

B. In determining if any source is subject to this Part, including a small business facility as defined in this Part, the owner or operator shall calculate the Potential to Emit (PTE) of such source and shall have the PTE calculation certified by a qualified professional engineer or an inhouse engineer with expertise in the operation of oil and gas equipment, vapor control systems, and pressurized liquid samples. The emission standards and requirements of this Part may not be considered in the PTE calculation required in this Section or in determining if any source is subject to this Part. The calculation shall be kept on file for a minimum of five years and shall be provided to the department upon request. This certified calculation shall be completed before startup for new sources, and within two years of the effective date of this Part for existing sources.

C. An owner or operator of a small business facility as defined in this Part shall comply with the requirements of this Part as specified in 20.2.50.125 NMAC.

D. Oil transmission pipelines, oil refineries, natural gas transmission pipelines (except transmission compressor stations), and saltwater disposal facilities are not subject to this Part.

[20.2.50.111 NMAC - N, 08/05/2022]

20.2.50.112 GENERAL PROVISIONS:

A. General requirements:

(1) Sources subject to emissions standards and requirements under this Part shall be operated and maintained consistent with manufacturer specifications, or good engineering and maintenance practices. When used in this Part, the term manufacturer specifications means either the original equipment manufacturer (or successor) emissions-related design specifications, maintenance practices and schedules, or an alternative set of specifications, maintenance practices and schedules sufficient to operate and maintain such sources in good working order, which have been approved by qualified maintenance personnel based on engineering principles and field experience. The owner or operator shall keep manufacturer specifications on file when available, as well as any alternative specifications that are being followed, and make them available upon request by the department. The terms of Paragraph (1) of Subsection A of 20.2.50.112 NMAC apply any time reference to manufacturer specifications occurs in this Part.

(2) Sources, including associated air pollution control equipment and monitoring equipment, subject to emission standards or requirements under this Part shall at all times, including periods of startup, shutdown, and malfunction, be operated and maintained in a manner consistent with safety and good air pollution control practices for minimizing emissions of VOC and NOx. During a period of startup, shutdown, or malfunction, this general duty to minimize emissions requires that the owner or operator reduce emissions from the affected source to the greatest extent consistent with safety and good air pollution control practices. The general duty to minimize emissions does not require the owner or operator to make any further efforts to reduce emissions beyond levels required by the applicable standard under this Part. The terms of Paragraph (2) of Subsection A of 20.2.50.112 NMAC apply any time reference to minimizing emissions occurs in this Part.

(3) Within two years of the effective date of this Part, owners and operators of a source requiring equipment monitoring, testing, or inspection shall develop and implement a data system(s) capable of storing information for each source in a manner consistent with this Section. The owner or operator shall maintain information regarding each source requiring equipment monitoring, testing, or inspection in a data system(s), including the following information in addition to the required information specified in an applicable section of this Part:

(a) unique identification number;

- (b) location (latitude and longitude) of the source;
- (c) type of source (e.g., tank, VRU, dehydrator, pneumatic controller, etc.);
- (d) for each source, the controlled VOC (and NOx, if applicable) emissions in lbs./hr. and tpy;
- (e) make, model, and serial number; and
- (f) a link to the manufacturer maintenance schedule or repair recommendations, or company-specific operational and maintenance practices.

(4) The data system(s) shall be maintained by the owner or operator of the facility.

(5) The owner or operator shall manage the source's record of data in the data system(s). The owner or operator shall generate a Compliance Database Report (CDR) from the information in the data system. The CDR is an electronic report maintained by the owner or operator and that can be submitted to the department upon request.

(6) The CDR is a report distinct from the owner or operator's data system(s). The department does not require access to the owner or operator's data system(s), only the CDR.

(7) The owner or operator's authorized representative must be able to access and input data in the data system(s) record for that source. That access is not required to be at any time from any location.

(8) The owner or operator shall contemporaneously track each monitoring event, and shall comply with the following:

(a) data gathered during each monitoring or testing event shall be uploaded into the data system as soon as practicable, but no later than three business days of each compliance event, and when the final reports are received;

(b) certain sections of this Part require a date and time stamp, including a GPS display of the location, for certain monitoring events. No later than one year from the effective date of this Part, the department shall finalize a list of approved technologies to comply with date and time stamp requirements, and shall post the approved list on its website. Owners and operators shall comply with this requirement using an approved technology no later than two years from the effective date of this Part. Prior to such time, owners and operators may comply with this requirement by making a written or electronic record of the date and time of any affected monitoring event; and

(c) data required by this Part shall be maintained in the data system(s) for at least five years.

(9) The department for good cause may request that an owner or operator retain a third party at their own expense to verify any data or information collected, reported, or recorded pursuant to this Part, and make recommendations to correct or improve the collection of data or information. Such requests may be made no more than once per year. The owner or operator shall submit a report of the verification and any recommendations made by the third party to the department by a date specified and implement the recommendations in the manner approved by the department. The owner or operator may request a hearing on whether good cause was demonstrated or whether the recommendations approved by the department must be implemented.

(10) Where Part 50 refers to applicable federal standards or requirements, the references are to the applicable federal standards or requirements that were in effect at the time of the effective date of this Part, unless the applicable federal standards or requirements have been superseded by more stringent federal standards or requirements.

(11) Prior to modifying an existing source, including but not limited to increasing a source's throughput or emissions, the owner or operator shall determine the applicability of this Part in accordance with 20.2.50.111.B NMAC.

B. Monitoring requirements: In addition to any monitoring requirements specified in the applicable sections of this Part, owners and operators shall comply with the following:

(1) Unless otherwise specified, the term monitoring as used in this Part includes, but is not limited to, monitoring, testing, or inspection requirements.

(2) If equipment is shut down at the time of periodic testing, monitoring, or inspection required under this Part, the owner or operator shall not be required to restart the unit for the sole purpose of performing the testing, monitoring, or inspection, but shall note the shut down in the records kept for that equipment for that monitoring event.

C. Recordkeeping requirements: In addition to any recordkeeping requirements specified in the applicable sections of this Part, owners and operators shall comply with the following:

(1) Within three business days of a monitoring event and when final reports are received, an electronic record shall be made of the monitoring event and shall include the information required by the applicable sections of this Part.

(2) The owner or operator shall keep an electronic record required by this Part for five years.

(3) By July 1 of each calendar year starting in 2024, the owner or operator shall generate a Compliance Database Report (CDR) on all assets under its control that are subject to the CDR requirements of this Part at the time the CDR is prepared and keep this report on file for five years.

D. Reporting requirements: In addition to any reporting requirements specified in the applicable sections in this Part, the owner or operator shall respond within three business days to a request for information by the department under this Part. The response shall provide the requested information for each source subject to the request by electronically submitting a CDR to the department's Secure Extranet Portal (SEP), or by other means and formats specified by the department in its request. If the department requests a CDR from multiple facilities, additional time will be given as appropriate.

[20.2.50.112 NMAC - N, 08/05/2022]

20.2.50.113 ENGINES AND TURBINES:

A. Applicability: Portable and stationary natural gas-fired spark ignition engines, compression ignition engines, and natural gas-fired combustion turbines located at well sites, tank batteries, gathering and boosting stations, natural gas processing plants, and transmission compressor stations, with a rated horsepower greater than the horsepower ratings of table 1, 2, and 3 of 20.2.50.113 NMAC are subject to the requirements of 20.2.50.113 NMAC. Non-road engines as defined in 40 C.F.R. §§ 1068.30 are not subject to 20.2.50.113 NMAC.

B. Emission standards:

(1) The owner or operator of a portable or stationary natural gas-fired spark ignition engine, compression ignition engine, or natural gas-fired combustion turbine shall ensure compliance with the emission standards by the dates specified in Subsection B of 20.2.50.113 NMAC, except as otherwise specified under an Alternative Compliance Plan approved pursuant to Paragraph (10) of Subsection B of 20.2.50.113 NMAC or alternative emissions standards approved pursuant to Paragraph (11) of Subsection B of 20.2.50.113 NMAC.

(2) The owner or operator of an existing natural gas-fired spark ignition engine shall complete an inventory of all existing engines subject to this Part by January 1, 2023, and shall prepare a schedule to ensure that each existing engine does not exceed the emission standards in table 1 of Paragraph (2) of Subsection B of 20.2.50.113 NMAC as follows, except as otherwise specified under an Alternative Compliance Plan (ACP) approved pursuant to Paragraph (10) of Subsection B of 20.2.50.113 NMAC or alternative emissions standards approved pursuant to Paragraph (11) of Subsection B of 20.2.50.113 NMAC:

(a) by January 1, 2025, the owner or operator shall ensure at least thirty percent of the company's existing engines meet the emission standards.

(b) by January 1, 2027, the owner or operator shall ensure at least an additional thirty-five percent of the company's existing engines meet the emission standards.

(c) by January 1, 2029, the owner or operator shall ensure that the remaining thirty-five percent of the company's existing engines meet the emission standards.

(d) in lieu of meeting the emission standards for an existing natural gas-fired spark ignition engine, an owner or operator may reduce the annual hours of operation of an engine such that the annual PTE of NO_x and VOC emissions are reduced to achieve an equivalent allowable ton per year emission reduction as set forth in table 1 of Paragraph (2) of Subsection B of 20.2.50.113 NMAC, or by at least ninety-five percent per year.

Table 1 - EMISSION STANDARDS FOR EXISTING NATURAL GAS-FIRED SPARK IGNITION ENGINES

Engine Type	Rated bhp	NO _x	CO	NMNEHC (as propane)
2 Stroke Lean Burn	>1,000	3.0 g/bhp-hr	0.60 g/bhp-hr	0.70 g/bhp-hr
4-Stroke Lean Burn	>1,000 bhp and <1,775 bhp	2.0 g/bhp-hr	0.60 g/bhp-hr	0.70 g/bhp-hr
4-Stroke Lean Burn	≥1,775 bhp	0.5 g/bhp-hr	0.60 g/bhp-hr	0.70 g/bhp-hr
Rich Burn	>1,000 bhp	0.5 g/bhp-hr	0.60 g/bhp-hr	0.70 g/bhp-hr

(3) The owner or operator of a new natural gas-fired spark ignition engine shall ensure the engine does not exceed the emission standards in table 2 of Paragraph (3) of Subsection B of 20.2.50.113 NMAC upon startup.

Table 2 - EMISSION STANDARDS FOR NEW NATURAL GAS-FIRED SPARK IGNITION ENGINES

Engine Type	Rated bhp	NO _x	CO	NMNEHC (as propane)
Lean-burn	> 500 and < 1875	0.50 g/bhp-hr	0.60 g/bhp-hr	0.70 g/bhp-hr
Lean-burn	≥ 1875	0.30 g/bhp-hr	0.60 g/bhp-hr	0.70 g/bhp-hr

Rich-burn	>500	0.50 g/bhp-hr	0.60 g/bhp-hr	0.70 g/bhp-hr
-----------	------	---------------	---------------	---------------

(4) The owner or operator of a natural gas-fired spark ignition engine with NOx emission control technology that uses ammonia or urea as a reagent shall ensure that the exhaust ammonia slip is limited to 10 ppmvd or less, corrected to fifteen percent oxygen.

(5) The owner or operator of a compression ignition engine shall ensure compliance with the following emission standards:

(a) a new portable or stationary compression ignition engine with a maximum design power output equal to or greater than 500 horsepower that is not subject to the emission standards under Subparagraph (b) of Paragraph (5) of Subsection B of 20.2.50.113 NMAC shall limit NOx emissions to not more than nine g/bhp-hr upon startup.

(b) a stationary compression ignition engine that is subject to and complying with Subpart IIII of 40 CFR Part 60, Standards of Performance for Stationary Compression Ignition Internal Combustion Engines, is not subject to the requirements of Subparagraph (a) of Paragraph (5) of Subsection B of 20.2.50.113 NMAC.

(6) The owner or operator of a portable or stationary compression ignition engine with NOx emission control technology that uses ammonia or urea as a reagent shall ensure that the exhaust ammonia slip is limited to 10 ppmvd or less, corrected to fifteen percent oxygen.

(7) The owner or operator of a stationary natural gas-fired combustion turbine with a maximum design rating equal to or greater than 1,000 bhp shall comply with the applicable emission standards for an existing, new, or reconstructed turbine listed in table 3 of Paragraph (7) of Subsection B of 20.2.50.113 NMAC: The owner or operator of an existing stationary natural gas-fired combustion turbine shall complete an inventory of all existing turbines subject to Part 50 by July 1, 2023, and shall prepare a schedule to ensure that each subject existing turbine does not exceed the emission standards in table 3 of Paragraph (7) of Subsection B of 20.2.50.113 NMAC as follows, except as otherwise specified under an Alternative Compliance Plan approved pursuant to Paragraph (10) of Subsection B of 20.2.50.113 NMAC or alternative emissions standards approved pursuant to Paragraph (11) of Subsection B of 20.2.50.113 NMAC:

(a) by January 1, 2024, the owner or operator shall ensure at least thirty percent of the company's existing turbines meet the emission standards.

(b) by January 1, 2026, the owner or operator shall ensure at least an additional thirty-five percent of the company's existing turbines meet the emission standards.

(c) by January 1, 2028, the owner or operator shall ensure that the remaining thirty-five percent of the company's existing turbines meet the emission standards.

(d) in lieu of meeting the emission standards for an existing stationary natural gas-fired combustion turbine, an owner or operator may reduce the annual hours of operation of a turbine such that the annual PTE of NOx and VOC emissions are reduced to achieve an equivalent allowable ton per year emission reduction as set forth in table 3 of Paragraph (7) of Subsection B of 20.2.50.113 NMAC, or by at least ninety-five percent per year.

Table 3 - EMISSION STANDARDS FOR STATIONARY COMBUSTION TURBINES

For each applicable existing natural gas-fired combustion turbine, the owner or operator shall ensure the turbine does not exceed the following emission standards no later than the schedule set forth in Paragraph (7)(a) of Subsection B of 20.2.50.113 NMAC:			
Turbine Rating (bhp)	NO _x (ppmvd @15% O ₂)	CO (ppmvd @ 15% O ₂)	NMNEHC (as propane, ppmvd @15% O ₂)
≥1,000 and <4,100	150	50	9
≥4,100 and <15,000	50	50	9
≥15,000	50	50 or 93% reduction	5 or 50% reduction
For each applicable new natural gas-fired combustion turbine, the owner or operator shall ensure the turbine does not exceed the following emission standards upon startup:			
Turbine Rating (bhp)	NO _x (ppmvd @15% O ₂)	CO (ppmvd @ 15% O ₂)	NMNEHC (as propane, ppmvd @15% O ₂)
≥1,000 and <4,000	100	25	9
≥4,000 and <15,900	15	10	9
≥15,900	9.0 Uncontrolled or 2.0 with Control	10 Uncontrolled or 1.8 with Control	5

(8) The owner or operator of a stationary natural gas-fired combustion turbine with NOx emission control technology that uses ammonia or urea as a reagent shall ensure that the exhaust ammonia slip is limited to 10 ppmvd or less, corrected to fifteen percent oxygen.

(9) The owner or operator of an emergency use engine as defined by 40 C.F.R. §§ 60.4211, 60.4243, or 63.6675 is not subject to the emissions standards in this

Part but shall be equipped with a non-resettable hour meter to monitor and record any hours of operation.

(10) In lieu of complying with the emission standards for individual engines and turbines established in Subsection B of 20.2.50.113 NMAC, an owner or operator may elect to comply with the emission standards through an Alternative Compliance Plan (ACP) approved by the department. An ACP must include the list of engines or turbines subject to the ACP, and a demonstration that the total allowable emissions for the engines or turbines subject to the ACP will not exceed the total allowable emissions under the emission standards of this Part. Prior to submitting a proposed ACP to the Department, the owner or operator shall comply with the following requirements in the order listed:

(a) The owner or operator shall contract with an independent third-party engineering or consulting firm to conduct a technical and regulatory review of the ACP proposal. The selected firm shall review the proposal to determine if it meets the requirements of this Part, and shall prepare and certify an evaluation of the proposed ACP indicating whether the ACP proposal adheres to the requirements of this Part.

(b) Following the independent third-party review, the owner or operator shall provide the ACP, along with the third-party evaluation and findings, to the department for posting on the department's website. The department shall post the ACP and the third-party review within 15 days of receipt.

(c) Following posting by the department, the owner or operator shall publish a notice in a newspaper of general circulation announcing the ACP proposal, the dates it will be available for review and comment by the public, and information on how and where to submit comments. The dates specified in the public notice must provide for a thirty-day comment period.

(d) Following the close of the thirty-day notice and comment period, the department shall send the comments submitted on the ACP proposal and findings to the owner or operator. The owner or operator shall provide written responses to all comments to the department.

(e) Following receipt of the owner or operator's responses to comments received during the thirty-day comment period, the department shall make a determination whether to approve or deny the ACP proposal within 90 days. The department shall approve an ACP that meets the requirements of this Part, unless the department determines that the total allowable emissions under the ACP exceed the total allowable emissions under the emission standards of 20.2.50.113 NMAC. If approved by the department, the emission reductions and associated emission limits for the affected engines or turbines shall become enforceable terms under this Part.

(11) The owner or operator may submit a request for alternative emission standards for a specific engine or turbine based on technical impracticability or

economic infeasibility. The owner or operator is not required to submit an ACP proposal under Paragraph (10) of Subsection B of 20.2.50.113 NMAC prior to submission of a request for alternative emissions standards under this Paragraph (11), provided that the owner or operator satisfies Subparagraph (b) of Paragraph (11) of Subsection B of 20.2.50.113 NMAC, below. To qualify for an alternative emission standard, an owner or operator must comply with the following requirements:

(a) Prepare a reasonable demonstration detailing why it is not technically practicable or economically feasible for the individual engine or turbine to achieve the emissions standards in table 1 of Paragraph (2) of Subsection B of 20.2.50.113 NMAC or table 3 of Paragraph (7) of Subsection B of 20.2.50.113 NMAC, as applicable;

(b) Prepare a demonstration detailing why emissions from the individual engine or turbine cannot be addressed through an ACP in a technically practicable or economically feasible manner;

(c) Prepare a technical analysis for the affected engine or turbine specifying the emission reductions that can be achieved through other means, such as combustion modifications or capacity limitations. The technical analysis shall include an analysis of any previous modifications of the source and a determination whether such modifications meet the definition of a reconstructed source, such that the source should be considered a new source under federal regulations. The analysis shall include a certification that the modifications to the source are not in violation of any state or federal air quality regulation; and

(d) Fulfill the requirements of Subparagraphs (a) through (c) of Paragraph (10) of Subsection B of 20.2.50.113 NMAC.

(e) Following the close of the thirty-day notice and comment period, the department shall send the comments submitted on the alternative emission standards and findings to the owner or operator. The owner or operator shall provide written responses to all comments to the department.

(f) Following receipt of the owner or operator's responses to comments received during the thirty-day comment period, the department shall make a determination whether to approve or deny the alternative emission standards within 90 days. If approved by the department, the emission reductions and alternative emission standards for the affected engine or turbine shall become enforceable terms under this Part.

(g) If approved by the department, the emissions reductions and alternative standards for the affected engine or turbine shall become enforceable terms under this Part.

(12) A short-term replacement engine may be substituted for any engine subject to Section 20.2.50.113 NMAC consistent with any applicable air quality permit

containing allowances for short term replacement engines, including but not limited to New Source Review and General Construction Permits issued under 20.2.72 NMAC. A short-term replacement engine is not considered a "new" engine for purposes of this Part unless the engine it replaces is a "new" engine within the meaning of this Part. The reinstallation of the existing engine following removal of the short-term replacement engine is not considered a "new" engine under this Part unless the engine was "new" prior to the temporary replacement.

C. Monitoring requirements:

(1) Maintenance and repair for a spark ignition engine, compression ignition engine, and stationary combustion turbine shall meet the manufacturer recommended maintenance schedule as defined in 20.2.50.112 NMAC.

(2) Maintenance conducted consistent with an applicable NSPS or NESHAP requirement shall be deemed to be in compliance with Paragraph (1) of Subsection (C) of 20.2.50.113 NMAC.

(3) Catalytic converters (oxidative, selective, and non-selective) and AFR controllers shall be inspected and maintained according to manufacturer specifications as defined in 20.2.50.112 NMAC, and shall include replacement of oxygen sensors as necessary for oxygen-based controllers. During periods of catalytic converter or AFR controller maintenance, the owner or operator shall shut down the engine or turbine until the catalytic converter or AFR controller can be replaced with a functionally equivalent spare to allow the engine or turbine to return to operation.

(4) For equipment operated for 500 hours per year or more, compliance with the emission standards in Subsection B of 20.2.50.113 NMAC shall be demonstrated within 180 days of the effective date applicable to the source as defined by Paragraphs (2) and (7) of Subsection B of this Section or, if installed more than 180 days after the effective date, within 60 days after achieving the maximum production rate at which the source will be operated, but not later than 180 days after initial startup of such source. Compliance with the applicable emission standards shall be demonstrated by performing an initial emission test for NO_x and VOC, as defined in 40 CFR 51.100(s) using U.S. EPA reference methods or ASTM D6348. Periodic monitoring shall be conducted annually to demonstrate compliance with the allowable emission standards and may be demonstrated utilizing a portable analyzer or EPA reference methods. For units with g/hp-hr emission standards, the engine load shall be calculated using the following equations:

Where: LVH = lower heating value, btu/scf, or btu/gal, as appropriate; and

BSFC = brake specific fuel consumption

If the manufacturer's rated BSFC is not available, an operator may use an alternative load calculation methodology based on available data.

(a) emissions testing shall be conducted within 10 percent of 100 percent peak (or the highest achievable) load. The load and the parameters used to calculate it shall be recorded to document operating conditions at the time of testing and shall be included with the test report.

(b) emissions testing utilizing a portable analyzer shall be conducted in accordance with the requirements of the current version of ASTM D6522. If a portable analyzer has met a previously approved department criterion, the analyzer may be operated in accordance with that criterion until it is replaced.

(c) the default time period for a test run shall be at least 20 minutes.

(d) an emissions test shall consist of three separate runs, with the arithmetic mean of the results from the three runs used to determine compliance with the applicable emission standard.

(e) during emissions tests, pollutant and diluent concentration shall be monitored and recorded. Fuel flow rate shall be monitored and recorded if stack gas flow rate is determined utilizing U.S. EPA reference method 19. This information shall be included with the periodic test report.

(f) stack gas flow rate shall be calculated in accordance with U.S. EPA reference method 19 utilizing fuel flow rate (scf) determined by a dedicated fuel flow meter and fuel heating value (Btu/scf). The owner or operator shall provide a contemporaneous fuel gas analysis (preferably on the day of the test, but no earlier than three months before the test date) and a recent fuel flow meter calibration certificate (within the most recent quarter) with the final test report. Alternatively, stack gas flow rate may be determined by using U.S. EPA reference methods 1 through 4 or through the use of manufacturer provided fuel consumption rates.

(g) upon request by the department, an owner or operator shall submit a notification and protocol for an initial or annual emissions test.

(h) emissions testing shall be conducted at least once per calendar year. Emission testing required by Subparts GG, IIII, JJJJ, or KKKK of 40 CFR 60, or Subpart ZZZZ of 40 CFR 63, may be used to satisfy the emissions testing requirements if it meets the requirements of 20.2.50.113 NMAC and is completed at least once per calendar year.

(i) The results of emissions testing demonstrating compliance with the emission standard for CO may be used as a surrogate to demonstrate compliance with the emission standard for NMNEHC.

(5) The owner or operator of equipment operated less than 500 hours per year shall monitor the hours of operation using a non-resettable hour meter and shall

test the unit at least once per 8760 hours of operation in accordance with the emissions testing requirements in Paragraph (4) of Subsection C of 20.2.50.113 NMAC.

(6) An owner or operator of an emergency use engine as defined by 40 C.F.R. §§ 60.4211, 60.4243, or 63.6675 shall monitor the hours of operation by a non-resettable hour meter.

(7) An owner or operator limiting the annual operating hours of an engine or turbine to meet the requirements of Paragraph (2) or (7) of Subsection B of 20.2.50.113 NMAC shall monitor the hours of operation by a non-resettable hour meter.

(8) Prior to any monitoring, testing, inspection, or maintenance of an engine or turbine, the owner or operator shall date and time stamp the event, and the monitoring data entry shall be made in accordance with the requirements of 20.2.50.112 and 113 NMAC.

D. Recordkeeping requirements:

(1) The owner or operator of a spark ignition engine, compression ignition engine, or stationary combustion turbine shall maintain a record in accordance with 20.2.50.112 NMAC for the engine or turbine. The record shall include:

(a) the make, model, serial number, and unique identification number for the engine or turbine;

(b) location of the source (latitude and longitude);

(c) a copy of the engine, turbine, or control device manufacturer recommended maintenance and repair schedule as defined in 20.2.50.112 NMAC; and

(d) all inspection, maintenance, or repair activity on the engine, turbine, and control device, including:

(i) the date and time stamp(s), including GPS of the location, of an inspection, maintenance, or repair;

(ii) the date a subsequent analysis was performed (if applicable);

(iii) the name of the person(s) conducting the inspection, maintenance or repair;

(iv) a description of the physical condition of the equipment as found during the inspection;

(v) a description of maintenance or repair conducted; and

(vi) the results of the inspection and any required corrective actions.

(2) The owner or operator of a spark ignition engine, compression ignition engine, or stationary combustion turbine shall maintain records of initial and annual emissions testing for the engine or turbine for a period of five years. The records shall include:

(a) make, model, and serial number for the tested engine or turbine;

(b) the date and time stamp(s), including GPS of the location, of any monitoring event, including sampling or measurements;

(c) date analyses were performed;

(d) name of the person(s) and the qualified entity that performed the analyses;

(e) analytical or test methods used;

(f) results of analyses or tests;

(g) calculated emissions of NO_x and VOC in lb/hr and tpy; and

(h) operating conditions at the time of sampling or measurement.

(3) The owner or operator of an emergency use engine as defined by 40 C.F.R. §§ 60.4211, 60.4243, or 63.6675 shall record the total annual hours of operation as recorded by the non-resettable hour meter.

(4) The owner or operator limiting the annual operating hours of an engine or turbine to meet the requirements of Paragraph (2) or (7) of Subsection B of 20.2.50.113 NMAC shall record the hours of operation by a non-resettable hour meter. The owner or operator shall calculate and record the annual NO_x and VOC emission calculation, based on the engine or turbine's actual hours of operation, to demonstrate that an equivalent allowable ton per year emission reduction as set forth in table 1 or table 3 of Paragraph (2) or (7) of Subsection B of 20.2.50.113 NMAC, or the ninety-five percent emission reduction requirement is met.

E. Reporting requirements: The owner or operator shall comply with the reporting requirements in 20.2.50.112 NMAC.

[20.2.50.113 NM-C - N, 08/05/2022]

20.2.50.114 COMPRESSOR SEALS:

A. Applicability:

(1) Centrifugal compressors using wet seals and located at tank batteries, gathering and boosting stations, and natural gas processing plants are subject to the requirements of 20.2.50.114 NMAC. Centrifugal compressors located at well sites and transmission compressor stations are not subject to the requirements of 20.2.50.114 NMAC.

(2) Reciprocating compressors located at tank batteries, gathering and boosting stations, and natural gas processing plants are subject to the requirements of 20.2.50.114 NMAC. Reciprocating compressors located at well sites and transmission compressor stations are not subject to the requirements of 20.2.50.114 NMAC.

B. Emission standards:

(1) The owner or operator of an existing centrifugal compressor with wet seals shall control VOC emissions from a centrifugal compressor wet seal fluid degassing system by at least ninety-five percent within two years of the effective date of this Part. Emissions shall be captured and routed via a closed vent system to a control device, recovery system, fuel cell, or a process stream.

(2) The owner or operator of an existing reciprocating compressor shall, either:

(a) replace the reciprocating compressor rod packing after every 26,000 hours of compressor operation or every 36 months, whichever is reached later. The owner or operator shall begin counting the hours of compressor operation toward the first replacement of the rod packing upon the effective date of this Part; or

(b) beginning no later than two years from the effective date of this Part, collect emissions from the rod packing, and route them via a closed vent system to a control device, recovery system, fuel cell, or a process stream.

(3) The owner or operator of a new centrifugal compressor with wet seals shall control VOC emissions from the centrifugal compressor wet seal fluid degassing system by at least ninety-five percent upon startup. Emissions shall be captured and routed via a closed vent system to a control device, recovery system, fuel cell, or process stream.

(4) The owner or operator of a new reciprocating compressor shall, upon startup, either:

(a) replace the reciprocating compressor rod packing after every 26,000 hours of compressor operation, or every 36 months, whichever is reached later; or

(b) collect emissions from the rod packing and route them via a closed vent system to a control device, a recovery system, fuel cell, or a process stream.

(5) The owner or operator complying with the emission standards in Subsection B of 20.2.50.114 NMAC through use of a control device shall comply with the control device requirements in 20.2.50.115 NMAC.

C. Monitoring requirements:

(1) The owner or operator of a reciprocating compressor complying with Subparagraph (a) of Paragraph (2) or Subparagraph (a) of Paragraph (4) of Subsection B of 20.2.50.114 NMAC shall continuously monitor the hours of operation with a non-resettable hour meter and track the number of hours since initial startup or since the previous reciprocating compressor rod packing replacement.

(2) The owner or operator of a reciprocating compressor complying with Subparagraph (b) of Paragraph (2) or Subparagraph (b) of Paragraph (4) of Subsection B of 20.2.50.114 NMAC shall monitor the rod packing emissions collection system semiannually to ensure that it operates as designed and routes emissions through a closed vent system to a control device, recovery system, fuel cell, or process stream.

(3) The owner or operator of a centrifugal or reciprocating compressor complying with the requirements in Subsection B of 20.2.50.114 NMAC through use of a closed vent system or control device shall comply with the monitoring requirements in 20.2.50.115 NMAC.

(4) The owner or operator of a centrifugal or reciprocating compressor shall comply with the monitoring requirements in 20.2.50.112 NMAC.

D. Recordkeeping requirements:

(1) The owner or operator of a centrifugal compressor using a wet seal fluid degassing system shall maintain a record of the following:

(a) the location (latitude and longitude) of the centrifugal compressor;

(b) the date of construction or reconstruction of the centrifugal compressor;

(c) the monitoring required in Subsection C of 20.2.50.114 NMAC, including the time and date of the monitoring, the person(s) conducting the monitoring, a description of any problem observed during the monitoring, and a description of any corrective action taken; and

(d) the type, make, model, and unique identification number or equivalent identifier of a control device used to comply with the control requirements in Subsection B of 20.2.50.114 NMAC.

(2) The owner or operator of a reciprocating compressor shall maintain a record of the following:

- (a) the location (latitude and longitude) of the reciprocating compressor;
- and
- (b) the date of construction or reconstruction of the reciprocating compressor;
- (c) the monitoring required in Subsection C of 20.2.50.114 NMAC, including:
 - (i) the number of hours of operation since the effective date, initial startup after the effective date, or the last rod packing replacement, as applicable;
 - (ii) data showing the effectiveness of the rod packing emissions collection system, as applicable; and
 - (iii) the time and date of the inspection, the person(s) conducting the inspection, a description of any problems observed during the inspection, and a description of corrective actions taken.

(3) The owner or operator of a centrifugal or reciprocating compressor complying with the requirements in Subsection B of 20.2.50.114 NMAC through use of a control device or closed vent system shall comply with the recordkeeping requirements in 20.2.50.115 NMAC.

(4) The owner or operator of a centrifugal or reciprocating compressor shall comply with the recordkeeping requirements in 20.2.50.112 NMAC.

E. Reporting requirements: The owner or operator of a centrifugal or reciprocating compressor shall comply with the reporting requirements in 20.2.50.112 NMAC.

[20.2.50.114 NMAC - N, 08/05/2022]

20.2.50.115 CONTROL DEVICES AND CLOSED VENT SYSTEMS:

A. Applicability: These requirements apply to control devices and closed vent systems as defined in 20.2.50.7 NMAC and used to comply with the emission standards and emission reduction requirements in this Part.

B. General requirements:

(1) Control devices used to demonstrate compliance with this Part shall be installed, operated, and maintained consistent with manufacturer specifications, and good engineering and maintenance practices.

(2) Control devices shall be adequately designed and sized to achieve the control efficiency rates required by this Part and to handle the reasonably expected range of inlet VOC or NO_x concentrations or volumes.

(3) The owner or operator shall inspect control devices visually or consistent with applicable federally approved inspection methods at least monthly to identify defects, leaks, and releases, and to ensure proper operation. Prior to an inspection or monitoring event, the owner or operator shall date and time stamp the event, and the required monitoring data entry shall be made in accordance with this Part.

(4) The owner or operator shall ensure that a control device used to comply with emission standards in this Part operates as a closed vent system that captures and routes VOC emissions to the control device, in order to minimize venting of unburnt gas to the atmosphere.

(5) The owner or operator of a permanent closed vent system for a centrifugal compressor wet seal fluid degassing system, reciprocating compressor, natural gas driven pneumatic pump, or storage vessel using a control device or routing emissions to a process shall:

(a) ensure the control device or process is of sufficient design and capacity to accommodate the expected range of emissions from the affected sources;

(b) conduct an assessment to confirm that the closed vent system is of sufficient design and capacity to ensure that emissions from the affected equipment are routed to the control device or process; and

(c) have the assessment certified by a qualified professional engineer or an in-house engineer with expertise regarding the design and operation of closed vent system(s) in accordance with Items (i) and (ii) of Subparagraph (c) of this section.

(i) The assessment of the closed vent system shall be prepared under the direction or supervision of a qualified professional engineer or an in-house engineer who signs the certification in Item (ii) of Subparagraph (c) of this section.

(ii) The owner or operator shall provide the following certification, signed and dated by a qualified professional engineer or an in-house engineer: "I certify that the closed vent system assessment was prepared under my direction or supervision. I further certify that the closed vent system assessment was conducted, and this report was prepared, pursuant to the requirements of this Part. Based on my professional knowledge and experience, and inquiry of personnel involved in the assessment, the certification submitted herein is true, accurate, and complete."

(d) An owner or operator of an existing closed vent system shall comply with the requirements of Paragraph (5) of Subsection B of 20.2.50.115 NMAC within three years of the effective date of this Part and within 90 days of startup for a new closed vent system.

(6) The owner or operator shall keep manufacturer specifications for all control devices on file. The information shall include the unique identification number,

type of unit, manufacturer name, make, model, capacity, and destruction or reduction efficiency data.

C. Requirements for open flares:

(1) Emission standards:

(a) the flare shall be properly sized and designed to ensure proper combustion efficiency to combust the gas sent to the flare, and combustion shall be maintained for the duration of time that gas is sent to the flare. The owner or operator shall not send gas to the flare in excess of the manufacturer maximum rated capacity.

(b) The owner or operator shall equip each new and existing flare (except those flares required to meet the requirements of Subparagraph (c) of this Subsection) with a continuous pilot flame, an operational auto-igniter, or require manual ignition, and shall comply with the following no later than one year after the effective date of this part, unless otherwise specified:

(i) a flare with a continuous pilot flame or an auto-igniter shall be equipped with a system to ensure the flare is operated with a flame present at all times when gas is being sent to the flare.

(ii) The owner or operator of a flare with manual ignition shall inspect and ensure a flame is present upon initiating a flaring event.

(iii) A new flare controlling a continuous gas stream shall be equipped with a continuous pilot flame upon startup.

(iv) An existing flare controlling a continuous gas stream shall be equipped with a continuous pilot.

(c) An existing flare located at a site with an annual average daily production of equal to or less than 10 barrels of oil per day or an average daily production of 60,000 standard cubic feet of natural gas shall be equipped with an auto-igniter, continuous pilot, or technology (e.g. alarm) that alerts the owner or operator of a flare malfunction, if replaced or reconstructed after the effective date of this Part.

(d) The owner or operator shall operate a flare with no visible emissions, except for periods not to exceed a total of 30 seconds during any 15 consecutive minutes. The flare shall be designed so that an observer can, by means of visual observation from the outside of the flare or by other means such as a continuous monitoring device, determine whether it is operating properly. The observation may be terminated if visible emissions are observed and recorded and action is taken to address the visible emissions.

(e) The owner or operator shall repair the flare within three business days of any thermocouple or other flame detection device alarm activation.

(2) Monitoring requirements:

(a) the owner or operator of a flare with a continuous pilot or auto-igniter shall continuously monitor the presence of a pilot flame, or presence of flame during flaring if using an auto-igniter, using a thermocouple equipped with a continuous recorder and alarm to detect the presence of a flame. An alternative equivalent technology alerting the owner or operator of failure of ignition of the gas stream may be used in lieu of a continuous recorder and alarm, if approved by the department;

(b) the owner or operator of a manually ignited flare shall monitor the presence of a flame using continuous visual observation during a flaring event;

(c) the owner or operator shall, at least quarterly, and upon observing visible emissions, perform a U.S. EPA method 22 observation while the flare pilot or auto-igniter flame is present to certify compliance with visible emission requirements. The observation period shall be a minimum of 15 consecutive minutes. The observation may be terminated if visible emissions are observed and recorded and action is taken to address the visible emissions;

(d) prior to an inspection or monitoring event, the owner or operator shall date and time stamp the event, and the required monitoring data entry shall be made in accordance with this Part; and

(e) the owner or operator shall monitor the technology that alerts the owner or operator of a flare malfunction and any instances of technology or alarm activation.

(3) Recordkeeping requirements: The owner or operator of an open flare shall keep a record of the following:

(a) any instance of thermocouple, other approved technology, or flame detection device alarm activation, including the date and cause of alarm activation, action taken to bring the flare into a normal operating condition, the name of the person(s) conducting the inspection, and any maintenance activity performed;

(b) the results of the U.S. EPA method 22 observations;

(c) the monitoring of the presence of a flame on a manual flare during a flaring event as required under Subparagraph (b) of Paragraph (2) of Subsection C of 20.2.50.115 NMAC;

(d) the results of the most recent gas analysis for the gas being flared, including VOC content and heating value; and

(e) the date and time stamp(s), including GPS of the location, of any monitoring event.

(4) Reporting requirements: The owner or operator shall comply with the reporting requirements in 20.2.50.112 NMAC.

D. Requirements for enclosed combustion devices (ECD) and thermal oxidizers (TO):

(1) Emission standards:

(a) the ECD/TO shall be properly sized and designed to ensure proper combustion efficiency to combust the gas sent to the ECD/TO. The owner or operator shall not send gas to the ECD/TO in excess of the manufacturer maximum rated capacity.

(b) The owner or operator shall equip each new ECD/TO with a continuous pilot flame or an auto-igniter upon startup. Existing ECD/TO shall be equipped with a continuous pilot flame or an auto-igniter no later than two years after the effective date of this Part.

(c) ECD/TO with a continuous pilot flame or an auto-igniter shall be equipped with a system to ensure that the ECD/TO is operated with a flame present at all times when gas is sent to the ECD/TO. Combustion shall be maintained for the duration of time that gas is sent to the ECD/TO. New ECD/TOs shall comply with this requirement upon startup, and existing ECD/TOs shall comply with this requirement within 2 years of the effective date of this Part.

(d) The owner or operator shall operate an ECD/TO with no visible emissions, except for periods not to exceed a total of 30 seconds during any 15 consecutive minutes. The ECD/TO shall be designed so that an observer can, by means of visual observation from the outside of the ECD/TO or by other means such as a continuous monitoring device, determine whether it is operating properly. The observation may be terminated if visible emissions are observed and recorded and action is taken to address the visible emissions.

(2) Monitoring requirements:

(a) the owner or operator of an ECD/TO with a continuous pilot or an auto-igniter shall continuously monitor the presence of a pilot flame, or of a flame during combustion if using an auto-igniter, using a thermocouple equipped with a continuous recorder and alarm to detect the presence of a flame. An alternative equivalent technology alerting the owner or operator of failure of ignition of the gas stream may be used in lieu of a continuous recorder and alarm, if approved by the department.

(b) The owner or operator shall, at least quarterly, and upon observing visible emissions, perform a U.S. EPA method 22 observation while the ECD/TO pilot flame or auto-igniter flame is present to certify compliance with the visible emission requirements. The period of observation shall be a minimum of 15 consecutive minutes. The observation may be terminated if visible emissions are observed and recorded and action is taken to address the visible emissions.

(c) Prior to an inspection or monitoring event, the owner or operator shall date and time stamp the event, and the required monitoring data entry shall be made in accordance with the monitoring requirements of this Part.

(3) Recordkeeping requirements: The owner or operator of an ECD/TO shall keep records of the following:

(a) any instance of thermocouple, other approved technology, or flame detection device alarm activation, including the date and cause of the activation, any action taken to bring the ECD/TO into normal operating condition, the name of the person(s) conducting the inspection, and any maintenance activities performed;

(b) the results of the U.S. EPA method 22 observations;

(c) the date and time stamp(s), including GPS of the location, of any monitoring event; and

(d) the results of the most recent gas analysis for the gas being combusted, including VOC content and heating value.

(4) Reporting requirements: The owner or operator shall comply with the reporting requirements in 20.2.50.112 NMAC.

E. Requirements for vapor recovery units (VRU):

(1) Emission standards:

(a) the owner or operator shall operate the VRU as a closed vent system that captures and routes all VOC emissions directly back to the process or to a sales pipeline and does not vent to the atmosphere.

(b) The owner or operator shall control VOC emissions during startup, shutdown, maintenance, or other VRU downtime with a backup control device (e.g. flare, ECD, TO) or redundant VRU during the period of VRU downtime, unless otherwise approved in an air permit issued prior to the effective date of this Part. Alternatively, the owner or operator may shut down and isolate the source being controlled by the VRU. For sites that already have a VRU installed as of the effective date of this Part, the owner or operator shall install backup control devices or redundant VRUs within three years of the effective date of this Part.

(2) Monitoring Requirements:

(a) the owner or operator shall comply with the standards for equipment leaks in 20.2.50.116 NMAC, or alternatively, shall implement a program that meets the requirements of Subpart OOOOa of 40 CFR 60.

(b) Prior to a VRU inspection or monitoring event, the owner or operator shall date and time stamp the event, and the required monitoring data entry shall be made in accordance with the requirements of this Part.

(3) Recordkeeping requirements: For a VRU inspection or monitoring event, the owner or operator shall record the result of the event, including the name of the person(s) conducting the inspection, any maintenance or repair activities required, and the date and time stamp(s), including GPS of the location, of any monitoring event. The owner or operator shall record the type of redundant control device used during VRU downtime, or keep records of the source shut down and isolated and the time period during which it was shut down, or records of compliance with an air permit issued prior to the effective date of this Part.

(4) Reporting requirements: The owner or operator shall comply with the reporting requirements in 20.2.50.112 NMAC.

F. Recordkeeping requirements: In addition to the general recordkeeping requirements of 20.2.50.112 NMAC, the owner or operator of a control device or closed vent system shall maintain a record of the following:

(1) the certification of the closed vent system assessment, where applicable, and as required by this Part; and

(2) the information required in Paragraph (6) of Subsection B of 20.2.50.115 NMAC.

G. Reporting requirements: The owner or operator shall comply with the reporting requirements in 20.2.50.112 NMAC.

[20.2.50.115 NMAC - N, 08/05/2022]

20.2.50.116 EQUIPMENT LEAKS AND FUGITIVE EMISSIONS:

A. Applicability: Well sites, tank batteries, gathering and boosting stations, natural gas processing plants, transmission compressor stations, and associated piping and components are subject to the requirements of 20.2.50.116 NMAC. Components in water or air service are not subject to the requirements of 20.2.50.116 NMAC. The requirements of this Part may be considered in the facility-wide PTE and in determining the monitoring frequency requirements of this section.

B. Emission standards: The owner or operator of oil and gas production and processing equipment located at well sites, tank batteries, gathering and boosting stations, natural gas processing plants, or transmission compressor stations shall demonstrate compliance with this Part by performing the monitoring, recordkeeping, and reporting requirements specified in 20.2.50.116 NMAC. Tank batteries supporting multiple facilities are subject to the requirements for the most stringently regulated facility of which they are a part.

C. Default monitoring requirements: Owners and operators shall comply with the following monitoring requirements:

(1) The owner or operator of a facility with an annual average daily production or average daily throughput of greater than 10 barrels of oil per day or an average daily production of greater than 60,000 standard cubic feet per day of natural gas shall, at least weekly, conduct an external audio, visual, and olfactory (AVO) inspection of thief hatches, closed vent systems, pumps, compressors, pressure relief devices, open-ended valves or lines, valves, flanges, connectors, piping, and associated equipment to identify defects and leaking components as follows:

(a) conduct an external visual inspection for defects, which may include cracks, holes, or gaps in piping or covers; loose connections; liquid leaks; broken or missing caps; broken, cracked or otherwise damaged seals or gaskets; broken or missing hatches; or broken or open access covers or other closure or bypass devices;

(b) conduct an audio inspection for pressure leaks and liquid leaks;

(c) conduct an olfactory inspection for unusual or strong odors; and

(d) any positive detection during the AVO inspection shall be repaired in accordance with Subsection E if not repaired at the time of discovery.

(2) The owner or operator of a facility with an annual average daily production or average daily throughput of equal to or less than 10 barrels of oil per day or an average daily production of equal to or less than 60,000 standard cubic feet per day of natural gas shall, at least monthly, conduct an external audio, visual, and olfactory (AVO) inspection of thief hatches, closed vent systems, pumps, compressors, pressure relief devices, open-ended valves or lines, valves, flanges, connectors, piping, and associated equipment to identify defects and leaking components as specified in Subparagraphs (a) through (d) of Paragraph (1) of Subsection C of 20.2.50.116 NMAC; except that an owner or operator of a well site within 1,000 feet (as measured from the center of the well site to the applicable structure or area of public assembly) of an occupied area shall conduct the AVO inspection at least weekly.

(3) The owner or operator of the following facilities shall conduct an inspection using U.S. EPA method 21 or optical gas imaging (OGI) of thief hatches, closed vent systems, pumps, compressors, pressure relief devices, open-ended valves or lines,

valves, flanges, connectors, piping, and associated equipment to identify leaking components at a frequency determined according to the following schedules, and upon request by the department for good cause shown:

(a) for existing well sites and standalone tank batteries, the owner or operator shall comply with these requirements no later than two years from the effective date of this Part.

(b) for well sites and standalone tank batteries:

(i) annually at facilities with a PTE less than two tpy VOC;

(ii) semi-annually at facilities with a PTE equal to or greater than two tpy and less than five tpy VOC; and

(iii) quarterly at facilities with a PTE equal to or greater than five tpy VOC.

(c) for gathering and boosting stations and natural gas processing plants:

(i) quarterly at facilities with a PTE less than 25 tpy VOC; and

(ii) monthly at facilities with a PTE equal to or greater than 25 tpy VOC.

(d) For transmission compressor stations, quarterly or in compliance with the federal equipment leak and fugitive emissions monitoring requirements of New Source Performance Standards, 40 C.F.R. Part 60, as may be revised, so long as the federal equipment leak and fugitive emissions monitoring requirements are at least as stringent as the New Source Performance Standards OOOOa, 40 CFR Part 60, in existence as of the effective date of this Part.

(e) Quarterly at well sites within 1,000 feet of an occupied area.

(f) For existing wellhead only facilities, annual inspections shall be completed on the following schedule: thirty percent by January 1, 2024; sixty-five percent by January 1, 2025; and one-hundred percent by January 1, 2026.

(g) for inactive well sites:

(i) for well sites that are inactive on or before the effective date of this Part, annually beginning within six months of the effective date of this Part;

(ii) for well sites that become inactive after the effective date of this Part, annually beginning 30 days after the site becomes an inactive well site.

(4) Inspections using U.S. EPA method 21 shall meet the following requirements:

(a) the instrument shall be calibrated before each day of use by the procedures specified in U.S. EPA method 21 and the instrument manufacturer; and

(b) a leak is detected if the instrument records a measurement of 500 ppm or greater of hydrocarbons, and the measurement is not associated with normal equipment operation, such as pneumatic device actuation and crank case ventilation.

(5) Inspections using OGI shall meet the following requirements:

(a) the instrument shall comply with the specifications, daily instrument checks, and leak survey requirements set forth in Subparagraphs (1) through (3) of Paragraph (i) of 40 CFR 60.18; and

(b) a leak is detected if the emission images recorded by the OGI instrument are not associated with normal equipment operation, such as pneumatic device actuation or crank case ventilation.

(6) Components that are difficult, unsafe, or inaccessible to monitor, as determined by the following conditions, are not required to be inspected until it becomes feasible to do so:

(a) difficult to monitor components are those that require elevating the monitoring personnel more than two meters above a supported surface;

(b) unsafe to monitor components are those that cannot be monitored without exposing monitoring personnel to an immediate danger as a consequence of completing the monitoring; and

(c) inaccessible to monitor components are those that are buried, insulated, or obstructed by equipment or piping that prevents access to the components by monitoring personnel.

(7) Owners and operators of well sites must conduct an evaluation to determine applicability of Subparagraph (e) of Paragraph (3) of Subsection C of Section 20.2.50.116 NMAC within 30 days of constructing a new well site, and within 90 days of the effective date of this Part for existing well sites.

(8) An owner or operator conducting an evaluation pursuant to Paragraph (7) of Subsection C of Section 20.2.50.116 NMAC shall measure the distance from the latitude and longitude of each well at a well site to the following points for each type of occupied area:

(a) the property line for indoor or outdoor spaces associated with a school that students use commonly as part of their curriculum or extracurricular activities and outdoor venues or recreation areas;

(b) the property line for outdoor venues or recreation areas, such as a playground, permanent sports field, amphitheater, or other similar place of outdoor public assembly;

(c) the location of a building or structure used as a place of residency by a person, a family, or families; and

(d) the location of a commercial facility with five-thousand (5,000) or more square feet of building floor area that is operating and normally occupied during working hours.

(9) Injection well sites and temporarily abandoned well sites are not subject to the leak survey requirements of Paragraphs (3) through (6) of Subsection C of 20.2.50.116 NMAC.

(10) Prior to any monitoring event, the owner or operator shall date and time stamp the monitoring event.

D. Alternative equipment leak monitoring plans: An owner or operator may comply with the equipment leak requirements of Subsection C of 20.2.50.116 NMAC through an equally effective and enforceable alternative monitoring plan, which may include the use of alternative monitoring methods and technologies, as follows:

(1) An owner or operator may comply with an individual alternative monitoring plan, subject to the following requirements:

(a) the proposed alternative monitoring plan shall be submitted to the department on an application form provided by the department. Within 90 days of receipt, the department shall issue a letter approving or denying the requested alternative monitoring plan. An owner or operator shall comply with the default monitoring requirements of Section 20.2.50.116 NMAC and may not operate under an alternative monitoring plan until it has been approved by the department.

(b) the department may terminate an approved alternative monitoring plan if the department finds that the owner or operator failed to comply with a provision of the plan and failed to correct and disclose the violation to the department within 15 calendar days of identifying the violation.

(c) upon department denial or termination of an approved alternative monitoring plan, the owner or operator shall comply with the default monitoring requirements of Subsection C of 20.2.50.116 NMAC within 15 days.

(2) An owner or operator may comply with a pre-approved alternative monitoring plan maintained by the department, subject to the following requirements:

(a) the owner or operator shall notify the department in writing of the intent to conduct monitoring under a pre-approved alternative monitoring plan, and identify which pre-approved plan will be used, at least 15 days prior to conducting the first monitoring under that plan.

(b) the department may terminate the use of a pre-approved alternative monitoring plan by the owner or operator if the department finds that the owner or operator failed to comply with a provision of the plan and failed to correct and disclose the violation to the department within 15 calendar days of identifying the violation.

(c) upon department denial or termination of a pre-approved alternative monitoring plan, the owner or operator shall comply with the default monitoring requirements of Subsection C of 20.2.50.116 NMAC within 15 days.

E. Repair requirements: For a leak detected pursuant to monitoring conducted under 20.2.50.116 NMAC:

(1) the owner or operator shall place a visible tag on the leaking component not otherwise repaired at the time of discovery until the component has been repaired;

(2) leaks shall be repaired as soon as practicable but no later than 30 days from discovery;

(3) the equipment must be re-monitored no later than 15 days after the repair of the leak to demonstrate that it has been repaired;

(4) if the leak cannot be repaired within 30 days of discovery without a process unit shutdown, the leak may be designated "Repair delayed," the date of the next scheduled process unit shutdown must be identified, and the leak must be repaired before the end of the scheduled process unit shutdown or within 2 years, whichever is earlier; and

(5) if the leak cannot be repaired within 30 days of discovery due to shortage of parts, the leak may be designated "Repair delayed," and must be repaired within 15 days of resolution of such shortage.

F. Recordkeeping requirements:

(1) The owner or operator shall keep a record of the following for all AVO, RM 21, OGI, or alternative equipment leak monitoring inspections conducted as required under 20.2.50.116 NMAC, and shall provide the record to the department upon request:

(a) facility location (latitude and longitude);

- (b) time and date stamp, including GPS of the location, of any monitoring;
- (c) monitoring method (e.g. AVO, RM 21, OGI, approved alternative method);
- (d) name of the person(s) performing the inspection;
- (e) a description of any leak requiring repair or a note that no leak was found;

and

- (f) whether a visible tag was placed on the leak.

(2) The owner or operator shall keep the following record for any leak that is detected:

- (a) the date the leak is detected;

- (b) the date of attempt to repair;

(c) for a leak with a designation of "repair delayed" the following shall be recorded:

- (i) reason for delay if a leak is not repaired within the required number of days after discovery. If a delay is due to a parts shortage, a record documenting the attempt to order the parts and the unavailability due to a shortage is required;

- (ii) the date of next scheduled process unit shutdown by which the repair will be completed; and

- (iii) name of the person(s) who determined that the repair could not be implemented without a process unit shutdown.

- (d) date of successful leak repair;

- (e) date the leak was monitored after repair and the results of the monitoring;

and

- (f) a description of the component that is designated as difficult, unsafe, or inaccessible to monitor, an explanation stating why the component was so designated, and the schedule for repairing and monitoring the component.

(3) For a leak detected using OGI, the owner or operator shall keep records of the specifications, the daily instrument check, and the leak survey requirements specified at 40 CFR 60.18(i)(1)-(3).

(4) The owner or operator shall comply with the recordkeeping requirements in 20.2.50.112 NMAC.

G. Reporting requirements:

(1) The owner or operator shall certify the use of an alternative equipment leak monitoring plan under Subsection D of 20.2.50.116 NMAC to the department annually, if used.

(2) The owner or operator shall comply with the reporting requirements in 20.2.50.112 NMAC.

[20.2.50.116 NMAC - N, 08/05/2022]

20.2.50.117 NATURAL GAS WELL LIQUID UNLOADING:

A. Applicability: Liquid unloading operations resulting in the venting of natural gas at natural gas wells are subject to the requirements of 20.2.50.117 NMAC. Liquid unloading operations that do not result in the venting of any natural gas are not subject to this Part. Owners and operators of a natural gas well subject to this Part must comply with the standards set forth in Paragraph (1) of Subsection B of 20.2.50.117 NMAC within two years of the effective date of this Part.

B. Emission standards:

(1) The owner or operator of a natural gas well shall implement at least one of the following best management practices during the life of the well to avoid the need for venting of natural gas associated with liquid unloading:

- (a) use of a plunger lift;
- (b) use of artificial lift;
- (c) use of a control device;
- (d) use of an automated control system; or
- (e) other practices if approved by the department.

(2) The owner or operator of a natural gas well shall implement the following best management practices during venting associated with liquid unloading to minimize emissions, consistent with well site conditions and good engineering practices:

- (a) reduce wellhead pressure before blowdown or venting to atmosphere;
- (b) monitor manual venting associated with liquid unloading in close proximity to the well or via remote telemetry; and

(c) close vents to the atmosphere and return the well to normal production operation as soon as practicable.

C. Monitoring requirements:

(1) The owner or operator shall monitor the following parameters during venting associated with liquid unloading:

(a) wellhead pressure;

(b) flow rate of the vented natural gas (to the extent feasible); and

(c) duration of venting to the storage vessel, tank battery, or atmosphere.

(2) The owner or operator shall calculate the volume and mass of VOC emitted during a venting event associated with a liquid unloading event.

(3) The owner or operator shall comply with the monitoring requirements of 20.2.50.112 NMAC.

D. Recordkeeping requirements:

(1) The owner or operator shall keep the following records for liquid unloading:

(a) unique identification number and location (latitude and longitude) of the well;

(b) date of the unloading event;

(c) wellhead pressure;

(d) flow rate of the vented natural gas (to the extent feasible. If not feasible, the owner or operator shall use the estimated flow rate in the emission calculation);

(e) duration of venting to the storage vessel, tank battery, or atmosphere;

(f) a description of the best management practices used to minimize venting of VOC emissions during the life of the well and before and during the liquid unloading; and

(g) a calculation of the VOC emissions vented during a liquid unloading event based on the duration, calculated volume, and composition of the produced gas.

(2) The owner or operator shall comply with the recordkeeping requirements in 20.2.50.112 NMAC.

E. Reporting requirements: The owner or operator shall comply with the reporting requirements in 20.2.50.112 NMAC.

[20.2.50.117 NMAC - N, 08/05/2022]

20.2.50.118 GLYCOL DEHYDRATORS:

A. Applicability: Glycol dehydrators with a PTE equal to or greater than two tpy of VOC and located at well sites, tank batteries, gathering and boosting stations, natural gas processing plants, and transmission compressor stations are subject to the requirements of 20.2.50.118 NMAC.

B. Emission standards:

(1) Existing glycol dehydrators with a PTE equal to or greater than two tpy of VOC shall achieve a minimum combined capture and control efficiency of ninety-five percent of VOC emissions from the still vent and flash tank (if present) no later than two years after the effective date of this Part. If a combustion control device is used, the combustion control device shall have a minimum design combustion efficiency of ninety-eight percent.

(2) New glycol dehydrators with a PTE equal to or greater than two tpy of VOC shall achieve a minimum combined capture and control efficiency of ninety-five percent of VOC emissions from the still vent and flash tank (if present) upon startup. If a combustion control device is used, the combustion control device shall have a minimum design combustion efficiency of ninety-eight percent.

(3) The owner or operator of a glycol dehydrator shall comply with the following requirements:

(a) the still vent and flash tank emissions shall be routed at all times to the reboiler firebox, condenser, combustion control device, fuel cell, to a process point that either recycles or recompresses the VOC emissions or uses the emissions as fuel, or to a VRU that reinjects the VOC emissions back into the process stream or natural gas pipeline;

(b) if a VRU is used, it shall consist of a closed loop system of seals, ducts, and a compressor that reinjects the vapor into the process or the natural gas pipeline. The VRU shall be operational at least ninety-five percent of the time the facility is in operation, resulting in a minimum combined capture and control efficiency of ninety-five percent, which shall supersede any inconsistent requirements in 20.2.50.115 NMAC. The VRU shall be installed, operated, and maintained according to the manufacturer's specifications; and

(c) the still vent and flash tank emissions shall not be vented directly to the atmosphere during normal operation.

(4) An owner or operator complying with the requirements in Subsection B of 20.2.50.118 NMAC through use of a control device shall comply with the requirements in 20.2.50.115 NMAC.

(5) The requirements of Subsection B of 20.2.50.118 NMAC cease to apply when the actual annual VOC emissions from a new or existing glycol dehydrator are less than two tpy of VOC.

C. Monitoring requirements:

(1) The owner or operator of a glycol dehydrator shall conduct an annual extended gas analysis on the dehydrator inlet gas and calculate the uncontrolled and controlled VOC emissions in tpy.

(2) The owner or operator of a glycol dehydrator shall inspect the glycol dehydrator, including the reboiler and regenerator, and the control device or process the emissions are being routed, semi-annually to ensure it is operating as initially designed and in accordance with the manufacturer recommended operation and maintenance schedule.

(3) Prior to any monitoring event, the owner or operator shall date and time stamp the event, and the monitoring data entry shall be made in accordance with the requirements of this Part.

(4) An owner or operator complying with the requirements in Subsection B of 20.2.50.118 NMAC through the use of a control device shall comply with the monitoring requirements in 20.2.50.115 NMAC.

(5) Owners and operators shall comply with the monitoring requirements in 20.2.50.112 NMAC.

D. Recordkeeping requirements:

(1) The owner or operator of a glycol dehydrator shall maintain a record of the following:

(a) unique identification number and dehydrator location (latitude and longitude);

(b) glycol circulation rate, monthly natural gas throughput, and the date of the most recent throughput measurement;

(c) data and methodology used to estimate the PTE of VOC (must be a department approved calculation methodology);

(d) controlled and uncontrolled VOC emissions in tpy;

(e) type, make, model, and unique identification number of the control device or process the emissions are being routed;

(f) time and date stamp, including GPS of the location, of any monitoring;

(g) results of any equipment inspection, including maintenance or repair activities required to bring the glycol dehydrator into compliance; and

(h) a copy of the glycol dehydrator manufacturer specifications.

(2) An owner or operator complying with the requirements in Paragraph (1) or (2) of Subsection B of 20.2.50.118 NMAC through use of a control device as defined in this Part shall comply with the recordkeeping requirements in 20.2.50.115 NMAC.

(3) The owner or operator shall comply with the recordkeeping requirements in 20.2.50.112 NMAC.

E. Reporting requirements: The owner or operator shall comply with the reporting requirements in 20.2.50.112 NMAC.

[20.2.50.118 NMAC - N, 08/05/2022]

20.2.50.119 HEATERS:

A. Applicability: Natural gas-fired heaters with a rated heat input equal to or greater than 20 MMBtu/hour including heater treaters, heated flash separators, evaporator units, fractionation column heaters, and glycol dehydrator reboilers in use at well sites, tank batteries, gathering and boosting stations, natural gas processing plants, and transmission compressor stations are subject to the requirements of 20.2.50.119 NMAC.

B. Emission standards:

(1) Natural gas-fired heaters shall comply with the emission limits in table 1 of 20.2.50.119 NMAC.

Table 1 - EMISSION STANDARDS FOR NO_x AND CO

Date of Construction:	NO _x (ppmvd @ 3% O ₂)	CO (ppmvd @ 3% O ₂)
Constructed or reconstructed before the effective date of 20.2.50 NMAC	30	400
Constructed or reconstructed on or after the effective date of 20.2.50 NMAC	30	400

(2) Existing natural gas-fired heaters shall comply with the requirements of 20.2.50.119 NMAC no later than three years after the effective date of this Part.

(3) New natural gas-fired heaters shall comply with the requirements of 20.2.50.119 NMAC upon startup.

C. Monitoring requirements:

(1) The owner or operator shall:

(a) conduct emission testing for NO_x and CO within 180 days of the compliance date specified in Paragraph (2) or (3) of Subsection B of 20.2.50.119 NMAC and at least every two years thereafter.

(b) inspect, maintain, and repair the heater in accordance with the manufacturer specifications at least once every two years following the applicable compliance date specified in 20.2.50.119 NMAC. The inspection, maintenance, and repair shall include the following:

(i) inspecting the burner and cleaning or replacing components of the burner as necessary;

(ii) inspecting the flame pattern and adjusting the burner as necessary to optimize the flame pattern consistent with the manufacturer specifications;

(iii) inspecting the AFR controller and ensuring it is calibrated and functioning properly, if present;

(iv) optimizing total emissions of CO consistent with the NO_x requirement and manufacturer specifications, and good combustion practices; and

(v) measuring the concentrations in the effluent stream of CO in ppmvd and O₂ in volume percent before and after adjustments are made in accordance with Subparagraph (c) of Paragraph (2) of Subsection C of 20.2.50.119 NMAC.

(2) The owner or operator shall comply with the following periodic testing requirements:

(a) conduct three test runs of at least 20-minutes duration within ten percent of one-hundred percent peak, or the highest achievable, load;

(b) determine NO_x and CO emissions and O₂ concentrations in the exhaust with a portable analyzer used and maintained in accordance with the manufacturer specifications and following the procedures specified in the current version of ASTM D6522;

(c) if the measured NOX or CO emissions concentrations are exceeding the emissions limits of table 1 of 20.2.50.119 NMAC, the owner or operator shall repeat the inspection and tune-up in Subparagraph (b) of Paragraph (1) of Subsection C of 20.2.50.119 NMAC within 30 days of the periodic testing; and

(d) if at any time the heater is operated in excess of the highest achievable load in a prior test plus ten percent, the owner or operator shall perform the testing specified in Subparagraph (a) of Paragraph (2) of Subsection C of 20.2.50.119 NMAC within 60 days from the anomalous operation.

(3) When conducting periodic testing of a heater, the owner or operator shall follow the procedures in Paragraph (2) of Subsection C of 20.2.50.119 NMAC. An owner or operator may deviate from those procedures by submitting a written request to use an alternative procedure to the department at least 60 days before performing the periodic testing. In the alternative procedure request, the owner or operator must demonstrate the alternative procedure's equivalence to the standard procedure. The owner or operator must receive written approval from the department prior to conducting the periodic testing using an alternative procedure.

(4) Prior to a monitoring event, the owner or operator shall date and time stamp the event, and the required monitoring data entry shall be made in accordance with this Part.

(5) The owner or operator shall comply with the monitoring requirements of 20.2.50.112 NMAC.

D. Recordkeeping requirements: The owner or operator shall maintain a record of the following:

(1) unique identification number and location (latitude and longitude) of the heater;

(2) summary of the complete test report and the results of periodic testing;

(3) inspections, testing, maintenance, and repairs, which shall include at a minimum:

(a) the date and time stamp, including GPS of the location, of the inspection, testing, maintenance, or repair conducted;

(b) name of the person(s) conducting the inspection, testing, maintenance, or repair;

(c) concentrations in the effluent stream of CO in ppmv and O₂ in volume percent; and

(d) the results of the inspections and any the corrective action taken.

(4) The owner or operator shall comply with the recordkeeping requirements in 20.2.50.112 NMAC.

E. Reporting requirements: The owner or operator shall comply with the reporting requirements in 20.2.50.112 NMAC.

[20.2.50.119 NMAC - N, 08/05/2022]

20.2.50.120 HYDROCARBON LIQUID TRANSFERS:

A. Applicability: Hydrocarbon liquid transfers located at existing well sites, standalone tank batteries, gathering and boosting stations with one or more controlled storage vessels, natural gas processing plants, or transmission compressor stations are subject to the requirements of 20.2.50.120 NMAC within two years of the effective date of this Part. Hydrocarbon liquid transfers at existing gathering and boosting stations (including associated tank batteries) without any controlled storage vessels are subject to the requirements of 20.2.50.120 NMAC on the schedule specified in Paragraph 1 of Subsection B of 20.2.50.123 NMAC. Hydrocarbon liquid transfers located at new well sites, standalone tank batteries, gathering and boosting stations, natural gas processing plants, or transmission compressor stations are subject to the requirements of 20.2.50.120 NMAC upon startup. The following facilities and operations are not subject to the requirements of this Section:

(1) Any facility connected to an oil sales pipeline that is routinely used for hydrocarbon liquid transfers;

(2) Well sites, standalone tank batteries, gathering and boosting stations, natural gas processing plants, or transmission compressor stations not connected to an oil sales pipeline that load out hydrocarbon liquids to trucks fewer than thirteen (13) times in a calendar year; and

(3) Transfers of hydrocarbon liquid from a transfer vessel to a storage vessel subject to the emission standards in 20.2.50.123 NMAC.

B. Emission standards:

(1) The owner or operator of a hydrocarbon liquid transfer operation shall use vapor balance, vapor recovery, or a control device to control VOC emissions by at least ninety-five percent, when transferring hydrocarbon liquid from a storage vessel to a tanker truck or tanker railcar for transport. If a combustion control device is used, the combustion device shall have a minimum design combustion efficiency of ninety-eight percent.

(2) An owner, operator, or personnel conducting the hydrocarbon liquid transfer using vapor balance shall:

(a) transfer the vapor displaced from the transfer truck or railcar being loaded back to the storage vessel being emptied via a pipe or hose connected before the start of the transfer operation. If multiple storage vessels are manifolded together in a tank battery, the vapor may be routed back to any storage vessel in the tank battery;

(b) ensure that the transfer does not begin until the vapor collection and return system is properly connected;

(c) inspect connector pipes, hoses, couplers, valves, and pressure relief devices for leaks;

(d) check the hydrocarbon liquid and vapor line connections for proper connections before commencing the transfer operation; and

(e) operate transfer equipment at a pressure that is less than the pressure relief valve setting of the receiving transport vehicle or storage vessel.

(3) Connector pipes and couplers shall be inspected and maintained to ensure there are no liquid leaks.

(4) Connections of hoses and pipes used during hydrocarbon liquid transfers shall be supported on drip trays that collect any leaks, and the materials collected shall be returned to the process or disposed of in a manner compliant with state law.

(5) Liquid leaks that occur shall be cleaned and disposed of in a manner that minimizes emissions to the atmosphere, and the material collected shall be returned to the process or disposed of in a manner compliant with state law.

(6) An owner or operator complying with Paragraph (1) of Subsection B of 20.2.50.120 NMAC through use of a control device shall comply with the control device requirements in 20.2.50.115 NMAC.

C. Monitoring requirements:

(1) The owner, operator, or their designated representative shall visually inspect the hydrocarbon liquid transfer equipment monthly at staffed locations and semi-annually at unstaffed locations to ensure that hydrocarbon liquid transfer lines, hoses, couplings, valves, and pipes are not dripping or leaking. At least once per calendar year, the inspection shall occur during a transfer operation. Leaking components shall be repaired to prevent dripping or leaking before the next transfer operation, or measures must be implemented to mitigate leaks until the necessary repairs are completed.

(2) The owner or operator of a hydrocarbon liquid transfer operation controlled by a control device must follow manufacturer specifications for the device.

(3) Owners and operators complying with Paragraph (1) of Subsection B of 20.2.50.120 NMAC through use of a control device shall comply with the monitoring requirements in 20.2.50.115 NMAC.

(4) Prior to any monitoring event, the owner or operator shall date and time stamp the event, and the monitoring data entry shall be made in accordance with the requirements of this Part.

(5) The owner or operator shall comply with the monitoring requirements in 20.2.50.112 NMAC.

D. Recordkeeping requirements:

(1) The owner or operator shall maintain a record of the following:

(a) the location of the facility;

(b) if using a control device, the type, make, and model of the control device;

(c) the date and time stamp, including GPS of the location, of any inspection;

(d) the name of the person(s) conducting the inspection;

(e) a description of any problem observed during the inspection; and

(f) the results of the inspection and a description of any repair or corrective action taken.

(2) The owner or operator shall maintain a record for each site of the annual total hydrocarbon liquid transferred and annual total VOC emissions. Each calendar year, the owner or operator shall create a company-wide record summarizing the annual total hydrocarbon liquid transferred and the annual total calculated VOC emissions.

(3) The owner or operator shall comply with the recordkeeping requirements in 20.2.50.112 NMAC.

E. Reporting requirements: The owner or operator shall comply with the reporting requirements in 20.2.50.112 NMAC.

[20.2.50.120 NMAC - N, 08/05/2022]

20.2.50.121 PIG LAUNCHING AND RECEIVING:

A. Applicability: Individual pipeline pig launcher and receiver operations with a PTE equal to or greater than one tpy VOC located within the property boundary of, and under common ownership or control with, well sites, tank batteries, gathering and boosting stations, natural gas processing plants, and transmission compressor stations are subject to the requirements of 20.2.50.121 NMAC.

B. Emission standards:

(1) Owners and operators of affected pipeline pig launcher and receiver operations shall capture and reduce VOC emissions from pigging operations by at least ninety-five percent within two years of the effective date of this Part. If a combustion control device is used, the combustion device shall have a minimum design combustion efficiency of ninety-eight percent.

(2) The owner or operator conducting an affected pig launching and receiving operation shall:

(a) employ best management practices to minimize the liquid present in the pig receiver chamber and to minimize emissions from the pig receiver chamber to the atmosphere after receiving the pig in the receiving chamber and before opening the receiving chamber to the atmosphere;

(b) employ a method to minimize emissions, such as installing a liquid ramp or drain, routing a high-pressure chamber to a low-pressure line or vessel, using a ball valve type chamber, or using multiple pig chambers;

(c) recover and dispose of receiver liquid in a manner that minimizes emissions to the atmosphere to the extent practicable; and

(d) ensure that the material collected is returned to the process or disposed of in a manner compliant with state law.

(3) The emission standards in Paragraphs (1) and (2) of Subsection B of 20.2.50.121 NMAC cease to apply to an individual pipeline pig launching and receiving operation if the actual annual VOC emissions of the launcher or receiver operation are less than one tpy of VOC.

(4) An owner or operator complying with Paragraphs (1) or (2) of Subsection B of 20.2.50.121 NMAC through use of a control device shall comply with the control device requirements in 20.2.50.115 NMAC.

C. Monitoring requirements:

(1) The owner or operator of an affected pig launching and receiving site shall inspect the equipment for leaks using AVO, RM 21, or OGI on either:

(a) a monthly basis if pigging operations at a site occur on a monthly basis or more frequently; or

(b) prior to the commencement and after the conclusion of the pig launching or receiving operation, if less frequent.

(2) The monitoring shall be performed using the methodologies outlined in Subsection C of 20.2.50.116 NMAC as applicable and at the frequency required in Paragraph (1) of Subsection C of 20.2.50.121 NMAC. The monitoring shall be performed when the pig trap is under pressure.

(3) An owner or operator complying with Paragraphs (1) or (2) of Subsection B of 20.2.50.121 NMAC through use of a control device shall comply with the monitoring requirements in 20.2.50.115 NMAC.

(4) The owner or operator shall comply with the monitoring requirements in 20.2.50.112 NMAC.

D. Recordkeeping requirements: In addition to complying with the recordkeeping requirements in 20.2.50.112 NMAC, the owner or operator of an affected pig launching and receiving site shall maintain a record of the following:

(1) the pigging operation, including the location, date, and time of the pigging operation;

(2) the data and methodology used to estimate the actual emissions to the atmosphere and used to estimate the PTE;

(3) date and time of any monitoring and the results of the monitoring; and

(4) the type of control device and its make and model.

E. Reporting requirements: The owner or operator shall comply with the reporting requirements in 20.2.50.112 NMAC.

[20.2.50.121 NMAC - N, 08/05/2022]

20.2.50.122 PNEUMATIC CONTROLLERS AND PUMPS:

A. Applicability: Natural gas-driven pneumatic controllers and pumps located at well sites, tank batteries, gathering and boosting stations, natural gas processing plants, and transmission compressor stations are subject to the requirements of 20.2.50.122 NMAC.

B. Emission standards:

(1) A new natural gas-driven pneumatic controller or pump shall comply with the requirements of 20.2.50.122 NMAC upon startup.

(2) An existing natural gas-driven pneumatic pump shall comply with the requirements of 20.2.50.122 NMAC within three years of the effective date of this Part.

(3) An owner or operator shall ensure that its existing natural gas-driven pneumatic controllers comply with the requirements of 20.2.50.122 NMAC according to the following schedule:

Table 1 – WELL SITES, STANDALONE TANK BATTERIES, GATHERING AND BOOSTING STATIONS

Total Historic Percentage of Non-Emitting Controllers	Total Required Percentage of Non-Emitting Controllers by January 1, 2024	Total Required Percentage of Non-Emitting Controllers by January 1, 2027	Total Required Percentage of Non-Emitting Controllers by January 1, 2030
> 75%	80%	85%	90%
> 60-75%	80%	85%	90%
> 40-60%	65%	70%	80%
> 20-40%	45%	70%	80%
0-20%	25%	65%	80%

Table 2 – TRANSMISSION COMPRESSOR STATIONS AND GAS PROCESSING PLANTS

Total Historic Percentage of Non-Emitting Controllers	Total Required Percentage of Non-Emitting Controllers by January 1, 2024	Total Required Percentage of Non-Emitting Controllers by January 1, 2027	Total Required Percentage of Non-Emitting Controllers by January 1, 2030
> 75%	80%	95%	98%
> 60-75%	80%	95%	98%
> 40-60%	65%	95%	98%
> 20-40%	50%	95%	98%
0-20%	35%	95%	98%

(4) Standards for natural gas-driven pneumatic controllers:

(a) new pneumatic controllers shall have an emission rate of zero. A natural gas driven pneumatic controller replacing an existing natural gas driven pneumatic controller at an existing facility is an existing pneumatic controller for purposes of Section 20.2.50.122 NMAC.

(b) owners and operators of existing pneumatic controllers shall meet the required percentage of non-emitting controllers within the deadlines in tables 1 and 2 of

Paragraph (3) of Subsection B of 20.2.50.122 NMAC, and shall comply with the following:

(i) by July 1, 2023, the owner or operator shall determine the total controller count for all controllers subject to each table separately at all of the owner or operator's affected facilities that commenced construction before the effective date of this Part. The total controller count for each table must include all emitting pneumatic controllers and all non-emitting pneumatic controllers, except that pneumatic controllers necessary for a safety or process purpose that cannot otherwise be met without emitting natural gas shall not be included in the total controller count. This final number is the total historic controller count. Controllers identified as required for a safety or process purpose after July 1, 2023, shall not affect the total historic controller count.

(ii) determine which controllers in the total controller count for each table are non-emitting and sum the total number of non-emitting controllers and designate those as total historic non-emitting controllers.

(iii) determine the total historic non-emitting percent of controllers for each table by dividing the total historic non-emitting controller count by the total historic controller count and multiplying by 100.

(iv) based on the percent calculated in (iii) above for each table, the owner or operator shall determine which provisions of tables 1 and 2 of Paragraph (3) of Subsection B of 20.2.50.122 NMAC apply and the replacement schedule the owner or operator must meet.

(v) if an owner or operator meets at least seventy-five percent total non-emitting controllers using the calculation methodology in Subparagraph (b) of Paragraph (4) of Subsection B of 20.2.50.122 NMAC by January 1, 2025, for either or both table 1 or table 2, the owner or operator is not thereafter subject to the requirements of tables 1 and/or 2 of Paragraph (3) of Subsection B of 20.2.50.122 NMAC.

(vi) if after January 1, 2027, an owner or operator's remaining pneumatic controllers are not cost-effective to retrofit, the owner or operator may submit a cost analysis of retrofitting those remaining units to the department. The department shall review the cost analysis and determine whether those units qualify for a waiver from meeting additional retrofit requirements.

(c) owners and operators of existing natural gas driven pneumatic controllers shall demonstrate compliance with tables 1 and 2 of Paragraph (3) of Subsection B of 20.2.50.122 NMAC, on January 1, 2024, January 1, 2027, and January 1, 2030, as follows:

(i) determine which controllers are emitting (excluding pneumatic controllers necessary for safety or process reasons pursuant to Subparagraph (d) of

Paragraph (4) of Subsection B of 20.2.50.122 NMAC) and sum the total number of emitting controllers for table 1 and table 2 facilities separately.

(ii) determine the percentage of non-emitting controllers by using the following equation for table 1 and table 2 facilities separately:

$$\text{Total Percentage of Non-Emitting Controllers} = 100 - ((\text{total emitting controllers} / \text{total historic controller count}) \times 100)$$

(iii) compliance is demonstrated if the Total Percentage of Non-Emitting Controllers calculated pursuant to Subparagraph (c) of Paragraph (4) of Subsection B of 20.2.50.122 NMAC is less than or equal to the value for that year in the Total Historic Percentage of Non-Emitting Controllers row (as calculated pursuant to Subparagraph (b)(i)-(iv) of Paragraph (4) of Subsection B of 20.2.50.122 NMAC) in table 1 or table 2, as applicable, of Paragraph (3) of Subsection B of 20.2.50.122 NMAC.

(d) No later than January 1, 2024, a pneumatic controller with a bleed rate greater than six standard cubic feet per hour is permitted when the owner or operator has demonstrated that a higher bleed rate is required based on functional needs, including response time, safety, and positive actuation. An owner or operator that seeks to maintain operation of an emitting pneumatic controller as excepted for process or safety reasons under Subparagraph (a)(i) of Paragraph (4) of Subsection B of 20.2.50.122 NMAC must prepare and document the justification for the safety or process purpose prior to the installation of a new emitting controller or the retrofit of an existing controller. The justification shall be certified by a qualified professional or inhouse engineer.

(e) Temporary pneumatic controllers that emit natural gas and are used for well abandonment activities or used prior to or through the end of flowback, and pneumatic controllers used as emergency shutdown devices located at a well site, are not subject to the requirements of Subsection B of 20.2.50.122 NMAC.

(f) Temporary or portable pneumatic controllers that emit natural gas and are on-site for less than 90 days are not subject to the requirements of Subsection B of 20.2.50.122 NMAC.

(5) Standards for natural gas-driven pneumatic diaphragm pumps:

(a) new pneumatic diaphragm pumps located at natural gas processing plants shall have an emission rate of zero.

(b) new pneumatic diaphragm pumps located at well sites, tank batteries, gathering and boosting stations, or transmission compressor stations with access to commercial line electrical power shall have an emission rate of zero.

(c) existing pneumatic diaphragm pumps located at well sites, tank batteries, gathering and boosting stations, natural gas processing plants, or transmission compressor stations with access to commercial line electrical power shall have an emission rate of zero within two years of the effective date of this Part.

(d) owners and operators of pneumatic diaphragm pumps located at well sites, tank batteries, gathering and boosting stations, or transmission compressor stations without access to commercial line electrical power shall reduce VOC emissions from the pneumatic diaphragm pumps by ninety-five percent if it is technically feasible to route emissions to a control device, fuel cell, or process. If there is a control device available onsite but it is unable to achieve a ninety-five percent emission reduction, and it is not technically feasible to route the pneumatic diaphragm pump emissions to a fuel cell or process, the owner or operator shall route the pneumatic diaphragm pump emissions to the control device within two years of the effective date of this Part.

C. Monitoring requirements:

(1) Pneumatic controllers or diaphragm pumps not using natural gas or other hydrocarbon gas as a motive force are not subject to the monitoring requirements in Subsection C of 20.2.50.122 NMAC.

(2) No later than January 1, 2023, the owner or operator of a facility with one or more natural gas-driven pneumatic controllers subject to the deadlines set forth in tables 1 and 2 of Paragraph (3) of Subsection B of 20.2.50.122 NMAC shall monitor the compliance status of each subject pneumatic controller at each facility.

(3) The owner or operator of a natural gas-driven pneumatic controller shall, on a monthly basis, conduct an AVO or OGI inspection, and shall also inspect the pneumatic controller, perform necessary maintenance (such as cleaning, tuning, and repairing a leaking gasket, tubing fitting and seal; tuning to operate over a broader range of proportional band; eliminating an unnecessary valve positioner), and maintain the pneumatic controller according to manufacturer specifications to ensure that the VOC emissions are minimized.

(4) Within two years of the effective date of this Part, the owner or operator's data systems shall contain the following for each in-service natural gas-driven pneumatic controller:

- (a) natural gas-driven pneumatic controller unique identification number;
- (b) type of controller (continuous or intermittent);
- (c) if continuous, design continuous bleed rate in standard cubic feet per hour;

(d) if intermittent, bleed volume per intermittent bleed in standard cubic feet;
and

(e) if continuous, design annual bleed rate in standard cubic feet per year.

(5) Upon the effective date specified for the facility in 20.2.50.116 NMAC, the owner or operator of a natural gas-driven pneumatic diaphragm pump shall, on a monthly basis, conduct an AVO or OGI inspection and shall also inspect the pneumatic pump and perform necessary maintenance, and maintain the pneumatic pump according to manufacturer specifications to ensure that the VOC emissions are minimized.

(6) The owner or operator of a natural gas-driven pneumatic controller shall comply with the requirements in Paragraph (3) of Subsection C or Subsection D of 20.2.50.116 NMAC applicable to the facility type at which the pneumatic controller is installed on the effective date specified in 20.2.50.116 NMAC. During instrument inspections, operators shall use RM 21, OGI, or alternative instruments used under Subsection D of 20.2.50.116 NMAC to verify that intermittent controllers are not emitting when not actuating. Any intermittent controller emitting when not actuating shall be repaired consistent with Subsection E of 20.2.50.116 NMAC.

(7) Prior to any monitoring event, the owner or operator shall date and time stamp the event, and the monitoring data entry shall be made in accordance with the requirements of this Part.

(8) The owner or operator shall comply with the monitoring requirements in 20.2.50.112 NMAC.

D. Recordkeeping requirements:

(1) Non-emitting pneumatic controllers and diaphragm pumps are not subject to the recordkeeping requirements in Subsection D of 20.2.50.122 NMAC.

(2) The owner or operator shall maintain a record of the total controller count for all controllers at all of the owner or operator's affected facilities that commenced operation before the effective date of this Part. The total controller count must include all emitting and non-emitting pneumatic controllers.

(3) The owner or operator shall maintain a record of the total count of natural gas-driven pneumatic controllers necessary for a safety or process purpose that cannot otherwise be met without emitting VOC.

(4) The owner or operator of a natural gas-driven pneumatic controller subject to the requirements in tables 1 and 2 of Paragraph (3) of Subsection B of 20.2.50.122 NMAC shall generate a schedule for meeting the compliance deadlines for each pneumatic controller. The owner or operator shall keep a record of the compliance

status of each subject controller. On or before January 1, 2024, January 1, 2027 and January 1, 2030, the owner or operator shall make and retain the compliance demonstration set forth in Subparagraph (c) of Paragraph (4) of Subsection B of 20.2.50.122 NMAC.

(5) The owner or operator shall maintain an electronic record for each natural gas-driven pneumatic controller. The record shall include the following:

- (a) pneumatic controller unique identification number;
- (b) time and date stamp, including GPS of the location, of any monitoring;
- (c) name of the person(s) conducting the inspection;
- (d) AVO or OGI inspection result;
- (e) AVO or OGI level discrepancy in continuous or intermittent bleed rate;
- (f) record of the controller type, bleed rate, or bleed volume required in Subparagraphs (b), (c), (d), and (e) of Paragraph (4) of Subsection C of 20.2.50.122 NMAC.
- (g) maintenance date and maintenance activity; and
- (h) a record of the justification and certification required in Subparagraph (c) of Paragraph (4) of Subsection B of 20.2.50.122 NMAC.

(6) The owner or operator of a natural gas-driven pneumatic controller with a bleed rate greater than six standard cubic feet per hour shall maintain a record documenting why a bleed rate greater than six scf/hr is necessary, as required in Subsection B of 20.2.50.122 NMAC. This demonstration shall be completed by July 1, 2023 for controllers with a bleed rate greater than six scf/hr and as necessary for controllers with a bleed rate less than or equal to six scf/hr.

(7) The owner or operator shall maintain a record for a natural gas-driven pneumatic pump with an emission rate greater than zero and the associated pump number at the facility. The record shall include:

- (a) for a natural gas-driven pneumatic diaphragm pump in operation less than 90 days per calendar year, a record for each day of operation during the calendar year.
- (b) a record of any control device designed to achieve at least ninety-five percent emission reduction, including an evaluation or manufacturer specifications indicating the percentage reduction the control device is designed to achieve.

(c) records of the engineering assessment and certification by a qualified professional or inhouse engineer that routing pneumatic pump emissions to a control device, fuel cell, or process is technically infeasible.

(8) The owner or operator shall comply with the recordkeeping requirements in 20.2.50.112 NMAC.

E. Reporting requirements: The owner or operator shall comply with the reporting requirements in 20.2.50.112 NMAC.

[20.2.50.122 NMAC - N, 08/05/2022]

20.2.50.123 STORAGE VESSELS:

A. Applicability: New storage vessels with a PTE equal to or greater than two tpy of VOC, existing storage vessels with a PTE equal to or greater than three tpy of VOC in multi-tank batteries, and existing storage vessels with a PTE equal to or greater than four tpy of VOC in single tank batteries are subject to the requirements of 20.2.50.123 NMAC. Storage vessels in multi-tank batteries manifolded together such that all vapors are shared between the headspace of the storage vessels and are routed to a common outlet or endpoint may determine an individual storage vessel PTE by averaging the emissions across the total number of storage vessels. Storage vessels associated with produced water management units are required to comply with this Section to the extent specified in Subsection B of Section 20.2.50.126 NMAC.

B. Emission standards:

(1) An existing storage vessel subject to this Section shall have a combined capture and control of VOC emissions of at least ninety-five percent according to the following schedule. If a combustion control device is used, the combustion device shall have a minimum design combustion efficiency of ninety-eight percent.

(a) By January 1, 2025, an owner or operator shall ensure at least 30% of the company's existing storage vessels are controlled;

(b) By January 1, 2027, an owner or operator shall ensure at least an additional 35% of the company's existing storage vessels are controlled; and

(c) By January 1, 2029, an owner or operator shall ensure the company's remaining existing storage vessels are controlled.

(2) A new storage vessel subject to this Section shall have a combined capture and control of VOC emissions of at least ninety-five percent upon startup. If a combustion control device is used, the combustion device shall have a minimum design combustion efficiency of ninety-eight percent.

(3) The emission standards in Subsection B of 20.2.50.123 NMAC cease to apply to a storage vessel if the actual annual VOC emissions decrease to less than two tpy.

(4) If a control device is not installed by the date specified in Paragraphs (1) and (2) of Subsection B of 20.2.50.123 NMAC, an owner or operator may comply with Subsection B of 20.2.50.123 NMAC by shutting in the well supplying the storage vessel by the applicable date, and not resuming production from the well until the control device is installed and operational.

(5) The owner or operator of a new or existing storage vessel with a thief hatch shall ensure that the thief hatch is capable of opening sufficiently to relieve overpressure in the vessel and to automatically close once the vessel overpressure is relieved. Any pressure relief device installed must automatically close once the vessel overpressure is relieved.

(6) An owner or operator complying with Paragraphs (1) and (2) of Subsection B of 20.2.50.123 NMAC through use of a control device shall comply with the control device operational requirements in 20.2.50.115 NMAC.

C. Storage vessel measurement requirements: Owners and operators of new storage vessels required to be controlled pursuant to this Part at well sites, tank batteries, gathering and boosting stations, or natural gas processing plants shall use a storage vessel measurement system to determine the quantity of liquids in the storage vessel(s). New tank batteries receiving an annual average of 200 bbls oil/day or more with available grid power shall be outfitted with a lease automated custody transfer (LACT) unit(s).

(1) The owner or operator shall keep thief hatches (or other access points to the vessel) and pressure relief devices on storage vessels closed and latched during activities to determine the quantity of liquids in the storage vessel(s), except as necessary for custody transfer. Tank batteries equipped with LACT units shall use the LACT unit measurements in lieu of field testing of quantity and quality except in case of malfunction. Nothing in this paragraph shall be construed to prohibit the opening of thief hatches, pressure relief devices, or any other openings or access points to perform maintenance or similar activities designed to ensure the safety or proper operation of the storage vessel(s) or related equipment or processes. Where opening a thief hatch is necessary, owners and operators of new and existing storage vessels shall minimize the time the thief hatch is open.

(2) The owner or operator may inspect, test, and calibrate the storage vessel measurement system either semiannually, or as directed by the Bureau of Land Management (see 43 C.F.R. Section 374.6(b)(5)(ii)(B) (November 17, 2016)) or system manufacturer. Opening a thief hatch if required to inspect, test, or calibrate the vessel measurement system is not a violation of Paragraph (1) of this Subsection.

(3) The owner or operator shall install signage at or near the storage vessel that indicates which equipment and method(s) are used and the appropriate and necessary operating procedures for that system.

(4) The owner or operator shall develop and implement an annual training program for employees and third parties conducting activities subject to this Subsection that includes, at a minimum, operating procedures for each type of system.

(5) The owner or operator must make and retain the following records for at least two years and make such records available to the department upon request:

(a) date of construction of the storage vessel or facility;

(b) description of the storage vessel measurement system used to comply with this Subsection;

(c) date(s) of storage vessel measurement system inspections, testing, and calibrations that require opening the thief hatch pursuant to Paragraph (1) of this Subsection;

(d) manufacturer specifications regarding storage vessel measurement system inspections and/or calibrations, if followed pursuant to Paragraph (2) of this Subsection; and

(e) records of the annual training program, including the date and names of persons trained.

D. Monitoring requirements: No later than January 1, 2023, the owner or operator of a storage vessel shall:

(1) on a monthly basis, monitor, calculate, or estimate, the total monthly liquid throughput (in barrels) and the upstream separator pressure (in psig) if the storage vessel is directly downstream of a separator. When a storage vessel is unloaded less frequently than monthly, the throughput and separator pressure monitoring shall be conducted before the storage vessel is unloaded;

(2) conduct an AVO inspection on a weekly basis. If the storage vessel is unloaded less frequently than weekly, the AVO inspection shall be conducted before the storage vessel is unloaded;

(3) inspect the storage vessel monthly to ensure compliance with the requirements of 20.2.50.123 NMAC. The inspection shall include a check to ensure the vessel does not have a leak;

(4) prior to any monitoring event, date and time stamp the event and enter the monitoring data in accordance with the requirements of this Part;

(5) comply with the monitoring requirements in 20.2.50.115 NMAC if using a control device to comply with the requirements in Paragraphs (1) and (2) of Subsection B of 20.2.50.123 NMAC; and

(6) comply with the monitoring requirements of 20.2.50.112 NMAC.

E. Recordkeeping requirements: No later than January 1, 2023, the owner or operator of a storage vessel shall comply with the following requirements:

(1) Monthly, maintain a record for each storage vessel of the following:

(a) unique identification number and location (latitude and longitude);

(b) monitored, calculated, or estimated monthly liquid throughput;

(c) the upstream separator pressure, if a separator is present;

(d) the data and methodology used to calculate the actual emissions of VOC (tpy);

(e) the controlled and uncontrolled VOC emissions (tpy); and

(f) the type, make, model, and identification number of any control device.

(2) Verify each record of liquid throughput by dated liquid level measurements, a dated delivery receipt from the purchaser of the hydrocarbon liquid, the metered volume of hydrocarbon liquid sent downstream, or other proof of transfer.

(3) Make a record of the inspections required in Subsections C and D of 20.2.50.123 NMAC, including:

(a) the date and time stamp, including GPS of the location, of the inspection;

(b) the person(s) conducting the inspection;

(c) a description of any problem observed during the inspection; and

(d) a description and date of any corrective action taken.

(4) Comply with the recordkeeping requirements in 20.2.50.115 NMAC if complying with the requirements in Paragraphs (1) and (2) of Subsection B of 20.2.50.123 NMAC through use of a control device.

(5) The owner or operator shall comply with the recordkeeping requirements in 20.2.50.112 NMAC.

F. Reporting requirements:

(1) An owner or operator complying with the requirements in Paragraphs (1) and (2) of Subsection B of 20.2.50.123 NMAC through use of a control device shall comply with the reporting requirements in 20.2.50.115 NMAC.

(2) The owner or operator shall comply with the reporting requirements in 20.2.50.112 NMAC.

[20.2.50.123 NMAC - N, 08/05/2022]

20.2.50.124 WELL WORKOVERS:

A. Applicability: Workovers performed at oil and natural gas wells are subject to the requirements of 20.2.50.124 NMAC as of the effective date of this Part.

B. Emission standards: The owner or operator of an oil or natural gas well shall use the following best management practices during a workover to minimize emissions, consistent with the well site condition and good engineering or operational practices:

(1) reduce wellhead pressure before blowdown to minimize the volume of natural gas vented;

(2) monitor manual venting at the well until the venting is complete; and

(3) route natural gas to the sales line, if possible.

C. Monitoring requirements:

(1) The owner or operator shall monitor the following parameters during a workover:

(a) wellhead pressure;

(b) flow rate of the vented natural gas (to the extent feasible); and

(c) duration of venting to the atmosphere.

(2) The owner or operator shall calculate the estimated volume and mass of VOC vented during a workover.

(3) The owner or operator shall comply with the monitoring requirements in 20.2.50.112 NMAC.

D. Recordkeeping requirements:

- (1) The owner or operator shall keep the following record for a workover:
 - (a) unique identification number and location (latitude and longitude) of the well;
 - (b) date the workover was performed;
 - (c) wellhead pressure;
 - (d) flow rate of the vented natural gas to the extent feasible, and if measurement of the flow rate is not feasible, the owner or operator shall use the maximum potential flow rate in the emission calculation;
 - (e) duration of venting to the atmosphere;
 - (f) description of the best management practices used to minimize release of VOC emissions before and during the workover;
 - (g) calculation of the estimated VOC emissions vented during the workover based on the duration, volume, and gas composition; and
 - (h) the method of notification to the public and proof that notification was made to the affected public.

(2) The owner or operator shall comply with the recordkeeping requirements in 20.2.50.112 NMAC.

E. Reporting requirements:

(1) The owner or operator shall comply with the reporting requirements in 20.2.50.112 NMAC.

(2) If it is not feasible to prevent VOC emissions from being emitted to the atmosphere from a workover event, the owner or operator shall notify by certified mail, or by other effective means of notice so long as the notification can be documented, all residents located within one-quarter mile of the well of the planned workover at least three calendar days before the workover event.

(3) If the workover is needed for routine or emergency downhole maintenance to restore production lost due to upsets or equipment malfunction, the owner or operator shall notify all residents located within one-quarter mile of the well of the planned workover at least 24 hours before the workover event.

[20.2.50.124 NMAC - N, 08/05/2022]

20.2.50.125 SMALL BUSINESS FACILITIES:

A. Applicability: Small business facilities as defined in this Part are subject to Sections 20.2.50.125 NMAC and 20.2.50.127 NMAC of this Part. Small business facilities are not subject to any other requirements of this Part unless specifically identified in 20.2.50.125 NMAC.

B. General requirements:

(1) The owner or operator shall ensure that all equipment is operated and maintained consistent with manufacturer specifications, and good engineering and maintenance practices. The owner or operator shall keep manufacturer specifications and maintenance practices on file and make them available to the department upon request.

(2) The owner or operator shall calculate the VOC and NO_x emissions from the facility on an annual basis. The calculation shall be based on the actual production or processing rates of the facility.

(3) The owner or operator shall maintain a database of company-wide VOC and NO_x emission calculations for all subject facilities and associated equipment and shall update the database annually.

(4) The owner or operator shall comply with Paragraph (9) of Subsection A of 20.2.50.112 NMAC if requested by the department.

C. Monitoring requirements: The owner or operator shall comply with the requirements in Subsections C or D of 20.2.50.116 NMAC. The owner or operator shall comply with Subsection B of 20.2.50.111 NMAC in determining applicability of the requirements in 20.2.50.116 NMAC.

D. Repair requirements: The owner or operator shall comply with the requirements of Subsection E of 20.2.50.116 NMAC.

E. Recordkeeping requirements: The owner or operator shall maintain the following electronic records for each facility:

(1) annual certification that the small business facility meets the definition in this Part;

(2) calculated annual VOC and NO_x emissions from each facility and the company-wide annual VOC and NO_x emissions for all subject facilities; and

(3) records as required under Subsection F of 20.2.50.116 NMAC.

F. Reporting requirements: The owner or operator shall submit to the department an initial small business certification within sixty days of the effective date of this Part, and by March 1 of each calendar year thereafter. The certification shall be made on a

form provided by the department. The owner or operator shall comply with the reporting requirements in 20.2.50.112 NMAC.

G. Failure to comply with 20.2.50.125 NMAC: Notwithstanding the provisions of Section 20.2.50.125 NMAC, a source that meets the definition of a small business facility can be required to comply with the other Sections of 20.2.50 NMAC if the Secretary finds based on credible evidence that the source (1) presents an imminent and substantial endangerment to the public health or welfare or to the environment; (2) is not being operated or maintained in a manner that minimizes emissions of air contaminants; or (3) has violated any other requirement of 20.2.50.125 NMAC.

[20.2.50.125 NMAC - N, 08/05/2022]

20.2.50.126 PRODUCED WATER MANAGEMENT UNITS:

A. Applicability: Produced water management units as defined in this Part and their associated storage vessels are subject to 20.2.50.126 NMAC and shall comply with these requirements no later than 180 days after the effective date of this Part.

B. Emission standards:

(1) The owner or operator shall use good operational or engineering practices to minimize emissions of VOC from produced water management units (PWMU) and their associated storage vessels.

(2) The owner or operator shall not allow any transfer of untreated produced water to a PWMU without first processing and treating the produced water in a separator and/or storage vessel to minimize entrained hydrocarbons.

(3) Within two years of the effective date of this Part for storage vessels associated with existing PWMUs, or upon startup for storage vessels associated with new PWMUs, the owner or operator shall either:

(a) control such storage vessels in accordance with the requirements of Section 20.2.50.123 NMAC that are applicable to tank batteries; or

(b) submit a VOC minimization plan to the department demonstrating that controlling VOC emissions from storage vessels associated with the PWMU in accordance with the requirements of Section 20.2.50.123 NMAC is technically infeasible without supplemental fuel. The plan shall state the good operational or engineering practices used to minimize VOC emissions. The plan shall be enforceable by the department upon submission. The department may require revisions to the plan, and must approve any proposed revisions to the plan.

C. Monitoring requirements: The owner or operator shall:

(1) develop a protocol to calculate the VOC emissions from each PWMU. The protocol shall include at a minimum: produced water throughput monitoring, semi-annual sampling and analysis of the liquid composition, hydrocarbon measurement method(s), representative sample size, and sample chain of custody requirements.

(2) calculate the monthly total VOC emissions in tons from each unit with the first month of emission calculations beginning within 180 days of the effective date of this Part;

(3) monthly, monitor the best management and good operational or engineering practices implemented to reduce emissions at each unit to ensure and demonstrate their effectiveness;

(4) upon written request by the department, sample the PWMU to determine the VOC content of the liquid; and

(5) comply with the monitoring requirements of 20.2.50.112 NMAC.

D. Recordkeeping requirements:

(1) The owner or operator shall maintain the following electronic records for each PWMU:

(a) unique identification number and UTM coordinates of the PWMU;

(b) the good operational or engineering practices used to minimize emissions of VOC from the PWMU;

(c) the VOC emissions calculation protocol required in Subsection C of 20.2.50.126 NMAC, including the results of the sampling conducted in accordance with the protocol; and

(d) the annual total VOC emissions from each PWMU.

(2) The owner or operator shall comply with the recordkeeping requirements in 20.2.50.112 NMAC.

E. Reporting requirements: The owner or operator shall comply with the reporting requirements in 20.2.50.112 NMAC.

[20.2.50.126 NMAC - N, 08/05/2022]

20.2.50.127 FLOWBACK VESSELS AND PREPRODUCTION OPERATIONS:

A. Applicability: Wells undergoing recompletions and new wells being completed at an existing wellhead site are subject to the requirements of 20.2.50.127 NMAC one year

after the effective date of this Part. New wells constructed at a new wellhead site that commence completion or recompletion on or after the effective date of this Part are subject to the requirements of 20.2.50.127 NMAC.

B. Emissions standards:

(1) The owner or operator of a well that begins flowback on or after the effective date of this Part must collect and control emissions from each flowback vessel on and after the date flowback is routed to the flowback vessel by routing emissions to an operating control device that achieves a hydrocarbon control efficiency of at least ninety-five percent. If a TO or ECD is used, it must have a design destruction efficiency of at least ninety-eight percent for hydrocarbons.

(2) The owner or operator shall ensure that a control device used to comply with the emission standards in 20.2.50.127 NMAC operates as a closed vent system that captures and routes VOC emissions to the control device, and that unburnt gas is not directly vented to the atmosphere.

(3) Flowback vessels shall be inspected, tested, and refurbished where necessary to ensure the flowback vessel is in compliance with Paragraph (2) of Subsection B of 20.2.50.127 NMAC prior to receiving flowback.

(4) The owner or operator shall use a vessel measurement system to determine the quantity of liquids in the flowback vessel(s).

(5) Thief hatches or other access points to the flowback vessel(s) must remain closed and latched during activities to determine the quantity of liquids in the flowback.

(6) Opening the thief hatch or other access point if required to inspect, test, or calibrate the vessel measurement system, or to add biocides or chemicals, is not a violation of Paragraph 2 of Subsection B of 20.2.50.127 NMAC.

C. Monitoring requirements: The owner or operator of a well with flowback that begins on or after the effective date of this Part shall conduct daily visual inspections of the flowback vessel and any associated equipment. Such inspections shall include:

(1) visual inspection of any thief hatch, pressure relief valve, or other access point to ensure that they are closed and properly seated;

(2) visual inspection or monitoring of the control device to ensure that it is operating; and

(3) visual inspection of the control device to ensure that the valves for the piping from the flowback vessel to the control device are open.

D. Recordkeeping requirements:

(1) The owner or operator of each flowback vessel subject to the emissions standards in Subsection B of 20.2.50.127 NMAC shall maintain the following records:

(a) the API number of the well and the associated facility location, including latitude and longitude coordinates;

(b) the date and time of the onset of flowback;

(c) the date and time that the flowback vessels were permanently disconnected, if applicable;

(d) the date and duration of any period where the control device was not operating; and

(e) records of the inspections required in Subsection C of 20.2.50.127 NMAC, including the following:

(i) time and date of each inspection;

(ii) a description of any problems observed;

(iii) a description of any corrective action(s) taken; and

(iv) the name and position of the person performing the corrective action(s).

(2) The owner or operator shall comply with the recordkeeping requirements in 20.2.50.112 NMAC.

E. Reporting requirements: The owner or operator shall comply with the reporting requirements in 20.2.50.112 NMAC.

[20.2.50.127 NMAC - N, 08/05/2022]

20.2.50.128 PROHIBITED ACTIVITY AND CREDIBLE EVIDENCE:

A. Failure to comply with the emissions standards, monitoring, recordkeeping, reporting or other requirements of this Part within the timeframes specified shall constitute a violation of this Part subject to enforcement action under Section 74-2-12 NMSA 1978.

B. If credible evidence or information obtained by the department or provided to the department by a third party indicates that a source is not in compliance with the

provisions of this Part that evidence or information may be used by the department for purposes of establishing whether a person has violated or is in violation of this Part.

[20.2.50.128 NMAC - N, 08/05/2022]

PART 51-59: [RESERVED]

PART 60: OPEN BURNING

20.2.60.1 ISSUING AGENCY:

Environmental Improvement Board.

[20.2.60.1 NMAC - Rp 20.2.60.1 NMAC, 12/31/03]

20.2.60.2 SCOPE:

All geographic areas within the jurisdiction of the environmental improvement board.

[20.2.60.2 NMAC - Rp 20.2.60.2 NMAC, 12/31/03]

20.2.60.3 STATUTORY AUTHORITY:

Environmental Improvement Act, NMSA 1978, Sections 74-1-1 to -15, including specifically Subsections 74-1-8(A) (4) and (7), and Air Quality Control Act, NMSA 1978, Sections 74-2-1 to -22, including specifically Subsections 74-2-5(A), (B) and (C).

20.2.60.4 DURATION:

Permanent.

[20.2.60.4 NMAC - Rp 20.2.60.4 NMAC, 12/31/03]

20.2.60.5 EFFECTIVE DATE:

December 31, 2003, except where a later date is cited at the end of a section.

[20.2.60.5 NMAC - Rp 20.2.60.5 NMAC, 12/31/03]

[The latest effective date of any section in this part is December 31, 2003.]

20.2.60.6 OBJECTIVE:

The objective of this part is to protect public health and welfare by establishing controls on pollution produced by open burning. This part does not preempt any more stringent controls on open burning provided in:

A. any other New Mexico statute or regulation, or any local law, ordinance or regulation; or

B. any lawfully issued restriction on open burning, including those that may be issued for prevention of wildfires.

[20.2.60.6 NMAC - Rp 20.2.60.6 NMAC, 12/31/03]

20.2.60.7 DEFINITIONS:

In addition to the terms defined in 20.2.2 NMAC (Definitions), as used in this part:

A. "air pollution episode" means an air pollution alert, warning, or emergency issued by the department pursuant to the air pollution episode contingency plan for New Mexico, as included in New Mexico's state implementation plan as adopted by the environmental improvement board, and Section 74-2-10 NMSA 1978;

B. "household waste" means any waste including garbage and trash, derived from households including single and multiple residences, hotels and motels, bunkhouses, ranger stations, crew quarters, campgrounds, picnic grounds and day use recreation areas;

C. "nonattainment area" means an area which has been designated under Section 107 of the federal Clean Air Act as nonattainment for one or more of the national ambient air quality standards by the federal environmental protection agency;

D. "open burning" means any manner of burning, whether caused, suffered or allowed, not in a device or chamber designed to achieve combustion, where the products of combustion are emitted, directly or indirectly, into the open air; open burning does not include detonation of manufactured explosives;

E. "part" means an air quality control regulation under Title 20, Chapter 2, of the New Mexico administrative code, unless otherwise noted, as adopted or amended by the board;

F. "pile volume" means the gross volume of a pile, including the air space between solid constituents, as calculated from the overall dimensions and shape of the pile;

G. "salvage operation" means any operation to salvage or reclaim any material for use or sale, such as reprocessing of used motor oils, metals, wire, chemicals, shipping containers, or drums, and specifically including automobile graveyards and junkyards; and

H. "vegetative material" means plant material, including:

(1) grass, grass clippings, leaves, conifer needles, bushes, shrubs, trees, and clippings from bushes, shrubs and trees, resulting from maintenance of yards or other private or public lands; and

(2) wood waste, clean lumber, wood and wood products, including tree stumps (whole or chipped), trees, tree limbs (whole or chipped), bark, sawdust, chips, scraps, slabs, millings, and shavings, which have not been painted, pigment-stained, or treated with compounds containing chromium, copper, arsenic, pentachlorophenol, or creosote.

[20.2.60.7 NMAC - Rp 20.2.60.7 NMAC, 12/31/03]

20.2.60.8-20.2.60.107 [RESERVED]

20.2.60.108 RESTRICTIONS ON OPEN BURNING:

Any open burning not expressly allowed, not expressly prohibited, or not otherwise specifically addressed under this part or 20.2.65 NMAC (Smoke Management) shall be conducted only pursuant to 20.2.72 NMAC, upon issuance of a construction permit under 20.2.72 NMAC, regardless of the applicability requirements contained in 20.2.72 NMAC. Open burning as allowed or prohibited in this part is not considered a stationary source as defined in other parts of Title 20, Chapter 2, NMAC.

[20.2.60.108 NMAC - Rp 20.2.60.108 NMAC, 12/31/03]

20.2.60.109 UNRESTRICTED OPEN BURNING:

A. Open burning is allowed for recreational and ceremonial purposes, for barbecuing, for heating purposes in fireplaces, for the noncommercial cooking of food for human consumption and for warming by small wood fires at construction sites. This subsection does not apply to open burning for the purpose of waste disposal.

B. Open burning of natural gas is allowed at gasoline plant and compressor stations and when used or produced in drilling, completion and workover operations on oil and gas wells, when necessary to avoid serious hazard to safety.

[20.2.60.109 NMAC - Rp 20.2.60.109 NMAC, 12/31/03]

20.2.60.110 OPEN BURNING OF HOUSEHOLD WASTE:

A. Applicability:

(1) This section (20.2.60.110 NMAC) applies to open burning of household waste, except for household waste that consists solely of vegetative material as defined in 20.2.60.7 NMAC.

(2) This section (20.2.60.110 NMAC) does not apply to any kind of salvage operation. Open burning as part of a salvage operation is prohibited.

B. Effective June 1, 2004, open burning of household waste, other than vegetative material as defined in 20.2.60.7 NMAC, is prohibited.

C. Prior to June 1, 2004, open burning of household waste is allowed where all of the following conditions are met:

(1) household waste shall not be burned on property other than that property where it was generated;

(2) household waste shall not be burned on property which is served by any on-premises or curbside refuse collection service operated or contracted by a regional waste authority, county, or incorporated city, town, or village;

(3) household waste shall not be burned on any property less than ten miles by road from a convenience center, transfer station, or other receptacle made available for public use by a regional waste authority, county, or incorporated city, town, or village for the deposition and collection of refuse;

(4) household waste shall not be burned at any location nearer than three hundred feet from any occupied dwelling, workplace, or place where people congregate, on property owned by, or under possessory control of, another person;

(5) burning of the following materials is prohibited:

(a) natural or synthetic rubber products, including tires;

(b) waste oil or used oil filters;

(c) insulated wire;

(d) plastic, including polyvinyl chloride ("PVC") pipe, tubing, and connectors;

(e) tar, asphalt, asphalt shingles, or tar paper;

(f) railroad ties;

(g) wood, wood waste, or lumber which has been painted or which has been treated with preservatives containing arsenic, chromium, pentachlorophenol, or creosote;

- (h) batteries;
- (i) motor vehicle bodies or interiors;
- (j) pathogenic wastes; and
- (k) asbestos or asbestos containing materials;

D. Auxiliary fuel or incendiary devices may be used to start the burning allowed by this section, provided that:

- (1) no oil heavier than number two diesel shall be used; and
- (2) no more than the minimum amount of auxiliary fuel necessary to start the fire shall be used.

[20.2.60.110 NMAC - Rp 20.2.60.110 NMAC, 12/31/03]

20.2.60.111 OPEN BURNING OF VEGETATIVE MATERIAL:

A. Applicability:

(1) This section (20.2.60.111 NMAC) applies to open burning of vegetative material as defined in 20.2.60.7 NMAC, for purposes of disposal of such material, provided that burning of areas with non-piled vegetative material does not exceed ten acres per day, or burning of piled vegetative material, including material gathered in a pit or open container, does not exceed one thousand cubic feet of pile volume per day. In determining daily burn area and daily burn pile volume, areas or piles that are within three hundred feet of each other shall be considered to constitute a single burn if the burning occurs on the same day and on property under ownership or possessory control of the same person. Burning in excess of these daily limits is subject to 20.2.65 NMAC (Smoke Management).

(2) This section does not apply to any open burning of vegetative material which is subject to 20.2.65 NMAC.

(3) Open burning of vegetative material is prohibited in nonattainment areas.

B. Open burning of vegetative material under this section shall meet the following requirements:

(1) burning shall be conducted at least three hundred feet from any occupied dwelling, workplace, or place where people congregate, which is on property owned by, or under possessory control of, another person; burning that does not meet this requirement is subject to 20.2.65 NMAC (Smoke Management);

(2) burning shall begin no earlier than one hour after sunrise, and shall be extinguished no later than one hour before sunset; burning outside of this time limitation is subject to 20.2.65 NMAC (Smoke Management);

(3) burning shall be attended at all times;

(4) the appropriate local fire department or dispatch or firefighting authority shall be notified prior to burning;

(5) for burns exceeding one acre per day or one hundred cubic feet of pile volume per day, the burner shall provide prior notice of the date and location of the burn to all households within one quarter of a mile of the burn;

(6) burning shall be in compliance with 20.9.1 NMAC (Solid Waste Management);

(7) burning shall not be conducted when an air pollution episode is in effect;

(8) auxiliary fuel or incendiary devices may be used to ignite the burning allowed by this section, provided that:

(a) no oil heavier than number two diesel shall be used; and

(b) no more than the minimum amount of auxiliary fuel necessary to complete the burn shall be used;

(9) polyethylene sheeting may be burned with the vegetative materials, provided that:

(a) the sheeting has been covering piled vegetative material for at least one month prior to burning;

(b) the amount of sheeting burned is no more than the minimum necessary to cover the pile;

(c) removal of the sheeting before burning is impractical; and

(d) the burner is able to provide evidence, such as purchase records or package labeling, that the sheeting is polyethylene and not some other form of plastic;

(10) the burner shall consider alternatives to burning prior to igniting a burn; and

(11) material to be burned shall be as dry as practicable.

[20.2.60.111 NMAC - Rp 20.2.60.111 NMAC, 12/31/03]

20.2.60.112 BURNING OF MATERIALS AND STRUCTURES FOR FIREFIGHTER TRAINING:

Burning of structures, buildings, facilities or materials for purposes of instruction and training of bona fide firefighting and fire-rescue personnel is allowed, provided that:

- A.** all regulated asbestos-containing material is removed prior to burning, in accordance with 40 CFR 61, Subpart M (National Emission Standard for Asbestos); and
- B.** the department is notified, prior to burning, using the form provided by the department.

[20.2.60.112 NMAC - Rp 20.2.60.112 NMAC, 12/31/03]

20.2.60.113 OPEN BURNING OF HAZARDOUS WASTE:

Open burning of hazardous waste, as defined in the New Mexico Hazardous Waste Act, NMSA 1978, Sections 74-4-1 to -14, is allowed only when conducted in compliance with interim status regulations, or a permit issued, pursuant to the New Mexico Hazardous Waste Act and any other permits issued by the department.

[20.2.60.113 NMAC - Rp 20.2.60.113 NMAC 12/31/03]

20.2.60.114 EMERGENCY BURNING:

Open burning is allowed for purposes of eliminating an imminent danger to public health, safety, or the environment, provided that:

- A.** no other practical and lawful method of abatement or disposal is available;
- B.** an emergency response specialist has determined that the situation requires immediate and expeditious action;
- C.** the burning is in compliance with all other applicable state laws and regulations; and
- D.** notice is provided to the department as soon as practical, but at least within two weeks after the burn.

PART 61: SMOKE AND VISIBLE EMISSIONS

20.2.61.1 ISSUING AGENCY:

Environmental Improvement Board.

[11/30/95; 20.2.61.1 NMAC - Rn, 20 NMAC 2.61.100 10/31/02]

20.2.61.2 SCOPE:

All geographic areas within the jurisdiction of the Environmental Improvement Board.

[11/30/95; 20.2.61.2 NMAC - Rn, 20 NMAC 2.61.101 10/31/02]

20.2.61.3 STATUTORY AUTHORITY:

Environmental Improvement Act, NMSA 1978, section 74-1-8(A)(4) and (7), and Air Quality Control Act, NMSA 1978, sections 74-2-1 et seq., including specifically, section 74-2-5(A), (B), and (C).

[11/30/95; 20.2.61.3 NMAC - Rn, 20 NMAC 2.61.102 10/31/02]

20.2.61.4 DURATION:

Permanent.

[11/30/95; 20.2.61.4 NMAC - Rn, 20 NMAC 2.61.103 10/31/02]

20.2.61.5 EFFECTIVE DATE:

November 30, 1995.

[11/30/95; 20.2.61.5 NMAC - Rn, 20 NMAC 2.61.104 10/31/02]

[The latest effective date of any section in this Part is 10/31/02.]

20.2.61.6 OBJECTIVE:

The objective of this Part is to establish controls on smoke and visible emissions from certain sources. This Part is not intended to preempt any more stringent controls on smoke and visible emissions provided in any other air quality control regulation or in any local ordinance or regulation.

[11/30/95; 20.2.61.6 NMAC - Rn, 20 NMAC 2.61.105 10/31/02]

20.2.61.7 DEFINITIONS:

In addition to the terms defined in 20.2.2 NMAC (Definitions), as used in this Part:

A. "Air curtain destructor" means a combustion device or system designed to achieve controlled combustion of woodwaste and slash materials in an earthen trench or refractory-lined pit or bin through means of a fan-generated air curtain.

B. "Opacity" means the degree to which emissions reduce the transmission of light and obscure the view of an object in the background.

C. "Part" means an air quality control regulation under Title 20, Chapter 2 of the New Mexico Administrative Code, unless otherwise noted; as adopted or amended by the Board.

D. "Stationary combustion equipment" means any stationary device or system used to oxidize solid, liquid, or gaseous materials, including fuels or wastes, and includes but is not limited to incinerators, wood-fired boilers, air curtain destructors, and stationary oil burning equipment.

E. "Visible emissions" means particulate or gaseous matter which can be detected by the human eye.

[11/30/95; 20.2.61.7 NMAC - Rn, 20 NMAC 2.61.107 10/31/02]

20.2.61.8 AMENDMENT AND SUPERSESSION OF PRIOR REGULATIONS:

This Part amends and supersedes Air Quality Control Regulation ("AQCR") 401 -- Regulation to Control Smoke and Visible Emissions last filed July 15, 1986.

A. All references to AQCR 401 in any other rule shall be construed as a reference to this Part.

B. The amendment and supersession of AQCR 401 shall not affect any administrative or judicial enforcement action pending on the effective date of such amendment nor the validity of any permit issued pursuant to AQCR 401.

[11/30/95; 20.2.61.8 NMAC - Rn, 20 NMAC 2.61.106 10/31/02]

20.2.61.9 DOCUMENTS:

Documents cited in this Part may be viewed at the New Mexico Environment Department, Air Quality Bureau, Runnels Building, 1190 Saint Francis Drive, Santa Fe, NM 87505 [2048 Galisteo St., Santa Fe, NM 87505].

[11/30/95; 20.2.61.9 NMAC - Rn, 20 NMAC 2.61.108 10/31/02]

20.2.61.10-20.2.61.108 [RESERVED]

20.2.61.109 STATIONARY COMBUSTION EQUIPMENT:

The owner or operator of stationary combustion equipment shall not permit, cause, suffer or allow visible emissions from the stationary combustion equipment to equal or exceed an opacity of 20 percent; provided, however, stationary combustion equipment

which is regulated by Parts 20.2.10 NMAC through 20.2.18 NMAC, 20.2.37 NMAC, and 20.2.42 NMAC, and any other Part of Chapter 2 which specifically limits particulate emissions is exempted from this Part.

[11/30/95; 20.2.61.109 NMAC - Rn, 20 NMAC 2.61.109 10/31/02]

20.2.61.110 DIESEL-POWERED VEHICLE:

A. No person shall permit, cause, suffer or allow the emission into the open air of any smoke having an opacity greater than thirty percent for any period greater than ten seconds from any diesel-powered vehicle operating below 8,000 feet (mean sea level).

B. No person shall permit, cause, suffer or allow the emission into the open air of any smoke having an opacity greater than forty percent for any period greater than ten seconds from any diesel-powered vehicle operating above 8,000 feet (mean sea level).

[11/30/95; 20.2.61.110 NMAC - Rn, 20 NMAC 2.61.110 10/31/02]

20.2.61.111 EXCLUSIONS:

This Part does not apply to:

A. emissions from diesel-powered vehicles if the emissions are a direct result of a cold engine start-up;

B. off-highway, diesel-powered vehicles operating in non-urban areas; and

C. oil well drilling rigs and oil well servicing rigs.

D. for sources subject to the provisions of 20.2.70 NMAC (Operating Permits), emissions which result from insignificant activities as defined in 20.2.70 NMAC.

[11/30/95; 01/10/96; 20.2.61.111 NMAC - Rn, 20 NMAC 2.61.111 10/31/02]

20.2.61.112 DIESEL-POWERED LOCOMOTIVES:

A. No person shall permit, cause, suffer or allow the emissions into the open air of any smoke having an opacity greater than twenty percent for any period greater than ten seconds from any diesel-powered locomotive operating below 8,000 feet (mean sea level).

B. No person shall permit, cause, suffer or allow the emission into the open air of any smoke having an opacity greater than forty percent for any period greater than ten seconds from any diesel-powered locomotive:

(1) operating above 8,000 feet (mean sea level); or

(2) involved in switching and railroad yard use.

C. This Part does not apply to emissions for diesel-powered locomotives if the emissions are a direct result of a cold engine start-up.

11/30/95; 20.2.61.112 NMAC - Rn, 20 NMAC 2.61.112 10/31/02]

20.2.61.113 AIR CURTAIN DESTRUCTORS:

An exemption to this Part may be granted by the Department for start-up and burn-down periods of operation of air curtain destructors, if the owner or operator has demonstrated to the satisfaction of the Department that such an exemption is necessary and takes all actions necessary to minimize emissions during such periods.

11/30/95; 20.2.61.113 NMAC - Rn, 20 NMAC 2.61.113 10/31/02]

20.2.61.114 OPACITY DETERMINATIONS:

Opacity of emissions from equipment subject to 20.2.61.109 NMAC shall be determined consistent with the method set forth by the US EPA in 40 CFR, Part 60 Appendix A, Method 9, or any other method receiving prior approval from the Department. The minimum time period for taking opacity readings shall be ten minutes.

11/30/95; 20.2.61.114 NMAC - Rn, 20 NMAC 2.61.114 10/31/02]

PART 62: MUNICIPAL WASTE COMBUSTION

20.2.62.1 ISSUING AGENCY:

Environmental Improvement Board.

[11/30/95; 20.2.62.1 NMAC - Rn, 20 NMAC 2.62.100 10/31/02]

20.2.62.2 SCOPE:

All geographic areas within the jurisdiction of the Environmental Improvement Board.

[11/30/95; 20.2.62.2 NMAC - Rn, 20 NMAC 2.62.101 10/31/02]

20.2.62.3 STATUTORY AUTHORITY:

Environmental Improvement Act, NMSA 1978, section 74-1-8(A)(4), and Air Quality Control Act, NMSA 1978, sections 74-2-1 et seq., including specifically, section 74-2-5(A), (B) and (C)(3).

[11/30/95; 20.2.62.3 NMAC - Rn, 20 NMAC 2.62.102 10/31/02]

20.2.62.4 DURATION:

Permanent.

[11/30/95; 20.2.62.4 NMAC - Rn, 20 NMAC 2.62.103 10/31/02]

20.2.62.5 EFFECTIVE DATE:

November 30, 1995.

[11/30/95; 20.2.62.5 NMAC - Rn, 20 NMAC 2.62.104 10/31/02]

[The latest effective date of any section in this Part is 10/31/02.]

20.2.62.6 OBJECTIVE:

The objective of this Part is to establish requirements for emissions from, and design and operation of, municipal waste combustion units.

[11/30/95; 20.2.62.6 NMAC - Rn, 20 NMAC 2.62.105 10/31/02]

20.2.62.7 DEFINITIONS:

In additions to the terms defined in 20.2.2 NMAC (Definitions), as used in this Part:

A. "Continuous emission monitor" means the total equipment required to sample and analyze emissions or process parameters.

B. "dscm" means dry standard cubic meter with standard conditions being a temperature of 68 degrees Fahrenheit and a pressure of 29.92 inches Hg.

C. "dscf" means dry standard cubic foot with standard conditions being a temperature of 68 degrees Fahrenheit and a pressure of 29.92 inches Hg.

D. "gr" means grains.

E. "mg" means milligrams.

F. "Municipal waste" means all materials and substances discarded from residential dwellings and similar types of materials discarded from institutional, commercial, governmental, and industrial sources. The term does not include industrial process waste or hazardous wastes which are subject to regulation under Subtitle C of the Resource Conservation and Recovery Act, 42 USC 6901 et seq.

G. "Municipal waste combustion unit" means an incinerator, furnace, or boiler which is used to dispose of municipal waste by combustion either alone or with fossil fuel.

H. "ng" means nanograms.

I. "Opacity" means the degree to which emissions reduce the transmission of light and obscure the view of an object in the background.

J. "Part" means an air quality control regulation under Title 20, Chapter 2 of the New Mexico Administrative Code, unless otherwise noted; as adopted or amended by the Board.

K. "PCDD/PCDF" means total tetra- through octa-chlorinated dibenzo-para-dioxins and dibenzofurans.

L. "Refuse-derived fuel" means municipal waste which has been processed and shredded prior to use as a fuel.

[11/30/95; 20.2.62.7 NMAC - Rn, 20 NMAC 2.62.107 10/31/02]

20.2.62.8 AMENDMENT AND SUPERSESSION OF PRIOR REGULATIONS:

This Part amends and supersedes Air Quality Control Regulation ("AQCR") 2000 -- Municipal Waste Combustion filed November 16, 1990.

A. All references to AQCR 2000 in any other rule shall be construed as a reference to this Part.

B. The amendment and supersession of AQCR 2000 shall not affect any administrative or judicial enforcement action pending on the effective date of such amendment nor the validity of any permit issued pursuant to AQCR 2000.

[11/30/95; 20.2.62.8 NMAC - Rn, 20 NMAC 2.62.106 10/31/02]

20.2.62.9 DOCUMENTS:

Documents cited in this Part may be viewed at the New Mexico Environment Department, Air Quality Bureau, Runnels Building, 1190 Saint Francis Drive, Santa Fe, NM 87505 [2048 Galisteo St., Santa Fe, NM 87505].

[11/30/95; 20.2.62.9 NMAC - Rn, 20 NMAC 2.62.108 10/31/02]

20.2.62.10-20.2.62.199 [RESERVED]

20.2.62.200 APPLICABILITY:

A. Affected Facility: The requirements of this Part apply to the owner or operator of any municipal waste combustion unit.

B. New Source Performance Standards: In addition to the requirements of this Part, any applicable federal regulation in 40 CFR Part 60 -- Standards of Performance for New Stationary Sources shall apply in full. Whenever there is a conflict between this Part and a federal counterpart, the more stringent requirement shall apply.

[11/30/95; 20.2.62.200 NMAC - Rn, 20 NMAC 2.62.200 - 201 10/31/02]

20.2.62.201 EMISSION LIMITS:

A. Emission Limits: The owner or operator shall not cause or allow any emission limit in Table 1 (20.2.62.213 NMAC) to be exceeded.

B. Compliance:

(1) Compliance with emission limits for sulfur dioxide and nitrogen dioxide shall be determined by continuous emission monitor measurements as calculated in the form of 24-hour daily averages.

(2) Compliance with the emission limit for carbon monoxide shall be determined by continuous emission monitor measurements as calculated in the form of 4-hour block averages.

(3) Compliance with the emission limits for particulate matter, PCDD/PCDF, total hydrocarbon, hydrogen chloride and metals shall be determined by manual tests conducted in accordance with 20.2.62.204 NMAC. For metals, the percent removal shall be calculated as the percent difference between the measured concentrations at the inlet and outlet of the air pollution control system.

(4) Compliance with the opacity limit in Table 1 (20.2.62.213 NMAC) shall be determined by continuous emission monitor measurements and 40 CFR Part 60, Appendix A, Method 9 as calculated in the form of 6-minute averages.

[11/30/95; 20.2.62.201 NMAC - Rn, 20 NMAC 2.62.300 - 301 10/31/02]

20.2.62.202 DESIGN AND OPERATIONAL REQUIREMENTS:

A. Operational Temperature:

(1) The combustion temperature as monitored at the location specified by subsection C of 20.2.62.203 NMAC shall be a minimum of 1800 degrees Fahrenheit for a 30-minute averaging period.

(2) Flue gas temperature as monitored at the location specified by subsection C of 20.2.62.203 NMAC shall be a maximum of 300 degrees Fahrenheit for a 30-minute averaging period.

B. Residence Time: All combustion gases shall be retained for at least 1.0 second at the required combustion temperature of subsection A or C of 20.2.62.202 NMAC at a location beyond the final secondary air injection port, or an alternative location specified by the Department if such location better represents the fully mixed height of the incinerator.

C. Equivalent Design: The Department may approve a combustion unit design which does not have a minimum temperature of 1800 degrees Fahrenheit and a residence time of at least 1.0 second if it determines the proposed design will achieve a combustion efficiency equivalent to or greater than a unit meeting the requirements of paragraph (1) of subsection A of 20.2.62.202 NMAC and subsection B of 20.2.62.202 NMAC.

D. Auxiliary Burner Capacity:

(1) Auxiliary burners shall be installed which can supply at least 60 percent of the maximum rated heat capacity of the combustion unit.

(2) Auxiliary burners shall be capable of meeting the required combustion temperature of subsection A or C of 20.2.62.202 NMAC during periods of startup, shutdown, and malfunction.

E. Turndown Restriction: Municipal waste shall not be burned in an amount outside the range of 80 to 100 percent of the hourly design-rated capacity of the combustion unit.

F. Automatic Waste Feed Cutoff: The municipal waste combustion unit shall include automatic waste feed cutoff mechanisms which stop waste feed to the unit if a continuous emission monitor records an exceedance of any emission limit in Table 1 (20.2.62.213 NMAC) for which compliance is based on continuous monitoring or the temperature requirements of subsection A or C of 20.2.62.202 NMAC.

[11/30/95; 20.2.62.202 NMAC - Rn, 20 NMAC 2.62.400 - 405 10/31/02]

20.2.62.203 MONITORING:

A. Emission Monitoring:

(1) Continuous emission monitors shall be installed, calibrated, maintained, operated, and continuously record data for the following:

(a) oxygen;

- (b) carbon monoxide;
- (c) sulfur dioxide;
- (d) nitrogen dioxide; and
- (e) opacity.

(2) At least 45 days prior to initial startup, the owner or operator shall submit a report to the Department which describes for each monitor the location, specifications, procedures for calibration, operation, maintenance, data evaluation, and reporting. Monitoring equipment shall not be installed until the Department approves the report. The Department shall, within 45 days of receipt, approve or disapprove the subject report.

(3) The continuous emission monitors which measure oxygen, carbon monoxide, sulfur dioxide, and nitrogen dioxide shall complete a minimum of 1 cycle of operation for each successive 15-minute period. One-hour averages shall be calculated from 4 or more data points equally spaced over each 1-hour period.

(4) The continuous emission monitor which measures opacity shall complete a minimum of 1 cycle of operation for each successive 10 second period. Six-minute averages shall be calculated from 36 or more data points equally spaced over each 6-minute period.

(5) Data recorded during periods of continuous emission monitor breakdown, repairs, calibration checks, and zero and span adjustments shall not be included in calculated data averages.

(6) Emission data shall be obtained from each continuous emission monitor which represents a minimum of 75 percent of all operational hours for each 24-hour period beginning at 12 midnight. During periods of continuous emission monitor breakdowns, repairs, calibration checks, and zero and span adjustments, emission data may be obtained by other monitoring systems or reference methods approved by the Department. Such other monitoring systems or reference methods must comply, at a minimum, with performance specifications as found in 40 CFR Part 60, Appendix B. Failure to meet the 75 percent data capture requirement of this section shall cause the combustion unit to be shutdown as required by subsection C of 20.2.62.206 NMAC.

(7) The owner or operator shall ensure each continuous emission monitor meets the requirements of 40 CFR Part 60, Appendix F -- Quality Assurance Procedures and shall submit to the Department all reports specified by such requirements.

B. Performance Evaluation:

(1) During or within 30 days of the initial emission tests required by paragraph (2) of subsection A of 20.2.62.204 NMAC, the owner or operator shall conduct a performance evaluation of each continuous emission monitor in accordance with the procedures of 40 CFR Part 60, Appendix B -- Performance Specifications.

(2) The performance evaluation required by paragraph (1) of subsection B of 20.2.62.203 NMAC shall be repeated on an annual basis or at additional times when the Department has reason to believe the monitor performance is inadequate.

(3) The owner or operator shall provide at least 30 days prior notice to the Department before conducting any performance evaluation.

(4) A written report of each performance evaluation shall be furnished within 30 days from the end of the test period to the Department.

C. Temperature monitors:

(1) Continuous temperature monitors shall be installed, calibrated, maintained, operated, and continuously record measurements at the following locations:

(a) within 1 meter of the final secondary air injection port or at a different location specified by the Department which better represents the fully mixed height of the combustion chamber; and

(b) at the inlet to the particulate matter air pollution control device.

(2) Temperature monitors shall take measurements at least every ten seconds from which 30-minute averages shall be calculated.

[11/30/95; 20.2.62.203 NMAC - Rn, 20 NMAC 2.62.500 - 502 10/31/02]

20.2.62.204 EMISSION TESTING:

A. Emission Testing Schedule:

(1) Emission testing shall be conducted quarterly for total particulate matter, fine particulate matter, total hydrocarbon, PCDD/PCDF, hydrogen chloride and all metals listed in Table 1 (20.2.62.213 NMAC).

(2) Within 60 days of first achieving the maximum firing rate for the combustion unit, but not more than 180 days from the date of initial startup, the first quarterly emission tests shall be conducted.

(3) The Department shall require the owner or operator to conduct additional tests if there is a reasonable basis to believe the facility is not in compliance with the provisions of this Part or any applicable permit condition.

(4) The Department or its representative may conduct unscheduled emission tests at any time during operating hours of the facility.

B. Emission Testing Procedures:

(1) Notice of the test date and a copy of the test protocol shall be given to the Department at least 30 days prior to the actual test date.

(2) A representative of the Department shall be given the opportunity to be present during all emission tests required by this Part.

(3) A written copy of all test results shall be furnished to the Department within 90 days from the test date.

(4) Emission tests shall be conducted utilizing the following methods:

(a) for total particulate matter -- 40 CFR Part 60, Appendix A, Method 5;

(b) for fine particulate matter -- California Air Resources Board, Method 501;

(c) for PCDD/PCDF -- 40 CFR Part 60, Appendix A, Method 23;

(d) for total hydrocarbon -- 40 CFR Part 60, Appendix A, Method 25A;

(e) for cadmium, chromium, and lead -- 40 CFR Part 60, Appendix A, Method 12;

(f) for arsenic -- 40 CFR Part 61, Appendix B, Method 108;

(g) for beryllium -- 40 CFR Part 61, Appendix B, Method 104;

(h) for mercury -- 40 CFR Part 61, Appendix B, Method 101A; and

(i) for hydrogen chloride -- 40 CFR Part 60, Appendix A, Method 26.

(5) The owner or operator may utilize test methods other than those in paragraph (4) of subsection B of 20.2.62.204 NMAC if the Department has approved the alternative method. The Department shall approve or disapprove proposed alternate test methods within 30 days of receipt of subject request.

[11/30/95; 20.2.62.204 NMAC - Rn, 20 NMAC 2.62.600 - 601 10/31/02]

20.2.62.205 RECORDKEEPING AND REPORTING:

A. Quarterly Report: The owner or operator shall submit a report containing the following information to the Department within 30 days from the end of each calendar quarter:

- (1) the hourly average waste feed rate to each combustion unit;
- (2) the 30-minute average temperature of the combustion unit and the inlet to the particulate matter control device;
- (3) the hourly and 24-hour average concentrations in mg/dscm corrected to 7% O₂ of sulfur dioxide and nitrogen dioxide as measured by continuous emission monitors;
- (4) the hourly and 4-hour average concentrations in mg/dscm corrected to 7% O₂ of carbon monoxide as measured by continuous emission monitors;
- (5) the hourly average percent oxygen and 6-minute average opacity as measured by continuous emission monitors;
- (6) the percent data capture for each 24-hour period for each continuous emission monitor;
- (7) the hourly auxiliary fuel use per combustion unit;
- (8) the identification of all periods of startup, shutdown, and excess emissions; and
- (9) the reason for any excess emissions and the corrective action taken.

B. Records:

(1) Records shall be maintained for a period of three years from the date created by the owner or operator for all parameters in subsection A of 20.2.62.205 NMAC and made available upon request for inspection and copying by the Department during normal operating hours.

(2) All information submitted to the Department in quarterly reports or emission test reports, or any other information created or obtained by the Department regarding the municipal waste combustion unit shall be available for public inspection and copying during normal business hours.

[11/30/95; 20.2.62.205 NMAC - Rn, 20 NMAC 2.62.700 - 701 10/31/02]

20.2.62.206 STARTUP, SHUTDOWN, AND UPSET CONDITION:

A. Startup and Shutdown Procedure:

(1) Waste shall not be placed into the combustion unit during startup until the auxiliary burners have achieved the required combustion temperature of subsection A or C of 20.2.62.202 NMAC.

(2) During shutdown, auxiliary burners shall be utilized to maintain the required combustion temperature of subsection A or C of 20.2.62.202 NMAC until the carbon monoxide emission limit specified in 20.2.62.201 NMAC can be achieved without their use.

B. Upset Condition:

(1) The provisions of 20.2.7 NMAC (Excess Emissions During Malfunction, Startup, Shutdown, or Scheduled Maintenance) shall not apply to any municipal waste combustion unit.

(2) Prior to the failure of the system to meet the temperature requirements of subsection A or C of 20.2.62.202 NMAC or any emission limit in 20.2.62.201 NMAC for which compliance is based on continuous emission monitoring, a visual and audible alarm shall notify the operator. The operator shall implement all reasonable measures to correct the impending upset condition.

(3) Whenever the temperature requirements of subsection A or C of 20.2.62.202 NMAC or any emission limit in 20.2.62.201 NMAC for which compliance is based on continuous emission monitoring is exceeded, the operator shall take the following actions:

(a) waste feed to the combustion unit shall automatically cut off and the unit be shutdown;

(b) notify the Department verbally of the exceedance within 4 hours of its occurrence or prior to 12 noon of the next business day should the exceedance occur during non-business hours;

(c) note in the operating record the time and date of the exceedance, when shutdown began, and when shutdown was complete;

(d) identify and correct the cause of the upset condition before resuming operation of the unit; and

(e) note in the operating record the corrective action taken and the time and date of startup.

C. Continuous Emission Monitor Malfunction: Whenever any required continuous emission monitor cannot meet the data capture requirement of paragraph (6) of subsection A of 20.2.62.203 NMAC, and the owner or operator does not obtain the required data from an alternate monitor or test method, the combustion unit shall be

shutdown for the time necessary to comply with paragraph (6) of subsection A of 20.2.62.203 NMAC.

D. Disaster Plan for Catastrophic Failure: No permit shall be approved for the operation of a municipal waste incinerator until the Department has approved a plan prepared by the applicant for prevention of harm to the surrounding population and environment in the event of a catastrophic failure at the incinerator. The plan shall include, but not be limited to, measures for protecting that population from releases into the environment of significant emissions from the incinerator.

[11/30/95; 20.2.62.206 NMAC - Rn, 20 NMAC 2.62.800 - 803 10/31/02]

20.2.62.207 MANAGEMENT OF ASH:

A. Handling, Storage, and Transportation of Ash:

(1) All handling and storage of fly ash and bottom ash shall be conducted in a closed system which prevents ash from becoming airborne.

(2) Transportation of fly ash and bottom ash offsite shall be conducted in a manner which prevents the release of any amount of ash to the atmosphere.

B. Opacity of Ash Emissions: Handling, storage, and transportation of fly ash and bottom ash shall not result in a release to the atmosphere exceeding 0 (zero) percent opacity. Compliance with this requirement shall be determined by visual observation as specified in 40 CFR Part 60, Appendix A, Method 9.

C. Disposal of Ash:

(1) Disposal of fly ash and bottom ash shall be in compliance with the applicable requirements of New Mexico Solid Waste Management Regulations (20.9.1 NMAC).

(2) Transportation of Municipal Waste Combustion (MWC) ash:

(a) No transporter shall accept or transport MWC ash unless it has been treated or is securely covered to prevent release of fugitive dust;

(b) Transporters shall cover vehicles to prevent fugitive dust loss during transport; and

(c) Transporters shall line or seal vehicles in such a manner to prevent any leakage of liquids or fugitive dust during transport.

(3) MWC ash that is temporarily stored at generation site awaiting transportation must be stored in such a manner as to prevent fugitive dust emissions.

[11/30/95; 20.2.62.207 NMAC - Rn, 20 NMAC 2.62.900 - 902 10/31/02]

20.2.62.208 TRAINING:

A. Training Requirements:

(1) During all operating hours plant operations shall be supervised by an individual who has received certification by the American Society of Mechanical Engineers as an operator of a resource recovery facility.

(2) All plant personnel shall receive adequate training specific to their job function prior to assuming a starting or new position which shall include instruction in:

- (a) operation and maintenance of equipment;
- (b) response to upset conditions; and
- (c) compliance with applicable environmental regulations and permit conditions.

B. Recordkeeping of Training: The following records shall be maintained and made available to the Department during normal operating hours:

- (1) documentation of certification of operators as required by paragraph (1) of subsection A of 20.2.62.208 NMAC;
- (2) a written description of the training program given to plant personnel; and
- (3) a list of current employees and their job titles.

[11/30/95; 20.2.62.208 NMAC - Rn, 20 NMAC 2.62.1000 - 1001 10/31/02]

20.2.62.209 MATERIALS SEPARATION:

A. Materials Separation - Percent Reduction /requirement:

(1) The owner or operator shall separate materials from municipal waste prior to combustion such that an overall 25 percent or greater reduction by weight on annual basis is achieved.

(2) The percent reduction requirement in this section shall be met by separation of some or all of the following materials:

- (a) Paper and paperboards;
- (b) Ferrous metals;

- (c) Nonferrous metals;
- (d) Glass;
- (e) Plastics;
- (f) Household batteries; and
- (g) Yard waste.

(3) A maximum of 10 percent reduction by weight shall be attributed to separation of yard waste.

(4) The percent reduction requirement may be achieved by mechanical or manual separation techniques either on or off-site and can include a community separation program.

B. Materials Separation - Compliance:

(1) The owner or operator shall record on a monthly basis the amount by weight of municipal waste combusted and the amount of separated materials by type and weight.

(2) The owner or operator shall calculate and record the percent reduction in municipal waste combusted by material separation for each month.

(3) Compliance with the annual percent reduction requirement in paragraph (1) of subsection A of 20.2.62.209 NMAC shall be determined by calculating the average of the monthly percent reduction amounts for the calendar year.

(4) By February 1 of each year, the owner or operator shall submit a report to the Department containing the monthly and annual average percent reduction calculations and results.

[11/30/95; 20.2.62.209 NMAC - Rn, 20 NMAC 2.62.1100 - 1101 10/31/02]

20.2.62.210 RISK ASSESSMENT:

A. Assessment of Risk: Each application for a permit to operate a municipal waste incinerator shall contain a formal assessment of risk to the population and the environment which may be affected by the incinerator. The factors which shall be addressed in the assessment shall include but not be limited to the quantity, volume, potency, toxicity, and hazardous nature of all substances emitted from the incinerator, the exposure pathways of those substances, potential receptors, including human populations, flora, and fauna, the proximity of the proposed incinerator to all human habitations, including but not limited to residences, hospitals, schools, day care centers,

and work sites, and any other factors which may contribute to or determine the risks posed by the proposed incinerator.

B. Risk Assessment Evaluation: The assessment of risk prepared by the applicant shall be considered by the Department in its decision on the application, and shall be addressed in any written determination made by the Department.

[11/30/95; 20.2.62.210 NMAC - Rn, 20 NMAC 2.62.1200 - 1201 10/31/02]

20.2.62.211 LOCATION OF PUBLIC HEARINGS:

Public hearings conducted subsequent to a permit application for construction of a municipal waste combustor shall be held in the geographic area most likely to be impacted by the source.

[11/30/95; 20.2.62.211 NMAC - Rn, 20 NMAC 2.62.1300 10/31/02]

20.2.62.212 OFF-SITE MONITORING REQUIREMENTS:

The owner or operator shall monitor at the facility boundary, where the population is, and one or more miles beyond the facility in all directions, in order to determine the concentrations of materials being emitted from the incinerator at the points of exposure to the population. Meteorological data shall be monitored at the stack and in all four directions in order to provide a better basis for surface monitoring.

[11/30/95; 20.2.62.212 NMAC - Rn, 20 NMAC 2.62.1400 10/31/02]

20.2.62.213 MUNICIPAL WASTE COMBUSTION EMISSION LIMITS:

TABLE 1.

Pollutant	Emission Limit (1)
Particulate Matter	
Total	0.01 gr/dscf
Fine (less than 2 microns)	0.008 gr/dscf
Sulfur Dioxide	80 mg/dscm
Hydrogen Chloride	40 mg/dscm
Carbon Monoxide	
Refuse-Derived Fuel	120 mg/dscm
All other designs	60 mg/dscm
Nitrogen Dioxide	100 ppmv
PCDD/PCDF	5 ng/dscm
Total Hydrocarbon (as CH ₄)	45 mg/dscm
Metals	
Arsenic	99% Removal

Beryllium	99% Removal
Cadmium	99% Removal
Chromium	99% Removal
Lead	99% Removal
Mercury	90% Removal
Opacity	10%

(1) The particulate matter emission limit is set at a condition of 12% CO₂. All other emission limits are set at 7% O₂.

[11/30/95; 20.2.62.213 NMAC - Rn, 20 NMAC 2.62.1500 10/31/02]

PART 63: BIOMEDICAL WASTE COMBUSTION

20.2.63.1 ISSUING AGENCY:

Environmental Improvement Board.

[11/30/95; 20.2.63.1 NMAC - Rn, 20 NMAC 2.63.100 10/31/02]

20.2.63.2 SCOPE:

All geographic areas within the jurisdiction of the Environmental Improvement Board.

[11/30/95; 20.2.63.2 NMAC - Rn, 20 NMAC 2.63.101 10/31/02]

20.2.63.3 STATUTORY AUTHORITY:

Environmental Improvement Act, NMSA 1978, section 74-1-8(A)(4), and Air Quality Control Act, NMSA 1978, sections 74-2-1 et seq., including specifically, section 74-2-5(A), (B) and (C)(3).

[11/30/95; 20.2.63.3 NMAC - Rn, 20 NMAC 2.63.102 10/31/02]

20.2.63.4 DURATION:

Permanent.

[11/30/95; 20.2.63.4 NMAC - Rn, 20 NMAC 2.63.103 10/31/02]

20.2.63.5 EFFECTIVE DATE:

November 30, 1995.

[11/30/95; 20.2.63.5 NMAC - Rn, 20 NMAC 2.63.104 10/31/02]

[The latest effective date of any section in this Part is 10/31/02.]

20.2.63.6 OBJECTIVE:

The objective of this Part is to establish requirements for emissions from, and design and operation of, biomedical waste combustion units.

[11/30/95; 20.2.63.6 NMAC - Rn, 20 NMAC 2.63.105 10/31/02]

20.2.63.7 DEFINITIONS:

In additions to the terms defined in 20.2.2 NMAC (Definitions), as used in this Part:

A. "Anatomical/pathological waste" means human or animal remains consisting of carcasses, tissues, organs or body parts that may or may not be infectious.

B. "Biomedical waste" means waste that includes anatomical/pathological wastes, infectious wastes, and chemotherapeutic wastes. Incorporated in this definition are wastes generated in health care facilities, medical laboratories, and veterinary clinics that require special handling.

C. "Biomedical waste combustion unit" means any incinerator which is used to dispose of biomedical waste by combustion.

D. "Charging capacity" means the combustion unit manufacturer's or designer's rated capacity expressed in terms of pounds per hour (lb/hr).

E. "Charging rate" means the actual rate at which the subject combustion unit is combusting waste at a given point in time expressed in terms of pounds per hour (lb/hr).

F. "Chemotherapeutic waste" means all wastes resulting from the production or use of antineoplastic agents used for the purpose of stopping or reversing the growth of malignant cells. Chemotherapeutic wastes shall not include any waste containing antineoplastic agents that are listed as hazardous waste.

G. "Continuous emission monitor" means the total equipment required to sample and analyze emissions or process parameters on a continuous basis.

H. "Crematory incinerator" means any combustion unit designed and used solely for the combustion of anatomical/pathological waste including incidental items normally cremated as part of the funeral process.

I. "DSCF" means dry standard cubic foot with standard conditions being a temperature of 68 degrees Fahrenheit and a pressure of 29.92 inches Hg.

J. "DSCM" means dry standard cubic meter with standard conditions being a temperature of 68 degrees Fahrenheit and a pressure of 29.92 inches Hg.

K. "Facility" means one or more biomedical waste combustion units at the same location.

L. "gr" means grains.

M. "Hazardous waste" means hazardous waste as defined in 40 CFR Part 261.3.

N. "Infectious waste" means a limited class of substances that carry a significant risk of transmitting disease, including but not limited to:

(1) microbiology laboratory wastes, including cultures and stocks of infectious agents from clinical research and industrial laboratories, and disposable culture dishes and devices used to transfer, inoculate and mix cultures;

(2) pathological wastes, including human or animal tissues, organs and body parts, removed during surgery, autopsy or biopsy;

(3) disposable equipment, instruments, utensils, and other disposable materials which require special precautions because of contamination by highly contagious diseases;

(4) blood and blood products, including waste blood, blood serum, plasma and blood products;

(5) contaminated sharps, including contaminated hypodermic needles, syringes, scalpel blades, pasteur pipettes and broken glass; and

(6) contaminated animal carcasses, body parts and bedding, especially those intentionally exposed to pathogens in research, in the production of biologicals or the "in vivo" testing of pharmaceuticals.

O. "mg" means milligrams.

P. "ng" means nanograms.

Q. "Opacity" means the degree to which emissions reduce the transmission of light and obscure the view of an object in the background.

R. "Operation" means the acts of ash removal, preheating of combustion unit, waste loading, combustion, burndown and cooldown.

S. "Part" means an air quality control regulation under Title 20, Chapter 2 of the New Mexico Administrative Code, unless otherwise noted; as adopted or amended by the Board.

T. "PCDD/PCDF" means total tetra- through octa-chlorinated dibenzo-para-dioxins and dibenzofurans.

U. "Same location" means the same or contiguous property that is under common ownership or control, including properties that are separated only by a street, road, highway, or other public right-of-way. Common ownership or control includes properties that are owned, leased, or operated by the same entity, parent entity, subsidiary, subdivision, or any combination thereof, including any municipality or other governmental unit, or any quasi-governmental authority.

V. "Shutdown" means the cessation of all waste charging operations.

W. "Startup" means the setting into operation of any air pollution control equipment, process equipment or process for any purpose except routine phasing in of equipment.

X. "Total charging capacity" means the aggregate of all charging capacities of biomedical combustion units located at a facility.

[11/30/95; 20.2.63.7 NMAC - Rn, 20 NMAC 2.63.107 10/31/02]

20.2.63.8 AMENDMENT AND SUPERSESSION OF PRIOR REGULATIONS:

This Part amends and supersedes Air Quality Control Regulation ("AQCR") 2020 -- Biomedical Waste Combustion filed March 8, 1991.

A. All references to AQCR 2020 in any other rule shall be construed as a reference to this Part.

B. The amendment and supersession of AQCR 2020 shall not affect any administrative or judicial enforcement action pending on the effective date of such amendment nor the validity of any permit issued pursuant to AQCR 2020.

[11/30/95; 20.2.63.8 NMAC - Rn, 20 NMAC 2.63.106 10/31/02]

20.2.63.9 DOCUMENTS:

Documents cited in this Part may be viewed at the New Mexico Environment Department, Air Quality Bureau, Runnels Building, 1190 Saint Francis Drive, Santa Fe, NM 87505 [2048 Galisteo St., Santa Fe, NM 87505].

[11/30/95; 20.2.63.9 NMAC - Rn, 20 NMAC 2.63.108 10/31/02]

20.2.63.10-20.2.63.199 [RESERVED]

20.2.63.200 APPLICABILITY:

A. The requirements of this regulation apply to the owner or operator of any biomedical waste combustion unit located at a facility with a total charging capacity of less than 50 tons per day. The requirements of this regulation do not apply to crematory incinerators.

B. In addition to the requirements of this regulation, any applicable federal regulation in 40 CFR Part 60 -- Standards of Performance for New Stationary Sources shall apply in full. Whenever there is a conflict between this regulation and a federal counterpart, the more stringent requirement shall apply.

[11/30/95; 20.2.63.200 NMAC - Rn, 20 NMAC 2.63.200 10/31/02]

20.2.63.201 GENERAL REQUIREMENTS:

A. No one shall combust biomedical waste in a single chamber combustion unit. All single chamber combustion units shall be taken out of service and removed from the facility.

B. No one shall combust material marked with radiation symbols as required by 20.3.1 NMAC - 20.3.20 NMAC (Radiation Protection Regulations), or material having a radioactivity level greater than background, in a combustion unit subject to this Part.

C. Hazardous waste may not be combusted in a combustion unit subject to this regulation unless a permit to do so pursuant to the Resource Conservation and Recovery Act has been obtained from the Hazardous Waste Bureau of the Department.

D. Infectious wastes are defined as "special wastes" and as such are subject to 20.9.1 NMAC (New Mexico Solid Waste Management Regulation).

E. Any biomedical waste combustion unit located at a facility with a total charging capacity of 50 tons per day or more or which accepts off-site municipal solid waste from a non-generator of biomedical waste must also meet the requirements of 20.2.62 NMAC (Municipal Waste Combustion).

[11/30/95; 20.2.63.201 NMAC - Rn, 20 NMAC 2.63.300 10/31/02]

20.2.63.202 EMISSION LIMITS:

A. Emission Limits: The owner or operator shall not cause or allow any emission limit in subsection A of 20.2.63.210 NMAC to be exceeded.

B. Compliance:

(1) Compliance with the emission limit for carbon monoxide (CO), for units required to have continuous CO monitoring, shall be determined by continuous emission monitor measurements as calculated in the form of 4-hour block averages. For

units not equipped with continuous CO monitoring equipment compliance shall be determined by manual tests conducted in accordance with 20.2.63.205 NMAC.

(2) Compliance with the emission limits for particulate matter, sulfur dioxide, nitrogen dioxide, hydrogen chloride, PCDD/PCDF, and metals shall be determined by manual tests conducted in accordance with 20.2.63.205 NMAC. For metals, the percent removal shall be calculated as the percent difference between the measured concentrations at the inlet and outlet of the air pollution control system.

(3) As surrogate for compliance with metals removal efficiency requirements, the owner or operator may comply with an emission limitation for cadmium (Cd) of fifty (50) micrograms per kilogram of waste combusted. The emission limit for cadmium cannot be used as surrogate for mercury.

(4) Compliance with the opacity limit in subsection A of 20.2.63.210 NMAC shall be determined by continuous emission monitor measurements and 40 CFR Part 60, Appendix A, Method 9 as calculated in the form of 6-minute averages.

(5) The owner or operator of a biomedical waste combustion unit located at a facility with a total charging capacity of up to four hundred (400) pounds per hour may obtain a written exemption from the Air Quality Bureau from the applicable emission limits set forth in subsection A of 20.2.63.210 NMAC and may obtain a written exemption from the Air Quality Bureau from emission monitoring requirements as stated in subparagraph (c) of paragraph (1) of subsection A of 20.2.63.204 NMAC provided that:

(a) The owner or operator complies with the emission limits set forth in subsection A of 20.2.63.210 NMAC for biomedical waste combustion units located at a facility with a total charging capacity of less than two hundred (200) pounds per hour; and

(b) The owner or operator obtains a written exemption from the Air Quality Bureau that contains a condition limiting the operation of such biomedical waste combustion unit to six hours in any one day. The violation of such an exemption condition shall be a violation of this regulation.

11/30/95; 20.2.63.202 NMAC - Rn, 20 NMAC 2.63.400 - 401 10/31/02]

20.2.63.203 DESIGN AND OPERATING REQUIREMENTS:

A. Design Requirements:

(1) All combustion units shall be equipped with a secondary combustion chamber which provides for turbulent mixing by ensuring that the air being supplied to the combustion zone has sufficient momentum to penetrate the combustion gases. The secondary combustion chamber shall also provide one second of residence time, as

measured from the location where the maximum temperature has been fully developed and is calculated with consideration of design-specific furnace parameters including chamber volume, volumetric air flow rate, and excess air rate.

(2) Primary combustion chamber temperature must be maintained at not less than fourteen hundred (1400) degrees Fahrenheit.

(3) Secondary combustion chamber temperature must be maintained at not less than eighteen hundred (1800) degrees Fahrenheit.

(4) Auxiliary burners must be designed to provide the combustion chamber temperatures as described in paragraphs (2) and (3) of subsection A of 20.2.63.203 NMAC without the assistance of the heat content of the waste. The auxiliary burner fuel and the combustion air shall be modulated automatically to maintain a secondary chamber exit temperature of at least eighteen hundred (1800) degrees Fahrenheit and a primary chamber temperature of at least fourteen hundred (1400) degrees Fahrenheit.

(5) The waste charging system of any combustion unit must be designed to prevent disruption of the combustion process as waste is charged. Batch charged units must be equipped with a lockout mechanism to prevent charging after start-up. Units with automatic charging systems shall be equipped with a sealed feeding device capable of preventing combustion upsets during charging. The volume of the loading system shall be designed to prevent overcharging.

(6) For batch charged units, waste shall not be ignited until the secondary chamber exit temperature is established and holding at eighteen hundred (1800) degrees Fahrenheit for at least fifteen (15) minutes. Interlocks shall be provided which prevent opening the charging door after ignition and until the burn-down and cool-down periods are complete.

(7) For continually charged combustion units, the charging of waste shall automatically cease through the use of an interlock system if:

(a) The combustion unit's secondary chamber temperature drops below 1800 degrees Fahrenheit for any continuous fifteen-minute period; or

(b) The carbon monoxide emissions are equal to or greater than 50 ppm by volume, corrected to seven percent (7%) O₂ on a dry basis for any continuous 15-minute period.

B. Stack Height Requirements: Exhaust stack height for all biomedical waste combustion units shall be in accord with "good engineering practice" (GEP).

(1) For purposes of this Part, GEP is defined as the greater of:

(a) $H_g = H + 1.5L$ where: H_g = Good engineering practice stack height measured from the ground-level elevation at the base of the stack, H = Height of nearby structure(s) measured from the ground-level elevation at the base of the stack, L = Lesser dimension, height or projected width, of nearby structure(s), provided that the Department may require the use of a field study or fluid model to verify GEP stack height for the source; or

(b) The height demonstrated by a fluid model or a field study approved by the Department, which ensures that the emissions from a stack do not result in excessive concentrations of any air pollutant as a result of atmospheric downwash, wakes, or eddy effects created by the source itself, nearby structures or nearby terrain features.

(2) For purposes of this Part, the definitions in 40 CFR Sections 51.100(Z), (ff), and (hh)-(kk) (1987) are hereby incorporated as state regulations.

C. Operating Requirements:

(1) The owner or operator of a biomedical waste combustion unit shall not manually charge the primary combustion chamber through doors open to the atmosphere while the unit is operating. Charging of waste for units other than batch units shall be by mechanical means which prevents upsets in the burn cycle.

(2) Each combustion unit shall operate so that during shutdown the combustion unit continues to meet applicable emission limitations and the secondary combustion chamber temperature is maintained at 1800 degrees Fahrenheit or above until the waste is completely combusted.

(3) Combustion units utilizing control devices to attain emission limits must be designed such that the flue gas temperature at the outlet of the final control device does not exceed three hundred (300) degrees Fahrenheit unless a demonstration is made that an equivalent collection (removal) of heavy metals and toxic organics can be achieved at a higher temperature or through the use of alternate technologies.

[11/30/95; 20.2.63.203 NMAC - Rn 20 NMAC 2.63.500 - 502 10/31/02]

20.2.63.204 MONITORING:

A. Emission Monitoring:

(1) Continuous emission monitors shall be installed, calibrated, maintained, and operated, and shall continuously record data for the following:

(a) For biomedical waste combustion units located at a facility with a total charging rate of 1000 pounds per hour or greater;

(i) carbon monoxide (CO);

- (ii) oxygen (O₂); and
- (iii) opacity.

(b) If an opacity monitor cannot be applied satisfactorily, alternate apparatus may be employed, on a case by case basis, with the written approval of the Department, to demonstrate acceptable operation of the particulate removal device.

(c) For biomedical waste combustion units located at a facility with a total charging capacity of less than one thousand (1000) pounds per hour;

- (i) oxygen (O₂); and
- (ii) carbon monoxide (CO).

(2) The owner or operator of any combustion unit shall install, calibrate, maintain, operate, and continuously record the temperature of gases leaving the primary and secondary combustion chambers and the outlet of the final air pollution control device, where present. Such monitors shall have an accuracy of plus or minus 0.75 percent of the temperature being measured expressed in degrees Celsius or plus or minus 2.5 degrees Celsius, whichever is greater. Sensors shall be located such that flames from the burners do not impinge on the sensors.

(3) At least ninety (90) days prior to initial startup, the owner or operator shall submit a report to the Department which describes, for each monitor, the location, specifications, procedures for calibration, operation, maintenance, data evaluation, and reporting. Monitoring equipment shall not be installed prior to Department approval of the report.

(4) The continuous emission monitors which measure oxygen (O₂) and carbon monoxide (CO) shall complete a minimum of one cycle of operation for each successive fifteen-minute period. One-hour averages shall be calculated from four (4) or more data points equally spaced over each one-hour period.

(5) The continuous emission monitor which measures opacity shall complete a minimum of one cycle of operation for each successive ten-second period. Six-minute averages shall be calculated from thirty-six (36) or more data points equally spaced over each six-minute period.

(6) Data recorded during periods of continuous emission monitor breakdown, repairs, calibration checks, and zero and span adjustments shall not be included in calculated data averages.

(7) Emission data shall be obtained from each continuous emission monitor which represents a minimum of seventy-five (75) percent of all operational hours for each twenty-four (24) hour period beginning at twelve (12) midnight. Failure to meet the

seventy-five (75) percent data capture requirement of this section shall cause the combustion unit to be shutdown as required by subsection B of 20.2.63.204 NMAC.

(8) The owner or operator shall ensure each continuous emission monitor meets the requirements of 40 CFR Part 60, Appendix F -- Quality Assurance Procedures and shall submit to the Department all reports specified by subject requirements. The required reports shall be submitted quarterly.

B. Continuous Emission Monitor Malfunction: Whenever any required continuous emission monitor cannot meet the data capture requirement of paragraph (7) of subsection A of 20.2.63.204 NMAC and the owner or operator does not obtain the required data from an alternate monitor or test method, the combustion unit shall cease operation for the time necessary to comply with paragraph (7) of subsection A of 20.2.63.204 NMAC.

C. Performance Evaluation:

(1) During or within thirty (30) days of the emission tests required by 20.2.63.205 NMAC, the owner or operator shall conduct a performance evaluation of each continuous emissions monitor in accordance with the procedures of 40 CFR Part 60, Appendix B -- Performance Specifications.

(2) The performance evaluation required by paragraph (1) of subsection C of 20.2.63.204 NMAC shall be repeated on an annual basis or after any major equipment malfunction which requires component replacement, or at additional times when the Department has reason to believe the monitor performance is inadequate.

(3) The owner or operator shall provide at least thirty (30) days prior notice to the Department before conducting any performance evaluation.

(4) A written report of each performance evaluation shall be furnished to the Department within thirty (30) days from the end of the test period.

[11/30/95; 20.2.63.204 NMAC - Rn, 20 NMAC 2.63.600 - 602 10/31/02]

20.2.63.205 EMISSION TESTING:

A. Emission Testing:

(1) Within sixty (60) days of first achieving the maximum charging rate, but not more than one hundred eighty (180) days from the date of initial startup, the first annual performance test shall be conducted.

(2) Units with charging capacity less than two hundred (200) pounds per hour:

(a) The owner or operator of any biomedical waste combustion unit that has a charging capacity of less than two hundred (200) pounds per hour shall conduct an annual performance test to demonstrate compliance with the emission standards for particulate matter (PM), carbon monoxide (CO) and hydrogen chloride (HCl).

(b) The initial performance test for combustion units subject to this paragraph shall include PCDD/PCDF and the following metals:

- (i)** arsenic and compounds (expressed as arsenic)
- (ii)** beryllium and compounds (expressed as beryllium)
- (iii)** cadmium and compounds (expressed as cadmium)
- (iv)** chromium and compounds (expressed as chromium)
- (v)** lead and compounds (expressed as lead)
- (vi)** mercury and compounds (expressed as mercury).

(c) The required performance test for PCDD/PCDF and metals shall be conducted once, provided that PCDD/PCDF emission test results indicate compliance with the standard set forth in subsection A of 20.2.63.202 NMAC (i.e. the table in subsection A of 20.2.63.210 NMAC).

(3) Units with charging capacity of two hundred (200) pounds per hour or greater:

(a) The owner or operator of any biomedical waste combustion unit located at a facility with a total charging capacity of two hundred (200) pounds per hour or greater shall conduct a performance test to demonstrate compliance with the standards for particulate matter (PM), carbon monoxide (CO), hydrogen chloride (HCl), sulfur dioxide (SO₂), nitrogen dioxide (NO₂), total tetra-through octa-chlorinated dibenzo-para-dioxins and dibenzofurans (PCDD/PCDF), and the following metals:

- (i)** arsenic and compounds (expressed as arsenic)
- (ii)** beryllium and compounds (expressed as beryllium)
- (iii)** cadmium and compounds (expressed as cadmium)
- (iv)** chromium and compounds (expressed as chromium)
- (v)** lead and compounds (expressed as lead)
- (vi)** mercury and compounds (expressed as mercury).

(b) The required test for metals may be met by surrogate testing for cadmium as stated in paragraph (3) of subsection B of 20.2.63.202 NMAC.

(c) Source tests shall be conducted annually for the above specified pollutants.

(d) The owner or operator may apply to the Department for a waiver of annual testing for a specific pollutant where performance testing has consistently shown emission rates for that pollutant which are less than those required in this Part, but in no case shall any required test be conducted less than once in every three years.

(4) All performance testing shall be conducted at the design charging capacity using waste that is representative of normal operation while being operated by the facility operator.

(5) The Department may require additional testing if there is a reasonable basis to believe the facility is not in compliance with provision of this Part or any applicable permit condition.

(6) The Department or its representative may conduct unscheduled emission tests at any time during operating hours of the facility.

B. Emission Testing Procedures:

(1) Notice of the test date and a copy of the test protocol shall be submitted to the Department at least thirty (30) days prior to the actual test date.

(2) A representative of the Department shall be given the opportunity to be present during all emission tests required by this Part.

(3) A written copy of all test results shall be furnished to the Department within sixty (60) days from the test date.

(4) Emission tests shall be conducted utilizing the following methods:

(a) For total particulate matter -- 40 CFR Part 60, Appendix A, Methods 1-5;

(b) For PCDD/PCDF 40 CFR Part 60, Appendix A, Method 23;

(c) For cadmium, chromium, and lead 40 CFR Part 60, Appendix A, Methods 1-4 and 12;

(d) For arsenic 40 CFR Part 61, Appendix B, Method 108;

(e) For beryllium 40 CFR Part 61, Appendix B, Method 104;

- (f) For mercury 40 CFR Part 61, Appendix B, Method 101A;
- (g) For opacity 40 CFR Part 60, Appendix A, Method 9;
- (h) For hydrogen chloride 40 CFR Part 60, Appendix A, Method 26;
- (i) For cadmium (as surrogate), California Air Resources Board (CARB) ARB Method 424;
- (j) For carbon monoxide 40 CFR Part 60, Appendix A, Method 10;
- (k) For sulfur dioxide 40 CFR Part 60, Appendix A, Method 6; and
- (l) For nitrogen oxide 40 CFR Part 60, Appendix A, Method 7.

(5) The owner or operator may use test methods other than those in paragraph (4) of subsection B of 20.2.63.205 NMAC if the Department has approved the alternate test method prior to the test date. The Department shall rule on proposed alternate test method acceptability within thirty (30) days of receipt of proposal.

[11/30/95; 20.2.63.205 NMAC - Rn, 20 NMAC 2.63.700 - 701 10/31/02]

20.2.63.206 RECORDKEEPING AND REPORTING:

A. Quarterly Report: The owner or operator shall submit a report containing the following information to the Department within thirty (30) days from the end of each calendar quarter:

- (1) The hourly average charging rate to each combustion unit;
- (2) The thirty (30) minute average temperature of the primary chamber, the secondary chamber, and the outlet from the final air pollution control device;
- (3) The hourly and four-hour average concentration in mg/dscm corrected to seven percent O₂ of carbon monoxide (CO) as measured by continuous emission monitors;
- (4) The hourly average percent oxygen (O₂) and six-minute average opacity as measured by continuous emission monitors;
- (5) The percent data capture for each twenty-four hour period for each continuous emission monitor;
- (6) The identification of all periods of startup, shutdown, and excess emissions; and

(7) The reason for any excess emissions and the corrective action taken.

B. Records:

(1) Records shall be maintained for a period of three years from the date created by the owner or operator for all parameters in subsection A of 20.2.63.206 NMAC and made available upon request for inspection and copying by the Department during operating hours.

(2) All information submitted to the Department in quarterly reports or emission test reports, or any other information created or obtained by the Department regarding the biomedical waste combustion unit shall be available at the Department's central offices for public inspection and copying during business hours. Section B of 20.2.63.210 NMAC summarizes reporting requirements and their respective due dates.

C. Upset Condition:

(1) The provisions of 20.2.7 NMAC (Excess Emissions During Malfunction, Startup, Shutdown, or Scheduled Maintenance) shall not apply to any biomedical waste combustion unit.

(2) Whenever the temperature requirements of 20.2.63.203 NMAC or any emission limit in subsection A of 20.2.63.202 NMAC for which compliance is based on continuous emissions monitoring is exceeded, the operator shall take the following actions:

(a) Cut off waste charging to the combustion unit;

(b) Notify the Department verbally of the exceedance within four hours of its occurrence or prior to twelve noon of the next business day should the exceedance occur during non-business hours;

(c) Note in the operating record the time and date of the exceedance, when shutdown began, and when shutdown was complete;

(d) Identify and correct the cause of the upset condition before resuming operation of the unit; and

(e) Note in the operating record the corrective action taken and the time and date of startup.

[11/30/95; 20.2.63.206 NMAC - Rn, 20 NMAC 2.63.800 - 802 10/31/02]

20.2.63.207 MANAGEMENT OF ASH:

A. Handling, Storage, and Transportation:

(1) All handling and storage of fly ash and bottom ash shall be conducted in a closed system which prevents ash from becoming airborne.

(2) Transporters of Biomedical Waste Combustion Ash (BWC ash):

(a) Shall not accept or transport BWC ash unless it has been treated or is securely covered to prevent release of fugitive dust;

(b) Shall cover vehicles to prevent fugitive dust loss during transport; and

(c) Shall line or seal vehicles in such a manner to prevent any leakage of liquids or fugitive dust during transport.

B. Opacity: Handling, storage, and transportation of fly ash and bottom ash shall not result in a release to the atmosphere exceeding zero percent opacity. Compliance with this requirement shall be determined by visual observation as specified in 40 CFR Part 60, Appendix A, Method 9.

C. Disposal: Disposal of fly ash and bottom ash shall be in compliance with the applicable requirements of 20.9.1 NMAC (New Mexico Solid Waste Management Regulation).

[11/30/95; 20.2.63.207 NMAC - Rn, 20 NMAC 2.63.900 - 902 10/31/02]

20.2.63.208 OPERATOR TRAINING:

A. A trained combustion unit operator shall be present at the facility in which a combustion unit is located whenever waste is being combusted. The facility employed operator will control the operation of the combustion unit during performance testing.

B. All combustion unit operators or their immediate supervisor on-site must have completed the following qualifying training. Operator training shall include a program of study approved by the Department. The owner or operator shall submit a proposed program of study to include the following:

(1) Proper waste handling;

(2) Identification of waste types acceptable for combustion;

(3) Combustion unit design and waste combustion theory;

(4) Proper combustion unit startup, operation, shutdown, and maintenance procedures;

(5) Work safety procedures, including infectious disease control procedures for the facility;

(6) Applicable air pollution, solid waste, and wastewater management regulations;

(7) Air pollution control equipment operation and maintenance; and

(8) A minimum of two (2) burn cycles of hands-on combustion unit operation under the supervision of another trained operator or the combustion unit manufacturer's representative.

C. Operator training shall include an annual review lasting at least eight hours. The required review may contain but shall not be limited to reviews of operation and maintenance procedures, topic specific conferences, manufacturers updates, and regulatory updates. The content of the annual review shall be approved by the Department.

D. Every operator shall have visible proof of completion of the required initial training and annual review posted or filed in the work area at the facility.

E. Upon completion of the development of a training course by the American Society of Mechanical Engineers (ASME) which is specific to biomedical waste combustion units, subsection B of 20.2.63.208 NMAC shall be superseded and the ASME training course shall be required.

[11/30/95; 20.2.63.208 NMAC - Rn, 20 NMAC 2.63.1000 10/31/02]

20.2.63.209 COMPLIANCE SCHEDULE FOR EXISTING BIOMEDICAL WASTE COMBUSTION UNITS:

A. Biomedical waste combustion units in existence before April 8, 1991 shall achieve compliance with the standards and requirements of this Part by April 8, 1992. Each owner or operator of an existing biomedical waste combustion unit who intends to permanently cease operating the unit shall remove the unit from the facility by October 5, 1991. The Department shall be notified of the intent to cease operating by July 7, 1991. Each owner or operator of an existing biomedical waste combustion unit shall either demonstrate compliance with the requirements of this Part or submit a schedule of compliance to the Department by July 7, 1991.

B. Proposed schedules of compliance shall contain the following:

(1) Owner or operator's name and address;

(2) Date of submittal;

(3) Description of facility;

(4) Description of the property upon which the facility is located;

(5) The following increments of progress;

(a) A date or dates by which contracts for each major phase of construction or installation of emission control systems, or process modification, or orders for their component parts, will be awarded;

(b) A date or dates of initiation of each major phase of on-site construction or installation of emission control equipment or process modification;

(c) A date or dates by which each major phase of on-site construction or installation of emission control equipment or process modification is to be completed; and

(d) Date or dates by which final compliance is to be achieved.

(6) A detailed description of the methods or devices to be used to achieve compliance.

[11/30/95; 20.2.63.209 NMAC - Rn, 20 NMAC 2.63.1100 10/31/02]

20.2.63.210 BIOMEDICAL WASTE COMBUSTION TABLES:

A. Emission Limits:

Total Charging Capacity(1)	Pollutants						
	PM(2)	HCl	CO	NOx	SO2	PCDF	Metals(3)
<200 lb/hr	0.08 gr/dscf	<4 lb/hr or 99%	60 mg/dscm			500 ng/dscm	
200 lb/hr to 999 lb/hr	0.03 gr/dscf	40 mg/dscm	60 mg/dscm	235 mg/dscm	80 mg/dscm	5 ng/dscm	99% removal or Cd surrogate at 50 ug/kg of waste burned
>1000 lb/hr	0.015 gr/dscf	40 mg/dscm	60 mg/dscm	235 mg/dscm	80 mg/dscm	5 ng/dscm	99% removal or Cd surrogate at 50 ug/kg of waste burned

(1) The emission limit for opacity is ten percent (10%) for all charging capacities.

(2) The particulate matter emission limit is set at twelve percent (12%) CO₂. All other emission limits are set at seven percent (7%) O₂.

(3) The ninety-nine percent (99%) removal efficiency requirement applies to the following metals except for mercury which requires a ninety percent (90%) removal efficiency: arsenic, beryllium, cadmium, chromium, and lead.

B. Summary Table of Reporting Requirements:

REPORT DESCRIPTION	REFERENCE	DATE DUE TO DEPARTMENT
Notice of CEM performance evaluation	paragraph (3) of subsection C of 20.2.63.204 NMAC	At least 30 days prior to performance evaluation
CEM Performance	paragraph (4) of subsection C of 20.2.63.204 NMAC	Within 30 days from the end of the test period
Notice of emission testing and test protocols	paragraph (1) of subsection B of 20.2.63.205 NMAC	At least 30 days prior to the actual test date
Copy of emission test results	paragraph (3) of subsection B of 20.2.63.205 NMAC	Within 60 days from test date
Quarterly report of CEM and temperature monitoring results	subsection A of 20.2.63.206 NMAC	Within 30 days of the end of each calendar quarter
Intent to cease unit operations	subsection A of 20.2.63.209 NMAC	Within 90 days of July 7, 1991 (1)
Schedule of compliance	subsection A of 20.2.63.209 NMAC	Within 90 days of July 7, 1991 (1)
(1) Date applies to units in existence before April 8, 1991.		

[11/30/95; 20.2.63.210 NMAC - Rn, 20 NMAC 2.63.1200 10/31/02]

PART 64: MUNICIPAL SOLID WASTE LANDFILLS

20.2.64.1 ISSUING AGENCY:

Environmental Improvement Board.

[20.2.64.1 NMAC - Rp, 20.2.64.1 NMAC, 05/31/17]

20.2.64.2 SCOPE:

All geographic areas within the jurisdiction of the Environmental Improvement Board.

[20.2.64.2 NMAC - Rp, 20.2.64.2 NMAC, 05/31/17]

20.2.64.3 STATUTORY AUTHORITY:

Environmental Improvement Act, Paragraphs (4) and (7) of Subsection (A) of Section 74-1-8 NMSA 1978 and Air Quality Control Act, Section 74-2-1 et seq. NMSA 1978, including specifically, Subsections (A), (B) and (C) of Section 74-2-5 NMSA 1978.

[20.2.64.3 NMAC - Rp, 20.2.64.3 NMAC, 05/31/17]

20.2.64.4 DURATION:

Permanent.

[20.2.64.4 NMAC - Rp, 20.2.64.4 NMAC, 05/31/17]

20.2.64.5 EFFECTIVE DATE:

May 31, 2017, unless a later date is cited at the end of a section.

[20.2.64.5 NMAC - Rp, 20.2.64.5 NMAC, 05/31/17]

[The latest effective date of any section in this part is 05/31/17.]

20.2.64.6 OBJECTIVE:

The objective of this part is to establish requirements for municipal solid waste landfills in order to control emissions of nonmethane organic compounds (NMOC).

[20.2.64.6 NMAC - Rp, 20.2.64.6 NMAC, 05/31/17]

20.2.64.7 DEFINITIONS:

In addition to the terms defined in 20.2.2 NMAC (Definitions), and those defined in 40 CFR 60 Subpart A, all definitions found in 40 CFR Part 60 Subpart XXX apply to new municipal solid waste landfills (MSWLs) and all definitions found in 40 CFR Part 60 Subpart Cf apply to existing MSWLs. As used in this part:

A. "Active municipal solid waste landfill" or "active MSWL" means an MSWL in which solid waste is being placed or an MSWL that is planned to accept waste in the future.

B. "Closed municipal solid waste landfill" or "closed MSWL" means an MSWL in which solid waste is no longer being placed, and in which no additional solid wastes will be placed without first filing a notification of modification as prescribed in 40 CFR 60.7(a)(4). Once a notification of modification has been filed and additional solid waste is placed in the MSWL, the MSWL is no longer closed.

C. "Existing municipal solid waste landfill" or "existing MSWL" means an active or closed MSWL meeting the following conditions:

(1) Construction, reconstruction, or modification was commenced on or before July 17, 2014; and

(2) The MSWL has accepted waste at any time since November 8, 1987, or has additional design capacity available for future waste deposition.

D. "Modification" means an increase in the permitted volume design capacity of an MSWL by either lateral or vertical expansion based on its permitted design capacity as of July 17, 2014. Modification does not occur until the owner or operator commences construction on the lateral or vertical expansion.

E. "Municipal solid waste landfill" or "MSWL" means an entire disposal facility in a contiguous geographical space where household waste is placed in or on land. An MSWL may also receive other types of Resource Conservation and Recovery Act (RCRA) Subtitle D wastes such as commercial solid waste, nonhazardous sludge, conditionally exempt small quantity generator waste, and industrial solid waste. Portions of an MSWL may be separated by access roads. An MSWL may be publicly or privately owned. An MSWL may be new, existing, or a lateral expansion.

F. "New municipal solid waste landfill" or "new MSWL" means an MSWL that commenced construction, reconstruction, or modification after July 17, 2014.

G. "NMOC" means nonmethane organic compounds as measured according to the provisions of either 40 CFR 60 Subpart Cf or 40 CFR 60 Subpart XXX. NMOC may include many compounds commonly referred to as VOC (volatile organic compounds) and HAP (hazardous air pollutants).

[20.2.64.7 NMAC - Rp, 20.2.64.7 NMAC, 05/31/17]

20.2.64.8 [RESERVED]

20.2.64.9 DOCUMENTS:

Documents cited in this part may be viewed at the New Mexico environment department, air quality bureau.

[20.2.64.9 NMAC - Rp, 20.2.64.9 NMAC, 05/31/17]

[As of April 2013, the air quality bureau is located at 525 Camino de los Marquez, Suite 1, Santa Fe, NM 87505.]

20.2.64.10-20.2.64.108 [RESERVED]

20.2.64.109 APPLICABILITY:

A. Existing municipal solid waste landfills: An owner or operator of an existing (active or closed) MSWL is subject to all provisions specified in 40 CFR 60 Subpart Cf as promulgated by the United States environmental protection agency on August 29, 2016, except as provided for in Section 111 of this part. Physical or operational changes made to an existing MSWL solely to comply with an emission guideline are not considered a modification or a reconstruction and would not subject an existing MSWL to the requirements of a standard of performance for new MSWLs.

B. New municipal solid waste landfills: In addition to being subject to 20.2.64.110 NMAC new MSWLs are subject to 40 CFR Part 60, Subpart XXX as incorporated by reference in 20.2.77 NMAC (New Source Performance Standards).

[20.2.64.109 NMAC - Rp, 20.2.64.109 NMAC, 05/31/17]

20.2.64.110 PERMITTING REQUIREMENTS:

A. Operating permits: New and existing active MSWLs with design capacities greater than or equal to 2.5 million megagrams and 2.5 million cubic meters are subject to permitting requirements under 20.2.70 NMAC (Operating Permits). Closed MSWLs and new and existing MSWLs with design capacities less than 2.5 million megagrams or 2.5 million cubic meters are not subject to permitting requirements under 20.2.70 NMAC unless they are major sources as defined in 20.2.70 NMAC.

B. Construction permits: Emissions of NMOC from MSWLs subject to 20.2.64 NMAC shall not be included in applicability determinations under 20.2.72 NMAC or be subject to permit requirements under that part solely on the basis of NMOC emissions.

[20.2.64.110 NMAC - Rp, 20.2.64.110 NMAC, 05/31/17]

20.2.64.111 REQUIREMENTS FOR EXISTING MUNICIPAL SOLID WASTE LANDFILLS:

A. Requirements for existing (active and closed) MSWLs shall be in accordance with 40 CFR 60 Subpart Cf, except as provided in Subsections B and C below.

B. All reports required in 40 CFR 60 Subpart Cf shall be submitted to the department according to the schedules outlined in that subpart. Additional notifications regarding progress toward meeting the final compliance schedule for control system installation and startup shall be submitted to the department as follows:

(1) Contracts for construction of collection and control systems shall be awarded or orders for purchase of components shall be completed no later than six months following submission of the final control plan;

(2) On-site construction or installation of the collection and control system shall be initiated no later than nine months following submission of the final control plan;

(3) On-site construction or installation of the collection and control system shall be completed no later than 29 months following the submission of an annual NMOC emission rate report showing NMOC emissions equal to or exceeding the emissions threshold in Subpart Cf; and

(4) Initial performance testing shall be scheduled for no later than 150 days following the final compliance date in Subpart Cf.

C. Exceptions: On a case by case basis, an existing active or closed MSWL may apply for a less stringent emission standard or longer compliance schedule than those otherwise required by this part, provided that the owner or operator demonstrates to the department:

(1) unreasonable cost of control including, but not limited to MSWL age, location, or basic design;

(2) physical impossibility or impracticability of installing necessary control equipment; or

(3) other environmental factors specific to the MSWL that make application of a less stringent standard or final compliance time significantly more reasonable.

[20.2.64.111 NMAC - Rp, 20.2.64.111 NMAC, 05/31/17]

PART 65: SMOKE MANAGEMENT

20.2.65.1 ISSUING AGENCY:

Environmental Improvement Board.

[20.2.65.1 NMAC - N, 12/31/03]

20.2.65.2 SCOPE:

All geographic areas within the jurisdiction of the environmental improvement board.

[20.2.65.2 NMAC - N, 12/31/03]

20.2.65.3 STATUTORY AUTHORITY:

Environmental Improvement Act, NMSA 1978, Subsection 74-1-8(A) (4) and Air Quality Control Act, NMSA 1978, Sections 74-2-1 to -22, including specifically, Subsections 74-2-5(A), (B) and (C).

[20.2.65.3 NMAC - N, 12/31/03]

20.2.65.4 DURATION:

Permanent.

[20.2.65.4 NMAC - N, 12/31/03]

20.2.65.5 EFFECTIVE DATE:

December 31, 2003, except where a later date is cited at the end of a section.

[20.2.65.5 NMAC - N, 12/31/03]

[The latest effective date of any section in this part is December 31, 2003.]

20.2.65.6 OBJECTIVE:

The objective of this part is to manage the air quality impacts of smoke from all sources of fire. This part does not preempt any more stringent controls on burning provided in:

A. any other New Mexico statute or regulation or any local law, ordinance or regulation; or

B. any lawfully issued restriction on burning such as may be issued for wildfire prevention.

[20.2.65.6 NMAC - N, 12/31/03]

20.2.65.7 DEFINITIONS:

In addition to the terms defined in 20.2.2 NMAC (definitions), as used in this part:

A. "alternatives to burning" means treatments employing manual, mechanical, chemical, or biological methods to manage vegetation or fuel loads or land management practices that treat vegetation (fuel) without using fire; a treatment or practice may only be considered an alternative if it has successfully been used to take the place of fire for at least three years;

B. "burn project" means, in prescribed burning or in wildland fire use, a burn on an area that is contiguous and is being treated or managed for the same land management objectives;

C. "burner" means that person who is responsible for a prescribed fire project that is regulated under this part;

D. "class I area" means all international parks, national wilderness areas that exceed 5,000 acres in area, national memorial parks that exceed 5,000 acres in area, and national park areas that exceed 6,000 acres in area and that existed on the date of enactment of the Clean Air Act amendments of 1977; the extent of the areas designated as class I shall conform to any changes in the boundaries of such areas that occurred subsequent to the date of the enactment of the Clean Air Act amendments of 1977 or 1990;

E. "emission reduction technique" means a strategy for controlling smoke from prescribed fires that minimizes the amount of smoke output per unit of area treated or other objective unit of accomplishment; such strategy shall be used in conjunction with fire and shall not be a replacement for fire; for the purposes of this regulation, a technique used within three years of a burning operation is an emission reduction technique; if that same technique replaces fire for three years or more, the technique is considered an alternative to burning;

F. "non-attainment area" means an area which has been designated under section 107 of the federal Clean Air Act as nonattainment for one or more of the national ambient air quality standards by the federal environmental protection agency;

G. "part" means an air quality control regulation under Title 20, Chapter 2 of the New Mexico administrative code, unless otherwise noted, as adopted or amended by the board;

H. "pile" means vegetative materials that have been relocated either by hand or machinery and heaped together;

I. "pile volume" means a pile's gross volume, including the air space between solid constituents, as calculated from the pile's overall dimensions and shape;

J. "population" means the total of individuals occupying an area; locations for individuals within an area include, but are not limited to, open campgrounds, single family dwellings, hospitals, schools in use, villages, and open places of employment;

K. "prescribed fire" means any fire ignited by any person to meet specific land management objectives; for the purposes of this part, wildland fire use is considered prescribed fire; any fire ignited in an air curtain incinerator is not "prescribed fire" for purposes of this part;

L. "public notification" means any method that communicates burn information to the burners, air regulators, the local fire authority, and to the general public;

M. "SMP I" means burn projects that emit less than one ton per day of PM-10 emissions or burn less than 5,000 cubic feet pile volume of vegetative material per day;

N. "SMP II" means burn projects that emit greater than or equal to one ton of PM-10 emissions per day or greater than or equal to 5,000 cubic feet pile volume of vegetative material per day;

O. "vegetative material" means untreated wood and untreated wood products, including tree stumps (whole or chipped), trees, tree limbs (whole or chipped), bark, sawdust, chips, scraps, slabs, millings, shavings, grass, grass clippings, leaves, conifer needles, bushes, shrubs, clippings from bushes and shrubs, and agricultural plant residue;

P. "ventilation category" means that adjective describing the ventilation index conditions in terms of excellent, very good, good, fair, and poor;

Q. "ventilation index" means an index that describes the potential for smoke or other pollutants to ventilate away from their source;

R. "wildfire" means any unplanned, non-structural fire that occurs on wildland;

S. "wildland" means an area in which development is essentially non-existent, except for roads, railroads, power lines, and similar transportation facilities; structures if any are widely scattered;

T. "wildland fire use" means the management of wildfire, which is naturally ignited (such as by lightning or volcanic eruption) fire, to accomplish specific pre-stated resource objectives in predefined geographic areas, also known as fire use, wildfire use, prescribed natural fire, and fire for resource benefit.

[20.2.65.7 NMAC - N, 12/31/03]

20.2.65.8-20.2.65.99 [RESERVED]

20.2.65.100 APPLICABILITY:

A. This part applies to all users of prescribed fire that:

(1) exceeds ten acres in area or 1,000 cubic feet of pile volume per day of vegetative material; or

(2) exceeds the daily burn area or pile volume thresholds specified in Subsection A of 20.2.60.111 NMAC (open burning).

B. This part also applies to burn projects otherwise subject to 20.2.60 NMAC (open burning) that users of prescribed fire voluntarily choose to register with the department under Subsection C of 20.2.65.102 NMAC or Subsection G of 20.2.65.103 NMAC.

C. In addition, portions of this part also apply to the land manager or owner of property on which a wildfire occurs.

[20.2.65.100 NMAC - N, 12/31/03]

20.2.65.101 MATERIALS ALLOWED TO BE BURNED:

Only vegetative material shall be burned, with the following exceptions.

A. Auxiliary fuel or incendiary devices may be used to ignite the burning authorized by this section, provided that:

(1) no oil heavier than no. 2 diesel shall be used; and

(2) no more than the minimum amount of auxiliary fuel necessary to complete the burn shall be used.

B. Polyethylene sheeting may be burned with the vegetative materials, provided that:

(1) the sheeting has been covering piled vegetative material for at least one month prior to burning;

(2) the amount of sheeting burned is no more than the minimum necessary to cover the pile;

(3) removal of the sheeting before burning is impractical; and

(4) the burner is able to provide evidence, such as purchase records or package labeling, that the sheeting is polyethylene and not some other form of plastic.

[20.2.65.101 NMAC - N, 12/31/03]

20.2.65.102 REQUIREMENTS FOR SMP I:

For any burn project of less than one ton of PM-10 emissions per day or less than 5,000 cubic feet pile volume per day, all of the following requirements shall apply.

A. The burner shall burn only under appropriate dispersion conditions. In order to accomplish this objective, the burner shall follow one of the two options below.

(1) The burner shall:

(a) ignite burns only during the hours from one hour after sunrise until one hour before sunset; the burner may apply for a waiver of this requirement in writing from the department no later than two weeks prior to the planned burn project; the burner

shall document the reasons for waiver application on the appropriate form provided by the department; the department shall notify the burner no later than one week prior to the planned burn project of whether the waiver is granted or denied; the department shall consider such waiver requests on a case-by-case basis; and

(b) conduct burn projects at least 300 feet from any occupied dwelling, workplace, or place where people congregate, which is on property owned by, or under possessory control of, another person; the burner may apply for a waiver of this requirement in writing from the department no later than two weeks prior to the planned burn project; the burner shall document the reasons for waiver application on the appropriate form provided by the department; the department shall notify the burner no later than one week prior to the planned burn project of whether the waiver is granted or denied; the department shall consider such waiver requests on a case-by-case basis; or

(2) the burner shall:

(a) only burn during times when the ventilation category is good or better; the burner may apply for a waiver of this requirement in writing from the department no later than 10:00 a.m. one business day prior to the planned burn project; the burner shall document the reasons for waiver application on the appropriate form provided by the department; the department shall notify the burner no later than 3:00 p.m. one business day prior to the planned burn project of whether the waiver is granted or denied; the department shall consider such waiver requests on a case-by-case basis; and

(b) conduct visual monitoring and shall document the results; the burner shall maintain records of those results for a period of one year; for any burn project planned to be conducted within a one mile radius of a population, the department may require that the burner notify the department no later than two business days prior to the planned burn project so that the department may determine whether to conduct instrument monitoring in addition to visual monitoring conducted by the burner; the need for instrument monitoring shall be determined by the department on a case-by-case basis.

B. The burner shall notify the local fire authority prior to igniting a burn.

C. The burner shall register the burn project with the department on a registration form provided by the department no later than 10:00 a.m. one business day prior to the planned ignition of the burn project. The department shall provide the burner with a registration number for the burn project. Prior to igniting the burn project, if the burner has not received the registration number, the burner shall make a good faith effort to contact the department to obtain the registration number. For burn projects longer than seven days, the burner shall notify the department separately for each seven days of burning to be conducted under that burn project registration. The burner shall not burn more area or volume than the burner has included in the notification or registration.

D. The burner shall submit a completed burn project tracking form to the department on a tracking form provided by the department no later than two weeks following completion of the burn project.

E. For burn projects conducted within a one-mile radius of a population, the following requirements shall apply in addition to all other requirements in this section (20.2.65.102 NMAC):

(1) the burner shall conduct visual monitoring and document the results; and

(2) the burner shall conduct public notification of populations within a one-mile radius of the burn project no later than two days prior to, and no earlier than thirty days in advance of, igniting a burn project.

F. The burner shall maintain all records of actions performed pursuant to the requirements of this section for a period of at least one year.

[20.2.65.102 NMAC - N, 12/31/03]

20.2.65.103 REQUIREMENTS FOR SMP II:

For any burn project with emissions greater than or equal to one ton of PM-10 emissions per day or greater than or equal to 5,000 cubic feet pile volume per day, all of the following requirements shall apply.

A. The burner shall review smoke management educational material supplied by the department or complete an approved smoke management training program prior to initiating burning.

B. The burner shall consider alternatives to burning and shall document this consideration and rationale for not using alternatives on the form provided by the department.

C. The burner shall implement at least one emission reduction technique and shall document this implementation on the forms provided by the department. The burner may apply for a waiver of this requirement in writing from the department no later than two weeks prior to the planned burn project. The burner shall document the reasons for waiver application on the appropriate form provided by the department. The department shall notify the burner no later than 10:00 a.m. one week prior to the planned burn project of whether the waiver is granted or denied. The department shall consider such waiver requests on a case-by-case basis, taking into consideration the criteria of efficiency, economics, law, emission reduction opportunities, land management objectives, and reduction of visibility impact.

D. The burner shall only burn during times when the ventilation category is "good" or better. The burner may apply for a waiver of this requirement in writing from the

department no later than 10:00 a.m. one business day prior to the planned burn. The burner shall document the reasons for waiver application on the appropriate form provided by the department. The department shall notify the burner no later than 3:00 p.m. one business day prior to the planned burn of whether the waiver is granted or denied. The department shall consider such waiver requests on a case-by-case basis.

E. The burner shall conduct visual monitoring and shall document the results.

F. The burner shall notify the local fire authority prior to igniting a burn.

G. The burner shall register a burn project with the department on forms provided by the department no later than two weeks prior to planned ignition of the burn.

H. The burner shall notify the department of the intent to burn on a specific date no later than 10:00 a.m. one business day prior to the planned burn project. The notification may be made for up to a seven-day advance period. The department shall notify the burner of the receipt of the notification by 11:00 a.m. If the department has not notified the burner by 11:00 a.m., the burner shall make a good faith effort to contact the department to verify that the department received the notification prior to igniting the burn. The burner shall not burn more area or volume than the burner has included in the notification. The department shall notify the burner no later than 3:00 p.m. one business day prior to the burn project if a modification of the burn is required.

I. The burner shall complete and submit to the department on a form provided by the department a fire activity tracking form no later than two weeks following the end of the burn project.

J. For burns planned to be conducted with the wind blowing toward a population, or within a fifteen mile radius of a population if wind direction is not considered, the following requirements shall apply in addition to all other requirements in this section (20.2.65.103 NMAC).

(1) The department may require that the burner notify the department no later than two business days prior to the planned burn so that the department may determine whether to conduct instrument monitoring in addition to visual monitoring conducted by the burner. The need for instrument monitoring shall be determined by the department on a case-by-case basis; and

(2) The burner shall conduct public notification no later than two days prior to, and no sooner than thirty days in advance of, igniting a burn.

K. The burner shall maintain all records of actions performed pursuant to the requirements of this section for a period of at least one year.

[20.2.65.103 NMAC - N, 12/31/03]

20.2.65.104 WILDLAND FIRE USE:

For wildland fire use exceeding ten acres in area, the following requirements shall apply.

A. The burner shall register a burn project with the department on forms provided by the department no later than one business day following the decision to manage a wildland fire use burn. The burner shall notify the department daily by 10:00 a.m. of the status of the burn.

B. The burner shall notify the appropriate authorities of the decision to manage a wildland fire use burn. For burns within a fifteen mile radius of a population, the burner shall conduct public notification no later than one calendar day of the decision to manage the burn as a wildland fire use.

C. The burner shall conduct visual monitoring and shall document the results.

D. The burner shall complete and submit to the department a fire activity tracking form no later than two weeks following the end of the burn project.

E. The burner shall maintain all records of actions performed pursuant to the requirements of this section for a period of at least one year.

[20.2.65.104 NMAC - N, 12/31/03]

20.2.65.105 WILDFIRE UNDER SUPPRESSION:

The land manager or owner of property on which a wildfire exceeding 100 acres in area occurs shall complete and submit to the department a fire activity tracking form no later than six weeks or by November 1 of that year, whichever is earlier, following the cessation of fire fighting activities on the wildfire.

[20.2.65.105 NMAC - N, 12/31/03]

PART 66: COTTON GINS

20.2.66.1 ISSUING AGENCY:

Environmental Improvement Board.

[20.2.66.1 NMAC - N, 04/07/05]

20.2.66.2 SCOPE:

All persons who intend to construct or modify a cotton ginning facility as defined in this part, except as otherwise provided by this part.

[20.2.66.2 NMAC - N, 04/07/05]

20.2.66.3 STATUTORY AUTHORITY:

Environmental Improvement Act, NMSA 1978, Section 74-1-8(A)(4) and Air Quality Control Act, NMSA 1978, Sections 74-2-1 et seq., including specifically, Section 74-2-5(A) and (B), and Section 74-2-7(A)(1), (B), (C), (D) and (O).

[20.2.66.3 NMAC - N, 04/07/05]

20.2.66.4 DURATION:

Permanent.

[20.2.66.4 NMAC - N, 04/07/05]

20.2.66.5 EFFECTIVE DATE:

April 7, 2005 except where a later date is cited at the end of a section.

[20.2.66.5 NMAC - N, 04/07/05]

20.2.66.6 OBJECTIVE:

The objective of this part is to specify the best system of emissions reduction for cotton ginning facilities under the provisions of Air Quality Control Act, NMSA 1978 ("the act"), Section 74-2-7(O), and to assure that permits issued under this part assure the maintenance of national ambient air quality standards, in accordance with Section 74-2-5 (A) and (B)(1) of the act and the federal Clean Air Act, Section 110(a).

[20.2.66.6 NMAC - N, 04/07/05]

20.2.66.7 DEFINITIONS:

In addition to the terms defined in 20.2.2 NMAC (Definitions), as used in this part.

A. "Bale" means a unit of measurement to denote an amount of lint cotton with a nominal weight of 500 pounds.

B. "Class I area" means any federal land area that is classified or reclassified as class I as described in 20.2.74.108 NMAC.

C. "Cotton ginning facility" or "facility" means any facility that separates seed, lint, and trash from raw cotton, and bales lint cotton for further processing, that will emit no more than fifty (50) tons per year of any regulated air contaminant for which there is a national ambient air quality standard, and that has the standard industrial

classification code 0724 (cotton ginning) and the North American industrial standard classification code 115111 (cotton ginning).

D. "Department" is the state of New Mexico environment department.

E. "Fugitive emissions" means those emissions that could not reasonably pass through a stack, chimney, vent, or other functionally equivalent opening.

F. "High efficiency cyclone dust collector" means any cyclone type collector of the 2D-2D or 1D-3D configuration. These designations refer to the ratio of cylinder to cone length, where D is the diameter of the cylinder portion. A 2D-2D cyclone would exhibit a cylinder length of 2 x D and a cone length of 2 x D, with a ninety percent (90%) efficiency for total suspended particulates. A 1D-3D cyclone would exhibit a cylinder length of 1 x D and a cone length of 3 x D, with a ninety-five percent (95%) efficiency for total suspended particulates.

G. "High pressure exhausts" means the exhaust from all air handling systems located at a cotton gin that are not defined as 'low pressure exhausts'.

H. "Low pressure exhausts" means the exhaust from systems at a cotton gin that handle air from the cotton lint handling system and battery condenser.

I. "Non-attainment" means designated by the United States environmental protection agency as not meeting one or more of the national ambient air quality standards.

J. "Opacity" means the degree to which emissions reduce the transmission of light and obscure the view of an object in the background.

K. "Owner or operator" is any person who owns or operates a process or process equipment at the source for which coverage under the permit has been granted.

L. "20.2.72 NMAC" means the air quality control regulation 20.2.72 NMAC (Construction Permits); that is, Part 72 of Title 20, Chapter 2 of the New Mexico administrative code.

[20.2.66.7 NMAC - N, 04/07/05]

20.2.66.8 [RESERVED]

20.2.66.9 DOCUMENTS:

Documents incorporated and cited in this part may be viewed at the New Mexico environment department, air quality bureau, 2048 Galisteo Street, Santa Fe, NM 87505.

[20.2.66.9 NMAC - N, 04/07/05]

20.2.66.10-20.2.66.199 [RESERVED]

20.2.66.200 ISSUANCE OF PERMIT UNDER 20.2.72 NMAC:

The department shall not deny issuance or revision of an air quality construction permit under 20.2.72 NMAC to any cotton ginning facility, as defined in Subsection C of 20.2.66.7 NMAC, if the permit application and the permit conditions meet the requirements of this part.

[20.2.66.200 NMAC - N, 04/07/05]

20.2.66.201 PERMIT APPLICATION REQUIREMENTS:

Permit applications for each permit issued in accordance with 20.2.66.200 NMAC shall:

A. meet all requirements for the contents of permit applications under Paragraphs (1) through (3), (5) through (15) of Subsection A of 20.2.72.203 NMAC and Subsections B through E of 20.2.72.203 NMAC;

B. state that this part is applicable to the cotton ginning facility;

C. propose maximum allowable annual and hourly emissions from the facility, and include proposed limitations to hours of operations and other limitations that will result in allowable emissions of no more than fifty (50) tons per year of any regulated air contaminant for which there is a national ambient air quality standard; and

D. include the proposed best system of emissions reduction for the facility, which for purposes of this part shall include at a minimum the controls, limitations, plans and practices set out in 20.2.66.202 NMAC.

[20.2.66.201 NMAC - N, 04/07/05]

20.2.66.202 PERMIT REQUIREMENTS:

Permits issued in accordance with 20.2.66.200 NMAC shall include the following best system of emissions reduction, as well as other conditions, including but not limited to recordkeeping, monitoring, reporting requirements, and test methods, as required to ensure the enforceability of permit conditions.

A. Limitations from application: except as modified by the department, the proposed emission reduction system and limitations specified in the application.

B. Emissions control on high pressure exhausts.

(1) All emissions from high pressure exhausts shall be controlled by the use of a high efficiency cyclone dust collectors (the terms high pressure exhaust and high efficiency cyclone dust collectors are defined in 20.2.66.7 NMAC).

(2) The opacity of visible emissions from cyclones shall not exceed twenty percent (20%).

C. Emissions control on low pressure exhausts.

(1) All emissions from low pressure exhausts (as defined in Subsection H of 20.2.66.7 NMAC) shall be controlled by the use of screens with a mesh size of 70 by 70 or finer (United States sieve), or the use of perforated condenser drums with holes not exceeding 0.045 inches in diameter, or with equipment of equivalent or higher design efficiency, as determined by the department.

(2) The opacity of visible emissions from low pressure exhausts shall not exceed twenty percent (20%).

D. A fugitive dust management plan that includes the following, or methods at least as effective in controlling fugitive dust.

(1) Complete enclosure of all burr hoppers.

(2) Measures to be taken to control fugitive dust emissions from any source, process or operation occurring within the cotton gin building to assure that no fugitive dust emissions to the outside atmosphere from any door, vent, or window are visible.

(3) Measures to be taken to minimize fugitive emissions from the handling, transportation or disposition of any substance or material that is likely to be scattered by the air or wind at the facility, including but not limited to materials in the gin yard and haul roads, including all open areas, right-of ways, storage piles, and vehicles at the facility. Such measures shall be sufficient to assure that no visible fugitive dust emissions generated from the property leave the property. Emissions may be controlled by watering, paving and cleaning, surfactants, or other equivalent means.

(4) The posted speed limit for all vehicles on unpaved haul roads and in unpaved yard areas shall be no more than 10 miles per hour.

E. Requirements for fuel burning equipment. This subsection applies to fuel burning equipment such as driers and humidifiers, but does not apply to mobile sources (such as loaders, haul trucks, and other vehicles).

(1) Any emissions from fuel burning equipment shall not exhibit greater than 20 percent opacity.

(2) The owner or operator shall use only the following fuels: natural gas, liquefied petroleum gas (LPG), propane, or No. 2 diesel fuel with a sulfur content equal to or less than 0.05 percent by weight.

(3) The owner or operator shall operate and maintain the equipment such that emissions and opacity limitations in the permit are met.

F. Location restrictions.

(1) The distance from the cotton gin to the property boundary shall be at least ten (10) feet in all directions, or the distance established in Paragraph (2) of Subsection F of 20.2.66.202 NMAC, whichever is greater.

(2) The minimum distance (in feet) in all directions from the cotton gin to the property boundary shall be calculated as the multiple of the square of the maximum emission rate (in pounds of PM10 per hour) and 0.2385, plus the multiple of the maximum emission rate (in pounds of PM10 per hour) and 54.0718, minus the value 816.0886.

(3) The distance from the cotton gin to the nearest existing state park, recreation area, or school shall be at least 0.25 miles. The distance from the cotton gin to the nearest class I area shall be at least three miles.

G. Maintenance of equipment.

(1) All materials handling systems and control equipment shall be installed and operated as required to assure that permit conditions will be met.

(2) The owner or operator shall conduct daily visual inspection of the material handling systems for leaks, breaks or other visible signs of equipment malfunctions, and repair such leaks, breaks or malfunctions in a timely manner.

(3) The owner or operator shall maintain a record of the daily inspections, including any equipment malfunctions discovered and corrective action taken to repair the malfunction.

[20.2.66.202 NMAC - N, 04/07/05]

PART 67-69: [RESERVED]

PART 70: OPERATING PERMITS

20.2.70.1 ISSUING AGENCY:

Environmental Improvement Board.

[11/30/95; 20.2.70.1 NMAC - Rn, 20 NMAC 20.2.70.100, 06/14/02]

20.2.70.2 SCOPE:

All persons who own or operate a major source or any other source required to obtain a permit under this Part.

[11/30/95; 20.2.70.2 NMAC - Rn, 20 NMAC 20.2.70.101, 06/14/02]

20.2.70.3 STATUTORY AUTHORITY:

Environmental Improvement Act, NMSA 1978, section 74-1-8(A)(4) and (7), and Air Quality Control Act, NMSA 1978, sections 74-2-1 et seq., including specifically, section 74-2-5(A), (B), and (C) and (D).

[11/30/95; 20.2.70.3 NMAC - Rn, 20 NMAC 20.2.70.102, 06/14/02]

20.2.70.4 DURATION:

Permanent.

[11/30/95; 20.2.70.4 NMAC - Rn, 20 NMAC 20.2.70.103, 06/14/02]

20.2.70.5 EFFECTIVE DATE:

11/30/95, except where a later date is cited at the end of a section.

[11/30/95; 20.2.70.5 NMAC - Rn, 20 NMAC 20.2.70.I.104, 06/14/02; A, 9/6/06]

[The latest effective date of any section in this part is 02/06/2013.]

20.2.70.6 OBJECTIVE:

The objective of this Part is to establish the requirements for obtaining an operating permit.

[11/30/95; 20.2.70.6 NMAC - Rn, 20 NMAC 20.2.70.105, 06/14/02]

20.2.70.7 DEFINITIONS:

In addition to the terms defined in 20.2.2 NMAC (definitions), as used in this part the following definitions shall apply.

A. "Acid rain source" has the meaning given to "affected source" in the regulations promulgated under Title IV of the federal act, and includes all sources subject to Title IV of the federal act.

B. "Affected programs" means all states, local air pollution control programs, and Indian tribes and pueblos, that are within 50 miles of the source.

C. "Air pollutant" means an air pollution agent or combination of such agents, including any physical, chemical, biological, radioactive (including source material, special nuclear material, and byproduct material) substance or matter which is emitted into or otherwise enters the ambient air. Such term includes any precursors to the formation of any air pollutant, to the extent the administrator has identified such precursor or precursors for the particular purpose for which the term "air pollutant" is used. This excludes water vapor, nitrogen (N₂), oxygen (O₂), and ethane.

D. "Air pollution control equipment" means any device, equipment, process or combination thereof, the operation of which would limit, capture, reduce, confine, or otherwise control regulated air pollutants or convert for the purposes of control any regulated air pollutant to another form, another chemical or another physical state. This includes, but is not limited to, sulfur recovery units, acid plants, baghouses, precipitators, scrubbers, cyclones, water sprays, enclosures, catalytic converters, and steam or water injection.

E. "Applicable requirement" means all of the following, as they apply to a Part 70 source or to an emissions unit at a Part 70 source (including requirements that have been promulgated or approved by the board or US EPA through rulemaking at the time of permit issuance but have future-effective compliance dates).

(1) Any standard or other requirement provided for in the New Mexico state implementation plan approved by US EPA, or promulgated by US EPA through rulemaking, under Title I of the federal act to implement the relevant requirements of the federal act, including any revisions to that plan promulgated in 40 CFR, Part 52.

(2) Any term or condition of any preconstruction permit issued pursuant to regulations approved or promulgated through rulemaking under Title I, including Parts C or D, of the federal act, unless that term or condition is determined by the department to be no longer pertinent.

(3) Any standard or other requirement under Section 111 of the federal act, including Section 111(d).

(4) Any standard or other requirement under Section 112 of the federal act, including any requirement concerning accident prevention under Section 112(r)(7) of the federal act.

(5) Any standard or other requirement of the acid rain program under Title IV of the federal act or the regulations promulgated thereunder.

(6) Any requirements established pursuant to Section 504(b) or Section 114(a)(3) of the federal act.

(7) Any standard or other requirement governing solid waste incineration under Section 129 of the federal act.

(8) Any standard or other requirement for consumer and commercial products under Section 183(e) of the federal act.

(9) Any standard or other requirement for tank vessels under Section 183(f) of the federal act.

(10) Any standard or other requirement of the regulations promulgated to protect stratospheric ozone under Title VI of the federal act, unless the administrator has determined that such requirements need not be contained in a Title V permit.

(11) Any national ambient air quality standard.

(12) Any increment or visibility requirement under Part C of Title I of the federal act, but only as it would apply to temporary sources permitted pursuant to Section 504(e) of the federal act.

(13) Any regulation adopted by the board pursuant to the New Mexico Air Quality Control Act, Section 74-2-5(B) NMSA 1978.

F. "CFR" means the Code of Federal Regulations.

G. "Draft permit" means a version of a permit which the department offers for public participation or affected program review.

H. "Emission limitation" means a requirement established by US EPA, the board, or the department, that limits the quantity, rate or concentration, or combination thereof, of emissions of regulated air pollutants on a continuous basis, including any requirements relating to the operation or maintenance of a source to assure continuous reduction.

I. "Emissions allowable under the permit" means:

(1) any state or federally enforceable permit term or condition that establishes an emission limit (including a work practice standard) requested by the applicant and approved by the department or determined at issuance or renewal to be required by an applicable requirement; or

(2) any federally enforceable emissions cap that the permittee has assumed to avoid an applicable requirement to which the source would otherwise be subject.

J. "Emissions unit" means any part or activity of a stationary source that emits or has the potential to emit any regulated air pollutant or any air pollutant listed pursuant to

Section 112(b) of the federal act. This term is not meant to alter or affect the definition of the term "unit" for purposes of Title IV of the federal act.

K. Federally enforceable" means all limitations and conditions which are enforceable by the administrator, including those requirements developed pursuant to 40 CFR Parts 60 and 61, requirements within the New Mexico state implementation plan, and any permit requirements established pursuant to 40 CFR 52.21 or under regulations approved pursuant to 40 CFR Part 51, Subpart I, including 40 CFR 51.165 and 40 CFR 51.166.

L. "Final permit" means the version of an operating permit issued by the department that has met all review requirements of 20.2.70.400 NMAC - 20.2.70.499 NMAC.

M. "Fugitive emissions" are those emissions which could not reasonably pass through a stack, chimney, vent, or other functionally-equivalent opening.

N. "General permit" means an operating permit that meets the requirements of 20.2.70.303 NMAC.

O. "Greenhouse gas" for the purpose of this part is defined as the aggregate group of the following six gases: carbon dioxide, nitrous oxide, methane, hydrofluorocarbons, perfluorocarbons, and sulfur hexafluoride.

P. "Hazardous air pollutant" means an air contaminant that has been classified as a hazardous air pollutant pursuant to the federal act.

Q. "Insignificant activities" means those activities which have been listed by the department and approved by the administrator as insignificant on the basis of size, emissions or production rate.

R. "Major source" means any stationary source (or any group of stationary sources that are located on one or more contiguous or adjacent properties, and are under common control of the same person(s)) in which all of the pollutant emitting activities at such source belong to the same major group (i.e., all have the same two-digit code), as described in the standard industrial classification manual, 1987, and that is described in Paragraphs (1), (2) or (3) below.

(1) A major source under Section 112 of the federal act, which is defined as the following.

(a) For pollutants other than radionuclides, any stationary source or group of stationary sources located within a contiguous area and under common control that emits or has the potential to emit, in the aggregate, 10 tons or more per year of any hazardous air pollutant which has been listed pursuant to Section 112 (b) of the federal act, 25 or more tons per year of any combination of such hazardous air pollutants

(including any major source of fugitive emissions of any such pollutant, as determined by rule by the administrator), or such lesser quantity as the administrator may establish by rule. Notwithstanding the preceding sentence, hazardous emissions from any oil or gas exploration or production well (with its associated equipment) and hazardous emissions from any pipeline compressor or pump station shall not be aggregated with hazardous emissions from other similar units, whether or not such units are in a contiguous area or under common control, to determine whether such units or stations are major sources.

(b) For radionuclides, "major source" shall have the meaning specified by the administrator by rule.

(2) A major stationary source of air pollutants that directly emits or has the potential to emit, 100 or more tons per year of any air pollutant subject to regulation (including any major source of fugitive emissions of any such pollutant, as determined by rule by the administrator). The fugitive emissions of a stationary source shall not be considered in determining whether it is a major stationary source for the purposes of this paragraph, unless the source belongs to one of the following categories of stationary sources:

- (a)** coal cleaning plants (with thermal dryers);
- (b)** kraft pulp mills;
- (c)** portland cement plants;
- (d)** primary zinc smelters;
- (e)** iron and steel mills;
- (f)** primary aluminum ore reduction plants;
- (g)** primary copper smelters;
- (h)** municipal incinerators capable of charging more than 250 tons of refuse per day;
- (i)** hydrofluoric, sulfuric, or nitric acid plants;
- (j)** petroleum refineries;
- (k)** lime plants;
- (l)** phosphate rock processing plants;
- (m)** coke oven batteries;

(n) sulfur recovery plants;

(o) carbon black plants (furnace process);

(p) primary lead smelters;

(q) fuel conversion plant;

(r) sintering plants;

(s) secondary metal production plants;

(t) chemical process plants;

(u) fossil-fuel boilers (or combination thereof) totaling more than 250 million British thermal units per hour heat input;

(v) petroleum storage and transfer units with a total storage capacity exceeding 300,000 barrels;

(w) taconite ore processing plants;

(x) glass fiber processing plants;

(y) charcoal production plants;

(z) fossil fuel-fired steam electric plants of more than 250 million British thermal units per hour heat input;

(aa) any other stationary source category, which as of August 7, 1980 is being regulated under Section 111 or 112 of the federal act.

(3) A major stationary source as defined in Part D of Title I of the federal act, including:

(a) for ozone non-attainment areas, sources with the potential to emit 100 tons or more per year of volatile organic compounds or nitrogen oxides in areas classified as "marginal" or "moderate," 50 tons or more per year in areas classified as "serious," 25 tons or more per year in areas classified as "severe," and 10 tons or more per year in areas classified as "extreme"; except that the references in this paragraph to 100, 50, 25, and 10 tons per year of nitrogen oxides shall not apply with respect to any source for which the administrator has made a finding, under Section 182(f)(1) or (2) of the federal act, that requirements under Section 182(f) of the federal act do not apply;

(b) for ozone transport regions established pursuant to Section 184 of the federal act, sources with the potential to emit 50 tons or more per year of volatile organic compounds;

(c) for carbon monoxide non-attainment areas (1) that are classified as "serious," and (2) in which stationary sources contribute significantly to carbon monoxide levels as determined under rules issued by the administrator, sources with the potential to emit 50 tons or more per year of carbon monoxide; and

(d) for particulate matter (PM10) non-attainment areas classified as "serious," sources with the potential to emit 70 tons or more per year of PM10.

S. "Operating permit" or "permit" (unless the context suggests otherwise) means any permit or group of permits covering a source that is issued, renewed, modified or revised pursuant to this part.

T. "Operator" means the person or persons responsible for the overall operation of a facility.

U. "Owner" means the person or persons who own a facility or part of a facility.

V. "Part" means an air quality control regulation under Title 20, Chapter 2 of the New Mexico Administrative Code, unless otherwise noted; as adopted or amended by the board.

W. "Part 70 source" means any source subject to the permitting requirements of this part, as provided in 20.2.70.200 NMAC - 20.2.70.299 NMAC.

X. "Permit modification" means a revision to an operating permit that meets the requirements of significant permit modifications, minor permit modifications, or administrative permit amendments, as defined in 20.2.70.404 NMAC.

Y. "Permittee" means the owner, operator or responsible official at a permitted Part 70 source, as identified in any permit application or modification.

Z. "Portable source" means any plant that is mounted on any chassis or skids and which can be moved by the application of a lifting or pulling force. In addition, there shall be no cable, chain, turnbuckle, bolt or other means (except electrical connections) by which any piece of equipment is attached or clamped to any anchor, slab, or structure, including bedrock, that must be removed prior to the application of a lifting or pulling force for the purpose of transporting the unit. Portable sources may include sand and gravel plants, rock crushers, asphalt plants and concrete batch plants which meet this criteria.

AA. "Potential to emit" means the maximum capacity of a stationary source to emit any air pollutant under its physical and operational design. Any physical or

operational limitation on the capacity of a source to emit an air pollutant, including air pollution control equipment and restrictions on hours of operation or on the type or amount of material combusted, stored, or processed, shall be treated as part of its design if the limitation is federally enforceable. The potential to emit for nitrogen dioxide shall be based on total oxides of nitrogen.

AB. "Proposed permit" means the version of a permit that the department proposes to issue and forwards to the administrator for review in compliance with 20.2.70.402 NMAC.

AC. "Regulated air pollutant" means the following:

(1) nitrogen oxides, total suspended particulate matter, or any volatile organic compounds;

(2) any pollutant for which a national ambient air quality standard has been promulgated;

(3) any pollutant that is subject to any standard promulgated under Section 111 of the federal act;

(4) any class I or II substance subject to any standard promulgated under or established by Title VI of the federal act;

(5) any pollutant subject to a standard promulgated under Section 112 or any other requirements established under Section 112 of the federal act, including Sections 112(g), (j), and (r), including the following;

(a) any pollutant subject to requirements under Section 112(j) of the federal act; if the administrator fails to promulgate a standard by the date established pursuant to Section 112(e) of the federal act, any pollutant for which a subject source would be a major shall be considered to be regulated on the date 18 months after the applicable date established pursuant to Section 112(e) of the federal act; and

(b) any pollutant for which the requirements of Section 112(g)(2) of the federal act have been met, but only with respect to the individual source subject to a Section 112(g)(2) requirement; or

(6) any other pollutant subject to regulation as defined in Subsection AL of this section.

AD. "Renewal" means the process by which a permit is reissued at the end of its term.

AE. "Responsible official" means one of the following.

(1) For a corporation: a president, secretary, treasurer, or vice-president of the corporation in charge of a principal business function, or any other person who performs similar policy or decision-making functions for the corporation, or a duly authorized representative of such person if the representative is responsible for the overall operation of one or more manufacturing, production, or operating facilities applying for or subject to a permit and either a) the facilities employ more than 250 persons or have gross annual sales or expenditures exceeding \$25 million (in second quarter 1980 dollars), or b) the delegation of authority to such representative is approved in advance by the department.

(2) For a partnership or sole proprietorship: a general partner or the proprietor, respectively.

(3) For a municipality, state, federal or other public agency: either a principal executive officer or ranking elected official. For the purposes of this part, a principal executive officer of a federal agency includes the chief executive officer having responsibility for the overall operations of a principal geographic unit of the agency (e.g., a regional administrator of US EPA).

(4) For an acid rain source: the designated representative (as defined in Section 402(26) of the federal act) in so far as actions, standards, requirements, or prohibitions under Title IV of the federal act or the regulations promulgated thereunder are concerned, and for any other purposes under 40 CFR, Part 70.

AF. "Section 502(b)(10) changes" are changes that contravene an express permit term. Such changes do not include changes that would violate applicable requirements or contravene permit terms and conditions that are monitoring (including test methods), recordkeeping, reporting, or compliance certification requirements.

AG. "Shutdown" means the cessation of operation of any air pollution control equipment, process equipment or process for any purpose.

AH. "Solid waste incineration unit" means a distinct operating unit of any facility which combusts any solid waste material from commercial or industrial establishments or the general public (including single and multiple residences, hotels, and motels). The term "solid waste incineration unit" does not include:

(1) incinerators or other units required to have a permit under Section 3005 of the federal Solid Waste Disposal Act;

(2) materials recovery facilities (including primary or secondary smelters) which combust waste for the primary purpose of recovering metals;

(3) qualifying small power production facilities, as defined in Section 3(17)(C) of the Federal Power Act (16 U.S.C. 796(17)(C)), or qualifying cogeneration facilities, as defined in Section 3(18)(B) of the Federal Power Act (16 U.S.C. 796(18)(B)), which burn

homogeneous waste (such as units which burn tires or used oil, but not including refuse-derived fuel) for the production of electric energy or in the case of qualifying cogeneration facilities which burn homogeneous waste for the production of electric energy and steam or forms of useful energy (such as heat) which are used for industrial, commercial, heating or cooling purposes; or

(4) air curtain incinerators, provided that such incinerators only burn wood wastes, yard wastes and clean lumber and that such air curtain incinerators comply with opacity limitations established by the administrator by rule.

AI. "Startup" means the setting into operation of any air pollution control equipment, process equipment or process for any purpose.

AJ. "Stationary source" or "source" means any building, structure, facility, or installation, or any combination thereof that emits or may emit any regulated air pollutant or any pollutant listed under Section 112(b) of the federal act.

AK. "Subsidiary" means a business concern which is owned or controlled by, or is a partner of, the applicant or permittee.

AL. "Subject to regulation" means, for any air pollutant, that the pollutant is subject to either a provision in the act, or a nationally-applicable regulation codified by the administrator in subchapter C of 40 CFR Chapter I, that requires actual control of the quantity of emissions of that pollutant, and that such a control requirement has taken effect and is operative to control, limit or restrict the quantity of emissions of that pollutant released from the regulated activity. Except that:

(1) "greenhouse gases" (GHGs) shall not be subject to regulation, unless, as of July 1, 2011, the GHG emissions are at a stationary source emitting or having the potential to emit 100,000 tons per year CO₂e equivalent emissions;

(2) the term "tons per year CO₂e equivalent emissions" (CO₂e) shall represent the aggregate amount of GHGs emitted by the regulated activity, and shall be computed by multiplying the mass amount of emissions (tons per year), for each of the six greenhouse gases in the pollutant GHGs, by the gas's associated global warming potential published at Table A-1 to subpart A of 40 CFR part 98 - Global Warming Potentials, and summing the resultant value for each gas; for purposes of this paragraph, prior to July 21, 2014, the mass of the greenhouse gas carbon dioxide shall not include carbon dioxide emissions resulting from the combustion or decomposition of non-fossilized and biodegradable organic material originating from plants, animals, or micro-organisms (including products, by-products, residues and waste from agriculture, forestry and related industries as well as the non-fossilized and biodegradable organic fractions of industrial and municipal wastes, including gases and liquids recovered from the decomposition of non-fossilized and biodegradable organic material);

(3) if a federal court stays, invalidates or otherwise renders unenforceable by the US EPA, in whole or in part, the prevention of significant deterioration and Title V greenhouse gas tailoring rule (75 FR 31514, June 3, 2010), the definition "subject to regulation" shall be enforceable by the department only to the extent that it is enforceable by US EPA.

AM. "Temporary source" means any plant that is situated in one location for a period of less than one year, after which it will be dismantled and removed from its current site or relocated to a new site. A temporary source may be semi-permanent, which means that it does not have to meet the requirements of a portable source. Temporary sources may include well head compressors which meet this criteria.

AN. "Title I modification" means any modification under Sections 111 or 112 of the federal act and any physical change or change in method of operations that is subject to the preconstruction regulations promulgated under Parts C and D of the federal act.

[11/30/95; 20.2.70.7 NMAC - Rn, 20 NMAC 2.70.1.107, 06/14/02; A, 11/07/02; A, 09/06/06; A, 01/01/11; A, 02/06/13]

20.2.70.8 AMENDMENT AND SUPERSESSION OF PRIOR REGULATIONS:

This Part amends and supersedes Air Quality Control Regulation ("AQCR") 770, - Operating Permits, filed November 15, 1993, as amended ("AQCR 770"). The original effective date of AQCR 770 was December 19, 1994, which was the effective date of approval, by the Administrator, of the New Mexico operating permit program. (See 59 FR 59656, November 18, 1994).

A. All references to AQCR 770 in any other rule shall be construed as a reference to this Part.

B. The amendment and supersession of AQCR 770 shall not affect any administrative or judicial enforcement action pending on the effective date of such amendment nor the validity of any permit issued pursuant to AQCR 770.

[11/30/95; 20.2.70.8 NMAC - Rn, 20 NMAC 2.70.106, 06/14/02]

20.2.70.9 DOCUMENTS:

Documents cited in this Part may be viewed at the New Mexico Environment Department, Air Quality Bureau, Runnels Building, 1190 Saint Francis Drive, Santa Fe, NM 87505 [1301 Siler Rd., Bldg. B, Santa Fe, NM 87507].

[11/30/95; 20.2.70.9 NMAC - Rn, 20 NMAC 2.70.108, 06/14/02; A, 01/01/11]

20.2.70.10-20.2.70.199 [RESERVED]

20.2.70.200 PART 70 SOURCES:

Operating permits must be obtained from the Department for the following sources:

A. Any major source;

B. Any source, including an area source, subject to a standard or other requirement promulgated under section 111 -- Standards of Performance for New Stationary Sources, or section 112 -- Hazardous Air Pollutants, of the Federal Act, but not including any source which:

(1) is exempted under Subsection B of 20.2.70.202 NMAC; or

(2) would be required to obtain a permit solely because it is subject to regulations or requirements under section 112(r) of the Federal Act;

C. Any acid rain source; and

D. Any source in a source category so designated by the Administrator, in whole or in part, by regulation, after notice and comment.

[11/30/95; 20.2.70.200 NMAC - Rn, 20 NMAC 2.70.200, 06/14/02]

20.2.70.201 REQUIREMENT FOR A PERMIT:

A. A Part 70 source may operate after the time that it is required to submit a timely and complete application under this part only if:

(1) the source is in compliance with an operating permit issued by the department or EPA; or

(2) a timely permit (including permit renewal) application has been submitted consistent with 20.2.70.300 NMAC; the ability to operate under these circumstances shall cease if the applicant fails to submit by the deadline specified in writing by the department any additional information identified as being needed to process the application.

B. Revocation or termination of a permit by the department terminates the permittee's right to operate.

C. The submittal of a complete operating permit application shall not protect any source from any applicable requirement, including any requirement that the source have a preconstruction permit under Title I of the federal act or state regulations.

D, Requirement for permit under 20.2.72 NMAC.

(1) Part 70 sources that have an operating permit and do not have a permit issued under 20.2.72 NMAC or 20.2.74 NMAC shall submit a complete application for a permit under 20.2.72 NMAC within 180 days of September 6, 2006. The department shall consider and may grant reasonable requests for extension of this deadline on a case-by-case basis.

(2) Part 70 sources that do not have an operating permit or a permit under 20.2.72 NMAC upon the effective date of this subsection shall submit an application for a permit under 20.2.72 NMAC within 60 days after submittal of an application for an operating permit.

(3) Paragraphs 1 and 2 of this subsection shall not apply to sources that have demonstrated compliance with both the national and state ambient air quality standards through dispersion modeling or other method approved by the department and that have requested incorporation of conditions in their operating permit to ensure compliance with these standards.

[11/30/95; 20.2.70.201 NMAC - Rn, 20 NMAC 2.70.II.201, 06/14/02; A, 9/6/06]

20.2.70.202 SOURCE CATEGORY EXEMPTIONS:

A. The following source categories are exempted from the obligation to obtain an operating permit:

(1) All sources and source categories that would be required to obtain a permit solely because they are subject to 40 CFR Part 60, Subpart AAA -- Standards of Performance for New Residential Wood Heaters;

(2) All sources and source categories that would be required to obtain a permit solely because they are subject to 40 CFR Part 61, Subpart M -- National Emission Standard for Hazardous Air Pollutants for Asbestos, section 61.145, Standard for Demolition and Renovation;

(3) Except as required under sections 20.2.70.500 NMAC - 20.2.70.599 NMAC, any source that would be required to obtain a permit solely because of emissions of radionuclides; and

(4) Any source in a source category exempted by the Administrator, by regulation, after notice and comment.

B. Non-major sources, including those subject to sections 111 or 112 of the Federal Act, are exempt from the obligation to obtain a Part 70 (20.2.70 NMAC) permit until such time that the Administrator completes a rulemaking that requires such sources to obtain operating permits.

C. Any source exempted from the requirement to obtain an operating permit may opt to apply for a permit under this Part.

D. No permit for a solid waste incineration unit shall be issued by the Department if a New Mexico state agency is responsible, in whole or in part, for the design and construction or operation of the unit. In such cases, applications shall be made to the Administrator. Department review or approval of solid waste incineration units shall not constitute responsibility for the design, construction, or operation of the unit.

[11/30/95; 20.2.70.202 NMAC - Rn, 20 NMAC 2.70.202, 06/14/02]

20.2.70.203 EXISTING MAJOR SOURCES WHICH ARE NOT REQUIRED TO HAVE A PERMIT UNDER 20.2.72 NMAC (CONSTRUCTION PERMITS):

A. The owner or operator of any major source may reverse or avoid designation as a major source under this Part by obtaining a permit under 20.2.72 NMAC (Construction Permits) which includes federally enforceable conditions which restrict the potential to emit of the source to non-major emission rates. Such conditions may include emissions limitations, process restrictions and/or limitations, restrictions on annual hours of operation, or other conditions which reduce the facility's potential to emit.

B. [REPEALED]

[11/30/95; A, 11/19/97; 20.2.70.203 NMAC - Rn, 20 NMAC 2.70.203, 06/14/02]

20.2.70.204 BERNALILLO COUNTY:

For the operation of sources within Bernalillo County, the applicant shall make such applications to the Air Pollution Control Division of the Albuquerque Environmental Health Department or its successor agency or authority.

[11/30/95; 20.2.70.204 NMAC - Rn, 20 NMAC 2.70.204, 06/14/02]

20.2.70.205 INDIAN TRIBAL JURISDICTION:

The requirements of this Part do not apply to sources within Indian Tribal jurisdiction. For the operation of sources in that jurisdiction, the applicant should make such applications to the Tribal Authority or to the Administrator, as appropriate.

[11/30/95; 20.2.70.205 NMAC - Rn, 20 NMAC 2.70.205, 06/14/02]

20.2.70.206-20.2.70.299 [RESERVED]

20.2.70.300 PERMIT APPLICATIONS:

A. Duty to apply. For each Part 70 source, the owner or operator shall submit a timely and complete permit application in accordance with this part.

B. Timely application. A timely application for a source applying for a permit under this part is:

(1) for first time applications, one that is submitted within twelve (12) months after the source commences operation as a Part 70 source;

(2) for purposes of permit renewal, one that is submitted at least twelve (12) months prior to the date of permit expiration;

(3) for the acid rain portion of permit applications for initial phase II acid rain sources under Title IV of the federal act, by January 1, 1996 for sulfur dioxide, and by January 1, 1998 for nitrogen oxides;

C. Completeness of application.

(1) To be deemed complete, an application must provide all information required pursuant to Subsection D of 20.2.70.300 NMAC, except that applications for permit modifications need supply such information only if it is related to the proposed change.

(2) If, while processing an application, regardless of whether it has been determined or deemed to be complete, the department determines that additional information is necessary to evaluate or take final action on that application, it may request such information in writing and set a reasonable deadline for a response.

(3) Any applicant who fails to submit any relevant facts or who has submitted incorrect information in a permit application or in a supplemental submittal shall, upon becoming aware of such failure or incorrect submittal, promptly submit such supplementary facts or corrected information. In addition, an applicant shall provide further information as necessary to address any requirements that become applicable to the source after the date it filed a complete application but prior to release of a draft permit.

(4) The applicant's ability to operate without a permit, as set forth in Paragraph (2) of Subsection A of 20.2.70.201 NMAC, shall be in effect from the date a timely application is submitted until the final permit is issued or disapproved, provided that the applicant adequately submits any requested additional information by the deadline specified by the department.

D. Content of application. Any person seeking a permit under this part shall do so by filing a written application with the department. The applicant shall submit three (3) copies of the permit application, or more, as requested by the department. An applicant may not omit information needed to determine the applicability of, or to impose, any

applicable requirement, or to evaluate the fee amount required under 20.2.71 NMAC (operating permit emission fees). Fugitive emissions shall be included in the permit application in the same manner as stack emissions, regardless of whether the source category in question is included in the list of sources contained in the definition of major source. All applications shall meet the following requirements.

(1) Be made on forms furnished by the department, which for the acid rain portions of permit applications and compliance plans shall be on nationally-standardized forms to the extent required by regulations promulgated under Title IV of the federal act.

(2) State the company's name and address (and, if different, plant name and address), together with the names and addresses of the owner(s), responsible official and the operator of the source, any subsidiaries or parent companies, the company's state of incorporation or principal registration to do business and corporate or partnership relationship to other permittees subject to this part, and the telephone numbers and names of the owners' agent(s) and the site contact(s) familiar with plant operations.

(3) State the date of the application.

(4) Include a description of the source's processes and products (by standard industrial classification code) including any associated with alternative scenarios identified by the applicant, and a map, such as the 7.5 minute topographic quadrangle map published by the United States geological survey or the most detailed map available showing the exact location of the source. The location shall be identified by latitude and longitude or by UTM coordinates.

(5) For all emissions of all air pollutants for which the source is major and all emissions of regulated air pollutants, provide all emissions information, calculations and computations for the source and for each emissions unit, except for insignificant activities (as defined in 20.2.70.7 NMAC). This shall include:

(a) a process flow sheet of all components of the facility which would be involved in routine operations and emissions;

(b) identification and description of all emissions points in sufficient detail to establish the basis for fees and applicability of requirements of the state and federal acts;

(c) emissions rates in tons per year, pounds per hour and in such terms as are necessary to establish compliance consistent with the applicable standard reference test method;

(d) specific information such as that regarding fuels, fuel use, raw materials, or production rates, to the extent it is needed to determine or regulate emissions;

(e) identification and full description, including all calculations and the basis for all control efficiencies presented, of air pollution control equipment and compliance monitoring devices or activities;

(f) the maximum and standard operating schedules of the source, as well as any work practice standards or limitations on source operation which affect emissions of regulated pollutants;

(g) if requested by the department, an operational plan defining the measures to be taken to mitigate source emissions during startups, shutdowns and emergencies;

(h) other relevant information as the department may reasonably require or which are required by any applicable requirements (including information related to stack height limitations developed pursuant to Section 123 of the federal act); and

(i) for each alternative operating scenario identified by the applicant, all of the information required in Subparagraphs (a) through (h) above, as well as additional information determined to be necessary by the department to define such alternative operating scenarios.

(6) Provide a list of insignificant activities (as defined in 20.2.70.7 NMAC) at the source, their emissions, to the extent required by the department, and any information necessary to determine applicable requirements.

(7) Provide a citation and description of all applicable air pollution control requirements, including:

(a) sufficient information related to the emissions of regulated air pollutants to verify the requirements that are applicable to the source; and

(b) a description of or reference to any applicable test method for determining compliance with each applicable requirement.

(8) Provide an explanation of any proposed exemptions from otherwise applicable requirements.

(9) Provide other specific information that may be necessary to implement and enforce other requirements of the state or federal acts or to determine the applicability of such requirements, including information necessary to collect any permit fees owed under 20.2.71 NMAC (operating permit emission fees).

(10) Provide certification of compliance, including all of the following.

(a) A certification, by a responsible official consistent with Subsection E of 20.2.70.300 NMAC, of the source's compliance status for each applicable requirement. For national ambient air quality standards, certifications shall be based on the following.

(i) For first time applications, this certification shall be based on modeling submitted with the application for a permit under 20.2.72 NMAC.

(ii) For permit renewal applications, this certification shall be based on compliance with the relevant terms and conditions of the current operating permit.

(b) A statement of methods used for determining compliance, including a description of monitoring, recordkeeping, and reporting requirements and test methods.

(c) A statement that the source will continue to be in compliance with applicable requirements for which it is in compliance, and will, in a timely manner or at such schedule expressly required by the applicable requirement, meet additional applicable requirements that become effective during the permit term.

(d) A schedule for submission of compliance certifications during the permit term, to be submitted no less frequently than annually, or more frequently if specified by the underlying applicable requirement or by the department.

(e) A statement indicating the source's compliance status with any enhanced monitoring and compliance certification requirements of the federal act.

(11) For sources that are not in compliance with all applicable requirements at the time of permit application, provide a compliance plan that contains all of the following.

(a) A description of the compliance status of the source with respect to all applicable requirements.

(b) A narrative description of how the source will achieve compliance with such requirements for which it is not in compliance.

(c) A schedule of remedial measures, including an enforceable sequence of actions with milestones, leading to compliance with such applicable requirements. The schedule of compliance shall be at least as stringent as that contained in any consent decree or administrative order to which the source is subject, and the obligations of any consent decree or administrative order shall not be in any way diminished by the schedule of compliance. Any such schedule of compliance shall be supplemental to, and shall not prohibit the department from taking any enforcement action for noncompliance with, the applicable requirements on which it is based.

(d) A schedule for submission of certified progress reports no less frequently than every six (6) months.

(e) For the portion of each acid rain source subject to the acid rain provisions of Title IV of the federal act, the compliance plan content requirements specified in this paragraph, except as specifically superseded by regulations promulgated under Title IV

of the federal act with regard to the schedule and method(s) the source will use to achieve compliance with the acid rain emissions limitations.

E. Certification. Any document, including any application form, report, or compliance certification, submitted pursuant to this part shall contain certification by a responsible official of truth, accuracy, and completeness. This certification and any other certification required under this part shall state that, based on information and belief formed after reasonable inquiry, the statements and information in the document are true, accurate, and complete.

[11/30/95; A, 11/14/98; 20.2.70.300 NMAC - Rn, 20 NMAC 2.70.III.300, 06/14/02; A, 9/6/06; A, 01/01/11]

20.2.70.301 CONFIDENTIAL INFORMATION PROTECTION:

A. All confidentiality claims made regarding material submitted to the Department under this Part shall be reviewed under the provisions of the New Mexico Air Quality Control Act section 74-2-11 NMSA 1978 and the New Mexico Inspection of Public Records Act, sections 14-2-1 et seq. NMSA 1978.

B. In the case where an applicant or permittee has submitted information to the Department under a claim of confidentiality, the Department may also require the applicant or permittee to submit a copy of such information directly to the Administrator.

C. An operating permit is a public record, and not entitled to protection under section 114(c) of the Federal Act.

[11/30/95; 20.2.70.301 NMAC - Rn, 20 NMAC 2.70.301, 06/14/02]

20.2.70.302 PERMIT CONTENT:

A. Permit conditions.

(1) The department shall specify conditions upon a permit, including emission limitations and sufficient operational requirements and limitations, to assure compliance with all applicable requirements at the time of permit issuance or as specified in the approved schedule of compliance. The permit shall:

(a) for major sources, include all applicable requirements for all relevant emissions units in the major source;

(b) for any non-major source subject to 20.2.70.200 NMAC - 20.2.70.299 NMAC, include all applicable requirements which apply to emissions units that cause the source to be subject to this part;

(c) specify and reference the origin of and authority for each term or condition, and identify any difference in form as compared to the applicable requirement upon which the term or condition is based;

(d) include a severability clause to ensure the continued validity of the various permit requirements in the event of a challenge to any portions of the permit;

(e) include a provision to ensure that the permittee pays fees to the department consistent with the fee schedule in 20.2.71 NMAC (Operating Permit Emission Fees); and

(f) for purposes of the permit shield, identify any requirement specifically identified in the permit application or significant permit modification that the department has determined is not applicable to the source, and state the basis for any such determination.

(2) Each permit issued shall, additionally, include provisions stating the following.

(a) The permittee shall comply with all terms and conditions of the permit. Any permit noncompliance is grounds for enforcement action. In addition, noncompliance with federally enforceable permit conditions constitutes a violation of the federal act.

(b) It shall not be a defense for a permittee in an enforcement action that it would have been necessary to halt or reduce the permitted activity in order to maintain compliance with the conditions of the permit.

(c) The permit may be modified, reopened and revised, revoked and reissued, or terminated for cause in accordance with 20.2.70.405 NMAC.

(d) The filing of a request by the permittee for a permit modification, revocation and reissuance, or termination, or of a notification of planned changes or anticipated noncompliance shall not stay any permit condition.

(e) The permit does not convey any property rights of any sort, or any exclusive privilege.

(f) Within the period specified by the department, the permittee shall furnish any information that the department may request in writing to determine whether cause exists for reopening and revising, revoking and reissuing, or termination of the permit or to determine compliance with the permit. Upon request, the permittee shall also furnish to the department copies of records required by the permit to be maintained.

(3) The terms and conditions for all alternative operating scenarios identified in the application and approved by the department:

(a) shall require that the permittee maintain a log at the permitted facility which documents, contemporaneously with any change from one operating scenario to another, the scenario under which the facility is operating; and

(b) shall, for each such alternative scenario, meet all applicable requirements and the requirements of this part.

(4) The department may impose conditions regulating emissions during startup and shutdown.

(5) All permit terms and conditions which are required under the federal act or under any of its applicable requirements, including any provisions designed to limit a source's potential to emit, are enforceable by the administrator and citizens under the federal act. The permit shall specifically designate as not being federally enforceable under the federal act any terms or conditions included in the permit that are not required under the federal act or under any of its applicable requirements.

(6) The issuance of a permit, or the filing or approval of a compliance plan, does not relieve any person from civil or criminal liability for failure to comply with the provisions of the Air Quality Control Act, the federal act, federal regulations thereunder, any applicable regulations of the board, and any other applicable law or regulation.

(7) The department may include part or all of the contents of the application as terms and conditions of the permit or permit modification. The department shall not apply permit terms and conditions upon emissions of regulated pollutants for which there are no applicable requirements, unless the source is major for that pollutant.

(8) Fugitive emissions from a source shall be included in the operating permit in the same manner as stack emissions, regardless of whether the source category in question is included in the list of sources contained in the definition of major source.

(9) The acid rain portion of operating permits for acid rain sources shall additionally:

(a) state that, where an applicable requirement of the federal act is more stringent than an applicable requirement of regulations promulgated under Title IV of the federal act, both provisions shall be incorporated into the permit and shall be enforceable by the administrator; and

(b) contain a permit condition prohibiting emissions exceeding any allowances that the acid rain source lawfully holds under Title IV of the federal act or the regulations promulgated thereunder; no permit modification under this part shall be required for increases in emissions that are authorized by allowances acquired pursuant to the acid rain program, provided that such increases do not require a permit modification under any other applicable requirement; no limit shall be placed on the number of allowances held by the acid rain source; the permittee may not use allowances as a defense to

noncompliance with any other applicable requirement; any such allowance shall be accounted for according to the procedures established in regulations promulgated under Title IV of the federal act.

B. Permit duration. The department shall issue operating permits for a fixed term of five (5) years.

C. Monitoring.

(1) Each permit shall contain all emissions monitoring requirements, and analysis procedures or test methods, required to assure and verify compliance with the terms and conditions of the permit and applicable requirements, including any procedures and methods promulgated by the administrator.

(2) Where the applicable requirement does not require periodic testing or instrumental or noninstrumental monitoring (which may consist of recordkeeping designed to serve as monitoring), the permit shall require periodic monitoring sufficient to yield reliable data from the relevant time period that are representative of the source's compliance with the permit, as reported pursuant to Subsection E of 20.2.70.302 NMAC. Such monitoring requirements shall assure use of terms, test methods, units, averaging periods, and other statistical conventions consistent with the applicable requirement.

(3) The permit shall also contain specific requirements concerning the use, maintenance, and, when appropriate, installation of monitoring equipment or methods.

D. Recordkeeping.

(1) The permit shall require recordkeeping sufficient to assure and verify compliance with the terms and conditions of the permit, including recordkeeping of:

(a) the date, place as defined in the permit, and time of sampling or measurements;

(b) the date(s) analyses were performed;

(c) the company or entity that performed the analyses;

(d) the analytical techniques or methods used;

(e) the results of such analyses; and

(f) the operating conditions existing at the time of sampling or measurement.

(2) Records of all monitoring data and support information shall be retained for a period of at least five (5) years from the date of the monitoring sample,

measurement, report, or application. Supporting information includes all calibration and maintenance records and all original strip-chart recordings for continuous monitoring instrumentation, and copies of all reports required by the permit.

E. Reporting. The permit shall require reporting sufficient to assure and verify compliance with the terms and conditions of the permit and all applicable requirements, including all of the following.

(1) Submittal of reports of any required monitoring at least every six (6) months. The reports shall be due to the department within forty-five (45) days of the end of the permittee's reporting period. All instances of deviations from permit requirements, including emergencies, must be clearly identified in such reports. All required reports must be certified by a responsible official consistent with Subsection E of 20.2.70.300 NMAC.

(2) Prompt reporting of all deviations from permit requirements, including those attributable to upset conditions as defined in the permit, the probable cause of such deviations, and any corrective actions or preventive measures taken. The report shall be contained in the report submitted in accordance with the timeframe given in Paragraph (1) of this section.

(3) Submittal of compliance certification reports at least every twelve (12) months (or more frequently if so specified by an applicable requirement) certifying the source's compliance status with terms and conditions contained in the permit, including emission limitations, standards, or work practices. The reports shall be due to the department within thirty (30) days of the end of the permittee's reporting period. Such compliance certifications shall be submitted to the administrator as well as to the department and shall include:

(a) the identification of each term or condition of the permit that is the basis of the certification;

(b) the compliance status of the source;

(c) whether compliance was continuous or intermittent;

(d) the method(s) used for determining the compliance status of the source, currently and during the reporting period identified in the permit; and

(e) such other facts as the department may require to determine the compliance status of the source.

(4) Such additional provisions as may be specified by the administrator to determine the compliance status of the source.

F. Portable and temporary sources. The department may issue permits for portable and temporary sources which allow such sources to relocate without undergoing a permit modification. Such permits shall not apply to acid rain sources and shall include conditions to assure that:

(1) the source is installed at all locations in a manner conforming with the permit;

(2) the source shall comply with all applicable requirements and all other provisions of this part at all authorized locations;

(3) the owner or operator shall notify the department in writing at least fifteen (15) calendar days in advance of each change in location;

(4) notification shall include a legal description of where the source is to be relocated and how long it will be located there; and

(5) emissions from the source shall not, at any location, result in or contribute to an exceedance of a national ambient air quality standard or increment or visibility requirement under Part C of Title I of the federal act; the department may require dispersion modeling to assure compliance at any location.

G. Compliance. To assure and verify compliance with the terms and conditions of the permit and with this part, permits shall also include all the following.

(1) Require that, upon presentation of credentials and other documents as may be required by law, the permittee shall allow authorized representatives of the department to perform the following:

(a) enter upon the permittee's premises where a source is located or emission related activity is conducted, or where records must be kept under the conditions of the permit;

(b) have access to and copy any records that must be kept under the conditions of the permit;

(c) inspect any facilities, equipment (including monitoring and air pollution control equipment), practices, or operations regulated or required under the permit; and

(d) sample or monitor any substances or parameters for the purpose of assuring compliance with the permit or applicable requirements or as otherwise authorized by the federal act.

(2) Require that sources required under Paragraph (11) of Subsection D of 20.2.70.300 NMAC to have a schedule of compliance submit progress reports to the department at least semiannually, or more frequently if specified in the applicable

requirement or by the department. Such progress reports shall be consistent with the schedule of compliance and requirements of Paragraph (11) of Subsection D of 20.2.70.300 NMAC and shall contain:

(a) dates for achieving the activities, milestones, or compliance required in the schedule of compliance, and dates when such activities, milestones or compliance were achieved; and

(b) an explanation of why any dates in the schedule of compliance were not or will not be met, and any preventive or corrective measures adopted.

(3) Include such other provisions as the department may require.

H. Operational flexibility.

(1) Section 502(b)(10) changes.

(a) The permittee may make Section 502(b)(10) changes, as defined in 20.2.70.7 NMAC, without applying for a permit modification, if those changes are not title I modifications and the changes do not cause the facility to exceed the emissions allowable under the permit (whether expressed as a rate of emissions or in terms of total emissions).

(b) For each such change, the permittee shall provide written notification to the department and the administrator at least seven (7) days in advance of the proposed changes. Such notification shall include a brief description of the change within the permitted facility, the date on which the change will occur, any change in emissions, and any permit term or condition that is no longer applicable as a result of the change.

(c) The permittee and department shall attach each such notice to their copy of the relevant permit.

(d) If the written notification and the change qualify under this provision, the permittee is not required to comply with the permit terms and conditions it has identified that restrict the change. If the change does not qualify under this provision, the original terms of the permit remain fully enforceable.

(2) Emissions trading within a facility.

(a) The department shall, if an applicant requests it, issue permits that contain terms and conditions allowing for the trading of emissions increases and decreases in the permitted facility solely for the purpose of complying with a federally enforceable emissions cap that is established in the permit in addition to any applicable requirements. Such terms and conditions shall include all terms and conditions required under 20.2.70.302 NMAC to determine compliance. If applicable requirements apply to

the requested emissions trading, permit conditions shall be issued only to the extent that the applicable requirements provide for trading such increases and decreases without a case-by-case approval.

(b) The applicant shall include in the application proposed replicable procedures and permit terms that ensure the emissions trades are quantifiable and enforceable. The department shall not include in the emissions trading provisions any emissions units for which emissions are not quantifiable or for which there are no replicable procedures to enforce the emissions trades. The permit shall require compliance with all applicable requirements.

(c) For each such change, the permittee shall provide written notification to the department and the administrator at least seven (7) days in advance of the proposed changes. Such notification shall state when the change will occur and shall describe the changes in emissions that will result and how these increases and decreases in emissions will comply with the terms and conditions of the permit.

(d) The permittee and department shall attach each such notice to their copy of the relevant permit.

I. Off-permit changes.

(1) Permittees are allowed to make, without a permit modification, changes that are not addressed or prohibited by the operating permit, if:

(a) each such change meets all applicable requirements and shall not violate any existing permit term or condition;

(b) such changes are not subject to any requirements under Title IV of the federal act and are not Title I modifications;

(c) such changes are not subject to permit modification procedures under 20.2.70.404 NMAC; and

(d) the permittee provides contemporaneous written notice to the department and US EPA of each such change, except for changes that qualify as insignificant activities. Such written notice shall describe each such change, including the date, any change in emissions, pollutants emitted and any applicable requirement that would apply as a result of the change.

(2) The permittee shall keep a record describing changes made at the source that result in emissions of a regulated air pollutant subject to an applicable requirement, but not otherwise regulated under the permit, and the emissions resulting from those changes.

J. Permit shield.

(1) Except as provided in this part, the department shall expressly include in a Part 70 (20.2.70 NMAC) permit a provision stating that compliance with the conditions of the permit shall be deemed compliance with any applicable requirements as of the date of permit issuance, provided that:

(a) such applicable requirements are included and are specifically identified in the permit; or

(b) the department, in acting on the permit application or significant permit modification, determines in writing that other requirements specifically identified are not applicable to the source, and the permit includes the determination or a concise summary thereof.

(2) A Part 70 (20.2.70 NMAC) permit that does not expressly state that a permit shield exists for a specific provision shall be presumed not to provide such a shield for that provision.

(3) Nothing in this section or in any Part 70 (20.2.70 NMAC) permit shall alter or affect the following:

(a) the provisions of Section 303 of the federal act -- Emergency Powers, including the authority of the administrator under that section, or the provisions of the New Mexico Air Quality Control Act, Section 74-2-10 NMSA 1978;

(b) the liability of an owner or operator of a source for any violation of applicable requirements prior to or at the time of permit issuance;

(c) the applicable requirements of the acid rain program, consistent with Section 408(a) of the federal act; or

(d) the ability of US EPA to obtain information from a source pursuant to Section 114 of the federal act, or the department to obtain information subject to the New Mexico Air Quality Control Act, Section 74-2-13 NMSA 1978.

(4) The permit shield shall remain in effect if the permit terms and conditions are extended past the expiration date of the permit pursuant to Subsection D of 20.2.70.400 NMAC.

(5) The permit shield shall extend to terms and conditions that allow emission increases and decreases as part of emissions trading within a facility pursuant to Paragraph (2) of Subsection H of 20.2.70.302 NMAC, and to all terms and conditions under each operating scenario included pursuant to Paragraph (3) of Subsection A of 20.2.70.302 NMAC.

(6) The permit shield shall not extend to administrative amendments under Subsection A of 20.2.70.404 NMAC, to minor permit modifications under Subsection B

of 20.2.70.404 NMAC, to Section 502(b)(10) changes under Paragraph (1) of Subsection H of 20.2.70.302 NMAC, or to permit terms or conditions for which notice has been given to reopen or revoke all or part under 20.2.70.405 NMAC.

[11/30/95; A, 11/14/98; 20.2.70.302 NMAC - Rn, 20 NMAC 2.70.III.302, 06/14/02; A, 9/6/06; A, 08/01/08]

20.2.70.303 GENERAL PERMITS:

A. Issuance of General Permits:

(1) The Department may, after notice and opportunity for public participation and US EPA and affected program review, issue a general permit covering numerous similar sources. Such sources shall be generally homogenous in terms of operations, processes and emissions, subject to the same or substantially similar requirements, and not subject to case-by-case standards or requirements.

(2) Any general permit shall comply with all requirements applicable to other operating permits and shall identify criteria by which sources may qualify for the general permit.

B. Authorization to Operate under a General Permit:

(1) The owner or operator of a Part 70 source which qualifies for a general permit must:

(a) Apply to the Department for coverage under the terms of the general permit; or

(b) Apply for an operating permit consistent with 20.2.70.300 NMAC.

(2) The Department may, in the general permit, provide for applications which deviate from the requirements of subsection D of 20.2.70.300 NMAC, provided that such applications meet the requirements of the Federal Act and include all information necessary to determine qualification for, and to assure compliance with, the general permit. The Department shall review the application for authorization to operate under a general permit for completeness within thirty (30) days after its receipt of the application.

(3) The Department shall authorize qualifying sources which apply for coverage under the general permit to operate under the terms and conditions of the general permit. The Department shall take final action on a general permit authorization request within ninety (90) days of deeming the application complete.

(4) The Department may grant a request for authorization to operate under a general permit without repeating the public participation procedures required under 20.2.70.401 NMAC. Such an authorization shall not be a permitting action for purposes

of administrative review under New Mexico Air Quality Control Act section 74-2-7.H NMSA 1978. Permitting action for the purposes of section 74-2-7 NMSA 1978 shall be the issuance of the general permit.

(5) Authorization to operate under a general permit shall not be granted for acid rain sources unless otherwise provided in regulations promulgated under title IV of the Federal Act.

(6) The permittee shall be subject to enforcement action for operation without an operating permit if the source is later determined not to qualify for the conditions and terms of the general permit.

[11/30/95; 20.2.70.303 NMAC - Rn, 20 NMAC 2.70.303, 06/14/02]

20.2.70.304 EMERGENCY PROVISION:

A. An "emergency" means any situation arising from sudden and reasonably unforeseeable events beyond the control of the permittee, including acts of God, which situation requires immediate corrective action to restore normal operation, and that causes the source to exceed a technology-based emission limitation under the permit due to unavoidable increases in emissions attributable to the emergency. An emergency shall not include noncompliance to the extent caused by improperly designed equipment, lack of preventive maintenance, or careless or improper operation.

B. An emergency constitutes an affirmative defense to an action brought for noncompliance with such technology-based emission limitations if the permittee has demonstrated through properly signed, contemporaneous operating logs, or other relevant evidence that:

(1) an emergency occurred and that the permittee can identify the cause(s) of the emergency;

(2) the permitted facility was at the time being properly operated;

(3) during the period of the emergency the permittee took all reasonable steps to minimize levels of emissions that exceeded the emission standards or other requirements in the permit; and

(4) the permittee submitted notice of the emergency to the department within 2 working days of the time when emission limitations were exceeded due to the emergency; this notice fulfills the requirement of Paragraph (2) of Subsection E of 20.2.70.302 NMAC; this notice must contain a description of the emergency, any steps taken to mitigate emissions, and corrective actions taken.

C. In any enforcement proceeding, the permittee seeking to establish the occurrence of an emergency has the burden of proof.

D. This provision is in addition to any emergency or upset provision contained in any applicable requirement.

[11/30/95; 20.2.70.304 NMAC - Rn, 20 NMAC 2.70.III.304, 06/14/02; A, 9/6/06; A, 08/01/08]

20.2.70.305-20.2.70.399 [RESERVED]

20.2.70.400 ACTION ON PERMIT APPLICATIONS:

A. A permit (including permit renewal) or permit modification shall only be issued if all of the following conditions have been met:

(1) The Department has received a complete application for a permit, permit modification, or permit renewal, except that a complete application need not be received before issuance of a general permit under 20.2.70.303 NMAC;

(2) Except for administrative and minor permit modifications, the Department has complied with the requirements for public participation procedures under 20.2.70.401 NMAC;

(3) Except for administrative amendments, the Department has complied with the requirements for notifying and responding to affected programs under 20.2.70.402 NMAC;

(4) The conditions of the permit provide for compliance with all applicable requirements and the requirements of this Part; and

(5) The Administrator has received a copy of the proposed permit and any notices required under 20.2.70.402 NMAC, and has not objected to issuance of the permit within the time period specified within that section.

B. The Department shall, within sixty (60) days after its receipt of an application for a permit or significant permit modification, review such application for completeness. Unless the Department determines that an application is not complete, requests additional information or otherwise notifies the applicant of incompleteness within sixty (60) days of receipt of an application, the application shall be deemed complete. When additional information is requested by the Department prior to ruling an application complete, receipt of such information shall be processed as a new application for purposes of this section. If the application is judged complete, a certified letter to that effect shall be sent to the applicant. If the application is judged incomplete a certified letter shall be sent to the applicant stating what additional information or points of clarification are necessary to judge the application complete.

C. The Department shall take final action on each permit application (including a request for permit renewal) within eighteen (18) months after an application is ruled complete by the Department, except that:

(1) For sources in operation on or before December 19, 1994 and which submit to the Department timely and complete applications in accordance with 20.2.70.300 NMAC, the Department shall take final action on one third of such applications annually over a period not to exceed three (3) years after such effective date;

(2) Any complete permit application containing an early reduction demonstration under section 112(i)(5) of the Federal Act shall be acted on within nine (9) months of deeming the application complete; and

(3) The acid rain portion of permits for acid rain sources shall be acted upon in accordance with the deadlines in title IV of the Federal Act and the regulations promulgated thereunder.

D. If a timely and complete application for a permit renewal is submitted, consistent with 20.2.70.300 NMAC, but the Department has failed to issue or disapprove the renewal permit before the end of the term of the previous permit, then the permit shall not expire and all the terms and conditions of the permit shall remain in effect until the renewal permit has been issued or disapproved.

E. Permits being renewed are subject to the same procedural requirements, including those for public participation, affected program and US EPA review, that apply to initial permit issuance.

F. The Department shall state within the draft permit the legal and factual basis for the draft permit conditions (including references to the applicable statutory or regulatory provisions).

G. The Department shall grant or disapprove the permit based on information contained in the Department's administrative record. The administrative record shall consist of the application, any additional information submitted by the applicant, any evidence or written comments submitted by interested persons, any other evidence considered by the Department, and, if a public hearing is held, the evidence submitted at the hearing.

H. If the Department grants or disapproves a permit or permit modification, the Department shall notify the applicant by certified mail of the action taken and the reasons therefor. If the Department grants a permit or modification, the Department shall mail the permit or modification, including all terms and conditions, to the applicant by certified mail.

I. Voluntary Discontinuation. Upon request by the permittee, the Department shall permanently discontinue a Part 70 (20.2.70 NMAC) permit. Permit discontinuance terminates the permittee's right to operate the source under the permit. The Department shall confirm the permit discontinuance by certified letter to the permittee.

J. No permit shall be issued by failure of the Department to act on an application or renewal.

[11/30/95; 20.2.70.400 NMAC - Rn, 20 NMAC 2.70.400, 06/14/02]

20.2.70.401 PUBLIC PARTICIPATION:

A. Proceedings for all permit issuances (including renewals), significant permit modifications, reopenings, revocations and terminations, and all modifications to the Department's list of insignificant activities, shall include public notice and provide an opportunity for public comment. The Department shall provide thirty (30) days for public and affected program comment. The Department may hold a public hearing on the draft permit, a proposal to suspend, reopen, revoke or terminate a permit, or for any reason it deems appropriate, and shall hold such a hearing in the event of significant public interest. The Department shall give notice of any public hearing at least thirty (30) days in advance of the hearing.

B. Public notice and notice of public hearing shall be given by publication in a newspaper of general circulation in the area where the source is located or in a state publication designed to give general public notice, to persons on a mailing list developed by the Department, including those who request in writing to be on the list, and by other means if necessary to assure adequate notice to the affected public.

C. The public notice shall identify:

- (1) The affected facility;
- (2) The names and addresses of the applicant or permittee and its owners;
- (3) The name and address of the Department;
- (4) The activity or activities involved in the permit action;
- (5) The emissions change(s) involved in any permit modification;
- (6) The name, address and telephone number of a person from whom interested persons may obtain additional information, including copies of the permit draft, the application, and relevant supporting materials;
- (7) A brief description of the comment procedures required by the Department; and

(8) As appropriate, a statement of procedures to request a hearing, or the time and place of any scheduled hearing.

D. Notice of public hearing shall identify:

- (1) The affected facility;
- (2) The names and addresses of the applicant or permittee and its owners;
- (3) The name and address of the Department;
- (4) The activity or activities involved in the permit action;
- (5) The name, address and telephone number of a person from whom interested persons may obtain additional information;
- (6) A brief description of hearing procedures; and
- (7) The time and place of the scheduled hearing.

E. Public hearings shall be held in the geographic area likely to be impacted by the source. The time, date, and place of the hearing shall be determined by the Department. The Department shall appoint a hearing officer. A transcript of the hearing shall be made at the request of either the Department or the applicant and at the expense of the person requesting the transcript. At the hearing, all interested persons shall be given a reasonable chance to submit data, views or arguments orally or in writing and to examine witnesses testifying at the hearing.

F. The Department shall keep a record of the commenters and also of the issues raised during the public participation process so that the Administrator may fulfill his or her obligation under section 505(b)(2) of the Federal Act to determine whether a citizen petition may be granted. Such records shall be available to the public upon request.

G. The Department shall provide such notice and opportunity for participation by affected programs as is provided for by 20.2.70.402 NMAC.

[11/30/95; 20.2.70.401 NMAC - Rn, 20 NMAC 2.70.401, 06/14/02]

20.2.70.402 REVIEW BY THE ADMINISTRATOR AND AFFECTED PROGRAMS:

A. Notification: The Department shall not issue an operating permit (including permit renewal or reissuance), minor permit modification or significant permit modification, until affected programs and the Administrator have had an opportunity to review the proposed permit as required under this section. Permits for source categories waived by the Administrator from this requirement and any permit terms or conditions which are

not required under the Federal Act or under any of its requirements are not subject to Administrator review or approval.

(1) Within five (5) days of notification by the Department that the application has been determined complete, the applicant shall provide a copy of the complete permit application (including the compliance plan and all additional materials submitted to the Department) directly to the Administrator. The permit or permit modification shall not be issued without certification to the Department of such notification. The Department shall provide to the Administrator a copy of each draft permit, each proposed permit, each final operating permit, and any other relevant information requested by the Administrator.

(2) The Department shall provide notice of each draft permit to any affected program on or before the time that the Department provides this notice to the public under 20.2.70.401 NMAC, except to the extent that minor permit modification procedures require the timing of the notice to be different.

(3) The Department shall keep for five (5) years such records and submit to the Administrator such information as the Administrator may reasonably require to ascertain whether the state program complies with the requirements of the Federal Act or related applicable requirements.

B. Responses to Objections:

(1) No permit for which an application must be transmitted to the Administrator under this Part shall be issued by the Department if the Administrator, after determining that issuance of the proposed permit would not be in compliance with applicable requirements, objects to such issuance in writing within forty-five (45) days of receipt of the proposed permit and all necessary supporting information.

(2) If the Administrator does not object in writing under paragraph (1) of subsection B of 20.2.70.402 NMAC, any person may, within sixty (60) days after the expiration of the Administrator's 45-day review period, petition the Administrator to make such objection. Any such petition shall be based only on objections to the permit that were raised with reasonable specificity during the public comment period provided for in 20.2.70.401 NMAC, unless the petitioner demonstrates that it was impracticable to raise such objections within such period, or unless the grounds for such objection arose after such period. If the Administrator objects to the permit as a result of a petition filed under this paragraph, the Department shall not issue the permit until the Administrator's objection has been resolved, except that a petition for review does not stay the effectiveness of a permit or its requirements if the permit was issued after the end of the 45-day review period and prior to the Administrator's objection.

(3) The Department, as part of the submittal of the proposed permit to the Administrator (or as soon as possible after the submittal for minor permit modification procedures allowed under subsection B of 20.2.70.404 NMAC), shall notify the

Administrator and any affected program in writing of any refusal by the Department to accept all recommendations for the proposed permit that the affected program submitted during the public or affected program review period. The notice shall include the Department's reasons for not accepting any such recommendation. The Department is not required to accept recommendations that are not based on federally enforceable applicable requirements.

[11/30/95; 20.2.70.402 NMAC - Rn, 20 NMAC 2.70.402, 06/14/02]

20.2.70.403 PETITIONS FOR REVIEW OF FINAL ACTION:

A. Hearing before the board:

(1) Any person who participated in a permitting action before the department and who is adversely affected by such permitting action may file a petition for hearing before the board. For the purposes of this section, permitting action shall include the failure of the department to take final action on an application for a permit (including renewal) or permit modification within the time specified in this part.

(2) The petition shall be made in writing to the board within thirty (30) days from the date notice is given of the department's action and shall specify the portions of the permitting action to which the petitioner objects, certify that a copy of the petition has been mailed or hand-delivered as required by this paragraph, and attach a copy of the permitting action for which review is sought. Unless a timely request for hearing is made, the decision of the department shall be final. The petition shall be copied simultaneously to the department upon receipt of the appeal notice. If the petitioner is not the applicant or permittee, the petitioner shall mail or hand-deliver a copy of the petition to the applicant or permittee. The department shall certify the administrative record to the board.

(3) If a timely request for hearing is made, the board shall hold a hearing within sixty (60) days of receipt of the petition in accordance with New Mexico Air Quality Control Act section 74-2-7 NMSA 1978.

B. Judicial review:

(1) Any person who is adversely affected by an administrative action taken by the board pursuant to subsection A of 20.2.70.403 NMAC may appeal to the Court of Appeals in accordance with New Mexico Air Quality Control Act section 74-2-9 NMSA 1978. Petitions for judicial review must be filed no later than thirty (30) days after the administrative action.

(2) The judicial review provided for by 20.2.70.403 NMAC shall be the exclusive means for obtaining judicial review of the terms and conditions of the permit.

[11/30/95; 20.2.70.403 NMAC Rn, 20 NMAC 2.70.403, 06/14/02; A, 08/01/08]

20.2.70.404 PERMIT MODIFICATIONS:

A. Administrative Permit Amendments:

- (1)** An administrative permit amendment is one that:
 - (a)** Corrects typographical errors;
 - (b)** Provides for a minor administrative change at the source, such as a change in the address or phone number of any person identified in the permit;
 - (c)** Incorporates a change in the permit solely involving the retiring of an emissions unit;
 - (d)** Requires more frequent monitoring or reporting by the permittee; or
 - (e)** Any other type of change which has been determined by the Department and the Administrator to be similar to those in this paragraph.
- (2)** Changes in ownership or operational control of a source may be made as administrative amendments provided that:
 - (a)** A written agreement, containing a specific date for transfer of permit responsibility, coverage, and liability between the current and new permittee, has been submitted to the Department, and either the Department has determined that no other change in the permit is necessary, or changes deemed necessary by the Department have been made;
 - (b)** The new owners have submitted the application information required in paragraph (2) of subsection D of 20.2.70.300 NMAC;
 - (c)** No grounds exist for permit termination, as set out in subparagraphs (b) and (c) of paragraph (3) of subsection A of 20.2.70.405 NMAC; and
 - (d)** The permittee has published a public notice of the change in ownership of the source in a newspaper of general circulation in the area where the source is located.
- (3)** The Department may incorporate administrative permit amendments without providing notice to the public or affected programs, provided that it designates any such permit modifications as administrative permit amendments and submits a copy of the revised permit to the Administrator.
- (4)** The Department shall take no more than sixty (60) days from receipt of a request for an administrative permit amendment to take final action on such request. The permittee may implement the changes outlined in subparagraphs (a) through (d) of paragraph (1) of subsection A of 20.2.70.404 NMAC immediately upon submittal of the

request for the administrative amendment. The permittee may implement the changes outlined in subparagraph (e) of paragraph (1) of subsection A of 20.2.70.404 NMAC or paragraph (2) of subsection A of 20.2.70.404 NMAC upon approval of the administrative amendment by the Department.

B. Minor Permit Modifications:

(1) Minor permit modification procedures may be used only for those permit modifications that:

(a) Do not violate any applicable requirement;

(b) Do not involve relaxation of existing monitoring, reporting, or recordkeeping requirements in the permit;

(c) Do not require or change a case-by-case determination of an emission limitation or other standard, or a source-specific determination for temporary sources of ambient impacts, or a visibility or increment analysis;

(d) Do not seek to establish or change a permit term or condition for which there is no corresponding underlying applicable requirement and that the permittee has assumed to avoid an applicable requirement to which the source would otherwise be subject. Such terms and conditions include any federally enforceable emissions cap assumed to avoid classification as a title I modification and any alternative emissions limit approved pursuant to regulations promulgated under section 112(i)(5) of the Federal Act;

(e) Are not title I modifications; and

(f) Are not required by the Department to be processed as a significant modification pursuant to subsection C of 20.2.70.404 NMAC.

(2) A permittee shall not submit multiple minor permit modification applications that may conceal a larger modification that would not be eligible for minor permit modification procedures. The Department may, at its discretion, require that multiple related minor permit modification applications be submitted as a significant permit modification.

(3) An application requesting the use of minor permit modification procedures shall meet the requirements of subsections C and D of 20.2.70.300 NMAC and shall include:

(a) A description of the change, the emissions resulting from the change, and any new applicable requirements that will apply if the change occurs;

(b) The applicant's suggested draft permit;

(c) Certification by a responsible official, consistent with subsection E of 20.2.70.300 NMAC, that the proposed modification meets the criteria for use of minor permit modification procedures and a request that such procedures be used; and

(d) If the requested permit modification would affect existing compliance plans or schedules, related progress reports, or certification of compliance requirements, an outline of such effects.

(4) The Department shall, within thirty (30) days after its receipt of an application for a minor permit modification, review such application for completeness. Unless the Department determines that an application is not complete, requests additional information or otherwise notifies the applicant of incompleteness within thirty (30) days of receipt of an application, the application shall be deemed complete. If the application is judged complete, a certified letter to that effect shall be sent to the applicant. If the application is judged incomplete a certified letter shall be sent to the applicant stating what additional information or points of clarification are necessary to judge the application complete.

(5) Within five (5) working days of notification by the Department that the minor permit modification application has been determined complete, the applicant shall meet its obligation under subsection A of 20.2.70.402 NMAC to notify the Administrator of the requested permit modification. The Department promptly shall send any notice required under paragraph (2) of subsection A of 20.2.70.402 NMAC and subsection B of 20.2.70.402 NMAC to the Administrator and affected programs.

(6) The permittee may make the change proposed in its minor permit modification application immediately after such application is deemed complete. After the permittee makes the change allowed by the preceding sentence, and until the Department takes any of the actions specified in paragraph (7) of subsection B of 20.2.70.404 NMAC below, the permittee must comply with both the applicable requirements governing the change and the proposed permit terms and conditions. During this time period, the permittee need not comply with the existing permit terms and conditions it seeks to modify. If the permittee fails to comply with its proposed permit terms and conditions during this time period, the existing permit terms and conditions it seeks to modify may be enforced against it.

(7) The Department may not issue a final minor permit modification until after the Administrator's 45-day review period of the proposed permit modification or until US EPA has notified the Department that the Administrator will not object to issuance of the permit modification, although the Department may approve the permit modification prior to that time. Within ninety (90) days of ruling the application complete under minor permit modification procedures or within fifteen (15) days after the end of the Administrator's 45-day review period, whichever is later, the Department shall:

(a) Issue the permit modification as it was proposed;

(b) Disapprove the permit modification application;

(c) Determine that the requested modification does not meet the minor permit modification criteria and should be reviewed under the significant modification procedures; or

(d) Revise the draft permit modification and transmit to the Administrator the new proposed permit modification as required by subsection A of 20.2.70.402 NMAC.

C. Significant Permit Modifications:

(1) A significant permit modification is:

(a) Any revision to an operating permit that does not meet the criteria under the provisions for administrative permit amendments under subsection A of 20.2.70.404 NMAC or for minor permit modifications under subsection B of 20.2.70.404 NMAC above;

(b) Any modification that would result in any relaxation in existing monitoring, reporting or recordkeeping permit terms or conditions;

(c) Any modification for which action on the application would, in the judgment of the Department, require decisions to be made on significant or complex issues; and

(d) Changes in ownership which do not meet the criteria of paragraph (2) of subsection A of 20.2.70.404 NMAC.

(2) For significant modifications which are not required to undergo preconstruction permit review and approval, changes to the source which qualify as significant permit modifications shall not be made until the Department has issued the operating permit modification.

(3) For significant modifications which have undergone preconstruction permit review and approval, the permittee shall:

(a) Before commencing operation, notify the Department in writing of any applicable requirements and operating permit terms and conditions contravened by the modification, emissions units affected by the change, and allowable emissions increases resulting from the modification; and

(b) Within twelve (12) months after commencing operation, file a complete operating permit modification application.

(4) Where an existing operating permit would specifically prohibit such change, the permittee must obtain an operating permit modification before commencing operation or implementing the change.

(5) Significant permit modifications shall meet all requirements of this Part for permit issuance, including those for applications, public participation, review by affected programs and review by the Administrator.

(6) The Department shall complete review on the majority of significant permit modification applications within nine (9) months after the Department rules the applications complete.

D. Modifications to Acid Rain Sources: Administrative permit amendments and permit modifications for purposes of the acid rain portion of the permit shall be governed by regulations promulgated by the Administrator under title IV of the Federal Act.

[11/30/95; 20.2.70.404 NMAC - Rn, 20 NMAC 2.70.404, 06/14/02]

20.2.70.405 PERMIT REOPENING, REVOCATION OR TERMINATION:

A. Action by the Department:

(1) Each permit shall include provisions specifying the conditions under which the permit will be reopened prior to the expiration of the permit. A permit shall be reopened and revised for any of the following, and may be revoked and reissued for subparagraphs (c) or (d) of the following:

(a) Additional applicable requirements under the Federal Act become applicable to a major source with a remaining permit term of three (3) or more years. Such a reopening shall be completed not later than eighteen (18) months after promulgation of the applicable requirement. No such reopening is required if the effective date of the requirement is later than the date on which the permit is due to expire, unless the original permit or any of its terms or conditions have been extended past the expiration date of the permit pursuant to subsection D of 20.2.70.400 NMAC;

(b) Additional requirements (including excess emissions requirements) become applicable to a source under the acid rain program promulgated under title IV of the Federal Act. Upon approval by the Administrator, excess emissions offset plans shall be deemed to be incorporated into the permit;

(c) The Department or the Administrator determines that the permit contains a material mistake or that inaccurate statements were made in establishing the terms or conditions of the permit; or

(d) The Department or the Administrator determines that the permit must be revised or revoked and reissued to assure compliance with the applicable requirements.

(2) Proceedings to reopen and revise, or revoke and reissue, a permit shall affect only those parts of the permit for which cause to reopen or revoke exists. Units for

which permit conditions have been revoked shall not be operated until permit reissuance. Reopenings shall be made as expeditiously as practicable.

(3) A permit, or an authorization to operate under a general permit, may be terminated when:

(a) The permittee fails to meet the requirements of an approved compliance plan;

(b) The permittee has been in significant or repetitious non-compliance with the operating permit terms or conditions;

(c) The applicant or permittee has exhibited a history of willful disregard for environmental laws of any state or Tribal authority, or of the United States;

(d) The applicant or permittee has knowingly misrepresented a material fact in any application, record, report, plan, or other document filed or required to be maintained under the permit;

(e) The permittee falsifies, tampers with or renders inaccurate any monitoring device or method required to be maintained under the permit;

(f) The permittee fails to pay fees required under the fee schedule in 20.2.71 NMAC (Operating Permit Emission Fees); or

(g) The Administrator has found that cause exists to terminate the permit.

(4) The Department shall, by certified mail, provide a notice of intent to the permittee at least thirty (30) days in advance of the date on which a permit is to be reopened or revoked, or terminated, except that the Department may provide a shorter time period in the case of an emergency. The notice shall state that the permittee may, within 30 (thirty) days of receipt, submit comments or request a hearing on the proposed permit action.

B. Action by the Administrator: Within ninety (90) days, or longer if the Administrator extends this period, after receipt of written notification that the Administrator has found that cause exists to terminate, modify or revoke and reissue a permit, the Department shall forward to the Administrator a proposed determination of termination, modification, or revocation and reissuance, as appropriate. Within ninety (90) days from receipt of an Administrator objection to a proposed determination, the Department shall address and act upon the Administrator's objection.

C. Compliance Orders: Notwithstanding any action which may be taken by the Department or the Administrator under subsections A and B of 20.2.70.405 NMAC, a compliance order issued pursuant to New Mexico Air Quality Control Act section 74-2-12 NMSA 1978 may include a suspension or revocation of any permit or portion thereof.

[11/30/95; 20.2.70.405 NMAC - Rn, 20 NMAC 2.70.405, 06/14/02]

20.2.70.406 CITIZEN SUITS:

Pursuant to section 304 of the Federal Act, 42 USC 7604, any person may commence certain civil actions under the Federal Act.

[11/30/95; 20.2.70.406 NMAC - Rn, 20 NMAC 2.70.406, 06/14/02]

20.2.70.407 VARIANCES:

Pursuant to New Mexico Air Quality Control Act section 74-2-8 NMSA 1978, applicants and permittees may seek a variance from the non-federally enforceable provisions of this Part.

[11/30/95; 20.2.70.407 NMAC - Rn, 20 NMAC 2.70.407, 06/14/02]

20.2.70.408 ENFORCEMENT:

Notwithstanding any other provision in the New Mexico State Implementation Plan approved by the Administrator, any credible evidence may be used for the purpose of establishing whether a person has violated or is in violation of the terms or conditions of a permit issued pursuant to this Part.

A. Information from the use of the following methods is presumptively credible evidence of whether a violation has occurred at the source:

(1) A monitoring or information gathering method approved for the source pursuant to this Part and incorporated in an operating permit; or

(2) Compliance methods specified in the New Mexico State Implementation Plan.

B. The following testing, monitoring or information gathering methods are presumptively credible testing, monitoring or information gathering methods:

(1) Any federally enforceable monitoring or testing methods, including those in 40 CFR parts 51, 60, 61 and 75; and

(2) Other testing, monitoring or information gathering methods that produce information comparable to that produced by any method under subsection A of 20.2.70.408 NMAC or paragraph (1) of subsection B of 20.2.70.408 NMAC.

[The latest effective date of any section in this part is 01/09/09.]

20.2.71.6 OBJECTIVE:

The objective of this Part is to establish a schedule of operating permit emission fees.

[11/30/95; 20.2.71.6 NMAC - Rn, 20 NMAC 2.71.105 10/31/02]

20.2.71.7 DEFINITIONS:

In addition to the terms defined in 20.2.2 NMAC (definitions), as used in this part, the following definitions apply.

A. "Allowable emission rate" means the maximum emission allowed by the more stringent emission limitation applicable to the source contained in:

- (1) any New Mexico air quality control regulation;
- (2) any federal standard of performance, emission limitation, or emission standard adopted pursuant to 42 U.S.C. Section 7411 or 7412; or
- (3) any condition within a construction or operating permit issued by the department.

B. "Emissions unit" means any part or activity of a stationary source that emits or has the potential to emit any fee pollutant.

C. "Fee pollutant" means:

- (1) sulfur dioxide, nitrogen dioxide, carbon monoxide, total suspended particulate matter, volatile organic compounds, and mercury; and
- (2) any hazardous air pollutant that is subject to any standard promulgated pursuant to section 112 of the federal act.

D. "Fugitive emissions" means those emissions which could not reasonably pass through a stack, chimney, vent, or other functionally-equivalent opening.

E. "Hazardous air pollutant" means an air contaminant that has been classified as a hazardous air pollutant pursuant to section 112 of the federal act.

F. "Operator" means the person or persons responsible for the overall operation of a facility.

G. "Owner" means the person or persons who own a facility or part of a facility.

H. "Part" means an air quality control regulation under Title 20, Chapter 2 of the New Mexico Administrative Code, unless otherwise noted; as adopted or amended by the board.

I. "Stationary source" means any building, structure, facility, or installation that emits or may emit any air pollutant.

[11/30/95; 20.2.71.7 NMAC - Rn, 20 NMAC 2.71.107 10/31/02; A, 12/15/04; A, 06/15/07]

20.2.71.8 AMENDMENT AND SUPERSESSION OF PRIOR REGULATIONS:

This Part amends and supersedes Air Quality Control Regulation (AQCR) 771 -- Operating Permit Emission Fees, filed November 15, 1993, as amended.

A. All references to AQCR 771 in any other rule shall be construed as a reference to this Part.

B. The amendment and supersession of AQCR 771 shall not affect any administrative or judicial enforcement action pending on the effective date of such amendment nor the validity of any permit issued pursuant to AQCR 771.

[11/30/95; 20.2.71.8 NMAC - Rn, 20 NMAC 2.71.106 10/31/02]

20.2.71.9 DOCUMENTS:

Documents cited in this Part may be viewed at the New Mexico Environment Department, Air Quality Bureau, Runnels Building, 1190 Saint Francis Drive, Santa Fe, NM 87505 [2048 Galisteo St., Santa Fe, NM 87505].

[11/30/95; 20.2.71.9 NMAC - Rn, 20 NMAC 2.71.108 10/31/02]

20.2.71.10-20.2.71.108 [RESERVED]

20.2.71.109 APPLICABILITY:

Each owner or operator required to obtain an operating permit under 20.2.70 NMAC (Operating Permits) shall be subject to the requirements of this Part.

[11/30/95; 20.2.71.109 NMAC - Rn, 20 NMAC 2.71.109 10/31/02]

20.2.71.110 FEE REQUIREMENT:

A. An annual operating permit emission fee shall be paid to the department by each owner or operator subject to this part.

B. The fee shall be assessed:

(1) for a major source as defined in 20.2.70 NMAC (Operating Permits), for all emissions units;

(2) for all other stationary sources, for emissions units which cause the source to be subject to 20.2.70 NMAC; and

(3) for emissions above annual allowable emission limits for the source categories in Paragraphs (1) and (2) of Subsection B of Section 20.2.71.110 NMAC.

C. The fee shall be calculated in conformance with 20.2.71.111 NMAC.

[11/30/95; 20.2.71.110 NMAC - Rn, 20 NMAC 2.71.110 10/31/02; A, 12/15/04]

20.2.71.111 FEE DETERMINATION:

A. Fee calculation.

(1) The annual fee shall be calculated by taking the product of the allowable emission rate for each fee pollutant expressed in tons per year and the appropriate fee per ton of pollutant listed in 20.2.71.112 NMAC.

(2) The allowable emission rate which shall be used in the fee calculation is:

(a) the allowable emission rate which exists on December 31 for each year;
and

(b) the failure of an owner or operator to include the correct information in a permit application, resulting in incorrect allowable emissions in a permit issued under 20.2.70 NMAC, 20.2.72 NMAC, or 20.2.74 NMAC, shall not preclude the department from requiring payment for the correct emissions from the time payment would have been first due.

(3) Allowable emission rates shall be calculated to the tenth of a ton for each emission unit and then summed to determine the tons per year for the facility. Total facility tons per year quantities shall be determined by rounding amounts equal to or greater than five tenths of a ton upward and amounts lower than five tenths of a ton downward.

(4) Emissions from those operations determined to be insignificant activities by the department under 20.2.70 NMAC shall not be included in the fee calculation.

(5) Fugitive emissions which have an allowable emission rate shall be included in the fee calculation.

(6) Any quantity of a pollutant which is assessed a fee because it is a hazardous air pollutant shall not be assessed additional fees.

(7) A maximum of six thousand tons per year of any one fee pollutant shall be used in the fee calculation.

B. Source shutdown.

(1) The annual fee shall not be reduced due to lack of operation of any emissions unit, except when:

(a) the discontinued operation is accounted for in an allowable emission rate contained within a construction or operating permit issued by the department;

(b) a construction or operating permit issued by the department has been discontinued or terminated and the source ceased operation; or

(c) the emissions unit is located at a stationary source which meets the criteria of Paragraph (2) of Subsection B of 20.2.71.111 NMAC.

(2) The annual fee shall be reduced when all operations at a stationary source have been shutdown for a period greater than 60 consecutive days within a calendar year. In this case, the fee calculation shall be adjusted by reducing the annualized allowable emission rate, or potential to emit if applicable, for each day the stationary source was shutdown.

C. Fee for emissions above annual allowable emission limits.

(1) The fee for emissions above annual allowable emission limits shall be based on all emissions above annual allowable emission limits of fee pollutants reported or required to be reported by a stationary source through December 31 in accordance with Subsection E of 20.2.70.302 NMAC. The fee shall be calculated by taking the product of the emissions above annual allowable emission limits for each fee pollutant above and beyond the allowable annual emissions limit per unit expressed in tons per year and the appropriate fee per ton of pollutant listed in 20.2.71.112 NMAC.

(2) Total facility tons per year quantities of emissions above annual allowable emission limits shall be determined by rounding amounts equal to or greater than five tenths of a ton upward and amounts lower than five tenths of a ton downward.

(3) Any quantity of a pollutant which is assessed a fee pursuant to this section because it is a hazardous air pollutant shall not be assessed additional fees pursuant to this section.

(4) A maximum of six thousand tons per year of any one fee pollutant shall be used in the fee calculation for this section.

[11/30/95; 20.2.71.111 NMAC - Rn, 20 NMAC 2.71.111 10/31/02; A, 12/15/04]

20.2.71.112 EMISSION FEE:

A. The fee for each fee pollutant shall be \$20.00 per ton on an annual basis, except as provided for in Subsection B of 20.2.70.112 NMAC. This fee shall increase by \$2.00 per ton on an annual basis beginning on January 1, 2010 through the fees due on June 1, 2012.

B. The fee for each hazardous air pollutant shall be \$165.00 per ton on an annual basis for any stationary source which is only major as defined in 20.2.70 NMAC for any hazardous air pollutant.

C. Fees for mercury emissions.

(1) For the calendar years 2010 through 2017, the fee for mercury emissions from stationary sources subject to 20.2.85 NMAC shall be \$8.88 per ounce annually.

(2) For the calendar years 2018 and thereafter, the fee for mercury emissions from stationary sources subject to 20.2.85 NMAC shall be \$22.51 per ounce annually.

D. The fee per ton of emissions above annual allowable emission limits shall be identical to the fee per ton of allowable emissions.

E. Beginning on January 1, 2009, the fees referenced in this section shall be changed annually by the percentage, if any, of any annual increase in the consumer price index in accordance with Section 502(b)(3)(B)(v) of the federal Clean Air Act.

[11/30/95; 20.2.71.112 NMAC - Rn, 20 NMAC 2.71.112 10/31/02; A, 12/15/04; A, 06/15/07; A, 01/09/09]

20.2.71.113 FEE PAYMENT:

A. Schedule.

(1) The department shall by April 1 of each year provide to each owner or operator subject to this part notification, which shall contain:

(a) the emissions fee based on the requirements of this part which is currently due; and

(b) a summary of the basis for the required fee.

(2) Upon discovery of an error in any past notification of emissions fees due, the department shall promptly notify the owner or operator and provide credit for overcharges or require payment for undercharges.

(3) Each owner or operator shall pay by June 1 the emissions fee contained in the department's notification required under Paragraph (1) of Subsection A of Section 20.2.71.113 NMAC.

(4) Each owner or operator shall pay invoices based on notices of errors in past notifications within 60 days of the invoice date.

(5) The department shall commence invoicing for fees for emissions above annual allowable emission limits reported by the method specified by the department in calendar year 2007.

B. Payment.

(1) Fees shall be remitted in the form of a certified check or money order made payable to the environment department and submitted to the air quality bureau at the address specified in the notice.

(2) Upon receipt of the check or money order, it shall be deposited in the state air quality permit fund.

C. Nonpayment. Failure to remit the full fee required by the due date specified in this section is a violation of this part and may subject the owner or operator to:

(1) civil penalties for each day of noncompliance as provided for in the New Mexico Air Quality Control Act, section 74-2-12.1, NMSA 1978;

(2) the enforcement provisions of the New Mexico Air Quality Control Act, section 74-2-12, NMSA 1978, which includes suspension or revocation of any permit.

Environmental Improvement Act, NMSA 1978, Section 74-1-8(A)(4) and Air Quality Control Act, NMSA 1978, Sections 74-2-1 et seq., including specifically, Section 74-2-7(A)(1), (B), (C) and (D).

[20.2.72.3 NMAC - Rn, 20 NMAC 2.72.102, 2/2/01]

20.2.72.4 DURATION:

Permanent. Notwithstanding the applicability provisions of 20.2.72.402 NMAC, the Department is stayed from enforcing requirements relating to asphalt fumes as a toxic air pollutant for new or modified sources until September 1, 1997.

[20.2.72.4 NMAC - Rn, 20 NMAC 2.72.103, 2/2/01]

20.2.72.5 EFFECTIVE DATE:

November 30, 1995 except where a later date is cited at the end of a section or paragraph.

[The latest effective date of any section in this Part is 9/6/06.]

[20.2.72.5 NMAC - Rn, 20 NMAC 2.72.104, 2/2/01]

20.2.72.6 OBJECTIVE:

The objective of this part is to establish the requirements for obtaining a construction permit.

[20.2.72.6 NMAC - Rn, 20 NMAC 2.72.105, 2/2/01]

20.2.72.7 DEFINITIONS:

In addition to the terms defined in 20.2.2 NMAC (Definitions) as used in this part:

A. "Accelerated review" means an optional process of permit application review that allows the department to utilize a qualified outside firm to assist in review of a construction permit application.

B. "Affiliate," for the purposes of accelerated review, means a person that directly or indirectly, through one or more intermediaries, controls or is under common control with another person. Control includes the possession of the power to direct or cause the direction of management and policies of a person, whether directly or indirectly through the ownership, control or holding with the power to vote ten percent or more of the person's voting securities.

C. "Air pollution control equipment" means any device, equipment, process or combination thereof the operation of which would limit, capture, reduce, confine, or otherwise control air contaminants or convert for the purposes of control any air contaminant to another form, another chemical or another physical state.

D. "Ambient air" means the outdoor atmosphere, but does not include the area entirely within the boundaries of the industrial or manufacturing property within which

the air contaminants are or may be emitted and public access is restricted within such boundaries.

E. "Coal mining operation" means the business of developing, producing, preparing or loading bituminous coal, subbituminous coal, anthracite, or lignite, or of reclaiming the areas upon which such activities occur. This definition does not include coal preparation plants.

F. "Coal preparation plant" means any facility which prepares coal by one or more of the following processes: breaking, crushing, screening, wet or dry cleaning, and thermal drying.

G. "Commencement" means that an owner or operator has undertaken a continuous program of construction or modification.

H. "Conflict of interest," for the purposes of accelerated review, means any direct or indirect relationship between the qualified outside firm and the applicant or other interested person that would cause a reasonable person with knowledge of the relevant facts to question the integrity or impartiality of the qualified outside firm in review of the application. A conflict of interest does not include any gifts, gratuities, financial or contractual relationship of less than one hundred dollars (\$100) in value for the twelve month period preceding Department receipt of the application. A conflict of interest includes but is not limited to the following examples:

(1) Gifts or gratuities of value have been exchanged between the qualified outside firm and the applicant.

(2) The qualified outside firm has provided goods or services to the applicant within one year prior to the start, or during the term, of the accelerated review process.

(3) An express or implied contractual relationship exists between the qualified outside firm and the applicant and the qualified outside firm has provided goods or services to the applicant through that relationship within five years prior to the start of the accelerated review process.

(4) There is a current financial relationship between the qualified outside firm and the applicant. Current financial relationships include, but are not limited to:

(a) The qualified outside firm owes anything of value to, or is owed anything of value by the applicant.

(b) The qualified outside firm has provided goods or services to the applicant and has issued a warranty or guarantee for the work that is still in effect during the time the contracted work for accelerated review is being performed.

(5) A director, officer, or employee of the qualified outside firm, who will perform services under a contract pursuant to this section (20.2.72.221 NMAC), has one or more personal, business, or financial interests or relationships with the applicant or any director, officer or employee of the applicant which would cause a reasonable person with knowledge of the relevant facts to question the integrity or impartiality of those who are or will be acting under a contract.

(6) A director, officer or employee of the qualified outside firm was a director, officer or employee of the applicant within one year prior to the start of the accelerated review process.

(7) Except where allowed by the department, communication has been made between the qualified outside firm and the applicant regarding the substance of the application before a qualified outside firm has been selected to perform accelerated review of an application. Direct communication between the qualified outside firm and the applicant may take place once the qualified outside firm has been selected by the department.

(8) Any affiliate of the applicant has any of the above identified relationships with the qualified outside firm.

(9) Any affiliate of the qualified outside firm has any of the above identified relationships with the applicant.

(10) Any affiliate of the applicant has any of the above identified relationships with any affiliate of the qualified outside firm.

I. "**Construction**" means fabrication, erection, installation or relocation of a stationary source, including but not limited to temporary installations and portable stationary sources.

J. "**Emergency**" means unforeseen circumstances resulting in an imminent and substantial endangerment to health, safety, or welfare which requires immediate action.

K. "**Federally enforceable**" means all limitations and conditions which are enforceable by the administrator of the US EPA, including those requirements developed pursuant to 40 CFR Parts 60 and 61, requirements within any applicable State Implementation Plan, any permit requirements established pursuant to 40 CFR 52.21 or under regulations approved pursuant to 40 CFR Part 51, Subpart I including 40 CFR 51.165 and 40 CFR 51.166.

L. "**Fugitive emissions**" means those emissions which could not reasonably pass through a stack, chimney, vent, or other functionally equivalent opening.

M. "Hazardous air pollutant" means an air contaminant which has been classified as a "hazardous air pollutant" by the administrator of the US EPA and is subject to a NESHAP.

N. "Interested person," as used in the definition of conflict of interest, means any person, other than the department, that is reasonably expected to provide or has provided substantive comment or technical evidence on the permit application.

O. "Malfunction" means any sudden and unavoidable failure of air pollution control equipment, process equipment, or process to operate in an expected manner. Failures that are caused entirely or in part by poor maintenance, careless operation, or any other preventable equipment breakdown shall not be considered a malfunction.

P. "Modification" means any physical change in, or change in the method of operation of, a stationary source which results in an increase in the potential emission rate of any regulated air contaminant emitted by the source or which results in the emission of any regulated air contaminant not previously emitted, but does not include:

- (1) a change in ownership of the source;
- (2) routine maintenance, repair or replacement;
- (3) installation of air pollution control equipment, and all related process equipment and materials necessary for its operation, undertaken for the purpose of complying with regulations adopted by the board or pursuant to the federal act; or
- (4) unless previously limited by enforceable permit conditions:
 - (a) an increase in the production rate, if such increase does not exceed the operating design capacity of the source;
 - (b) an increase in the hours of operation; or
 - (c) use of an alternative fuel or raw material if, prior to January 6, 1975, the source was capable of accommodating such fuel or raw material, or if use of an alternate fuel or raw material is caused by any natural gas curtailment or emergency allocation or any other lack of supply of natural gas.

Q. "National Ambient Air Quality Standard" means, unless otherwise modified, the primary (health-related) and secondary (welfare-based) federal ambient air quality standards promulgated by the US EPA pursuant to Section 109 of the federal act.

R. "National Emission Standards for Hazardous Air Pollutants" or "NESHAP" mean the regulatory requirements, guidelines and emission limitations promulgated by the US EPA pursuant to Section 112 of the federal act.

S. "New Source Performance Standard" or "NSPS" means the regulatory requirements, guidelines and emission limitations promulgated by the US EPA pursuant to Section 111 of the federal act.

T. "Nonattainment area" means for any air contaminant an area which is shown by monitored data or which is calculated by air quality modeling (or other methods determined by the administrator to be reliable) to exceed any national or New Mexico ambient air quality standard for such contaminant. Such term includes any areas identified under Sub-paragraphs (A) through (C) of Section 107 (d)(1) of the federal act.

U. "Operator" means the person or persons responsible for the overall operation of a facility.

V. "Owner" means the person or persons who own a facility or part of a facility.

W. "Part" means an air quality control regulation under Title 20, Chapter 2 of the New Mexico Administrative Code, unless otherwise noted; as adopted or amended by the board.

X. "Portable stationary source" means a source which can be relocated to another operating site with limited dismantling and reassembly, including for example but not limited to moveable sand and gravel processing operations and asphalt plants.

Y. "Potential emission rate" means the emission rate of a source at its maximum capacity to emit a regulated air contaminant under its physical and operational design, provided any physical or operational limitation on the capacity of the source to emit a regulated air contaminant, including air pollution control equipment and restrictions on hours of operation or on the type or amount of material combusted, stored or processed, shall be treated as part of its physical and operational design only if the limitation or the effect it would have on emissions is enforceable by the department pursuant to the Air Quality Control Act or the federal Act.

Z. "Qualified outside firm" means any person who has entered into a contract with the department to provide assistance in the accelerated review of construction permit applications.

AA. "Regulated air contaminant" means, any air contaminant, the emission or ambient concentration of which is regulated pursuant to the New Mexico Air Quality Control Act or the federal act.

BB. "Shutdown" means the cessation of operation of any air pollution control equipment, process equipment or process for any purpose, except routine phasing out of batch process units.

CC. "Standard Industrial Classification" or "SIC" means the code from the classification manual created by the Executive Office of the President-Office of

Management and Budget, which categorizes industrial, manufacturing and commercial facilities, as listed in the Standard Industrial Code Manual published by the U.S. Government Printing Office, Washington D.C. 1972.

DD. "Startup" means the setting into operation of any air pollution control equipment, process equipment or process for any purpose, except routine phasing in of batch process units.

EE. "Stationary source" or "source" means any building, structure, equipment, facility, installation (including temporary installations), operation or portable stationary source which emits or may emit any air contaminant. Any research facility may group its sources for the purpose of this part at the discretion of the secretary.

[20.2.72.7 NMAC - Rn, 20 NMAC 2.72.107, 2/2/01; A, 3/30/01; A, 2/18/02]

20.2.72.8 AMENDMENT AND SUPERSESSION OF PRIOR REGULATIONS:

This part amends and supersedes Air Quality Control Regulation ("AQCR") 702 - Permits, filed May 29, 1990, as amended ("AQCR 702").

A. All references to AQCR 702 in any other rule shall be construed as a reference to this part.

B. The amendment and supersession of AQCR 702 shall not affect any administrative or judicial enforcement action pending on the effective date of such amendment nor the validity of any permit issued pursuant to AQCR 702.

[20.2.72.8 NMAC - Rn, 20 NMAC 2.72.106, 2/2/01]

20.2.72.9 DOCUMENTS:

Documents incorporated and cited in this part may be viewed at the New Mexico Environment Department, Air Quality Bureau, Harold Runnels Building, 1190 St. Francis Drive, Santa Fe, NM 87505.

[20.2.72.9 NMAC - Rn, 20 NMAC 2.72.108, 2/2/01]

20.2.72.10-20.2.72.199 [RESERVED]

20.2.72.200 APPLICATION FOR CONSTRUCTION, MODIFICATION, NSPS, AND NESHAP - PERMITS AND REVISIONS:

A. Permits must be obtained from the department by:

(1) Any person constructing a stationary source which has a potential emission rate greater than 10 pounds per hour or 25 tons per year of any regulated air

contaminant for which there is a National or New Mexico Ambient Air Quality Standard. If the specified threshold in this subsection is exceeded for any one regulated air contaminant, all regulated air contaminants with National or New Mexico Ambient Air Quality Standards emitted are subject to permit review. Within this subsection, the potential emission rate for nitrogen dioxide shall be based on total oxides of nitrogen;

(2) Any person modifying a stationary source when all of the pollutant emitting activities at the entire facility, either prior to or following the modification, emit a regulated air contaminant for which there is a National or New Mexico Ambient Air Quality Standard with a potential emission rate greater than 10 pounds per hour or 25 tons per year and the regulated air contaminant is emitted as a result of the modification. If the specified threshold in this subsection is exceeded for any one regulated air contaminant, all regulated air contaminants with National or New Mexico Ambient Air Quality Standards emitted by the modification are subject to permit review. Within this subsection, the potential emission rate for nitrogen dioxide shall be based on total oxides of nitrogen;

(3) Any person constructing or modifying any source or installing any equipment which is subject to 20.2.77 NMAC (New Source Performance Standards), 20.2.78 NMAC (Emission Standards for Hazardous Air Pollutants), or any other New Mexico Air Quality Control Regulation which contains emission limitations for any regulated air contaminant;

(4) For toxic air pollutants, see 20.2.72.400 NMAC - 20.2.72.499 NMAC;

(5) Any person constructing a stationary source which has a potential emission rate for lead greater than 5 tons per year or modifying a stationary source which either prior to or following the modification has a potential emission rate for lead greater than 5 tons per year; or

(6) Sources which are major sources of hazardous air pollutants by the definitions in 20.2.83 NMAC (Construction or Modification of Major Sources of Hazardous Air Pollutants).

B. Fugitive dust emissions from a coal mining operation shall not be subject to the requirements of Paragraph 1 of Subsection A of 20.2.72.200 NMAC. Note: New coal mining operations are required to have an approved air pollution control plan for fugitive dust emissions by the New Mexico surface coal mining commission.

C. Any source or modification meeting the applicability requirements of this part, but which is a major stationary source or a major modification as defined in 20.2.74 NMAC, shall in addition be subject to 20.2.74 NMAC (Prevention of Significant Deterioration).

D. Any source or modification meeting the applicability requirements of this part but which is a major stationary source or a major modification as defined in 20.2.79 NMAC, shall in addition be subject to 20.2.79 NMAC (Permits - Nonattainment Areas).

E. For all sources subject to this part, applications for permits shall be filed prior to the commencement of the construction, modification or installation. Regardless of the anticipated commencement date, no construction, modification or installation shall begin prior to issuance of the permit.

F. Temporary installations and portable stationary sources are subject to this part.

G. If a source consists of more than one unit, a separate permit may be required for each unit which is not substantially interrelated with another unit. A common connection leading to ductwork, pollution control equipment or a single stack shall not, by itself, constitute a substantial interrelationship.

H. Any source which previously did not require a permit because it was in existence before August 31, 1972 shall be subject to the requirements of this Part if operations cease for a period of five years or more and the source has a potential emission rate greater than 10 pounds per hour or 25 tons per year of any regulated air contaminant for which there is a National or New Mexico Ambient Air Quality Standard.

I. Any source meeting the applicability requirements of this part, but which is a major source of hazardous air pollutants, shall in addition be subject to 20.2.83 NMAC (Construction or Modification of Major Sources of Hazardous Air Pollutants).

[20.2.72.200 NMAC - Rn, 20 NMAC 2.72.II.200, 2/2/01]

20.2.72.201 NEW SOURCE REVIEW COORDINATION:

In cases where the new source review requirements of either 20.2.74 NMAC, 20.2.77 NMAC, 20.2.78 NMAC, 20.2.79 NMAC, or 20.2.83 NMAC (Construction or Modifications of Major Sources of Hazardous Air Pollutants) apply to a new stationary source or modification in addition to this Part, the following provisions apply:

A. Only one permit application shall be submitted. The applicant shall submit a sufficient number of copies to meet the requirement of the applicable Part which requires the most copies;

B. The application shall be ruled administratively complete when information required by all applicable Parts has been submitted;

C. Definitions and requirements of each applicable Part are applied separately and do not supersede each other; and

D. After the requirements of all applicable Parts are met, only one permit shall be issued.

[20.2.72.201 NMAC - Rn, 20 NMAC 2.72.II.201, 2/2/01]

20.2.72.202 EXEMPTIONS:

The following exemptions are made to the following requirements of 20.2.72.200 NMAC - 20.2.72.299 NMAC. The exemptions in this section do not apply to emissions of toxic air pollutants listed under 20.2.72.502 NMAC, do not alter the calculation of the potential emissions of toxic air pollutants for applicability under 20.2.72.402 NMAC, and do not exempt the department or the owner or operator of any source from any requirement under 20.2.72.403 NMAC, 20.2.72.404 NMAC, or 20.2.72.405 NMAC.

A. The following sources and activities shall not be reported in the permit application. Emissions from such activities shall not be included in the calculation of facility-wide potential emission rate under Paragraphs 1 or 2 of Subsection A of 20.2.72.200 NMAC. Such activities may be commenced or changed without a permit or permit revision under 20.2.72.200 NMAC - 20.2.72.299 NMAC:

(1) Activities which occur strictly for maintenance of grounds or buildings, including: lawn care, pest control, grinding, cutting, welding, painting, woodworking, sweeping, general repairs, janitorial activities, and building roofing operations;

(2) Activities for maintenance of equipment or pollution control equipment, either inside or outside of a building, including cutting, welding, and grinding, but excluding painting;

(3) Exhaust emissions from forklifts, courier vehicles, front end loaders, graders, carts, maintenance trucks, and fugitive emissions from fleet vehicle refueling operations, provided such emissions are not subject to any requirements under this Chapter (Air Quality), NSPS or NESHAP;

(4) Use of fire fighting equipment and fire fighting training;

(5) Government military activities such as field exercises, explosions, weapons testing and demolition to the extent that such activities:

(a) Do not result in visible emissions entering publicly accessible areas; and

(b) Are not subject to a NSPS or NESHAP;

(6) Office activities, such as photocopying;

(7) Test drilling for characterization of underground storage tank and waste disposal sites;

(8) Non-anthropogenic wind blown dust;

(9) Residential activities such as use of fireplaces, woodstoves, and barbecue cookers;

(10) Gases used to calibrate plant instrumentation, including continuous emission monitoring (CEM) systems;

(11) Food service, such as cafeteria activities;

(12) Automotive repair shop activities, except painting and use of solvents;

(13) Use of portable aerospace ground equipment (such as power generators, compressors, heaters, air conditioners, lighting units) in direct support of aircraft operations and on or in the immediate vicinity of an airfield;

(14) Activities which occur strictly for preventive maintenance of highway bridges, displays and water towers, including: grinding, cutting, welding, painting, and general repairs;

(15) The act of repositioning or relocating equipment, pipes, ductwork, or conveyors within the plant site, but only when such change in physical configuration does not:

(a) Reposition or relocate any source of air emissions or the emission points from any such source; or

(b) Increase the amount of air emissions or the ambient impacts of such emissions.

B. The presence of the following new or modified sources and activities at the facility shall be reported as provided for in the permit application forms supplied by the department. Emissions from such sources and activities shall not be included in the calculation of facility-wide potential emission rate under Paragraphs 1 or 2 of Subsection A of 20.2.72.200 NMAC. Construction of such sources or commencement of such activities after issuance of the permit shall be subject to the administrative permit revision procedures in 20.2.219 NMAC.

(1) Fuel burning equipment which is used solely for heating buildings for personal comfort or for producing hot water for personal use and which:

(a) Uses gaseous fuel and has a design rate less than or equal to five (5) million BTU per hour; or

(b) Uses distillate oil (not including waste oil) and has a design rate less than or equal to one (1) million BTU per hour;

(2) VOC emissions resulting from the handling or storing of any VOC if:

(a) Such VOC has a vapor pressure of less than two tenths (0.2) PSI at temperatures at which the compound is stored and handled; and

(b) The owner or operator maintains sufficient record keeping to verify that the requirements of Sub-paragraph (a) of this paragraph are met;

(3) Standby generators which are:

(a) Operated only during the unavoidable loss of commercial utility power;

(b) Operated less than 500 hours per year; and

(c) Either are:

(i) The only source of air emissions at the site; or

(ii) Accompanied by sufficient record keeping to verify that the standby generator is operated less than 500 hours per year;

(4) The act of repositioning or relocating sources of air emissions or emissions points within the plant site, but only when such change in physical configuration does not increase air emissions or the ambient impacts of such emissions;

(5) Any emissions unit, operation, or activity that has a potential emission rate of no more than one-half (1/2) ton per year of any pollutant for which a national or New Mexico ambient air quality standard has been set or one-half (1/2) ton per year of any VOC. Multiple emissions units, operations, and activities that perform identical or similar functions shall be combined in determining the applicability of this exemption;

(6) Surface coating of equipment, including spray painting, roll coating, and painting with aerosol spray cans, if:

(a) The potential emission rate of VOCs do not exceed ten (10) pounds per hour;

(b) The facility-wide total VOC content of all coating and clean-up solvent use is less than two (2) tons per year; and

(c) The owner or operator maintains sufficient record keeping to verify that the requirements in Sub-paragraphs (a) and (b) of this paragraph are met;

(7) Particulate emissions resulting from abrasive blasting operations, if:

(a) Blasting operations are entirely enclosed in a building; and

(b) No visible particulate emissions are released from the building.

C. For sources and units subject to 40 CFR Part 60 (NSPS), 40 CFR Part 61 (NESHAP) or other Parts of this Chapter (Air Quality), except 40 CFR Part 60 Subparts

I (asphalt plants) and OOO (rock crushers), 40 CFR Part 61 Subpart C (Beryllium), and 40 CFR Part 61 Subpart D (Beryllium Rocket Motor Firing):

(1) Such sources and units shall be exempt from the applicability requirements in Paragraph 3 of Subsection A of 20.2.72.200 NMAC if such sources or units:

(a) Are included in a notice of intent filed under 20.2.73 NMAC (Notice of Intent and Emissions Inventory); or

(b) Have met the notification requirements to which they are subject under NSPS or NESHAP; and

(2) Applicability determinations under Paragraphs 1 and 2 of Subsection A of 20.2.72.200 NMAC shall take into account all federally enforceable emission limits established for such sources or units under NSPS, NESHAP and other parts of this chapter.

D. Portable source relocation. For a portable source which has been issued a permit under this part:

(1) Such source may relocate without undergoing a permit revision if:

(a) The source is installed in a manner conforming with the initial permit;

(b) The source continues to meet all applicable emission limitations and permit conditions; and

(c) The source meets the applicable requirements in Paragraphs 2 and 3 of Subsection D of 20.2.72.202 NMAC below;

(2) For each portable compressor engine which has been issued a streamlined permit in accordance with Paragraph 1 of Subsection D of 20.2.72.301 NMAC, the owner or operator shall complete the appropriate forms provided by the department and maintain such records on file for at least two (2) years;

(3) For all other portable sources, including but not limited to rock crushers and asphalt plants:

(a) The owner or operator shall notify the department, on the form provided by the department, at least fifteen (15) days prior to beginning installation at the new location;

(b) Operation at a new location of such source shall not commence until the department has approved the relocation in writing;

(c) The department shall not approve the relocation if it would result in exceedances of any national or New Mexico ambient air quality standard at the new location; and

(d) The department shall approve, deny, or approve with conditions, the relocation request within fifteen (15) days of receipt of the notice form.

[20.2.72.202 NMAC - Rn, 20 NMAC 2.72.II.202, 2/2/01]

20.2.72.203 CONTENTS OF APPLICATIONS:

A. Any person seeking a permit under Subsection A of 20.2.72.200 NMAC shall do so by filing a written application with the department. The applicant shall submit the number of copies of the permit application specified in the applicable application form. The items of this section, if requested on the applicable application form, are required before the department may deem an application administratively complete. The items may be modified by the department, as appropriate, for emergency permits processed under 20.2.72.215 NMAC. All applications shall, as required by the department:

- (1) Be filled out on the form(s) furnished by the department;
- (2) State the applicant's name and address, together with the names and addresses of all owners or operators of the source, and the applicant's state of incorporation or principal registration to do business;
- (3) Provide all information, including all calculations and computations, to describe the specific chemical and physical nature and to estimate the maximum quantities of any regulated air contaminants the source will emit through routine operations after construction, modification or installation is completed, and estimate maximum potential emissions during malfunction, startup, shutdown. With respect to a toxic air pollutant as defined by Subsection H of 20.2.72.401 NMAC this requirement only applies when the toxic air pollutant is emitted in such a manner that a permit is required under the provisions of 20.2.72.400 NMAC - 20.2.72.499 NMAC;
- (4) Contain a regulatory compliance discussion demonstrating compliance with each applicable air quality regulation, ambient air quality standard, prevention of significant deterioration increment, and provision of 20.2.72.400 NMAC - 20.2.72.499 NMAC. The discussion must include an analysis, which may require use of US EPA-approved air dispersion model(s), to (1) demonstrate that emissions from routine operations will not violate any New Mexico or National Ambient Air Quality Standard or prevention of significant deterioration increment, and (2) if required by 20.2.72.400 NMAC - 20.2.72.499 NMAC, estimate ambient concentrations of toxic air pollutants.
- (5) Provide a preliminary operational plan defining the measures to be taken to mitigate source emissions during malfunction, startup or shutdown;

(6) Include a topographical map, at least as detailed as the 7.5 minute Topographic Quadrangle map published by the United States Geological Survey, showing the exact location and geographical coordinates of the proposed construction, modification or installation of the source;

(7) Include a process flow sheet, including a material balance, and a site diagram of all components and locations of emissions to the atmosphere of the facility which would be involved in routine operations and emissions;

(8) Include a full description, including all calculations of controlled and uncontrolled emissions and the basis for all control efficiencies presented, of the equipment to be used for air pollution control, including a process flow sheet, or, if the department so requires, layout and assembly drawings;

(9) Include a description of the equipment or methods proposed by the applicant to be used for emission measurement;

(10) State the maximum and standard operating schedules of the source after completion of construction, modification or installation or after permit revision in terms of which and how many hours per day, days per week, days per month and days per year;

(11) Contain such other specifically identified relevant information as the department may reasonably require;

(12) Be notarized and signed under oath or affirmation by the operator, the owner or an authorized representative, certifying, to the best of his or her knowledge, the truth of all information in the application and addenda, if any;

(13) Contain payment of any fees which are specified in 20.2.75 NMAC (Construction Permit Fees) as payable at the time the application is submitted;

(14) Contain documentary proof of applicant's public notice, if applicable, as specified in Subsection B of 20.2.72.203 NMAC; and

(15) At the sole discretion of the applicant, contain a request for accelerated review of the application.

B. The applicant's public notice for technical permit revisions shall be as specified in Paragraph 6 of Subsection B of 20.2.72.219 NMAC. The applicant's public notice for a permit or significant permit revision shall be:

(1) Provided by certified mail, to the owners of record, as shown in the most recent property tax schedule, of all properties:

(a) Within one hundred (100) feet of the property on which the facility is located or proposed to be located, if the facility is or is proposed to be located in a Class

A or Class H county or a municipality with a population of more than two thousand five hundred (2500) persons; or

(b) Within one-half (1/2) mile of the property on which the facility is located or is proposed to be located if the facility is or will be in a county or municipality other than those specified in Sub-paragraph (a) of Paragraph 1 of Subsection B of 20.2.72.203 NMAC;

(2) Provided by certified mail to all municipalities and counties in which the facility is or will be located and to all municipalities, Indian tribes, and counties within a ten (10) mile radius of the property on which the facility is proposed to be constructed or operated;

(3) Published once in a newspaper of general circulation in each county in which the property on which the facility is proposed to be constructed or operated is located. This notice shall appear in either the classified or legal advertisements section of the newspaper and at one other place in the newspaper calculated to give the general public the most effective notice and, when appropriate, shall be printed in both English and Spanish;

(4) Posted in at least four (4) publicly accessible and conspicuous places, including:

(a) The proposed or existing facility entrance on the property on which the facility is, or is proposed to be, located, until the permit or significant permit revision is issued or denied; and

(b) Three (3) locations commonly frequented by the general public, such as a nearby post office, public library, or city hall; and

(5) Submitted as a public service announcement to at least one radio or television station which serves the municipality or county in which the source is or is proposed to be located.

C. The notice specified in Paragraphs 1 through 4 of Subsection B of 20.2.72.203 NMAC shall contain the following:

(1) The applicant's name and address, together with the names and addresses of all owners or operators of the facility or proposed facility;

(2) The actual or estimated date that the application was or will be submitted to the department;

(3) The exact location of the facility or proposed facility;

(4) A description of the process or change for which a permit is sought, including an estimate of the maximum quantities of any regulated air contaminant the source will emit after proposed construction is complete or permit is issued;

(5) The maximum and standard operating schedules of the facility after completion of proposed construction or permit issuance; and

(6) The current address of the department to which comments and inquiries may be directed.

D. The public service announcement request specified in Paragraph 5 of Subsection B of 20.2.72.203 NMAC shall contain the following information about the facility or proposed facility:

(1) The name, location, and type of business;

(2) The name of the principal owner or operator;

(3) The type of process or change for which a permit is sought;

(4) Locations where the notices required under Paragraph 4 of Subsection B of 20.2.72.203 NMAC have been posted; and

(5) The address or telephone number at which comments and inquires may be directed to the department.

E. Changing, Supplementing or Correcting Applications:

(1) Prior to a final decision on an application, the applicant shall have a duty to promptly supplement and correct information submitted in the application. The duty to supplement shall include relevant information thereafter acquired or otherwise determined to be relevant.

(2) If, while processing an application, regardless of whether it has been determined to be administratively complete, the department determines that additional information is necessary to evaluate or take final action on that application, it may request such information. The request shall be in writing, identify the additional information requested and the need for the additional information, and set a reasonable deadline for a response. The applicant shall submit the requested information in writing on or before the deadline set by the department.

[20.2.72.203 NMAC - Rn, 20 NMAC 2.72.II.203, 2/2/01; A, 3/30/01]

20.2.72.204 CONFIDENTIAL INFORMATION PROTECTION:

All confidentiality claims made regarding material submitted to the department under this part shall be reviewed under the provisions of 20.2.1 NMAC (General Provisions).

[20.2.72.204 NMAC - Rn, 20 NMAC 2.72.II.204, 2/2/01]

20.2.72.205 CONSTRUCTION, MODIFICATION AND PERMIT REVISION IN BERNALILLO COUNTY:

For the construction or modifications of sources within Bernalillo county, the applicant shall make such applications to the air quality control staff of the joint Albuquerque-Bernalillo county air quality control board, unless that board loses, rejects or fails to exercise authority for the administration and enforcement of the Air Quality Control Act, at which time this part shall apply in full in Bernalillo county.

[20.2.72.205 NMAC - Rn, 20 NMAC 2.72.II.205, 2/2/01]

20.2.72.206 PUBLIC NOTICE AND PARTICIPATION:

A. The department shall:

(1) Make available for public inspection a list of all pending applications for permits or permit revisions;

(2) Make available for public inspection the permit application and the department's preliminary determination. This material shall be available both at the department's central office and the district or field office nearest to the proposed source. Copies of any permit application, except those portions of which may be determined as confidential in accordance with 20.2.1 NMAC (General Provisions), will be supplied upon written request and payment of reasonable costs;

(3) Subsequent to an affirmative administrative completeness determination, publish a public notice in a newspaper of general circulation in the area closest to the location of the source. The notice shall include: the applicant's name and address, the location and brief description of the source, a summary of estimated emissions and ambient impact, and the department's preliminary intent to issue the permit if the construction or modification requested in the application will comply with air quality requirements, including ambient standards. The notice shall identify the location of the permit application and department's analysis (when available) for public review and describe the manner in which comments or evidence may be submitted to the department, including that persons must inform the department in writing of their interest in the permit application in order to have a 30 day period to review and comment on the analysis under Subsection B of 20.2.72.206 NMAC below. The notice shall clearly state that any person who does not express such interest in writing prior to the end of the initial 30 day comment period will not receive notification of the availability of the analysis and thus forewarn such person of the need to express interest in writing if they desire to review and comment on the analysis;

(4) Provide the notice under Paragraph 3 of Subsection A of 20.2.72.206 NMAC above by mail, which may include electronic mail, to all individuals and organizations identified on a list maintained by the department of those who have indicated in writing a desire to receive notices of all applications under this part;

(5) Allow all interested persons thirty (30) days from the date the public notice is published to express an interest in writing in the permit application;

(6) Mail written notice of the action taken on a permit application to any person who expresses an interest in writing in the application; and

(7) Mail a copy of the public notice at the same time it is sent for publication to the appropriate agency in the following locations if the source will locate within fifty kilometers of the boundary of other states, Bernalillo county, or a Class I area. Copies of all public notices shall be sent to US EPA Region VI, if requested by US EPA.

B. In the event that any person expresses an interest in writing in the permit application, the department shall also:

(1) Notify each person who expressed an interest in writing in the permit application of the date and the location that the department's analysis was or will be available for review; and

(2) Not issue the permit until at least thirty (30) days after the department's analysis is available for review. During this thirty (30) day period, any person may submit written public comments or request a public hearing.

C. The department shall hold a public hearing if the secretary determines that there is a significant public interest. Public hearings shall be held in the geographic area likely to be impacted by the source. The time, date, and place of the hearing shall be determined by the department. The department shall give notice of the hearing to the applicant and the public. The secretary may appoint a hearing officer. A transcript of the hearing shall be made at the request of either the department or the applicant and at the expense of the person requesting the transcript. At the hearing, all interested persons shall be given a reasonable chance to submit data, views or arguments orally or in writing and to examine witnesses testifying at the hearing.

[20.2.72.206 NMAC - Rn & A, 20 NMAC 2.72.II.206, 2/2/01]

20.2.72.207 PERMIT DECISIONS AND APPEALS:

A. The department shall, within thirty (30) days after its receipt of an application for a permit or significant permit revision, review such application and determine whether it is administratively complete. If the application is deemed:

(1) administratively complete, a letter to that effect shall be sent by certified mail to the applicant;

(2) administratively incomplete, a letter shall be sent by certified mail to the applicant stating what additional information or points of clarification are necessary to deem the application administratively complete; upon receipt of the additional information or clarification, the department shall promptly review such information and determine whether the application is administratively complete;

(3) administratively complete but no permit is required, a letter shall be sent by certified mail to the applicant informing the applicant of the determination.

B. The department shall either grant, grant subject to conditions or deny the permit or significant permit revision:

(1) within ninety (90) days after the department deems the application administratively complete, if the application is not subject to the requirements of 20.2.74 NMAC (Prevention of Significant Deterioration); or

(2) within one hundred eighty (180) days after the department deems the application administratively complete, if the application is subject to the requirements of 20.2.74 NMAC (Prevention of Significant Deterioration).

C. If the department fails to take action on the application within the deadlines specified in Subsection B of 20.2.72.207 NMAC, the department shall notify the applicant by certified mail that an extension of time is necessary to process the application and shall specify, in detail, the grounds for the extension. The secretary may grant an extension, not to exceed ninety (90) days, to the deadlines specified in Subsection B of 20.2.72.207 NMAC, if the secretary determines that good cause exists for the extension. The secretary shall notify the applicant by certified mail of the decision on the extension. If the secretary grants the extension, the notification shall include the length of the extension and the reasons therefore. The authority under this paragraph may be delegated by the secretary only to the deputy secretary or a division director. Examples of good cause for extension include, but are not limited to:

(1) the need to have public hearings;

(2) a health assessment is required under 20.2.72.400 NMAC - 20.2.72.499 NMAC;

(3) the permit application is subject to the requirements of 20.2.79 NMAC (Permits - Nonattainment Areas);

(4) additional time is needed to complete the requirements for federal review specified in 20.2.74.403 NMAC;

(5) the permit application requires review of unusually complex technical and regulatory issues; or

(6) the department is unable to complete review of information submitted, because of the timing and scope of the submittal.

D. The department shall grant the permit, grant the permit subject to conditions, or deny the permit based on information contained in the department's administrative record. The administrative record shall consist of the application, any other evidence submitted by the applicant, any evidence or written comments submitted by interested persons, any other evidence considered by the department, a statement of matters officially noticed, and if a public hearing is held, the evidence submitted at the hearing. The applicant has the burden of demonstrating that a permit or permit revision should be approved.

E. Any person who participated in a permitting action before the department shall be notified by the department of the action taken and the reasons for the action. Notification of the applicant shall be by certified mail.

F. Any person who participated in a permitting action before the department and who is adversely affected by such permitting action may file a petition for hearing before the board. The petition shall be made in writing to the board within thirty (30) days from the date notice is given of the department's action and shall specify the portions of the permitting action to which the petitioner objects, certify that a copy of the petition has been mailed or hand-delivered as required by this paragraph, and attach a copy of the permitting action for which review is sought. Unless a timely request for hearing is made, the decision of the department shall be final. The petition shall be copied simultaneously to the department upon receipt of the appeal notice. If the petitioner is not the applicant or permittee, the petitioner shall mail or hand-deliver a copy of the petition to the applicant or permittee. The department shall certify the administrative record to the board.

G. If a timely request for a hearing is made, the board shall hold a hearing within sixty (60) days of receipt of the petition in accordance with Section 74-2-7 of the New Mexico Air Quality Control Act, NMSA 1978.

H. Any person adversely affected by an administrative action taken by the board may appeal in accordance with Section 74-2-9 of the New Mexico Air Quality Control Act, NMSA 1978.

[20.2.72.207 NMAC - Rn, 20 NMAC 2.72.II.207, 2/2/01]

20.2.72.208 BASIS FOR DENIAL OF PERMIT:

The department shall deny any application for a permit or permit revision if considering emissions after controls:

A. It appears that the construction, modification or permit revision will not meet applicable regulations adopted pursuant to the Air Quality Control Act;

B. The source will emit a hazardous air pollutant or an air contaminant in excess of any applicable New Source Performance Standard or National Emission Standard for Hazardous Air Pollutants or a regulation of the board;

C. For toxic air pollutants, see 20.2.72.400 NMAC - 20.2.72.499 NMAC;

D. The construction, modification, or permit revision will cause or contribute to air contaminant levels in excess of any National Ambient Air Quality Standard or New Mexico ambient air quality standard unless the ambient air impact is offset by meeting the requirements of either 20.2.79 NMAC or 20.2.72.216 NMAC, whichever is applicable;

E. The construction, modification, or permit revision would cause or contribute to ambient concentrations in excess of a prevention of significant deterioration (PSD) increment;

F. Any provision of the Air Quality Control Act will be violated;

G. It appears that the construction of the new source will not be completed within a reasonable time; or

H. The department chooses to deny the application due to a conflict of interest in accelerated review as provided for under Subsection C of 20.2.72.221 NMAC.

[20.2.72.208 NMAC - Rn, 20 NMAC 2.72.II.208, 2/2/01; A, 3/30/01]

20.2.72.209 ADDITIONAL LEGAL RESPONSIBILITIES ON APPLICANTS:

The issuance of a permit does not relieve any person from civil or criminal liability for failure to comply with the provisions of the Air Quality Control Act, the federal act, federal regulations thereunder, any applicable regulations of the board, and any other applicable law or regulation.

[20.2.72.209 NMAC - Rn, 20 NMAC 2.72.II.209, 2/2/01]

20.2.72.210 PERMIT CONDITIONS:

A. The contents of the application specifically identified by the department shall become terms and conditions of the permit or permit revision.

B. The department shall, as appropriate, specify conditions upon a permit, including:

(1) Placement of individual emission limits determined on a case-by-case basis on the source for which the permit is issued, but such individual emission limits shall be only as restrictive as the more stringent of the following:

(a) the extent necessary to meet the requirements of the Air Quality Control Act and the federal act; or

(b) the emission rate specified in the permit application;

(2) A requirement that such source install and operate control technology, determined on a case-by-case basis, sufficient to meet the requirements of the Air Quality Control Act and the federal act and regulations promulgated under either;

(3) Compliance with applicable NSPS and NESHAP;

(4) Imposition of reasonable restrictions and limitations other than restrictions and limitations relating to emission limits or emission rates; or

(5) Any combination of the above;

(6) In the case of a modification, the requirements of Subsection B of 20.2.72.210 NMAC apply only to the facility or facilities involved in such modification.

C. The department may impose such other reasonable conditions upon a permit, including a schedule of construction, a condition requiring timely revision of permit terms or conditions in order to meet new requirements, if any, under any federally required and approved State Implementation Plan revision, and conditions requiring the source to be provided with or to undertake:

(1) Sampling ports of a size, number and location as the department may require;

(2) Safe access to each port;

(3) Instrumentation to monitor and record emission data including continuous emission monitoring, if appropriate;

(4) Any other reasonable sampling, testing and ambient monitoring and meteorological facilities and protocols; and

(5) Periodic testing pursuant to 20.2.72.213 NMAC.

D. Any term or condition imposed by the department on a permit or permit revision is enforceable to the same extent as a regulation of the board.

E. The department will as a condition of each permit require the permittee to establish and maintain such records of the nature and amount of emissions and to make such periodic reports to the department regarding the nature and amounts of emissions and the performance of air pollution control equipment, as are necessary to carry out the purpose of the Air Quality Control Act.

F. [RESERVED]

[20.2.72.210 NMAC - Rn, 20 NMAC 2.72.II.210, 2/2/01]

20.2.72.211 PERMIT CANCELLATIONS:

A. The department shall automatically cancel any permit for any source which ceases operation for five years or more, or permanently. Reactivation of any source after the five year period shall require a new permit.

B. The department may cancel a permit if the construction or modification is not commenced within two years from the date of issuance or, if during the construction or modification, work is suspended for a total of one year, such cancellation shall be subject to the following procedures:

(1) At least thirty days prior to the cancellation of a permit, the department shall notify the permittee by certified mail of the impending cancellation. The department shall notify the permittee by certified mail of the cancellation of his permit and the reasons therefor. Construction, modification and, if required, interim operation shall cease upon the effective date of cancellation contained in the notice of cancellation. A permittee who has received notice that a permit is or will be cancelled may request a hearing before the board. The request must be made in writing to the board within thirty days after notice of the department's action has been received by the permittee. Unless a timely request for hearing is made, the decision of the department shall be final; and

(2) If a timely request for hearing is made, the board shall hold a hearing within thirty days after receipt of the request. The department shall notify the permittee by certified mail of the date, time and place of the hearing. In the hearing the burden of proof shall be upon the permittee. The board may designate a hearing officer to take evidence in the hearing. Based upon the evidence presented at the hearing, the board shall sustain, modify or reverse the action of the department.

[20.2.72.211 NMAC - Rn, 20 NMAC 2.72.II.211, 2/2/01]

20.2.72.212 PERMITTEE'S NOTIFICATION REQUIREMENTS TO DEPARTMENT:

Any owner or operator subject to this part shall notify the department in writing of or provide the department with:

A. Anticipated date of initial startup of a source not less than thirty (30) days prior to the date;

B. Actual date of initial startup of a source within fifteen (15) days after the startup date;

C. Any change of operators within fifteen (15) days of such change;

D. Any necessary update or correction no more than sixty (60) days after the operator knows or should have known of the condition necessitating the update or correction of the permit.

[20.2.72.212 NMAC - Rn, 20 NMAC 2.72.II.212, 2/2/01]

20.2.72.213 STARTUP AND FOLLOWUP TESTING:

Within sixty (60) days after achieving the maximum production rate at which the source will be operated but not later than one hundred eighty (180) days after initial startup of the source, the owner or operator of the source may be required to conduct a performance test. The test method utilized shall be approved by the department. Whenever the requirements of 40 CFR 60 or 61 apply, test methods must be utilized as specified in those regulations. The owner or operator shall notify the department at least thirty (30) days prior to the test date and allow a representative of the department to be present at the test. A written report of the results of the test shall be submitted to the department by the owner or operator within thirty (30) days from the test date. This requirement may be reimposed on a source as necessary if inspections of the source indicate noncompliance with permit conditions subject to such testing, or the previous test showed noncompliance or was technically unsatisfactory. In such cases, the test requirement may be reimposed as frequently as necessary until compliance is achieved and testing is performed in a technically satisfactory manner. This testing requirement may be waived if the source is a member of a class subject to an exemption from this requirement pursuant to 20.2.72.214 NMAC, and has agreed to comply with, and its permit contains, enforceable design, operational and locational protocols set by the department for the class of sources to which the source belongs.

[20.2.72.213 NMAC - Rn, 20 NMAC 2.72.II.213, 2/2/01]

20.2.72.214 SOURCE CLASS EXEMPTION PROCESS (PERMIT STREAMLINING):

A. Upon application by any person or group of persons, or upon the initiative of the department, the board may exempt any source or class of sources, from any procedural requirement of this part except the requirement to obtain a permit prior to commencement of construction if the board finds that the conditions set forth below in this section have been met. When possible, comprehensive exemptions shall be established for source classes in order to conduct expedited, streamlined permit processing for any applicant whose source is a member of such class. Exemptions may

be granted only after a public hearing of the board, at which time the basis for such exemption shall be presented and any interested person allowed to comment and to question any witness. The board's decision that an exemption under this section is justified shall be based at a minimum on each of the following findings:

(1) The department has substantial actual experience with or knowledge of the specific class of sources proposed for exemption, that such experience or knowledge is material to the application for exemption, and that such experience or knowledge includes modeling and analysis of a representative sample of such sources. Such knowledge may be acquired through, but not limited to, direct department experience with such sources, or the review of other regulatory agencies' experience, records, documentation and formal actions, or through publications of professional organizations and societies upon which engineers and scientists would conventionally rely in formulating a professional judgment;

(2) The sources possess sufficiently common characteristics of operation, process technology, emissions, emission control technology and impact on air quality that with respect to the specific requirements proposed to be exempted, protocols have been developed which, if applied to all members of that class, will ensure that air quality is protected at least as well as would be accomplished by the full permit review process; and

(3) Under such an exemption, compliance with all federal and state air quality laws, regulations, standards and emissions limitations will be assured.

B. Exemptions may apply statewide or regionally and may be revoked by the board only after a public hearing following at least sixty days public notice.

C. As may be required under federal law, all protocols established hereunder shall be submitted to the US EPA for review and approval as revisions to the State Implementation Plan. Such protocols shall be established contingent upon approval by the US EPA.

D. There shall be no exemptions under this section from the requirements of 20.2.74 NMAC, 20.2.77 NMAC, 20.2.78 NMAC, or 20.2.79 NMAC.

[20.2.72.214 NMAC - Rn, 20 NMAC 2.72.II.214, 2/2/01]

20.2.72.215 EMERGENCY PERMIT PROCESS:

A. The department may issue an emergency permit when the secretary determines an emergency exists which threatens the public health, safety or welfare, and which requires the rapid construction or modification of, or installation of equipment in, a facility subject to this part in order to mitigate, prevent or remedy such emergency.

B. Department personnel shall verify that the source, operating in accordance with the permit issued, can and will meet all applicable standards, emissions limitations and conditions before authorizing start-up in order to ensure that the public emergency is not worsened by excess or improperly controlled air pollution.

C. An emergency caused by any negligent or unlawful action or operation of the facility or the facility owner or operator, including but not limited to failure to apply timely for a permit or revision, shall not constitute an emergency for the purposes of this section.

D. The requirements of Paragraphs 5 and 6 of Subsection A of 20.2.72.206 NMAC, Subsection C of 20.2.72.206 NMAC, and Subsections A and B of 20.2.72.207 NMAC shall not apply to emergency permits processed under this section.

E. Construction shall not commence until the emergency permit is issued.

[20.2.72.215 NMAC - Rn & A, 20 NMAC 2.72.II.215, 2/2/01]

20.2.72.216 NONATTAINMENT AREA REQUIREMENTS:

A. The requirements of this section apply to:

(1) a new source or modification of an existing source that will emit a regulated air contaminant such that the ambient impact of the contaminant would exceed the significant ambient concentration in 20.2.72.500 NMAC, table 1, at any location that does not meet the New Mexico ambient air quality standard for the contaminant;

(2) a new source or modification of an existing source that is not a major stationary source or major modification as defined in 20.2.79 NMAC and that will emit a regulated air contaminant such that the ambient impact of the contaminant would exceed the significant ambient concentration in table 1 at any location that does not meet the national ambient air quality standard for the contaminant; or

(3) an existing source that does not propose an increase in emissions and that will emit a regulated air contaminant such that the ambient impact of the contaminant would exceed the significant ambient concentration in 20.2.72.500 NMAC (table 1) at any location that does not meet the national or New Mexico ambient air quality standard for the contaminant.

B. A new source or modification of an existing source subject to this section shall offset the ambient impact of its emissions by:

(1) obtaining emission offsets for proposed emissions in an amount greater than one-to-one such that a net air quality benefit will occur; and

(2) ensuring emission offsets are quantifiable, enforceable, and permanent by meeting the following sections of 20.2.79 NMAC:

(a) 20.2.79.114 NMAC (emission offset baseline);

(b) 20.2.79.115 NMAC (emission offsets); and

(c) 20.2.79.117 NMAC (air quality benefit).

C. An existing source that is subject to this section shall demonstrate a net air quality benefit of at least a 20 percent reduction in ambient impact for each applicable contaminant. The 20 percent reduction shall be calculated as the projected source impact subtracted from the existing source impact divided by the existing source impact. The net air quality benefit must also meet the requirements of 20.2.79.117 NMAC (air quality benefit).

[20.2.72.216 NMAC - Rn, 20 NMAC 20.2.72.II.216, 2/2/01; A, 9/6/06]

20.2.72.217 COMPLIANCE CERTIFICATIONS:

A. Notwithstanding any other provision in the New Mexico State Implementation Plan approved by the administrator, for the purpose of determining compliance, an owner or operator is not prohibited from using monitoring as required under 20.2.70 NMAC and incorporated into an operating permit in addition to any specified compliance methods.

B. The requirements of this section are only applicable to those sources which, in addition to being subject to this part are either: defined as a major source under 20.2.70 NMAC (Operating Permits), or; subject to 20.2.82 NMAC (Maximum Achievable Control Technology Standards for Source Categories of Hazardous Air Pollutants).

[20.2.72.217 NMAC - Rn, 20 NMAC 20.2.72.II.217, 2/2/01]

20.2.72.218 ENFORCEMENT:

Notwithstanding any other provision in the New Mexico State Implementation Plan approved by the administrator, any credible evidence may be used for the purpose of establishing whether a person has violated or is in violation of the terms or conditions of a permit issued pursuant to this part, including permits for sources meeting the applicability requirements 20.2.74 NMAC (Prevention of Significant Deterioration), or 20.2.79 NMAC (Permits - Nonattainment Areas).

A. Information from the use of the following methods is presumptively credible evidence of whether a violation has occurred at the source:

(1) A monitoring or information gathering method approved for the source pursuant to 20.2.70 NMAC and incorporated in an operating permit; or

(2) Compliance methods specified in the New Mexico State Implementation Plan.

B. The following testing, monitoring or information gathering methods are presumptively credible testing, monitoring or information gathering methods:

(1) Any federally enforceable monitoring or testing methods, including those in 40 CFR, parts 51, 60, 61 and 75; and

(2) Other testing, monitoring or information gathering methods that produce information comparable to that produced by any method in Subsection A of 20.2.72.218 NMAC or Paragraph 1 of Subsection B of 20.2.72.218 NMAC, above.

C. The requirements of this section are only applicable to those sources which, in addition to being subject to this part, are either: defined as a major source under 20.2.70 NMAC (Operating Permits), or; subject to 20.2.82 NMAC (Maximum Achievable Control Technology Standards for Source Categories of Hazardous Air Pollutants).

[20.2.72.218 NMAC - Rn, 20 NMAC 20.2.72.II.218, 2/2/01]

20.2.72.219 PERMIT REVISIONS:

A. Administrative Permit Revisions:

(1) Administrative permit revision procedures may be used only for those permit revisions that:

(a) Correct typographical errors;

(b) Provide for a minor administrative change at the source, such as a change in ownership or a change in the address or phone number of any person identified in the permit;

(c) Incorporate a change in the permit solely involving the retiring of a source or closing of a facility upon notification of the department that the permittee has ceased operations of the source or facility;

(d) Incorporate a change in the permit solely involving the deletion from the permit of a source or sources upon notification of the department that the source or sources have not been and will not be built; or

(e) Incorporate a source or activity at the facility which is exempted under Subsection B of 20.2.72.202 NMAC;

(2) The permittee shall apply for an administrative permit revision by filing a certified written notification of the proposed revision with the department which includes all information required by the department to review the request. The certification shall be made as required under Paragraph 12 of Subsection A of 20.2.72.203 NMAC;

(3) The administrative permit revision is effective upon receipt of the notification by the department;

(4) Administrative permit revisions shall not be subject to public notification requirements under Subsection B of 20.2.72.203 NMAC and 20.2.72.206 NMAC. The department shall attach the revision to the permit;

(5) Administrative permit revisions shall not be subject to filing fees or permit fees under 20.2.75 NMAC (Construction Permit Fees);

(6) The department is not required to reissue the permit to incorporate an administrative permit revision.

B. Technical Permit Revisions:

(1) Technical permit revision procedures may be used only for:

(a) Permit revisions that incorporate a change in the permit solely involving a change to monitoring, record keeping, or reporting requirements by the permittee, provided that the department determines that such change does not reduce the enforceability of the permit;

(b) Permit revisions that incorporate a change in the permit solely involving additional equipment with a potential emission rate of no more than one (1) pound per hour for any pollutant for which a National or New Mexico Ambient Air Quality Standard has been set or one (1) pound per hour for any VOC;

(c) Permit revisions that incorporate a change in the permit solely involving the placement of permit conditions, including emissions limitations, on sources which existed on August 31, 1972 and which have been regularly operated since that time;

(d) Modifications that replace an emissions unit for which the allowable emissions limits have been established in the permit, provided that the new emissions unit:

(i) Is equivalent to the replaced emissions unit, and serves the same function within the facility and process;

(ii) Has the same or lower capacity and potential emission rates;

(iii) Has the same or higher control efficiency, and stack parameters which are at least as effective in the dispersion of air pollutants;

(iv) Would not result in an increase of the potential emission rate of any other equipment at the facility;

(v) Shall be subject to the same or lower allowable emissions limits under the permit, and to all other permit conditions which have applied to the replaced emissions unit;

(vi) Would not, when operated under applicable permit conditions, cause or contribute to a violation of any national or New Mexico ambient air quality standard; and

(vii) Would not, as determined by the department, require additional permit conditions in order to ensure the enforceability of the permit, such as additional record keeping or reporting to show compliance;

(e) Permit revisions that make adjustments to the emissions limitations based on the result of the initial compliance test(s), provided that:

(i) The test is performed in accordance with permit conditions;

(ii) Such adjustment occurs within six (6) months of the compliance test;

(iii) No other such adjustment has occurred since the most recent permit issuance or reissuance;

(iv) Such adjustment does not: alter any other permit condition; trigger additional requirements under any other part, including 20.2.74 NMAC (Prevention of Significant Deterioration); or result in allowable emissions which could contribute to a violation of any national or New Mexico ambient air quality standard;

(v) Such request does not increase the permitted allowable emissions of the unit(s) on which the initial compliance test(s) have been performed by more than ten (10) percent; and

(vi) Where the permit fee calculated under 20.2.75 NMAC (Construction Permit Fees) would have been greater if it had been based on the potential emission rate as indicated by the compliance test, the balance of the permit fee is submitted as part of the technical permit revision application;

(f) Permit revisions that incorporate a change in the permit solely involving the addition of air pollution control equipment or the substitution of a different type of air pollution control equipment to existing equipment provided that such addition or

substitution shall not result in an increase in the potential emission rate of more than one (1) pound per hour for any pollutant for which a national or New Mexico ambient air quality standard has been set, or one (1) pound per hour for total VOCs; or

(g) Permit revisions that incorporate terms and conditions in the permit, such as a cap on hours of operation, limitations on throughput of a specific product or products, or limitations on equipment capacity, for the purpose of reducing the potential emission rate of a unit or source.

(2) A request for a technical permit revision shall be accomplished by filing a certified written notification of the proposed revision with the department on forms provided by the Department and shall include all information required by the department to review the request. The certification shall be made as required under Paragraph 12 of Subsection A of 20.2.72.203 NMAC;

(3) The department shall approve or deny the technical permit revision, or inform the applicant that the request must be submitted as a significant permit revision:

(a) Within thirty (30) days of receipt of the application; or

(b) If in response to significant public interest the department holds a public meeting regarding the technical permit revision, within sixty (60) days of receipt of the application;

(4) The department may deny an application for a technical permit revision or require that such application be submitted as a significant permit revision if:

(a) Such revision does not meet the criteria of this section;

(b) In the judgment of the department the revision would require a decision on a significant or complex issue; or

(c) In the judgment of the department the permittee has submitted multiple or subsequent applications for technical permit revisions under this Part that segment a larger revision or modification that would not be eligible for a technical permit revision;

(5) The technical permit revision shall become effective upon written approval from the department;

(6) Technical permit revisions shall not be subject to public notification requirements under Paragraphs 1, 4 and 5 of Subsection B of 20.2.72.203 NMAC, and 20.2.72.206 NMAC. The department shall attach the technical permit revision to the permit.

C. [RESERVED]

D. Significant Permit Revisions:

(1) A significant permit revision is required for any modification to a source, and for revisions to any term or condition of such permit, including but not limited to emissions limitation, control technology, operating conditions, and monitoring requirements; that:

(a) Do not meet the criteria under the provisions for administrative or technical permit revisions under Subsections A or B of 20.2.72.219 NMAC; or

(b) Meet the applicability criteria under 20.2.72.402 NMAC regarding toxic air pollutants;

(2) Applications for significant permit revisions shall meet all requirements of this part for permits and shall be processed in accordance with the public notice, review, and hearing procedures set forth in this part for such permits.

[20.2.72.219 NMAC - Rn, 20 NMAC 2.72.II.219, 02/02/01; A, 08/27/03]

20.2.72.220 GENERAL PERMITS:

A. Issuance of general construction permits:

(1) The department may, after notice under Subsections A and B of 20.2.72.206 NMAC and a public hearing with opportunity for public participation under Subsection C of 20.2.72.206 NMAC issue one or more general construction permits, each covering numerous similar sources. Sources registered for coverage under a general permit shall be generally homogeneous in terms of operations, processes and emissions, subject to the same or substantially similar requirements, and not subject to case-by-case standards or requirements.

(2) Each general construction permit shall:

(a) Describe which sources may qualify to register under the general construction permit;

(b) Specify the contents of a complete application to register under the general construction permit. The department may, in the general construction permit, provide for applications which deviate from the requirements under 20.2.72.203 NMAC, provided that such applications include:

(i) All information necessary to determine qualification for, and to assure compliance with, the general construction permit; and

(ii) Applicant's public notice requirements including, at a minimum, a notice: a) published once in the legal notices section of a newspaper in general

circulation in the county or counties in which the property on which the facility is proposed to be constructed or operated is located; and b) posted at the proposed or existing facility entrance in a publicly accessible and conspicuous place on the property on which the facility is, or is proposed to be, located, until the general permit registration is granted or denied;

(c) Contain permit terms and conditions which apply to all sources registered under the general construction permit, and which include:

(i) Sufficient terms and conditions to assure that all sources registered under and operating in accordance with the general construction permit will meet all applicable requirements under the federal act, the New Mexico Air Quality Control Act and this chapter (Air Quality), including 20.2.74 NMAC (Prevention of Significant Deterioration), 20.2.77 NMAC (New Source Performance Standards), 20.2.78 NMAC (Emission Standards for Hazardous Air Pollutants), 20.2.79 NMAC (Permits - Nonattainment Areas), and 20.2.82 NMAC (Maximum Achievable Control Technology Standards for Source Categories of Hazardous Air Pollutants), and will not cause or contribute to air contaminant levels in excess of any national or New Mexico ambient air quality standard; and

(ii) Monitoring, record keeping and reporting requirements appropriate to the source and sufficient to ensure compliance with the general construction permit. At a minimum, the general permit shall specify where the records shall be maintained, how long the records shall be retained and that all records or reports shall be made available upon request by the department;

(iii) As appropriate, terms and conditions to address and report emissions occurring during upsets, startups and maintenance; and

(d) Specify that any document, including any application form, report, compliance certification and supporting data, submitted pursuant to this section (20.2.72.220 NMAC) shall contain a certification that meets the requirements of Paragraph 10 of Subsection A of 20.2.72.203 NMAC.

B. Revisions to a General Construction Permit:

(1) The department may, after notice under Subsections A and B of 20.2.72.206 NMAC and a public hearing with opportunity for public participation under Subsection C of 20.2.72.206 NMAC, revise a general construction permit. Notice of the proposed revision shall also be sent to the owner or operator of all sources registered under the general construction permit.

(2) Revisions to a general construction permit shall include a reasonable transition schedule for existing registered sources to comply with the revised permit. The department shall revise the general permit terms and conditions only to the extent

necessary to ensure that the requirements of Sub-paragraph (c) of Paragraph 2 of Subsection A of 20.2.72.220 NMAC are met.

C. Registration under a General Construction Permit:

(1) The owner or operator of a source required to obtain a permit pursuant to this part and which qualifies to register under a general construction permit shall either:

(a) Apply to the department to register under the terms of the general construction permit; or

(b) Apply for a construction permit under 20.2.72.200 NMAC.

(2) Within thirty (30) days of receiving an application to register under a general construction permit, the department shall review the application for completeness and shall grant or deny the registration. The department shall not grant the registration until at least fifteen (15) days after the date the applicant's public notice was initiated. The department shall notify the applicant of its determination by certified mail. The department shall attach a copy of the general construction permit to registration approvals.

(3) The department shall grant registration under a general permit to a source only if:

(a) The application is complete and meets the requirements of this section (20.2.72.220 NMAC); and

(b) The source meets the terms and conditions of the general permit.

(4) The department may grant or deny an application to register under a general construction permit without repeating the public notice and participation procedures required under 20.2.72.206 NMAC.

(5) Administrative review under Sections 74-2-7.H through L NMSA 1978 shall be available for a determination made by the department of whether or not a source qualifies to register for coverage under a general construction permit. However, administrative review of a registration for coverage under a general construction permit shall not extend to administrative review of the general permit itself. Administrative review of the general construction permit shall be available under Sections 74-2-7.H through L NMSA 1978 only upon issuance or revision of the general permit as a permitting action.

(6) Sources shall be subject to enforcement action for construction without a permit if:

(a) Construction of a source is commenced prior to the receipt of the department's written approval of registration under a general construction permit; or

(b) It is determined after construction commences that a source does not qualify for coverage under the general construction permit.

(7) A general permit registration may be canceled, consistent with the provisions of 20.2.72.211 NMAC, for any source which ceases operation for five years or more, or permanently, and for any source for which the construction or modification is not commenced within two years from the date of issuance or, if during the construction or modification, work is suspended for a total of one year. The owner or operator shall notify the department of the anticipated and actual startup of a source, consistent with the provisions of 20.2.72.212 NMAC.

D. Modifications to Sources Registered Under a General Construction Permit:
Each general construction permit shall provide that, prior to modification of a source which is registered under a general construction permit, the owner or operator shall:

(1) For those modifications for which the facility will continue to meet the conditions of the general construction permit after the modification, notify the department in writing of such modification; and

(2) For those modifications for which the source will not continue to meet the conditions of the general construction permit after such modification, obtain a construction permit from the department under this part prior to the modification.

[20.2.72.220 NMAC - Rn & A, 20 NMAC 2.72.II.220, 2/2/01]

20.2.72.221 ACCELERATED REVIEW:

A. Qualified Outside Firms:

(1) The department shall request proposals from persons interested in providing assistance as a qualified outside firm in the accelerated review of construction permit applications under this part.

(2) The department shall evaluate the proposal submitted by the person. To be eligible to contract with the department as a qualified outside firm a person must:

(a) Be legally qualified to contract with the department; and

(b) Be qualified to assist the department in review of permit applications, as determined by the department in the department's sole discretion.

(3) Persons who are selected as qualified outside firms shall be under contract with the department for accelerated review of construction permit applications under this section.

B. Requests for Accelerated Review:

(1) At the sole discretion of the applicant, a construction permit applicant under this part may request accelerated permit review of the application by a qualified outside firm. Applications for accelerated review shall be preceded by a pre-application meeting between the applicant and the department. Requests for accelerated review shall not be granted unless there is at least one qualified outside firm under contract with the department pursuant to Paragraph 3 of Subsection A of 20.2.72.221 NMAC. If there are no firms under contract to provide accelerated review, the department shall review the application in accordance with 20.2.72.207 NMAC.

(2) Such request for accelerated permit review shall be submitted with the construction permit application along with a corporate check or money order for the amount of the accelerated review filing fee as specified in 20.2.75 NMAC. The department shall notify the applicant of the names and addresses of the qualified outside firms. The applicant shall deliver a copy of the application, by mail or hand delivery, to each qualified outside firm identified by the department, unless the applicant is aware of a conflict of interest.

(3) Participation in the accelerated permit review process shall not relieve the applicant of any responsibilities specified in this chapter.

(4) Applicants who have opted for accelerated review under this section shall be subject to supplementary fees pursuant to 20.2.75 NMAC which shall be assessed in addition to all other applicable fees levied under 20.2.75 NMAC.

(5) Qualified outside firms under contract which are interested in performing the accelerated review on a specific application shall submit to the department:

(a) A statement of interest;

(b) A statement of qualifications for that specific application;

(c) An estimate of the cost and schedule for the review; and

(d) A notarized affidavit attesting that no conflict of interest exists on the specific permit application.

(6) If no qualified outside firm submits the four items required by Paragraph 5 of Subsection B of 20.2.72.221 NMAC, the department shall apply the accelerated review filing fee to the permit fee in accordance with 20.2.75 NMAC and review the

application without the assistance of a qualified outside firm and in accordance with 20.2.72.207 NMAC.

(7) The department shall review the submittals and determine, in the department's sole discretion, which firms qualify for any specific application.

(8) Prior to determining any application administratively complete for which accelerated review has been requested as allowed under 20.2.72.203 NMAC, the department shall provide the applicant a written summary of the qualified submittals showing the costs to the applicant of the accelerated review and the anticipated schedule for application review, permit development and permit issuance.

(9) Applicant's responsibilities for response to submittal summary:

(a) Within five (5) working days of receipt of the department's bid summary the applicant shall either: (i) submit to the department a written recommendation to accept one of the accelerated review bids, or a prioritized list of more than one of the accelerated review bids, including a brief justification for the recommendation(s) along with a corporate check or money order payable to the department for the amount of the accelerated review bid and a notarized affidavit attesting that no conflict of interest exists on the specific permit application; or (ii) submit to the department a written withdrawal of the request for accelerated review.

(b) The request for accelerated review is deemed withdrawn if the applicant fails to submit a written recommendation or withdrawal within five (5) working days of receipt of the department's bid summary unless the Department has granted an extension.

(10) Department's selection of qualified outside firm

(a) If the request for accelerated review is withdrawn, the department shall retain the accelerated review filing fee in accordance with 20.2.75 NMAC and shall review the application without the assistance of a qualified outside firm and in accordance with 20.2.72.207 NMAC.

(b) If the applicant recommends a qualified submittal, the department shall determine whether to accept the recommended submittal. If the department accepts the recommended submittal it shall instruct the qualified outside firm to begin review of the application. If the department rejects the recommended submittal, it shall inform the applicant and allow the applicant to recommend an alternate submittal pursuant to Paragraph 9 of Subsection B of 20.2.72.221 NMAC or, if there are no other qualified submittals, the department shall retain the accelerated review filing fee in accordance with 20.2.75 NMAC and review the application without the assistance of a qualified outside firm and in accordance with 20.2.72.207 NMAC.

C. Disclosure of Conflicts During Accelerated Review:

(1) The applicant and the qualified outside firm have a continuing obligation to investigate potential conflicts of interest and to immediately disclose, in writing, any conflict of interest to the department. If a conflict of interest was not disclosed pursuant to Subparagraph d of Paragraph 5 of 20.2.72.221 NMAC or Subparagraph a of Paragraph 9 of Subsection B of 20.2.72.221 NMAC, and is later disclosed or discovered, the department may:

- (a) Deny the application pursuant to 20.2.72.208 NMAC;
- (b) Terminate accelerated review and review the application pursuant to 20.2.72.207 NMAC; or
- (c) Allow accelerated review to continue after elimination of the conflict.

(2) In choosing between these options the department shall consider whether the conflict of interest was disclosed or discovered, the timing of the disclosure or discovery, diligence in investigating potential conflicts of interest, any indication of intentional or willful failure to disclose, significance of the conflict of interest, and ability to eliminate the conflict of interest in a timely manner.

D. Issuance of a Permit After Accelerated Review:

(1) Upon completion of the review, the qualified outside firm shall provide the department with all documentation, including but not limited to all communications, notes, and drafts, pertaining to the permit application. At any time during the review, the qualified outside firm shall provide all documentation pertaining to a specific application to the department upon request. Such documentation shall be subject to the Inspection of Public Records Act, Chapter 14, Article 2 NMSA 1978, and the Confidential Information Section of the Air Quality Control Act, Section 74-2-11 NMSA 1978.

(2) The department shall review the analysis prepared by the qualified outside firm and shall issue a permit or deny the permit application in accordance with this part. The qualified outside firm's analysis is not binding on the department. The department retains final authority to accept or reject the qualified outside firm's analysis regarding the permit application.

(3) The department shall not issue the permit until both the accelerated review processing fee and any fees due pursuant to 20.2.75 NMAC have been paid.

[20.2.72.221 NMAC - N, 3/30/01]

20.2.72.222-20.2.72.299 [RESERVED]

20.2.72.300 DEFINITIONS:

In addition to the definitions in 20.2.72.7 NMAC, the following definitions apply to 20.2.72.300 NMAC - 20.2.72.399 NMAC:

A. "Compressor station" means a facility whose primary function is the extraction of crude oil, natural gas, or water from the earth with compressors, or movement of any fluid, including crude oil or natural gas, or products refined from these substances through pipelines or the injection of natural gas or CO₂ back into the earth using compressors. A compressor station may include engines to generate power in conjunction with the other functions of extraction, injection or transmission and may contain emergency flares. A compressor station may have auxiliary equipment which emits small quantities of regulated air contaminants, including but not limited to, separators, de-hydration units, heaters, treaters and storage tanks, provided the equipment is located within the same property boundaries as the compressor engine.

B. "Good engineering practice stack height" means $H_{subGEP} = H + 1.5L$, where H equals the height of any building or obstruction within 5L of the stack, and L equals the lesser of the height or maximum projected width of the building or obstruction.

C. "Impact area" means the circular area with a radius extending from the source to the most distant point where the total potential emissions from the facility will cause a significant ambient impact (i.e., equal or exceed the applicable significant ambient impact level in 20.2.72.500 NMAC).

D. "Maximum projected width" means the largest crosswind building or obstruction dimension.

E. "Potential to emit" or "potential emissions" means the maximum capacity of a stationary source to emit a regulated air contaminant under its physical and operational design. Any physical or operational limitation on the capacity of the source to emit a regulated air contaminant, including air pollution control equipment and restrictions on hours of operation or on the type or amount of material combusted, stored, or processed, shall be treated as part of its design if the limitations or the effect it would have on emissions is federally enforceable. Secondary emissions do not count in determining the potential to emit of a stationary source.

F. "Secondary emissions" means emissions of an air contaminant which occur as a result of the construction or operation of a stationary source or modification, but do not come from the stationary source or modification itself. Secondary emissions must be specific, well defined, quantifiable, and impact the same general areas as the stationary source or modification which causes the secondary emissions. Secondary emissions include emissions from any offsite support facility which would not be constructed or increase its emissions except as a result of the construction or operation of the stationary source or modification. Secondary emissions do not include any emissions which come directly from a mobile source, such as emissions from the tailpipe of a motor vehicle, from a train, or from a vessel.

G. "SUM" means the sum of the potential emissions for oxides of nitrogen from all adjacent sources.

H. "SUM15" means the sum of the potential emissions for oxides of nitrogen from all adjacent sources within 15 km of the NO₂ impact area.

I. "SUM25" means the sum of the potential emissions for oxides of nitrogen from all adjacent sources within 25 km of the NO₂ impact area.

J. "Sweet natural gas" means natural gas containing no more than 0.25 grains of hydrogen sulfide per 100 standard cubic feet of gas.

[20.2.72.300 NMAC - Rn & A, 20 NMAC 2.72.III.300, 2/2/01]

20.2.72.301 APPLICABILITY:

A. Any owner or operator intending to construct or modify a source which requires a permit under the provisions of 20.2.72.200 NMAC may elect to obtain a permit under 20.2.72.300 NMAC - 20.2.72.399 NMAC if the source category is listed in 20.2.72.501 NMAC.

B. 20.2.72.300 NMAC - 20.2.72.399 NMAC shall not apply to:

- (1)** Any "major stationary source" as defined in 20.2.74 NMAC;
- (2)** Any facility, either before or after construction or modification, with a total potential to emit of any regulated air contaminant greater than 200 tons per year (tpy);
- (3)** Any source subject to the requirements of 20.2.78 NMAC or 20.2.72.400 NMAC - 20.2.72.499 NMAC;
- (4)** Any reciprocating internal combustion (IC) engines and/or turbines located at petroleum refineries, chemical manufacturing plants, bulk gasoline terminals, natural gas processing plants, or at any facility containing sources in addition to IC engines and/or turbines for which an air quality permit is required through state or federal air quality regulations;
- (5)** Any source which emits or proposes to emit those contaminants for which the impact area from the facility intersects an area, or for which the area itself is: 1) designated nonattainment for federal ambient air quality standards; or 2) nonattainment for federal PSD increments or state ambient air quality standards according to ambient data or air quality modeling; or 3) shown by air quality data or dispersion or other air quality modeling that air contaminants have consumed more than 80% of state or federal ambient air quality standards or PSD increments for those areas where the baseline has been triggered for the specific PSD increments;

(6) Any source with the nearest property boundary located less than:

(a) 1 kilometer (km) from a school, residence, office building, or occupied structure. Buildings and structures within the immediate industrial complex of the source are not included.

(b) 3 km from the property boundary of any state park, Class II wilderness area, Class II national wildlife refuge, national historic park, state recreation area, or community with a population of more than twenty-thousand people.

(c) 10 km from the boundary of any community with a population of more than forty-thousand people, or

(d) 30 km from the boundary of any Class I area;

(7) Any source located in Bernalillo county or within 15 km of the Bernalillo county line.

C. The following sections and subsections of 20.2.72.200 NMAC - 20.2.72.299 NMAC apply to permit applications submitted pursuant to 20.2.72.300 NMAC - 20.2.72.399 NMAC: Subsections A, B and E through H of 20.2.72.200 NMAC, 20.2.72.202 NMAC, 20.2.72.204 NMAC, 20.2.72.205 NMAC, Subsection C of 20.2.72.206 NMAC, Subsections D through G of 20.2.72.207 NMAC, 20.2.72.208 NMAC, 20.2.72.209 NMAC, 20.2.72.210 NMAC, 20.2.72.211 NMAC, 20.2.72.212 NMAC, 20.2.72.214 NMAC and 20.2.72.215 NMAC. The remainder of 20.2.72.200 NMAC - 20.2.72.299 NMAC does not apply to applications submitted pursuant to 20.2.72.300 NMAC - 20.2.72.399 NMAC.

D. Any source, including compressor stations, consisting of IC engines and/or turbines must comply with one of the following three criteria, Paragraph 1, 2, or 3 of Subsection D of 20.2.72.301 NMAC, in order to qualify for source class permit streamlining under 20.2.72.300 NMAC - 20.2.72.399 NMAC (In demonstrating compliance with Subsection D of 20.2.72.301 NMAC, the department shall give no credit for modeled reductions in ambient air concentrations due to so much of a source's stack which exceeds good engineering stack height, or fifty (50) feet in situations where there are not obstructions or buildings associated with the source):

(1) The total potential to emit of each regulated contaminant from all sources at the facility shall be less than 40 tpy. The potential to emit for nitrogen dioxide shall be based on total oxides of nitrogen; or

(2) The total potential to emit of each regulated contaminant from all emission sources at the facility shall be less than 100 tons per year (tpy) and the impact on ambient air from all sources at the facility shall be less than the ambient significance levels in 20.2.72.500 NMAC, Table 1. The potential to emit for nitrogen dioxide shall be based on total oxides of nitrogen expressed as nitrogen dioxide; or

(3) The maximum modeled ambient impact from the total potential emissions at the facility shall be less than 50 percent of each applicable PSD increment, for those areas where the baseline has been triggered for the specific PSD increments, and state and federal ambient air quality standards; and

(a) There shall be no adjacent sources emitting the same regulated air contaminant(s) as the source within 2.5 km of the modeled nitrogen dioxide (NO₂) impact area; and

(b) The "sum of the potential emissions for oxides of nitrogen from all adjacent sources" (SUM) within 15 km of the NO₂ impact area (SUM15) shall be less than 740 tpy; and

(c) The SUM25 within 25 km from the NO₂ impact area shall be less than 1540 tpy.

(4) Modifications to the auxiliary emission generating equipment at a facility qualifying and electing source class permit streamlining may commence without obtaining a permit for such modification as long as the total potential to emit of all auxiliary equipment remains at or below 1.0 lb/hr for any one regulated air contaminant and as long as the total potential to emit of each regulated air contaminant from the compressor station meets the requirements of Paragraphs 1 or 2 of Subsection D of 20.2.72.301 NMAC or previously qualified under Paragraph 3 of Subsection D of 20.2.72.301 NMAC. The applicant shall provide, in writing, the nature of all changes to the department no later than 15 days prior to the expected change.

[20.2.72.301 NMAC - Rn & A, 20 NMAC 2.72.III.301, 2/2/01]

[Annotated Note: Section 20.2.72.202 - Permit Revisions, which is referenced in Subsection C of this section, was renumbered to Section 20.2.72.219 NMAC, effective 1/7/1998]

20.2.72.302 CONTENTS OF APPLICATION:

A. Any person seeking a permit under 20.2.72.300 NMAC - 20.2.72.399 NMAC shall do so by filing a written application with the department. For those applications not qualifying under Subsection A of 20.2.72.303 NMAC, the applicant shall also:

(1) Provide by certified mail a complete copy of the application and public notice to the department's field or district office nearest the source; and

(2) Provide by certified mail a copy of the public notice to the appropriate federal land manager if the source will locate within 50 km of the boundary of a Class I area.

B. The items of this section, if requested on the applicable application form, are required before the department may deem an application administratively complete. The applicant shall submit the number of copies of the permit application specified in the applicable application form. All applications shall be filed on the forms furnished by the department and shall include:

(1) The applicant's name and address, the person to contact regarding the application, and the name and address of the new source or modification;

(2) A description of the new facility or modification including all operations effecting air emissions;

(3) The anticipated operating schedule;

(4) A topographical map, at least as detailed as a 7.5 minute United States Geological Survey Topographic Quadrangle, showing the exact location and geographical coordinates of the stationary source;

(5) The Universal Transverse Mercator (UTM) horizontal and vertical coordinates for the facility;

(6) A plot plan showing the location of emission units with respect to the plant's property boundaries and the dimensions of any buildings, terrain, or obstructions which may cause emissions to be down-washed;

(7) A detailed description of any air pollution control device or method to be utilized, including the basis for the estimated control efficiency;

(8) The stack and exhaust gas parameters for all emission points, including calculations and manufacturer's or supplier's data which documents the emission rates and exhaust gas parameters;

(9) A comprehensive regulatory compliance review, including all pertinent data and calculations, for each applicable new source performance standard, such as 40 CFR 60, Subpart GG - Standards of Performance for Stationary Gas Turbines;

(10) Documentation of the manufacturer's or supplier's recommended maintenance schedules and procedures for all air pollution control equipment;

(11) A compliance demonstration based on US EPA approved modeling or analysis, including all pertinent calculations and computations, for all applicable requirements of 20.2.72.300 NMAC - 20.2.72.399 NMAC for any facility electing to obtain a permit under 20.2.72.300 NMAC - 20.2.72.399 NMAC;

(12) Documentary proof that the requirements of Paragraphs 1 and 2 of Subsection A of 20.2.72.302 NMAC have been satisfied;

(13) The notarized signature under oath or affirmation by the operator, the owner, or an authorized representative, certifying to the best of his or her knowledge the truth of all information submitted;

(14) Payment of any fees which are specified in 20.2.75 NMAC (Construction Permit Fees) as payable at the time the application is submitted; and

(15) Any other specifically identified relevant information as the department may reasonably require.

[20.2.72.302 NMAC - Rn & A, 20 NMAC 2.72.III.302, 2/2/01]

20.2.72.303 PUBLIC NOTICE AND PARTICIPATION:

A. Applications qualifying under the following paragraphs of 20.2.72.300 NMAC - 20.2.72.399 NMAC are not subject to Subsection B of 20.2.72.303 NMAC and Paragraph 2 of Subsection C of 20.2.72.303 NMAC: Paragraphs 1 and 2 of Subsection D of 20.2.72.301 NMAC.

B. The applicant shall:

(1) Publish notice once in a newspaper of general circulation in the area closest to the location of the source. This notice shall appear in either the classified or legal advertisements section of the newspaper. Notice shall be published in accordance with department guidance documents and must include:

(a) The applicant's name and address;

(b) The address and phone number of the department's air quality bureau in Santa Fe, and the address of the field or district office where a copy of the application will be sent as required in Subsection A of 20.2.72.302 NMAC;

(c) The location and a brief description of the source;

(d) A summary of estimated emissions and ambient impact for each regulated contaminant for the entire facility;

(e) Where required in 20.2.72.300 NMAC - 20.2.72.399 NMAC, the applicant's public notice shall contain the following statement: "Any comments submitted on this permit application should address the relevant requirements of state and federal air quality regulations and the Federal Clean Air Act and the state Air Quality Control Act. The comments shall be submitted to the department's air quality bureau in Santa Fe within thirty (30) days following the date of publication";

(f) Any other information required by the department; and

(2) Post the notice at the proposed or existing facility entrance on the property on which the facility is, or is proposed to be located prior to submittal of the application and remaining posted until the department takes final action on the permit.

C. The department shall:

(1) Make available for public inspection the permit application. Copies of any permit application, except those portions of which may be determined as confidential in accordance with 20.2.1 NMAC (General Provisions), will be supplied upon written request and payment of reasonable costs.

(2) Allow all interested persons thirty (30) days from the date of publication of the applicant's public notice in a newspaper of general circulation, to submit written comments or evidence on the application.

[20.2.72.303 NMAC - Rn & A, 20 NMAC 2.72.III.303, 2/2/01]

20.2.72.304 PERMIT DECISIONS:

A. The department shall within thirty (30) days after its receipt of an application for a permit or permit revision review such application and determine whether it is administratively complete.

(1) If the application is deemed administratively complete, a certified letter to that effect shall be sent to the applicant.

(2) If the application is deemed administratively incomplete, a certified letter shall be sent to the applicant stating what additional information or points of clarification are necessary to deem the application administratively complete. Upon receipt of such information, the department shall promptly review such information and determine whether the application is administratively complete.

(3) If the application is deemed administratively complete but no permit is required, a certified letter shall be sent to the applicant informing the applicant of the determination.

B. The department shall either grant, grant subject to conditions, or deny the permit or permit revision as soon as practicable after the department deems the application administratively complete but not to exceed the times specified below:

(1) For applications qualifying under the Paragraphs 1 and 2 of Subsection D of 20.2.72.301 NMAC, within thirty (30) days;

(2) For all other applications, within sixty (60) days, or ninety (90) days if there is a hearing under 20.2.72.206 NMAC.

[20.2.72.304 NMAC - Rn & A, 20 NMAC 2.72.III.304, 2/2/01]

20.2.72.305 GENERAL REQUIREMENTS:

All sources permitted pursuant to 20.2.72.300 NMAC - 20.2.72.399 NMAC shall operate in compliance with the following conditions:

A. A copy of the most recent permit issued by the department shall be made available to department personnel for inspection upon request. If the permit is not kept at the plant location, a notice at the plant site shall be located in a conspicuous place stating the facility name and ownership, air quality permit number, and the address and phone number of the department in Santa Fe;

B. The source shall operate in compliance with all applicable state and federal regulations, including federal new source performance standards incorporated by 20.2.77 NMAC and permit conditions;

C. The owner or operator of the source shall be required to conduct such performance tests as specified by the department to determine compliance with emission limitations or technology requirements as specified in an applicable regulation or permit condition. Specific schedules and requirements will be listed in 20.2.72.306 NMAC for each source class and/or in the permit. Performance test requirements may be reimposed on a source as necessary if inspections of the source or other information available to the department, indicate noncompliance, or the previous test showed noncompliance or was technically unsatisfactory. In such cases, the department may reimpose such tests as frequently as necessary until compliance is achieved and testing is performed in a manner technically satisfactory to the department. The owner or operator shall:

(1) Arrange a pretest meeting with the department at least two weeks prior to the anticipated test date for all tests;

(2) Notify the department at least thirty (30) days prior to the date and time of performance testing, and provide the department an opportunity to have an observer present during testing;

(3) Conduct performance tests in accordance with methods and procedures specified by the department. Whenever the requirements of 40 CFR 60 apply, test methods must be utilized as specified in those regulations;

(4) Submit a written report to the department of the results of the test within thirty (30) days from the test date; and

D. The owner or operator using a catalytic converter to meet the requirements of 20.2.72.300 NMAC - 20.2.72.399 NMAC shall satisfactorily test the reduction efficiency across the catalyst bed and report the results of the test to the department according to

the permit conditions, within ninety (90) days following initial start-up and on a quarterly basis thereafter, unless an alternative testing schedule is specified by the department. The tests shall be conducted in accordance with the requirements of Subsection C of 20.2.72.305 NMAC and as required in the permit, except that the requirements of Paragraphs 1 and 2 of Subsection C of 20.2.72.305 NMAC shall be waived unless the department specifically requests a pretest meeting or notification of the next test date.

[20.2.72.305 NMAC - Rn & A, 20 NMAC 2.72.III.305, 2/2/01]

20.2.72.306 SOURCE CLASS REQUIREMENTS:

A. In addition to the general conditions of 20.2.72.305 NMAC, each permitted source listed in 20.2.72.501 NMAC (Table 2) shall also comply with the applicable source class requirements below:

(1) Requirements for source class category 1 - reciprocating internal combustion (IC) engines:

(a) Gas fuel shall be produced natural gas, sweet natural gas, liquid petroleum gas, or fuel gas. No gas fuel shall contain more than 0.1 grain of total sulfur per dry standard cubic foot. Liquid fuel shall be first run refinery grade diesel or No. 2 fuel oil that is not a blend containing waste oils or solvents and contains less than 0.3% by weight sulfur;

(b) Within ninety (90) days after initial start-up of the source, the owner or operator shall conduct NO_x and carbon monoxide (CO) performance tests on one or more engines (turbines) at the facility to ensure the facility is in compliance with 20.2.72.300 NMAC - 20.2.72.399 NMAC and permit requirements, including emission limits and any applicable pollution control device reduction efficiency requirements for NO_x. The department shall specifically identify in the permit each engine or turbine subject to initial performance testing requirements. Tests shall be conducted in accordance with the requirements of Subsection C of 20.2.72.305 NMAC;

(c) Any engine which operates with a non-selective catalytic converter shall comply with the following requirements:

i. Any spark ignited gas-fired or any compression ignited dual fuel-fired engine shall be equipped and operated with an automatic air-fuel ratio (AFR) controller which maintains AFR in the range required to minimize NO_x emissions, as recommended by the manufacturer; and

ii. The owner or operator shall make and maintain records to demonstrate that the manufacturer's or supplier's recommended maintenance is performed, including replacement of the oxygen sensor as necessary for oxygen-based AFR controllers, and cleaning, regeneration, and/or replacement of catalyst(s) as

necessary to maintain at least the NO_x reduction efficiencies across the catalyst bed that are specified in the permit.

B. Requirements for source class category 2 - turbines: The source must comply with Paragraphs 1 and 2 of Subsection A of 20.2.72.306 NMAC.

[20.2.72.306 NMAC - Rn & A, 20 NMAC 2.72.III.306, 2/2/01]

20.2.72.307-20.2.72.399 [RESERVED]

20.2.72.400 PREAMBLE:

The board is concerned about the increasingly common presence of toxic air pollutants in the ambient air. The board believes that the best approach to regulating sources of toxic air pollutants over the long term is to set ambient standards for each pollutant of concern. However, because of financial constraints, the unavailability of sufficient information to establish such ambient standards, the time necessary to establish such standards for the contaminants identified as toxic air pollutants and because the board wishes to implement a toxic air pollutant permitting program as soon as possible, the board has adopted a source-by-source permit-based approach for the present. Under this permit-based approach, the board has given limited authority to the department to use factors of the OELs (occupational exposure limits) in evaluating permit applications. The board recognizes that the use of OELs, or factors of them, as ambient air standards would be inappropriate; therefore, the board has authorized their use for screening purposes only. This authorization is not intended to represent, and should not be interpreted as, a finding by the board that these factors are suitable for determining safe or unsafe ambient air concentrations. Various respected groups, such as the American Conference of Governmental Industrial Hygienists (ACGIH), may develop ambient air exposure guidelines in the future. Development of ambient air guidelines by groups such as this could be the basis for developing toxic air pollutant ambient air standards. The board also notes that the department currently is developing an emissions inventory of toxic air pollutants. An emissions inventory may identify toxic air pollutants that are of particular concern in New Mexico. The board believes that efforts like these may facilitate the development of toxic air pollutant ambient air standards. For these reasons, the board requests the department to prepare and present a report to the board within five years of the effective date of the toxic air pollutant permitting requirements. The report shall review and evaluate the implementation of the toxic air pollutant permitting program, summarize the results of the toxic air pollutant inventory gathered pursuant to AQCR 752, and review scientific and technical progress made in the area of toxic air pollutants that might facilitate the development of toxic air pollutant ambient air standards. The board shall schedule a discussion of this report at a regular monthly meeting within three months of the publication of this report.

[20.2.72.400 NMAC - Rn & A, 20 NMAC 2.72.IV.400, 2/2/01]

20.2.72.401 DEFINITIONS:

In addition to the definitions in 20.2.72.7 NMAC, the following definitions apply to 20.2.72.400 NMAC - 20.2.72.499 NMAC:

A. "Best available control technology" means an emission limitation based on the maximum degree of reduction in emissions of each contaminant subject to this part which the secretary (or the board), on a case-by-case basis, taking into consideration the cost of achieving such emission reduction, and any non-air quality health and environmental impacts resulting from the use of such technology, determines is achievable for the source, through application of measures, processes, methods, systems, or techniques including, but not limited to, measures which:

- (1) Reduce the volume of such pollutants through process changes, substitutions of materials, or other modifications, or
- (2) Enclose systems or processes to eliminate emissions, or
- (3) Collect, capture or treat such pollutants when released from a process, stack, storage, or fugitive emission point.

B. "Existing source" means any source, the construction or modification of which was commenced on or before December 31, 1988.

C. "Fixed capital costs" means that capital needed to provide all the depreciable components.

D. "New source" means any source, the construction of which is commenced after December 31, 1988. The term does not include any new source which is integrally related with and integrally connected to the process of an existing source. The term includes the reconstruction of an existing source.

E. "Occupational Exposure Limit" or "OEL" means the eight-hour time weighted average concentration specified for workroom air in "Threshold Limit Values and Biological Exposure Indices for 1986-1987" as adopted by the American Conference of Governmental Industrial Hygienists, or for compounds not assigned an OEL in that document, the minimum detection limit specified in the National Institute for Occupational Safety and Health "Manual of Analytical Methods", Third Edition.

F. "Oil and gas production facilities" means facilities for the exploration, development, production, treatment, separation, storage, transport, and sale of unrefined hydrocarbons, natural gas liquids, and CO₂ (e.g., major SIC group 13, oil and gas extraction, SIC industry group no. 4612, crude, petroleum, pipeline and SIC industry no. 4922, natural gas transmission). Natural gas processing plants and refineries are not included for purposes of this definition.

G. "Reconstruction" means a modification which results in the replacement of the components or addition of integrally related equipment to an existing source to such an

extent that the fixed capital cost of the new components or equipment exceeds 50 percent of the fixed capital cost that would be required to construct a comparable entirely new facility.

H. "Toxic air pollutant" means any air contaminant in 20.2.72.502 NMAC.

[20.2.72.401 NMAC - Rn & A, 20 NMAC 2.72.IV.401, 2/2/01]

20.2.72.402 APPLICABILITY:

A. All the requirements of 20.2.72.400 NMAC - 20.2.72.499 NMAC for toxic air pollutants shall supplement other provisions of this Part (20.2.72 NMAC).

B. A permit must be obtained from the department by any person prior to the construction or modification of a new source which has total potential emissions of a toxic air pollutant into the ambient air that exceed the emission level in pounds per hour specified in 20.2.72.502 NMAC, and one or more of the following conditions are met:

(1) The toxic air pollutant is listed under applicable primary and secondary SIC codes appropriate for the source in the US EPA SIC/Pollutant Index (Appendix C of EPA-450/4-86-010); or

(2) The toxic air pollutant is known by the owner or operator to be emitted into the ambient air because of:

(a) Information from material safety data sheets and hazard labelling required under the OSHA Hazard Communications Standard 29 CFR 1910.1200, or

(b) Information from reports required under the Federal Emergency Planning and Community Right-to-Know Act of 1986, P.L. 99-499, Title III, Sections 300-330, or

(c) Other information reasonably available to the owner or operator based on the source's obligations under other regulatory programs; or

(3) The toxic air pollutant is identified by the department on or before the date the application is determined to be complete, as likely to be emitted from a source. The department shall also provide the owner or operator a reasonable basis to support the belief that the source will emit such toxic air pollutant.

C. The following classes of sources are exempt from the permitting requirements for toxic air pollutants:

(1) Gasoline Service Stations - SIC No. 5441

(2) Automotive Repair Shops - SIC No. 753

(3) Laundry, Cleaning, and Garment Services - SIC No. 721

(4) Domestic Woodstoves and Fireplaces

(5) Oil and Gas Production Facilities

(6) Agricultural Production - Crops, SIC No. 01

(7) Agricultural Production - Livestock, SIC No. 02

(8) Agricultural Services - SIC No. 07

(9) Containers, such as tanks, barrels, drums, cans and buckets, unless equipped with a vent that emits or may emit any toxic air pollutant, which are used in connection with the operation, maintenance or repair of a stationary source.

(10) Non-process fugitive emissions of toxic air pollutants from stationary sources, such as construction sites, unpaved roads, coal piles, tailings piles, waste piles, and fuel and ash handling operations.

D. An exemption or exclusion from the permitting requirements for toxic air pollutants does not relieve a source from any other requirements in this part (20.2.72 NMAC).

[20.2.72.402 NMAC - Rn & A, 20 NMAC 2.72.IV.402, 2/2/01]

20.2.72.403 CONTENTS OF APPLICATION:

A. For the department to deem administratively complete a permit application for the emission of a toxic air pollutant, the application shall contain, in addition to the requirements of 20.2.72.203 NMAC, the following items:

(1) Identification of all toxic air pollutants that may be emitted in excess of the screening level (specified in pounds per hour) in 20.2.72.502 NMAC;

(2) Air quality modeling, in accordance with methods approved by the US EPA or the department, that estimates ambient concentrations that would be caused by the proposed emissions. The modeling for the toxic air pollutants will include available emissions supplied by the department from registration and permitting information from all registered or permitted sources in the area of the source being permitted.

B. If the modeling shows that the eight-hour average ambient concentration of the toxic air pollutant exceeds one-one hundredth of the OEL and the toxic air pollutant is not identified as a known or suspected human carcinogen in 20.2.72.502 NMAC, Table B, the permit application shall also include, as a requirement for administrative

completeness, a health assessment for the toxic air pollutant under consideration. The assessment shall include consideration of the following:

- (1) Source to potential receptor data and modeling;
- (2) Relevant environmental pathway and effects data;
- (3) Available health effects data such as:
 - (a) Functional diseases;
 - (b) Mutagenicity data as an index of genotoxic effects including heritable diseases;
 - (c) Reproductive effects data;
 - (d) Other diseases; and
- (4) An integrated assessment of the human health effects for projected exposures from the applicant's facility. The assessment should use existing relevant data obtained from epidemiological studies, controlled human exposure studies, laboratory animal studies, and studies using tissues and cells.

C. If the toxic air pollutant is identified as a known or suspected human carcinogen in 20.2.72.502 NMAC and air quality modeling shows that the eight-hour average concentration of the toxic air pollutant exceeds one one-hundredth of the OEL or the minimum detection level in 20.2.72.502 NMAC, the permit application shall include, as a requirement for administrative completeness, information necessary to demonstrate the source will install the best available control technology to control that pollutant.

[20.2.72.403 NMAC - Rn & A, 20 NMAC 2.72.IV.403, 2/2/01]

20.2.72.404 PUBLIC NOTICE AND PARTICIPATION:

In addition to the requirements of 20.2.72.206 NMAC:

A. The department shall meet with the applicant during the permit application process, prior to deeming the application administratively complete, to discuss the need for additional data and information not initially submitted by the applicant; and

B. The department shall promptly advise the applicant of all medical or other scientific evidence the department uses to evaluate the health effects of the toxic air pollutant emissions and make available to the applicant in a timely manner all information, including all previous decisions on the toxic air pollutant in question.

[20.2.72.404 NMAC - Rn & A, 20 NMAC 2.72.IV.404, 2/2/01]

20.2.72.405 PERMIT DECISIONS:

In making its decisions, the department shall consider emissions after control.

A. Ambient concentrations not exceeding one one-hundredth of the OEL or the minimum detection level for compounds without an OEL: If the department finds that the eight-hour average concentration of the toxic air pollutant in the ambient air does not exceed one one-hundredth of the OEL, or for compounds without an OEL, the minimum detection levels as shown in 20.2.72.502 NMAC, the department shall grant the permit. The administrative screening level of one one-hundredth the OEL and the OEL shall not be a basis for denying a permit and shall not constitute an ambient air quality standard.

B. Ambient concentrations exceeding one one-hundredth of the OEL or the minimum detection level for compounds without an OEL for substances identified as known or suspected human carcinogens in 20.2.72.502 NMAC: If the toxic air pollutant being considered is identified as a known or suspected carcinogen in 20.2.72.502 NMAC, Table B, and the department finds the eight-hour concentration of the toxic air pollutant in the ambient air exceeds one one-hundredth of the OEL, or for compounds without an OEL, the minimum detection level, the department shall grant the permit if the applicant implements the best available control technology to control that pollutant.

C. Ambient concentrations exceeding one one-hundredth of the OEL for substances not identified as carcinogens in 20.2.72.502 NMAC:

(1) If the applicant has been required to prepare a health assessment under Subsection B of 20.2.72.403 NMAC, the department shall prepare a Summary Review Statement (SRS) which indicates the department's opinion of the adequacy of the applicant's health assessment. The SRS will include a summary recommendation on whether the issuance of a permit will or will not with reasonable probability injure human health.

(2) If the applicant does not agree with the recommendation contained in the SRS, the applicant's assessment and the SRS will be provided to the Air Toxics Scientific Advisory Committee (ATSAC). The ATSAC will be composed of five members appointed by the Secretary. They will include physicians, toxicologists, industrial hygienists, or others knowledgeable of the potential health and environmental effects of air pollution. The committee will include at least one member nominated by the applicant. The ATSAC will review the applicant's assessment and the SRS in a public meeting. The ATSAC shall provide a letter to the Secretary stating: (1) whether the submitted documents provide a scientifically adequate basis to determine whether the proposed source will with reasonable probability injure human health and (2), if the documents do provide an adequate basis, whether the proposed source will with reasonable probability injure human health. If the documents are scientifically inadequate, the ATSAC shall return them to the department and indicate their inadequacies.

(3) The department will make a final decision on the issuance of the permit after consideration of the following factors:

(a) The nature of the toxic air pollutant and the size, susceptibility, and proximity of the human population;

(b) The pathways of human exposure (e.g., ingestion, inhalation, skin absorption);

(c) The short term and long term health effects associated with the toxic air pollutant at levels of exposure commensurate with the anticipated exposure level;

(d) Existing epidemiological data on health effects associated with the anticipated levels of exposure;

(e) The character of the land use of the predicted area of impact (e.g., residential, industrial, and recreational); and

(f) The scientific adequacy of the health and environmental assessment submitted by the applicant and the recommendation of the ATSAC. The department shall not rely on the OEL or on the administrative screening level of one one-hundredth the OEL, and it shall not be bound by prior permit decisions when considering pending applications.

(4) The department shall deny any application for a permit evaluated under Subsection C of 20.2.72.405 NMAC if the source will emit a toxic air pollutant in such quantities and duration as may with reasonable probability injure human health.

D. The department shall document, in the administrative record, all processes, facts, and reasoning relied on in making the permit decision, including citations to the relevant technical data, publications, and expert opinions considered.

(1) The final deliberations of the ATSAC shall be open to the public. Except for requests by members of the ATSAC for input from the applicant or department, no other comments from the applicant, department, or audience shall be allowed during final deliberations.

(2) Prior to a final decision, the ATSAC members may communicate among themselves in order to facilitate the evaluation process. However, all ATSAC members shall be apprised of such communications.

(3) Prior to a final decision, the ATSAC members may also communicate with the department and applicant in order to clarify information or secure additional information concerning the applicant's health assessment or the department's SRS. The department, applicant, and all ATSAC members shall be apprised of such communication.

FOOTNOTES

The emissions in pounds per hour in Section 502 were derived using the formula listed below:

$$\text{emission level (lbs/hr)} = \text{OEL (mg/m}^3\text{)} / 15$$

* = Compound for which an OEL is not listed by the ACGIH. Value derived by using the minimum detectable level listed in the NIOSH "Manual of Analytical Methods", Third Edition.

** = Compound for which an OEL is not listed by the ACGIH and for which there is no chemical specific analytical method listed in the NIOSH "Manual of Analytical Methods", Third Edition. A minimum detectable level (MDL) was derived by using the MDL of a similar compound listed in the NIOSH analytical methods or by assigning the average MDL for a class of compounds such as "halogenated hydrocarbons". In some cases the lowest MDL of the whole class was used.

Table C - Stack Height Release Correction Factor

Sources may choose to use a correction factor for the release height of emissions for the purpose of determining whether a permit is necessary for the emission of a toxic air pollutant. To apply the correction go to the table below and find the minimum height of release for the toxic air pollutant and select the correction factor (CF) which corresponds to that figure. If the height of release is between two values, the lower number shall be selected; or in the event of multiple releases of the same substance from different release heights, the source may choose to use a weighted average CF, weighted by the emission rate at each. The emissions in pounds per hour is then multiplied by the CF (see below). If the emissions from your source exceed the

resulting number, you must apply for a permit from the department. Remember, this must be done for each toxic air pollutant.

CF x Emissions in Pounds per Hour

where: E - emission rate (pounds per hour)

OEL - occupational exposure limit (mg per cubic meter)

CF is a correction factor, shown in the table below, which accounts for release height.

PART 73: NOTICE OF INTENT AND EMISSIONS INVENTORY REQUIREMENTS

20.2.73.1 ISSUING AGENCY:

Environmental Improvement Board.

[11/30/95; 20.2.73.1 NMAC - Rn, 20 NMAC 2.73.100 02/18/02]

20.2.73.2 SCOPE:

All persons who own or operate a source or who intend to construct or modify a source.

[11/30/95; 20.2.73.2 NMAC - Rn, 20 NMAC 2.73.101 02/18/02]

20.2.73.3 STATUTORY AUTHORITY:

Environmental Improvement Act, NMSA 1978, Section 74-1-8(A)(4), and Air Quality Control Act, NMSA 1978, Sections 74-2-1 et seq., including specifically, Section 74-2-7(A)(1) and (B).

[11/30/95; 20.2.73.3 NMAC - Rn, 20 NMAC 2.73.102 02/18/02]

20.2.73.4 DURATION:

Permanent.

[11/30/95; 20.2.73.4 NMAC - Rn, 20 NMAC 2.73.103 02/18/02]

20.2.73.5 EFFECTIVE DATE:

November 30, 1995 except where a later date is cited at the end of a section or paragraph.

[11/30/95, 10/01/97; 20.2.73.5 NMAC - Rn, 20 NMAC 2.73.104 02/18/02]

[The latest effective date of any section in this Part is July 6, 2011.]

20.2.73.6 OBJECTIVE:

The objective of this part is to establish requirements for the submission of certain relevant information to ensure that the regulations and standards under the Air Quality Control Act and the federal act will not be violated, and to facilitate the quantification of greenhouse gas emissions in New Mexico.

[11/30/95; 20.2.73.6 NMAC - Rn, 20 NMAC 2.73.105 02/18/02; A, 01/01/08]

20.2.73.7 DEFINITIONS:

In addition to the terms defined in 20.2.2 NMAC (Definitions), as used in this part, the following apply.

A. "Air pollution control equipment" means any device, equipment, process or combination thereof the operation of which would limit, capture, reduce, confine, or otherwise control air contaminants or convert for the purposes of control any air contaminant to another form, another chemical or another physical state.

B. "California climate action registry" means the voluntary registry for greenhouse gas emissions established pursuant to California Health & Safety Code D. 26, Pt. 4, Ch. 6 (West 2007).

C. "Commencement" means that an owner or operator has undertaken a continuous program of construction or modification.

D. "Construction" means fabrication, erection, installation or relocation of a stationary source, including but not limited to temporary installations and portable stationary sources.

E. "Emission report or inventory" means a listing, by source, of the amount of air pollutants discharged into the atmosphere of a community.

F. "Fuel carbon content" means the mass of carbon per unit of heat content of a fuel.

G. "Fugitive emissions" are those emissions which could not reasonably pass through a stack, chimney, vent, or other functionally-equivalent opening.

H. "Greenhouse gas emissions reporting year" means the calendar year in which greenhouse gas emissions required to be reported under this part occurred.

I. "Modification" means any physical change in, or change in the method of operation of, a stationary source which results in an increase in the potential emission rate of any regulated air contaminant emitted by the source or which results in the emission of any regulated air contaminant not previously emitted, but does not include:

(1) a change in ownership of the source;

(2) routine maintenance, repair or replacement;

(3) installation of air pollution control equipment, and all related process equipment and materials necessary for its operation, undertaken for the purpose of complying with regulations adopted by the board or pursuant to the federal Clean Air Act; or

(4) unless previously limited by enforceable permit conditions:

(a) an increase in the production rate, if such increase does not exceed the operating design capacity of the source;

(b) an increase in the hours of operation; or

(c) use of an alternative fuel or raw material if, prior to January 6, 1975, the source was capable of accommodating such fuel or raw material, or if use of an alternate fuel or raw material is caused by any natural gas curtailment or emergency allocation or any other lack of supply of natural gas.

J. "Nonattainment area" means, for any air pollutant, an area which has been designated as a nonattainment area under Section 107 of the federal act.

K. "Operator" means the person or persons responsible for the overall operation of a facility.

L. "Owner" means the person or persons who own a facility or part of a facility.

M. "Part" means an air quality control regulation under Title 20, Chapter 2 of the New Mexico administrative code, unless otherwise noted; as adopted or amended by the board.

N. "Portable stationary source" means a source which can be relocated to another operating site with limited dismantling and reassembly, including for example but not limited to moveable sand and gravel processing operations and asphalt plants.

O. "Potential emission rate" means the emission rate of a source at its maximum capacity to emit a regulated air contaminant under its physical and operational design, provided any physical or operational limitation on the capacity of the source to emit a regulated air contaminant, including air pollution control equipment and restrictions on

hours of operation or on the type or amount of material combusted, stored or processed, shall be treated as part of its physical and operational design only if the limitation or the effect it would have on emissions is enforceable by the department pursuant to the Air Quality Control Act or the federal act.

P. "Potential to emit" means the maximum capacity of a stationary source to emit any air pollutant under its physical and operational design; any physical or operational limitation on the capacity of a source to emit an air pollutant, including air pollution control equipment and restrictions on hours of operation or on the type or amount of material combusted, stored, or processed, shall be treated as part of its design if the limitation is federally enforceable; the potential to emit for nitrogen dioxide shall be based on total oxides of nitrogen.

Q. "Regulated air contaminant" means any air contaminant, the emission or ambient concentration of which is regulated pursuant to the New Mexico Air Quality Control Act or the federal act.

R. "Shutdown" means the cessation of operation of any air pollution control equipment, process equipment or process for any purpose, except routine phasing out of batch process units.

S. "Stationary source" or "source" means any building, structure, equipment, facility, installation (including temporary installations), operation or portable stationary source which emits or may emit any air contaminant; any research facility may group its sources for the purpose of this part at the discretion of the secretary of the department.

T. "The climate registry" means the nonprofit corporation by that name incorporated under the District of Columbia Nonprofit Corporation Act with a purpose of creating and operating a multi-state greenhouse gas emissions registry.

U. "WEB source" means a stationary source that meets the applicability requirements of 20.2.81.101 NMAC.

V. "Western backstop sulfur dioxide trading program" means 20.2.81 NMAC, triggered as a backstop in accordance with the provisions in the sulfur dioxide milestones and backstop trading program implementation plan, if necessary, to ensure that regional sulfur dioxide emissions are reduced.

[11/30/95, 10/01/97; 20.2.73.7 NMAC - Rn, 20 NMAC 2.73.107 & A, 02/18/02; A, 12/31/03; A, 01/01/08]

20.2.73.8-20.2.73.105 [RESERVED]

20.2.73.106 AMENDMENT AND SUPERSESSION OF PRIOR REGULATIONS:

This part amends and supersedes Air Quality Control Regulation ("AQCR") 703.1 - Notice of Intent and Emissions Inventory Requirements last filed May 29, 1990, as amended ("AQCR 703.1").

A. All references to AQCR 703.1 in any other rule shall be construed as a reference to this part.

B. The amendment and supersession of AQCR 703.1 shall not affect any administrative or judicial enforcement action pending on the effective date of such amendment nor the validity of any permit issued pursuant to AQCR 703.1.

[11/30/95; 20.2.73.106 NMAC - Rn, 20 NMAC 2.73.106 02/18/02]

20.2.73.107-20.2.73.199 [RESERVED]

20.2.73.200 NOTICE OF INTENT:

A. Applicability:

(1) Any owner or operator intending to construct a new stationary source which has a potential emission rate greater than 10 tons per year of any regulated air contaminant or 1 ton per year of lead shall file a notice of intent with the department.

(2) Any owner or operator intending to modify a stationary source which either prior to or following the modification has a potential emission rate greater than 10 tons per year of any regulated air contaminant or 1 ton per year of lead shall file a notice of intent with the department.

(3) The requirements of 20.2.73.200 NMAC do not apply to stationary sources or modifications located in Bernalillo county.

(4) The notice of intent shall be filed prior to the commencement of construction. Construction shall not begin prior to issuance of a written determination by the department that a permit is not required, or if a permit is required, prior to the issuance of the permit under 20.2.72 NMAC, 20.2.74 NMAC or 20.2.79 NMAC.

B. Contents of Notice: Notices of intent shall be filed on forms furnished by the department, which shall be identical to the extent practicable, as those used for 20.2.72 NMAC (Construction Permits) and shall include:

(1) The applicant's name and address, the person to contact regarding the application, and the name and address of the new source or modification.

(2) The date of the application.

(3) A description of the new facility or modification including all operations affecting air emissions.

(4) The anticipated operating schedule.

(5) A map such as a 7.5 minute United States geological survey topographic quadrangle showing the location of the stationary source.

(6) The nature and quantities of any regulated air contaminants the new source or modification will emit, including all calculations utilized to estimate emissions.

(7) A description of any air pollution control device or method to be utilized, including the basis for the estimated control efficiency.

(8) The stack and exhaust gas parameters for all emission points.

(9) Any other relevant information as the department may reasonably require.

(10) Be signed under oath or affirmation by the operator, the owner, or an authorized representative, certifying to the best of his or her knowledge the truth of all information submitted.

C. Review of Notice: Within thirty days from the date a notice is received, the department shall review its content and by certified letter indicate to the applicant:

(1) the notice is incomplete and indicate specific additional material or clarification required; or

(2) a permit is not required and construction may commence; or

(3) a permit is required before construction may commence. For this case, the department will indicate whether the application is complete with respect to the requirements of each applicable permit regulation and specify additional material or clarification required if it is not complete.

D. Verification: In verifying information submitted in response to the requirements of this part, the department may:

(1) Enter at all reasonable times in or upon any private or public property, except private residences, which the department has reasonable cause to believe is or will become a source of air contaminants contributing to air pollution; and

(2) Require the production of information relating to emissions which cause or contribute to air pollution, including the sampling of emissions in accordance with methods and at locations and intervals as may be prescribed by the department.

E. Notification Requirements:

(1) The owner or operator of a portable stationary source shall notify the department in writing of the date and site of any relocation at least fifteen days prior to its occurrence.

(2) Any owner or operator of a stationary source which will be shut down for a period of one year or more shall notify the department in writing of the actual date of shut down within thirty days after the shut down occurs.

(3) Any new owner or operator of a stationary source shall notify the department within thirty days of assuming ownership of his or her name and address.

[11/30/95; 20.20.73.200 NMAC - Rn, 20 NMAC 2.73.200-204 02/18/02]

20.2.73.201-20.2.73.299 [RESERVED]

20.2.73.300 EMISSION INVENTORY REQUIREMENTS:

A. Applicability. The requirements of 20.2.73.300 NMAC apply to the owner or operator of any stationary source located outside of Bernalillo county which:

(1) has been issued a permit under 20.2.72 NMAC (Construction Permits) during any period of time, except for toxic air pollutant permits issued under Sections 401 to 499 of 20.2.72 NMAC;

(2) is required to file a notice of intent under 20.2.73.200 NMAC; or

(3) emits in excess of 1 ton of lead or 10 tons of total suspended particulate, PM10, PM2.5, sulfur dioxide, nitrogen oxides, carbon monoxide, or volatile organic compounds in any calendar year including and subsequent to 1990.

B. Reporting requirements.

(1) Any source which emits, or has the potential to emit, 5 tons per year or more of lead or lead compounds, or 100 tons per year or more of PM10, PM2.5, sulfur oxides, nitrogen oxides, carbon monoxide, or volatile organic compounds shall submit an emissions report annually.

(2) Any source defined as a major source of hazardous air pollutants under 20.2.70 NMAC (Operating Permits) shall submit an emissions report annually.

(3) Any source which is located in an ozone nonattainment area and which emits, or has the potential to emit, 25 tons per year or more of nitrogen oxides or volatile organic compounds shall submit an emissions report annually.

(4) Any source which is not required by Paragraph (1), (2), or (3) of Subsection B of this section (20.2.73.300 NMAC) to submit an emission report shall submit an emissions report under this part upon request by the department, but no more frequently than annually.

(5) Except as provided in Paragraph (8) of Subsection B of this section (20.2.73.300 NMAC), the department shall provide to the owner or operator required by this section (20.2.73.300 NMAC) to submit an emissions report a complete copy of the most current emissions report for their stationary source which is on file with the department. The department shall provide this copy to the owner or operator at least 90 days prior to the date when the source is required to submit an emissions report.

(6) The owner or operator shall submit to the department a complete, correct and current emissions report in the format specified by the department which reflects emissions during the previous calendar year.

(7) Except as provided in Paragraph (8) of Subsection B of this section (20.2.73.300 NMAC) the owner or operator shall submit the emission report by April 1 of each year in which the source is required to submit an emission report.

(8) Sources for which a date for submitting an annual emission report is specified in a current operating permit issued under 20.2.70 NMAC (Operating Permits) shall submit such report on that date. The department shall provide a copy of the previous emissions report upon request by the owner or operator of such source.

(9) Any source that is requested by the department to submit a report of greenhouse gas emissions shall:

(a) submit such report on the schedule and according to the greenhouse gas emissions reporting procedures established by the department, but not more often than annually; or

(b) report greenhouse gas emissions from the source under 20.2.87 NMAC for the greenhouse gas emissions reporting year and the two years following that year; or

(c) provide the department access to the requested information for the greenhouse gas emissions reporting year registered in either the climate registry or the California climate action registry; and

(d) keep records in support of the report for a minimum of five years.

(10) In determining the schedule of greenhouse gas emissions reports and reporting procedures, the department, subject to Paragraph (11) below, shall provide an opportunity for public comment, and shall consider:

(a) public comments regarding the schedule of such reports and greenhouse gas emissions reporting procedures;

(b) emissions quantification standards and best practices approved or recommended by federal and state agencies, by greenhouse gas emissions registries, and by non-governmental bodies having expertise in greenhouse gas emissions quantification;

(c) whether greenhouse gases emissions from a particular source or source type, considering the amount and chemical composition of the emissions, are expected to be minimal relative to emissions from other sources or source types, and

(d) whether emissions of a particular greenhouse gas from a source or source type, considering the amount and chemical composition of the emissions, are expected to be minimal relative to the total greenhouse gas emissions from that source or source type.

(11) The schedule for greenhouse gas emissions reports and reporting procedures pursuant to Paragraphs (9) and (10) of Subsection B of 20.2.73.300 NMAC, shall:

(a) subject to the department's selection of best available quantification methodologies, include a requirement that sources within North American industry classification system codes 211111, 211112, 213111, 213112, 486210, 221210, 486110, and 486910 subject to this part and permit requirements pursuant to 20.2.70 NMAC (Operating Permits) report at a minimum emissions of carbon dioxide and methane beginning no later than reporting year 2009 and for subsequent reporting years; and

(b) subject to the department's selection of best available quantification methodologies, include a requirement that sources within North American industry classification system codes 211111, 211112, 213111, 213112, 486210, 221210, 486110, and 486910 subject to this part pursuant to Paragraphs (1) and (2) of Subsection A of 20.2.73.300 NMAC, and not otherwise covered by Subparagraph (a), above, report at a minimum emissions of carbon dioxide and methane no later than reporting year 2010 and for subsequent reporting years as requested by the department.

C. Content of emissions reports. Emissions report contents for reports made under Paragraphs (1) through (8) of Subsection B of 20.2.73.300 NMAC shall include:

(1) the name, address, if any, and physical location of the stationary source;

(2) the name and telephone number of the person to contact regarding the emissions report;

(3) a certification signed by the owner, or operator, or a responsible official as defined in 20.2.70 NMAC attesting that the statements and information contained in the emissions report are true and accurate to the best knowledge and belief of the certifying official, and including the full name, title, signature, date of signature, and telephone number of the certifying official; for sources subject to 20.2.70 NMAC, the certification shall be made as required under that part;

(4) smelters shall submit an annual report of sulfur input, in tons/year;

(5) for each emission point, as required by the department:

(a) stack and exhaust gas parameters and location information;

(b) type of control equipment and estimated control efficiency;

(c) schedule of operation;

(d) estimated actual emissions, including fugitive emissions and emissions occurring during maintenance, start-ups, shutdowns, upsets, and downtime of total suspended particulate, PM10, PM2.5, ammonia, sulfur oxides, nitrogen oxides, carbon monoxide, volatile organic compounds, and lead, and, if requested by the department, speciated hazardous air pollutants, in tons per year and a description of the methods utilized to make such estimates, including calculations;

(e) the annual process or fuel combustion rates; and

(f) the fuel heat, sulfur, and ash content; and

(6) all information required under the federal act.

D. Additional content for emissions reports from sources in ozone nonattainment areas. Emissions reports from sources located in ozone nonattainment areas shall include, in addition to the contents specified by Subsection C of this section (20.2.73.300 NMAC), the following information:

(1) typical daily process rate during the peak ozone season, where the peak ozone season is specified by the department; and

(2) estimated actual emissions of nitrogen oxides and volatile organic compounds, which shall be reported:

(a) for each emissions point;

(b) for each process and fuel type contributing to emissions from each point;

(c) in units of tons per year for annual emissions; and

(d) in units of pounds per day for a typical day during the peak ozone season.

E. Waiver of reporting requirements for insignificant emissions. The department may waive the requirements of Paragraph (5) of Subsection C of this section (20.2.73.300 NMAC) for emissions which the department determines to be insignificant under 20.2.70 NMAC, except that:

(1) for sources in nonattainment areas, reporting of emissions of pollutants for which the area is nonattainment shall not be waived; and

(2) reporting of emissions for which reporting is required under the federal act shall not be waived.

F. Emission tracking requirements for sulfur dioxide emission inventories. All stationary sources with actual emissions of one hundred (100) tons per year or more of sulfur dioxide in the year 2000, or in any subsequent year, shall submit an annual inventory of sulfur dioxide emissions, beginning with the 2003 emission inventory. A source that meets these criteria that then emits less than 100 tons per year in a later year shall submit a sulfur dioxide inventory for tracking compliance with the regional sulfur dioxide milestones until the western backstop sulfur dioxide trading program has been fully implemented and emission tracking has occurred under 20.2.81.106 NMAC.

(1) All WEB sources will be subject to the following federally enforceable provisions:

(a) submit an annual inventory of sulfur dioxide emissions;

(b) document the emissions monitoring/estimation methodology used, and demonstrate that the selected methodology is acceptable under the inventory program;

(c) include emissions from start up, shut down, and upset conditions in the annual total inventory;

(d) use 40 CFR Part 75 methodology for reporting emissions for all sources subject to the federal acid rain program;

(e) maintain all records used in the calculation of the emissions, including but not limited to the following:

(i) amount of fuel consumed;

(ii) percent sulfur content of fuel and how the content was determined;

(iii) quantity of product monitoring data;

(iv) emissions monitoring data;

(v) operating data; and

(vi) how the emissions are calculated;

(f) maintain records of any physical changes to facility operations or equipment, or any other changes that may affect the emissions projections; and

(g) retain records for a minimum of ten years from the date of establishment, or if the record was the basis for an adjustment to the milestone, five years after the date of an implementation plan revision, whichever is longer.

(2) Changes in emission measurement techniques. Each source subject to this subsection that uses a different emission monitoring or calculation method than was used to report sulfur dioxide emissions in 2006 under this part or 40 CFR Part 75 shall adjust their reported emissions to be comparable to the emission monitoring or calculation method that was used in 2006. The calculations that are used to make this adjustment shall be included with the annual emission report.

(3) The department shall retain emission inventory records for non-utilities for 2006 until the year 2018 to ensure that changes in emissions monitoring techniques can be tracked.

G. Content of greenhouse gas emissions reports. Greenhouse gas emissions reports shall contain the following information, as set out in the greenhouse gas emissions reporting procedures established under Subparagraph (a) of Paragraph (9) of Subsection B of 20.2.73.300 NMAC:

(1) the name, location, and permit or notice of intent number of the stationary source;

(2) the name and telephone number of the person to contact regarding the greenhouse gas emissions report;

(3) a certification signed by the owner or operator attesting that the statements and information contained in the emissions report are true and accurate to the best knowledge and belief of the certifying official, and including the full name, title, signature, date of signature, and telephone number of the certifying official;

(4) for each emission point as required by the department under the greenhouse gas emissions reporting procedures, the estimated actual emissions of greenhouse gases, including fugitive emissions and emissions occurring during maintenance, start-ups, shutdowns, upsets and downtime; and

(5) if requested by the department, the fuel type, fuel heat content, and fuel carbon content.

[11/30/95, 10/01/97; 2.20.73.300 NMAC - Rn, 20 NMAC 2.73.300 - 304 02/18/02; A, 12/31/03; A, 12/31/04; A, 01/01/08; A, 07/06/11]

PART 74: PERMITS - PREVENTION OF SIGNIFICANT DETERIORATION (PSD)

20.2.74.1 ISSUING AGENCY:

New Mexico Environmental Improvement Board

[07/20/95; 20.2.74.1 NMAC - Rn, 20 NMAC 2.74.100, 10/31/02]

20.2.74.2 SCOPE:

Any person constructing any new major stationary source or major modification as defined in this Part, that emits or will emit regulated pollutants in an attainment or unclassified area.

[07/20/95; 20.2.74.2 NMAC - Rn, 20 NMAC 2.74.101, 10/31/02]

20.2.74.3 STATUTORY AUTHORITY:

The Environmental Improvement Board "shall promulgate regulations and standards in...air quality management" (NMSA 1978, section 74-1-8.A) and "the environmental improvement board...shall adopt...regulations to attain and maintain national ambient air quality standards and prevent or abate air pollution..." (NMSA 1978, section 74-2-5.B).

[07/20/95; 20.2.74.3 NMAC - Rn, 20 NMAC 2.74.102, 10/31/02]

20.2.74.4 DURATION:

Permanent.

[07/20/95; 20.2.74.4 NMAC - Rn, 20 NMAC 2.74.103, 10/31/02]

20.2.74.5 EFFECTIVE DATE:

July 20, 1995, except where a later date is cited at the end of a section or paragraph.

[07/20/95; 01/01/00; 20.2.74.5 NMAC - Rn, 20 NMAC 2.74.104, 10/31/02]

[The latest effective date of any section in this Part is 8/18/14.]

20.2.74.6 OBJECTIVE:

The purpose of this Part is to require any person constructing any new major stationary source or major modification as defined in this Part, that emits or will emit regulated pollutants in an attainment or unclassified area, to obtain a permit from the Department in accordance with the requirements of this Part prior to the construction or modification.

[07/20/95; 20.2.74.6 NMAC - Rn, 20 NMAC 2.74.105, 10/31/02]

20.2.74.7 DEFINITIONS:

Terms used but not defined in this part shall have the meaning given them by 20.2.2 NMAC (Definitions) (formerly AQCR 100). As used in this part the following definitions shall apply.

A. "Act" means the Federal Clean Air Act, as amended, 42 U. S. C. Sections 7401 et seq.

B. "Actual emissions" means the actual rate of emissions of a regulated new source review pollutant from an emissions unit, as determined in accordance with Paragraphs (2) through (4) of this subsection.

(1) This definition shall not apply for calculating whether a significant emissions increase has occurred, or for establishing a PAL under 20.2.74.320 NMAC. Instead, Subsections G and AR of this section shall apply for those purposes.

(2) In general, actual emissions as of a particular date shall equal the average rate, in tons per year, at which the unit actually emitted the pollutant during a consecutive 24-month period which precedes the particular date and which is representative of normal source operation. The department shall allow the use of a different time period upon a determination that it is more representative of normal source operation. Actual emissions shall be calculated using the unit's actual operating hours, production rates, and types of materials processed, stored, or combusted during the selected time period.

(3) The department may presume that source-specific allowable emissions for the unit are equivalent to the actual emissions of the unit.

(4) For any emissions unit that has not begun normal operations on the particular date, actual emissions shall equal the potential to emit of the unit on that date.

C. "Administrator" means the administrator of the U.S. environmental protection agency (EPA) or an authorized representative.

D. "Adverse impact on visibility" means visibility impairment which interferes with the management, protection, preservation, or enjoyment of the visitor's visual experience of the class I federal area. This determination must be made on a case-by-case basis taking into account the geographic extent, intensity, duration, frequency, and

time of the visibility impairments and how these factors correlate with the following: 1) times of visitor use of the class I federal area; and 2) the frequency and timing of natural conditions that reduce visibility. This term does not include effects on integral vistas as defined in 40 CFR 51.301 Definitions.

E. "Allowable emissions" means the emissions rate of a stationary source calculated using the maximum rated capacity of the source (unless the source is subject to federally enforceable limits which restrict the operating rate, or hours of operation, or both) and the most stringent of the following:

- (1) the applicable standards as set forth in 40 CFR Parts 60 and 61;
- (2) the applicable state implementation plan emissions limitation, including those with a future compliance date; or
- (3) the emissions rate specified as a federally enforceable permit condition, including those with a future compliance date.

F. "Attainment area" means, for any air pollutant, an area which is shown by monitored data or which is calculated by air quality modeling not to exceed any national ambient air quality standard for such pollutant, and is so designated under Section 107 (d) (1) (D) or (E) of the act.

G. "Baseline actual emissions" means the rate of emissions, in tons per year, of a regulated new source review pollutant, as determined in accordance with the following.

(1) For any existing electric utility steam generating unit, baseline actual emissions means the average rate, in tons per year, at which the unit actually emitted the pollutant during any consecutive 24-month period selected by the owner or operator within the 5-year period immediately preceding when the owner or operator begins actual construction of the project. The department shall allow the use of a different time period upon a determination that it is more representative of normal source operation.

(a) The average rate shall include fugitive emissions to the extent quantifiable, and emissions associated with startups, shutdowns, and malfunctions.

(b) The average rate shall be adjusted downward to exclude any non-compliant emissions that occurred while the source was operating above an emission limitation that was legally enforceable during the consecutive 24-month period.

(c) For a regulated new source review pollutant, when a project involves multiple emissions units, only one consecutive 24-month period must be used to determine the baseline actual emissions for the emissions units being changed. A different consecutive 24-month period can be used for each regulated new source review pollutant.

(d) The average rate shall not be based on any consecutive 24-month period for which there is inadequate information for determining annual emissions, in tons per year, and for adjusting this amount if required by Subparagraph (b) of this paragraph.

(2) For an existing emissions unit (other than an electric utility steam generating unit), baseline actual emissions means the average rate, in tons per year, at which the emissions unit actually emitted the pollutant during any consecutive 24-month period selected by the owner or operator within the 10-year period immediately preceding either the date the owner or operator begins actual construction of the project, or the date a complete permit application is received by the department for a permit required either under this part or under a plan approved by the administrator, whichever is earlier, except that the 10-year period shall not include any period earlier than November 15, 1990.

(a) The average rate shall include fugitive emissions to the extent quantifiable, and emissions associated with startups, shutdowns, and malfunctions.

(b) The average rate shall be adjusted downward to exclude any non-compliant emissions that occurred while the source was operating above an emission limitation that was legally enforceable during the consecutive 24-month period.

(c) The average rate shall be adjusted downward to exclude any emissions that would have exceeded an emission limitation with which the major stationary source must currently comply, had such major stationary source been required to comply with such limitations during the consecutive 24-month period. However, if an emission limitation is part of a maximum achievable control technology standard that the administrator proposed or promulgated under 40 CFR Part 63, the baseline actual emissions need only be adjusted if the state has taken credit for such emissions reductions in an attainment demonstration or maintenance plan consistent with the requirements of 40 CFR 51.165(a)(3)(ii)(G).

(d) For a regulated new source review pollutant, when a project involves multiple emissions units, only one consecutive 24-month period must be used to determine the baseline actual emissions for the emissions units being changed. A different consecutive 24-month period can be used for each regulated new source review pollutant.

(e) The average rate shall not be based on any consecutive 24-month period for which there is inadequate information for determining annual emissions, in tons per year, and for adjusting this amount if required by Subparagraphs (b) and (c) of this paragraph.

(3) For a new emissions unit, the baseline actual emissions for purposes of determining the emissions increase that will result from the initial construction and operation of such unit shall equal zero; and thereafter, for all other purposes, shall equal the unit's potential to emit.

(4) For a PAL for a stationary source, the baseline actual emissions shall be calculated for existing electric utility steam generating units in accordance with the procedures contained in Paragraph (1) of this subsection, for other existing emissions units in accordance with the procedures contained in Paragraph (2) of this subsection, and for a new emissions unit in accordance with the procedures contained in Paragraph (3) of this subsection.

H. "**Baseline area**" means all lands designated as attainment or unclassifiable in which the major source or major modification establishing the minor source baseline date would construct or would have an air quality impact for the pollutant for which the baseline date is established, as follows: equal to or greater than one microgram per cubic meter (annual average) for sulfur dioxide, nitrogen dioxide, or PM₁₀; or equal or greater than 0.3 microgram per cubic meter (annual average) for PM_{2.5}. The major source or major modification establishes the minor source baseline date (see the definition "minor source baseline date" in this part). Lands are designated as attainment or unclassifiable under Section 107(d)(1) (A)(ii) or (iii) of the act within each federal air quality control region in the state of New Mexico. Any baseline area established originally for TSP (total suspended particulates) increments shall remain in effect and shall apply for purposes of determining the amount of available PM₁₀ increments. A TSP baseline area shall not remain in effect if the department rescinds the corresponding minor source baseline date (see "minor source baseline date" in this part).

I. "**Baseline concentration**" means that ambient concentration level that exists in the baseline area at the time of the applicable minor source baseline date.

(1) A baseline concentration is determined for each pollutant for which a minor source baseline date is established and shall include:

(a) the actual emissions, as defined in this section, representative of sources in existence on the applicable minor source baseline date, except as provided in Paragraph (2) of this subsection;

(b) the allowable emissions of major stationary sources that commenced construction before the major source baseline date, but were not in operation by the applicable minor source baseline date.

(2) The following will not be included in the baseline concentration and will affect the applicable maximum allowable increase(s):

(a) actual emissions, as defined in this section, from any major stationary source on which construction commenced after the major source baseline date; and

(b) actual emissions increases and decreases, as defined in Subsection B of this section, at any stationary source occurring after the minor source baseline date.

J. "Begin actual construction" means, in general, initiation of physical onsite construction activities on an emissions unit which are of a permanent nature. Such activities include, but are not limited to, installation of building supports and foundations, laying underground pipework and construction of permanent storage structures. With respect to a change in method of operations, this term refers to those on-site activities other than preparatory activities which mark the initiation of the change.

K. "Best available control technology (BACT)" means an emissions limitation (including a visible emission standard) based on the maximum degree of reduction for each regulated pollutant which would be emitted from any proposed major stationary source or major modification, which the secretary determines is achievable on a case-by-case basis. This determination will take into account energy, environmental, and economic impacts and other costs. The determination must be achievable for such source or modification through application of production processes or available methods, systems, and techniques, including fuel cleaning, clean fuels, or treatment or innovative fuel combustion techniques for control of such pollutants. In no event shall application of best available control technology result in emissions of any pollutant which would exceed the emissions allowed by any applicable standard under 40 CFR Parts 60 and 61. If the department determines that technological or economic limitations on the application of measurement methodology to a particular emissions unit would make the imposition of an emissions standard infeasible, a design, equipment, work practice, operational standard, or combination thereof, may be prescribed instead to satisfy the requirement for the application of best available control technology. Such standard shall, to the degree possible, set forth the emissions reduction achievable by implementation of such design, equipment, work practice, or operation, and shall provide for compliance by means which achieve equivalent results.

L. "Building, structure, facility, or installation" means all of the pollutant emitting activities which belong to the same industrial grouping, are located on one or more contiguous or adjacent properties, and are under the control of the same person (or persons under common control). Pollutant-emitting activities shall be considered as part of the same industrial grouping if they belong to the same "major group" (i.e., which have the same first two digit code) as described in the standard industrial classification (SIC) manual, 1972, as amended by the 1977 supplement (U. S. government printing office stock numbers 4101-0066 and 003-005-00176-0, respectively) or any superseding SIC manual.

M. "Class I federal area" means any federal land that is classified or reclassified as "class I" as described in 20.2.74.108 NMAC.

N. "Commence" means, as applied to construction of a major stationary source or major modification, that the owner or operator has all necessary preconstruction approvals or permits and has:

(1) begun, or caused to begin, a continuous program of actual on-site construction of the source, to be completed within a reasonable time; or

(2) entered into binding agreements or contractual obligations, which cannot be cancelled or modified without substantial loss to the owner or operator, to undertake and complete, within a reasonable time, a program of actual construction.

O. "Construction" means any physical change or change in the method of operation (including fabrication, erection, installation, demolition, or modification of an emissions unit) that would result in a change in emissions.

P. "Continuous emissions monitoring system (CEMS)" means all of the equipment that may be required to meet the data acquisition and availability requirements of this section, to sample, condition (if applicable), analyze, and provide a record of emissions on a continuous basis.

Q. "Continuous emissions rate monitoring system (CERMS)" means the total equipment required for the determination and recording of the pollutant mass emissions rate (in terms of mass per unit of time).

R. "Continuous parameter monitoring system (CPMS)" means all of the equipment necessary to meet the data acquisition and availability requirements of this section, to monitor process and control device operational parameters (for example, control device secondary voltages and electric currents) and other information (for example, gas flow rate, O₂ or CO₂ concentrations), and to record average operational parameter value(s) on a continuous basis.

S. "Department" means the New Mexico environment department.

T. "Electric utility steam generating unit" means any steam electric generating unit that is constructed for the purpose of supplying more than one-third of its potential electric output capacity and more than 25 megawatts electrical output to any utility power distribution system for sale. Any steam supplied to a steam distribution system for the purpose of providing steam to a steam-electric generator that would produce electrical energy for sale is also considered in determining the electrical energy output capacity of the affected facility.

U. "Emissions unit" means any part of a stationary source that emits or would have the potential to emit any regulated new source review pollutant and includes an electric utility steam generating unit as defined in this section. For purposes of this section, there are two types of emissions units as described in the following.

(1) A new emissions unit is any emissions unit that is (or will be) newly constructed and that has existed for less than 2 years from the date such emissions unit first operated.

(2) An existing emissions unit is any emissions unit that does not meet the requirements in Paragraph (1) of this subsection. A replacement unit, as defined in this section, is an existing unit.

V. "Federal land manager" means, with respect to any lands in the United States, a federal level cabinet secretary of a federal level department (e.g. interior dept.) with authority over such lands.

W. "Federally enforceable" means all limitations and conditions which are enforceable by the administrator, including:

- (1) those requirements developed pursuant to 40 CFR Parts 60 and 61;
- (2) requirements within any applicable state implementation plan;
- (3) any permit requirements established pursuant to 40 CFR 52.21; or
- (4) under regulations approved pursuant to 40 CFR Part 51, Subpart I including 40 CFR 51.165 and 40 CFR 51.166.

X. "Fugitive emissions" means those emissions which could not reasonably pass through a stack, chimney, vent, or other functionally equivalent opening.

Y. "Greenhouse gas" for the purpose of this part is defined as the aggregate group of the following six gases: carbon dioxide, nitrous oxide, methane, hydrofluorocarbons, perfluorocarbons, and sulfur hexafluoride.

Z. "High terrain" means any area having an elevation nine hundred (900) feet or more above the base of a source's stack.

AA. "Indian governing body" means the governing body of any tribe, band, or group of Indians subject to the jurisdiction of the United States and recognized by the United States as possessing power of self-government.

AB. "Innovative control technology" means any system of air pollution control that has not been adequately demonstrated in practice. But such system would have a substantial likelihood of achieving greater continuous emissions reduction than any control system in current practice or achieving at least comparable reductions at lower cost in terms of energy, economics, or non-air quality environmental impacts.

AC. "Low terrain" means any area other than high terrain.

AD. "Lowest achievable emission rate" means, for any source, the more stringent rate of emissions based on the following:

- (1) the most stringent emissions limitation which is contained in the implementation plan of any state for such class or category of stationary source, unless the owner or operator of the proposed stationary source demonstrates that such limitations are not achievable; or

(2) the most stringent emissions limitation which is achieved in practice by such class or category of stationary source; this limitation, when applied to a modification, means the lowest achievable emissions rate for the new or modified emissions units within the stationary source. In no event shall the application of this term permit a proposed new or modified stationary source to emit any pollutant in excess of the amount allowable under an applicable new source standard of performance.

AE. "Major modification" means any physical change in or change in the method of operation of a major stationary source that would result in: a significant emissions increase (as defined in this section) of a regulated new source review pollutant (as defined in this section); and a significant net emissions increase of that pollutant from the major stationary source. Any significant emissions increase (as defined in this section) from any emissions units or net emissions increase (as defined in this section) at a major stationary source that is significant for volatile organic compounds or nitrogen oxides shall be considered significant for ozone.

(1) A physical change or change in the method of operation shall not include:

(a) routine maintenance, repair, and replacement;

(b) use of an alternative fuel or raw material by reason of an order under Section 2 (a) and (b) of the Energy Supply and Environmental Coordination Act of 1974 (or any superseding legislation) or by reason of a natural gas curtailment plan pursuant to the Federal Power Act;

(c) use of an alternative fuel by reason of an order or rule under Section 125 of the act;

(d) use of an alternative fuel at a steam generating unit to the extent that the fuel is generated from municipal solid waste;

(e) use of an alternative fuel or raw material by a stationary source which:

(i) the source was capable of accommodating before January 6, 1975, unless such change would be prohibited under any federally enforceable permit condition which was established after January 6, 1975 pursuant to 40 CFR 52.21 or under regulations approved pursuant to 40 CFR 51.165 or 40 CFR 51.166; or

(ii) the source is approved to use under any permit issued under 40 CFR 52.21 or under regulations approved pursuant to 40 CFR 51.166;

(f) an increase in the hours of operation or in the production rate, unless such change would be prohibited under any federally enforceable permit which was established after January 6, 1975, pursuant to 40 CFR 52.21 or under regulations approved pursuant to 40 CFR 51.165 or 40 CFR 51.166;

(g) any change in ownership at a stationary source;

(h) the installation, operation, cessation, or removal of a temporary clean coal technology demonstration project, provided that the project complies with:

(i) the state implementation plan for the state in which the project is located; and

(ii) other requirements necessary to attain and maintain the national ambient air quality standards during the project and after it is terminated;

(i) the installation or operation of a permanent clean coal technology demonstration project that constitutes repowering, provided that the project does not result in an increase in the potential to emit of any regulated pollutant emitted by the unit; this exemption shall apply on a pollutant-by-pollutant basis;

(j) the reactivation of a very clean coal-fired electric utility steam generating unit.

(2) This definition shall not apply with respect to a particular regulated new source review pollutant when the major stationary source is complying with the requirements under 20.2.74.320 NMAC for a PAL for that pollutant. Instead, the definition at Paragraph (8) of Subsection B of 20.2.74.320 NMAC shall apply.

AF. "Major source baseline date" means:

(1) in the case of PM₁₀ and sulfur dioxide, January 6, 1975;

(2) in the case of nitrogen dioxide, February 8, 1988; and

(3) in the case of PM_{2.5}, October 20, 2010.

AG. "Major stationary source" means the following.

(1) Any stationary source listed in table 1 (20.2.74.501 NMAC) which emits, or has the potential to emit, emissions equal to or greater than one hundred (100) tons per year of any regulated new source review pollutant.

(2) Any stationary source not listed in table 1 (20.2.74.501 NMAC) and which emits or has the potential to emit two hundred fifty (250) tons per year or more of any regulated new source review pollutant.

(3) Any physical change that would occur at a stationary source not otherwise qualifying under Paragraphs (1) or (2) of this subsection if the change would constitute a major stationary source by itself.

(4) A major source that is major for volatile organic compounds or nitrogen oxides shall be considered major for ozone.

(5) The fugitive emissions of a stationary source shall not be included in determining for any of the purposes of this section whether it is a major stationary source, unless the source belongs to one of the stationary source categories found in Table 1 (20.2.74.501 NMAC) or any other stationary source category which, as of August 7, 1980, is being regulated under Section 111 or 112 of the act.

AH. "Mandatory class I federal area" means any area identified in the Code of Federal Regulations (CFR), 40 CFR Part 81, Subpart D. See 20.2.74.108 NMAC for a list of these areas in New Mexico.

AI. "Minor source baseline date" means the earliest date after the trigger date on which the owner or operator of a major stationary source or major modification subject to 40 CFR 52.21 or to this part submits a complete application under the relevant regulations.

(1) The trigger date is:

(a) in the case of PM₁₀ and sulfur dioxide, August 7, 1977;

(b) in the case of nitrogen dioxide, February 8, 1988; and

(c) in the case of PM_{2.5}, October 20, 2011.

(2) Any minor source baseline date established originally for the TSP (total suspended particulates) increments shall remain in effect and shall apply for purposes of determining the amount of available PM-10 increments. The department may rescind any TSP minor source baseline date where it can be shown, to the department's satisfaction, that the emissions increase from the major stationary source, or the net emissions increase from the major modification, responsible for triggering that date, did not result in a significant amount of PM-10 emissions.

AJ. "Natural conditions" includes naturally occurring phenomena that reduce visibility as measured in terms of visual range, contrast or coloration.

AK. "Necessary preconstruction approvals or permits" means those permits or approvals required under federal air quality control laws and regulations and those air quality control laws and regulations which are part of the New Mexico state implementation plan.

AL. "Net emissions increase" means, with respect to any regulated new source review pollutant emitted by a major stationary source, the following.

(1) The amount by which the sum of the following exceeds zero.

(a) The increase in emissions from a particular physical change or change in the method of operation at a stationary source as calculated pursuant to Subsection D of 20.2.74.200 NMAC.

(b) Any other increases and decreases in actual emissions at the major stationary source that are contemporaneous with the particular change and are otherwise creditable. Baseline actual emissions for calculating increases and decreases under this paragraph shall be determined as provided in Subsection G, except that Subparagraph (c) of Paragraph (1) and Subparagraph (d) of Paragraph (2) of Subsection G of this section shall not apply.

(2) An increase or decrease in actual emissions is contemporaneous with the increase from the particular change only if it occurs within the time period five years prior to the commencement of construction on the particular change and the date that the increase from the particular change occurs.

(3) An increase or decrease in actual emissions is creditable only if:

(a) it occurs within the time period five years prior to the commencement of construction on the particular change and the date that the increase from the particular change occurs; and

(b) the department has not relied on it in issuing a permit for the source under regulations approved pursuant to this section, which permit is in effect when the increase in actual emissions from the particular change occurs.

(4) An increase or decrease in actual emissions of sulfur dioxide, particulate matter, or nitrogen oxides that occurs before the applicable minor source baseline date is creditable only if it is required to be considered in calculating the amount of maximum allowable increases remaining available.

(5) An increase in actual emissions is creditable only to the extent that the new level of actual emissions exceeds the old level.

(6) A decrease in actual emissions is creditable only to the extent that:

(a) the old level of actual emissions or the old level of allowable emissions, whichever is lower, exceeds the new level of actual emissions;

(b) it is enforceable as a practical matter at and after the time that actual construction on the particular change begins; and

(c) it has approximately the same qualitative significance for public health and welfare as that attributed to the increase from the particular change.

(7) An increase that results from a physical change at a source occurs when the emissions unit on which construction occurred becomes operational and begins to emit a particular pollutant. Any replacement unit that requires shakedown becomes operational only after a reasonable shakedown period, not to exceed 180 days.

(8) Paragraph (2) of Subsection B of this section shall not apply for determining creditable increases and decreases.

AM. "Nonattainment area" means an area which has been designated under Section 107 of the federal Clean Air Act as nonattainment for one or more of the national ambient air quality standards by EPA.

AN. "Portable stationary source" means a source which can be relocated to another operating site with limited dismantling and reassembly.

AO. "Potential to emit" means the maximum capacity of a stationary source to emit a pollutant under its physical and operational design. Any physical or operational limitation on the capacity of the source to emit a pollutant, including air pollutant control equipment and restrictions on hours of operation or on the type or amount of material combusted, stored, or processed, shall be treated as part of its design if the limitations or the effect it would have on emissions is federally enforceable. Secondary emissions do not count in determining the potential to emit of a stationary source.

AP. "Predictive emissions monitoring system (PEMS)" means all of the equipment necessary to monitor process and control device operational parameters (for example, control device secondary voltages and electric currents) and other information (for example, gas flow rate, O₂ or CO₂ concentrations), and calculate and record the mass emissions rate (for example, lb/hr) on a continuous basis.

AQ. "Project" means a physical change in, or change in method of operation of, an existing major stationary source.

AR. "Projected actual emissions" means the maximum annual rate, in tons per year, at which an existing emissions unit is projected to emit a regulated new source review pollutant in any one of the 5 years (12-month period) following the date the unit resumes regular operation after the project, or in any one of the 10 years following that date, if the project involves increasing the emissions unit's design capacity or its potential to emit that regulated new source review pollutant, and full utilization of the unit would result in a significant emissions increase, or a significant net emissions increase at the major stationary source. In determining the projected actual emissions (before beginning actual construction), the owner or operator of the major stationary source:

(1) shall consider all relevant information, including but not limited to, historical operational data, the company's own representations, the company's expected business activity and the company's highest projections of business activity, the

company's filings with the state or federal regulatory authorities, and compliance plans under the approved plan; and

(2) shall include fugitive emissions to the extent quantifiable and emissions associated with startups, shutdowns, and malfunctions; and

(3) shall exclude, in calculating any increase in emissions that results from the particular project, that portion of the unit's emissions following the project that an existing unit could have accommodated during the consecutive 24-month period used to establish the baseline actual emissions under Subsection G of this section and that are also unrelated to the particular project, including any increased utilization due to product demand growth; or,

(4) in lieu of using the method set out in Paragraphs (1) through (3) of this subsection, may elect to use the emissions unit's potential to emit, in tons per year, as defined in Subsection AR of this section.

AS. "Regulated new source review pollutant", for purposes of this part, means the following:

(1) any pollutant for which a national ambient air quality standard has been promulgated and any pollutant identified under this paragraph (Paragraph (1) of Subsection AS of 20.2.74.7 NMAC) as a constituent or precursor to such pollutant; precursors identified by the administrator for purposes of NSR are the following:

(a) volatile organic compounds and nitrogen oxides are precursors to ozone in all attainment and unclassifiable areas;

(b) sulfur dioxide is a precursor to PM_{2.5} in all attainment and unclassifiable areas;

(c) nitrogen oxides are presumed to be precursors to PM_{2.5} in all attainment and unclassifiable areas, unless the state demonstrates to the administrator's satisfaction or EPA demonstrates that emissions of nitrogen oxides from sources in a specific area are not a significant contributor to that area's ambient PM_{2.5} concentrations;

(d) volatile organic compounds are presumed not to be precursors to PM_{2.5} in any attainment or unclassifiable area, unless the state demonstrates to the administrator's satisfaction or EPA demonstrates that emissions of volatile organic compounds from sources in a specific area are a significant contributor to that area's ambient PM_{2.5} concentrations;

(2) any pollutant that is subject to any standard promulgated under Section 111 of the act;

(3) any class I or II substance subject to a standard promulgated under or established by title VI of the act; or

(4) any pollutant that otherwise is subject to regulation under the act as defined in Subsection AZ of this section;

(5) notwithstanding Paragraphs (1) through (4) of Subsection AS of this section, the term "regulated NSR pollutant" shall not include any or all hazardous air pollutants either listed in Section 112 of the act, or added to the list pursuant to Section 112(b)(2) of the act, and which have not been delisted pursuant to Section 112(b)(3) of the act, unless the listed hazardous air pollutant is also regulated as a constituent or precursor of a general pollutant listed under Section 108 of the act;

(6) particulate matter (PM) emissions, PM_{2.5} emissions, and PM₁₀ emissions shall include gaseous emissions from a source or activity which condense to form particulate matter at ambient temperatures; on or after January 1, 2011, such condensable particulate matter shall be accounted for in applicability determinations and in establishing emissions limitations for PM, PM_{2.5} and PM₁₀ in PSD permits; compliance with emissions limitations for PM, PM_{2.5} and PM₁₀ issued prior to this date shall not be based on condensable particulate matter unless required by the terms and conditions of the permit or the applicable implementation plan; applicability determinations made prior to this date without accounting for condensable particulate matter shall not be considered in violation of this section unless the applicable implementation plan required condensable particulate matter to be included.

AT. "Replacement unit" means an emission unit for which all of the following criteria are met. No creditable emission reductions shall be generated from shutting down the existing emissions unit that is replaced.

(1) The emissions unit is a reconstructed unit within the meaning of 40 CFR 60.15(b)(1), or the emissions unit completely takes the place of an existing emissions unit.

(2) The emissions unit is identical to or functionally equivalent to the replaced emissions unit.

(3) The replacement unit does not change the basic design parameter(s) of the process unit.

(4) The replaced emissions unit is permanently removed from the major stationary source, otherwise permanently disabled, or permanently barred from operation by a permit that is enforceable as a practical matter. If the replaced emissions unit is brought back into operation, it shall constitute a new emissions unit.

AU. "Secondary emissions" means emissions which occur as a result of the construction or operation of a major stationary source or major modification, but do not

come from the major stationary source or major modification itself. For the purpose of this section, secondary emissions must be specific, well defined, quantifiable, and impact the same general areas as the stationary source or modification which causes the secondary emissions. Secondary emissions include emissions from any offsite support facility which would not be constructed or increase its emissions except as a result of the construction or operation of the major stationary source or major modification. Secondary emissions do not include any emissions which come directly from a mobile source, such as emissions from the tailpipe of a motor vehicle, from a train, or from a vessel.

AV. "Secretary" means the cabinet level secretary of the New Mexico environment department or his or her successor.

AW. "Significant" means in reference to a net emissions increase or the potential of a source to emit air pollutants, a rate of emission that would equal or exceed any of the rates listed in table 2 (20.2.74.502 NMAC).

AX. "Significant emissions increase" means, for a regulated new source review pollutant, an increase in emissions that is significant (as defined in Subsection AW of this section) for that pollutant.

AY. "Stationary source" means any building, structure, facility, or installation which emits, or may emit, any regulated new source review pollutant.

AZ. "Subject to regulation" means, for any air pollutant, that the pollutant is subject to either a provision in the act, or a nationally-applicable regulation codified by the administrator in subchapter C of 40 CFR Chapter I, that requires actual control of the quantity of emissions of that pollutant, and that such a control requirement has taken effect and is operative to control, limit or restrict the quantity of emissions of that pollutant released from the regulated activity. Except that:

(1) "greenhouse gases (GHGs)" shall not be subject to regulation except as provided in paragraphs AZ(4) and (5) of this section and shall not be subject to regulation if the stationary source maintains its total source-wide emissions below the GHG PAL level, meets the requirements in 20.2.74.320 NMAC, and complies with the PAL permit containing the GHG PAL;

(2) for purposes of Paragraphs (3) through (5) of Subsection AZ of this section, the term "tons per year CO₂ equivalent emissions (CO₂e)" shall represent an amount of GHGs emitted, and shall be computed as follows:

(a) multiplying the mass amount of emissions (tons per year), for each of the six greenhouse gases in the pollutant GHGs, by the gas's associated global warming potential published at table A-1 to subpart A of 40 CFR part 98 - Global Warming Potentials; for purposes of this subparagraph, prior to July 21, 2014, the mass of the greenhouse gas carbon dioxide shall not include carbon dioxide emissions resulting

from the combustion or decomposition of non-fossilized and biodegradable organic material originating from plants, animals or micro-organisms (including products, by-products, residues and waste from agriculture, forestry and related industries as well as the non-fossilized and biodegradable organic fractions of industrial and municipal wastes, including gases and liquids recovered from the decomposition of non-fossilized and biodegradable organic material);

(b) sum the resultant value from Subparagraph (a) of Paragraph (2) of Subsection AZ of this section for each gas to compute a tons per year CO_{2e};

(3) the term "emissions increase" as used in Paragraphs (4) and (5) of Subsection AZ of this section shall mean that both a significant emissions increase (as calculated using the procedures in Subsection D of 20.2.74.200 NMAC) and a significant net emissions increase (as defined in Subsections AL, AW and AX of 20.2.74.7 NMAC) occur; for the pollutant GHGs, an emissions increase shall be based on tons per year CO_{2e}, and shall be calculated assuming the pollutant GHGs is a regulated NSR pollutant, and "significant" is defined as 75,000 tons per year CO_{2e} instead of applying the value in table 2 of 20.2.74 NMAC;

(4) beginning January 2, 2011, the pollutant GHGs is subject to regulation if:

(a) the stationary source is a new major stationary source for a regulated NSR pollutant that is not GHGs, and also will emit or will have the potential to emit 75,000 tons per year CO_{2e} or more; or

(b) the stationary source is an existing major stationary source for a regulated NSR pollutant that is not GHGs, and also will have an emissions increase of a regulated NSR pollutant that is not GHGs, and also will have an emissions increase of 75,000 tons per year CO_{2e} or more; and

(5) beginning July 1, 2011, in addition to the provisions in Paragraph (4) of this subsection, the pollutant GHGs shall also be subject to regulation:

(a) at a new stationary source that will emit or have the potential to emit 100,000 tons per year CO_{2e}; or

(b) at an existing stationary source that emits or has the potential to emit 100,000 tons per year CO_{2e}, when such stationary source undertakes a physical change or change in the method of operation that will result in an emissions increase of 75,000 tons per year CO_{2e} or more;

(6) if a federal court stays, invalidates or otherwise renders unenforceable by the US EPA, in whole or in part, the prevention of significant deterioration and Title V greenhouse gas tailoring rule (75 FR 31514, June 3, 2010), the definition "subject to regulation" shall be enforceable by the department only to the extent that it is enforceable by US EPA.

BA. "Temporary source" means a stationary source which changes its location or ceases to exist within two years from the date of initial start of operations.

BB. "Visibility impairment" means any humanly perceptible change in visibility (visual range, contrast, coloration) from that which would have existed under natural conditions.

BC. "Volatile organic compound (VOC)" means any organic compound which participates in atmospheric photochemical reactions; that is, any organic compound other than those which the administrator designates as having negligible photochemical reactivity.

[07/20/95; 01/01/00; 20.2.74.7 NMAC - Rn, 20 NMAC 2.74.107, 10/31/02; A, 1/22/06; A, 8/31/09; A, 1/1/11; A, 6/3/11; A, 2/6/13]

20.2.74.8 AMENDMENT AND SUPERSESSION OF PRIOR REGULATIONS:

This Part amends and supersedes Air Quality Control Regulation (AQCR) 707, which was originally filed on February 14, 1984, and subsequently refiled on July 15, 1986; August 1, 1988; and May 29, 1990. All references to AQCR 707 in any other rule shall be understood as a reference to this Part.

[07/20/95; 20.2.74.8 NMAC - Rn, 20 NMAC 2.74.106, 10/31/02]

20.2.74.9 DOCUMENTS:

Documents cited in this Part may be viewed at the New Mexico Environment Department, Air Quality Bureau, Harold Runnels Building, 1190 St. Francis Drive, Santa Fe, NM 87503 [1301 Siler Rd., Bldg. B, Santa Fe, NM 87507].

[07/20/95; 20.2.74.9 NMAC - Rn, 20 NMAC 2.74.109, 10/31/02; A, 01/01/11]

20.2.74.10 SEVERABILITY:

If any provision of this part, or the application of such provision to any person or circumstance, is held invalid, the remainder of this part, or the application of such provision to persons or circumstances other than those as to which it is held invalid, shall not be affected thereby.

[20.2.74.10 NMAC - N, 1/22/06]

20.2.74.11 CONSTRUCTION:

This part shall be liberally construed to carry out its purpose.

[20.2.74.11 NMAC - N, 1/22/06]

20.2.74.12 SAVINGS CLAUSE:

Repeal or supersession of prior versions of this part shall not affect any administrative or judicial action initiated under those prior versions.

[20.2.74.12 NMAC - N, 1/22/06]

20.2.74.13 COMPLIANCE WITH OTHER REGULATIONS:

Compliance with this part does not relieve a person from the responsibility to comply with any other applicable federal, state, or local regulations.

[20.2.74.13 NMAC - N, 1/22/06]

20.2.74.14 LIMITATION OF DEFENSE:

The existence of a valid permit under this part shall not constitute a defense to a violation of any section of this part, except the requirement for obtaining a permit.

[20.2.74.14 NMAC - N, 1/22/06]

20.2.74.15-20.2.74.107 [RESERVED]

20.2.74.108 RESTRICTIONS ON AREA CLASSIFICATIONS:

A. Mandatory Class I Federal areas:

(1) The following areas which were in existence on August 7, 1977, shall be mandatory Class I Federal areas and may not be redesignated:

- (a) International parks (all of them);
 - (b) National wilderness areas which exceed 5,000 acres in size;
 - (c) National memorial parks which exceed 5,000 acres in size; and
 - (d) National parks which exceed 6,000 acres in size.
- (2) Specifically for New Mexico, these areas are:
- (a) Bandelier Wilderness, administered by NPS;
 - (b) Bosque del Apache Wilderness, administered by NFWS;
 - (c) Carlsbad Caverns National Park, administered by NPS;

- (d)** Gila Wilderness, administered by NFS;
- (e)** Pecos Wilderness, administered by NFS;
- (f)** Salt Creek Wilderness, administered by NFWS;
- (g)** San Pedro Parks Wilderness, administered by NFS;
- (h)** Wheeler Peak Wilderness, administered by NFS; and
- (i)** White Mountain Wilderness, administered by NFS; where: NPS = National Park Service, NFWS = National Fish and Wildlife Service, NFS = National Forest Service.

B. Areas which may be redesignated only as Class I or Class II:

(1) The following areas may be redesignated only as Class I or II:

(a) an area, as of August 7, 1977, which exceeds 10,000 acres in size and is a national monument, national primitive area, national preserve, national recreational area, national wild and scenic river, national wildlife refuge; or

(b) a national park or national wilderness area established after August 7, 1977 which exceeds 10,000 acres in size.

(2) Specifically for New Mexico, these areas include (but are not necessarily limited to):

- (a)** Apache Kid Wilderness, administered by NFS;
- (b)** Bandelier National Monument, administered by NPS;
- (c)** Bitter Lake National Wildlife Refuge, administered by NFWS;
- (d)** Blue Range Wilderness, administered by NFS;
- (e)** Bosque del Apache National Wildlife Refuge, administered by NFWS;
- (f)** Capitan Mountains Wilderness, administered by NFS;
- (g)** Cebolla Wilderness, administered by BLM;
- (h)** Chama River Canyon Wilderness, administered by NFS;

[07/20/95; 20.2.74.108 NMAC - Rn, 20 NMAC 2.74.108, 10/31/02]

20.2.74.109-20.2.74.199 [RESERVED]

20.2.74.200 APPLICABILITY:

A. The requirements of this part apply to the construction of any new major stationary source (as defined in 20.2.74.7 NMAC) or any project at an existing major stationary source in an area designated as attainment or unclassifiable.

B. The requirements of Sections 300 through 306, 400 and 403 of this part apply to the construction of any new major stationary source or the major modification of any existing major stationary source, except as this part otherwise provides.

C. No new major stationary source or major modification to which the requirements of Subsections A, B, C and D of 20.2.74.300 NMAC, and Sections 301, 302, 303, 304, 305, 306, 400 and 403 of this part apply shall begin actual construction without a permit that states that the major stationary source or major modification will meet those requirements.

D. Applicability procedures.

(1) Except as otherwise provided in Subsections E and F of this section, and consistent with the definition of major modification contained in 20.2.74.7 NMAC, a

project is a major modification for a regulated new source review pollutant if it causes two types of emissions increases - a significant emissions increase (as defined in 20.2.74.7 NMAC), and a significant net emissions increase (as defined in Subsections AL and AX of 20.2.74.7 NMAC). The project is not a major modification if it does not cause a significant emissions increase. If the project causes a significant emissions increase, then the project is a major modification only if it also results in a significant net emissions increase.

(2) The procedure for calculating (before beginning actual construction) whether a significant emissions increase (i.e., the first step of the process) will occur depends upon the type of emissions units being modified, according to Paragraphs (3) through (4) of this subsection. The procedure for calculating (before beginning actual construction) whether a significant net emissions increase will occur at the major stationary source (i.e., the second step of the process) is contained in the definition in 20.2.74.7 NMAC. Regardless of any such preconstruction projections, a major modification results if the project causes a significant emissions increase and a significant net emissions increase.

(3) Actual-to-projected-actual applicability test for projects that involve existing emissions units. A significant emissions increase of a regulated new source review pollutant is projected to occur if the sum of the difference between the projected actual emissions (as defined in 20.2.74.7 NMAC) and the baseline actual emissions (as defined in Paragraphs (1) and (2) of Subsection G of 20.2.74.7 NMAC) for each existing emissions unit, equals or exceeds the significant amount for that pollutant (as defined in 20.2.74.7 NMAC).

(4) Actual-to-potential test for projects that involve construction of a new emissions unit(s). A significant emissions increase of a regulated new source review pollutant is projected to occur if the sum of the difference between the potential to emit (as defined in 20.2.74.7 NMAC) from each new emissions unit following completion of the project and the baseline actual emissions (as defined in Paragraph (3) of Subsection G of 20.2.74.7 NMAC) of these units before the project equals or exceeds the significant amount for that pollutant (as defined in 20.2.74.7 NMAC).

(5) Hybrid test for projects that involve multiple types of emissions units. A significant emissions increase of a regulated NSR pollutant is projected to occur if the sum of the emissions increases for each emissions unit, using the method specified in Paragraphs (3) and (4) of this subsection as applicable with respect to each emissions unit, for each type of emissions unit equals or exceeds the significant amount for that pollutant. For example, if a project involves both an existing emissions unit and a new emissions unit, the projected increase is determined by summing the values determined using the method specified in Paragraph (3) of this subsection for the existing unit and determined using the method specified in Paragraph (4) of this subsection for the new unit.

E. For any major stationary source for a PAL for a regulated new source review pollutant, the major stationary source shall comply with requirements under 20.2.74.320 NMAC.

[07/20/95; 20.2.74.200 NMAC - Rn, 20 NMAC 2.74.200, 10/31/02; A, 1/22/06; A, 01/01/11]

20.2.74.201 EXEMPTIONS:

This Part shall not apply to:

A. Each regulated pollutant emitted for which the area the source proposes to locate in is designated as nonattainment;

B. Sources or modifications that are part of a nonprofit health or nonprofit educational institution and are approved by the Secretary;

C. A portable stationary source which has previously received a permit pursuant to this Part; and

(1) The owner or operator proposes to relocate the source, and emissions from the source at the new location will be temporary; and

(2) The emissions from the source would not exceed its allowable emission rate; and

(3) The emissions from the source would not impact any Class I Federal area nor any area where an applicable increment is known to be violated; and

(4) Reasonable notice is given to the Department prior to the relocation identifying the proposed new location and probable duration of operation at the new location. Such notice shall be given to the Department not less than ten (10) days in advance of the proposed relocation unless a different time interval is previously approved by the Department;

D. A source or modification that would be major only if fugitive emissions, to the extent they are quantifiable, are considered in calculating the potential to emit or net emissions increase, and the source does not belong to:

(1) Any category in Table 1 of this Part (20.2.74.501 NMAC); or

(2) Any other stationary source category which as of August 7, 1980 is being regulated under section 111 or 112 of the Act.

[07/20/95; 20.2.74.201 NMAC - Rn, 20 NMAC 2.74.201, 10/31/02]

20.2.74.202-20.2.74.299 [RESERVED]

20.2.74.300 OBLIGATIONS OF OWNERS OR OPERATORS OF SOURCES:

A. Any owner or operator who begins actual construction or operates a source or modification without, or not in accordance with, a permit issued under the requirements of this part shall be subject to enforcement action.

B. The issuance of a permit does not relieve any person from the responsibility of complying with the provisions of the Air Quality Control Act, sections 74-2-1 to 74-2-17, NMSA 1978; any applicable regulations of the board; and any other requirements under local, state, or federal law.

C. Approval to construct shall become invalid if: 1) construction is not commenced within eighteen (18) months after receipt of such approval; 2) if construction is discontinued for a period of eighteen (18) months or more; or 3) if construction is not completed within a reasonable time. For a phased construction project, each phase must commence construction within eighteen (18) months of the projected and approved commencement date. The secretary may extend the eighteen (18) month period upon a satisfactory showing that an extension is justified.

D. If a source or modification becomes a major stationary source or major modification solely due to a relaxation in any enforceable limitation (which limitation was established after August 7, 1980), on the capacity of the source or modification otherwise to emit a pollutant, such as a restriction on hours of operation, then this part shall apply to the source or modification as though construction had not yet commenced.

E. Except as otherwise provided in Paragraph (6) under this subsection (Subsection E of 20.2.74.300 NMAC), the following specific provisions apply with respect to any regulated NSR pollutant emitted from projects at existing emissions units at a major stationary source (other than projects at a source with a PAL) in circumstances where there is a reasonable possibility, within the meaning of Paragraph (6) under this subsection (Subsection E of 20.2.74.300 NMAC), that a project that is not a part of a major modification may result in a significant emissions increase of such pollutant, and the owner or operator elects to use the method specified in Paragraphs (1) through (3) of Subsection AR of 20.2.74.7 NMAC for calculating projected actual emissions.

(1) Before beginning actual construction of the project, the owner or operator shall document and maintain a record of the following information:

(a) a description of the project;

(b) identification of the emissions unit(s) whose emissions of a regulated new source review pollutant could be affected by the project; and

(c) a description of the applicability test used to determine that the project is not a major modification for any regulated new source review pollutant, including the baseline actual emissions, the projected actual emissions, the amount of emissions excluded under Paragraph (3) of Subsection AR of 20.2.74.7 NMAC and an explanation for why such amount was excluded, and any netting calculations, if applicable.

(2) If the emissions unit is an existing electric utility steam generating unit, before beginning actual construction, the owner or operator shall provide a copy of the information set out in Paragraph (1) of this subsection to the department. Nothing in this paragraph shall be construed to require the owner or operator of such a unit to obtain any determination from the department; however, necessary preconstruction approvals and/or permits must be obtained before beginning actual construction.

(3) The owner or operator shall monitor the emissions of any regulated new source review pollutant that could increase as a result of the project and that is emitted by any emissions unit identified in Subparagraph (b) of Paragraph (1) of this subsection; and calculate and maintain a record of the annual emissions, in tons per year on a calendar year basis, for a period of 5 years following resumption of regular operations after the change, or for a period of 10 years following resumption of regular operations after the change if the project increases the design capacity or potential to emit of that regulated new source review pollutant at such emissions unit.

(4) If the unit is an existing electric utility steam generating unit, the owner or operator shall submit a report to the department within 60 days after the end of each year during which records must be generated under Subparagraph (c) of Paragraph (1) of this subsection setting out the unit's annual emissions during the calendar year that preceded submission of the report.

(5) If the unit is an existing unit other than an electric utility steam generating unit, the owner or operator shall submit a report to the department if the annual emissions, in tons per year, from the project identified in Paragraph (1) of this subsection, exceed the baseline actual emissions (as documented and maintained pursuant to Subparagraph (c) of Paragraph (1) of this subsection) by a significant amount (as defined in 20.2.74.7 NMAC) for that regulated new source review pollutant, and if such emissions differ from the preconstruction projection as documented and maintained pursuant to Subparagraph (c) of Paragraph (1) of this subsection. Such report shall be submitted to the department within 60 days after the end of such year. The report shall contain the following:

- (a)** the name, address and telephone number of the major stationary source;
- (b)** the annual emissions as calculated pursuant to Paragraph (3) of this subsection; and

(c) any other information that the owner or operator wishes to include in the report (e.g., an explanation as to why the emissions differ from the preconstruction projection);

(6) a “reasonable possibility” under this subsection (Subsection E of 20.2.74.300 NMAC) occurs when the owner or operator calculates the project to result in either:

(a) a projected actual emissions increase of at least 50 percent of the amount that is a “significant emissions increase,” as defined under Subsection AX of 20.2.74.7 NMAC (without reference to the amount that is a significant net emissions increase), for the regulated NSR pollutant; or

(b) a projected actual emissions increase that, added to the amount of emissions excluded under Paragraph (3) of Subsection AR of 20.2.74.7 NMAC, sums to at least 50 percent of the amount that is a “significant emissions increase,” as defined under Subsection AX of 20.2.74.7 NMAC (without reference to the amount that is a significant net emissions increase), for the regulated NSR pollutant; for a project for which a reasonable possibility occurs only within the meaning under this subparagraph (Subparagraph (b) of Paragraph (6) of Subsection E of 20.2.74.300 NMAC), and not also within the meaning of Subparagraph (a) under this paragraph (Paragraph (6) of Subsection E of 20.2.74.300 NMAC), then the provisions in Paragraphs (2) through (5) under this subsection (Subsection E of 20.2.74.300 NMAC) do not apply to the project.

F. The owner or operator of the source shall make the information required to be documented and maintained pursuant to Subsection E of this section available for review upon request for inspection by the department or the general public pursuant to the requirements contained in 40 CFR 70.4(b)(3)(viii).

[07/20/95; 20.2.74.300 NMAC - Rn, 20 NMAC 2.74.300, 10/31/02; A, 1/22/06; A, 1/1/11; A, 6/3/11]

20.2.74.301 SOURCE INFORMATION:

The owner or operator of a proposed source or modification shall submit all information necessary to perform any analysis or make any determination required under this Part.

A. Information shall include, but is not limited to:

(1) A description of the nature, location, design capacity, and typical operating schedule of the source or modification, including specifications and drawings showing the design and plant layout; and

(2) A detailed schedule of construction of the source or modification; and

(3) A detailed description of the planned system of continuous emission reduction for the source or modification, emission estimates, and other information necessary to determine that Best Available Control Technology will be applied.

B. Upon request by the Department, the owner or operator shall also provide information on:

(1) The air quality impact of the source or modification, including meteorologic and topographic data necessary to estimate such impact; and

(2) The air quality impacts, and the nature and extent of any or all general commercial, residential, industrial, and other growth which has occurred since August 7, 1977 in the area the source or modification would affect.

[07/20/95; 20.2.74.301 NMAC - Rn, 20 NMAC 2.74.301, 10/31/02]

20.2.74.302 CONTROL TECHNOLOGY REQUIREMENTS:

A. A new major stationary source shall apply Best Available Control Technology for each regulated pollutant that it would have the potential to emit in amounts equal to or greater than the significance levels as listed in Table 2 of this Part (20.2.74.502 NMAC). This requirement applies to each proposed emissions unit or operation that will emit such pollutant.

B. A major modification shall apply Best Available Control Technology for each regulated pollutant at the source when a significant net emissions increase occurs as defined in this Part. This requirement applies to each proposed emissions unit or operation where a net emissions increase in the pollutant would occur as a result of a physical change or change in the method of operation in the unit.

C. For phased construction projects, the determination of Best Available Control Technology shall be reviewed and modified as appropriate at the latest reasonable time but no later than eighteen (18) months prior to commencement of construction of each independent phase of the project. At such time, the owner or operator of the applicable stationary source may be required to demonstrate the adequacy of any previous determination of Best Available Control Technology for the source.

D. The Department may approve a system of innovative control technology for the major stationary source or major modification if:

(1) The proposed control system would not cause or contribute to an unreasonable risk to public health, welfare, or safety in its operation or function; and

(2) The owner or operator agrees to achieve a level of continuous emissions reduction equivalent to that which would have been required under Best Available

Control Technology by a date specified by the Department. Such date shall not be later than four (4) years from the time of startup or seven (7) years from permit issuance; and

(3) The source or modification would meet the requirements of 20.2.74.302 NMAC and 20.2.74.303 NMAC based on the emission rate that the system of innovative control technology would be required to meet on the date specified by the Department; and

(4) During the interim period of achieving the permitted emission level, the source or modification would not:

(a) Cause or contribute to a violation of an applicable national ambient air quality standard; nor

(b) Impact any Class I Federal area; nor

(c) Impact any area where an applicable increment is known to be violated; and

(5) All other applicable requirements including those for public participation have been met.

E. The Department shall withdraw any approval to employ a system of innovative control technology if:

(1) The proposed system fails by the specified date to achieve the required continuous emissions reduction rate; or

(2) The proposed system fails before the specified date so as to contribute to an unreasonable risk to public health, welfare, or safety; or

(3) The Department decides at any time that the proposed system is unlikely to achieve the required level of control or to protect the public health, welfare, or safety.

F. If a source or modification fails to meet the required level of continuous emission reduction within the specified time period or the approval is withdrawn in accordance with subsection E of 20.2.74.302 NMAC, the Department may allow the source or modification up to an additional three (3) years to meet the requirement for the application of Best Available Control Technology. This shall be accomplished through use of a demonstrated system of control.

G. If the owner or operator of a major stationary source or major modification previously issued a permit under this Part applies for an extension (as provided for under subsection C of 20.2.74.300 NMAC), and the new proposed date of construction is greater than eighteen (18) months from the date the permit would become invalid, the determination of Best Available Control Technology shall be reviewed and modified as

appropriate before such an extension is granted. At such time, the owner or operator of the applicable stationary source may be required to demonstrate the adequacy of any previous determination of Best Available Control Technology for the source.

H. With respect to PM₁₀, for the case where PM₁₀ emissions cannot be quantified, the Best Available Control Technology limitation may be defined in terms of particulate matter emissions.

[07/20/95; 20.2.74.302 NMAC - Rn, 20 NMAC 2.74.302, 10/31/02]

20.2.74.303 AMBIENT IMPACT REQUIREMENTS:

A. The requirements of this section shall apply to each pollutant emitted by a new major stationary source or major modification in amounts equal to or greater than those in Table 2 of this Part (20.2.74.502 NMAC). For PM₁₀, the source will only be required to perform ambient impact analysis for PM₁₀ when the source has the potential to emit significant amounts of PM₁₀ (Table 2, 20.2.74.502 NMAC).

B. The allowable emission increases from the proposed source or modification, including secondary emissions, in conjunction with all other applicable emissions increases or reductions, including secondary emissions, shall not cause or contribute to air pollution in violation of:

(1) any national ambient air quality standard in any location; or

(2) any applicable maximum allowable increase as shown in Table 4 of this Part (20.2.74.504 NMAC) over the baseline concentrations in any area;

(3) the owner or operator of the proposed major stationary source or major modification shall demonstrate that neither Paragraph (1) nor Paragraph (2) of 20.2.74.303 NMAC will occur.

[07/20/95; 20.2.74.303 NMAC - Rn, 20 NMAC 2.74.303, 10/31/02; A, 6/3/11; A, 8/18/14]

20.2.74.304 ADDITIONAL IMPACT REQUIREMENTS:

A. The owner or operator of the proposed major stationary source or major modification shall provide an analysis of the impairment to visibility, soils, and vegetation that would occur as a result of the source or modification and general commercial, residential, industrial, and other growth associated with the source or modification. The owner or operator need not provide an analysis of the impact on vegetation having no significant commercial or recreational value. The analysis can use data or information available from the Department.

B. The owner or operator shall also provide an analysis of the air quality impact projected for the area as a result of general commercial, residential, industrial, and other growth associated with the source or modification.

[07/20/95; 20.2.74.304 NMAC - Rn, 20 NMAC 2.74.304, 10/31/02]

20.2.74.305 AMBIENT AIR QUALITY MODELING:

All estimates of ambient concentrations required by this Part shall be based on applicable air quality models, data bases, and other requirements as specified in EPA's Guideline on Air Quality Models (EPA-450/2-78-027R, July, 1986), its revisions, or any superseding EPA document, and approved by the Department. Where an air quality impact model specified in the Guideline on Air Quality Models is inappropriate, the model may be modified or another model substituted. Any substitution or modification of a model must be approved by the Department. Notification shall be given by the Department of such a substitution or modification and the opportunity for public comment provided for in fulfilling the public notice requirements in subsection B of 20.2.74.400 NMAC. The Department will seek EPA approval of such substitutions or modifications.

[07/20/95; 20.2.74.305 NMAC - Rn, 20 NMAC 2.74.305, 10/31/02]

20.2.74.306 MONITORING REQUIREMENTS:

A. Any application for a permit under this part shall contain an analysis of ambient air quality. Air quality data can be that measured by the applicant or that available from a government agency in the area affected by the major stationary source or major modification. The analysis shall contain the following:

(1) for a major stationary source, each pollutant for which the potential to emit is equal to or greater than the significant emission rates as listed in Table 2 of this part (20.2.74.502 NMAC); or

(2) for a major modification, each pollutant that would result in a significant net emission increase.

B. If no national ambient air quality standard (NAAQS) for a pollutant exists, and there is an acceptable method for monitoring that pollutant, the analysis shall contain such air quality monitoring data as the department determines is necessary to assess ambient air quality for that pollutant.

C. Continuous air quality monitoring data shall be required for all pollutants for which a national ambient air quality standard exists. Such data shall be submitted to the department for at least the one (1) year period prior to receipt of the permit application. The department has the discretion to:

(1) determine that a complete and adequate analysis can be accomplished with monitoring data gathered over a period shorter than one year but not less than four months; or

(2) determine that existing air quality monitoring data is representative of air quality in the affected area and accept such data in lieu of additional monitoring by the applicant.

D. Ozone monitoring shall be performed if monitoring data is required for volatile organic compounds. Post construction ozone monitoring data may be submitted in lieu of providing preconstruction data as required under Subsection C of 20.2.74.306 NMAC if the owner or operator of the proposed major source or major modification satisfies all the provisions of 40 CFR Part 51, Appendix S, Section IV.

E. The department may require monitoring of visibility in any Class I federal area where the department determines that an adverse impact on visibility may occur due primarily to the operations of the proposed new source or modification. Such monitoring shall be conducted following procedures approved by the department and subject to the following:

(1) visibility monitoring methods specified by the department shall be reasonably available and not require any research and development; and

(2) the cost of visibility monitoring required by the department shall not exceed fifty percent (50%) of the cost of ambient monitoring required by this part; if ambient monitoring is not required, the cost shall be estimated as if it were required for each pollutant to which this part applies;

(3) both preconstruction and post construction visibility monitoring may be required; in each case, the duration of such monitoring shall not exceed one (1) year.

F. The owner or operator of a major stationary source or major modification shall conduct post construction ambient monitoring as the department determines is necessary to validate attainment of ambient air quality standards and to assure that increments are not exceeded.

G. The owner or operator of a major stationary source or major modification shall meet the requirements of 40 CFR 58, Appendix B during the operation of monitoring stations for purposes of satisfying the requirements of this section.

H. The department has the discretion to exempt a stationary source or modification from the requirements of this section with respect to monitoring for a particular pollutant if the emissions of the pollutant from the new source or the net emissions increase of the pollutant from the modification would cause, in any area, increases in ambient concentrations less than the levels listed in Table 3 of this part (20.2.74.503 NMAC).

I. The department shall exempt a stationary source or modification from the requirements of this section with respect to preconstruction monitoring for a particular pollutant if:

- (1) for ozone, volatile organic compound emissions are less than one hundred (100) tons per year; or
- (2) the air pollutant is not a regulated pollutant; or
- (3) the existing ambient concentrations of the pollutant in the area that the source or modification would affect are less than the concentrations listed in Table 3 of this part (20.2.74.503 NMAC); or
- (4) the pollutant is not listed in Table 3 of this part (20.2.74.503 NMAC).

[07/20/95; 20.2.74.306 NMAC - Rn, 20 NMAC 2.74.306, 10/31/02; A, 6/3/11]

20.2.74.307 TEMPORARY SOURCE EXEMPTIONS:

The requirements of 20.2.74.304 NMAC and 20.2.74.306 NMAC shall not apply to a temporary source subject to this Part for a given pollutant if the allowable emissions of such pollutant would not impact any Class I Federal area or any areas where an applicable increment is violated and would be temporary.

[07/20/95; 20.2.74.307 NMAC - Rn, 20 NMAC 2.74.307, 10/31/02]

20.2.74.308-20.2.74.319 [RESERVED]

20.2.74.320 ACTUALS PLANTWIDE APPLICABILITY LIMITS (PALs):

A. Applicability.

(1) The department may approve the use of an actuals PAL, including for GHGs on either a mass basis or a CO₂e basis, for any existing major stationary source or any other existing GHG-only source if the PAL meets the requirements in this section. The term "PAL" shall mean "actuals PAL" throughout this section.

(2) Any physical change in or change in the method of operation of a major stationary source or a GHG-only source that maintains its total source-wide emissions below the PAL level, meets the requirements of this section, and complies with the PAL permit:

(a) is not a major modification for the PAL pollutant;

(b) does not have to be approved through the requirements of this part; and

(c) is not subject to the provisions in Subsection D of 20.2.74.300 NMAC (restrictions on relaxing enforceable emission limitations that the major stationary source used to avoid applicability of the major new source review program); and

(d) does not make GHGs subject to regulation as defined by Subsection AZ of 20.2.74.7 NMAC.

(3) Except as provided under Subparagraph (c) of Paragraph (2) of this subsection, a major stationary source or GHG-only source shall continue to comply with all applicable federal or state requirements, emission limitations, and work practice requirements that were established prior to the effective date of the PAL.

B. Definitions applicable to this section.

(1) Actuals PAL for a major stationary source means a PAL based on the baseline actual emissions (as defined in 20.2.74.7 NMAC) of all emissions units (as defined in 20.2.74.7 NMAC) at the source, that emit or have the potential to emit the PAL pollutant. For a GHG-only source, "actuals PAL" means a PAL based on the baseline actual emissions (as defined in Paragraph (13) of this subsection) of all emissions units (as defined in Paragraph (14) of this subsection) at the source, that emit or have the potential to emit GHGs.

(2) Allowable emissions means "allowable emissions" as defined in 20.2.74.7 NMAC, except as this definition is modified in accordance with the following.

(a) The allowable emissions for any emissions unit shall be calculated considering any emission limitations that are enforceable as a practical matter on the emissions unit's potential to emit.

(b) An emissions unit's potential to emit shall be determined using the definition in 20.2.74.7 NMAC, except that the words "or enforceable as a practical matter" should be added after "federally enforceable".

(3) Small emissions unit means an emissions unit that emits or has the potential to emit the PAL pollutant in an amount less than the significant level for that PAL pollutant, as defined in Subsection AW of 20.2.74.7 NMAC or in the act, whichever is lower. For a GHG PAL issued on a CO₂e basis, "small emissions unit" means an emissions unit that emits or has the potential to emit less than the amount of GHGs on a CO₂e basis defined as "significant" for the purposes of Paragraph (3) of Subsection AZ of 20.2.74.7 NMAC at the time the PAL permit is being issued.

(4) Major emissions unit means:

(a) any emissions unit that emits or has the potential to emit 100 tons per year or more of the PAL pollutant in an attainment area; or

(b) any emissions unit that emits or has the potential to emit the PAL pollutant in an amount that is equal to or greater than the major source threshold for the PAL pollutant as defined by the act for nonattainment areas; for example, in accordance with the definition of major stationary source in Section 182(c) of the act, an emissions unit would be a major emissions unit for VOC if the emissions unit is located in a serious ozone nonattainment area and it emits or has the potential to emit 50 or more tons of VOC per year; or

(c) for a GHG PAL issued on a CO_{2e} basis, any emissions unit that emits or has potential to emit equal to or greater than the amount of GHGs on a CO_{2e} basis that would be sufficient for a new source to trigger permitting requirements under Subsection AZ of 20.2.74.7 NMAC at the time the PAL permit is being issued.

(5) Plantwide applicability limitation (PAL) means an emission limitation expressed on a mass basis in tons per year, or expressed in tons per year CO_{2e} for a CO_{2e}-based GHG emission limitation, for a pollutant at a major stationary source or GHG-only source, that is enforceable as a practical matter and established source-wide in accordance with this section.

(6) PAL effective date generally means the date of issuance of the PAL permit. However, the PAL effective date for an increased PAL is the date any emissions unit that is part of the PAL major modification becomes operational and begins to emit the PAL pollutant.

(7) PAL effective period means the period beginning with the PAL effective date and ending 10 years later.

(8) PAL major modification means, notwithstanding the definitions for major modification, net emissions increase, and subject to regulation in 20.2.74.7 NMAC, any physical change in or change in the method of operation of the PAL source that causes it to emit the PAL pollutant at a level equal to or greater than the PAL.

(9) PAL permit means the major new source review permit, the minor new source review permit, or the state operating permit under a program that is approved into the plan, or the title V permit issued by the department that establishes a PAL for a major stationary source or a GHG-only source.

(10) PAL pollutant means the pollutant for which a PAL is established at a major stationary source or a GHG-only source. For a GHG-only source, the only available PAL pollutant is greenhouse gases.

(11) Significant emissions unit means an emissions unit that emits or has the potential to emit a PAL pollutant in an amount that is equal to or greater than the significant level (as defined in Subsection AW of 20.2.74.7 NMAC or in the act, whichever is lower) for that PAL pollutant, but less than the amount that would qualify the unit as a major emissions unit as defined in Paragraph (4) of this subsection. For a

GHG PAL issued on a CO_{2e} basis, "significant emissions unit" means any emissions unit that emits or has the potential to emit GHGs on a CO_{2e} basis in amounts equal to or greater than the amount that would qualify the unit as a small emissions unit as defined in Paragraph (3) of this subsection, but less than the amount that would qualify the unit as a major emissions unit as defined in Subparagraph (c) of Paragraph (4) of this subsection.

(12) GHG-only source means any existing station source that emits or has the potential to emit GHGs in the amount equal to or greater than the amount of GHGs on a mass basis that would be sufficient for a new source to trigger permitting requirements for GHGs under Subsection AG of 20.2.74.7 NMAC and the amount of GHGs on a CO_{2e} basis that would be sufficient for a new source to trigger permitting requirements for GHGs under Subsection AZ of 20.2.74.7 NMAC at the time the PAL permit is being issued, but does not emit or have the potential to emit any other non-GHG regulated new source review pollutant at or above the applicable major source threshold. A GHG-only source may only obtain a PAL for GHG emissions under 20.2.74.320 NMAC.

(13) Baseline actual emissions for a GHG PAL means the average rate, in tons per year CO_{2e} or tons per year GHG, as applicable, at which the emissions unit actually emitted GHGs during any consecutive 24-month period selected by the owner or operator within the 10-year period immediately preceding either the date the owner or operator begins actual construction of the project, or the date a complete permit application is received by the department for a permit required under this section or by the department for a permit required by a plan, whichever is earlier. For any existing electric utility steam generating unit, "baseline actual emissions" for a GHG PAL means the average rate, in tons per year CO_{2e} or tons per year GHG, as applicable, at which the emissions unit actually emitted the GHGs during any consecutive 24-month period selected by the owner or operator within the 5-year period immediately preceding either the date the owner or operator begins actual construction of the project, except that the department shall allow the use of a different time period upon a determination that it is more representative of normal source operation.

(a) The average rate shall include fugitive emissions to the extent quantifiable, and emissions associated with startups, shutdowns, and malfunctions.

(b) The average rate shall be adjusted downward to exclude any non-compliant emissions that occurred while the source was operating above an emission limitation that was legally enforceable during the consecutive 24-month period.

(c) The average rate shall be adjusted downward to exclude any emissions that would have exceeded an emission limitation with which the stationary source must currently comply, had such stationary source been required to comply with such limitations during the consecutive 24-month period.

(d) The average rate shall not be based on any consecutive 24-month period for which there is inadequate information for determining annual GHG emissions and for

adjusting this amount if required by Subparagraphs (b) and (c) of Paragraph (13) of this subsection.

(14) Emissions unit with respect to GHGs means any part of a stationary source that emits or has the potential to emit GHGs. For purposes of this section, there are two types of emissions units as described in the following:

(a) A new emissions unit is any emissions unit that is (or will be) newly constructed and that has existed for less than 2 years from the date such emissions unit first operated.

(b) An existing emissions unit is any emissions unit that does not meet the requirements in subparagraph (a) of this paragraph.

(15) Minor source means any stationary source that does not meet the definition of major stationary source in Subsection AG of 20.2.74.7 NMAC for any pollutant at the time the PAL is issued.

C. Permit application requirements. As part of a permit application requesting a PAL, the owner or operator of a major stationary source or a GHG-only source shall submit the following information to the department for approval.

(1) A list of all emissions units at the source designated as small, significant or major based on their potential to emit. In addition, the owner or operator of the source shall indicate which, if any, federal or state applicable requirements, emission limitations, or work practices apply to each unit.

(2) Calculations of the baseline actual emissions (with supporting documentation). Baseline actual emissions are to include emissions associated not only with operation of the unit, but also emissions associated with startup, shutdown, and malfunction.

(3) The calculation procedures that the major stationary source owner or operator proposes to use to convert the monitoring system data to monthly emissions and annual emissions based on a 12-month rolling total for each month as required by Subsection M of this section.

(4) As part of a permit application requesting a GHG PAL, the owner or operator of a major stationary source or a GHG-only source shall submit a statement by the source owner or operator that clarifies whether the source is an existing major source as defined in Paragraphs (1) and (2) of Subsection AG of 20.2.74.7 NMAC or a GHG-only source as defined in Paragraph (12) of Subsection B of this subsection.

D. General requirements for establishing PALs.

(1) The department may establish a PAL at a major stationary source or a GHG-only source, provided that at a minimum, the following requirements are met.

(a) The PAL shall impose an annual emission limitation expressed on a mass basis in tons per year, or expressed in tons per year CO₂e, that is enforceable as a practical matter, for the entire major stationary source or GHG-only source. For each month during the PAL effective period after the first 12 months of establishing a PAL, the major stationary source or GHG-only source owner or operator shall show that the sum of the monthly emissions from each emissions unit under the PAL for the previous 12 consecutive months is less than the PAL (a 12-month average, rolled monthly). For each month during the first 11 months from the PAL effective date, the major stationary source or GHG-only source owner or operator shall show that the sum of the preceding monthly emissions from the PAL effective date for each emissions unit under the PAL is less than the PAL.

(b) The PAL shall be established in a PAL permit that meets the public participation requirements in Subsection E of this section.

(c) The PAL permit shall contain all the requirements of Subsection G of this section.

(d) The PAL shall include fugitive emissions, to the extent quantifiable, from all emissions units that emit or have the potential to emit the PAL pollutant at the major stationary source or GHG-only source.

(e) Each PAL shall regulate emissions of only one pollutant.

(f) Each PAL shall have a PAL effective period of 10 years.

(g) The owner or operator of the major stationary source or GHG-only source with a PAL shall comply with the monitoring, recordkeeping, and reporting requirements provided in Subsections L through N of this section for each emissions unit under the PAL through the PAL effective period.

(2) At no time (during or after the PAL effective period) are emissions reductions of a PAL pollutant that occur during the PAL effective period creditable as decreases for purposes of offsets under 40 CFR 51.165(a)(3)(ii) unless the level of the PAL is reduced by the amount of such emissions reductions and such reductions would be creditable in the absence of the PAL.

E. Public participation requirements for PALs. PALs for existing major stationary sources or GHG-only sources shall be established, renewed, or increased, through a procedure that is consistent with 40 CFR 51.160 and 161. This includes the requirement that the department provide the public with notice of the proposed approval of a PAL permit and at least a 30-day period for submittal of public comment. The department must address all material comments before taking final action on the permit.

F. Setting the 10-year actuals PAL level.

(1) Except as provided in Paragraph (2) of this subsection, the actuals PAL level for a major stationary source or GHG-only source shall be established as the sum of the baseline actual emissions (as defined in 20.2.74.7 NMAC or, for GHGs, Paragraph (13) of Subsection B of 20.2.74.320 NMAC) of the PAL pollutant for each emissions unit at the source; plus an amount equal to the applicable significant level for the PAL pollutant under Subsection AW of 20.2.74.7 NMAC or under the act, whichever is lower. When establishing the actuals PAL level, for a PAL pollutant, only one consecutive 24-month period must be used to determine the baseline actual emissions for all existing emissions units. However, a different consecutive 24-month period may be used for each different PAL pollutant. Emissions associated with units that were permanently shutdown after this 24-month period must be subtracted from the PAL level. The department shall specify a reduced PAL level(s) (in tons/yr) in the PAL permit to become effective on the future compliance date(s) of any applicable federal or state regulatory requirement(s) that the department is aware of prior to issuance of the PAL permit. For instance, if the source owner or operator will be required to reduce emissions from industrial boilers in half from baseline emissions of 60 ppm NO_x to a new rule limit of 30 ppm, then the permit shall contain a future effective PAL level that is equal to the current PAL level reduced by half of the original baseline emissions of such unit(s).

(2) For newly constructed units (which do not include modifications to existing units) on which actual construction began after the 24-month period, in lieu of adding the baseline actual emissions as specified in Paragraph (1) of this subsection, the emissions must be added to the PAL level in an amount equal to the potential to emit of the units.

(3) For CO_{2e} based GHG PAL, the actuals PAL level shall be established as the sum of the GHGs baseline actual emissions (as defined in Paragraph (13) of Subsection B of 20.2.74.320 NMAC) of GHGs for each emissions unit at the source, plus an amount equal to the amount defined as "significant" on a CO_{2e} basis for the purposes of Subsection AZ of 20.2.74.7 NMAC at the time the PAL permit is being issued. When establishing the actuals PAL level for a CO_{2e}-based PAL, only one consecutive 24-month period must be used to determine the baseline actual emissions for all existing emissions units. Emissions associated with units that were permanently shut down after this 24-month period must be subtracted from the PAL level. The department shall specify a reduced PAL level (in tons per year CO_{2e}) in the PAL permit to become effective on the future compliance date(s) of any applicable federal or New Mexico regulatory requirement(s) that the department is aware of prior to issuance of the PAL permit.

G. Contents of the PAL permit. The PAL permit shall contain, at a minimum, the following information.

(1) The PAL pollutant and the applicable source-wide emission limitation in tons per year or tons per year CO₂e.

(2) The PAL permit effective date and the expiration date of the PAL (PAL effective period).

(3) Specification in the PAL permit that if a major stationary source or GHG-only source owner or operator applies to renew a PAL in accordance with Subsection J of this section before the end of the PAL effective period, then the PAL shall not expire at the end of the PAL effective period. It shall remain in effect until a revised PAL permit is issued by the department.

(4) A requirement that emission calculations for compliance purposes include emissions from startups, shutdowns and malfunctions.

(5) A requirement that, once the PAL expires, the major stationary source or GHG-only source is subject to the requirements of Subsection I of this section.

(6) The calculation procedures that the major stationary source or GHG-only source owner or operator shall use to convert the monitoring system data to monthly emissions and annual emissions based on a 12-month rolling total for each month as required by Paragraph (1) of Subsection C of this section.

(7) A requirement that the major stationary source or GHG-only source owner or operator monitor all emissions units in accordance with the provisions under Subsection M of this section.

(8) A requirement to retain the records required under Subsection M of this section on site. Such records may be retained in an electronic format.

(9) A requirement to submit the reports required under Subsection N of this section by the required deadlines.

(10) Any other requirements that the department deems necessary to implement and enforce the PAL.

(11) A permit for a GHG PAL issued to a GHG-only source shall also include a statement denoting that GHG emissions at the source will not be subject to regulation under Subsection AZ of 20.2.74.7 NMAC as long as the source complies with the PAL.

H. PAL effective period and reopening of the PAL permit.

(1) PAL effective period. The PAL effective period shall be 10 years.

(2) Reopening of the PAL permit.

(a) During the PAL effective period, the department shall reopen the PAL permit to:

(i) correct typographical/calculation errors made in setting the PAL or reflect a more accurate determination of emissions used to establish the PAL;

(ii) reduce the PAL if the owner or operator of the major stationary source creates creditable emissions reductions for use as offsets under 40 CFR 51.165(a)(3)(ii); and

(iii) revise the PAL to reflect an increase in the PAL as provided under Subsection K of this section.

(b) The department may reopen the PAL permit for the following:

(i) to reduce the PAL to reflect newly applicable federal requirements (for example, NSPS) with compliance dates after the PAL effective date;

(ii) to reduce the PAL consistent with any other requirement, that is enforceable as a practical matter, and that the department may impose on the major stationary source or GHG-only source under the plan; and

(iii) to reduce the PAL if the department determines that a reduction is necessary to avoid causing or contributing to a NAAQS or PSD increment violation, or to an adverse impact on an AQRV that has been identified for a federal class I area by a federal land manager and for which information is available to the general public.

(c) Except for the permit reopening in Item (i) of Subparagraph (a) of Paragraph (2) of this subsection for the correction of typographical/calculation errors that do not increase the PAL level, all reopenings shall be carried out in accordance with the public participation requirements of Subsection E of this section.

I. Expiration of a PAL. Any PAL that is not renewed in accordance with the procedures in Subsection J of this section shall expire at the end of the PAL effective period, and the following requirements shall apply.

(1) Each emissions unit (or each group of emissions units) that existed under the PAL shall comply with an allowable emission limitation under a revised permit established according to the following procedures.

(a) Within the time frame specified for PAL renewals in Paragraph (2) of Subsection J of this section, the major stationary source or GHG-only source shall submit a proposed allowable emission limitation for each emissions unit (or each group of emissions units, if such a distribution is more appropriate as decided by the department) by distributing the PAL allowable emissions for the major stationary source among each of the emissions units that existed under the PAL. If the PAL had not yet

been adjusted for an applicable requirement that became effective during the PAL effective period, as required under Paragraph (5) of Subsection J of this section, such distribution shall be made as if the PAL had been adjusted.

(b) The department shall decide whether and how the PAL allowable emissions will be distributed and issue a revised permit incorporating allowable limits for each emissions unit, or each group of emissions units, as the department determines is appropriate.

(2) Each emissions unit(s) shall comply with the allowable emission limitation on a 12-month rolling basis. The department may approve the use of monitoring systems (source testing, emission factors, etc.) other than CEMS, CERMS, PEMS or CPMS to demonstrate compliance with the allowable emission limitation.

(3) Until the department issues the revised permit incorporating allowable limits for each emissions unit, or each group of emissions units, as required under Subparagraph (b) of Paragraph (1) of Subsection I of this section, the source shall continue to comply with a source-wide, multi-unit emissions cap equivalent to the level of the PAL emission limitation.

(4) Any physical change or change in the method of operation at the major stationary source or GHG-only source will be subject to major new source review requirements if such change meets the definition of major modification in 20.2.74.7 NMAC.

(5) The major stationary source or GHG-only source owner or operator shall continue to comply with any New Mexico or federal applicable requirements (BACT, RACT, NSPS, etc.) that may have applied either during the PAL effective period or prior to the PAL effective period except for those emission limitations that had been established pursuant to Subsection D of 20.2.74.300 NMAC, but were eliminated by the PAL in accordance with the provisions in Subparagraph (c) of Paragraph (2) of Subsection A of this section.

J. Renewal of a PAL.

(1) The department shall follow the procedures specified in Subsection E of this section in approving any request to renew a PAL for a major stationary source or GHG-only source, and shall provide both the proposed PAL level and a written rationale for the proposed PAL level to the public for review and comment. During such public review, any person may propose a PAL level for the source for consideration by the department.

(2) Application deadline. A major stationary source or GHG-only source owner or operator shall submit a timely application to the department to request renewal of a PAL. A timely application is one that is submitted at least 6 months prior to, but not earlier than 18 months from, the date of permit expiration. This deadline for application

submittal is to ensure that the permit will not expire before the permit is renewed. If the owner or operator of a major stationary source or GHG-only source submits a complete application to renew the PAL within this time period, then the PAL shall continue to be effective until the revised permit with the renewed PAL is issued.

(3) Application requirements. The application to renew a PAL permit shall contain the following information.

- (a)** The information required in Subsection C of this section.
- (b)** A proposed PAL level.
- (c)** The sum of the potential to emit of all emissions units under the PAL (with supporting documentation).
- (d)** Any other information the owner or operator wishes the department to consider in determining the appropriate level for renewing the PAL.

(4) PAL adjustment. In determining whether and how to adjust the PAL, the department shall consider the options outlined in Subparagraphs (a) and (b) of this paragraph. However, in no case may any such adjustment fail to comply with Subparagraph (c) of this paragraph.

(a) If the emissions level calculated in accordance with Subsection F of this section is equal to or greater than 80 percent of the PAL level, the department may renew the PAL at the same level without considering the factors set forth in Subparagraph (b) of this paragraph.

(b) The department may set the PAL at a level that it determines to be more representative of the source's baseline actual emissions, or that it determines to be appropriate considering air quality needs, advances in control technology, anticipated economic growth in the area, desire to reward or encourage the source's voluntary emissions reductions, or other factors as specifically identified by the department in its written rationale.

(c) Notwithstanding Subparagraphs (a) and (b) of this paragraph:

(i) if the potential to emit of the major stationary source or GHG-only source is less than the PAL, the department shall adjust the PAL to a level no greater than the potential to emit of the source; and

(ii) the department shall not approve a renewed PAL level higher than the current PAL, unless the major stationary source or GHG-only source has complied with the provisions of Subsection K of this section (increasing a PAL).

(5) If the compliance date for a state or federal requirement that applies to the PAL source occurs during the PAL effective period, and if the department has not already adjusted for such requirement, the PAL shall be adjusted at the time of PAL permit renewal or title V permit renewal, whichever occurs first.

K. Increasing a PAL during the PAL effective period.

(1) The department may increase a PAL emission limitation only if the major stationary source or GHG-only source complies with the following provisions.

(a) The owner or operator of the major stationary source or GHG-only source shall submit a complete application to request an increase in the PAL limit for a PAL major modification. Such application shall identify the emissions unit(s) contributing to the increase in emissions so as to cause the major stationary or GHG-only source's emissions to equal or exceed its PAL.

(b) As part of this application, the major stationary source or GHG-only source owner or operator shall demonstrate that the sum of the baseline actual emissions of the small emissions units, plus the sum of the baseline actual emissions of the significant and major emissions units assuming application of BACT equivalent controls, plus the sum of the allowable emissions of the new or modified emissions unit(s), exceeds the PAL. The level of control that would result from BACT equivalent controls on each significant or major emissions unit shall be determined by conducting a new BACT analysis at the time the application is submitted, unless the emissions unit is currently required to comply with a BACT or LAER requirement that was established within the preceding 10 years. In such a case, the assumed control level for that emissions unit shall be equal to the level of BACT or LAER with which that emissions unit must currently comply.

(c) The owner or operator obtains a major new source review permit for all emissions unit(s) identified in Subparagraph (a) of this paragraph, regardless of the magnitude of the emissions increase resulting from them (that is, no significant levels apply). These emissions unit(s) shall comply with any emissions requirements resulting from the major new source review process (for example, BACT), even though they have also become subject to the PAL or continue to be subject to the PAL.

(d) The PAL permit shall require that the increased PAL level shall be effective on the day any emissions unit that is part of the PAL major modification becomes operational and begins to emit the PAL pollutant.

(2) The department shall calculate the new PAL as the sum of the allowable emissions for each modified or new emissions unit, plus the sum of the baseline actual emissions of the significant and major emissions units (assuming application of BACT equivalent controls as determined in accordance with Subparagraph (b) of Paragraph (1) of this subsection), plus the sum of the baseline actual emissions of the small emissions units.

(3) The PAL permit shall be revised to reflect the increased PAL level pursuant to the public notice requirements of Subsection E of this section.

L. Monitoring requirements for PALs.

(1) General requirements.

(a) Each PAL permit must contain enforceable requirements for the monitoring system that accurately determines plantwide emissions of the PAL pollutant in terms of mass per unit of time or CO₂e per unit of time. Any monitoring system authorized for use in the PAL permit must be based on sound science and meet generally acceptable scientific procedures for data quality and manipulation. Additionally, the information generated by such system must meet minimum legal requirements for admissibility in a judicial proceeding to enforce the PAL permit.

(b) The PAL monitoring system must employ one or more of the four general monitoring approaches meeting the minimum requirements set forth in Paragraph (2) of this subsection and must be approved by the department.

(c) Notwithstanding Subparagraph (b) of this paragraph, you may also employ an alternative monitoring approach that meets Subparagraph (a) of this paragraph if approved by the department.

(d) Failure to use a monitoring system that meets the requirements of this section renders the PAL invalid.

(2) The following are acceptable general monitoring approaches when conducted in accordance with the minimum requirements in Paragraphs (3) through (9) of this subsection:

(a) mass balance calculations for activities using coatings or solvents;

(b) CEMS;

(c) CPMS or PEMS; and

(d) emission factors.

(3) Mass balance calculations. An owner or operator using mass balance calculations to monitor PAL pollutant emissions from activities using coating or solvents shall meet the following requirements:

(a) provide a demonstrated means of validating the published content of the PAL pollutant that is contained in or created by all materials used in or at the emissions unit;

(b) assume that the emissions unit emits all of the PAL pollutant that is contained in or created by any raw material or fuel used in or at the emissions unit, if it cannot otherwise be accounted for in the process; and

(c) where the vendor of a material or fuel, which is used in or at the emissions unit, publishes a range of pollutant content from such material, the owner or operator must use the highest value of the range to calculate the PAL pollutant emissions unless the department determines there is site-specific data or a site-specific monitoring program to support another content within the range.

(4) CEMS. An owner or operator using CEMS to monitor PAL pollutant emissions shall meet the following requirements:

(a) CEMS must comply with applicable performance specifications found in 40 CFR Part 60, Appendix B; and

(b) CEMS must sample, analyze, and record data at least every 15 minutes while the emissions unit is operating.

(5) CPMS or PEMS. An owner or operator using CPMS or PEMS to monitor PAL pollutant emissions shall meet the following requirements:

(a) the CPMS or the PEMS must be based on current site-specific data demonstrating a correlation between the monitored parameter(s) and the PAL pollutant emissions across the range of operation of the emissions unit; and

(b) each CPMS or PEMS must sample, analyze, and record data at least every 15 minutes, or at another less frequent interval approved by the department, while the emissions unit is operating.

(6) Emission factors. An owner or operator using emission factors to monitor PAL pollutant emissions shall meet the following requirements:

(a) all emission factors shall be adjusted, if appropriate, to account for the degree of uncertainty or limitations in the factors' development;

(b) the emissions unit shall operate within the designated range of use for the emission factor, if applicable; and

(c) if technically practicable, the owner or operator of a significant emissions unit that relies on an emission factor to calculate PAL pollutant emissions shall conduct validation testing to determine a site-specific emission factor within 6 months of PAL permit issuance, unless the department determines that testing is not required.

(7) A source owner or operator must record and report maximum potential emissions without considering enforceable emission limitations or operational

restrictions for an emissions unit during any period of time that there is no monitoring data, unless another method for determining emissions during such periods is specified in the PAL permit.

(8) Notwithstanding the requirements in Paragraphs (3) through (7) of this subsection, where an owner or operator of an emissions unit cannot demonstrate a correlation between the monitored parameter(s) and the PAL pollutant emissions rate at all operating points of the emissions unit, the department shall, at the time of permit issuance:

(a) establish default value(s) for determining compliance with the PAL based on the highest potential emissions reasonably estimated at such operating point(s); or

(b) determine that operation of the emissions unit during operating conditions when there is no correlation between monitored parameter(s) and the PAL pollutant emissions is a violation of the PAL.

(9) Revalidation. All data used to establish the PAL pollutant must be revalidated through performance testing or other scientifically valid means approved by the department. Such testing must occur at least once every 5 years after issuance of the PAL.

M. Recordkeeping requirements.

(1) The PAL permit shall require an owner or operator to retain a copy of all records necessary to determine compliance with any requirement of this section and of the PAL, including a determination of each emissions unit's 12-month rolling total emissions, for 5 years from the date of such record.

(2) The PAL permit shall require an owner or operator to retain a copy of the following records, for the duration of the PAL effective period plus 5 years:

(a) a copy of the PAL permit application and any applications for revisions to the PAL; and

(b) each annual certification of compliance pursuant to title V and the data relied on in certifying the compliance.

N. Reporting and notification requirements. The owner or operator shall submit semi-annual monitoring reports and prompt deviation reports to the department in accordance with the applicable title V operating permit program. The reports shall meet the following requirements.

(1) Semi-annual report. The semi-annual report shall be submitted to the department within 30 days of the end of each reporting period. This report shall contain the following information:

(a) the identification of owner and operator and the permit number;

(b) total annual emissions (expressed on a mass-basis in tons per year, or expressed in tons per year CO₂e) based on a 12-month rolling total for each month in the reporting period recorded pursuant to Paragraph (1) of Subsection M of this section;

(c) all data relied upon, including, but not limited to, any quality assurance or quality control data, in calculating the monthly and annual PAL pollutant emissions;

(d) a list of any emissions units modified or added to the major stationary source or GHG-only source during the preceding 6-month period;

(e) the number, duration, and cause of any deviations or monitoring malfunctions (other than the time associated with zero and span calibration checks), and any corrective action taken;

(f) a notification of a shutdown of any monitoring system, whether the shutdown was permanent or temporary, the reason for the shutdown, the anticipated date that the monitoring system will be fully operational or replaced with another monitoring system, and whether the emissions unit monitored by the monitoring system continued to operate, and the calculation of the emissions of the pollutant or the number determined by method included in the permit, as provided by Paragraph (7) of Subsection L of this section; and

(g) a signed statement by the responsible official (as defined by the applicable title V operating permit program) certifying the truth, accuracy, and completeness of the information provided in the report.

(2) Deviation report. The major stationary source or GHG-only source owner or operator shall promptly submit reports of any deviations or exceedance of the PAL requirements, including periods where no monitoring is available. A report submitted pursuant to Paragraph (2) of Subsection E of 20.2.70.302 NMAC shall satisfy this reporting requirement. The deviation reports shall be submitted within the time limits prescribed by the applicable program implementing Paragraph (2) of Subsection E of 20.2.70.302 NMAC. The reports shall contain the following information:

(a) the identification of owner and operator and the permit number;

(b) the PAL requirement that experienced the deviation or that was exceeded;

(c) emissions resulting from the deviation or the exceedance; and

(d) a signed statement by the responsible official (as defined by the applicable title V operating permit program) certifying the truth, accuracy, and completeness of the information provided in the report.

(3) Revalidation results. The owner or operator shall submit to the department the results of any revalidation test or method within three months after completion of such test or method.

O. Transition requirements.

(1) The department may not issue a PAL that does not comply with the requirements in this section after the administrator has approved regulations incorporating these requirements into a plan.

(2) The department may supersede any PAL which was established prior to the date of approval of the plan by the administrator with a PAL that complies with the requirements of this section.

[20.2.74.320 NMAC - N, 1/22/06; A, 1/1/11; A, 2/6/13]

20.2.74.321-20.2.74.399 [RESERVED]

20.2.74.400 PUBLIC PARTICIPATION AND NOTIFICATION:

A. The Department shall, within thirty (30) days after receipt of an application, review such application and determine whether it is administratively complete or there is any deficiency in the application or information submitted. To be deemed administratively complete, the application must meet the requirements of 20.2.74.301 NMAC in addition to the requirements of 20.2.72 NMAC. If the application is deemed:

(1) administratively complete, a letter to that effect shall be sent by certified mail to the applicant.

(2) administratively incomplete, a letter shall be sent by certified mail to the applicant stating what additional information or points of clarification are necessary to deem the application administratively complete. Upon receipt of the additional information or clarification, the Department shall promptly review such information and determine whether the application is administratively complete.

(3) administratively complete but no permit is required, a letter shall be sent by certified mail to the applicant informing the applicant of the determination.

B. For purposes of determining minor source baseline date pursuant to 40 CFR 51:

(1) An application is complete when it contains all the information necessary for processing the application. Designating an application complete for purposes of 40 CFR 51 does not preclude the Department from requesting or accepting any additional information; and

(2) In the event that additional information is submitted to remedy any deficiency in the application or information submitted, the date of receipt of the application shall be the date on which the Department received all required information.

C. The Department shall:

(1) Make a preliminary determination whether construction should be approved, approved with conditions, or disapproved.

(2) Make available at the Department district and local office nearest to the proposed source a copy of all materials the applicant submitted, a copy of the preliminary determination, and a copy or summary of other materials, if any, considered in making the preliminary determination.

(3) Notify the public by advertisement in a newspaper of general circulation in the area in which the proposed source would be constructed:

(a) Of the application,

(b) The preliminary determination,

(c) The degree of increment consumption that is expected from the source or modification, and

(d) Of the opportunity for comment at a public hearing as well as written public comment. The public comment period shall be for thirty (30) days from the date of such advertisement.

(4) Send a copy of the notice of public comment to:

(a) The applicant,

(b) The Administrator, and

(c) Officials and agencies having jurisdiction over the location where the proposed construction would occur as follows:

(i) Any other state or local air pollution control agencies;

(ii) The chief executives of the city and county where the source would be located;

(iii) Any comprehensive regional land use planning agency; and

(iv) Any state, Federal Land Manager, or Indian governing body whose lands may be affected by emissions from the source or modification.

(5) Provide opportunity for a public hearing for interested persons to appear and submit written or oral comments on the air quality impact of the source and other appropriate considerations.

(6) Consider all written comments submitted within a time specified in the notice of public comment and all comments received at any public hearing(s) in making a final decision on the approvability of the application. The Department shall make all comments available for public inspection in the same locations where the Department made available preconstruction information relating to the source.

(7) Within one hundred eighty (180) days after an application is deemed administratively complete, unless the Secretary, as specified in 20.2.72.207 NMAC, grants an extension not to exceed ninety (90) days for good cause:

(a) make a final determination of whether construction should be approved, approved with conditions, or disapproved; and

(b) notify the applicant in writing of the final determination and make such notification available for public inspection at the same location where the Department made available preconstruction information and public comments relating to the source.

[07/20/95; 01/01/00; 20.2.74.400 NMAC - Rn, 20 NMAC 2.74.400, 10/31/02]

20.2.74.401 STACK HEIGHT CREDIT:

The Department shall review all applications in accordance with the provisions of 20.2.80 NMAC (Stack Heights) (formerly Air Quality Control Regulation 710 -- Stack Height Requirements).

[07/20/95; 20.2.74.401 NMAC - Rn, 20 NMAC 2.74.401, 10/31/02]

20.2.74.402 EXCLUSIONS FROM INCREMENT CONSUMPTION:

Following a public hearing, the Secretary may exclude the following concentrations in determining compliance with a maximum allowable increase:

A. Concentrations due to the increase in emissions from stationary sources, over the emissions from such sources before the effective date of an order under sections 2(a) and (b) of the Energy Supply and Environmental Coordination Act of 1974 (or any superseding legislation). Sources must have converted from the use of petroleum products, natural gas, or both by reason of such order. This exclusion shall not apply more than five (5) years after the effective date of such an order; or

B. Concentrations due to the increase in emissions from sources, over the emissions from such sources before the effective date of a plan in effect pursuant to the Federal Power Act. Sources must have converted from using natural gas by reason of a

natural gas curtailment plan. This exclusion shall not apply more than five (5) years after the effective date of such a plan; or

C. Concentrations of particulate matter due to the increase in emissions from construction or other temporary emission-related activities of new or modified sources; or

D. The increase in concentrations due to new sources outside the United States over the concentrations attributed to existing sources which are included in the baseline concentrations.

[07/20/95; 20.2.74.402 NMAC - Rn, 20 NMAC 2.74.402, 10/31/02]

20.2.74.403 ADDITIONAL REQUIREMENTS FOR SOURCES IMPACTING CLASS I FEDERAL AREAS:

A. The department shall transmit to the administrator and the federal land manager a copy of each permit application relating to a major stationary source or major modification proposing to locate within one hundred (100) kilometers of any Class I federal area. The complete permit application shall be transmitted within thirty (30) days of receipt and sixty (60) days prior to any public hearing on the application. The department shall include all relevant information in the permit application. Relevant information shall include an analysis of the proposed source's anticipated impacts on visibility in the Class I federal area. The department shall consult with all affected federal land managers as to the completeness of the permit application and shall consider any analysis performed by the federal land manager concerning the impact of the proposed major stationary source or major modification on air quality related values. This consideration shall include visibility, if such analysis is received within thirty (30) days after the federal land manager receives a copy of the complete application. Additionally, the department shall notify any affected federal land manager within thirty days (30) from the date the department receives a request for a pre-application meeting from a proposed source subject to this part. Notice shall be provided to the administrator and federal land manager of every action related to the consideration of such permit. The department shall also provide the federal land manager and the administrator with a copy of the preliminary determination required under 20.2.74.400 NMAC and shall make available to them any materials used in making that determination. In any case where the department disagrees with the federal land manager's analysis of source impact on air quality related values, the department shall, either explain its decision or give notice to the federal land manager as to where the explanation can be obtained. In the case where the department disagrees with the federal land managers' analysis, the department will also explain its decision or give notice to the public by advertisement in a newspaper of general circulation in the area in which the proposed source would be constructed, as to where the decision can be obtained.

B. The department shall transmit to air quality control agencies of neighboring states and Indian governing bodies a copy of each permit application having the potential to affect Class I federal areas or increment consumption in areas under their jurisdiction. The department shall also provide the affected air quality control agencies and Indian governing bodies with a copy of the preliminary determination required under 20.2.74.400 NMAC and shall make available to them any materials used in making that determination. The department shall include a provision for a sixty (60) day comment period for the federal land managers before any public hearing on a permit application is held.

C. Federal land managers may demonstrate to the department that emissions from a proposed source or modification would have an adverse impact on air quality related values, including visibility, of any Class I federal lands under their jurisdiction. This may be done even though the change in air quality resulting from emissions from the proposed source or modification would not cause or contribute to concentrations which would exceed the maximum allowable increases for a Class I federal area. If the department concurs with this demonstration, then the source shall not be issued a permit.

D. Class I waivers: The owner or operator of a proposed source or modification may demonstrate to the federal land manager that the emissions from a proposed source or modification would have no adverse impact on air quality related values, including visibility, of Class I federal lands under his or her jurisdiction. This may be done even though the change in air quality resulting from emissions from such source or modification would cause or contribute to concentrations which would exceed the maximum allowable increases for a Class I federal area. If the federal land manager concurs with such demonstration and so certifies to the department, the department may grant a waiver from such maximum allowable increases. Emission limitations must be included in the permit as necessary to assure that emissions of sulfur dioxide, PM₁₀, PM_{2.5}, and nitrogen oxides would not exceed the maximum allowable increases over minor source baseline concentrations shown in Table 5 of this part (20.2.74.505 NMAC).

E. For the case where the federal land manager does not perform an impact analysis with respect to visibility impairment in a Class I federal area, the department may perform such an analysis. The department shall not issue the source a permit if the department determines that an adverse impact on visibility would occur. The adverse impact must be due, primarily, to the operation of the proposed source or modification.

F. Sulfur dioxide waiver by governor: The owner or operator of a proposed major stationary source or major modification, which cannot be approved under Subsection D of 20.2.74.403 NMAC, may demonstrate to the governor that the source cannot be constructed by reason of an exceedance of a maximum allowable increase for a Class I federal area for sulfur dioxide for a period of twenty-four (24) hours or less. The owner or operator may also demonstrate that a waiver from this requirement would not adversely affect the air quality related values of the Class I federal area. The governor,

after consideration of the federal land manager's recommendation and subject to his concurrence, may, after notice and public hearing, grant a waiver from such maximum allowable increase. If the waiver is granted, the department shall issue a permit to the owner or operator of the source or modification. Any owner or operator of a source or modification who obtains a permit under this section shall comply with sulfur dioxide emissions limitations. These limitations do not allow increases of ambient concentrations, above the baseline concentration, to exceed the levels found in Table 6 of this part (20.2.74.506 NMAC) for periods of twenty-four (24) hours or less for more than eighteen (18) days, not necessarily consecutive, in any annual period.

G. Sulfur dioxide waiver by governor with the president's concurrence. In any case where the governor recommends a waiver in which the federal land manager does not concur, the recommendations of the governor and the federal land manager shall be transmitted to the president through the office of the governor. If the president so directs, the department shall issue the permit. Any source or modification that obtains a permit under this section shall comply with sulfur dioxide emissions limitations. These limitations do not allow increases in ambient concentrations, above the baseline concentration, to exceed the levels found in Table 6 of this part (20.2.74.506 NMAC) for periods of twenty-four (24) hours or less for more than eighteen (18) days, not necessarily consecutive, in any annual period.

20.2.74.502 TABLE 2 - SIGNIFICANT EMISSION RATES:

POLLUTANT	EMISSION RATE (TONS/YR)
Carbon monoxide	100
Fluorides	3

Lead	0.6
Municipal waste combustor	
Acid gases (measured as sulfur dioxide and hydrogen chloride)	40 (36 megagrams/year)
Metals (measured as particulate matter)	15 (14 megagrams/year)
Organics (measured as total tetra- through octa-chlorinated dibenzo-p-dioxins and dibenzofurans)	0.0000035 (0.0000032 megagrams/yr)
Nitrogen oxides	40
Ozone (Volatile Organic Compounds or nitrogen oxides)	40
Particulate Matter	
Particulate matter emissions	25
PM ₁₀ emissions	15
Particulate Matter _{2.5}	
Direct PM _{2.5} emissions	10
Sulfur dioxide emissions	40
Nitrogen oxide emissions (unless demonstrated not to be a PM _{2.5} precursor under Subsection AS of 20.2.74.7 NMAC)	40
Sulfur compounds	
Hydrogen sulfide (H ₂ S)	10
Reduced sulfur compounds (incl. H ₂ S)	10
Sulfur dioxide	40
Sulfuric acid mist	7
Total reduced sulfur (incl. H ₂ S)	10
Any other pollutant regulated under the act that is not listed in this table	Any emission rate
Each regulated pollutant	Emission rate or net emissions increase associated with a major stationary source or major modification that causes an air quality impact of one microgram per cubic meter or greater (24-hr average) in any class I federal area located within 10 km of the source.

[07/20/95; 20.2.74.502 NMAC - Rn, 20 NMAC 2.74 Table 2, 10/31/02; A, 1/22/06; A, 8/31/09; A, 6/3/11]

20.2.74.503 TABLE 3 - SIGNIFICANT MONITORING CONCENTRATIONS:

POLLUTANT	AIR QUALITY CONCENTRATION	AVERAGING TIME
	micrograms per cubic meter	
Carbon monoxide	575	8 hours
Fluorides	0.25	24 hours
Lead	0.1	3 months
Nitrogen dioxide	14	Annual
Ozone	b	
PM ₁₀	10	24 hours
PM _{2.5}	0 ^c	
Sulfur compounds		
Hydrogen sulfide (H ₂ S)	0.20	1 hour
Reduced sulfur compounds (incl. H ₂ S)	10	1 hour
Sulfur dioxide	13	24 hours
Sulfuric acid mist	a	
Total reduced sulfur (incl. H ₂ S)	10	1 hour
a - No acceptable monitoring techniques available at this time. Therefore, monitoring is not required until acceptable techniques are available.		
b - No de minimis air quality level is provided for ozone. However, any net increase of 100 tons per year or more of volatile organic compounds or nitrogen oxides subject to PSD would be required to perform an ambient impact analysis, including the gathering of ambient air quality data.		
c - In accordance with <i>Sierra Club v. EPA</i> , 706 F.3d 428 (DC Cir. 2013), no exemption is available with regard to PM _{2.5} .

PART 75: CONSTRUCTION PERMIT FEES

20.2.75.1 ISSUING AGENCY:

Environmental Improvement Board.

[20.2.75.1 NMAC - Rp 20 NMAC 2.75.100, 03/02/01]

20.2.75.2 SCOPE:

A. All persons who apply for a permit to construct or modify a source or revise a permit, or who request a technical review of an existing permit under 20.2.72 NMAC. Part 70 (20.2.70 NMAC) operating permit emission fees are covered under 20.2.71 NMAC.

B. The requirements concerning the payment of an annual fee shall apply to sources with an air quality construction permit for which the application to either revise, modify or for a new permit was received following the effective date of this regulation.

[20.2.75.2 NMAC - Rp 20 NMAC 2.75.101, 03/02/01]

20.2.75.3 STATUTORY AUTHORITY:

Environmental Improvement Act, Paragraph 4 of Subsection A of Section 74-1-8 NMSA 1978, and Air Quality Control Act, Chapter 74, Article 2 NMSA 1978, including specifically, Paragraph 6 of Subsection B of Section 74-2-7 NMSA 1978.

[20.2.75.3 NMAC - Rp 20 NMAC 2.75.102, 03/02/01]

20.2.75.4 DURATION:

Permanent.

[20.2.75.4 NMAC - Rp 20 NMAC 2.75.103, 03/02/01]

20.2.75.5 EFFECTIVE DATE:

March 2, 2001 except where a later date is cited at the end of a section.

A. For applications received prior to the effective date of this regulation, the provisions in 20.2.75 NMAC, as effective as of the date of the receipt of the application, remain effective, and fees shall be so determined.

B. For applications received following the effective date of this regulation, fees shall be based on the current regulation.

[20.2.75.5 NMAC - Rp 20 NMAC 2.75.104, 03/02/01; A, 12/01/03]

[The latest effective date of any section in this Part is 12/01/03.]

20.2.75.6 OBJECTIVE:

The objective of this Part is to establish a schedule of fees for the construction permit program, including construction permits, permit revisions, and technical reviews of existing permits.

[20.2.75.6 NMAC - Rp 20 NMAC 2.75.105, 03/02/01]

20.2.75.7 DEFINITIONS:

In addition to the terms defined in 20.2.2 NMAC (definitions) or 20.2.72 NMAC (construction permits), as used in this Part:

A. "air toxics review" means the required review of a permit application for the potential emission of an air toxic regulated by 20.2.72.400 NMAC - 20.2.72.499 NMAC. As used in this Part, a level I air toxics review consists of modeling to determine whether one one-hundredth (1/100) of the occupational exposure limit, as defined in 20.2.72.401 NMAC, is met; a level II air toxics review consists of either a health assessment or best available control technology (BACT) determination, whichever is required by 20.2.72.400 NMAC - 20.2.72.499 NMAC.

B. "applicable regulations", for the purpose of assessing permit fee points, mean those regulations that are applicable to the source and not the review to determine whether the regulation is applicable. Applicable regulations do not include 20.2.1 NMAC (general provisions), 20.2.2 NMAC (definitions), 20.2.3 NMAC (ambient air quality standards), 20.2.5 NMAC (source surveillance), 20.2.7 NMAC (excess emissions during malfunctions, startup, shutdown, or scheduled maintenance), 20.2.8 NMAC (emissions leaving New Mexico), 20.2.60 NMAC (open burning), 20.2.70 NMAC (operating permits), 20.2.71 NMAC (operating permit emission fees), 20.2.72 NMAC (construction permits), 20.2.73 NMAC (notice of intent and emission inventory requirements), 20.2.74 NMAC (prevention of significant deterioration (PSD)), 20.2.75 NMAC (construction permit fees), 20.2.77 NMAC (new source performance standards), 20.2.78 NMAC (emission standards for hazardous air pollutants), 20.2.79 NMAC (permits - nonattainment areas), 20.2.80 NMAC (stack heights), and 20.2.82 NMAC (maximum achievable control technology standards for source categories of hazardous air pollutants). All other Title 20, Chapter 2 NMAC Parts and all new source performance standards (excluding Subpart A) and national emission standards for hazardous air pollutants/maximum achievable control technology (NESHAP/MACT) (excluding 40 CFR Part 61 Subparts A and M and 40 CFR Part 63 Subpart A) regulations that are applicable to the source shall be counted and shall result in additional points for permit fees purposes, in accordance with the permit fee schedule in this Part.

C. "fee unit" means any equipment or process which generates, creates, or is the source of a regulated air contaminant, which is listed or identified in a construction permit application or application to revise a permit and which requires review and evaluation against state and federal regulations and standards. This definition does not

include sources which are exempt under 20.2.72.202 NMAC or sources for which no applicable requirements are identified in the permit. In the case of a permit modification, revision or technical review of an existing permit, the requirements of Subsection A of 20.2.75.11 NMAC apply only to the equipment or process involved in such modification, revision or review.

D. "fugitive emissions fee unit" means sources of fugitive emissions for which applicable requirements are identified in the permit. A maximum of one fugitive emissions fee unit shall be applied to any given application.

E. "revision" means any change requested by an applicant to any term or condition of a permit including but not limited to emission limitations, control technology, operating conditions and monitoring requirements. For the purposes of this regulation, revision does not include administrative revision as used in 20.2.72 NMAC.

F. "small business" means, for the purposes of this Part, a company that employs no more than ten (10) employees at any time during the calendar year. Employees include part-time, temporary, or limited service workers. For new sources, the responsible company official shall certify that the source does not expect to employ any more than ten (10) employees in the first year of operations. In addition, "small business" does not include (1) any source which may emit more than fifty (50) tons per year of any regulated air contaminant for which there is a national or New Mexico ambient air quality standard, or seventy-five (75) tons per year of all regulated air contaminants for which there are national or New Mexico ambient air quality standards; and (2) any major source for hazardous air pollutants under 20.2.70 NMAC.

G. "technical review of an existing permit" means the department's technical review of new information submitted by a permittee as required by an existing permit condition and in conjunction with proposed changes at the source that do not involve any changes to the existing permit. The review must be necessary to demonstrate that all applicable state and federal regulations and standards will continue to be met and that the existing permit will continue to be valid. This does not include required periodic reports.

[20.2.75.7 NMAC - Rp 20 NMAC 2.75.107, 03-02-01; A, 12/01/03]

20.2.75.8 AMENDMENT AND SUPERSESSION OF PRIOR REGULATIONS:

This Part amends and supersedes Air Quality Control Regulation 700 - Filing and Permit Fees, filed November 20, 1989, as amended (AQCR 700).

A. All references to AQCR 700 in any other rule shall be construed as a reference to this Part.

B. The amendment and supersession of AQCR 700 shall not affect any administrative or judicial enforcement action pending on the effective date of such amendment nor the validity of any permit issued pursuant to AQCR 700.

[20.2.75.8 NMAC - Rp 20 NMAC 2.75.106, 03/02/01]

20.2.75.9 DOCUMENTS:

Documents cited in this Part may be viewed at the New Mexico Environment Department, Air Quality Bureau, Santa Fe, NM.

[20.2.75.9 NMAC - Rp 20 NMAC 2.75.108, 03/02/01]

20.2.75.10 FILING FEE:

A. A filing fee of five hundred dollars (\$500) shall be submitted with each filing of a notice of intent, application for a permit to construct or modify a source, or revision of a permit. The filing fee shall be applied to the total permit fee determined from the fee schedule in 20.2.75.11 NMAC.

B. For applications submitted under 20.2.72.221 NMAC, accelerated review, an accelerated review filing fee of one thousand dollars (\$1,000) shall be submitted in lieu of any other filing fees under this section. One-half of the accelerated review filing fee shall be applied to the cost of the accelerated review submitted by the qualified outside firm. In the event that:

(1) There are no qualified outside firms on contract with the department, or if all of the qualified outside firms have a conflict of interest, the entire filing fee shall be applied to the total permit fee determined from the fee schedule in 20.2.75.11 NMAC;

(2) No qualified outside firm submits a proposal for the accelerated permit review, one-half of this filing fee shall be applied to the total permit fee determined from the fee schedule in 20.2.75.11 NMAC;

(3) One or more qualified outside firms submit a proposal but all such proposals are rejected by the applicant, the accelerated review filing fee shall be forfeited and retained by the department; or

(4) The applicant withdraws the application for any reason, the accelerated review filing fee shall be forfeited and retained by the department.

[20.2.75.10 NMAC - Rp 20 NMAC 2.75.109, 03/02/01; A, 12/01/03]

20.2.75.11 PERMIT FEE:

A. The permit fee shall be based on the following point-based fee schedule.

ACTION	# OF POINTS
1. CONSTRUCTION PERMIT/TECHNICAL REVIEW OF EXISTING PERMIT	
Technical Complexity	
1-5 Fee Units	5
6-15 Fee Units	1 point per fee unit
>15 Fee Units	15
Fugitive Emissions Fee Unit	5
Portable Source Relocation	1
(Paragraph 3 of Subsection D of 20.2.72.202 NMAC)	
Non-Attainment Area (20.2.79 NMAC)	75
Modeling Review	15
Air Toxics Review (20.2.72.400 NMAC - 20.2.72.499 NMAC)	
Level I	8
Level II	
Best Available Control Technology (BACT)	60
Analysis	
Health Assessment	100
Applicable Regulations	
20.2.X NMAC (per each)	3
NSPS (per each)	5
NESHAP/MACT (per each)	5
Case-by-Case MACT (20.2.83 NMAC)	100
PSD netting only (no additional PSD analysis is required)	20
PSD review (including netting) (20.2.74 NMAC)	75
2. OTHER PERMITTING ACTIONS	
General Permits (20.2.72.220 NMAC)	10
Streamline (each site) (20.2.72.300 NMAC- 20.2.72.399 NMAC)	10

B. The fee shall be the sum of all of the points that are applicable to the permitting action, multiplied by three hundred fifteen dollars (\$315).

C. For sources that satisfy the definition of "small business" as defined in Subsection F of 20.2.75.7 NMAC, the permit fee determined by Subsections B and E of 20.2.75.11 NMAC shall be divided by two.

D. For applications processed under 20.2.72.221 NMAC, Accelerated Review, the permit fee determined by Subsection B of 20.2.75.11 NMAC shall be divided by two, and shall be in addition to the cost of the accelerated review bid, as described in 20.2.72.221 NMAC.

E. Sources that have been issued a construction permit under 20.2.72 NMAC shall be assessed an annual fee of one thousand five hundred dollars (\$1,500). This fee shall

not apply to sources which are assessed an annual fee in accordance with 20.2.71 NMAC.

F. Beginning in 2005, the cost per point in Subsection B of this section and the annual fee in Subsection E of this section shall be adjusted each year on January 1 to reflect the increase, if any, by which the consumer price index for the most recent year exceeds the consumer price index for the year 2004. The amount of the change in the fee shall be determined by multiplying the existing fee by the change in the consumer price index and rounding the result to the nearest dollar. The consumer price index for any year is the average of the consumer price index for all-urban consumers published by the United States department of labor, as of the close of the twelve-month period ending on August 31 of that year.

[20.2.75.11 NMAC - Rp 20 NMAC 2.75.110, 03/02/01; A, 12/01/03]

20.2.75.12 PAYMENT OF FEES:

A. The Department shall refuse to accept any permit application without payment of the filing fee at the time the application is received by the Department. The filing fee and the accelerated review filing fee are non-refundable.

B. An invoice for permit fees shall be mailed to the applicant at the time the Department finds the application administratively complete pursuant to 20.2.72.203 NMAC. The Department shall deny any permit application or request for permit revision if the required permit fee has not been paid within thirty (30) days of invoicing, unless the Department has granted an extension. If, upon completion of the permit review, the Department determines additional fees are due, the Department shall mail an invoice to the applicant along with the signed permit. The permittee shall pay this invoice within thirty (30) days of invoicing, unless the Department has granted an extension. In the event excess fees were paid, the Department shall issue a refund for excess fees and mail the refund to the applicant.

C. An invoice for a request for technical review of an existing permit shall accompany the Department's response. The applicant or permittee shall pay for the review within thirty (30) days of invoicing.

D. Except for the refund of excess fees paid, all fees paid under this Part shall be non-refundable.

E. All fees paid pursuant to this Part shall be remitted in the form of a corporate or certified check or money order made payable to the Environment Department at the address specified in the notice. Upon receipt of the check, it shall be deposited in the "state air quality permit fund" established by NMSA 1978, 74-2-15 (1992).

F. Permittees shall pay annual fees within thirty (30) days of receipt of an invoice for annual fees for a permitted facility.

G. All fees shall be paid in U.S. dollars.

[20.2.75.12 NMAC - Rp 20 NMAC 2.75.111, 03/02/01]

20.2.75.13 PERIODIC REVIEW:

The Department shall prepare a review of the construction permit fees and construction permit program costs annually. The review shall include information on the budgets, expenditures, fund balance, and related projections. The review shall be presented to the Board within six months following the end of the fiscal year.

[20.2.75.13 NMAC - N, 03/02/01]

PART 76: [RESERVED]

PART 77: NEW SOURCE PERFORMANCE STANDARDS

20.2.77.1 ISSUING AGENCY:

New Mexico Environmental Improvement Board.

[06/16/95; 20.2.77.1 NMAC - Rn, 20 NMAC 2.77.100, 06/23/00]

20.2.77.2 SCOPE:

Any stationary source constructing or modifying and which is subject to the requirements of 40 CFR Part 60, as amended through June 28, 2023.

[06/16/1995, 11/19/1997, 09/08/1999; 20.2.77.2 NMAC - Rn & A, 20 NMAC 2.77.101, 06/23/2000; A, 02/18/2002; A, 06/13/2003; A, 06/15/2007; A, 08/17/2009; A, 09/02/2011; A, 12/19/2013; A, 1/29/2016; A, 5/30/2017; A, 12/19/2023]

20.2.77.3 STATUTORY AUTHORITY:

The environmental improvement board "shall promulgate regulations and standards in...air quality management" (Section 74-1-8.A NMSA 1978) and "regulations adopted by the environmental improvement board...shall...ensure that regulations and standards under...the federal act will not be violated" (Section 74-2-7.B NMSA 1978).

[06/16/95; 20.2.77.3 NMAC - Rn, 20 NMAC 2.77.102, 06/23/00]

20.2.77.4 DURATION:

Permanent.

[06/16/95; 20.2.77.4 NMAC - Rn, 20 NMAC 2.77.103, 06/23/00]

20.2.77.5 EFFECTIVE DATE:

June 16, 1995, except where a later date is cited at the end of a section.

[06/16/95, 08/02/96; 20.2.77.5 NMAC - Rn, 20 NMAC 2.77.104, 6/23/00]

[The latest effective date of any section in this part is May 30, 2017.]

20.2.77.6 OBJECTIVE:

The objective of Part 77 of Chapter 2 is to adopt or establish state authority to implement new source performance standards for stationary sources in New Mexico subject to 40 CFR Part 60.

[06/16/95; 20.2.77.6 NMAC - Rn, 20 NMAC 2.77.105, 06/23/00]

20.2.77.7 DEFINITIONS:

[RESERVED]

[20.2.77.7 NMAC - N, 06/23/00]

20.2.77.8 AMENDMENT AND SUPERSESSION OF PRIOR REGULATIONS:

This part amends and supersedes Air Quality Control Regulation (AQCR) 750, last filed on April 10, 1994. All references to AQCR 750 in any other rule shall be understood as a reference to this part.

[06/16/95; 20.2.77.8 NMAC - Rn, 20 NMAC 2.77.106, 06/23/00]

20.2.77.9 ADOPTION OF 40 CFR PART 60:

Except as otherwise provided, the new source performance standards as promulgated by the United States environmental protection agency, 40 CFR Part 60, as amended in the Federal Register through June 28, 2023 are hereby incorporated into this part (20.2.77 NMAC).

[06/16/1995, 08/02/1996, 11/19/1997, 09/08/1999; 20.2.77.9 NMAC - Rn & A, 20 NMAC 2.77.107, 06/02/2000; A, 02/18/2002; A, 06/13/2003; A, 06/15/2007; A, 08/17/2009; A, 09/02/2011; A, 12/19/2013; A, 1/29/2016; A, 5/30/2017; A, 12/19/2023]

20.2.77.10 MODIFICATIONS AND EXCEPTIONS:

The following modifications or exceptions are made to the incorporated federal standards:

A. Amend 40 CFR Part 60, Section 60.2, Definitions, as follows: For the purposes of delegation of authority which the administrator of the United States environmental protection agency may, at the administrator's discretion, delegate to the secretary of the New Mexico environment department, "administrator" means the secretary of the department or the secretary's authorized representative.

B. Exclude 40 CFR - Part 60, Subpart AAA - Standards of Performance for New Residential Wood Heaters.

C. The federal standards of performance incorporated by this regulation shall not be subject to NMSA 1978, Section 74-2-8 (Variances).

D. Exclude 40 CFR Part 60, Subpart QQQQ – Standards of Performance for New Residential Hydronic Heaters and Forced-Air Furnaces.

[06/16/95; 20.2.77.10 NMAC - Rn, 20 NMAC 2.77.108, 06/23/00; A, 06/15/07; A, 1/29/16]

20.2.77.11 DOCUMENTS:

Documents incorporated and cited in this part may be viewed at the New Mexico environment department, air quality bureau.

[06/16/95; 20.2.77.11 NMAC - Rn, 20 NMAC 2.77.109, 06/23/00; A, 08/17/09; A, 1/29/16]

[As of April 2013, the air quality bureau is located at 525 Camino de los Marquez, Santa Fe NM, 87505]

PART 78: EMISSION STANDARDS FOR HAZARDOUS AIR POLLUTANTS

20.2.78.1 ISSUING AGENCY:

New Mexico Environmental Improvement Board.

[06/16/95; 20.2.78.1 NMAC - Rn, 20 NMAC 2.78.100 06/23/00]

20.2.78.2 SCOPE:

All sources emitting hazardous air pollutants which are subject to the requirements of 40 CFR Part 61, as amended through June 28, 2023.

[06/16/1995, 11/19/97, 09/08/1999; 20.2.78.2 NMAC - Rn 20 NMAC 2.78.101 & A, 06/23/2000; A, 02/18/2002; A, 06/08/2007; A, 08/17/2009; A, 09/02/2011; A, 1/29/2016; A, 5/30/2017; A, 12/19/2023]

20.2.78.3 STATUTORY AUTHORITY:

The environmental improvement board "shall promulgate regulations and standards in...air quality management" (Subsection (A) of Section 74-1-8 NMSA 1978) and

"regulations adopted by the environmental improvement board...may...prescribe standards of performance for sources and emissions standards for hazardous air pollutants..." (Subsection (D) of Section 74-2-5 NMSA 1978).

[06/16/1995; 20.2.78.3 NMAC - Rn, 20 NMAC 2.78.102 06/23/2000; A, 12/19/2023]

20.2.78.4 DURATION:

Permanent.

[06/16/95; 20.2.78.4 NMAC - Rn, 20 NMAC 2.78.103 06/23/00]

20.2.78.5 EFFECTIVE DATE:

June 16, 1995, except where a later date is cited at the end of a section.

[06/16/95, 08/02/96; 20.2.78.5 NMAC - Rn, 20 NMAC 2.78.104 06/23/00]

[The latest effective date of any section in this part is May 30, 2017.]

20.2.78.6 OBJECTIVE:

The objective of Part 78 of Chapter 2 is to adopt or establish state authority to implement emission standards for hazardous air pollutants in New Mexico subject to 40 CFR Part 61.

[06/16/95; 20.2.78.6 NMAC - Rn, 20 NMAC 2.78.105 06/23/00]

20.2.78.7 DEFINITIONS:

[RESERVED]

[20.2.78.7 NMAC - N, 06/23/00]

20.2.78.8 AMENDMENT AND SUPERSESSION OF PRIOR REGULATIONS:

This part amends and supersedes Air Quality Control Regulation (AQCR) 751, last filed on April 10, 1994. All references to AQCR 751 in any other rule shall be understood as a reference to this part.

[06/16/95; 20.2.78.8 NMAC - Rn, 20 NMAC 2.78.106 06/23/00]

20.2.78.9 ADOPTION OF 40 CFR PART 61:

Except as otherwise provided, the national emission standards for hazardous air pollutants as promulgated by the United States environmental protection agency, 40

CFR Part 61, as amended in the Federal Register through June 28, 2023 are hereby incorporated into this part (20.2.78 NMAC).

[06/16/1995, 08/02/1996, 11/19/1997, 09/08/1999; 20.2.78.9 NMAC - Rn 20 NMAC 2.78.107 & A, 06/23/2000; A, 02/18/2002; A, 06/08/2007; A, 08/1720/09; A, 09/02/2011; A, 1/29/2016; A, 5/30/2017; A, 12/19/2023]

20.2.78.10 MODIFICATIONS AND EXCEPTIONS:

The following modifications or exceptions are made to the incorporated federal standards:

A. amend 40 CFR Part 61, Section 61.02, Definitions, as follows: For the purposes of delegation of authority which the administrator of the United States environmental protection agency may, at the administrator's discretion, delegate to the secretary of the New Mexico environment department, "administrator" means the secretary or the secretary's authorized representative.

B. exclude 40 CFR Part 61, Subparts B (National Emission Standards for Radon Emissions from Underground Uranium Mines), H (National Emission Standards for Emissions of Radionuclides Other Than Radon from Department of Energy Facilities), I (National Emission Standards for Radionuclide Emissions from Facilities Licensed by the NRC and Federal Facilities not covered by Subpart H), K (National Emission Standard for Radionuclide Emissions from Elemental Phosphorus Plants), Q (National Emission Standards for Radon Emissions from Department of Energy Facilities), R (National Emission Standards for Radon Emissions from Phosphogypsum Stacks), T (National Emission Standards for Radon Emissions from the Disposal of Uranium Mill Tailings), and W (National Emission Standards for Radon Emissions from Operating Mill Tailings).

C. the federal emission standards incorporated by this regulation shall not be subject to NMSA 1978, Section 74-2-8 (Variances).

[06/16/95; 20.2.78.9 NMAC - Rn, 20 NMAC 2.78.108 06/23/00; A, 1/29/16]

20.2.78.11 DOCUMENTS:

Documents incorporated and cited in this part may be viewed at the New Mexico environment department, air quality bureau.

[06/16/95; 20.2.78.11 NMAC - Rn, 20 NMAC 2.78.109 06/23/00; A, 08/17/09; A, 1/29/16]

[As of April 2013, the air quality bureau is located at 525 Camino de los Marquez, Suite 1, Santa Fe NM, 87505]

PART 79: PERMITS - NONATTAINMENT AREAS

20.2.79.1 ISSUING AGENCY:

Environmental Improvement Board.

[11/30/95; 20.2.79.1 NMAC - Rn, 20 NMAC 2.79.100, 10/31/02]

20.2.79.2 SCOPE:

All persons who intend to construct or modify a source, except as otherwise provided by this Part.

[11/30/95; 20.2.79.2 NMAC - Rn, 20 NMAC 2.79.101, 10/31/02]

20.2.79.3 STATUTORY AUTHORITY:

Environmental Improvement Act, NMSA 1978, section 74-1-8(A)(4), and Air Quality Control Act, NMSA 1978, sections 74-2-1 et seq., including specifically, sections 74-2-5(C)(1) and 74-2-7(A)(1), (B), (C) and (D).

[11/30/95; 20.2.79.3 NMAC - Rn, 20 NMAC 2.79.102, 10/31/02]

20.2.79.4 DURATION:

Permanent.

[11/30/95; 20.2.79.4 NMAC - Rn, 20 NMAC 2.79.103, 10/31/02]

20.2.79.5 EFFECTIVE DATE:

November 30, 1995 except where a later date is cited at the end of a section.

[11/30/1995; A, 10/01/1997; 20.2.79.5 NMAC - Rn, 20 NMAC 2.79.104, 10/31/2002; A, 8/21/2021]

20.2.79.6 OBJECTIVE:

The objective of this Part is to establish the requirements for obtaining a nonattainment area permit.

[11/30/95; 20.2.79.6 NMAC - Rn, 20 NMAC 2.79.105, 10/31/02]

20.2.79.7 DEFINITIONS:

In addition to the terms defined in 20.2.2.7 NMAC (Definitions), as used in this part, the following terms apply.

A. "Actual emissions" means the actual rate of emissions of a regulated new source review pollutant from an emissions unit, as determined in accordance with the following, except that this definition shall not apply for calculating whether a significant emissions increase has occurred, or for establishing a plantwide applicability limit under 20.2.79.120 NMAC. Instead, Subsections E and AI of this section shall apply for those purposes.

(1) In general, actual emissions as of a particular date shall equal the average rate, in tons per year, at which the unit actually emitted the pollutant during a consecutive 24-month period which precedes the particular date and which is representative of normal source operation. The department shall allow the use of a different time period upon a determination that it is more representative of normal source operation. Actual emissions shall be calculated using the unit's actual operating hours, production rates, and types of materials processed, stored, or combusted during the selected time period.

(2) The department may presume that source-specific allowable emissions for the unit are equivalent to the actual emissions of the unit.

(3) For any emissions unit that has not begun normal operations on the particular date, actual emissions shall equal the potential to emit of the unit on that date.

B. "Administrator" means the administrator of the U.S. environmental protection agency (EPA) or an authorized representative.

C. "Adverse impact on visibility" means visibility impairment which interferes with the management, protection, preservation, or enjoyment of the visitor's visual experience of the mandatory federal class I area. This determination must be made on a case-by-case basis taking into account the geographic extent, intensity, duration, frequency, and time of the visibility impairments and how these factors correlate with:

- (1) times of visitor use of the mandatory federal class I area; and
- (2) the frequency and timing of natural conditions that reduce visibility. This term does not include effects on integral vistas as defined in 40 CFR 51.301 Definitions.

D. "Allowable emissions" means the emissions rate of a stationary source calculated using the maximum rated capacity of the source (unless the source is subject to federally enforceable limits which restrict the operating rate, or hours of operation, or both) and the most stringent of the following:

- (1) the applicable standard set forth in 40 CFR Part 60 or 61;

(2) any applicable state implementation plan emissions limitation including those with a future compliance date; or

(3) the emissions rate specified as a federally enforceable permit condition, including those with a future compliance date.

E. "Baseline actual emissions" means the rate of emissions, in tons per year, of a regulated new source review pollutant, as determined in accordance with the following.

(1) For any existing electric utility steam generating unit, baseline actual emissions means the average rate, in tons per year, at which the unit actually emitted the pollutant during any consecutive 24-month period selected by the owner or operator within the 5-year period immediately preceding when the owner or operator begins actual construction of the project. The department shall allow the use of a different time period upon a determination that it is more representative of normal source operation.

(a) The average rate shall include fugitive emissions to the extent quantifiable, and emissions associated with startups, shutdowns, and malfunctions.

(b) The average rate shall be adjusted downward to exclude any noncompliant emissions that occurred while the source was operating above any emission limitation that was legally enforceable during the consecutive 24-month period.

(c) For a regulated new source review pollutant, when a project involves multiple emissions units, only one consecutive 24-month period must be used to determine the baseline actual emissions for the emissions units being changed. A different consecutive 24-month period can be used for each regulated new source review pollutant.

(d) The average rate shall not be based on any consecutive 24-month period for which there is inadequate information for determining annual emissions, in tons per year, and for adjusting this amount if required by Subparagraph (b) of Paragraph (1) of this subsection.

(2) For an existing emissions unit (other than an electric utility steam generating unit), baseline actual emissions means the average rate, in tons per year, at which the emissions unit actually emitted the pollutant during any consecutive 24-month period selected by the owner or operator within the 10-year period immediately preceding either the date the owner or operator begins actual construction of the project, or the date a complete permit application is received by the department for a permit required either under this section or under a plan approved by the administrator, whichever is earlier, except that the 10-year period shall not include any period earlier than November 15, 1990.

(a) The average rate shall include fugitive emissions to the extent quantifiable, and emissions associated with startups, shutdowns, and malfunctions.

(b) The average rate shall be adjusted downward to exclude any noncompliant emissions that occurred while the source was operating above an emission limitation that was legally enforceable during the consecutive 24-month period.

(c) The average rate shall be adjusted downward to exclude any emissions that would have exceeded an emission limitation with which the major stationary source must currently comply, had such major stationary source been required to comply with such limitations during the consecutive 24-month period. However, if an emission limitation is part of a maximum achievable control technology standard that the administrator proposed or promulgated under 40 CFR Part 63, the baseline actual emissions need only be adjusted if the state has taken credit for such emissions reductions in an attainment demonstration or maintenance plan consistent with the requirements of Subsection D of 20.2.79.115 NMAC.

(d) For a regulated new source review pollutant, when a project involves multiple emissions units, only one consecutive 24-month period must be used to determine the baseline actual emissions for the emissions units being changed. A different consecutive 24-month period can be used for each regulated new source review pollutant.

(e) The average rate shall not be based on any consecutive 24-month period for which there is inadequate information for determining annual emissions, in tons per year, and for adjusting this amount if required by Subparagraphs (b) and (c) of Paragraph (2) of this subsection.

(3) For a new emissions unit, the baseline actual emissions for purposes of determining the emissions increase that will result from the initial construction and operation of such unit shall equal zero; and thereafter, for all other purposes, shall equal the unit's potential to emit.

(4) For a plantwide applicability limit for a major stationary source, the baseline actual emissions shall be calculated for existing electric utility steam generating units in accordance with the procedures contained in Paragraph (1) of this subsection, for other existing emissions units in accordance with the procedures contained in Paragraph (2) of this subsection, and for a new emissions unit in accordance with the procedures contained in Paragraph (3) of this subsection.

F. "Begin actual construction" means in general, initiation of physical on-site construction activities on an emissions unit which are of a permanent nature. Such activities include, but are not limited to, installation of building support and foundations, laying of underground pipework, and construction of permanent storage structures. With respect to a change in method of operating this term refers to those on-site activities other than preparatory activities which mark the initiation of the change.

G. "Best available control technology (BACT)" means an emissions limitation (including a visible emissions standard) based on the maximum degree of reduction for

each regulated new source review pollutant which would be emitted from any proposed major stationary source or major modification which the department, on a case-by-case basis, taking into account energy, environmental, and economic impacts and other costs, determines is achievable for such source or modification through application of production processes or available methods, systems, and techniques, including fuel cleaning, clean fuels, or treatment or innovative fuel combustion techniques for control of such pollutant. In no event shall application of best available control technology result in emissions of any pollutant which would exceed the emissions allowed by any applicable standard under 40 CFR Part 60 or 61. If the department determines that technological or economic limitations on the application of measurement methodology to a particular emissions unit would make the imposition of an emissions standard infeasible, a design, equipment, work practice, operational standard, or combination thereof, may be prescribed instead to satisfy the requirement for the application of BACT. Such standard shall, to the degree possible, set forth the emissions reduction achievable by implementation of such design, equipment, work practice or operation, and shall provide for compliance by means which achieve equivalent results.

H. "Building, structure, facility, or installation" means all of the pollutant-emitting activities which belong to the same industrial grouping, are located on one or more contiguous or adjacent properties, and are under the control of the same person (or persons under common control). Pollutant-emitting activities shall be considered as part of the same industrial grouping if they belong to the same "major group" (i.e., which have the same two-digit code) as described in the standard industrial classification manual, 1972, as amended by the 1977 supplement (U.S. government printing office stock numbers 4101-0066 and 003-005-00176-0, respectively).

I. "Commence" as applied to construction of a major stationary source or major modification means that the owner or operator has all necessary preconstruction approvals or permits and either has:

(1) begun, or caused to begin, a continuous program of actual on-site construction of the source, to be completed within a reasonable time; or

(2) entered into binding agreements or contractual obligations, which cannot be cancelled or modified without substantial loss to the owner or operator, to undertake a program of actual construction of the source to be completed within a reasonable time.

J. "Construction" means any physical change or change in the method of operation (including fabrication, erection, installation, demolition, or modification of an emissions unit) which would result in a change in actual emissions.

K. "Continuous emissions monitoring system" (CEMS) means all of the equipment that may be required to meet the data acquisition and availability requirements of this section, to sample, condition (if applicable), analyze, and provide a record of emissions on a continuous basis.

L. "Continuous emissions rate monitoring system" (CERMS) means the total equipment required for the determination and recording of the pollutant mass emissions rate (in terms of mass per unit of time).

M. "Continuous parameter monitoring system" (CPMS) means all of the equipment necessary to meet the data acquisition and availability requirements of this section, to monitor process and control device operational parameters (for example, control device secondary voltages and electric currents) and other information (for example, gas flow rate, oxygen or carbon dioxide concentrations), and to record average operational parameter value(s) on a continuous basis.

N. "Electric utility steam generating unit" means any steam electric generating unit that is constructed for the purpose of supplying more than one-third of its potential electric output capacity and more than 25 megawatts electrical output to any utility power distribution system for sale. Any steam supplied to a steam distribution system for the purpose of providing steam to a steam-electric generator that would produce electrical energy for sale is also considered in determining the electrical energy output capacity of the affected facility.

O. "Emissions unit" means any part of a stationary source that emits or would have the potential to emit any regulated new source review pollutant and includes an electric steam generating unit as defined in Subsection N of this section. For purposes of this section, there are two types of emissions units.

(1) A new emissions unit is any emissions unit which is (or will be) newly constructed and which has existed for less than two years from the date such emissions unit first operated.

(2) An existing emissions unit is any emissions unit that does not meet the requirements in Paragraph (1) of this subsection. A replacement unit, as defined in this section, is an existing unit.

P. "Federal class I area" means any Federal land that is classified or reclassified "class I".

Q. "Federal land manager" means, with respect to any lands in the United States, the secretary of the department with authority over such lands.

R. "Federally enforceable" means all limitations and conditions which are enforceable by the administrator, including those requirements developed pursuant to 40 CFR Parts 60 and 61, requirements within any applicable state implementation plan, any permit requirements established pursuant to 40 CFR 52.21 or under regulations approved pursuant to 40 CFR Part 51, Subpart I including 40 CFR 51.165 and 40 CFR 51.166.

S. "Fugitive emissions" means those emissions which could not reasonably pass through a stack, chimney, vent, or other functionally equivalent opening.

T. "Lowest achievable emission rate" means, for any source, the more stringent rate of emissions based on the following:

(1) the most stringent emissions limitation which is contained in the implementation plan of any state for such class or category of stationary source, unless the owner or operator of the proposed stationary source demonstrates that such limitations are not achievable; or

(2) the most stringent emissions limitation which is achieved in practice by such class or category of stationary source; this limitation, when applied to a modification, means the lowest achievable emissions rate for the new or modified emissions units within the stationary source; in no event shall the application of this term permit a proposed new or modified stationary source to emit any pollutant in excess of the amount allowable under an applicable new source standard of performance.

U. "Major modification" means any physical change in or change in the method of operation of a major stationary source that would result in a significant emissions increase of a regulated new source review pollutant (as defined in this section); and a significant net emissions increase of that pollutant from the major stationary source. Any significant emissions increase (as defined in this section) from any emissions units or net emissions increase (as defined in this section) at a major stationary source that is significant for volatile organic compounds or oxides of nitrogen shall be considered significant for ozone.

(1) A physical change or change in the method of operation shall not include:

(a) routine maintenance, repair, and replacement;

(b) use of an alternative fuel or raw material by reason of an order under Section 2 (a) and (b) of the Energy Supply and Environmental Coordination Act of 1974 (or any superseding legislation) or by reason of a natural gas curtailment plan pursuant to the federal Power Act;

(c) use of an alternative fuel by reason of an order or rule under Section 125 of the federal Clean Air Act;

(d) use of an alternative fuel at a steam generating unit to the extent that the fuel is generated from municipal solid waste;

(e) use of an alternative fuel or raw material by a stationary source which:

(i) the source was capable of accommodating before December 21, 1976, unless such change would be prohibited under any federally enforceable permit

condition which was established after December 21, 1976 pursuant to 40 CFR 52.21 or under regulations approved pursuant to 40 CFR 51.165 or 40 CFR 51.166; or

(ii) the source is approved to use under any permit issued under 40 CFR 52.21 or under regulations approved pursuant to 40 CFR 51.166;

(f) an increase in the hours of operation or in the production rate, unless such change would be prohibited under any federally enforceable permit which was established after December 21, 1976, pursuant to 40 CFR 52.21 or under regulations approved pursuant to 40 CFR 51.165 or 40 CFR 51.166;

(g) any change in ownership at a stationary source; or

(h) the installation, operation, cessation, or removal of a temporary clean coal technology demonstration project, provided that the project complies with the state implementation plan for the state in which is project is located, and other requirements necessary to attain and maintain the national ambient air quality standards during the project and after it is terminated.

(2) This definition shall not apply with respect to a particular regulated new source review pollutant when the major stationary source is complying with the requirements under 20.2.79.120 NMAC for a plantwide applicability limit for that pollutant. Instead, the definition at Paragraph (8) of Subsection B of 20.2.79.120 NMAC shall apply.

(3) For the purpose of applying the requirements of Subsection H of 20.2.79.109 NMAC to modifications at major stationary sources of nitrogen oxides located in ozone nonattainment areas or in ozone transport regions, whether or not subject to subpart 2, part D, title I of the federal Clean Air Act, any significant net emissions increase of nitrogen oxides is considered significant for ozone.

(4) Any physical change in, or change in the method of operation of a major stationary source of volatile organic compounds that results in any increase in emissions of volatile organic compounds from any discrete operation, emissions unit, or other pollutant emitting activity at the source shall be considered a significant net emissions increase and a major modification for ozone, if the major stationary source is located in an extreme ozone nonattainment area that is subject to subpart 2, part D, title I of the federal Clean Air Act.

V. "Major stationary source" means the following.

(1) Any stationary source of air pollutants which emits, or has the potential to emit, 100 tons per year or more of any regulated new source review pollutant, except that lower emissions thresholds shall apply in areas subject to subpart 2, subpart 3, or subpart 4 of part D, title I of the federal Clean Air Act, according to Subparagraphs (a) through (f) of Paragraph (1) of Subsection V of 20.2.79.7 NMAC.

(a) 50 tons per year of volatile organic compounds in any serious ozone nonattainment area.

(b) 50 tons per year of volatile organic compounds in an area within an ozone transport region, except for any severe or extreme ozone nonattainment area.

(c) 25 tons per year of volatile organic compounds in any severe ozone nonattainment area.

(d) 10 tons per year of volatile organic compounds in any extreme ozone nonattainment area.

(e) 50 tons per year of carbon monoxide in any serious nonattainment area for carbon monoxide, where stationary sources contribute significantly to carbon monoxide levels in the area (as determined under rules issued by the United States environmental protection agency administrator).

(f) 70 tons per year of PM10 in any serious nonattainment area for PM10.

(2) For the purposes of applying the requirements of Subsection H of 20.2.79.109 NMAC to stationary sources of nitrogen oxides located in an ozone nonattainment area or in an ozone transport region, any stationary source which emits, or has the potential to emit, 100 tons per year or more of nitrogen oxides emissions, except that the emission thresholds in Subparagraphs (a) through (f) of Paragraph (1) of Subsection V of 20.2.79.7 NMAC shall apply in areas subject to subpart 2 of part D, title I of the federal Clean Air Act.

(a) 100 tons per year or more of nitrogen oxides in any ozone nonattainment area classified as marginal or moderate.

(b) 100 tons per year or more of nitrogen oxides in any ozone nonattainment area classified as a transitional, submarginal, or incomplete or no data area, when such area is located in an ozone transport region.

(c) 100 tons per year or more of nitrogen oxides in any area designated under section 107(D) of the federal Clean Air Act as attainment or unclassifiable for ozone that is located in an ozone transport region.

(d) 50 tons per year or more of nitrogen oxides in any serious nonattainment area for ozone.

(e) 25 tons per year or more of nitrogen oxides in any severe nonattainment area for ozone.

(f) 10 tons per year or more of nitrogen oxides in any extreme nonattainment area for ozone; or

(3) Any physical change that would occur at a stationary source not qualifying under Paragraph (1) or (2) of this definition as a major stationary source, if the change would constitute a major stationary source by itself.

(4) A major stationary source that is major for volatile organic compounds or oxides of nitrogen shall be considered major for ozone.

(5) A stationary source shall not be a major stationary source due to fugitive emissions, to the extent they are quantifiable, unless the source belongs to:

(a) any category in Subsection B of 20.2.79.119 NMAC; or

(b) any other stationary source category which as of August 7, 1980 is being regulated under Section 111 or 112 of the federal Clean Air Act.

(6) A stationary source shall not be a major stationary source due to secondary emissions.

W. "Mandatory federal class I area" means those federal lands that are international parks, national wilderness areas which exceed five thousand (5,000) acres in size, national memorial parks which exceed five thousand (5,000) acres in size, and national parks which exceed six thousand (6,000) acres in size, and which were in existence on August 7, 1977. These areas may not be redesignated.

X. "Natural conditions" includes naturally occurring phenomena that reduce visibility as measured in terms of visual range, contrast or coloration.

Y. "Necessary preconstruction approvals or permits" means those permits or approvals required under federal air quality control laws and regulations and those air quality control laws and regulations which are part of the applicable state implementation plan.

Z. "Net emissions increase"

(1) With respect to any regulated new source review pollutant emitted by a major stationary source, the amount by which the sum of the following exceeds zero:

(a) the increase in emissions from a particular physical change or change in the method of operation at a stationary source as calculated pursuant to Subsection E of 20.2.79.109 NMAC; and

(b) any other increases and decreases in actual emissions at the major stationary source that are contemporaneous with the particular change and are otherwise creditable; baseline actual emissions for calculating increases and decreases shall be determined as provided in Subsection E of this section, except that

Subparagraph (c) of Paragraph (1) and Subparagraph (d) of Paragraph (2) of Subsection E of this section shall not apply.

(2) An increase or decrease in actual emissions is contemporaneous with the increase from the particular change only if it occurs within the time period five years prior to the commencement of construction on the particular change and the date that the increase from the particular change occurs.

(3) An increase or decrease in actual emissions is creditable only if:

(a) it occurs within the time period five years prior to the commencement of construction on the particular change and the date that the increase from the particular change occurs; and

(b) either the department or the administrator has not relied on it in issuing a permit for the source under regulations approved pursuant to this section, which permit is in effect when the increase in actual emissions from the particular change occurs.

(4) An increase in actual emissions is creditable only to the extent that the new level of actual emissions exceeds the old level.

(5) A decrease in actual emissions is creditable only to the extent that:

(a) the old level of actual emissions or the old level of allowable emissions whichever is lower, exceeds the new level of actual emissions;

(b) it is enforceable as a practical matter at and after the time that actual construction on the particular change begins;

(c) the department has not relied on it in issuing any permit under regulations approved pursuant to 40 CFR Part 51 Subpart I or the state has not relied on it in demonstrating attainment or reasonable further progress; and

(d) it has approximately the same qualitative significance for public health and welfare as that attributed to the increase from the particular change.

(6) An increase that results from a physical change at a source occurs when the emissions unit on which construction occurred becomes operational and begins to emit a particular pollutant. Any replacement unit that requires shakedown becomes operational only after a reasonable shakedown period, not to exceed 180 days.

(7) Paragraph (1) of Subsection A of this section shall not apply for determining creditable increases and decreases or after a change.

AA. "Nonattainment area" means, for any air pollutant an area which is designated "nonattainment" with respect to that pollutant within the meaning of Section 107(d) of the federal Clean Air Act.

AB. "Nonattainment major new source review (NSR) program" means a major source preconstruction permit program that has been approved by the administrator and incorporated into the New Mexico state implementation plan to implement the requirements of 40 CFR 51.165, or a program that implements 40 CFR Part 51, Appendix S, Sections I through VI. Any permit issued under such a program is a major new source review permit.

AC. "Part" means an air quality control regulation under Title 20, Chapter 2 of the New Mexico Administrative Code, unless otherwise noted; as adopted or amended by the board.

AD. "Portable stationary source" means a source which can be relocated to another operating site with limited dismantling and reassembly.

AE. "Potential to emit" means the maximum capacity of a stationary source to emit a pollutant under its physical and operational design. Any physical or operational limitation on the capacity of the source to emit a pollutant, including air pollution control equipment and restrictions on hours of operation or on the type or amount of material combusted, stored, or processed, shall be treated as part of its design only if the limitation or the effect it would have on emissions is federally enforceable. Secondary emissions do not count in determining the PTE of a stationary source.

AF. "Predictive emissions monitoring system" (PEMS) means all of the equipment necessary to monitor process and control device operational parameters (for example, control device secondary voltages and electric currents) and other information (for example, gas flow rate, oxygen or carbon dioxide concentrations), and calculate and record the mass emissions rate (for example, pounds per hour) on a continuous basis.

AG. "Prevention of significant deterioration (PSD) permit" means any permit that is issued under 20.2.74 NMAC.

AH. "Project" means a physical change in, or change in the method of operation of, an existing major stationary source.

AI. "Projected actual emissions" means, the maximum annual rate, in tons per year, at which an existing emissions unit is projected to emit a regulated new source review pollutant in any one of the five years (12-month period) following the date the unit resumes regular operation after the project, or in any one of the 10 years following that date, if the project involves increasing the emissions unit's design capacity or its potential to emit of that regulated new source review pollutant and full utilization of the

unit would result in a significant emissions increase or a significant net emissions increase at the major stationary source. In determining the projected actual emissions before beginning actual construction, the owner or operator of the major stationary source:

(1) shall consider all relevant information, including but not limited to, historical operational data, the company's own representations, the company's expected business activity and the company's highest projections of business activity, the company's filings with the state or federal regulatory authorities, and compliance plans under the approved plan; and

(2) shall include fugitive emissions to the extent quantifiable, and emissions associated with startups, shutdowns, and malfunctions; and

(3) shall exclude, in calculating any increase in emissions that results from the particular project, that portion of the unit's emissions following the project that an existing unit could have accommodated during the consecutive 24-month period used to establish the baseline actual emissions under Subsection E of this section and that are also unrelated to the particular project, including any increased utilization due to product demand growth; or,

(4) in lieu of using the method set out in Paragraphs (1) through (3) of this subsection, may elect to use the emissions unit's potential to emit, in tons per year, as defined under Subsection AE of this section.

AJ. "Regulated new source review pollutant", for purposes of this section, means the following:

(1) nitrogen oxides or any volatile organic compounds;

(2) any pollutant for which a national ambient air quality standard has been promulgated;

(3) any pollutant that is identified under this paragraph (Paragraph (3) of Subsection AJ of 20.2.79.7 NMAC) as a constituent or precursor of a general pollutant listed in Paragraphs (1) or (2) of this subsection, provided that such constituent or precursor pollutant may only be regulated under new source review as part of regulation of the general pollutant; precursors identified by the administrator for purposes of NSR are the following:

(a) volatile organic compounds and nitrogen oxides are precursors to ozone in all ozone nonattainment areas;

(b) sulfur dioxide is a precursor to PM_{2.5} in all PM_{2.5} nonattainment areas;

(c) nitrogen oxides are presumed to be precursors to PM_{2.5} in all PM_{2.5} nonattainment areas, unless the state demonstrates to the administrator's satisfaction or EPA demonstrates that emissions of nitrogen oxides from sources in a specific area are not a significant contributor to that area's ambient PM_{2.5} concentrations;

(d) volatile organic compounds and ammonia are presumed not to be precursors to PM_{2.5} in any PM_{2.5} nonattainment area, unless the state demonstrates to the administrator's satisfaction or EPA demonstrates that emissions of volatile organic compounds or ammonia from sources in a specific area are a significant contributor to that area's ambient PM_{2.5} concentrations; or

(4) PM_{2.5} emissions and PM₁₀ emissions shall include gaseous emissions from a source or activity which condense to form particulate matter at ambient temperatures; on or after January 1, 2011, such condensable particulate matter shall be accounted for in applicability determinations and in establishing emissions limitations for PM_{2.5} and PM₁₀ in nonattainment major NSR permits; compliance with emissions limitations for PM_{2.5} and PM₁₀ issued prior to this date shall not be based on condensable particulate matter unless required by the terms and conditions of the permit or the applicable implementation plan; applicability determinations made prior to this date without accounting for condensable particulate matter shall not be considered in violation of this section unless the applicable implementation plan required condensable particulate matter to be included.

AK. "Replacement unit" means an emission unit for which all of the following criteria are met. No creditable emission reductions shall be generated from shutting down the existing emissions unit that is replaced.

(1) The emissions unit is a reconstructed unit within the meaning of 40 CFR 60.15(b)(1), or the emissions unit completely takes the place of an existing emissions unit.

(2) The emissions unit is identical to or functionally equivalent to the replaced emissions unit.

(3) The replacement unit does not change the basic design parameter(s) of the process unit.

(4) The replaced emissions unit is permanently removed from the major stationary source, otherwise permanently disabled, or permanently barred from operation by a permit that is enforceable as a practical matter. If the replaced emissions unit is brought back into operation, it shall constitute a new emissions unit.

AL. "Secondary emissions" means emissions which would occur as a result of the construction or operation of a major stationary source or major modification, but do not come from the major stationary source or major modification itself. For the

purpose of this section, secondary emissions must be specific, well defined, quantifiable, and impact the same general area as the stationary source or modification which causes the secondary emissions. Secondary emissions include emissions from any offsite support facility which would not be constructed or increase its emissions except as a result of the construction or operation of the major stationary source or major modification. Secondary emissions do not include any emissions which come directly from a mobile source, such as emissions from the tailpipe of a motor vehicle, from a train, or from a vessel.

AM. "Significant" means:

(1) In reference to a net emissions increase or the potential of a source to emit any of the following pollutants, a rate of emissions that would equal or exceed any of the following rates: carbon monoxide, 100 tons per year; nitrogen oxides, 40 tons per year; sulfur dioxide, 40 tons per year; PM₁₀ emissions, 15 tons per year; ozone, 40 tons per year of volatile organic compounds or nitrogen oxides; lead, 0.6 tons per year, PM_{2.5}: 10 tpy of direct PM_{2.5} emissions; 40 tpy of sulfur dioxide emissions; 40 tpy of nitrogen oxide emissions unless demonstrated not to be a PM_{2.5} precursor under Subsection AJ of 20.2.79.7 NMAC.

(2) Notwithstanding the significant emissions rate for ozone in Paragraph (1) of Subsection AM of 20.2.79.7 NMAC, significant means, in reference to an emissions increase or a net emissions increase, any increase in actual emissions of volatile organic compounds that would result from any physical change in, or change in the method of operation of, a major stationary source locating in a serious or severe ozone nonattainment area that is subject to subpart 2, part D, title I of the federal Clean Air Act, if such emissions increase of volatile organic compounds exceeds 25 tons per year.

(3) For the purposes of applying the requirements of Subsection H of 20.2.79.109 NMAC to modifications at major stationary sources of nitrogen oxides located in an ozone nonattainment area or in an ozone transport region, the significant emission rates and other requirements for volatile organic compounds in Paragraphs (1), (2), and (5) of Subsection AM of 20.2.79.7 NMAC shall apply to nitrogen oxides emissions.

(4) Notwithstanding the significant emissions rate for carbon monoxide under Paragraph (1) of Subsection AM of 20.2.79.7 NMAC significant means, in reference to an emissions increase or a net emissions increase, any increase in actual emissions of carbon monoxide that would result from any physical change in, or change in the method of operation of, a major stationary source in a serious nonattainment area for carbon monoxide if such increase equals or exceeds 50 tons per year, provided the U.S. environmental protection agency administrator has determined that stationary sources contribute significantly to carbon monoxide levels in that area.

(5) Notwithstanding the significant emissions rates for ozone under Paragraphs (1) and (2) of Subsection AM of 20.2.79.7 NMAC, any increase in actual

emissions of volatile organic compounds from any emissions unit at a major stationary source of volatile organic compounds located in an extreme ozone nonattainment area that is subject to subpart 2, part D, title I of the federal Clean Air Act shall be considered a significant net emissions increase.

AN. "Significant emissions increase" means, for a regulated new source review pollutant, an increase in emissions that is significant (as defined in Subsection AM of this Section) for that pollutant.

AO. "Stationary source" means any building, structure, facility, or installation which emits or may emit any regulated new source review pollutant.

AP. "Temporary source" means a stationary source which changes its location or ceases to exist within one year from the date of initial start of operations.

AQ. "Visibility impairment" means any humanly perceptible change in visibility (visual range, contrast, coloration) from that which would have existed under natural conditions.

[11/30/1995; 20.2.79.7 NMAC - Rn, 20 NMAC 2.79.107, 10/31/2002; A, 1/22/2006; A, 8/31/2009; A, 6/3/2011; A, 8/21/2021]

20.2.79.8 AMENDMENT AND SUPERSESSION OF PRIOR REGULATIONS:

This Part amends and supersedes Air Quality Control Regulation ("AQCR") 709 -- Permits -- Nonattainment Areas last filed June 25, 1992, as amended ("AQCR 709").

A. All references to AQCR 709 in any other rule shall be construed as a reference to this Part.

B. The amendment and supersession of AQCR 709 shall not affect any administrative or judicial enforcement action pending on the effective date of such amendment nor the validity of any permit issued pursuant to AQCR 709.

[11/30/95; 20.2.79.8 NMAC - Rn, 20 NMAC 2.79.106, 10/31/02]

20.2.79.9 DOCUMENTS:

Documents cited in this Part may be viewed at the New Mexico Environment Department, Air Quality Bureau.

[11/30/1995; 20.2.79.9 NMAC - Rn, 20 NMAC 2.79.108, 10/31/2002; A, 8/21/2021]

20.2.79.10 SEVERABILITY:

If any provision of this part, or the application of such provision to any person or circumstance, is held invalid, the remainder of this part, or the application of such provision to persons or circumstances other than those as to which it is held invalid, shall not be affected thereby.

[20.2.79.10 NMAC - N, 1/22/06]

20.2.79.11 CONSTRUCTION:

This part shall be liberally construed to carry out its purpose.

[20.2.79.11 NMAC - N, 1/22/06]

20.2.79.12 SAVINGS CLAUSE:

Repeal or supersession of prior versions of this part shall not affect any administrative or judicial action initiated under those prior versions.

[20.2.79.12 NMAC - N, 1/22/06]

20.2.79.13 COMPLIANCE WITH OTHER REGULATIONS:

Compliance with this part does not relieve a person from the responsibility to comply with any other applicable federal, state, or local regulations.

[20.2.79.13 NMAC - N, 1/22/06]

20.2.79.14 LIMITATION OF DEFENSE:

The existence of a valid permit under this part shall not constitute a defense to a violation of any section of this part, except the requirement for obtaining a permit.

[20.2.79.14 NMAC - N, 1/22/06]

20.2.79.15-20.2.79.108 [RESERVED]

20.2.79.109 APPLICABILITY:

A. Any person constructing any new major stationary source or major modification shall obtain a permit from the department in accordance with the requirements of this part prior to the start of construction or modification if either of the following conditions apply:

(1) the major stationary source or major modification will be located within a nonattainment area so designated pursuant to Section 107 of the federal Clean Air Act

and will emit a regulated pollutant for which it is major and which the area is designated nonattainment for; or

(2) the major stationary source or major modification will be located within an area designated as attainment or unclassifiable for any national ambient air quality standard pursuant to Section 107 of the federal Clean Air Act, when it would cause or contribute to a violation of any national ambient air quality standard. A major source or major modification will be considered to cause or contribute to a violation of a national ambient air quality standard when such source or modification would, at a minimum, exceed any of the significance levels in Subsection A of 20.2.79.119 NMAC at any location that does not or would not meet the applicable national standard. (See Subsection D of 20.2.79.109 NMAC).

B. The requirements of this part apply to each regulated pollutant meeting the criteria of either Paragraph (1) or Paragraph (2) of Subsection A of 20.2.79.109 NMAC.

C. For an area which is nonattainment for ozone, volatile organic compounds and oxides of nitrogen are the regulated pollutants which may make this part applicable under the provisions of Paragraph (1) of Subsection A of 20.2.79.109 NMAC.

D. Other requirements.

(1) A new major stationary source or major modification which meets the criteria of Paragraph (2) of Subsection A of 20.2.79.109 NMAC shall demonstrate that the source or modification will not cause or contribute to a violation of any national ambient air quality standard by meeting the following requirements and no others of this part:

(a) Paragraph (2) of Subsection C of 20.2.79.112 NMAC regarding emission offsets;

(b) Subsection D of 20.2.79.112 NMAC regarding a net air quality benefit;

(c) 20.2.79.114 NMAC - Emission Offset Baseline;

(d) 20.2.79.115 NMAC - Emission Offset; and

(e) 20.2.79.117 NMAC - Air Quality Benefit.

(2) In addition, a new source or modification which meets the criteria of Paragraph (2) of Subsection A of 20.2.79.109 NMAC and is also a major stationary source or major modification as defined in 20.2.74 NMAC (prevention of significant deterioration (PSD)), shall obtain a PSD permit under the provisions of 20.2.74 NMAC.

E. Applicability procedures.

(1) Except as otherwise provided in Paragraph (6) of this subsection, and consistent with the definition of major modification, a project is a major modification for a regulated new source review pollutant if it causes two types of emissions increases - a significant emissions increase (as defined in Subsection AM of 20.2.79.7 NMAC), and a significant net emissions increase (as defined in Subsections Z and AM of 20.2.79.7 NMAC). The project is not a major modification if it does not cause a significant emissions increase. If the project causes a significant emissions increase, then the project is a major modification only if it also results in a significant net emissions increase.

(2) The procedure for calculating (before beginning actual construction) whether a significant emissions increase (i.e., the first step of the process) will occur depends upon the type of emissions units being modified, according to Paragraphs (3), (4) and (5) of this subsection. The procedure for calculating (before beginning actual construction) whether a significant net emissions increase will occur at the major stationary source (i.e., the second step of the process) is contained in the definition of net emissions increase. Regardless of any such preconstruction projections, a major modification results if the project causes a significant emissions increase and a significant net emissions increase.

(3) Actual-to-projected-actual applicability test for projects that involve existing emissions units. A significant emissions increase of a regulated new source review pollutant is projected to occur if the sum of the difference between the projected actual emissions and the baseline actual emissions (as defined in Paragraphs (1) and (2) of Subsection E of 20.2.79.7 NMAC, as applicable), for each existing emissions unit, equals or exceeds the significant amount for that pollutant (as defined in Subsection AM of 20.2.79.7 NMAC).

(4) Actual-to-potential test for projects that involve construction of a new emissions unit(s). A significant emissions increase of a regulated new source review pollutant is projected to occur if the sum of the difference between the potential to emit from each new emissions unit following completion of the project and the baseline actual emissions (as defined in Paragraph (3) of Subsection E of 20.2.79.7 NMAC) of these units before the project equals or exceeds the significant amount for that pollutant (as defined in Subsection AM of 20.2.79.7 NMAC).

(5) Hybrid test for projects that involve multiple types of emissions units. A significant emissions increase of a regulated NSR pollutant is projected to occur if the sum of the emissions increases for each emissions unit, using the method specified in Paragraphs (3) and (4) of this subsection as applicable with respect to each emissions unit, for each type of emissions unit equals or exceeds the significant amount for that pollutant. For example, if a project involves both an existing emissions unit and a new emissions unit, the projected increase is determined by summing the values determined using the method specified in Paragraph (3) of this subsection for the existing unit and determined using the method specified in Paragraph (4) of this subsection for the new unit.

(6) any major stationary source for a PAL for a regulated new source review pollutant, the major stationary source shall comply with requirements under 20.2.79.120 NMAC.

F. Except as otherwise provided in Paragraph (6) under this subsection (Subsection F of 20.2.79.109 NMAC), the following specific provisions apply with respect to any regulated NSR pollutant emitted from projects at existing emissions units at a major stationary source (other than projects at a source with a PAL) in circumstances where there is a reasonable possibility, within the meaning of Paragraph (6) under this subsection (Subsection F of 20.2.79.109 NMAC), that a project that is not a part of a major modification may result in a significant emissions increase of such pollutant, and the owner or operator elects to use the method specified in Paragraphs (1) through (3) of Subsection AI of 20.2.79.7 NMAC for calculating projected actual emissions.

(1) Before beginning actual construction of the project, the owner or operator shall document and maintain a record of the following information:

(a) a description of the project;

(b) identification of the emissions unit(s) whose emissions of a regulated new source review pollutant could be affected by the project; and

(c) a description of the applicability test used to determine that the project is not a major modification for any regulated new source review pollutant, including the baseline actual emissions, the projected actual emissions, the amount of emissions excluded under Paragraph (3) of Subsection AI of 20.2.79.7 NMAC and an explanation for why such amount was excluded, and any netting calculations, if applicable.

(2) If the emissions unit is an existing electric utility steam generating unit, before beginning actual construction, the owner or operator shall provide a copy of the information set out in Paragraph (1) of this subsection to the department. Nothing in this paragraph shall be construed to require the owner or operator of such a unit to obtain any determination from the department; however, necessary preconstruction approvals or permits, or both must be obtained before beginning actual construction.

(3) The owner or operator shall monitor the emissions of any regulated new source review pollutant that could increase as a result of the project and that is emitted by any emissions units identified in Subparagraph (b) of Paragraph (1) of this subsection; and calculate and maintain a record of the annual emissions, in tons per year on a calendar year basis, for a period of five years following resumption of regular operations after the change, or for a period of 10 years following resumption of regular operations after the change if the project increases the design capacity or potential to emit of that regulated new source review pollutant at such emissions unit.

(4) If the unit is an existing electric utility steam generating unit, the owner or operator shall submit a report to the department within 60 days after the end of each

year during which records must be generated under Paragraph (3) of this subsection setting out the unit's annual emissions during the year that preceded submission of the report.

(5) If the unit is an existing unit other than an electric utility steam generating unit, the owner or operator shall submit a report to the department if the annual emissions, in tons per year, from the project identified in Paragraph (1) of this subsection, exceed the baseline actual emissions (as documented and maintained pursuant to Subparagraph (c) of Paragraph (1) of this subsection, by a significant amount (as defined in Subsection AM of 20.2.79.7 NMAC) for that regulated new source review pollutant, and if such emissions differ from the preconstruction projection as documented and maintained pursuant to Subparagraph (c) of Paragraph (1) of this subsection. Such report shall be submitted to the department within 60 days after the end of such year. The report shall contain the following:

- (a)** the name, address and telephone number of the major stationary source;
- (b)** the annual emissions as calculated pursuant to Paragraph (3) of this subsection; and
- (c)** any other information that the owner or operator wishes to include in the report (e.g., an explanation as to why the emissions differ from the preconstruction projection).

(6) A "reasonable possibility" under this subsection (Subsection F of 20.2.79.109 NMAC) occurs when the owner or operator calculates the project to result in either:

(a) a projected actual emissions increase of at least 50 percent of the amount that is a "significant emissions increase," as defined under Subsection AN of 20.2.79.7 NMAC (without reference to the amount that is a significant net emissions increase), for the regulated NSR pollutant; or

(b) a projected actual emissions increase that, added to the amount of emissions excluded under Subparagraph (3) of Subsection AI of 20.2.79.7 NMAC, sums to at least 50 percent of the amount that is a "significant emissions increase," as defined under Subsection AN of 20.2.79.7 NMAC (without reference to the amount that is a significant net emissions increase), for the regulated NSR pollutant; for a project for which a reasonable possibility occurs only within the meaning of Subparagraph (b) of Paragraph (6) of Subsection F of 20.2.79.109 NMAC, and not also within the meaning of Subparagraph (a) of Paragraph (6) of Subsection F of 20.2.79.109 NMAC, then provisions Paragraphs (2) through (5) under this subsection (Subsection F of 20.2.79.109 NMAC) do not apply to the project.

G. The owner or operator of the source shall make the information required to be documented and maintained pursuant to Subsection F of this section (20.2.79.109

NMAC) available for review upon a request for inspection by the department or the general public pursuant to the requirements contained in 40 CFR 70.4(b)(3)(viii).

H. The requirements of this section (20.2.79.109 NMAC) applicable to major stationary sources and major modifications of volatile organic compounds shall apply to nitrogen oxides emissions from major stationary sources and major modifications of nitrogen oxides in an ozone transport region or in any ozone nonattainment area, except in ozone nonattainment areas or in portions of an ozone transport region where the U.S. environmental protection agency administrator has granted a NO_x waiver applying the standards set forth under section 182(f) of the federal Clean Air Act and the waiver continues to apply.

I. In meeting the emissions offset requirements of 20.2.79.115 NMAC, the ratio of total actual emissions reductions to the emissions increase shall be at least 1:1 unless an alternative ratio is provided for the applicable nonattainment area in Subsections J through N of 20.2.79.109 NMAC.

J. In meeting the emissions offset requirements of 20.2.79.115 NMAC for ozone nonattainment areas that are subject to subpart 2, part D, title I of the federal Clean Air Act, the ratio of total actual emissions reductions of VOC to the emissions increase of VOC shall be as follows:

- (1)** in any marginal nonattainment area for ozone, at least 1.1:1;
- (2)** in any moderate nonattainment area for ozone, at least 1.15:1;
- (3)** in any serious nonattainment area for ozone, at least 1.2:1;
- (4)** in any severe nonattainment area for ozone, at least 1.3:1 (except that the ratio may be at least 1.2:1 if the approved state implementation plan also requires all existing major sources in such nonattainment area to use BACT for the control of VOC); and
- (5)** in any extreme nonattainment area for ozone, at least 1.5:1 (except that the ratio may be at least 1.2:1 if the approved state implementation plan also requires all existing major sources in such nonattainment area to use BACT for the control of VOC).

K. Notwithstanding the requirements of Subsection J of 20.2.79.109 NMAC for meeting the requirements of 20.2.79.115 NMAC, the ratio of total actual emissions reductions of VOC to the emissions increase of VOC shall be at least 1.15:1 for all areas within an ozone transport region that is subject to subpart 2, part D title I of the federal Clean Air Act, except for serious, severe, and extreme ozone nonattainment areas that are subject to subpart 2, part D, title I of the federal Clean Air Act.

L. In meeting the emissions offset requirements of 20.2.79.115 NMAC for ozone nonattainment areas that are subject to subpart 1, part D, title I of the federal Clean Air Act, (but are not subject to subpart 2, part D title I of the federal Clean Air Act including 8-hour ozone nonattainment areas subject to 40 CFR 51.902(b)), the ratio of total actual emissions increase of VOC shall be at least 1:1.

M. The requirements of 20.2.79.109 NMAC applicable to major stationary sources and major modifications of PM₁₀ shall also apply to major stationary sources and major modifications of PM₁₀ precursors except where the US. environmental protection agency administrator determines that such sources do not contribute significantly to PM₁₀ levels that exceed the PM₁₀ ambient standards in the area.

N. In meeting the emissions offset requirements of 20.2.79.115 NMAC, the emissions offsets obtained shall be for the same regulated NSR pollutant unless interprecursor offsetting is permitted for a particular pollutant as specified in this paragraph. The department may allow the offset requirements in 20.2.79.115 NMAC for direct PM_{2.5} emissions or emissions of precursors of PM_{2.5} to be satisfied by offsetting reductions in direct PM_{2.5} emissions or emissions of any PM_{2.5} precursor identified under Subsection AJ of 20.2.79.7 NMAC if such offsets comply with the interprecursor trading hierarchy and ratio established in the approved plan for a particular nonattainment area.

[11/30/1995; 20.2.79.109 NMAC - Rn, 20 NMAC 2.79.109, 10/31/2002; A, 1/22/2006; A, 8/31/2009; A, 6/3/2011; A, 8/21/2021]

20.2.79.110 SOURCE OBLIGATION:

A. The requirements of this Part shall apply as though construction had not yet commenced at the time that a source or modification becomes a major source or major modification solely due to a relaxation in any enforceable limitation established after August 7, 1980.

B. The issuance of a permit by the Department shall not relieve any owner or operator of the responsibility to comply with the provisions of the Air Quality Control Act, sections 74-2-1 to 74-2-17, NMSA 1978, any applicable regulations of the Board, and any other requirements under local, state, or federal law.

C. Any owner or operator who commences construction or operates a major stationary source or major modification without, or not in accordance with, a permit issued under the requirements of this Part shall be subject to enforcement action.

D. Approval to construct shall become invalid if construction is not commenced within 18 months after receipt of such approval, if construction is discontinued for a period of 18 months or more, or if construction is not completed within a reasonable time. For a phased construction project, each phase must commence construction within 18 months of the projected and approved commencement date. The Secretary

may extend the 18-month period upon a satisfactory showing that an extension is justified.

E. For phased construction projects, the determination of the lowest achievable emission rate shall be reviewed and modified as appropriate at the latest reasonable time but no later than 18 months prior to commencement of construction of each independent phase of the project. At such time, the owner or operator of the applicable stationary source may be required to demonstrate the adequacy of any previous determination of lowest achievable emission rate.

F. If the owner or operator previously issued a permit under this Part applies for an extension as provided for under subsection D of 20.2.79.110 NMAC, and the new proposed date of construction is greater than 18 months from the date the permit would become invalid, the determination of lowest achievable emission rate shall be reviewed and modified as appropriate before such an extension is granted. At such time, the owner or operator may be required to demonstrate the adequacy of any previous determination of lowest achievable emission rate.

[11/30/95; 20.2.79.110 NMAC - Rn, 20 NMAC 2.79.110, 10/31/02]

20.2.79.111 APPLICATION CONTENTS:

The owner or operator of a proposed major stationary source or major modification shall submit all information necessary to perform any analysis or make any determination required under this Part. The items of this section are required before the Department may deem an application administratively complete. All applications shall include:

A. All information required by subsection A of 20.2.72.203 NMAC; and

B. A detailed schedule for construction of the major stationary source or major modification; and

C. A detailed description of the planned system of continuous emission reduction to be implemented, emission estimates, and other information necessary to demonstrate that the lowest achievable emission rate or any other applicable emission limitation will be maintained.

[11/30/95; A, 01/01/00; 20.2.79.111 NMAC - Rn, 20 NMAC 2.79.111, 10/31/02]

20.2.79.112 SOURCE REQUIREMENTS:

In order for a permit to be granted, all of the following conditions shall be met:

A. The major stationary source or major modification shall be designed such that the lowest achievable emission rate (LAER) will be met and maintained for each pollutant emitted which is subject to this Part;

B. The owner or operator of the proposed new or modified source has demonstrated that all existing major stationary sources owned or operated by such person (or any entity controlling, controlled by, or under common control with such person) in this state are in compliance with, or on a schedule for compliance, with all applicable emission limitations and standards, under the Federal Act, and all conditions in a federally enforceable permit;

C. Emission Reductions:

(1) Emission reductions (offsets) at existing sources shall occur prior to or concurrent with the start of operation of the proposed major stationary source or major modification for each pollutant emitted which is subject to this Part. As a general rule, such offsets shall be at least twenty percent (20%) greater than the allowable emissions of the proposed new major stationary source or major modification, and shall assure that the total tonnage of increased emissions of the air pollutant from the new or modified source shall be offset by an equal or greater reduction in the actual emissions of such air pollutant from the same or other sources in the area. An offset less than twenty percent (20%) but at least ten percent (10%, or 1:1.1 ratio), may be allowed if reasonable progress toward the attainment of the applicable NAAQS will be achieved. A higher level of offset reduction may be required in order to demonstrate that a net air quality benefit will occur; or

(2) A new major stationary source or major modification which is subject to the requirements of subsection D of 20.2.79.109 NMAC shall obtain sufficient emission reductions to, at a minimum, compensate for its adverse ambient impact where the major stationary source or major modification would otherwise cause or contribute to a violation of any national ambient air quality standard.

D. Emission offsets shall provide a net air quality benefit in the area where the national ambient air quality standard for that pollutant is violated; and

E. The owner or operator of the proposed major stationary source or major modification has conducted an analysis of alternative sites, sizes, production processes, and environmental control techniques for such proposed source which demonstrates that benefits of the proposed source significantly outweigh the environmental and social costs imposed as a result of its location, construction, or modification.

F. The proposed major stationary source or major modification will meet all applicable emission requirements in the New Mexico State Implementation Plan, any applicable new source performance standard in 40 CFR Part 60, and any national emission standard for hazardous air pollutants in 40 CFR Part 61.

[11/30/95; A, 10/01/97; 20.2.79.112 NMAC - Rn, 20 NMAC 2.79.112, 10/31/02]

20.2.79.113 ADDITIONAL REQUIREMENTS FOR SOURCES IMPACTING MANDATORY FEDERAL CLASS I AREAS:

A. The requirements of this section apply only to proposed major stationary sources or major modifications that meet the criteria of paragraph (1) of subsection A of 20.2.79.109 NMAC and that also are major stationary sources or major modifications as defined in 20.2.74 NMAC. A major stationary source or major modification which meets the criteria of paragraph (2) of subsection A of 20.2.79.109 NMAC may be subject to requirements for Federal Class I Areas in 20.2.74 NMAC if that Part applies.

B. The Department shall transmit to the Administrator and any affected Federal Land Manager a copy of each permit application and any information relevant to any proposed major stationary source or major modification which may have an impact on visibility in any mandatory Federal Class I area. Relevant information will include an analysis of the proposed source's anticipated impacts on visibility in the Federal Class I area. The application shall be transmitted within thirty (30) days of receipt by the Department and at least sixty (60) days prior to any public hearing on the application. Additionally, the Department shall notify any affected Federal Land Manager within thirty (30) days from the date the Department receives a request for a pre-application meeting from a proposed source subject to this Part. The Department shall consult with the affected Federal Land Manager prior to making a determination of completeness for any such permit application. The Department shall also provide the Federal Land Manager and the Administrator with a copy of the preliminary determination on the permit application and shall make available to them any materials used in making that determination.

C. The owner or operator of any proposed major stationary source or major modification which may have an impact on visibility in a mandatory Federal Class I area shall include in the permit application an analysis of the anticipated impacts on visibility in such areas.

D. The Department may require monitoring of visibility in any mandatory Federal Class I area where the Department determines an adverse impact on visibility may occur due to the operations of the proposed new source or modification. Such monitoring shall be conducted following procedures approved by the Department and subject to the following conditions:

(1) Visibility monitoring methods specified by the Department shall be reasonably available and not require any research and development; and

(2) Both preconstruction and post construction visibility monitoring may be required. In each case, the duration of such monitoring shall not exceed one year.

E. The Department shall consider any analysis with respect to visibility impacts provided by the Federal Land Manager if it is received within thirty (30) days from the date a complete application is given to the Federal Land Manager. In any case where the Department disagrees with the Federal Land Manager's analysis, the Department shall either explain its decision to the Federal Land Manager or give notice as to where the explanation can be obtained. In the case where the Department disagrees with the

Federal Land Manager's analysis, the Department will also explain its decision or give notice to the public by means of an advertisement in a newspaper of general circulation in the area in which the proposed source would be constructed as to where the decision can be obtained.

F. In making its determination as to whether or not to issue a permit, the Department shall ensure that the source's emissions will be consistent with making reasonable progress toward the national visibility goal of preventing any future impairment of visibility in mandatory Federal Class I areas. The Department may take into account the costs of compliance, the time necessary for compliance, the energy and non-air quality environmental impacts of compliance, and the useful life of the source.

[11/30/95; 20.2.79.113 NMAC - Rn, 20 NMAC 2.79.113, 10/31/02]

20.2.79.114 EMISSION OFFSET BASELINE:

The baseline for determining credit for emission offsets shall be the most stringent emissions limitation pursuant to a New Mexico air quality regulation or federally enforceable permit which is applicable and in effect at the time the application to construct is filed. If neither a state air quality regulation nor a federally enforceable permit contains an emissions limitation for the source, the baseline shall be the actual emissions of the source from which offset credit is obtained. Where a source is subject to an emission standard established in a New Source Performance Standard (NSPS) or a National Emission Standard for Hazardous Air Pollutants (NESHAPS) and a different State Implementation Plan or permit limitation, including any emission limitation used in demonstrating reasonable further progress, the more stringent emission standard shall be used as the baseline for determining credit for emission offsets.

[11/30/95; 20.2.79.114 NMAC - Rn, 20 NMAC 2.79.114, 10/31/02]

20.2.79.115 EMISSION OFFSETS:

All emission offsets approved by the department shall meet the following criteria.

A. All emission reductions claimed as offset credit shall be from decreases of the same pollutant for which the offset is required.

B. All emission reductions claimed as offset credit shall occur prior to or concurrent with the start of operation of the proposed source. In addition, past reductions must have occurred later than the date upon which the area became nonattainment in order to be creditable.

C. For the case where emission reductions claimed as offset credit occur at the source subject to this part, such reductions shall be a condition required by a federally enforceable permit. For the case where emission reductions claimed as offset credit

occur at a neighboring source, such reductions shall be incorporated as modifications to pertinent federally enforceable permits held by the neighboring source. If the neighboring source has no relevant permits, the reductions shall be approved as a revision to the state implementation plan by the board.

D. Offset credit for any emissions reduction can be claimed only to the extent that the department or U.S. EPA has not relied on it in previously issuing any permit or in demonstrating attainment or reasonable further progress.

E. No emissions reduction credit shall be allowed for replacing one volatile organic compound with another of lesser reactivity, except as approved by the U.S. EPA reactivity guidance found at 42 *federal register* 35314, (1977), and any amendments thereto.

F. Emission reduction credit may be allowed for a source permanently curtailing production or operating hours below baseline levels provided that the work force to be affected has been notified of the curtailment.

(1) Emissions reductions achieved by shutting down an existing emission unit or curtailing production or operating hours below baseline levels may be generally credited for offsets if such reductions are surplus, permanent, quantifiable, and federally enforceable. In addition, the shutdown or curtailment is creditable only if it occurred after the date of the most recent emissions inventory used in the state implementation plan's demonstration of attainment. However, in no event may credit be given for shutdowns which occurred prior to August 7, 1977. For purposes of this paragraph, a permitting authority may choose to consider a prior shutdown or curtailment to have occurred after the date of the base year inventory, if the projected inventory used to develop the attainment demonstration explicitly includes the emissions from such previously shutdown or curtailed emission units.

(2) Such reductions may be credited in the absence of an approved attainment demonstration only if the shutdown or curtailment occurred on or after the date the new source permit application is filed, or, if the applicant can establish that the proposed new emission unit is a replacement for the shutdown or curtailed emission unit, and the provisions of Paragraph (1) of Subsection F of 20.2.79.7 NMAC are observed.

G. Where the most stringent emissions limit which is applicable allows greater emissions than the potential to emit of the offsetting source, emission offset credit will be allowed only for control below the potential to emit of the source.

H. The emission limit for determining emission offset credit involving an existing fuel combustion source shall be the most stringent emission standard which is applicable for this source for the type of fuel being burned at the time the permit application is filed. If the existing source commits to switch to a cleaner fuel, emission offset credit based on the difference between the allowable emissions of the fuels involved shall be acceptable

only if an alternative control measure, which would achieve the same degree of emission reduction should the source switch back to a fuel which produces more pollution, is specified in a permit issued by the department.

I. The owner or operator desiring to utilize an emission reduction as an offset shall submit to the department the following information:

(1) a detailed description of the process to be controlled and the control technology to be used; and

(2) emission calculations showing the types and amounts of actual emissions to be reduced; and

(3) the effective date of the reduction.

J. Source shutdowns and curtailments in production or operating hours may be used for emission offset credit only if they occur after August 7, 1977, or less than one year prior to the date of permit application, whichever is earlier, and the proposed new source for which the offset is to apply is a replacement for the shutdown or curtailment.

K. The total tonnage of increased emissions, in tons per year, resulting from a major modification that must be offset in accordance with Section 173 of the federal Clean Air Act shall be determined by summing the difference between the allowable emissions after the modification and the actual emissions before the modification for each emissions unit.

[11/30/1995; 20.2.79.115 NMAC - Rn, 20 NMAC 2.79.115, 10/31/2002; A, 1/22/2006; A, 8/31/2009; A, 8/21/2021]

20.2.79.116 BANKING OF EMISSION REDUCTION:

A. Any stationary source which decreases actual emissions of a regulated pollutant in excess of the requirements of this Part or any other applicable air quality regulation or permit emission limitation may preserve or bank such excess emission reductions for sale or future use.

B. The owner or operator desiring to preserve such reductions shall submit a written request prior to the actual emission reduction to the Department which contains the following information:

(1) A detailed description of the process(es) to be controlled and the control technology to be used; and

(2) Emission calculations showing the types and amounts of actual emissions to be reduced; and

(3) The effective date(s) of such reductions.

C. The Department shall:

(1) Verify the amount of emission reduction claimed in the written request;
and

(2) Approve or deny the request for banking of the emission reduction and notify the applicant in writing of the decision; and

(3) Keep appropriate records of any emission reduction accepted for banking;
and

(4) For the case where emission reductions are approved in excess of those required for obtaining a permit under this Part, the Department shall make such reductions a condition of the permit; and

(5) For the case where emission reductions are approved not in conjunction with granting a permit, the Department shall preserve such reductions as a State Implementation Plan revision which must be approved by the Environmental Improvement Board.

D. Use and Sale of Emission Reductions.

(1) The use of any preserved emission reduction is confined to meeting the emission offset requirements of this Part or 20.2.72 NMAC.

(2) The provisions of this Part apply to the future use of any preserved emission reduction as if such reductions were obtained concurrently with the commencement of operations of the new or modified source.

(3) Before the use or sale of any preserved emission reduction occurs, written notification must be given to the Department. Such notice shall be in writing and shall identify the permit(s) and State Implementation Plan revision(s) in which such reductions are preserved. The Department must verify the availability of the preserved reduction before any use or sale occurs.

(4) The use of preserved emission reduction credits is subject to the criteria of 20.2.79.115 NMAC - Emission Offsets.

[11/30/95; 20.2.79.116 NMAC - Rn, 20 NMAC 2.79.116, 10/31/02]

20.2.79.117 AIR QUALITY BENEFIT:

All demonstrations of the occurrence of a net air quality benefit shall meet the following criteria:

A. Emission offsets for volatile organic compounds or nitrogen oxides emissions impacting an ozone nonattainment area may be obtained from sources located in the broad vicinity of the proposed new source or modification, subject to approval by the Department. Atmospheric dispersion modeling will not be required to demonstrate the net air quality benefit that occurs due to reductions in volatile organic compound emissions.

B. An applicant which proposes emission offsets for sulfur dioxide, particulate matter, carbon monoxide, nitrogen oxides, or any other pollutant may be required by the Department to submit atmospheric dispersion modeling to demonstrate a net air quality benefit will occur. For any case involving these pollutants where stack emissions and fugitive or ground level emissions are offsetting, atmospheric dispersion modeling shall be required to demonstrate a net air quality benefit will occur.

[11/30/95; 20.2.79.117 NMAC - Rn, 20 NMAC 2.79.117, 10/31/02]

20.2.79.118 PUBLIC PARTICIPATION AND NOTIFICATION:

A. The Department shall, within thirty (30) days after its receipt of an application for a permit or significant permit revision subject to this Part, review such application and determine whether it is administratively complete. If the application is deemed:

(1) administratively complete, a letter to that effect shall be sent by certified mail to the applicant.

(2) administratively incomplete, a letter shall be sent by certified mail to the applicant stating what additional information or points of clarification are necessary to deem the application administratively complete. Upon receipt of the additional information or clarification, the Department shall promptly review such information and determine whether the application is administratively complete.

(3) administratively complete but no permit is required, a letter shall be sent by certified mail to the applicant informing the applicant of the determination.

B. The Department shall:

(1) Make a preliminary determination whether construction should be approved, approved with conditions, or disapproved.

(2) Make available at the Department, district and local office nearest to the proposed source a copy of all materials the applicant submitted, a copy of the preliminary determination, and a copy or summary of other materials, if any, considered in making the preliminary determination.

(3) Notify the public by advertisement in a newspaper of general circulation in the area in which the proposed major stationary source or major modification would be

constructed, of the application, the preliminary determination, and of the opportunity for comment at a public hearing as well as written public comment. The public comment period shall be for forty-five days from the date of such advertisement.

(4) Send a copy of the notice of public comment to the applicant, the Administrator, and to officials and agencies having jurisdiction over the location where the proposed construction would occur as follows: any other state or local air pollution control agencies, the chief executives of the city and county where the source would be located, any regional comprehensive land use planning agency, and any state, federal land manager, or Indian governing body whose lands may be affected by emissions from the source or modification.

(5) Provide opportunity for a public hearing for interested persons to appear and submit written or oral comments on the air quality impact of the source and other appropriate considerations. Public hearings shall be held in the geographic area likely to be impacted by the source.

(6) Consider all written comments submitted within a time specified in the notice of public comment and all comments received at any public hearing(s) in making a final decision on the approvability of the application. The Department shall make all comments available for public inspection in the same locations where the Department made available preconstruction information relating to the source.

(7) Within ninety (90) days after the application is deemed administratively complete, unless the Secretary grants an extension, as specified in 20.2.72.207 NMAC, not to exceed ninety (90) days for good cause:

(a) make a final determination whether construction should be approved, approved with conditions, or disapproved, or whether no permit is required; and

(b) notify the applicant in writing of the final determination and make such notification available for public inspection at the same location where the Department made available preconstruction information and public comments relating to the source.

[11/30/1995; 20.2.79.119 NMAC - Rn, 20 NMAC 2.79.119, 10/31/2002; A, 6/3/2011; A, 8/21/2021]

20.2.79.120 ACTUALS PLANTWIDE APPLICABILITY LIMITS (PALs):

A. Applicability.

(1) The department may approve the use of an actuals PAL for any existing major stationary source (except as provided in Paragraph (2) of this subsection) if the PAL meets the requirements of this section. The term "PAL" shall mean "actuals PAL" throughout this section.

(2) Actuals PALs shall not be allowed for VOC or NO_x for any major stationary source located in an extreme ozone nonattainment area.

(3) Any physical change in or change in the method of operation of a major stationary source that maintains its total source-wide emissions below the PAL level, meets the requirements of this section, and complies with the PAL permit:

(a) is not a major modification for the PAL pollutant;

(b) does not have to be approved through the requirements of this part; and

(c) is not subject to the provisions in 20.2.79.110 NMAC (restrictions on relaxing enforceable emission limitations that the major stationary source used to avoid applicability of the nonattainment major new source review program).

(4) Except as provided under Subparagraph (c) of Paragraph (3) of this subsection, a major stationary source shall continue to comply with all applicable federal or state requirements, emission limitations, and work practice requirements that were established prior to the effective date of the PAL.

B. Definitions. When a term is not defined in this subsection, it shall have the meaning given in 20.2.79.7 NMAC or in 20.2.2 NMAC.

(1) Actuals PAL for a major stationary source means a PAL based on the baseline actual emissions of all emissions units at the source, that emit or have the potential to emit the PAL pollutant.

(2) Allowable emissions means "allowable emissions" as defined in 20.2.79.7 NMAC, except as this definition is modified according to the following.

(a) The allowable emissions for any emissions unit shall be calculated considering any emission limitations that are enforceable as a practical matter on the emissions unit's potential to emit.

(b) An emissions unit's potential to emit shall be determined using the definition in this part, except that the words "or enforceable as a practical matter" should be added after "federally enforceable".

(3) Small emissions unit means an emissions unit that emits or has the potential to emit the PAL pollutant in an amount less than the significant level for that PAL pollutant, as defined in Subsection AM of 20.2.79.7 NMAC or in the federal Clean Air Act, whichever is lower.

(4) Major emissions unit means:

(a) any emissions unit that emits or has the potential to emit 100 tons per year or more of the PAL pollutant in an attainment area; or

(b) any emissions unit that emits or has the potential to emit the PAL pollutant in an amount that is equal to or greater than the major source threshold for the PAL pollutant as defined by the federal Clean Air Act for nonattainment areas; for example, in accordance with the definition of major stationary source in Section 182 (c) of the federal Clean Air Act, an emissions unit would be a major emissions unit for VOC if the emissions unit is located in a serious ozone nonattainment area and it emits or has the potential to emit 50 or more tons of VOC per year.

(5) Plantwide applicability limitation (PAL) means an emission limitation expressed in tons per year, for a pollutant at a major stationary source, that is enforceable as a practical matter and established source-wide in accordance with this section.

(6) PAL effective date generally means the date of issuance of the PAL permit. However, the PAL effective date for an increased PAL is the date any emissions unit which is part of the PAL major modification becomes operational and begins to emit the PAL pollutant.

(7) PAL effective period means the period beginning with the PAL effective date and ending 10 years later.

(8) PAL major modification means, notwithstanding the definitions for major modification and net emissions increase in 20.2.79.7 NMAC, any physical change in or change in the method of operation of the PAL source that causes it to emit the PAL pollutant at a level equal to or greater than the PAL.

(9) PAL permit means the major new source review permit, the minor NSR permit, or the state operating permit under the requirements of 20.2.72 NMAC, 20.2.74 NMAC, 20.2.79 NMAC, or the title V permit under the requirements of 20.2.70 NMAC issued by the department that establishes a PAL for a major stationary source.

(10) PAL pollutant means the pollutant for which a PAL is established at a major stationary source.

(11) Significant emissions unit means an emissions unit that emits or has the potential to emit a PAL pollutant in an amount that is equal to or greater than the significant level (as defined in Subsection AM of 20.2.79.7 NMAC or in the federal Clean Air Act, whichever is lower) for that PAL pollutant, but less than the amount that would qualify the unit as a major emissions unit as defined in Paragraph (4) of Subsection B of this section.

C. Permit application requirements. As part of a permit application requesting a PAL, the owner or operator of a major stationary source shall submit the following information to the department for approval.

(1) A list of all emissions units at the source designated as small, significant or major based on their potential to emit. In addition, the owner or operator of the source shall indicate which, if any, federal or state applicable requirements, emission limitations or work practices apply to each unit.

(2) Calculations of the baseline actual emissions (with supporting documentation). Baseline actual emissions are to include emissions associated not only with operation of the unit, but also emissions associated with startup, shutdown and malfunction.

(3) The calculation procedures that the major stationary source owner or operator proposes to use to convert the monitoring system data to monthly emissions and annual emissions based on a 12-month rolling total for each month as required by Paragraph (1) of Subsection M of this section.

D. General requirements for establishing PALs.

(1) A PAL at a major stationary source may be allowed by the department, provided that at a minimum, the following requirements are met.

(a) The PAL shall impose an annual emission limitation in tons per year, that is enforceable as a practical matter, for the entire major stationary source. For each month during the PAL effective period after the first 12 months of establishing a PAL, the major stationary source owner or operator shall show that the sum of the monthly emissions from each emissions unit under the PAL for the previous 12 consecutive months is less than the PAL (a 12-month average, rolled monthly). For each month during the first 11 months from the PAL effective date, the major stationary source owner or operator shall show that the sum of the preceding monthly emissions from the PAL effective date for each emissions unit under the PAL is less than the PAL.

(b) The PAL shall be established in a PAL permit that meets the public participation requirements in Subsection E of this section.

(c) The PAL permit shall contain all the requirements of Subsection G of this section.

(d) The PAL shall include fugitive emissions, to the extent quantifiable, from all emissions units that emit or have the potential to emit the PAL pollutant at the major stationary source.

(e) Each PAL shall regulate emissions of only one pollutant.

(f) Each PAL shall have a PAL effective period of 10 years.

(g) The owner or operator of the major stationary source with a PAL shall comply with the monitoring, recordkeeping, and reporting requirements provided in Subsections L through N of this section for each emissions unit under the PAL through the PAL effective period.

(2) At no time (during or after the PAL effective period) are emissions reductions of a PAL pollutant, which occur during the PAL effective period, creditable as decreases for purposes of offsets under 20.2.79.115 NMAC unless the level of the PAL is reduced by the amount of such emissions reductions and such reductions would be creditable in the absence of the PAL.

E. Public participation requirement for PALs. PALs for existing major stationary sources shall be established, renewed, or increased through a procedure that is consistent with 40 CFR 51.160 and 161. This includes the requirement that the department provide the public with notice of the proposed approval of a PAL permit and at least a 30-day period for submittal of public comment. The department shall address all material comments before taking final action on the permit.

F. Setting the 10-year actuals PAL level.

(1) Except as provided in Paragraph (2) of this subsection, the actuals PAL level for a major stationary source shall be established as the sum of the baseline actual emissions (as defined in 20.2.79.7 NMAC) of the PAL pollutant for each emissions unit at the source; plus an amount equal to the applicable significant level for the PAL pollutant under 20.2.79.7 NMAC or under the act, whichever is lower. When establishing the actuals PAL level, for a PAL pollutant, only one consecutive 24-month period must be used to determine the baseline actual emissions for all existing emissions units. However, a different consecutive 24-month period may be used for each different PAL pollutant. Emissions associated with units that were permanently shutdown after this 24-month period must be subtracted from the PAL level. The department shall specify a reduced PAL level(s) (in tons/yr) in the PAL permit to become effective on the future compliance date(s) of any applicable federal or state regulatory requirement(s) that the department is aware of prior to issuance of the PAL permit. For instance, if the source owner or operator will be required to reduce emissions from industrial boilers in half from baseline emissions of 60 ppm NO_x to a new rule limit of 30 ppm, then the permit shall contain a future effective PAL level that is equal to the current PAL level reduced by half of the original baseline emissions of such unit(s).

(2) For newly constructed units (which do not include modifications to existing units) on which actual construction began after the 24-month period, in lieu of adding the baseline actual emissions as specified in Paragraph (1) of this subsection, the emissions must be added to the PAL level in an amount equal to the potential to emit of the units.

G. Contents of the PAL permit. The PAL permit shall contain, at a minimum, all of the following information.

(1) The PAL pollutant and the applicable source-wide emission limitation in tons per year.

(2) The PAL permit effective date and the expiration date of the PAL (PAL effective period).

(3) Specification in the PAL permit that if a major stationary source owner or operator applies to renew a PAL in accordance with Subsection J of this section before the end of the PAL effective period, then the PAL shall not expire at the end of the PAL effective period. It shall remain in effect until a revised PAL permit is issued by the department.

(4) A requirement that emission calculations for compliance purposes include emissions from startups, shutdowns and malfunctions.

(5) A requirement that, once the PAL expires, the major stationary source is subject to the requirements of Subsection I of this section.

(6) The calculation procedures that the major stationary source owner or operator shall use to convert the monitoring system data to monthly emissions and annual emissions based on a 12-month rolling total for each month as required by Paragraph (1) of Subsection M of this section.

(7) A requirement that the major stationary source owner or operator monitor all emissions units in accordance with the provisions under Subsection L of this section.

(8) A requirement to retain the records required under Subsection M of this section on site. Such records may be retained in an electronic format.

(9) A requirement to submit the reports required under Subsection N of this section by the required deadlines.

(10) Any other requirements that the department deems necessary to implement and enforce the PAL.

H. PAL effective period and reopening of the PAL permit.

(1) PAL effective period. The permit shall specify a PAL effective period of 10 years.

(2) Reopening of the PAL permit.

(a) During the PAL effective period, the department shall reopen the PAL permit to:

(i) correct typographical/calculation errors made in setting the PAL or reflect a more accurate determination of emissions used to establish the PAL;

(ii) reduce the PAL if the owner or operator of the major stationary source creates credible emissions reductions for use as offsets under 20.2.79.115 NMAC; or

(iii) revise the PAL to reflect an increase in the PAL as provided under Subsection K of this section.

(b) The department may reopen the PAL permit for the following:

(i) to reduce the PAL to reflect newly applicable federal requirements (for example, NSPS) with compliance dates after the PAL effective date;

(ii) to reduce the PAL consistent with any other requirement, that is enforceable as a practical matter, and that the department may impose on the major stationary source under this part; or

(iii) to reduce the PAL if the department determines that a reduction is necessary to avoid causing or contributing to a NAAQS or PSD increment violation, or to an adverse impact on an air quality related value that has been identified for a federal class I area by a federal land manager and for which information is available to the general public.

(c) Except for the permit reopening in Item (i) of Subparagraph (a) of this paragraph for the correction of typographical/calculation errors that do not increase the PAL level, all other reopenings shall be carried out in accordance with the public participation requirements of Subsection E of this section.

I. Expiration of a PAL. Any PAL which is not renewed in accordance with the procedures in Subsection J of this section shall expire at the end of the PAL effective period, and the following requirements shall apply.

(1) Each emissions unit (or each group of emissions units) that existed under the PAL shall comply with an allowable emission limitation under a revised permit established according to the following procedures.

(a) Within the time frame specified for PAL renewals in Paragraph (2) of Subsection J of this section, the major stationary source shall submit a proposed allowable emission limitation for each emissions unit (or each group of emissions units, if such a distribution is more appropriate as decided by the department) by distributing the PAL allowable emissions for the major stationary source among each of the emissions units that existed under the PAL. If the PAL had not yet been adjusted for an applicable requirement that became effective during the PAL effective period, as required under Paragraph (5) of Subsection J of this section, such distribution shall be made as if the PAL had been adjusted.

(b) The department shall decide whether and how the PAL allowable emissions will be distributed and issue a revised permit incorporating allowable limits for each emissions unit, or each group of emissions units, as the department determines is appropriate.

(2) Each emissions unit(s) shall comply with the allowable emission limitation on a 12-month rolling basis. The department may approve the use of monitoring systems (source testing, emission factors, etc.) other than CEMS, CERMS, PEMS or CPMS to demonstrate compliance with the allowable emission limitation.

(3) Until the department issues the revised permit incorporating allowable limits for each emissions unit, or each group of emissions units, as required under Subparagraph (a) of Paragraph (1) of this subsection, the source shall continue to

comply with a source-wide, multi-unit emissions cap equivalent to the level of the PAL emission limitation.

(4) Any physical change or change in the method of operation at the major stationary source will be subject to the nonattainment major new source review requirements if such change meets the definition of major modification in 20.2.79.7 NMAC.

(5) The major stationary source owner or operator shall continue to comply with any New Mexico or federal applicable requirements (BACT, RACT, NSPS, etc.) that may have applied either during the PAL effective period or prior to the PAL effective period except for those emission limitations that had been established pursuant to Subsection A of 20.2.79.110 NMAC, but were eliminated by the PAL in accordance with the provisions in Subparagraph (c) of Paragraph (3) of Subsection A of this section.

J. Renewal of a PAL.

(1) The department shall follow the procedures specified in Subsection E of this section in approving any request to renew a PAL for a major stationary source, and shall provide both the proposed PAL level and a written rationale for the proposed PAL level to the public for review and comment. During such public review, any person may propose a PAL level for the source for consideration by the department.

(2) Application deadline. A major stationary source owner or operator shall submit a timely application to the department to request renewal of a PAL. A timely application is one that is submitted at least six months prior to, but not earlier than 18 months from, the date of permit expiration. This deadline for application submittal is to ensure that the permit will not expire before the permit is renewed. If the owner or operator of a major stationary source submits a complete application to renew the PAL within this time period, then the PAL shall continue to be effective until the revised permit with the renewed PAL is issued.

(3) Application requirements. The application to renew a PAL permit shall contain the following information.

(a) The information required in Paragraphs (1) through (3) of Subsection C of this section.

(b) A proposed PAL level.

(c) The sum of the potential to emit of all emissions units under the PAL (with supporting documentation).

(d) Any other information the owner or operator wishes the department to consider in determining the appropriate level for renewing the PAL.

(4) PAL adjustment. In determining whether and how to adjust the PAL, the department shall consider the options outlined in Subparagraph (a) of this paragraph. However, in no case may any such adjustment fail to comply with Subparagraph (b) of this paragraph.

(a) If the emissions level calculated in accordance with Subsection F of this section is equal to or greater than 80 percent of the PAL level, the department may:

(i) renew the PAL at the same level without considering the factors set forth in Item (ii) of this subparagraph; or

(ii) set the PAL at a level that it determines to be more representative of the source's baseline actual emissions, or that it determines to be appropriate considering air quality needs, advances in control technology, anticipated economic growth in the area, desire to reward or encourage the source's voluntary emissions reductions, or other factors as specifically identified by the department in its written rationale.

(b) Notwithstanding Subparagraph (a) of this paragraph:

(i) if the potential to emit of the major stationary source is less than the PAL, the department shall adjust the PAL to a level no greater than the potential to emit of the source; and

(ii) the department shall not approve a renewed PAL level higher than the current PAL, unless the major stationary source has complied with the provisions of Subsection K of this section (increasing a PAL).

(5) If the compliance date for a New Mexico or federal requirement that applies to the PAL source occurs during the PAL effective period, and if the department has not already adjusted for such requirement, the PAL shall be adjusted at the time of PAL permit renewal or title V permit renewal, whichever occurs first.

K. Increasing a PAL during the PAL effective period.

(1) The department may increase a PAL emission limitation only if the major stationary source complies with the following provisions.

(a) The owner or operator of the major stationary source shall submit a complete application to request an increase in the PAL limit for a PAL major modification. Such application shall identify the emissions unit(s) contributing to the increase in emissions so as to cause the major stationary source's emissions to equal or exceed its PAL.

(b) As part of this application, the major stationary source owner or operator shall demonstrate that the sum of the baseline actual emissions of the small emissions

units, plus the sum of the baseline actual emissions of the significant and major emissions units assuming application of BACT equivalent controls, plus the sum of the allowable emissions of the new or modified emissions unit(s) exceeds the PAL. The level of control that would result from BACT equivalent controls on each significant or major emissions unit shall be determined by conducting a new BACT analysis at the time the application is submitted, unless the emissions unit is currently required to comply with a BACT or LAER requirement that was established within the preceding 10 years. In such a case, the assumed control level for that emissions unit shall be equal to the level of BACT or LAER with which that emissions unit must currently comply.

(c) The owner or operator shall obtain a major new source review permit for all emissions unit(s) identified in Subparagraph (a) of Paragraph (1) of Subsection K of this section, regardless of the magnitude of the emissions increase resulting from them (that is, no significant levels apply). These emissions unit(s) shall comply with any emissions requirements resulting from the nonattainment major NSR program process (for example, LAER), even though they have also become subject to the PAL or continue to be subject to the PAL.

(d) The PAL permit shall require that the increased PAL level shall be effective on the day any emissions unit that is part of the PAL major modification becomes operational and begins to emit the PAL pollutant.

(2) The department shall calculate the new PAL as the sum of the allowable emissions for each modified or new emissions unit, plus the sum of the baseline actual emissions of the significant and major emissions units (assuming application of BACT equivalent controls as determined in accordance with Subparagraph (b) of Paragraph (1) of Subsection K of this section), plus the sum of the baseline actual emissions of the small emissions units.

(3) The PAL permit shall be revised to reflect the increased PAL level pursuant to the public notice requirements of Subsection E of this section.

L. Monitoring requirements for PALs.

(1) General Requirements.

(a) Each PAL permit must contain enforceable requirements for the monitoring system that accurately determines plantwide emissions of the PAL pollutant in terms of mass per unit of time. Any monitoring system authorized for use in the PAL permit must be based on sound science and meet generally acceptable scientific procedures for data quality and manipulation. Additionally, the information generated by such system must meet minimum legal requirements for admissibility in a judicial proceeding to enforce the PAL permit.

(b) The PAL monitoring system must employ one or more of the four general monitoring approaches meeting the minimum requirements set forth in Subparagraphs

(a) through (d) of Paragraph (2) of this subsection and must be approved by the department.

(c) Notwithstanding Subparagraph (b) of this paragraph, the owner or operator may also employ an alternative monitoring approach that meets Subparagraph (a) of this paragraph if approved by the department.

(d) Failure to use a monitoring system that meets the requirements of this section renders the PAL invalid.

(2) The following are acceptable general monitoring approaches when conducted in accordance with the minimum requirements in Paragraphs (3) through (9) of this subsection:

(a) mass balance calculations for activities using coatings or solvents;

(b) CEMS;

(c) CPMS or PEMS; and

(d) emission factors.

(3) Mass balance calculations. An owner or operator using mass balance calculations to monitor PAL pollutant emissions from activities using coating or solvents shall meet the following requirements:

(a) provide a demonstrated means of validating the published content of the PAL pollutant that is contained in or created by all materials used in or at the emissions unit;

(b) assume that the emissions unit emits all of the PAL pollutant that is contained in or created by any raw material or fuel used in or at the emissions unit, if it cannot otherwise be accounted for in the process; and

(c) where the vendor of a material or fuel, which is used in or at the emissions unit, publishes a range of pollutant content from such material, the owner or operator must use the highest value of the range to calculate the PAL pollutant emissions unless the department determines there is site-specific data or a site-specific monitoring program to support another content within the range.

(4) CEMS. An owner or operator using CEMS to monitor PAL pollutant emissions shall meet the following requirements:

(a) CEMS must comply with applicable performance specifications found in 40 CFR part 60, appendix B; and

(b) CEMS must sample, analyze and record data at least every 15 minutes while the emissions unit is operating.

(5) CPMS or PEMS. An owner or operator using CPMS or PEMS to monitor PAL pollutant emissions shall meet the following requirements:

(a) the CPMS or the PEMS must be based on current site-specific data demonstrating a correlation between the monitored parameter(s) and the PAL pollutant emissions across the range of operation of the emissions unit; and

(b) each CPMS or PEMS must sample, analyze, and record data at least every 15 minutes, or at another less frequent interval approved by the department, while the emissions unit is operating.

(6) Emission factors. An owner or operator using emission factors to monitor PAL pollutant emissions shall meet the following requirements:

(a) all emission factors shall be adjusted, if appropriate, to account for the degree of uncertainty or limitations in the factors' development;

(b) the emissions unit shall operate within the designated range of use for the emission factor, if applicable; and

(c) if technically practicable, the owner or operator of a significant emissions unit that relies on an emission factor to calculate PAL pollutant emissions shall conduct validation testing to determine a site-specific emission factor within six months of PAL permit issuance, unless the department determines that testing is not required.

(7) A source owner or operator must record and report maximum potential emissions without considering enforceable emission limitations or operational restrictions for an emissions unit during any period of time that there is no monitoring data, unless another method for determining emissions during such periods is specified in the PAL permit.

(8) Notwithstanding the requirements in Paragraphs (3) through (7) of this subsection, where an owner or operator of an emissions unit cannot demonstrate a correlation between the monitored parameter(s) and the PAL pollutant emissions rate at all operating points of the emissions unit, the department shall, at the time of permit issuance:

(a) establish default value(s) for determining compliance with the PAL based on the highest potential emissions reasonably estimated at such operating point(s); or

(b) determine that operation of the emissions unit during operating conditions when there is no correlation between monitored parameter(s) and the PAL pollutant emissions is a violation of the PAL.

(9) Revalidation. All data used to establish the PAL pollutant must be revalidated through performance testing or other scientifically valid means approved by the department. Such testing must occur at least once every five years after issuance of the PAL.

M. Recordkeeping requirements.

(1) The PAL permit shall require an owner or operator to retain a copy of all records necessary to determine compliance with any requirement of this section and of the PAL, including a determination of each emissions unit's 12-month rolling total emissions, for five years from the date of such record.

(2) The PAL permit shall require an owner or operator to retain a copy of the following records for the duration of the PAL effective period plus five years:

(a) a copy of the PAL permit application and any applications for revisions to the PAL; and

(b) each annual certification of compliance pursuant to title V and the data relied on in certifying the compliance.

N. Reporting and notification requirements. The owner or operator shall submit semi-annual monitoring reports and prompt deviation reports to the department in accordance with the requirements of 20.2.70 NMAC. The reports shall meet the following requirements.

(1) Semi-Annual Report. The semi-annual report shall be submitted to the department within 30 days of the end of each reporting period. This report shall contain the following information.

(a) The identification of owner and operator and the permit number.

(b) Total annual emissions (tons/year) based on a 12-month rolling total for each month in the reporting period recorded pursuant to Paragraph (1) of Subsection M of this section.

(c) All data relied upon, including, but not limited to, any quality assurance or quality control data, in calculating the monthly and annual PAL pollutant emissions.

(d) A list of any emissions units modified or added to the major stationary source during the preceding six-month period.

(e) The number, duration, and cause of any deviations or monitoring malfunctions (other than the time associated with zero and span calibration checks), and any corrective action taken.

(f) A notification of a shutdown of any monitoring system, whether the shutdown was permanent or temporary, the reason for the shutdown, the anticipated date that the monitoring system will be fully operational or replaced with another monitoring system, and whether the emissions unit monitored by the monitoring system continued to operate, and the calculation of the emissions of the pollutant or the number determined by method included in the permit, as provided by Paragraph (7) of Subsection L of this section.

(g) A signed statement by the responsible official (as defined by the applicable title V operating permit program) certifying the truth, accuracy, and completeness of the information provided in the report.

(2) Deviation report. The major stationary source owner or operator shall promptly submit reports of any deviations or exceedance of the PAL requirements, including periods where no monitoring is available. A report submitted pursuant to 40 CFR 70.6(a)(3)(iii)(B) shall satisfy this reporting requirement. The deviation reports shall be submitted within the time limits prescribed by the applicable program implementing 40 CFR 70.6(a)(3)(iii)(B). The reports shall contain the following information:

(a) the identification of owner and operator and the permit number;

(b) the PAL requirement that experienced the deviation or that was exceeded;

(c) emissions resulting from the deviation or the exceedance; and

(d) a signed statement by the responsible official (as defined by the applicable title V operating permit program) certifying the truth, accuracy, and completeness of the information provided in the report.

(3) Revalidation results. The owner or operator shall submit to the department the results of any revalidation test or method within three months after completion of such test or method.

O. Transition requirements.

(1) The department shall not issue a PAL that does not comply with the requirements of this section after the administrator has approved these regulations.

(2) The department may supersede any PAL which was established prior to the date of approval of this part by the administrator with a PAL that complies with the requirements of this section.

[The latest effective date of any section in this Part is 10/31/02.]

20.2.80.6 OBJECTIVE:

The objective of this Part is to establish requirements for the evaluation of stack heights and other dispersion techniques in permitting decisions.

[11/30/95; 20.2.80.6 NMAC - Rn, 20 NMAC 2.80.105 10/31/02]

20.2.80.7 DEFINITIONS:

In addition to the terms defined in 20.2.2 NMAC (Definitions), the definitions in 40 CFR Sections 51.100(z) and (ff)-(kk) (1987) are hereby incorporated as state regulations and, as used in this Part: "Part" means an air quality control regulation under Title 20,

Chapter 2 of the New Mexico Administrative Code, unless otherwise noted; as adopted or amended by the Board.

[11/30/95; 20.2.80.7 NMAC - Rn, 20 NMAC 2.80.107 10/31/02]

20.2.80.8 AMENDMENT AND SUPERSESSION OF PRIOR REGULATIONS:

This Part amends and supersedes Air Quality Control Regulation ("AQCR") 710, -- Stack Height Requirements, last filed March 15, 1988, as amended.

A. All references to AQCR 710 in any other rule shall be construed as a reference to this Part.

B. The amendment and supersession of AQCR 710 shall not affect any administrative or judicial enforcement action pending on the effective date of such amendment nor the validity of any permit issued pursuant to AQCR 710.

[11/30/95; 20.2.80.8 NMAC - Rn, 20 NMAC 2.80.106 10/31/02]

20.2.80.9 DOCUMENTS:

Documents cited in this Part may be viewed at the New Mexico Environment Department, Air Quality Bureau, Harold Runnels Building, 1190 Saint Francis Drive, Santa Fe, NM 87505 [2048 Galisteo St., Santa Fe, NM 87505].

20.2.80.10-20.2.80.108 [RESERVED]

20.2.80.109 NEW SOURCES OR MODIFIED EXISTING SOURCES:

Except as otherwise provided, in evaluating air quality impacts for a proposed new source or modification of an existing source requiring a permit pursuant to 20.2.72 NMAC (Construction Permits); 20.2.74 NMAC (Prevention of Significant Deterioration (PSD)); or 20.2.79 NMAC (Permits - Nonattainment Areas), the Department shall give no credit for reductions in emissions due to the length of a source's stack height that exceeds good engineering practice or due to any other dispersion technique.

[11/30/95; 20.2.80.109 NMAC - Rn, 20 NMAC 2.80.109 10/31/02]

20.2.80.110 EXISTING STACKS:

The provisions of 20.2.80.109 NMAC shall not apply to:

A. Stack heights in existence or dispersion techniques implemented on or before December 31, 1970, except where air contaminants are being emitted from such stacks

or using such dispersion techniques by sources, as defined in section 111(a)(3) of the Federal Act, which were constructed, or reconstructed, or for which major modifications, as defined in 40 CFR Sections 51.165(a)(1)(v)(A), 51.166(b)(2)(i) and 52.21(b)(2)(i), were carried out after December 31, 1970; or

B. Coal-fired steam electric generating units subject to the provisions of section 118 of the Federal Act, which commenced operation before July 1, 1957, and whose stacks were constructed under a contract awarded before February 8, 1974.

[11/30/95; 20.2.80.110 NMAC - Rn, 20 NMAC 2.80.110 10/31/02]

20.2.80.111 DEMONSTRATION STUDY:

A. Notification: Before the Department issues a permit, pursuant to 20.2.72 NMAC, 20.2.74 NMAC, or 20.2.79 NMAC, which contains a new or revised emission limitation that is based on a good engineering stack height that exceeds the height allowed by 40 CFR Part 51 Section 51.100(ii) (1) or (2) (1987), the Department shall notify the public of the availability of the demonstration study. Such notice shall be given in the manner specified in the applicable regulation for the permit application. Interested parties shall have thirty (30) days from the date of the notice to submit comments on the demonstration and to request a public hearing.

B. Public Hearing: If the Secretary determines there is significant public interest, he shall hold a public hearing. If a public hearing is held, the Department shall give notice of the time, date, and place of the hearing. The hearing shall be held within forty-five (45) days of the notice. The hearing may be combined with any other public hearing to be held on the permit application.

C. Final Determination: After the hearing, the Department shall make its final decision on the new or revised emission limitation.

[11/30/95; 20.2.80.111 NMAC - Rn, 20 NMAC 2.80.111 10/31/02]

20.2.80.112 VARIANCES:

Because sources subject to the federal stack height regulation cannot be granted variances from that requirement, the requirements of this Part shall not be subject to section 74-2-8 NMSA 1978.

[11/30/95; 20.2.80.111 NMAC - Rn, 20 NMAC 2.80.112 10/31/02]

PART 81: WESTERN BACKSTOP SULFUR DIOXIDE TRADING PROGRAM

20.2.81.1 ISSUING AGENCY:

Environmental Improvement Board.

[20.2.81.1 NMAC - N, 12/31/03]

20.2.81.2 SCOPE:

All geographic areas within the jurisdiction of the environmental improvement board.

[20.2.81.2 NMAC - N, 12/31/03]

20.2.81.3 STATUTORY AUTHORITY:

Environmental Improvement Act, NMSA 1978, Section 74-1-8(A)(4) and (7), and Air Quality Control Act, NMSA 1978, Sections 74-2-1 et seq., including specifically, Section 74-2-5 (A), (B) and (C).

[20.2.81.3 NMAC - N, 12/31/03]

20.2.81.4 DURATION:

Permanent.

[20.2.81.4 NMAC - N, 12/31/03]

20.2.81.5 EFFECTIVE DATE:

December 31, 2003, except where a later date is cited at the end of a section.

[20.2.81.5 NMAC - N, 12/31/03]

[The latest effective date of any section in this part is July 6, 2011.]

20.2.81.6 OBJECTIVE:

A. 20.2.81 NMAC implements the western backstop sulfur dioxide trading program ("WEB trading program") provisions required under the federal regional haze rule, 40 CFR 51.309, and New Mexico's regional haze implementation plan.

B. Nothing in 20.2.81 NMAC waives any requirement otherwise in effect or subsequently required under another program, including rules governing new sources.

[20.2.81.6 NMAC - N, 12/31/03]

20.2.81.7 DEFINITIONS:

In addition to the terms defined in 20.2.2 NMAC (Definitions), as used in this part, the following definitions shall apply.

A. "Account certificate of representation" means the completed and signed submission required to designate an account representative for a web source or an account representative for a general account.

B. "Account representative" means the individual who is authorized through an account certificate of representation to represent owners and operators of the WEB source with regard to matters under the web trading program or, for a general account, who is authorized through an account certificate of representation to represent the persons having an ownership interest in allowances in the general account with regard to matters concerning the general account.

C. "Act" means the federal Clean Air Act, as amended, 42 U.S.C. 7401, et seq.

D. "Actual emissions" means total annual sulfur dioxide emissions determined in accordance with 20.2.81.106 NMAC, or determined in accordance with 20.2.73 NMAC for sources that are not subject to 20.2.81.106 NMAC.

E. "Allocate" means to assign allowances to a WEB source through Section C1 of the implementation plan.

F. "Allowance" means the limited authorization under the WEB trading program to emit one ton of sulfur dioxide during a specified control period or any control period thereafter subject to the terms and conditions for use of unused allowances as established by 20.2.81 NMAC.

G. "Allowance limitation" means the tonnage of sulfur dioxide emissions authorized by the allowances available for compliance deduction for a WEB source for a control period under 20.2.81.109 NMAC on the allowance transfer deadline for that control period.

H. "Allowance tracking system" means the system developed by the department where allowances under the WEB trading program are recorded, held, transferred and deducted.

I. "Allowance tracking system account" means an account in the allowance tracking system established for purposes of recording, holding, transferring, and deducting allowances.

J. "Allowance transfer deadline" means the deadline established in Subsection B of 20.2.81.107 NMAC when allowances must be submitted for recording in a WEB source's compliance account in order to demonstrate compliance for that control period.

K. "Best available retrofit technology (BART)" means that emission reduction control device, facility, method, or system, used to achieve the best continuous emission reduction for each pollutant emitted by an existing stationary facility. The emission limitation shall be established on a case-by-case basis taking into consideration the technology available, the costs of compliance, the energy and non-air quality environmental impacts of compliance, any pollution control equipment in use or in existence at the source, the remaining useful life of the source, and the degree of improvement in visibility which may reasonably be anticipated to result from the use of such technology.

L. "Compliance account" means an account established in the allowance tracking system under Subsection A of 20.2.81.105 NMAC for the purpose of recording allowances that a WEB source might hold to demonstrate compliance with its allowance limitation.

M. "Compliance certification" means a submission to the department by the account representative as required under Subsection B of 20.2.81.109 NMAC to report a WEB source's compliance or noncompliance with 20.2.81 NMAC.

N. "Control period" means the period beginning January 1 of each year and ending on December 31 of the same year, inclusive.

O. "Emission unit" means any part of a stationary source that emits or would have the potential to emit any pollutant subject to regulations under the Clean Air Act.

P. "Emissions tracking database" means the central database where sulfur dioxide emissions for WEB sources as recorded and reported in accordance with 20.2.81 NMAC are tracked to determine compliance with allowance limitations.

Q. "Existing source" means, a stationary source that commenced operation before the program trigger date.

R. "Fugitive emissions" are those emissions that could not reasonably pass through a stack, chimney, vent, or other functionally equivalent opening.

S. "General account" means an account established in the allowance tracking system under 20.2.81.105 NMAC for the purpose of recording allowances held by a person that are not to be used to show compliance with an allowance limitation.

T. "Milestone" means the maximum level of stationary source regional sulfur dioxide emissions for each year from 2003 to 2018, established according to the procedures in section A of the sulfur dioxide milestones and backstop trading program implementation plan.

U. "New web source" means a WEB source that commenced operation on or after the program trigger date.

V. "New source set-aside" means a pool of allowances that are available for allocation to new sources in accordance with the provisions of the sulfur dioxide milestones and backstop trading program implementation plan.

W. "Owner or operator" means any person who is an owner or who operates, controls or supervises a WEB source, and includes but is not be limited to any holding company, utility system or plant manager.

X. "Part" means an air quality control regulation under Title 20, Chapter 2 of the New Mexico administrative code, unless otherwise noted, as adopted or amended by the board.

Y. "Potential to emit" means the maximum capacity of a stationary source to emit any air pollutant under its physical and operational design. Any physical or operational limitation on the capacity of a source to emit an air pollutant, including air pollution control equipment and restrictions on hours of operation or on the type or amount of material combusted, stored or processed, shall be treated as part of its design if the limitation is enforceable by the EPA administrator.

Z. "Program trigger date" means the date that the department determines that the WEB trading program has been triggered in accordance with the provisions of section A2 of the sulfur dioxide milestones and backstop trading program implementation plan.

AA. "Program trigger years" means the years shown in table 1, column 3, of the sulfur dioxide milestones and backstop trading program implementation plan for the applicable milestone if the WEB trading program is triggered as described in section A of the sulfur dioxide milestones and backstop trading program implementation plan.

AB. "Retired source" means a WEB source that has received a retired source exemption as provided in Subsection D of 20.2.81.101 NMAC. Any retired source resuming operations under Subsection D of 20.2.81.101 NMAC, must submit its exemption as part of its registration materials.

AC. "Serial number" means, when referring to allowances, the unique identification number assigned to each allowance by the tracking systems administrator, in accordance with Subsection B of 20.2.81.104 NMAC.

AD. "Special reserve compliance account" means an account established in the allowance tracking system under 20.2.81.105 NMAC for the purpose of recording allowances that a WEB source might hold to demonstrate compliance with its allowance limitation for emission units that are monitored for sulfur dioxide in accordance with 20.2.81.106 NMAC.

AE. "Sulfur dioxide emitting unit" means any equipment that is located at a WEB source and that emits sulfur dioxide.

AF. "Sulfur dioxide milestones and backstop trading program implementation plan" or "implementation plan" means section C of the New Mexico regional haze state implementation plan.

AG. "Stationary source" means any building, structure, facility or installation that emits or may emit any air pollutant subject to regulation under the Clean Air Act.

AH. "Submit" means sent to the appropriate authority under the signature of the account representative. For purposes of determining when something is submitted, an official U.S. postal service postmark, or equivalent electronic time stamp, shall establish the date of submittal.

AI. "Ton" means 2000 pounds and, for any control period, any fraction of a ton equaling 1000 pounds or more shall be treated as one ton and any fraction of a ton equaling less than 1000 pounds shall be treated as zero tons.

AJ. "Tracking system administrator" means the person designated by the department as the administrator of the allowance tracking system and the emission tracking database.

AK. "Web source" means a stationary source that meets the applicability requirements of 20.2.81.101 NMAC.

AL. "Western backstop sulfur dioxide trading program ("WEB trading program")" means 20.2.81 NMAC, triggered as a backstop in accordance with the provisions in the sulfur dioxide milestones and backstop trading program implementation plan, if necessary, to ensure that regional sulfur dioxide emissions are reduced.

[20.2.81.7 NMAC - N, 12/31/03; A, 07/06/11]

20.2.81.8-20.2.81.99 [RESERVED]

20.2.81.100 WEB TRADING PROGRAM TRIGGER:

A. Except as provided in Subsection B of this section, the provisions of 20.2.81 NMAC shall apply on the program trigger date that is established in accordance with the procedures outlined in the sulfur dioxide milestones and backstop trading program implementation plan.

B. 20.2.81.110 NMAC, special penalty provisions for 2018 milestone, shall apply on January 1, 2018 and shall remain effective until the provisions of 20.2.81.110 NMAC have been fully implemented.

C. The department shall report to the environmental improvement board every two years following the trigger of this program on the distributions of emissions allowances under the program.

[20.2.81.100 NMAC - N, 12/31/03; A, 07/06/11]

20.2.81.101 WEB TRADING PROGRAM APPLICABILITY:

A. General applicability. 20.2.81 NMAC applies to any stationary source or group of stationary sources that are located on one or more contiguous or adjacent properties and which are under the control of the same person or persons under common control, belonging to the same industrial grouping, and that are described in Paragraphs 1 through 4 of Subsection B. A stationary source or group of stationary sources shall be considered part of a single industrial grouping if all of the pollutant emitting activities at such source or group of sources on contiguous or adjacent properties belong to the same major group as described in the North American industry classification system (NAICS), 2007.

B. The following are WEB sources.

(1) All BART-eligible sources as defined in 40 CFR 51.301 that are BART-eligible due to sulfur dioxide emissions.

(2) All stationary sources not meeting the criteria of Paragraph 1 of Subsection B of 20.2.81.101 NMAC, that have actual sulfur dioxide emissions of 100 tons or more per year in the program trigger years or any subsequent year. The fugitive emissions of a stationary source shall not be considered in determining whether it is a WEB source unless the source belongs to one of the following categories of stationary source:

- (a)** coal cleaning plants (with thermal dryers);
- (b)** Kraft pulp mills;
- (c)** Portland cement plants;
- (d)** primary zinc smelters;
- (e)** iron and steel mills;
- (f)** primary aluminum ore reduction plants;
- (g)** primary copper smelters;
- (h)** municipal incinerators capable of charging more than 250 tons of refuse per day;
- (i)** hydrofluoric, sulfuric, or nitric acid plants;
- (j)** petroleum refineries;

- (k)** lime plants;
 - (l)** phosphate rock processing plants;
 - (m)** coke oven batteries;
 - (n)** sulfur recovery plants;
 - (o)** carbon black plants (furnace process);
 - (p)** primary lead smelters;
 - (q)** fuel conversion plants;
 - (r)** sintering plants;
 - (s)** secondary metal production plants;
 - (t)** chemical process plants;
 - (u)** fossil-fuel boilers (or combination thereof) totaling more than 250 million British thermal units per hour heat input;
 - (v)** petroleum storage and transfer units with a total storage capacity exceeding 300,000 barrels;
 - (w)** taconite ore processing plants;
 - (x)** glass fiber processing plants;
 - (y)** charcoal production plants;
 - (z)** fossil-fuel-fired steam electric plants of more than 250 million British thermal units per hour heat input; or
 - (aa)** any other stationary source category, which as of August 7, 1980 is being regulated under Section 111 or 112 of the Clean Air Act.
- (3)** A new source that begins operation after the program trigger date and has the potential to emit 100 tons or more of sulfur dioxide per year.
- (4)** The department may determine on a case-by-case basis, with concurrence from the EPA administrator, that a source defined in Paragraph 2 of Subsection B of 20.2.81.101 NMAC is not a WEB source if the source:

(a) in each of the previous five years had actual sulfur dioxide emissions of less than 100 tons per year; and

(b) had actual sulfur dioxide emissions of 100 tons or more in a single year due to a temporary emission increase that was caused by a sudden, infrequent, and not reasonably preventable failure of air pollution control equipment, failure of process equipment, or a failure to operate in a normal or usual manner; and

(c) took timely and reasonable action to minimize the temporary emission increase; and

(d) has corrected the failure of air pollution control equipment, process equipment, or process by the time of the department's determination under this section; or

(e) had to switch fuels or feedstocks on a temporary basis and as a result of an emergency situation or unique and unusual circumstances besides cost of such fuels or feedstocks; and

(f) a temporary emission increase due to poor maintenance or careless operation does not meet the criteria of this section.

C. Duration of program participation. Except as provided for in Subsection D of 20.2.81.101 NMAC, once a source is subject to the WEB trading program, it will remain in the program every year thereafter.

D. Retired source exemption: application.

(1) Any WEB that is retired shall apply for a retired source exemption. The WEB source may only be considered retired if all sulfur dioxide emitting units at the source are retired. The application shall contain all of the following information:

(a) identification of the WEB source, including plant name and an appropriate identification code in a format specified by the department;

(b) name of account representative;

(c) description of the status of the WEB source, including the date that the WEB source was retired;

(d) signed certification that the WEB source is retired and will comply with the requirements of Subsection D of 20.2.81.101 NMAC; and

(e) verification that the WEB source has a general account where any unused allowances or future allocations will be recorded.

(2) Responsibilities of retired sources. The retired source exemption becomes effective when the department notifies the source that the retired source exemption has been granted.

(3) A retired source shall be exempt from 20.2.81.106 NMAC and 20.2.81.109 NMAC, except as provided below.

(a) A retired source shall not emit any sulfur dioxide after the date the retired source exemption is effective.

(b) A WEB source shall submit sulfur dioxide emissions reports, as required by Subsection O of 20.2.81.106 NMAC for any time period the source was operating prior to the effective date of the retired source exemption. The retired source shall be subject to the compliance provisions of 20.2.81.109 NMAC, including the requirement to hold allowances in the source's compliance account to cover all sulfur dioxide emissions prior to the date the source was permanently retired.

(c) A retired source that is still in existence but no longer emitting sulfur dioxide shall, for a period of five years from the date the records are created, retain records demonstrating the effective date of the retired source exemption for purposes of this part.

(4) Resumption of operations.

(a) Should a retired source desire to resume operation, the retired source shall submit registration materials as follows:

(i) if the source is required to obtain a new source review permit or operating permit under 20.2.70 NMAC, 20.2.72 NMAC, 20.2.74 NMAC or 20.2.79 NMAC prior to resuming operation, then the source shall submit registration information as described in 20.2.81.103 NMAC and a copy of the retired source exemption with the application required under 20.2.70 NMAC, 20.2.72 NMAC, 20.2.74 NMAC or 20.2.79 NMAC; or

(ii) if the source is not required to obtain a new source review permit or operating permit under 20.2.70 NMAC, 20.2.72 NMAC, 20.2.74 NMAC or 20.2.79 NMAC prior to resuming operation, then the source shall submit registration information as described in Subsection A of 20.2.81.103 NMAC and a copy of the retired source exemption to the department at least ninety days prior to resumption of operation.

(b) The retired source exemption shall automatically expire on the day the source resumes operation.

(5) Loss of future allowances. A WEB source that is retired and that does not apply to the department for a retired source exemption within ninety days of the date

that the source is retired shall forfeit any unused and future allowances. The abandoned allowances shall be retired by the tracking system administrator.

[20.2.81.101 NMAC - N, 12/31/03; A, 07/06/11]

20.2.81.102 ACCOUNT REPRESENTATIVE FOR WEB SOURCES:

Each WEB source must identify one account representative and may also identify an alternate account representative who may act on behalf of the account representative. Any representation, action, inaction or submission by the alternate account representative will be deemed to be a representation, action, inaction or submission by the account representative.

A. Identification and certification of an account representative.

(1) The account representative and any alternate account representative shall be appointed by an agreement that makes the representations, actions, inactions or submissions of the account representative and any alternate binding on the owners and operators of the WEB source.

(2) The account representative shall submit to the department and the tracking system administrator a signed and dated account certificate of representation (certificate) that contains the following elements:

(a) identification of the WEB source by plant name, state and an appropriate identification code in a format specified by the department;

(b) the name, address, e-mail (if available), telephone and facsimile number of the account representative and any alternate;

(c) a list of owners and operators of the WEB source; and

(d) information to be part of the emission tracking system database in accordance with the implementation plan. the specific data elements shall be as specified by the department to be consistent with the data system structure, and may include basic facility information that may appear in other reports and notices submitted by the WEB source, such as county location, industrial classification codes, and similar general facility information.

(e) the following certification statement: "I certify that I was selected as the account representative or alternate account representative, as applicable, by an agreement binding on the owners and operators of the WEB source. I certify that I have all the necessary authority to carry out my duties and responsibilities under the WEB trading program on behalf of the owners and operators of the WEB source and that each such owner and operator shall be fully bound by my representations, actions,

inactions, or submissions and by any decision or order issued to me by the department regarding the WEB trading program."

(3) Upon receipt by the department of the complete certificate, the account representative and any alternate account representative represents and, by his or her representations, actions, inactions, or submissions, legally binds each owner and operator of the WEB source in all matters pertaining to the WEB trading program. The owners and operators shall be bound by any decision or order issued by the department regarding the WEB trading program.

(4) No WEB allowance tracking system account shall be established for the WEB source until the tracking system administrator has received a complete certificate. Once the account is established, the account representative shall make all submissions concerning the account, including the deduction or transfer of allowances.

B. Requirements and responsibilities.

(1) The responsibilities of the account representative include, but are not limited to, the transferring of allowances, and the submission of monitoring plans, registrations, certification applications, sulfur dioxide emissions data and compliance reports as required by 20.2.81 NMAC, and representing the source in all matters pertaining to the WEB trading program.

(2) Each submission under this program shall be signed and certified by the account representative for the WEB source. Each submission shall include the following truth and accuracy certification statement by the account representative: "I am authorized to make this submission on behalf of the owners and operators of the WEB source for which the submission is made. I certify under penalty of law that I have personally examined, and am familiar with, the statements and information submitted in this document and all its attachments. Based on my inquiry of those individuals with primary responsibility for obtaining the information, I certify that the statements and information are to the best of my knowledge and belief true, accurate, and complete. I am aware that there are significant penalties for submitting false statements and information or omitting required statements and information, including the possibility of fine or imprisonment."

C. Changing the account representative or owners and operators.

(1) Changes to the account representative or the alternate account representative. The account representative or alternate account representative may be changed at any time by sending a complete superseding certificate to the department and the tracking system administrator under Paragraph 3 of Subsection A of 20.2.81.102 NMAC, with the change taking effect upon receipt of such certificate by the department. Notwithstanding any such change, all representations, actions, inactions, and submissions by the previous account representative or alternate prior to the time and date when the tracking system administrator receives the superseding certificate

shall be binding on the new account representative and the owners and operators of the WEB source.

(2) Changes in owners and operators.

(a) Within thirty days of any change in the owners and operators of the WEB source, including the addition of a new owner or operator, the account representative shall submit a revised certificate amending the list of owners and operators to include such change.

(b) In the event a new owner or operator of a WEB source is not included in the list of owners and operators submitted in the certificate, such new owner or operator shall be deemed to be subject to and bound by the certificate, the representations, actions, inactions, and submissions of the account representative of the WEB source, and the decisions, orders, actions, and inactions of the department as if the new owner or operator were included in such list.

[20.2.81.102 NMAC - N, 12/31/03]

20.2.81.103 REGISTRATION:

A. Deadlines.

(1) Each source that is a WEB source on or before the program trigger date shall register by submitting the initial certificate required in Subsection A of 20.2.81.102 NMAC to the department no later than 180 days after the program trigger date.

(2) Any existing source that becomes a WEB source after the program trigger date shall register by submitting the initial certificate required in Subsection A of 20.2.81.102 NMAC to the department no later than September 30 of the year following the inventory year in which the source exceeded the emission threshold.

(3) Any new WEB source shall register by submitting the initial certificate required in Subsection A of 20.2.81.102 NMAC to the department prior to the commencement of operation.

B. Integration into permits.

(1) Any allocation, transfer or deduction of allowance to or from the compliance account of a WEB source shall not require revision of the WEB source's operating permit under 20.2.70 NMAC.

(2) Any WEB source is not required to have a permit under 20.2.72 NMAC, 20.2.74 NMAC or 20.2.79 NMAC at any time after this rule becomes effective, must at all times possess a permit that includes the requirements of 20.2.81 NMAC. If it does not possess a title V permit under 20.2.70 NMAC , it may satisfy this paragraph's

requirements by obtaining or modifying a permit under 20.2.72, NMAC, 20.2.74 NMAC or 20.2.79 NMAC to incorporate the requirements of 20.2.81 NMAC. The source must at all times possess a permit that includes these requirements.

[20.2.81.103 NMAC - N, 12/31/03]

20.2.81.104 ALLOWANCE ALLOCATIONS:

A. The tracking system administrator shall record the allowances for each WEB source in the compliance account for a WEB source once the allowances are allocated by the department under section C1 of the sulfur dioxide milestones and backstop trading program implementation plan. If applicable, the tracking system administrator shall record a portion of the sulfur dioxide allowances for a WEB source in a special reserve account assigned to the department to account for any allowances to be held by the Department in accordance with Subsection B of 20.2.81.106 NMAC.

B. The tracking system administrator shall assign a serial number to each allowance in accordance with section C2 of the sulfur dioxide milestones and backstop trading program implementation plan.

C. All allowances shall be allocated, recorded, transferred, or used as whole allowances. To determine the number of whole allowances, the number of allowances shall be rounded down for decimals less than 0.50 and rounded up for decimals of 0.50 or greater.

D. An allowance is not a property right, and is a limited authorization to emit one ton of sulfur dioxide valid only for the purpose of meeting the requirements of 20.2.81 NMAC. No provision of this WEB trading program or other law should be construed to limit the authority of the United States or the department to terminate or limit such authorization.

E. Early reduction bonus allocation. Any WEB source that reduces permitted annual sulfur dioxide emissions to a level that is below the floor level allocation established for that source in section C1 of the sulfur dioxide milestones and backstop trading program implementation plan between 2003 and the program trigger year may apply to the department for an early reduction bonus allocation. The application shall be submitted no later than ninety days after the program trigger date. Any WEB source that applies and receives early reduction bonus allocations shall retain the records referenced below for a minimum of five years after the early reduction bonus allowance is certified in accordance with section C1.1(a) (3) of the implementation plan. The application for an early reduction bonus allocation shall contain the following information.

(1) Copies of all permits or other enforceable documents that include annual sulfur dioxide emissions limits for the WEB source during the period the WEB source was generating the early reductions. Such permits or enforceable documents shall

require monitoring for sulfur dioxide emissions that meets the requirements in Subsection A and Subsection C of 20.2.81.106 NMAC and that the monitoring provisions were in effect one year prior to the beginning of the credit generating period.

(2) Copies of emissions monitoring reports, for one year prior to the beginning of the credit generating period and for the period the WEB source was generating the early reductions, that documents the actual annual sulfur dioxide emissions. The emissions monitoring reports during the credit generating period must demonstrate that the actual annual sulfur dioxide emissions were below the floor level allocation established for that source in section C1 of the sulfur dioxide milestones and backstop trading program implementation plan.

(3) Demonstration that the floor level established for the source in accordance with section C1 of the sulfur dioxide milestones and backstop trading program implementation plan was calculated using data that are consistent with the new monitoring methodology under Subsection A of 20.2.81.106 NMAC. If new monitoring techniques change the floor level for the source, then a demonstration of the new floor level based on new monitoring techniques shall be included in the application.

F. Request for allowances for new WEB sources or modified WEB sources.

(1) A new WEB source or an existing WEB source that has increased production capacity through a permitted change in operations under 20.2.72 NMAC, 20.2.74 NMAC or 20.2.79 NMAC may apply to the department for an allocation from the new source set-aside, as outlined in section C1.3 of the implementation plan.

(a) A new WEB source is eligible to apply for an annual allocation equal to the permitted annual sulfur dioxide emission limit for that source after the source has commenced operation.

(b) An existing WEB source is eligible to apply for an annual allocation equal to the permitted annual sulfur dioxide emission limit for that source that is attributable to any amount of production capacity that is greater than the permitted production capacity for that source as of January 1, 2003.

(c) A source that has received a retired source exemption under Subsection D of 20.2.81.101 NMAC is not eligible to apply for an allocation from the new source set-aside.

(2) The application for an allocation from the new source set-aside shall contain the following information:

(a) for existing WEB sources, documentation that shows the permitted production capacity of the source before and after the new permit; or

(b) for new WEB sources, documentation of the actual date of the commencement of operation and a copy of the permit.

[20.2.81.104 NMAC - N, 12/31/03]

20.2.81.105 ESTABLISHMENT OF ACCOUNTS:

A. Allowance tracking system accounts. All WEB sources shall open a compliance account. Any person may open a general account for holding and transferring allowances. In addition, if a Web source conducts monitoring under Subsection B of 20.2.81.106 NMAC, the WEB source shall open a special reserve compliance account for allowances associated with units monitored under those provisions. The WEB source and account representative shall have no rights to transfer allowances in or out of such special reserve compliance account. The department shall allocate allowances to the account in accordance with Paragraph 5 of Subsection B of 20.2.81.106 NMAC and all such allowances for each control period shall be retired each year for compliance in accordance with 20.2.81.109 NMAC. To open either type of account; an application that contains the following information shall be submitted:

(1) the name, mailing address, e-mail address, telephone number, and facsimile number of the account representative; for a compliance account, include a copy of the account certificate of representation of the account representative and any alternate as required in Paragraph 2 of Subsection A of 20.2.81.102 NMAC; for a general account, include the account certificate of representation of the account representative and any alternate as required in Paragraph 2 of Subsection C or 20.2.81.105 NMAC;

(2) the WEB source or organization name;

(3) the type of account to be opened; and

(4) a signed certification of truth and accuracy by the account representative according to Paragraph 2 of Subsection A of 20.2.81.102 for compliance accounts and for general accounts, certification of truth and accuracy by the account representative according to Subsection D of 20.2.81.105 NMAC.

B. Account representative for general accounts. For a general account, one account representative shall be identified and an alternate account representative may be identified and may act on behalf of the account representative. Any representation, action, inaction or submission by the alternate account representative shall be deemed to be a representation, action, inaction or submission by the account representative.

C. Identification and certification of an account representative for general accounts.

(1) The account representative shall be appointed by an agreement that makes the representations, actions, inactions or submissions of the account representative binding on all persons who have an ownership interest with respect to allowances held in the general account.

(2) The account representative shall submit to the department and the tracking system administrator a signed and dated account certificate of representation (certificate) that contains the following elements:

(a) the name, address, e-mail (if available), telephone and facsimile number of the account representative and any alternate;

(b) the organization name; and

(c) the following certification statement: "I certify that I was selected as the account representative or alternate account representative, as applicable, by an agreement binding on all persons who have an ownership interest in allowances in the general account with regard to matters concerning the general account. I certify that I have all the necessary authority to carry out my duties and responsibilities under the WEB trading program on behalf of said persons and that each such person shall be fully bound by my representations, actions, inactions, or submissions and by any decision or order issued to me by the department regarding the general account."

(3) Upon receipt by the department of the complete certificate, the account representative represents and, by his or her representations, actions, inactions, or submissions, legally binds each person who has an ownership interest in allowances held in the general account with regard to all matters concerning the general account. Such persons shall be bound by any decision or order issued by the department.

(4) No WEB allowance tracking system general account shall be established until the tracking system administrator has received a complete certificate. Once the account is established, the account representative shall make all submissions concerning the account, including the deduction or transfer of allowances.

D. Requirements and responsibilities. Each submission for the general account shall be signed and certified by the account representative for the general account. Each submission shall include the following truth and accuracy certification statement by the account representative: "I am authorized to make this submission on behalf of all person who have an ownership interest in allowances held in the general account. I certify under penalty of law that I have personally examined, and am familiar with, the statements and information submitted in this document and all its attachments. Based on my inquiry of those individuals with primary responsibility for obtaining the information, I certify that the statements and information are to the best of my knowledge and belief true, accurate, and complete. I am aware that there are significant penalties for submitting false statements and information or omitting required statements and information, including the possibility of fine or imprisonment."

E. Changing the account representative. The account representative or alternate account representative may be changed at any time by sending a complete superseding certificate to the department and the tracking system administrator under Paragraph 2 of Subsection C of 20.2.81.105 NMAC, with the change taking effect upon receipt of such certificate by the department. Notwithstanding any such change, all representations, actions, inactions, and submissions by the previous account representative or alternate prior to the time and date when the department receives the superseding certificate shall be binding on the new account representative and all persons having ownership interest with respect to allowances held in the general account.

F. Changes to the account. Any change to the information required in the application for an existing account under Subsection A of 20.2.81.105 NMAC shall require a revision of the application.

[20.2.81.105 NMAC - N, 12/31/03]

20.2.81.106 MONITORING, RECORDKEEPING AND REPORTING - GENERAL REQUIREMENTS ON MONITORING METHODS:

A. For each sulfur dioxide emitting unit at a WEB source shall comply with the following, as applicable, to monitor and record sulfur dioxide mass emissions.

(1) If a unit is subject to 40 CFR Part 75 under a requirement separate from the WEB trading program, the unit shall meet the requirements contained in Part 75 with respect to monitoring, recording and reporting sulfur dioxide mass emissions.

(2) If a unit is not subject to 40 CFR Part 75 under a requirement separate from the WEB trading program, a unit shall use one of the following monitoring methods, as applicable:

(a) a continuous emission monitoring system (CEMS) for sulfur dioxide and flow that complies with all applicable monitoring provisions in 40 CFR Part 75;

(b) if the unit is a gas- or oil-fired combustion device, the excepted monitoring methodology in Appendix D to 40 CFR Part 75, or, if applicable, the low mass emissions (LME) provisions (with respect to sulfur dioxide mass emissions only) of Section 75.19 of 40 CFR Part 75;

(c) one of the optional WEB protocols, if applicable, in 20.2.81.111 NMAC or 20.2.81.112 NMAC; or

(d) a petition for site-specific monitoring that the source submits for approval by the department, and approval by the U.S. environmental protection agency in accordance with Paragraph 5 of Subsection O of 20.2.81.106 NMAC.

(3) A permanently retired unit shall not be required to monitor under this section if such unit was permanently retired and had no emissions for the entire period for which the WEB source implements this Paragraph 3 and the account representative certifies in accordance with Subsection B of 20.2.81.109 NMAC that these conditions were met. In the event that a permanently retired unit recommences operation, the WEB source shall meet the requirements of this Section 20.2.81.106 NMAC in the same manner as if the unit was a new unit.

B. Notwithstanding Subsection A of this section, the WEB source with a unit that meets one of the conditions of Paragraph 1 of Subsection B of 20.2.81.106 NMAC may elect to have the provisions of this Paragraph 1 apply to that unit.

(1) Any of the following units may implement Subsection B of 20.2.81.106 NMAC:

(a) any smelting operation where all of the emissions from the operation are not ducted to a stack;

(b) any flare, except to the extent such flares are used as a fuel gas combustion device at a petroleum refinery; or

(c) any other type of unit without add-on sulfur dioxide control equipment, if no control level was assumed for the WEB source in establishing the floor level (and reducible allocation) provided in section C1 of the implementation plan.

(2) For each unit covered by Subsection B of 20.2.81.106 NMAC, the account representative shall submit a notice to request that Subsection B of 20.2.81.106 NMAC apply to one or more sulfur dioxide emitting units at a WEB source. The notice shall be submitted in accordance with the compliance dates specified in Paragraph 1 of Subsection M of 20.2.81.106 NMAC, and shall include the following information (in a format specified by the department with such additional, related information as may be requested):

(a) a notice of all units at the applicable source, specifying which of the units are to be covered by Subsection B of 20.2.81.106 NMAC;

(b) consistent with the emission estimation methodology used to determine the floor level (and reducible allocation) for the source in accordance with section C1 of the implementation plan, the portion of the WEB source's overall allowance allocation that is attributable to any unit(s) covered by this paragraph; and

(c) an identification of any such units that are permanently retired.

(3) For each new unit at an existing WEB source for which the WEB source seeks to comply with this Subsection B of 20.2.81.106 NMAC; and for which the account representative applies for an allocation under the new source set-aside

provisions of Subsection F of 20.2.81.104 NMAC, the account representative shall submit a modified notice under Paragraph 2 of Subsection B of 20.2.81.106 NMAC, that includes such new sulfur dioxide emitting unit(s). The modified notice shall be submitted in accordance with the compliance dates in Paragraph 1 of Subsection M of 20.2.81.106 NMAC, but no later than the date on which a request is submitted under Paragraph 1 of Subsection F of 20.2.81.104 NMAC for allocations from the set-aside.

(4) The department shall evaluate the information submitted by the WEB source in Paragraphs 2 and 3 of Subsection B of 20.2.81.106 NMAC, and may issue a notice to the source to exclude any units that do not qualify under this Subsection B of 20.2.81.106 NMAC or to adjust the portion of allowances attributable to units that do qualify to be consistent with the emission estimation methodology used to establish the floor level (and reducible allocation) for the source.

(5) The department shall allocate allowances equal to the adjusted portion of the WEB source's allowances under Paragraphs 2, 3, and 4 of Subsection B of 20.2.81.106 NMAC in a special reserve compliance account provided that no such treatment of the WEB source's allocation will be required for any unit that is permanently retired and had no emissions for the entire period for which the WEB source implements this Subsection B and the account representative certifies in accordance with 20.2.81.109 NMAC that these conditions are met. In the event that a permanently retired unit recommences operation, the WEB source shall meet the requirements of this Section 20.2.81.106 NMAC in the same manner as if the unit was a new unit.

(6) The account representative for a WEB source shall submit an annual emissions statement for each unit under this Subsection B of 20.2.81.106 NMAC in accordance with Subsection O of 20.2.81.106 NMAC. The WEB source shall maintain operating records sufficient to estimate annual emissions in a manner consistent with the emission estimation methodology used to establish the floor level (and reducible allocation) for the source. In addition, if the estimated emissions from all such units at the WEB source are greater than the allowances for the current control year held in the special reserve compliance account under Paragraph 5 of Subsection B of 20.2.81.106 NMAC for the WEB source, the account representative shall report the excess amount as part of the annual report for the WEB source under 20.2.81.109 NMAC and be required to use other allowances in the standard compliance account for the WEB source to account for such emissions, in accordance with 20.2.81.109 NMAC.

(7) The remaining provisions of this section shall not apply to units covered by Subsection B of 20.2.81.106 NMAC except where otherwise noted.

(8) A WEB source may opt to modify the monitoring for an sulfur dioxide emitting unit to use monitoring under Subsection A of 20.2.81.106 NMAC, but any such monitoring change shall take effect on January 1 of the next compliance year. In addition, the account representative shall submit an initial monitoring plan at least 180 days prior to the date on which the new monitoring will take effect and a detailed monitoring plan in accordance with Subsection D of 20.2.81.106 NMAC. The account

representative shall also submit a revised notice under Subsection B of 20.2.81.106 NMAC at the same time that the initial monitoring plan is submitted.

C. For any monitoring that the WEB source uses under this section (including Paragraph 1), the WEB source (and, as applicable, the account representative) shall implement, certify, and use such monitoring in accordance with this section, and shall record and report the data from such monitoring as required in this section. In addition, the WEB source (and, as applicable, the account representative) shall not:

(1) except for an alternative approved by the U.S. EPA administrator for a WEB source that implements monitoring under Paragraph 1 of Subsection A of 20.2.81.106 NMAC, use an alternative monitoring system, alternative reference method or another alternative for the required monitoring method without having obtained prior written approval in accordance with Paragraph 5 of Subsection O of 20.2.81.106 NMAC;

(2) operate an sulfur dioxide emitting unit so as to discharge, or allow to be discharged, sulfur dioxide emissions to the atmosphere without accounting for these emissions in accordance with the applicable provisions of this section;

(3) disrupt the approved monitoring method or any portion thereof, and thereby avoid monitoring and recording sulfur dioxide mass emissions discharged into the atmosphere, except for periods of recertification or periods when calibration, quality assurance testing or maintenance is performed in accordance with the applicable provisions of this section; or

(4) retire or permanently discontinue use of an approved monitoring method, except under one of the following circumstances:

(a) during a period when the unit is exempt from the requirements of this section, including retirement of a unit as addressed in Paragraph 3 of Subsection A of 20.2.81.106 NMAC;

(b) the WEB source is monitoring emissions from the unit with another certified monitoring method approved under this section for use at the unit that provides data for the same parameter as the retired or discontinued monitoring method; or

(c) the account representative submits notification of the date of certification testing of a replacement monitoring system in accordance with this section, and the WEB source recertifies thereafter a replacement monitoring system in accordance with the applicable provisions of this section.

D. Monitoring plan general provisions. The WEB source of a sulfur dioxide emitting unit that uses a monitoring method under Paragraph 2 of Subsection A of 20.2.81.106 NMAC shall meet the following requirements:

(1) prepare and submit to the department an initial monitoring plan for each monitoring method that the WEB source uses to comply with this section; in accordance with Subsection F of 20.2.81.106 NMAC, the plan shall contain sufficient information on the units involved, the applicable method, and the use of data derived from that method to demonstrate that all unit sulfur dioxide emissions are monitored and reported; the plan shall be submitted in accordance with the compliance deadlines specified in Subsection M of 20.2.81.106 NMAC;

(2) prepare, maintain and submit to the department a detailed monitoring plan prior to the first day of certification testing in accordance with the compliance deadline specified in Subsection M of 20.2.81.106 NMAC; the plan shall contain the applicable information required by Subsection D of 20.2.81.106 NMAC; the department may require that the monitoring plan (or portions thereof) be submitted electronically; the department also may require that the plan be submitted on an ongoing basis in electronic format as part of the quarterly report submitted under Paragraph 1 of Subsection O of 20.2.81.106 NMAC or resubmitted separately within after any change is made to the plan in accordance with the following Paragraph 3 of Subsection D of 20.2.81.106 NMAC; and

(3) whenever the WEB source makes a replacement, modification, or change in one of the systems or methodologies provided for in Paragraph 2 of Subsection A of 20.2.81.106 NMAC, including a change in the automated data acquisition and handling system or in the flue gas handling system, that affects information reported in the monitoring plan (e.g., a change to serial number for a component of a monitoring system), then the WEB source shall update the monitoring plan in accordance with the compliance deadline specified in Subsection M of 20.2.81.106 NMAC.

E. A WEB source with a sulfur dioxide emitting unit that uses a method under Paragraph 1 of Subsection A of 20.2.81.106 NMAC (a unit subject to 40 CFR Part 75 under a program other than this WEB trading program) shall meet the requirements of Subsections D-I of 20.2.81.106 NMAC by preparing, maintaining and submitting a monitoring plan in accordance with the requirements of 40 CFR Part 75, provided that the WEB source also shall submit the entire monitoring plan to the department upon request.

F. Initial monitoring plan. The account representative shall submit an initial monitoring plan for each sulfur dioxide emitting unit (or group of units sharing a common methodology) that, except as otherwise specified in an applicable provision in 20.2.81.111 NMAC, contains the following information.

(1) For all sulfur dioxide emitting units involved in the monitoring plan:

(a) plant name and location;

(b) plant and unit identification numbers assigned by the department;

(c) type of unit (or units for a group of units using a common monitoring methodology);

(d) identification of all stacks or pipes associated with the monitoring plan;

(e) types of fuel(s) fired (or sulfur containing process materials used in the sulfur dioxide emitting unit), and the fuel classification of the unit if combusting more than one type of fuel and using a 40 CFR Part 75 methodology;

(f) type(s) of emissions controls for sulfur dioxide installed or to be installed, including specifications of whether such controls are pre-combustion, post-combustion, or integral to the combustion process;

(g) maximum hourly heat input capacity, or process throughput capacity, if applicable;

(h) identification of all units using a common stack; and

(i) indicator of whether any stack identified in the plan is a bypass stack.

(2) For each unit and parameter required to be monitored, identification of monitoring methodology information, consisting of monitoring methodology, monitor locations, substitute data approach for the methodology, and general identification of quality assurance procedures. If the proposed methodology is a site-specific methodology submitted pursuant to Subparagraph d of Paragraph 2 of Subsection A of 20.2.81.106 NMAC, the description under this paragraph shall describe fully all aspects of the monitoring equipment, installation locations, operating characteristics, certification testing, ongoing quality assurance and maintenance procedures, and substitute data procedures.

(3) If the WEB source intends to petition for a change to any specific monitoring requirement otherwise required under this section, such petition may be submitted as part of the initial monitoring plan.

(4) The department may issue a notice of approval or disapproval of the initial monitoring plan based on the compliance of the proposed methodology with the requirements for monitoring in this section.

G. Detailed monitoring plan. The account representative shall submit a detailed monitoring plan that, except as otherwise specified in an applicable provisions in 20.2.81.111 NMAC or 20.2.81.112 NMAC, shall contain the following information.

(1) Identification and description of each monitoring component (including each monitor and its identifiable components, such as analyzer or probe) in a CEMS (e.g., sulfur dioxide pollutant concentration monitor, flow monitor, moisture monitor), a 40 CFR Part 75, Appendix D monitoring system (e.g., fuel flowmeter, data acquisition

and handling system), or a protocol in 20.2.81.111 NMAC or 20.2.81.112 NMAC , including:

- (a)** manufacturer, model number and serial number;
- (b)** component or system identification code assigned by the facility to each identifiable monitoring component, such as the analyzer or probe;
- (c)** designation of the component type and method of sample acquisition or operation (e.g., in situ pollutant concentration monitor or thermal flow monitor);
- (d)** designation of the system as a primary or backup system;
- (e)** first and last dates the system reported data;
- (f)** status of the monitoring component; and
- (g)** parameter monitored.

(2) Identification and description of all major hardware and software components of the automated data acquisition and handling system, including:

- (a)** hardware components that perform emission calculations or store data for quarterly reporting purposes (provide the manufacturer and model number); and
- (b)** software components (provide the identification of the provider and model or version number).

(3) Explicit formulas for each measured emissions parameter, using component or system identification codes for the monitoring system used to measure the parameter that links the system observations with the reported concentrations and mass emissions. The formulas shall contain all constants and factors required to derive mass emissions from component or system code observations and an indication of whether the formula is being added, corrected, deleted, or is unchanged. The WEB source with a low mass emissions unit for which the WEB source is using the optional low mass emissions excepted methodology in Section 75.19(c) of 40 CFR Part 75 is not required to report such formulas.

(4) Inside cross-sectional area (square feet) at flow monitoring location (for units with flow monitors, only).

(5) If using CEMS for sulfur dioxide and flow, for each parameter monitored: scale, maximum potential concentration (and method of calculation), maximum expected concentration (if applicable) (and method of calculation), maximum potential flow rate (and method of calculations), span value, full-scale range, daily calibration units of measure, span effective date and hour, span inactivation date and hour,

indication of whether dual spans are required, default high range value, flow rate span, and flow rate span value and full scale value in standard cubic feet per hour (scfh) for each unit or stack using sulfur dioxide or flow component monitors.

(6) If the monitoring system or excepted methodology provides for use of a constant, assumed, or default value for a parameter under specific circumstances, then the following information for each value of such parameter shall be included:

- (a)** identification of the parameter;
- (b)** default, maximum, minimum, or constant value, and units of measure for the value;
- (c)** purpose of the value;
- (d)** indicator of use during controlled and uncontrolled hours;
- (e)** types of fuel;
- (f)** source of the value;
- (g)** value effective date and hour;
- (h)** date and hour value is no longer effective (if applicable); and
- (i)** for units using the excepted methodology under Section 75.19 of 40 CFR Part 75, the applicable sulfur dioxide emission factor.

(7) Unless otherwise specified in Section 6.5.2.1 of Appendix A to 40 CFR Part 75, for each unit or common stack on which hardware CEMS are installed:

- (a)** the upper and lower boundaries of the range of operation (as defined in Section 6.5.2.1 of Appendix A to 40 CFR Part 75), or thousand of lb/hr of steam, or ft/sec (as applicable);
- (b)** the load or operating level(s) designated as normal in Section 6.5.2.1 of Appendix A to 40 CFR Part 75, or thousands of pounds per hour lb/hr of steam, or feet per second ft/sec (as applicable);
- (c)** the two load or operating levels (i.e., low, mid, or high) identified in Section 6.5.2.1 of Appendix A to 40 CFR Part 75 as the most frequently used;
- (d)** the date of the data analysis used to determine the normal load (or operating) level(s) and the two most frequently-used load (or operating) levels; and

(e) activation and deactivation dates when the normal load or operating level(s) change and are updated.

(8) For each unit that is complying with 40 CFR Part 75 for which the optional fuel flow-to-load test in Section 2.1.7 of Appendix D to 40 CFR Part 75 is used:

(a) the upper and lower boundaries of the range of operation (as defined in Section 6.5.2.1 of Appendix A to 40 CFR Part 75), expressed in thousand of lb/hr of steam;

(b) the load level designated as normal, pursuant to Section 6.5.2.1 of Appendix A to 40 CFR Part 75, expressed in thousands of lb/hr of steam; and

(c) the date of the load analysis used to determine the normal load level.

(9) Information related to quality assurance testing, including (as applicable): identification of the test strategy; protocol for the relative accuracy test audit; other relevant test information; calibration gas levels (percent of span) for the calibration error test and linearity check; calculations for determining maximum potential concentration, maximum expected concentration (if applicable), maximum potential flow rate, and span.

(10) If applicable, apportionment strategies under Sections 75.10 through 75.18 of 40 CFR Part 75.

(11) Description of site locations for each monitoring component in a monitoring system, including schematic diagrams and engineering drawings and any other documentation that demonstrates each monitor location meets the appropriate siting criteria. For units monitored by a continuous emission monitoring system, diagrams shall include:

(a) a schematic diagram identifying entire gas handling system from unit to stack for all units, using identification numbers for units, monitor components, and stacks corresponding to the identification numbers provided in the initial monitoring plan and Paragraphs 1 and 3 of Subsection G of 20.2.81.106 NMAC; the schematic diagram must depict the height of any monitor locations; comprehensive or separate schematic diagrams shall be used to describe groups of units using a common stack; and

(b) stack and duct engineering diagrams showing the dimensions and locations of fans, turning vanes, air preheaters, monitor components, probes, reference method sampling ports, and other equipment that affects the monitoring system location, performance, or quality control checks.

(12) A data flow diagram denoting the complete information handling path from output signals of CEMS components to final reports.

H. In addition to supplying the information in Subsections F and G above, the WEB source with an sulfur dioxide emitting unit using either of the methodologies in Subparagraph b of Paragraph 2 of Subsection A of 20.2.81.106 NMAC shall include the following information in its monitoring plan for the specific situations described.

(1) For each gas-fired or oil-fired sulfur dioxide emitting unit for which the WEB source uses the optional protocol in Appendix D to 40 CFR Part 75 for sulfur dioxide mass emissions, the WEB source shall include the following information in the monitoring plan:

- (a)** parameter monitored;
- (b)** type of fuel measured, maximum fuel flow rate, units of measure, and basis of maximum fuel flow rate (i.e., upper range value or unit maximum) for each fuel flowmeter;
- (c)** test method used to check the accuracy of each fuel flowmeter;
- (d)** submission status of the data;
- (e)** monitoring system identification code;
- (f)** the method used to demonstrate that the unit qualifies for monthly gross calorific value (GCV) sampling or for daily or annual fuel sampling for sulfur content, as applicable;
- (g)** a schematic diagram identifying the relationship between the unit, all fuel supply lines, the fuel flowmeter(s), and the stack(s); the schematic diagram must depict the installation location of each fuel flowmeter and the fuel sampling location(s); comprehensive and separate schematic diagrams shall be used to describe groups of units using a common pipe;
- (h)** for units using the optional default sulfur dioxide emission rate for "pipeline natural gas" or "natural gas" in Appendix D to 40 CFR Part 75, the information on the sulfur content of the gaseous fuel used to demonstrate compliance with either Section 2.3.1.4 or 2.3.2.4 of Appendix D to 40 CFR Part 75;
- (i)** for units using the 720 hour test under Section 2.3.6 of Appendix D to 40 CFR Part 75 to determine the required sulfur sampling requirements, report the procedures and results of the test; and
- (j)** for units using the 720 hour test under Section 2.3.5 of Appendix D to 40 CFR Part 75 to determine the appropriate fuel GCV sampling frequency, report the procedures used and the results of the test.

(2) For each sulfur dioxide emitting unit for which the WEB source uses the low mass emission excepted methodology of Section 75.19 to 40 CFR Part 75, the WEB source shall include the following information in the monitoring plan that accompanies the initial certification application:

(a) the results of the analysis performed to qualify as a low mass emissions unit under Section 75.19(c) to 40 CFR Part 75; this report shall include either the previous three years actual or projected emissions; the following items shall be included: a) current calendar year of application; b) type of qualification; c) years one, two, and three; d) annual measured, estimated or projected sulfur dioxide mass emissions for years one, two, and three; and e) annual operating hours for years one, two, and three;

(b) a schematic diagram identifying the relationship between the unit, all fuel supply lines and tanks, any fuel flowmeter(s), and the stack(s); comprehensive or separate schematic diagrams shall be used to describe groups of units using a common pipe;

(c) for units which use the long term fuel flow methodology under Section 75.19(c)(3) to 40 CFR Part 75, a diagram of the fuel flow to each unit or group of units and a detailed description of the procedures used to determine the long term fuel flow for a unit or group of units for each fuel combusted by the unit or group of units;

(d) a statement that the unit burns only gaseous fuel(s) and/or fuel oil and a list of the fuels that are burned or a statement that the unit is projected to burn only gaseous fuel(s) and/or fuel oil and a list of the fuels that are projected to be burned;

(e) a statement that the unit meets the applicability requirements in Sections 75.19(a) and (b) to 40 CFR Part 75 with respect to sulfur dioxide emissions; and

(f) any unit historical actual, estimated and projected sulfur dioxide emissions data and calculated sulfur dioxide emissions data demonstrating that the unit qualifies as a low mass emissions unit under Sections 75.19(a) and (b) to 40 CFR Part 75.

(3) For each gas-fired unit the WEB source shall include the following in the monitoring plan: current calendar year, fuel usage data as specified in the definition of gas-fired in Section 72.2 of 40 CFR Part 72, and an indication of whether the data are actual or projected data.

I. The specific elements of a monitoring plan under Subsection D of 20.2.81.106 NMAC shall not be part of an operating permit for a WEB source issued in accordance with the title V of the Clean Air Act, and modifications to the elements of the plan shall not require a permit modification.

J. Certification and recertification.

(1) All monitoring systems are subject to initial certification and recertification testing as specified in 40 CFR Part 75, 20.2.81.111 NMAC or ; 20.2.81.112 NMAC. Certification or recertification of a monitoring system by the U.S. environmental protection agency for a WEB source that is subject to 40 CFR Part 75 under a requirement separate from 20.2.81 NMAC shall constitute certification under the WEB trading program.

(2) The WEB source with a sulfur dioxide emitting unit not otherwise subject to 40 CFR Part 75 that monitors sulfur dioxide mass emissions in accordance with 40 CFR Part 75 to satisfy the requirements of this section shall perform all of the tests required by that regulation and shall submit the following:

(a) a test notice, not later than 21 days before the certification testing of the monitoring system, provided that the department may establish additional requirements for adjusting test dates after this notice as part of the approval of the initial monitoring plan under Subsection F of 20.2.81.106 NMAC;

(b) an initial certification application within 45 days after testing is complete;

(c) a monitoring system shall be considered provisionally certified while the application is pending, and the system shall be deemed certified if the department does not approve or disapprove the system within six months after the date on which the application is submitted; and

(d) whenever an audit of any monitoring certified under 20.2.81 NMAC, and a review of the initial certification or recertification application, reveal that any system or component should not have been certified or recertified because it did not meet a particular performance specification or other requirement of 20.2.81 NMAC, both at the time of the initial certification or recertification application submission and at the time of the audit, the department will issue a notice of disapproval of the certification status of such system or component; for the purposes of this paragraph, an audit shall be either a field audit of the facility or an audit of any information submitted to the department regarding the facility; by issuing the notice of disapproval, the certification status is revoked prospectively, and the data measured and recorded shall not be considered valid quality-assured data from the date of issuance of the notification of the revoked certification status until the date and time that the WEB source completes subsequently approved initial certification or recertification tests in accordance with the procedures in Subsection J of 20.2.81.106 NMAC; the WEB source shall apply the substitute data procedures in Paragraph 2 of Subsection L of 20.2.81.106 NMAC to replace, prospectively, all of the invalid, non-quality-assured data for each disapproved system or component.

K. Ongoing quality assurance and quality control. The WEB source shall satisfy the applicable quality assurance and quality control requirements of Part 75 or, if the WEB source is subject to a WEB protocol in 20.2.81.111 NMAC , the applicable quality

assurance and quality control requirements in 20.2.81.111 NMAC on and after the date that certification testing commences.

L. Substitute data procedures.

(1) For any period after certification testing is complete in which quality assured, valid data are not being recorded by a monitoring system certified and operating in accordance with 20.2.81 NMAC, missing or invalid data shall be replaced with substitute data in accordance with 40 CFR Part 75 or, if the WEB source is subject to a WEB protocol in 20.2.81.111 NMAC or 20.2.81.112 NMAC, with substitute data in accordance with 20.2.81.111 NMAC.

(2) For a sulfur dioxide emitting unit that does not have a certified or provisionally certified monitoring system in place as of the beginning of the first control period for which the unit is subject to the WEB trading program, the WEB source shall:

(a) if the WEB source will use a CEMS to comply with this section, substitute the maximum potential concentration of sulfur dioxide for the unit and the maximum potential flow rate, as determined in accordance with 40 CFR Part 75; the procedures for conditional data validation under Section 75.20(b)(3) may be used for any monitoring system under 20.2.81 NMAC that uses these 40 CFR Part 75 procedures, as applicable;

(b) if the WEB source will use the 40 CFR Part 75 Appendix D methodology, substitute the maximum potential sulfur content, density or gross calorific value for the fuel and the maximum potential fuel flow rate, in accordance with Section 2.4 of Appendix D to 40 CFR Part 75;

(c) if the WEB source will use the 40 CFR Part 75 methodology for low mass emissions units, substitute the sulfur dioxide emission factor required for the unit as specified in 40 CFR 75.19 and the maximum rated hourly heat input, as defined in 40 CFR 72.2; or

(d) if using a protocol in 20.2.81.111 NMAC or 20.2.81.112 NMAC, follow the procedures in the applicable protocol.

M. Compliance deadline.

(1) The initial monitoring plan shall be submitted by the following dates.

(a) For each source that is a WEB source on or before the program trigger date, the monitoring plan shall be submitted 180 days after such program trigger date.

(b) For any existing source that becomes a WEB source after the program trigger date, the monitoring plan shall be submitted by September 30 of the year following the inventory year in which the source exceeded the emissions threshold.

(c) For any new WEB source, the monitoring plan shall be included with the permit application under 20.2.70 NMAC, 20.2.72 NMAC, 20.2.74 NMAC or 20.2.79 NMAC.

(2) A detailed monitoring plan under Subsection E of 20.2.81.106 NMAC shall be submitted no later than 45 days prior to commencing certification with the following Paragraph 3.

(3) Emission monitoring systems shall be installed, operational and shall have met all of the certification testing requirements of this 20.2.81.106 NMAC (including any referenced in 20.2.81.111 NMAC or 20.2.81.112 NMAC) by the following dates.

(a) For each source that is a WEB source on or before the program trigger date, two years prior to the start of the first control period as described in 20.2.81.109 NMAC.

(b) For any existing source that becomes a WEB source after the program trigger date, one year after the due date for the monitoring plan under Subparagraph b of Paragraph 2 of Subsection M of 20.2.81.106 NMAC.

(c) For any new WEB source, (or any new unit at a WEB source under Paragraph 3 Subparagraph a or b, the earlier of 90 unit operating days or 180 calendar days after the date the new source commences operation.

(4) The WEB source shall submit test notices and certification applications in accordance with the deadlines set forth in Paragraph 2 of Subsection J of 20.2.81.106 NMAC.

(5) For each applicable control period, the WEB source shall submit each quarterly report under Subsection O of 20.2.81.106 NMAC by no later than 30 days after the end of each calendar quarter and shall submit the annual report under Subsection O of 20.2.81.106 NMAC no later than 60 days after the end of each calendar year.

N. Recordkeeping.

(1) The WEB source shall keep copies of all reports, registration materials, compliance certifications, sulfur dioxide emissions data, quality assurance data, and other submissions under 20.2.81 NMAC for a period of five years. In addition, the WEB source shall keep a copy of all account certificates of representation. Unless otherwise requested by the WEB source and approved by the department, the copies shall be kept on site at the source.

(2) The WEB source shall keep records of all operating hours, quality assurance activities, fuel sampling measurements, hourly averages for sulfur dioxide, stack flow, fuel flow, or other continuous measurements, as applicable, and any other

applicable data elements specified in this section , 20.2.81.111 NMAC or in 20.2.81.112 NMAC. The WEB source shall maintain the applicable records specified in 40 CFR Part 75 for any sulfur dioxide emitting unit that uses a Part 75 monitoring method to meet the requirements of this section.

O. Reporting.

(1) Quarterly reports. For each sulfur dioxide emitting unit, the account representative shall submit a quarterly report within thirty days after the end of each calendar quarter. The report shall be in a format specified by the department to include hourly and quality assurance activity information and shall be submitted in a manner compatible with the emissions tracking database designed for the WEB trading program. If the WEB source submits a quarterly report under 40 CFR Part 75 to the U.S. EPA administrator, no additional report under this paragraph shall be required, provided, however, that the department may require that a copy of that report (or a separate statement of quarterly and cumulative annual sulfur dioxide mass emissions) be submitted separately to the department.

(2) Annual report. Based on the quarterly reports, each WEB source shall submit an annual statement of total annual sulfur dioxide emissions for all sulfur dioxide emitting units at the source. The annual report shall identify the total emissions for all units monitored in accordance with Subsection A of 20.2.81.106 NMAC and the total emissions for all units with emissions estimated in accordance with Subsection B of 20.2.81.106 NMAC. The annual report shall be submitted within 60 days after the end of a control period.

(3) If the department so directs that any monitoring plan, report, certification, recertification, or emissions data required to be submitted under this section be submitted to the tracking system administrator.

(4) The department may review and reject any report submitted under this Subsection O of 20.2.81.106 NMAC that contains errors or fails to satisfy the requirements of this section, and the account representative shall resubmit the report to correct any deficiencies.

(5) A WEB source may petition for an alternative to any requirement specified in Paragraph 2 of Subsection A of 20.2.81.106 NMAC. The petition shall require approval of the department and the U.S. EPA administrator. Any petition submitted under this paragraph shall include sufficient information for the evaluation of the petition, including, at a minimum, the following information:

(a) identification of the WEB source and applicable sulfur dioxide emitting unit(s);

(b) a detailed explanation of why the proposed alternative is being suggested in lieu of the requirement;

(c) a description and diagram of any equipment and procedures used in the proposed alternative, if applicable;

(d) a demonstration that the proposed alternative is consistent with the purposes of the requirement for which the alternative is proposed and is consistent with the purposes of 20.2.81 NMAC and that any adverse effect of approving such alternative will be de minimis; and

(e) any other relevant information that the department may require.

(6) For any monitoring plans, reports, or other information submitted under 20.2.81.106 NMAC, the WEB source shall ensure that, where applicable, identifying information is consistent with the identifying information provided in the most recent certificate of representation for the WEB source submitted under 20.2.81.102 NMAC.

[20.2.81.106 NMAC - N, 12/31/03; A, 07/06/11]

20.2.81.107 ALLOWANCE TRANSFERS:

A. Procedure. To transfer allowances, the account representative shall submit the following information to the tracking system administrator:

- (1) the transfer account number(s) identifying the transferor account;
- (2) the transfer account number(s) identifying the transferee account;
- (3) the serial number of each allowance to be transferred; and
- (4) the transferor's account representative's name and signature and date of submission.

B. Deadline. The allowance transfer deadline is midnight Pacific standard time March 1 of each year (or if this date is not a business day, midnight of the first business day thereafter) following the end of the control period. By this time, the transfer of the allowances into the WEB source's compliance account must be correctly submitted to the tracking system administrator in order to demonstrate compliance under Subsection A of 20.2.81.109 NMAC for that control period.

C. Retirement of Allowances. To transfer allowances for the purpose of retirement, the account representative shall submit the following information to the tracking system administrator:

- (1) the transfer account number(s) identifying the transferor account;
- (2) the serial number of each allowance to be retired; and

(3) the transferor's account representative's name and signature and date of submission accompanied by a signed statement acknowledging that each retired allowance as no longer available for future transfers from or to any account.

[20.2.81.107 NMAC - N, 12/31/03]

20.2.81.108 USE OF ALLOWANCES FROM A PREVIOUS YEAR:

A. Any allowance that is held in a compliance account or general account shall remain in such an account unless and until the allowance is deducted in conjunction with the compliance process, or transferred to another account.

B. In order to demonstrate compliance under Subsection A of 20.2.81.109 NMAC for a control period, WEB sources shall only use allowances allocated for that current control period or any previous year. Because all allowances held in a special reserve compliance account for a WEB source that monitors certain units in accordance with Subsection B of 20.2.81.106 NMAC will be deducted for compliance for each control period, no banking of such allowances for use in a subsequent year is permitted by 20.2.81 NMAC.

C. If flow control procedures for the current control period have been triggered as outlined in section C4.2 of the sulfur dioxide milestones and backstop trading program implementation plan, then the use of allowances that were allocated for any previous year shall be limited as follows.

(1) The number of allowances that are held in each compliance account and general account as of the allowance transfer deadline for the immediately previous year and that were allocated for any previous year shall be determined.

(2) The number determined in Paragraph 1 shall be multiplied by the flow control ratio established in accordance with section C4.2 of the sulfur dioxide milestones and backstop trading program implementation plan to determine the number of allowances that were allocated for a previous year that can be used without restriction for the current control period.

(3) Allowances that were allocated for a previous year in excess of the number determined in Paragraph 2 may also be used for the current control period. If such allowances are used to make a deduction, three allowances shall be deducted for each deduction of one allowance required under 20.2.81.109 NMAC.

D. Special provisions for the year 2018. After compliance with the 2017 allowance limitation has been determined in accordance with Subsection A of 20.2.81.109 NMAC, allowances allocated for any year prior to 2018 shall not be used for determining compliance with the 2018 allowance limitation or any future allowance limitation.

[20.2.81.108 NMAC - N, 12/31/03; A, 07/06/11]

20.2.81.109 COMPLIANCE:

A. Compliance with allowance limitations.

(1) The WEB source shall hold allowances, in accordance with Paragraph 2 of Subsection A of 20.2.81.109 NMAC and 20.2.81.108 NMAC, as of the allowance transfer deadline in the WEB source's compliance account (together with any current control year allowances held in the WEB source's special reserve compliance account under Subsection B of 20.2.81.106 NMAC in an amount not less than the total sulfur dioxide emissions for the control period from the WEB source, as determined under the monitoring and reporting requirements of 20.2.81.106 NMAC.

(a) For each source that is a WEB source on or before the program trigger date, the first control period is the calendar year that is six years following the calendar year for which sulfur dioxide emissions exceeded the milestone in accordance with procedures in section A of the sulfur dioxide milestones and backstop trading program implementation plan.

(b) For any existing source that becomes a WEB source after the program trigger date, the first control period is the calendar year that is four years following the inventory year in which the source exceeded the sulfur dioxide emissions threshold.

(c) For any new WEB source after the program trigger date the first control period is the first full calendar year that the source is in operation.

(d) If the WEB trading program is triggered in accordance with the 2013 review procedures in section A4 of the sulfur dioxide milestones and backstop trading program implementation plan, the first control period for each source that is a WEB source on or before the program trigger date is the year 2018.

(2) Allowance transfer deadline. An allowance may only be deducted from the WEB source's compliance account if:

(a) the allowance was allocated for the current control period or meets the requirements in 20.2.81.108 NMAC for use of allowances from a previous control period; and

(b) the allowance was held in the WEB source's compliance account as of the allowance transfer deadline for the current control period, or was transferred into the compliance account by an allowance transfer correctly submitted for recording by the allowance transfer deadline for the current control period.

(3) Compliance with allowance limitations shall be determined as follows.

(a) The total annual sulfur dioxide emissions for all sulfur dioxide emitting units at the source that are monitored under Subsection B of 20.2.81.106 NMAC, as

reported by the source in Paragraph 2 or 4 of Subsection O of 20.2.81.106 NMAC, and recorded in the emissions tracking database shall be compared to the allowances held in the source's special reserve compliance account as of the allowance transfer deadline for the current control period, adjusted in accordance with 20.2.81.108 NMAC. If the emissions are equal to or less than the allowances in such account, all such allowances shall be retired to satisfy the obligation to hold allowances for such emissions. If the total emissions from such units exceeds the allowances in such special reserve account, the WEB source shall account for such excess emissions in Subparagraph b of this paragraph.

(b) The total annual sulfur dioxide emissions for all sulfur dioxide emitting units at the source that are monitored under Subsection A of 20.2.81.106 NMAC, as reported by the source in Paragraph 2 or 4 of Subsection O of 20.2.81.106 NMAC, and recorded in the emissions tracking database, together with any excess emissions as calculated in the preceding Subparagraph a, shall be compared to the allowances held in the source's compliance account as of the allowance transfer deadline for the current control period, adjusted in accordance with 20.2.81.108 NMAC.

(c) If the comparison in Subparagraph b of this paragraph results in emissions that exceed the allowances held in the source's compliance account, the source has exceeded its allowance limitation and the excess emissions are subject to the allowance deduction penalty in Subsection C of this section.

(4) Other than allowances in a special reserve compliance account for units monitored under Subsection B of 20.2.81.106 NMAC, to the extent consistent with 20.2.81.108 NMAC, allowances shall be deducted for a WEB source for compliance with the allowance limitation as directed by the WEB source's account representative. Deduction of any other allowances as necessary for compliance with the allowance limitation shall be on a first-in, first-out accounting basis in the order of the date and time of their recording in the WEB source's compliance account, beginning with the allowances allocated to the WEB source and continuing with the allowances transferred to the WEB source's compliance account from another compliance account or general account. The allowances held in a special reserve compliance account pursuant to Subsection B of 20.2.81.106 NMAC shall be deducted as specified in Subparagraph a of Paragraph 3 of Subsection A of 20.2.81.109 NMAC.

B. Certification of compliance.

(1) For each control period in which a WEB source is subject to the allowance limitation, the account representative of the source shall submit to the department a compliance certification report for the source.

(2) The compliance certification report shall be submitted no later than the allowance transfer deadline of each control period, and shall contain the following:

(a) identification of each WEB source;

(b) at the account representative's option, the serial numbers of the allowances that are to be deducted from a source's compliance account for compliance with the allowance limitation; and

(c) the compliance certification report according to Paragraph 3 of this section.

(3) In the compliance certification report, the account representative shall certify, based on reasonable inquiry of those persons with primary responsibility for operating the WEB source in compliance with the WEB trading program, whether the WEB source for which the compliance certification is submitted was operated during the control period covered by the report in compliance with the requirements of the WEB trading program applicable to the source including:

(a) whether the WEB source operated in compliance with the sulfur dioxide allowance limitation;

(b) whether sulfur dioxide emissions data has been submitted to the department in accordance with Subsection A of 20.2.81.106 NMAC and other applicable guidance, for review, revision as necessary, and finalization for forwarding to the sulfur dioxide allowance tracking system for recording;

(c) whether the monitoring plan that governs the WEB source has been maintained to reflect the actual operation and monitoring of the source, and contains all information necessary to attribute sulfur dioxide emissions to the source, in accordance with Subsection A of 20.2.81.106 NMAC;

(d) whether all the sulfur dioxide emissions from the WEB source if applicable, were monitored or accounted for either through the applicable monitoring or through application of the appropriate missing data procedures;

(e) if applicable, whether any sulfur dioxide emitting unit for which the WEB source is not required to monitor in accordance with Paragraph 3 of Subsection A of 20.2.81.106 NMAC remained permanently retired and had no emissions for the entire applicable period; and

(f) whether there were any changes in the method of operating or monitoring the WEB source that required monitor recertification; if there were any such changes, the report shall specify the nature, reason, and date of the change, the method to determine compliance status subsequent to the change, and specifically, the method to determine sulfur dioxide emissions.

C. Allowance deduction penalty for any WEB source exceeding its allowance limitations.

(1) If emissions from a WEB source exceed the allowance limitation for a control period, as determined in accordance with Subsection A of 20.2.81.109 NMAC, the source's allowance held in its compliance account will be reduced by an amount equal to three times the source's tons of excess emissions. If the compliance account does not have sufficient allowances allocated for that control period, the required number of allowances shall be deducted from the WEB source's compliance account regardless of the control period for which they were allocated, once allowances are recorded in the account.

(2) Any allowance deduction required under this section shall not affect the liability of the owners and operators of the WEB source for any fine, penalty or assessment or their obligation to comply with any other remedy, for the same violation, as ordered under the Clean Air Act, implementing regulations or applicable state or tribal law. Accordingly, a violation can be assessed each day of the control period for each ton of sulfur dioxide emissions in excess of its allowance limitation if the department so chooses.

D. Liability.

(1) WEB source liability for non-compliance. Separate and regardless of any allowance deduction penalty, a WEB source that violates any requirement of 20.2.81 NMAC is subject to civil and criminal penalties under the Air Quality Control Act and the Clean Air Act. Each day of the control period is a separate violation, and each ton of sulfur dioxide emissions in excess of a source's allowance limitation is a separate violation.

(2) General liability.

(a) Any provision of the WEB trading program that applies to a source or an account representative shall apply also to the owners and operators of such source.

(b) Any person who violates any requirement or prohibition of the WEB trading program shall be subject to enforcement pursuant to applicable state, tribal or federal law.

(c) Any person who knowingly makes a false material statement in any record, submission, or report under this WEB trading program shall be subject to criminal enforcement pursuant to the applicable state, tribal or federal law.

[20.2.81.109 NMAC - N, 12/31/03; A, 07/06/11]

20.2.81.110 SPECIAL PENALTY PROVISIONS FOR THE 2018 MILESTONE:

A. If the WEB trading program is triggered as outlined in section A of the sulfur dioxide milestones and backstop trading program implementation plan, and the first

control period will not occur until after the year 2018, the following provisions shall apply for the 2018 emissions year.

(1) All WEB sources shall register, and open a compliance account within 180 days after the program trigger date, in accordance with Subsection A of 20.2.81.103 NMAC and 20.2.81.105 NMAC.

(2) The tracking system administrator shall record the allowances for the 2018 control period for each WEB source in the source's compliance account once the department allocates the 2018 allowances under section C1 and D1 of the sulfur dioxide milestones and backstop trading program implementation plan.

(3) The allowance transfer deadline is midnight Pacific standard time on May 31, 2021 (or if this date is not a business day, midnight of the first business day thereafter). WEB sources may transfer allowances as provided in Subsection A of 20.2.81.107 NMAC until the allowance transfer deadline. For each control period after 2018 that the special penalty provisions are assessed, the dates for the 2019 control period will be adjusted forward by one year.

(4) A WEB source shall hold allowances allocated for 2018 including those transferred into the compliance account by an allowance transfer correctly submitted by the allowance transfer deadline, in an amount not less than the WEB source's total sulfur dioxide emissions for 2018. Emissions shall be determined using the pre-trigger monitoring provisions in section B of the sulfur dioxide milestones and backstop trading program implementation plan, and 20.2.73 NMAC.

(5) In accordance with Subsection D of 20.2.81.108 NMAC and Paragraph 4 of Subsection A of 20.2.81.110 NMAC, the department shall seek at least the minimum financial penalty of \$5,000 per ton of sulfur dioxide emissions in excess of the WEB source's allowance limitation.

(a) Any source may resolve its excess emissions violation by agreeing to a streamline settlement approach where the source pays a penalty of \$5,000 per ton or partial ton of excess emissions, and payment is received within 90 calendar days after the issuance of a notice of violation.

(b) Any source that does not resolve its excess emissions violation in accordance with the streamlined settlement approach in Subparagraph a of this paragraph will be subject to civil enforcement action, in which the department shall seek a financial penalty for the excess emissions based on the state's statutory maximum civil penalties.

(6) Each ton of sulfur dioxide emissions in excess of a source's allowance limitation is a separate violation and each day of a control period is a separate violation.

B. The provisions in 20.2.81.110 NMAC shall continue to apply for each year after the 2018 emission year until:

(1) the first control period under the WEB trading program under Paragraph 1 of Subsection A of 20.2.81.109 NMAC; or

(2) the department determines, in accordance with section A3.10 of the implementation plan, that the 2018 sulfur dioxide milestone has been met.

C. If 20.2.81.110 NMAC was implemented, the following shall apply to each emissions year after the 2018 emissions year.

(1) The tracking system administrator will record the allowances for the control period for the specific year for each WEB source in the source's compliance account once the department allocates the allowances under section C1 of the sulfur dioxide milestones and backstop trading program implementation plan.

(2) The allowance transfer deadline for the 2019 emissions year shall be midnight Pacific standard time on May 31, 2021 (or if this date is not a business day, midnight of the first business day thereafter); and for each control period after 2018 that the special penalty provisions are assessed, the May 31, 2021 allowance transfer deadline for the 2019 control period will be adjusted forward by one year.

(3) A WEB source must hold allowances allocated for that specific emissions year, or any year after 2018, including those transferred into the compliance account by an allowance transfer correctly submitted by the allowance transfer deadline, in an amount not less than the WEB source's total sulfur dioxide emissions for the specific emissions year. Emissions are determined using the pre-trigger monitoring provisions in section B of the sulfur dioxide milestones and backstop trading program implementation plan, and 20.2.73 NMAC.

(4) An allowance deduction penalty and financial penalty shall be assessed and levied in accordance with Subsection D of 20.2.81.108 NMAC, Paragraph 4 of Subsection A of 20.2.81.109 NMAC, and Subsection C of 20.2.81.109 NMAC, except that sulfur dioxide emissions shall be determined under Paragraph 3 of Subsection C of 20.2.81.110 NMAC.

[20.2.81.110 NMAC - N, 12/31/03; A, 07/06/11]

20.2.81.111 NMAC SULFUR DIOXIDE MONITORING OF FUEL GAS COMBUSTION DEVICES:

A. Applicability.

(1) The provisions of this protocol are applicable to fuel gas combustion devices at petroleum refineries.

(2) Fuel gas combustion devices include boilers, process heaters, and flares used to burn fuel gas generated at a petroleum refinery.

(3) Fuel gas means any gas which is generated and combusted at a petroleum refinery. Fuel gas does not include:

- (a)** natural gas, unless combined with other gases generated at a petroleum refinery;
- (b)** gases generated by a catalytic cracking unit catalyst regenerator;
- (c)** gases generated by fluid coking burners;
- (d)** gases combusted to produce sulfur or sulfuric acid; or
- (e)** process upset gases generated due to startup, shutdown, or malfunctions.

B. Monitoring Requirements.

(1) Except as provided in Paragraphs 2 and 3 of 20.2.81.111 NMAC, fuel gas combustion devices shall use a continuous fuel gas monitoring system (CFGMS) to determine the total sulfur content (reported as H₂S) of the fuel gas mixture prior to combustion, and continuous fuel flow meters to determine the amount of fuel gas burned.

(a) Fuel gas combustion devices having a common source of fuel gas may be monitored for sulfur content at one location, if monitoring at that location is representative of the sulfur content of the fuel gas being burned in any fuel gas combustion device.

(b) The CFGMS shall meet the performance requirements in Performance Specification 2 in Appendix B to 40 CFR Part 60, and the following.

(i) Continuously monitor and record the concentration by volume of total sulfur compounds in the gaseous fuel reported as ppmv H₂S.

(ii) Have the span value set so that the majority of readings fall between 10 and 95 percent of the range.

(iii) Record negative values of zero drift, for initial certification and daily calibration error tests.

(iv) Calibration drift shall be 5.0 percent of the span.

(v) Methods 15A, 16, or approved alternatives for total sulfur, are the reference methods for the relative accuracy test. The relative accuracy test shall include a bias test in accordance with Paragraph 3 of Subsection D of 20.2.81.111 NMAC.

(c) All continuous fuel flow meters shall comply with the provisions of Section 2.1.5 of Appendix D to 40 CFR Part 75.

(d) The hourly mass sulfur dioxide emissions rate for all the fuel combustion devices monitored by this approach shall be calculated using the following equation:

$$E_t = (C_s)(Q_f)(K)$$

where: E_t = Total sulfur dioxide emissions in lb/hr from applicable fuel gas combustion devices

C_s = Sulfur content of the fuel gas as H_2S (ppmv)

Q_f = Fuel gas flow rate to the applicable fuel gas combustion devices (scf/hr)

$K = 1.660 \times 10^{-7}$ (lb/scf)/ppmv

(2) In place of a CFGMS in Paragraph 1 of Subsection B of 20.2.81.111 NMAC, fuel gas combustion devices having a common source of fuel gas may be monitored with an sulfur dioxide CEMS flow CEMS and (if necessary) a moisture monitoring system at only one location, if the CEMS monitoring at that location is representative of the sulfur dioxide emission rate (lb sulfur dioxide/scf fuel gas burned) of all applicable fuel gas combustion devices. Continuous fuel flow meters shall be used in accordance with Paragraph 2 of Subsection B of 20.2.81.111 NMAC, and the fuel gas combustion device monitored by a CEMS shall have separate fuel metering.

(a) Each CEMS for sulfur dioxide and flow, and (if applicable) moisture, shall comply with the operating requirements, performance specifications, and quality assurance requirements of 40 CFR Part 75.

(b) All continuous fuel flow meters shall comply with the provisions of Section 2.1.5 of Appendix D to 40 CFR Part 75.

(c) The sulfur dioxide hourly mass emissions rate for all the fuel gas combustion devices monitored by this approach shall be determined by the ratio of the amount of fuel gas burned by the CEMS-monitored fuel gas combustion device to the total fuel gas burned by all applicable fuel gas combustion devices using the following equation:

$$E_t = (E_m)(Q_t)/(Q_m)$$

where: E_t = Total sulfur dioxide emissions in lb/hr from applicable fuel gas combustion devices.

E_m = sulfur dioxide emissions in lb/hr from the CEMS-monitored fuel gas combustion device, calculated using Equation F-1 or (if applicable) F-2 in Appendix F to 40 CFR Part 75

Q_t = Fuel gas flow rate (scf/hr) from applicable fuel gas combustion devices.

Q_m = Fuel gas flow rate (scf/hr) to the CEMS-monitored fuel gas combustion device.

(3) In place of a CFGMS in Paragraph 1 of Subsection B of 20.2.81.111 NMAC, fuel gas combustion devices having a common source of fuel gas may be monitored with an sulfur dioxide - diluent CEMS at only one location, if the CEMS monitoring at that location is representative of the sulfur dioxide emission rate (lb sulfur dioxide/mmBtu) of all applicable fuel gas combustion devices. If this option is selected, the owner or operator shall conduct fuel gas sampling and analysis for gross calorific value (GCV), and shall use continuous fuel flow metering in accordance with Paragraph 1 of Subsection B of 20.2.81.111 NMAC, with separate fuel metering for the CEMS-monitored fuel gas combustion device.

(a) Each sulfur dioxide - diluent CEMS shall comply with the applicable provisions for sulfur dioxide monitors and diluent monitors in 40 CFR Part 75, and shall use the procedures in Section 3 of Appendix F to Part 75 for determining sulfur dioxide emission rate (lb/mmBtu) by substituting the term sulfur dioxide for no_x in that section, and using a K factor of 1.660×10^{-7} (lb/scf) ppmv instead of the NO_x K factor.

(b) All continuous fuel flow meters and fuel gas sampling and analysis for GCV to determine the heat input ratio shall comply with the applicable provisions of Section 2.1.5 and 2.3.4 of Appendix D to 40 CFR Part 75.

(c) The sulfur dioxide hourly mass emissions rate for all the fuel gas combustion devices monitored by this approach shall be determined by the ratio of the fuel gas heat input to the CEMS-monitored fuel gas combustion device to the total fuel gas heat input to all applicable fuel gas combustion devices using the following equation:

$$E_t = (E_m)(Q_t)/(GCV) / 10^6$$

where: E_t = Total sulfur dioxide emissions in lbs/hr from applicable fuel gas combustion devices.

E_m = sulfur dioxide emissions in lb/mmBtu from the CEMS - monitored fuel gas combustion device.

Q_t = Fuel gas flow rate (scf/hr) to the applicable fuel gas combustion devices.

GCV = Fuel Gross Calorific Value (Btu/scf)

10^6 = Conversion from Btu to million Btu

(d) The owner or operator shall calculate total sulfur dioxide mass emissions for each calendar quarter and each calendar year based on the emissions in lb/hr and equations F-3 and F-4 in Appendix F to 40 CFR Part 75, Appendix F.

C. Certification and recertification requirements. All monitoring systems are subject to initial certification and recertification testing as follows.

(1) The owner or operator shall comply with the initial testing and calibration requirements in performance specification 2 in Appendix B of 40 CFR Part 60 and Subparagraph b of Paragraph 1 of Subsection B of 20.2.81.111 NMAC for each CFGMS.

(2) Each CEMS for sulfur dioxide and flow or each sulfur dioxide-diluent CEMS shall comply with the testing and calibration requirements specified in 40 CFR Part 75, Section 75.20 and appendices A and B, except that each sulfur dioxide-diluent CEMS shall meet the relative accuracy requirements for a NO_x-diluent CEMS (lb/mmBtu).

(3) A continuous fuel flow meter shall comply with certification requirements in Section 2.1.5 of Appendix D of 40 CFR Part 75.

D. Quality assurance/quality control requirements.

(1) A quality assurance and quality control (QA/QC) plan shall be developed and implemented for each CEMS for sulfur dioxide and flow or the sulfur dioxide-diluent CEMS in compliance with Sections 1, 1.1, and 1.2 of Appendix B of 40 CFR Part 75.

(2) A quality assurance and quality control plan shall be developed and implemented for each continuous fuel flow meter and fuel sampling and analysis in compliance with Sections 1, 1.1, and 1.3 Appendix B of 40 CFR Part 75. The owner or operator shall meet the requirements in Section 2.1.6 of Appendix D to 40 CFR Part 75, and may use the procedures set forth in Section 2.1.7 of that appendix.

(3) A quality assurance and quality control plan shall be developed and implemented for each CFGMS in compliance with Sections 1 and 1.1 of Appendix B to 40 CFR Part 75, and the following.

(a) Perform a daily calibration error test of each CFGMS at two gas concentrations, one low level and one high level. Calculate the calibration error as described in Appendix A to 40 CFR Part 75. An out of control period occurs whenever the error is greater than 5.0 percent of the span value.

(b) In addition to the daily calibration error test, an additional calibration error test shall be performed whenever a daily calibration error test is failed, whenever a monitoring system is returned to service following repairs or corrective actions that may affect the monitor measurements, or after making manual calibration adjustments.

(c) Perform a linearity test once every operating quarter. Calculate the linearity as described in Appendix A to 40 CFR Part 75. An out of control period occurs whenever the linearity error is greater than 5.0 percent of a reference value, and the absolute value of the difference between average monitor response values and a reference value is greater than 5.0 ppm.

(d) Perform a relative accuracy test audit once every four operating quarters. Calculate the relative accuracy as described in Appendix A to 40 CFR Part 75. An out of control period occurs whenever the relative accuracy is greater than 20.0 percent of the mean value of the reference method measurements.

(e) Using the results of the relative accuracy test audit, conduct a bias test in accordance with Appendix A to 40 CFR Part 75, and calculate and apply a bias adjustment factor if required.

E. Missing data procedures.

(1) For any period in which valid data are not being recorded by an sulfur dioxide CEMS or flow CEMS specified in this section, missing or invalid data shall be replaced with substitute data in accordance with the requirements in subpart D of 40 CFR Part 75.

(2) For any period in which valid data are not being recorded by an sulfur dioxide-diluent CEMS specified in this section, missing or invalid data shall be replaced with substitute data on a rate basis (lb/mmBtu) in accordance with the requirements for sulfur dioxide monitors in subpart D of 40 CFR Part 75.

(3) For any period in which valid data are not being recorded by a continuous fuel flow meter or for fuel gas GCV sampling and analysis specified in this section, missing or invalid data shall be replaced with substitute data in accordance with missing data requirements in Section 2.4 of Appendix D to 40 CFR Part 75.

(4) For any period in which valid data are not being recorded by the CFGMS specified in this section, hourly missing or invalid data shall be replaced with substitute data in accordance with the missing data requirements for units performing hourly gaseous fuel sulfur sampling in Section 2.4 of Appendix D to 40 CFR Part 75.

F. Monitoring plan and reporting requirements. In addition to the general monitoring plan and reporting requirements of 20.2.81.106 NMAC, the owner or operator shall meet the following additional requirements.

(1) The monitoring plan shall identify each group of units that are monitored by a single monitoring system under this 20.2.81.111 NMAC, and the plan shall designate an identifier for the group of units for emissions reporting purposes. For purpose of submitting emissions reports, no apportionment of emissions to the individual units within the group is required.

(2) If the provisions of Paragraph 2 or 3 of Subsection B of 20.2.81.111 NMAC are used, provide documentation and an explanation to demonstrate that the sulfur dioxide emission rate from the monitored unit is representative of the rate from non-monitored units.

[20.2.81.111 NMAC - N, 12/31/03]

20.2.81.112 NMAC PREDICTIVE FLOW MONITORING SYSTEMS FOR KILNS WITH POSITIVE PRESSURE FABRIC FILTER:

A. Applicability. The provisions of this protocol are applicable to cement kilns or lime kilns that:

- (1) are controlled by a positive pressure fabric filter;
- (2) combust only a single fuel, no fuel blends; and
- (3) have operating conditions upstream of the fabric filter that the WEB source documents would reasonably prevent reliable flow monitor measurements; this protocol does not modify the sulfur dioxide monitoring requirements in 20.2.81.106 NMAC.

B. Monitoring requirements.

(1) A cement or lime kiln with a positive pressure fabric filter shall use a predictive flow monitoring system (PFMS) to determine the hourly kiln exhaust gas flow.

(2) A PFMS is the total equipment necessary for the determination of exhaust gas flow using process or control device operating parameter measurements and a conversion equation, a graph, or computer program to produce results in cubic feet per hour.

(3) The PFMS shall meet the following performance specifications.

(a) Sensors readings and conversion of sensor data to flow in cubic feet per hour must be automated.

(b) The PFMS must allow for the automatic or manual determination of failed monitors. At a minimum a daily determination must be performed.

(c) The PFMS shall have provisions to check the calibration error of each parameter that is individually measured. The owner or operator shall propose appropriate performance specifications in the initial monitoring plan for all parameters used in the PFMS comparable to the degree of accuracy required for other monitoring systems used to comply with 20.2.81 NMAC. The parameters shall be tested at two levels, low: 0 to 20 percent of full scale, and high: 50 to 100 percent of full scale. The reference value need not be certified.

(d) The relative accuracy of the PFMS must be ≤ 10.0 percent of the reference method average value, and include a bias test in accordance with Paragraph 3 of Subsection D of 20.2.81.112 NMAC.

C. Certification Requirements. The PFMS is subject to initial certification testing. The source owner or operator shall:

(1) demonstrate the ability of the PFMS to identify automatically or manually a failed monitor;

(2) provide evidence of calibration testing of all monitoring equipment. Any tests conducted within the previous 12 months of operation that are consistent with the QA/QC plan for the PFMS are acceptable for initial certification purposes; and

(3) perform an relative accuracy test audit and accompanying bias test once every four operating quarters. Calculate the relative accuracy (and bias adjustment factor) as described in Appendix A to 40 CFR Part 75. An out of control period occurs whenever the flow relative accuracy is greater than 10.0 percent of the mean value of the reference method.

D. Quality assurance and quality control requirements. A quality assurance and quality control plan shall be developed and implemented for each PFMS in compliance with Sections 1 and 1.1 of Appendix B of 40 CFR Part 75, and the following:

(1) perform a daily monitor failure check;

(2) perform calibration tests of all monitors for each parameter included in the PFMS. At a minimum, calibrations shall be conducted prior to each relative accuracy test audit; and

(3) perform a relative accuracy test audit and accompanying bias test once every four operating quarters. Calculate the relative accuracy (and bias adjustment factor) as described in Appendix A to 40 CFR Part 75. An out of control period occurs whenever the flow relative accuracy is greater than 10.0 percent of the mean value of the reference method.

E. Missing data. For any period in which valid data are not being recorded by the PFMS specified in this section, hourly missing or invalid data shall be replaced with

substitute data in accordance with the flow monitor missing data requirements for non-load based units in subpart D of 40 CFR Part 75.

F. Monitoring plan requirements. In addition to the general monitoring plan requirements of 20.2.81.106 NMAC, the owner or operator shall meet the following additional requirements.

(1) The monitoring plan shall document the reasons why stack flow measurements upstream of the fabric filter are unlikely to provide reliable flow measurements over time.

(2) The initial monitoring plan shall explain the relationship of the proposed parameters and stack flow, and discuss other parameters considered and the reasons for not using those parameters in the PFMS. The department may require that the subsequent monitoring plan include additional explanation and documentation for the reasonableness of the proposed PFMS.

[20.2.81.112 NMAC - N, 12/31/03]

PART 82: MAXIMUM ACHIEVABLE CONTROL TECHNOLOGY STANDARDS FOR SOURCE CATEGORIES OF HAZARDOUS AIR POLLUTANTS

20.2.82.1 ISSUING AGENCY:

New Mexico Environmental Improvement Board.

[Rn, 20 NMAC 2.82.1, 08/14/98; 20.2.82.1 NMAC - Rn, 20 NMAC 2.82.100, 06/23/00]

20.2.82.2 SCOPE:

All sources emitting hazardous air pollutants, which are subject to the requirements of 40 CFR Part 63, as amended through June 28, 2023.

[Rn, 20 NMAC 2.82.2, 08/14/1998; A, 08/14/1998; A, 09/08/1999; 20.2.82.2 NMAC - Rn & A, 20 NMAC 2.82.101, 06/23/2000; A, 02/18/2002; A, 06/13/2003; A, 06/08/2007; A, 08/17/2009; A, 09/02/2011; A, 12/19/2013; A, 1/29/2016; A, 5/30/2017; A, 12/19/2023]

20.2.82.3 STATUTORY AUTHORITY:

Environmental Improvement Act, Paragraphs (4) and (7) of Subsection (A) of Section 74-1-8 NMSA 1978, and Air Quality Control Act, NMSA 1978, Sections 74-2-1 et seq., including specifically, Subsections (A), (B) and (D) of Section 74-2-5. Subsection (D) of Section 74-2-5 provides that "regulations adopted by the environmental improvement board may prescribe standards of performance for sources and emissions standards for hazardous air pollutants...".

[Rn, 20 NMAC 2.82.3, 08/14/1998; A, 08/14/1998; 20.2.82.3 NMAC - Rn, 20 NMAC 2.82.102, 06/23/2000; A, 12/19/2023]

20.2.82.4 DURATION:

Permanent.

[Rn, 20 NMAC 2.82.4, 08/14/98; 20.2.82.4 NMAC - Rn, 20 NMAC 2.82.103, 06/23/00]

20.2.82.5 EFFECTIVE DATE:

November 27, 1994, except where a later date is cited at the end of a section.

[Rn, 20 NMAC 2.82.5, 08/14/98; A, 08/14/98; 20.2.82.5 NMAC - Rn, 20 NMAC 2.82.104, 06/23/00]

[The latest effective date of any section in this part is May 30, 2017.]

20.2.82.6 OBJECTIVE:

The objective of this part is to adopt or establish state authority to implement emission standards for hazardous air pollutants for the source categories in New Mexico subject to federal standards. The United States environmental protection agency requires New Mexico to adopt such standards in order to implement requirements in Section 112 of the Clean Air Act.

[Rn, 20 NMAC 2.82.6, 08/14/98; A, 08/14/98; 20.2.82.6 NMAC - Rn, 20 NMAC 2.82.105, 06/23/00; A, 1/29/16]

20.2.82.7 DEFINITIONS:

[RESERVED]

[20.2.82.7 NMAC - Rn, 20 NMAC 2.82.107 06/23/00]

20.2.82.8 ADOPTION OF 40 CFR PART 63:

Except as otherwise provided in Section 20.2.82.10 NMAC (below), the national emission standards for hazardous air pollutants for source categories as promulgated by the United States environmental protection agency, 40 CFR Part 63, as amended in the Federal Register through June 28, 2023 are hereby incorporated into this part (20.2.82 NMAC).

[Rn, 20 NMAC 2.82.7, 08/14/1998; A, 08/14/1998; A, 09/08/1999; 20.2.82.8 NMAC - Rn & A, 20 NMAC 2.82.106, 06/23/2000; A, 02/18/2002; A, 06/13/2003; A, 06/08/2007; A, 08/17/2009; A, 09/02/2011; A, 12/19/2013; A, 1/29/2016; A, 5/30/2017; A, 12/19/2023]

20.2.82.9 SOURCES SUBJECT TO 40 CFR 63.40 - 63.44 OF SUBPART B (CONSTRUCTED AND RECONSTRUCTED MAJOR SOURCES OF HAZARDOUS AIR POLLUTANTS):

The owner or operator of a source subject to these provisions, that will be constructing or reconstructing after June 29, 1999, shall not construct or reconstruct unless:

A. the source has received a maximum achievable control technology (MACT) determination and approval from the department under this part; and

B. the MACT determination and approval has been incorporated into a permit under 20.2.72 NMAC - Construction Permits or 20.2.70 NMAC - Operating Permits.

[08/14/98; 20.2.82.9 NMAC - Rn, 20 NMAC 2.82.108, 06/23/00]

20.2.82.10 MODIFICATIONS AND EXCEPTIONS:

The following modifications or exceptions are made to the incorporated federal standards:

A. general provisions: amend 40 CFR Part 63, Subpart A - General Provisions, Section 63.2, Definitions, as follows: For the purposes of delegation of authority which the administrator of the United States environmental protection agency may, at the administrator's discretion, delegate to the secretary of the New Mexico environment department, "administrator" means the secretary or the secretary's authorized representative.

B. variances: the federal emission standards incorporated by this part shall not be subject to NMSA 1978, Section 74-2-8 (Variances).

C. constructed and reconstructed major sources: the effective date for incorporation of 40 CFR 63.40 - 63.44 of Subpart B under 20.2.82.8 NMAC shall be June 29, 1999.

[Rn, 20 NMAC 2.82.8, 08/14/98; A, 08/14/98; 20.2.82.10 NMAC - Rn, 20 NMAC 2.82.109, 06/23/00; A, 1/29/16]

20.2.82.11 DOCUMENTS:

Documents incorporated and cited in this part may be viewed at the New Mexico environment department, air quality bureau.

[08/14/98; 20.2.82.11 NMAC - Rn, 20 NMAC 2.82.110 06/23/00; A, 08/17/09; A, 1/29/16]

[As of April 2013, the air quality bureau is located at 525 Camino de los Marquez, Suite 1, Santa Fe NM, 87505]

PART 83: [RESERVED]

PART 84: ACID RAIN PERMITS

20.2.84.1 ISSUING AGENCY:

New Mexico Environmental Improvement Board.

[20.2.84.1 NMAC - 06/16/95; Rn, 20 NMAC 2.84.100 06/15/00]

20.2.84.2 SCOPE:

All affected sources under the federal acid rain program which operate in the jurisdiction of this part.

[20.2.84.2 NMAC - 06/16/95; Rp 20 NMAC 2.84.101, 06/15/00]

20.2.84.3 STATUTORY AUTHORITY:

The environmental improvement board "shall promulgate regulations and standards in...air quality management" (NMSA 1978, Section 74-1-8.A) and "regulations adopted by the environmental improvement board...shall...ensure that regulations and standards under...the federal act will not be violated." (NMSA 1978, Section 74-2-7.B).

[20.2.84.3 NMAC - 06/16/95; Rp 20 NMAC 2.84.102, 06/15/00]

20.2.84.4 DURATION:

Permanent.

[20.2.84.4 NMAC - 06/16/95; Rn, 20 NMAC 2.84.103 06/15/00]

20.2.84.5 EFFECTIVE DATE:

June 16, 1995, unless a later date is cited at the end of a section.

[20.2.84.5 NMAC - 06/16/95; Rn, 20 NMAC 2.84.104 & A, 06/15/00]

[The latest effective date of any section in this Part is June 15, 2007]

20.2.84.6 OBJECTIVE:

The objective of this rule is to establish permitting required by 40 CFR Part 72, and to fulfill state requirements that accommodate the implementation of the federal acid rain program, which is designed to control acid deposition at the national level.

[20.2.84.6 NMAC - 06/16/95; Rn, 20 NMAC 2.84.105 & A, 06/15/00]

20.2.84.7 DEFINITIONS:

"affected source" has the meaning given to that term in the federal regulations promulgated under Title IV of the federal act, and includes all sources subject to Title IV of the federal Act.

[20.2.84.7 NMAC - 06/16/95; Rn, 20 NMAC 2.84.107 & A, 06/15/00]

20.2.84.8 ADOPTION BY REFERENCE OF FEDERAL ACID RAIN PERMITTING REQUIREMENTS:

Except as otherwise provided in 20.2.84.10 NMAC, the portions of the federal acid rain program promulgated by the United States environmental protection agency under 40 CFR Part 72 (including all portions of Parts 73, 74, 75, 77 and 78 referenced therein) and 76, and amended in the federal register through May 18, 2005, to implement Sections 407 (nitrogen oxides emission reduction program), 408 (permits and compliance plans) and 412 (monitoring, reporting and recordkeeping requirements) of the federal act, are hereby incorporated into this part.

[20.2.84.8 NMAC - N, 06/15/00; A, 06/15/07]

20.2.84.9 DOCUMENTS:

Documents incorporated and cited in this part may be viewed at the New Mexico environment department, air quality bureau, Harold Runnels building, 1190 St. Francis drive, Santa Fe, NM 87503.

[20.2.84.9 NMAC - 06/16/95; Rn, 20 NMAC 2.84.108 06/15/00]

20.2.84.10 MODIFICATIONS AND EXCEPTIONS:

The following modifications or exceptions are made to the incorporated federal rules:

A. for purposes of this part, the term "permitting authority" shall mean the department; and

B. requirements imposed on affected sources under the federal Act shall not be subject to NMSA 1978, Section 74-2-8 [Variances].

[20.2.84.10 NMAC - N, 06/15/00]

PART 85: MERCURY EMISSION STANDARDS AND COMPLIANCE SCHEDULES FOR ELECTRIC GENERATING UNITS [REPEALED]

[This part was repealed on May 5, 2014.]

PART 86: BEST AVAILABLE CONTROL TECHNOLOGY FOR MERCURY AT NEW POWER PLANTS

20.2.86.1 ISSUING AGENCY:

Environmental Improvement Board.

[20.2.86.1 NMAC - N, 02/10/08]

20.2.86.2 SCOPE:

All persons who operate or intend to construct a coal-fired power plant within the jurisdiction of the environmental improvement board, except those coal-fired power plants constructed and generating electric power and energy before July 1, 2007.

[20.2.86.2 NMAC - N, 02/10/08]

20.2.86.3 STATUTORY AUTHORITY:

Environmental Improvement Act, NMSA 1978, Section 74-1-8(A)(4), and Air Quality Control Act, NMSA 1978, Sections 74-2-1 et seq., including specifically, Section 74-2-5(C)(4).

[20.2.86.3 NMAC - N, 02/10/08]

20.2.86.4 DURATION:

Permanent.

[20.2.86.4 NMAC - N, 02/10/08]

20.2.86.5 EFFECTIVE DATE:

02/10/08 except where a later date is cited at the end of a section.

[20.2.86.5 NMAC - N, 02/10/08]

20.2.86.6 OBJECTIVE:

The objective of this part is to require implementation of mercury emission control strategies for coal-fired power plants subject to this part.

[20.2.86.6 NMAC - N, 02/10/08]

20.2.86.7 DEFINITIONS:

In addition to the terms defined in 20.2.2 NMAC (Definitions) and 20.2.74 NMAC (Permits - Prevention of Significant Deterioration (PSD)), as used in this part, the following definitions apply.

A. "Best available control technology (BACT)" means an emissions limitation as defined in 20.2.74 NMAC (Permits - Prevention of Significant Deterioration (PSD)).

B. "Coal" means any solid fuel classified as anthracite, bituminous, subbituminous, or lignite by the American society of testing and materials (ASTM) standard specification for classification of coals by rank D388-77, 90, 91, 95, 98a or 99 (Reapproved 2004).

C. "Coal-fired" means combusting any of coal or coal-derived fuel, alone or in combination with any amount of any other fuel.

D. "Control strategy" means equipment, processes or actions used to reduce air pollution.

E. "Control strategy selection report" means a report completed as a component of a 20.2.72 NMAC, 20.2.74 NMAC or 20.2.79 NMAC permit application that shall be submitted by the applicant to the department pursuant to 20.2.86.104 NMAC.

F. "Input fuel" means fuel used in a stationary coal-fired boiler or stationary coal-fired combustion turbine to generate electricity.

G. "Operator" means any person who operates, controls, or supervises a power plant or a facility that includes a power plant and shall include, but not be limited to, any holding company, utility system, or plant manager of such power plant.

H. "Owner" means any of the following persons:

(1) any holder of any portion of the legal or equitable title in a power plant;

(2) any holder of a leasehold interest in a power plant; or

(3) any purchaser of power from a power plant under a life-of-the-unit firm power contractual arrangement; provided that, unless expressly provided for in a leasehold agreement, owner shall not include a passive lessor, or a person who has an equitable interest through such lessor, whose rental payments are not based (either directly or indirectly) on the revenues or income from such power plant.

I. "Power plant" means one or more stationary coal-fired boiler or stationary coal-fired combustion turbine that is subject to this part pursuant to 20.2.86.100 NMAC.

J. "State" means:

(1) for purposes of referring to a governing entity, the state of New Mexico; or

(2) for purposes of referring to a geographic area, all geographic areas within the jurisdiction of the environmental improvement board.

K. "Submit" means to send or transmit a document, information, or correspondence to the person specified in accordance with the applicable regulation in person, by United States postal service, or by other means of dispatch or transmission and delivery. Compliance with any "submission" deadline shall be determined by the date of dispatch, transmission, or mailing and not the date of receipt.

[20.2.86.7 NMAC - N, 02/10/08]

20.2.86.8 DOCUMENTS:

Documents incorporated and cited in this part may be viewed at the New Mexico environment department air quality bureau offices in Santa Fe.

[20.2.86.8 NMAC - N, 02/10/08]

[The current address for the New Mexico environment department air quality bureau is 1301 Siler Road, Building B, Santa Fe, NM 87507]

20.2.86.9 SEVERABILITY:

If any provision of this part, or the application of such provision to any person or circumstance, is held invalid, the remainder of this part, or the application of such provision to persons or circumstances other than those as to which it is held invalid, shall not be affected thereby.

[20.2.86.9 NMAC - N, 02/10/08]

20.2.86.10 CONSTRUCTION:

This part shall be liberally construed to carry out its purpose.

[20.2.86.10 NMAC - N, 02/10/08]

20.2.86.11 SAVINGS CLAUSE:

Repeal or supersession of prior versions of this part shall not affect any administrative or judicial action initiated under those prior versions.

[20.2.86.11 NMAC - N, 02/10/08]

20.2.86.12 COMPLIANCE WITH OTHER REGULATIONS:

Compliance with this part does not relieve a person from the responsibility to comply with any other applicable federal, state, or local regulations.

[20.2.86.12 NMAC - N, 02/10/08]

20.2.86.13 LIMITATION OF DEFENSE:

The existence of a valid permit under this part shall not constitute a defense to a violation of any section of this part, except the requirement for obtaining a permit.

[20.2.86.13 NMAC - N, 02/10/08]

20.2.86.14-20.2.86.99 [RESERVED]

20.2.86.100 APPLICABILITY:

The part applies to all coal-fired power plants within the jurisdiction of the environmental improvement board, except for coal-fired power plants constructed and generating electric power and energy before July 1, 2007.

[20.2.86.100 NMAC - N, 02/10/08]

20.2.86.101 MERCURY CONTROL STRATEGIES:

Prior to and at all times when generating electric power, each coal-fired power plant shall implement a control strategy for mercury emissions that removes the greater of what is achievable with best available control technology or ninety percent removal of the mercury from the input fuel.

[20.2.86.101 NMAC - N, 02/10/08]

20.2.86.102 EXEMPTIONS:

Coal-fired power plants constructed and generating electric power before July 1, 2007 are not subject to this part.

[20.2.86.102 NMAC - N, 02/10/08]

20.2.86.103 LIABILITY:

Any provision of this part that applies to a coal-fired power plant shall also apply to the owners and operators of such coal-fired power plant.

[20.2.86.103 NMAC - N, 02/10/08]

20.2.86.104 PERMIT REQUIREMENTS:

A. As a component of a 20.2.72 NMAC, 20.2.74 NMAC or 20.2.79 NMAC permit application, the owner or operator of any power plant subject to this part shall submit to the department a control strategy selection report that analyzes control of mercury emissions. The control strategy selection report shall:

(1) analyze and indicate whether BACT or ninety percent removal of mercury from the input fuel results in greater mercury emission reductions;

(2) indicate, based on control efficiency, whether BACT or ninety percent removal of mercury from the input fuel is to be implemented at the power plant to reduce mercury emissions; and

(3) provide sufficient documentation (i.e., manufacturers guarantees, emissions calculations, etc.) to support the control strategy chosen under Paragraph (2) of this subsection.

B. The department shall make a final determination, based on control efficiency, whether BACT or ninety percent removal of mercury from the input fuel shall be implemented at the power plant to reduce mercury emissions. The control strategy that results in greater control efficiency shall be used by the department to determine an allowable mercury emission limit. The department shall include the allowable mercury emission limit in the resulting air quality permit as an enforceable permit condition. The department shall establish monitoring and recordkeeping requirements that ensure compliance with the permit condition.

[20.2.86.104 NMAC - N, 02/10/08]

20.2.86.105 GENERAL REQUIREMENTS FOR MONITORING AND REPORTING:

A. Any power plant subject to this part with a nameplate capacity of greater than 25 megawatts electric producing electricity for sale shall comply with all applicable requirements for monitoring and reporting pursuant to 20.2.85.111 NMAC and 40 CFR 75 subpart I.

B. Any power plant subject to this part with a nameplate capacity of less than or equal to 25 megawatts electric producing electricity for sale shall provide the department with an annual report. The annual report shall:

(1) include adequate information to demonstrate compliance with the mercury control limit set by the air quality permit issued by the department; and

(2) be submitted to the department annually within 30 calendar days of the anniversary of the date that the air quality permit was issued.

[20.2.86.105 NMAC - N, 02/10/08]

20.2.86.106 INSPECTIONS AND INFORMATION REQUESTS:

A. For the purpose of determining compliance with this part the department may inspect any power plant and may inspect and copy related records, including records documenting the effectiveness of the mercury control strategy.

B. For the purpose of determining compliance with this part, the department may require the owner or operator of a power plant to submit any documentation related to a power plant subject or potentially subject to this part, except that this subsection shall not be construed to require the creation of a new record.

[20.2.86.106 NMAC - N, 02/10/08]

PART 87: GREENHOUSE GAS EMISSIONS REPORTING [REPEALED]

[This part was repealed on January 1, 2011]

PART 88: EMISSION STANDARDS FOR NEW MOTOR VEHICLES [REPEALED]

[This part was repealed on December 19, 2013.]

PART 89: QUALIFIED GENERATING FACILITY CERTIFICATION

20.2.89.1 ISSUING AGENCY:

New Mexico Environment Department.

[20.2.89.1 NMAC - N, 12/20/08]

20.2.89.2 SCOPE:

All entities that have an interest in a qualified generating facility pursuant to NMSA 1978, Sections 7-9G-2, 7-2-18.25, and 7-2A-25.

[20.2.89.2 NMAC - N, 12/20/08; A, 09/26/09]

20.2.89.3 STATUTORY AUTHORITY:

NMSA 1978, Sections 7-9G-2, 7-2-18.25, and 7-2A-25, and NMSA 1978, Section 62-6-28.

[20.2.89.3 NMAC - N, 12/20/08; A, 09/26/09]

20.2.89.4 DURATION:

Permanent.

[20.2.89.4 NMAC - N, 12/20/08]

20.2.89.5 EFFECTIVE DATE:

December 20, 2008, except where a later date is cited at the end of a section.

[20.2.89.5 NMAC - N, 12/20/08]

[The latest effective date of any section in this part is 09/26/09.]

20.2.89.6 OBJECTIVE:

The objective of this part is to establish requirements for issuance of a certificate of eligibility for advanced energy tax credits pursuant to NMSA 1978, Sections 7-9G-2, 7-2-18.25, and 7-2A-25.

[20.2.89.6 NMAC - N, 12/20/08; A, 09/26/09]

20.2.89.7 DEFINITIONS:

In addition to the terms defined in 20.2.2 NMAC, the following definitions shall apply to terms used in this part.

A. "Department" means the environment department.

B. "Entity" means an individual, estate, trust, receiver, cooperative association, club, corporation, company, firm, partnership, limited liability company, limited liability partnership, joint venture, syndicate or other association or a gas, water or electric utility owned or operated by a county or municipality.

C. "Geothermal electric generating facility" means a facility with a name-plate capacity of one megawatt or more that uses geothermal energy to generate electricity, including a facility that captures and provides geothermal energy to a preexisting electric generating facility using other fuels in part.

D. "Interest in a qualified generating facility" means title to a qualified generating facility; a leasehold interest in a qualified generating facility; an ownership interest in a business or entity that is taxed for federal income tax purposes as a partnership that holds title to or a leasehold interest in a qualified generating facility; or an ownership interest, through one or more intermediate entities that are each taxed for federal income tax purposes as a partnership, in a business that holds title to or a leasehold interest in a qualified generating facility.

E. "Name-plate capacity" means the maximum rated output of the facility measured as alternating current or the equivalent direct current measurement.

F. "Qualified generating facility" means a facility for which construction is anticipated to begin not later than December 31, 2015 and is:

(1) a solar thermal electric generating facility that begins or began construction on or after July 1, 2007 and that may include an associated renewable energy storage facility;

(2) a recycled energy project if that facility begins or began construction on or after July 1, 2007;

(3) a solar photovoltaic electric generating facility that begins or began construction on or after July 1, 2009 and that may include an associated renewable energy storage facility; or

(4) a geothermal electric generating facility that begins or began construction on or after July 1, 2009.

G. "Recycled energy" means energy produced by a generation unit with a name-plate capacity of not more than 15 megawatts that converts the otherwise lost energy from the exhaust stacks or pipes to electricity without combustion of additional fossil fuel.

H. "Small business" means a business entity, including its affiliates, that is independently owned and operated and employs fifty or fewer full-time employees. In addition, "small business" does not include any source which may emit more than fifty (50) tons per year of any regulated air contaminant for which there is a national or New Mexico ambient air quality standard, or seventy-five (75) tons per year of all regulated air contaminants for which there are national or New Mexico ambient air quality standards; and any major source for hazardous air pollutants under 20.2.70 NMAC.

I. "Solar photovoltaic electric generating facility" means an electric generating facility with a name-plate capacity of one megawatt or more that uses solar photovoltaic energy to generate electricity.

J. "Solar thermal electric generating facility" means an electric generating facility with a name-plate capacity of one megawatt or more that utilizes solar energy conversion technologies that convert solar energy to electricity by heating a working fluid to power a turbine that drives a generator, including a facility that captures and provides solar energy to a preexisting electric generating facility using other fuels in part. Examples of these systems include, but are not limited to, central receiver systems, parabolic dish, and solar trough.

[20.2.89.7 NMAC - N, 12/20/08; A, 09/26/09]

20.2.89.8 SEVERABILITY:

If any provision of this part, or the application of such provision to any person or circumstance, is held invalid, the remainder of this part, or the application of such provision to persons or circumstances other than those as to which it is held invalid, shall not be affected thereby.

[20.2.89.8 NMAC - N, 12/20/08]

20.2.89.9 CONSTRUCTION:

This part shall be liberally construed to carry out its purpose.

[20.2.89.9 NMAC - N, 12/20/08]

20.2.89.10 SAVINGS CLAUSE:

Repeal or supersession of prior versions of this part shall not affect any administrative or judicial action initiated under those prior versions.

[20.2.89.10 NMAC - N, 12/20/08]

20.2.89.11 COMPLIANCE WITH OTHER REGULATIONS:

Compliance with this part does not relieve a person from the responsibility to comply with any other applicable federal, state, or local regulations.

[20.2.89.11 NMAC - N, 12/20/08]

20.2.89.12-20.2.89.199 [RESERVED]

20.2.89.200 APPLICABILITY:

Any entity that has an interest in a qualified generating facility located in New Mexico may apply for a certificate of eligibility under this part. Only one certificate shall be granted to a qualified generating facility. If changes to the facility are planned or made that could result in the facility no longer meeting certification requirements as a qualified generating facility, the entity that has an interest in a qualified generating facility shall apply to the department for a reevaluation of the certification under this part. A complete application including fees pursuant to section 20.2.89.400 NMAC shall be submitted with that application for reevaluation.

[20.2.89.200 NMAC - N, 12/20/08; A, 09/26/09]

20.2.89.201 APPLICATION REQUIREMENTS:

A. Entities that have an interest in a qualified generating facility may submit an application for a certificate of eligibility for an advanced energy tax credit.

B. All applications shall include all of the following items and information.

(1) Be filled out on the form(s) furnished by the department.

(2) State the applicant's name and address.

(3) Include a topographical map, at least as detailed as the 7.5 minute topographic quadrangle map published by the United States geological survey, showing the exact location and geographical coordinates of the proposed construction or installation of the facility or project.

(4) Include a full description of the process, including a process flow sheet, or, if the department so requires, layout and assembly drawings.

(5) All information relied upon by the applicant to support its position that the facility meets the criteria for a qualified generating facility.

(6) Contain other information requested by the department to determine whether the facility meets the criteria for a qualified generating facility.

(7) Be notarized and signed under oath or affirmation by an entity that has an interest in the facility certifying, to the best of his or her knowledge, the truth of all information in the application and addenda, if any.

(8) Contain payment of any fees which are specified in 20.2.89.400 NMAC, payable at the time the application is submitted.

[20.2.89.201 NMAC - N, 12/20/08; A, 09/26/09]

20.2.89.202 CERTIFICATION PROCEDURES:

A. The department shall either grant or deny the certification within 180 days after the department receives the application.

B. The department shall grant or deny the certification based on information contained in the department's administrative record. The administrative record shall consist of the application, any other evidence submitted by the applicant, and any other evidence considered by the department. The applicant has the burden of demonstrating that a certificate should be issued.

[20.2.89.202 NMAC - N, 12/20/08]

20.2.89.203 CANCELLATION OF CERTIFICATION:

The department shall cancel a previously issued certification and notify the department of taxation and revenue if the department finds that the plans for the facility are changed, or the facility is changed, so that the facility no longer meets the requirements of this part as a qualified generating facility.

[20.2.89.203 NMAC - N, 12/20/08; A, 09/26/09]

20.2.89.204-20.2.89.399 [RESERVED]

20.2.89.400 FEES:

A. Fees for the review of applications for certification shall be \$5,000 per application.

B. For sources that satisfy the definition of "small business" as defined in Subsection F of 20.2.89.7 NMAC, the permit fee determined by Subsection A of this section shall be divided by two.

C. Fees collected pursuant to this part shall be included with the application for certification. The department shall refuse to accept any application without inclusion of the fee.

D. All fees paid pursuant to this part shall be remitted in the form of a corporate or certified check or money order made payable to the environment department at the address specified on the application form. Upon receipt of the check, it shall be deposited in the "state air quality permit fund" established by NMSA 1978, 74-2-15 (1992).

E. All fees shall be paid in U.S. dollars.

F. Beginning on January 1, 2010, the fees referenced in this section shall be changed annually by the percentage, if any, of any annual increase in the consumer price index in accordance with Section 502(b)(3)(B)(v) of the federal Clean Air Act.

[20.2.89.400 NMAC - N, 12/20/08; A, 09/26/09]

PART 90: FIELD CITATIONS

20.2.90.1 ISSUING AGENCY:

Environmental Improvement Board.

[20.2.90.1 NMAC - N, 12/12/08]

20.2.90.2 SCOPE.

This part applies to the field citation program for minor violations of the Air Quality Control Act, NMSA 1978, Sections 74-2-1 to 74-2-17, the air quality regulations, 20.2 NMAC, and any permit issued under the act or regulations.

[20.2.90.2 NMAC - N, 12/12/08]

20.2.90.3 STATUTORY AUTHORITY.

Environmental Improvement Act, NMSA 1978, Section 74-1-8(A)(4), and Air Quality Control Act, NMSA 1978, Sections 74-2-1 to 74-2-17, including specifically NMSA 1978, Section 74-2-12.

[20.2.90.3 NMAC - N, 12/12/08]

20.2.90.4 DURATION:

Permanent.

[20.2.90.4 NMAC - N, 12/12/08]

20.2.90.5 EFFECTIVE DATE:

12/12/2008, except where a later date is cited at the end of a section.

[20.2.90.5 NMAC - N, 12/12/08]

20.2.90.6 OBJECTIVE:

The objective of this part is to implement the provisions of NMSA 1978, Section 74-2-12 of the Air Quality Control Act establishing a field citation program for minor violations of the act, air quality regulations and permits issued under the act and regulations.

[20.2.90.6 NMAC - N, 12/12/08]

20.2.90.7 DEFINITIONS:

As used in this part, the following definitions apply. Terms defined in the act or regulations and not defined in this part are used consistent with the meanings provided in the act or regulations.

A. "Act" means the Air Quality Control Act, NMSA 1978, Sections 74-2-1 to 74-2-17.

B. "Air quality regulations" or "regulations" mean the air quality (statewide) regulations compiled at 20.2 NMAC.

C. "**Department**" means the New Mexico environment department.

D. "**Division**" means the environmental protection division of the department.

E. "**Field citation**" means a written document issued by the division alleging a minor violation that sets forth the nature of the alleged minor violation and, if applicable, an assessment of a penalty.

F. "**Hearing officer**" means the individual appointed by the secretary to conduct a proceeding under this part.

G. "**Minor violation**" means an failure of a person to comply with any requirement or condition of any applicable provision of the Air Quality Control Act, air quality regulations, or a permit issued under the act or regulations that, with the exception of minor violations of 20.2.60 NMAC, Open Burning, and 20.2.65 NMAC, Smoke Management, meets all of the following criteria:

(1) does not result in or contribute to, an increase in emissions of any air contaminant;

(2) does not cause an increase in emissions of any toxic air contaminant in excess of any emission standard or limitation or other state or federal requirement that is applicable to that toxic air contaminant;

(3) does not cause or contribute to the violation of any state or federal ambient air quality standard; and

(4) does not hinder the ability of the department to determine compliance with any other applicable air quality state or federal law, rule, regulation, information request, order, variance, permit, or other requirement.

H. "**Party**" means the appellant and the division.

I. "**Person**" means an individual, entity, source, facility, business or company.

J. "**Secretary**" means the secretary of the department, or any person who assumes the role of secretary for purposes of this part in the event of the secretary's disqualification, recusal or delegation of authority to another person.

[20.2.90.7 NMAC - N, 12/12/08]

20.2.90.8 CONSTRUCTION:

This part shall be liberally construed to carry out its purpose.

[20.2.90.8 NMAC - N, 12/12/08]

20.2.90.9 SAVINGS CLAUSE:

Repeal or supersession of prior versions of this part shall not affect any administrative or judicial action initiated under those prior versions.

[20.2.90.9 NMAC - N, 12/12/08]

20.2.90.10 COMPLIANCE WITH OTHER REGULATIONS:

Compliance with this part does not relieve a person from the responsibility to comply with any other applicable federal, state, or local laws.

[20.2.90.10 NMAC - N, 12/12/08]

20.2.90.11-20.2.90.107 [RESERVED]

20.2.90.108 GENERAL PROVISIONS - COMPUTATION OF TIME:

In computing any period of time prescribed or allowed by this part, except as otherwise specifically provided, the day of the event from which the designated period begins to run shall not be included. The last day of the computed period shall be included, unless it is a Saturday, Sunday, or legal state holiday, in which event the time is extended until the end of the next day, which is not a Saturday, Sunday or legal state holiday. Whenever a party must act within a prescribed period after service upon him, and service is by mail, three days is added to the prescribed period. The three-day extension does not apply to any deadline under the Air Quality Control Act.

[20.2.90.108 NMAC - N, 12/12/08]

20.2.90.109 REQUIREMENTS:

For the purposes of this part, the following requirements shall apply to the issuance of, and response to, a field citation.

A. A person who is issued a field citation pursuant to this part shall have the period specified from the date of service of the field citation in which to achieve compliance. Within five (5) working days of achieving compliance, the person who received the field citation shall sign the citation, stating that the person has complied with the citation and return it to the department address provided in the citation. A false statement that compliance has been achieved shall constitute a violation of this part.

B. The department may require a person subject to a field citation to submit reasonable and necessary information to support a claim of compliance.

C. Nothing in this part shall be construed as preventing the re-inspection of a source or facility to ensure that the minor violation(s) cited in the field citation has been corrected.

D. Notwithstanding any other provision of this part, if a person fails to comply with a field citation within the prescribed period, or if the department determines that the circumstances surrounding a particular minor violation are such that immediate enforcement is warranted to prevent harm to any person(s) or to the environment, the department may take any enforcement action authorized by law.

E. If a person wishes to request a hearing on the alleged minor violation(s) cited or penalty assessed in the field citation, the person may file a hearing request as prescribed in 20.2.90.110 NMAC.

F. If a person does not file a hearing request, that person shall pay the penalty assessed in the field citation within thirty (30) calendar days of service of the field citation.

G. Payment of a penalty assessed in a field citation issued pursuant to this part shall not be a defense to further enforcement by the department to correct a violation cited in the field citation or to assess the maximum statutory penalty pursuant to the Air Quality Control Act if the violation continues.

H. Any person who fails to comply with the compliance requirements of a field citation by the date specified or who fails to pay a penalty assessed within thirty (30) calendar days of service of the field citation may be subject to further enforcement action pursuant to the Air Quality Control Act.

I. The department may issue a warning, without penalty, as a field citation for the first offense.

[20.2.90.109 NMAC - N, 12/12/08]

20.2.90.110 FIELD CITATIONS: HEARING REQUESTS:

A. Any person who receives a field citation from the department may request a hearing before the department. The request must be made in writing to the secretary within fifteen (15) working days after the field citation has been issued, with completed assessment of penalty, if any, and shall include a copy of the field citation. Unless a hearing request is received by the secretary within fifteen (15) working days after the field citation is issued, the decision of the department shall be final.

B. If a hearing request is received within the fifteen (15) working days time limit, the secretary shall hold a hearing within fifteen (15) working days after receipt of the request. The secretary shall notify the person who requested the hearing of the date, time and place of the hearing by certified mail.

C. The department shall present the field citation and supporting evidence first, followed by the appellant who has the burden of proving no violation had occurred and shall present any evidence to support the request for hearing.

D. Hearings shall be held at a place designated by the secretary unless other mutually agreed upon arrangements are made. The secretary may designate a hearing officer to conduct the hearing and make a final decision or make recommendations for a final decision. The secretary's hearing notice shall indicate who will conduct the hearing and make the final decision.

E. Motions. All motions, except those made orally during a hearing, shall be in writing, specify the grounds for the motion, state the relief sought, and state whether it is opposed or unopposed. Each motion may be accompanied by an affidavit, certificate, or other evidence relied upon and shall be served upon the secretary or hearing officer and the other parties. An unopposed motion shall state that concurrence of all other parties was obtained. Any party upon whom an opposed motion is served shall have an opportunity to file a response. To expedite the proceedings, no replies shall be allowed except upon leave from the hearing officer.

F. Discovery. No discovery shall be allowed, including requests for admission, interrogatories, and depositions.

G. Upon request, the hearing shall be recorded. The person who requests the recording shall pay recording costs.

H. In field citation hearings, the rules governing civil procedure and evidence in district court do not apply. Hearings shall be conducted so that all relevant views, arguments and testimony are amply and fairly presented without undue repetition. The secretary shall allow department staff and the hearing requestor to call and examine witnesses, to submit written and oral evidence and arguments, to introduce exhibits and to cross-examine persons who testify. All testimony shall be taken under oath. At the end of the hearing, the secretary shall decide and announce if the hearing record will remain open and for how long and for what reason it will be left open.

I. Based upon the evidence presented at the hearing, the secretary shall sustain, modify or reverse the action of the department. The secretary's decision shall be by written order within fifteen (15) working days following the close of the hearing record. The decision shall state the reasons therefore and shall be sent by certified mail to the hearing requestor and any other affected person who requests notice. Appeals from the secretary's final decision are by NMSA 1978, Section 74-2-9.

J. Pursuant to 20.1.5.2 NMAC, these hearing procedures supersede the procedures provided in 20.1.5 NMAC.

[20.2.90.110 NMAC - N, 12/12/08]

20.2.90.111 PENALTIES:

First time violators of the field citation rule who demonstrate cooperation in compliance may be fined up to one hundred dollars (\$100.00) per violation. First time violators of the field citation rule who fail to demonstrate cooperation in compliance may be fined up to two hundred dollars (\$200.00) per violation. Multiple time violators of the field citation rule who demonstrate cooperation in compliance may be fined up to five hundred dollars (\$500.00) per violation. Multiple time violators of the field citation rule who fail to demonstrate cooperation in compliance may be fined up to one thousand dollars (\$1,000.00) per violation. Provided, however, that penalties assessed in a field citation shall not exceed one thousand dollars (\$1,000.00) per day per violation or a maximum of fifteen thousand dollars (\$15,000.00). In determining the amount of a penalty to be assessed pursuant to this section, the person issuing the field citation shall take into account the seriousness of the violation, any good-faith effort to comply with the applicable requirements and other relevant factors.

[20.2.90.111 NMAC - N, 12/12/08]

20.2.90.112 SERVICE OF FIELD CITATION:

Service of a field citation shall be accomplished by any of the following methods:

A. personal service by a department representative who shall obtain the signature of a person who is an owner, operator, employee, or representative of the source, facility or property being inspected at the time the field citation is issued, with a copy of the signed citation sent by certified first class mail to the facility's operations headquarters when appropriate; if such person refuses or fails to sign the field citation, the failure or refusal to sign shall not affect the validity of service nor of the citation or subsequent proceedings; or

B. service by certified first class mail.

[20.2.90.112 NMAC - N, 12/12/08]

PART 91 NEW MOTOR VEHICLE EMISSION STANDARDS

20.2.91.1 ISSUING AGENCY:

Environmental Improvement Board.

[20.2.91.1 NMAC - Rp, 20.2.91.1 NMAC, 12/31/2023]

20.2.91.2 SCOPE:

All manufacturers, dealers, rental car agencies, the United States, state and local governments, or other persons who deliver for sale, offer for sale, sell, import, deliver,

purchase, rent, lease, acquire, receive, or register model year 2027 and subsequent model year passenger cars, light-duty trucks, medium-duty passenger vehicles, medium-duty vehicles or motor vehicle engines, heavy-duty vehicles, heavy-duty engines or motor vehicle engines. All regulated entities subject to compliance with 20.2.91.120 NMAC (Large Entity Reporting Requirement).

[20.2.91.2 NMAC - Rp, 20.2.91.2 NMAC, 12/31/2023]

20.2.91.3 STATUTORY AUTHORITY:

The Environmental Improvement Act, Paragraph (4) of Subsection A of Section 74-1-8 NMSA 1978, and the Air Quality Control Act, Sections 74-2-1 through 74-2-17 NMSA 1978.

[20.2.91.3 NMAC - Rp, 20.2.91.3 NMAC, 12/31/2023]

20.2.91.4 DURATION:

Permanent.

[20.2.91.4 NMAC - Rp, 20.2.91.4 NMAC, 12/31/2023]

20.2.91.5 EFFECTIVE DATE:

December 31, 2023, except where a later date is cited at the end of a section.

[20.2.91.5 NMAC - Rp, 20.2.91.5 NMAC, 12/31/2023]

20.2.91.6 OBJECTIVE:

To adopt and implement the California vehicle emission standards and requirements statewide pursuant to Section 177 of the federal Clean Air Act.

[20.2.91.6 NMAC - Rp, 20.2.91.6 NMAC, 12/31/2023]

20.2.91.7 DEFINITIONS:

The definitions in the Air Quality Control Act, Section 74-2-2 NMSA 1978 shall apply in 20.2.91 NMAC. If a term is defined in Section 74-2-2 NMSA 1978 and 20.2.91 NMAC, the definition in 20.2.91 NMAC shall apply. The definitions in 20.2.2.7 NMAC shall not apply in 20.2.91 NMAC. When a term in a provision of the California code of regulations (CCR), Title 13, Title 17, or the California health and safety code (CHSC) incorporated by reference is given a different meaning than the term defined for general purposes in 20.2.91 NMAC, the specific CCR or CHSC section's meaning and application of the term shall control, except that all references in the incorporated sections of the CCR and CHSC shall have a different meaning unique to New Mexico whenever appropriate depending on context and the entity's authority, as follows: "California" shall, whenever

appropriate, mean "New Mexico"; the "California Air Resources Board," "CARB," "state board", or "board" shall mean the "environmental improvement board" or "department," depending on the context; and "Executive Officer" shall mean the "secretary," provided, however, the terms in the CCR and CHSC definitions incorporated by reference in 20.2.91.7 NMAC (Definitions) shall not be changed. For registration of a motor vehicle, when a term defined herein is also defined in the Motor Vehicle Code, Articles 1 through 8 of Chapter 66 NMSA 1978, and is given a different meaning than the term defined for general purposes in 20.2.91 NMAC, the Motor Vehicle Code meaning, and application of the term shall control.

A. "California Air Resources Board" or "CARB" means the same in 20.2.91 NMAC as it is defined in CHSC, Section 39003.

B. "Certification" means the same in 20.2.91 NMAC as it is defined in CHSC, Section 39018.

C. "Dealer" means the same in 20.2.91 NMAC as it is defined in Subsection B of Section 57-16-3 NMSA 1978.

D. "Emission standards" means the same in 20.2.91 NMAC as it is defined in CHSC, Section 39027, which New Mexico is authorized to adopt pursuant to 42 U.S.C. § 7507.

E. "Emergency vehicle" means the same in 20.2.91 NMAC as it is defined in CCR, Title 13, Section 1961.3(f)(10).

F. "Environmental improvement board" means the same in 20.2.91 NMAC as it is defined in Subsection A of Section 74-1-3 NMSA 1978.

G. "Fleet" means the same in 20.2.91 NMAC as it is defined in CCR, Title 13, Section 2012(d).

H. "Fleet owner" means the same in 20.2.91 NMAC as it is defined in CCR, Title 13, Section 2012(d).

I. "Greenhouse gas" means the same in 20.2.91 NMAC as it is defined in CCR, Title 13, Section 1961.3(18).

J. "Heavy-duty engine" means the same in 20.2.91 NMAC as it is defined in CCR, Title 13, Section 1900(b)(5) or CCR, Title 17, Section 95662, as applicable.

K. "Heavy-duty vehicle" means the same in 20.2.91 NMAC as it is defined in CCR, Title 13, Section 1900(b)(6) or CCR, Title 17, Section 95662, as applicable.

L. "Light-duty truck" means the same in 20.2.91 NMAC as it is defined in CCR, Title 13, Section 1900(b)(11).

M. "Manufacturer" means the same in 20.2.91 NMAC as it is defined in Subsection J of Section 57-16-3 NMSA 1978.

N. "Medium-duty" means the same in 20.2.91 NMAC as it is defined in CHSC, Section 39037.5.

O. "Medium-duty passenger vehicle" means the same in 20.2.91 NMAC as it is defined in CCR, Title 13, Section 1900(b)(12).

P. "Medium-duty vehicle" means the same in 20.2.91 NMAC as it is defined in CCR, Title 13, Section 1900(b)(13) or CCR, Title 17, Section 95662, as applicable.

Q. "Methane" means the chemical compound containing one atom of carbon and four atoms of hydrogen.

R. "Model year" means the same in 20.2.91 NMAC as it is defined in CHSC, Section 39038.

S. "Motor vehicle" means the same in 20.2.91 NMAC as it is defined in CHSC, Section 39039.

T. "Motor vehicle engine" means the same in 20.2.91 NMAC as it is defined in CHSC, Section 39042.5.

U. "Non-methane organic gas" means the same in 20.2.91 NMAC as it is defined in CCR, Title 13, Section 1961.2.

V. "Particulate matter" means the same in 20.2.91 NMAC as it is defined in CCR, Title 13, Section 1961.2.

W. "Passenger car" means the same in 20.2.91 NMAC as it is defined in CCR, Title 13, Section 1900(b)(17).

X. "Passenger vehicle" means the same in 20.2.91 NMAC as it is defined in CHSC, Section 39046.

Y. "Plug-in hybrid electric vehicle" or "PHEV" means the same in 20.2.91 NMAC as it is defined in CCR, Title 13, Section 1962.4 and CCR, Title 13, Section 1963, as applicable.

Z. "Recall" means the same in 20.2.91 NMAC as it is defined in CCR, Title 13, Section 1900(b)(19).

AA. "Register" means to register a motor vehicle with the New Mexico motor vehicle division.

BB. "Sale" or "sell" means the transfer of equitable or legal title to a motor vehicle or motor vehicle engine to the ultimate purchaser.

CC. "Truck" means the same in 20.2.91 NMAC as it is defined in CHSC, Section 39054.

DD. "Ultimate purchaser" means the same in 20.2.91 NMAC as it is defined in CHSC, Section 39055.5.

EE. "Vehicle" means the same in 20.2.91 NMAC as it is defined in CHSC, Section 39059.

FF. "Zero-emission vehicle" or "ZEV" means the same in 20.2.91 NMAC as it is incorporated in CCR, Title 13, Sections 1962.2(a) and 1962.4(b).

GG. "ZEV value" means a unit, expressed numerically, demonstrating delivery of qualified zero-emission vehicles or other vehicle allowances for the annual ZEV requirement.

[As of July 2023, the Climate Change Bureau is located at 525 Camino de los Marquez, Suite 1, Santa Fe, New Mexico 87505.]

20.2.91.9 SEVERABILITY:

If any provision of 20.2.91 NMAC, or the application of such provision to any person or circumstance, is held invalid, the remainder of 20.2.91 NMAC, or the application of such provision to persons or circumstances other than those as to which it is held invalid, shall not be affected thereby.

[20.2.91.9 NMAC – Rp 20.2.91.9 NMAC, 12/31/2023]

20.2.91.10 CONSTRUCTION:

20.2.91 NMAC shall be liberally construed to carry out its purpose.

[20.2.91.10 NMAC – Rp 20.2.91.10, 12/31/2023]

20.2.91.11 SAVINGS CLAUSE:

Repeal or supersession of prior versions of 20.2.91 NMAC shall not affect any administrative or judicial action initiated under those prior versions.

[20.2.91.11 NMAC – Rp 20.2.91.11, 12/31/2023]

20.2.91.12 COMPLIANCE WITH OTHER REGULATIONS:

Compliance with 20.2.91 NMAC does not relieve a person from the responsibility to comply with any other applicable federal, state, or local regulations.

[20.2.91.12 NMAC - Rp 20.2.91.12, 12/31/2023]

20.2.91.13 LIMITATION OF DEFENSE:

The existence of a valid registration or certification under 20.2.91 NMAC shall not constitute a defense to a violation of 20.2.91 NMAC, except the requirement for obtaining a registration or certification.

[20.2.91.13 NMAC - Rp 20.2.91.13, 12/31/2023]

20.2.91.14 to 20.2.91.100 [RESERVED]

[20.2.91.100 NMAC - Repealed, 12/31/2023]

20.2.91.101 GENERAL REQUIREMENTS:

A. Except as otherwise required, 20.2.91 NMAC shall apply to new motor vehicles, including passenger cars, light-duty trucks, medium-duty passenger vehicles, and medium-duty vehicles, where "new" means model years 2027 through 2032 with 7,500 miles or fewer on the odometer, and for dealers the mileage at the time of sale as determined by the odometer statement when the dealer acquired the motor vehicle; and medium-duty passenger vehicles, medium-duty vehicles, heavy-duty vehicles, and heavy-duty engines, where "new" means model years 2027 and subsequent with 7,500 miles or fewer on the odometer, and for dealers the mileage at the time of sale as determined by the odometer statement when the dealer acquired the motor vehicle.

B. A manufacturer, dealer, rental car agency, the United States, state or local government, or other person shall not deliver for sale, offer for sale, sell, import, deliver, purchase, rent, lease, acquire, receive, or register passenger cars, light-duty trucks, medium-duty passenger vehicles, medium-duty vehicles, heavy-duty vehicles, heavy-duty engines, or motor vehicle engines unless such motor vehicle or motor vehicle engine is certified to the California vehicle emission standards, as incorporated by reference pursuant to 20.2.91 NMAC.

C. Each manufacturer shall comply with the motor vehicle emission standards, zero-emission motor vehicle requirements, reporting, warranty, labeling, recall campaign, and other applicable requirements contained in 20.2.91 NMAC.

D. Each manufacturer, dealer, rental car agency, the United States, state and local government, and other person shall comply with the department's inspection and information requests issued pursuant to 20.2.91.115 NMAC (Inspections and Information Requests).

E. Each person registering a motor vehicle in New Mexico shall comply with the registration requirements in 20.2.91 NMAC.

F. The requirements in 20.2.91 NMAC shall not be applicable if exempt, as provided in 20.2.91.103 NMAC (Exemptions).

G. The requirements in 20.2.91 NMAC shall be in compliance with the Motor Vehicle Dealers Franchising Act, Sections 57-16-1 through 57-16-16 NMSA 1978.

H. Except as provided in 20.2.91.120 (Large Entity Reporting Requirement), all regulated entities shall submit information specified in CCR, Title 13, Sections 2012.1 and 2012.2 to the secretary.

I. In 20.2.91 NMAC, New Mexico is inclusive of the city of Albuquerque and Bernalillo county, which allows for compliance on a statewide basis.

[20.2.91.101 NMAC - Rp 20.2.91.101, 12/31/2023]

20.2.91.102 INCORPORATION BY REFERENCE:

A. Sections of the CCR and the CHSC incorporated by reference herein include the regulations as they existed on the effective date in 20.2.91.5 NMAC (Effective Date); incorporated sections of the CCR and the CHSC do not incorporate a later adoption or amendment of the regulation.

B. Each manufacturer of a passenger car, light-duty truck, medium-duty passenger vehicle, medium-duty vehicle, heavy-duty vehicle, heavy-duty engine, or motor vehicle engine shall comply with each applicable standard in Title 13 and Title 17 of the CCR as incorporated by reference herein, as applicable.

C. The CCR sections from Title 13 and Title 17 unless otherwise noted incorporated by reference include:

(1) Title 13, Section 1900: Definitions. As amended, 11/30/2022.

(2) Title 13, Section 1956.8: Exhaust Emission Standards and Test Procedures - 1985 and Subsequent Model Heavy-Duty Engines and Vehicles, 2021 and

Subsequent Zero-Emission Powertrains, and 2022 and Subsequent Model Heavy-Duty Hybrid Powertrains (medium-duty vehicle greenhouse gas emission standards at 1956.8(h) only). As amended, 11/30/2022.

(3) Title 13, Section 1961.2: Exhaust Emission Standards and Test Procedures - 2015 through 2025 Model Year Passenger Cars, and Light-Duty Trucks, and 2015 through 2028 Model Year Medium-Duty Vehicles. As amended, 11/30/2022.

(4) Title 13, Section 1961.3: Greenhouse Gas Exhaust Emission Standards and Test Procedures - 2017 and Subsequent Model Passenger Cars, Light-Duty Trucks, and Medium-Duty Passenger Vehicles. As amended, 11/30/2022.

(5) Title 13, Section 1961.4: Exhaust Emission Standards and Test Procedures — 2026 and Subsequent Model Year Passenger Cars, Light-Duty Trucks, and Medium-Duty Vehicles, as amended 11/30/2022, except that subsection 1961.4(g)(1) is not adopted by reference.

(6) Title 13, Section 1962.2: Zero-Emission Vehicle Standards for 2018 through 2025 Model Year Passenger Cars, Light-Duty Trucks, and Medium-Duty Vehicles. As amended, 11/30/2022.

(7) Title 13, Section 1962.3: Electric Vehicle Charging Requirements. As amended, 11/30/2022.

(8) Title 13, Section 1962.4: Zero-Emission Vehicle Requirements for 2026 and Subsequent Model Year Passenger Cars and Light-Duty Trucks, as amended 11/30/2022, except that subsection 1962.4(c)(1)(B) model years "2033", "2034" and "2035 and subsequent" with corresponding percentage requirements and subsection 1962.4(e)(2)(A)(3) are not adopted by reference.

(9) Title 13, Section 1962.5: Data Standardization Requirements for 2026 and Subsequent Model Year Light-Duty Zero Emission Vehicles and Plug-in Hybrid Electric Vehicles. As amended 11/30/2022.

(10) Title 13, Section 1962.6: Battery Labeling Requirements. As amended 11/30/2022.

(11) Title 13, Section 1962.7: In-Use Compliance, Corrective Action and Recall Protocols for 2026 and Subsequent Model Year Zero-Emission and Plug-in Hybrid Electric Passenger Cars and Light-Duty Trucks. As amended, 11/30/2022.

(12) Title 13, Section 1962.8: Warranty Requirements for Zero-Emission and Batteries in Plug-in Hybrid Electric 2026 and Subsequent Model Year Passenger Cars and Light-Duty Trucks. As amended 11/30/2022.

(13) Title 13, Section 1963: Advanced Clean Trucks Purpose, Applicability, Definitions, and General Requirements. As amended, 3/15/2021.

(14) Title 13, Section 1963.1: Advanced Clean Trucks Deficits. As amended, 3/15/2021.

(15) Title 13, Section 1963.2: Advanced Clean Trucks Credit Generation, Banking, and Trading. As amended, 3/15/2021.

(16) Title 13, Section 1963.3: Advanced Clean Trucks Compliance Determination. As amended, 3/15/2021.

(17) Title 13, Section 1963.4: Advanced Clean Trucks Reporting and Recordkeeping. As amended, 3/15/2021.

(18) Title 13, Section 1963.5(a)(1)-(3): Advanced Clean Trucks Enforcement. As amended, 3/15/2021.

(19) Title 13, Section 1964: Special Test Procedures for Certification and Compliance – New Modifier Certified Motor Vehicles. As amended, 3/15/2021.

(20) Title 13, Section 1965: Emission Control, Smog Index, and Environmental Performance Labels - 1979 and Subsequent Model-Year Motor Vehicles. As amended, 11/30/2022.

(21) Title 13, Section 1968.2: Malfunction and Diagnostic System Requirements - 2004 and Subsequent Model-Year Passenger Cars, Light-Duty Trucks, and Medium-Duty Vehicles and Engines. As amended, 11/30/2022.

(22) Title 13, Section 1969: Motor Vehicle Service Information - 1994 and Subsequent Model Passenger Cars, Light-Duty Trucks, and Medium-Duty Engines and Vehicles, and 2007 and Subsequent Model Heavy-Duty Engines. As amended, 11/30/2022.

(23) Title 13, Section 1971.1: On-Board Diagnostic System Requirements -- 2010 and Subsequent Model-Year Heavy-Duty Engines. As amended, 3/15/2021.

(24) Title 13, Section 1976: Standards and Test Procedures for Motor Vehicle Fuel Evaporative Emissions. As amended, 11/30/2022.

(25) Title 13, Section 1978: Standards and Test Procedures for Vehicle Refueling Emissions. As amended, 11/30/2022.

(26) Title 13, Section 2012: Advanced Clean Trucks, Large Entity Reporting Requirement. As amended, 3/15/2021.

(27) Title 13, Section 2012.1: General Entity Information Reporting. As amended, 3/15/2021.

(28) Title 13, Section 2012.2: Vehicle Usage by Facility Reporting. As amended, 3/15/2021.

(29) Title 13, Section 2035: Purpose, Applicability, and Definitions. As amended, 10/1/2019.

(30) Title 13, Section 2036: Defects Warranty Requirements for 1979 Through 1989 Model Passenger Cars, Light-Duty Trucks, and Medium-Duty Vehicles; 1979 and Subsequent Model Motorcycles and Heavy-Duty Vehicles; and Motor Vehicle Engines Used in Such Vehicles; and 2020 and Subsequent Model Year Trailers. As amended, 12/22/2021.

(31) Title 13, Section 2037: Defects Warranty Requirements for 1990 and Subsequent Model Passenger Cars, Light-Duty Trucks, Medium-Duty Vehicles, and Motor Vehicle Engines Used in Such Vehicles. As amended, 11/30/2022.

(32) Title 13, Section 2038: Performance Warranty Requirements for 1990 and Subsequent Model Passenger Cars, Light-Duty Trucks, and Medium-Duty Vehicles, and Motor Vehicle Engines Used in Such Vehicles. As amended, 11/30/2022.

(33) Title 13, Section 2039: Emission Control System Warranty Statement. As amended, 12/26/1990.

(34) Title 13, Section 2040: Vehicle Owner Obligations. As amended, 10/1/2019.

(35) Title 13, Section 2041: Mediation; Finding of Warrantable Condition. As amended, 12/26/1990.

(36) Title 13, Section 2046: Defective Catalyst. As amended, 2/15/1979.

(37) Title 13, Section 2047: Certification Procedures for User Modifier-certified Motor Vehicles. As amended, 1/8/1988.

(38) Title 13, Section 2062: Assembly-line Test Procedures - 1998 and Subsequent Model Years. As amended, 8/7/2012.

(39) Title 13, Section 2109: New Vehicle Recall Provisions. As amended, 12/30/1983.

(40) Title 13, Section 2111: Applicability. As amended, 12/22/2021.

(41) Title 13, Section 2112: Definitions. As amended, 11/30/2022.

(42) Title 13, Section 2113: Initiation and Approval of Voluntary and Influenced Emission-Related Recalls. As amended, 12/22/2021.

(43) Title 13, Section 2114: Voluntary and Influenced Recall Plans. As amended, 12/22/2021.

(44) Title 13, Section 2115: Eligibility for Repair. As amended, 12/22/2021.

(45) Title 13, Section 2116: Repair Label. As amended, 12/22/2021.

(46) Title 13, Section 2117: Proof of Correction Certificate. As amended, 12/22/2021.

(47) Title 13, Section 2118: Notification. As amended, 12/22/2021.

(48) Title 13, Section 2119: Recordkeeping and Reporting Requirements. As amended, 12/22/2021.

(49) Title 13, Section 2120: Other Requirements Not Waived. As amended, 1/26/1995.

(50) Title 13, Section 2121: Penalties. As amended, 12/22/2021.

(51) Title 13, Section 2122: General Provisions. As amended, 12/8/2010.

(52) Title 13, Section 2123: Initiation and Notification of Ordered Emission-Related Recalls. As amended, 12/22/2021.

(53) Title 13, Section 2124: Availability of Public Hearing. As amended, 1/26/1995.

(54) Title 13, Section 2125: Ordered Recall Plan. As amended, 12/22/2021.

(55) Title 13, Section 2126: Approval and Implementation of Recall Plan. As amended, 12/22/2021.

(56) Title 13, Section 2127: Notification of Owners. As amended, 12/22/2021.

(57) Title 13, Section 2128: Repair Label. As amended, 12/22/2021.

(58) Title 13, Section 2129: Proof of Correction Certificate. As amended, 12/22/2021.

(59) Title 13, Section 2130: Capture Rates and Alternative Measures. As amended, 12/22/2021.

- (60) Title 13, Section 2131: Preliminary Tests. As amended, 12/22/2021.
- (61) Title 13, Section 2132: Communication with Repair Personnel. As amended, 1/26/1995.
- (62) Title 13, Section 2133: Recordkeeping and Reporting Requirements. As amended, 12/22/2021.
- (63) Title 13, Section 2135: Extension of Time. As amended, 1/26/1995.
- (64) Title 13, Section 2137: Vehicle, Engine, and Trailer Selection. As amended, 11/30/2022.
- (65) Title 13, Section 2139: Testing. As amended, 11/30/2022.
- (66) Title 13, Section 2140: Notification and Use of Test Results. As amended, 11/30/2022.
- (67) Title 13, Section 2141: General Provisions. As amended, 12/22/2021.
- (68) Title 13, Section 2142: Alternative Procedures. As amended, 12/22/2021.
- (69) Title 13, Section 2143: Failure Levels Triggering Recall and Corrective Action. As amended, 12/22/2021.

(94) Title 17, Section 95661: Applicability. As amended, 12/5/2014.

(95) Title 17, Section 95662: Definitions. As amended, 12/22/2021.

(96) Title 17, Section 95663: Greenhouse Gas Exhaust Emission Standards and Testing Procedures for New 2014 and Subsequent Model Heavy-Duty Vehicles. As amended, 12/22/2021.

[20.2.91.102 NMAC - Rp, 20.2.91.102 NMAC, 12/31/2023]

20.2.91.103 EXEMPTIONS:

The following motor vehicles shall not be subject to 20.2.91 NMAC.

A. Military tactical vehicles, which shall mean the same in this section as in CCR, Title 13, Section 1905.

B. Motor vehicles sold for registration in a state that is not New Mexico.

C. Motor vehicles that have greater than 7,500 miles on the odometer.

D. Motor vehicles available for rent to a final destination outside of New Mexico.

E. Motor vehicles transferred from one person to another person due to: death, inheritance, devise or bequest; divorce, dissolution, annulment or legal separation; merger or consolidation; bankruptcy; court judgment or decree; or possessory lien, seizure or foreclosure.

F. Emergency vehicles.

G. A motor vehicle acquired by a resident of New Mexico to replace a motor vehicle registered to such resident that was stolen, damaged, or failed beyond reasonable repair while out of state, provided that such replacement motor vehicle is acquired out of state when the previously owned motor vehicle was stolen, damaged, or failed beyond reasonable repair.

H. A motor vehicle with a right-hand drive configuration that is not available in a California-certified model, purchased by a rural route postal carrier and used primarily for work.

I. Motor vehicles purchased by a nonresident before establishing residency in New Mexico, regardless of the mileage on the odometer.

J. Motor vehicles purchased by a resident of New Mexico while assigned to active government service outside New Mexico.

K. Custom and assembled motor vehicles that:

(1) are maintained for occasional transportation, exhibitions, club activities, parades, tours, testing of operation, repair, maintenance, and similar uses; and

(2) are not used for general daily transportation.

L. A vehicle sold for the purpose of being wrecked or dismantled.

M. Motor vehicles used exclusively in the conduct of agricultural operations, like implements of husbandry not including a vehicle whose existing design is primarily for the transportation of persons or property on a highway, or road machinery not regularly operated on public streets and highways.

N. A vehicle defined as an "excluded bus" pursuant to CCR, Title 13, Section 1963(c)(11).

[20.2.91.103 NMAC - Rp, 20.2.91.103 NMAC, 12/31/2023]

20.2.91.104 FLEET AVERAGE NON-METHANE ORGANIC GAS PLUS OXIDES OF NITROGEN EXHAUST EMISSION STANDARDS, REPORTING AND COMPLIANCE:

A. Beginning model year 2027 and subsequent years, this 20.2.91.104 NMAC (Fleet Average Non-methane Organic Gas Plus Oxides of Nitrogen Exhaust Emission Standards, Reporting and Compliance) applies to manufacturers that deliver for sale, offer for sale, sell, import, deliver, purchase, rent, lease, acquire, receive, or register passenger cars, light-duty trucks, and medium-duty vehicles pursuant to the requirements of CCR, Title 13, Section 1961.4.

B. Each manufacturer subject to 20.2.91.104 NMAC (Fleet Average Non-methane Organic Gas Plus Oxides of Nitrogen Exhaust Emission Standards, Reporting and Compliance) shall comply with fleet average non-methane organic gas plus oxides of nitrogen exhaust emission standards for passenger cars, light-duty trucks, and medium-duty vehicles, and other requirements set forth in CCR, Title 13, Section 1961.4. Compliance shall be based on the motor vehicles subject to 20.2.91.104 NMAC (Fleet Average Non-methane Organic Gas Plus Oxides of Nitrogen Exhaust Emission Standards, Reporting and Compliance) and 20.11.104.104 NMAC (Fleet Average Non-methane Organic Gas Plus Oxides of Nitrogen Exhaust Emission Standards, Reporting and Compliance) that each manufacturer delivers for sale, offers for sale, sells, imports, delivers, or leases in New Mexico, and shall be determined on a statewide basis.

C. Each manufacturer subject to Subsection B of 20.2.91.104 NMAC (Fleet Average Non-methane Organic Gas Plus Oxides of Nitrogen Exhaust Emission Standards, Reporting and Compliance) shall accrue fleet average non-methane organic gas plus oxides of nitrogen exhaust emission standard credits and debits and may use credits in accordance with CCR, Title 13, Section 1961.4. Each manufacturer shall accrue and use debits and credits based on the number of motor vehicles subject to Subsection B of 20.2.91.104 NMAC (Fleet Average Non-methane Organic Gas Plus Oxides of Nitrogen Exhaust Emission Standards, Reporting and Compliance) and Subsection B of 20.11.104.104 NMAC (Fleet Average Non-methane Organic Gas Plus Oxides of

Nitrogen Exhaust Emission Standards, Reporting and Compliance). Accounting for the use of debits and credits shall be on a statewide basis.

D. Each manufacturer subject to Subsection A of 20.2.91.104 NMAC (Fleet Average Non-methane Organic Gas Plus Oxides of Nitrogen Exhaust Emission Standards, Reporting and Compliance) shall submit a report by May 1 of each year to the department that includes the statewide fleet average non-methane organic gas plus oxides of nitrogen exhaust emission data for the model year just ended. The report shall be in accordance with the procedures in CCR, Title 13, Section 1961.4 and be in the same format used to report such information to CARB. If a manufacturer elects to report the information required pursuant to Subsection B of 20.2.91.104 NMAC (Fleet Average Non-methane Organic Gas Plus Oxides of Nitrogen Exhaust Emission Standards, Reporting and Compliance) and Subsection B of 20.11.104.104 NMAC (Fleet Average Non-methane Organic Gas Plus Oxides of Nitrogen Exhaust Emission Standards, Reporting and Compliance) using the pooling provisions set forth in CCR, Title 13, Section 1961.4, the manufacturer shall report to the department the information for the entire pool as well as for the portion specific to New Mexico.

[20.2.91.104 NMAC - Rp, 20.2.91.104 NMAC, 12/31/2023]

20.2.91.105 PARTICULATE MATTER EXHAUST EMISSION STANDARDS, REPORTING AND COMPLIANCE:

Beginning model year 2027 and subsequent years, each manufacturer subject to 20.2.91.105 NMAC (Particulate Matter Exhaust Emission Standards, Reporting and Compliance) shall comply with particulate exhaust emission standards for passenger cars, light-duty trucks, medium-duty passenger vehicles, and medium-duty vehicles, and other requirements set forth in CCR, Title 13, Section 1961.4. Compliance shall be based on the motor vehicles subject to 20.2.91.105 NMAC (Particulate Matter Exhaust Emission Standards, Reporting and Compliance) and 20.11.104.105 NMAC (Particulate Matter Exhaust Emission Standards, Reporting and Compliance) that each manufacturer delivers for sale, offers for sale, sells, imports, delivers, or leases in New Mexico, and shall be determined on a statewide basis.

[20.2.91.105 NMAC - Rp, 20.2.91.105 NMAC, 12/31/2023]

20.2.91.106 FLEET AVERAGE GREENHOUSE GAS EXHAUST EMISSION STANDARDS, REPORTING AND COMPLIANCE:

A. Beginning model year 2027 and subsequent years, this 20.2.91.106 NMAC (Fleet Average Greenhouse Gas Exhaust Emission Standards, Reporting and Compliance) applies to manufacturers that deliver for sale, offer for sale, sell, import, deliver, purchase, rent, lease, acquire, receive, or register passenger cars, light-duty trucks, and medium-duty vehicles pursuant to the requirements of CCR, Title 13, Section 1961.3.

B. Each manufacturer subject to 20.2.91.106 NMAC (Fleet Average Greenhouse Gas Exhaust Emission Standards, Reporting and Compliance) shall comply with fleet average greenhouse gas exhaust emission standards for passenger cars, light-duty trucks, and medium-duty passenger vehicles, and other requirements set forth in CCR, Title 13, Section 1961.3. Compliance shall be based on the motor vehicles subject to 20.2.91.106 NMAC (Fleet Average Greenhouse Gas Exhaust Emission Standards, Reporting and Compliance) and 20.11.104.106 NMAC (Fleet Average Greenhouse Gas Exhaust Emission Standards, Reporting and Compliance) that each manufacturer delivers for sale, offers for sale, sells, imports, delivers, or leases in New Mexico, and shall be determined on a statewide basis.

C. Each manufacturer subject to Subsection B of 20.2.91.106 NMAC (Fleet Average Greenhouse Gas Exhaust Emission Standards, Reporting and Compliance) shall accrue fleet average greenhouse gas exhaust emission standard credits and debits and may use credits in accordance with CCR, Title 13, Section 1961.3. Each manufacturer shall accrue and use debits and credits based on the number of motor vehicles subject to Subsection B of 20.2.91.106 NMAC (Fleet Average Greenhouse Gas Exhaust Emission Standards, Reporting and Compliance) and Subsection B of 20.11.104.106 NMAC (Fleet Average Greenhouse Gas Exhaust Emission Standards, Reporting and Compliance). Accounting for the use of debits and credits shall be on a statewide basis.

D. Each manufacturer subject to Subsection B of 20.2.91.106 NMAC (Fleet Average Greenhouse Gas Exhaust Emission Standards, Reporting and Compliance) shall submit a report by May 1 of each year to the department that includes the statewide fleet average greenhouse gas exhaust emission standard data for the model year just ended. The report shall include the number of motor vehicles in each test group, delineated by model type certified pursuant to CCR, Title 13, Section 1961.3, be in accordance with the procedures in CCR, Title 13, Section 1961.3, and be in the same format used to report such information to CARB. If a manufacturer reports the information required pursuant to Subsection B of 20.2.91.106 NMAC (Fleet Average Greenhouse Gas Exhaust Emission Standards, Reporting and Compliance) and Subsection B of 20.11.104.106 NMAC (Fleet Average Greenhouse Gas Exhaust Emission Standards, Reporting and Compliance) using option number 2 for the "Calculation of fleet average carbon dioxide value" set forth in CCR, Title 13, Section 1961.3(a)(5)(D), the manufacturer shall report the information for the entire pool as well as for the portion specific to New Mexico.

[20.2.91.106 NMAC - Rp, 20.2.91.106 NMAC, 12/31/2023]

20.2.91.107 FLEET AVERAGE EXHAUST EMISSION STANDARDS REMEDIATION REPORT:

A. If the department determines that a report submitted by a manufacturer pursuant to 20.2.91.104 NMAC (Fleet Average Non-methane Organic Gas Plus Oxides of Nitrogen Exhaust Emission Standards, Reporting and Compliance) or 20.2.91.106 NMAC (Fleet Average Greenhouse Gas Exhaust Emission Standards, Reporting and

Compliance) demonstrates that the manufacturer is not in compliance with the fleet average non-methane organic gas plus oxides of nitrogen exhaust emission standards or the fleet average greenhouse gas exhaust emission standards, respectively, the department shall require the manufacturer to submit a fleet average remediation report to the department.

B. A fleet average remediation report shall be submitted to the department within 60 calendar days after notice from the department.

C. The fleet average remediation report shall, at a minimum:

- (1) describe how the manufacturer intends to equalize any accrued debits;
- (2) identify all motor vehicle models and the percentage of each model delivered for sale, offered for sale, sold, imported, delivered, or leased in New Mexico with their corresponding certification standards for New Mexico and California in relation to total sales in each respective state; and
- (3) describe how the manufacturer intends to achieve compliance with the fleet average non-methane organic gas plus oxides of nitrogen exhaust emission standards or the fleet average greenhouse gas exhaust emission standards, as applicable, in future model years.

[20.2.91.107 NMAC - Rp, 20.2.91.107 NMAC, 12/31/2023

20.2.91.108 LIGHT- AND MEDIUM-DUTY ZERO-EMISSION VEHICLE REQUIREMENTS, REPORTING AND COMPLIANCE:

A. Effective model years 2027 through 2032, this 20.2.91.108 NMAC (Light- and Medium-Duty Zero-emission Vehicle Requirements, Reporting and Compliance) applies to manufacturers that deliver for sale, offer for sale, sell, import, deliver or lease passenger cars, light-duty trucks, and medium-duty vehicles pursuant to the requirements of CCR, Title 13, Section 1962.4.

B. Each manufacturer subject to 20.2.91.108 NMAC (Light- and Medium-Duty Zero-emission Vehicle Requirements, Reporting and Compliance) shall comply with the annual ZEV requirement set forth in CCR, Title 13, Section 1962.4 using New Mexico specific vehicle production volume calculated in accordance with CCR, Title 13, Section 1962.4. Manufacturer's compliance with the annual ZEV requirement in New Mexico shall be based on the motor vehicles subject to 20.2.91.108 NMAC (Light- and Medium-Duty Zero-emission Vehicle Requirements, Reporting and Compliance) and 20.11.104.108 NMAC (Light- and Medium-Duty Zero-emission Vehicle Requirements, Reporting and Compliance) that each manufacturer delivers for sale, offers for sale, sells, imports, delivers, or leases in New Mexico, and shall be determined on a statewide basis.

C. Each manufacturer subject to 20.2.91.108 NMAC (Light- and Medium-Duty Zero-emission Vehicle Requirements, Reporting and Compliance) shall submit to the department all reports in accordance with CCR, Title 13, Section 1962.4 for motor vehicles delivered for sale, offered for sale, sold, imported, delivered, or leased in New Mexico during the previous model year. The reports shall be on a statewide basis and formatted as determined by the department.

D. Manufacturers subject to 20.2.91.108 NMAC (Light- and Medium-Duty Zero-emission Vehicle Requirements, Reporting and Compliance) may fulfill a portion of their compliance requirement with any of the additional vehicle values and allowances in accordance with CCR, Title 13, Section 1962.4, including:

(1) PHEVs produced and delivered for sale in New Mexico in accordance with CCR, Title 13, Section 1962.4;

(2) New ZEVs and PHEVs provided for use in qualified community-based clean mobility programs in New Mexico, which means a program determined by the department to qualify as a community-based clean mobility program pursuant to guidance issued by the department; the department shall determine that a program qualifies as a community-based clean mobility program before a manufacturer may earn vehicle values pursuant to the requirements of CCR, Title 13, Section 1962.4;

(3) ZEVs and PHEVs initially leased in New Mexico and sold at the end of lease to a New Mexico dealer participating in a financial assistance program, which means a vehicle purchase incentive program where approved dealers accept a point-of-sale incentive for used ZEVs and PHEVs for lower-income consumers; qualifying programs in New Mexico will be approved by the department and posted on the department website;

(4) New ZEVs and PHEVs delivered for sale in New Mexico below the manufacturer's suggested retail price threshold in accordance with CCR, Title 13, Section 1962.4; and

(5) Early compliance vehicle values for model years 2025 and 2026 earned in accordance with CCR, Title 13, Section 1962.4.

E. Manufacturers subject to 20.2.91.108 NMAC (Light- and Medium-Duty Zero-emission Vehicle Requirements, Reporting and Compliance) may fulfill any deficit portion of their total annual ZEV requirement with additional allowances in accordance with CCR, Title 13, Section 1962.4 and 20.2.91.109 (Voluntary Early Action Credits and Onetime Values), including:

(1) with converted ZEV values and PHEV values earned pursuant to 20.2.91.109 NMAC (Voluntary Early Action Credits and Onetime Values);

(2) with ZEV values and PHEV values transferred from other states ("Pooled Values") pursuant to CCR, Title 13, Section 1962.4.

F. In New Mexico, manufacturers shall make up any deficits incurred for a model year by submitting a commensurate amount of ZEV values to the secretary within three years to fulfill any remaining deficit of their annual ZEV requirement in a given model year in accordance with CCR, Title 13, Section 1962.4.

[20.2.91.108 NMAC - Rp, 20.2.91.108 NMAC, 12/31/2023]

20.2.91.109 VOLUNTARY EARLY ACTION CREDITS AND ONETIME VALUES:

A. Beginning July 1, 2022, for model years 2023 through 2025, this 20.2.91.109 NMAC (Voluntary Early Action Credits and Onetime Values) applies to manufacturers that deliver for sale, offer for sale, sell, import, deliver or lease passenger cars, light-duty trucks, and medium-duty vehicles pursuant to the requirements of CCR, Title 13, Section 1962.2.

B. A manufacturer may earn early action credits for motor vehicles delivered for sale, offered for sale, sold, imported, delivered, or leased in New Mexico as set forth in CCR, Title 13, Section 1962.2. To earn early action credits, a manufacturer shall report all prior model year qualifying motor vehicles from this Subsection B of 20.2.91.109 NMAC (Voluntary Early Action Credits and Onetime Values) and Subsection B of 20.11.104.109 NMAC (Voluntary Early Action Credits and Onetime Values) to the department before May 1 following each applicable year. The department shall verify, record, track, and report early action credits calculated on a statewide basis. At the conclusion of the reporting for model year 2025, the department shall follow CARB's procedures to convert early action credits to ZEV values and PHEV values as set forth in CCR, Title 13, Section 1962.4(g)(2)(A).

C. For model 2025, a manufacturer may earn either early action credits as set forth 20.2.91.109 NMAC (Voluntary Early Action Credits and Onetime Values) and 20.2.104.109 NMAC (Voluntary Early Action Credits and Onetime Values) or early compliance vehicle values as set forth in 20.2.91.108 NMAC (Light- and Medium-Duty Zero-emission Vehicle Requirements, Reporting and Compliance), both which are calculated on a statewide basis. A manufacturer shall make this election in its report for model year 2025.

D. In addition to earning early action credits, a manufacturer may earn onetime ZEV values and PHEV values equal to their converted early action credits, calculated on a statewide basis. To earn the onetime ZEV and PHEV values, a manufacturer shall submit a request to the department by May 1, 2026.

E. Notwithstanding the provisions set forth in CCR, Title 13, Subsections 1962.4(g)(2)(B) and (C), ZEV values and PHEV values issued pursuant to 20.2.91.109 NMAC (Voluntary Early Action Credits and Onetime Values) may be used, and shall

only be used by a manufacturer subject to 20.2.91.108 NMAC (Light- and Medium-Duty Zero-emission Vehicle Requirements, Reporting and Compliance) or traded to a manufacturer subject to 20.2.91.108 NMAC (Light- and Medium-Duty Zero-emission Vehicle Requirements, Reporting and Compliance) to fulfill a deficit portion of their annual ZEV requirement in New Mexico for model years 2027 through 2029.

F. ZEV values and PHEV values issued pursuant to 20.2.91.109 NMAC (Voluntary Early Action Credits and Onetime Values) may only be used for compliance with the annual ZEV requirements in New Mexico.

G. Motor vehicle early action credits or onetime values shall not constitute or convey a property right.

[20.2.91.109 NMAC - Rp, 20.2.91.109, 12/31/2023]

20.2.91.110 ADDITIONAL REPORTING:

A. Beginning model year 2027 and subsequent years, each manufacturer subject to 20.2.91 NMAC shall submit to the department, within 30 calendar days of a request from the department:

(1) A copy of the applicable CARB executive order.

(2) Any documentation the department determines necessary for the effective administration and enforcement of 20.2.91 NMAC, including without limitation certification materials submitted to CARB and documentation regarding the sale of each motor vehicle subject to 20.2.91 NMAC.

(3) Any emission warranty information reports prepared in accordance with CCR, Title 13.

B. If these records are available electronically, the manufacturer shall submit the records in an electronic format approved by the department.

[20.2.91.110 NMAC - Rp, 20.2.91.110 NMAC, 12/31/2023]

20.2.91.111 WARRANTIES:

A. Beginning model year 2027 and subsequent years, each manufacturer of a motor vehicle subject to 20.2.91 NMAC shall warrant to the ultimate purchaser and each subsequent purchaser that the motor vehicle shall comply over its period of warranty coverage with all applicable requirements of CCR, Title 13, Sections 1962.4, 2035 through 2038, 2040, and 2046. Subsection C of 20.2.91.103 NMAC (Exemptions) shall not apply to this section.

B. Except as otherwise provided in Subsection B of 20.2.91.111 NMAC (Warranties) each manufacturer subject to 20.2.91 NMAC shall include with each motor vehicle or motor vehicle engine, the emission control systems warranty statement that complies with the requirements of CCR, Title 13, Section 2039, except:

(1) A manufacturer shall modify the emission control systems warranty statement as necessary to inform motor vehicle owners of the applicability of the warranty in New Mexico.

(2) For the purpose of the documents required pursuant to CCR, Title 13, Section 2039(c), a manufacturer is only required to submit such documents upon request of the department.

C. Upon the department's request, a manufacturer of a motor vehicle subject to 20.2.91 NMAC shall submit to the department within 30 calendar days any emission warranty information report submitted to CARB, as required in CCR, Title 13, Section 2144.

[20.2.91.111 NMAC - Rp, 20.2.91.111 NMAC, 12/31/2023]

20.2.91.112 LABELS:

Beginning model year 2027 and subsequent years, a manufacturer, dealer, rental car agency, the United States, state or local government, or other persons shall deliver for sale, offer for sale, sell, import, deliver, purchase, rent, lease, acquire, receive, or register passenger cars, light-duty trucks, medium-duty passenger vehicles, medium-duty vehicles, heavy-duty vehicles, heavy-duty engines, or motor vehicle engines in New Mexico with emission control labels and environmental performance labels affixed in accordance with CCR, Title 13, Section 1965.

[20.2.91.112 NMAC - Rp, 20.2.91.112 NMAC, 12/31/2023]

20.2.91.113 RECALL CAMPAIGNS:

A. Beginning model year 2027 and subsequent years, each manufacturer of a motor vehicle subject to 20.2.91 NMAC shall be subject to all recall campaign requirements of CCR, Title 13, including Sections 1962.4, 2035 through 2038, 2040, and 2046.

B. Any order issued, or enforcement action taken by CARB to correct noncompliance that results in a recall campaign of a motor vehicle pursuant to CCR, Title 13, including Sections 1962.7, and 2111 through 2135 shall be prima facie evidence concerning noncompliance for a motor vehicle registered in New Mexico. If the manufacturer demonstrates to the department's satisfaction that the order or action is not applicable to a motor vehicle registered in New Mexico, the department shall not pursue a recall campaign of that motor vehicle.

C. If a manufacturer initiates a voluntary or influenced emission-related recall campaign pursuant to CCR, Title 13, including Sections 1962.7, and 2113 through 2121, the recall campaign shall include all affected motor vehicles registered in New Mexico.

D. For a motor vehicle subject to an order or action under Subsection B of 20.2.91.113 NMAC (Recall Campaigns) and Subsection B of 20.2.104.113 NMAC (Recall Campaigns), each manufacturer shall send to each owner of an affected motor vehicle registered in New Mexico a notice that complies with the requirements in CCR, Title 13, including Sections 1962.7, 2118 and 2127, as applicable, including a telephone number for owners to obtain answers to questions regarding the recall.

[20.2.91.113 NMAC - Rp, 20.2.91.113 NMAC, 12/31/2023]

20.2.91.114 REGISTRATION AND FEES:

A. Effective January 1, 2026, for each manufacturer delivering for sale, offering for sale, selling, importing, delivering, or leasing passenger cars, light-duty trucks, medium-duty passenger vehicles, medium-duty vehicles, heavy-duty vehicles, heavy-duty engines or motor vehicle engines subject to 20.2.91 NMAC shall obtain a registration from the department. The department shall issue a registration for a period of 10 years subject to an annual registration fee as set forth in Section C of 20.1.91.114 NMAC (Registration and Fees) and 20.1.104.114 NMAC (Registration and Fees). It shall be a violation of 20.2.91 NMAC for a manufacturer subject to 20.2.91 NMAC to not obtain a registration in accordance with Subsection A of 20.2.91.114 NMAC (Registration and Fees).

B. Effective January 1, 2026, each manufacturer subject to 20.2.91.114 NMAC (Registration and Fees) and 20.2.104.114 NMAC (Registration and Fees) shall report to the department the type and number of passenger cars, light-duty trucks, medium-duty passenger vehicles, medium-duty vehicles, and heavy-duty vehicles, heavy-duty engines or motor vehicle engines subject to 20.2.91 NMAC delivered for sale, offered for sale, sold, imported, delivered, or leased in New Mexico during the previous model year. The manufacturer shall submit the report to the department by May 1 of each year. Failure to timely submit the report shall be a violation of Subsection B of 20.2.91.114 NMAC (Registration and Fees) and cause for the department to revoke the manufacturer's registration.

C. The department shall assess an annual registration fee for the period beginning July 1 and ending June 30 of the subsequent year.

(1) The department shall assess annual registration fees by apportioning the total registration fee among all registrants according to each manufacturer's reported market share for the previous model year, calculated on a statewide basis.

(2) Within 45 calendar days after the report required by 20.2.91.114 NMAC (Registration and Fees) is due, the department shall notify each registrant of the registration fee required for the next registration period. Within 30 calendar days of the department's notice of the required registration fee, each registrant shall remit the specified amount payable to the New Mexico environment department.

(3) The total registration fee is \$300,000 and shall increase annually by the consumer price index through model year 2032. Beginning model year 2033, the total registration fee is \$100,000 and shall increase annually by the consumer price index.

(4) Failure to timely pay the annual registration fee shall be a violation of Subsection C of 20.2.91.114 NMAC (Registration and Fees) and cause for the department to revoke the manufacturer's registration.

D. Manufacturers seeking to earn early action credits and onetime values under 20.2.91.109 NMAC (Voluntary Early Action Credits and Onetime Values) shall pay a \$20,000 registration fee that is separate and apart from the annual registration fee required by Section C of 20.2.91.114 NMAC (Registration and Fees) by May 1 following each applicable model year.

[20.2.91.114 NMAC - Rp, 20.2.91.114 NMAC, 12/31/2023]

20.2.91.115 INSPECTIONS AND INFORMATION REQUESTS:

A. The department may inspect motor vehicles, and may inspect and copy relevant, non-financial records, including records documenting motor vehicle origin, certification, delivery, or sales, and any record of emission-related part repairs performed under warranty.

B. The department may require a manufacturer, dealer, rental car agency, the United States, state or local government, or other person to submit or may inspect and copy itself, relevant, non-financial records related to a motor vehicle subject or potentially subject to 20.2.91 NMAC, except that Subsection B of 20.2.91.115 NMAC (Inspections and Information Requests) shall not be construed to require the creation of a new record.

[20.2.91.115 NMAC - Rp, 20.2.91.115 NMAC, 12/31/2023]

20.2.91.116 RECORDKEEPING:

All manufacturers, dealers, rental car agencies, the United States, state and local governments, or other persons shall retain records pertaining to compliance under 20.2.91 NMAC.

[20.2.91.116 NMAC Rp, 20.2.91.116 NMAC, 12/31/2023]

20.2.91.117 PROHIBITED:

Failure to comply with the emission standards, recordkeeping, reporting, or other requirements of 20.2.91 NMAC within the timeframes specified shall constitute a violation of 20.2.91 NMAC subject to enforcement action under Section 74-2-12 NMSA 1978.

[20.2.91.117 NMAC - Rp, 20.2.91.117 NMAC, 12/31/2023]

20.2.91.118 EXHAUST EMISSION STANDARDS FOR HEAVY-DUTY ENGINES:

A. Beginning model year 2027 and subsequent years, this 20.2.91.118 NMAC (Exhaust Emission Standards for Heavy-Duty Engines) applies to manufacturers that deliver for sale, offer for sale, sell, import, deliver, purchase, rent, lease, acquire, receive heavy-duty vehicles, heavy-duty engines or other motor vehicle engines pursuant to the requirements of CCR, Title 13, Sections 1900, 1956.8, 1961.2, 1965, 1968.2, 1971.1, 2035, 2036, 2166, 2166.1, 2167 through 2170, 2111 through 2119, 2121, 2123, 2125 through 2131, 2133, 2137, 2139 through 2149, 2423 and 2485.

B. Each manufacturer subject to 20.2.91.118 NMAC (Exhaust Emission Standards for Heavy-Duty Engines) shall comply with the heavy-duty engine emissions standards and other requirements set forth in CCR, Title 13, Sections 1900, 1956.8, 1961.2, 1965, 1968.2, 1971.1, 2035, 2036, 2166, 2166.1, 2167 through 2170, 2111 through 2119, 2121, 2123, 2125 through 2131, 2133, 2137, 2139 through 2149, 2423 and 2485. Compliance shall be based on the motor vehicles subject to 20.2.91.118 NMAC (Exhaust Emission Standards for Heavy-Duty Engines) and 20.11.104.118 NMAC (Exhaust Emission Standards for Heavy-Duty Engines) that each manufacturer delivers for sale, offers for sale, sells, imports, delivers, purchases, rents, leases, acquires or receives in New Mexico, and shall be determined on a statewide basis.

[20.2.91.118 NMAC - Rp, 20.2.91.118 NMAC, 12/31/2023]

20.2.91.119 MEDIUM- AND HEAVY-DUTY ZERO-EMISSION VEHICLE REQUIREMENT, REPORTING AND COMPLIANCE:

A. Beginning model year 2027 and subsequent years, this 20.2.91.119 NMAC (Medium- and Heavy-Duty Zero-emission Vehicle Requirement, Reporting and Compliance) applies to manufacturers that deliver for sale, offer for sale, sell, import, deliver, purchase, rent, lease, acquire, receive medium-duty vehicles, heavy-duty vehicles, heavy-duty engines or other motor vehicle engines pursuant to the requirements of CCR, Title 13, Sections 1963, 1963.1, 1963.2, 1963.4 and 1963.5.

B. Each manufacturer subject to 20.2.91.119 NMAC (Medium- and Heavy-Duty Zero-Emission Vehicle Requirement, Reporting and Compliance) shall deliver for sale, offer for sale, sell, import, deliver, purchase, rent, lease, acquire or receive medium-duty vehicles, heavy-duty vehicles, heavy-duty engines or other motor vehicle engines

certified as ZEVs to New Mexico in accordance with CCR, Title 13, Sections 1963, 1963.1, 1963.2, 1963.4 and 1963.5.

C. Each manufacturer subject to 20.2.91.119 NMAC (Medium- and Heavy-Duty Zero-emission Vehicle Requirement, Reporting and Compliance) shall comply with the ZEV sales percentage schedule set forth in CCR, Title 13, Section 1963.1 using New Mexico specific ZEV sales calculated in accordance with CCR, Title 13, Section 1963.1. Manufacturer's compliance with the ZEV sales percentage shall be based on medium-duty vehicles, heavy-duty vehicles, heavy-duty engines or other motor vehicle engines subject to 20.2.91.119 NMAC (Medium- and Heavy-Duty Zero-Emission Vehicles Requirement, Reporting and Compliance) and 20.2.104.119 NMAC (Medium- and Heavy-Duty Zero-Emission Vehicles Requirement, Reporting and Compliance) that each manufacturer delivers for sale, offers for sale, sells, imports, delivers, or leases in New Mexico, and shall be determined on a statewide basis.

D. Before May 1 of each year, each manufacturer subject to 20.2.91.119 NMAC (Medium- and Heavy-Duty Zero-emission Vehicle Requirement, Reporting and Compliance) shall submit to the department a report detailing ZEV sales percentage performance by identifying qualifying medium-duty vehicles, heavy-duty vehicles, heavy-duty engines or other motor vehicle engines transferred to or from any manufacturer or, offered for sale, sold, imported, delivered, or leased in New Mexico during the previous model year in accordance with CCR, Title 13, Sections 1963.1. The report shall include the resulting surplus or deficit in meeting the ZEV sales percentage for the model year after applying any ZEV deficits or credits according to CCR Title 13, Section 1963.1. ZEV sales percentage performance shall be on a statewide basis. The report shall be prepared in the same format used to report ZEV sales percentage performance compliance to CARB.

E. Each manufacturer subject to 20.2.91.119 NMAC (Medium- and Heavy-Duty Zero-emission Vehicle Requirement, Reporting and Compliance) may generate, bank and trade ZEV credits for qualifying medium-duty vehicles, heavy-duty vehicles, heavy-duty engines or other motor vehicle engines delivered for sale, offered for sale, sold, imported, delivered, or leased in New Mexico in accordance with 20.2.91.119 NMAC (Medium- and Heavy-Duty Zero-emission Vehicle Requirement, Reporting and Compliance) and CCR, Title 13, Sections 1963, 1963.1, and 1963.2.

F. Beginning with the model year 2025 any manufacturer that produces on-road vehicles over 8,500 pounds gross vehicle weight rating for sale in New Mexico may generate, bank and trade ZEV credits for vehicles certified as ZEVs in accordance with CCR, Title 13, Sections 1963, 1963.1, 1963.2, 1963.4, and 1963.5 for such vehicles pursuant to CCR, Title 13 Section 1963.2.

[20.2.91.119 NMAC - Rp, 20.2.91.119 NMAC, 12/31/2023]

20.2.91.120 LARGE ENTITY REPORTING REQUIREMENT:

A. Beginning model year 2027 and subsequent years, this 20.2.91.120 NMAC (Large Entity Reporting Requirement) applies to entities in accordance with CCR, Title 13, Sections 2012, 2012.1, and 2012.2.

B. Each entity subject to this 20.2.91.120 NMAC (Large Entity Reporting Requirement) shall comply with the large entity reporting requirement in accordance with such sections provided however that every occurrence of "California" shall be replaced with "New Mexico", "Executive Officer" shall be replaced with "Secretary", "Public Utilities Commission" shall be replaced with "Public Regulation Commission", and all other replacements clarifying that Sections 2012, 2012.1, and 2012.2 are requirements in New Mexico in accordance with this section. For purposes of compliance with 20.2.91.120 (Large Entity Reporting Requirement) only, all exemptions under CCR, Title 13, Section 2012(c) apply, and do not apply to another other subsection of 20.2.91 NMAC.

C. Each entity subject to this 20.2.91.120 NMAC (Large Entity Reporting Requirement) shall report complete information to the secretary by May 1, 2025, through the department's Advanced Clean Trucks webpage. Vehicle data shall be reported as the fleet was comprised on a date of the fleet owner's choosing any time after December 31, 2023. The reporting entity shall maintain the records of their information required by CCR Title 13, Sections 2012.1 and 2012.2 for five years following the report date. To the extent reports submitted contain confidential data, entities may choose to designate that information as confidential.

[20.2.91.120 NMAC - Rp, 20.2.91.120 NMAC, 12/31/2023]

PART 92-97: [RESERVED]

PART 98: CONFORMITY OF GENERAL FEDERAL ACTIONS TO THE STATE IMPLEMENTATION PLAN [REPEALED]

[This part was repealed on November 25, 2013.]

PART 99: CONFORMITY TO THE STATE IMPLEMENTATION PLAN OF TRANSPORTATION PLANS, PROGRAMS, AND PROJECTS

20.2.99.1 ISSUING AGENCY:

New Mexico Environmental Improvement Board.

[20.2.99.1 NMAC - Rp, 20.2.99.1 NMAC, 09/15/14]

20.2.99.2 SCOPE:

Agencies affected by this part are: federal transportation agencies (the federal highway administration (FHWA) and the federal transit administration (FTA) of the United States

department of transportation (US DOT)), and state and local agencies responsible for transportation planning and air quality management that are within the geographic jurisdiction of the environmental improvement board (see also 20.2.99.6 NMAC).

A. The provisions of this part shall apply in all nonattainment areas and maintenance areas for transportation-related criteria pollutants for which the area is designated as a nonattainment area or has a maintenance plan.

B. The provisions of this part apply with respect to emissions of the following criteria pollutants: ozone, carbon monoxide, nitrogen dioxide, and particles with an aerodynamic diameter less than or equal to a nominal 10 micrometers (PM₁₀) and particles with an aerodynamic diameter less than or equal to a nominal 2.5 micrometers (PM_{2.5}).

C. The provisions of this part apply with respect to emissions of the following precursor pollutants in nonattainment areas or maintenance areas:

- (1) volatile organic compounds (VOCs) and nitrogen oxides in ozone areas;
- (2) nitrogen oxides in nitrogen dioxide areas;
- (3) volatile organic compounds or nitrogen oxides in PM₁₀ areas if:

(a) the US EPA region 6 administrator or the department has made a finding (including a finding as part of the New Mexico state implementation plan (SIP) or a submitted implementation plan revision) that transportation-related emissions of one or both of these precursor emissions within the nonattainment area are a significant contributor to the PM₁₀ nonattainment problem and has so notified the metropolitan planning organization (MPO) (or the New Mexico department of transportation (NMDOT) in the absence of an MPO) and US DOT; or

(b) the applicable SIP (or implementation plan submission) establishes an approved (or adequate) motor vehicle emissions budget for such emissions as part of the reasonable further progress, attainment or maintenance strategy;

(4) nitrogen oxides in PM_{2.5} areas, unless both the US EPA regional administrator and the department have made a finding that transportation-related emissions of nitrogen oxides within the nonattainment area are not a significant contributor to the PM_{2.5} nonattainment problem and has notified the MPO (or the NMDOT in the absence of an MPO) and US DOT, or the applicable implementation plan (or implementation plan submission) does not establish an approved (or adequate) motor vehicle emissions budget for such emissions as part of the reasonable further progress, attainment or maintenance strategy; and

(5) VOCs, sulfur dioxide (SO₂) or ammonia (NH₃) in PM_{2.5} areas either if the US EPA regional administrator or the department has made a finding that

transportation-related emissions of any of these precursors within the nonattainment area are a significant contributor to the PM_{2.5} nonattainment problem and has so notified the MPO (or the NMDOT in the absence of an MPO) and US DOT, or if the applicable implementation plan (or implementation plan submission) establishes an approved (or adequate) motor vehicle emissions budget for such emissions as part of the reasonable further progress, attainment or maintenance strategy.

D. The provisions of this part apply to PM_{2.5} nonattainment areas and maintenance areas with respect to PM_{2.5} from re-entrained road dust if the US EPA regional administrator or the department has made a finding that re-entrained road dust emissions within the area are a significant contributor to the PM_{2.5} nonattainment problem and has so notified the MPO (or the NMDOT in the absence of an MPO) and US DOT, or if the applicable SIP (or implementation plan submission) includes re-entrained road dust in the approved (or adequate) motor vehicle emissions budget as part of the reasonable further progress, attainment or maintenance strategy.

E. The provisions of this part apply to maintenance areas through the last year of a maintenance area's approved CAA Section 175A(b) maintenance plan, unless the applicable implementation plan specifies that the provisions of this part (20.2.99 NMAC) shall apply for more than 20 years.

[20.2.99.2 NMAC - Rp, 20.2.99.2 NMAC, 09/15/14]

20.2.99.3 STATUTORY AUTHORITY:

Environmental Improvement Act, Paragraph (4) and (7) of Subsection A of Section 74-1-8 NMSA 1978 and Air Quality Control Act, Sections 74-2-1 NMSA 1978 *et seq.*, including specifically, Subsections (A), (B) and (C) of Section 74-2-5 NMSA 1978. Subsection (B) of Section 74-2-5 NMSA 1978 provides that the environmental improvement board shall adopt regulations "to attain and maintain national ambient air quality standards and prevent or abate air pollution."

[20.2.99.3 NMAC - Rp, 20.2.99.3 NMAC, 09/15/14]

20.2.99.4 DURATION:

Permanent.

[20.2.99.4 NMAC - Rp, 20.2.99.4 NMAC, 09/15/14]

20.2.99.5 EFFECTIVE DATE:

September 15, 2014, except where a later date is cited at the end of a section.

[20.2.99.5 NMAC - Rp, 20.2.99.5 NMAC, 09/15/14]

[The latest effective date of any section in this part is 09/15/14.]

20.2.99.6 OBJECTIVE:

The purpose of this part is to implement Section 176(c) of the Clean Air Act (CAA), as amended (42 U.S.C. 7401 *et seq.*), the related requirements of 23 U.S.C. 109(j), and regulations under 40 CFR Part 93 Subpart A, with respect to the conformity of transportation plans, programs and projects which are developed, funded or approved by the US DOT, the NMDOT, MPOs or other recipients of funds under Title 23 U.S.C. or the Federal Transit Laws (49 U.S.C. Chapter 53) to the SIP, as developed pursuant to Section 110 and Part D of the CAA. This part sets forth policy and procedures for consultations demonstrating and assuring conformity of such activities to the SIP and for resolving interagency conflicts.

[20.2.99.6 NMAC - Rp, 20.2.99.6 NMAC, 09/15/14]

20.2.99.7 DEFINITIONS:

Terms used but not defined in this part shall have the meaning given them by the CAA Titles 23 and 49 U.S.C., US EPA regulations, US DOT regulations, and 20.2.2 NMAC (Definitions), in that order of priority.

A. "Applicable implementation plan" is defined in Section 302(q) of the CAA and means the portion (or portions) of the implementation plan, or most recent revision thereof, which has been approved under Section 110 (of the CAA), promulgated under Section 110(c), or promulgated or approved pursuant to regulations promulgated under Section 301(d) and which implements the relevant requirements of the CAA.

B. "CAA" means the Clean Air Act, as amended, 42 U.S.C. 7401, *et seq.*

C. "Cause or contribute to a new violation" for a project means:

(1) to cause or contribute to a new violation of a standard in the area substantially affected by the project or over a region which would otherwise not be in violation of the standard during the future period in question, if the project were not implemented; or

(2) to contribute to a new violation in a manner that would increase the frequency or severity of a new violation of a standard in such area.

D. "CFR" means the code of federal regulations.

E. "Conformity determination" means the demonstration of consistency with motor vehicle emissions budgets for each pollutant and precursor identified in the applicable SIP. The conformity determination is the affirmative written documentation declaring conformity with the applicable SIP which is submitted to FHWA and FTA for

approval with US EPA consultation. An affirmative conformity determination means conformity to the plan's purpose of eliminating or reducing the severity and number of violations of the national ambient air quality standards and achieving expeditious attainment of such standards; and that such activities will not:

- (1) cause or contribute to a new violation of any standard in any area;
- (2) increase the frequency or severity of any existing violation of any standard in any area; or
- (3) delay timely attainment of any standard or any required interim emission reductions or other milestones in any area.

F. "Consultation" means that one party confers with another identified party, provides or makes available all relevant information to that party, and, prior to taking any action, considers the views of that party and (except with respect to those actions for which only notification is required) responds to written comments in a timely, substantive written manner prior to any final decision on such action. Such views and written response shall be made part of the record of any decision or action. Specific procedures and processes are described in 20.2.99.102 through 20.2.99.110 NMAC.

G. "Control strategy implementation plan revision" is the implementation plan which contains specific strategies for controlling the emissions of and reducing ambient levels of pollutants in order to satisfy CAA requirements for demonstrations of reasonable further progress and attainment (including implementation plan revisions submitted to satisfy CAA Sections 172(c), 182(b)(1), 182(c)(2)(A), 182(c)(2)(B), 187(a)(7), 189(a)(1)(B), 189(b)(1)(A) and 189(d); and Sections 192(a) and 192(b), for nitrogen dioxide; and any other applicable CAA provisions requiring a demonstration of reasonable further progress or attainment).

H. "Criteria pollutants" are the six principal pollutants for which national ambient air quality standards exist.

I. "Department" means the New Mexico environment department.

J. "Design concept" means the type of facility identified by the project, e.g., freeway, expressway, arterial highway, grade separated highway, reserved right-of-way rail transit, mixed traffic rail transit, exclusive busway, etc.

K. "Design scope" means the design aspects of a facility which will affect the proposed facility's impact on regional emissions, usually as they relate to vehicle or person-carrying capacity and control, e.g., number of lanes or tracks to be constructed or added, length of project, signalization, access control including approximate number and location of interchanges, preferential treatment for high-occupancy vehicles, etc.

L. "Donut areas" are geographic areas outside a metropolitan planning area boundary, but inside the boundary of a nonattainment area or maintenance area that contains any part of a metropolitan area(s). These areas are not isolated rural nonattainment area and maintenance areas.

M. "FHWA" means the federal highway administration of US DOT.

N. "FHWA/FTA project" means, for the purpose of this part, any highway or transit project which is proposed to receive funding assistance and approval through the federal-aid highway program or the federal mass transit program, or requires federal highway administration (FHWA) or federal transit administration (FTA) approval for some aspect of the project, such as connection to an interstate highway or deviation from applicable design standards on the interstate system.

O. "FTA" means the federal transit administration of US DOT.

P. "Highway project" is an undertaking to implement or modify a highway facility or highway-related program. Such an undertaking consists of all required phases necessary for implementation. For analytical purposes, it shall be defined sufficiently to:

(1) connect logical termini and be of sufficient length to address environmental matters on a broad scope;

(2) have independent utility or significance, i.e., be usable and be a reasonable expenditure even if no additional transportation improvements in the area are made; and

(3) not restrict consideration of alternatives for other reasonably foreseeable transportation improvements.

Q. "Hot-spot analysis" is an estimation of likely future localized CO, PM₁₀ or PM_{2.5} pollutant concentrations and a comparison of those concentrations to the national ambient air quality standards. Hot-spot analysis assesses impacts on a scale smaller than the entire nonattainment area or maintenance area, including, for example, congested roadway intersections and highways or transit terminals, and uses an air quality dispersion model to determine the effects of emissions on air quality.

R. "Increase the frequency or severity" means to cause a location or region to exceed a standard more often or to cause a violation at a greater concentration than previously existed or would otherwise exist during the future period in question, if the project were not implemented.

S. "Isolated rural nonattainment and maintenance areas" are areas that do not contain or are not part of any metropolitan planning area as designated under the transportation planning regulations. Isolated rural areas that do not have federally required metropolitan transportation plans or transportation improvement programs

(TIPs) and do not have projects that are part of the emissions in such areas are instead included in statewide TIPs. These are not donut areas.

T. "Limited maintenance plan" means a maintenance plan that US EPA has determined meets US EPA's limited maintenance plan policy criteria for a given national ambient air quality standard (NAAQS) and pollutant. To qualify for a limited maintenance plan, for example, an area must have a design value that is significantly below a given NAAQS, and it must be reasonable to expect that a NAAQS violation will not result from any level of future motor vehicle emissions growth.

U. "Maintenance area" means any geographic region of the United States previously designated nonattainment pursuant to the CAA amendments of 1990 and subsequently redesignated to attainment subject to the requirement to develop a maintenance plan under Section 175A of the CAA, as amended.

V. "Maintenance plan" means an implementation plan under Section 175A of the CAA, as amended.

W. "Memorandum of agreement" or "MOA" means a document agreed upon by cooperating parties.

X. "Metropolitan planning organization" or "MPO" means the policy board of an organization created as a result of the designation process in 23 U.S.C.134(d).

Y. "Milestone" has the meaning given in CAA Sections 182(g)(1) and 189(c) for serious and above ozone nonattainment areas and PM₁₀ nonattainment areas, respectively. For all other nonattainment areas, a milestone consists of an emissions level and the date on which that level is to be achieved as required by the applicable CAA provision for reasonable further progress towards attainment.

Z. "Motor vehicle emissions budget" is that portion of the total allowable emissions, defined in the submitted or approved control strategy implementation plan revision or maintenance plan for a certain date for the purpose of meeting reasonable further progress milestones or demonstrating attainment or maintenance of the national ambient air quality standards, for any criteria pollutant or its precursors, allocated by the state implementation plan to highway and transit vehicle use and emissions.

AA. "National ambient air quality standards" or "NAAQS" are those standards established pursuant to Section 109 of the CAA.

AB. "NEPA" means the National Environmental Policy Act of 1969, as amended, 42 U.S.C. 4321, *et seq.*

AC. "NEPA process completion" means, for the purposes of this part, with respect to FHWA or FTA, the point at which there is a specific action to make a determination that a project is categorically excluded, to make a finding of no significant

impact, or to issue a record of decision on a final environmental impact statement under NEPA.

AD. "NMDOT" means the New Mexico department of transportation or its successor agency or authority, as represented by the department secretary or his or her designee.

AE. "Nonattainment area" means any geographic region of the United States which has been designated as nonattainment under Section 107 of the CAA for any pollutant for which a national ambient air quality standard exists.

AF. "Project" means a highway project or transit project.

AG. "Recipient of funds designated under Title 23 U.S.C. or the federal transit laws" means any agency at any level of state, county, city, or regional government that routinely receives Title 23 U.S.C. or federal transit law funds to construct FHWA/FTA projects, operate FHWA/FTA projects or equipment, purchase equipment, or undertake other services or operations via contracts or agreements. This definition does not include private landowners or developers, or contractors or entities that are only paid for services or products created by their own employees.

AH. "Re-entrained road dust" means emissions which are produced by travel on paved and unpaved roads, including emissions from anti-skid and de-icing material(s).

AI. "Regionally significant project" means a transportation project (other than an exempt project) that is on a facility which serves regional transportation needs (such as access to and from the area outside of the region, major activity centers in the region, major planned developments such as new retail malls, sports complexes, etc., or transportation terminals, as well as most terminals themselves) and would normally be included in the modeling of a metropolitan area's transportation network, including at a minimum:

- (1) all principal arterial highways; and
- (2) all fixed guideway transit facilities that offer an alternative to regional highway travel.

AJ. "Standard" means a national ambient air quality standard.

AK. "State implementation plan" or "SIP" means an applicable implementation plan and the applicable portion (or portions) of the New Mexico state implementation plan, or most recent revision thereof, which has been approved under Section 110, or promulgated under Section 110(c), or promulgated or approved pursuant to regulations promulgated under Section 301(d) of the CAA and which

implements the relevant requirements of the CAA (see the definition for "applicable implementation plan").

AL. "Title 23 U.S.C." means Title 23 of the United States Code.

AM. "Transit" means mass transportation by bus, rail, or other conveyance which provides general or special service to the public on a regular and continuing basis. It does not include school buses or charter or sightseeing services.

AN. "Transit project" means an undertaking to: implement or modify a transit facility or transit-related program; purchase transit vehicles or equipment; or provide financial assistance for transit operations. It does not include actions that are solely within the jurisdiction of local transit agencies, such as changes in routes, schedules or fares. It may consist of several phases. For analytical purposes, it shall be defined inclusively enough to:

(1) connect logical termini and be of sufficient length to address environmental matters on a broad scope;

(2) have independent utility or independent significance, i.e., be a reasonable expenditure even if no additional transportation improvements in the area are made; and

(3) not restrict consideration of alternatives for other reasonably foreseeable transportation improvements.

AO. "Transportation control measure" or "TCM" means any measure that is specifically identified and committed to in the applicable implementation plan, including a substitute or additional TCM that is incorporated into the applicable SIP through the process established in CAA Section 176(c)(8), that is either one of the types listed in Section 108 of the CAA, or any other measure for the purpose of reducing emissions or concentrations of air pollutants from transportation sources by reducing vehicle use or changing traffic flow or congestion conditions. Notwithstanding the above, vehicle technology-based, fuel-based and maintenance-based measures which control the emissions from vehicles under fixed traffic conditions are not TCMs for the purposes of this part.

AP. "Transportation improvement program" or "TIP" means a transportation improvement program developed by a metropolitan planning organization under Title 23 U.S.C. 134(j).

AQ. "Transportation plan" means the official intermodal metropolitan transportation plan that is developed through the metropolitan planning process for the metropolitan planning area, developed pursuant to 23 CFR part 450.

AR. "Transportation project" is a highway project or a transit project.

AS. "US EPA" means the United States environmental protection agency.

AT. "US DOT" means the United States department of transportation.

AU. "**Written commitment**" means, for the purposes of this part, a written commitment that includes a description of the action to be taken; a schedule for the completion of the action; a demonstration that funding necessary to implement the action has been authorized by the appropriating or authorizing body; and an acknowledgment that the commitment is an enforceable obligation under the applicable implementation plan.

[20.2.99.7 NMAC - Rp, 20.2.99.7 NMAC, 09/15/14]

20.2.99.8 DOCUMENTS:

Documents incorporated and cited in this part may be viewed at the New Mexico environment department, air quality bureau, Santa Fe, NM.

[20.2.99.8 NMAC - Rp, 20.2.99.8 NMAC, 09/15/14]

20.2.99.9-20.2.99.100 [RESERVED]

20.2.99.101 APPLICABILITY:

A. Action applicability.

(1) Conformity determinations are required for:

(a) the adoption, acceptance, approval or support of transportation plans and transportation plan amendments developed pursuant to 23 CFR part 450 or 49 CFR part 613 by an MPO (or NMDOT in the absence of an MPO) or US DOT;

(b) the adoption, acceptance, approval or support of TIPs and TIP amendments developed pursuant to 23 CFR part 450 or 49 CFR part 613 by an MPO (or NMDOT in the absence of an MPO) or US DOT; and

(c) the approval, funding, or implementation of FHWA/FTA projects.

(2) Conformity determinations are not required under this part for individual projects which are not FHWA/FTA projects.

B. Geographic and pollutant applicability are set out in 20.2.99.2 NMAC (Scope).

C. Limitations. In order to receive any FHWA/FTA approval or funding actions, including NEPA approvals, for a project phase subject to this subpart, a currently conforming transportation plan and TIP must be in place at the time of project approval.

D. Grace period for new nonattainment areas. For areas or portions of areas which have been continuously designated attainment or not designated for any standard for ozone, CO, PM₁₀, PM_{2.5} or NO₂ since 1990 and are subsequently redesignated to nonattainment or designated nonattainment for any standard for any of these pollutants, the provisions of this subpart shall not apply with respect to that standard for 10 months following the effective date of final designation to nonattainment for each standard for such pollutant.

[20.2.99.101 NMAC - Rp, 20.2.99.109 NMAC, 09/15/14]

20.2.99.102 CONSULTATION:

A. 20.2.99.102 through 20.2.99.110 NMAC provide procedures for the interagency (federal, state, and local) consultation process, resolution of conflicts, and public consultation. Public consultation procedures will be developed in accordance with the requirements for public involvement in 23 CFR part 450. The affected agencies listed in Subsection C of 20.2.99.102 NMAC shall undertake a consultation process with each other prior to the development of: 1) conformity determinations; 2) major activities listed in 20.2.99.103 NMAC below; 3) specific major activities listed in 20.2.99.106 NMAC below; and 4) specific routine activities listed in 20.2.99.107 NMAC below. This consultation process shall follow the consultation procedures described in 20.2.99.105 NMAC below.

B. Prior to US EPA's approval of this part, any MPO (or NMDOT in the absence of an MPO) and NMDOT, before making any conformity determinations, shall provide reasonable opportunity for consultation with the department, the local transportation agency in the county where the nonattainment area or maintenance area is located, the local air quality agency in the county in which the nonattainment area or maintenance area is located, New Mexico FHWA division offices, FTA region 6 offices, and US EPA region 6, including consultation on the issues described in 20.2.99.103 NMAC. This opportunity for consultation shall be provided prior to the determination of conformity.

C. Affected agencies.

(1) Agencies which are affected by this part and which are required to participate in the consultation process are:

- (a)** the designated MPO for the nonattainment area or maintenance area;
- (b)** the department;
- (c)** NMDOT;
- (d)** the local transportation agency for the county or city in which the nonattainment area or maintenance area is located;

(e) the local transit agency for the city or county in which the nonattainment area or maintenance area is located;

(f) US EPA region 6;

(g) New Mexico FHWA division offices;

(h) FTA region 6;

(i) local air quality agencies; and

(j) any other organization or resource agency within the state responsible under state law for developing, submitting or implementing transportation-related provisions of an implementation plan.

(2) Agencies which may be affected by this part and which are entitled to participate in the interagency consultation process include:

(a) NMDOT district office for the county in which the nonattainment area or maintenance area is located; and

(b) the city or county government in the city or county where the nonattainment area or maintenance area is located.

D. Policy level points of contact and policy level meetings.

(1) The policy level points of contact for participating organizations are as follows:

(a) MPO: executive director or designee;

(b) department: secretary or designee;

(c) NMDOT: secretary or designee;

(d) NMDOT district office: district engineer;

(e) local government: chief administrative officer or designee;

(f) US EPA region 6: regional administrator or designee;

(g) FHWA NM division office: division administrator or designee;

(h) FTA region 6: regional administrator or designee; and

(i) other organizations: as directed in writing.

(2) Policy level meetings shall be those meetings to which the following individuals have been given ample notice thereof:

(a) policy level points of contact for all agencies which are required to participate in the conformity process; and

(b) the policy level points of contact for all agencies and organizations which are entitled to participate and have submitted a written request to participate in the conformity process.

[20.2.99.102 NMAC - Rp, 20.2.99.116 NMAC, 09/15/14]

20.2.99.103 AGENCY ROLES IN CONSULTATION:

Specific roles of the agencies participating in the interagency consultation process are listed below. Specific responsibilities of the agencies participating in the interagency consultation process are listed in 20.2.99.104 NMAC. For the purposes of this part, the lead agency for all conformity processes and procedures is that agency which is responsible for initiating the consultation process, preparing the initial and final drafts of the document or decision, and for assuring the adequacy of the interagency consultation process.

A. The department shall be the lead agency for the development of:

(1) applicable control strategy implementation plan revisions for the nonattainment area or maintenance area;

(2) the list of transportation control measures (TCMs) to be submitted as part of the SIP; and

(3) any amendments or revisions thereto.

B. In the case of areas in which an MPO has been established, the designated MPO for the nonattainment area or maintenance area shall be the lead agency for:

(1) development of the unified planning work program under 23 CFR 450.314;

(2) development of the transportation plan for the nonattainment area or maintenance area;

(3) development of the transportation improvement program (TIP) for the nonattainment area or maintenance area;

(4) any amendments or revisions thereto;

(5) any determinations of conformity under this part for which that MPO is responsible;

(6) choosing conformity tests and methodologies for isolated rural nonattainment and maintenance areas; and

(7) development of TCMs, in cooperation with the department.

C. In the case of areas in which an MPO has not been established, NMDOT shall be the lead agency for:

(1) development of the transportation plan for the nonattainment area or maintenance area;

(2) development of the TIP for the nonattainment area or maintenance area;

(3) any amendments or revisions thereto;

(4) any determinations of conformity under this part for which an MPO would otherwise be responsible;

(5) choosing conformity tests and methodologies for isolated rural nonattainment and maintenance areas; and

(6) development of TCMs, in cooperation with the department.

[20.2.99.103 NMAC - Rp, 20.2.99.117 NMAC, 09/15/14]

20.2.99.104 AGENCY RESPONSIBILITIES IN CONSULTATION:

A. The department shall be responsible for developing or providing:

(1) emissions inventories;

(2) motor vehicle emissions budgets;

(3) air quality modeling;

(4) attainment demonstrations;

(5) control strategy implementation plan revisions;

(6) regulatory TCMs; and

(7) updated motor vehicle emissions factors.

B. The designated MPO (or, in nonattainment areas or maintenance areas where an MPO has not been established, NMDOT) shall be responsible for:

- (1)** developing transportation plans and TIPs;
- (2)** developing and evaluating TCM transportation impacts;
- (3)** developing transportation and socioeconomic data and planning assumptions and providing such data and planning assumptions for use in air quality analysis to determine conformity of transportation plans, TIPs, and projects;
- (4)** monitoring regionally significant projects;
- (5)** developing system or facility-based or other programmatic (non-regulatory) TCMs;
- (6)** providing technical input on motor vehicle emissions budgets; and
- (7)** performing transportation modeling, regional emissions analyses and documentation of timely implementation of TCMs needed for conformity assessments.

C. NMDOT shall be responsible for:

- (1)** providing technical input on proposed revisions to motor vehicle emissions factors;
- (2)** distributing draft and final highway or transit project environmental documents to other agencies; and
- (3)** convening air quality technical review meetings on specific highway or transit plans, programs and projects when requested by other agencies or as needed.

D. FHWA New Mexico offices and FTA region 6 shall be responsible for:

- (1)** assuring timely action on final findings of conformity, after consultation with other agencies as provided in 20.2.99.102 through 20.2.99.110 NMAC; and
- (2)** providing guidance on conformity and the transportation planning process to agencies participating in the interagency consultation process.

E. US EPA region 6 shall be responsible for providing guidance on conformity criteria and procedures to agencies participating in the interagency consultation process.

[20.2.99.104 NMAC - Rp, 20.2.99.118 NMAC, 09/15/14]

20.2.99.105 GENERAL CONSULTATION PROCEDURES:

The following are the responsibilities of lead and participating agencies at each stage of the consultation process.

A. It shall be the affirmative responsibility of the lead agency to initiate the consultation process by:

- (1)** notifying other participants of the plan, program or project which must undergo the interagency consultation process;
- (2)** preparing an initial draft of the document being developed, together with necessary supporting information;
- (3)** convening consultation meetings and agendas when the initial draft of the document being developed is complete; and
- (4)** appointing the conveners of technical meetings.

B. It shall be the responsibility of the lead agency to facilitate the interagency consultation process by:

- (1)** conferring with all other agencies identified under Subsection C of 20.2.99.102 NMAC who are participating in the particular consultation process;
- (2)** providing all appropriate information needed for meaningful input to the participating agencies, including timely notification of all policy level and relevant technical meetings;
- (3)** soliciting early and continuing input from participating agencies;
- (4)** scheduling consultation meetings as specified in this part;
- (5)** conducting the consultation process as described in this section (20.2.99.105 NMAC);
- (6)** assuring that all relevant documents and information, including drafts of the document being developed and necessary background documents, are supplied to all participants in the consultation process in a timely manner;
- (7)** assuring, where required, policy-level contact with those agencies;
- (8)** considering the views of each participating agency and (except with respect to those actions for which only notification is required) responding to written comments in a timely, substantive written manner prior to making any final decision on the document that is the subject of the consultation process; and

(9) assuring that such views and written responses are made part of the record of any decision or action.

C. Regular consultation on major activities, as defined in 20.2.99.106 NMAC, shall include policy level meetings beginning no later than nine months prior to the date a final document is required (or the date on which such agency begins its own work on such document, if later) and continuing at regular, scheduled intervals no less frequently than quarterly. In addition, technical meetings shall be convened as necessary. Not later than 30 days prior to the adoption or approval of the final document or decision, the lead agency shall supply the final draft document, including all relevant information and documents, as appropriate, to the participating agencies.

D. Regular consultation on routine activities, as defined in 20.2.99.107 NMAC, shall include meetings at regular, scheduled intervals no less frequently than semiannually, and shall be on the agenda of at least one policy level meeting. In addition, technical meetings shall be convened as necessary.

E. The lead agency shall provide each final document for which a consultation process was required to be undertaken (including, but not limited to, the relevant portions of SIPs or implementation plan revisions, transportation plans, and TIPs, and determinations of conformity), together with all supporting information, as appropriate, to each participating agency within 14 calendar days after adopting or approving such document or making such determination. The lead agency may supply a checklist of available supporting information, which the participating agencies may use to request all or part of such supporting information, in lieu of generally distributing all supporting information.

F. It shall be the responsibility of each participating agency (those listed in Paragraph (1) of Subsection C of 20.2.99.102 NMAC) during the consultation process to:

(1) confer with the lead and other participating agencies (those listed in Paragraph (1) of Subsection C of 20.2.99.102 NMAC) in the consultation process;

(2) review and comment as appropriate (including comments in writing) on all proposed and final draft documents and decisions within 30 days of receipt;

(3) attend consultation and decision meetings;

(4) assure policy-level contact with other participants;

(5) provide input on any area of substantive expertise or responsibility (including, but not limited to planning assumptions, modeling, information on status of TCM implementation, and interpretation of regulatory or other requirements); and

(6) provide technical assistance to the lead agency or consultation process in accordance with this section when requested.

G. A meeting that is scheduled or required for another purpose may be used for the purposes of consultation if the conformity consultation purpose is specifically identified in the announcement for the meeting and all participating agencies are notified of such meeting.

[20.2.99.105 NMAC - Rp, 20.2.99.119 NMAC, 09/15/14]

20.2.99.106 CONSULTATION PROCEDURES FOR SPECIFIC MAJOR ACTIVITIES:

An interagency consultation process among the members of the lead and participating agencies shall be undertaken for the following specific major activities in accordance with all the procedures specified in 20.2.99.105 NMAC above. The lead agency for each activity shall be as specified, and the participating agencies shall be the agencies specified in Subsection C of 20.2.99.102 NMAC above.

A. Evaluation and choice of each model (or models) and associated methods and assumptions to be used in hot-spot analyses and regional emissions analyses, including vehicle miles traveled (VMT) forecasting. The lead agency shall be the MPO (or NMDOT in the absence of an MPO).

B. Determination of which minor arterials and other transportation projects should be considered "regionally significant" for the purposes of regional emissions analysis (in addition to those functionally classified as principal arterial or higher or fixed guideway systems or extensions that offer an alternative to regional highway travel), and which projects should be considered to have a significant change in design concept and design scope from the transportation plan or TIP. The lead agency shall be the MPO (or NMDOT in the absence of an MPO).

C. Evaluation of whether projects otherwise exempted from meeting the requirements of this part should be treated as non-exempt in cases where potential adverse emissions impacts may exist for any reason. The lead agency shall be the MPO (or NMDOT in the absence of an MPO).

D. Determination of whether past obstacles to implementation of TCMs which are behind the schedule established in the SIP have been identified and are being overcome, and whether state and local agencies with influence over approvals or funding for TCMs are giving maximum priority to approval or funding for TCMs. Consultation shall also include consideration of whether delays in TCM implementation necessitate revisions to the SIP to remove TCMs or substitute TCMs or other emission reduction measures. The lead agency shall be the MPO (or NMDOT in the absence of an MPO).

E. Determination of whether:

(1) the project is included in the regional emissions analysis supporting the currently conforming TIP's conformity determination, even if the project is not strictly "included" in the TIP for the purposes of MPO project selection or endorsement; and

(2) the project's design concept and design scope have changed significantly from those which were included in the regional emissions analysis, or in a manner which would significantly impact use of the facility; the lead agency shall be the MPO (or NMDOT in the absence of an MPO).

F. Determination of what forecast of VMT to use in establishing or tracking motor vehicle emissions budgets, developing transportation plans, TIPs, or making conformity determinations. The lead agency shall be the MPO (or NMDOT in the absence of an MPO).

G. Verification of what forecast of VMT to use in developing SIPs. The lead agency shall be the air quality bureau of the department.

H. Consultation, within the context of a memorandum of agreement (MOA), on emissions analysis for transportation activities which cross the borders of MPOs or nonattainment areas or air basins. The lead agency shall be NMDOT.

I. Evaluation of events which will trigger new conformity determinations. The lead agency shall be the MPO (or NMDOT in the absence of an MPO).

J. In the event that the metropolitan planning area does not include the entire nonattainment area or maintenance area, an interagency consultation process involving the designated MPO for the nonattainment area or maintenance area, NMDOT, local transportation agencies, and the department, shall be undertaken, in the context of an MOA, for cooperative planning and analysis for purposes of determining conformity of all projects outside the metropolitan area and within the nonattainment area or maintenance area. The lead agency shall be NMDOT.

K. In nonattainment areas or maintenance areas where more than one MPO is involved, such MPOs must develop an MOA or memorandum of understanding reflecting their consultation.

L. In nonattainment areas or maintenance areas where the MPO's jurisdiction does not cover the entire nonattainment area or maintenance area, the MPO and NMDOT must develop an MOA or a memorandum of understanding reflecting their consultation.

M. In choosing conformity tests and methodologies for isolated rural nonattainment and maintenance areas, the lead agency shall be the MPO (or NMDOT in the absence of an MPO).

20.2.99.107 CONSULTATION PROCEDURES FOR SPECIFIC ROUTINE ACTIVITIES:

An interagency consultation process among the lead and participating agencies shall be undertaken for the following routine activities in accordance with all the procedures specified in 20.2.99.105 NMAC. The lead agency for each activity shall be as specified, and the participating agencies shall be the agencies specified in Subsection C of 20.2.99.102 NMAC above or as specified for the specific activity. Not later than 30 days prior to the preparation of the final document or decision, the lead agency shall supply all relevant information and documents, as appropriate, to the participating agencies.

A. Identification of projects located at sites in PM₁₀ nonattainment areas which have vehicle and roadway emission and dispersion characteristics which are essentially identical to those at sites which have violations verified by monitoring, and therefore require quantitative PM₁₀ hot-spot analysis. The lead agency shall be either the MPO or NMDOT, in cooperation with the department.

B. Assumption of the location and design concept and design scope of projects which are disclosed to the MPO, as required by Subsection D of 20.2.99.107 NMAC, but whose sponsors have not yet decided these features in sufficient detail to perform the regional emissions analysis. The lead agency shall be either the MPO or NMDOT. Participating agencies shall include recipients of funds designated under Title 23 U.S.C. or the federal transit laws.

C. The design, schedule, and funding of research and data collection efforts and regional transportation model development by the MPO (e.g., household/travel transportation surveys). The lead agency shall be either NMDOT or the MPO, as applicable. Participating agencies shall be the MPO, the department, and NMDOT.

D. Regionally significant non-FHWA/FTA projects.

(1) Assurance that plans for construction of regionally significant projects which are not FHWA/FTA projects (including projects for which alternative locations, design concept and design scope, or the no-build option are still being considered), including all those sponsored by recipients of funds designated under Title 23 U.S.C. or the federal transit laws, are disclosed to the MPO on a regular basis, and assurance that any changes to those plans are immediately disclosed. The lead agency for this process shall be the agency which is implementing the project. Participating agencies shall be the MPO, the department, NMDOT, local transportation and transit agencies for the city or county in which the nonattainment area or maintenance area is located, and recipients of funds designated under Title 23 U.S.C. or the federal transit laws.

(2) The sponsor of any such regionally significant project, and any agency that becomes aware of any such project through applications for approval, permitting, funding or otherwise, shall disclose such project to the designated MPO for the nonattainment area or maintenance area and NMDOT in a timely manner. Such

disclosure shall be made not later than the first occasion on which any of the following actions is sought:

- (a) any policy board action necessary for the project to proceed;
- (b) the issuance of administrative permits for the facility or for construction of the facility;
- (c) the execution of a contract to design or construct the facility;
- (d) the execution of any indebtedness for the facility;
- (e) any final action of a board, commission or administrator authorizing or directing employees to proceed with design, permitting or construction of the project; or
- (f) the execution of any contract to design or construct or any approval needed for any facility that is dependent on the completion of a regionally significant project.

(3) In the case of any such regionally significant project that has not been disclosed in a timely manner to the designated MPO for the nonattainment area or maintenance area, NMDOT, and other interested agencies participating in the consultation process, such regionally significant project and all other regionally significant projects of that sponsor shall be deemed to be not included in the regional emissions analysis supporting the currently conforming TIP's conformity determination and to be not consistent with the motor vehicle emissions budget in the SIP. In the case of repeated failures to disclose regionally significant projects by an agency that becomes aware of any such project through applications for approval, permitting or funding, all other regionally significant projects within the jurisdiction of such agency shall be deemed to be not included in the regional emissions analysis supporting the currently conforming TIP's conformity determination and to be not consistent with the motor vehicle emissions budget in the SIP.

(4) For the purposes of this section (20.2.99.107 NMAC), the phrase "adopt or approve of a regionally significant project" means the first time any action necessary to authorizing a project occurs, such as any policy board action necessary for the project to proceed, the issuance of administrative permits for the facility or for construction of the facility, the execution of a contract to construct the facility, any final action of a board, commission or administrator authorizing or directing employees to proceed with construction of the project, or any written decision or authorization from the MPO that the project may be adopted or approved.

[20.2.99.107 NMAC - Rp, 20.2.99.121 NMAC, 09/15/14]

20.2.99.108 NOTIFICATION PROCEDURES FOR ROUTINE ACTIVITIES:

Notification of affected agencies (including those listed in Paragraph (1) of Subsection C of 20.2.99.102 NMAC) of transportation plan or TIP amendments which merely add or delete exempt projects shall be the affirmative responsibility of NMDOT or the MPO. Such notification shall be provided not later than 30 days prior to the preparation of the final draft of the document or decision. This process shall include:

A. notification of the affected agencies (including those listed in Paragraph (1) of Subsection C of 20.2.99.102 NMAC) early in the process of decision on the final document; and

B. supplying all relevant documents and information to the affected agencies (including those listed in Paragraph (1) of Subsection C of 20.2.99.102 NMAC).

[20.2.99.108 NMAC - Rp, 20.2.99.122 NMAC, 09/15/14]

20.2.99.109 CONFLICT RESOLUTION AND APPEALS TO THE GOVERNOR:

A. Any conflict among state agencies or between state agencies and an MPO shall be escalated to the governor if the conflict cannot be resolved by the heads of the involved agencies. Prior to such escalation, such agencies shall make every effort to resolve any differences, including personal meetings between the heads of such agencies or their policy-level representatives, to the extent possible.

B. The department has 14 calendar days to appeal a determination of conformity (or other policy decision under this part) to the governor after NMDOT or the MPO has notified the department of the resolution of all comments on such determination of conformity or policy decision. Such 14-day period shall commence when the MPO or NMDOT has confirmed receipt by the secretary of the department of the resolution of the comments of the department. If the department appeals to the governor, the final conformity determination must have the concurrence of the governor. The department must provide notice of any appeal under this subsection to the MPO and NMDOT. If the department does not appeal to the governor within 14 days, the MPO or NMDOT may proceed with the final conformity determination.

C. In the case of any comments with regard to findings of fiscal constraint or air quality effects of any determination of conformity, NMDOT has 14 calendar days to appeal a determination of conformity (or other policy decision under this part) to the governor after the MPO has notified the department or NMDOT of the resolution of all comments on such determination of conformity or policy decision. Such 14-day period shall commence when the MPO has confirmed receipt by the secretary of the department or NMDOT of the resolution of the comments of NMDOT. If NMDOT appeals to the governor, the final conformity determination must have the concurrence of the governor. NMDOT must provide notice of any appeal under this subsection to the MPO and the department. If NMDOT does not appeal to the governor within 14 days, the MPO may proceed with the final conformity determination.

D. The governor may delegate the role of hearing any such appeal under this subsection and of deciding whether to concur in the conformity determination to another official or agency within the state, but not to the head or staff of the department or any local air quality agency, NMDOT, a state transportation commission or board, any agency that has responsibility for one of these functions or an MPO.

[20.2.99.109 NMAC - Rp, 20.2.99.123 NMAC, 09/15/14]

20.2.99.110 PUBLIC CONSULTATION PROCEDURES:

A. Affected agencies making conformity determinations on transportation plans, programs and projects shall establish a proactive public involvement process which provides opportunity for public review and comment by, at a minimum, providing reasonable public access to technical and policy information considered by the agency at the beginning of the public comment period and prior to taking formal action on a conformity determination for all transportation plans, TIPs, and projects, consistent with the requirements of 23 CFR part 450, including Sections 450.316 (a), 450.322(c), and 450.324(c) as in effect on the date of adoption of this part. Any charges imposed for public inspection and copying should be consistent with the fee schedule contained in 49 CFR 7.43. In addition, any such agency must specifically address in writing all public comments which allege that known plans for a regionally significant project which is not receiving FHWA or FTA funding or approval have not been properly reflected in the emissions analysis supporting a proposed conformity finding for a transportation plan or TIP. Any such agency shall also provide opportunity for public involvement in conformity determinations for projects to the extent otherwise required by law (e.g. NEPA).

B. The opportunity for public involvement provided under this section (20.2.99.110 NMAC) shall include access to information, emissions data, analyses, models and modeling assumptions used to perform a conformity determination, and the obligation of any such agency to consider and respond in writing to significant comments.

C. No transportation plan, TIP or project may be found to conform unless the determination of conformity has been subject to a public involvement process in accordance with this section, without regard to whether the US DOT has certified any process under 23 CFR part 450.

[20.2.99.110 NMAC - Rp, 20.2.99.124 NMAC, 09/15/14]

20.2.99.111 ENFORCEABILITY OF DESIGN CONCEPT AND DESIGN SCOPE AND PROJECT-LEVEL MITIGATION AND CONTROL MEASURES:

A. Prior to determining that a transportation project is in conformity, the MPO, other recipient of funds designated under Title 23 U.S.C. or the federal transit laws, FHWA or FTA must obtain from the project sponsor or operator written commitments to implement in the construction of the project and operation of the resulting facility or service any project-level mitigation or control measures which are identified as

conditions for NEPA process completion with respect to local CO, PM₁₀, or PM_{2.5} impacts. Before a conformity determination is made, written contractual commitments must also be obtained for project-level mitigation or control measures which are conditions for making conformity determinations for a transportation plan or TIP and included in the project design concept and design scope which is used in the regional emissions analysis or used in the project-level hot-spot analysis.

B. Project sponsors voluntarily committing to mitigation measures to facilitate positive conformity determinations shall provide written contractual commitments and must comply with the obligations of such commitments.

C. Written contractual commitments to mitigation or control measures shall be obtained prior to a positive conformity determination, and project sponsors must comply with such commitments.

D. If the MPO or project sponsor believes the mitigation or control measure is no longer necessary for conformity, the project sponsor or operator may be relieved of its obligation to implement the mitigation or control measure if it can demonstrate that the applicable hot-spot requirements, motor vehicle emissions budget requirements and interim emissions requirements are satisfied without the mitigation or control measure, and so notifies the agencies involved in the interagency consultation process required under 20.2.99.102 through 20.2.99.110 NMAC. The MPO (or NMDOT in the absence of an MPO) and US DOT must find that the transportation plan and TIP still satisfy the applicable requirements for motor vehicle emissions budgets and interim motor vehicle emissions budgets, and that the project still satisfies the requirements for hot spots, and therefore that the conformity determinations for the transportation plan, TIP and project are still valid. This finding is subject to the applicable public consultation requirements in 20.2.99.110 NMAC for conformity determinations for projects.

[20.2.99.111 NMAC - Rp, 20.2.99.150 NMAC, 09/15/14]

20.2.99.112 SAVINGS PROVISION:

The federal conformity rules under 40 CFR Part 93 Subpart A, in addition to any existing applicable state requirements, establish the conformity criteria and procedures necessary to meet the requirements of CAA Section 176(c) until such time as this conformity implementation plan revision is approved by US EPA. Following US EPA approval of this revision to the SIP (or a portion thereof), the approved (or approved portion of) the department's criteria and procedures would govern conformity determinations and the federal conformity regulations contained in 40 CFR Part 93 would apply only for the portion, if any, of the department's conformity provisions that is not approved by US EPA. In addition, any previously applicable SIP requirements relating to conformity remain enforceable until the department revises its SIP to specifically remove them and that revision is approved by US EPA.

[20.2.99.112 NMAC - Rp, 20.2.99.154 NMAC, 09/15/14]

PART 100: GREENHOUSE GAS REDUCTION PROGRAM [REPEALED]

[This part was repealed on June 7, 2012]

PART 101: CARBON DIOXIDE EMISSION STANDARDS FOR COAL-FIRED ELECTRIC GENERATING FACILITIES

20.2.101.1 ISSUING AGENCY:

Environmental Improvement Board.

[20.2.101.1 NMAC – N, 01/01/2023]

20.2.101.2 SCOPE:

All geographic areas within the jurisdiction of the Environmental Improvement Board.

[20.2.101.2 NMAC – N, 01/01/2023]

20.2.101.3 STATUTORY AUTHORITY:

Environmental Improvement Act, Section 74-1-1 to 74-1-16 NMSA 1978, including specifically Paragraph (4) of Subsection A of Section 74-1-8 NMSA 1978, and Air Quality Control Act, Sections 74-2-1 to 74-2-22 NMSA 1978, including specifically Subparagraph (b) of Paragraph (1) of Subsection B of Section 74-2-5 NMSA 1978.

[20.2.101.3 NMAC - N, 01/01/2023]

20.2.101.4 DURATION:

Permanent.

[20.2.101.4 NMAC - N, 01/01/2023]

20.2.101.5 EFFECTIVE DATE:

January 1, 2023, except where a later date is cited at the end of a section.

[20.2.101.5 NMAC - N, 01/01/2023]

20.2.101.6 OBJECTIVE:

The objective of this Part is to establish a carbon dioxide (CO₂) emission standard for coal-fired electric generating facilities with an original installed capacity exceeding three hundred megawatts.

[20.2.101.6 NMAC - N, 01/01/2023]

20.2.101.7 DEFINITIONS:

In addition to the terms defined in 20.2.2.7 NMAC (Definitions), as used in this Part, the following terms apply:

A. "Affected Electric Generating Facility or Affected EGF" means a new or existing electric generating facility with an original installed capacity exceeding 300 megawatts and that uses coal as a fuel source.

B. "Continuous emission monitoring system or CEMS" means the equipment used to sample, analyze, measure, and provide, by means of readings recorded at least once every 15 minutes (using an automated data acquisition and handling system), a permanent record of CO₂ emissions or stack gas volumetric flow rate.

C. "Department" means the New Mexico environment department.

D. "Electric generating facility (EGF)" means a facility that generates electricity and includes all appurtenances and pollution control devices, and including, but not limited to all processes and equipment used to separate, compress, and transport CO₂ or other pollutants to offsite locations. A facility may include one or more electric generating units (EGU) at the same location.

E. "Megawatt-hour (MWh)" means the net generation from the affected EGU as determined by 40 CFR Part 60.5540.

F. "Operating day" means a calendar day during which any fuel is combusted in the affected EGU at any time.

G. "Operator" means the person or persons responsible for the overall operation of an affected EGF.

H. "Owner" means the person or persons who own all or part of an affected EGF.

I. "Rolling average" means the weighted average of all data, meeting quality assurance and quality control requirements normalized pursuant to this Part, collected during the applicable averaging period. A 365-operating-day rolling average is calculated by adding the hourly mass emissions over the previous 365 operating days and dividing that sum by the hourly generation (MWh-net) during the same period. A 30-operating-day rolling average is calculated by adding the hourly mass emissions over the previous 30 operating days and dividing that sum by the hourly generation (MWh-net) during the same period.

[20.2.101.7 NMAC - N, 01/01/2023]

20.2.101.8 SEVERABILITY:

If any provision of this Part, or the application of this provision to any person or circumstance is held invalid, the remainder of this Part, or the application of this provision to any person or circumstance other than those as to which it is held invalid, shall not be affected thereby.

[20.2.101.8 NMAC - N, 01/01/2023]

20.2.101.9 CONSTRUCTION:

This Part shall be liberally construed to carry out its purpose.

[20.2.101.9 NMAC - N, 01/01/2023]

20.2.101.10 SAVINGS CLAUSE:

Repeal or supersession of prior versions of this Part shall not affect administrative or judicial action initiated under those prior versions.

[20.2.101.10 NMAC - N, 01/01/2023]

20.2.101.11 COMPLIANCE WITH OTHER REGULATIONS:

Compliance with this Part does not relieve a person from the responsibility to comply with other applicable federal, state, or local laws, rules, or regulations, including more stringent controls.

[20.2.101.11 NMAC - N, 01/01/2023]

20.2.101.12 DOCUMENTS:

Documents incorporated and cited in this Part may be viewed at the New Mexico environment department air quality bureau.

[20.2.101.12 NMAC - N, 01/01/2023]

20.2.101.13-20.2.101.110 [RESERVED]

20.2.101.111 APPICABILITY:

This Part shall apply to new and existing affected electric generating facilities.

[20.2.101.111 NMAC - N, 01/01/2023]

20.2.101.112 EMISSION STANDARD:

After January 1, 2023, the owner or operator of an affected EGF shall limit CO2 emissions from the EGF to no more than 1,100 pounds per megawatt-hour on a 365-

operating-day rolling average basis. The calculation shall be performed within 15 days of the end of each calendar month. The calculation of pounds of CO₂ emitted must include all CO₂ emitted during the compliance period, including but not limited to emissions during startup, shutdown, maintenance, and malfunction. The calculation of megawatt-hours generated during the compliance period must include all net megawatt-hours generated by the affected EGF.

[20.2.101.112 NMAC - N, 01/01/2023]

20.2.101.113 MONITORING REQUIREMENTS:

A. Owners or operators of an affected EGF shall prepare a monitoring plan to quantify the hourly CO₂ mass emission rate in tons per hour (tph) in accordance with the applicable provisions of this Section and 40 CFR Part 75.53(g). The monitoring plan shall be submitted to the Department and in place prior to reporting emission data and the results of the monitoring system certification test under Subsection A of 20.2.101.113 NMAC. The monitoring plan shall be updated as appropriate.

B. Owners or operators shall determine the hourly CO₂ mass emissions in pounds or tons from each affected electric generating unit (EGU) according to paragraphs (1) through (5) of Subsection B of 20.2.101.113 NMAC.

(1) Owners or operators shall install, certify, operate, maintain, and calibrate a CO₂ continuous emission monitoring system (CEMS) to directly measure and record the hourly average CO₂ concentration in the affected EGU exhaust gas emitted to the atmosphere, and a flow monitoring system to measure hourly average stack gas flow rates, in accordance with 40 CFR Part 75.10(a)(3)(i). As an alternative to direct measurement of the CO₂ concentration, provided that the affected EGU does not employ carbon separation (e.g., carbon capture and storage), owners or operators may use data from a certified oxygen (O₂) monitor to calculate the hourly average CO₂ concentration in accordance with 40 CFR Part 75.10(a)(3)(iii). If the CO₂ concentration is measured on a dry basis, owners or operators shall also install, certify, operate, maintain, and calibrate a continuous moisture monitoring system, in accordance with 40 CFR Part 75.11(b). Alternatively, owners or operators may either use an appropriate fuel-specific default moisture value from 40 CFR Part 75.11(b) or submit a petition to the Department for a site-specific default moisture value.

(2) For each CEMS used to comply with this Part, owners or operators shall meet the applicable certification and quality assurance procedures in 40 CFR Part 75.20 and Appendices A and B of 40 CFR Part 75.

(3) Owners or operators shall use only unadjusted exhaust gas volumetric flow rates to determine the hourly CO₂ mass emission rate from each affected EGU. Owners or operators shall not apply the bias adjustment factors described in Section 7.6.5 of Appendix A to 40 CFR Part 75 to the exhaust gas flow rate data.

(4) Owners or operators shall select an appropriate reference method to set up the flow monitor and perform the ongoing Relative Accuracy Test Audit (RATA), in accordance with 40 CFR Part 75. If owners or operators use a Type-S pitot tube or a pitot tube assembly for the flow RATA, owners or operators shall calibrate the pitot tube or pitot tube assembly. Owners or operators may not use the 0.84 default Type-S pitot tube coefficient specified in Method 2.

(5) Owners or operators shall calculate the hourly CO₂ mass emissions (in tons) as described in Subparagraphs (a) through (c) of Paragraph (5) of Subsection B of 20.2.101.113 NMAC. Owners and operators shall only perform this calculation for valid operating hours, as defined in 40 CFR Part 60.5540(a)(1).

(a) Begin with the hourly CO₂ mass emission rate (tons/hour), obtained either from Equation F-11 of Appendix F of 40 CFR Part 75 (if the CO₂ concentration is measured on a wet basis), or by following the procedure in section 4.2 of Appendix F of 40 CFR Part 75 (if the CO₂ concentration is measured on a dry basis).

(b) Next, multiply each hourly CO₂ mass emission rate by the EGU or stack operating time in hours (as defined in 40 CFR Part 72.2), to calculate the tons of CO₂.

(c) The hourly CO₂ emission rate and the EGU (or stack) operating hours used to calculate the CO₂ emission rate shall be recorded under 20.2.101.114 NMAC and shall be reported as required under 20.2.101.115 NMAC.

C. Owners or operators shall install, calibrate, maintain, and operate a sufficient number of watt meters to continuously measure and record the hourly net electric output from each affected EGU. These measurements shall be performed using 0.2 class electricity metering instrumentation and calibration procedures as specified under ANSI Standards No. C12.20 (see 40 CFR Part 60.17).

D. Consistent with 40 CFR Part 60.5520, if two or more affected EGUs serve a common electric generator, the owners or operators shall apportion the combined hourly net energy output to the individual affected EGU according to the fraction of the total steam load contributed by each EGU. Alternatively, if the EGUs are identical, owners or operators may apportion the combined hourly net electrical load to the individual EGUs according to the fraction of the total heat input contributed by each EGU.

E. In accordance with 40 CFR Part 60.13(g) and 40 CFR Part 60.5520, if an owner or operator of two or more affected EGUs that utilize the CEMS provisions in Subsection B of 20.2.101.113 NMAC share a common exhaust stack, the owners or operators may monitor the hourly CO₂ mass emissions at the common stack, in lieu of monitoring each EGU separately. If an owner or operator chooses this option, the hourly net generation shall be the sum of the hourly net generation for each individual affected EGU, and the owner or operator shall express the operating time as "stack operating hours" (as defined in 40 CFR Part 72.2). If an owner or operator demonstrates

compliance with the emission standard of this Part at the common exhaust stack, each affected EGU utilizing the stack shall be determined to be in compliance.

F. In accordance with 40 CFR Part 60.13(g) and 40 CFR Part 60.5520, if an owner or operator of an affected EGU utilizing the CEMS provisions in Subsection B of 20.2.101.113 NMAC has exhaust gas that is emitted to the atmosphere through multiple stacks (or if the exhaust gases are routed to a common stack through multiple ducts and owners or operators elect to monitor the ducts), the owner or operator shall monitor the hourly CO₂ mass emissions and the "stack operating time" (as defined in 40 CFR Part 72.2) at each stack or duct separately. Owners or operators shall determine compliance with the emission standard of this Part by summing the CO₂ mass emissions measured at the individual stacks or ducts and dividing by the total net generation for the affected EGU.

G. Operating hours in which CO₂ mass emission rates are calculated using maximum potential values are not "valid operating hours" (as defined in 40 CFR Part 60.5540(a)(1)) and shall not be used in the compliance determinations under 40 CFR Part 60.5540.

[20.2.101.113 NMAC - N, 01/01/2023]

20.2.101.114 RECORDKEEPING REQUIREMENTS:

A. Owners or operators shall maintain records of the information used to demonstrate compliance with this Part as specified in 40 CFR Parts 60.7(b) and 40 CFR Part 60.7(f) and shall comply with the applicable recordkeeping requirements of subpart F of 40 CFR Part 75. Owners or operators not subject to the requirements of 40 CFR Part 75 shall, at minimum, keep the records required under 40 CFR Part 60.5560(b)(2).

B. Owners or operators shall keep records of the calculations performed to determine the hourly and daily total CO₂ mass emissions in tons for:

- (1) Each operating day for each affected EGU; and
- (2) Each monthly rolling 30-operating-day period.

C. Consistent with 40 CFR Part 60.5520, owners or operators shall keep records of the applicable data recorded and the calculations performed and used to determine the gross energy output for each operating month for each affected EGU.

D. Owners or operators shall keep records of the calculations performed to determine any site-specific carbon-based F-factors used in the emissions calculations (if applicable).

E. Owners or operators shall maintain records of the information used to demonstrate compliance with Section 114, of 20.2.101 NMAC and as specified in 40 CFR Part 60.5560.

F. Owners or operators shall comply with the following requirements for record retention:

- (1) records shall be in a form suitable and readily available for review;
- (2) owners or operators shall maintain each record for ten years after the date of conclusion of each compliance period; and
- (3) Owners or operators shall maintain a record onsite for at least 5 years after the date of each measurement, maintenance, corrective action, report, or record, according to 40 CFR Part 60.7. Records that are accessible from a central location by a computer or other means that instantly provide access at the site meet this requirement. Owners or operators may maintain the records offsite for the remaining year as required by Subsection F of 20.2.101.114 NMAC.

[20.2.101.114 NMAC - N, 01/01/2023]

20.2.101.115 REPORTING REQUIREMENTS:

A. Owners or operators shall comply with the following reporting requirements:

(1) Owners or operators shall submit electronic quarterly reports. For the first 12 months, owners or operators shall submit an electronic quarterly report no later than 30 days after the end of each quarter. Thereafter, owners or operators shall submit a report for each subsequent calendar quarter, no later than 30 days after the end of the quarter.

(2) Owners or operators shall include the following information in each quarterly report:

(a) each rolling average CO₂ mass emission rate for which the last (twelfth) operating month in a 12-operating-month compliance period falls within the calendar quarter. Except as provided in this part, owners or operators shall calculate each average CO₂ mass emission rate for the compliance period according to the procedures in 40 CFR Part 60.5540. Owners or operators shall report the dates (month and year) of the first and twelfth operating months in each compliance period for which owners or operators performed a CO₂ mass emission rate calculation. Owners or operators shall identify compliance periods that ended in each quarterly report;

(b) if one or more compliance periods end in the quarter, owners or operators shall identify each operating month in the calendar quarter where owners or operators of an affected EGF violated the emission standard of this Part;

(c) if one or more compliance periods end in the quarter and there are no violations for an affected EGF, the owners or operators shall include an affirmative compliance statement in the quarterly report; and

(d) the percentage of valid operating hours in each 12-operating-month compliance period (i.e., the total number of valid operating hours (as defined in 40 CFR Part 60.5540(a)(1)) in that period divided by the total number of operating hours in that period and multiplied by one hundred percent).

(3) In the final quarterly report for each calendar year, owners or operators shall include the potential electric output of the affected EGU and the net energy output over the four quarters of the calendar year, in accordance with 40 CFR Part 60.5520.

B. Owners or operators shall meet all applicable reporting requirements under subpart G of 40 CFR Part 75 with reporting beginning January 1, 2023, or the date on which the EGF becomes an affected facility under this Part.

C. If any required monitoring system has not been provisionally certified by the applicable date on which emissions data reporting is required to begin under paragraph 40 CFR Part 60.55(c)(3), the maximum (or in some cases, minimum) potential value for the parameter measured by the monitoring system shall be reported until the required certification testing is successfully completed, in accordance with 40 CFR Part 75.4(j), 40 CFR Part 75.37(b), or section 2.4 of Appendix D of 40 CFR Part 75 (as applicable).

PART 102-299: [RESERVED]

PART 300: REPORTING OF GREENHOUSE GAS EMISSIONS [REPEALED]

[This part was repealed on March 14, 2012]

PART 301: GREENHOUSE GAS REPORTING - VERIFICATION REQUIREMENTS [REPEALED]

[This part was repealed on March 14, 2012]

PART 302-349: [RESERVED]

PART 350: GREENHOUSE GAS CAP-AND-TRADE PROVISIONS [REPEALED]

[This part was repealed on March 14, 2012]

CHAPTER 3: RADIATION PROTECTION

PART 1: GENERAL PROVISIONS

20.3.1.1 ISSUING AGENCY:

Environmental Improvement Board.

[20.3.1.1 NMAC - Rp, 20.3.1.1 NMAC, 04/30/2009]

20.3.1.2 SCOPE:

Except as otherwise specifically provided, this part applies to all persons who receive, possess, use, transfer, own or acquire any source of radiation; provided, however, that nothing in this part shall apply to any person to the extent that such person is subject to regulations by the NRC. Regulation by the state of source material, byproduct material and special nuclear material in quantities not sufficient to form a critical mass is subject to the provisions of the agreement between the state and the NRC and 10 CFR Part 150.

[20.3.1.2 NMAC - Rp, 20.3.1.2 NMAC, 04/30/2009]

20.3.1.3 STATUTORY AUTHORITY:

Sections 74-1-9, 74-3-5 and 74-3-9 NMSA 1978.

[20.3.1.3 NMAC - Rp, 20.3.1.3 NMAC, 04/30/2009]

20.3.1.4 DURATION:

Permanent.

[20.3.1.4 NMAC - Rp, 20.3.1.4 NMAC, 04/30/2009]

20.3.1.5 EFFECTIVE DATE:

April 30, 2009, unless a later date is cited at the end of a section.

[20.3.1.5 NMAC - Rp, 20.3.1.5 NMAC, 04/30/2009]

20.3.1.6 OBJECTIVES:

A. To protect the public and occupationally exposed individuals from unnecessary exposure to ionizing radiation.

B. To provide for the safe possession and use of radioactive materials and radiation machines in keeping with the ALARA principle, as defined in 20.3.4.7 NMAC.

[20.3.1.6 NMAC - Rp, 20.3.1.6 NMAC, 04/30/2009]

20.3.1.7 DEFINITIONS:

As used in these regulations, these terms have the definitions as set forth below.

A. "Accelerator" (See particle accelerator).

B. "Accelerator produced material" means any material made radioactive by exposure to radiation from a particle accelerator.

C. "Act" means the Radiation Protection Act (Sections 74-3-1 through 74-3-16, NMSA 1978).

D. "Agreement state" means any state with which the United States nuclear regulatory commission (NRC) or the United States atomic energy commission (AEC) has entered into an effective agreement under Section 274b of the Atomic Energy Act, as amended (73 Stat. 689).

E. "Board" means the environmental improvement board.

F. "Byproduct material" means:

(1) any radioactive material, (except special nuclear material), yielded in or made radioactive by exposure to the radiation incident to the process of producing or utilizing special nuclear material;

(2) the tailings or wastes produced by the extraction or concentration of uranium or thorium from any ore processed primarily for its source material content, including discrete surface wastes resulting from uranium or thorium solution extraction processes; underground ore bodies depleted by these solution extraction operations do not constitute byproduct material within this definition;

(3) any discrete source of radium-226 that is produced, extracted or converted after extraction, before, on, or after August 8, 2005, for use for a commercial, medical or research activity;

(4) any material that:

(a) has been made radioactive by use of a particle accelerator; and

(b) is produced, extracted or converted after extraction, before, on, or after August 8, 2005, for use for a commercial, medical or research activity; or

(5) any discrete source of naturally occurring radioactive material, other than source material, that

(a) NRC, in consultation with the administrator of the environmental protection agency (EPA), the secretary of energy, the secretary of homeland security, and the head of any other appropriate federal agency, determines would pose a threat similar to the threat posed by a discrete source of radium-226 to the public health and safety or the common defense and security; and

(b) before, on, or after August 8, 2005, is extracted or converted after extraction for use in a commercial, medical or research activity.

G. "Calibration" means the quantitative evaluation and adjustment, as deemed necessary by the department, of radiation measuring instruments by a department approved laboratory. Calibration includes the determination of:

(1) the response or reading of an instrument relative to a series of known radiation values over the range of the instrument, or

(2) the strength of a source of radiation relative to a standard using national institute of standards and technology (NIST) traceable sources and approved techniques.

H. "CFR" means code of federal regulations.

I. "Chelating agent" means amine polycarboxylic acids, hydroxycarboxylic acids, gluconic acid and polycarboxylic acids.

J. "Commercial waste disposal" means disposal of radioactive waste as a business enterprise.

K. "Consortium" means an association of medical use licensees and a PET radionuclide production facility in the same geographical area that jointly own or share in the operation and maintenance cost of the PET radionuclide production facility that produces PET radionuclides for use in producing radioactive drugs within the consortium for noncommercial distributions among its associated members for medical use. The PET radionuclide production facility within the consortium must be located at an educational institution or a federal facility or a medical facility.

L. "Council" means the radiation technical advisory council (RTAC).

M. "Curie" means that amount of radioactive material which disintegrates at the rate of 37 billion atoms per second.

N. "Cyclotron" means a particle accelerator in which the charged particles travel in an outward spiral or circular path. A cyclotron accelerates charged particles at energies

usually in excess of 10 megaelectron volts and is commonly used for production of short half-life radionuclides for medical use.

O. "Decommission" means to remove a facility or site safely from service and reduce residual radioactivity to a level that permits:

(1) release of the property for unrestricted use and termination of the license;
or

(2) release of the property under restricted conditions and termination of the license.

P. "Department" means the environment department, its successors, or its predecessors, the environmental improvement agency, or the environmental protection division of the environment department.

Q. "Depleted uranium" means the source material uranium which the isotope uranium-235 is less than 0.711 weight percent of the total uranium present. Depleted uranium does not include special nuclear material.

R. "Discrete source" means a radionuclide that has been processed so that its concentration within a material has been purposely increased for use for commercial, medical or research activities.

S. "DOE" means the United States department of energy established by the Department of Energy Organization Act (Public Law 95-91, 91 Stat. 565, 42 U.S.C. 7101 et. seq.) to the extent that the DOE, or its duly authorized representatives, exercises functions formerly vested in the United States atomic energy commission (AEC), its chairman, members, officers and components and transferred to the United States energy research and development administration (ERDA) and to the administrator thereof pursuant to sections 104(b), (c) and (d) of the Energy Reorganization Act (Public Law 93-438, 88 Stat. 1233 at 1237, 42 U.S.C. 5814) and retransferred to the secretary of energy pursuant to section 301(a) of the Department of Energy Organization Act (Public Law 95-91, 91 Stat. 565 at 577-578, 42 U.S.C. 7151).

T. "DOT" means the United States department of transportation.

U. "EPA" means the United States environmental protection agency.

V. "FDA" means the United States food and drug administration.

W. "Former U.S. atomic energy commission (AEC) or NRC licensed facilities" means nuclear reactors, nuclear fuel reprocessing plants, uranium enrichment plants or critical mass experimental facilities where AEC or NRC licenses have been terminated.

X. "Government agency" means any state or federal executive department, commission, independent establishment, corporation, wholly or partly owned by any state or the United States of America which is an instrumentality of the state or United States, or any board, bureau, division, service, office, officer, authority, administration or other establishment in the executive branch of the government.

Y. "Hazardous waste" means those wastes designated as hazardous by EPA regulations in 40 CFR Part 261.

Z. "Healing arts" means those professional disciplines authorized by the laws of this state to use x-rays or radioactive material in the diagnosis or treatment of human or animal disease.

AA. "Human use" means the internal or external administration of radiation or radioactive material to human beings for the purpose of medical diagnosis or therapy.

BB. "Individual" means any human being.

CC. "Inspection" means an official examination or observation including, but not limited to, tests, surveys and monitoring to determine compliance with rules, regulations, orders, requirements and license or registration conditions of the department.

DD. "License" means a license issued by the department in accordance with 20.3 NMAC.

EE. "Licensed material" means radioactive material received, possessed, used, transferred or disposed of under a general or specific license issued by the department.

FF. "Licensee" means the holder of a license.

GG. "Licensing state" means any state with regulations equivalent to the suggested state regulations for control of radiation (SSRCR) relating to, and an effective program for, the regulatory control of NARM (as defined in 20.3.1.7 NMAC) and which has been granted final designation by the conference of radiation control program directors, incorporated (CRCPD).

HH. "Lost or missing licensed material" means licensed material whose location is unknown. This definition includes, but is not limited to, material that has been shipped but has not reached its planned destination and whose location cannot be readily traced in the transportation system.

II. "Major processor" means a user processing, handling or manufacturing radioactive material exceeding type A quantities as unsealed sources or material, or exceeding 4 times type B quantities as sealed sources, but does not include nuclear

medicine programs, universities, industrial radiographers or small industrial programs. Type A and B quantities are defined in 10 CFR Part 71.4.

JJ. "Mixed waste" contains both hazardous waste (as defined by Resource Conservation and Recovery Act (RCRA) and its amendments) and radioactive waste (as defined by Atomic Energy Act (AEA) and its amendments). It is jointly regulated by NRC or NRC's agreement states and EPA or EPA's RCRA authorized states. The fundamental and most comprehensive statutory definition is found in the Federal Facilities Compliance Act (FFCA) where Section 1004(41) was added to RCRA: "The term 'mixed waste' means waste that contains both hazardous waste and source, special nuclear, or byproduct material subject to the Atomic Energy Act."

KK. "NARM" means any naturally occurring or accelerator-produced radioactive material. It does not include source or special nuclear material.

LL. "Natural radioactivity" means radioactivity of naturally occurring nuclides.

MM. "NRC" means the United States nuclear regulatory commission or its duly authorized representatives.

NN. "Ore refineries" means all processors of a radioactive material ore including uranium mills or other source material extraction facilities.

OO. "Particle accelerator" (accelerator) means any machine capable of accelerating electrons, protons, deuterons or other charged particles in a vacuum and of discharging the resultant particulate or other radiation into a medium at energies usually in excess of 1 megaelectron volt. For purposes of this definition, "accelerator" is an equivalent term. Particle accelerators which intentionally produce radioactive materials or produce radioactive materials incidental to the operation of an accelerator shall be subject to the licensing requirements in 20.3.3 NMAC. Particle accelerators which produce radiation for research, diagnostic or therapeutic purposes shall be subject to the registration requirements in 20.3.2 and 20.3.9 NMAC.

PP. "Person" means:

(1) any individual, corporation, partnership, firm, association, trust, estate, public or private institution, group, government agency other than NRC or DOE, any state or any political subdivision of or any political entity within a state, any foreign government or nation or any political subdivision of any such government or nation, or other entity; and

(2) any legal successor, representative, agent or agency of the foregoing.

QQ. "PET" means positron emission tomography.

RR. "Qualified expert" means an individual having the knowledge and training to measure ionizing radiation, to evaluate safety techniques, and to advise regarding radiation protection needs; for example, individuals certified in the appropriate field by the American board of radiology (ABR), or the American board of health physics (ABHP), or the American board of medical physics (ABMP) or those having equivalent qualifications. With reference to the calibration of radiation therapy equipment, an individual having, in addition to the above qualifications, training and experience in the clinical applications of radiation physics to radiation therapy; for example, individuals certified in therapeutic radiological physics or x-ray and radium physics by the ABR, or those having equivalent qualifications. With reference to providing medical physics services to certified mammographic facilities, such individuals must meet the requirements as defined by the FDA.

SS. "Radiation" (ionizing radiation), as used in this chapter, means alpha particles, beta particles, gamma rays, x-rays, neutrons, high-speed electrons, high-speed protons and other particles capable of producing ions. Radiation, as used in this chapter, does not include non-ionizing radiation, such as radiowaves or microwaves, visible, infrared or ultraviolet light.

TT. "Radiation machine" means any device capable of producing radiation except those devices with radioactive material as the only source of radiation.

UU. "Radiation safety officer" means one who has the knowledge and responsibility to apply appropriate radiation protection regulations.

VV. "Radioactive material" means any material in any physical or chemical form which emits radiation spontaneously.

WW. "Radioactivity" means the transformation of unstable atomic nuclei by the emission of radiation.

XX. "Radioisotope" (see radioactive material).

YY. "Radionuclide" (see radioactive material).

ZZ. "Registrant" means a holder of a registration and any person who is registered or legally obligated to register with the department pursuant to 20.3.2 NMAC or 20.3.9 NMAC.

AAA. "Registration" (certificate of registration) means a registration issued by the department pursuant to 20.3.2 NMAC or 20.3.9 NMAC.

BBB. "Regulation" means any rule adopted pursuant to the act.

CCC. "Regulations of the U.S. department of transportation" (DOT) means the regulations in 49 CFR Parts 100-185.

DDD. "Research and development" means:

(1) theoretical analysis, exploration or experimentation; or

(2) the extension of investigative findings and theories of a scientific or technical nature into practical application for experimental and demonstration purposes, including the experimental production and testing of models, devices, equipment, materials and processes. Research and development does not include the internal or external administration of radiation or radioactive material to human beings.

EEE. "Sealed source" means any radioactive material that is encased in a capsule designed to prevent leakage or escape of the radioactive material.

FFF. "Sealed source and device registry" means the national registry that contains all the registration certificates, generated by both NRC and the agreement states that summarize the radiation safety information for the sealed sources and devices and describe the licensing and use conditions approved for the product.

GGG. "Secretary" means the secretary of the New Mexico environment department.

HHH. "SI" means the international system of units.

III. "Site boundary" means that line beyond which the land or property is not owned, leased or otherwise controlled by the licensee or registrant.

JJJ. "Source material" means:

(1) uranium or thorium, or any combination thereof, in any physical or chemical form; or

(2) ores that contain by weight one-twentieth of one percent (0.05 percent) or more of uranium, thorium or any combination thereof; source material does not include special nuclear material.

KKK. "Source material milling" means any activity which results in the production of byproduct as defined in Paragraph (2) of Subsection F of this section.

LLL. "Source of radiation" means any radioactive material, device or equipment emitting or capable of producing radiation.

MMM. "Special form radioactive material" means radioactive material that satisfies the conditions in 10 CFR 71.75

NNN. "Special nuclear material" means:

(1) plutonium, uranium-233, uranium enriched in the isotope 233 or in the isotope 235, and any other material which the NRC, pursuant to the provisions of Section 51 of the Atomic Energy Act determines to be special nuclear material, but does not include source material; or

(2) any material artificially enriched by any of the foregoing but does not include source material.

OOO. "Special nuclear material in quantities not sufficient to form a critical mass" means uranium enriched in the isotope U-235 in quantities not exceeding 350 grams of contained U-235; uranium-233 in quantities not exceeding 200 grams; plutonium in quantities not exceeding 200 grams or any combination of them in accordance with the following formula: for each kind of special nuclear material, determine the ratio between the quantity of that special nuclear material and the quantity specified above for the same kind of special nuclear material. The sum of such ratios for all of the kinds of special nuclear material in combination shall not exceed 1 (i.e. unity). For example, the following quantities in combination would not exceed the limitation and are within the formula: $175 \text{ (grams contained U-235)}/350 + 50 \text{ (grams U-233)}/200 + 50 \text{ (grams Pu)}/200 = 1$.

PPP. "Test" means a method for determining the characteristics of conditions of sources of radiation or components thereof.

QQQ. "These regulations" means all parts of 20.3 NMAC.

RRR. "Unrefined and unprocessed ore" means ore in its natural form prior to any processing such as grinding, roasting, beneficiating or refining.

SSS. "Waste" (radioactive waste) means those low-level radioactive wastes containing radioactive material which is acceptable for disposal in a land disposal facility. For the purposes of this chapter, excluded from the definition of "waste" are:

(1) high-level radioactive waste or spent nuclear fuel as defined in section 2 of the Nuclear Waste Policy Act;

(2) transuranic waste as defined in section 11.(ee) of the Atomic Energy Act;
or

(3) byproduct material as defined in Paragraphs (2), (3), (4) and (5) of the definition of *byproduct material* set forth in this section.

[20.3.1.7 NMAC - Rp, 20.3.1.7 NMAC, 4/30/2009; A, 6/13/2017; A, 8/10/2021]

20.3.1.8-20.3.1.106 [RESERVED]

20.3.1.107 EXEMPTIONS FROM THE REGULATORY REQUIREMENTS:

A. General Provisions. The department may, upon application of any interested person or upon its own initiative, grant such exemptions from the requirements of this chapter as it determines are authorized by law, will not endanger public health and safety or property and are otherwise in the public interest.

B. DOE contractors and NRC contractors. Any DOE contractor or subcontractor and any NRC contractor or subcontractor of the following categories operating within this state is exempt from these regulations to the extent that such contractor or subcontractor under his contract receives, possesses, uses, transfers or acquires sources of radiation:

(1) prime contractors performing work for the DOE at United States government-owned or controlled sites, including the transportation of sources of radiation to or from such sites and the performance of contract services during temporary interruptions of such transportation;

(2) prime contractors of the DOE performing research in, or development, manufacture, storage, testing or transportation of atomic weapons or components thereof;

(3) prime contractors of the DOE using or operating nuclear reactors or other nuclear devices in a United States government-owned vehicle or vessel; and

(4) any other prime contractor or subcontractor of the DOE or NRC when the state and the NRC jointly determine:

(a) that the exemption of the prime contractor or subcontractor is authorized by law; and

(b) that, under the terms of the contract or subcontract, there is adequate assurance that the work thereunder can be accomplished without undue risk to the public health and safety.

C. Common and contract carriers, freight forwarders, warehousemen and United States postal service are exempt from the regulations in 10 CFR parts 31 through 37 and 39 as well as the requirements for a license set forth in section 81 of the Atomic Energy Act to the extent that they transport or store byproduct material in the regular course of carriage for another or storage incident thereto.

D. Mining, extracting, processing, storage or transportation of radioactive ores or uranium concentrates that are regulated by the mine safety and health administration (MSHA), United States department of labor (DOL), or any other federal or state agency having authority are exempt unless the authority is ceded by such agency to the board.

[20.3.1.107 NMAC - Rp, 20.3.1.107 NMAC, 04/30/2009; A, 06/13/2017]

20.3.1.108 RECORDS:

Each licensee and registrant shall maintain records showing the receipt, transfer and disposal of all sources of radiation. Additional record requirements are specified elsewhere in these regulations.

[20.3.1.108 NMAC - Rp, 20.3.1.108 NMAC, 04/30/2009]

20.3.1.109 INSPECTIONS:

A. Each licensee and registrant shall afford the department at all reasonable times, opportunity to inspect sources of radiation and the premises and facilities wherein such sources of radiation are used or stored.

B. Each licensee and registrant shall make available to the department for inspection upon reasonable notice, records maintained pursuant to the requirements in this chapter.

[20.3.1.109 NMAC - Rp, 20.3.1.109 NMAC, 04/30/2009]

20.3.1.110 TESTS:

Each licensee and registrant shall perform, or permit the department to perform such tests as the department deems appropriate or necessary for the administration of the requirements in this chapter, including, but not limited to, tests of:

A. sources of radiation;

B. facilities wherein sources of radiation are used or stored;

C. radiation detection and monitoring instruments; and

D. other equipment and devices used in connection with utilization or storage of sources of radiation.

[20.3.1.110 NMAC - Rp, 20.3.1.110 NMAC, 04/30/2009]

20.3.1.111 ADDITIONAL REQUIREMENTS:

The department may impose upon a licensee or registrant such requirements in addition to those established in this chapter as it deems appropriate or necessary to minimize danger to public health and safety or property.

[20.3.1.111 NMAC - Rp, 20.3.1.111 NMAC, 04/30/2009]

20.3.1.112 VIOLATIONS:

A. Violation of any requirement of the act, this chapter or a license or registration condition may result in enforcement proceedings under Section 74-3-11.1, NMSA 1978, including, but not limited to, the following:

(1) issuing a compliance order or assessing a civil penalty of up to \$ 15,000 per day for each violation or both; or

(2) commencing a civil action in district court for appropriate relief, including injunctive relief.

B. A person who knowingly commits a violation of any provision of the act, this chapter or order issued thereunder may be guilty of a misdemeanor under Section 74-3-12.1, NMSA 1978. A person who knowingly makes a false statement, representation or certification in an application, record, report, plan or other document filed or required to be maintained pursuant to the act or this chapter may be guilty of a petty misdemeanor under Section 74-3-12.1, NMSA 1978.

[20.3.1.112 NMAC - Rp, 20.3.1.112 NMAC, 04/30/2009]

20.3.1.113 IMPOUNDING:

Sources of radiation shall be subject to impounding pursuant to the act.

[20.3.1.113 NMAC - Rp, 20.3.1.113 NMAC, 04/30/2009]

20.3.1.114 PROHIBITED USES:

A. A hand-held fluoroscopic screen shall not be used with x-ray equipment unless it has been listed in the *registry of sealed sources and devices* or accepted for certification by the FDA, or the center for devices and radiological health (CDRH).

B. A shoe-fitting fluoroscopic device shall not be used.

C. The use of a source of radiation for the purpose of screening or inspecting individuals for concealed weapons, hazardous materials, stolen property, illegal goods or contraband, is prohibited without prior written approval from the department.

D. The exposure of any individual to the primary beam of a radiation machine for training or demonstration purposes is prohibited.

[20.3.1.114 NMAC - Rp, 20.3.1.114 NMAC, 04/30/2009]

20.3.1.115 INTERPRETATIONS:

Except as specifically authorized by the department in writing, no interpretation of these regulations by an officer or employee of the department other than a written interpretation by the legal counsel will be recognized to be binding upon the department.

[20.3.1.115 NMAC - Rp, 20.3.1.115 NMAC, 04/30/2009]

20.3.1.116 COMMUNICATIONS:

All communications and reports concerning these regulations and applications filed thereunder should be addressed to the department at its office as follows: New Mexico Environment Department, Radiation Control Bureau, P.O. Box 5469, Santa Fe, NM 87502-5469.

[20.3.1.116 NMAC - Rp, 20.3.1.116 NMAC, 04/30/2009; A, 06/13/2017]

20.3.1.117-20.3.1.120 [RESERVED]

20.3.1.121 DOCUMENTS AND FORMS:

A. All documents referenced in these regulations are available for review at the offices of the department's radiation control bureau.

B. All forms referenced in these regulations may be obtained for review at the offices of the department's radiation control bureau.

[20.3.1.121 NMAC - Rp, 20.3.1. 121 NMAC, 04/30/2009]

20.3.1.122 DELIBERATE MISCONDUCT:

A. Any licensee, registrant, applicant for a license or registration, employee of a licensee, employee of a registrant or registration applicant; or any contractor (including a supplier or consultant), subcontractor, employee of a contractor or subcontractor of any licensee or registrant or applicant for a license or registration, who knowingly provides to any licensee, registrant, applicant, contractor, or subcontractor, any components, equipment, materials, or other goods or services that relate to a licensee's, registrant's or applicant's activities in 20.3 NMAC, may not:

(1) engage in deliberate misconduct that causes or would have caused, if not detected, a licensee, registrant, or applicant to be in violation of any rule, regulation, or order; or any term, condition, or limitation of any license or registration issued by the department; or

(2) deliberately submit to the department, a licensee, registrant, an applicant, or a licensee's, registrant's or applicant's, contractor or subcontractor, information that the person submitting the information knows to be incomplete or inaccurate in some respect material to the department.

B. A person who violates Paragraphs (1) or (2) of Subsection A of this section may be subject to enforcement action in accordance with all applicable provisions of the act and 20.3 NMAC.

C. For the purposes of Paragraph (1) of Subsection A of this section, deliberate misconduct by a person means an intentional act or omission that the person knows:

(1) would cause a licensee, registrant or applicant to be in violation of any rule, regulation, or order; or any term, condition, or limitation, of any license or registration issued by the department; or

(2) constitutes a violation of a requirement, procedure, instruction, contract, purchase order or policy of a licensee, registrant, applicant, contractor or subcontractor.

[20.3.1.122 NMAC - Rp, 20.3.1.122 NMAC, 04/30/2009]

20.3.1.123 COMPLETENESS AND ACCURACY OF INFORMATION:

A. Information provided to the department by an applicant for a license or registration, or by a licensee or registrant or information required by statute or by the department's regulations, orders, or license or registration conditions to be maintained by the applicant or the licensee or registrant shall be complete and accurate in all material respects.

B. Each applicant, licensee or registrant shall notify the department of information identified by the applicant, licensee or registrant as having for the regulated activity a significant implication for public health and safety. An applicant, licensee or registrant violates this paragraph only if the applicant, licensee or registrant fails to notify the department of information that the applicant, licensee or registrant has identified as having a significant implication for public health and safety. Notification shall be provided to the department within two working days of identifying the information. This requirement is not applicable to information which is already required to be provided to the department by other reporting or updating requirements.

[20.3.1.123 NMAC - N, 04/30/2009]

20.3.1.124 SAVING CLAUSE:

Amendment and supersession of this chapter shall not affect any administrative or judicial enforcement action pending on the effective date of such amendment nor the validity of any license or registration issued pursuant to this chapter.

[20.3.1.124 NMAC - N, 04/30/2009]

PART 2: REGISTRATION OF RADIATION MACHINES AND SERVICES

20.3.2.1 ISSUING AGENCY:

Environmental Improvement Board.

[Recompiled 11/27/01]

20.3.2.2 SCOPE:

This subpart provides for the registration of:

A. radiation machines; and

B. persons providing radiation machine installation, servicing, or services as stipulated in 204 [20.3.2.204 NMAC].

C. In addition to the requirements of this subpart, all registrants are subject to the applicable provisions of other subparts of these regulations.

[5-3-95; 20.3.2.2 NMAC – Rn, 20 NMAC 3.1.2.200, Recompiled 11/27/01]

20.3.2.3 STATUTORY AUTHORITY:

[RESERVED]

20.3.2.4 DURATION:

[RESERVED]

20.3.2.5 EFFECTIVE DATE:

[RESERVED]

20.3.2.6 OBJECTIVE:

[RESERVED]

20.3.2.7 DEFINITIONS:

[RESERVED]

20.3.2.8-20.3.2.200 [RESERVED]

20.3.2.201 EXEMPTIONS:

A. Electronic equipment that produces radiation incidental to its operation for other purposes is exempt from the registration and notification requirements of this subpart,

provided that the dose equivalent rate averaged over an area of 10 sq. cm does not exceed 0.5 mrem (5 mSv) per hour at 5 cm from an accessible surface of such equipment. The production, testing, or factory servicing of such equipment shall not be exempt.

B. Radiation machines while in transit or storage incident thereto are exempt from the requirements of this subpart.

C. Domestic television receivers are exempt from the requirements of this subpart.

D. Microwave ovens in private homes are exempt from the requirements of this subpart.

[5-3-95; 20.3.2.201 NMAC – Rn, 20 NMAC 3.1.2.201, Recompiled 11/27/01]

20.3.2.202 APPLICATION FOR REGISTRATION OF RADIATION MACHINES:

Each person having a radiation machine shall:

A. Apply for registration of such machine with the Department within 30 days following the effective date of these regulations or thereafter prior to the operation of a radiation machine on forms furnished by the Department and shall contain all the information required by the form and accompanying instructions; and

B. Designate on the application form an individual to be responsible for radiation protection.

[5-3-95; 20.3.2.202 NMAC – Rn, 20 NMAC 3.1.2.202, Recompiled 11/27/01]

20.3.2.203 PROHIBITED SERVICING OF RADIATION MACHINES:

Each registrant shall prohibit any person from furnishing radiation machine servicing or services as described in 204.D [Subsection D. of 20.3.2.204 NMAC] to their radiation machine facility until the person provides evidence that they have been registered with the Department as a provider of services in accordance with 204 [Section 204 of 20.3.2.204 NMAC].

[5-3-95; 20.3.2.203 NMAC – Rn, 20 NMAC 3.1.2.203, Recompiled 11/27/01]

20.3.2.204 APPLICATION FOR REGISTRATION OF SERVICING AND SERVICES:

A. Each person who is engaged in the business of installing or offering to install radiation machines or is engaged in the business of furnishing or offering to furnish radiation machine servicing or radiation safety related services in this State, shall apply for registration of such services with the Department prior to furnishing or offering to furnish any such services.

B. Application for registration shall be completed on a form furnished by the Department and shall contain all information required by the Department as indicated on the forms and accompanying instructions.

C. Each person applying for registration under this subpart shall specify:

- (1) that they have read and understand the requirements of these regulations; and
- (2) the services for which they are applying for registration; and
- (3) the training and experience that qualifies them to discharge the services for which they are applying for registration.

D. For the purpose of 204 [Section 204 of 20.3.2.204 NMAC], services may include, but shall not be limited to:

- (1) installation or servicing of radiation machines and associated radiation machine components;
- (2) calibration of radiation machines or radiation measurement instruments or devices;
- (3) radiation protection or health physics consultations or surveys; and
- (4) personnel dosimetry services.

E. Personnel dosimetry services shall obligate themselves to report to the Department all exposures greater than 400 millirems (4000 mSv) in any one month within 10 days of the determination.

F. No individual shall perform services which are not specifically indicated by that individual on his application for registration.

[5-3-95; 20.3.2.204 NMAC – Rn, 20 NMAC 3.1.2.204, Recompiled 11/27/01]

20.3.2.205 ISSUANCE OF REGISTRATION CERTIFICATES:

A. Upon a determination that an applicant meets the requirements of these regulations, the Department shall issue a Registration Certificate.

B. The Department may incorporate in the Registration Certificate at the time of issuance or thereafter by appropriate rule or order, such additional requirements and conditions with respect to the registrant's receipt, possession, use and transfer of radiation machines as it deems appropriate or necessary to protect the health of the people of this State.

[5-3-95; 20.3.2.205 NMAC – Rn, 20 NMAC 3.1.2.205, Recompiled 11/27/01]

20.3.2.206 EXPIRATION OF REGISTRATION CERTIFICATES:

Except as provided by 207 [20.3.2.207 NMAC], each Registration Certificate shall expire at the end of the day on the date stated therein.

[5-3-95; 20.3.2.206 NMAC – Rn, 20 NMAC 3.1.2.206, Recompiled 11/27/01]

20.3.2.207 RENEWAL OF NOTICE OF REGISTRATION:

A. Application for renewal of registration shall be filed in accordance with 202 or 204 [20.3.2.202 or 204 NMAC].

B. In any case in which a registrant not less than 30 days prior to the expiration of his existing Registration Certificate has filed an application in proper form for renewal, such existing Registration Certificate shall not expire until the application status has been finally determined by the Department.

[5-3-95; 20.3.2.207 NMAC – Rn, 20 NMAC 3.1.2.207, Recompiled 11/27/01]

20.3.2.208 REPORT OF CHANGES:

The registrant shall notify the Department in writing before making any change which would render the information contained in the Application for Registration or the Registration Certificate no longer accurate.

[5-3-95; 20.3.2.208 NMAC – Rn, 20 NMAC 3.1.2.208, Recompiled 11/27/01]

20.3.2.209 APPROVAL NOT IMPLIED:

No person, in any advertisement, shall refer to the fact that they or their facility is registered with the Department pursuant to the provisions of 202 or 204 [Sections 202 or 204 of 20.3.2.202 or 204 NMAC] and no person shall state or imply that any activity under such registration has been approved by the Department.

[5-3-95; 20.3.2.209 NMAC – Rn, 20 NMAC 3.1.2.209, Recompiled 11/27/01]

20.3.2.210 ASSEMBLER OR TRANSFER OBLIGATION:

A. Any person who sells, leases, transfers, lends, disposes, assembles, or installs radiation machines in this State shall notify the Department within 15 days of:

- (1) the name and address of persons who have received these machines;

(2) the manufacturer, model, and serial number of each radiation machine transferred; and

(3) the date of transfer of each radiation machine.

B. No person shall make, sell, lease, transfer, lend, assemble, or install radiation machines or the supplies used in connection with such machines unless such supplies and equipment when properly placed in operation and used shall meet the requirements of these regulations.

[5-3-95; 20.3.2.210 NMAC – Rn, 20 NMAC 3.1.2.210, Recompiled 11/27/01]

20.3.2.211 OUT-OF-STATE RADIATION MACHINES:

A. Whenever any radiation machine is to be brought into the State, for any temporary use, the person proposing to bring such machine into the State shall give written notice to the Department at least two working days before such machine is to be used in the state. The notice shall include the type of radiation machines; the nature, duration, and scope of use; and the exact location(s) where the radiation, machine is to be used. If for a specific case the two-working-day period would impose an undue hardship on the person, they may, upon application to the Department, obtain permission to proceed sooner.

B. In addition, the out-of-state person shall:

(1) comply with all applicable regulations;

(2) supply the Department with such other information as the Department may reasonably request; and

(3) not operate within this state on a temporary basis, in excess of 180 calendar days per year.

[5-3-95; 20.3.2.211 NMAC – Rn, 20 NMAC 3.1.2.211, Recompiled 11/27/01]

20.3.2.121-20.3.2.299 [RESERVED]

PART 3: LICENSING OF RADIOACTIVE MATERIALS

20.3.3.1 ISSUING AGENCY:

Environmental Improvement Board.

[20.3.3.1 NMAC - Rp, 20.3.3.1 NMAC, 04/30/2009]

20.3.3.2 SCOPE:

A. This part provides for the licensing of radioactive material. Except for persons exempt as provided in this part, no person shall manufacture, produce, receive, possess, use, own, transfer or acquire radioactive material except as authorized in a specific or general license issued pursuant to the requirements in this part.

B. In addition to the requirements of this part, all licensees are subject to the requirements of 20.3.1 NMAC, 20.3.4 NMAC, 20.3.10 NMAC and 20.3.16 NMAC.

C. The requirements of this part are in addition to, and not in substitution for, other requirements of this chapter. In any conflict between a requirement in this part and a specific requirement in another part of this chapter, the specific requirement governs.

[20.3.3.2 NMAC - Rp, 20.3.3.2 NMAC, 04/30/2009]

20.3.3.3 STATUTORY AUTHORITY:

Sections 74-1-9, 74-3-5 and 74-3-9 NMSA 1978.

[20.3.3.3 NMAC - Rp, 20.3.3.3 NMAC, 04/30/2009]

20.3.3.4 DURATION:

Permanent.

[20.3.3.4 NMAC - Rp, 20.3.3.4 NMAC, 04/30/2009]

20.3.3.5 EFFECTIVE DATE:

April 30, 2009, unless a later date is cited at the end of a section.

[20.3.3.5 NMAC - Rp, 20.3.3.5 NMAC, 04/30/2009]

20.3.3.6 OBJECTIVE:

This part sets forth rules applicable to all persons in the state of New Mexico governing licensing of radioactive material under the act, and exemptions from the licensing requirements.

[20.3.3.6 NMAC - Rp, 20.3.3.6 NMAC, 04/30/2009]

20.3.3.7 DEFINITIONS:

A. "Alert" means events that may occur, are in progress, or have occurred that could lead to a release of radioactive material but that the release is not expected to require a response by offsite response organizations to protect persons offsite.

B. "Principal activities" means activities authorized by the license which are essential to achieving the purpose(s) for which the license was issued or amended. Storage during which no licensed material is accessed for use or disposal and activities incidental to decontamination or decommissioning are not principal activities.

C. "Site area emergency" means events that may occur, are in progress, or have occurred that could lead to a significant release of radioactive material and that could require a response by offsite response organizations to protect persons offsite.

D. "Indian Tribe" means an Indian or Alaska native Tribe, band, nation, pueblo, village, or community that the secretary of the interior acknowledges to exist as an Indian Tribe pursuant to the Federally Recognized Indian Tribe List Act of 1994, 25 U.S.C. 479a.

E. "Tribal official" means the highest ranking individual that represents Tribe leadership, such as the chief, president, or Tribe council leadership.

F. "Unrefined and unprocessed ore" means ore in its natural form prior to any processing, such as grinding, roasting or beneficiating, or refining. Processing does not include sieving or encapsulation of ore or preparation of samples for laboratory analysis.

[20.3.3.7 NMAC - N, 4/30/2009; A, 6/13/2017; A, 8/10/2021]

20.3.3.8-20.3.3.300 [RESERVED]

20.3.3.301 EXEMPTIONS - UNIMPORTANT QUANTITIES OF SOURCE MATERIAL:

A. Any person is exempt from the requirements in this part to the extent that such person receives, possesses, uses, transfers or delivers source material in any chemical mixture, compound, solution or alloy in which the source material is by weight less than one twentieth of one percent of the mixture, compound, solution or alloy. The exemption contained in this subsection does not include *byproduct material* as defined in Paragraph (2) of Subsection F of 20.3.1.7 NMAC.

B. Any person is exempt from the requirements in this part to the extent that such person receives, possesses, uses or transfers unrefined and unprocessed ore containing source material; provided that, except as authorized in a specific license, such person shall not refine or process such ore.

C. Any person is exempt from the requirements for a license set forth in the Radiation Protection Act, Sections 74-3-1 through 16 NMSA 1978 and from the regulations in this part and in 10 CFR Parts 19, 20, and 21 to the extent that such person receives, possesses, uses or transfers:

- (1) any quantities of thorium contained in:

(a) incandescent gas mantles;

(b) vacuum tubes;

(c) welding rods;

(d) electric lamps for illuminating purposes; provided, that each lamp does not contain more than 50 milligrams of thorium;

(e) germicidal lamps, sunlamps, and lamps for outdoor or industrial lighting; provided, that each lamp does not contain more than two grams of thorium;

(f) rare earth metals and compounds, mixtures and products containing not more than one fourth of one percent by weight, thorium, uranium or any combination of these; or

(g) personnel neutron dosimeters; provided, that each dosimeter does not contain more than 50 milligrams of thorium;

(2) source material contained in the following products:

(a) glazed ceramic tableware manufactured before August 27, 2013, provided that the glaze does not contain more than twenty percent by weight source material;

(b) glassware, containing not more than two percent by weight source material or, for glassware manufactured before August 27, 2013, ten percent by weight source material; but not including commercially manufactured glass brick, pane glass, ceramic tile or other glass, glass enamel or ceramic used in construction;

(c) glass enamel or glass enamel frit containing not more than ten percent by weight source material imported or ordered for importation into the United States, or initially distributed by manufacturers in the United States, before July 25, 1983 (On July 25, 1983, the exemption of glass enamel frit was suspended. The exemption was eliminated on September 11, 1984); or

(d) piezoelectric ceramic containing not more than two percent by weight source material;

(3) photographic film, negatives and prints containing uranium or thorium;

(4) any finished product or part fabricated of, or containing, tungsten or magnesium-thorium alloys, provided that the thorium content of the alloy does not exceed four percent by weight and that this exemption shall not be deemed to authorize the chemical, physical or metallurgical treatment or processing of any such product or part;

(5) uranium contained in counterweights installed in aircraft, rockets, projectiles and missiles, or stored or handled in connection with installation or removal of such counterweights; provided, that:

(a) each counterweight has been impressed with the following legend clearly legible through any plating or other covering: "depleted uranium." (the requirements specified in Subparagraphs (a) and (b) of this paragraph need not be met by counterweights manufactured prior to December 31, 1969; provided, that such counterweights are impressed with the legend, "caution - radioactive material - uranium");

(b) each counterweight is durably and legibly labeled or marked with the identification of the manufacturer and the statement: "unauthorized alterations prohibited"; (the requirements specified in Subparagraphs (a) and (b) of this paragraph need not be met by counterweights manufactured prior to December 31, 1969; provided, that such counterweights are impressed with the legend, "caution - radioactive material - uranium");

(c) the exemption contained in this paragraph shall not be deemed to authorize the chemical, physical or metallurgical treatment or processing of such counterweights other than repair or restoration of any plating or other covering; and

(d) consistent with 10 CFR 40.56, the counterweights are not manufactured for military purpose using Australian-obligated source material;

(6) natural or depleted uranium metal used as shielding constituting part of any shipping container which is conspicuously and legibly impressed with the legend, "caution - radioactive shielding - uranium" and the uranium metal is encased in mild steel or equally fire resistant metal of minimum wall thickness of one-eighth of an inch (3.2 millimeters);

(7) thorium or uranium contained in or on finished optical lenses and mirrors, provided that each lens or mirror does not contain more than ten percent by weight of thorium or uranium or, for lenses manufactured before August 27, 2013, thirty percent by weight of thorium; and that the exemption contained in this paragraph does not authorize either:

(a) the shaping, grinding or polishing of such lens or mirror or manufacturing processes other than the assembly of such lens or mirror into optical systems and devices without any alternation of the lens; or

(b) the receipt, possession, use or transfer of uranium or thorium contained in contact lenses, spectacles, eyepieces in binoculars or other optical instruments;

(8) uranium contained in detector heads for use in fire detection units, provided that each detector head contains not more than 0.005 microcurie of uranium; or

(9) thorium contained in any finished aircraft engine part containing nickel-thoria alloy, provided, that:

(a) the thorium is dispersed in the nickel-thoria alloy in the form of finely divided thoria (thorium-dioxide); and

(b) the thorium content in the nickel-thoria alloy does not exceed four percent by weight.

D. No person may initially transfer for sale or distribution a product containing source material to persons exempt in accordance with 10 CFR 40.13(c), or equivalent regulations of an agreement state, unless authorized by a license issued pursuant to 10 CFR 40.52 to initially transfer such products for sale or distribution.

(1) Persons initially distributing source material in products covered by the exemptions in this paragraph 10 CFR 40.13(c) before August 27, 2013, without specific authorization may continue such distribution for 1 year beyond this date. Initial distribution may also be continued until the NRC commission takes final action on a pending application for license or license amendment to specifically authorize distribution submitted no later than 1 year beyond this date.

(2) Persons authorized to manufacture, process, or produce these materials or products containing source material by an agreement state, and persons who import finished products of parts, for sale or distribution must be authorized by a license issued pursuant to 10 CFR 40.52 for distribution only and are exempt from the requirements of 10 CFR 19 and 10 CFR 20, and 10 CFR 40.32(b) and (c).

E. The exemptions in Subsection C of this section do not authorize the manufacture of any of the products described.

[20.3.3.301 NMAC - Rp, 20.3.3.301 NMAC, 4/30/2009; A, 8/10/2021]

20.3.3.302 EXEMPTIONS - RADIOACTIVE MATERIAL OTHER THAN SOURCE MATERIAL:

A. Exempt concentrations.

(1) Except as provided in Paragraphs (3) and (4) of this subsection, any person is exempt from the license requirements in this part to the extent that such person receives, possesses, uses, transfers, owns or acquires products or materials containing radioactive material in concentrations not in excess of those listed in 20.3.3.329 NMAC.

(2) This subsection shall not be deemed to authorize the import of radioactive material or products containing radioactive material.

(3) A manufacturer, processor or producer of a product or material is exempt from the license requirements in this part to the extent that they transfer radioactive material contained in a product or material in concentrations not in excess of those specified in 20.3.3.329 NMAC and introduced into the product or material by a licensee holding a specific license issued by the NRC expressly authorizing such introduction. This exemption does not apply to the transfer of radioactive material contained in any food, beverage, cosmetic, drug or other commodity or product designed for ingestion or inhalation by, or application to, a human being.

(4) No person may introduce radioactive material into a product or material knowing or having reason to believe that it will be transferred to persons exempt under this subsection or equivalent regulations of the NRC or an agreement state, except in accordance with a specific license issued pursuant to Paragraph (1) of Subsection A of 20.3.3.315 NMAC.

B. Exempt quantities.

(1) Except as provided in Paragraphs (3) through (5) of this subsection, any person is exempt from the license requirements in this part to the extent that such person receives, possesses, uses, transfers, owns or acquires radioactive material in individual quantities each of which does not exceed the applicable quantity set forth in 20.3.3.330 NMAC.

(2) Any person who possesses byproduct material received or acquired prior to September 25, 1971 under the general license then provided in 10 CFR 31.4 or similar general license of an agreement state, is exempt from the requirements for a license set forth in this part to the extent that such person possesses, uses, transfers or owns byproduct material.

(3) This subsection does not authorize for the purposes of commercial distribution the production, packaging, repackaging or transfer of radioactive material or the incorporation of radioactive material into products intended for commercial distribution.

(4) No person may, for purposes of commercial distribution, transfer radioactive material in the individual quantities set forth in 20.3.3.330 NMAC, knowing or having reason to believe that such quantities of radioactive material will be transferred to persons exempt under this subsection or equivalent regulations of the NRC or an agreement state, except in accordance with a specific license issued by the NRC pursuant to 10 CFR 32.18 which license states that the radioactive material may be transferred by the licensee to persons exempt under this subsection or the equivalent regulations of the NRC or an agreement state.

(5) No person may, for purposes of producing an increased radiation level, combine quantities of radioactive material covered by this exemption so that the aggregate quantity exceed the limits set forth in 20.3.3.330 NMAC, except for radioactive material combined within a device placed in use before May 3, 1999, or as otherwise permitted by the rules in this chapter.

C. Exempt items.

(1) Certain items containing radioactive material. Any person who desires to apply byproduct material to, or to incorporate byproduct material into, the products exempted in this paragraph, or who desires to initially transfer for sale or distribution such products containing byproduct material, shall apply for a specific license to NRC pursuant to 10 CFR 32.14, which license states that the product may be distributed by the licensee to persons exempt from the regulations pursuant to this paragraph or equivalent NRC or agreement state regulations. Except for persons who apply radioactive material to, or persons who incorporate radioactive material into, the following products, or persons who initially transfer for sale or distribution (specifically licensed by NRC pursuant to 10 CFR 32.14) the following products containing radioactive material, any person is exempt from the license requirements in this part to the extent that such person receives, possesses, uses, transfers, owns or acquires the following products:

(a) timepieces or hands or dials containing not more than the following specified quantities of radioactive material and not exceeding the following specified levels of radiation:

(i) 25 millicuries (925 megabecquerels) of tritium per timepiece;

(ii) 5 millicuries (185 megabecquerels) of tritium per hand;

(iii) 15 millicuries (555 megabecquerels) of tritium per dial (bezels when used shall be considered as part of the dial);

(iv) 100 microcuries (3.7 megabecquerels) of promethium-147 per watch hand or 200 microcuries (7.4 megabecquerels) of promethium-147 per any other timepiece;

(v) 20 microcuries (0.74 megabecquerel) of promethium-147 per watch hand or 40 microcuries (1.48 megabecquerels) of promethium-147 per other timepiece hand;

(vi) 60 microcuries (2.22 megabecquerels) of promethium-147 per watch dial or 120 microcuries (4.44 megabecquerels) of promethium-147 per other timepiece dial (bezels when used shall be considered as part of the dial);

(vii) the levels of radiation from hands and dials containing promethium-147 shall not exceed, when measured through 50 milligrams per square centimeter of absorber: 1) for wrist watches, 0.1 millirad (1 milligray) per hour at 10 centimeters from any surface; 2) for pocket watches, 0.1 millirad (1 milligray) per hour at 1 centimeter from any surface; or 3) for any other timepiece, 0.2 millirad (2 milligray) per hour at 10 centimeters from any surface; or

(viii) 1 microcurie (37 kilobecquerels) of radium-226 per timepiece in intact timepieces manufactured prior to November 30, 2007;

(b) Static elimination device. Devices designed for use as static eliminators which contain, as a sealed source or sources, byproduct material consisting of a total of not more than 500 microcuries (18.5 megabecquerels) of polonium-210 per device.

(c) Ion generating tube. Devices designed for ionization of air which contain, as a sealed source or sources, byproduct material consisting of a total of not more than 500 microcuries (18.5 megabecquerels) of polonium-210 per device or a total of not more than 50 millicuries (1.85 gigabecquerels) of hydrogen-3 (tritium) per device.

(d) precision balances containing not more than 1 millicurie (37 megabecquerels) of tritium per balance or not more than 0.5 millicurie (18.5 megabecquerels) of tritium per balance part manufactured before December 17, 2007;

(e) [Reserved];

(f) marine compasses containing not more than 750 millicuries (27.8 gigabecquerels) of tritium gas and other marine navigational instruments containing not more than 250 millicuries (9.25 gigabecquerels) of tritium gas manufactured before December 17, 2007;

(g) ionization chamber smoke detectors containing not more than 1 microcurie (37 kilobecquerels) of americium-241 per detector in the form of a foil and designed to protect life and property from fires;

(h) electron tubes; provided, that each tube does not contain more than one of the following specified quantities of radioactive material (for purposes of this exemption, "electron tubes" include spark gap tubes, power tubes, gas tubes including glow lamps, receiving tubes, microwaves tubes, indicator tubes, pick-up tubes, radiation detection tubes and any other completely sealed tube that is designed to conduct or control electrical currents):

(i) 150 millicuries (5.55 gigabecquerels) of tritium per microwave receiver protector tube or 10 millicuries (370 megabecquerels) of tritium per any other electron tube;

(ii) 1 microcurie (37 kilobecquerels) of cobalt-60;

- (iii) 5 microcuries (185 kilobecquerels) of nickel-63;
- (iv) 30 microcuries (1.11 megabecquerels) of krypton-85;
- (v) 5 microcuries (185 kilobecquerels) of cesium-137;

(vi) 30 microcuries (1.11 megabecquerels) of promethium-147; and provided further, that the levels of radiation from each electron tube containing radioactive materials do not exceed 1 millirad (10 milligray) per hour at 1 centimeter from any surface when measured through 7 milligrams per square centimeter of absorber; and

(i) ionizing radiation measuring instruments containing, for purposes of internal calibration or standardization, one or more sources of radioactive material; provided, that:

(i) each source contains no more than one exempt quantity set forth in 20.3.3.330 NMAC;

(ii) each instrument contains no more than ten exempt quantities; for this requirement, an instrument's source(s) may contain either one type or different types of radionuclides and an individual exempt quantity may be composed of fractional parts of one or more of the exempt quantities in 20.3.3.330 NMAC provided that the sum of such fractions shall not exceed unity; and

(iii) for purposes of this subparagraph, 0.05 microcurie (1.85 kilobecquerels) of americium-241 is considered an exempt quantity under 20.3.3.330 NMAC.

(2) Self-luminous products containing tritium, krypton-85, promethium-147 or radium-226.

(a) Except for persons who manufacture, process, produce, or initially transfer for sale or distribution self-luminous products containing tritium, krypton-85, promethium-147 or radium-226, and except as provided in Subparagraph (c) of this paragraph, any person is exempt from the license requirements in this part to the extent that such person receives, possesses, uses, transfers, owns or acquires tritium, krypton-85, promethium-147 or radium-226 in self-luminous products manufactured, processed, produced or initially transferred in accordance with a specific license issued by the NRC pursuant to 10 CFR 32.22 which license authorizes the initial transfer of the product for use under this paragraph.

(b) Any person who desires to manufacture, process or produce, or initially transfer for sale or distribution self-luminous products containing tritium, krypton-85 or promethium-147 for use pursuant to Subparagraph (a) of this paragraph, shall apply to

NRC for a license pursuant to 10 CFR 32.22, and for a certificate of registration in accordance with 10 CFR 32.210.

(c) The exemption in this paragraph does not apply to tritium, krypton-85, promethium-147 or radium-226 used in products primarily for frivolous purposes or in toys or adornments.

(3) Radium-226 acquired previously. Any person is exempt from the licensing requirements in this part to the extent that such person possesses, uses or transfers, articles containing less than 0.1 microcurie (3.7 kilobecquerels) of radium-226 which were acquired prior to May 3, 1995 (the date when these rules were codified).

(4) Gas and aerosol detectors containing radioactive material.

(a) Except for persons who manufacture, process, produce or initially transfer for sale or distribution gas and aerosol detectors containing byproduct material, any person is exempt from the licensing requirements in this part to the extent that such person receives, possesses, uses, transfers, owns or acquires byproduct material, in gas and aerosol detectors designed to protect life or property, and manufactured, processed, produced or initially transferred in accordance with a specific license issued by the NRC, pursuant to 10 CFR 32.26, which license authorizes the initial transfer of the product for use under this paragraph. This exemption also covers gas and aerosol detectors manufactured or distributed before November 30, 2007 in accordance with a specific license issued by the department, agreement state or non-agreement state under comparable provisions to 10 CFR 32.26 authorizing distribution to persons exempt from regulatory requirements.

(b) Any person who desires to manufacture, process or produce gas and aerosol detectors containing byproduct material, or to initially transfer such products for use pursuant to Subparagraph (a) of this paragraph, shall apply for a license to the NRC pursuant to 10 CFR 32.26 and for a certificate of registration in accordance with 10 CFR 32.210.

(5) Certain industrial devices.

(a) Except for persons who manufacture, process, produce, or initially transfer for sale or distribution industrial devices containing byproduct material designed and manufactured for the purpose of detecting, measuring, gauging or controlling thickness, density, level, interface location, radiation, leakage, or qualitative or quantitative chemical composition, or for producing an ionized atmosphere, any person is exempt from the requirements for a license set forth in section 81 of the Atomic Energy Act of 1954, as amended and from the regulations in 10 CFR parts 19, 20, 21, 30 through 36, and 39 to the extent that such person receives, possesses, uses, transfers, owns, or acquires byproduct material, in these certain detecting, measuring, gauging, or controlling devices and certain devices for producing an ionized atmosphere, and manufactured, processed, produced, or initially transferred in accordance with a specific

license issued under 10 CFR 32.30 of this chapter, which license authorizes the initial transfer of the device for use under this section. This exemption does not cover sources not incorporated into a device, such as calibration and reference sources.

(b) Any person who desires to manufacture, process, produce, or initially transfer for sale or distribution industrial devices containing byproduct material for use under subparagraph (a) of this paragraph, should apply for a license under 10 CFR 32.30 and for a certificate of registration in accordance with 10 CFR 32.210.

D. Radioactive drug - capsules containing carbon-14 urea for "in vivo" diagnostic use for humans.

(1) Except as provided in Paragraphs (2) and (3) of this subsection, any person is exempt from the requirements for a license set forth in this part and 20.3.7 NMAC provided that such person receives, possesses, uses, transfers, owns or acquires capsules containing 1 microcurie (37 kilobecquerels) carbon-14 urea (allowing for nominal variation that may occur during the manufacturing process) each, for "in vivo" diagnostic use for humans.

(2) Any person who desires to use the capsules for research involving human subjects shall apply for and receive a specific license pursuant to 20.3.7 NMAC.

(3) Any person who desires to manufacture, prepare, process, produce, package, repackage or transfer for commercial distribution such capsules shall apply for and receive a specific license by NRC pursuant to 10 CFR 32.21.

(4) Nothing in this section relieves persons from complying with applicable FDA, other federal and state requirements governing receipt, administration and use of drugs.

[20.3.3.302 NMAC - Rp, 20.3.3.302 NMAC, 4/30/2009; A, 6/30/2011; A, 8/10/2021]

20.3.3.303 TYPES OF LICENSES:

Licenses for radioactive materials are of two types: general and specific.

A. General License. A general license is provided by regulation, grants authority to a person for certain activities involving radioactive material, and is effective without the filing of an application with the department or the issuance of a licensing document to a particular person. However, registration with the department may be required by the particular general license.

B. Specific License. A specific license is issued by the department to a named person who has filed an application for the license under the specific licensing provisions of 20.3.3 NMAC, 20.3.5 NMAC, 20.3.7 NMAC, 20.3.12 NMAC, 20.3.13 NMAC, 20.3.14 NMAC and 20.3.15 NMAC.

[20.3.3.303 NMAC - Rp, 20.3.3.303 NMAC, 04/30/2009]

20.3.3.304 GENERAL LICENSES - SOURCE MATERIAL:

A. General license to receive title to source material or byproduct material (as defined in Paragraph (2) of Subsection F of 20.3.1.7 NMAC). A general license is hereby issued authorizing the receipt of title to source material or byproduct material (as defined in Paragraph (2) of Subsection F of 20.3.1.7 NMAC) without regard to quantity. This general license does not authorize any person to receive, possess, deliver, use or transfer source material or byproduct material (as defined in Paragraph (2) of Subsection F of 20.3.1.7 NMAC).

B. Small quantities of source material. A general license is hereby issued authorizing commercial and industrial firms; research, educational, and medical institutions; and federal, state, and local government agencies to receive, possess, use, and transfer uranium and thorium, in their natural isotopic concentrations and in the form of depleted uranium, for research, development, educational, commercial, or operational purposes in the following forms and quantities:

(1) No more than 1.5 kg (3.3 lb) of uranium and thorium in dispersible forms (e.g., gaseous, liquid, powder, etc.) at any one time. Any material processed by the general licensee that alters the chemical or physical form of the material containing source material must be accounted for as a dispersible form. A person authorized to possess, use, and transfer source material under Subsection B of this section may not receive more than a total of 7 kg (15.4 lb) of uranium and thorium in any one calendar year. Persons possessing source material in excess of these limits as of August 27, 2013, may continue to possess up to 7 kg (15.4 lb) of uranium and thorium at any one time for one year beyond this date, or until the department takes final action on a pending application submitted on or before August 27, 2014, for a specific license for such material and receive up to 70 kg (154 lb) of uranium or thorium in any one calendar year until December 31, 2014, or until the department takes final action on a pending application submitted on or before August 27, 2014, for a specific license for such material; and

(2) no more than a total of 7 kg (15.4 lb) of uranium and thorium at any one time. A person authorized to possess, use, and transfer source material under Subsection B of this section may not receive more than a total of 70 kg (154 lb) of uranium and thorium in any one calendar year. A person may not alter the chemical or physical form of the source material possessed under this paragraph unless it is accounted for under the limits of Subsection B(1) of this section; or

(3) no more than 7 kg (15.4 lb) of uranium, removed during the treatment of drinking water, at any one time. A person may not remove more than 70 kg (154 lb) of uranium from drinking water during a calendar year under Subsection B of this section; or

(4) no more than 7 kg (15.4 lb) of uranium and thorium at laboratories for the purpose of determining the concentration of uranium and thorium contained within the material being analyzed at any one time. A person authorized to possess, use, and transfer source material under Subsection B of this section may not receive more than a total of 70 kg (154 lb) of source material in any one calendar year.

C. Any person who receives, possess, uses, or transfers source material pursuant to the general license in Subsection B of this section:

(1) is prohibited from administering source material, or the radiation

therefrom, either externally or internally, to human beings except as may be authorized by the department in a specific license;

(2) shall not abandon such source material. Source material may be disposed of as follows:

(a) A cumulative total of 0.5 kg (1.1 lb) of source material in a solid, non-dispersible form may be transferred each calendar year, by a person authorized to receive, possess, use, and transfer source material under a general license to persons receiving the material for permanent disposal.

(b) The recipient of source material transferred under the provisions of this section is exempt from the requirements to obtain a license under this part to the extent the source material is permanently disposed. This provision does not apply to any person who is in possession of source material under a specific license issued under this chapter or in accordance with 20.3.4.433 NMAC.

(3) is subject to the provisions in accordance with 10 CFR 40.1 through 40.10, 10 CFR 40.41(a) through (e), 10 CFR 40.46, 10 CFR 40.51, 10 CFR 40.56, 10 CFR 40.60 through 40.63, 10 CFR 40.71, 10 CFR 40.81, and the equivalent regulations in 20.3.3 NMAC; and

(4) shall not export such source material except in accordance with 10 CFR 110.

D. Any person who receives, possesses, uses, or transfers source material in accordance with subsection B of this section shall conduct activities so as to minimize contamination of the facility and the environment. When activities involving such source material are permanently ceased at any site, if evidence of significant contamination is identified, the general licensee shall notify the department by an appropriate method listed in 20.3.1.116 NMAC about such contamination and may consult with the department as to the appropriateness of sampling and restoration activities to ensure that any contamination or residual source material remaining at the site where source material was used under this general license is not likely to result in exposures that exceed the limits in 20.3.4.426.B NMAC.

E. Any person who receives, possesses, uses, or transfers source material in accordance with the general license granted in Subsection B of this section is exempt from the provisions of 20.3.10 NMAC, and 20.3.4 NMAC to the extent that such receipt, possession, use, and transfer are within the terms of this general license, except that such person shall comply with the provisions of 20.3.4.426.A NMAC and 20.3.4.433 NMAC to the extent necessary to meet the provisions of 20.3.3.304.B NMAC. However, this exemption does not apply to any person who also holds a specific license issued under 20.3.3 NMAC.

F. No person may initially transfer or distribute source material to persons generally licensed under Paragraph (1) and (2) Subsection B of this Section, or equivalent regulations of an agreement state, unless authorized by a specific license in accordance with 10 CFR 40.54 or equivalent provisions of an agreement state . This prohibition does not apply to analytical laboratories returning processed samples to the client who initially provided the sample. Initial distribution of source material to persons generally licensed by Subsection A of this section before August 27, 2013, without specific authorization may continue for 1 year beyond this date. Distribution may also be continued until the NRC takes final action on a pending application for a license or license amendment to specifically authorize distribution submitted on or before August 27, 2014.

G. Depleted uranium in industrial products and devices.

(1) A general license is hereby issued to receive, acquire, possess, use or transfer, in accordance with the provisions in Paragraphs (2), (3), (5) and (6) of this subsection, depleted uranium contained in industrial products or devices for the purpose of providing a concentrated mass in a small volume of the product or device.

(2) The general license in Paragraph (1) of this subsection applies only to industrial products or devices which have been manufactured or initially transferred either in accordance with a specific license issued to the manufacturer of the products or devices pursuant to Subsection L of 20.3.3.315 NMAC or in accordance with a specific license issued by the NRC or an agreement state which authorizes manufacture of the products or devices for distribution to persons generally licensed by the NRC or an agreement state.

(3) Persons who receive, acquire, possess or use depleted uranium pursuant to the general license established by Paragraph (1) of this subsection shall file a form, *registration certificate - use of depleted uranium under general license*, with the department. The form shall be submitted within 30 days after the first receipt or acquisition of such depleted uranium. The general licensee shall furnish on the registration form the following information and such other information as may be required by that form:

(a) name and address of the general licensee;

(b) a statement that the general licensee has developed and will maintain procedures designed to establish physical control over the depleted uranium described in Paragraph (1) of this subsection and designed to prevent transfer of such depleted uranium in any form, including metal scrap, to persons not authorized to receive the depleted uranium; and

(c) name and title, address and telephone number of the individual duly authorized to act for and on behalf of the general licensee in supervising the procedures identified in Subparagraph (b) of this paragraph.

(4) The general licensee possessing or using depleted uranium under the general license established by Paragraph (1) of this subsection shall report in writing to the department any changes in information furnished by them in the form *registration certificate-use of depleted uranium under general license*. The report shall be submitted within 30 days after the effective date of such change.

(5) A person, who receives, acquires, possesses or uses depleted uranium pursuant to the general license established by Paragraph (1) of this subsection:

(a) shall not introduce such depleted uranium, in any form, into a chemical, physical or metallurgical treatment or process, except a treatment or process for repair or restoration of any plating or other covering of the depleted uranium;

(b) shall not abandon such depleted uranium;

(c) shall transfer or dispose of such depleted uranium only by transfer in accordance with the provisions of 20.3.3.323 NMAC; in the case where the transferee receives the depleted uranium pursuant to the general license established by Paragraph (1) of this subsection, the transferor shall furnish the transferee a copy of this subsection and a copy of the registration form; in cases where the transferee receives the depleted uranium pursuant to a general license contained in the NRC or agreement state's regulation equivalent to this subsection, Subsection C of 20.3.3.304 NMAC, the transferor shall furnish the transferee a copy of this subsection and a copy of the registration form accompanied by a note explaining that use of the product or device is regulated by the NRC or agreement state under requirements substantially the same as those in this subsection;

(d) shall report in writing, within 30 days of any transfer, to the department the name and address of the person receiving the depleted uranium pursuant to such transfer; and

(e) shall not export such depleted uranium except in accordance with a license issued by the NRC pursuant to 10 CFR 110.

(6) Any person receiving, acquiring, possessing, using or transferring depleted uranium pursuant to the general license established by Paragraph (1) of this

subsection is exempt from the requirements of 20.3.4 NMAC and 20.3.10 NMAC with respect to the depleted uranium covered by that general license.

[20.3.3.304 NMAC - Rp, 20.3.3.304 NMAC, 4/30/2009; A, 8/10/2021]

20.3.3.305 GENERAL LICENSES - RADIOACTIVE MATERIAL OTHER THAN SOURCE MATERIAL:

A. [RESERVED].

B. Certain detecting, measuring, gauging or controlling devices and certain devices for producing light or an ionized atmosphere.

(1) A general license is hereby issued as required by Subparagraph (m) of Paragraph (3) of this Subsection to commercial and industrial firms and research, educational and medical institutions, individuals in the conduct of their business, and federal, state or local government agencies to receive, acquire, possess, use or transfer, in accordance with the provisions of Paragraphs (2), (3), and (4) of this subsection, byproduct material contained in devices designed and manufactured for the purpose of detecting, measuring, gauging or controlling thickness, density, level, interface location, radiation, leakage, or qualitative or quantitative chemical composition, or for producing light or an ionized atmosphere, and the device has been registered in the sealed source and device registry.

(2) The general license in Paragraph (1) of this subsection applies only to byproduct material contained in devices which have been manufactured or initially transferred and labeled in accordance with the specifications contained in:

(a) a specific license issued by the department pursuant to Subsection E of 20.3.3.315 NMAC; or

(b) an equivalent specific license issued by the NRC or an agreement state;
or

(c) an equivalent specific license issued by a state with provisions comparable to Subsection E of 20.3.3.315 NMAC. The devices must have been received from one of the specific licensees described in this paragraph, or through a transfer made under Subparagraph (h) of Paragraph (3) of this subsection.

(3) Any person who receives, acquires, possesses, uses or transfers byproduct material in a device pursuant to the general license in Paragraph (1) of this subsection shall comply with the following.

(a) The general licensee shall assure that all labels affixed to the device at the time of receipt and bearing a statement that removal of the label is prohibited are

maintained thereon and shall comply with all instructions and precautions provided by such labels.

(b) The general licensee shall assure that the device is tested for leakage of radioactive material and proper operation of the on-off mechanism and indicator, if any, at no longer than six month intervals or at such other intervals as are specified in the label; however:

(i) devices containing only krypton need not be tested for leakage of radioactive material; and

(ii) devices containing only tritium or not more than 100 microcuries (3.7 megabecquerels) of other beta or gamma emitting material or 10 microcuries (0.37 megabecquerel) of alpha emitting material and devices held in storage in the original shipping container prior to initial installation need not be tested for any purpose.

(c) The general licensee shall assure that the test required by Subparagraph (b) of Paragraph (3) of this subsection and other testing, installation, servicing and removal from installation involving the radioactive materials, its shielding or containment are performed:

(i) in accordance with the instructions provided by the labels; or

(ii) by a person holding a specific license pursuant to this part from the department, the NRC, or an agreement state to perform such activities.

(d) The general licensee shall maintain records showing compliance with the requirements of Subparagraphs (b) and (c) of Paragraph (3) of this subsection. The records must show the results of tests. The records must also show the dates of performance of, and the names of persons performing, testing, installing, servicing and removing from the installation radioactive material and its shielding or containment. The licensee shall retain these records as follows:

(i) each record of a test for leakage or radioactive material required by Subparagraph (b) of Paragraph (3) of this subsection shall be retained for three years after the next required leak test is performed or until the sealed source is transferred or disposed of;

(ii) each record of a test of the on-off mechanism and indicator required by Subparagraph (b) of Paragraph (3) of this subsection shall be retained for three years after the next required test of the on-off mechanism and indicator is performed or until the sealed source is transferred or disposed of; and

(iii) each record that is required by Subparagraph (c) of Paragraph (3) of this subsection shall be retained for 3 years from the date of the recorded event or until the device is transferred or disposed of.

(e) The general licensee shall immediately suspend operation of the device if there is a failure of, or damage to, or any indication of a possible failure of or damage to, the shielding of the radioactive material or the on-off mechanism or indicator, or upon the detection of 0.005 microcuries (185 becquerels) or more removable radioactive material. The device may not be operated until it has been repaired by the manufacturer or other person holding a specific license to repair such devices that was issued pursuant to this part by the department, the NRC or an agreement state. The device and any radioactive material from the device, shall only be disposed of by transfer to a person authorized by a specific license to receive the radioactive material in the device, or as otherwise approved by the department. A report shall be furnished to the department within 30 days containing a brief description of the event and the remedial action taken. In the case of detection of 0.005 microcurie or more removable radioactive material or failure of, or damage to, a source likely to result in contamination of the premises or the environs, the report shall include a plan for ensuring that the premises and environs are acceptable for unrestricted use. Under these circumstances, the criteria set out in Subsection B of 20.3.4.426 NMAC, *radiological criteria for unrestricted use*, shall be applicable, as determined by the department on a case-by-case basis.

(f) The general licensee shall not abandon the device containing radioactive material.

(g) The general licensee shall not export the device containing radioactive material except in accordance with 10 CFR 110.

(h) Device transfer requirements.

(i) The general licensee shall transfer or dispose of the device containing radioactive material only by export as provided by Subparagraph (g) of this paragraph, by transfer to another general licensee as authorized in Subparagraph (i) of this paragraph, or to a person authorized to receive the device by a specific license issued by the department pursuant under this part, or by a specific license issued by the department authorizing waste collection pursuant to this part, or equivalent provisions of the NRC or an agreement state, or as otherwise approved under Item (iii) of this subparagraph.

(ii) The general licensee shall within 30 days after the transfer of a device to a specific licensee or export, furnish a report to the department at the address indicated in 20.3.1.116 NMAC. The report shall contain the identification of the device by manufacturer's (or initial transferor's) name, model number and serial number; the name, address and license number of the person receiving the device (license number not applicable if exported); and the date of the transfer.

(iii) The general licensee shall obtain written department approval before transferring the device to any other specific licensee not specifically identified in Item (i) of this subparagraph. However, a holder of a specific license may transfer a device for possession and use under its own specific license without prior approval, if,

the holder: verifies that the specific license authorizes the possession and use, or applies for and obtains amendment to the license authorizing the possession and use; removes, alters, covers, or clearly and unambiguously augments the existing label (otherwise required by Subparagraph (a) of this paragraph) so that the device is labeled in compliance with 20.3.4.430 NMAC, however, the manufacturer, model number, and serial number must be retained; obtains the manufacturer's or initial transferor's information concerning maintenance that would be applicable under the specific license (such as leak testing procedures); and reports the transfer under Item (ii) of this subparagraph.

(i) The general licensee shall transfer the device to another general licensee only if:

(i) the device remains in use at a particular location, in which case: 1) the transferor shall give the transferee a copy of this subsection (Subsection B of 20.3.3.305 NMAC), a copy of Subsection F of 20.3.3.317 NMAC, a copy of 20.3.3.326 NMAC, a copy of 20.3.4.451 NMAC, a copy of 20.3.4.452 NMAC and any safety documents identified in the label of the device; 2) within 30 days of the transfer, the transferor shall report to the department at the address indicated in 20.3.1.116 NMAC, stating the manufacturer's (or initial transferor's) name, the model number and the serial number of the device transferred, the transferee's name and mailing address for the location of use, and the name, title and phone number of the responsible individual identified by the transferee in accordance with Subparagraph (l) of this paragraph to have knowledge of and authority to take actions to ensure compliance with the appropriate regulations and requirements; or

(ii) the device is held in storage by an intermediate person in the original shipping container at its intended location of use prior to initial use by a general licensee.

(j) The general licensee shall comply with the provisions of 20.3.4.451 NMAC and 20.3.4.452 NMAC for reporting radiation incidents, theft or loss of licensed material, but shall be exempt from the other requirements of 20.3.4 NMAC and 20.3.10 NMAC.

(k) The general licensee shall respond to written requests from the department to provide information relating to the general license within 30 calendar days of the date of the request, or other time specified in the request. If the general licensee cannot provide the requested information within the allotted time, it shall, within that same time period, request a longer period to supply the information by providing the department with a written justification for the request.

(l) The general licensee shall appoint an individual responsible for having knowledge of the appropriate regulations and requirements and the authority for taking required actions to comply with appropriate regulations and requirements. The general licensee, through this individual, shall ensure the day-to-day compliance with

appropriate regulations and requirements. This appointment does not relieve the general licensee of any of its responsibility in this regard.

(m) Registration requirements.

(i) The general licensee shall register on a department registration form, in accordance with Items (ii) and (iii) of this subparagraph, devices containing at least 10 millicuries (370 megabecquerels) of cesium-137, 0.1 millicuries (3.7 megabecquerels) of strontium-90, 1 millicurie (37 megabecquerels) of cobalt-60, 0.1 millicurie (3.7 megabecquerels) of radium-226, 1 millicurie (37 megabecquerels) of americium-241 or any other transuranic (i.e., element with atomic number greater than uranium (92)), based on the activity indicated on the label. Each address of a location of use, as described under Item (iii) of this subparagraph, represents a separate general licensee and requires a separate registration.

(ii) If in possession of a device meeting the criteria of Item (i) of this subparagraph, the general licensee shall register these devices annually with the department. Registration shall be done by verifying, correcting or adding to the information provided in a request for registration received from the department. The registration information shall be submitted to the department within 30 days of the date of the request for registration or as otherwise indicated in the request. In addition, a general licensee holding devices meeting the criteria of Item (i) of this Subparagraph is subject to the bankruptcy notification requirement in Subsection E of 20.3.3.317 NMAC.

(iii) In registering devices, the general licensee shall furnish the following information and any other information specifically requested by the department: 1) name and mailing address of the general licensee; 2) information about each device: the manufacturer (or initial transferor), model number, serial number, the radioisotope and activity (as indicated on the label); 3) name, title and telephone number of the responsible person designated as a representative of the general licensee under Subparagraph (i) of this paragraph; 4) address or location at which the device(s) are used or stored; for portable devices, the address of the primary place of storage; 5) certification by the responsible representative of the general licensee that the information concerning the device(s) has been verified through a physical inventory and checking of label information; and 6) certification by the responsible representative of the general licensee that they are aware of the requirements of the general license.

(iv) Persons generally licensed by the NRC and an agreement state with respect to devices meeting the criteria in Item (i) of this Subparagraph are not subject to registration requirements if the devices are used in areas subject to department jurisdiction for a period less than 180 days in any calendar year. The department will not request registration information from such licensees.

(n) The general licensee shall report changes to the mailing address for the location of use (including change in name of general licensee) to the department at the address indicated in 20.3.1.116 NMAC, within 30 days of the effective date of the

change. For a portable device, a report of address change is only required for a change in the device's primary place of storage.

(o) The general licensee shall not hold devices that are not in use for longer than 2 years. If devices with shutters are not being used, the shutter shall be locked in the closed position. The testing required by Subparagraph (b) of Paragraph (3) of this Subsection need not be performed during the period of storage only. However, when devices are put back into service or transferred to another person, and have not been tested within the required test interval, they shall be tested for leakage before use or transfer and the shutter tested before use. Devices kept in standby for future use are excluded from the two-year time limit if the general licensee performs quarterly physical inventories of these devices while they are in standby.

(4) The general license in Paragraph (1) of this subsection does not authorize the manufacture or import of devices containing radioactive material.

C. Luminous safety devices for use in aircraft.

(1) A general license is hereby issued to own, receive, acquire, possess and use tritium or promethium-147 contained in luminous safety devices for use in aircraft, provided:

(a) each device contains not more than 10 curies (370 gigabecquerels) of tritium or 300 millicuries (11.1 gigabecquerels) of promethium-147;

(b) each device has been manufactured, assembled or initially transferred in accordance with a license issued under the provisions 10 CFR 32.53, or manufactured or assembled in accordance with a specific license issued by the NRC;

(c) quality assurance procedures are in place that are sufficient to ensure compliance with 10 CFR 32.55; and

(d) prototypes of the device have been subjected to and have satisfactorily passed the tests required in 10 CFR 32.53(e) and outlined in Subsection C(2) of this section.

(2) The applicant shall subject at least five prototypes of the device to tests as follows:

(a) the devices are subjected to tests that adequately take into account the individual, aggregate, and cumulative effects of environmental conditions expected in service that could adversely affect the effective containment of tritium or promethium-147, such as temperature, moisture, absolute pressure, water immersion, vibration, shock, and weathering;

(b) the devices are inspected for evidence of physical damage and for loss of tritium or promethium-147, after each stage of testing, using methods of inspection adequate for determining compliance with the criteria in subparagraph C(2) of this section; and

(c) the device designs are rejected for which the following has been detected for any unit; a leak resulting in a loss of one tenth of one percent or more of the original amount of tritium or promethium-147 from the device; or surface contamination of tritium or promethium-147 on the device of more than 2,200 disintegrations per minute per 100 square centimeters of surface area; or any other evidence of physical damage.

(3) Each person licensed under 10 CFR 32.55 or Subsection C of 20.3.3.305 NMAC shall visually inspect each device and shall reject any that has an observable physical defect that could adversely affect containment of the tritium or promethium-147.

(4) Each person licensed under 10 CFR 32.53 or Subsection C of 20.3.3.305 NMAC shall:

(a) maintain quality assurance systems in the manufacture of the luminous safety device in a manner sufficient to provide reasonable assurance that the safety-related components of the distributed devices are capable of performing their intended functions; and

(b) subject inspection lots to acceptance sampling procedures, by procedures specified in Subparagraph C(2) of this section and in the license issued under 10 CFR 32.53 or Subsection C of 20.3.3.305 NMAC to provide at least ninety-five percent confidence that the lot tolerance percent defective of five percent will not be exceeded.

(5) The licensee shall subject each inspection lot to:

(a) tests that adequately take into account the individual, aggregate, and cumulative effects of environmental conditions expected in service that could adversely affect the effective containment of tritium or promethium-147, such as absolute pressure and water immersion; and

(b) inspection for evidence of physical damage, containment failure, or loss of tritium or promethium-147 after each stage of testing, using methods of inspection adequate for applying the following criteria for defective:

(i) a leak resulting in a loss of one tenth of one percent or more of the original amount of tritium or promethium-147 from the device;

(ii) levels of radiation in excess of 5 microgray (0.5 millirad) per hour at 10 centimeters from any surface when measured through 50 milligrams per square centimeter of absorber, if the device contains promethium-147; and

(iii) any other criteria specified in the license issued under 10 CFR 32.53 or Subsection C of 20.3.3.305 NMAC.

(6) No person licensed under 10 CFR 32.53 or Subsection C of 20.3.3.305 NMAC shall transfer to persons generally licensed pursuant to 10 CFR 31.7 or under an equivalent general license of an agreement state:

(a) any luminous safety device tested and found defective under any condition of a license issued under Subsection C of this section, unless the defective luminous safety device has been repaired or reworked, retested, and determined by an independent inspector to meet the applicable acceptance criteria; or

(b) any luminous safety device contained within any lot that has been sampled and rejected as a result of the procedures in Subsection C(4)(b) of this section, unless a procedure for defining sub-lot size, independence, and additional testing procedures is contained in the license issued under 10 CFR 32.53 or Subsection C of 20.3.3.305 NMAC and each individual sub-lot is sampled, tested, and accepted in accordance with Subsection C(2) of this section and any other criteria that may be required as a condition of the license issued under 10 CFR 32.53 or Subsection C of 20.3.3.305 NMAC.

(7) Persons who own, receive, acquire, possess or use luminous safety devices pursuant to this general license are exempt from the requirements of 20.3.4 NMAC and 20.3.10 NMAC except that they shall comply with the reporting and notification provisions of 20.3.4.451 NMAC and 20.3.4.452 NMAC.

(8) This general license does not authorize the manufacture, assembly, repair or import of luminous safety containing tritium or promethium-147.

(9) This general license does not authorize the export of luminous safety devices containing tritium or promethium-147.

(10) This general license does not authorize the ownership, receipt, acquisition, possession or use of promethium-147 contained in instrument dials.

D. Calibration and reference sources.

(1) A general license is hereby issued to those persons listed in this paragraph to own, receive, acquire, possess, use and transfer, in accordance with the provisions of Paragraphs (4) and (5) of this subsection americium-241 in the form of calibration or reference sources.

(a) Any person who holds a specific license issued by the department which authorizes them to receive, possess, use and transfer radioactive material.

(b) Any government agency, as defined in 20.3.1.7 NMAC, which holds a specific license issued pursuant to this chapter which authorizes it to receive, possess, use and transfer radioactive material.

(2) A general license is hereby issued to those persons listed below to receive title to, own, acquire, deliver, receive, possess, use and transfer in accordance with the provisions of Paragraph (4) and (5) plutonium in the form of calibration or reference sources.

(a) Any person who holds a specific license issued by the department which authorizes them to receive, possess, use and transfer radioactive material.

(b) Any government agency, as defined in 20.3.1.7 NMAC, which holds a specific license issued pursuant to 20.3 NMAC which authorizes it to receive, possess, use and transfer radioactive material.

(c) Any person who holds a specific license issued by the NRC or an agreement state which authorizes them to receive, possess, use and transfer special nuclear material.

(3) A general license is hereby issued to receive, possess, use and transfer radium-226 in the form of calibration or reference sources in accordance with Paragraphs (4) and (5) of this subsection to any person who holds a specific license issued by the department which authorizes them to receive, possess, use and transfer radioactive material.

(4) The general licenses in Paragraphs (1), (2) and (3) of this subsection apply only to calibration or reference sources which have been manufactured or initially transferred in accordance with the specifications contained in a specific license issued the department pursuant to Subsection G of 20.3.3.315 NMAC or in accordance with the specifications contained in a specific license issued by the NRC or an agreement state pursuant to equivalent licensing requirements which authorizes the manufacturer of the sources for distribution to persons generally licensed by the NRC or an agreement state.

(5) The general licenses provided in Paragraphs (1), (2) and (3) of this subsection are subject to the provisions of Subsection F of 20.3.3.317 NMAC. In addition, persons who receive, acquire, possess, use or transfer one or more calibration or reference sources pursuant to these general licenses:

(a) shall not possess at any one time, at any one location of storage or use, more than 5 microcuries (185 kilobecquerels) of americium-241, 5 microcuries (185 kilobecquerels) of plutonium and 5 microcuries (185 kilobecquerels) of radium-226 in such sources;

(b) shall not receive, possess, use or transfer such source unless the source, or the storage container, bears a label which includes the following statement or a substantially similar statement which contains the information called for in the following statement:

The receipt, possession, use and transfer of this source, model _____, serial number _____, are subject to a general license and the regulations of the United States nuclear regulatory commission or of a state with which the commission has entered into an agreement for the exercise of regulatory authority. Do not remove this label. Caution - radioactive material - this source contains [describe one of the following radioactive materials americium-241, plutonium or radium-226 as appropriate]. Do not touch radioactive portion of this source.

(name of manufacturer or initial transferor)

(c) shall not transfer, abandon or dispose of such source except by transfer to a person authorized by a license issued by the department, the NRC or an agreement state to receive the source;

(d) shall store such source, except when the source is being used, in a closed container adequately designated and constructed to contain americium-241, plutonium or radium-226 which might otherwise escape during storage; and

(e) shall not use such source for any purpose other than the calibration of radiation detectors or the standardization of other sources.

(6) These general licenses do not authorize the manufacture or import of calibration or reference sources containing americium-241, plutonium or radium-226.

E. General license to install devices generally licensed in Subsection B of 20.3.3.305 NMAC. Any person who holds a specific license issued by the NRC or an agreement state authorizing the holder to manufacture, install or service a device described in Subsection B of this section within such agreement state issuing the specific license or within a location subject to NRC jurisdiction, is hereby granted a general license to install and service such device in this state; provided, that:

(1) the device has been manufactured, labeled, installed and serviced in accordance with applicable provisions of the specific license issued to such person by the NRC or an agreement state; and

(2) such person assures that any labels required to be affixed to the device under regulations of the NRC or agreement state which licensed manufacture of the device bear a statement that removal of the label is prohibited.

F. General license for use of radioactive material for certain in-vitro clinical or laboratory testing.

(1) A general license is hereby issued to any physician, veterinarian in the practice of veterinary medicine, clinical laboratory or hospital to receive, acquire, possess, transfer or use, for any of the following stated tests, in accordance with the provisions of Paragraphs (2) through (6) of this subsection, the following radioactive materials in prepackaged units, each for use for in-vitro clinical or laboratory tests not involving internal or external administration of radioactive material, or the radiation therefrom, to human beings or animals:

(a) iodine-125, in units not exceeding 10 microcuries (370 kilobecquerels) each;

(b) iodine-131, in units not exceeding 10 microcuries (370 kilobecquerels) each;

(c) carbon-14, in units not exceeding 10 microcuries (370 kilobecquerels) each;

(d) hydrogen-3, in units not exceeding 50 microcuries (1.85 megabecquerels) each;

(e) iron-59, in units not exceeding 20 microcuries (740 kilobecquerels) each;

(f) cobalt-57, in units not exceeding 10 microcuries (370 kilobecquerels) each;

(g) selenium-75, in units not exceeding 10 microcuries (370 kilobecquerels) each; and

(h) mock iodine-125 for use as reference or calibration sources not to exceed 0.05 microcurie (1.85 kilobecquerels) of iodine-129 and 0.005 microcurie (1.85 becquerels) of americium-241 each.

(2) No person shall receive, acquire, possess, use or transfer radioactive material pursuant to the general license established by Paragraph (1) of this subsection unless that person

(a) has filed a form, *registration certificate-in vitro testing with radioactive material under general license*, with the department and received from the department a validated copy of the registration certificate with a registration number assigned. The physician, clinical laboratory or hospital shall furnish on the registration certificate the following information and such other information as may be required by the form:

(i) name and address of the physician, clinical laboratory or hospital;

(ii) the location of use; and

(iii) a statement that the physician, veterinarian, clinical laboratory or hospital has appropriate radiation measuring instruments to carry out in vitro clinical or laboratory tests with radioactive material as authorized under the general license in Paragraph (1) of this subsection and that such tests will be performed only by personnel competent in the use of such instruments and in the handling of the radioactive material; or

(b) has a license that authorizes the medical use of radioactive material that was issued under 20.3.7 NMAC.

(3) A person who receives, acquires, possesses or uses radioactive material pursuant to the general license established by Paragraph (1) of this subsection shall comply with the following:

(a) the general licensee shall not possess at any one time, pursuant to the general license in Paragraph (1) of this subsection at any one location of storage or use, a total amount of iodine-125, iodine-131, iron-59, cobalt-57 or selenium-75 in excess of 200 microcuries (7.4 megabecquerels);

(b) the general licensee shall store the radioactive material, until used, in the original shipping container or in a container providing equivalent radiation protection;

(c) the general licensee shall use the radioactive material only for the uses authorized by Paragraph (1) of this subsection;

(d) the general licensee shall neither transfer the radioactive material except by transfer to a person authorized to receive it pursuant to a license issued by the department, the NRC or an agreement state, nor transfer the radioactive material in any manner other than in the unopened, labeled shipping container as received from the supplier; and

(e) the general licensee shall dispose of mock iodine reference or calibration sources in accordance with 20.3.4.433 NMAC.

(4) The general licensee shall not receive, acquire, possess or use radioactive material pursuant to Paragraph (1) of this subsection:

(a) except as prepackaged units which are labeled in accordance with the provisions of a specific license issued under Subsection H of 20.3.3.315 NMAC, or in accordance with the provisions of a specific license issued by the NRC or an agreement state, or labeled before November 30, 2007 in accordance with the provisions of a specific license issued by a state with comparable provisions to Subsection H of 20.3.3.315 NMAC, which authorizes the manufacture and distribution of iodine-125, iodine-131, carbon-14, hydrogen-3 (tritium), iron-59, cobalt-57, selenium-75, or mock

iodine-125 for distribution to persons generally licensed by the NRC, the agreement state or the state with comparable provisions to Subsection H of 20.3.3.315 NMAC; and

(b) unless the following statement, or a substantially similar statement, which contains the information called for in the following statement appears on a label affixed to each prepackaged unit or appears in a leaflet or brochure which accompanies the package:

This radioactive material shall be received, acquired, possessed and used only by physicians, veterinarians in the practice of veterinary medicine, clinical laboratories or hospitals and only for in-vitro clinical or laboratory tests not involving internal or external administration of the material, or the radiation therefrom, to human beings or animals. Its receipt, acquisition, possession, use and transfer are subject to the regulations and a general license of the U.S. nuclear regulatory commission or of a State with which the commission has entered into an agreement for the exercise of regulatory authority.

(name of manufacturer)

(5) The general licensee possessing or using radioactive material under the general license of Paragraph (1) of this subsection shall report in writing to the department, any changes in the information furnished by them in the *certificate-in-vitro testing with radioactive material under general license* form. The report shall be furnished within 30 days after the effective date of such change.

(6) Any person using radioactive material pursuant to the general license of Paragraph (1) of this subsection is exempt from the requirements of 20.3.4 NMAC and 20.3.10 NMAC with respect to radioactive material covered by that general license except that such person using a mock iodine-125 shall comply with the provisions of 20.3.4.433 NMAC, 20.3.4.451 NMAC and 20.3.4.452 NMAC.

G. General license for strontium 90 in ice detection devices.

(1) A general license is hereby issued to own, receive, acquire, possess, use and transfer strontium-90 contained in ice detection devices, provided each device contains not more than 50 microcuries (1.85 megabecquerels) of strontium-90 and each device has been manufactured or initially transferred in accordance with a specific license issued by the department, the NRC or an agreement state, which authorizes manufacture of the ice detection devices for distribution to persons generally licensed by the department, NRC or an agreement state.

(2) Persons who own, receive, acquire, possess, use or transfer strontium-90 contained in ice detection devices pursuant to the general license in Paragraph (1) of this subsection:

(a) shall, upon occurrence of visually observable damage, such as a bend or crack or discoloration from overheating, to the device, discontinue use of the device until it has been inspected, tested for leakage and repaired by a person holding a specific license from the department, the NRC or an agreement state to manufacture or service such devices; or shall dispose of the device pursuant to the provisions of 20.3.4.433 NMAC;

(b) shall assure that all labels affixed to the device at the time of receipt, and which bear a statement which prohibits removal of the labels, are maintained thereof; and

(c) are exempt from the requirement of 20.3.4 NMAC and 20.3.10 NMAC except that such persons shall comply with the provisions of 20.3.4.433 NMAC, 20.3.4.451 NMAC and 20.3.4.452 NMAC.

(3) This general license does not authorize the manufacture, assembly, disassembly, repair or import of strontium-90 in ice detection devices.

H. General license for certain items and self-luminous products containing radium-226.

(1) A general license is hereby issued to any person to acquire, receive, possess, use or transfer, in accordance with the provisions of Paragraphs (2), (3) and (4) of this subsection, radium-226 contained in the following products manufactured prior to November 30, 2007.

(a) Antiquities originally intended for use by the general public. For the purposes of this paragraph, antiquities mean products originally intended for use by the general public and distributed in the late 19th and early 20th centuries, such as radium emanator jars, revigators, radium water jars, radon generators, refrigerator cards, radium bath salts and healing pads.

(b) Intact timepieces containing greater than 0.037 megabecquerel (1 microcurie), non-intact timepieces, and timepiece hands and dials no longer installed in timepieces.

(c) Luminous items installed in air, marine or land vehicles.

(d) All other luminous products, provided that no more than 100 items are used or stored at the same location at any one time.

(e) Small radium sources containing no more than 1 microcurie (0.037 megabecquerel) of radium-226. For the purposes of this paragraph, "small radium sources" means discrete survey instrument check sources, sources contained in radiation measuring instruments, sources used in educational demonstrations (such as

cloud chambers and spinthariscopes), electron tubes, lightning rods, ionization sources, static eliminators or as designated by the department or NRC.

(2) Persons who acquire, receive, possess, use or transfer byproduct material under the general license issued in Paragraph (1) of this subsection are exempt from the provisions of 20.3.3.325 NMAC, 20.3.3.326 NMAC, 20.3.4 NMAC and 20.3.10 NMAC to the extent that the receipt, possession, use or transfer of radioactive material is within the terms of the general license; provided, however, that this exemption shall not be deemed to apply to any such person specifically licensed under this chapter.

(3) Any person who acquires, receives, possesses, uses or transfers radioactive material in accordance with the general license in Paragraph (1) of this section shall:

(a) notify the department should there be any indication of possible damage to the product so that it appears it could result in a loss of the radioactive material. A report containing a brief description of the event, and the remedial action taken, must be furnished to the department at the address specified in 20.3.1.116 NMAC within 30 days of the event;

(b) not abandon products containing radium-226; the product, and any radioactive material from the product, may only be disposed of according to 20.3.4.437 NMAC or by transfer to a person authorized by a specific license to receive the radium-226 in the product or as otherwise approved by the department;

(c) not export products containing radium-226 except in accordance with 10 CFR 110;

(d) dispose of products containing radium-226 at a disposal facility authorized to dispose of radioactive material in accordance with any federal or state solid or hazardous waste law, including the Solid Waste Disposal Act, as authorized under the Energy Policy Act, by transfer to a person authorized to receive radium-226 by a specific license issued under this part, or equivalent regulations of the NRC, an agreement state or as otherwise approved by the department or NRC;

(e) respond to written requests from the department to provide information relating to the general license within 30 calendar days of the date of the request, or other time specified in the request. If the general licensee cannot provide the requested information within the allotted time, it shall, within that same time period, request a longer period to supply the information by providing the department a written justification for the request.

(4) The general license in Paragraph (1) of this section does not authorize the manufacture, assembly, disassembly, repair or import of products containing radium-226, except when timepieces may be disassembled and repaired.

I. General license to own radioactive material. A general license is hereby issued to receive title to and own radioactive material without regard to quantity. Notwithstanding any other provision of this chapter, a general licensee under this subsection is not authorized to acquire, deliver, manufacture, produce, transfer, receive, possess, use, import or export radioactive material, except as authorized in a specific license.

[20.3.3.305 NMAC - Rp, 20.3.3.305 NMAC, 4/30/2009; A, 8/10/2021]

20.3.3.306 TRANSPORTATION OF RADIOACTIVE MATERIAL:

A. Except as specified in Subsection D of this section, the regulations of the United States NRC set forth in 10 CFR 71 are hereby incorporated by reference.

B. Shipment and transport of radioactive material shall be in accordance with the provisions of Subsection A of this section.

C. The following modifications are made to the incorporated federal regulations in this section:

(1) "**commission**" means the NRC except as specified in subsection (4) below;

(2) "**act**" means the Radiation Protection Act, Sections 74-3-1 through 74-3-16 NMSA 1978; and

(3) "**byproduct material**" means radioactive material as defined in 20.3.1.7 NMAC.

(4) all reference in 10 CFR 71 to "commission" are changed to department as follows: 71.17(a), 71.17(b), 71.21, 71.91(b), 71.91(c), 71.91(d), 71.101(c)(1), 71.106(a), 71.106(a)(1), 71.106(b) and 71.106(b)(1).

(5) all reference in 10 CFR 71 to "certificate holder", "applicant" and "applicant for a certificate of compliance (COC)" apply to the NRC as follows 71.91(c), 71.91(d), 71.101(a), 71.101(b), 71.103(a) and 71.135.

D. The following provisions contained in 10 CFR 71 are applicable to the NRC and not incorporated in this section: 71.11, 71.14(b), 71.19, 71.31, 71.33, 71.35, 71.37, 71.38, 71.39, 71.41, 71.43, 71.45, 71.51, 71.55, 71.59, 71.61, 71.63, 71.64, 71.65, 71.70, 71.71, 71.73, 71.74, 71.75, 71.77, 71.85(a)-(c), 71.91(b), 71.101(c)(2), (d), and (e), 71.107, 71.109, 71.111, 71.113, 71.115, 71.117, 71.119, 71.121, 71.123, and 71.125.

[20.3.3.306 NMAC - Rp, 20.3.3.306 NMAC & 20.3.3.325 NMAC, 4/30/2009; A, 6/30/2011; A, 8/10/2021]

20.3.3.307 FILING APPLICATION FOR SPECIFIC LICENSES:

A. Except where otherwise determined by the department, applications for specific licenses shall be filed in duplicate on a form prescribed by the department (*application for a radioactive material license*) in accordance with the instructions to the form. Additional copies of the application may be required by the department. Information contained in previous application, statements or reports filed with the department may be incorporated by reference, provided that the reference is clear and specific.

B. The department may at any time after the filing of the original application, and before the expiration of the license, require further statements in order to enable the department to determine whether the application shall be granted or denied or whether a license shall be modified or revoked.

C. Each application shall be signed by the applicant or licensee or a person duly authorized to act for and on their behalf.

D. An application for a license may include a request for a license authorizing more than one activity, provided that the application specifies the additional activities for which licenses are requested and complies with the requirements in this chapter as to applications for such licenses. In such cases, annual fees for all types of activities authorized by the license may be charged as determined by 20.3.16 NMAC.

E. An application for a specific license of category 1 and category 2 quantities of radioactive material shall comply with 10 CFR 37. The licensee shall comply with 10 CFR 37 except as follows:

(1) any reference to the commission or NRC shall be deemed a reference to the department;

(2) 10 CFR 37.5 definitions of agreement state, byproduct material, commission and person shall not be applicable;

(3) 10 CFR 37.7, 10 CFR 37.9, 10 CFR 37.11(a) and (b), 10 CFR 37.13, 10 CFR 37.27(c), 10 CFR 37.105, and 10 CFR 37.107 shall not be applicable; and

(4) the license required report of events or notification in 10 CFR 37.45, 10 CFR 37.57, 10 CFR 71, 10 CFR 37.77(a) through (d), and 10 CFR 37.81 shall use the following address when applicable: New Mexico Environment Department/RCB, P.O. Box 5469, Santa Fe, NM 87502-5469.

F. An application for a specific license to use radioactive material in the form of a sealed source or in a device that contains the sealed source must identify the source and (or) the device by manufacturer name and model number as registered with the *sealed source and device registry*.

(1) Except as provided in Paragraph (2), (3) and (4) of this Subsection, an application for a specific license to use byproduct material in the form of a sealed source or in a device that contains the sealed source must either:

(a) identify the source or device by manufacturer and model number registered with the NRC pursuant to 10 CFR 32.210, with an agreement state, or for a source or a device containing radium-226 or accelerator-produced radioactive material with a state under provisions comparable to 10 CFR 32.210; or

(b) contain the information identified in 10 CFR 32.210(c).

(2) For sources or devices manufactured before October 23, 2012 that are not registered with the NRC under 10 CFR 32.210 or with an agreement state, and for which the applicant is unable to provide all categories of information specified in 10 CFR 32.210(c), the application must include:

(a) all available information identified in 10 CFR 32.210(c) concerning the source, and, if applicable, the device; and

(b) sufficient additional information to demonstrate that there is reasonable assurance that the radiation safety properties of the source or device are adequate to protect health and minimize danger to life and property. Such information must include a description of the source or device, a description of radiation safety features, the intended use and associated operating experience, and the results of a recent leak test.

(3) For sealed sources and devices allowed to be distributed without registration of safety information in accordance with 10 CFR 32.210(g)(1), the applicant may supply only the manufacturer, model number, and radionuclide and quantity.

(4) If it is not feasible to identify each sealed source and device individually, the applicant may propose constraints on the number and type of sealed sources and devices to be used and the conditions under which they will be used, in lieu of identifying each sealed source and device.

G. As provided by 20.3.3.311 NMAC, certain applications for a new or renewal specific license must contain a proposed decommissioning funding plan or a certification of financial assurance for decommissioning.

H. An application for a license to receive and possess radioactive material for the conduct of any activity which the department has determined pursuant to Subpart A of 10 CFR 51 will significantly affect the quality of the environment shall be filed at least nine months prior to commencement of construction of the plant or facility in which the activity will be conducted and shall be accompanied by an environmental impact report required pursuant to Subpart A of 10 CFR 51.

I. None of the following applications shall be accepted for review unless it is accompanied by an environmental impact report, submitted by the applicant, that specifically addresses the short-term and long-term environmental, radiological and public health and safety aspects of the applications and alternatives to the proposed action:

(1) an initial application for a radioactive material license for a commercial radioactive waste disposal site license;

(2) the first renewal of any such license not previously accompanied by an environmental impact report;

(3) an application for an amendment to an existing license that may result in additional significant impacts from radiation on the environment or public health or safety beyond those impacts addressed in the existing license and accompanying documents; and

(4) any other application that the secretary determines may have significant impacts from radiation on the environment or public health or safety.

J. The application for a radioactive material license for a commercial radioactive waste disposal site, or for any renewal thereof, or for an amendment thereto as described in Paragraph (3) of Subsection H of this section, shall demonstrate that the activity for which such license is requested will comply with all laws and regulations enforceable by the department.

K. An application from a medical facility or educational institution to produce PET radioactive drugs for noncommercial transfer to licensees in its consortium authorized for medical use under 20.3.7 NMAC shall include:

(1) a request for authorization for the production of PET radionuclides or evidence of an existing license issued under 20.3.3 NMAC or under equivalent NRC or agreement state requirements for a PET radionuclide production facility within its consortium from which it receives PET radionuclides;

(2) evidence that the applicant is qualified to produce radioactive drugs for medical use by meeting one of the criteria in Subparagraph (b) of Paragraph (1) of Subsection J of 20.3.3.315 NMAC;

(3) identification of individual(s) authorized to prepare the PET radioactive drugs if the applicant is a pharmacy, and documentation that each individual meets the requirements of an authorized nuclear pharmacist as specified in Subparagraph (b) of Paragraph (2) of Subsection J of 20.3.3.315 NMAC; and

(4) information identified in Subparagraph (c) of Paragraph (1) of Subsection J of 20.3.3.315 NMAC on the PET drugs to be non-commercially transferred to members of its consortium.

L. An application for a specific license to transfer source material under this section.

(1) An application for a specific license to initially transfer source material for use under 20.3.3.307 NMAC, will be approved if:

(a) the applicant satisfies the general requirements specified in this section;
and

(b) the applicant submits adequate information on, and the department approves the methods to be used for quality control, labeling, and providing safety instructions to recipients.

(2) Each person licensed under this section shall label the immediate container of each quantity of source material with the type of source material and quantity of material and the words, "radioactive material."

(3) Each person licensed under this section shall ensure that the quantities and concentrations of source material are as labeled and indicated in any transfer records.

(4) Each person licensed under this section shall provide the information specified in this paragraph to each person to whom source material is transferred for use under this section. This information must be transferred before the source material is transferred for the first time in each calendar year to the particular recipient. The required information includes:

(a) a copy of Subsection B of 20.3.3.304.B NMAC and 10 CFR 40.51 or equivalent regulations under Subsection L of 20.3.3.307 NMAC; and

(b) appropriate radiation safety precautions and instructions relating to handling, use, storage, and disposal of the material.

(5) Each person licensed under this section shall report transfers as follows:

(a) File a report with the department under 20.3.1.116 NMAC. The report shall include the following information:

(i) The name, address, and license number of the person who transferred the source material; and

(ii) For each general licensee under 10 CFR 40.22 or 20.3.3.304 NMAC to whom greater than 50 grams (0.11 lb) of source material has been transferred

in a single calendar quarter, the name and address of the general licensee to whom source material is distributed; a responsible agent, by name and/or position and phone number, of the general licensee to whom the material was sent; and the type, physical form, and quantity of source material transferred; and

(iii) The total quantity of each type and physical form of source material transferred in the reporting period to all such generally licensed recipients.

(b) File a report with each responsible agreement state agency that identifies all persons, operating under the provisions equivalent to 10 CFR 40.22, to whom greater than 50 grams (0.11 lb) of source material has been transferred within a single calendar quarter. The report shall include the following information specific to those transfers made to the agreement state:

(i) The name, address, and license number of the person who transferred the source material;

(ii) The name and address of the general licensee to whom source material was distributed; a responsible agent, by name and/or position and phone number, of the general licensee to whom the material was sent; and the type, physical form, and quantity of source material transferred; and

(iii) The total quantity of each type and physical form of source material transferred in the reporting period to all such generally licensed recipients within the Agreement State.

(c) Submit each report by January 31 of each year covering all transfers for the previous calendar year. If no transfers were made to persons generally licensed under 10 CFR 40.22 or equivalent agreement state provisions during the current period, a report shall be submitted to the NRC indicating so. If no transfers have been made to general licensees in a particular agreement state during the reporting period, this information shall be reported to the responsible agreement state agency upon request of the agency.

(d) Each person licensed under 20.3.3.304 NMAC shall maintain all information that supports the reports required by this section concerning each transfer to a general licensee for a period of one year after the event is included in a report to the NRC or to an agreement state agency.

[20.3.3.307 NMAC - Rp, 20.3.3.307 NMAC, 04/30/2009; A, 02/14/2023]

20.3.3.308 GENERAL REQUIREMENTS FOR THE ISSUANCE OF SPECIFIC LICENSES:

A. An application for a specific license shall be approved if all of the following requirements are met.

(1) The application is for a purpose authorized by the act.

(2) The applicant is qualified by training and experience to use the material for the purpose requested in accordance with the provisions in this chapter and in such a manner as to minimize the danger to public health and safety or property.

(3) The applicant's proposed equipment, facilities and procedures are adequate to minimize danger to public health and safety or property.

(4) The applicant satisfies the requirements in this section, and any special requirements in 20.3.3.307 NMAC and 20.3.3.309 NMAC, 20.3.3.313 NMAC, 20.3.3.314 NMAC or 20.3.3.315 NMAC.

B. Upon a determination that an application meets the requirements of the act and the 20.3 NMAC, the department will issue a specific license authorizing the possession and use of radioactive material.

C. The secretary may deny an application if an applicant:

(1) fails to demonstrate that the requirements of the act and 20.3 NMAC have been addressed;

(2) fails to meet the requirements for completeness and accuracy of information in 20.3.1.123 NMAC;

(3) has demonstrated deliberate misconduct as described in 20.3.1.122 NMAC; and

(4) fails to respond to a request for additional information within 30 days from the date of the request, or within such other time as may be specified in the request for information.

[20.3.3.308 NMAC - Rp, 20.3.3.308 NMAC, 04/30/2009; A, 06/13/2017]

20.3.3.309 REQUIREMENTS FOR EMERGENCY RESPONSE PLANS FOR CERTAIN LICENSEES:

A. Each application to possess radioactive materials in unsealed forms, on foils or plated sources, or sealed in glass in excess of the quantities in 20.3.3.333 NMAC (Schedule E - Quantities of Radioactive Materials Requiring Consideration of the Need for an Emergency Plan for Responding to a Release), must contain either:

(1) an evaluation showing that the maximum dose to a person offsite due to a release of radioactive materials would not exceed 1 rem effective dose equivalent or 5 rems (50 millisieverts) to the thyroid; or

(2) an emergency plan for responding to a release of radioactive material.

B. One or more of the following factors may be used to support an evaluation submitted under Paragraph (1) of Subsection A of this section:

(1) the radioactive material is physically separated so that only a portion could be involved in an accident;

(2) all or part of the radioactive material is not subject to release during an accident because of the way it is stored or packaged;

(3) the release fraction in the respirable size range would be lower than the release fraction shown in 20.3.3.333 NMAC of this part due to the chemical or physical form of the material;

(4) the solubility of the radioactive material would reduce the dose received;

(5) facility design or engineered safety features in the facility would cause the release fraction to be lower than shown in 20.3.3.333 NMAC;

(6) other factors appropriate for the specific facility; or

(7) operating restrictions or procedures would prevent a release fraction as large as that shown in 20.3.3.333 NMAC.

C. An emergency plan for responding to a release of radioactive material submitted under Paragraph (2) of Subsection A of this section must include the following information.

(1) **Facility description:** a brief description of the licensee's facility and area near the site.

(2) **Types of accidents:** an identification of each type of radioactive materials accident for which protective actions may be needed.

(3) **Classification of accidents:** a system for classifying each accident as "alert" or "site area emergencies".

(4) **Detection of accidents:** identification of the means of detecting each type of accident in a timely manner.

(5) **Mitigation of consequences:** a brief description of the means and equipment for mitigating the consequences of each type of accident, including those provided to protect workers onsite, and a description of the program for maintaining the equipment.

(6) Assessment of releases: a brief description of the methods and equipment to assess releases of radioactive materials.

(7) Responsibilities: a brief description of the responsibilities of licensee personnel should an accident occur, including identification of personnel responsible for promptly notifying offsite response organizations and the secretary; also responsibilities for developing, maintaining, and updating the plan.

(8) Notification and coordination: a commitment to and a brief description of the means to promptly notify offsite response organizations and request offsite assistance, including medical assistance for the treatment of contaminated injured onsite workers when appropriate. A control point must be established. The notification and coordination must be planned so that unavailability of some personnel, parts of the facility, and some equipment will not prevent the notification and coordination. The licensee shall also commit to notify the secretary immediately and ensure notification of other appropriate offsite response organizations "and not later than one hour after the licensee declares an emergency".

(9) Information to be communicated: a brief description of the types of information regarding facility status, radioactive releases and, if necessary, recommended protective actions.

(10) Training: a brief description of the frequency, performance objectives and plans for the training that the licensee will provide workers on how to respond to an emergency including any special instructions and orientation tours the licensee would offer to fire, police, medical and other emergency personnel. The training shall familiarize personnel with site-specific emergency procedures. Also, the training shall thoroughly prepare site personnel for their responsibilities in the event of accident scenarios postulated as most probable for the specific site, including the use of team training for such scenarios.

(11) Safe shutdown: a brief description of the means of restoring the facility to a safe condition after an accident.

(12) Exercises: provisions for conducting quarterly communications checks with offsite response organizations and biennial onsite exercises to test response to simulated emergencies. Quarterly communications checks with offsite response organizations must include the check and update of all necessary telephone numbers. The licensee shall invite offsite response organizations to participate in the biennial exercises. Participation of offsite response organizations in biennial exercises, although recommended, is not required. Exercises must use accident scenarios postulated as most probable for the specific site and the scenarios shall not be known to most exercise participants. The licensee shall critique each exercise using individuals not having direct implementation responsibility for the plan. Critiques of exercises must evaluate the appropriateness of the plan, emergency procedures, facilities, equipment

and training of personnel and overall effectiveness of the response. Deficiencies found by the critiques must be corrected.

(13) Hazardous chemicals: a certification that the applicant has met its responsibilities under the Emergency Planning and Community Right-to-Know Act (title III, pub. I. 99-499), if applicable to the applicant's activities at the proposed place of use of the radioactive material.

D. The licensee shall allow the offsite response organizations expected to respond in case of an accident 60 days to comment on the licensee's emergency plan before submitting it in final form to the department. The licensee shall provide any comments received within the 60 days to the department with the emergency plan.

[20.3.3.309 NMAC - Rp, 20.3.3.309 NMAC, 04/30/2009]

20.3.3.310 PUBLIC NOTICE, PARTICIPATION AND HEARING:

A. Within 60 days following:

(1) initial receipt of a new license application, or each additional submission of information by the applicant, the secretary will either accept the application for a new license for a review and give notice pursuant to Subsection B of this section, or notify the applicant in writing of any deficiencies in the application that must be corrected in order for the application to be accepted for review;

(2) a license amendment or license renewal application requesting a change of the location where radioactive material will be stored or used, the secretary will issue notices pursuant to Subsection B of this section;

(3) a license amendment or license renewal application requesting a change of principal activity, the secretary will issue notices pursuant to Subsection B of this section.

B. Notices. The secretary shall give a notice of acceptance of a new application, license amendment or renewal license application described in Subsection A of this section:

(1) to the applicant, by certified mail; and

(2) to the public, by the publication of a notice in at least one newspaper of general circulation in the area of the proposed activity in the license application, and in other newspapers as deemed appropriate by the secretary;

(3) the secretary shall make a good faith effort to notify of acceptance of a new application, license amendment or renewal license application described in of Subsection A of this section by first-class mail:

(a) any local, state, Indian Tribal government or federal government agency that the secretary determines may be significantly affected or interested; and

(b) any other person who, prior to such notice, has requested in writing such notices.

C. The notice specified in Paragraph (2) of Subsection B of this section shall include:

- (1) the name and address of the applicant;
- (2) the location of the proposed activity;
- (3) a brief description of the procedures to be followed by the secretary in making a final determination;
- (4) a brief description of the proposed activity;
- (5) the time within which written comments and requests for public hearings will be accepted; and
- (6) the means by which interested persons may obtain further information;
- (7) the following sample notice satisfies the requirements of this section:

PUBLIC NOTICE

The New Mexico Environment Department (the Department) has received an application for a Radioactive Material License from _____ (company name and address) for _____ (proposed activity) to be located at _____ (location).

During the early part of the evaluation period, the Department will review and comment upon the application. The NMED may, at its discretion, retain consultants to assist it in its evaluation of the application. Relevant comments and questions received by the NMED from various agencies and interested parties will be forwarded to the applicant for its response. Correspondence associated with the application will be on file with the Radiation Control Bureau and will be available for inspection by the applicant and any other interested parties.

The Department has required the applicant to provide complete plans and other materials addressing, among other things, the public health, safety and environmental aspects of the proposed activity.

The Department will analyze the license application carefully. During this analysis, the application will be reviewed to ensure that there are no deficiencies, that the application

meets all applicable requirements and that there is no reason to believe that the operation will violate any laws or regulations. If the Department is so satisfied, it will issue a Radioactive Material License, to expire in five years.

The activities of all licensees are inspected periodically to assure compliance with regulations and license conditions.

The application is available for review at NMED's offices of the Radiation Control Bureau in Santa Fe, New Mexico.

It is anticipated that the review period will require about _____ months. Written comments and requests for public hearing will be accepted for _____ days after publication of this notice.

Written comments regarding this license application should be directed to Radiation Control Bureau, Environment Department, P.O. Box 5469, Santa Fe, New Mexico 87502-5469.

D. The department shall maintain all licensees' administrative record, which shall be available for public inspection at the department office in Santa Fe.

E. Public comment period.

(1) Following the notice pursuant to Subsections B and C of this section and prior to ruling on any new application, or amendment request or renewal license application of the type described in Subsection A of this section, the secretary shall allow for a period of at least 30 days during which written comments or questions about the license application may be submitted by any interested person. If the secretary determines that the questions are relevant to the requirements in 20.3.3.307 NMAC, 20.3.3.308 NMAC and any specific requirements for the type of license requested, the secretary shall require the applicant to answer them.

(2) Following the notice of acceptance of the license application pursuant to Subsections A through C of this section and prior to ruling on any application required to be accompanied by an environmental report pursuant to Subsection H of 20.3.3.307 NMAC, the secretary shall allow a period of at least 60 days during which written comments or questions may be submitted by any interested person. If the secretary determines that the questions are relevant to the considerations enumerated in Subsection H of 20.3.3.307 NMAC or 20.3.3.308 NMAC, the secretary shall require the applicant to answer them.

The secretary may allow an additional written comment period upon submission of additional information to the license application, amendment request or renewal license application described by Subsection A of this section by the applicant, or upon request by members of the public. A written request for a hearing may be made by the members of the public within the time period specified in the public notice described in Subsection C of this section.

F. If the secretary determines that there is significant public interest, or that there is a need to resolve issues not resolvable in writing, the secretary shall order a public hearing be held to provide guidance on any issue relevant to the license proceeding. Notice of the public hearing shall be given at least 30 days prior to the hearing to the persons and in the manner specified in Subsection C of 20.1.4.200 NMAC. Any such public hearing shall be conducted pursuant to the hearing procedures in 20.1.4 NMAC.

[20.3.3.310 NMAC - Rp, 20.3.3.310 NMAC, 4/30/2009; A, 6/13/2017, 8/10/2021]

20.3.3.311 FINANCIAL ASSURANCE AND RECORD KEEPING FOR DECOMMISSIONING:

A. Decommissioning funding plan required.

(1) Each applicant for a specific license authorizing the possession and use of unsealed radioactive material (except source material which is subject to Paragraph (3) of this subsection) of half-life greater than 120 days in quantities exceeding 100,000 (1E+5) times the applicable quantities set forth in 20.3.3.338 NMAC, shall submit a decommissioning funding plan as described in Subsection E of this section. The decommissioning funding plan must also be submitted when a combination of radioisotopes is involved if R divided by 100,000 (1E+5) is greater than 1 (unity rule), where R is defined here as the sum of the ratios of the quantity of each radioisotope to the applicable value in 20.3.3.338 NMAC.

(2) Each applicant for a specific license authorizing the possession and use of sealed sources or plated foils of half-life greater than 120 days and in quantities exceeding 10^{12} (1E+12) times the applicable quantities set forth in 20.3.3.338 NMAC (or when a combination of radioisotopes is involved if R , as defined in Paragraph (1) of this subsection, divided by 10^{12} is greater than 1), shall submit a decommissioning funding plan as described in Subsection E of this section.

(3) Each applicant for a specific license authorizing the possession and use of more than 100 (1E+2) millicuries of source material in a readily dispersible form shall submit a decommissioning funding plan as described in Subsection E of this section.

B. Each applicant for a specific license authorizing possession and use of radioactive material of half-life greater than 120 days and in quantities specified in Subsection D of this section shall either:

(1) submit a decommissioning funding plan as described in Subsection E of this section; or

(2) submit a certification that financial assurance for decommissioning has been provided in the amount prescribed by Subsection D of this section using one of the methods described in Subsection F of this section; for an applicant, this certification may state that the appropriate assurance will be obtained after the application has been

approved and the license issued but prior to the receipt of licensed material; if the applicant defers execution of the financial instrument until after the license has been issued, a signed original of the financial instrument obtained to satisfy the requirements of Subsection F of this section must be submitted to the department before receipt of licensed material; if the applicant does not defer execution of the financial instrument, the applicant shall submit to the department, as part of the certification, a signed original of the financial instrument obtained to satisfy the requirements of Subsection F of this section.

C. Financial assurance for holders of specific license. Each holder of a specific license issued before the effective date of these regulations which is of a type described in Subsection A or B of this section shall provide financial assurance for decommissioning in accordance with the criteria set forth in this section.

(1) Each holder of a specific license issued before the effective date of these regulations, and of a type described in Subsection A of this section shall submit a decommissioning funding plan as described in Subsection E of this section.

(2) Each holder of a specific license issued before the effective date of these regulations, and of a type described in Subsection B of this section shall submit a decommissioning funding plan as described in Subsection E of this section, or a certification of financial assurance for decommissioning in accordance with the criteria set forth in Subsection D of this section.

(3) Any licensee who has submitted an application before the effective date of these regulations for renewal of license in accordance with 20.3.3.319 NMAC shall provide financial assurance for decommissioning in accordance with Subsections A and B of this section.

(4) Waste collectors and waste processors, as defined in 20.3.4.466 NMAC, must provide financial assurance in an amount based on a decommissioning funding plan as described in Subsection E of this section. The decommissioning funding plan must include the cost of disposal of the maximum amount (in curies) of radioactive material permitted by license, and the cost of disposal of the maximum quantity, by volume, of radioactive material which could be present at the licensee's facility at any time, in addition to the cost to remediate the licensee's site to meet the license termination criteria of 20.3.4.426 NMAC.

D. Required amounts of financial assurance for decommissioning by quantity of material. Licensees exceeding the upper bounds of this subsection must base financial assurance on a decommissioning funding plan as described in Subsection E of this section.

(1) Greater than 10,000 (1E+4) but less than or equal to 100,000 (1E+5) times the applicable quantities of 20.3.3.338 NMAC, in unsealed form. (For a combination of radioisotopes, if R as defined in Subsection A of this section, divided by

10,000 (1E+4) is greater than 1 but R divided by 100,000 (1E+5) is less than or equal to 1): at least equal to \$1,125,000.

(2) Greater than 1,000 (1E+3) but less than or equal to 10,000 (1E+4) times the applicable quantities of 20.3.3.338 NMAC, in unsealed form. (For a combination of radioisotopes, if R, as defined in Subsection A of this section, divided by 1,000 (1E+3) is greater than 1 but R divided by 10,000 (1E+4) is less than or equal to 1): at least equal to \$225,000.

(3) Greater than 10^{10} (1E+10) but less than or equal to 10^{12} (1E+12) times the applicable quantities of 20.3.3.338 NMAC, in sealed sources or plated foils. (For a combination of radioisotopes, if R, as defined in Subsection A of this section, divided by 10^{10} is greater than 1, but R divided by 10^{12} is less than or equal to 1): at least equal to \$113,000.

(4) For source material, greater than 10 millicuries but less than or equal to 100 millicuries: at least equal to \$225,000.

E. Decommissioning funding plan.

(1) Each decommissioning funding plan must be submitted for review and approval and must contain a detailed cost estimate for decommissioning in an amount reflecting:

(a) the cost of an independent contractor to perform all decommissioning activities;

(b) the cost of meeting the 20.3.4.426.B NMAC criteria for unrestricted use, provided that, if the applicant or licensee can demonstrate its ability to meet the provisions of 20.3.4.426.C NMAC, the cost estimate may be based on meeting the 20.3.4.426.C NMAC department approved criteria;

(c) the volume of onsite subsurface material containing residual radioactivity that will require remediation to meet the criteria for license termination;

(d) an adequate contingency factor with identification of and justification for using the key assumptions contained in the decommissioning cost estimate;

(e) a description of the method of assuring funds for decommissioning from 20.3.3.311.F NMAC including means for adjusting cost estimates and associated funding levels periodically over the life of the facility;

(f) a certification by the licensee that financial assurance for decommissioning has been provided in the amount of the cost estimate for decommissioning; and

(g) a signed original of the financial instrument obtained to satisfy the requirement of Subsection F of this section (unless a previously submitted and accepted financial instrument continues to cover the cost estimate for decommissioning).

(2) At the time of license renewal and at intervals not to exceed three years, the decommissioning funding plan must be resubmitted with adjustments as necessary to account for changes in costs and the extent of contamination. If the amount of financial assurance will be adjusted downward, this cannot be done until the updated decommissioning funding plan is approved. The decommissioning funding plan must update the information submitted with the original or prior approved plan, and must specifically consider the effect of the following events on decommissioning costs:

(a) spills of radioactive material producing additional residual radioactivity in onsite subsurface material;

(b) waste inventory increasing above the amount previously estimated;

(c) waste disposal costs increasing above the amount previously estimated;

(d) facility modifications;

(e) changes in authorized possession limits;

(f) actual remediation costs that exceed the previous cost estimate;

(g) onsite disposal; and

(h) use of a settling pond.

F. Methods of financial assurance. Financial assurance for decommissioning must be provided by one or more of the following methods.

(1) **Prepayment.** Prepayment is the deposit prior to the start of operation into an account segregated from licensee assets and outside the licensee's administrative control of cash or liquid assets such that the amount of funds would be sufficient to pay decommissioning costs. Prepayment may be in the form of a trust, escrow account, government fund, certificate of deposit or deposit of government securities.

(2) **A surety method, insurance or other guarantee method.** These methods guarantee that decommissioning costs will be paid. A surety method may be in the form of a surety bond, letter of credit or line of credit. A parent company guarantee of funds for decommissioning costs based on a financial test may be used if the guarantee and test are as contained in 20.3.3.334 NMAC. A parent company guarantee may not be used in combination with other financial methods to satisfy the requirements of this section. For commercial corporations that issue bonds, a guarantee of funds by the applicant or licensee for decommissioning costs based on a financial test may be

used if the guarantee and test are as contained in 20.3.3.335 NMAC. For commercial companies that do not issue bonds, a guarantee of funds by the applicant or licensee for decommissioning costs may be used if the guarantee and test are as contained in 20.3.3.336 NMAC. For nonprofit entities, such as colleges, universities and nonprofit hospitals, a guarantee of funds by the applicant or licensee may be used if the guarantee and test are as contained in 20.3.3.337 NMAC. A guarantee by the applicant or licensee may not be used in combination with any other financial methods to satisfy the requirements of this section or in any situation where the applicant or licensee has a parent company holding majority control of the voting stock of the company. Any surety method or insurance used to provide financial assurance for decommissioning must contain the following conditions.

(a) The surety method or insurance must be open-ended or, if written for a specified term, such as five years, must be renewed automatically unless 90 days or more prior to the renewal date, the issuer notifies the department, the beneficiary, and the licensee of its intention not to renew. The surety method or insurance must also provide that the full face amount be paid to the beneficiary automatically prior to the expiration without proof of forfeiture if the licensee fails to provide a replacement acceptable to the department within 30 days after receipt of notification of cancellation.

(b) The surety method or insurance must be payable to a trust established for decommissioning costs. The trustee and trust must be acceptable to the department. An acceptable trustee includes an appropriate state or federal government agency or an entity which has the authority to act as a trustee and whose trust operations are regulated and examined by a federal or state agency.

(c) The surety method or insurance must remain in effect until the department has terminated the license.

(3) An external sinking fund in which deposits are made at least annually, coupled with a surety method or insurance, the value of which may decrease by the amount being accumulated in the sinking fund. An external sinking fund is a fund established and maintained by setting aside funds periodically in an account segregated from licensee assets and outside the licensee's administrative control in which the total amount of funds would be sufficient to pay decommissioning costs at the time termination of operation is expected. An external sinking fund may be in the form of a trust, escrow account, government fund, certificate of deposit, or deposit of government securities. The surety or insurance provisions must be as stated in Paragraph (2) of this subsection.

(4) In the case of federal, state or local government licensees, a statement of intent containing a cost estimate for decommissioning or an amount based on Subsection D of this section, and indicating that funds for decommissioning will be obtained when necessary.

(5) When a governmental entity is assuming custody and ownership of a site, an arrangement that is deemed acceptable by such governmental entity.

G. Record keeping requirements. Each person licensed under this part or Parts 5, 7, 12, 13 and 15 of this chapter shall keep records of information important to the decommissioning of the facility in an identified location until the site is released for unrestricted use. Before licensed activities are transferred or assigned in accordance with 20.3.3.317 NMAC, licensees shall transfer all records described in this paragraph to the new licensee. In this case, the new licensee will be responsible for maintaining these records until the license is terminated. If records important to the decommissioning of a facility are kept for other purposes, reference to these records and their locations may be used. Information the department considers important to decommissioning consists of:

(1) records of spills or other unusual occurrences involving the spread of contamination in and around the facility, equipment or site; these records may be limited to instances when contamination remains after any cleanup procedures or when there is reasonable likelihood that contaminants may have spread to inaccessible areas as in the case of possible seepage into porous materials such as concrete; these records must include any known information on identification of involved nuclides, quantities, forms and concentrations;

(2) as-built drawings and modifications of structures and equipment in restricted areas where radioactive materials are used or stored, and of locations of possible inaccessible contamination such as buried pipes which may be subject to contamination; if required drawings are referenced, each relevant document need not be indexed individually; if drawings are not available, the licensee shall substitute appropriate records of available information concerning these areas and locations;

(3) except for areas containing only sealed sources (provided the sources have not leaked or no contamination remains after any leak) or radioactive materials having only half-lives of less than 65 days, a list contained in a single document and updated every two years, of the following:

(a) all areas designated and formerly designated restricted areas as defined in 20.3.4.7 NMAC;

(b) all areas outside of restricted areas that require documentation under Paragraph (1) of this subsection;

(c) all areas outside of restricted areas where current and previous wastes have been buried as documented under 20.3.4.448 NMAC; and

(d) all areas outside of restricted areas that contain material such that, if the license expired, the licensee would be required to either decontaminate the area to

meet the criteria for decommissioning in 20.3.4.426 NMAC, or apply for approval for disposal under 20.3.4.434 NMAC; and

(4) records of the cost estimate performed for the decommissioning funding plan or of the amount certified for decommissioning, and records of the funding method used for assuring funds if either a funding plan or certification is used.

[20.3.3.311 NMAC - Rp, 20.3.3.311 NMAC, 04/30/2009; A, 06/13/2017]

20.3.3.312 [RESERVED]

20.3.3.313 SPECIAL REQUIREMENTS FOR ISSUANCE OF CERTAIN SPECIFIC LICENSES FOR RADIOACTIVE MATERIAL:

A. Industrial radiographic operations. In addition to the requirements set forth in 20.3.3.307 NMAC and 20.3.3.308 NMAC, a specific license for use of sealed sources in industrial radiography will be issued if the applicant or licensee meets the specific requirements in 20.3.5 NMAC.

B. Medical use of radioactive materials. In addition to the requirements set forth in 20.3.3.307 NMAC and 20.3.3.308 NMAC, a specific license for use of sealed sources and unsealed radioactive materials for medical use will be issued if the applicant or licensee meets the specific requirements in 20.3.7 NMAC.

C. Well logging operations and subsurface tracer studies. In addition to the requirements set forth in 20.3.3.307 NMAC and 20.3.3.308 NMAC, a specific license for use of sealed sources in wireline service operations, including mineral-logging, radioactive markers or subsurface tracer studies will be issued if the applicant or licensee meets the specific requirements in 20.3.12 NMAC.

D. Land disposal of radioactive waste. In addition to the requirements set forth in 20.3.3.308 NMAC, a specific license for any method of land disposal of low-level radioactive waste will be issued if the applicant or licensee meets the specific requirements in 20.3.13 NMAC.

E. Naturally occurring radioactive materials in the oil and gas industry. In addition to the requirements set forth in 20.3.3.308 NMAC, a specific license for use of naturally occurring radioactive materials (NORM) in the gas and oil industry will be issued if the applicant or licensee meets the specific requirements in 20.3.14 NMAC.

F. Irradiators. In addition to the requirements set forth in 20.3.3.307 NMAC and 20.3.3.308 NMAC, a specific license for use of sealed sources in irradiators will be issued if the applicant or licensee meets the specific requirements in 20.3.15 NMAC.

[20.3.3.313 NMAC - Rp, 20.3.3.313 NMAC, 04/30/2009; A, 06/13/2017]

20.3.3.314 SPECIAL REQUIREMENTS FOR SPECIFIC LICENSES OF BROAD SCOPE:

This section prescribes requirements for the issuance of specific licenses of broad scope for radioactive material ("broad licenses") and certain regulations governing holders of such licenses.

A. Types of specific licenses of broad scope.

(1) A "*type A specific license of broad scope*" is a specific license authorizing receipt, acquisition, ownership, possession, use and transfer of any chemical or physical form of the radioactive material specified in the license, but not exceeding quantities specified in the license, for purposes authorized by the act. The quantities specified are usually in the multicurie range.

(2) A "*type B specific license of broad scope*" is a specific license authorizing receipt, acquisition, ownership, possession, use and transfer of any chemical or physical form of radioactive material specified in 20.3.3.332 NMAC, for purposes authorized by the act. The possession limit for a type B broad license, if only one radionuclide is possessed thereunder, is the quantity specified for that radionuclide in column I of 20.3.3.332 NMAC. If two or more radionuclides are possessed thereunder, the possession limit for each is determined as follows: for each radionuclide determine the ratio of the quantity possessed to the applicable quantity specified in column I of 20.3.3.332 NMAC, for that radionuclide. The sum of the ratios for all radionuclides possessed under the license shall not exceed unity.

(3) A "*type C specific license of broad scope*" is a specific license authorizing receipt, acquisition, ownership, possession, use and transfer of any chemical or physical form of radioactive material specified in 20.3.3.332 NMAC, for any purposes authorized by the act. The possession limit for a type C broad license, if only one radionuclide is possessed thereunder, is the quantity specified for that radionuclide in column II of 20.3.3.332 NMAC. If two or more radionuclides are possessed thereunder, the possession limit is determined for each as follows: 1) for each radionuclide determine the ratio of the quantity possessed to the applicable quantity specified in Column II of 20.3.3.332 NMAC, for the radionuclide; 2) the sum of the ratios for all radionuclides possessed under the license shall not exceed unity.

B. Requirements for the issuance of a type A specific license of broad scope.

An application for a type A specific license of broad scope will be approved if the following requirements are met.

(1) The applicant satisfies the general requirements specified in 20.3.3.307 NMAC and 20.3.3.308 NMAC.

(2) The applicant has engaged in a reasonable number of activities involving the use of radioactive materials.

(3) The applicant has established administrative controls and provisions relating to organization and management, procedures, record keeping, material control, material accounting and management review that are necessary to assure safe operations, including:

(a) the establishment of a radiation safety committee composed of such persons as a radiation safety officer, a representative of management, and persons trained and experienced in the safe use of radioactive material;

(b) the appointment of a radiation safety officer who is qualified by training and experience in radiation protection and who is available for advice and assistance on radiation safety matters; and

(c) the establishment of appropriate administrative procedures to assure:

(i) control of procurement and use of radioactive material;

(ii) completion of safety evaluations of proposed uses of radioactive material which take into consideration such matters as the adequacy of facilities and equipment, training and experience of the user and the operating or handling procedures; and

(iii) review, approval and recording by the radiation safety committee of safety evaluation of proposed uses prepared in accordance with Item (ii) of this subparagraph prior to use of the radioactive material.

C. Requirements for the issuance of a type B specific license of broad scope.

An application for a type B specific license of broad scope will be approved if the following requirements are met.

(1) The applicant satisfies the general requirements specified in 20.3.3.307 NMAC and 20.3.3.308 NMAC.

(2) The applicant has established administrative controls and provisions relating to organization and management, procedures, record keeping, material control, material accounting and management review that are necessary to assure safe operations, including:

(a) the appointment of a radiation safety officer who is qualified by training and experience in radiation protection and who is available for advice and assistance on radiation safety matters; and

(b) the establishment of appropriate administrative procedures to assure:

(i) control of procurement and use of radioactive material;

(ii) completion of safety evaluations of proposed uses of radioactive materials which take into consideration such matters as the adequacy of facilities and equipment, training and experience of the user, and the operating or handling procedures; and

(iii) review, approval and recording by the radiation safety officer of safety evaluations of proposed uses prepared in accordance with Item (ii) of this subparagraph.

D. Requirements for the issuance of a type C specific license of broad scope.

An application for a type C specific license of broad scope will be approved if the following requirements are met.

(1) The applicant satisfies the general requirements specified in 20.3.3.307 NMAC and 20.3.3.308 NMAC.

(2) The applicant submits a statement that radioactive material will be used only by, or under the direct supervision of, individuals who have received:

(a) a college degree at the bachelor level, or equivalent training and experience, in the physical or biological sciences or in engineering; and

(b) at least 40 hours of training and experience in the safe handling of radioactive materials, and in the characteristics of ionizing radiation, units of radiation dose and quantities, radiation detection instrumentation and biological hazards of exposure to radiation appropriate to the type and forms of radioactive material to be used.

(3) The applicant has established administrative controls and provisions relating to procurement of radioactive material, procedures, record keeping, material control, material accounting and management review necessary to assure safe operations.

E. Conditions of specific licenses of broad scope.

(1) Unless specifically authorized pursuant to other parts of this chapter, persons licensed under this section shall not:

(a) conduct tracer studies in the environment involving direct release of radioactive material;

(b) receive, acquire, own, possess, use, transfer or import devices containing 100,000 curies or more of radioactive material in sealed sources used for irradiation of material;

(c) conduct activities for which a specific license issued by the department under 20.3.5 NMAC, 20.3.7 NMAC or 20.3.3.315 NMAC is required; or

(d) add or cause the addition of radioactive material to any food, beverage, cosmetic, drug or other product designed for ingestion or inhalation by, or application to, a human being.

(2) Each type A specific license of broad scope issued under this section shall be subject to the condition that radioactive material possessed under the license shall only be used by, or under the direct supervision of, individuals approved by the licensee's radiation safety committee.

(3) Each type B specific license of broad scope issued under this section shall be subject to the condition that radioactive material possessed under the license shall only be used by, or under the direct supervision of, individuals approved by the licensee's radiation safety officer.

(4) Each type C specific license of broad scope issued under this section shall be subject to the condition that radioactive material possessed under the license shall only be used by, or under the direct supervision of, individuals who satisfy the requirements of Paragraph (2) of Subsection D of this section.

[20.3.3.314 NMAC - Rp, 20.3.3.314 NMAC, 04/30/2009; A, 06/13/2017]

20.3.3.315 SPECIAL REQUIREMENTS FOR A SPECIFIC LICENSE TO MANUFACTURE, ASSEMBLE, REPAIR OR DISTRIBUTE COMMODITIES, PRODUCTS OR DEVICES WHICH CONTAIN RADIOACTIVE MATERIAL:

A. Introduction of radioactive material in exempt concentrations into products or materials.

(1) **Licensing.** A specific license authorizing the introduction of radioactive material into a product or material owned by or in the possession of the licensee or another and the transfer of ownership or possession of the product or material containing the radioactive material to be transferred to persons exempt under Paragraph (1) of Subsection A of 20.3.3.302 NMAC will be issued by NRC pursuant to 10 CFR 32.11.

(2) **Prohibition of introduction.** No person may introduce radioactive material into a product or material knowing or having reason to believe that it will be transferred to persons exempt under Subsection A of 20.3.3.302 NMAC or equivalent regulations of the NRC or an agreement state, except in accordance with a license issued by NRC pursuant to 10 CFR 32.11.

B. Radioactive material in exempt quantities or in certain items.

(1) Manufacture, distribution and transfer of exempt quantities of byproduct material. An application for a specific license to manufacture, process, produce, package, repackage or transfer exempt quantities of byproduct material for commercial distribution to persons exempt pursuant to Subsection B of 20.3.3.302 NMAC or the equivalent regulations of the NRC or an agreement state shall be issued by NRC pursuant to 10 CFR 32.18.

(2) Certain items containing byproduct material. An application for a specific license to apply byproduct material to, or to incorporate byproduct material into, the products specified in Paragraph (1) of Subsection C of 20.3.3.302 NMAC or to initially transfer for sale or distribution such products containing byproduct material for use pursuant to Paragraph (1) of Subsection C of 20.3.3.302 NMAC to persons exempt from 20.3 NMAC shall be submitted to NRC pursuant to 10 CFR 32.14.

(3) Except as specified in Paragraphs (1) and (2) of this subsection, in addition to the requirements set forth in 20.3.3.308 NMAC, an application for a specific license to manufacture, process, produce, package, repackage or initially transfer naturally occurring or accelerator produced radioactive material (NARM) in exempt quantities as specified in 20.3.3.330 NMAC of this part to persons exempt from licensing pursuant to Subsection B of 20.3.3.302 NMAC will be approved if:

(a) the radioactive material is not contained in any food, beverage, cosmetic, drug or other commodity designed for ingestion or inhalation by, or application to, a human being;

(b) the radioactive material is in the form of processed chemical elements, compounds, mixtures, tissue samples, bioassay samples, counting standards, plated or encapsulated sources, or similar substances, identified as radioactive and to be used for its radioactive properties, but is not incorporated into any manufactured or assembled commodity, product or device intended for commercial distribution; and

(c) the applicant submits copies of prototype labels and brochures and the department approves such labels and brochures.

(4) The license issued under Paragraph (3) of Subsection B of this subsection is subject to the following conditions:

(a) no more than 10 exempt quantities shall be sold or transferred in any single transaction; however, an exempt quantity may be composed of fractional parts of one or more of the exempt quantity provided the sum of the fractions shall not exceed unity;

(b) each exempt quantity shall be separately and individually packaged; no more than 10 such packaged exempt quantities shall be contained in any outer package for transfer to persons exempt pursuant to Subsection B of 20.3.3.302 NMAC; the outer

package shall be such that the dose rate at the external surface of the package does not exceed 0.5 millirem per hour;

(c) the immediate container of each quantity or separately packaged fractional quantity of radioactive material shall bear a durable and legible label which:

- (i) identifies the radionuclide and the quantity of radioactivity; and
- (ii) bears the words "*radioactive material*"; and

(d) in addition to the labeling information required by Subparagraph (c) of this paragraph, the label affixed to the immediate container, or an accompanying brochure shall

- (i) state that the contents are exempt from these regulations;
- (ii) bear the words "*radioactive material - not for human use - introduction into foods, beverages, cosmetics, drugs or medicinal product, or into products manufactured for commercial distribution is prohibited - exempt quantities shall not be combined*"; and
- (iii) set forth appropriate additional radiation safety precautions and instructions relating to the handling, use, storage and disposal of the radioactive material.

(5) Each person licensed under Subsection B of 20.3.3.315 NMAC shall maintain records identifying, by name and address, each person to whom radioactive material is transferred for use under Subsection B of 20.3.3.302 NMAC and stating the kinds and quantities of radioactive material transferred. An annual summary report stating the total quantity of each radionuclide transferred under the specific license shall be filed with the department. Each report shall cover the year ending June 30 and shall be filed within 30 days thereafter. If no transfers of radioactive material have been made pursuant to Subsection B of 20.3.3.315 NMAC, during the report period, the report shall so indicate.

C. Licensing of byproduct material by NRC.

(1) Gas and aerosol detectors. An application for a specific license to manufacture, process or produce gas and aerosol detectors containing byproduct material and designed to protect life or property from fires and airborne hazards, or to initially transfer such products for use pursuant to Paragraph (4) of Subsection C of 20.3.3.302 NMAC or equivalent regulations of the NRC or an agreement state, shall be submitted to NRC pursuant to 10 CFR 32.26.

(2) Self-luminous products. An application for a specific license to manufacture, process or produce self-luminous products containing tritium, krypton-85,

promethium-147 or radium-226, or to initially transfer such products for use pursuant to Paragraph (2) of Subsection C of 20.3.3.302 NMAC or equivalent regulations of the NRC or an agreement state, shall be submitted to NRC pursuant to 10 CFR 32.22 and for distribution submit to the NRC pursuant to 10 CFR 32.53.

(3) Capsules containing carbon-14. An application for a specific license to manufacture, prepare, process, produce, package, repackage or transfer for commercial distribution capsules containing 1 microcurie (37 kilobecquerels) carbon-14 urea (allowing for nominal variation that may occur during the manufacturing process) each for in vivo diagnostic use, to persons exempt from licensing under Subsection D of 20.3.3.302 NMAC or the equivalent regulations of the NRC or an agreement state shall be submitted to NRC pursuant to 10 CFR 32.21.

D. [RESERVED]

E. Licensing the manufacture and distribution of devices to persons generally licensed under Subsection B of 20.3.3.305 NMAC.

(1) Requirements for approval of a license application. An application for a specific license to manufacture or initially transfer devices containing radioactive material to persons generally licensed under Subsection B of 20.3.3.305 NMAC or equivalent regulations of the NRC or an agreement state will be approved if:

(a) the applicant satisfies the general requirements of 20.3.3.308 NMAC;

(b) the applicant submits sufficient information relating to the design, manufacture, prototype testing, quality control, labels, proposed uses, installation, servicing, leak testing, operating and safety instructions and potential hazards of the device to provide reasonable assurance that:

(i) the device can be safely operated by persons not having training in radiological protection;

(ii) under ordinary conditions of handling, storage and use of the device, the radioactive material contained in the device will not be released or inadvertently removed from the device, and it is unlikely that any person will receive in one year a dose in excess of ten percent of the limits specified in Subsection A of 20.3.4.405 NMAC; and

(iii) under accident conditions (such as fire and explosion) associated with handling, storage and use of the device, it is unlikely that any person would receive an external radiation dose or dose commitment in excess of the following organ doses: 1) whole body, head and trunk, active blood-forming organs, gonads or lens of eye: 15 rems (150 millisieverts); 2) hands and forearms, feet and ankles, and localized areas of skin averaged over areas no larger than 1 square centimeter: 200 rems (2 sieverts); and 3) other organs: 50 rems (500 millisieverts);

(c) each device bears a durable, legible, clearly visible label or labels approved by the department, which contain in a clearly identified and separate statement:

(i) instructions and precautions necessary to assure safe installation, operation and servicing of the device (documents such as operating and service manuals may be identified in the label and used to provide this information);

(ii) the requirement, or lack of requirement, for leak testing, or for testing any on-off mechanism and indicator, including the maximum time interval for such testing, and the identification of radioactive material by isotope, quantity of radioactivity; and date of determination of the quantity; and

(iii) the information called for in the following statement in the same or substantially similar form:

The receipt, possession, use and transfer of this device model _____, serial number _____, are subject to general license or the equivalent and the regulations of the United States nuclear regulatory commission or a state with which the nuclear regulatory commission has entered into an agreement for the exercise of regulatory authority. This label shall be maintained on the device in a legible condition. Removal of this label is prohibited. The model, serial number, and name of manufacturer or distributor may be omitted from this label provided this information is specified elsewhere in labeling affixed.

Caution-radioactive material

_____;

(name of manufacturer or distributor)

(d) each device having a separable source housing that provides the primary shielding for the source also bears, on the source housing, a durable label containing the device model number and serial number, the isotope and quantity, the words, "*caution-radioactive material*," the radiation symbol described in 20.3.4.427 NMAC, and the name of the manufacturer or initial distributor; and

(e) each device meeting the criteria of Item (i) in Subparagraph (m) of Paragraph (3) of Subsection B of 20.3.3.305 NMAC, bears a permanent (e.g., embossed, etched, stamped or engraved) label affixed to the source housing if separable, or the device if the source housing is not separable, that includes the words, "*caution-radioactive material*," and, if practicable, the radiation symbol described in 20.3.4.427 NMAC.

(f) The device has been registered in the Sealed Source and Device Registry.

(2) Requests for lengthening of test intervals: In the event the applicant desires that the device be required to be tested at longer intervals than six months, either for proper operation of the on-off mechanism and indicator, if any, or for leakage of radioactive material or for both, the applicant shall include in its application sufficient information to demonstrate that such longer interval is justified by performance characteristics of the device or similar devices and by design features which have a significant bearing on the probability or consequences of leakage of radioactive material from the device or failure of the on-off mechanism and indicator. In determining the acceptable interval for the test for leakage of radioactive material, the department will consider information which includes, but is not limited to:

- (a) primary containment (source capsule);
- (b) protection of primary containment;
- (c) method of sealing containment;
- (d) containment construction materials;
- (e) form of contained radioactive material;
- (f) maximum temperature withstood during prototype test;
- (g) maximum pressure withstood during prototype test;
- (h) maximum quantity of contained radioactive material;
- (i) radiotoxicity of contained radioactive material; and
- (j) operating experience with identical devices or similarly designed and constructed devices.

(3) Authorizations for general licensees to perform certain activities. In the event the applicant desires that the general licensee under Subsection B of 20.3.3.305 NMAC, or under equivalent regulations of the NRC or an agreement state, be authorized to install the device, collect the sample to be analyzed by a specific licensee for leakage of radioactive material, service the device, test the on-off mechanism and indicator or remove the device from installation, the applicant shall include in its application written instructions to be followed by the general licensee, estimated calendar quarter doses associated with such activity or activities and the bases for such estimates. The submitted information must demonstrate that performance of such activity or activities by an individual untrained in radiological protection, in addition to other handling, storage and use of devices under the general license, is unlikely to cause that individual to receive a yearly dose in excess of ten percent of the limits specified in Subsection A of 20.3.4.405 NMAC.

(4) Transfer provisions:

(a) [Reserved]

(b) If radioactive material is to be transferred in a device for use under an equivalent general license of the NRC or an agreement state, each person that is licensed under this subsection shall provide the information specified in this subparagraph to each person to whom a device is to be transferred. This information shall be provided before the device may be transferred. In the case of a transfer through an intermediate person, the information shall also be provided to the intended user prior to initial transfer to the intermediate person. The required information includes:

(i) a copy of the NRC's or agreement state's regulations equivalent to Subsection B of 20.3.3.305 NMAC, Subsection F of 20.3.3.317 NMAC, 20.3.3.326 NMAC, 20.3.4.451 NMAC, and 20.3.4.452 NMAC or a copy of 10 CFR Sections 31.5, 31.2, 30.51, 20.2201 and 20.2202; if a copy of the NRC regulations is provided to a prospective general licensee in lieu of the agreement state's regulations, it shall be accompanied by a note explaining that use of the device is regulated by the agreement state; if certain paragraphs of the regulations do not apply to the particular device, those paragraphs may be omitted;

(ii) a list of the services that can only be performed by a specific licensee;

(iii) information on acceptable disposal options including estimated costs of disposal; and

(iv) the name or title, address and phone number of the contact at the agreement state regulatory agency from which additional information may be obtained.

(c) An alternative approach to informing customers may be proposed by the licensee for approval by the department.

(d) Each device shall meet the labeling requirements in Subparagraphs (c) through (e) of Paragraph (1) of this Subsection.

(e) If a notification of bankruptcy is submitted under Subsection E of 20.3.3.317 NMAC of this part and each specific licensee or the license is to be terminated, each person licensed under Paragraph (1) of this subsection shall provide, upon request, to the department, NRC and any agreement state, records of final disposition required under 10 CFR30.34(h).

(5) Material transfer reports and records: Each person licensed under 20.3.3.305 NMAC of this subsection to initially transfer devices to generally licensed persons shall comply with the requirements of this section.

(a) The person shall report to the department in accordance with 20.3.1.116 NMAC, all transfers of such devices to persons for use under the general license in Subsection B of 20.3.3.305 NMAC and all receipts of devices from persons licensed under Subsection B of 20.3.3.305 NMAC. The report shall be clear and legible, submitted on a quarterly basis containing all of the following data.

(i) The required information for transfers to general licensees includes: 1) the identity of each general licensee by name and mailing address for the location of use; if there is no mailing address for the location of use, an alternate address for the general licensee shall be submitted along with information on the actual location of use; 2) the name, title and phone number of the person identified by the general licensee as having knowledge of and authority to take required actions to ensure compliance with the appropriate regulations and requirements; 3) the date of transfer; 4) the type, model number, and serial number of the device transferred; and 5) the quantity and type of radioactive material contained in the device.

(ii) If one or more intermediate persons will temporarily possess the device at the intended place of use before its possession by the user, the report shall include the same information for both the intended user and each intermediate person, and clearly designate the intermediate person(s).

(iii) For devices received from a person licensed pursuant to Subsection B of 20.3.3.305 NMAC, the report shall include the identity of the general licensee by name and address, the type, model number, and serial number of the device received, the date of receipt, and, in the case of devices not initially transferred by the reporting licensee, the name of the manufacturer or initial transferor.

(iv) If the licensee makes changes to a device possessed by a person licensed pursuant to Subsection B of 20.3.3.305 NMAC, such that the label must be changed to update required information, the report shall identify the general licensee, the device and the changes to information on the device label.

(v) The report shall cover each calendar quarter, shall be filed within 30 days of the end of the calendar quarter, and shall clearly indicate the period covered by the report.

(vi) The report shall clearly identify the specific licensee submitting the report and include the license number of the specific licensee.

(vii) If no transfers have been made to or from persons generally licensed under Subsection B of 20.3.3.305 NMAC during the reporting period, the report shall so indicate.

(b) The person shall report all transfers of devices to persons for use under a general license under NRC's or an agreement state's regulations that are equivalent to Subsection B of 20.3.3.305 NMAC, and all receipts of devices from general licensees in

the NRC's or agreement state's jurisdiction, to the responsible NRC or agreement state agency. The report shall be clear and legible, containing all of the data required as described below.

(i) The required information for transfers to general licensees includes: 1) the identity of each general licensee by name and mailing address for the location of use; if there is no mailing address for the location of use, an alternate address for the general licensee shall be submitted along with information on the actual location of use; 2) the name, title and phone number of the person identified by the general licensee as having knowledge of and authority to take required actions to ensure compliance with the appropriate regulations and requirements; 3) the date of transfer; 4) the type, model number and serial number of the device transferred; and 5) the quantity and type of radioactive material contained in the device.

(ii) If one or more intermediate persons will temporarily possess the device at the intended place of use before its possession by the user, the report shall include the same information for both the intended user and each intermediate person, and clearly designate the intermediate person(s).

(iii) For devices received from a general licensee, the report shall include the identity of the general licensee by name and address, the type, model number, serial number of the device received, the date of receipt, and, in the case of devices not initially transferred by the reporting licensee, the name of the manufacturer or initial transferor.

(iv) If the licensee makes changes to a device possessed by a general licensee, such that the label must be changed to update required information, the report shall identify the general licensee, the device and the changes to information on the device label.

(v) The report shall cover each calendar quarter, shall be filed within 30 days of the end of the calendar quarter, and shall clearly indicate the period covered by the report.

(vi) The report shall clearly identify the specific licensee submitting the report and must include the license number of the specific licensee.

(vii) If no transfers have been made to or from NRC or a particular agreement state during the reporting period, this information shall be reported to NRC or the responsible agreement state agency upon request of the agency.

(c) The person shall maintain all information concerning transfers and receipts of devices that supports the reports required by Subparagraphs (a) and (b) of this paragraph. Records required by this paragraph shall be maintained for a period of three years following the date of the recorded event.

F. Special requirements for the manufacture, assembly, repair or initial transfer of luminous safety devices for use in aircraft. An application for a specific license to manufacture, assemble, repair or initially transfer luminous safety devices containing tritium or promethium-147 for use in aircraft, for distribution to persons generally licensed under Subsection C of 20.3.3.305 NMAC will be approved subject to the following conditions:

(1) the applicant satisfies the general requirements specified in 20.3.3.308 NMAC;

(2) the applicant satisfies the requirements of 10 CFR 32.53, 10 CFR 32.54, 10 CFR 32.55 and 10 CFR 32.56 or their equivalent;

(3) each person licensed under 10 CFR 32.53 shall file an annual report with the director, office of Nuclear Materials Safety and Safeguards, ATTN: document control desk/GLTS by an appropriate method listed in 10 CFR 30.6(a) which must state the total quantity of tritium or promethium-147 transferred to persons generally licensed under 10 CFR 31.7. The report must identify each general licensee by name, state the kinds and number of luminous devices transferred, and specify the quantity of tritium or promethium-147 in each kind of device. Each report must cover the year ending June 30 and must be filed within 30 days thereafter. If no transfers have been made to persons generally licensed under 10 CFR 31.7 during the reporting period, the report must so indicate; and

(4) each person licensed under 10 CFR 32.53 shall report annually all transfers of devices to persons for use under a general license in an agreement state's regulations that are equivalent to 10 CFR 31.7 of this paragraph to the responsible agreement state agency. The report must state the total quantity of tritium or promethium-147 transferred, identify each general licensee by name, state the kinds and numbers of luminous devices transferred, and specify the quantity of tritium or promethium-147 in each kind of device. If no transfers have been made to a particular agreement state during the reporting period, this information must be reported to the responsible agreement state agency upon request of the agency.

G. Special requirements for license to manufacture or initially transfer calibration or reference sources containing americium-241, plutonium or radium-226 for distribution to persons generally licensed under Subsection D of 20.3.3.305 NMAC. An application for a specific license to manufacture or initially transfer calibration or reference sources containing americium-241, plutonium or radium-226 for distribution to persons generally licensed under Subsection D of 20.3.3.305 NMAC will be approved subject to the following conditions:

(1) the applicant satisfies the general requirements of 20.3.3.307 NMAC and 20.3.3.308 NMAC, and

(2) the applicant satisfies the requirements of 10 CFR 32.57, 10 CFR 32.58, 10 CFR 32.59 and 10 CFR 70.39 or their equivalent.

H. Manufacture and distribution of radioactive material for certain in-vitro clinical or laboratory testing under general license. An application for a specific license to manufacture or distribute radioactive material for use under the general license of Subsection F of 20.3.3.305 NMAC will be approved if:

(1) the applicant satisfies the general requirements specified in 20.3.3.307 NMAC and 20.3.3.308 NMAC;

(2) the radioactive material is to be prepared for distribution in prepackaged units of:

(a) iodine-125 in units not exceeding 10 microcuries (370 kilobecquerels) each;

(b) iodine-131 in units not exceeding 10 microcuries (370 kilobecquerels) each;

(c) carbon-14 in units not exceeding 10 microcuries (370 kilobecquerels) each;

(d) hydrogen-3 (tritium) in units not exceeding 50 microcuries (1.85 megabecquerels) each;

(e) iron-59 in units not exceeding 20 microcuries (740 kilobecquerels) each;

(f) cobalt-57 in units not exceeding 10 microcuries (370 kilobecquerels) each;

(g) selenium-75 in units not exceeding 10 microcuries (370 kilobecquerels) each; or

(h) mock iodine-125 reference or calibration sources in units not exceeding 0.05 microcurie (1.85 kilobecquerels) of iodine-129 and 0.005 microcurie (185 becquerels) of americium-241 each;

(3) each prepackaged unit bears a durable, clearly visible label:

(a) identifying the radioactive contents as to chemical form and radionuclide, and indicating that the amount of radioactivity does not exceed 10 microcuries (370 kilobecquerels) of iodine-125, iodine-131, carbon-14, cobalt-57 or selenium-75; 50 microcuries (1.85 megabecquerels) of hydrogen-3 (tritium); 20 microcuries (740 kilobecquerels) of iron-59; or 0.05 microcurie (1.85 kilobecquerels) of iodine-129 and 0.005 microcurie (185 becquerels) of americium-241; and

(b) displaying the radiation caution symbol described in Paragraph (1) of Subsection A of 20.3.4.427 NMAC and the words, "*caution, radioactive material*" and "*not for internal or external use in humans or animals*";

(4) the following statement, or a substantially similar statement which contains the information called for in the following statement, appears on a label affixed to each prepackaged unit or appears in a leaflet or brochure which accompanies the package:

This radioactive material may be received, acquired, possessed, and used only by physicians, veterinarians, clinical laboratories or hospitals and only for in-vitro clinical or laboratory tests not involving internal or external administration of the material, or the radiation therefrom, to human beings or animals. Its receipt, acquisition, possession, use, and transfer are subject to the regulations and a general license of the United States nuclear regulatory commission or of a state with which the NRC has entered into an agreement for the exercise of regulatory authority.

(name of manufacturer); and

(5) the label affixed to the unit, or the leaflet or brochure which accompanies the package, contains adequate information as to the precautions to be observed in handling, storing and disposal of such radioactive material; in the case of the mock iodine-125 reference or calibration source, the information accompanying the source must also contain directions to the licensee regarding the waste disposal requirements set out in 20.3.4.433 NMAC.

I. Licensing the manufacture and distribution of ice detection devices. An application for a specific license to manufacture and distribute ice detection devices to persons generally licensed under Subsection G of 20.3.3.305 NMAC will be approved subject to the following conditions:

(1) the applicant satisfies the general requirements of 20.3.3.307 NMAC and 20.3.3.308 NMAC; and

(2) the criteria of 10 CFR 32.61 and 32.62 are met.

J. Manufacture, preparation or transfer for commercial distribution of radioactive drugs containing byproduct material for medical use under 20.3.7 NMAC.

(1) An application for a specific license to manufacture, prepare or transfer for commercial distribution, radioactive material for use by persons authorized pursuant to 20.3.7 NMAC will be approved if the following conditions are met.

(a) The applicant satisfies the general requirements specified in 20.3.3.307 NMAC and 20.3.3.308 NMAC;

(b) The applicant submits evidence that the applicant is at least one of the following:

(i) registered with the FDA as the owner or operator of a drug establishment that engages in the manufacture, preparation, propagation, compounding or processing of a drug under 21 CFR 207.20(a);

(ii) registered or licensed with a state agency as a drug manufacturer;

(iii) licensed as a pharmacy by a state board of pharmacy;

(iv) operating as a nuclear pharmacy within a federal medical institution; or

(v) a PET drug production facility registered with a state agency.

(c) The applicant submits information on the radionuclide; the chemical and physical form; the maximum activity per vial, syringe, generator, or other container of the radioactive drug; and the shielding provided by the packaging to show it is appropriate for the safe handling and storage of the radioactive drugs by medical use licensees.

(d) The applicant commits to the following labeling requirements.

(i) A label is affixed to each transport radiation shield, whether it is constructed of lead, glass, plastic or other material, of a radioactive drug to be transferred for commercial distribution; the label must include the radiation symbol and the words "*caution, radioactive material*" or "*danger, radioactive material*"; the name of the radioactive drug or its abbreviation; and the quantity of radioactivity at a specified date and time. For radioactive drugs with a half-life greater than 100 days, the time may be omitted; and

(ii) A label is affixed to each syringe, vial or other container used to hold a radioactive drug to be transferred for commercial distribution; the label must include the radiation symbol and the words "*caution, radioactive material*" or "*danger, radioactive material*" and an identifier that ensures that the syringe, vial or other container can be correlated with the information on the transport radiation shield label.

(2) A licensee described by Items (iii) or (iv) of Subparagraph (b) of Paragraph (1) of this subsection:

(a) may prepare radioactive drugs for medical use, as defined in 20.3.7.7 NMAC, provided that the radioactive drug is prepared by either an authorized nuclear

pharmacist, as specified in Subparagraphs (b) and (d) of this paragraph, or an individual under the supervision of an authorized nuclear pharmacist as specified in Subsection F of 20.3.7.702 NMAC;

(b) may allow a pharmacist to work as an authorized nuclear pharmacist if:

(i) the individual qualifies as an authorized nuclear pharmacist as defined in 20.3.7.7 NMAC;

(ii) the individual meets the requirements specified in Subsection C of 20.3.7.714 NMAC, incorporating 10 CFR 35.55(b) and Subsection E of 20.3.7.714 NMAC, incorporating 10 CFR 35.59, and the licensee has received an approved license amendment identifying this individual as an authorized nuclear pharmacist; or

(iii) the individual is designated as an authorized nuclear pharmacist in accordance with Subparagraph (d) of this paragraph;

(c) may conduct the actions authorized in Subparagraphs (a) and (b) of this paragraph in spite of more restrictive language in license conditions;

(d) may designate a pharmacist (as defined in 20.3.7.7 NMAC) as an authorized nuclear pharmacist if:

(i) the individual was a nuclear pharmacist preparing only radioactive drugs containing accelerator-produced radioactive material, and

(ii) the individual practiced at a pharmacy at a government agency or federally recognized Indian Tribe before November 30, 2007, or at all other pharmacies in non-licensing states, as defined in 20.3.1.7 NMAC, before August 8, 2009, or an earlier date as noticed by the NRC;

(e) may designate a pharmacist (as defined in 20.3.7.7 NMAC) as an authorized nuclear pharmacist if the individual is identified as of May 3, 1995, as an "authorized user" in a nuclear pharmacy license issued by the department under this part; and

(f) shall provide to the commission a copy of

(i) each individual's certification by a specialty board whose certification process has been recognized by the Commission or agreement state as specified in 10 CFR 35.55(a); or

(ii) the Commission or agreement state license, or

(iii) Commission master material licensee permit, or

(iv) the permit issued by a licensee or Commission master materials permittee of broad scope, or the authorization from a commercial nuclear pharmacy authorized to list its own authorized nuclear pharmacist, or

(v) documentation that only accelerator-produced radioactive materials were used in the practice of nuclear pharmacy at a government agency or federally recognized Indian Tribe before November 30, 2007, or at all other pharmacies in non-licensing states, as defined in 20.3.1.7 NMAC, before August 8, 2009, or an earlier date as noticed by the NRC; and

(vi) the state pharmacy licensure or registration, no later than 30 days after the date that the licensee allows, under Items (i) and (iii) of Subparagraph (b) of this paragraph, the individual to work as an authorized nuclear pharmacist.

(3) A licensee shall possess and use instrumentation to measure the radioactivity of radioactive drugs. The licensee shall have procedures for use of the instrumentation. The licensee shall measure, by direct measurement or by combination of measurements and calculations, the amount of radioactivity in dosages of alpha, beta or photon emitting radioactive drugs prior to transfer for commercial distribution. In addition, the licensee shall:

(a) perform tests before initial use, periodically and following repair, on each instrument for accuracy, linearity and geometry dependence, as appropriate for the use of the instrument; and make adjustments when necessary; and

(b) check each instrument for constancy and proper operation at the beginning of each day of use.

(4) A licensee shall satisfy the labeling requirements in paragraph J(1)(d) of this section.

(5) Nothing in this section relieves the licensee from complying with applicable FDA, or other federal and state requirements governing radioactive drugs.

K. Manufacture and distribution of sources or devices containing radioactive material for medical use. An application for a specific license to manufacture and distribute sources and devices containing radioactive material to persons licensed pursuant to 20.3.7 NMAC for use as a calibration, transmission or reference source or for the uses listed in 20.3.7.710 NMAC, 20.3.7.711 NMAC and 20.3.7.712 NMAC will be approved if:

(1) the applicant satisfies the general requirements in 20.3.3.307 NMAC and 20.3.3.308 NMAC; and

(2) the applicant satisfies the requirements in 10 CFR 32.74.

L. Requirements for license to manufacture and distribute industrial products containing depleted uranium for mass-volume applications.

(1) An application for a specific license to manufacture industrial products and devices containing depleted uranium for use pursuant to Subsection E of 20.3.3.304 NMAC or equivalent regulations of the NRC or an agreement state will be approved if:

(a) the applicant satisfies the general requirements specified in 20.3.3.307 NMAC and 20.3.3.308 NMAC;

(b) the applicant submits sufficient information relating to the design, manufacture, prototype testing, quality control procedures, labeling and marking, proposed uses, and potential hazards of the industrial product or device to provide reasonable assurance that possession, use, or transfer of the depleted uranium in the product or device is not likely to cause any individual to receive in one year a radiation dose in excess of ten percent of the limits specified in Subsection A of 20.3.4.405 NMAC; and

(c) the applicant submits sufficient information regarding the industrial product or device and the presence of depleted uranium for a mass-volume application in the product or device to provide reasonable assurance that unique benefits will accrue to the public because of the usefulness of the product or device.

(2) In the case of an industrial product or device whose unique benefits are questionable, the department will approve an application for a specific license under this subsection only if the product or device is found to combine a high degree of utility and low probability of uncontrolled disposal and dispersal of significant quantities of depleted uranium into the environment.

(3) The department may deny application for a specific license under this subsection if the end use of the industrial product or device cannot be reasonably foreseen.

(4) Each person licensed pursuant to this subsection shall:

(a) maintain the level of quality control required by the license in the manufacture of the industrial product or device, and in the installation of the depleted uranium into the product or device;

(b) label or mark each unit to:

(i) identify the manufacturer or initial transferor of the product or device and the number of the license under which the product or device was manufactured or initially transferred, the fact that the product or device contains depleted uranium, and the quantity of depleted uranium in each product or device; and

(ii) state that the receipt, possession, use and transfer of the product or device are subject to a general license or the equivalent and the regulations of the NRC or of an agreement state;

(c) assure that the depleted uranium before being installed in each product or device has been impressed with the following legend clearly legible through any plating or other covering: "depleted uranium";

(d) furnish a copy of the general license contained in Subsection C of 20.3.3.304 NMAC and a copy of the department form to each person to whom they transfer depleted uranium in a product or device for use pursuant to the general license contained in Subsection C of 20.3.3.304 NMAC; or furnish a copy of the general license contained in the NRC or agreement state's regulation equivalent to Subsection C of 20.3.3.304 NMAC and a copy of the NRC or agreement state's certificate; or alternatively, furnish a copy of the general license contained in Subsection C of 20.3.3.304 NMAC and a copy of department form to each person to whom they transfer depleted uranium in a product or device for use pursuant to the general license of the NRC or an agreement state, with a note explaining that use of the product or device is regulated by the NRC or an agreement state under requirements substantially the same as those in Subsection C of 20.3.3.304 NMAC;

(e) report to the department all transfers of industrial products or devices to persons for use under the general license in Subsection C of 20.3.3.304 NMAC; such report shall identify each general licensee by name and address, an individual by name and (or) position who may constitute a point of contact between the department and the general licensee, the type and model number of device transferred, and the quantity of depleted uranium contained in the product or device; the report shall be submitted within 30 days after the end of each calendar quarter in which such a product or device is transferred to the generally licensed person; if no transfers have been made to persons generally licensed under Subsection C of 20.3.3.304 NMAC during the reporting period, the report shall so indicate;

(f) report to the director of the office of nuclear material safety and safeguards, by an appropriate method listed in 10 CFR 40.5 all transfers of industrial products or devices to persons for use under the U.S. nuclear regulatory commission general license in 10 CFR 40.25; the report shall contain all information described in Subparagraph (e) of this paragraph;

(g) report to the responsible state agency all transfers of devices manufactured and distributed pursuant to Subsection L of 20.3.3.315 NMAC for use under a general license in that agreement state's regulations equivalent to Subsection C of 20.3.3.304 NMAC; the report shall contain all information described in Subparagraph (e) of this paragraph;

(h) keep records showing the name, address and point of contact for each general licensee to whom they transfer depleted uranium in industrial products or

devices for use pursuant to the general license provided in Subsection C of 20.3.3.304 NMAC or equivalent regulations of the NRC or of an agreement state; the records shall be retained for three years and show the date of each transfer, the quantity of depleted uranium in each product or device transferred and compliance with the report requirements of this subsection.

M. Licensing the manufacture, assembly, repair or distribution of commodities, products or devices which contain radioactive material other than those enumerated above. The department shall require substantially the same information as required for licensing of similar items by 10 CFR Part 32 not specifically named in this section.

N. Serialization of nationally tracked sources. Each licensee who manufactures a nationally tracked source, as defined in 20.3.4.7 NMAC, after February 6, 2007 shall assign a unique serial number to each nationally tracked source. Serial numbers must be composed only of alpha-numeric characters.

[20.3.3.315 NMAC - Rp, 20.3.3.315 NMAC, 04/30/2009; A, 02/14/2023]

20.3.3.316 ISSUANCE OF SPECIFIC LICENSES:

A. Upon a determination that an application meets the requirements of the act and 20.3 NMAC, the department will issue a specific license authorizing the proposed activity in such form and containing such conditions and limitations as it deems appropriate or necessary to effectuate the purposes of the act.

B. The department may incorporate in any license at the time of issuance, or thereafter by license amendment, rule, regulation, or order, such additional requirements and conditions with respect to the licensee's receipt, possession, use and transfer of radioactive material subject to this part as it deems appropriate or necessary in order to:

- (1) minimize danger to public health and safety or property; or
- (2) require reports and the keeping of records, or to provide for inspections of activities under the license as may be appropriate or necessary; or
- (3) prevent loss or theft of material subject to this chapter.

C. The department may request, and the licensee shall provide, additional information after the license has been issued to enable the department to determine whether the license shall be modified in accordance with 20.3.3.322 NMAC.

[20.3.3.316 NMAC - Rp, 20.3.3.316 NMAC, 04/30/2009]

20.3.3.317 TERMS AND CONDITIONS OF LICENSES:

A. Each license issued pursuant to the requirements in this part shall be subject to all the provisions of the act, now or hereafter in effect, and to all rules, regulations and orders of the board or department.

(1) No right to the special nuclear material shall be conferred by the license except as defined by the license;

(2) Neither the license nor any right under the license shall be assigned or otherwise transferred in violation of the provisions of 20.3.3.317 NMAC;

(3) The license shall be subject to and the licensee shall observe, all applicable rules, regulations, and orders of the department.

B. No license issued or granted under this part nor any right under a license issued pursuant to this part shall be transferred, assigned, or in any manner disposed of, either voluntarily, or involuntarily, directly or indirectly, through transfer of control of any license to any person unless the department shall, after securing full information, find that the transfer is in accordance with the provisions of the act, and shall give its consent in writing. An application for transfer of license must include:

(1) the identity, technical and financial qualifications of the proposed transferee; and

(2) financial assurance for decommissioning information required by 20.3.3.311 NMAC.

C. Each person licensed by the department pursuant to this part shall confine their use and possession of material licensed to the locations and purposes authorized in the license. Except as otherwise provided in the license, a license issued pursuant to the rules in this part shall carry with it the right to receive, acquire, own and possess radioactive material. Preparation for shipment and transport of radioactive material shall be in accordance with the provisions of 20.3.3.306 NMAC, incorporating 10 CFR 71.

D. Each license issued pursuant to the regulations in this part shall be deemed to contain the applicable provisions set forth in the act and 20.3 NMAC, whether or not these provisions are expressly set forth in the license.

E. Filing for bankruptcy.

(1) Each general licensee that is required to register by Paragraph (m) of Subsection B of 20.3.3.305 NMAC and each specific licensee shall notify the department and appropriate NRC Regional Administrator in writing, immediately following the filing of a voluntary or involuntary petition for bankruptcy under any chapter of title 11 (bankruptcy) of the United States Code by or against:

(a) the licensee;

(b) an entity (as that term is defined in 11 U.S.C. 101(15)) controlling the licensee or listing the license or licensee as property of the estate; or

(c) an affiliate (as that term is defined in 11 U.S.C. 101(2)) of the licensee.

(2) The notification must indicate:

(a) the bankruptcy court in which the petition for bankruptcy was filed; and

(b) the date of the filing of the petition.

F. The general licenses provided in this part are subject to the provisions in 20.3.1 NMAC, Paragraph (4) of Subsection A of 20.3.3.302 NMAC, Subsection A of 20.3.3.317 NMAC, 20.3.3.322 NMAC, 20.3.3.323 NMAC, 20.3.3.326 NMAC, 20.3.4 NMAC and 20.3.10 NMAC unless indicated otherwise by a particular provision of the general license.

G. Licensees required submitting emergency plans by 20.3.3.309 NMAC shall follow the emergency plan approved by the department. The licensee may change the approved plan without department approval only if the changes do not decrease the effectiveness of the plan. The licensee shall furnish the change to the department and to affected offsite response organizations prior to the effective date of the change. Proposed changes that decrease, or potentially decrease, the effectiveness of the approved emergency plan may not be implemented without prior application to and prior approval by the department.

H. Security requirements for portable gauges. Each portable gauge licensee shall use a minimum of two independent physical controls that form tangible barriers to secure portable gauges from unauthorized removal, whenever portable gauges are not under the control and constant surveillance of the licensee.

I. Generators. Each licensee preparing technetium-99m radiopharmaceuticals from molybdenum-99/technetium-99m generators or rubidium-82 from strontium-82/rubidium-82 generators shall test the generator eluates for molybdenum-99 breakthrough or strontium-82 and strontium-85 contamination, respectively, in accordance with 20.3.7.706 NMAC of this chapter. The licensee shall record the results of each test and retain each record for 3 years after the record is made. The licensee shall report the results of any test that exceeds the permissible concentration listed in 10 CFR 35.204(a) at the time of generator elution, in accordance with 10 CFR 35.3204.

J. PET drugs for non-commercial distribution.

(1) Authorization under Subsection J of 20.3.3.307 NMAC to produce PET radioactive drugs for non-commercial transfer to medical use licensees in its consortium

does not relieve the licensee from complying with applicable FDA, or other federal and state requirements governing radioactive drugs.

(2) Each licensee authorized under Subsection J of 20.3.3.307 NMAC to produce PET radioactive drugs for non-commercial transfer to medical use licensees in its consortium shall:

(a) satisfy the labeling requirements in Subparagraph (d) of Paragraph (1) of Subsection J of 20.3.3.315 NMAC for each PET radioactive drug transport radiation shield and each syringe, vial or other container used to hold a PET radioactive drug intended for non-commercial distribution to members of its consortium; and

(b) possess and use instrumentation to measure the radioactivity of the PET radioactive drugs intended for non-commercial distribution to members of its consortium and meet the procedural, radioactivity measurement, instrument test, instrument check and instrument adjustment requirements in Paragraph (3) of Subsection J of 20.3.3.315 NMAC.

(3) A licensee that is a pharmacy authorized under Subsection J of 20.3.3.307 NMAC to produce PET radioactive drugs for non-commercial transfer to medical use licensees in its consortium shall require that any individual that prepares PET radioactive drugs shall be:

(a) an authorized nuclear pharmacist that meets the requirements in Subparagraph (b) of Paragraph (2) of Subsection J of 20.3.3.315 NMAC; or

(b) an individual under the supervision of an authorized nuclear pharmacist as specified in Subsection F of 20.3.7.702 NMAC.

(4) A pharmacy, authorized under Subsection J of 20.3.3.307 NMAC to produce PET radioactive drugs for non-commercial transfer to medical use licensees in its consortium that allows an individual to work as an authorized nuclear pharmacist, shall meet the requirements of Subparagraph (e) of Paragraph (2) of Subsection J of 20.3.3.315 NMAC.

[20.3.3.317 NMAC - Rp, 20.3.3.317 NMAC, 4/30/2009; A, 6/30/2011; A, 6/13/2017; A, 02/14/2023]

20.3.3.318 EXPIRATION AND TERMINATION OF LICENSES AND DECOMMISSIONING OF SITES AND SEPARATE BUILDINGS OR OUTDOOR AREAS:

A. The term of a specific license is five years unless the department granted a different term. Except as provided in Subsection B of this section, each specific license expires at the end of the day on the expiration date stated in the license unless the licensee has filed an application for renewal under 20.3.3.319 NMAC not less than 30

days before the expiration date stated in the existing license. If an application for renewal has been filed at least 30 days before the expiration date stated in the existing license, the existing license expires at the end of the day on which the department makes a final determination to deny the renewal application or, if the determination states an expiration date, the expiration date stated in the determination.

B. If the licensee failed to pay outstanding annual fees to the department as required by 20.3.16 NMAC, the specific license expires at the end of the day on the expiration date stated in the license. The licensee shall follow the requirements in Subsection F through L of this section for termination of the specific license, or apply for a license pursuant to 20.3.3.307 NMAC after the outstanding annual fee(s) has been paid.

C. Each specific license revoked by the department expires at the end of the day on the date of the department's final determination to revoke the license, or on the expiration date stated in the determination, or as otherwise provided by department order.

D. Expiration of the specific license does not relieve the licensee from the requirements in 20.3 NMAC. All license provisions continue in effect, beyond the expiration date if necessary, with respect to possession of radioactive material until the department notifies the licensee in writing that the license is terminated. During this time, the licensee shall:

(1) limit actions involving radioactive material to those related to decommissioning; and

(2) continue to control entry to restricted areas until they are suitable for release in accordance with department requirements.

E. Within 60 days of the occurrence of any of the following, each licensee shall provide notification to the department in writing of such occurrence, and either begin decommissioning its site, or any separate building or outdoor area that contains residual radioactivity so that the building or outdoor area is suitable for release in accordance with department requirements, or submit within 12 months of notification a decommissioning plan, if required by Subsection H of this section, and begin decommissioning upon approval of that plan if:

(1) the license has expired or has been revoked pursuant to Subsections A, B or C of this section; or

(2) the licensee has decided to permanently cease principal activities, as defined in 20.3.3.7 NMAC, at the entire site or in any separate building or outdoor area that contains residual radioactivity such that the building or outdoor area is unsuitable for release in accordance with department requirements; or

(3) no principal activities under the license have been conducted for a period of 24 months; or

(4) no principal activities have been conducted for a period of 24 months in any separate building or outdoor area that contains residual radioactivity such that the building or outdoor area is unsuitable for release in accordance with department requirements.

F. Coincident with the notification required by Subsection E of this section, the licensee shall maintain in effect all decommissioning financial assurances established by the licensee pursuant to 20.3.3.311 NMAC in conjunction with a license issuance or renewal or as required by this section. The amount of the financial assurance must be increased, or may be decreased, as appropriate, to cover the detailed cost estimate for decommissioning established pursuant to Subparagraph (e) of Paragraph (4) of Subsection H of this section.

G. The department may grant a request to extend the time periods established in Subsection E of this section, if the department determines that this relief is not detrimental to the public health and safety and is otherwise in the public interest. The request must be submitted no later than 30 days before notification pursuant to Subsection E of this section. The schedule for decommissioning set forth in Subsection E of this section may not commence until the department has made a determination on the request.

H. Decommissioning Plan.

(1) A decommissioning plan must be submitted if required by license condition or if the procedures and activities necessary to carry out decommissioning of the site or separate building or outdoor area have not been previously approved by the department and these procedures could increase potential health and safety impacts to workers or to the public, such as in any of the following cases:

(a) procedures would involve techniques not applied routinely during cleanup or maintenance operations;

(b) workers would be entering areas not normally occupied where surface contamination and radiation levels are significantly higher than routinely encountered during operation;

(c) procedures could result in significantly greater airborne concentrations of radioactive materials than are present during operation; or

(d) procedures could result in significantly greater releases of radioactive material to the environment than those associated with operation.

(2) The department may approve an alternate schedule for submittal of a decommissioning plan required pursuant to Subsection E of this section if the department determines that the alternative schedule is necessary to the effective conduct of decommissioning operations and presents no undue risk from radiation to the public health and safety and is otherwise in the public interest.

(3) Procedures, such as those listed in Paragraph (1) of this subsection, with potential health and safety impacts may not be carried out prior to approval of the decommissioning plan.

(4) The proposed decommissioning plan for the site or separate building or outdoor area must include:

(a) a description of the conditions of the site or separate building or outdoor area sufficient to evaluate the acceptability of the plan;

(b) a description of planned decommissioning activities;

(c) a description of methods used to ensure protection of workers and the environment against radiation hazards during decommissioning;

(d) a description of the planned final radiation survey;

(e) an updated detailed cost estimate for decommissioning, comparison of that estimate with present funds set aside for decommissioning, and a plan for assuring the availability of adequate funds for completion of decommissioning; and

(f) for decommissioning plans calling for completion of decommissioning later than 24 months after plan approval, the plan shall include a justification for the delay based on the criteria in Subsection J of this section.

(5) The proposed decommissioning plan will be approved by the department if the information therein demonstrates that the decommissioning will be completed as soon as practicable and that the health and safety of workers and the public will be adequately protected.

I. Deadline for Decommissioning.

(1) Except as provided in Subsection J of this section, licensees shall complete decommissioning of the site or separate building or outdoor area as soon as practicable but no later than 24 months following the initiation of decommissioning.

(2) Except as provided in Subsection J of this section, when decommissioning involves the entire site, the licensee shall request license termination as soon as practicable but no later than 24 months following the initiation of decommissioning.

J. The department may approve a request for an alternative schedule for completion of decommissioning of the site or separate building or outdoor area, and license termination if appropriate, if the department determines that the alternative is warranted by consideration of the following:

- (1) whether it is technically feasible to complete decommissioning within the allotted 24-month period;
- (2) whether sufficient waste disposal capacity is available to allow completion of decommissioning within the allotted 24-month period;
- (3) whether a significant volume reduction in wastes requiring disposal will be achieved by allowing short-lived radionuclides to decay;
- (4) whether a significant reduction in radiation exposure to workers can be achieved by allowing short-lived radionuclides to decay; and
- (5) other site-specific factors which the department may consider appropriate on a case-by-case basis, such as the regulatory requirements of other government agencies, lawsuits, ground-water treatment activities, monitored natural ground-water restoration, actions that could result in more environmental harm than deferred cleanup, and other factors beyond the control of the licensee.

K. As the final step in decommissioning, the licensee shall:

- (1) certify the disposition of all licensed material, including accumulated wastes, by submitting a completed certificate - disposition of radioactive material form or equivalent information; and
- (2) conduct a radiation survey of the premises where the licensed activities were carried out and submit a report of the results of this survey, unless the licensee demonstrates in some other manner that the premises are suitable for release in accordance with the criteria for decommissioning in 20.3.4.426 NMAC; the licensee shall, as appropriate:
 - (a) report levels of gamma radiation in units of millisievert (microroentgen) per hour at one meter from surfaces, and report levels of radioactivity, including alpha and beta, in units of megabecquerels (disintegrations per minute or microcuries) per 100 square centimeters, removable and fixed, for surfaces, megabecquerels (microcuries) per milliliter for water, and becquerels (picocuries) per gram for solids such as soils or concrete; and
 - (b) specify the survey instrument(s) used and certify that each instrument is properly calibrated and tested.

L. Specific licenses, including expired licenses, will be terminated by written notice to the licensee when the department determines that:

- (1) radioactive material has been properly disposed;
- (2) reasonable effort has been made to eliminate residual radioactive contamination, if present; and
- (3) a radiation survey has been performed which demonstrates that the premises are suitable for release in accordance with the criteria for decommissioning in 20.3.4.426 NMAC; or other information submitted by the licensee is sufficient to demonstrate that the premises are suitable for release in accordance with the criteria for decommissioning in 20.3.4.426 NMAC; and
- (4) records required by Subsections D and F of 20.3.3.326 NMAC, have been received by the department.

[20.3.3.318 NMAC - Rp, 20.3.3.318 NMAC, A, 02/14/2023]

20.3.3.319 RENEWAL OF LICENSES:

A. Applications for renewal of specific licenses shall be filed in accordance with 20.3.3.307 NMAC not less than 30 days before the expiration date stated in the existing license.

B. In any case in which a licensee, not less than 30 days prior to expiration of their existing license, has filed an application in proper form for renewal or for a new license authorizing the same activities, such existing license shall not expire until the application has been finally determined by the department.

C. An application for renewal of a license shall be approved if the department determines that the requirements of this part have been satisfied, and the licensee has paid any outstanding annual fee(s) pursuant to 20.3.16 NMAC.

[20.3.3.319 NMAC - Rp, 20.3.3.319 NMAC and 20.3.3.321 NMAC, 04/30/2009]

20.3.3.320 AMENDMENT OF LICENSES AT REQUEST OF LICENSEE:

A. An license amendment may be requested by filing a form prescribed by the department pursuant to 20.3.3.307 NMAC which shall specify the proposed amendment and the grounds for the amendment.

B. Supporting documentation (e.g. training records, certificates, procedures, etc.) shall be submitted with the amendment, or provided upon request by the department within 30 days from the date of the request or other time as may be specified in the

request. Failure to provide the appropriate supporting documentation within the prescribed time frame will be grounds for denial of the amendment.

C. A request for a license amendment shall be approved if the department determines that the requirements of this part have been satisfied, and the licensee has paid any outstanding annual fee(s) pursuant to 20.3.16 NMAC.

[20.3.3.320 NMAC - Rp, 20.3.3.320 NMAC and 20.3.3.321 NMAC, 04/30/2009]

20.3.3.321 [RESERVED]

20.3.3.322 MODIFICATION, SUSPENSION AND REVOCATION OF LICENSES:

A. The terms and conditions of all licenses shall be subject to amendment or modification by the department by reason of amendments to the act, or by reason of rules, regulations and orders issued by the board or department.

B. Any license may be modified, suspended or revoked, in whole or in part by the department, for any material false statement in the application or any statement of fact required under provisions of the act; or because of conditions revealed by such application or statement of fact or any report, record, or inspection or other means which would warrant the department to refuse to grant a license on an original application; or for violation of, or failure to observe any of the terms and conditions of the act, conditions of the license, or of any rule, regulation, or order of the board or department; or the department determines that existing conditions constitute a substantial threat to the public health and safety or the environment.

C. Except in cases of willfulness or those in which the public health, interest or safety requires otherwise, no license shall be modified, suspended, or revoked unless, prior to the institution of proceedings therefore, facts or conduct which may warrant such actions shall have been called to the attention of the licensee in writing and the licensee shall have been accorded an opportunity to demonstrate or achieve compliance with all lawful requirements.

[20.3.3.322 NMAC - Rp, 20.3.3.322 NMAC, 04/30/2009]

20.3.3.323 TRANSFER OF MATERIAL:

A. No licensee shall transfer radioactive material except as authorized by this section.

B. Except as otherwise provided in their license and subject to the provisions of Sections C and D this section any licensee may transfer radioactive material:

- (1) to the department after receiving prior approval from the department;

(2) to the agency in any agreement state which regulates radioactive material pursuant to an agreement under Section 274 of the Atomic Energy Act;

(3) to the United States department of energy;

(4) to any person exempt from the Radiation Protection Act to the extent permitted under such exemptions; or to any person in the NRC jurisdiction or an agreement state, subject to the jurisdiction of that state, who has been exempted from the licensing requirements and regulations of the NRC or the agreement state, to the extent permitted under such exemption;

(5) to any person authorized to receive such material under terms of a general license or a specific license or equivalent licensing document issued by the department, the NRC or an agreement state; or

(6) as otherwise authorized by the department in writing.

C. Before transferring radioactive material to a specific licensee of the department, the NRC or an agreement state, or to a general licensee who is required to register with the department, the NRC or an agreement state prior to receipt of the radioactive material, the licensee transferring the material shall verify that the transferee's license authorizes the receipt of the type, form and quantity of radioactive material to be transferred.

D. The following methods for the verification required by Subsection C of this section are acceptable:

(1) the transferor may have in their possession, and read, a current copy of the transferee's specific license or registration certificate;

(2) the transferor may have in their possession a written certification by the transferee that they are authorized by license or registration certificate to receive the type, form and quantity of radioactive material to be transferred, specifying the license or registration certificate number, issuing agency and expiration date;

(3) for emergency shipments, the transferor may accept oral certification by the transferee that they are authorized by license or registration certificate to receive the type, form and quantity of radioactive material to be transferred, specifying registration certificate number, issuing agency and expiration date; provided that the oral certification is confirmed in writing within 10 days;

(4) the transferor may obtain other sources of information compiled by a reporting service from official records of the department, the NRC or an agreement state as to the identity of licensees and the scope and expiration dates of licenses and registration; or

(5) when none of the methods of verification described in Paragraphs (1) to (4) of this subsection are readily available or when a transferor desires to verify that information received by one of such methods is correct or up-to-date, the transferor may obtain and record confirmation from the department, the NRC or an agreement state that the transferee is licensed to receive the radioactive material.

[20.3.3.323 NMAC - Rp, 20.3.3.323 NMAC, 04/30/2009]

20.3.3.324 RECIPROCAL RECOGNITION OF LICENSES:

A. Provided that the requirements of this section have been met, any person who holds a specific license from the NRC or an agreement state, and issued by the regulatory authority having jurisdiction where the licensee maintains an office for directing the licensed activity and at which radiation safety records are normally maintained, is hereby granted a general license to conduct the activities authorized in such licensing document within the state of New Mexico for a period not in excess of 180 days in any calendar year provided that:

(1) the licensing document does not limit the activity authorized by such document to specified installations or locations;

(2) the out-of-state licensee notifies the department in writing at least three business days prior to engaging in such activity, filing a form, *reciprocity application - proposed activities*; such notification shall indicate the location of work, period of work, and type, manufacturer name and model number of radioactive material to be brought within the state, the client's name and address, and shall be accompanied by a copy of the pertinent licensing document and application fee as determined by 20.3.16 NMAC charged once for each calendar year; if, for a specific case, the three-day period would impose an undue hardship on the out-of-state licensee, they may, upon application to the department, obtain permission to proceed sooner; the department may waive the requirements for filing additional written notifications during the calendar year following the receipt of the initial notification from a person engaging in activities under the general license provided in this section;

(3) the out-of-state licensee complies with all applicable provisions of 20.3 NMAC, all provisions of the act, now or hereafter in effect, and orders of the board or department and with all the terms and conditions of their licensing document, except any such terms and conditions which may be inconsistent with requirements in this chapter;

(4) the out-of-state licensee supplies such other information as the department may request; and

(5) the out-of-state licensee shall not transfer or dispose of radioactive material possessed or used under the general license provided in this section except by

transfer to a person specifically licensed by the department, an agreement state or by the NRC to receive such material.

B. Notwithstanding the provisions of Subsection A of this section, any person who holds a specific license issued by the NRC or an agreement state authorizing the holder to manufacture, transfer, install or service a device described in Paragraph (1) of Subsection B of 20.3.3.305 NMAC within areas subject to the jurisdiction of the licensing body is hereby granted a general license to install, transfer, demonstrate or service such a device in this state provided that:

(1) such person shall file a report with the department within 30 days after the end of each calendar quarter in which any device is transferred to or installed in this state; each such report shall identify each general license to whom such device is transferred by name and address, the type of device transferred, and the quantity and type of radioactive material contained in the device;

(2) the device has been manufactured, labeled, installed and serviced in accordance with applicable provisions of the specific license issued to such person by the NRC or an agreement state;

(3) such person shall assure that any labels required to be affixed in the device under regulations of the authority which licensed manufacture of the device bear a statement that *"removal of this label is prohibited"*; and

(4) the holder of the specific license shall furnish to each general licensee to whom they transfer such device or on whose premises they install such device a copy of the general license contained in Subsection B of 20.3.3.305 NMAC.

C. The department may withdraw, limit or qualify its acceptance of any specific license or equivalent licensing document issued by another department, or any product distributed pursuant to such licensing document, upon determining that such action is necessary in order to prevent undue hazard to public health and safety or property.

D. Reciprocity in Areas of Exclusive Federal Jurisdiction:

(1) Before radioactive material can be used at temporary jobsites at any federal facility, the jurisdictional status of the jobsites shall be determined. If a temporary jobsite is under exclusive federal jurisdiction, the general license authorized under Subsection A of this section is subject to all the rules, regulations, orders and fees of the NRC.

(2) Authorizations for use of radioactive materials in areas of exclusive federal jurisdiction shall be obtained from the NRC by:

(a) filing an NRC form 241 in accordance with 10 CFR 150.20(b); or

(b) applying for a specific NRC license.

E. Reciprocity in Other States:

(1) Before radioactive material can be used at a temporary jobsite in another state, authorization shall be obtained from the state if it is an agreement state or from NRC for any non-agreement state, either by filing for reciprocity or applying for a specific license.

(2) The general license authorized under Subsection A of this section is subject to all the rules, regulations, orders and fees of the agreement state, or those of the NRC for any non-agreement state.

[20.3.3.324 NMAC - Rp, 20.3.3.324 NMAC, 04/30/2009]

20.3.3.325 REPORTING REQUIREMENTS:

A. Immediate Report. Each licensee shall notify the department as soon as possible but not later than 4 hours after the discovery of an event that prevents immediate protective actions necessary to avoid exposures to radiation or radioactive materials that could exceed regulatory limits or releases of licensed material that could exceed regulatory limits (events may include fires, explosions, toxic gas releases, etc.).

B. Twenty-Four Hour Report. Each licensee shall notify the department within 24 hours after the discovery of any of the following events involving licensed material.

(1) An unplanned contamination event that:

(a) requires access to the contaminated area, by workers or the public, to be restricted for more than 24 hours by imposing additional radiological controls or by prohibiting entry into the area;

(b) involves a quantity of material greater than five times the lowest annual limit on intake specified in 20.3.4.461 NMAC for the material; and

(c) has access to the area restricted for a reason other than to allow radioactive material with a half-life of less than 24 hours to decay prior to decontamination.

(2) An event in which equipment is disabled or fails to function as designed when:

(a) the equipment is required by regulation or license condition to prevent releases exceeding regulatory limits, to prevent exposures to radiation and radioactive materials exceeding regulatory limits, or to mitigate the consequences of an accident;

(b) the equipment is required to be available and operable when it is disabled or fails to function; and

(c) no redundant equipment is available and operable to perform the required safety function.

(3) An event that requires unplanned medical treatment at a medical facility of an individual with spreadable radioactive contamination on the individual's clothing or body.

(4) An unplanned fire or explosion damaging any licensed material or any device, container or equipment containing licensed material when:

(a) the quantity of material involved is greater than five times the lowest annual limit on intake specified in 20.3.4.461 NMAC for the material; and

(b) the damage affects the integrity of the licensed material or its container.

C. Preparation and Submission of Reports. Reports made by licensees in response to the requirements of this section must be made as follows.

(1) Licensees shall make reports required by Subsections A and B of this section by telephone to the department. To the extent that the information is available at the time of notification, the information provided in these reports must include:

(a) the caller's name and call back telephone number;

(b) a description of the event, including date and time;

(c) the exact location of the event;

(d) the radioactive material, quantities and chemical and physical form of the licensed material involved; and

(e) any personnel radiation exposure data available;

(2) **Written report.** Each licensee who makes a report required by Subsections A and B of this section shall submit a written follow-up report within 30 days of the initial report. Written reports prepared pursuant to other regulations may be submitted to fulfill this requirement if the reports contain all of the necessary information and the appropriate distribution is made. These written reports must be sent to the department at the address in 20.3.1.116 NMAC. The reports must include the following:

(a) a description of the event, including the probable cause and the manufacturer and model number (if applicable) of any equipment that failed or malfunctioned;

- (b) the exact location of the event;
- (c) the radioactive material, quantities and chemical and physical form of the licensed material involved;
- (d) date and time of the event;
- (e) corrective actions taken or planned and the results of any evaluations or assessments; and
- (f) the extent of exposure of individuals to radiation or to radioactive materials without identification of individuals by name.

[20.3.3.325 NMAC - Rp, 20.3.3.312 NMAC, 04/30/2009]

20.3.3.326 RECORDS:

Each person who receives radioactive material pursuant to a license and the regulations in this part and parts 20.3.5 NMAC, 20.3.7 NMAC, 20.3.12 NMAC, 20.3.13 NMAC, 20.3.14 NMAC and 20.3.15 NMAC is subject to the requirements of this section.

A. The licensee shall keep records showing the receipt, transfer and disposal of the radioactive material as follows.

(1) The licensee shall retain each record of receipt of radioactive material as long as the material is possessed and for three years following transfer or disposal of the material.

(2) The licensee who transferred the material shall retain each record of transfer for three years after each transfer unless a specific requirement in another part of the regulations in this chapter dictates otherwise.

(3) The licensee who disposed of the material shall retain each record of disposal of radioactive material until the department terminates each license that authorizes disposal of the material.

B. The licensee shall retain each record required by applicable parts of 20.3 NMAC or by license condition for the period specified by the applicable regulation or license condition. If a retention period is not otherwise specified by regulation or license condition, the record shall be retained until the department terminates each license that authorizes the activity that is subject to the recordkeeping requirement.

C. Records Format and Retention Period.

(1) Records which must be maintained pursuant to 20.3 NMAC may be the original or a reproduced copy or microform if such reproduced copy or microform is duly

authenticated by authorized personnel and the microform is capable of producing a clear and legible copy after storage for the period specified by 20.3 NMAC. The record may also be stored in electronic media with the capability for producing legible, accurate and complete records during the required retention period. Records such as letters, drawings, specifications, shall include all pertinent information such as stamps, initials and signatures. The licensee shall maintain adequate safeguards against tampering with and loss of records.

(2) If there is a conflict between the retention period in 20.3 NMAC, license condition or other written department approval or authorization pertaining to the retention period for the same type of record, the retention period specified in 20.3 NMAC for such records shall apply unless the department, pursuant to Subsection A of 20.3.1.107 NMAC, has granted a specific exemption from the record retention requirements specified in 20.3 NMAC.

D. Prior to license termination, each licensee authorized to possess radioactive material with a half-life greater than 120 days, in an unsealed form, shall forward the following records to the department:

(1) records of disposal of licensed material made under Sections 434 (including burials authorized before January 28, 1981), 435, 436 and 437 of 20.3.4 NMAC; and

(2) records required by Paragraph (4) of Subsection B of 20.3.4.442 NMAC.

E. If licensed activities are transferred or assigned in accordance with Subsection B of 20.3.3.317 NMAC, each licensee authorized to possess radioactive material, with a half-life greater than 120 days, in an unsealed form, shall transfer the following records to the new licensee and the new licensee will be responsible for maintaining these records until the license is terminated:

(1) records of disposal of licensed material made under Sections 434 (including burials authorized before January 28, 1981), 435, 436 and 437 of 20.3.4 NMAC;

(2) records required by Paragraph (4) of Subsection B of 20.3.4.442 NMAC; and

(3) the records required under Subsection G of 20.3.3.311 NMAC.

F. Prior to license termination, each licensee shall forward the records required by Subsection G of 20.3.3.311 NMAC to the department.

	Zn-69		2x10 ⁻²
Zirconium (40)	Zr-95		6x10 ⁻⁴
	Zr-97		2x10 ⁻⁴
Beta or gamma emitting radioactive material not listed above with half-life less than 3 years.		1x10 ⁻¹⁰	1x10 ⁻⁶

Table 329.1 notes:

¹ values are given in column I only for those materials normally used as gases;

² microcuries per gram for solids.

B. Notes.

(1) Many radioisotopes disintegrate into isotopes which are also radioactive. In expressing the concentrations in Subsection A the activity stated is that of the parent isotope and takes into account the daughters.

(2) For purposes of 20.3.3.302 NMAC where there is involved a combination of isotopes, the limit for the combination shall be derived as follows: determine for each isotope in the product the ratio between the concentration present in the product and the exempt concentration established in Subsection A of this section for the specific isotope when not in combination. The sum of such ratios may not exceed "1" (i.e., unity). Example: (concentration of isotope A in product) / (exempt concentration of

isotope A) + (concentration of isotope B in product) / (exempt concentration of isotope B) <1.

(3) The values in this table are presented in scientific notation. In this notation, a value of 3×10^{-4} represents a value of 3E-4 or 0.0003.

(4) To convert microcuries to SI units of kilobecquerels multiply the above values by 37. For example: Zirconium-97 of 2×10^{-4} microcurie multiplied by 37 is equivalent to 0.0074 kilobecquerel or 7.4 becquerels.

Tellurium-132	1	0.01
Terbium-160	1	0.01
Thallium-200	10	0.1
Thallium-201	10	0.1
Thallium-202	10	0.1

TABLE 332.1		
Radioactive Material	Column I	Column II
	curies	curies
Thallium-204	1	0.01
Thulium-170	1	0.01
Thulium-171	1	0.01
Tin-113	1	0.01
Tin-125	1	0.01
Tungsten-181	1	0.01
Tungsten-185	1	0.01
Tungsten-187	10	0.1
Vanadium-48	1	0.01
Xenon-131m	1,000	10.0
Xenon-133	100	1.0
Xenon-135	100	1.0
Ytterbium-175	10	0.1
Yttrium-90	1	0.01
Yttrium-91	1	0.01
Yttrium-92	10	0.1
Yttrium-93	1	0.01
Zinc-65	1	0.01
Zinc-69m	10	0.1
Zinc-69	100	1.0
Zirconium-93	1	0.01
Zirconium-95	1	0.01
Zirconium-97	1	0.01
Any radioactive material other than source material, special nuclear material, or alpha emitting radioactive material not listed above	0.1	0.001

B. Note. To convert curies to SI units of gigabecquerels, multiply the above values by 37. For example: Zirconium-97 (Column II) of 0.01 curie multiplied by 37 is equivalent to 0.37 gigabecquerel.

Xenon-133	1.0	900,000

TABLE 333.1		
Radioactive Material	Release	Quantity
	Fraction	(Curies)
Yttrium-91	0.01	2,000
Zinc-65	0.01	5,000
Zirconium-93	0.01	400
Zirconium-95	0.01	5,000
Any other beta-gamma emitter	.01	10,000
Mixed fission products	.01	1,000
Mixed corrosion products	.01	10,000
Contaminated equipment beta-gamma	.001	10,000
Irradiated material, any form other than solid, noncombustible	.01	1,000
Irradiated material solid, noncombustible	.001	10,000
Mixed radioactive waste, beta-gamma	.01	1,000
Packaged mixed waste, beta-gamma	.001	10,000
Any other alpha emitter	.001	2
Contaminated equipment alpha	.0001	20
Packaged waste, alpha ¹	.0001	20

Table 333.1 note:

¹ waste packaged in Type B containers does not require an emergency plan.

B. Notes.

(1) To convert curies to SI units of gigabecquerels, multiply the above values by 37. Example: Zirconium-95 of 5000 curies multiplied by 37 is equivalent to 185,000 gigabecquerels or 185 terabecquerels.

(2) For combinations of radioactive materials, consideration of the need for an emergency plan is required if the sum of the ratios of the quantity of each radioactive material authorized to the quantity listed for that material in table 333.1 exceeds one.

[20.3.3.333 NMAC - Rp, 20.3.3.333 NMAC, 04/30/2009]

20.3.3.334 CRITERIA RELATING TO USE OF FINANCIAL TESTS AND PARENT COMPANY GUARANTEES FOR PROVIDING REASONABLE ASSURANCE OF FUNDS FOR DECOMMISSIONING:

A. Introduction. An applicant or licensee may provide reasonable assurance of the availability of funds for decommissioning based on obtaining a parent company guarantee that funds will be available for decommissioning costs and on a demonstration that the parent company passes a financial test. This section establishes criteria for passing the financial test and for obtaining the parent company guarantee.

B. Financial Test.

(1) To pass the financial test, the parent company must meet the criteria of either Subparagraphs (a) or (b) of this paragraph.

(a) The parent company must have:

(i) two of the following three ratios: a ratio of total liabilities to net worth less than 2.0; a ratio of the sum of net income plus depreciation, depletion and amortization to total liabilities greater than 0.1; and a ratio of current assets to current liabilities greater than 1.5;

(ii) net working capital and tangible net worth each at least six times the current decommissioning cost estimates (or prescribed amount if a certification is used);

(iii) tangible net worth of at least \$10 million; and

(iv) assets located in the United States amounting to at least 90 percent of total assets or at least six times the current decommissioning cost estimates (or prescribed amount if a certification is used);

(b) The parent company must have:

(i) a current rating for its most recent bond issuance of AAA, AA, A or BBB as issued by Standard and Poor's or Aaa, Aa, A or Baa as issued by Moody's;

(ii) tangible net worth at least six times the current decommissioning cost estimate (or prescribed amount if a certification is used);

(iii) tangible net worth of at least \$10 million; and

(iv) assets located in the United States amounting to at least 90 percent of total assets or at least six times the current decommissioning cost estimates for the total of all facilities or parts thereof (or prescribed amount if certification is used).

(2) The parent company's independent certified public accountant must have compared the data used by the parent company in the financial test, which is derived from the independently audited, year end financial statements for the latest fiscal year, with the amounts in such financial statement. In connection with that procedure the

licensee shall inform the department within 90 days of any matters coming to the auditor's attention which cause the auditor to believe that the data specified in the financial test shall be adjusted and that the company no longer passes the test.

(3) After the initial financial test, the parent company must repeat the passage of the test within 90 days after the close of each succeeding fiscal year.

(4) If the parent company no longer meets the requirements of Subsection A of this section, the licensee must send notice to the department of intent to establish alternate financial assurance as specified in this section. The notice must be sent by certified mail within 90 days after the end of the fiscal year for which the year end financial data show that the parent company no longer meets the financial test requirements. The licensee must provide alternate financial assurance within 120 days after the end of such fiscal year.

C. Parent Company Guarantee. The terms of a parent company guarantee which an applicant or licensee obtains must provide the following.

(1) The parent company guarantee will remain in force unless the guarantor sends notice of cancellation by certified mail to the licensee and the department; cancellation may not occur, however, during the 120 days beginning on the date of receipt of the notice of cancellation by both the licensee and the department, as evidenced by the return receipts.
